1. Prepare for timber selection	1.1 Review workplace and quality procedures for timber selection. 1.2 Conduct visual inspection of products for suitability. 1.3 Review and check product specifications.
2. Evaluate selected timber	2.1 Assess growth and durability of the timber. 2.2 Assess species, timber structure, features and characteristics of timber. 2.3 Check moisture content of selected timber and ensure it meets production requirements. 2.4 Identify density and working properties of timber to ensure they meet production requirements. 2.5 Identify faults and features in the timber. 2.6 Select sawing patterns that best suit the selected timber.
3. Report on timber selection	3.1 Assess timber for quality and specification requirements. 3.2 Prepare timber for dispatch ensuring that damage is prevented or minimized. 3.3 Follow organizational procedures to document timber assessment outcomes. 3.4 Record and report on timber selection procedures and identify any problems with the process.

Foundation Skills

Assessment Requirements for FWPCOT3247 Select timber for forestry operations

Modification History

Release	Comment
1	Replaces equivalent FPICOT3247B Select timber for forestry operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures for selecting timber
- undertake visual inspection and identify: defects, contamination, timber colours, insect attack, surface finishes, loose surfaces, bubbles, holes, breakages, machine caused defects
- assess timber for growth patterns using appropriate methods including make-up of a tree: bark (cortex), phloem, cambium layer, sapwood (xylem), heartwood (truewood), pith (medulla), medullary rays, earlywood, latewood, growth rings, cellulose, hemicelluloses, lignin extractives
- assess timber for durability: strength, hardness and rating for use, classification and measurement
- assess timber structures: hardwood (pored wood) or softwood (non-pored wood) and cell structured timber, including vessels, fibres, ray cells, pits, tracheids, texture, seasoning methods
- assess timber characteristics: colour, density, texture, grain, figure, qualities, uses
- identify faults and features of timber: bow, spring, twist, warp, wane, cupping, shakes, insect defects, fungi, knots, resin pockets, wild grain, sloping grain
- measure moisture content of timber
- prepare products relating to a customer order via various means of transport

© Commonwealth of Australia, 2025 Skills Insight

- record and report on outcomes of timber selection.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational policies and procedures for selecting timber
- defects in timber: contamination, timber colours, insect attack, surface finishes, loose surfaces, bubbles, holes, breakages, machine caused defects
- procedures for assessing timber for growth, durability, cell structure and characteristics
- the working properties of timber: timber shrinkage, effects of light, density and deterioration of the timber, compressive and tensile stresses, modulus of elasticity, modulus of rupture, deformation, creep, surface hardness
- faults and features of timber
- acceptable moisture content of timber
- sawing patterns (live-sawn, back sawn, quarter sawn) and their suitability for different timber.

Assessment Conditions

The following resources must be made available:

- tools and equipment used to make timber selection
- timber for selection and classification
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- personal and protective equipment for selecting timber in forestry operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3248 Dry timber in solar assisted kilns

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3248A Dry timber in solar assisted kilns, which was first released with FPI05 Forest and Forest Products Training Package Version 2.2 This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to dry timber in solar assisted kilns, to appropriate moisture contents and stress levels. It covers hardwood and softwood and includes evaluation of energy savings and principles of sustainability.

The unit applies to those working in a range of technical roles in the forestry and forest products industry.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Timber Manufactured Products

Timber Merchandising

Wood Panel Products

Timber Truss and Frame Design and Manufacture

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	*Performance criteria describe the performance needed to*

ELEMENTS *essential outcomes.*	**PERFORMANCE CRITERIA** *demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for drying	1.1 Review and check work order. 1.2 Obtains type and quantity of timber to be dried from the conversion process. 1.3 Visually assess racks to be dried for consistent drying characteristics. 1.4 Select equipment required for the work requirements and check for operational effectiveness. 1.5 Select oven sections and sample boards, cut according to standard operating procedures and measure moisture content. 1.6 Plan drying process according to organisational procedures.
2. Load kiln and control kiln conditions	2.1 Conduct pre start-up checks according to manufacturer's instructions. 2.2 Follow emergency shutdown procedures in the case of alarm being triggered 2.3 Load kiln with racks selected for processing complete records of loading. 2.4 Position baffles and/or blankets according to standard operating procedures.
3. Monitor kiln conditions	3.1 Monitor and measure moisture content and review results against drying plan and initial measurement. 3.2 Check and adjust kiln control settings to ensure drying schedules are met. 3.3 Monitor kiln charge for drying degrade and assess the need for reconditioning or high humidity treatment.
4. Check timber quality on completion of drying	4.1 Identify drying end point and make kiln safe for entry. 4.2 Open kiln and check moisture content of processed timber. 4.3 Prepare drying stress samples and measure for specified use 4.4 Rectify unsuitable drying stresses within site procedures. 4.5 Visually assess drying quality, identify sub-standard material and direct for re-use according to site and environmental procedures.
5. Unload kiln and move or store timber	5.1 Remove moisture probes and baffles and/or blankets from timber. 5.2 Direct timber to storage or processing operations and check that

Assessment Requirements for FWPCOT3248 Dry timber in solar assisted kilns

Modification History

Release	Comment
2.0	Replaces equivalent FPICOT3248A Dry timber in solar assisted kilns, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational procedures to safely and efficiently dry timber in solar assisted kilns
- dry timber to appropriate moisture contents and stress levels
- operate and monitor a solar assisted kiln, and make necessary adjustments in the course of the drying process
- measure the amount of moisture content of timber or timber products during and after kiln drying
- keep degrade to a minimum when drying timber
- manage the safe movement of timber throughout all stages of the drying process
- produce accurate reports and records of the drying process.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational procedures for drying timber
- energy efficiency and savings obtained from various types of solar kilns
- types of tools and equipment and procedures for their safe use, operation and maintenance in the course of drying timber in the solar assisted kilns

© Commonwealth of Australia, 2025 Skills Insight

- species identification for timbers
- drying techniques including development and relief of drying stresses
- identification of drying degrade including surface checks, internal checks, end splits, collapse, excessive distortion, bow, spring, twist, cup and case hardening
- procedures for the operation of solar assisted kilns
- the anticipated process the timber will undergo to remove moisture to target moisture content including air drying, sheltered air drying, pre-drying, reconditioning, high humidity treatments, final kiln drying, equalising, conditioning
- types of timber degrades and how they develop
- wood-water relationships in the drying process
- methods of visual inspection
- characteristics of timber including native timber species, imported timber species and preservative treated timber
- quality and distribution processes
- storage systems and labelling.

Assessment Conditions

The following resources must be made available:

- solar assisted kiln
- timber for drying
- personal and protective equipment required for drying timber in solar assisted kilns.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Assessment Requirements for FWPCOT3249 Select timber preservation techniques

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3249A Select timber preservation techniques, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational procedures for selecting timber preservation techniques
- select the most suitable preservation technique for different types of timber considering chemical retention rates and preservation patterns.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational procedures for preserving timber and selecting timber preservation techniques
- environmental risks and hazards associated with different preservation techniques
- timber preservation chemicals and their safe use and storage
- timber preservation techniques including:
  - full cell (Bethel) process
  - empty cell process
  - rueping process
  - double treatment

© Commonwealth of Australia, 2025 Skills Insight

    - boultonising
- Australian Standards for timber preservation and market requirements, particularly Australian Standard (AS) 1604.1-2010 Specification for preservative treatment - Sawn and round timber and in Queensland, the Queensland Timber Utilisation and Marketing Act
    - service requirements including:
    - treated timber hazard ratings
    - marine borer hazard ratings
    - timber durability ratings
- chemical retention rate/s including the amount of preservative retained in a piece of timber after treatment and fixation have taken place, and must be expressed as either weight for volume or weight for weight.
- preservation patterns including the distribution of preservative within the cross section of a treated piece of timber.
- water management procedures including consideration of:
    - ground water monitoring
    - bund storages
    - contaminated water containment
    - contaminated water reuse
    - drip pads
- contingency plans including consideration of:
    - chemical handling and spill procedures
    - groundwater leakage procedures
    - fire suppression procedures
    - emergency evacuation procedures
- environmental monitoring procedures including monitoring of:
    - groundwater
    - chemical disposal
    - residue disposal
    - dust
    - noise
- types of tools and equipment, used for timber preservation and their safe use and maintenance.

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures for selecting timber preservation techniques
- examples of preservatives and end uses from which candidates must select appropriate chemicals and techniques.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

FWPCOT3250 Prepare timber to meet import/export compliance requirements

Modification History

Release	Comment
1	Replaces equivalent FPICOT3250A Prepare timber to meet import/export compliance requirements, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to ensure timber meets compliance requirements for import/export.

The unit applies to those who assess timber for import/export requirements in a variety of work settings including:

- timber harvesting
- sawmill
- woodchip mill
- veneer mill
- board/plywood mill
- timber and wood products production
- timber and wood products sales and service.

Licensing, legislative, regulatory or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to state or territory jurisdiction.

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Review regulatory requirements for import/export of timber	1.1 Identify and follow environmental legal requirements for preparing timber to meet import/export compliance requirements 1.2 Biosecurity requirements relevant to timber import/export are identified 1.3 Confirm and interpret compliance requirements. 1.4 Examine organisational compliance requirements for critical implications, risks and consequences of possible breaches.
2. Ensure timber compliance for import/export	2.1 Identify timber for import/export and assess wood properties. 2.2 Examine timber for identify biohazards associated with the particular species and undertake a risk assessment. 2.3 Determine the need for timber treatment and arrange for any required treatments to be carried out. 2.4 Establish the need for phytosanitary certificates and arrange for procurement.
3. Document compliance requirements	3.1 Complete and check branding of timber in line with regulatory requirements. 3.2 Obtain forest certification records and forward to relevant authorities. 3.3 Complete compliance records and reports and submit to appropriate internal and external personnel 3.4 Report breaches of compliance to those with sufficient authority to correct them.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for FWPCOT3250 Prepare timber to meet import/export compliance requirements

Modification History

Release	Comment
1	Replace equivalent FPICOT3250A Prepare timber to meet import/export compliance requirements, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow regulatory requirements and codes of practice relevant to importing/exporting timber
- follow organisational policies and procedures relevant to importing/exporting timber
- interpreting regulatory requirements for importing/exporting timber in Australia
- identify timber species, wood properties and timber biohazards
- determine compliance requirements for the organisation in relation to importing/exporting timber, and the risks and consequences of breaches
- examine timber and determine the appropriate requirements for compliance
- ensure appropriate arrangements are made for compliance
- complete documentation related to compliance.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- regulations, standards and codes of practice for identifying timber import and export requirements including knowledge of customs and biosecurity requirements

© Commonwealth of Australia, 2025 Skills Insight

- environmental protection requirements, including the safe disposal of waste material
- organisational and site standards, requirements, policies and procedures for identifying timber import and export requirements
- timber species identification techniques
- wood properties and how these relate to fungal and insect risks associated with importing/exporting timber
- range of timber treatments meeting biosecurity requirements
- branding and labelling requirements to ensure compliance
- forest certification systems and chain of custody procedures
- established communication channels and protocols
- procedures for recording and reporting records and information.

Assessment Conditions

The following resources must be made available:

- timber for import or export
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- regulations, workplace requirements and site standards for preparing timber to meet import/export compliance requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- safely and efficiently use environmental care procedures to undertake fire salvage operations
- follow regulatory requirements and codes of practice relevant to fire salvage operations
- follow organisational policies and procedures relevant to environmental care requirements
- assess, prepare for and carry out a fire salvage operation
- use safe work practices
- safely use plant and equipment associated with fire salvage operations, including:
  - harvesting plant and equipment
  - chainsaw harvesting techniques
- record and report all information and data related to the fire salvage operation.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace regulations, standards, codes of practice and established safe practices for using environmental care procedures to undertake fire salvage operations
- any activities and directives prescribed under legislation or required for standard certification requirements or as a management priority including:
  - soil erosion mitigation
  - track, road, drainage and crossing maintenance
  - weed management

© Commonwealth of Australia, 2025 Skills Insight

  - rehabilitation prescriptions
  - watercourse protection
  - flora and fauna management
  - run-off minimisation
  - buffer zone and filter strip maintenance
  - protection of remnant habitat
  - identification of cultural sites
- organisational and site standards, requirements, policies and procedures for using environmental care procedures to undertake fire salvage operations including any of the above.
- principles of ecological sustainability as they pertain to the specific forest type, landscape and fire regime to which the coupe or forest is exposed
- characteristics of trees and timber defects
- assessment of fire damaged trees, including for stability and:
  - whether or not it is safe to leave standing
  - its merchantability
  - how it should be felled
- fire salvage operations and strategies
- harvesting and extraction methods
- established communication channels and protocols including notification to authorities
- problem identification and resolution strategies in relation to plant and equipment used in salvage operations
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- fire salvage site
- harvesting plant and equipment
- workplace requirements and site standards for using environmental care procedures to undertake fire salvage operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3253 Convert timber residue into products for further use

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3253A Convert timber residue into products for further use, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to convert timber residue from a process into products designed for further use.

The unit applies to Engineered Timber Products Technician, Production Technician, Machine Operator, Timber Fabricator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Sawmilling and Processing

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

ELEMENTS	**PERFORMANCE CRITERIA**
Elements describe the	*Performance criteria describe the performance needed to*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS *essential outcomes.*	**PERFORMANCE CRITERIA** *demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for residue conversion processing operation	1.1 Identify timber residue product outcome and determine conversion process. 1.2 Review work order and confirm with appropriate staff. 1.3 Assess timber residue in line with conversion process requirements. 1.4 Select equipment for work requirements and check for operational effectiveness. 1.5 Transfer and store timber residue in line with material handling specifications and chain of custody priorities.
2. Undertake conversion process	2.1 Confirm product specifications and quality standards, and set plant and equipment to ensure outputs are compliant. 2.2 Establish and maintain communication with others on site to ensure safety. 2.3 Operate plant and equipment in line with safety standards, environmental requirements and residue output obligations and specifications. 2.4 Monitor process, ensuring inputs and outputs are compliant with product specifications. 2.5 Monitor, contain and dispose of waste in line with environmental and organisational protocols. 2.6 Inspect products to ensure they meet work order. 2.7 Transfer and store products in line with material handling specifications and chain of custody priorities.
3. Record outputs	3.1 Tally and record product volumes and any associated additives required, for conversion to a marketable product. 3.2 Record and report outputs for quality control and certification. 3.3 Report variations to output in line with organisational requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Skills Insight

Numeracy skills to:	• tally and record product volumes
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Problem solving skills to:	• identify problems and faults with equipment and demonstrate appropriate responses.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.

Range of Conditions

Not Applicable

Assessment Requirements for FWPCOT3253 Convert timber residue into products for further use

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3253A Convert timber into products for further use, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- safely and effectively convert timber residue into products for further use
- follow organisational policies and procedures for converting timber residue
- read work order to establish conversion process requirements
- convert timber residue into marketable products in line with product specifications and environmental requirements
- monitor, contain and dispose of waste in line with environmental and organisational protocols
- transfer and store timber residue and products in line with chain of custody priorities
- report and record information about the conversion process.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- product grading and assessment techniques
- characteristics of wood chips and stock levels
- chip production process
- timber production processes
- storage systems and labelling

© Commonwealth of Australia, 2025 Skills Insight

- alternative products for timber residue
- established communication channels and protocols
- typical tools and equipment used to convert timber products, and procedures for their safe use and maintenance including
  - processing plant
  - hand tools
  - transfer systems
  - chippers
  - washing plants
  - aggregate sorters
- procedures for the recording, reporting and maintenance of workplace information
- environmental protection requirements, including the safe disposal of waste material (including preservative treated timber), the safe use and storage of chemicals and the cleaning of plant, tools and equipment
- organisational and site standards, policies and procedures for grading and handling wood and timber residue
- environmental risks and hazards.

Assessment Conditions

The following resources must be made available:

- timber residue to be converted
- conversion tools and equipment
- workplace requirements and site standards for converting timber residue into products for further use.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3254 Implement environmentally sustainable work practices in the work area/work site

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3254A Implement environmentally sustainable work practices in the work area/work site, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to consider the environmentally sustainable work practices of the work site or work area, to identify opportunities for improvement, and gain support to put them into action.

The unit applies to a wide range of roles across all industry sectors.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Sawmilling and Processing

Timber Manufactured Products

Timber Merchandising

Wood Panel Products

Timber Truss and Frame Design and Manufacture

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Examine work site/work area in relation to environmentally sustainable work practices	1.1 Source information on environmental and resource efficiency systems and procedures. 1.2 Measure and document current resource usage. 1.3 Investigate and document current purchasing strategies 1.4 Examine current work processes to assist in identifying areas for improvement
2. Set targets for improvement	2.1 Seek input from stakeholders, appropriate personnel and specialists about providing solutions for work site/work area environmental issues 2.2 Consider alternative solutions to work site/work area environmental issues and communicate to appropriate personnel 2.3 Set environmental and resource efficiency targets 2.4 Develop an environmental and resource efficiency improvement plan for work site/work area
3. Implement environmental and resource efficiency improvement plan	3.1 Source appropriate techniques and tools to assist in achieving efficiency targets 3.2 Integrate the environmental and resource efficiency improvement plan with other operational activities 3.3 Seek suggestions and ideas about environmental and resource efficiency management from appropriate personnel and stakeholders, and implement where appropriate
4. Monitor performance	4.1 Document outcomes of efficiency targets and communicate to appropriate personnel and stakeholders 4.2 Review targets and environmental and resource efficiency improvement plan 4.3 Set new efficiency targets, and apply new tools and strategies where appropriate 4.4 Promote successful strategies and where possible, reward participants

Assessment Requirements for FWPCOT3254 Implement environmentally sustainable work practices in the work area/work site

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3254A Implement environmentally sustainable work practices in the work area/work site, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- develop and implement an environmental and resource efficiency improvement plan to meet efficiency targets and improve practice
- implement new approaches to work, in an effort to resolve and improve environmental and resource efficiency issues
- follow legal requirements and codes of practice relevant to implementing environmentally sustainable work practices in the work site/work area
- follow organisational policies and procedures relevant to implementing and monitoring environmentally sustainable work practices in the work site/work area
- monitor targets and improvements for environmental and resource efficiency for the work site/work area
- record and report on environmental and resource efficiency activities.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals, the minimisation of carbon emissions and noise, the cleaning of plant, tools and equipment, and care of surrounding environment
- organisational and site standards, requirements, policies and procedures associated with environmentally sustainable work practices
- environmental risks and hazards
- procedures for minimising environmental impact
- using energy effectively and efficiently
- using material effectively and efficiently
- environmental and resource efficiency issues specific to industry practices
- workplace communication channels, protocols and procedures
- organisational structure and reporting channels
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures relevant to environmentally sustainable work practices in the work site/work area
- work site or work area
- regulations, workplace requirements and site standards for implementing environmentally sustainable work practices
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3255 Apply silvicultural principles

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to access, interpret and apply sustainable silvicultural principles to forests. It applies to those who identify target species, and who select and maintain merchantable trees for forest operations.

The unit applies to Forestry technician, Nursery technician, Supervisor (Forestry operations), Tree planter, Silviculturist, Arboriculture technician

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for silvicultural work	1.1 Identify and review information on regulatory requirements for sustainable forest operations for various forest types.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Identify and interpret key principles and requirements that inform sustainable silvicultural methods and techniques. 1.3 Identify target species in line with approved forest operational plan and organisational procedures. 1.4 Review work order and identify and clarify sustainable forest requirements.
2. Assess forest condition	2.1 Select and use appropriate techniques and tools to measure tree and stand height. 2.2 Calculate basal area and assess tree dominance and crown vigour using an approved industry process. 2.3 Determine and record standing tree defects. 2.4 Identify and mark merchantable trees in line with organisational procedures.
3. Implement silvicultural practices	3.1 Calculate and apply tree retention and stocking criteria according to operational plan. 3.2 Select appropriate silvicultural methods and techniques to meet environmental and production requirements. 3.3 Identify situations requiring specialist advice and seek assistance.
4. Monitor work practices	4.1 Monitor and maintain sustainable forest practices. 4.2 Monitor and adjust work practices to meet changing conditions. 4.3 Identify and report non-compliant work practices to appropriate personnel. 4.4 Identify improved work practices and recommend improvements to silvicultural operations.
5. Maintain records	5.1 Revise and update forest operational plan and organisational procedures as required. 5.2 Record and report silvicultural activities to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• determine forest growth in terms of number of trees per hectare, height, girth, basal area.

© Commonwealth of Australia, 2025 Skills Insight

Oral communication skills to:	• work effectively with others.
Reading skills to:	• interpret regulatory requirements and workplace documentation.
Planning and organising skills to:	• identify work requirements in line with site conditions • analyse data and requirements to plan effective operations.

Assessment Requirements for FWPCOT3255 Apply silvicultural principles

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- application of appropriate industry-accepted silvicultural principles including:
  - slash or harvesting residue burning
  - scarification
  - enhancement planting or supplementary planting
  - fertilisation
  - thinning
  - pruning
  - waste thinning and non-commercial thinning
  - commercial thinning
  - harvesting
  - gapping
- follow organisational policies and procedures relevant to implementing and monitoring sustainable silvicultural principles
- monitor and maintain sustainable silvicultural activities
- identify and report non-compliant work practices
- complete relevant workplace reports.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- principles, policies, procedures and requirements relevant to silviculture operation including the following:
  - environment protection and biodiversity conservation
  - silviculture codes and guidelines
  - ecological sustainability
  - environmental planning and assessment
  - threatened species conservation
  - critical habitat register
  - native vegetation
  - federal, state or territory forestry legislation and local government regulations
  - native forest legislation
  - specific site environmental management plans
  - relevant codes of practice, including Safe Work Australia code of practice 'Managing Risks in Forest Operations'
  - water catchment management
  - surface and ground water conservation requirements
  - relevant Australian and industry standards
  - hazard reduction policy and procedures
  - reforestation codes
  - fisheries and fish passage
  - National Parks and Wildlife legislation
  - good neighbour policies
  - duty of care
  - heritage and traditional landowner requirements
- environmental protection requirements and minimal impact strategies to support the implementation of silviculture practices
- growth habits of specific species under soil and environmental conditions
- regeneration requirements of plant species being managed
- soil conservation and erosion mitigation techniques and their advantages and disadvantages for specific sites and habitats
- the conditions that can alter or change and therefore require different silvicultural practices to protect the environment, including:
  - recently declared or potentially rare and endangered species identified
  - unexpected flora or fauna encountered
  - new or potential habitat
  - ecology or ecosystem changes
  - undergrowth and ground cover
  - canopy
  - environmental features
  - operational conditions
  - ground conditions

© Commonwealth of Australia, 2025 Skills Insight

  - weather conditions
  - wind
  - dust
  - smoke
  - fire
  - cultural sensitivity
  - forest type
  - land tenure
  - quality of roads and tracks
- effective communication procedures and protocols
- procedures for recording and reporting workplace activity.

Assessment Conditions

The following resources must be made available:

- forest operations site
- workplace requirements and site standards for applying silvicultural principles
- resources outlining the principles, policies, procedures and requirements for applying silvicultural principles
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3256 Apply biodiversity protection principles

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3256 Apply biodiversity protection principles, which was first released with FPI11 Forest and Forest Products Training Package Version 2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to access, interpret and apply biodiversity principles and requirements, including monitoring work practices for compliance, and maintaining forest documentation and records.

The unit applies to those who work to identify and protect forest habitats, threatened species, microclimates and landscape features, and who conduct hazard-reduction in an operational forest environment.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Prepare for work	1.1 Identify and review information on regulatory requirements for the application of biodiversity protection principles for various forest types. 1.2 Identify and interpret key principles and requirements that apply to ecological and biodiversity protection. 1.3 Identify sensitive ecological and biodiversity sites, habitats, landscape features and protection zones in the forest operational plan and maps.
2. Implement biodiversity protection principles	2.1 Review work order and identify and clarify ecological and biodiversity requirements. 2.2 Identify endangered communities, threatened species, ecological habitats, sensitive landscape features and protection zones in the field. 2.3 Identify and report existing and potential ecological risks and hazards. 2.4 Apply protection measures for endangered communities, threatened species, ecological habitats and sensitive landscape features and protection zones in line with codes of practice and operational plan. 2.5 Select, apply and verify protection zone methods and materials with appropriate personnel. 2.6 Identify situations requiring specialist advice and seek assistance in line with organisational requirements.
3. Monitor work practices	3.1 Monitor and adjust work practices to meet changing conditions 3.2 Monitor and maintain ecological and biodiversity protection work practices in line with codes of practice and operational plan 3.3 Identify and report non-compliant work practices to appropriate personnel 3.4 Identify improved work practices and make recommendations to improve operations
4. Maintain records	4.1 Update operational plans with any new threatened species or habitat protection prescriptions. 4.2 Record and report biodiversity protection activities to appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Oral communication skills to:	• work effectively with others to maintain sound ecological and biodiversity protection work practices.
Reading skills to:	• interpret regulatory requirements and workplace documentation.
Planning and organising skills to:	• identify work requirements in line with site conditions • analyse data and requirements to plan effective operations.

Range of Conditions

Not Applicable

Assessment Requirements for FWPCOT3256 Apply biodiversity protection principles

Modification History

Not applicable.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- access and interpret ecological and biodiversity protection requirements
- safely and effectively apply biodiversity protection principles to various types of forests
- follow organisational policies and procedures relevant to implementing and monitoring ecological and biodiversity protection of a forest
- monitor and maintain ecological and biodiversity protection practices
- identify and report non-compliant work practices
- complete workplace documentation.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable regulatory and legal requirements that affect forest operations in relation to ecological and biodiversity protection:
  - Environment Protection and Biodiversity Conservation Act 1999 (the EPBC Act)
  - Threatened Species Conservation Act
  - Native Vegetation Act
  - native forest legislation
  - private native forest codes
  - forest operational plans
  - environmental legislation, policy and procedures
  - environmental planning and assessment
  - specific site environmental management plans
  - relevant codes of practice
  - water catchment management
  - surface and ground water conservation requirements
  - relevant Australian standards and industry standards
  - hazard reduction policy and procedures
  - plantation legislation

© Commonwealth of Australia, 2025 Skills Insight

    - plantation and reforestation code
    - fisheries and fish passage
    - national parks and wildlife legislation
    - good neighbour policies
    - award and organisational agreements
    - heritage and traditional landowner
    - forest certification, including Forest Stewardship Council (FSC) and Australian Forestry Standard (AFS) certification
- forest operational plans including one or more of the following:
    - forest operations plan
    - harvesting plan
    - plantation establishment plan
    - coupe plan
    - roading plan
    - drainage plan
    - sediment and erosion control plan
- habitats including any area or region where local animals, plants or organisms may live or rely upon for food, water, shelter or breeding purposes:
    - habitat plants and trees, including:
        - specific species
        - burrow
        - food
        - roost
        - nest
    - recruitment trees
    - hollow logs
    - rocky outcrops
    - rock overhangs
    - caves
    - soil mounds
    - creek or river banks
    - sheltered valleys or canyons
- any other site, feature or zone listed as habitat or potential habitat
- protection zones where operational conditions are varied by prescriptions for the management of ecological and biodiversity values including:
    - buffer zones
    - filter strips
    - riparian protection areas
    - exclusion zones
    - conservation management plan

© Commonwealth of Australia, 2025 Skills Insight

- regulations, standards, codes of practice and established safe practices for ecological and biodiversity protection
- established communication channels and protocols
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- forest operation site
- workplace requirements and site standards for applying biodiversity protection principles.
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3257 Follow cultural heritage requirements

Modification History

Release	Comment
1	Replaces equivalent FPICOT3257 Follow cultural heritage requirements, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to identify and protect indigenous, historical and natural heritage sites in line with relevant legislation.

The unit applies to those who identify cultural heritage sites, apply protective measures, and monitor work practices with the aim of improving cultural heritage awareness and care in a variety of work settings, including a forest or private native forest, horticultural, domestic, local council or emergency services environment.

The unit applies to Forestry Worker, Harvesting Technician, Machine Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	PERFORMANCE CRITERIA *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Access and interpret cultural heritage requirements	1.1 Identify and review information relevant to recognising and following cultural heritage protection, maintenance and recording. 1.2 Identify and interpret key principles and requirements that apply to cultural heritage protection and preservation. 1.3 Identify partnership arrangements and relationships with appropriate government departments, agencies and other relevant community organisations. 1.4 Identify indigenous, historical and natural heritage sites and/or objects in the forest operational plan and maps.
2. Apply cultural heritage requirements	2.1 Review work order and identify and clarify the potential impact on cultural heritage with appropriate personnel. 2.2 Locate and identify indigenous, historical and natural heritage sites and/or objects in the field. 2.3 Assess and report risks and hazards to cultural heritage sites. 2.4 Apply relevant requirements for the selection and use of protection zones, signage, field markings and equipment. 2.5 Carry out cultural heritage protection measures in line with legal requirements. 2.6 Identify situations requiring specialist advice and seek assistance.
3. Monitor work practices	3.1 Monitor and adjust work practices to meet changing conditions. 3.2 Monitor and maintain cultural heritage protection measures. 3.3 Identify and report non-compliant work practices to appropriate personnel. 3.4 Identify improved work practices and make recommendations for improvements.
4. Maintain records	4.1 Revise and update forest operational plans. 4.2 Record and report work activity in line with organisational requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Skills Insight

Oral communication skills to:	• work effectively with others in following and maintaining cultural heritage requirements • identify situations requiring specialist advice
Reading skills to:	• interpret: • cultural heritage legislation
Writing skills to:	• revise and update forest operational plans
Problem solving skills to:	• identify non-compliant work practices
Planning and organising skills to:	• monitor and adjust work practices

Assessment Requirements for FWPCOT3257 Follow cultural heritage requirements

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3257 Follow cultural heritage requirements, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- safely and effectively follow cultural heritage requirements
- follow regulatory requirements and codes of practice relevant to implementing cultural heritage protection principles
- follow organisational policies and procedures for implementing and monitoring cultural heritage protection principles
- monitor and maintain cultural heritage protection procedures
- identify and report non-compliant work practices
- complete relevant workplace reports.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- regulations, standards, codes of practice and established safe practices relevant to the processes for implementing and monitoring cultural heritage protection procedures including those related to:

© Commonwealth of Australia, 2025 Skills Insight

  - Commonwealth, state or territory and local departments, authorities, commissions or offices responsible for and administering cultural heritage legislation, codes, guidelines and policy and procedures
  - Indigenous affairs and culture
  - heritage and history
  - environment
  - sustainability
  - forestry
  - parks and wildlife
  - water
- organisational and site standards, requirements, policies and procedures associated with cultural heritage protection
- the importance of indigenous, historical and natural heritage conservation including:
- any place or object of significance to indigenous people because of their traditions, observances, lore, customs, beliefs and history including:
  - sacred sites
  - ceremonial sites
  - burial sites
  - rock art and engravings
  - ochre pits
  - scatter sites
  - scarred or carved trees
  - stone arrangements or bora rings
  - stone tool manufacture and grinding sites
  - artefacts
  - massacre sites
- Historical heritage aspects including the legacy of physical artefacts inherited from past generations, maintained in the present and bestowed for the benefit of future generations including:
  - buildings
  - constructions
  - mining ruins
  - roadways
  - landscape features, including:
  - convict markings or carvings
  - blazed trees
  - historic locations and sites
  - monuments
  - historic artefacts and objects
- Natural heritage knowledge of outstanding physical, biological and geological features including:

© Commonwealth of Australia, 2025 Skills Insight

  - physiological feature
  - paleontological feature
  - biological formation
  - habitat of protected, rare or endangered species
  - specific species management area
  - scientific site
  - educational significant site
  - spiritual site
  - nature reserve
  - wilderness area
- procedures for preventing harm to cultural heritage sites and objects including protection zone requirements
- established communication channels and protocols
- procedures for recording and reporting workplace activity.

Assessment Conditions

The following resources must be made available:

- legislation relating to cultural heritage principles
- forest operation site
- organisational policies and procedures relevant to following cultural heritage principles.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3258 Comply with soil and water protection

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3258 Comply with soil and water protection, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to protect soil, water and water catchments from erosion, sediment and other pollutants.

The unit applies to those who put in place erosion, sediment control and pollution prevention measures in a variety of work settings, including: a forest, horticultural, domestic, local council or emergency services environment.

The unit applies to Forestry technician, Nursery technician, Supervisor (Forestry operations), Tree planter, Silviculturist, Arboriculture technician, Mobile equipment operator

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Elements and Performance Criteria

ELEMENTS *Elements describe the*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to*

Assessment Requirements for FWPCOT3258 Comply with soil and water protection

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3258 Comply with soil and water protection, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- effectively comply with soil and water protection requirements
- following regulatory or local government ordinance requirements, codes of practice, WHS and environmental policies for the protection of soil, water and water catchments
- follow organisational policies and procedures, relevant to the protection of soil, water and water catchments
- implement effective erosion mitigation, sediment and pollutant control, surface and ground water protection measures
- monitor and maintain erosion mitigation and sediment control processes and water catchment protection measures
- use effective communication and safe work practices
- identifying and reporting non-compliant work practices
- complete relevant workplace documentation.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- regulations, standards, codes of practice and established safe practices for soil and water protection procedures, including the following

© Commonwealth of Australia, 2025 Skills Insight

    - applicable regulations from all levels of government that affect forest operations in relation to soil and water protection including:
        - regional forest agreements
        - relevant codes of practice
        - forest operational plans
- organisational and site standards, requirements, policies and procedures relevant to soil and water protection
- techniques and measures relevant to erosion mitigation including the majority of the following:
    - walk-over techniques
    - minimal disturbance techniques
    - crown and cross fall drainage
    - cross bank drainage
    - relief culverts on roads
    - mitre and table drains on roads
    - armouring/gravelling of roads
    - crossing and draining surfaces
    - batter stabilisation
    - contour banks and channels
    - gabions
    - sediment basins
    - riparian buffer zones
    - outlet protection structures
    - revegetation
- factors that are likely to influence soil and water protection measures including:
    - track and road maintenance
    - drainage structures
    - setting of contour lines
    - slope measurement techniques
    - boundaries and survey markers
    - site preparation techniques
    - site cultivation techniques
    - disposal of logging waste materials
    - windrowing placement and techniques
    - tree selection and felling techniques
    - log dump locations and techniques
    - log extraction and haulage techniques
    - clearing techniques
- environmental features that can be adversely effected if soil erosion occurs, or if inundated with sediment of other pollutants including the majority of the following:

© Commonwealth of Australia, 2025 Skills Insight

  - trees, understorey and other vegetation
  - drainage lines and drainage depressions
  - water course, creeks and rivers
  - lakes, swamps and wetlands
  - aquatic species
  - steep slopes
  - caves
  - historic and cultural heritage sites
  - road and water supply infrastructure
- Other pollution control measures including:
  - fuel containment barriers
  - chemical spillage barriers
  - containment and removal of waste, including rubbish litter and human waste
- risks and hazard identification relevant to soil and water protection
- established communication channels and protocols
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- forest operations site
- workplace requirements and site standards for complying with soil and water protection principles.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3259 Operate a four wheel drive on unsealed roads

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3259 Operate a four wheel drive on unsealed roads, which was first released with FPI11 Forest and Forest Products Training Package Version 1.0. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to safely operate a four wheel drive (4x4) vehicle on unsealed roads.

The unit applies to operating a 4x4 vehicle in a variety of work settings with different terrains.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Sawmilling and Processing

Timber Manufactured Products

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Identify four-wheel	1.1 Access, interpret and apply information relevant to

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
drive specific terms and terminology	operating a four-wheel drive vehicle on unsealed roads. 1.2 Identify the structural and handling differences between a conventional two-wheel drive vehicle and a four-wheel drive vehicle. 1.3 Identify four-wheel drive techniques.
2. Conduct checks of 4x4 vehicle and equipment	2.1 Perform pre-start checks. 2.2 Secure loads in line with organisational, workplace safety and environmental requirements. 2.3 Select suitable navigation aids where necessary. 2.4 Advise passengers of any special safety precautions to be taken when traversing rough terrain. 2.5 Check that tyre pressure is suitable for terrain and that it is changed as required in line with organisational procedures. 2.6 Select and access maintenance equipment prior to departure after considering the contextual issues.
3. Prepare for 4x4 operations	3.1 Identify and follow work health and safety (WHS), environmental, and organisational requirements relevant to operating a 4x4 vehicle. 3.2 Determine type of operation and ensure safe operating conditions. 3.3 Establish communication with others and choose the required safety mechanisms in line with organisational requirements.
4. Operate 4x4 vehicle on unsealed terrain types	4.1 Continually monitor the track to identify hazards, assess risks, and select the best route in line with WHS and environmental requirements. 4.2 Identify situations where the engagement of four-wheel drive is required and engage front hubs or centre differential lock where fitted. 4.3 Use appropriate range, gear, speed, driving and braking technique to negotiate a range of terrain types while maintaining control of vehicle at all times. 4.4 Check brakes and undercarriage after negotiating varying terrain. 4.5 Park and shut down 4x4 vehicle in line with manufacturer specifications and organisational requirements.
5. Operate 4x4 vehicle on	5.1 Inspect intended 4x4 vehicle path prior to negotiation of slope.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
a steep slope	5.2 Use appropriate range, gear, speed, driving and braking technique to negotiate a steep slope, while maintaining control of vehicle. 5.3 Use control braking to ascend and descend, and avoid skidding. 5.4 Maintain traction in line with requirements of 4x4 vehicle. 5.5 Apply appropriate automatic and manual techniques when 4x4 vehicle cannot proceed any further on a steep slope due to traction problems.
6. Perform maintenance and minor repairs on 4x4 vehicles	6.1 Perform operational maintenance and minor repairs as detailed in the vehicle operator manual and report vehicle defects to the appropriate person. 6.2 Demonstrate safe use of a jack to support a 4x4 vehicle while changing a tyre under relevant road terrains and conditions within the operating environment 6.3 Clean and store 4x4 vehicle and equipment after use in line with manufacturer specifications and organisational procedures. 6.4 Document maintenance and minor repairs in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• correctly adjust tyre pressure and follow operating instructions on instruments for checking, repairing and operating a four wheel drive vehicle • estimate the impact of shape of terrain on driving conditions • estimate time of a journey, water depth and fuel consumption.
Reading skills to:	• follow instructions in safety and equipment manuals when checking and operating four wheel drive vehicle • interpret diagrams on equipment or in operational manuals.
Problem solving skills to:	• identify problems and equipment faults in four wheel drive vehicles and demonstrate appropriate response procedures • identify potential hazards and operational faults when driving four wheel drive vehicles and demonstrate appropriate response procedures • demonstrate appropriate response procedures to driving conditions when driving four wheel drive vehicles.

Assessment Requirements for FWPCOT3259 Operate a four wheel drive on unsealed roads

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3259 Operate a four wheel drive on unsealed roads, which was first released with FPI11 Forest and Forest Products Training Package version 1.0. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow applicable workplace safety, environmental and regulatory requirements and codes of practice relevant to operating a 4x4 vehicle
- follow organisational policies and procedures relevant to operating a 4x4 vehicle, including:
  - own work role and responsibilities
  - procedural manuals
  - quality and continuous improvement
  - WHS, emergency and evacuation procedures
  - recording and reporting requirements
  - equipment use, maintenance and storage requirements
  - environmental management requirements
- communicate and work safely with others in rough terrain when operating a 4x4 vehicle
- perform pre-start checks of vehicle and equipment suitable to different terrains by checking loads and tyre pressure, selecting navigation aids and advising passengers of safety precautions
- operate safely, a 4x4 vehicle, on unsealed road conditions and different terrain types, including negotiating steep slopes, by identifying hazards and assessing risks
- use appropriate range, gear, speed, driving and braking techniques safely when operating a 4x4 vehicle on a steep slope

© Commonwealth of Australia, 2025 Skills Insight

- demonstrate safe use of a jack to support a 4x4 vehicle while changing a tyre under relevant road terrains and conditions within the operating environment
- park and shut down 4x4 vehicle in line with ***manufacturer specifications*** and organisational requirements
- perform and document operational maintenance as permitted by vehicle operator handbook.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- four wheel drive operational information
- structural differences between conventional two wheel drive and a four wheel drive including:
  - recovery hooks and mounting features
  - purpose and use of front wheel hubs
  - factors affecting tyre size, fitment, rating and pressure
- applicable regulations, standards, codes of practice and established safe practices relevant to the operating a 4x4 vehicle
- road rules, regulations, permit and licence requirements of the relevant state or territory
- environmental protection requirements including the safe disposal of waste material
- prestart checks for 4 x 4 vehicle on:
  - fuel, either diesel, gas or petrol
  - water
  - oil
  - brake and transmission fluid levels
  - battery water levels and electrolyte checks
  - tyres
  - belts
  - leads
  - hydraulic lines and connections
  - air cleaners
  - brakes
  - off-road safety equipment
  - traction devices
- Types of communication equipment including:
  - personal location beacon (PLB)
  - flares
  - markers
  - phone
  - radio
  - V-Sheet

© Commonwealth of Australia, 2025 Skills Insight

- safe operating conditions for a 4 X 4 vehicle
  - interpreting weather conditions to determine suitability for driving
  - determining food, water, PPE (sunglasses, high-visibility vest, etc.) and clothing requirements for journey
  - selecting routes to minimise damage to the environment
  - on and off-road conditions
  - traffic pattern and density
  - visibility
  - loading of four-wheel drive, including techniques to reduce overloading
- types of environmental risks and hazards associated with operating a 4x4 vehicle on unsealed roads including:
  - rocks and other unexpected obstacles
  - damage to vehicle
  - tidal influences
  - fire in vehicle
  - faulty brakes
  - leaking fuel
  - faulty steering mechanism on vehicle
  - animals and objects in vehicle path
  - crocodiles and snakes in some areas
  - windy or foggy sections of terrain
  - steep slopes
  - side slopes
  - slippery surfaces
  - land slides
  - overhead tree limbs
  - black ice
  - towing trailers
  - other vehicles
  - fallen trees, limbs and logs
  - icy terrain
  - flooded terrain
  - oil on road
  - parked vehicles on road
  - pedestrians on or near the road
  - poor visibility
- 4x4 driving techniques in different terrains including:
  - smooth
  - rough
  - uneven

© Commonwealth of Australia, 2025 Skills Insight

  - slippery
  - wet
  - boggy
  - sandy
  - steep or hilly
  - rock
  - icy
  - snow
  - mud, including:
    - brown clay
    - black silt
    - salt pan mud
    - red
  - hard ground
  - water
- operational knowledge of a 4x4 vehicle, including controls, instruments, indicators and their use
- tyre management principles for checking, changing and maintenance
- workplace communication channels and protocols
- techniques for travelling in convoy
- problem identification and resolution strategies, and common fault-finding techniques relevant to safely operating a four wheel drive vehicle
- types of tools and equipment relating to a 4x4 vehicle, and procedures for their safe use and maintenance
- maintenance equipment including spares and fluids
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- workplace location or simulated workplace offering conditions including different terrain on unsealed roads and steep slopes
- materials and equipment relevant to undertaking work applicable to this unit, including manual or automatic four-wheel drive or all-wheel drive
- specifications and work instructions relevant to workplace requirements and the safe operation of four wheel drive vehicles
- personal protective equipment required for operating a four wheel drive on unsealed roads
- relevant personnel for the purposes of communicating information.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

© Commonwealth of Australia, 2025 Skills Insight

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3260 Recover four wheel drive vehicles

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3260 Recover four wheel drive vehicles, which was first released with FPI11 Forest and Forest Products Training Package Version 2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to use recovery equipment and advanced skills to recover four-wheel drive (4x4) vehicles in difficult terrain conditions.

The unit applies to those who recover 4x4 vehicles in a variety of work settings.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Sawmilling and Processing

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan 4x4 recovery	1.1 Survey site to identify hazards, assess risks and select suitable strategy.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Select personal protective equipment appropriate to type of recovery operation. 1.3 Inform appropriate personnel of location. 1.4 Determine potential environmental impact of recovery.
2. Apply safe recovery method	2.1 Establish and maintain communications with appropriate personnel during recovery operations. 2.2 Determine recovery method based on the terrain conditions and circumstances. 2.3 Consider operating variables, define danger zone and apply strategies to reduce risk and environmental impact during recovery. 2.4 Determine the recovery equipment required and its availability. 2.5 Set up an exclusion zone. 2.6 Repair environmental damage where possible.
3. Use vehicle recovery equipment safely	3.1 Identify hazards and position recovery equipment safely. 3.2 Use safe operating procedures while using recovery equipment. 3.3 Use rated recovery equipment within limitations and capabilities.
4. Maintain vehicle recovery equipment	4.1 Carry out maintenance on recovery equipment. 4.2 Document equipment maintenance according to organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for FWPCOT3260 Recover four wheel drive vehicles

Modification History

Release	Comment
1	Replaces equivalent unit FWPCOT3260 Recover four wheel drive operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- safely and effectively recover a four wheel drive from varied situations
- use a winch and a snatch block (2:1) in difficult terrain, using ground anchor points for both hard ground and soft sand
- use one or more types of recovery equipment in a safe and efficient manner including devices and techniques for:
    - lifting
    - winching/towing
    - traction
    - support
    - protection
- demonstrate one or more pulling techniques including:
    - complex and multi-line
    - straight pull
    - double pull
    - starting vehicle
    - taking towed object to a location
    - using a winch

© Commonwealth of Australia, 2025 Skills Insight

- communicate effectively and follow safe work practices
- use and maintain relevant tools, machinery and equipment.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational policies and procedures, codes of practice and established safe practices for recovering a 4x4 vehicle
- techniques for using jacks and other recovery equipment
- factors affecting choice of recovery equipment and mode of recovery
- issues to consider when defining danger zones
- effect of suction on vehicles to identify mass weight needed for cable and winch capacity
- hazards and safety issues associated with the use of jacks and recovery equipment
- environmental impacts of 4x4 operation
- established communication protocols
- typical tools and equipment, and procedures for their safe use and maintenance
- procedures for reporting and recording information
- environmental protection requirements, including the safe disposal of waste material
- environmental risks and hazards relevant to recovering 4x4 vehicles in difficult terrain conditions.
-

Assessment Conditions

The following resources must be made available:

- four wheel drive to recover
- varied terrains and conditions from which to recover vehicle
- equipment required to recover a four wheel drive vehicle
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- personal protective and safety equipment required for recovering a four wheel drive vehicle.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3261 Transport forestry logs using trucks

Modification History

Release	Comment
1	Replaces equivalent FPICOT3261 Transport forestry logs using trucks, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to drive log trucks to and from forestry harvesting sites, facilitate log loading and unloading, and deliver logs to their destination. Work is completed in in a variety of work settings, including forest environments, landings, log dumps, saw mills, wood chip mills, veneer mills, board/plywood mills.

The unit applies to those who transport forestry logs by driving heavy logging vehicles.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare to transport logs	1.1 Review work order and schedules and where required check with appropriate personnel. 1.2 Obtain coupe map to determine identify logging sites, truck entry, access and exit tracks and loading areas. 1.3 Determine required truck configuration to meet work order and load build requirements and confirm availability of truck and ancillary equipment. 1.4 Check transportation documentation for compliance with

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	regulatory requirements for driving hours, load limits and dimensions.
2. Plan route	2.1 Select route and coupe entry and exits points to ensure efficient, safe and legal log movement and minimal environmental damage. 2.2 Ensure selected route complies with height, width, overhang and load limits of road infrastructure and environmental constraints. 2.3 Estimate time required to transport logs and account for fatigue management guidelines. 2.4 Confirm route, timings and coupe entry and exit points with appropriate personnel.
3. Facilitate log loading	3.1 Access site and determine safe manoeuvring approach for loading area with worksite personnel. 3.2 Position truck to avoid site and equipment hazards and to maximise load safety and security while loading. 3.3 Place and check log positioning equipment for loading, and reset as required. 3.4 Communicate with worksite personnel and machine operators to ensure safe loading location and processes and that load meets transport regulatory requirements. 3.5 Monitor loading, complete final check to ensure safe transport.
4. Secure logs prior to transport	4.1 Secure load with sufficient number and type of securing devices in line with loading guidelines and transport regulatory requirements. 4.2 Re-tension logs as required. 4.3 Fit overhang warning devices and signage to load to comply with transport regulatory requirements
5. Transport logs	5.1 Transport logs on planned or modified route considering conditions, road surfaces and fatigue management practices. 5.2 Monitor condition of tracks and roads and report unexpected ground, water, vegetation and other environmental conditions to appropriate personnel 5.3 Drive truck legally and safely using primary and subsidiary controls appropriate to conditions. 5.4 Monitor truck gauges and warning devices to detect and respond to operating faults and ensure operational safety. 5.5 Communicate with other drivers and road users to inform location and potential hazards. 5.6 Conduct periodic load safety checks and re-tension load in line

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	with road conditions and regulatory requirements. 5.7 Keep communication channels open to ensure location is known at all times to allow for emergency assistance.
6. Facilitate log unloading	6.1 Complete site inductions and establish safe manoeuvring approach for unloading area with worksite personnel. 6.2 Follow site personnel directions to manoeuvre and park truck to avoid site and equipment hazards. 6.3 Shut down and secure truck in identified safe unloading zone. 6.4 Inspect load for log movement and make provisions to support logs requiring difficult control during release. 6.5 Release load securing devices in correct sequence for truck, trailer and load configuration and in line with site safe unloading procedures. 6.6 Make truck, trailer and ancillary equipment safe for return journey to coupe. 6.7 Record and report log shifting process and truck operating faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	

Numeracy skills to:	• complete calculations, against regulatory specifications, of:
	  • heights, widths and weights of loads
	  • transportation distances, times and rest periods
	• read and interpret truck gauges and warning devices
	• record numerical data involving distances, times, weights and dimensions.

Oral communication skills to:	• ask questions and actively listen to clarify:
	  • contents of work orders and transport schedules
	  • locations of site loading and unloading areas
	  • unfamiliar site safety and operating procedures
	• provide clear unambiguous information to site personnel about loads and any problems expected with releasing unstable logs

Reading skills to:	• interpret: • workplace health and safety and other organisational procedures

© Commonwealth of Australia, 2025 Skills Insight

	• work orders and transport schedules • load manifests • transport regulations or plain English equivalent documents.
Writing skills to:	• complete accurate basic records for log shifting processes and truck operating faults.
Teamwork skills to:	• work cooperatively with site personnel and follow directions to complete safe and efficient loading and loading of logs.

Assessment Requirements for FWPCOT3261 Transport forestry logs using trucks

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3261 Transport forestry logs using trucks, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- plan the routes for and complete log movements using a truck or truck/trailer combination, in line with an individual work orders and transport schedule prescribing different load quantities, coupe locations and destinations for each job
- assess the load during loading operations to avoid:
  - uneven weight distribution
  - instability or uncontrolled collapse of the load
- assess the load during loading operations to account for:
  - requirements for trailer rigidity
  - turning clearance
  - overhang
  - projection above stanchions
  - crowning
  - weight distribution on truck and trailer axles
  - contact with bolsters, stanchions and other logs
- after each of the above transportation movements, complete accurate basic records for log shifting processes and truck operating faults.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose and content of applicable commonwealth, state or territory transport regulations for driving heavy logging vehicles with particular emphasis on load limits, allowable dimensions, driving hours, fatigue management and required rest breaks
- applicable fall from heights regulations and compliance requirements
- environmental protection practices relevant to driving heavy logging trucks to minimise:
  - fuel consumption
  - emissions
  - noise
  - damage to soil, water and other aspects of habitat
- key features of these varying environmental conditions and effects on driving heavy logging trucks:
  - sealed and unsealed roads and tracks
  - ground slope
  - ground hazards and obstacles
  - wind and dust
  - fog and rain
- typical safety hazards present at loading and unloading facilities and methods used to minimise associated risks
- methods used to:
  - plan time efficient routes and schedules to comply with regulations and environmental considerations
  - safely load, restrain and unload logs
- features, capabilities and capacities of logging trucks and trailers
- purpose, features and safe operation of equipment used to load, unload and transport logs:
  - log positioning equipment
  - load securing devices
  - overhang warning devices
  - communication equipment
- organisational procedures specific to transporting, loading and unloading logs:
  - workplace health and safety with particular emphasis on rest breaks and use of personal protective equipment
  - communication reporting lines
  - recording and reporting log shifting processes and truck operating faults.

Assessment Conditions

The following resources must be made available:

- logging trucks and trailers including one or more of the following:
  - rigid or articulated log trucks

© Commonwealth of Australia, 2025 Skills Insight

  - semi-trailers
  - jinkers
  - quad-dogs
  - B doubles
  - two-bay skeletal trucks
- safety fittings
- head boards
- cab guards
- log positioning equipment including one or more of the following:
  - bolsters
  - slippers
  - stanchions
  - chocks
- load securing devices including one or more of the following:
  - dogs and chains
  - binders/straps
  - webbing
  - lashings and winches
  - auto-tensioning devices
- overhang warning devices including one or more of the following:
  - flags
  - lights
  - reflectors
  - signs
- communication equipment including one or more of the following:
  - two-way radio
  - hands-free mobile phones
- personal protective equipment suitable for loading and unloading trucks
- maps for coupe location
- work order and transport schedules with instructions for equipment allocation, transport requirements and location of coupe and destination for logs
- template documents for recording log shifting processes and truck operating faults
- organisational procedures for transporting, loading and unloading logs.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and

© Commonwealth of Australia, 2025 Skills Insight

- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Harvesting and Haulage

Sawmilling and Processing

Wood panel products

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Prepare to transport forestry produce	1.1 Review work order and schedules and where required check with appropriate personnel. 1.2 Identify harvesting sites, obtain coupe map and determine truck access. 1.3 Determine required truck configuration to meet work order and load requirements and confirm availability of truck and ancillary equipment. 1.4 Check transportation documentation for compliance with regulatory requirements for driving hours, load limits and dimensions.
2. Plan route	2.1 Obtain coupe map to select route and coupe entry and exits points ensuring efficient, safe and legal produce movement and minimal environmental damage. 2.2 Ensure selected route complies with height, width and load limits of road infrastructure and environmental constraints. 2.3 Estimate time required to transport produce and account for fatigue management guidelines. 2.4 Confirm route, timings and coupe entry and exit points with appropriate personnel.
3. Load forestry produce	3.1 Access site and determine safe manoeuvring approach for loading area with worksite personnel. 3.2 Position truck to avoid site and equipment hazards and to maximise load safety and security while loading. 3.3 Communicate with worksite personnel and machine operators to ensure safe loading location and processes and that load meets transport regulatory requirements. 3.4 Monitor loading and complete final check to ensure safe transport. 3.5 Secure load with sufficient number and type of securing devices in line with loading guidelines and transport regulatory requirements.
4. Transport forestry produce	4.1 Transport forestry produce on planned or modified route considering conditions, road surfaces and fatigue management practices. 4.2 Monitor condition of tracks and roads and report unexpected ground, water, vegetation and other environmental conditions to appropriate personnel 4.3 Drive truck legally and safely using primary and subsidiary controls appropriate to conditions. 4.4 Monitor truck gauges and warning devices to detect and respond

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	to operating faults and ensure operational safety. 4.5 Communicate with other drivers and road users to inform location and potential hazards. 4.6 Conduct periodic load safety checks and realign load in line with road conditions and regulatory requirements. 4.7 Keep communication channels open to ensure location is known at all times to allow for emergency assistance.
5. Unload forestry produce	5.1 Complete site inductions and establish safe manoeuvring approach for unloading area with worksite personnel. 5.2 Follow site personnel directions to manoeuvre and park truck to avoid site and equipment hazards. 5.3 Shut down and secure truck in identified safe unloading zone. 5.4 Release load securing devices and unload forestry produce in line with site safe unloading procedures. 5.5 Make truck, trailer and ancillary equipment safe for return journey to coupe. 5.6 Record and report forestry produce shifting process and truck operating faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	

Numeracy skills to:	• complete calculations, against regulatory specifications, of:
	  • heights, widths and weights of loads
	  • transportation distances, times and rest periods
	• read and interpret truck gauges and warning devices
	• record numerical data involving distances, times, weights and dimensions.

Oral communication skills to:	• ask questions and actively listen to clarify:
	  • contents of work orders and transport schedules
	  • locations of site loading and unloading areas
	  • unfamiliar site safety and operating procedures
	• provide clear unambiguous information to site personnel about loads
	• use positive language to discuss loading and unloading issues and

FWPCOT3263 Maintain and contribute to energy efficiency

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to maintain energy efficient work practices and contribute to systems improvement with regard to energy efficiency.

The unit applies to a wide range of roles across all industry sectors.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pulp and Paper Manufacturing

Forest Growing and Management

Harvesting and Haulage

Sawmilling and Processing

Timber Manufactured Products

Timber Merchandising

Wood Panel Products

Timber Truss and Frame Design and Manufacture

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Identify requirements to maintain and contribute to energy efficiency	1.1 Identify and review requirements to maintain energy efficiency 1.2 Identify benefits relating to energy efficiency and the forest and wood products industry 1.3 Using a life-cycle analysis, compare the benefits of using forest and wood products to other building materials
2. Follow and promote energy efficient work practices	2.1 Adhere to site energy efficiency policy and procedures, including those related to recycling and waste management 2.2 Operate equipment to ensure maximum energy efficiency 2.3 Monitor own work practices to maintain energy efficiency 2.4 Promote positive aspects of the forest and wood products industry in comparison to other building materials to internal and external stakeholders
3. Contribute to systems improvement with regard to energy efficiency	3.1 Contribute to and support reviews of operations for improvements in energy efficiency 3.2 Identify opportunities for efficiencies in consumption or raw materials and progress through appropriate personnel 3.3 Identify opportunities for innovation in energy efficiency and progress through established channels.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• measure and monitor performance.
Oral communication skills to:	• escalate issues requiring attention. • communicate with colleagues about energy efficiency.
Reading skills to:	• interpret policies and procedures.
Writing skills to:	• make reports about energy efficiency.
Initiative and enterprise skills to:	• find safer and more energy efficient ways of working.

FWPCOT3264 Build and maintain timber stacks

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3264 Build and maintain timber stacks, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to safely build and maintain timber stacks in a variety of workplace settings, according to regulations and site procedures.

The unit applies to those stacking timber in a variety of work settings such as saw mills, veneer mills, board/plywood mills, frame and truss plants, timber product manufacturers, timber treatment plants and other settings such as timber warehouses and timber drying/kiln operations.

Licensing, legislative, regulatory or certification requirements apply to this unit but may differ according to state or territory jurisdiction. Refer to state or territory licensing body.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare to stack timber.	1.1 Review work order to identify timber stack site plan. 1.2 Identify and follow safe work procedure for building and maintaining timber stacks. 1.3 Conduct a risk assessment in line with site requirements to address hazards and faults and to ensure safety of self, others and proposed timber stack, taking avoidable loss into account. 1.4 Follow traffic management plan. 1.5 Use safety gear and equipment in line with work health and safety (WHS) and site requirements. 1.6 Communicate with others as required, to ensure safety requirements are met, in line with site procedures. 1.7 Identify personal limitations related to building a timber stack and seek assistance as required, in line with site procedures.
2. Build timber stack.	2.1 Inspect timber to ensure it meets labelled or expected content and report non-compliant material to supervisor, in line with site and safety requirements. 2.2 Choose appropriate bearers to create required space for powered mobile plant to lift the stack. 2.3 Build the stack, check bearers and restrain timber in line with site requirements. 2.4 Manage maximum height of stack to suit environment and weather conditions, in line with industry safety standards and site requirements. 2.5 Identify problems and faults and report to supervisor in line with site procedures.
3. Maintain timber stack.	3.1 Perform routine checks as stack is built and during life of stack, and report defects to appropriate personnel in line with site requirements. 3.2 Repair timber stack as required, in line with site procedures and scope of own job role. 3.3 Store, reuse, recycle or dispose of waste material in line with site procedures and environmental requirements. 3.4 Complete and maintain workplace records and documentation according to site requirements.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• visually estimate length of bearers and stack ratios.
Oral communication skills to:	• interact appropriately with colleagues and others • report to supervisor and other appropriate personnel in line with site procedures.
Reading skills to:	• interpret work order • refer to powered mobile machinery manual.
Writing skills to:	• record and report workplace information.
Problem solving skills to:	• identify and respond to problems, faults, hazards and risk.

Assessment Requirements for FWPCOT3264 Build and maintain timber stacks

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3264 Build and maintain timber stacks, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- stack timber and maintain timber stacks in line with safe work procedure, site standards and organisational requirements
- follow organisational policies and procedures relevant to building and maintaining a timber stack
- use safety gear and equipment required to build and maintain a timber stack, in line with site requirements
- communicate and work safely with others in the workplace
- identify and control hazards and risks associated with building a timber stack, in line with workplace requirements
- safely build timber stacks appropriate to the needs of the workplace
- record and report required timber stack and fault information in line with site requirements
- safely repair faults in a timber stack.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- work health and safety requirements, site standards and organisational policies and procedures for building and maintaining timber stacks

© Commonwealth of Australia, 2025 Skills Insight

- procedures for conducting a risk assessment which includes:
  - level and stability of individual packs
  - type of bearers
  - width, length and height of stack
  - weight of packs and stacks
  - duration of storage
  - type and strength of timber
  - type of lifting equipment
  - ground condition and stability in terms of slope, evenness, contamination and drainage
  - air-drying structure
  - unexpected obstacles
  - slippery or uneven surfaces
  - pedestrians on or near the timber stack
  - visibility
  - powered mobile machinery equipment faults or damage
  - ground strength to withstand the load of stacks and machinery
  - location of walkways, pathways and stores
  - top surface of ground
  - location of stack:
  - inside
  - outside under cover
  - in the open
  - monitoring and inspection procedures
  - storage area organisation
  - injury due to lifting, bending or crushing
  - machinery and equipment requirements
  - weather conditions.
- procedures for identifying hazards and risks associated with building and maintaining timber stacks as outlined in the range statement
- the use and importance of bearers including these needs:
  - be straight and not have knots
  - be identical in length in cross-section
  - not protrude from the stack
  - not be shorter than the stack
  - be laid flat
  - be in good condition
  - be able to withstand the environment
  - be checked for consistent thickness and shape
  - be correctly positioned
- criteria for site surface stability and building a stack

© Commonwealth of Australia, 2025 Skills Insight

- factors contributing to avoidable loss including:
  - inadequate stack support
  - packs that are not level
  - exposing the stack to adverse drying conditions
  - inadequate stack conditions (poor drainage, stacks close to ground)
  - inappropriate site layout
  - inadequate stack protection
  - pack damage
  - unstable stacking
  - timber stacked too high
- key components of a traffic management plan including:
  - ensure pedestrians are separated from powered mobile plants
  - allow safe entry and exit of mobile equipment and pedestrians
  - identify the most efficient route of travel
  - facilitate traffic flows
  - reduce the frequency of interaction with powered mobile plant
  - substitute a forklift with other suitable load shifting equipment
- methods to visually estimate length of bearers and ratio, grading, colour identification and tagging of stacked timber
- lengths, dimensions, tolerances, profiles and names of industry standard cross-sections
- communication strategies including hand signals and gestures
- common timber stack repair aspects including:
  - cordon off area from pedestrian access
  - install danger warning signage
  - replace damaged racking sticks, bearers or restraints
  - stabilise ground conditions, including top surface
  - stabilise packs and stacks
  - partially or fully rebuild packs and stacks
  - assess need for additional restraints
  - tighten loose restraints
- timber stacking tools and equipment, and procedures for their safe use and maintenance
- procedures for recording and reporting workplace information
- ‘Fit for work’ requirements, the impact of fatigue, and organisational policy and procedures for fatigue management
- standards for height of a timber stack inside, under cover and in the open.
- environmental protection requirements, including criteria for recycling and reusing material with faults and safely disposing of waste material.

Assessment Conditions

Assessment conditions

© Commonwealth of Australia, 2025 Skills Insight

The following resources must be made available:

- organisational policies and procedures relevant to building and maintaining timber stacks
- powered mobile machinery used to build and maintain timber stacks
- work order identifying timber stack site plan.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3265 Cut timber or engineered wood product to profile

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to use profiling equipment for cutting timber or engineered wood products to a profile to produce moulded products in a manufacturing facility.

The unit applies to individuals who work as benchman, machine operators, timber products technicians, production technicians and press operators. Operators generally work under broad or limited direction to complete routine activities related to their own work, and take responsibility for their work.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

	recommendations 4.4 Keep machine area clear of dust and debris according to workplace health and safety procedures 4.5 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	• Identify quantities of required material within work orders, and count numbers of panels to be profiled • Complete basic calculations of required depth of cut or profile to determine equipment set-up • Measure finished dimensions against specifications and allowable tolerances
Navigate the world of work	• Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Use modes of communication suitable for the purpose to confirm and clarify understanding
Get the work done	• Recognise and respond to routine problems

Assessment Requirements for FWPCOT3265 Cut timber or engineered wood product to profile

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- followed workplace health and safety requirements and environmental protection procedures for cutting timber or engineered wood product to profile
- cut one or more of the following timber or engineered wood products to profile according to work order and prescribed workplace specifications:
  - dressed timber
  - in-the-rough timber
  - stress and non-stress graded timber
  - preservative treated timber
  - medium density fibreboard
  - laminated veneer
  - chipboard
  - fibreboard
  - coated and/or treated timber products
  - glued laminated timber (glulam)
  - cross-laminated timber (CLT)
- conducted operator maintenance on profiling equipment
- stacked batches of cut timber or engineered wood product according to workplace health and safety requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- health and safety hazards or risks related to operating profiling equipment for timber or engineered wood products as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures specific to cutting timber or engineered wood product to profile:
  - health and safety, with particular emphasis on equipment lockout and the use of personal protective equipment (PPE)
  - use of timber profiling equipment
  - communication reporting lines
  - recording and reporting production outcomes, equipment faults and maintenance requirements
- environmental protection practices for timber manufacturing facilities:
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
  - reducing water and energy use
- characteristics of timber or relevant engineered wood product
  - storage systems and labelling procedures, including:
  - storage racks
  - storage bays
  - bins
  - stacks
  - pallet boxes
  - modularised storage components
  - temporary stacking bays
- storage layout and categories for:
  - raw materials
  - stacking finished timber products
- typical timber or engineered wood product defects and how they affect the ability to produce quality profiled product:
  - warp
  - wane
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- range of common profiles and applicable terminology, including:
  - quad
  - beading
  - mouldings
  - shaped beams
  - architraves

© Commonwealth of Australia, 2025 Skills Insight

  - skirting boards
  - scotia
- common cutting patterns used to achieve common profiles
- range of feed rates and how they affect production output and quality of the finished product
- purpose, features and operation of equipment used to cut timber or engineered wood product to profile:
  - measuring equipment
  - multi-head planing machines (four siders)
  - spindle moulders
  - routing machines
  - shaping machines
  - machine guides
- methods for assessing cutting blade condition.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - measuring equipment
  - profiling equipment including one or more of the following: multi-head planing machines (four siders), spindle moulders, routing machines, shaping machines
  - machine guides
  - maintenance tools and equipment for removing and replacing cutting blades
  - consumable profile cutting blades in various shapes and sizes
  - PPE suitable for cutting material to profile
  - timber or engineered wood product suitable for profiling operations
- specifications:
  - manufacturer instructions for use and maintenance of equipment
  - work order with specific instructions for cutting timber or engineered wood product to profile
  - workplace policies and procedures for cutting timber or engineered wood product to profile, including health and safety and emergency procedures and environmental protection procedures
  - template documents for recording production outcomes, equipment faults and maintenance requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3266 Dress timber using multi-headed machines

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate and adjust multi-headed machines to dress timber in a timber processing facility. Work also involves evaluating and monitoring dressing conditions and processes and operator maintenance.

The unit applies to individuals who work as operators of multi-headed machines for dressing timber. Operators generally work under broad or limited direction to complete routine activities related to their own work, and take responsibility for their work.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan timber dressing process	1.1 Review work order, workplace health and safety requirements, environmental protection practices and emergency procedures for timber dressing operation and, where required, check with appropriate personnel 1.2 Identify and report hazards and use personal protective equipment according to workplace requirements and health and safety legislation to maintain safe work practices 1.3 Identify sizes and quantities for dressed timber, assess available sawn timber and estimate material removal rates
2. Set up cutters	2.1 Use equipment according to workplace health and safety procedures, manufacturer instructions and environmental protection practices 2.2 Lock out equipment and set and adjust cutters, feeders, guides and conveyors to suit required dressed product dimensions and available sawn material 2.3 Complete trial run to check equipment operation, accuracy and quality and dimensions of finished work 2.4 Accept or reject trialled material and dispose of according to environmental protection practices 2.5 Adjust equipment settings as necessary
3. Dress timber	3.1 Select and follow the cutting sequence to maximise volume recovery and produce the required dimensions and quantity 3.2 Maintain feed rate appropriate to timber condition and size 3.3 Assess dressing conditions regularly to ensure continuity of supply and processing 3.4 Adjust conditions to optimise feed rate and maintain finished dimensions according to work order 3.5 Regularly evaluate and measure dressed timber dimensions and make adjustments to ensure product quality and required dimensions 3.6 Dispose of incorrect cuts, off-cuts and defective material according to environmental protection practices
4. Complete operator maintenance	4.1 Lock out equipment according to workplace health and safety procedures 4.2 Check cutter for bluntness or damage

© Commonwealth of Australia, 2025 Skills Insight

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	4.3 Remove and replace cutters and blades according to manufacturer recommendations 4.4 Dispose of used cutters according to environmental protection practices 4.5 Keep machine area clear of dust and debris according to workplace health and safety procedures 4.6 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	• Identify quantities of required material within work orders, and count timber • Interpret order sizes and sets up equipment to achieve correct dimensions • Calculate the feed rate to optimise quality and quantity of production output • Measure finished dimensions against specifications and allowable tolerances
Navigate the world of work	• Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Use modes of communication suitable for the purpose to confirm and clarify understanding
Get the work done	• Recognise and respond to routine problems

Assessment Requirements for FWPCOT3266 Dress timber using multi-headed machines

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- followed workplace health and safety requirements and environmental protection procedures for dressing timber using multi-headed machines
- produced dressed timber of one or more of the following types using multi-headed machines according to an individual work order prescribing different dimensions, tolerances and quantity of timber:
  - softwood
  - hardwood
  - treated
  - untreated
- conducted operator maintenance on the multi-headed machine.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to operating multi-headed machines for dressing timber, identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures specific to dressing timber using multi-headed machines:
  - health and safety, with particular emphasis on equipment lockout and the use of personal protective equipment (PPE)
  - use of timber dressing equipment
  - communication reporting lines
  - recording and reporting production outcomes, equipment faults and maintenance requirements

© Commonwealth of Australia, 2025 Skills Insight

- environmental protection practices for timber processing facility settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- typical timber defects and how these affect the ability to produce a quality finished product:
  - warp
  - wane
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- typical dressing problems triggering adjustment of the process to ensure product quality:
  - blunt or damaged cutters
  - burn marks
  - extra cuts
  - excessive cutter marks
  - dimensional errors
- industry standard profiles, lengths, cross-sections and tolerances and applicable terminology
- cutting patterns used on timber to achieve maximum volume recovery
- feed rates and how they affect production output and finished quality of timber
- purpose, features and operation of multi-headed machines for dressing timber:
  - single or multi-headed machines
  - machines cutting on one side of timber only
  - machines cutting two or more sides of timber simultaneously
  - machines incorporating grooving or splitting saws
- methods for assessing cutter condition.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - multi-headed machine for dressing timber
  - maintenance tools and equipment for replacing cutters
  - consumable cutters
  - PPE suitable for dressing timber using multi-headed machines

© Commonwealth of Australia, 2025 Skills Insight

  - timber suitable for dressing operations
- specifications:
  - manufacturer instructions for use and maintenance of equipment
  - work order with specific instructions for dressing timber using multi-headed machines

FWPCOT3268 Plane and sand engineered wood products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to plane and sand the surfaces of engineered wood products in a timber manufacturing facility, optimising product thickness while retaining its integrity.

The unit applies to individuals who work as timber products technicians and production workers. Operators generally work under broad or limited direction to complete routine activities related to their own work, and take responsibility for their work.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3268 Plane and sand engineered wood products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- followed workplace health and safety requirements and environmental procedures for planing and sanding engineered wood product
- planed and sanded engineered wood product in readiness for an application or interim storage
- redistributed material on site using designated equipment
- conducted operator maintenance on planing and sanding equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to operating equipment for planing and sanding engineered wood products, as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace policies and procedures specific to planing and sanding engineered wood products:
  - health and safety, with particular emphasis on equipment lockout and the use of personal protective equipment (PPE)
  - use of timber planing and sanding equipment
  - communication reporting lines
  - recording and reporting production outcomes, equipment faults and maintenance requirements
- environmental protection practices for engineered wood product manufacturing facility settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment

  - disposing of, recycling and reusing timber and other waste
- planning and sanding techniques
- methods of visual inspection of engineered wood products for thickness, finish quality and faults
- characteristics of relevant engineered wood product
- typical flow of material supply in and out of the planing and sanding area
- typical workflow processes and sanding techniques for optimising thickness, finish and quality of engineered wood product
- typical engineered wood product defects and how they affect the ability to produce quality finished product:
  - warp
  - wane
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
  - lifting veneer
  - bonding problems
- key features of, and applicable terminology for, industry standard grades for re-classifying quality and use of planed and sanded engineered wood products
- purpose, features and operation of equipment used to plane and sand engineered wood products:
  - planers or thicknessers
  - surface planers or buzzers
  - drum sanders
  - sanders
  - veneer sanders
  - stroke sanders
  - machine specific dust extraction systems with collection bags
  - hopper-based extraction systems
- methods for assessing condition of planer blades and sanding belts.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - planing and sanding equipment

© Commonwealth of Australia, 2025 Skills Insight

  - dust extraction equipment
  - maintenance tools and equipment for planers and sanders
  - planer blades and sanding belts
  - PPE suitable for planing and sanding engineered wood products
  - engineered wood products suitable for planing and sanding operations
- specifications:
  - manufacturer instructions for use and maintenance of equipment
  - work order with specific instructions for planing and sanding engineered wood product
  - workplace procedures for planing and sanding engineered wood product, including health and safety and emergency procedures and environmental protection procedures
  - template documents for recording production outcomes, equipment faults and maintenance requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3269 Provide specialised timber product solutions

Modification History

Release	Comment
1	New unit. First introduced in FWP Release 2.0. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to provide advice and solutions to customers, clients and other sales staff using advanced/specialised wood and timber product knowledge. It includes advice on product selection, quality and quantity, price, services and warranties with respect to wood and timber products. Clients include domestic and commercial individuals and businesses in both retail and wholesale settings.

This unit requires the ability to source relevant product technical information, develop client solutions that meet safety and design needs, explain product options and impacts, work within established systems including WH&S, quality, chain of custody, and manage client relationships.

The unit applies to job roles including Customer service/salesperson (retail or wholesale), Customer Service Officer, Sales and Merchandising Team Leader, Sales and Merchandising Team Leader (timber products), Timber Adviser, Yard Person.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Merchandising

Elements and Performance Criteria

ELEMENTS	**PERFORMANCE CRITERIA**
Elements describe the essential	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS *outcomes.*	**PERFORMANCE CRITERIA** *information is detailed in the range of conditions.*
1. Develop complete customer solutions	1.1 Establish and clarify scope of work with customer/client, including intended application and environment, and the critical integrity of the structure. 1.2 Identify suitable products by accessing relevant sources of information. 1.3 Convey detailed features, specifications, benefits, impacts of different product options and fixing/construction issues to customer/client to assist buying decisions. 1.4 Accurately determine product quantities and pricing according to customer/client requirements. 1.5 Provide customer/client with accurate product warranty, payment options, delivery, inclusions and other relevant sale-related information.
2. Conduct merchandising activities within legislative, design and organisational systems	2.1 Interpret and apply legislative, design and organisational system requirements to work activities. 2.2 Follow the processes and procedures that deliver products safely to the customer and which are fit for purpose. 2.3 Ensure recommendations comply with legislative, design and building code requirements. 2.4 Interpret and communicate specific fitting and installation instructions or recommendations to customers/clients.
3. Manage customer relations	3.1 Coordinate and manage delivery of services and products to ensure they effectively and efficiently meet customer service standards. 3.2 Ensure effective interpersonal techniques are applied to client interactions. 3.3 Contribute to the development, refinement and improvement of customer service standards, policies and processes. 3.4 Identify customer service problems and make or recommend adjustments to maintain and improve quality of customer service.
4. Select wood and timber for different applications	4.1 Relate properties, characteristics, features, grade, and treatments of wood and timber products to a range of domestic and commercial applications. 4.2 Select the most appropriate wood and timber products to suit customer installation and construction and cross-trade requirements, and end use. 4.3 Confirm selections with manufacturer data and recommended applications. 4.4 Obtain specialist licensed trade installation information from customer and relate to product selection to ensure product integrity is maintained.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	4.5 Provide detailed installation requirements for timber products to timber trade, cross-trade, retail and end use customers.
5. Research and apply new developments in wood, timber and related products	5.1 Use business technologies and networks to access, monitor and select information according to organisation requirements. 5.2 Identify emerging wood and timber technology trends, their uses, impacts and benefits. 5.3 Assess the value of new technologies, services and products to the organisation and marketplace, including ways to promote and advance both organisation and industry. 5.4 Communicate new innovations that may suit end user applications to staff, colleagues and customers.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Learning skills to:	• ascertain applications and explain implications of new and existing products to customers • independently locate, evaluate and organise product and related information in familiar and unfamiliar contexts. • build on, confirm and verify knowledge of technology, products, fixings, applications and installation issues • reflect on customer service experiences and incorporate into customer interactions
Numeracy skills to:	• estimate, measure, calculate and cost product solutions and options
Oral (verbal and non-verbal) communication skills to:	• convey product, technical and sale related information in a manner appropriate to customer/client • confirm and verify own understanding of products and features, applications and issues
Reading skills to:	• interpret technical and product information and data • comprehend product related terminology • extract relevant information from manufacturer product specifications, reference publications and online sources
Writing skills to:	• establish scope of work, clarify product options, record sale related information • convey written product and sale information and pricing appropriate to customer/client

© Commonwealth of Australia, 2025 Skills Insight

Other employment skills to:	• prepare basic sketches • clarify information on customer basic sketches
Research skills	• find solutions to customer needs • to keep up to date with industry products and services

Range of Conditions

Not Applicable

Unit Mapping Information

No equivalent unit.

Assessment Requirements for FWPCOT3269 Provide specialised timber product solutions

Modification History

Release	Comment
1.0	New unit. First introduced in FWP Release 2.0. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- provide accurate and detailed information about wood and timber products to customers/clients
- develop solutions based on customer requirements, including:
  - appropriate wood and timber product selection
  - design/utility issues
  - product handling
  - fixing/installation and treatment requirements and issues
  - quantities
  - pricing
  - warranties
- conduct merchandising activities within legislative, certification and design systems, including WH&S, environmental, quality, design, chain of custody systems and organisational systems
- advise customer from sketches and diagrams and technical specifications
- effectively manage customer relations
- monitor sales process to improve customer satisfaction
- access and interpret standards, reference documents, supplier specifications and related information to select suitable products
- select wood and timber and related products to suit trade and end user requirements

© Commonwealth of Australia, 2025 Skills Insight

- keep up to date on emerging wood and timber technology applications and services.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- common and specialised wood, timber and related products for domestic and commercial use
- properties, characteristics, features, grades and benefits of wood, timber and related products
- different timber treatments, suitable applications and impacts of different product options
- product fixing/construction and cross-trade issues, including fixing options, pre-priming of hardwood, moisture protection for H3, design for moisture shedding, colour or finish.
- sales-related information including pricing, warranty, payment options, delivery options
- specialist licensed trade installation information that impacts on product selection
- aspects of legislative, certification and design systems applicable to merchandising activities, including Workplace Health and Safety (WHS), environmental, design, chain of custody, organisational and reporting/record keeping requirements
- principles and practices for effective customer relationship management
- effective interpersonal communication techniques
- sources to access information on new and emerging technologies and products.

Assessment Conditions

The following resources must be made available:

- computers, keyboards, printers and software used to access information internal and external to the organisation
- legislative, certification and design system documentation including WH&S, environmental, quality, design, chain of custody and organisational systems in print or electronic format
- recording and reporting media in print or electronic format
- customer service standards and related documentation
- manufacturer product specifications, references and related industry literature in print or electronic format.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in the regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT3270 Grade and mark logs

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0

Application

This unit of competency describes the skills and knowledge required to visually assess and measure logs in a commercial forest harvesting environment, to determine the best end-use of individual logs and mark products for identification.

The unit applies to individuals who grade and mark logs at roadside, landing area or timber mill. Operators generally work under broad direction and take responsibility for their work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Core Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to grade and mark logs	1.1 Review log product specifications for species, product usage and size in reference to the grading and marking of logs 1.2 Review production plan, confirm its targets and assess wood flow requirements to ensure efficient operations and overall productivity 1.3 Confirm, identify and report health, safety, environmental and heritage risks of operation in line with standard operating procedures

© Commonwealth of Australia, 2025 Skills Insight

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	and site safety and environmental management plan 1.4 Apply risk control measures in line with standard operating procedures, site operational plan, legislative requirements and industry standards to eliminate or minimise risks 1.5 Identify emergency plan procedures to follow in the event of an emergency 1.6 Select appropriate log size measuring tools and calibration methods 1.7 Calibrate log measuring tools to ensure accuracy of length and diameter measurements
2. Grade and mark logs	2.1 Visually assess logs for species and quality characteristics to determine their best end-use in line with product specifications 2.2 Measure logs and defects for size 2.3 Grade logs and determine logs which are to be recovered 2.4 Mark graded logs for product identification in line with industry standards 2.5 Direct mechanical equipment to conduct log segregation and stacking into product groups 2.6 Tag stacks for identification in line with industry standards and production plan requirements for an optimum transport and logistics cycle time
3. Verify grading and marking logs	3.1 Conduct size accuracy checks by using standard or digital measuring tools to verify that graded logs meet length and diameter specifications and remediate errors 3.2 Verify that marking and tagging has been conducted correctly and display required information 3.2 Mark and report logs that cannot be clearly or safely evaluated for size or quality characteristics

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Skills Insight

Skill	Description
Reading	• read and understand production, safety and environmental management plans, product specifications and industry standards for grading logs
Writing	• record information about logs
Oral Communication	• interact verbally with machine operators on site to create log stacks • use appropriate vocabulary including technical language directly relevant to role
Numeracy	• count logs and measure log diameter and length
Navigate the world of work	• understand main tasks, responsibilities and boundaries of own role • calibrate and use log measuring tools according to workplace procedures
Interact with others	• report log grading and safety information to relevant personnel • participate in conversations relevant to role by responding and explaining as required
Get the work done	• recognise and respond to routine problems • plan ad organise own work activities and resources

Assessment Requirements for FWPCOT3270 Grade and mark logs

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- safely and correctly assessed, measured, graded and marked logs for segregation into product groups in line with specified product best-usage and production plan
- checked risk associated to the operation and applied standard operating procedures
- used log measuring tools and methods to measure logs and logs defects
- applied knowledge of log species, log quality characteristics and defects to grade logs
- identified and assessed log defects
- followed log product specifications and production plan requirements for grading and marking logs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in log product specifications and a production plan
- health and operational hazards or risks related to log grading and marking operations and factors that can change or introduce new hazards
- industry-accepted work health and safety risk control measures, legal obligations of the current Work Health and Safety Acts or Occupational Health and Safety Acts and regulations and requirements of industry standards and/or codes of practice for log grading and marking operations as outlined in workplace procedures and production plan
- industry-accepted warning signs, their correct positioning and procedures to maintain communication and work safety
- required emergency response procedure, including firefighting resources and emergency response

© Commonwealth of Australia, 2025 Skills Insight

- industry-accepted environmental control measures, restrictions, legal obligations of the current Environment Protection Acts and regulations and requirements of industry standards and/or codes of practice for log grading and marking operations as outlined in workplace procedures and production plan
- log species, quality characteristics and defects particular to the site and production system
- regional quality requirements for log products with particular end uses, markets and values
- maximum log damage or defect allowance and minimum quality allowance particular to a production system
- criteria for recycling and re-using logs with significant defects
- log measuring tools for length and diameter measurements
- methods for calibrating and verifying log measuring tools
- techniques and methods for measuring log diameter, length and defects using standard and digital tools
- causes of manual length and diameter measurement error
- industry-accepted methods for product identification.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a forest harvesting site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - logs for grading and marking
  - standard and digital log measuring tools
  - personal protective equipment required for grading and marking logs
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupation Health and Safety Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedure which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to site operational plan, production plan and log product specifications
  - access to site emergency procedure
  - access to workplace standard operating procedure for log segregation and sorting.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4201 Produce complex truss and frame plans and details using computers

Modification History

Release	Comment
1	Replaces superseded equivalent FPICOT4201B Produce complex truss and frame plans and details using computers, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to use computerised systems to produce complex truss or frame plans, including layout production, fabrication and installation instructions. Work is completed in a forest and wood products office setting.

The unit applies to a designer or developer of truss and frame plans.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Interpret plans and loading conditions	1.1 Interpret and assess plans, drawing views and notes; identify loading information, design requirements and restrictions. 1.2 Obtain additional information and data from appropriate personnel or sources. 1.3 Create functional and pictorial image of structure, trusses or frames based on design requirements. 1.4 Refer design requirements outside software limitations to appropriate personnel for resolution.
2. Test and select design options	2.1 Transfer fixed design details to layout data in line with software requirements. 2.2 Specify frame or truss design types, and select timber type and species in line with material suitability and availability. 2.3 Set common industry spacing of frames, trusses and their components to defined design structure in line with industry standards. 2.4 Fix component sizes to clarify and firm design options. 2.5 Select layouts, spacing and sizing of individual structural members progressively in line with software requirements. 2.6 Select, review and revise design details in line with work order.
3. Produce layouts and cutting requirements	3.1 Review design records for design integrity, completeness and consistency in line with certifying authority standards. 3.2 Produce structure layout drawings and truss or frame assembly drawings using appropriate software. 3.3 Produce component cutting detail in line with production requirements and schedules. 3.4 Prepare and document production and installation advice in line with organisational procedures and industry standards. 3.5 Complete and maintain design records and documentation in line with organisational procedures.
4. Provide advice on design and production issues	4.1 Answer questions about designs and assembly requirements clearly and comprehensively. 4.2 Use effective communication techniques to assist and develop production personnel. 4.3 Provide alternative materials and sizes for components within design scope and production requirements. 4.4 Discuss common site problems and select appropriate prevention

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	strategies to ensure future practice meets design requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret numerical data from designs involving height, length, angles, shape, and load • input complex numerical data into software systems for layout, spacing and dimensions of structural members.
Oral communication skills to:	• ask detailed open and closed probe questions and actively listen to clarify contents of designs, plans, drawings and notes • provide clear unambiguous information about designs and assembly requirements • negotiate solutions to site installation problems.
Reading skills to:	• interpret detailed and unfamiliar designs and technical notes.
Writing skills to:	• input clear written text into software systems • produce clear and detailed documents to support interpretation of drawings and assist with production and installation.
Planning and organising skills to:	• plan and organise own work in logical sequence and manage own timing and productivity to complete plans, drawings and documents within deadlines.

Range of Conditions

Not Applicable

Assessment Requirements for FWPCOT4201 Produce complex truss and frame plans and details using computers

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT4201B Produce complex truss and frame plans and details using computers, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- prepare and document computerised plans and details of manufactured timber products in line with an individual design and set of drawing views and notes using appropriate software, systems and techniques
- produce component cutting details
- prepare a package of production and installation advice documents to support interpretation of plans and drawings.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- computer software and hardware used to produce complex truss and frame plans and details including:
  - system functions and capabilities
  - available drawings
  - design limitations
  - methods to input and amend design factors and other data

© Commonwealth of Australia, 2025 Skills Insight

    - methods used to produce structural layout drawings, assembly drawings and component cutting detail
    - methods to store and retrieve drawings and other data
- building and structural regulations for complex timber wall frames, roof and floor trusses
- common industry terminology for all components of complex timber wall frames, roof and floor trusses
- common industry standard layouts, spacing and sizing dimensions of individual members for complex timber wall frames, roof and floor trusses
- relationship between component loads and supports and spans, including
    - details defining mass loads and externally applied loads (wind, surrounding structures, common or special building usage)
    - dimensions defining geometry and loading of individual structural members
- timber species and types that are suitable for the manufacture of complex timber wall frames, roof and floor trusses
- industry and specific organisational:
- processes for producing computerised plans and details for complex timber wall frames, roof and floor trusses
- formats for and inclusions of documents providing production and installation advice.

Assessment Conditions

The following resources must be made available:

- computers, keyboards and industry current software programs used to produce plans and details for complex trusses and frames
- designs, plans, drawing views and notes for complex timber wall frames, roof and floor trusses on which to base plan and details
- template documents for developing production and installation advice
- organisational procedures for preparing and documenting computerised plans and details for complex timber wall frames, roof and floor trusses.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

The following resources must be made available:

- computers, keyboards and industry current software programs used to produce documents
- scientific calculators
- code tables
- designs, plans, drawing views and notes for timber timber roof, wall and floor structures on which to base designs
- organisational procedures for preparing and documenting designs for timber roof, wall and floor structures.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT4203 Plan and coordinate product assembly

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPICOT4203B Plan and coordinate product assembly, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to manage operational logistics for the assembly of timber products. Work involves responsibilities in planning assembly schedules for operators and monitoring and evaluating processes and problems to determine and recommend improvements.

The unit applies to individuals who work as production supervisors in timber manufacturing facilities. They generally demonstrate autonomy, judgement and limited responsibility in known or changing contexts and within established parameters.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Sawmilling and Processing

Wood Panel and Board Production

© Commonwealth of Australia, 2025 Skills Insight

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan assembly operations	1.1 Review production orders, construction plans, workplace health and safety requirements, environmental protection practices and emergency procedures to plan assembly of products 1.2 Identify and report hazards and use personal protective equipment according to workplace requirements and health and safety legislation to maintain safe work practices 1.3 Identify requirements for pre-cut timber components, hardware componentry and jigs, and check availability and monitor supply 1.4 Plan and document product assembly schedules and communicate to operators according to workplace procedures 1.5 Explain construction plans and assembly techniques to operators
2. Coordinate product assembly	2.1 Assist operators to evaluate and resolve component and assembly problems 2.2 Monitor equipment operation and assembly processes and assess effectiveness and ability to maintain a schedule 2.3 Modify assembly process and schedules to ensure optimum performance and communicate changes to operators 2.4 Check completed products and direct to a designated area for storage or despatch and transportation 2.5 Direct processes for rejecting and disposing of sub-standard assembled products according to environmental protection practices 2.6 Obtain production output details from operators and complete and maintain operating logs and assembly records according to workplace procedures 2.7 Investigate and record major processing problems and equipment faults and resolve or report to appropriate personnel
3. Evaluate assembly performance	3.1 Monitor assembly operations and output to determine process improvements 3.2 Analyse systematic problems with construction plans, componentry and equipment for the potential to improve assembly operations 3.3 Document recommended process improvements and communicate to appropriate personnel according to workplace procedures

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Numeracy	• Complete calculations to determine:
	  • material amounts required to satisfy production orders
	  • assembly schedules considering human and equipment resource capacity
	• Complete routine production records involving dimensions and quantities tallied against work orders

Navigate the world of work	• Source, collect and organise data to inform product assembly schedules and process improvement
Interact with others	• Take responsibility for coordinating a team of operators for effective assembly operations
Get the work done	• Take responsibility for planning and organising own workload • Consider how to schedule different production jobs

Assessment Requirements for FWPCOT4203 Plan and coordinate product assembly

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPICOT4203B Plan and coordinate product assembly, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- planned and coordinated product assembly operation according to production and construction plan and workplace health and safety requirements
- determined, documented and communicated assembly schedules for the product assembly operation
- assessed production output during assembly operation for:
  - speed and efficiency of operation
  - quality finish
  - dimensional consistency
- monitored, assessed and modified schedules in response to changing circumstances
- completed operating logs and assembly records
- completed a detailed report about systematic issues arising during assembly operation regarding processes, construction plans, componentry and equipment, and recommended actions for process improvements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to assembling timber products, as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures specific to planning and coordinating product assembly:

© Commonwealth of Australia, 2025 Skills Insight

    - health and safety, including the use of personal protective equipment (PPE)
    - communication reporting lines for operator team members and self
    - documenting assembly schedules and reports
    - recording and reporting systematic equipment faults
- environmental protection practices for forest products factory settings:
    - reducing water and energy use
    - disposing of, recycling and reusing timber
- operational capacity of equipment used to assemble products, with particular emphasis on nail plate presses
- typical flow of material supply in and out of the assembly area
- typical assembly sequences and range of techniques used to assemble timber products
- methods of determining assembly schedules to:
    - maximise equipment and labour use
    - meet customer and production orders within deadlines
- methods used to:
    - assess assembly processes for ability to meet schedules and quality of outcomes
    - diagnose and analyse systematic problems with construction plans, componentry and equipment
- format, content and use of:
    - construction plans
    - assembly schedules
    - operating logs and assembly records
    - process improvement reports.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - tools, equipment and assembly hardware used to assemble timber products
    - PPE suitable for coordinating timber assembly production lines
    - pre-cut sections of timber
- specifications:
    - templates for recording timber product assembly issues and recommendations for improvements
    - production order for quantities and types of assembled timber products
    - construction plan with specifications for assembling timber products
    - workplace procedures for planning and coordinating product assembly, including health and safety and emergency procedures and environmental protection procedures.

© Commonwealth of Australia, 2025 Skills Insight

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4204 Schedule and coordinate load shifting

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT4204B Schedule and coordinate load shifting, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to schedule and coordinate load shifting activities for a range of material handling requirements.

The unit applies to workers who monitor and coordinate load shifting activities for safe and efficient operations in a forest products factory setting.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Timber Manufactured Products

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Schedule load shifting	1.1 Review production and despatch schedules and where required check with appropriate personnel. 1.2 Assess equipment operations for all sections of the organisation.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.3 Determine material handling requirements for loads and schedule required type of equipment to meet requirements. 1.4 Identify movement frequencies and develop material handling schedules. 1.5 Identify and assess variations in material handling requirements and product despatch requirements. 1.6 Adjust material handling schedules to maintain optimal output.
2. Coordinate load shifting	2.1 Coordinate load shifting arrangements for operators to ensure safe and efficient use of equipment. 2.2 Assess operating areas for unsafe conditions, acts and congestion to maintain safety. 2.3 Organise load movement to limit multiple loads being moved at the same time in the same area. 2.4 Resolve difficult load shifting situations and incidents in line with organisational safety procedures. 2.5 Record and report load shifting processes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret details of weights and dimensions of loads from production and despatch schedules and calculate load shifting capacity of equipment.
Oral communication skills to:	• ask and questions and actively listen to clarify contents of production and despatch schedules.
Reading skills to:	• interpret information in production and despatch schedules.
Writing skills to:	• develop and document load shifting schedules in a style and format easily understood by operators • complete basic accurate records of load shifting processes and equipment faults.
Planning and organising skills to:	• source, collect and organise data to inform load shifting schedules • efficiently and logically manage operational logistics for load shifting activities.

Assessment Requirements for FWPCOT4204 Schedule and coordinate load shifting

Modification History

Release	Comment
	Replaces equivalent unit FPICOT4204B Schedule and coordinate load shifting, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- schedule and coordinate load shifting activities in line with production and despatch schedules prescribing quantities and types of material to be shifted.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable fall from heights regulations and compliance requirements
- methods used to schedule load shifting according to staff rosters and availability of equipment
- typical workplace hazards present during load shifting operations and methods of minimising risks
- purpose, features and operation equipment used to shift loads in forest products factories
- use of specific equipment to move materials found in forest product factories:
  - treated paper
  - wood chips
  - flakes
  - wood fibre
  - logs
  - bark

© Commonwealth of Australia, 2025 Skills Insight

    - off-cuts
    - timber
    - raw board
    - panel products
    - veneer
- capacity of load shifting equipment in relation to dimensions and weight
- organisational procedures specific to load shifting:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting load shifting processes and equipment faults.

Assessment Conditions

The following resources must be made available:

- load shifting equipment including one or more of the following:

fork lifts

- loaders
- skid steer loaders
- dozers
- cranes
- truck-mounted loading cranes
- gantry cranes
- a commercial quantity of material to be shifted including one or more of the following:
    - treated paper
    - wood chips
    - flakes
    - wood fibre
    - logs
    - bark
    - off-cuts
    - timber
    - raw board
    - panel products
    - veneer
- production and despatch schedules with specific information about requirements for quantities and types of material to be shifted within the forest products factory
- template documents for recording load shifting processes and equipment faults
- organisational procedures for load shifting
- personal protective equipment required for scheduling and coordinating load shifting for different materials.

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting. Load shifting operations must be present in order that the individual can monitor activities and resolve issues as they arise.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Assessment Requirements for FWPCOT4205 Coordinate log debarking operations

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT4205B Coordinate log debarking operations, which was first released with FPI05 or FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures for log debarking
- produce and implement d***ebarking*** schedules
- assess individual logs for diameter range, curvature, faults, species and moisture content
- coordinate personnel to conduct log debarking to meet established quality specifications and timelines
- identify faults in logs.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational policies and procedures for log debarking
- log debarking procedures and management
- standard diameters and lengths
- log management information for diameter range, curvature, faults, species and moisture content

© Commonwealth of Australia, 2025 Skills Insight

- types of tools and equipment used for log debarking, and procedures for their safe use and maintenance.

Assessment Conditions

The following resources must be made available:

- log debarking equipment
- individual logs for debarking (species, faults, curvature and moisture content)
- tools and equipment used for log debarking
- templates for works orders and debarking schedules
- personal protective equipment required for co-ordinating log debarking operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	steam generation levels. 1.2 Plan and document operational orders and schedules to meet production requirements. 1.3 Plan boiler startup, operation and shutdown in line with production requirements. 1.4 Communicate all information to operators in line with organisational procedures.
2. Coordinate boiler startup and operation	2.1 Check boiler house chemicals for correct labelling to ensure compliance with safety, and regulatory requirements. 2.2 Direct operator processes for completing pre-operational safety and pre start-up checks. 2.3 Monitor boiler startup for correct running conditions and sign on. 2.4 Routinely check continued operation and condition of boiler with operators and assist them to evaluate boiler data and performance. 2.5 Modify generation levels to ensure optimum performance and communicate changes to operators. 2.6 Diagnose problematic boiler operations, calculate required adjustments and communicate to operators. 2.7 Monitor and evaluate boiler operations and output to determine process improvements. 2.8 Direct emergency shutdown processes in cases of fire.
3. Coordinate boiler shutdown, storage and records	3.1 Direct operator processes for shutting down equipment and ensure compliance with organisational safety procedures. 3.2 Check removal of valves and fittings and inspect boiler. 3.3 Assess boiler condition, direct operator cleaning processes and ensure compliance with environmental protection practices. 3.4 Select storage mode and direct operators to store boiler in line with organisational procedures. 3.5 Obtain operating logs and fuel efficiency records from operators and complete operating calculations. 3.6 Document and report operational records, equipment faults and process improvement recommendations to appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete calculations for steam generation levels against production requirements • read basic numerical machine settings to monitor boiler performance • record numerical data involving fuel efficiency.
Oral communication skills to:	• provide clear and unambiguous information and instructions to operators.
Reading skills to:	• interpret documents about production requirements.

Writing skills to:	• develop documents in a style and format easily understood by others:
	  • operational orders and boiler schedules
	  • reports on potential process improvements including rationale for recommendations
	• complete accurate basic records of boiler operations and equipment faults.

Planning and organising skills to:	• source, collect and organise data to inform boiler schedules and process improvement reports • efficiently and logically manage operational logistics for boiler operations.
Teamwork skills to:	• take responsibility for coordinating a team of operators for effective boiler operations.

Assessment Requirements for FWPCOT4206 Plan and coordinate boiler operations

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT4206B Plan and coordinate boiler operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- plan and coordinate boiler operations for different operational periods in line with production requirements for each period
- determine, document and communicate operational orders and boiler schedules for each of the above operational periods
- monitor and assess boiler performance and steam generation levels during each of the above operational periods and modify levels to ensure optimum performance
- complete records for operational outcomes for each of the above periods of operation
- complete a detailed report about systematic issues arising across the operational periods covering problems with processes, outputs and equipment including recommendations for process improvements.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for boiler operations:
  - cleaning plant, tools and equipment
  - disposing of hazardous substances

© Commonwealth of Australia, 2025 Skills Insight

- energy generation capacity of organisational steam generating boilers and methods used to calculate steam and energy generation levels
- energy generation capacity of organisational steam generating boilers and methods used to calculate steam and energy generation levels
- processes for boiler startup, shutdown and storage
- methods of determining boiler schedules to meet production requirements
- range of data used to evaluate boiler performance:
  - steam levels
  - pressure levels
  - energy generation levels
  - heat build-up
  - system overload information
  - test outcomes for water quality and chemicals
  - past performance records
- methods used to:
  - diagnose problems with boiler operations
  - safely handle and store boiler house chemicals
  - inspect boilers after shutdown
- format, content and use of:
  - operational orders
  - boiler schedules
  - operating logs and operational records
  - fuel efficiency records
  - process improvement reports
- organisational procedures specific to planning and coordinating boiler operations:
  - communication reporting lines for operator team members and self
  - documenting operational orders, boiler schedules and reports
  - recording and reporting operational outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- steam-generating boilers, including liquid or vapour restricted to water or steam
- fuel and fuel supply system
- boiler house chemicals and labels
- personal protective equipment suitable for operating steam boilers
- template:
  - operational orders
  - boiler schedules
  - operating logs and operational records
  - fuel efficiency records

© Commonwealth of Australia, 2025 Skills Insight

  - process improvement reports
  - records for equipment faults
- details of production requirements
- organisational procedures for planning and coordinating boiler operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- plan and coordinate heat plant operations for different operational periods in line with production requirements for each period
- determine, document and communicate operational orders and heat plant schedules for each of the above operational periods
- monitor and assess heat plant performance and energy generation levels during each of the above operational periods and modify levels to ensure optimum performance
- complete records for operational outcomes for each of the above periods of operation
- complete a detailed report about systematic issues arising across the operational periods covering problems with processes, outputs and equipment including recommendations for process improvements.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for heat plant operations:
  - cleaning plant, tools and equipment

© Commonwealth of Australia, 2025 Skills Insight

    - disposing of hazardous substances
- energy generation capacity of organisational heat plants and methods used to calculate energy generation levels
- processes for heat plant startup, shutdown and storage
- methods of determining heat plant schedules to meet production requirements
- data used to evaluate heat plant performance:
    - heat levels
    - pressure levels
    - energy generation levels
    - heat build-up
    - system overload information
    - test outcomes for water quality and chemicals
    - past performance records
- methods used to:
    - diagnose problems with heat plant operations
    - safely handle and store heat plant chemicals
    - inspect heat plant after shutdown
- format, content and use of:
    - operational orders
    - heat plant schedules
    - operating logs and operational records
    - fuel efficiency records
    - process improvement reports
- organisational procedures specific to planning and coordinating heat plant operations:
    - communication reporting lines for operator team members and self
    - documenting operational orders, heat plant schedules and reports
    - recording and reporting operational outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- energy generating heat plant
- heat plant chemicals and labels
- personal protective equipment suitable for operating heat plants
- documents and proformas:
    - operational orders
    - heat plant schedules
    - operating logs and operational records
    - fuel efficiency records
    - process improvement reports

© Commonwealth of Australia, 2025 Skills Insight

  - records for equipment faults
- details of production requirements
- organisational procedures for planning and coordinating heat plant operations.
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT4208 Implement workplace sustainability practices

Modification History

Release	Comment
1	New unit. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to implement and monitor sustainability practices and activities in the workplace. It can apply to the full scope of forest and wood products industry workplaces and to operations of all sizes.

The unit applies to job roles including Community Liaison Officer, Environmental Planner and Manager, Forest/Timber Harvester, Forest Planner, Forest Sustainability Manager, Forestry Manager, General Manager, Plantation Manager, Sustainability Manager, Technical Forester, Technical Services Officer, Technical Services Manager and Value Recovery Officer in a forest environment setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for	1.1 Review sustainability policy and provide recommendations

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
implementation of workplace sustainability practices	for integrating new sustainability practices into changed or new operational processes and procedures 1.2 Confirm resource requirements and timelines for implementation of changes in consultation with appropriate personnel. 1.3 Confirm changed or new procedures, processes and plans to facilitate implementation.
2. Implement workplace sustainability practices	2.1 Communicate changed or new operational processes and procedures resulting from changed approach to sustainability. 2.2 Monitor staff implementation of processes and procedures that incorporate new approaches to sustainability and assist as required. 2.3 Make recommendations to update procedures and processes.
3. Report on effectiveness of workplace sustainability practices	3.1 Measure operational performance against targets and indicators on an ongoing basis. 3.2 Report performance against targets and indicators and recommend operational improvements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Oral communication skills to:	• Provide clear unambiguous instructions on changed operational practices to staff members.
Reading skills to:	• Interpret complex and unfamiliar sustainability policy.
Writing skills to:	• Complete basic reports of performance of sustainability practices against targets.
Technology skills to:	• Use a computer, keyboard and software to prepare reports.

Unit Mapping Information

Assessment Requirements for FWPCOT4208 Implement workplace sustainability practices

Modification History

Release	Comment
1	New unit. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Interpret the contents of an organisation's sustainability policy to identify at least two changed or new operational processes and/or procedures for their work area of responsibility.
- Communicate the relevant operational processes and procedures and related sustainability targets to staff members and monitor implementation.
- Measure operational performance from the identified changes against related sustainability targets.
- Complete a basic written report on performance against sustainability targets and indicators and recommended further operational improvements.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Workplace practices that incorporate economic, social and environmental sustainability approaches.
- Impacts of forest and wood products industry production processes on the environment and environmental protection practices including the following:
  - reducing water and energy use
  - cleaning of plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
  - reducing use of toxic materials and hazardous chemicals
  - minimising resource use through changes in process, facility design and management.
- Content of the sustainability policy for the work area of responsibility.

© Commonwealth of Australia, 2025 Skills Insight

- Operational processes and procedures for the work area of responsibility.
- Change management principles and methods for implementing sustainability practices.
- Types of targets and performance indicators for effectiveness of sustainability practices and methods to monitor performance against targets.
- Organisational procedures for recording and reporting performance against targets.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers, software and other resources used to prepare and maintain reports.
- Worksheets and proformas commonly used to record targets and performance indicators and related data
- Organisational sustainability policy and other related policies and procedures

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPCOT5201 Implement sustainable forestry practices

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5201B Implement sustainable forestry practices which was first released with FPI11 Forest and Forest Products Training Package Version 2.

Application

This unit of competency describes the outcomes required to prepare and implement environmentally sustainable forest industry practices. It requires an ability to undertake consultative and audit processes to assess the effectiveness of environmental management strategies and to identify areas for change, or improved practice. Work is completed in a forest, equivalent or other suitable setting.

The unit applies to job roles including Community Liaison Officers, Designer (Manufacturing and Engineered Wood Products), Environmental Planners and Managers, Forest Auditor or Forest Planner, Forest Sustainability Manager, Forestry Manager, General Manager, Plantation Manager, Sustainability Manager, Technical Forester, Technical Services Officer, Technical Services Manager and Value Recovery Officer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

ELEMENTS *essential outcomes.*	**PERFORMANCE CRITERIA** *text is used, further information is detailed in the range of conditions.*
1. Implement environmentally sustainable forest management strategies	1.1 Develop and implement environmentally sustainable strategies for forest management. 1.2 Use consultative processes to negotiate and agree on strategy processes, objectives and timelines. 1.3 Assess strategies for effectiveness in reducing waste disposal. 1.4 Revise strategies to ensure ongoing improvements.
2. Manage integrity of water bodies	2.1 Determine appropriate strategies to manage integrity of water bodies in order to protect flora, fauna, culturally significant landscapes, natural or anthropogenic formations and constructions 2.2 Source and use water from locations other than mains water in line with organisational guidelines. 2.3 Manage and optimise use of run-off water and minimise pollutants. 2.4 Develop planting strategies to effectively and appropriately use available water supply and manage run-off.
3. Manage integrity of soil	3.1 Determine appropriate strategies to manage integrity of soil in order to protect flora, fauna, culturally significant landscapes, natural or anthropogenic formations and constructions 3.2 Minimise wind and water erosion by using appropriate species and planting patterns. 3.3 Manage nutrients and texture of the soil to maintain soil productivity. 3.4 Maintain soil integrity in line with rainfall, irrigation and water strategies in place.
4. Complete environmental audit	4.1 Determine need for an environmental management audit 4.2 Conduct environmental management audit in line with organisational policies and procedures. 4.3 Cover all environmental considerations relevant to site operations. 4.4 Report audit outcomes and develop detailed and verifiable recommendations for improvements to environmental protection practices.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Analyse quantitative information and data.
Oral communication skills to:	• Hold high-level consultative discussions to generate ideas for and negotiate content of environmental management strategies.
Writing skills to:	• Prepare audit reports where precise meaning is required and rationale for recommendations is justified.
Technology skills to:	• Use a computer, keyboard and software to prepare audit reports.

Assessment Requirements for FWPCOT5201 Implement sustainable forestry practices

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5201B Implement sustainable forestry practices which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Develop and document environmentally sustainable forest management strategies for a given forestry operation site.
- Incorporate strategies and practices to protect flora, fauna, culturally significant landscapes, natural or anthropogenic formations and constructions through managing the following issues:
  - waste disposal
  - managing the integrity of water bodies
  - managing integrity of soil
  - effective use of irrigation and watering systems
- Complete an environmental management audit for a given site where forestry operations are present; report outcomes and document recommendations for improvements to environmental protection practices.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Purpose and key content of environmental protection laws applicable to forestry operations.
- Key content of current government and industry environmental sustainability initiatives, codes of practice and guidelines.
- Environmentally sustainable management strategies and protection practices for forest settings:

© Commonwealth of Australia, 2025 Skills Insight

  - minimising temporary, short-term, long-term and permanent damage to natural flora, fauna and landscape
  - returning the environment to its original or near to original condition on completion of activity
  - soil and water protection
  - management of fire and weeds
  - disposing of, recycling and reusing timber and other waste
  - composting waste
  - safely cleaning plant, tools and equipment
  - protecting flora and fauna
  - maintenance of culturally significant landscapes, natural or anthropogenic formations and constructions.
- Energy flow and food web frameworks.
- Strategies to manage integrity of water bodies including methods to minimise effects of common pollutants on water bodies.
- Irrigation and watering strategies that aim to:
  - minimise evaporation
  - minimise run-off
  - accurately deliver water.
- Strategies to manage soil integrity, including:
  - appropriate species and planting patterns to minimise wind and water erosion
  - methods for managing nutrients and stages of nutrient cycling.
- Soil testing processes and results interpretation.
- Range of environmental considerations relevant to environmental site audits, including:
  - topography
  - water use
  - waste emissions.
- Format, content and use of audit reports.
- Organisational and site standards, policies and procedures for sustainable forestry practices.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to prepare environmental management strategies, plans and audit reports.
- Worksheets, checklists and other proformas commonly used to conduct an environmental management audit
- Organisational and site standards, policies and procedures for sustainable forestry practices.

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or other equivalent or suitable environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT5202 Manage forestry information and interpretations programs

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5202B Manage forestry information and interpretations programs which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to plan, promote and review forestry information and interpretation programs which can be delivered to internal and external client groups. Programs aim to enhance an understanding of forest growing and management practices.

The unit applies to job roles including Community Liaison Officer, Designer (Manufacturing and Engineered Wood Products), Environmental Planner and Manager, Forest/Timber Harvester, Forest Auditor or Forest Planner, Forest Sustainability Manager, Forestry Manager, General Manager, Plantation Manager, Sustainability Manager, Technical Forester, Technical Services Officer, Technical Services Manager and Value Recovery Officer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS *essential outcomes.*	**PERFORMANCE CRITERIA** *demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Identify program strategies	1.1 Source information relevant to information and interpretation programs. 1.2 Monitor trends and developments to provide effective information and interpretation programs. 1.3 Evaluate industry trends, client needs, community issues and organisational practices. 1.4 Determine objectives and strategies for information and interpretation programs to meet client groups and organisational needs.
2. Plan information and interpretation programs	2.1 Determine and develop program topics in consultation with appropriate personnel. 2.2 Integrate information and interpretation programs with other relevant organisational programs and activities. 2.3 Determine and document measurable performance indicators to judge program effectiveness. 2.4 Clearly document plan and performance indicators and communicate to appropriate personnel.
3. Promote and monitor information and interpretation programs	3.1 Promote information and interpretation programs to appropriate client groups, in line with documented plan and organisational procedures. 3.2 Establish and implement program monitoring mechanisms. 3.3 Monitor promotional activities in consultation with client groups and appropriate personnel.
4. Evaluate programs	4.1 Evaluate programs against documented plan and objectives and data from monitoring activities 4.2 Analyse programs to verify effectiveness in meeting objectives and to identify future program improvements. 4.3 Prepare recommendations for future programs based on consultation and analysis.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Oral communication skills to:	• Hold high-level consultative discussions to generate ideas for and negotiate content of information and interpretation programs.
Reading skills to:	• Interpret complex information in a range of internal and external source documents to plan information and interpretation programs.
Writing skills to:	• Develop and document comprehensive program plans. • Clearly articulate key performance indicators in quantifiable language. • Report on effectiveness of programs and potential improvements including rationale for recommendations.
Planning and organising skills to:	• Source, collect and organise a range of data to inform program content • Plan and manage own timing and productivity to plan, implement and evaluate information and interpretation programs.
Technology skills to:	• Use a computer, keyboard and software to prepare program plans, content and promotional material.

Assessment Requirements for FWPCOT5202 Manage forestry information and interpretations programs

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5202B Manage forestry information and interpretations programs which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Develop, promote and evaluate information and interpretation programs for at least one client group to be chosen from the following list:
  - people at any level in the organisation who operate within or for the forest
  - people outside the organisation who operate within or for the forest
  - people affected by organisational decisions or actions
  - people to whom the organisation provides programs to meet public and social accountability requirements
  - school children
  - people with an interest in the forest.
- For the above program/s, develop and document comprehensive program plans incorporating:
  - measurable objectives
  - key program topics
  - key performance indicators and mechanisms to evaluate programs
  - promotional methods and activities.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Trends in community perception of forest growing and management practices

© Commonwealth of Australia, 2025 Skills Insight

- Aims of providing information and interpretation programs to a range of client groups, including the following:
  - people at any level in the organisation who operate within or for the forest
  - people outside the organisation who operate within or for the forest
  - people affected by organisational decisions or actions
  - people to whom the organisation provides programs to meet public and social accountability requirements
  - school children
  - people with an interest in the forest
- Common attributes of those client groups, including :
  - information and learning needs and quality expectations
  - program topics of interest
  - characteristics, including language, literacy and numeracy skills, cultural background, and previous experience and knowledge
- Role of interpretation in creating a powerful learning experience
- Current interpretive theory, delivery methods, activities and media
- Features and benefits of different delivery strategies that may be used, including the following:
  - face-to face
  - in the field
  - classroom delivery
  - community visits
  - computer-based presentation techniques and tools
  - seminars
  - talks
  - lectures
  - information in in-house publications
  - exhibitions
- Format, content and use of plans for the delivery of information and interpretation programs
- Features, benefits and practical application of promotional activities commonly used to promote information and interpretation programs internally and externally, including the following media:
  - advertising
  - brochures
  - in-house promotions
  - public relations activities
  - websites
  - social media
  - trade and consumer shows and community events
  - signage and display

© Commonwealth of Australia, 2025 Skills Insight

- Creative writing techniques used for the content of promotional materials
- Ways to express performance indicators in quantifiable language
- Methods to evaluate program effectiveness against plans, aims and performance indicators

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to document plans and reports, to prepare promotional material and to evaluate program effectiveness

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPCOT5203 Manage installation and commissioning of equipment

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5203B Manage installation and commissioning of equipment, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan and manage the installation and commissioning of equipment to ensure compliance with budgetary, legal and contractual requirements.

The unit applies to managers or supervisors of timber manufacturing facilities where acquisition of new equipment is required to update or extend existing production targets.

Licensing, legislative, regulatory or certification requirements apply to this unit but may differ according to state or territory jurisdiction. Refer to state or territory licensing body.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Sawmilling and Processing

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Prepare installation plan	1.1 Prepare written plan for installation and commissioning of specified equipment including management and reporting procedures. 1.2 Check equipment specifications for intended operating conditions and document specifications.
2. Coordinate and monitor installation compliance	2.1 Coordinate arrangements for installing and commissioning equipment including required legal, insurance and safety requirements. 2.2 Coordinate contract arrangements for installation and commissioning of equipment in line with organisational procedures. 2.3 Monitor installation process, including testing, and ensure compliance with contractual requirements. 2.4 Address variations to ensure installation meets specification requirements.
3. Manage installation schedules, legalities and budgets	3.1 Monitor and ensure compliance with legal, environmental and organisational safety procedures for installing and commissioning equipment and systems. 3.2 Monitor installation process to ensure compliance with installation specifications, schedule and budget. 3.3 Adjust budget and scheduling processes in line with variations. 3.4 Document and report deviations to appropriate personnel. 3.5 Document administration of regulatory requirements using formal organisational processes.
4. Conduct trials to confirm operating status of equipment	4.1 Trial run equipment operations and evaluate performance against requirements. 4.2 Adjust equipment to achieve performance outcome specifications. 4.3 Match equipment operating requirements to employee duties and communicate to appropriate personnel. 4.4 Complete and process appropriate records, including maintenance and machine specification documentation. 4.5 Assess completed work to confirm required specifications have been met. 4.6 Prepare records and reports on completed work in line with organisational procedures.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret and calculate complex numerical data in equipment specifications and budgets.
Reading skills to:	• interpret complex information in source documents including equipment specifications, testing requirements and supply contracts.
Writing skills to:	• develop and document comprehensive installation and commissioning plans and reports.
Planning and organising skills to:	• source, collect and organise data to inform installation and commissioning plans • plan and manage own timing and productivity to manage installations.
Problem-solving skills to:	• analyse budgetary and scheduling problems, consider various solutions and determine variations.
Technology skills to:	• use a computer, keyboard and software to prepare plans and reports.

Assessment Requirements for FWPCOT5203 Manage installation and commissioning of equipment

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5203B Manage installation and commissioning of equipment, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- develop comprehensive written plans for the installation and commissioning of equipment
- demonstrate how to commission equipment in line with the above plans including relevant legal, financial and technical documentation
- develop a comprehensive in-house maintenance schedule for equipment to be commissioned.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- legal, safety and insurance requirements for installing and commissioning equipment
- typical types of equipment subject to installation and commissioning and time taken to complete processes
- typical schedule of processes required to install and commission equipment:
  - installation
  - alignment and adjustment

© Commonwealth of Australia, 2025 Skills Insight

    - testing
    - operator training
- format and content of budgets for installation and commissioning of equipment
- format, content and use of:
    - plans for installation and commissioning of equipment
    - in-house maintenance specifications for equipment
- key components of contracts with suppliers:
    - terms and obligations of parties
    - terms of trade
    - exclusion clauses
    - dispute resolution clauses
    - termination of contracts
- typical services provided by suppliers of new equipment:
    - installation
    - alignment and adjustment
    - testing
    - operator training
    - backup support
- organisational procedures for documenting plans and reports.

Assessment Conditions

The following resources must be made available:

- computers, keyboards, printers and software used to document plans and reports
- comprehensive information about the equipment to be commissioned and installed to determine plans and testing requirements
- budgets for installation and commissioning of equipment
- supplier contracts
- template in-house maintenance specifications for equipment
- template plans for installation and commissioning of equipment
- organisational procedures for documenting plans and reports.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

ELEMENTS	PERFORMANCE CRITERIA
	appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete complex calculations involving production downtime, required time and costs for labour, equipment and consumables for maintenance activities • interpret and record complex numerical data associated with testing equipment.
Reading skills to:	• interpret complex information in source documents to plan maintenance:
Writing skills to:	• develop and document comprehensive maintenance schedules in a style and format easily understood by production and other personnel • clearly and accurately record and report on maintenance outcomes.
Planning and organising skills to:	• source, collect and organise data to inform maintenance schedules • plan and manage own timing and productivity to complete initial and amended maintenance schedules.
Problem-solving skills to:	• analyse scheduling problems, consider various solutions and make adjustments.
Technology skills to:	• use a computer, keyboard and software to prepare maintenance schedules and reports.

Assessment Requirements for FWPCOT5204 Organise enterprise maintenance programs

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5204B Organise enterprise maintenance programs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- develop and document whole of organisational maintenance schedules for an operational period of three months
- develop work plans for the maintenance of individual pieces of static equipment to include:
  - maintenance sequence
  - use of consumables
  - labour requirements
- take appropriate readings, measurements and recordings and compare to equipment specifications.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- types of organisational equipment subject to maintenance and time taken to complete processes

© Commonwealth of Australia, 2025 Skills Insight

- features of different types of maintenance:
  - scheduled proactive
  - unscheduled reactive
  - emergency repairs
- methods used to schedule maintenance to minimise production downtime and according to availability of maintenance staff and equipment
- format, content and use of:
  - maintenance schedules
  - maintenance work plans
  - maintenance records and reports
- location and key aspects of :
  - manufacturers' equipment specifications including those for service requirements and maintenance intervals
  - testing and certification requirements and schedules for organisational equipment
- sources of information on:
  - costs for maintenance labour, equipment and consumables
  - staff maintenance skills
  - organisational production schedules
- organisational procedures specific to planning and completing maintenance:
  - communication reporting lines
  - recording and reporting maintenance schedules, work plans and outcomes.

Assessment Conditions

The following resources must be made available:

- computers, keyboards, printers and software used to document maintenance schedules and reports
- equipment for which tests are conducted
- measuring equipment used to test equipment readings
- manufacturers' equipment specifications including those for service requirements and maintenance intervals
- production schedules and staff rosters
- information on costs for maintenance labour, equipment and consumables
- template documents:
  - maintenance schedules
  - maintenance work plans
  - maintenance records and reports
- organisational procedures for planning and completing maintenance.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

© Commonwealth of Australia, 2025 Skills Insight

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT5205 Develop biohazard contingency plans

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5205A Develop biohazard contingency plans which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to develop plans to manage the risk of biohazard incidents involving fungal, viral, bacterial, insect and vertebrate infestations. Plans are developed to ensure hazards are controlled and that any infestation has minimal social, economic and environmental impact. The unit applies to the full scope of forest and wood products industry workplaces and to operations of all sizes.

The unit applies to job roles including Environmental Planners and Managers, Forest/Timber Harvester, Forest Planner, Forest Sustainability Manager, Forestry Manager, General Manager, Plantation Manager, Sustainability Manager and Technical Forester.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Review legal and system requirements	1.1 Identify legal, safety and environmental protection requirements for managing biohazards. 1.2 Review traceability chain for biohazard documentation to ensure compliance with appropriate standards. 1.3 Evaluate organisational biohazard contingency management practices. 1.4 Identify communication protocols for inclusion in the contingency plan.
2. Prepare a contingency plan	2.1 Identify the range of potential biohazards present in organisational operations. 2.2 Estimate potential social, economic and environmental impacts of biohazard infestations. 2.3 Complete risk assessment for the potential of biohazard infestations. 2.4 Develop controls and action plans to limit the spread of infestation in that event; include in the contingency plan. 2.5 Review operational procedures to ensure adequate risk controls and contingency plan are in place. 2.6 Identify routine infestation treatments and action plans for inclusion in contingency plan. 2.7 Incorporate communication protocols in the contingency plan. 2.8 Document training and induction processes for workforce involved with the implementation of risk controls.
3. Ensure effectiveness of contingency plan	3.1 Organise support and resources to enable the ongoing functionality of the contingency plan. 3.2 Implement continuous improvement processes to ensure plan remains effective and gain approval for changes. 3.3 Monitor activities on an ongoing basis to identify potential biohazard incidents and implement changes to plan.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Calculate complex numerical data to establish economic impacts of

© Commonwealth of Australia, 2025 Skills Insight

	biohazard infestations.
Reading skills to:	• Interpret complex information in a range of internal and external source documents to develop effective biohazard contingency plans.
Writing skills to:	• Develop and document comprehensive biohazard contingency plans in a style and format easily understood by the full scope of organisational employees.
Planning and organising skills to:	• Source, collect and organise a range of data to inform biohazard contingency plans. • Plan and manage own timing and productivity to complete initial and amended plans.
Technology skills to:	• Use a computer, keyboard and software to prepare biohazard contingency plans.

Assessment Requirements for FWPCOT5205 Develop biohazard contingency plans

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5205A Develop biohazard contingency plans which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Develop a comprehensive written plan to manage the risk of biohazard incidents involving fungal, viral, bacterial, insect and vertebrate infestations.
- Incorporate these inclusions in the plan:
  - risk assessment for the potential of biohazard infestations from operational activities
  - estimates of social, economic and environmental impacts of biohazard infestations
  - routine infestation treatments and action plans to avoid infestations
  - controls and action plans which would be used in the event of an infestation to limit the spread
  - training and induction processes to communicate responsibilities for implementing plans.
- Organise required support and resources
- Review plan and incorporate improvements

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Purpose and key content and of applicable commonwealth, state or territory legislation and regulation relevant to managing biohazards and controlling infestations.
- Industry and organisational standards for managing the traceability chain of biohazard documentation.

© Commonwealth of Australia, 2025 Skills Insight

- Characteristics of a range of potential biohazards present in forest and wood products industry operations, including:
  - fungal hazards
  - viral hazards
  - bacterial hazards
  - insect hazards
  - vertebrate hazards.
- Methods used to control biohazard infestations and limit the spread, including:
  - eradication
  - quarantine
  - fumigation
  - use of pesticides
  - use of biological controls
  - culling of infected plants.
- Economic impacts of biohazard infestations and methods used to estimate monetary losses, including:
  - loss of forest values
  - loss of current markets
  - loss of potential markets
  - damage to trading status.
- Key features of social and environmental impacts of biohazard infestations.
- Purpose, format, content and use of biohazard contingency plans.
- Methods used to train personnel on the content of biohazard contingency plans and their role in implementing it.
- Organisational procedures for documenting and communicating plans.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to prepare a biohazard contingency plan.
- Applicable commonwealth, state or territory legislation and regulations relevant to managing biohazards and controlling infestations.
- Industry and organisational standards for managing the ***traceability chain*** of biohazard documentation.
- Operational procedures for managing risks of biohazard infestations.
- Worksheets and proformas commonly used to develop, implement, monitor and evaluate a biohazard contingency plan.
- Organisational procedures for documenting and communicating plans.

FWPCOT5206 Implement forestry chain of custody certification system

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to manage operational logistics to implement forestry chain of custody certification systems for certified wood and forest products. It can apply to the full scope of forestry industry workplaces and to operations of all sizes.

The unit applies to job roles including Forest/Timber Harvester, Forest Planner, Forest Sustainability Manager, Forestry Manager, General Manager, Plantation Manager, Sustainability Manager, Technical Forester, Technical Services Officer, and Technical Services Manager.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Confirm system requirements	1.1 Identify key requirements of relevant laws to confirm understanding and ensure consistency of interpretation and application to chain of custody requirements. 1.2 Clarify the relationship between chain of custody certification and forestry certification systems to ensure integration and compatibility of both systems. 1.3 Review traceability chain for documentation to ensure compliance with appropriate standards. 1.4 Review chain of custody certification system manual for applicability to work areas within the organisation.
2. Comply with system requirements	2.1 Arrange internal auditors for chain of custody system and conduct appropriate training. 2.2 Distribute traceability chain records and instruct appropriate personnel on how to enter relevant information. 2.3 Conduct training and induction on chain of custody certification system manual for work areas covered by the chain of custody system. 2.4 Manage chain of custody activities and audits across work areas to minimise non-compliance. 2.5 Report incidents of non-compliance in line with legal and organisational requirements. 2.6 Complete traceability chain records and store in line with chain of custody certification system manual requirements. 2.7 Report inadequacies in chain of custody certification system manual which may contribute to non- compliance.
3. Provide system support	3.1 Incorporate audit recommendations into a system improvement plan to rectify non-compliances and improve processes. 3.2 Contribute to continuous improvement process to ensure system remains effective.
4. Document the operation and monitoring of the system	4.1 Prepare information on system operation and disseminate to relevant internal and external personnel in line with system communication plan. 4.2 Periodically prepare reports on system operation identifying operational problems and disseminate to relevant internal and

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	external personnel. 4.3 Prepare reports on any identified breaches of compliance and disseminate to relevant internal and external personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Oral communication skills to:	• Provide clear unambiguous instructions on the chain of custody system and its requirements to the full scope of organisational employees.
Reading skills to:	• Interpret complex and sometimes unfamiliar information to ensure compliance with chain of custody certification systems: • laws or plain English equivalent documents • Australian Standards • internal system manuals • audit reports.
Writing skills to:	• Develop and document comprehensive information in chain of custody records and reports.
Planning and organising skills to:	• Source, collect and organise a range of data to inform compliance activities. • Efficiently and logically manage operational logistics for organisational compliance with chain of custody certification systems.
Technology skills to:	• Use a computer, keyboard and software to prepare and maintain records and reports.

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Coordinate all aspects of a chain of custody certification system to ensure traceability of chain of custody system documentation and compliance with appropriate standards.
- Develop and deliver one training session for operators in one work area on chain of custody systems and their role in completing and lodging required documentation.
- Develop and deliver internal auditor training to three internal auditors.
- Coordinate all processes for one internal chain of custody certification system audit including:
  - preparation of all required documents
  - responding to audit reports and providing clear evidence of remedial actions taken for non-compliant issues.
- Complete the following reports:
  - system improvement plan for an audit
  - a report on periodic system operation
  - a report on breaches of compliance.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Purpose and key content and of the Illegal Logging Prohibition Act 2012 or superseding law.
- Purpose and key content of forestry certification standards and systems:
  - Australian Standard (AS) 47072006 Chain of custody for certified wood and forest products

Assessment Requirements for FWPCOT5207 Implement sustainability in the workplace

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5207A Implement sustainability in the workplace which was first released with FPI11 Forest and Forest Products Training Package Version 2.2 Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Assess the contents of a sustainability policy to:
  - document an implementation plan
  - communicate changes to operational processes and procedures to staff members
  - communicate targets and indicators to staff members
- Monitor workplace achievements against action plan and targets.
- Complete a comprehensive written report evaluating effectiveness of policy and recommended improvements.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Features, at an in-depth level of understanding, of different aspects of sustainability:
  - economic
  - social
  - environmental.
- Workplace practices that incorporate economic, social and environmental sustainability approaches.
- Impacts of forest and wood products industry production process on the environment and environmental protection practices, at an in-depth level of understanding, for the following:
  - reducing water and energy use

© Commonwealth of Australia, 2025 Skills Insight

    - cleaning of plant, tools and equipment
    - disposing of, recycling and reusing timber and other waste
    - reducing use of toxic materials and hazardous chemicals.
    - minimising resource use through changes in process, facility design and management
- Content of the sustainability policy
- Operational processes and procedures
- Change management principles and methods for implementing sustainability policy and practices.
- Types of targets and performance indicators for effectiveness of sustainability practices and methods of communicating these to team members.
- Methods to monitor performance against targets.
- Format, content and use of:
    - implementation action plans
    - evaluation reports.
- Organisational procedures for recording and reporting evaluation outcomes.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to prepare and maintain records and reports.
- Documents and proformas commonly used to implement and evaluate action plans.
- Organisational sustainability policy.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPCOT5208 Build and maintain community relationships

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5208B Build and maintain community relationships unit which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to build and maintain community relationships. It includes setting parameters for relationships and partnerships, providing information about community engagement and building the community engagement capacity within the organisation. It can apply to the full scope of forest and wood products industry workplaces and to operations of all sizes.

The unit applies to job roles including Community Liaison Officers, Designer (Manufacturing and Engineered Wood Products), Environmental Planners and Managers, Forest/Timber Harvester, Forest Auditor or Forest Planner, Forest Sustainability Manager, Forestry Manager, General Manager, Plantation Manager, Sustainability Manager, Technical Forester, Technical Services Officer, Technical Services Manager and Value Recovery Officer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

ELEMENTS *essential outcomes.*	**PERFORMANCE CRITERIA** *text is used, further information is detailed in the range of conditions.*
1. Set parameters for community relationships or partnerships	1.1 Utilise a community engagement framework to assist in analysing and setting parameters for community relationships or partnerships. 1.2 Establish purpose and parameters for various community relationships or partnerships in consultation with relevant community stakeholders. 1.3 Use a range of strategies and opportunities appropriate to both individual and community needs.
2. Provide information relating to community engagement	2.1 Assess current community understandings of the organisation. 2.2 Communicate information about rights and responsibilities of individuals and communities to relevant personnel. 2.3 Communicate opportunities for community involvement in organisational processes and decision making, by using methods appropriate for the diverse needs of the community.
3. Build community engagement capacity	3.1 Tap into informal and formal community networks to strengthen local capital and to ensure ongoing capacity. 3.2 Manage dynamics within and across relationships or partnerships. 3.3 Allocate resources to manage partnerships and community relationships. 3.4 Identify barriers to community engagement and formulate and implement solutions in line with the community context. 3.5 Implement mechanisms for communities to raise their own issues with the organisation, in line with the community context. 3.6 Promote and resource strategies to build community capacity.
4. Document and report on community relationships or partnerships	4.1 Report outcomes of community relationships or partnerships to relevant stakeholders. 4.2 Provide feedback to participants on how the outcomes have informed planning or decision making. 4.3 Review extent of community engagement capacity in light of outcomes.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Learning skills to:	• Continually update knowledge of individual and community perceptions and concerns with the organisation's practices.
Oral communication skills to:	• Interact appropriately with a variety of community partners to explain complex and formal policies. • Establish and foster transparent, trusting relationships or partnerships with individuals and communities. • Work with diverse communities using a range of communication styles to suit different audiences and purposes.
Writing skills to:	• Write recommendations and prepare community engagement reports requiring complex language structures and precision of expression. • Prepare community engagement information requiring the presentation of complex information, using simple language structures and precision of expression.
Planning and organising skills to:	• Coordinate community engagement, including relationship building, networking, negotiation, conflict management and risk management. • Maintain multiple and potentially conflicting relationships or partnerships.
Problem-solving skills to:	• Mediate, negotiate and attempt to obtain consensus between parties. • Use lateral thinking to provide solutions and overcome barriers to community engagement.
Technology skills to:	• Use a computer, keyboard and software to prepare correspondence with community stakeholders and to prepare organisational reports.

Assessment Requirements for FWPCOT5208 Build and maintain community relationships

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5208B Build and maintain community relationships unit which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Document a strategy to engage with two different and diverse community groups. The strategy must work within a community engagement framework and cover:
  - characteristics and demographics of the local community
  - organisational opportunities for involvement of a local community
  - constraints and barriers to community engagement.
  - purpose and parameters for the relationship or partnership
  - benefits and constraints for both parties
  - rights and responsibilities of the community groups to engage in organisational decision making processes
  - how consultation and communication will occur between both parties
  - mechanisms for the community groups to raise their own issues with the organisation
  - how the organisation will build the capacity of the community groups to engage in with the organisation.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Community engagement theory and principles.
- Strategies, practices and techniques for community engagement.
- Relationship and partnership building principles and techniques.

© Commonwealth of Australia, 2025 Skills Insight

- Communication styles appropriate for establishing and fostering transparent, trusting relationships or partnerships with individuals and communities.
- Leadership principles and the management of community engagement expectations.
- Strategies and processes for consultation with the community.
- Processes of individual advocacy and group advocacy.
- Organisational opportunities for community involvement.
- Constraints and barriers to community engagement.
- Demographic features of the local community, including:
  - socio-economic diversity
  - gender diversity
  - cultural mix
  - household structures
  - education levels
  - political orientations
  - religious beliefs
  - industry and business structures.
- Characteristics of local communities and factors affecting community engagement, such as:
  - dynamics of community
  - community power structures
  - big politics versus community politics (big 'P' v little 'p')
  - collaborations
  - formal and informal community networks, partnerships and lobby groups
  - strength and views publicised by business community and local media organisations.
- Organisational requirements, policies and procedures for the following:
  - building and maintaining community relationships
  - communication and media engagement.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to prepare correspondence with community stakeholders and to prepare organisational reports.
- Access to sources of local community data
- Current journals, Australian and international case studies on community engagement.
- Organisational policies and procedures for building and maintaining community relationships.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

© Commonwealth of Australia, 2025 Skills Insight

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPCOT5209 Manage tree harvesting to minimise environmental impact

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5209B Manage tree harvesting to minimise environmental impact which was first released with FPI11 Forest and Forest Products Training Package Version 2.2

Application

This unit of competency describes the outcomes required to plan and manage tree harvesting to minimise environmental impact and by-product while maximising yields. It applies to a variety of settings including forest environment (native and plantation), agroforestry and farm forestry.

The unit applies to job roles including Environmental Planner and Manager, Forest/Timber Harvester, Forest Planner, Forest Sustainability Manager, Forestry Manager, Plantation Manager, Sustainability Manager, and Technical Forester.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Develop tree harvesting plan	1.1 Analyse workplace health and safety (WHS), environmental and regulatory requirements for the design and operation of harvest activities. 1.2 Research and analyse tree harvesting requirements. 1.3 Consult stakeholders as an integral part of the planning process. 1.4 Identify and calculate available timber. 1.5 Develop tree harvesting plan to ensure maximum yields while minimising environmental impact and by-product. 1.6 Gain approval for plan and inform work teams.
2. Initiate pre-harvesting activities	2.1 Select appropriate personal protective and other equipment and check for operational effectiveness. 2.2 Install or identify buffer zones, protected areas and erosion control measures. 2.3 Acquire resources in line with plan requirements, and estimate equipment and resource requirements. 2.4 Apply for and gain planning permits and access permission.
3. Manage tree harvesting operations	3.1 Manage harvesting operational activities to comply with environmental and organisational requirements. 3.2 Monitor sustainability indicators for compliance with sustainability plan. 3.3 Rectify reported exceptions to work order and tree harvesting plan within legislative and planned timeframes.
4. Review tree harvesting operations	4.1 Report sustainability indicators for all harvesting stages, including pre- and post-harvesting, in line with organisational and contractual requirements. 4.2 Report performance indicators to appropriate stakeholders in line with legislative and contractual requirements. 4.3 Report sufficient feedback to provide data for assistance with planning of future harvesting.
5. Review tree harvesting plan	5.1 Analyse data from tree harvesting operations to assist with planning future harvesting operations. 5.2 Implement techniques to review effectiveness of harvesting operations in maximising yields and minimising environmental impact and by-product. 5.3 Use information to change harvesting plan as required.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Complete a range of complex calculations involving gross and nett spatial areas and volumes of extraction.

Oral communication skills to:	• Clearly represent complex harvest plans to others.
	• Ask open and closed probe questions and actively listen to:
	  • engage in a consultative process with others to generate and refine ideas
	  • seek feedback on proposed plan inclusions.

Reading skills to:	• Interpret complex and unfamiliar: • regulatory and environmental information affecting harvest plans • local authority zoning and approval documents.
Writing skills to:	• Document detailed and accurate harvesting plans and reports. • Complete detailed approval applications.
Planning and organising skills to:	• Plan and organise collection of all required information and manage own timing and productivity to complete plans and harvesting operations within deadlines.
Technology skills to:	• Use computers and software programs for documenting harvest plans and reports.

Assessment Requirements for FWPCOT5209 Manage tree harvesting to minimise environmental impact

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT5209B Manage tree harvesting to minimise environmental impact which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Develop a comprehensive written tree harvesting plan, to incorporate the following inclusions:
  - sustainability indicators
  - sustainability plan
  - workplace health and safety monitoring systems
  - certification scheme requirements
  - coupe size
  - calculation of available timber
  - key performance indicators
  - human resource requirements, equipment and resource requirement estimates
  - planning permits and access permission requirements
  - staff and contract work orders.
- Manage the harvesting operations according to the harvesting plan.
- Complete a post-harvesting report to include performance against key performance and sustainability indicators.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Key content and application of applicable commonwealth, state, territory or local government regulations and codes of practice relevant to harvest operations.

© Commonwealth of Australia, 2025 Skills Insight

- Key content of applicable certification schemes, including:
  - Forest Stewardship Council
  - Australian Forestry Standard
  - ISO standards for environmental and other management systems.
- Land use zoning and land owning approval processes.
- Environmental protection practices for forest settings, including:
  - minimising temporary, short-term, long-term and permanent damage to natural vegetation and landscape
  - soil and water protection
  - safe disposal of waste material
  - cleaning plant, tools and equipment.
- Key sustainability indicators, including:
  - water quality
  - soil condition
  - native flora and fauna protection
  - maintenance of culturally significant landscapes, natural or anthropogenic formations and constructions.
- Principles of harvest planning and format, content and use of plans
- Methods used to calculate gross and net spatial areas and volumes of extraction
- Considerations for determining buffer zones, protected areas and erosion control measures
- Harvesting and extraction methods used to maximise yields while minimising environmental impact and by-product
- Workplace health and safety hazards, risks and control measures
- Organisational standards, policies and procedures for the design and operation of harvest activities, including:
  - workplace health and safety for harvesting operations
  - environmental protection
  - documenting harvesting plans
  - communication reporting lines for plans and reports.

Assessment Conditions

The following resources must be made available:

- Access to a coupe to conduct a harvesting operation
- Computers and software programs used for documenting harvesting plans and reports.
- Applicable commonwealth, state, territory or local government regulations and codes of practice relevant to harvest operations.
- Topographic maps for the site.
- Information on land use zonings and application forms.
- Documents and proformas commonly used for:
- harvesting plans
- post-harvesting reports

© Commonwealth of Australia, 2025 Skills Insight

- Organisational standards, policies and procedures for the design and operation of harvest activities.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPCOT6201 Manage community engagement

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6201B Manage community engagement which was first released with FPI11 Forest and Forest Products Training Package Version 2.2

Application

This unit of competency describes the outcomes required to develop and implement plans for community engagement to achieve sustainable environmental, economic and community benefit.

This unit applies to job roles at a senior management level across the full scope of forest and wood products industry workplaces and to operations of all sizes.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Scope need for community engagement	1.1 Develop a community engagement framework to assist in analysing and responding to issues that require community engagement.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Identify organisational issues requiring community engagement and evaluate benefits of engaging community in consultation processes. 1.3 Define target community groups in line with identified issues and purpose of engagement. 1.4 Evaluate a range of community engagement strategies in line with identified issues and characteristics of target groups.
2. Develop community engagement plan	2.1 Establish purpose and objectives of community engagement in consultation with key stakeholders. 2.2 Design community engagement strategies that are relevant, achievable, measurable and flexible to allow for emergence of new ideas and options. 2.3 Identify barriers to community involvement, recognising community diversity, and develop strategies to address them. 2.4 Embed processes for communication, monitoring, reporting, feedback and evaluation in the plan. 2.5 Obtain relevant organisational commitment to and approval of community engagement plan.
3. Implement community engagement plan	3.1 Determine resource requirements and implementation timelines. 3.2 Communicate objectives and constraints of engagement to appropriate personnel and allocate resources, roles and responsibilities. 3.3 Identify and manage expectations of participants, provide information throughout engagement process and maintain community engagement. 3.4 Provide opportunities for individuals and communities to develop their capacity to engage with the organisation. 3.5 Implement mechanisms for communities to raise their own issues with the organisation. 3.6 Identify barriers to community engagement and formulate and implement solutions in line with the community context. 3.7 Implement feedback methods in line with plan and respond to maximise community participation.
4. Evaluate community engagement plan	4.1 Analyse feedback on quality and effectiveness of engagement strategies from appropriate personnel and community stakeholders. 4.2 Evaluate engagement outcomes against purpose and objectives. 4.3 Document and share outcomes with community stakeholders and

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	key organisational personnel. 4.4 Provide feedback to participants on how the outcomes have informed organisational planning or decision making. 4.5 Prepare recommendations for future programs based on consultation and analysis.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Learning skills to:	• Continually update knowledge of individual and community perceptions and concerns with the organisation's practices.
Oral communication skills to:	• Interact appropriately with a variety of community groups to explain complex and formal policies. • Establish and foster transparent, trusting relationships or partnerships with individuals and communities. • Work with diverse communities using a range of communication styles to suit different audiences and purposes.
Writing skills to:	• Develop and document comprehensive plans requiring complex language structures and precision of expression. • Prepare community engagement information requiring the presentation of complex information, using simple language structures and precision of expression. • Develop comprehensive reports on engagement outcomes including recommendations and rationale for future improvements.
Planning and organising skills to:	• Coordinate community engagement, including relationship building, networking, negotiation and conflict management. • Maintain multiple and potentially conflicting relationships.
Numeracy skills to:	• Measure performance against engagement principles and indicators. • Analyse feedback on quality and effectiveness of engagement strategies. • Identify and interpret local community characteristics and demographics
Problem-solving skills to:	• Mediate, negotiate and attempt to obtain consensus between parties. • Use lateral thinking to provide solutions and overcome barriers to community engagement.

© Commonwealth of Australia, 2025 Skills Insight

Technology skills to:	• Use a computer, keyboard and software to prepare correspondence with community stakeholders and to prepare organisational plans and reports.

Assessment Requirements for FWPCOT6201 Manage community engagement

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6201B Manage community engagement which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Determine and report on:
  - local community characteristics and demographics
  - key community perceptions and concerns with organisational practice
  - organisational issues requiring community engagement
  - range of benefits of engaging community in consultation processes
  - organisational opportunities for community engagement
  - constraints and barriers to community engagement.
- Develop a community engagement framework to assist in analysing and responding to community engagement issues
- Document two community engagement plans for two different and diverse community groups containing the following information:
  - purpose, objectives and parameters for the community engagement
  - resource requirements and roles and responsibilities of organisational personnel
  - benefits and constraints for both parties
  - community engagement strategies
  - mechanisms for the community groups to raise their own issues with the organisation
  - how the organisation will build the capacity of the community groups to engage with the organisation
  - mechanisms for community feedback and methods of response.
- Implement and evaluate one of the above community engagement plans for the community group or participant sample.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Community engagement frameworks, including
  - core principles and indicators
  - standards
  - performance rating measures
  - types, methods and levels of engagement
  - communication modes
  - decision making mechanisms
- Key community perceptions and concerns with forest and wood products industry practice.
- Common forest and wood products industry issues requiring community engagement and range of benefits of engaging community in consultation processes.
- Community engagement theory and principles
- Strategies and techniques for community engagement
- Relationship and partnership building principles and techniques.
- Communication styles appropriate for establishing and fostering transparent relationships or partnerships with individuals and communities.
- Leadership principles and expectations management.
- Features, benefits and processes for a range of community engagement and consultation strategies.
- Organisational opportunities for community involvement.
- Constraints and barriers to community engagement.
- Processes of individual and group advocacy.
- Demographic features of the local community, including:
  - socio-economic diversity
  - gender diversity
  - cultural mix
  - household structures
  - education levels
  - political orientations
  - religious beliefs
  - industry and business structures.
- Characteristics of local communities and factors affecting community engagement, including:
  - dynamics of community
  - community power structures
  - big politics versus community politics (big 'P' v little 'p')
  - collaborations
  - formal and informal community networks, partnerships and lobby groups
  - strength and views publicised by business community and local media organisations.

© Commonwealth of Australia, 2025 Skills Insight

- Organisational requirements, policies and procedures for:
  - community engagement
  - communication and media engagement.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to prepare correspondence with community stakeholders and to prepare organisational plans and reports.
- Information on local community.
- Current journals, Australian and international case studies on community engagement.
- Organisational policies and procedures for community engagement.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT6202 Develop and manage a forestry chain of custody certification process

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6202B Develop and manage a forestry chain of custody certification process for the workplace which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to develop and manage a system for chain of custody certification for wood and forest products.

This unit applies to job roles at senior management level across the full scope of forestry industry workplaces and to operations of all sizes.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Confirm certification requirements	1.1 Identify key requirements of relevant laws to confirm understanding and ensure consistency of interpretation and

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	application to chain of custody requirements. 1.2 Clarify the relationship between chain of custody certification and forestry certification systems to ensure integration and compatibility of both systems. 1.3 Investigate each operational area for applicability to certification requirements under law and determine management system options. 1.4 Identify organisational requirements for traceability chain of documentation and all other required components.
2. Develop chain of custody certification system	2.1 Design all required components of certification system for effective and efficient operation and document all specifications. 2.2 Write a values statement, in consultation with senior managers, that outlines the organisation's commitment to certification. 2.3 Develop policies and procedures for completing and maintaining required traceability chain documents. 2.4 Develop policies and procedures for meeting reporting requirements. 2.5 Develop policies and procedures for auditing processes and managing and documenting breaches. 2.6 Document a process for evaluating system effectiveness. 2.7 Prepare a chain of custody certification systems manual to compile all documents. 2.8 Request authorised external entities to review chain of custody certification system and make any necessary adjustments.
3. Develop chain of custody certification system	3.1 Develop an implementation plan and budget and allocate resources, roles and responsibilities. 3.2 Develop strategies for promoting a positive organisational culture at all employee levels to ensure certification system effectiveness. 3.3 Appoint internal auditors for chain of custody system and coordinate training. 3.4 Develop an induction and training process for auditors, system managers and operational personnel. 3.5 Consult with system managers to ensure effective implementation of certification system. 3.6 Prepare operational reports and those for identified compliance breaches and disseminate to relevant internal personnel and external certification authorities.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
4. Evaluate system	4.1 Monitor and review operation of certification system in line with system and regulatory requirements. 4.2 Analyse audit and other operational data. 4.3 Consult with auditors and system managers to seek feedback on operational effectiveness of system. 4.4 Make required changes to system based on consultation and analysis. 4.5 Prepare reports on review of certification system in line with system and regulatory requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Develop complex budgets for the implementation of certification systems across organisational operations.
Oral communication skills to:	• Provide clear and unambiguous information about certification requirements, policies and procedures to system managers. • Hold high-level consultative discussions to generate feedback on certification systems and ideas for changes.

Reading skills to:	• Interpret complex and sometimes unfamiliar information to ensure compliance with chain of custody certification systems:
	  • laws or plain English equivalent documents
	  • Australian Standards
	  • audit reports.

Writing skills to:	• Develop and document comprehensive plans requiring complex language structures and precision of expression. • Develop and document policies and procedures requiring the presentation of complex information, using simple language structures and precision of expression for use by the full scope of organisational employees.
Planning and organising skills to:	• Source, collect and organise a range of data to inform compliance activities. • Plan and organise collection of all required information and manage own timing and productivity to design and implement certification systems.
Technology skills	• Use a computer, keyboard and software to prepare and maintain plans, policies, procedures and reports.

Assessment Requirements for FWPCOT6202 Develop and manage a forestry chain of custody certification process

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6202B Develop and manage a forestry chain of custody certification process for the workplace which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Investigate certification requirements for a given forestry industry organisation against:
  - Australian Standard (AS) 47072006 Chain of custody for certified wood and forest products
  - Forestry Stewardship Council standards.
- Develop a chain of custody certification system to meet that organisation's requirements incorporating the following system components and documents:
  - values statement
  - policies and procedures for completing and maintaining traceability chain documents
  - policies and procedures for auditing processes and managing and documenting breaches
  - process for evaluating system effectiveness
  - chain of custody certification systems manual
  - strategies for promoting a positive organisational culture for chain of custody certification
  - implementation plan and budget
  - an induction and training process for auditors, system managers and operational personnel.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- Purpose and key content and of the Illegal Logging Prohibition Act 2012 or superseding law.
- Purpose and key content of forestry certification standards and systems:
  - Australian Standard (AS) 47072006 Chain of custody for certified wood and forest products
  - Forestry Stewardship Council.
- How a chain of custody process fits into forestry certification systems.
- Operational areas and organisational processes that are linked to certification requirements.
- Purpose, common content of and format for all chain of custody system components and documents, including:
  - values statement
  - policies and procedures for completing and maintaining traceability chain documents
  - policies and procedures for auditing processes and managing and documenting breaches
  - process for evaluating system effectiveness
  - chain of custody certification systems manual.
- Format, content and use of documents and register used for certification, audit and quality purposes, including:
  - timber source documents
  - processing records
  - quality records
  - numbering and labelling documents.
- Strategies for promoting a positive organisational culture for chain of custody certification.
- Internal audit processes, including:
  - purpose of internal audits
  - principles of auditing against a standard
  - role of internal auditors
  - requirements for and methods of responding to non-compliances and process improvements identified by audit.
- Organisational and legal requirements for reporting incidents of non-compliance.
- Format content and use of the following reports:
  - periodic reports on system operation
  - audit reports
  - reports on breaches of compliance.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to prepare to prepare and maintain plans, policies, procedures and reports.

© Commonwealth of Australia, 2025 Skills Insight

- Documents, proformas and register commonly used for certification, quality, audit and reporting, including:
  - timber source documents
  - processing records
  - quality records
  - numbering and labelling documents.
  - periodic reports on system operation
  - audit reports
  - reports on breaches of compliance.
- Australian Standard (AS) 47072006 Chain of custody for certified wood and forest products.
- Forestry Stewardship Council certification documents.
- Illegal Logging Prohibition Act 2012 or superseding law or plain English documents issued by the government regulator.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT6204 Use carbon accounting to estimate emissions

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6204A Use carbon accounting to estimate emissions in the workplace which was first released with FPI11 Forest and Forest Products Training Package Version 2.2

Application

This unit of competency describes the outcome required to identify and apply carbon accounting methodologies to develop and analyse a carbon inventory. It applies to senior managers and can apply to the full scope of forest and wood products industry workplaces and to operations of all sizes.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Evaluate context for carbon accounting	1.1 Determine organisational need to quantify stocks, sources and sinks of carbon and other greenhouse gas (GHG) emissions in line with anthropogenic impacts on global climate. 1.2 Investigate mandatory and voluntary obligations for carbon

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	accounting under international conventions and protocols within national context. 1.3 Examine the principles of baseline scenario, leakage and permanence. 1.4 Assess the role of forest and wood products industry in global balance of GHG emissions. 1.5 Establish organisational objective of conducting carbon emission accounting.
2. Identify carbon accounting methodologies and define approach	2.1 Identify and explore methodologies for carbon accounting. 2.2 Examine carbon accounting frameworks. 2.3 Identify protocols for carbon biomass pools including harvested wood products and non-CO2 emissions. 2.4 Establish approach for developing carbon inventory in line with nationally agreed standards.
3. Establish accounting area	3.1 Define organisational and operational boundaries for carbon inventory. 3.2 Determine time period over which carbon emissions will be assessed.
4. Collect data	4.1 Identify emissions and offset sources. 4.2 Determine collection of activity consumption and offset data, based on data availability, analytical capacity and available resources. 4.3 Construct carbon inventory summary table, listing and separating emission sources into correct scopes. 4.4 Include carbon offset sources outside scope in carbon inventory summary table. 4.5 Record available data in separate spreadsheet tabs. 4.6 Research and gather existing secondary and field data for carbon storage sources.
5. Calculate carbon emissions	5.1 Calculate carbon dioxide equivalent emissions consistent with GHG protocol within spreadsheets for each emissions source. 5.2 Calculate carbon storage according to standardised methodology for each carbon offset source in the inventory. 5.3 Populate carbon inventory summary with calculated emissions and offsets in descending order.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	5.4 Calculate total emissions for each scope and for removals and offsets. 5.5 Calculate sum total of emissions and offsets for inventory. 5.6 Estimate change in carbon stock if a baseline exists. 5.7 Display emissions by scope and source, using charts or graphs. 5.8 Formulate suitable ratio indicator for organisation and calculate value based on total carbon emissions in the summary. 5.9 Report value of ratio indicator in carbon inventory summary.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret a range of complex abstract numerical data • complete highly technical and complex calculations using equations • record abstract data with precision and prepare interpretative charts and graphs.
Reading skills to:	• interpret highly technical, complex and unfamiliar information within international and Australian protocol and convention documents.
Writing skills to:	• document clear explanatory notes for calculations.
Planning and organising skills to:	• source, collect and organise a range of data to inform carbon emission calculations • plan and organise collection of all required information and manage own timing and productivity to complete calculations.
Technology skills to:	• use a computer, keyboard and spreadsheet software to prepare and maintain calculations.

Unit Mapping Information

Assessment Requirements for FWPCOT6204 Use carbon accounting to estimate emissions

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6204A Use carbon accounting to estimate emissions in the workplace which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- For a given forest and wood products industry organisation within any sector:
  - identify mandatory and voluntary obligations for carbon accounting
  - define organisational objectives for participating in carbon accounting processes
  - define boundaries for the carbon inventory
  - select a methodology for carbon accounting calculations for emissions and offsets
- Complete two different carbon accounting calculations for two different time periods in line with the selected methodology and include the following factors:
  - direct greenhouse gas (GHG) emissions
  - indirect GHG emissions
  - on-site and off-site emissions (geographical)
  - upstream emissions
  - downstream emissions
  - full cycle accounting
  - non-CO2 emissions; soil disturbance, fertilisation, biomass combustion

In forest applications also consider the following:

- above ground biomass
- below ground biomass
- dead organic matter - wood, litter
- soil organic matter

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Methods to access, locate and select applicable objectives and key content in relevant international and national conventions, protocols, standards and guidance frameworks, including the following key references:
  - Kyoto Protocol
  - ISO 14000 essentials:
    - ISO 14064-1 2006 Greenhouse gases -- Part 1: Specification with guidance at the organization level for quantification and reporting of greenhouse gas emissions and removals
  - Greenhouse Gas Protocol Corporate Standard
  - Copenhagen Agreement
  - National Greenhouse Accounts (NGA) Factors Workbook
- Key drivers for carbon accounting
- Basic theory of the greenhouse effect and its impacts
- Basic principles of the carbon cycle and influences
- Carbon accounting terminology, frameworks and methods used to calculate carbon emissions and offsets
- Types of emissions and offset sources included in common calculations:
  - Direct GHG emissions
  - Indirect GHG emissions
  - On-site and off-site emissions (geographical)
  - Upstream emissions
  - Downstream emissions
  - Full cycle accounting
  - Non-CO2 emissions; soil disturbance, fertilisation, biomass combustion
- Sources of secondary data for carbon accounting
  - national statistical agencies
  - research institutes
  - information from sectoral experts
- Organisational and operational boundaries for the carbon inventory
- The full range of organisational emission sources and methods used to select key emission factors for calculations.

Assessment Conditions

The following resources must be made available:

- Computer, keyboard and spreadsheet software to prepare and maintain calculations
- Documents, spreadsheets and commonly used proformas for calculating carbon emissions

© Commonwealth of Australia, 2025 Skills Insight

- Access to international and national conventions, protocols, standards and guidance frameworks including the following key references:
  - Kyoto Protocol
  - ISO 14000 essentials:
    - ISO 14064-1 2006 Greenhouse gases -- Part 1: Specification with guidance at the organization level for quantification and reporting of greenhouse gas emissions and removals
  - Greenhouse Gas Protocol Corporate Standard
  - Copenhagen Agreement
  - National Greenhouse Accounts (NGA) Factors Workbook

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT6205 Prepare an enterprise carbon management report

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6205A Prepare an enterprise carbon management report which was first released with FPI11 Forest and Forest Products Training Package Version 2.2

Application

This unit of competency describes the outcomes required to write a carbon management report for an organisation for dissemination to internal personnel and or external authorities.

It applies to job roles, including senior managers and can apply to the full scope of forest and wood products industry workplaces and to operations of all sizes.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare to write report	1.1 Establish and maintain information management system to manage data over the reporting period. 1.2 Review carbon reporting procedures outlined in regulatory or

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	voluntary standards for carbon management. 1.3 Determine scope of carbon reporting and relevant audience. 1.4 Establish structure and specific objectives for each report heading in line with carbon reporting procedures content mandated by standards or regulatory bodies. 1.5 Develop report format and style in line with organisational formats and style guides. 1.6 Assess carbon inventory data for completeness, relevance and accuracy.
2. Compile draft report	2.1 Develop report content in line with report format and objectives. 2.2 Gather evidence to generate specific findings and recommendations relevant to carbon management principles. 2.3 Use appropriate language and ensure content covers the full scope of reporting requirements.
3. Complete final report	3.1 Present draft report to appropriate personnel, seek feedback and amend as required. 3.2 Prepare final draft for executive sign-off and distribute to stakeholders. 3.3 Name and store documents in line with organisational information management system requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Interpret a range of complex abstract numerical carbon inventory data • Accurately transcribe carbon accounting data into reports.
Reading skills to:	• Interpret highly technical, complex and unfamiliar information within carbon accounting records and international and Australian protocol and convention documents.
Writing skills to:	• Develop and document reports requiring the presentation of precise complex information, using simple language structures for use by wide audiences.
Planning and organising skills to:	• Source, collect and organise a range of data to inform reporting requirements and report contents.

© Commonwealth of Australia, 2025 Skills Insight

	• Plan and organise collection of all required information and manage own timing and productivity to complete reports.
Technology skills to:	• Use a computer, keyboard and spreadsheet software to prepare and maintain reports.

Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- For a given forest and wood products industry organisation within any sector:
  - identify mandatory and voluntary obligations for reporting on carbon management
  - identify content mandated by standards or regulatory bodies
  - develop one report for one specified reporting time period using organisational styles and formats
  - include the following information in the report:
    - content mandated by standards or regulatory bodies
    - organisational drivers for carbon accounting and reporting
    - diagram of organisational and operational boundaries for the carbon inventory
    - organisational emissions sources, offsets and their scope
    - summary carbon inventory table
    - whether or not the organisation's total carbon emissions breach any reporting thresholds
    - financial implications and risks for the organisation of various carbon price signals
    - setting of carbon reduction targets and objectives for the organisation
    - options for the introduction of new carbon management principles
    - recommended actions for reducing organisational greenhouse gas emissions
    - recommended actions for improving carbon accounting and reporting
    - barriers experienced when developing the inventory and report.

FWPCOT6207 Develop forest management systems and processes

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6207A Develop forest management systems and processes which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit describes the outcomes required to develop and implement systems for forestry management that meet the requirements for international treaties, conventions and initiatives; and commonwealth, state or territory law.

It applies to senior managers and can apply to a variety of work settings, such as native forests, plantations, agroforestry, farm forestry and operations of all sizes.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

ELEMENTS	PERFORMANCE CRITERIA
management system	compliance requirements. 1.2 Quantify range and scope of organisational activities requiring compliance with laws, international treaties, conventions and initiatives. 1.3 Monitor relevant information sources to identify and maintain knowledge of forest management issues. 1.4 Measure and qualify strategic and operational factors impacting on organisational forest management processes. 1.5 Identify strategic priorities and plan implementation to ensure compliance with laws, international treaties, conventions and initiatives.
2. Establish forest management plans and system	2.1 Direct and manage design of organisational forest management system. 2.2 Develop criteria for implementing and maintaining systems for forest management. 2.3 Develop methods for gathering and monitoring forest management information. 2.4 Develop, circulate and maintain feedback systems supporting forest management processes. 2.5 Develop processes for forest management; circulate and obtain sign-off from appropriate personnel.
3. Implement forest management system	3.1 Allocate material and equipment resources to implement systems in line with timelines and budget. 3.2 Assign roles and responsibilities to appropriate personnel and provide information on expected outcomes. 3.3 Coordinate training of personnel to ensure system and quality practices are incorporated into day-to-day work activities. 3.4 Implement feedback methods for determining effectiveness of major elements of forest management system. 3.5 Monitor system compliance of staff and contractors.
4. Monitor and evaluate forest management system	4.1 Monitor forest management systems regularly for compliance with laws, international treaties, conventions and initiatives. 4.2 Evaluate information on forest condition and consider system improvements. 4.3 Review reports to ensure compliance requirements are

ELEMENTS	PERFORMANCE CRITERIA
	consistently implemented and take corrective action as required. 4.4 Discuss and analyse feedback for operational effectiveness of system. 4.5 Make required changes to system based on consultation and analysis.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Manage complex budgets for all system aspects.
Oral communication skills to:	• Hold high-level consultative discussions to generate feedback on systems and ideas for changes.
Reading skills to:	• Interpret highly complex and unfamiliar information within laws (or plain English equivalent documents), international treaties, conventions and initiatives.
Writing skills to:	• Develop system documents requiring the presentation of precise complex information, using simple language structures for use by wide audiences.
Planning and organising skills to:	• Source, collect and organise a range of data to inform system requirements. • Manage own timing and productivity to plan for and implement forest management systems.
Technology skills to:	• Use a computer, keyboard and software to create system documents.

Assessment Requirements for FWPCOT6207 Develop forest management systems and processes

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT6207A Develop forest management systems and processes which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Complete a research project to determine and report on compliance requirements for a given organisation operating in a given forest location covering requirements for:
  - commonwealth, state or territory law
  - local government regulations
  - international treaties, conventions and initiatives.
- Develop a suite of systems and processes to maintain compliance with the identified requirements.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Objectives and key content of commonwealth, state or territory and local government laws and regulation relevant to forest management, including key areas of:
  - land ownership
  - boundary management
  - environmental management
  - access
  - silviculture
  - harvesting
  - forest protection

© Commonwealth of Australia, 2025 Skills Insight

- Methods to access, locate and select applicable objectives and key content of international and national treaties, conventions and initiatives relevant to forest management, the following key references:
  - Australian Standard for Sustainable Forest Management AS4708 endorsed by PEFC
  - Forest Stewardship Council (FSC) Certification
- Factors to be considered in assessing forest management issues inherent to different types of forests.
- Forest management issues that impact on the organisation and its practices.
- Scope of forest operations and activities of the organisation, including:
  - operations in national parks
  - other operations on public land
  - operations on private land
  - timber growing and harvesting
  - fire management
- Strategic and operational factors impacting on organisational forest management processes and decision making, including:
  - fire management planning
  - flora and fauna planning
  - planning for environmental protection and monitoring
  - regulatory compliance issues
  - compliance with international treaties, conventions and initiatives
  - location and nature of sites
  - organisational policy and operational guidelines
  - public liabilities and exposure to risk
  - risk-management strategies and policies
- Financial and business administration principles relevant to organisational needs.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards and software used to create system documents.
- Commonwealth, state or territory laws and local government regulations (or plain english documents issued by regulators) relevant to forest management.
- International treaties, conventions and initiatives relevant to forest management.
- Publications and journals relevant to forest management.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment Requirements for FWPCOT6208 Manage innovative thinking and practice in the forest and wood products industry

Modification History

Release	Comment
1	New unit. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- For a given individual business area with a forestry industry organisation (within any sector), complete a research project to investigate:
  - key concepts and theories relating to business innovation and creativity
  - a range of workplace methods and tools for generating new ideas and innovative thinking
  - organisational trends shaping current and future approach to innovative practice
  - operational issues that impact on innovative practices
  - operational opportunities for individual and collective innovative thinking and creativity
  - a range of risks associated with encouraging operational personnel to participate in innovative practice
  - how the individual business area's core business and size will impact on ability to use innovative practices
- Based on research findings, develop and document development approaches and strategies, tailored to the individual business area, to implement innovative practices for the business unit.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Objectives and key content of commonwealth, state or territory laws for copyright, trademarks and intellectual property.
- Key concepts and theories relating to innovative thinking, practice and creativity.

© Commonwealth of Australia, 2025 Skills Insight

- Relationship between theory on innovation and creativity, and applied practice.
- Theories, processes and practice of business unit transformation and change management.
- Typical operational challenges and barriers to innovation within individual business areas and methods to overcome.
- How the individual business area's core business and size will impact on ability to use innovative practices.
- Processes for promoting innovative thinking and practice within an individual business area.
- Common risks associated with encouraging operational personnel to participate in innovative practice.
- Technological developments affecting operational innovation.
- The way that different management styles impact on innovation in organisations.
- Specific management approaches that foster innovation.
- Workplace methods and tools for generating new ideas and innovative thinking.

Assessment Conditions

The following resources must be made available:

- Research material, reports, journals on organisational innovative practice.
- Workplace tools for generating new ideas and innovative thinking.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Assessment Requirements for FWPCOT6209 Manage forest and wood products industry research

Modification History

Release	Comment
1	New unit. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. They must be able to provide evidence that they can, for a given organisation, develop, implement and assess at least one research strategy that provides quality information as a basis for organisational decision making to improve individual, team or organisational performance.

The research focus may be self-identifed or provided as an existing applied research need.

- Document a research strategy, including the following information:
  - purpose of the research
  - specific research questions or hypotheses
  - valid population or sample size
  - description of the geographical, cultural, social or institutional context within which the research will be carried out
  - data collection methods
  - factors affecting data reliability and validity
  - analysis of the limitations to research.
- On completion of the data collection and analysis, write a report including the following:
  - purpose of the research
  - specific research questions or hypotheses
  - population or sample size
  - data collection methods
  - research findings
  - utility and relevance of research results
  - recommendations arising from research results.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstra knowledge of:

- Purpose and key content of applicable commonwealth, state or territory privacy laws as they relate to handling and storing data and publicising information.
- Purpose and key content of research codes of conduct.
- Ethical considerations for analysing data and presenting findings based on evidence.
- A range of data collection methods for conducting primary and secondary research.
- Applied research techniques, tools and data storage methods.
- Organisational processes for disseminating information on operation of research to optimise input.
- Organisational policies and procedures for conducting applied research.
- Organisation styles and formats for presenting reports.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to collect and file research data and prepare research reports.
- Organisational formats and style guides for the presentation of reports.
- Organisational policies and procedures for conducting applied research.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to research and develop engineered wood products to meet the requirements of energy efficient design for residential buildings. It requires high-level understanding of residential building design, building codes and engineered timber design and practice.

The unit applies to individuals who work as designers (manufacturing and engineered wood products) and senior managers in a timber and wood products production environment. They generally demonstrate autonomy, judgement and defined responsibility in known or changing contexts and within broad but established parameters.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 Skills Insight

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Explore commercial opportunities for engineered wood products	1.1 Review National Construction Code guidelines and standards relating to climate zones and energy efficiency measures 1.2 Research and evaluate existing information to inform new product development 1.3 Identify gaps in the current range of engineered wood products for new products or concepts 1.4 Complete a market analysis using appropriate information sources to determine design and production requirements 1.5 Develop preliminary product concept according to research findings 1.6 Consult relevant stakeholders on broad parameters for developing a product that meets the market need
2. Formulate design concept for products	2.1 Generate ideas for product style to complement design concepts and production requirements 2.2 Use appropriate documentation methods to produce preliminary representation or prototyping of product 2.3 Consult with stakeholders to review and critique design concepts according to production requirements 2.4 Review design concepts to ensure energy efficiency is proven to allow project progression 2.5 Develop a business case for realising design including a full cost-benefit analysis 2.6 Obtain required approvals to progress product development according to production requirements
3. Develop the product to an operational level	3.1 Develop and test product according to design concepts 3.2 Align product energy efficiency requirements to market analysis 3.3 Implement certification and compliance processes for engineered product and production system 3.4 Develop detailed implementation specifications and present to relevant stakeholders for approval and funding 3.5 Select and organise production resources according to design specifications 3.6 Design quality assurance system according to workplace procedures

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	3.7 Develop and document safe operating procedures for production processes

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret complex and sometimes unfamiliar information in building codes, guidelines and standards
Oral communication	• Hold high-level consultative discussions to present abstract ideas and generate feedback and ideas on design concepts • Influence and negotiate desired outcomes with stakeholders
Numeracy	• Interpret complex energy efficiency ratings in codes, and complete complex calculations for designs • Complete complex calculations for cost-benefit analysis
Navigate the world of work	• Work independently and collectively within broad parameters, with a strong sense of responsibility and ownership of goals, plans, decisions and outcomes
Interact with others	• Identify the perspectives of others as part of work role
Get the work done	• Use analytical processes, establishing criteria for deciding between options and seeking input and advice from others before taking action when necessary

Assessment Requirements for FWPCOT6210 Develop engineered wood products to meet energy efficient building design needs

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that the individual has:

- developed two designs for one or more of the following types of engineered wood products, from initial concepts through to operational level, to meet the requirements of energy efficiency performance for residential buildings:
  - laminated beams
  - laminated veneer lumber
  - plywood
  - chipboard
  - hardboard
  - medium density fibreboard
  - oriented strand board
  - laminated or engineered flooring
  - glued laminated timber (glulam)
  - cross-laminated timber (CLT).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and key content of the following codes and standards:
  - National Construction Code guidelines and standards for climate zones and energy efficiency measures
  - AS/NZ Standards associated with engineered wood products and associated design and construction
  - forest certification and Chain of Custody standards
- key components of market analysis, including:

© Commonwealth of Australia, 2025 Skills Insight

    - need
    - placement
    - financial certainty
    - volume
- market issues relevant to engineered wood products and climate zones and applications
- theory underpinning development of R-values
- timber engineering design principles for energy efficient residential constructions
- characteristics of a range of timber species and associated wood-based products, their durability and serviceability
- key features of product development stages relevant to engineered wood products, including:
    - prototyping
    - testing
    - acquiring and commencing certification
    - gaining approval for infrastructure development
    - establishing production methods and procedures
- project management processes and tools for developing engineered wood products, including:
    - quality management systems
    - risk assessment systems
    - cost-benefit analysis tools
    - safe operating procedures for production processes
- purpose, format and common contents of business cases for realising designs, including:
    - capital cost
    - material
    - labour
    - design expenses
    - overheads
    - margin
    - running cost
    - lifecycle analysis
    - market uptake
    - discount and internal rate of return on investment
    - other opportunity cost analysis
- system functions and capabilities of house energy rating software and associated protocols for use.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Skills Insight

  - skills must be demonstrated in an environment that accurately reflects workplace conditions
- resources, equipment and materials:
  - computers, keyboards, printers and software used to document business case, design specifications and safe operating procedures
- specifications:
  - documents and proformas commonly used for developing business cases and operating procedures for production processes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT8101 Lead forest and wood products industry innovative thinking and practice

Modification History

Release	Comment
1	New unit. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to initiate and lead innovation in any forest and wood products industry context. Each organisation's thinking and practice will be different depending on its core business, purpose, size and complexity.

This unit applies to job roles including senior managers who may use innovative thinking and practice to advance business processes and contributions to organisational strategies, business plans and goals.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Generate innovative thinking and creativity	1.1 Research trends and conditions shaping organisation's current and future thinking and practice.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Evaluate drivers, enablers and issues that impact on individual and collective innovative thinking and creativity. 1.3 Introduce techniques and tools that foster and promote creative thinking, new ideas and innovative knowledge transfer. 1.4 Establish an environment conducive to innovative thinking and creativity
2. Lead innovative practices	2.1 Develop and refine a transformational leadership style to set new direction and sell the adoption of innovative practices. 2.2 Initiate and promote innovative practices, processes and products appropriate to organisational mission and business philosophy. 2.3 Identify, evaluate and manage risks associated with encouraging innovation across the organisation. 2.4 Establish conditions necessary for others to implement and manage innovative practices.
3. Generate and support a culture of innovation	3.1 Inspire and motivate others to strive for innovative achievement 3.2 Establish the conditions necessary to empower others and effect change 3.3 Encourage, develop and shape cultural beliefs, norms and behaviours that support open sharing of innovative ideas and practices 3.4 Devise and execute organisational strategies that foster a workplace philosophy of innovation.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Learning skills to:	• Critically evaluate own leadership style and innovative practices. • Monitor and refine leadership style • Access and evaluate complex information from a range of sources and using a range of methods • Identify organisational issues and conditions • Facilitate creative problem solving
Oral communication skills to:	• Hold high-level consultative discussions to generate ideas for innovative organisational practice. • Influence and persuade others

© Commonwealth of Australia, 2025 Skills Insight

	• Inspire and motivate others • Promote innovation and transformational change • Articulate vision and convey leadership attributes
Reading skills to:	• Analyse a range of complex research to evaluate and extract information on trends in innovative workplace practice. • Research techniques and tools for innovation
Writing skills to:	• Communicate vision and promote innovative practices, processes and products • Structure communications to address purpose and audience through clear and persuasive messages
Numeracy skills to	• Investigate and analyse trends and data related to innovation • Evaluate organisational data

Assessment Requirements for FWPCOT8101 Lead forest and wood products industry innovative thinking and practice

Modification History

Release	Comment
1	New unit. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Critically evaluate and develop own transformational leadership style
- Research and evaluate trends, conditions and issues relating to innovation
- Evaluate organisational factors and risks associated with the adoption of innovative practices and development of a culture of innovation
- Introduce techniques, tools and conditions that innovative thinking and creativity
- Initiate and promote innovative practices, processes and products
- Facilitate others to implement and manage innovative practices.
- Inspire, motivate and empower others through leadership behaviours
- Implement strategies that develop and shape a culture of innovation

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Objectives and key content of commonwealth, state or territory laws for copyright, trademarks and intellectual property.
- Current and past theories relating to organisational innovation and creativity.
- Relationship between theory on innovation and creativity, and applied practice.
- Factors that impact on creativity and innovation
- Features and characteristics of a creative and innovative environment
- Theories, processes and practice of organisational transformation and change management.
- Fundamentals of organisational culture and strategies for fostering a workplace culture of innovation

© Commonwealth of Australia, 2025 Skills Insight

- Leadership styles and the ways they impact on innovation in organisations
- Specific leadership styles that foster innovation including theories and practice of transformation leadership
- Typical strategic challenges, barriers and risks associated with innovation within organisations and methods to establish conditions for innovation.
- How an organisation's core business, size and mission statement will impact on ability to use innovative practices.
- Motivation theory and practice in relation to leading innovation.
- Processes, techniques and tools for promoting innovative organisational thinking and practice.
- Common risks associated with operating an organisation that encourages innovation for the full scope of employees.
- Developments affecting organisational innovation, including:
  - social
  - political
  - economic
  - technological.

Assessment Conditions

The following resources must be made available:

- Research, reports, trade journals and other material on organisational innovative practice.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOT8102 Initiate and lead a forest and wood products industry innovation

Modification History

Release	Comment
1	New unit. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to develop, validate and implement an innovation project to improve individual, team and/or organisational performance in the forest and wood products industry.

The unit applies to senior managers across a range of forest and wood products industry workplaces and to operations of all sizes.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common Technical

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Develop the innovation concept	1.1 Clarify and confirm the need for innovation and needs of users. 1.2 Design the innovation to meet user needs.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.3 Determine organisational policies and procedures for the innovation.
2. Plan the innovation	2.1 Prepare a project plan documenting project stages, tasks, milestones and resources required to develop and implement the innovation. 2.2 Evaluate project barriers and develop a risk management strategy. 2.3 Establish criteria for evaluating project outcomes and deliverables.
3. Validate the innovation	3.1 Establish conditions and requirements for innovation trial. 3.2 Provide innovation specifications and implementation support. 3.3 Coordinate the innovation trial. 3.4 Analyse and report feedback to appropriate personnel. 3.5 Analyse validation feedback and coordinate required changes.
4. Implement the innovation	4.1 Determine logistics for implementing the innovation. 4.2 Implement innovation and monitor progress. 4.3 Recommend changes as required to achieve quality standards. 4.4 Manage and review the implementation process and provide reports to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Writing skills to:	• Develop project plans requiring the presentation of precise complex information, using simple language structures for use by wide audiences.
Planning and organising skills to:	• Manage own timing and productivity to manage a project to introduce an innovation.
Numeracy skills to:	• Schedule dates and milestones, calculate resource quantities and costs, present mathematical information in graphs and tables, evaluate and record data
Communication skills to:	• Explore innovation issues and problem solve in a range of contexts • Present information about the innovation in a persuasive manner • Influences and negotiates with a range of internal and external

© Commonwealth of Australia, 2025 Skills Insight

This section describes those core and employment skills that are essential to performance and	
	stakeholders in the implementation and adoption of the innovation • Demonstrate an understanding of the different stakeholder perspectives

Assessment Requirements for FWPCOT8102 Initiate and lead a forest and wood products industry innovation

Modification History

Release	Comment
1	New unit. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- For a given forest and wood products industry organisation within any sector, manage one project to develop, plan, validate and implement an innovation for the improvement of individual, team and/or organisational performance. The innovation "need" may be supplied to the candidate or self-identified.
- For that project, develop a comprehensive project plan.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Innovation requirements, including:
  - objectives
  - design deliverables
  - quality standards.
- Methods used to trial innovations, including any of the following:
  - focus group
  - pilot project
  - feasibility assessment
- Key components of project management, including:
  - planning
  - risk management strategies
  - implementation and monitoring
  - review of outcomes.

© Commonwealth of Australia, 2025 Skills Insight

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers, software and other resources used to prepare budgets, document and record policies and project plans
- Documents, spreadsheets and proformas commonly used to develop, plan, validate and implement an innovation, such as:
  - worksheets
  - recording and data collection sheets
  - policies and procedures.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM2201 Collect seed

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2201B Collect seed, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to collect, treat and store seed. Work is completed in a forest environment setting.

The unit applies to Arboriculture worker, Farm forestry worker, Forestry worker, Nursery worker

Plantation establishment worker, Plantation forest officer, Silviculturist

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare to collect seed	1.1 Review work order and where required check with appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Use equipment in line with organisational safety procedures and environmental protection practices. 1.4 Identify potential locations for collecting required seeds and obtain approval from appropriate personnel.
2. Select and assess seed	2.1 Identify plant species and assess condition visually to determine healthy seeds. 2.2 Select and use appropriate seed collection method, maintaining genetic diversity and preventing damage to parent plant. 2.3 Place seed in clean containers and label accurately in line with organisational procedures.
3. Clean and store seed	3.1 Separate, weigh and treat seed to prevent deterioration in line with species requirements. 3.2 Package seed for storage in line with organisational procedures. 3.3 Record and report details of seed species, weight and place of origin to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine calculations for seed weights and quantities.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures • work orders.
Writing skills to:	• complete accurate basic records for seed collection.
Planning and organising skills to:	• efficiently and logically sequence the stages of selecting and collecting seeds using work order to guide activities.

Assessment Requirements for FWPFGM2201 Collect seed

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2201B Collect seed, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- collect seed from plants and planted areas using one or more of the following methods:
  - climbing
  - shaking
  - shooting
  - ground collection
- and one or more of the following separation methods:
  - hand selection
  - wind separation/winnowing
  - sieving
  - vibrating
  - flotation
  - drying
  - husk crumbling
- for each of the above seed collection methods, select, use and perform operator maintenance of appropriate equipment safely and efficiently:
  - ladders
  - pruning and shaking equipment
  - sheets and tarpaulins
  - high-powered rifles

© Commonwealth of Australia, 2025 Skills Insight

  - elevated work platforms
  - hand tools
- use packaging and storage techniques for seed collection based on seed type and collection method as listed above:
  - vacuum sealing
  - use of inert atmospheres:
    - nitrogen
    - carbon dioxide.
- treat collected seed for protection against pests using the following methods:
  - heat
  - mechanical
  - chemical
- control each of these environmental factors when packing collected seeds:
  - temperature
  - light
  - moisture
- Identify locations and obtain appropriate approvals for the collection of seeds
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- collection techniques according to health of parent plant:
  - hand picking
  - careful and selective pruning
- common separation methods used to treat and weigh seed:
  - hand selection
  - wind separation/winnowing
  - sieving
  - vibrating
  - flotation
  - drying
  - husk crumbling
- seed species and collection, treatment and packaging processes, including storage requirements for different seed species
- type of information that is recorded for seed collection:
  - time and date of harvest
  - time and date of receipt
  - weight
  - seed origin
- common pests and diseases that infect seed species and visual characteristics

© Commonwealth of Australia, 2025 Skills Insight

- seed treatment methods for protection against pests:
  - heat
  - mechanical
  - chemical protection against pests.
- packaging and storage techniques for seed collection:
  - vacuum sealing
  - use of inert atmospheres:
    - nitrogen
    - carbon dioxide.
- controls for the packing environment:
  - temperature
  - light
  - moisture
- environmental protection practices for forest environment setting:
  - the safe disposal of waste material
  - returning the environment to its original or near to original condition on completion of activity
  - procedures for minimising environmental impact
- organisational procedures specific to collecting seed:
  - work health and safety with particular emphasis on use of personal protective equipment and handling hazardous substances
  - communication reporting lines
  - recording and reporting seed collection information.
  -

Assessment Conditions

The following resources must be made available:

- clean containers for holding seeds
- vacuum seed collecting machines
- ladders or elevated work platforms
- pruning and shaking equipment
- sheets and tarpaulins
- high-powered rifles according to site requirements
- cherry-pickers or elevated work platforms according to site requirements
- personal protective equipment suitable for seed collection and treatment
- work order with specific instructions for collecting, treating and storing seed
- documents, spreadsheets and commonly used proformas for recording seed collection information
- relevant personnel for the purposes of communicating information
- organisational procedures for collecting seed

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

FWPFGM2202 Prepare seedbed

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2202B Prepare seedbed, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to select and implement appropriate seedbed preparation techniques, and to survey and review the prepared seedbed. Work is completed in a forest environment setting.

The unit applies to Arboriculture worker, Farm forestry worker, Forestry worker, Nursery worker

Plantation establishment worker, Plantation forest officer, Silviculturist

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication. Where licensing for load shifting or other mobile equipment is required, the relevant units of competency should also be accessed and are to be met concurrently or prior to the achievement of this unit.

Pre-requisite Unit

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	**PERFORMANCE CRITERIA** *is used, further information is detailed in the range of conditions.*
1. Select site preparation techniques and equipment	1.1 Review work order and where required check with appropriate personnel. 1.2 Select seedbed preparation technique in line with work order and obtain approval from appropriate personnel. 1.3 Select appropriate tools, equipment, personal protective and other safety and check for serviceable condition.
2. Plan and prepare site	2.1 Record site preparation plan in line with work order and environmental protection practices. 2.2 Prepare seedbed using appropriate techniques in line with site preparation plan. 2.3 Monitor seedbed preparation for issues, adjusting techniques and seeking assistance as required.
3. Survey and review seedbed	3.1 Inspect seedbed and record findings in line with organisational procedures. 3.2 Identify improvements to seedbed preparation methods and techniques and take remedial action as required. 3.3 Record and report seed bed preparation processes and improvement suggestions to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine measurements of seedbed dimensions • estimate space required in seedbed for multiple seed species.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders • make accurate verbal reports on selection of seedbed techniques.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions.

© Commonwealth of Australia, 2025 Skills Insight

Writing skills to:	• complete basic records of survey results and seedbed preparation processes • prepare basic site plans and reports suggesting process improvements.

Assessment Requirements for FWPFGM2202 Prepare seedbed

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2202B Prepare seedbed, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- develop a basic site preparation plan with information on:
  - forest area to be prepared
  - particular preparation techniques to be used
  - scheduling
  - resource requirements
  - responsibilities
- select and use appropriate equipment for seedbed preparation including:
  - self propelled or trailed plows, disks, chisels, sweeps for primary tillage
  - harrows, rakes, packers, bed formers, and levellers for final preparation
  - manual and trailed sprayers
  - excavator or skidder for clearing and rough heaping
- using the above site preparation plan, prepare a seedbed using each of the following site preparation techniques:
  - application of herbicides
  - burning
  - clearing
  - rough-heaping

© Commonwealth of Australia, 2025 Skills Insight

    - cultivation
    - ripping
    - post-raking
- adjust seedbed preparation in response to issues
- for the seedbed prepared above, complete a basic report describing:
    - survey results
    - suggestions for improvements to seedbed preparation methods and techniques.
    -

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices specific to the seedbed site
- techniques for seedbed preparation:
    - application of herbicides using manual and trailed sprayers
    - burning
    - clearing
    - rough-heaping
    - cultivation
    - ripping
    - post-raking
- site preparation requirements for particular seed species
- key specific seedbed requirements required for sowing suitable seed species:
    - range of species to be sown or planted
    - season
    - area topography
- organisational procedures specific to preparing seedbeds:
    - workplace health and safety with particular emphasis on use of personal protective equipment
    - communication reporting lines
    - recording and reporting site preparation plans, survey results and preparation processes.
    -

Assessment Conditions

The following resources must be made available:

- site for seedbed preparation
- tools and equipment used to prepare seedbeds
- personal protective equipment suitable for seedbed preparation
- work order with specific instructions for seedbed preparation

© Commonwealth of Australia, 2025 Skills Insight

- documents, spreadsheets and commonly used proformas for recording site preparation plans, survey results, preparation processes and suggestions for improvements
- relevant personnel for the purposes of communicating information
- organisational procedures for seedbed preparation.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence
-

FWPFGM2203 Plant trees by hand

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2203B Plant trees by hand, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to select suitable tree stock and plant by hand. Work is completed in a forest environment setting.

The unit applies to Forestry worker, Arboriculture worker, Farm forestry worker, Nursery worker

Plantation establishment worker, Plantation forest officer, Silviculturist,

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	PERFORMANCE CRITERIA *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for	1.1 Review work order and where required check with appropriate

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
planting operations	personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Obtain and prepare planting stock in line with work order.
2. Prepare for planting	2.1 Assess plant site for suitability and prepare in line with work order. 2.2 Select work methods, quantities and patterns to suit tree type and plant site. 2.3 Select quantity from tree stock in line with production target and stock quality. 2.4 Distribute required stock quantities across the site ready for planting 2.5 Identify and resolve site or equipment hazards in line with organisational safety procedures.
3. Plant tree stock	3.1 Use equipment in line with organisational safety procedures. 3.2 Plant tree stock by hand with minimal handling, adapting work methods or patterns as required. 3.3 Identify and dispose of unsuitable tree stock in line with environmental protection practices. 3.4 Maintain and store equipment and remaining tree stock in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine calculations involving depth, width and spacing in to plant trees.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders.

Assessment Requirements for FWPFGM2203 Plant trees by hand

Modification History

1	Replaces equivalent unit FPIFGM2203B Plant trees by hand, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow work order to prepare planting site for tree stock, according to required:
  - hole depth
  - hole width
  - cultivation requirements
- assess the site and plant tree stock manually by:
  - checking for appropriate atmosphere, moisture content and seasonal suitability for planting
  - ensuring appropriate spacing and growth suitability for each tree
  - handling tree stock minimally
- use the following tools and equipment safely and efficiently when handling tree stock:
  - spade
  - planting frame
  - planting tools
  - harness
  - auger
- identify and resolve the following problems when planting tree stock:
  - site or equipment issues:
    - equipment faults and malfunctions
    - environmental safety hazards
- unsuitable planting stock affected by:
  - pests

© Commonwealth of Australia, 2025 Skills Insight

- disease
- nutritional deficiencies.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- typical environmental hazards present in forest planting situations and methods of minimising risks:
  - slope
  - water
  - rock
  - undergrowth
  - slash
  - depressions and holes
  - falling or fallen branches
- typical causes of stock defects:
  - pests
  - diseases
  - nutritional deficiencies
- visual characteristics of stock defects:
  - defective form, including double leaders
  - malformed or insufficient root systems
  - discoloured leaves or needles
- factors to consider for planting trees and how these affect quality and characteristics of grown trees:
  - planting depth
  - spacing and row positioning of seedlings
  - root placement
- types of tools and equipment used to plant tools manually and procedures for their safe use and maintenance:
  - spades
  - planting frames
  - planting tools
  - harnesses
  - augers
- organisational procedures specific to planting trees by hand:
  - workplace health and safety with particular emphasis on risk control and use of personal protective equipment
  - communication reporting lines.
- environmental protection practices for forest settings:

© Commonwealth of Australia, 2025 Skills Insight

  - cleaning plant, tools and equipment
  - disposing of and recycling waste
  - returning the environment to its original or near to original condition on completion of activity
- safe manual handling techniques for operating in forest settings, specifically those for:
  - shifting
  - lifting
  - carrying tree stock
  -

Assessment Conditions

The following resources must be made available:

- spades
- planting frames
- harnesses
- augers
- personal protective equipment suitable for planting trees
- commercial quantities of tree stock for planting
- work order with specific instructions for types and quantities of trees to be planted
- relevant personnel for the purposes of communicating information
- organisational procedures for planting trees by hand.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM2205 Prune trees

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2205B Prune trees, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency specifies the outcomes required to select appropriate trees and prepare and prune them. Work is completed in a variety of work settings, including forest environments, farms, nurseries and workshops.

The unit applies to Forestry worker, Arboriculture worker, Farm forestry worker, Nursery worker

Plantation establishment worker, Plantation forest officer, Silviculturist

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for pruning	1.1 Review work order and where required check with appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Determine existing and potential site hazards and assess associated risks in line with organisational procedures. 1.3 Select appropriate personal protective and other equipment and check for operational effectiveness.
2. Select and prune trees	2.1 Identify and select trees for pruning in line with work order. 2.2 Use ladder handling and pruning techniques in line with organisational safety procedures. 2.3 Prune trees; remove branches, epicormics and green shoots to meet quality requirements.
3. Assess pruning quality	3.1 Assess pruned trees visually to ensure pruning quality and pruned stock level is in line with work order. 3.2 Rectify incorrect pruning to ensure quality of grown trees. 3.3 Dispose of pruned material in line with environmental protection practices. 3.4 Record and report pruning process and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantity of trees to be pruned from work order and count numbers • complete routine calculations involving tree spacing, size, lean and angle and count quantity of branches.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders.

Writing skills to:	• complete basic accurate reports on pruning process and equipment faults.

Assessment Requirements for FWPFGM2205 Prune trees

Modification History

Release	Comment
Release 1	Replaces equivalent unit FPIFGM2205B Prune trees, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete pruning jobs in line with an individual work order for each prescribing different quantities and species of trees to be pruned, utilising the following equipment:
  - pruners
  - jacksaw
  - pouch
  - steps
  - epicormic remover
  - pole saw
  - ladder
  - climbing gear
  - elevated work platform according to site requirements
- at the completion of each of the above jobs:
  - dispose of pruned materials in line with environmental protection practices
  - compete a basic report on pruning processes and equipment faults
  -

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- typical workplace hazards associated with pruning trees and methods of minimising risks:

© Commonwealth of Australia, 2025 Skills Insight

  - slope and uneven ground
  - falling or fallen branches
  - ladder instability
  - climbing ladders
  - loss of balance
  - damp conditions
- reasons for pruning trees and form pruning techniques
- best seasonal timing for pruning of tree species relevant to the organisation
- what to look for when selecting trees for pruning:
  - prescribed defects
  - green crowns
  - dominance
  - vigour straightness
  - lean
  - size
  - angle
  - number of branches
  - overall tree health
  - stocking
  - spacing and quality requirements
- purpose, features and safe operation of tree pruning tools and equipment:
  - pruners
  - jacksaw
  - pouch
  - steps
  - epicormic remover
  - pole saw
  - ladder
  - climbing gear
  - elevated work platform according to site requirements
- environmental protection practices for disposing of pruned materials:
  - recycling pruned material where appropriate
  - sending pruned material to landfill only where it cannot be recycled
  - redirecting pruned material for energy recovery.
- organisational procedures specific to pruning trees:
  - workplace health and safety with particular emphasis on risk control and use of personal protective equipment
  - communication reporting lines
  - recording and reporting pruning processes and equipment faults.
  -

© Commonwealth of Australia, 2025 Skills Insight

Assessment Conditions

The following resources must be made available:

- pruners
- jacksaw
- pouch
- steps
- epicormic remover
- pole saw
- ladder
- climbing gear
- elevated work platform according to site requirements
- a commercial quantity trees to be pruned
- personal protective equipment suitable for pruning trees
- environmental regulations affecting site operations or plain English equivalent documents
- work order with instructions for types and quantities of trees to be pruned
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proformas documents for recording pruning process and equipment faults
- organisational procedures for pruning trees.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPFGM2206 Collect data or samples for assessment

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2206B Collect data or samples for assessment, was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to collect data and samples from specified areas for the purposes of assessment. Data and samples can be for a diverse range of items including foliage, wood, soil, seeds, pollen, weeds and insects. The unit includes interpreting maps and plans, marking the sample area, measuring aspects of the sample area, and recording the results in a format suitable for further analysis. Work is completed in a forest environment.

The unit applies to Forestry worker, Arboriculture worker, Farm forestry worker, Nursery worker

Plantation establishment worker, Plantation forest officer, Silviculturist

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA *information is detailed in the range of conditions.*
1. Prepare for sampling	1.1 Review work order and where required check with appropriate personnel. 1.2 Identify purpose and requirements for sampling from work order. 1.3 Identify sample area from map, plan or work order and interpret relationship of sample area to whole area. 1.4 Select appropriate personal protective and other equipment and check for operational effectiveness.
2. Collect data or samples	2.1 Mark boundaries and corners for sample area using appropriate techniques. 2.2 Re-mark unclear or obliterated markings in line with organisational procedures. 2.3 Take measurements using appropriate equipment in line with organisational procedures. 2.4 Collect and label samples in line with work order.
3. Complete records	3.1 Record collected data or samples in line with organisational procedures. 3.2 Check results and rectify omissions and errors. 3.3 Submit samples and records for assessment in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret numerical data and symbols on maps • complete sometimes complex calculations and record numerical data involving areas, ratios, percentages, volumes, lengths and diameters
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures • work orders • site plans and maps.

© Commonwealth of Australia, 2025 Skills Insight

Writing skills to:	• accurately label samples and complete basic routine records for data and samples.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and sampling work using work order to guide activities.

Range of Conditions

Not Applicable

Assessment Requirements for FWPFGM2206 Collect data or samples for assessment

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2206B Collect data or samples for assessment, was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- Complete data and sample collection jobs in line with an individual work order prescribing different sampling areas, purpose for collection and type of data and samples to be collected
- across the above jobs, collect data for and samples of one or more of the following materials:
  - foliage
  - wood
  - soil
  - seeds
  - pollen
  - weeds
  - insects
- for each of the above jobs, record results of data and sample collection in a format suitable for analysis.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- common purposes for collecting data or samples:

© Commonwealth of Australia, 2025 Skills Insight

  - calculating volume of timber and residue
  - inventory control
  - stock count
  - assisting with trials
  - environmental assessment
  - conducting pest and disease surveys
  - documenting site factors
- methods used to identify boundaries and corners and for marking areas:
  - pegging
  - placing flags
  - placing balloons
  - spraying
- types of samples commonly collected and techniques to collect and label:
  - foliage
  - wood
  - soil
  - seeds
  - pollen
  - weeds
  - insects
- typical stock defects and visual characteristicsfrom the effects of:
  - pests
  - diseases
  - nutritional deficiencies
- typical hazards present in forest environments, and methods of minimising risks and moving through the environment safely:
  - slope
  - water
  - rock
  - undergrowth
  - slash
  - depressions and holes
  - falling or fallen branches
- format, content and use of documents used to record data and sample collection and methods used to record information for analysis
- purpose, features and safe operation of data and sample collection equipment:
  - measuring tape
  - callipers
  - measuring poles
  - paint

© Commonwealth of Australia, 2025 Skills Insight

    - purpose-specific balloons
    - flags
    - pegs
    - mallet
    - pruning shears
- organisational procedures specific to collecting data and samples:
    - workplace health and safety with particular emphasis on use of personal protective equipment
    - communication reporting lines
    - recording and reporting data and sample collection.

Assessment Conditions

The following resources must be made available:

- measuring tools and instruments:
    - measuring tape
    - callipers
    - measuring pole
- marking tools and instruments:
    - paint
    - purpose-specific balloons
    - flags
    - pegs
    - mallet
- pruning shears
- sample collection container and labels
- personal protective equipment suitable for collecting data and samples
- work order with specific instructions for collecting data and samples
- relevant personnel for the purposes of communicating information
- maps for the area subject to data and sample collection
- documents, spreadsheets and commonly used proformas documents for recording data and sample collection
- organisational procedures for collecting data and samples.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and

© Commonwealth of Australia, 2025 Skills Insight

- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence

FWPFGM2207 Undertake brushcutting operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2207B Undertake brushcutting operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan for and safely cut vegetation using a professional standard blade type brushcutter. Work is completed in a variety of work settings including forest environments, farms, nurseries and local council environments.

The unit applies to forestry worker, plantation forest officer, arboriculture worker.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for brushcutting	1.1 Review work order and where required check with appropriate personnel. 1.2 Select personal protective and other equipment and check for operational effectiveness.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.3 Identify and assess environmental conditions and site hazards in line with organisational procedures. 1.4 Select appropriate cutting methods for identified types of vegetation and to optimise time and safety.
2. Operate brushcutter	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Use hand signals with other operators to maintain effective and safe operations. 2.3 Adjust brushcutter safety harness and handles to correct ergonomic position. 2.4 Monitor brushcutter for operational effectiveness and refuel as required. 2.5 Operate brushcutter appropriate to site conditions and at a safe distance from other people present. 2.6 Dispose of cut vegetation in line with environmental protection practices.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check brushcutter blades for bluntness or damage. 3.3 Remove and replace brushcutter blades and other operator-replaceable components in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with environmental protection practices. 3.5 Record and report equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine measurements of fuel volume.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational

Assessment Requirements for FWPFGM2207 Undertake brushcutting operations

Modification History

Release	Comment
Release 1	Replaces equivalent unit FPIFGM2207B Undertake brushcutting operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- assess, plan and safely complete brushcutting jobs in line with work order prescribing areas and types of vegetation to be cut
- on completion of each of the above jobs:
  - dispose of cut vegetation in line with environmental protection practices
  - complete operator maintenance operator maintenance tasks including oil, fuel, safety checks, cleaning, lubricating, adjustments
  - compete basic records for equipment faults and maintenance requirements.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- typical workplace hazards associated with operating brushcutters and methods of minimising risks:
  - ground growth
  - ground slope
  - ground hazards
  - noise
  - weather
  - kickback

© Commonwealth of Australia, 2025 Skills Insight

    - flying objects
- safe working distances from other people present
- purpose, features and safe operation of brushcutters
- the correct ergonomic position in which to conduct brushcutter operations, including using a safety harness and handle adjustments
- methods for assessing blade condition, removing and replacing
- operator maintenance tasks including oil, fuel, safety checks, cleaning, lubricating, adjustments
- different types of vegetation and the appropriate brushcutting methods
- environmental protection practices for disposing of cut vegetation:
    - recycling vegetation where appropriate
    - sending vegetation to landfill only where it cannot be recycled
    - redirecting vegetation for energy recovery.
- organisational procedures specific to brushcutting operations:
- workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
- communication reporting lines
    - recording and reporting equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- brushcutters
- maintenance tools and equipment for removing and replacing blades
- consumable fuel, brushcutter blades and other components
- personal protective equipment suitable for operating brushcutters
- manufacturers' instructions for use and maintenance of equipment
- work order with specific instructions for brushcutting operations
- template documents for recording equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for operating brushcutters.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM2209 Cut, sort and set cuttings

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2209B Cut, sort and set cuttings, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to cut, sort and set cuttings. The unit includes preparing cuttings and the growing environment. Work is completed in a variety of work settings, including forest environments, farms, nurseries and workshops.

The unit applies to Forestry worker, Arboriculture worker, Farm forestry worker, Nursery worker

Plantation establishment worker, Plantation forest officer, Silviculturist

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for cutting	1.1 Review work order and where required check with appropriate

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Clear and clean work area to eliminate contamination of plants.
2. Sort and select cuttings for setting	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Prepare parent plant and take cutting using method appropriate to species. 2.3 Assess cuttings visually, select and condition for propagation to maintain maximum viability appropriate to species requirements. 2.4 Dispose of discarded cutting material in line with environmental protection practices.
3. Prepare growing site and set cuttings	3.1 Prepare growing environment and weed retardents in line with work order, and organisational and environmental requirements 3.2 Set cuttings in growing environment using appropriate tools and equipment 3.3 Control pests and diseases as required in line with organisational safety procedures. 3.4 Record and report cutting, sorting and setting production outcomes to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine measurements for spacing cuttings for propagation • calculate routine dilution ratios to prepare pest and weed control chemicals.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders

© Commonwealth of Australia, 2025 Skills Insight

	• safety data sheets or plain English equivalents for chemicals.
Writing skills to:	• complete accurate basic records for production outcomes.
Planning and organising skills to:	• efficiently and logically sequence the stages of cutting, sorting and setting using work order to guide activities.

Assessment Requirements for FWPFGM2209 Cut, sort and set cuttings

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2209B Cut, sort and set cuttings, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

select and use cutting and conditioning techniques, prepare the growing environment, and set cuttings according to the individual species and to ensure maximum viability of plants

- at the completion of the above:
  - dispose of discarded cuttings in line with environmental protection practices
  - compete basic records for production outcomes.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- spoilage and contamination issues for plant cuttings
- cleaning techniques, features and uses of cleaning products for plant preparation areas to avoid contamination of plants
- for the range of plants propagated by the organisation:
  - cutting techniques
  - pre-planting conditioning techniques, nutritional treatments and storage requirements to ensure maximum viability of plants

© Commonwealth of Australia, 2025 Skills Insight

    - suitable growing environments to ensure maximum viability of plants
    - common pests, diseases and nutritional deficiencies and visual characteristics
- methods of remedial action for plants affected by pests and diseases:
    - removal of infected material
    - treatment of site with chemicals
- methods used to control weeds:
    - weed-mat
    - slatted benches
    - chemical solutions
- purpose, features and safe operation of equipment used to cut, sort and set cuttings
- environmental protection practices for disposing of plant cuttings:
    - recycling material where appropriate
    - sending pruned to landfill only where it cannot be recycled
- organisational procedures specific to cutting, sorting and setting cuttings:
    - workplace health and safety with particular emphasis on use of personal protective equipment and handling hazardous substances
    - communication reporting lines
    - recording and reporting site production outcomes.
    -

Assessment Conditions

The following resources must be made available:

- motorised or electrically-powered automated systems or manually-operated equipment and tools
- pest control chemicals
- weed retardants
- commercial quantities of plants to be propagated
- personal protective equipment suitable for cutting, sorting and setting cuttings
- safety data sheets for chemicals or plain English equivalent documents
- work order with specific instructions for types and quantities of plants to be propagated
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proformas documents for recording production outcomes
- organisational procedures for cutting, sorting and setting cuttings.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and

© Commonwealth of Australia, 2025 Skills Insight

- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM2210 Implement animal pest control procedures

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2210B Implement animal pest control procedures, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to control browsing pests, such as rabbits, foxes, rats, kangaroos, wallabies and dogs. Work is completed in a variety of work settings, including forest environments, farms, nurseries and workshops.

The unit applies to Forestry worker, Arboriculture worker, Farm forestry worker, Nursery worker, Plantation establishment worker, Plantation forest officer, Silviculturist.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction

Pre-requisite Unit

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare to control pests	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	check for operational effectiveness. 1.3 Identify pests to be controlled and select and check control method in line with work order. 1.4 Identify and obtain required permits or licences in line with organisational procedures.
2. Control pests	2.1 Use equipment and animal baits in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Notify neighbouring landholders of pest control operation and erect appropriate signage in line with organisational procedures. 2.3 Control animal pests using appropriate methods in line with work order.
3. Complete pest control operation	3.1 Dispose of pests in line with environmental protection practices. 3.2 Remove temporary signage and store in line with organisational procedures. 3.3 Record and report pest control outcomes to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine calculations to measure animal bait dose rates and areas for distribution.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • safety data sheets or plain English equivalents for animal baits

Writing skills to:	• complete accurate basic records for pest control outcomes.
Planning and organising skills to:	• efficiently and logically sequence the stages of planning for and controlling animal pests work order to guide activities.

Assessment Requirements for FWPFGM2210 Implement animal pest control procedures

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2210B Implement animal pest control procedures, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete animal pest control procedures in line with an individual work order prescribing the animal species to be controlled
- for each of the above procedures:
  - obtain the required permits or licences for the control activity
  - select the most appropriate control method for the species
- across the above procedures, use one or more of these animal control methods:
  - all legally approved forms of trapping pests
  - all legally approved baits and methods of distribution
  - legally approved shooting
- at the completion of each of the above jobs:
  - dispose of pests in line with environmental protection practices
  - compete basic records for pest control outcomes.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- key features and application of animal pest control methods including:
  - all legally approved forms of trapping pests
  - all legally approved baits and methods of distribution
  - legally approved shooting
- requirements for obtaining permits and licences for different types of animal pest control activities and the authority from whom approval must be obtained
- types of animal pests, their effects on operational production and optimum control methods:
  - rats
  - rabbits
  - foxes
  - kangaroos
  - wallabies
  - dogs
- chemical bait uses, dose and distribution rates
- animal-handling techniques to minimise animal distress
- signage requirements to indicate presence of animal control measures:
  - types of signs
  - approved wording
  - distribution
- hazards of handling traps, chemical baits and fire-arms and methods to minimise associated risks
- organisational procedures specific to controlling animal pests:
  - workplace health and safety with particular emphasis on use of personal protective equipment and handling hazardous substances
  - communication reporting lines
  - recording and reporting pest control outcomes.

Assessment Conditions

The following resources must be made available:

- equipment and substances used to control animal pests
- signs used for identifying the presence of animal control measures
- personal protective equipment suitable for animal pest control activities
- safety data sheets for animal bait chemicals or plain English equivalent documents
- work order with specific instructions for animal pest control activities
- template documents for:
  - applying for permits and licences
  - recording pest control outcomes
- relevant personnel for the purposes of communicating information
- organisational procedures for controlling animal pests.

FWPFGM2211 Detect fires

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2211B Detect fires, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit describes the outcomes required to detect smoke and fire in forest environments, maintain communication with fire command or control and to record information using required formats and conventions. Detection can take place in all types and locations commonly found in forested and grassland country as well as in towers and aircraft.

The unit applies to Forestry Worker, Mobile Equipment Operator, Chainsaw Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Locate position in the field	1.1 Identify smoke and current position of fire using landmarks and key geographical features.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	1.2 Locate current position of fire on a map or plan.
2. Record and report smoke and other sightings	2.1 Record and report smoke and other sightings promptly in line with organisational procedures. 2.2 Maintain chronological log in line with organisational procedures. 2.3 Identify situations requiring specialist advice and seek assistance as required in line with organisational procedures.
3. Communicate with fire command or control	3.1 Use communications equipment to relay location of own position and sightings to fire command or control using organisational procedures. 3.2 Record and relay relevant meteorological information and conditions using required conventions and formats. 3.3 Record and report fire detecting processes and outcomes to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret numerical data and symbols on maps • complete precise calculations using maps and landmarks to determine location of fire and track progression • record precise numerical data in chronological sequence about progressive location and speed of fire.
Oral communication skills to:	• provide clear unambiguous information about the location of fires.

Reading skills to:	• interpret:
	  • organisational procedures
	  • map features and plan details.

Writing skills to:	• record accurate and detailed information about fires in logs, reports and records.

Range of Conditions

Assessment Requirements for FWPFGM2211 Detect fires

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2211B Detect fires, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to detecting fires
- locate and identify on a map or plan the current position of a fire from the field or air
- note and report sighting details, including estimated distances, in the required formats and conventions including:
- track the progression of the fire using landmarks and maps
- make initial and ongoing reports of fire activity
- maintain a chronological log of fire activity and meteorological measurements
- complete a basic accurate report on fire detecting processes and outcomes.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- smoke types, colour and meaning
- map types and features, common scales used on maps and plans, and methods for their use and manipulation
- terrain and geographical features visible from a tower or aircraft
- procedures for measuring and recording meteorological data
- precautions to be taken in extreme weather conditions

© Commonwealth of Australia, 2025 Skills Insight

- fire command or control conventions for recording and reporting fire sightings in an emergency situation
- organisational policies and procedures specific to detecting fires:
  - communication reporting lines
  - recording and reporting fires
  - emergency evacuation
  -

Assessment Conditions

The following resources must be made available:

- communication equipment used to relay information
- documents, spreadsheets and commonly used proformas for recording and reporting fires
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for recording and reporting fires.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPFGM2212 Graft cuttings

Modification History

Release	Comment
1	Replaces equivalent FPIFGM2212B Graft cuttings, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare and graft cuttings on to a mature plant. The unit applies to pre-planting treatments and nutritional care in a variety of work settings including forest environments, farms, agriculture, workshops, domestic, nurseries and local councils.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare cuttings	1.1 Interpret and check work order with appropriate personnel, if required 1.2 Select and check equipment for operational effectiveness, appropriate to work requirements and according to manufacturer

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	recommendations 1.3 Prepare the parent plant and apply a suitable method to take the cutting appropriate to the species 1.4 Identify and provide correct conditioning and storage procedures appropriate to species requirements to maintain maximum viability of cuttings
2. Sort and select cuttings	2.1 Identify and follow organisational hygiene practices and procedures to maintain a contamination-free work area 2.2 Undertake work using established safe operating practices in line with workplace procedures and environmental requirements 2.3 Visually assess and select cuttings for propagation in line with work order requirements 2.4 Dispose of discarded cutting material in line with workplace waste disposal guidelines and organisational requirements.
3. Graft cuttings on to mature plant	3.1 Prepare mature plant for grafting and apply pre-planting treatment using methods suitable to the species 3.2 Use handling methods that prevent damage to cuttings 3.3 Check grafting type is appropriate to species type and apply identifying labels in line with workplace procedures 3.4 Provide and maintain nutrients and growing environment for grafted cuttings appropriate to the species requirements 3.5 Take remedial action as required to control pests and diseases in line with specified planting program 3.6 Record and report grafting process to the appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• measure quantities of nutrients appropriate to cuttings • estimate timeframes appropriate to graft cutting processes
Oral communication skills to:	• ask questions to clarify instructions • explain routine procedures to others
Reading skills to:	• read and follow information on equipment and in workplace procedure manuals on safety and environmental requirements when

© Commonwealth of Australia, 2025 Skills Insight

	grafting cuttings • read and interpret information from tables and charts • read and interpret safety instructions in relation to using nutrients
Writing skills to:	• label grafted cuttings legibly and accurately with correct species name • complete factual reports on grafting process
Problem solving skills to:	• use and maintain equipment and tools for grafting cuttings • identify and apply different workplace requirements to plant species in graft cutting and storage.

Assessment Requirements for FWPFGM2212 Graft cuttings

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2212B Graft cuttings, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

- A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:
- use appropriate grafting tools and equipment, including hand-held tools, a grafting or budding knife, secateurs and grafting tape
- maintain a hygienic work environment, when grafting cuttings
- use appropriate methods and techniques to graft cuttings onto a mature plant
- maintain a growing environment suitable to the plant species, when grafting cuttings
- apply nutrients, chemicals, fertilizers and organic material to grafted cuttings
- apply remedial treatments to plants, including removal of infected material and treatment with chemicals
- dispose of discarded cutting material by recycling or sending to landfill
- record and report grafting process according to workplace procedures using a manual, computer based or other appropriate communication system
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- types and species of cuttings and suitable grafting methods and storage
- grafting methods and the type of equipment used for each method
- pre-planting treatments to prepare for grafting
- water and nutrient requirements for cuttings, including chemicals, fertilisers and organic material
- techniques of taking cuttings

© Commonwealth of Australia, 2025 Skills Insight

- conditioning and storage requirements for cuttings
- impact of different growing environments on grafted cuttings including:
  - heat
  - light
  - humidity
  - wind
  - sun
  - moisture
  - topography
  - rainfall
- established workplace communication channels and protocols
- problem identification and resolution strategies, and common fault finding techniques in relation to grafting cuttings
- types of tools and equipment used in grafting cuttings, including hand-held tools, including a grafting or budding knife, secateurs and grafting tape and procedures for their safe use and maintenance
- remedial treatment on grafted cuttings, including the removal of infected material and treatment with chemicals
- mathematical procedures for estimating and measuring, including calculating time to complete tasks and measuring quantities of nutrients
- procedures for recording and reporting workplace information.
-

Assessment Conditions

The following resources must be made available:

- materials and equipment relevant to undertaking work applicable to this unit including:
  - specifications and work instructions
  - different plant species and cuttings
  - growing environments
  - nutrients including chemicals, fertilisers and organic material
  - equipment hand-held tools, a grafting or budding knife, secateurs and grafting tape
  - storage facilities for cuttings
- personal protective equipment suitable for grafting cuttings
- safety equipment
- specifications and work instructions
- relevant personnel for the purposes of communicating information
- organisational procedures for controlling animal pests

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

© Commonwealth of Australia, 2025 Skills Insight

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence

FWPFGM2213 Process seed

Modification History

Release	Comment
1	Replaces equivalent FPIFGM2213B Process seed, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to treat, store and despatch seed.

The unit applies to processing seed in a variety of work settings, including forest environments, farms, agriculture, nurseries and local councils.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare to process seed	1.1 Interpret and check work order, with appropriate personnel, if required 1.2 Identify and adhere to site environmental protection measures in line with relevant regulations and workplace requirements for processing seed

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Select and check equipment appropriate to work requirements for operational effectiveness in line with manufacturer recommendations 1.4 Check seed processing operations for safe working conditions and plans in line with site procedures and environmental requirements
2. Treat and store seed	2.1 Separate seeds from other materials, weigh and store in line with species and site procedures 2.2 Treat seeds to prevent deterioration in line with seed species and site procedures 2.3 Record seed information accurately in line with site procedures 2.4 Package seed for storage in line with industry and workplace requirements.
3. Prepare seed sample for viability testing	3.1 Identify and check seed sample for testing in line with work order 3.2 Remove seed sample from lot and prepare for testing in line with site procedures, and industry, organisational and environmental requirements 3.3 Clearly label and package representative seed sample for despatch to testing body in line with site procedures 3.4 Record seed sample information accurately in line with site procedures.
4. Despatch seed	4.1 Interpret and check seed request specifications, with appropriate personnel 4.2 Retrieve seed from storage, and calculate quantities and species of seed to meet request specifications 4.3 Weigh, document and place each seed species in an appropriate container in line with request requirements and site procedures 4.4 Mix multiple seed lots thoroughly, as required in line with request specifications 4.5 Accurately and clearly label seed and seed mixtures in line with industry requirements and site procedures 4.6 Organise and undertake despatch of seed in line with request specifications and site procedures 4.7 Record and report seed processing results in line with industry requirements, site procedures and environmental requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and

© Commonwealth of Australia, 2025 Skills Insight

are not explicit in the performance criteria.	
Numeracy skills to:	• calculate seed weight and quantity using scales • identify and calculate percentages in specifications for seed mix • estimate impact of time on storage of seed • estimate time to complete work tasks when processing seed • undertake numerical calculations on seed processing equipment
Oral communication skills to:	• ask questions to clarify instructions • explain routine procedures to others
Reading skills to:	• read and follow information on equipment and in workplace procedure manuals on safety and environmental requirements when processing seed • interpret instructions combining of written and pictorial information on equipment or in operational manuals
Writing skills to:	• complete seed records and labels accurately and legibly using correct technical and enterprise specific vocabulary
Problem solving skills to:	• use and maintain equipment and tools for processing seed • identify and apply different workplace requirements to plant species in seed processing and storage.

Assessment Requirements for FWPFGM2213 Process seed

Modification History

Release	Comment
1	Replaces equivalent FPIFGM2213B Process seed, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- apply effective methods to treat seed, including fungicides and cleaning
- test, package and store seed species using:
  - vacuum sealing
  - use of inert atmospheres, including nitrogen and carbon dioxide
  - control of packing environment, including temperature, light and moisture
- operate and maintain seed processing equipment including electric and manual scales, packaging material, seed cleaning machine, seed lot mixing device, lifting equipment
- separate seeds, using one or more of the following methods:
- hand selection
  - wind separation and winnowing
  - sieving
  - vibrating
  - flotation
  - drying
  - crumbling of husks
- despatch seed in line with seed request specifications, including:
  - seed species

© Commonwealth of Australia, 2025 Skills Insight

  - percentage of seed mix
  - pure graded seed
  - rate of sown
  - dispatch container
  - method of dispatch
  - sowing equipment to be used
- record seed processing information and results and maintain workplace information

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- using seed material effectively and efficiently
- types of seed processing tools and equipment, including electric and manual scales, packaging material, seed cleaning machine, seed lot mixing device, lifting equipment
- seed separation methods and their uses including:
  - hand selection
  - wind separation and winnowing
  - sieving
  - vibrating
  - flotation
  - drying
  - crumbling of husks
- impact and application procedures of seed treatments including fungicides and cleaning
- hazards associated with the storage, treatment and despatch of seed
- seed species and treating, packaging and storage processes
- seed treatments and storage requirements for different seed species
- types of diseases and pests likely to infect the species
- problem identification and resolution strategies, and common fault finding techniques when processing seed
- appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks when processing seed
- workplace procedures for recording and reporting workplace records and seed information including:
  - species
  - time and date of harvest
  - time and date of receipt into the store
  - place or origin of seed
  - container identifier
- packaging including:
  - vacuum sealing
  - use of inert atmospheres, including nitrogen and carbon dioxide

© Commonwealth of Australia, 2025 Skills Insight

    - control of packing environment, including temperature, light and moisture
- request specifications including:
    - seed species
    - percentage of seed mix
    - pure graded seed
    - rate of sown
    - dispatch container
    - method of dispatch
    - sowing equipment to be used
- appropriate container criteria:
    - length of time seed will be stored
    - method to be used to transport seed
    - equipment to be used for sowing seed
    - quantity of seed
    - size of individual seeds

Assessment Conditions

The following resources must be made available:

- workplace location or simulated workplace, required to treat, store and despatch seed.
- materials and equipment relevant to undertaking seed processing work applicable to this unit equipment, including electric and manual scales, packaging material, seed cleaning machine, seed lot mixing device, lifting equipment
- specifications and work instructions
- personal protective equipment suitable to process seed
- safety equipment
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence

FWPFGM2214 Maintain visitor sites

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to maintain sites and facilities used by the public. The unit includes identifying and reporting site hazards and safely handling waste materials.

The unit applies to the maintenance of visitor sites in forest environment settings.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for site maintenance	1.1 Identify maintenance requirements from work order and supervisor instructions in line with organisational requirements 1.2 Identify and obtain supplies in line with work order and

© Commonwealth of Australia, 2025 Skills Insight

	organisational procedures 1.3 Select, transport and store equipment in line with organisational requirements 1.4 Identify and assess potential and existing site hazards in line with WHS and environmental requirements, and organisational procedures 1.5 Establish and maintain communication with colleagues and others in line with WHS requirements.
2. Maintain site	2.1 Inspect visitor site to determine maintenance and cleaning requirements in line with organisational procedures and environmental requirements 2.2 Maintain visitor site in line with organisational and environmental requirements 2.3 Handle and remove waste materials according to environmental, WHS and workplace requirements 2.4 Identify, note and report problems in line with organisational procedures 2.5 Record and report visitor site maintenance to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• measure, estimate and calculate time required to complete a task • measure and estimate correct amounts of cleaning chemicals.
Reading skills to:	• locate, record and report information • interpret instructions which combine pictorial and written information on chemicals, equipment and in workplace manuals.
Writing skills to:	• complete forms requiring factual data relevant to visitor site maintenance • record and report using a manual, computer based or other appropriate communication system.
Problem solving skills to:	• identify potential hazards and risks when maintaining sites and demonstrate appropriate response procedures • identify equipment faults when maintaining sites and demonstrate appropriate response procedures.

Assessment Requirements for FWPFGM2214 Maintain visitor sites

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- maintain visitor sites by:
  - lawn mowing and edging
  - raking leaves
  - cleaning toilets, shower blocks and other structures
  - supplying firewood
  - repainting and other minor repairs
  - removing rubbish
- follow regulatory and workplace requirements and codes of practice relevant to maintaining visitor sites
- check and order supplies of consumables for cleaning relevant to maintaining visitor sites including:
  - toilet paper
  - cleaning chemicals
  - lawn mower fuel
  - paint
- select and use types of cleaning and maintenance equipment including:
  - manual cleaning tools
  - power tools
  - petrol-driven lawn mowers
  - whipper snipper and edger

© Commonwealth of Australia, 2025 Skills Insight

- undertake efficient and safe selection, use, transport and storage of equipment and supplies with no damage to equipment, property, environment, colleagues or the public
- identify site hazards or unsafe facilities including:
  - contaminated waste material
  - visitors moving around adjacent to maintenance activities
  - unsafe structures
  - deteriorated structures
  - natural features or facilities
  - and demonstrate an appropriate response, including reporting to supervisor
- handle and remove waste or contaminated material including:
  - blood
  - bandages
  - sanitary bins
  - effluent
  - garbage
  - sharps
- identify, note and report problems including:
  - deteriorated or vandalised structures
- record and report manually, in a computer based system or other appropriate organisational communication system:
  - problems including deteriorated or vandalised structures and natural features and facilities that do not meet enterprise acceptable standards
  - maintenance outcomes
  - hazards and incidents
  - equipment malfunctions and damage

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection requirements, including:
  - waste minimisation
  - the safe disposal of waste material
  - implementing recycling and reuse guidelines
  - the safe use and storage of chemicals
  - the minimisation of environmental impact
  - cleaning of plant, tools and equipment
- work place and site standards, requirements, policies and procedures for maintaining visitor sites including:
  - camp grounds
  - toilet and shower blocks
  - natural features

© Commonwealth of Australia, 2025 Skills Insight

- identification and handling procedures relevant to environmental risks and hazards, including:
  - contaminated waste material
  - visitors moving around adjacent to maintenance activities
  - unsafe structures
  - deteriorated structures
  - natural features or facilities
- types of cleaning and maintenance equipment and procedures for their safe use, including:
  - manual cleaning tools
  - power tools
  - petrol-driven lawn mowers
  - whipper snipper and edger
- types of maintenance supplies and consumables, including:
  - toilet paper
  - cleaning chemicals
  - lawn mower fuel
  - paint
- procedures for the safe use and maintenance of cleaning and maintenance tools and equipment, including:
  - selection of appropriate cleaning and maintenance equipment
  - checking and ordering supplies of consumable items
  - transporting and storing equipment
- operation of septic tanks and other plumbing associated with visitor use facilities
- established communication channels and protocols
- procedures and practices for recording and reporting workplace information on a manual or computer based system or other appropriate communication system.

Assessment Conditions

The following resources must be made available:

- workplace location or simulated workplace, including camp grounds, toilet and shower blocks and natural features
- materials and equipment relevant to undertaking work applicable to this unit, including manual cleaning tools, power tools, petrol-driven lawn mowers, whipper snipper and edger
- specifications and work instructions
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

FWPFGM2215 Measure trees

Modification History

Release	Comment
1	Replaces superseded equivalent FPIFGM2215B Measure trees, first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to measure trees, record tree measurement data and identify tree abnormalities.

The unit applies to measuring trees in a forest environment.

The unit applies to Forestry worker, Arboriculture worker, Farm forestry worker, Nursery worker, Plantation establishment worker, Plantation forest officer, Silviculturist

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Identify tree measuring requirements	1.1 Interpret and check work order, as required with appropriate personnel 1.2 Select tools appropriate to work requirements and check for operational effectiveness in line with manufacturer recommendations

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Establish and maintain communication with colleagues and others in line with WHS requirements..
2. Measure and record tree measurements and abnormalities	2.1 Undertake work by using established safe operating practices in line with site procedures and environmental requirements 2.2 Select, use and maintain suitable personal protective equipment and clothing 2.3 Identify site environmental concerns in line with relevant regulations and workplace requirements 2.4 Identify from the work order the forest area to be worked within and locate on the ground 2.5 Obtain, check and record accurately tree measurements in the appropriate style and format in line with organisational and environmental requirements 2.6 Identify, assess and record tree abnormalities in line with workplace procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

Learning skills to:	• review own skills in relation to assessing abnormalities in trees
Numeracy skills to:	• use mathematical techniques to calculate stand height and measure dimension and volume in relation to trees • identify, estimate and measure common angles and shapes when measuring trees
Oral communication skills to:	• select and use appropriate spoken communication strategies with work colleagues and other personnel when measuring and assessing trees
Reading skills to:	• interpret instructions which combine pictorial and written information on equipment , site plans and in workplace manuals when measuring and assessing trees
Writing skills to:	• record accurately and legibly tree measurements and factual information about tree abnormalities
Problem solving skills to:	• identify problems and equipment faults when measuring trees and demonstrate appropriate response procedures

Assessment Requirements for FWPFGM2215 Measure trees

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM2215B Measure trees, first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- on native or plantation trees, carry out tree measuring procedures without causing damage to tree, environment, equipment or personnel and including:
  - calculating stand height in line with sampling technique
  - measuring log volume and length
  - diameter and girth (over or under bark at breast height or ground level)
  - classifying stem form or crown class
  - identify and follow applicable commonwealth, state or territory legislative and regulatory requirements and codes of practice relevant to measuring trees
- identify tree form and abnormalities, including:
  - butt swell
  - double leaders
  - heavy branching
  - ramicorns
- use and maintain appropriate measuring tools including:
  - diameter tapes
  - length tapes
  - optical wedges
  - clinometers
- locate forest or plot area from map or plan
- communicate effectively and work safely with others

© Commonwealth of Australia, 2025 Skills Insight

•

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- tree measuring techniques, including relevant mathematical calculations and basic trigonometry including:
  - tolerances, allowances, calibration requirements and special procedures
  - tree diameter and girth (over or under bark at breast height or ground level)
  - tree height
  - log length
- organisational and site standards, requirements, policies and procedures for measuring trees
- environmental risks and hazards
- species and characteristics of vegetation to be measured, including plantation and native forest trees
- tree abnormalities including:
  - butt swell
  - double leaders
  - heavy branching
  - ramicorns
- types of measuring tools, and procedures for their safe use and maintenance, including:
  - diameter tapes
  - length tapes
  - optical wedges
  - clinometers
- established communication channels and protocols
- problem identification and resolution strategies, and common fault finding techniques
- procedures for recording and reporting workplace information

Assessment Conditions

The following resources must be made available:

- workplace location or simulated workplace that includes plantation or native forest trees
- materials and equipment relevant to undertaking work applicable to this unit including:
  - diameter tapes
  - length tapes
  - optical wedges
  - clinometers
- specifications and work instructions
- relevant personnel for the purposes of communicating information

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence

FWPFGM3201 Manage seed collection

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3201B Manage seed collection, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan and monitor the implementation of seed collection or sowing programs. The unit includes collection of native and non-native species.

The unit applies to those who manage seed collection in settings such as: forest environments, farms, agriculture, nurseries and local councils.

The unit applies to Forestry technician, Nursery technician, Supervisor (Forestry operations), Tree planter, Silviculturist, Arboriculture technician

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan seed collection	1.1 Analyse seeding and/or planting program and identify seed characteristic requirements.

© Commonwealth of Australia, 2025 Skills Insight

	1.2 Identify seed collection opportunities and determine a suitable area for seed collection. 1.3 Select seed collection methods and determine the quantity, cost and impacts on provenances and species. 1.4 Identify the required approvals and seek and obtain from relevant authorities. 1.5 Determine measurable performance indicators, specifications and targets. 1.6 Seed collection plan, costs and performance indicators are clearly documented and communicated to appropriate personnel.
2. Implement and monitor seed collection	2.1 Coordinate and schedule resources required for seed collection. 2.2 Establish and maintain communication with others to ensure safety. 2.3 Implement the seed collection plan. 2.4 Monitor seed collection activities to ensure compliance requirements are adhered to. 2.5 Adjust seed collection activities to meet site conditions and communicate to appropriate personnel.
3. Review seed collection	3.1 Assess and evaluate data from seed collection activity to confirm techniques, methodologies and costs are in line with plan. 3.2 Identify issues and impediments to seed collection activities and program costs. 3.3 Prepare a cost benefit analysis and make recommendations to improve future seed collecting activity. 3.4 Record and report seed collection activity to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• calculate costs of seed collecting activity and simple cost benefit analysis
Oral communication skills to:	• interact with land owners, and internal and external bodies and groups to gain approvals • disseminate information about seed collecting activity to appropriate personnel.
Writing skills to:	• prepare a seed collecting plan and report on seed collection

© Commonwealth of Australia, 2025 Skills Insight

Assessment Requirements for FWPFGM3201 Manage seed collection

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3201B Manage seed collection, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

- A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:
- follow legal and regulatory requirements, and codes of practice for managing seed collection
- follow organisational policies and procedures for managing seed collection
- develop a plan for seed collection which includes measurable performance indicators, specifications and targets
- coordinate and schedule resources, and manage the work of others to achieve specific outcomes
- monitor seed collection operations, ensuring that activity follows quality standards
- document results from seed collection activities and prepare a report for relevant personnel.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable regulations, standards, codes of practice and established safe practices for managing seed collection
- organisational and site standards, policies and procedures for managing seed collection
- environmental risks and hazards of seed collection
- seed collection methods including:
  - climbing

© Commonwealth of Australia, 2025 Skills Insight

  - removal of branches with rifle
  - elevated platform vehicles
  - collecting after falling or felling
  - ladders
  - shaking
- biological signs that indicate that the seed crop is ready to be collected
- procedures to extract and handle seed from collected material, including handling procedures of the seed crop after picking
- treatment and documentation requirements of extracted seed
- characteristics of seed including:
  - provenance
  - potential growth characteristics
  - forest types
  - optimum time to collect
  - physiology and biology
  - dormancy
  - species
- process for approvals to undertake seed collection
- established communication channels and protocols
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- seed collection site
- tools and equipment required to collect seed
- relevant personnel for the purposes of communicating information
- organisational requirements and standards for managing seed collection.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3202 Extract seed

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3202B Extract seed, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to extract and process native or non-native seed using an extraction unit. It includes seed storage requirements and extraction unit maintenance.

The unit applies to those who extract seed in a variety or work settings, including forest environment settings such as farms, agriculture, workshops, domestic, nurseries and local councils.

The unit applies to Forestry technician, Nursery technician, Supervisor (Forestry operations), Tree planter, Silviculturist, Arboriculture technician

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for seed extraction	1.1 Review and clarify work order with appropriate personnel. 1.2 Receive and visually assess seed bearing material and ensure species is identified on container label.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Weigh and label containers with identifiers in line with site procedures. 1.4 Store material in dry and well-ventilated conditions.
2. Extract seed	2.1 Plan and check seed extraction processes for safe working conditions 2.2 Select appropriate extraction units and equipment and check for operational effectiveness. 2.3 Operate and monitor seed extraction systems to extract maximum seed yield. 2.4 Inspect seed capsules and reprocess as required to ensure maximum yield.
3. Clean and store seed	3.1 Weigh and store separated seed in line with species requirements and site procedures. 3.2 Accurately record seed information. 3.3 Package seed for storage with label to maintain traceability to collection source.
4. Clean and maintain extraction unit	4.1 Clean, maintain and calibrate extraction units and equipment. 4.2 Dispose of residue and other waste material in line with site environmental management guidelines. 4.3 Report abnormal operation or faults in equipment for corrective action. 4.4 Clean and maintain work areas in line with site procedures, and organisational and environmental requirements. 4.5 Record and report results of seed extraction process.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.
• calibrate scales, ensuring compliance with weights and measure authority.
• correctly label seeds • complete records, reports and maintenance logs.

Assessment Requirements for FWPFGM3202 Extract seed

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3202B Extract seed, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- apply safe and efficient techniques to identify, extract, clean and store seed in line with species requirements, work order and organisational guidelines
- operate seed extraction units and equipment including
  - kilns operated by gas, solar energy, oil or electricity
  - sieves of various sizes
  - air-drying racks and trays
  - conveyor belt
- clean, maintain and calibrate seed extraction units and equipment
- record seed species information and extraction results including
  - species name
  - weight
  - place or origin
  - container identifier.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- regulations, standards, codes of practice and established safe practices for extracting seed
- organisational and site standards, policies and procedures for extracting seed
- environmental protection requirements for extracting seed
- the cleaning maintenance and calibration of plant, tools and equipment
- hazards associated with seed extraction, processing and storage
- seed species, including native and non-native
- seed extraction processes
- identification of seed species from capsules
- storage procedures and requirements for different seed species
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- manual or automated seed extraction equipment
- material with seed to be extracted
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- work order, workplace requirements and site standards for extracting seed.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3203 Conduct an instrument survey

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3203B Conduct an instrument survey, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan, monitor and implement an instrument survey for a range of survey purposes. The unit includes evaluation of the survey and reporting of outcomes.

The unit applies to those who conduct instrument surveys in a forest environment.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan instrument survey	1.1 Identify and follow WHS, environmental, legal and organisational requirements relevant to conducting an instrument survey. 1.2 Adhere to site environmental protection measures in line with relevant requirements. 1.3 Check work order, identify survey purpose and check

© Commonwealth of Australia, 2025 Skills Insight

	specifications with appropriate personnel. 1.4 Relevant information is obtained, interpreted and analysed for impact on current survey. 1.5 Coordinate and schedule survey tools, equipment and personnel requirements. 1.6 Identify and organise permit or licence requirements. 1.7 Select survey method/s and instruments and communicate survey schedule to appropriate personnel.
2. Implement and monitor instrument survey	2.1 Establish and maintain regular communication with others in line with WHS requirements and to ensure continuous workflow and progress. 2.2 Carry out instrument survey in line with work order and specifications in survey plan, consulting individuals and groups as required. 2.3 Monitor and modify survey plan as required in response to equipment, personnel, site condition changes and environmental requirements. 2.4 Conduct routine checks to ensure survey documentation and data are accurately and continuously recorded and completed. 2.5 Routinely review survey progress to maintain efficient options, and hazards or impediments to the survey are promptly rectified.
3. Review instrument survey	3.1 Compile and organise survey documentation and data for review. 3.2 Prepare map or plan in line with survey requirements. 3.3 Prepare survey report in appropriate format in line with organisational guidelines. 3.4 Undertake evaluation of survey plan and processes and documented for use in reviewing and revising future instrument surveys. 3.5 Record and report instrument survey outcomes in line with site procedures and organisational requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• read maps and interpret survey data • prepare plans and diagrams representative of instrument

© Commonwealth of Australia, 2025 Skills Insight

	survey.
Planning and organising skills to:	• plan survey schedule • organise instruments, equipment, licenses and personnel to carry out instrument survey.
Problem solving skills to:	• identify equipment faults or impediments to survey work and rectify.

Range of Conditions

Assessment Requirements for FWPFGM3203 Conduct an instrument survey

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3203B Conduct an instrument survey, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to conducting an instrument survey
- communicating and following safe work practices
- plan and coordinate instrument survey processes and implementing an instrument plan
- monitor the collection of survey documentation and data
- prepare a survey report to include data analysis and consider costs, difficulties or issues faced and recommendations for future work.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace requirements and site standards requirements, policies and procedures for conducting an instrument survey
- environmental risks and hazards of survey work
- environmental protection requirements of work sites
- survey techniques and purposes including laying out road lines, marking establishment boundaries and forest area boundaries, assessment of forest, laying out planting rows, site design or drainage design
- safety issues and hazards associated with undertaking boundary surveys
- methods of navigating and geographically orienting in the field

© Commonwealth of Australia, 2025 Skills Insight

- established communication channels and protocols
- problem identification and resolution strategies, and common fault finding techniques
- types of tools and equipment used for instrument surveys, and procedures for their safe use and maintenance
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- survey instruments and equipment
- site to be surveyed
- survey tools including tape, hammer, pegs and pins, chain, measuring wheel, global positioning system (GPS)
- personal protective equipment for conducting an instrument survey
- work order, workplace requirements and site standards for conducting an instrument survey.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3206 Plan and implement non-commercial thinning operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3206B Plan and implement non-commercial thinning operations, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to control non-commercially thin species growing on site, to maintain the health of the stand, improve productivity and long-term sustainability, and ensure maximum growth vigour to optimise product outcome. It includes treatment with chemicals and the use of mechanical equipment.

The unit applies to a variety of work settings, including: forest environments, farms, agriculture operations, nurseries and local councils.

The unit applies to Forestry technician, Nursery technician, Supervisor (Forestry operations), Tree planter, Silviculturist, Arboriculture technician.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Plan thinning operations	1.1 Review and assess relevant plans and site information for thinning operations. 1.2 Identify sample area and measure growth. 1.3 Plan level of overwood treatment accounting for habitat or seed tree considerations. 1.4 Plan thinning operation methods in line with budget and resources and confirm with appropriate personnel. 1.5 Seek and obtain necessary approvals.
2. Implement thinning operations	2.1 Obtain and coordinate required resources and equipment and authorisations in line with organisational requirements. 2.2 Organise schedule for operations with appropriate personnel. 2.3 Mark trees for treatment in line with plan and organisational procedures 2.4 Establish and maintain communication with others to coordinate work and keep work site safe. 2.5 Coordinate thinning operations in line with plans, budget, OHS, environmental and legislative requirements. 2.6 Monitor and adjust operations in line with site conditions to ensure effective and efficient work and minimal damage to stand.
3. Review thinning operations	3.1 Review operation against relevant plan and organisational and environmental requirements. 3.2 Analyse information to determine effectiveness of thinning operations and possible improvements to future operations. 3.3 Prepare recommendations for future operations, based on assessment of information collected. 3.4 Record and report operation activities and results to the appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• determine forest growth in terms of number of trees per hectare, height, girth • review and analyse information to determine cost effectiveness of operations.

© Commonwealth of Australia, 2025 Skills Insight

Planning and organising skills to:	• identify work requirements in line with site conditions • analyse data and requirements to plan efficient operations.

Assessment Requirements for FWPFGM3206 Plan and implement non-commercial thinning operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3206B Plan and implement non-commercial thinning operations, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- plan a non-commercial thinning operation to achieve one or more of the following:
  - work to maintain the health of the stand
  - improve productivity and long-term sustainability
  - provide for end product mix requirements
  - manage notifiable weeds.
- and that includes:
  - identified and measured areas to be thinned
- use mechanical and chemical methods to thin forest growth effectively
- monitor non-commercial thinning operations to ensure safe and efficient work practice and minimal damage to stand
- review operations and use findings to document improvements to future operations.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace procedures and site standards for planning and implementing non-commercial thinning operations

© Commonwealth of Australia, 2025 Skills Insight

- environmental protection requirements relevant to planning and implementing non-commercial thinning operations
- methods and products used for thinning operations including one or more of the following:
  - felling
  - poisoning
  - sapringing
  - ringbarking
- processes for managing risks and hazards associated with thinning operations
- relevant biology and stand dynamics for the species
- common diseases, pests and nutritional deficiencies for the species being thinned
- common weed and herbicide interactions
- tools and equipment used for non-commercial thinning operations, and procedures for their safe use and maintenance
- authorisations and approvals processes including:
  - permits
  - approvals
  - licenses relating to neighbouring sites or properties
  - hours of operation
  - use and application of chemicals.
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- mechanical equipment for thinning operations
- chemicals for thinning operations
- site with growth to be non-commercially thinned
- relevant personnel for the purposes of communicating information
- workplace requirements and site standards for planning and conducting non-commercial thinning operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3207 Coordinate stem improvement

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3207B Coordinate stem improvement, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan, implement and monitor the development of preferred stem shape or number of branches, using techniques such as pruning and pest control.

The unit applies to those who coordinate stem improvement in a forest environment.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan stem improvements	1.1 Obtain and review relevant information for impact on stem improvement planning. 1.2 Identify and select methods of intervention in line with required product. 1.3 Determine and document measurable performance indicators, specifications and targets. 1.4 Identify, seek and obtain required approvals from relevant

© Commonwealth of Australia, 2025 Skills Insight

	authorities. 1.5 Document and communicate stem improvement plan and its performance indicators to appropriate personnel.
2. Implement and monitor stem improvement	2.1 Identify and coordinate resources required for stem improvement activities. 2.2 Implement stem improvement plan to ensure stem health and growth are maintained. 2.3 Carry out systematic checks to ensure compliance requirements are adhered to 2.4 Monitor and adjust stem improvement activities as required 2.5 Identify and control risks and hazards in the work area.
3. Review stem improvement	3.1 Assess and evaluate data from operations to confirm methods and ensure budgets are in line with the plan. 3.2 Identify issues and impediments to stem improvement activities and program costs and document. 3.3 Recommend changes to stem improvement operations to improve costs effectiveness. 3.4 Record, report and disseminate information about stem improvement processes to appropriate personnel

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• analyse operational costs and output to determine effectiveness of work.
Oral communication skills to:	• supervise operational staff and contractors to work efficiently and effectively.
Planning and organising skills to:	• determine a stem improvement plan taking into consideration the site conditions, species and methods • supervise operational staff and contractors to work efficiently and effectively.

Assessment Requirements for FWPFGM3207 Coordinate stem improvement

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3207B Coordinate stem improvement, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- plan and coordinate a safe and effective stem improvement operation that includes one or more of the following methods:
  - pruning using mechanical or hand tools
  - using chemicals or biological agents
- follow organisational policies and procedures for coordinating stem improvement that includes:
  - recycling pruned material
  - disposing of pruned material that cannot be recycled due to chemicals or biological agents used
- identify and recommend methods and strategies to manage stem quality and growth
- determine and document measurable performance indicators, specifications and targets for work
- supervise staff to carry out stem improvement
- monitor stem improvement operation for efficiency and effectiveness
- document results from stem improvement activities and prepare a report for appropriate personnel.
-

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- regulations, standards, codes of practice and safe practices for coordinating stem improvement
- environmental protection requirements, including the safe disposal of waste material and chemicals
- pruning techniques for target species
- tools and equipment used for stem improvement operations, and their safe use and maintenance including:
  - pruners
  - jacksaw
  - pouch
  - steps
  - epicormic remover
  - pole saw
  - ladder
  - climbing gear
- recognition and identification of species and plant identification sources
- approvals and documentation required for use of chemical or biological agents
- effective communication methods
- hazards that may apply to stem improvement activities including:
  - adverse weather conditions
  - adverse terrain conditions
  - use of machinery
  - use of chemicals or biological agents
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- site that requires stem improvement operations
- resources and tools for stem improvement including:
  - pruners
  - jacksaw
  - pouch
  - steps
  - epicormic remover
  - pole saw
  - ladder
  - climbing gear

© Commonwealth of Australia, 2025 Skills Insight

- relevant personnel for the purposes of communicating information
- workplace requirements and site standards for coordinating thinning operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3209 Construct and maintain forest roads and tracks

Modification History

Release	Comment
1	Replaces equivalent FPIFGM3209B Construct and maintain forest roads and tracks, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan, construct and maintain roads and tracks in a forest environment. It includes monitoring road or track conditions and coordinating maintenance work.

The unit applies to Bulldozer operator, Forestry technician, Harvesting technician, Mobile Equipment operator.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan road or track	1.1 Obtain topographical map of area and assess details in relation to environmental management considerations. 1.2 Identify and confirm construction requirements with appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Plan road or track including drainage and entry points that provide vehicle and equipment access, turning and loading space. 1.4 Prepare forest road or track construction plan that includes timelines, resources and equipment, in line with organisational practices
2. Construct road or track	2.1 Establish line of road and remove obstacles in line with plans. 2.2 Establish and maintain communication with others to ensure safe work. 2.3 Remove soil to establish base that has suitable width, slope and stability. 2.4 Construct water crossing points and drains in line with environmental requirements and site procedures. 2.5 Prepare and construct intersection points to provide suitable entry and exit levels and control water flow. 2.6 Place pipes or culverts and backfill and compact, in line with predicted water volume. 2.7 Transfer, spread and compact base and surface material to meet planned road or track design. 2.8 Control and manoeuvre equipment to compact road material and stabilise adjacent soil during construction. 2.9 Prepare road or track surface suitable for moving logs, and for the manoeuvre and traction of equipment.
3. Maintain road or track	3.1 Monitor condition of road or track to identify specific damage likely to lead to safety or environmental issues and report to appropriate personnel. 3.2 Redesign and remake areas of consistent damage with assistance from appropriate personnel. 3.3 Plan and carry out maintenance with minimal disruption to other work activities. 3.4 Record and report construction operations and maintenance in line with site procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• calculate quantities of required material to construct and maintain tracks and roads.

© Commonwealth of Australia, 2025 Skills Insight

Writing skills to:	• prepare construction and maintenance plan and report on work activities.
Planning and organising skills to:	• prepare a plan, and the resources and materials for the construction and maintenance of a forest road or track.

Assessment Requirements for FWPFGM3209 Construct and maintain forest roads and tracks

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3209B Construct and maintain forest roads and tracks, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- plan, construct and maintain a forest road or track in line with organisational tolerances
- operate one or more of the following road construction equipment effectively and safely
  - dozer
  - front end loader
  - skidder using bucket or blade attachments or grader using blade attachments
- identify and remove obstacles to construction
- establish water crossings and drains, using pipes, cords or culverts
- assess road or track for damage and report hazards or areas requiring redesign
- plan and carry out maintenance of forest roads and tracks
- report on road and track construction and maintenance.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable regulations, standards, codes of practice and established safe practices for constructing and maintaining forest roads and tracks, including:

© Commonwealth of Australia, 2025 Skills Insight

    - data relating to road requirements and restrictions
    - maximum road loads
    - likely weather conditions
    - expected timeframes
    - survey locations and requirements
    - water courses
    - location of log landings
    - road entry points
    - crossing or entry points for other roads and tracks
    - budget.
- environmental protection requirements and management considerations including:
    - roadside conditions and climate
    - habitat trees
    - ground growth
    - canopy
    - general forest lean
    - wind speed and direction
    - fallen trees
    - density of trees
    - ground slope
    - soil and water protection
    - ground hazards
    - obstacles
- operational procedures, checks and routine maintenance to be carried out on construction equipment
- road construction methods
- risks and hazards associated with forest road and track construction
- logging and harvesting operations
- road transport equipment requirements and capabilities in forest operations
- ground water behaviour
- workplace health and safety requirements, fire protocols and emergency evacuation procedures.

Assessment Conditions

The following resources must be made available:

- wheeled or tracked road construction equipment, including one or more of the following: dozer, front end loader, skidder or grader with bucket or blade attachments
- forest environment suitable to construct and maintain a track or road
- relevant personnel for the purposes of communicating information
- workplace requirements and site standards for constructing forest roads and tracks.

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3210 Patrol forest

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3210B Patrol forest, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to patrol a forest estate and inspect visitor site facilities. The unit includes identifying and assessing risks and hazards, and collecting evidence in line with prescribed formats and procedures.

The unit applies to Park Ranger, Forestry Officer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for patrol	1.1 Identify patrol requirements outlined in work instructions. 1.2 Access and prepare necessary equipment and store safely in patrol vehicle. 1.3 Establish communication links with appropriate personnel notify them of intended activities. 1.4 Prepare and communicate contingency plans to appropriate

© Commonwealth of Australia, 2025 Skills Insight

	personnel.
2. Carry out patrol	2.1 Conduct patrol in line with work instructions. 2.2 Identify and assess risks and potential consequences to staff, the public and forest estate. 2.3 Implement control measures promptly, in line with WHS requirements and organisational procedures. 2.4 Implement appropriate follow-up action and document.
3. Respond to complaints or breaches	3.1 Assess complaints or breaches of legislation, in line with WHS, environmental, heritage and organisational requirements. 3.2 Collect and document evidence of breaches. 3.3 Take appropriate follow-up action. 3.4 Record and report forest patrol activities and outcomes.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Oral communication skills to:	• appropriately question people to collect evidence of breach • listen to complaints.
Problem solving skills to:	• to determine course of action to follow up on complaints and breaches of legislation.
Planning and initiative skills	• to follow through on course of action in response to breach • appropriately respond to complaints.

Assessment Requirements for FWPFGM3210 Patrol forest

Modification History

Release	Comment
1	Replaces equivalent FPIFGM3210B Patrol forest, which was first released with FPI11 Forest and Forest Products Training Package Version 1. Significant changes to the unit include: Performance criteria revised, range statement reduced, foundation skills revised, new evidence requirements for assessment, skills and knowledge integrated elsewhere in unit. This is the first release of this unit in the new standards.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- prepare for a patrol ensuring communication links are established, appropriate notification of intended patrol route and area
- prepare and communicate contingency plans of one or more of the following:
  - search and rescue of lost members of the public and colleagues
  - recovery of vehicles
  - clearing of roads
  - evacuation plans
  - bush fire control assistance to emergency services or other government agencies
  - administration of first aid.
- carry out a patrol, identifying and assessing risks and hazards, and demonstrating appropriate response procedures
- respond to complaints and breaches of legislation, including
  - unauthorised use of roads to which public access is restricted
  - unauthorised use of firearms by members of the public
  - damage or theft of the forest estate by members of the public
  - illegal activities by members of the public, particularly in campsites
- report forest patrol activity
- follow applicable legal, regulatory and organisational requirements, and codes of practice for patrolling a forest

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable regulations, standards, codes of practice and established safe practices relevant to patrolling a forest
- organisational and site standards, requirements, policies and procedures for patrolling a forest
- environmental risks and hazards typically found in a forest, and on patrol of a forest
- typical types, use and maintenance of communications equipment
- navigating using a map or a GPS
- the geography of the patrol area
- formats and procedures for collecting and documenting evidence that includes:
  - verbal
  - written
  - physical
- typical complaints and breaches, and appropriate response procedures and follow-up actions including:
  - unauthorised use of roads or entry to areas to which public access is restricted
  - unauthorised use of firearms by members of the public
  - damage or theft of the forest estate by members of the public
  - illegal activities by members of the public, particularly in campsites
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- forest site to patrol
- relevant personnel for the purposes of communicating information
- workplace requirements and site standards for planning and conducting a forest patrol.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3211 Manage coppice stems

Modification History

Release	Comment
Release 2	This version released with FWP Training Package Version 3.0 to correct application section and minor typographical errors.
Release 1	This version released with FWP Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to manage coppice stem development in the regeneration of broadleaf forests by allowing coppice stems to grow from ground level stumps (stools). The unit includes thinning to promote growth of stronger stems and to achieve a higher yield rate.

The unit applies to Forestry technician, Nursery technician, Supervisor (Forestry operations), Tree planter, Silviculturist, Arboriculture technician.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for coppice management	1.1 Review and clarify work order with appropriate personnel. 1.2 Identify and assess type and quantity of stumps to grow coppice and plan coppice activities.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Select thinning equipment and check for operational effectiveness.
2. Develop coppice stems	2.1 Establish and maintain communication with others to ensure a safe work environment. 2.2 Assess environmental conditions and respond to them when planning the coppice development of each tree stump. 2.3 Direct chainsaw operators to cut tree stumps at ground level to form stools. 2.4 Clear stools of debris and allow to rest and sprout coppice. 2.5 Protect coupe from wildlife and grazing animals during coppice development. 2.6 Remove or leave standard seedlings in line with the coppice management plan 2.7 Assess stools regularly to measure and gauge the amount of coppice growth.
3. Undertake thinning	3.1 Assess coppice stems to identify stronger stems and determine how many stems to leave. 3.2 Remove weaker or smaller coppice stems by hand or mechanically. 3.3 Undertake thinning regularly to control regrowth and promote the growth of retained coppice stems. 3.4 Direct and prepare harvesting activities to thin more mature coppice forests. 3.5 Recycle debris in line with site procedures and environmental requirements. 3.6 Record and report coppice management activities to the appropriate personnel.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Release 1	This version released with FWP Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- manage coppice stems to promote forest regeneration and bring about high volume yields
- conduct thinning operations of coppice stems using thinning tools, equipment and machinery
- follow organisational policies and procedures for managing coppice stems
- identify and recommend methods manage stem quality and growth
- communicate coppice stem management requirements effectively
- report results from coppice management activities to appropriate personnel.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable regulations, standards, codes of practice and established safe practices for managing coppice stems
- environmental protection requirements, including the safe disposal of waste
- environmental risks and hazards associated with working in a forest and managing coppice growth
- characteristics of trees and timber defects
- coppice stem development and regeneration methods
- tools, equipment and machinery used for managing coppice stems, and their safe use and maintenance

© Commonwealth of Australia, 2025 Skills Insight

- established communication channels and protocols to maintain safety and effective work flow
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- site with stumps and coppice growth to be managed
- tools, equipment and machinery used for managing coppice stems
- suitable PPE for managing coppice stems
- relevant personnel for the purposes of communicating information
- workplace requirements and site standards for managing coppice stems.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3212 Fall trees manually (intermediate)

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3212 Fall trees manually (intermediate), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess, plan and safely carry out manual tree-felling operations using a chainsaw.

This unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and practical felling skills.

Persons competent in this unit should be able to effectively fell most trees except very large trees, and/or those with significant defects and/or characteristics that cause excessive complexity.

It applies to trees that have a diameter greater than the bar length of the chainsaw.

Trees typical to the scope of this unit may include the following characteristics:

- lean and weight distribution, which can be assessed and readily adapted to falling direction with the use of wedges and/or control with hinge-wood
- various dimensions relative to local forest size distribution
- limited visible damage or defect
- species prone to free splitting and adverse reactions during felling
- single or multi-stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add complexity to the operation

The unit applies to a non-production environment, including forest, rural and community environments.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for felling	1.1 Identify and comply with applicable work health and safety (WHS), environmental, legislative and organisational requirements relevant to felling trees 1.2 Identify and adhere to site environmental protection measures according to relevant legislation and regulations 1.3 Review and check job requirements with appropriate personnel 1.4 Sharpen and adjust chainsaw or change components according to manufacturer recommendations 1.5 Assess tree and determine felling requirements 1.6 Identify and control potential and existing risks and hazards in the work area 1.7 Identify trees to be retained and felled 1.8 Establish and maintain communication with others according to WHS requirements
2. Visually assess site conditions and surroundings	2.1 Review terrain and slope to determine if they add complexity to the operation 2.2 Assess general factors affecting felling requirements and detect and control specific forest or site risks and hazards
3. Assess tree and plan felling	3.1 Visually assess tree for felling characteristics 3.2 Confirm tree is safe to fell 3.3 Select tools and equipment appropriate to work requirements and check for operational effectiveness according to manufacturer recommendations 3.4 Identify trees to be felled for size, significant defects and any characteristics causing excessive complexity 3.5 Assess and progressively plan tree-felling sequence for individual trees 3.6 Assess and check required falling direction and possible deviation 3.7 Plan sequence of cuts to fell tree according to standard felling

© Commonwealth of Australia, 2025 Skills Insight

	procedures 3.8 Assess limitations of own skills in safely felling trees, identify trees considered outside own skill level and seek assistance from appropriate personnel where required 3.9 Monitor and exclude location and activity of other personnel on the work site
4. Apply tree-felling techniques	4.1 Select suitable escape route and clear of growth and other obstacles according to environmental care principles and statutory requirements 4.2 Fell individual trees using planned techniques according to site requirements, at a safe distance from other personnel in the work area 4.3 Adjust cutting technique in response to movement and condition of tree 4.4 Use planned escape route when tree starts to fall and monitor the fall and movement of tree on ground until determined stable 4.5 Delay movement back into the felling area until all tree material, including from adjacent tree crowns, has fallen 4.6 Identify and implement procedures for removal of trees that are hung-up 4.7 Dispose of waste materials in line with environmental and operational requirements 4.8 Detect, rectify and report blunt or damaged saw chain according to workplace procedures 4.9 Monitor chainsaw for operational effectiveness and record and report faults, malfunctions and problems according to workplace procedures

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the *performance criteria.*	
Numeracy skills to:	• measure and record tree height, length and diameter • estimate, measure and compare height, size and distance relevant to tree felling • calculate product mass of individual trees and determine fall zone
Oral communication skills to:	• select and use appropriate spoken communication strategies with work colleagues and other personnel on site when felling trees • interpret hand signals with other operators to ensure safe tree

© Commonwealth of Australia, 2025 Skills Insight

	felling

Reading skills to:	• interpret:
	  • workplace health and safety, industry standards and regulations for felling trees and other relevant tree felling procedures
	  • work orders
	  • manufacturers' maintenance recommendations.

Writing skills to:	• complete forms to record WHS considerations for felling trees • report equipment faults and request maintenance of equipment. • complete log book requirements
Planning and organising skills to:	• identify an unsafe tree. • efficiently and logically sequence the stages of preparation for and felling of trees using work order to guide activities.
Problem solving skills to:	• plan and apply the hierarchy of risk control • review and identify work requirements • recognise own limitations in conditions and trees for felling • identify problems and equipment faults and demonstrate appropriate response procedures

Assessment Requirements for FWPFGM3212 Fall trees manually (intermediate)

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3212 Fall trees manually (intermediate), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- comply with applicable federal, state or territory legislative and regulatory requirements and codes of practice including WHS, environmental and organisational policies and procedures relevant to felling trees at an intermediate level
- comply with organisational policies and procedures relevant to felling trees manually at an intermediate level
- comply with applicable licensing and certification requirements relevant to felling trees at an intermediate level
- effectively communicate and use safe working practices, including maintaining an awareness of other personnel activity in the work area
- assess site conditions, by applying environmental protection measures, detecting hazards and own skill level for felling trees at an intermediate level
- conduct a tree assessment
- identify structural defects and stresses in trees and the impact on felling, including exclusion of trees from hand felling due to hazardous and difficult situations for assessment, monitoring and safe falling including a crown that contains dead or broken material, entanglement or malformation
- plan a felling sequence for individual trees and preparing surroundings including escape route
- fell intermediate trees using appropriate cuts safely without damage to personnel, equipment and surrounding environment
- identify trees that are hung up

© Commonwealth of Australia, 2025 Skills Insight

- select, prepare and maintain chainsaw equipment including recognising faults, problems and malfunctions
- assess, plan and safely operate chainsaw equipment to manually fell trees at an intermediate level in forest, rural and community environments
- use tree felling techniques including scarf cutting , back cutting to provide hinge-wood and the use of wedges to assist in controlling falling direction
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Workplace health and safety (WHS) requirements including:
  - PPE and clothing
  - safety equipment
  - first aid equipment
  - firefighting equipment
  - hazard and risk control procedures
  - fatigue management procedures
  - appropriate signage
  - elimination of hazardous materials and substances procedures
  - safe forest practices, including required actions relating to fire
  - techniques for manual handling, including shifting, lifting and carrying
  - types and purposes of cuts to fell trees, including scarf cutting and back cutting to provide hinge-wood and maintain control of tree
- typical tree defects and how these affect tree felling activities:
  - shakes
  - insect defects
  - knots and resin pockets
  - pipe
  - drysides
- Identifying trees:
  - that contain hazards and are deemed unsafe to fell
  - considered outside own skill level
  - trees where cuts made may lead to loss of control of tree in felling
- hazards and related risks and the impact on felling trees of:
  - uneven and unstable terrain
  - unsafe trees
  - fires
  - overhead and underground services
  - excavations

© Commonwealth of Australia, 2025 Skills Insight

  - traffic
  - structures
  - hazardous materials
  - insects and animals
  - other personnel and machinery
- methods used to remove trees that are hung up and procedures for removal
- methods for assessing chain condition
- environmental protection measures to follow when felling trees related to:
  - native vegetation
  - soil and water
  - heritage and archeological artefacts
  - flora and fauna
  - geomorphologic features
  - landscape
  - external site pollution
  - recreational opportunities
  - regeneration opportunities
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- key features of these varying environmental conditions and their effects on intermediate tree felling activities:
  - general forest lean
  - ground growth
  - ground hazards and obstacles
  - ground slope
  - gullies
  - presence and density of seed and habitat trees
  - water courses
  - wet and adverse weather conditions
  - wind speed and direction
- the use of types of tools and equipment for felling trees manually, and the procedures for their safe use, operation and maintenance including:
  - warning signs
  - chainsaw and components
  - PPE and clothing
  - first aid equipment
  - maintenance requirements
  - support tools
  -

© Commonwealth of Australia, 2025 Skills Insight

Assessment Conditions

The following resources must be made available:

- workplace location or simulated workplace of a forest environment with trees typical to the scope of this unit
- relevant personnel for the purposes of communicating information
- PPE and clothing including:
  - Safety helmet
  - Safety gloves
  - Protective footwear
  - Eye protection
  - Hearing protection
  - High visibility clothing
  - Leg protection (trousers or chaps)
- materials and equipment including;
  - warning signs
  - chainsaw and components
  - first aid equipment
  - maintenance tools and equipment
  - support tools
  - manufacturers' instructions for use and maintenance of equipment
  - radio or communication device
  - fire fighting equipment (if prescribed)
- specifications and work instructions, including
  - information and instructions relevant to tree-felling operations, including processing location details and trees to be felled and retained
  - policy and procedures for work health and safety (WHS)
  - risk assessment plan
  - general and specific environmental requirements
  - applicable state or territory logging code of practice
  - emergency and evacuation procedures
  - fire protocols

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM3213 Fall trees manually (advanced)

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3213 Fall trees manually (advanced), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess, plan and safely carry out manual tree-felling operations using a chainsaw.

This unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and advanced practical felling skills.

Persons competent in this unit should be able to effectively fell trees of any size, species and condition, including those with significant defects and characteristics that cause excessive felling complexity, that are deemed safe to fell.

Trees typical to the scope of this unit may include the following characteristics:

- lean and weight distribution that adds significant complexity yet can be assessed and adapted to site requirements
- larger dimensions relative to local forest size distribution
- substantial lean
- damage or defect that requires complex felling techniques
- multi-legged, hollow butts, culls and stags
- species prone to free splitting and adverse reactions during felling
- single or complex multi-stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add significant complexity to the operation

The unit applies to a non-production environment, including forest, rural and community environments.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction

FWPFGM3214 Operate a four wheel drive in a towing situation

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3214 Operate a four wheel drive in a towing situation, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to tow and move an object using a four-wheel drive (4x4) vehicle on roads and varied terrain. This may include towing a trailer, vehicle or equipment as well as moving logs or other loads.

The unit applies to those who tow and move objects using a four wheel drive in forest environments and timber processing environments.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction.

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Prepare 4x4 for towing	1.1 Identify and follow WHS, environmental, legal and organisational requirements relevant to operating in a towing situation. 1.2 Identify type of object to be towed and determine a suitable towing arrangement. 1.3 Identify equipment requirements and techniques to carry out the towing job. 1.4 Identify potential hazards that may be experienced at the towing site and during the towing operation. 1.5 Assess the towing activity for safety, security of passengers, vehicles and property. 1.6 Check the 4x4 vehicle to ensure equipment is appropriate to conditions and operationally effective in line with manufacturer specifications.
2. Drive 4x4 towing a trailer	2.1 Identify hazards and risk-management strategies associated with towing a trailer. 2.2 Safely couple and uncouple the trailer. 2.3 Secure load onto trailer. 2.4 Apply risk-management strategies while 4x4 vehicle is in operation and towing a trailer. 2.5 Demonstrate driving forward, reversing a trailer uphill, around corners and in a straight line. 2.6 Use correct jack technique to change a trailer wheel. 2.7 Park and shut down 4x4 vehicle in line with manufacturer specifications and organisational requirements.
3. Drive 4x4 moving an attached object	3.1 Secure vehicle, equipment or object to be moved using appropriate recovery devices. 3.2 Apply risk-management strategies to a 4x4 vehicle moving an object. 3.3 Drive 4x4 and move attached object.
4. Perform post-towing tasks	4.1 Notify relevant personnel of trip completion. 4.2 Carry out maintenance on allocated vehicle. 4.3 Record and report activity in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and

are not explicit in the performance criteria.	
Numeracy skills to:	• measure, estimate and calculate time required to complete the task • determine if vehicle has sufficient fuel for the task.
Initiative and enterprise skills to:	• apply precautions and required action to minimise, control or eliminate hazards that can occur during work activities.
Problem-solving skills to:	• identify faults and issues associated with towing a trailer and moving objects with a 4x4 vehicle, and identify solutions.

Assessment Requirements for FWPFGM3214 Operate a four wheel drive in a towing situation

Modification History

Release	Comment
	Replaces equivalent unit FWPFGM3214 Operate a four wheel drive in a towing situation, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow applicable legal and regulatory requirements, and codes of practice relevant to operating a 4x4 vehicle towing a trailer or moving an object
- couple and uncouple a trailer
- safely couple and uncouple vehicles, equipment and objects using recovery equipment
- operate a 4x4 in a towing situation
- follow organisational policies and procedures relevant to operating a 4x4 in a towing situation
- assess the safety of towing a trailer or object and consider risk management strategies including:
  - appropriate vehicle and trailer clearance
  - appropriate approach and departure angles
  - correct load management
  - controlled braking methods using electric brakes, no brakes, override brakes
  - adequate movement of the tow system
  - making adjustment for extra length and width of trailers, and their tendency to 'cut in' on corners and curves
  - making appropriate adjustment in braking distance to compensate for the combined extra weight of vehicle and trailer
  - driving vehicle to minimise trailer sway

© Commonwealth of Australia, 2025 Skills Insight

  - engaging a lower gear when travelling downhill with a trailer to give greater vehicle control and reduce load on brakes
  - ensuring mirrors on both sides of towing vehicle are properly adjusted to give a clear view of vehicles approaching from the rear.
- use and maintain relevant tools, machinery and equipment
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable regulations, standards, codes of practice and established safe practices relevant to processes when towing a trailer or object
- environmental risks and hazards, organisational and site standards, requirements, policies and procedures for towing a trailer or object including:
  - damage to vehicle
  - wet and iced terrain
  - flooded terrain
  - fire in vehicle
  - fire at the scene
  - faulty brakes
  - leaking fuel
  - faulty steering mechanism on vehicle
  - animals and objects in vehicle path
  - crocodiles and snakes in some areas
  - windy or foggy sections of terrain
  - steep slopes
  - land slides
  - tree limbs
  - black ice
  - trailers
  - logs, rocks and other unexpected obstacles
  - weather conditions
  - slippery surfaces
  - unsafe or damaged equipment
  - spilt or leaking fuel or dangerous or hazardous goods or substances
  - unsafe manual-lifting procedures
- recovery devices suitable for towing including:
  - winches
  - ropes
  - cables
  - slings and straps

© Commonwealth of Australia, 2025 Skills Insight

  - pullers
- road rules, regulations, permit and licence requirements of the relevant state or territory
- operational knowledge of 4x4 vehicle, including controls, instruments and indicators, and their use
- 4x4 driving and towing techniques
- vehicle maintenance requirements
- established communication channels and protocols
- relevant personnel for the purposes of communicating information
- vehicle problem identification and resolution strategies, and common vehicle fault-finding techniques
- characteristics, applications, capabilities and limitations of a 4x4 vehicle while towing a trailer or object
- tools and equipment used when setting up and securing an object for towing
- typical problems that may occur when setting up and securing an object for towing, and how to resolve them
- procedures for recording and reporting workplace information.
-

Assessment Conditions

The following resources must be made available:

- manual or automatic or all wheel drive (AWD) four-wheel drive vehicle
- trailer to tow
- object to move
- personal protective equipment required to operate a four wheel drive vehicle in a towing situation
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPFGM3215 Perform complex 4x4 operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM3215 Perform complex 4x4 operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to perform complex four-wheel drive (4x4) vehicle operations, including operations over rugged terrain and water crossings.

The unit applies to those who operate a four wheel drive in forest and timber processing environments.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for complex 4x4 operations	1.1 Identify and assess types of water crossings and terrain being accessed for safe operating conditions. 1.2 Check that 4x4 vehicle being used is appropriate to conditions and operationally effective in line with manufacturer

© Commonwealth of Australia, 2025 Skills Insight

	specifications. 1.3 Identify appropriate range of personal protective equipment (PPE) to be carried for the trip conditions. 1.4 Establish communication with others and choose required safety mechanisms in line with organisational requirements.
2. Prepare 4x4 vehicle for water crossing	2.1 Place cover securely across the front of the vehicle when required by water depth. 2.2 Protect electrical connectors, battery terminals and electrical components. 2.3 Check wheel hubs to engage/lock position. 2.4 Select appropriate gear for water crossing. 2.5 Allow vehicle to cool down before entering water
3. Negotiate water crossing	3.1 Assess hazards and risks associated with water crossings. 3.2 Determine safety of water crossing. 3.3 Establish and select entry and exit points for crossing in line with current flow and risk assessment. 3.4 Access water crossing to determine depth of water at intended crossing point. 3.5 Monitor the track continually to identify hazards and assess risks. 3.6 Perform water crossing by maintaining a constant bow wave.
4. Perform check of vehicle operations on completion of water crossing	4.1 Drain water from 4x4 vehicle back into the water crossing. 4.2 Dry brakes off by gentle application while moving. 4.3 Check engine oils for contamination. 4.4 Check air cleaner elements for water intrusion and assess air intake operational effectiveness. 4.5 Check differential and gear box oils after prolonged periods in the water.
5. Operate vehicle in rugged terrain	5.1 Determine intended route prior to departure. 5.2 Inspect intended vehicle path prior to negotiation of rugged terrain. 5.3 Identify potential hazards and risks when operating vehicle in rugged terrain and ensure appropriate response can be applied 5.4 Inspect, position and secure vehicle load to maximise traction for 4x4 driving. 5.5 Set vehicle controls in line with manufacturer specifications

© Commonwealth of Australia, 2025 Skills Insight

	and for operation in the rugged terrain. 5.6 Negotiate terrain in line with requirements for specific driving conditions.
6. Recover vehicle from loss of traction while ascending	6.1 Determine intended route backwards. 6.2 Use correct brake and engine techniques to reverse vehicle. 6.3 Ensure vehicle comes to a safe stop.
7. Perform post-trip tasks	7.1 Notify relevant personnel of trip completion. 7.2 Carry out maintenance on allocated vehicle. 7.3 Record and report activity in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• measure, estimate and calculate time required to complete the task • time to complete the task • determine if vehicle has sufficient fuel for the task.
Initiative and enterprise skills to:	• apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities.
Problem-solving skills to:	• identify faults and issues associated with performing complex 4x4 operations, and identify solutions.

Assessment Requirements for FWPFGM3215 Perform complex 4x4 operations

Modification History

Release	Comment
1	Replaces equivalent FPIFGM3215 Perform complex 4x4 operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

- A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:
- follow applicable legal and regulatory requirements, and codes of practice relevant to performing complex 4x4 operations
- follow organisational policies and procedures relevant to performing complex 4x4 operations
- assess the safety and potential hazards of planned water and rugged terrain crossings including consideration of:
  - assessment of water speed and depth
  - underwater hazards
  - debris in water
  - rocks and other unexpected obstacles
  - variable water depth and width of crossing
  - risk of vehicle being swept down the waterway
  - tidal influences
  - wet and iced terrain
  - flooded terrain
  - fire in vehicle
  - faulty brakes

© Commonwealth of Australia, 2025 Skills Insight

  - leaking fuel
  - faulty steering mechanism on vehicle
  - animals and objects in vehicle path
  - crocodiles and snakes in some areas
  - windy or foggy sections of terrain
  - steep slopes
  - slippery surfaces
  - land slides
  - tree limbs
  - black ice
  - trailers
- safely perform 4x4 operations over rugged terrain and water crossings in line with the conditions and 4x4 operating requirements
- select correct gear/range to negotiate terrain
- engage and disengage freewheel hubs in line with driving conditions
- identify safe locations for entry into and out of a waterway
- identify and prepare supplies and resources appropriate to the journey
- use correct techniques to safely stop and start on steep terrain
- use and maintain relevant tools, machinery and equipment.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable regulations, standards, codes of practice and established safe practices relevant to the full range of processes when performing complex 4x4 operations
- environmental risks and hazards, organisational and site standards, requirements, policies and procedures for performing complex 4x4 operations
- road rules, regulations, permit and licence requirements of the relevant state or territory
- operational knowledge of 4x4 vehicle, including controls, instruments and indicators, and their use
- environmental protection requirements relating to 4x4 operations in rugged terrain
- organisational and site standards, requirements, policies and procedures for performing complex 4x4 operations
- road rules, regulations, permit and licence requirements of the relevant state or territory
- operational knowledge of 4x4 vehicle, including controls, instruments and indicators and their use
- four-wheel drive techniques, including to safely cross water and operate 4x4 vehicle in rugged terrain
- vehicle maintenance requirements following water crossings
- established communication channels and protocols
- vehicle problem identification and common vehicle fault-finding techniques

© Commonwealth of Australia, 2025 Skills Insight

- common vehicle operating problems and appropriate operator response in line with organisational and manufacturer requirements
- types of tools and equipment, and procedures for their safe use and maintenance.

Assessment Conditions

The following resources must be made available:

- manual or automatic or all wheel drive (AWD) four-wheel drive
- access to a water crossing and rugged terrain with safe entry into and out of a waterway, shallow run-ins and a firm base
- locations that minimise the impact on the environment
- personal protective equipment required for performing complex 4x4 operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPFGM4201 Implement a forest establishment plan

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4201B Implement a forest establishment plan, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to establish or re-establish a section of native forest or plantation, either in a monoculture or multiple-use environment.

The unit applies to job roles including Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Harvesting Supervisor, Harvesting Team Leader, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for implementation of forest establishment plan	1.1 Review local authority coverage, land owning boundaries, and forest design plan. 1.2 Identify forest location including map and grid references.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Check land use zoning and planning permits for approval status. 1.4 Check site environmental protection measures.
2. Implement forest establishment plan	2.1 Select method of establishment to meet requirements of the forest type, and environmental and organisational guidelines. 2.2 Select forest type and available species for establishment. 2.3 Identify topography and how this will impact forest. 2.4 Direct operational activities and schedule activities, material and equipment. 2.5 Coordinate forest design and planting strategy to establish the forest
3. Monitor and review forest establishment plan	3.1 Inspect correct implementations of environmental protection measures for the landscape, soil and drainage. 3.2 Communicate with operational staff, clients and contractors during the establishment phase to ensure smooth operation and progress 3.3 Monitor operational activities for potential improvements 3.4 Record and report on implementation of forest establishment plan.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• calculate required numbers of trees
Oral communication skills to:	• direct the work of others • explain the forest plan
Reading skills to:	• interpret information from council, contractors and other stakeholders • interpret plans and maps

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relating to the implementation of a forest establishment plan
- obtain and interpret topographical maps, information from local government and information about environmental requirements for forests
- prepare, implement and review a forest establishment plan that includes:
  - forest layout
  - protected areas
  - access
  - harvesting considerations
  - environmental sustainability issues
  - minimising environmental impact
- coordinate personnel to undertake activities to meet established timelines
- produce a report on the outcomes of the implementation of a forest plan that includes:
  - difficulties
  - costs
  - data analysis
  - efficiency and effectiveness
  - results
  - recommendations for future work

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection requirements for the establishment of a forest including the following
  - ground growth
  - canopy
  - general forest lean
  - wind speed and direction
  - fallen trees
  - density of trees
  - ground slope
  - soil and water protection
  - ground hazards
  - obstacles
  - drainage
- organisational policies and procedures for implementing a forest establishment plan
- how wood generates renewable energy through biomass
- forest establishment and planning procedures including:
  - forest design and map details
  - site preparation
  - access considerations
- planting for forest or streamside:
  - buffers
  - filter strips
  - contours
  - gullies
  - crossing points
- environmental considerations, including protection of:
  - habitat
  - rainforest
  - flora and fauna
  - landscape
  - excluded areas
  - rubbish removal
- and preparation of:
  - permanent roads
  - temporary roads
  - landings

© Commonwealth of Australia, 2025 Skills Insight

  - dumps
  - snig tracks
  - forwarding tracks
  - adjoining land
  - wet weather restrictions
  - fire protection requirements.
- forest design and planting strategies
- regeneration principles and methods
- topography including:
  - terrain levels
  - soil types
  - contours
  - elevations
  - slopes
  - gullies
  - adjoining land parcels
- land use zoning and relevant approvals and permits including:
  - private zoning
  - government zoning
- resources, tools and equipment used for the implementation of a forest plan, and procedures for their safe use and maintenance
- appropriate mathematical procedures for estimating and measuring, including calculating time to complete tasks.

Assessment Conditions

The following resources must be made available:

- forest plan
- information required to support the implementation of a forest plan
- relevant personnel for the purposes of communicating information.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM4202 Manage stand health

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4202B Manage stand health, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess trees and apply treatments to ensure the health of a stand of trees. The unit includes reviewing and evaluating program processes against defined criteria

The unit applies to job roles including Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Harvesting Supervisor, Harvesting Team Leader, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan stand health program	1.1 Review stand health requirements and site environmental protection measures and regulations. 1.2 Obtain and assess information that will impact on stand health planning. 1.3 Identify and select methods for encouraging stand health.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Develop and document measurable performance indicators, specifications and targets for stand health. 1.5 Obtain required approvals from authorities 1.6 Document and communicate stand health program.
2. Implement and monitor stand health program	2.1 Coordinate resources for stand health program. 2.2 Maintain clear and accurate documentation on stand health. 2.3 Develop and communicate work schedule for the site. 2.4 Implement and monitor stand health program ensuring health and protection of stand. 2.5 Conduct systematic checks for compliance requirements. 2.6 Make adjustments to the stand health program as required. 2.7 Manage risks and hazards in the work area are identified and controlled. 2.8 Ensure workplace health and safety of the site. 2.9 Respond to problems and factors affecting stand health.
3. Review stand health program	3.1 Assess and evaluate information on stand health operation and confirm that techniques, methodologies and budgets are consistent with the program. 3.2 Document issues and impediments to stand health. 3.3 Undertake cost benefit analysis and make recommendations for change or improvement. 3.4 Disseminate results of review of stand health program. 3.5 Follow organisational procedures for completion of all documentation on stand health program.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Develop and review budgets
Oral communication skills to:	• Manage the site team
Organisational and planning skills to:	• Develop schedules • Sequence work and activities

Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures for the management of stand health
- develop a program for the management of stand health that includes:
  - reference to organisational policies and procedures
  - plans
  - budgets
  - timelines
  - resources, including people, material and equipment
  - disposal methods, including burning, burying and chemical destruction of vegetation waste
- coordinate workers and activities to ensure stand health
- identify factors that may affect stand health and develop effective treatments to address these issues
- manage a budget for stand health
- develop and achieve targets and measures for stand health
- monitor implementation of the stand health program including the following checks:
  - that WHS procedures, practices, policies and precautions are observed and followed
  - that site environmental requirements and relevant commonwealth, state or territory, and local legislation and regulations are followed
  - that performance indicators, targets and specifications are met

© Commonwealth of Australia, 2025 Skills Insight

  - that quantity, cost and provenance information is collected in line with plan specifications
  - that required organisational documentation is completed clearly and accurately
- review and report on the outcomes of stand health program.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- health requirements, indicators and treatment of the target species including
  - stress problems
  - pests and diseases, including insects, fungal, bacterial, viral, birds and animals
  - structural
  - storm damage
  - root damage
  - gassing
  - compaction
  - incineration
  - nutrient deficiencies
  - chemical
  - competition
  - poor draining
  - vandalism
  - salt
  - drought
- procedures for identifying and evaluating structural defects in trees
- methods to identify pests, diseases and physiological damage to trees
- methods to manage tree pests and diseases
- methods for analysing the nutritional status of trees
- methods of collecting and storing specimens for identification
- methods to improve stand health including
  - application of fertilisers
  - application of pesticides and herbicides
  - pruning techniques
  - competition management techniques
  - browsing control techniques
  - consideration of environmental sustainability issues
- environmental protection requirements for the site or setting
- relevant approvals including where:
  - the use of chemicals or biological agents is intended
  - browsing control techniques that may impact on neighbouring properties

© Commonwealth of Australia, 2025 Skills Insight

  - consideration of environmental sustainability issues apply
- WHS policies and procedures
- budgets and planning tools

Assessment Conditions

The following resources must be made available:

- relevant policies and procedures for the management of stand health
- a stand of trees and the relevant health requirements
- PPE suitable for managing stand health
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM4203 Design plantations

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4203C Design plantations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to design a plantation or monoculture. The unit also applies to an area that is to be used for multiple uses, such as farm forestry.

The unit applies to job roles including Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Harvesting Supervisor, Harvesting Team Leader, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for plantation design	1.1 Assess site and identify site environmental protection measures. 1.2 Review and analyse relevant plans to assess impacts on proposed plantation. 1.3 Consult with stakeholders and obtain input into the design for the site.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Review organisational maps, plans and strategies and how they relate to plantation requirements. 1.5 Develop measurable performance indicators, specifications and targets for the plantation.
2. Design components of plantation	2.1 Arrange surveys and determine species tolerances for the plantation site. 2.2 Develop plan for site preparation. 2.3 Develop design components and obtain approvals. 2.4 Communicate design plan and performance indicators to appropriate personnel.
3. Review plantation design	3.1 Assess plantation data and documentation against plans and adjacent plantations 3.2 Prepare recommendations and design improvements. 3.3 Record and report on plantation design processes.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for FWPFGM4203 Design plantations

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4203C Design plantations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce designs for plantations that comply with commonwealth, state or territory or local government legislative and regulatory requirements
- follow organisational policies and procedures relevant to designing plantations
- interpret aerial photographs and maps
- design a plantation using consultative processes with colleagues and stakeholders to obtain inputs, and ensure efficient use of resources
- design a plantation that meets specified requirements
- review a plantation design against determined performance indicators, specifications and targets
- develop recommendations for design improvements.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- commonwealth, state or territory or local government legislative and regulatory requirements and codes of practice relevant to designing plantations
- relevant species characteristics and selection information including:
  - appropriate species
  - provenance
  - distribution and hardiness of trees to be sown or planted to suit the area to be planted

© Commonwealth of Australia, 2025 Skills Insight

- factors relevant to an assessment of the area including:
  - soil types
  - site rainfall characteristics
  - understory species
  - canopy
  - general forest lean
  - wind speed and direction
  - fallen trees
  - retained vegetation
  - density of trees
  - ground slope
  - soil and water protection
  - ground hazards and obstacles
  - contingencies for modifying operations during wet or other adverse weather conditions
  - hygiene of the area
  - relevant commonwealth, state or territory, and local legislation and regulations.
- plantation design components including:
  - roads
  - fences
  - drainage channels
  - forest area boundaries
- environmental protection requirements relevant to plantation design
- organisational policies and procedures for designing plantations including the following:
  - tending plans
  - harvesting plans
  - organisational marketing and strategic plans
  - plans or regulations relating to chemical use and environmental requirements.
- environmental risks and hazards in the area of the proposed site
- common diseases, pests and nutritional deficiencies that affect plantations
- the principles of good design for plantations.

Assessment Conditions

The following resources must be made available:

- requirements for a plantation design
- PPE suitable for designing plantations
- Organisational policies and procedures relevant to designing plantations
- Relevant parties for the purposes of consulting and communicating

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM4204 Conduct a pests and diseases assessment

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4204B Conduct a pests and diseases assessment, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess the presence and level of pests and diseases within a forest area. The unit includes the assessment of animal populations, weeds, diseases and pests.

The unit applies to job roles including Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Harvesting Supervisor, Harvesting Team Leader, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for assessment	1.1 Determine frequency of assessment for particular forest area, and calculate size of sample area from inventory programs, budgets and organisational guidelines. 1.2 Research pests and diseases for the area.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Select methods of pest and disease measurement according to the forest management plan. 1.4 Locate and adhere to site environmental protection measures.
2. Implement pests and diseases assessment	2.1 Select method of assessment with regard to the forest type, and local, environmental and organisational guidelines. 2.2 Coordinate people, materials and equipment for the assessment. 2.3 Organise schedule for the site assessment in conjunction with other relevant forest operations personnel 2.4 Obtain permits or licences required for the assessment. 2.5 Direct personnel to undertake the assessment and collect the data on pests and diseases 2.6 Communicate regularly with contractors and operational staff to ensure smooth operation and progress. 2.7 Review and report on data retrieved from the assessment.
3. Monitor and review assessment	3.1 Check compliance with environmental protection measures, relevant legislation and regulations. 3.2 Monitor operational staff and contractors during the assessment phase and address problems or issues promptly. 3.3 Monitor and review operational activities for potential improvements. 3.4 Review assessment method for potential improvements. 3.5 Record and report on assessment results according to organisational procedures.

Assessment Requirements for FWPFGM4204 Conduct a pests and diseases assessment

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4204B Conduct a pests and diseases assessment, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to conducting a pests and diseases assessment
- identify the physical, biological, and environmental indicators of the presence of pests and diseases found in a forest
- accurately and safely measure the numbers of pests in a sample area
- coordinate people, resources and equipment for an efficient assessment for pests and diseases
- identify methods of improvement for an assessment of pests and diseases
- accurately interpret data on pests and diseases
- record and report on the outcomes of an assessment of pests and diseases.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices for conducting pest and disease assessment
- environmental protection requirements in relation to conducting a pests and diseases assessment
- organisational policies and procedures for conducting pest and disease assessment
- types of pests and diseases including:

© Commonwealth of Australia, 2025 Skills Insight

  - Fauna, including avian fauna, rodents, feral cats and wild dogs, and insects
  - Flora including weeds and creeping plants and diseases that affect plants
- methods and techniques to assess animal populations, diseases, pests and weeds
- methods for measuring and collecting data on pests and diseases
- safe use and application of tools and equipment used to conduct a pest and disease assessment
- procedures to obtain a permit or licence to conduct an assessment
-

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures relevant to conducting a pest and disease assessment
- PPE suitable to conduct a pest and disease assessment
- tools and equipment to conduct a pest and disease assessment
- forest site suitable to conduct a pest and disease assessment
- relevant contractors and operational staff for the purposes of communication

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM4205 Monitor regeneration rates

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4205B Monitor regeneration rates, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to monitor and coordinate the assessment of new plant stocks within a forestry area. The unit includes the assessment of germination, survival, regeneration and basal area surveys.

The unit applies to job roles including Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Harvesting Supervisor, Harvesting Team Leader, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to monitoring regeneration rates
- accurately and safely monitor regeneration in a sample area
- coordinate people, resources and equipment for the efficient monitoring of regeneration
- identify methods of improvement for the monitoring of regeneration
- accurately interpret data on regeneration
- record and report on the outcomes of monitoring regeneration in a forest.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational and site standards, requirements, policies and procedures for monitoring regeneration rates
- environmental risks and hazards in a forest setting
- types and rates of regeneration of the following
  - seeding
  - seedlings
  - coppice
  - standard sprouts

© Commonwealth of Australia, 2025 Skills Insight

- assessment techniques for regeneration rates, including
  - monitoring germination and survival rates
  - observing the effects of browsing, the distribution of new growth in square metres and regeneration rates
  - calculating basal areas
- types of tools, and equipment used for measuring regeneration in a forest, and procedures for their safe use and maintenance.
-

Assessment Conditions

The following resources must be made available:

- a forest area that is undergoing regeneration
- organisational policies and procedures relevant to monitoring regeneration rates
- relevant personnel for the purposes of communicating information
- PPE suitable to monitor regeneration rates.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- plan, conduct and review a wood volume yield assessment in line with regulations and organisational requirements that includes:
  - timber volume by class sizes
  - timber quality
  - timber damage
  - form and rates of growth
- accurately and safely calculate wood volume and yield from a sample area
- coordinate people, resources and equipment for the efficient assessment of wood volume and yield
- identify methods of improvement for the assessment of wood volume and yield
- accurately interpret data on assessment of wood volume and yield
- record and report on the outcomes of assessment of wood volume and yield.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational policies and procedures for conducting a wood volume and yield assessment
- environmental risks and hazards associated with assessing wood volume and yield

© Commonwealth of Australia, 2025 Skills Insight

- volumes and yields associated with different species that includes:
  - quantity (gross volume) of timber per hectare
  - estimated yield (net volume) of useable timber per hectare
- assessment techniques and methods for measuring and calculating wood volume and yield
- types of tools and equipment for conducting a wood volume and yield assessment, and procedures for their safe use and maintenance.
- Relevant permits and licences

Assessment Conditions

The following resources must be made available:

- An area of forest in which to conduct a wood volume and yield assessment
- PPE suitable to conduct a wood volume and yield assessment
- Relevant personnel for the purposes of communicating information
- Organisational and site procedures and requirements relevant to conducting a wood volume and yield assessment

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM4208 Plan a quarry

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4208B Plan a quarry, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to locate the site, and gain approval for a quarry (borrow pit) operation for the purpose of sourcing material for the construction and maintenance of forest roads and tracks. It also includes developing and implementing a plan to establish a quarry.

The unit applies to job roles including Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Harvesting Supervisor, Harvesting Team Leader, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan for quarry operation	1.1 Review need for quarry operation. 1.2 Consult with relevant parties about land tenure and plans for possible sites for the quarry. 1.3 Inspect proposed locations for quarry and visually assess for

© Commonwealth of Australia, 2025 Skills Insight

	suitability and quantity and quality of material for end use. 1.4 Analyse samples of materials and test for suitability. 1.5 Identify environmental protection measures of site and any regulatory or zoning issues. 1.6 Conduct a cost-benefit analysis for the viability and lifespan of the proposed quarry site. 1.7 Prepare a quarry management plan with reference to site procedures.
2. Implement a quarry operation plan	2.1 Obtain necessary licences or permits for quarry development. 2.2 Select quantities required and methods of extracting material with reference to the quarry management plan. 2.3 Coordinate and schedule people, materials and equipment for quarry development. 2.4 Liaise with colleagues about other information, work plans, road maintenance or construction plans and ensure a coordinated approach. 2.5 Document activities according to organisational procedures.
3. Monitor and review quarry planning	3.1 Check compliance with environmental protection measures, WHS requirements, quality requirements. 3.2 Review outputs of quarry against plan. 3.3 Identify areas for improvement in establishment and operation of quarry. 3.4 Record and report on outcomes to appropriate personnel

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Calculate quantities of material that can be extracted from a given area • Calculate time for tasks
Oral communication skills to:	• Coordinate and direct the work of others.
Planning and organising skills to:	• Schedule activities and sequence tasks • Establish timelines

Assessment Requirements for FWPFGM4208 Plan a quarry

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4208B Plan a quarry, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to planning a quarry
- review sites and determine best site for the establishment of a quarry
- review the quality of material that a quarry will yield
- calculate the quantity of material that a quarry will yield
- safely and efficiently coordinate people, resources and equipment for the establishment of a quarry
- identify methods of improvement for the establishment of a quarry
- record and report on the outcomes of the establishment of a quarry.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational procedures for planning a quarry
- quarrying operations
- properties of quarry materials and their suitability for end use
- materials required for road construction, road maintenance, track rehabilitation and snig tracks and landings
- planning and sequencing quarrying tasks and activities
- environmental risks and hazards associated with quarrying
- methods of extraction from quarries: with plant and equipment and using blasting methods
- project planning including task breakdown

© Commonwealth of Australia, 2025 Skills Insight

- recording and reporting

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures relevant to planning a quarry
- documentation related to quarry planning and permits
- relevant personnel and parties for the purposes of communication and consultation
- PPE suitable to plan a quarry

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM4209 Interpret and use aerial photographs for forest management

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4209B Interpret and use aerial photographs for forest management, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to use aerial photographs as a tool to assist with management of a forest area.

The unit applies to job roles including Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Harvesting Supervisor, Harvesting Team Leader, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan to review aerial photographs	1.1 Review forest management objectives and requirements for aerial photographs.

© Commonwealth of Australia, 2025 Skills Insight

	1.2 Obtain available types of aerial photographs for required locations and application. 1.3 Assess aerial photographs for suitability to meet forest management objectives and applications.
2. Interpret forest management information from aerial photographs	2.1 Position aerial photographs for viewing and calculate scale. 2.2 Identify key aspects from aerial photographs and document these. 2.3 Interpret and apply photomapping standards for consistent data-collection. 2.4 Identify and interpret forest attributes and required forest management information from aerial photographs. 2.5 Map aerial photographs according to organisational procedures. Record and report on analysis of aerial photographs.
3. Update maps and plans from aerial photographs	3.1 Assess maps and plans and update as required, using established symbols, colours and conventions. 3.2 Use tools to transfer data in line with manufacturer recommendations. 3.3 Complete documentation and store according to organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Calculate scale in photographs

Range of Conditions

Not Applicable

Assessment Requirements for FWPFGM4209 Interpret and use aerial photographs for forest management

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4209B Interpret and use aerial photographs for forest management, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- maintain relevant equipment and materials
- interpret forest area detail from a map
- identify disease symptoms in trees and forest areas using aerial photographs
- identify vegetation characteristics on an aerial photograph
- locate required photographs from appropriate records (flight plan map)
- report and maintain information on details of forest attributes and topographic information
- interpret charts, tables, maps and flight plans
- identify and interpret title panel information on an aerial photograph
- calculate scale of an aerial photograph, scale distances for a map, and calculate and manipulate height and area information
- identify map type and map features, including topographic map features.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- typical scales used on maps and plans, and procedures for their use and manipulation
- key aspects of aerial photography including
  - determining north and flight line path

© Commonwealth of Australia, 2025 Skills Insight

  - mapsheet
  - flight orientation
  - photography type
  - focal length
  - film number
  - run number
  - frame number
  - height above sea level
  - photography date
- forest types and structures and type of information including
  - area
  - height
  - species
  - crown cover
  - crown form
  - disturbance
  - aspects to be considered as part of the environmental management process.
- applications relevant to using aerial photography including
  - road or plantation design
  - field navigation and interpretation of forest types
  - forest structure
  - environmental processes, including salinity discharge
  - ecological vegetation communities, including coastal heathlands
  - land capability classes
  - remnant vegetation (roadside vegetation)
  - diseased vegetation classes, including *Eucalyptus* dieback from *Phytophthora.*
- range of photographic film, and photo types including
  - project, mapsheet, spot and stratigraphic:
  - of photographic classes, including terrestrial, vertical and oblique
  - of aerial photographic film, including black and white, black and white infra-red, colour, colour infra-red.
- requirements for aerial photography including
  - scale
  - flying height and focal length
  - required percent endlap and sidelap
  - orientation
  - location and number of flight lines required
  - total number of photographs required
  - allowable drift, crab, tilt and image motion

© Commonwealth of Australia, 2025 Skills Insight

    - camera characteristics, including format, lens quality, shutter speed and aperture, film and filter characteristics
    - acceptable seasons of the year, time of day, allowable present cloud cover and hot spots
- field observations including
    - accuracy of all mapped topographic information
    - measure of accuracy of associated base topographic or digital base map
    - spatial accuracy of strata
    - measure of accuracy of content of strata
- transferring data including
    - rescaling from one source to another
    - transferring from map to map
    - transferring from photograph to map or diapositive to map
- care and storage of aerial photographs
- procedures for recording and reporting workplace information
- maps and plans: cadastral plans; topographic maps; locality plans; site plans and maps and plans generated through the use of geographic information systems (GIS)
- representation of topographic features on maps and plans including
    - roads and tracks
    - watercourses
    - ridges and spurs
    - saddles
    - peaks and knobs
- technology and equipment used to interpret aerial photographs, and procedures for its maintenance including
    - electronic data transfer technology
    - manual light tables
    - mechanical light tables, including Omnigraph, Kartoflex, Zoom Transfer Scope, Artiscope and Sketchmaster.

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures relevant to interpreting and using aerial photographs for forest management
- a selection of aerial photographs for forest management

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and

© Commonwealth of Australia, 2025 Skills Insight

- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM4210 Prepare a tender

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM4210B Prepare a tender, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to respond to and prepare a tender. The unit includes preparation of bid estimates in the required format.

The unit applies to job roles including Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Harvesting Supervisor, Harvesting Team Leader, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Identify tender requirements	1.1 Review tender information and organisational procedures for tender preparation. 1.2 Analsye tender specifications and job scope and determine fit with organisational objectives. 1.3 Review resources and capacity to meet tender requirements.

© Commonwealth of Australia, 2025 Skills Insight

2. Complete tender documentation	2.1 Prepare tender in line with project specifications, budget and timeline 2.2 Collate and document tender information in the required format. 2.3 Promptly disseminate tender documentation to appropriate personnel for review and modification in line with organisational procedures 2.4 Identify and correct areas of insufficient detail in line with organisational procedures
3. Undertake bid estimation	3.1 Detail bid estimations in the required format 3.2 Sequence work in line with project timelines, organisational procedures and environmental requirements 3.3 Develop contingency plans in line with organisational procedures. 3.4 Obtain approvals for budget and submission of tender in line with organisational requirements

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• calculate costs of works and time for tasks • develop a project budget
Reading skills to:	• interpret a tender
Writing skills to:	• develop a clear and proposal with sufficient detail to meet the requirements of the specifications.

Range of Conditions

Not Applicable

Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- accurately assess tender requirements relevant to the work context
- prepare written tenders in accordance with the organisation's style and format
- use technology to prepare a well written and clear tender
- use technology to store and retrieve necessary documentation
- estimate and calculate time, cost, quality and quantity for a project
- edit and make revisions to a tender so that it is ready for lodgement.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- resources and how to cost them for a tender including
  - work
  - time
  - personnel
  - equipment
- how to set out a budget for a tender
- project planning including
  - specifications
  - scope of work
  - performance measures

FWPFGM5201 Plan and manage an inventory program

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5201B Plan and manage an inventory program, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan and manage forest assessments, based on an inventory program. The unit includes conducting consultative processes, and monitoring and analysing the effectiveness of the program.

The unit applies to job roles including Arboriculture Manager, Forest Manager, Forestry Manager, Harvesting Manager, Nursery Manager, Plantation Establishment Manager, Plantation Manager and Production Manager.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan inventory program	1.1 Analyse requirements for an inventory program. 1.2 Review relevant site environmental protection measures, and legislative and regulatory requirements.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Check timeline and budget for inventory program. 1.4 Review organisational plans to check impact on tree breeding operation 1.5 Determine and document methods of measurement and frequency of inventory assessment. 1.6 Consult and obtain input to inventory program. 1.7 Develop a documented plan for inventory program and obtain necessary approvals. 1.8 Communicate the plan to relevant personnel.
2. Implement inventory program	2.1 Implement inventory program according to planned methods, schedule, budget and legislative requirements. 2.2 Coordinate required resources and authorisations. 2.3 Communicate schedule for inventory assessment to coordinating personnel. 2.4 Maintain documentation for all stages of the inventory.
3. Monitor inventory assessment	3.1 Identify monitoring points and check inventory assessment to ensure compliance with environmental, WHS, organisational and legislative requirements 3.2 Amend or revise inventory program and assessment processes to ensure specifications, quality and performance targets are met.
4. Review inventory assessment	4.1 Review inventory assessment against inventory program and organisational requirements 4.2 Analyse data and information to determine effectiveness of inventory assessment and improvements to future programs. 4.3 Make recommendations for future programs based on findings of analysis and consultation conducted 4.4 Record and report on inventory program outcomes to the appropriate personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for FWPFGM5201 Plan and manage an inventory program

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5201B Plan and manage an inventory program , which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- Follow organisational policies and procedures relevant to planning and managing an inventory program
- Plan an inventory program that includes a process to:
  - calculate the current and expected wood volume and yield within a forest, or
  - set a monitoring process in place to enable reporting against marketing, strategic and business plans.
- select sampling techniques and create sampling designs
- identify species growing in the target area
- recognise common diseases, pests and nutritional deficiencies in a forest
- use appropriate consultative, communication and interpersonal techniques with colleagues and stakeholders
- present clear and succinct written and verbal information to colleagues
- analyse qualitative and quantitative information and data
- prepare reports, documentation and submissions
- prepare site maps and plans
- use and adapt complex maps and diagrams.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- procedures for the development and implementation of environmental management strategies
- data collection and analysis methods
- map and plan preparation techniques
- characteristics and growth habits of local vegetation
- identification of plant species and their ecological interactions with the environment
- soil characteristics and topography of local area
- use and application of appropriate survey and assessment equipment
- statistical analysis techniques
- sampling techniques applicable to forest assessments
- principles of hydrology and the interaction/implications between forests/plantations and water use
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- organisational inventory procedures
- data, images, geographic and topogrpahic information, maps and diagrams relating to inventory assessments
- survey and assessment equipment
- computers, keyboards, printers and software
- documents, plans, reports and proformas commonly used for inventory planning and assessment
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM5208 Manage road construction and maintenance

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5208B Manage road construction and maintenance, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan and implement road construction and maintenance procedures. The unit covers a range of road types including heavy duty, all weather logging roads and unsurfaced earth roads.

The unit applies to those working in forest growing and management in a supervisory or management position.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan road construction and maintenance	1.1 Review forest management plan and requirements for roads. 1.2 Obtain and assess logging and topography details while applying environmental management considerations. 1.3 Review road location, design and construction requirements and analyse costs, benefits and impact on the forest.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Review timeframe for use of the road and likely weather conditions. 1.5 Calculate and document timber extraction methods and storage requirements for roads, tracks, equipment placement, falling and recovery rates, and delivery schedules. 1.6 Consult with authorities and obtain approvals for road development. 1.7 Prepare formal road construction/maintenance plan for approval in line with site procedures and environmental requirements.
2. Implement road construction	2.1 Brief site personnel on road and track design and construction plan. 2.2 Coordinate and schedule personnel, material and equipment required for the construction. 2.3 Plan operational procedures for roads with site personnel in line with design plan and environmental requirements. 2.4 Monitor construction of roads and tracks and report unexpected ground, water, vegetation or other environmental conditions to appropriate personnel. 2.5 Provide technical assistance to site personnel in preparing roads and tracks.
3. Maintain roads	3.1 Assess and record roads and tracks for maintenance and requirements. 3.2 Coordinate personnel, material and equipment required for maintenance, taking seasonal weather conditions into consideration. 3.3 Monitor site environmental conditions and make changes as required. 3.4 Organise maintenance schedule for the site in conjunction with operational personnel. 3.5 Maintain communication with operational staff, clients and contractors throughout maintenance activities to ensure smooth operations.
4. Monitor and review road construction and maintenance	4.1 Develop monitoring schedule in line with organisational policy and environmental requirements. 4.2 Checks that WHS procedures are observed and site environmental conditions are adhered to throughout works. 4.3 Check that performance indicators, targets and specifications are being met and that process or methods are amended as required. 4.4 Analyse data and documentation from construction or maintenance activities and measure performance against the plan.

© Commonwealth of Australia, 2025 Skills Insight

	4.5 Prepare recommendations for improvements and further work. 4.6 Record and report on road construction and maintenance process.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• calculate materials required for road construction • estimate time for tasks • manage budgets
Oral communication skills to:	• coordinate personnel and stakeholders
Planning and organising skills to:	• schedule work and meet established timeframes

Range of Conditions

Not Applicable

Assessment Requirements for FWPFGM5208 Manage road construction and maintenance

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5208B Manage road construction and maintenance, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures for road construction and maintenance
- plan for the efficient and cost-effective construction of a road
  - manage a road construction team to achieve established outcomes, including:
  - consulting with and obtaining approvals from authorities
  - providing technical assistance
  - co-ordinating and scheduling personnel, materials and equipment
- manage WHS in the course of road construction
- manage the protection of the environment in the course of road construction
- manage contingencies, including weather changes, in the course of road construction
- report on the outcomes of road construction and maintenance.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational policies and procedures for managing road construction and maintenance
- environmental risks and hazards associated with road construction
- materials used for road construction and their properties including:

© Commonwealth of Australia, 2025 Skills Insight

    - road base
    - gravel
    - crushed rock
    - sand and bluestone
    - cords and pipes for water crossings
- logging operations and log extraction methods
- road construction and maintenance procedures
- principles of road design and development, including:
    - control points
    - required grades
    - water crossing points and structures
- types of tools, plant and equipment used for road construction and procedures for their safe use and maintenance.
-

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures relevant to managing road construction and maintenance
- maps, plans, regulations and other documentation relevant to the construction of a road in a forestry setting
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM5210 Manage tending operations in a native forest

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5210A Manage tending operations in a native forest, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare and implement a tending operation within a managed native forest. It includes the conduct of consultative processes, analysis of the effectiveness of the operation, and presentation of findings.

The unit applies to those working in a management role in the forest and wood products industry.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan tending operation	1.1 Review native forest plan and organisational objectives relating to tending operations. 1.2 Identify environmental protection requirements for the native forest. 1.3 Review operational requirements for tending the native forest. 1.4 Consult with stakeholders about tending requirements for the native

© Commonwealth of Australia, 2025 Skills Insight

	forest. 1.5 Document a tending plan and obtain approvals for implementation.
2. Implement tending plan	2.1 Obtain required resources and authorisations to implement the tending plan. 2.2 Implement emergency treatments and hazard notification procedures. 2.3 Organise site schedule with technical operators. 2.4 Implement tending plan with reference to budget, schedule, performance indicators and objectives.
3. Monitor tending operations	3.1 Obtain data about performance at key milestones or established review periods. 3.2 Check that environmental, WHS, organisational and legislative compliance requirements are met and that documentation is accurate and up-to-date. 3.3 Maintain communication with operations supervisor throughout implementation of the plan. 3.4 Amend tending operation plan to ensure that specifications, quality and performance targets are on track.
4. Review tending operation	4.1 Review outcomes against established objectives. 4.2 Determine operational improvements for the future and formulate recommendations. 4.3 Record and report on tending operations to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Writing skills to:	• develop and document a plan for tending operations
Planning and organising skills to:	• schedule activities to meet established goals and objectives.

Assessment Requirements for FWPFGM5210 Manage tending operations in a native forest

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5210A Manage tending operations in a native forest, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures for managing tending operations in a native forest
- identify and obtain applicable licensing or certification requirements for tending operations
- use consultative processes with colleagues and stakeholders to obtain inputs in developing a plan for tending operations
- implement, monitor and review a plan for tending operations for a native forest
- manage tending operations in a native forest to meet established outcomes
- keep accurate records on the tending process and make recommendations for improvements in the tending process.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection requirements for a native forest, including:
  - soil disturbance measures
  - retention tree damage
  - fungal hygiene measures
  - identification of habitat trees

© Commonwealth of Australia, 2025 Skills Insight

    - chemical handling and application procedures
- organisational policies and procedures for managing tending operations in a native forest that relate to
    - WHS
    - organisational, legislative and environmental regulations, procedures, practices and precautions
    - adherence to site environmental imperatives
    - specifications
    - quality
    - performance targets
- tending operations in a native forest, including the following aspects:
    - the health of the stand
    - productivity and long term sustainability
    - end product mix requirements
    - the management of notifiable weeds
- impact of tending operations on forest productivity
- authorisations relevant to managing tending operations:
    - permits
    - approvals
    - licensing
- biology of relevant forest health problems
- native tree growth and development
- weed species and herbicide interactions
- hydrology and hydrological principles
- plant identification and plant classification
- ecology and ecological interactions
- soil types and structure
- hazards related to managing tending operations:
    - use of chemicals
    - off-site effects
    - tools and equipment
    - dangers to the public
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- a native forest area
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- requirements, organisational policies and procedures relevant to tending operations.

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM5211 Coordinate stand nutrition

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5211A Coordinate stand nutrition, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan and monitor the nutrition of a stand of trees.

The unit applies to those in management roles in the forest and wood products industry including Forestry Supervisor, Forestry Manager, Propagation and Stand Health Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan stand nutrition	1.1 Identify site environmental requirements. 1.2 Obtain and analyse relevant information for impacts on stand nutrition planning. 1.3 Select methods of ensuring adequate and appropriate level of stand nutrition. 1.4 Develop and document performance indicators and targets.

© Commonwealth of Australia, 2025 Skills Insight

	1.5 Obtain required approvals from relevant authorities. 1.6 Communicate stand nutrition plan and its performance indicators are communicated to appropriate personnel.
2. Implement and monitor stand nutrition plan	2.1 Communicate with operational staff to explain nutrition plan, activities and roles and responsibilities. 2.2 Coordinate resources and maintain documentation for fertiliser applications. 2.3 Monitor the implementation of the nutrition plan and make necessary adjustments. 2.4 Ensure compliance with organisational procedures, quality, WHS, legislative and regulatory requirements. 2.5 Identify and control potential and existing risks and hazards in the work area.
3. Review outcomes of nutrition activities	3.1 Collect data on stand nutrition and review effectiveness of activities. 3.2 Analyse budgets and cost-effectiveness of nutrition program. 3.3 Document outcomes of the nutrition plan against established performance indicators and report to relevant personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Writing skills to:	• develop and document a plan for tending operations
Planning and organising skills to:	• schedule activities to meet established goals and objectives.

Range of Conditions

Not Applicable

Assessment Requirements for FWPFGM5211 Coordinate stand nutrition

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5211A Coordinate stand nutrition, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures for managing stand nutrition
- develop and implement a plan for stand nutrition that includes:
  - relevant policies and procedures
  - budgets
  - timelines
  - resources (people, materials, equipment)
  - activities and tasks
  - performance indicators
- identify nutritional deficiencies in target species
- recommend suitable strategies to address nutritional deficiencies in target species
- report on the outcomes of a plan for stand nutrition

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection requirements relating to stand nutrition
- hazards relating to stand nutrition including:
- the use of chemicals and/or biological agents
- infrastructure in the vicinity of the stand, including powerlines

© Commonwealth of Australia, 2025 Skills Insight

- organisational policies and procedures for stand nutrition
- fertiliser technology and options for the application of fertiliser
- nutritional requirements of target species
- biology of target species
- hydrology and hydrological principles
- plant identification and classification skills
- ecology and ecological interactions
- soil types and structure
- types of tools and equipment used for ensuring stand nutrition, and procedures for their use, operation and maintenance.

Assessment Conditions

The following resources must be made available:

- relevant organisational procedures, policies and requirements to co-ordinate stand nutrition
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- forest area to implement stand nutrition

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM5212 Manage genetic resources

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5212A Manage genetic resources, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to manage the propagation process using sexual and asexual methods and tending nursery plants. It includes the propagation methods of seeding, cuttings, grafting, tissue culture and layering.

The unit applies to job roles including Arboriculture Manager, Forest Manager, Forestry Manager, Harvesting Manager, Nursery Manager, Plantation Establishment Manager, Plantation Manager and Production Manager.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication, however reference should be made to the Plant Breeders Rights Act 1994.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan propagation	1.1 Review organisational genetic resources policies and procedures in relation to the propagation and tending planning process. 1.2 Select and confirm quantities, timing, provenances, species and desirable characteristics for plants in development.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Document specifications and targets for production quantities, timing, provenances and species. 1.4 Review site environmental protection measures and relevant legislation and regulations.
2. Implement genetic management plan	2.1 Select method of propagation for the target species. 2.2 Obtain permits or licences required for production, collection and management of genetic resources 2.3 Direct operational activities including hygiene, propagation, bed preparation and environmental considerations. 2.4 Schedule and coordinate people, materials, tools and equipment required for propagation. 2.5 Keep nursery staff informed of the plan, propagation methods and tending requirements.
3. Monitor and review genetic resource plan	3.1 Inspect environmental protection measures for propagation, soil and drainage and implement corrections where necessary. 3.2 Maintain communications with staff, clients and contractors about progress of propagation. 3.3 Review propagation methods and implement corrections where necessary 3.4 Record and report on genetic management results, with recommendations for future improvement.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Writing skills to:	• develop and document a plan for propagation
Planning and organising skills to:	• schedule activities for propagation • coordinate the work of staff.

Range of Conditions

Not Applicable

Assessment Requirements for FWPFGM5212 Manage genetic resources

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5212A Manage genetic resources, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- use propagation techniques including:
  - seeds
  - cuttings
  - grafting
  - tissue cultures
  - layering
- schedule resources, materials and equipment required for propagation
- identify problems in the management of genetic resources and demonstrate appropriate response procedures
- efficiently and safely implement a genetic resource management plan, and organise and obtain required permits or licences
- record and report on genetic resource management.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational policies and procedures, and legislation relevant to processes for managing genetic resources
- genetic resources including sexual and asexual plant species

© Commonwealth of Australia, 2025 Skills Insight

- provenance of genetic resources
- characteristics of genetic resources including:
  - growth rate
  - branch angle
  - branch height
  - timber density
- environmental protection requirements for managing genetic resources including:
  - fungal and insect control measures
- and action to limit impacts on:
  - selected forest vegetation
  - habitat
  - soil and water features
- methods of propagation including:
  - seeds
  - cuttings
  - grafting
  - tissue cultures
  - layering
- genetic resources and tending strategies
- regeneration principles and methods
- hydrology and hydrological principles
- plant identification and classification skills
- ecology and ecological interactions
- soil types and structure
- nursery hygiene and sterilisation techniques
- types of tools and equipment used for managing genetic resources, and procedures for their use, operation and maintenance
- procedures for recording and reporting workplace information.
-

Assessment Conditions

The following resources must be made available:

- tools and equipment relevant to the management of genetic resources
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- organisational policies and procedures relevant to managing genetic resources
- PPE suitable to manage genetic resources.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

FWPFGM5213 Coordinate plantation tending operations

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to prepare and implement a tending operation in a plantation. It includes the conduct of consultative processes, analysis of the effectiveness of the operation and the presentation of findings.

The unit applies to job roles including Arboriculture Manager, Forest Manager, Forestry Manager, Harvesting Manager, Nursery Manager, Plantation Establishment Manager, Plantation Manager and Production Manager.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan tending operation	1.1 Review forest plan and organisational objectives relating to tending operations for a plantation.

© Commonwealth of Australia, 2025 Skills Insight

	1.2 Identify environmental protection requirements for the plantation. 1.3 Review operational requirements for tending the plantation. 1.4 Consult with stakeholders about tending requirements. 1.5 Document a tending plan and obtain approvals for implementation.
2. Implement tending plan	2.1 Obtain required resources and authorisations to implement the tending plan. 2.2 Implement emergency treatments and hazard notification procedures. 2.3 Organise site schedule with technical operators. 2.4 Implement tending plan with reference to budget, schedule, performance indicators and objectives.
3. Monitor tending operations	3.1 Obtain data about performance at key milestones or established review periods. 3.2 Check that environmental, WHS, organisational and legislative compliance requirements are met and that documentation is accurate and up-to-date. 3.3 Maintain communication with operations supervisor throughout implementation of the plan. 3.4 Amend tending operation plan to ensure that specifications, quality and performance targets are meeting planned requirements.
4. Review tending operation	4.1 Review outcomes against established objectives. 4.2 Determine operational improvements for the future and formulate recommendations. 4.3 Record and report on tending operations to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Writing skills to:	• develop and document a plan for tending operations.
Planning and organising skills to:	• schedule activities to meet established goals and objectives.

Assessment Requirements for FWPFGM5213 Coordinate plantation tending operations

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures for managing tending operations in a plantation
- identify and obtain applicable licensing or certification requirements for tending operations
- use consultative processes with colleagues and stakeholders to obtain inputs in developing a plan for tending operations
- develop and implement a plan for tending operations
- manage tending operations to meet established outcomes
- keep accurate records on the tending process and make recommendations for improvements in the tending process.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection requirements for a forest including:
  - soil disturbance measures
  - retention tree damage
  - fungal hygiene measures
  - identification of habitat trees
  - chemical handling and application procedures
- organisational policies and procedures for managing tending operations in a forest including

© Commonwealth of Australia, 2025 Skills Insight

  - end product requirements
  - stand treatment certification documentation
  - contractual requirements and obligations
  - environmental and public relations imperatives
  - current state of the forest resource
- tending operations that are designed to:
  - maintain the health of the stand
  - improve productivity and long term sustainability
  - the management of notifiable weeds
- impact of tending operations on forest productivity and various end products
- authorisations and permits including:
  - permits
  - approvals
  - licences relating to neighbouring properties

and may relate to:

  - hours of operation
  - use and application of chemicals
  - the environment
- biology of relevant forest health problems
- target species growth and development
- weed species and herbicide interactions
- hydrology and hydrological principles
- plant identification and plant classification
- ecology and ecological interactions
- soil types and structure
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- policies and procedures relevant to co-ordinating plantation tending operations
- PPE suitable to coordinate plantation tending operations
- plantation site suitable to coordinate tending operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and

© Commonwealth of Australia, 2025 Skills Insight

- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM5214 Develop a native forest regeneration plan

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5214A a native forest regeneration plan, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan and implement the regeneration or revegetation of an area of native forest for timber production. It includes conducting consultative processes and evaluation of the effectiveness of the regeneration plan against organisational marketing, strategic and business objectives.

The unit applies to job roles including Arboriculture Manager, Forest Manager, Forestry Manager, Harvesting Manager, Nursery Manager, Plantation Establishment Manager, Plantation Manager and Production Manager.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare regeneration plan	1.1 Analyse requirement for a native forest regeneration plan. 1.2 Review relevant site environmental protection measures, and legislative and regulatory requirements.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Check timeline and budget for regeneration 1.4 Select method of regeneration and trees. 1.5 Consult and obtain input to the plan. 1.6 Seek necessary approvals and obtain in line with site requirements 1.7 Develop a documented plan the native forest regeneration and obtain necessary approvals.
2. Implement regeneration plan	2.1 Obtain required resources and authorisations to implement the native forest regeneration. 2.2 Implement emergency treatments and hazard notification procedures. 2.3 Communicate plan and explain roles and responsibilities to the work team. 2.4 Implement native forest regeneration plan with reference to budget, schedule, performance indicators and objectives.
3. Monitor forest regeneration	3.1 Obtain data about performance at key milestones or established review periods. 3.2 Check that environmental, WHS, organisational and legislative compliance requirements are met and that documentation is accurate and up-to-date. 3.3 Maintain communication with operations supervisor throughout implementation of the plan. 3.4 Amend native forest regeneration plan to ensure that specifications, quality and performance targets are meeting planned requirements.
4. Review forest regeneration	4.1 Review outcomes against established objectives. 4.2 Determine operational improvements for the future and formulate recommendations. 4.3 Record and report on tending operations to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

Assessment Requirements for FWPFGM5214 Develop a native forest regeneration plan

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5214A Develop a native forest regeneration plan, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

- A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:
- plan a native forest regeneration operation with reference to organisational objectives, policies and procedures
- use consultative processes with colleagues and stakeholders to determine performance criteria, specifications and targets
- ensure efficient and safe processes and timelines
- safely implement native forest regeneration activities according to a documented plan and budget, and making adjustments to the plan or operation
- review and analyse operations and outcomes
- use data to document improvements to future operations
- maintain accurate and up-to-date documentation
- prepare a report on costs, processes and analysis of findings on the regeneration operation.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- applicable commonwealth, state or territory legislation, regulations, standards, codes of practice for native forests
- organisational policies and procedures relating to native forest regeneration
- environmental protection requirements for native forests including
  - soil disturbance measures

© Commonwealth of Australia, 2025 Skills Insight

    - retention tree damage
    - fungal hygiene measures
    - identification of habitat trees
    - chemical handling and application procedures.
- Authorisations and permits relevant to forest regeneration plans
    - permits
    - approvals
    - licences relating to neighbouring properties
- and may relate to:
    - hours of operation
    - use and application of chemicals
    - the environment
- methods of regeneration including
    - prescription burning
    - infill planting to support directional natural regeneration
    - pathways
    - direct seeding
    - crop tree retention
- consultation aspects and stakeholders that are relevant to native forest regeneration plans including
    - clients
    - neighbours
    - relevant groups/bodies
    - local, State and federal government bodies and agencies
    - local interest/lobby groups
    - friends' groups
    - representatives of industry bodies
- biology of the target species
- hydrology and hydrological principles
- plant identification and classification skills
- ecology and ecological interactions
- seed collecting and distribution seasons for the target species
- organisational marketing, business and strategic plans
- original and potential ecosystems for the target area
- common diseases, pests and nutritional deficiencies
- soil types and structure
- procedures for recording workplace information.

Assessment Conditions

The following resources must be made available:

© Commonwealth of Australia, 2025 Skills Insight

- organisational policies and procedures relevant to forest regeneration
- a suitable forest area from which to develop a forest regeneration plan
- PPE suitable to develop a forest regeneration plan
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM5216 Manage coupe planning

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5216A Manage coupe planning, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to manage the planning of forest coupe establishment, harvesting and regeneration.

The unit applies to job roles including Arboriculture Manager, Forest Manager, Forestry Manager, Harvesting Manager, Nursery Manager, Plantation Establishment Manager, Plantation Manager and Production Manager.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

There may be Codes of Practice applicable to coupe planning in some areas and for some forest types.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan coupe establishment	1.1 Establish local authority coverage, land ownership and boundaries. 1.2 Check coupe location including map and grid references.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Identify and apply for land use zoning and planning permits.
2. Plan coupe harvesting	2.1 Analyse forest type, available species and topography and document in line site procedures. 2.2 Calculate gross area of coupe and net area to be harvested. 2.3 Calculate and report volume estimates. 2.4 Plan operational activities including site preparation, environmental considerations and access. 2.5 Issue tenders and award harvesting and cartage contracts and establish cartage routes. 2.6 Develop, check and communicate schedule for harvesting.
3. Plan coupe regeneration	3.1 Select regeneration method best suited to the site conditions 3.2 Plan and instigate environmental protection measures for the landscape, soil and drainage. 3.3 Create and schedule seeding process or seedling planting regime 3.4 Plan and schedule silviculture systems. 3.5 Record and report management of coupe planning to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Planning and organising skills to:	• schedule activities to meet established goals and objectives.
Writing skills to:	• develop and document a plans for coupe establishment, harvesting and regeneration • report on outcomes.
Numeracy skills to:	• calculate length, width area and volume in relation to coupe

Range of Conditions

Not Applicable

Assessment Requirements for FWPFGM5216 Manage coupe planning

Modification History

Release	Comment
1	Replaces equivalent unit FPIFGM5216A Manage coupe planning, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to managing coupe planning
- plan for the establishment, harvest and regeneration of forest coupes
- select regeneration methods, create and schedule seeding processes or seedling regimes, and plan silviculture systems
- communicate effectively with the work team
- record and report workplace information, maintain documentation
- read and interpret maps
- estimate and calculate volume, gross and net areas
- manage risks and contingencies
- report on the outcomes of coupe planning

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection requirements relevant to coupe planning including limiting impact on:
  - selected forest vegetation
  - fauna
  - habitat

© Commonwealth of Australia, 2025 Skills Insight

  - soil and water features
- organisational policies and procedures for managing coupe planning
- coupe establishment and planning methods
- harvesting methodologies
- regeneration principles and methods
- hydrology and hydrological principles
- plant identification and classification skills
- ecology and ecological interactions
- soil types and structure
- types of tools and equipment, and procedures for their use, operation and maintenance, for coupe planning
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures relevant to coupe planning
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- PPE suitable to managing coupe planning
- a suitable forest area.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM5217 Promote plantations as a sustainable form of land use

Modification History

Release	Comment
1	Replaces superseded equivalent FPIFGM5217A Promote plantations as a sustainable form of land use which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to develop, implement, monitor and review a program to promote plantations to stakeholders and the general community, including the environmental and sustainability benefits of plantations compared to other forms of land use.

The unit applies to job roles including Community Liaison Officer, Designer (Manufacturing and Engineered Wood Products), Environmental Planner and Manager, Forest/Timber Harvester, Forest Auditor or Forest Planner, Forest Sustainability Manager, Forestry Manager, General Manager, Plantation Manager, Sustainability Manager, Technical Forester, Technical Services Officer, Technical Services Manager and Value Recovery Officer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS	**PERFORMANCE CRITERIA**
Elements describe the	*Performance criteria describe the performance needed to demonstrate*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS *essential outcomes.*	**PERFORMANCE CRITERIA** *achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Identify target market	1.1 Define program need, purpose, objectives and outcomes in consultation with stakeholders. 1.2 Evaluate potential of program to appeal to a range of markets. 1.3 Identify benefits and costs of targeting specific audiences. 1.4 Establish markets to be targeted in consultation with appropriate personnel.
2. Plan promotions program	2.1 Identify timeline and budget and obtain necessary approvals from appropriate personnel. 2.2 Select range of appropriate promotional modes and methods to reach target markets. 2.3 Develop tools and resources appropriate to modes and methods of program promotion and obtain necessary approvals for promotional activities. 2.4 Clearly document plan and communicate to appropriate personnel.
3. Implement promotions program	3.1 Obtain and coordinate required resources to implement promotions program. 3.2 Provide program schedule tools and resources to appropriate personnel. 3.3 Establish processes to monitor program quality.
4. Evaluate programs	4.1 Evaluate programs against documented plan and objectives. 4.2 Analyse programs to verify effectiveness in meeting objectives and to identify future program improvements. 4.3 Prepare recommendations for future programs based on consultation and analysis.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Oral communication skills to:	• Hold high-level consultative discussions to generate ideas for and negotiate content of promotional programs.

© Commonwealth of Australia, 2025 Skills Insight

Reading skills to:	• Interpret complex information in a range of internal and external source documents to evaluate and establish target markets.
Writing skills to:	• Develop and document comprehensive program plans. • Report on effectiveness of programs and potential improvements including rationale for recommendations.
Planning and organising skills to:	• Source, collect and organise a range of data to inform program content. • Plan and manage own timing and productivity to plan, implement and evaluate promotional programs.
Numeracy skills to:	• Calculate promotional costs • Develop timelines and budgets
Technology skills to:	• use a computer, keyboard and software to prepare program plans and reports.

Assessment Requirements for FWPFGM5217 Promote plantations as a sustainable form of land use

Modification History

Release	Comment
1	Replaces superseded equivalent FPIFGM5217A Promote plantations as a sustainable form of land use which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Develop individual promotional programs to communicate the benefits of tree plantations as an alternative land use, to each of the following targeted stakeholder groups:
  - landholders
  - local government councils
  - general public.
- For each of the above programs, develop and document materials which provide advice on the following range of matters relating to plantation management:
  - objectives of plantation establishment
  - species selection
  - plantation designs
  - establishment techniques
  - silvicultural regimes
  - maintenance
  - fire protection
  - market opportunities.
- For each of the above programs, choose at least two promotional methods from the following list that are suitable to the audience and document plans for delivery of promotions:
  - literature
  - self-help material
  - field demonstrations

© Commonwealth of Australia, 2025 Skills Insight

  - field inspections
  - lectures
  - workshops
  - field days
  - brochures
  - information sessions
  - individual consultations
  - multimedia material.
- Evaluate the effectiveness of one of the above promotional programs and complete a report including recommendations for improving future programs.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- A range of matters relating to plantation management around which promotions can be designed, including:
  - objectives of plantation establishment
  - species selection suitable for plantation establishment for a range of soil types and climates
  - plantation designs
  - plantation establishment techniques
  - silvicultural regimes suitable for a range of plantation types
  - maintenance
  - fire protection and suppression in plantations.
- Harvesting methods suitable for a range of plantation types.
- Market opportunities for plantation products and carbon storage.
- Role of wood or waste products in generating renewable energy through biomass.
- Effects of plantation on soils, water quality, water quantity and biodiversity compared to other land uses.
- Levels of use of fertilisers, herbicides, insecticides and other chemicals compared to other land uses.
- Socioeconomic impacts of plantations on rural communities.
- Use and demand for plantation products nationally and internationally.
- Economic benefits of plantations compared to other land uses.
- Features, benefits and practical application of promotional methods commonly used to promote plantations, including:
  - self-help material
  - field demonstrations
  - field inspections
  - lectures
  - workshops

© Commonwealth of Australia, 2025 Skills Insight

  - field days
  - brochures
  - information sessions
  - individual consultations
  - multimedia material.
- Approvals required for promotional activities:
  - permits, approvals and licences relating to use of resource material
  - use of existing plantations for demonstration purposes.
- Methods to evaluate program effectiveness against plans and objectives.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to document plans and reports.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM5219 Undertake carbon stock sampling of forests and plantations

Modification History

Release	Comment
1	Replaces superseded equivalent unit FPIFGM5219 Undertake carbon stock sampling which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to assess forests and plantations for current and future carbon stocks, including the use of growth modelling techniques to estimate future stocks. Work is completed in a variety of settings including native forest environments, hardwood or softwood plantations and agroforestry and farm forestry.

The unit applies to job roles including Forest Auditor, Forest Planner, Environmental Manager, Environmental Planner Forest Sustainability Manager And Sustainability Manager.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Plan for carbon stock sampling activities	1.1 Confirm purpose, objectives and scope of sample collection activity through stakeholder discussions and consultations. 1.2 Conduct desktop study of existing forests and plantations. 1.3 Design measurement program and confirm sampling site locations and where required, obtain approval for site access. 1.4 Evaluate characteristics of sites for impact on sampling and testing method. 1.5 Determine and arrange human and physical resource requirements.
2. Prepare for carbon stock sampling activities	2.1 Locate forests and plantations using site maps and plans and identify areas for sampling. 2.2 Complete administrative requirements, arrange contractors and obtain approvals in line with organisational procedures. 2.3 Complete a risk assessment for the sample site and activities.
3. Conduct carbon stock sampling collection	3.1 Inspect and test sampling equipment to ensure operational effectiveness. 3.2 Coordinate sampling activities at sites prior to commencement of and during the work activity. 3.3 Conduct surveys and sampling in line with organisational safety procedures. 3.4 Record results of samples and surveys, in line with sampling plan. 3.5 Monitor sampling activities on a regular basis against sampling plan, and implement modifications or improvements as required.
4. Interpret results	4.1 Estimate forest carbon stocks from collected data. 4.2 Review data against assessment program in line with organisational procedures. 4.3 Analyse data to determine effectiveness of assessment. 4.4 Prepare recommendations for future programs based on analysis. 4.5 Record and report assessment processes and improvement suggestions to appropriate personnel.
5. Use growth models to predict biomass and carbon stocks	5.1 Select appropriate growth model. 5.2 Predict biomass growth and carbon stocks from data

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	assessments and incorporate in growth model. 5.3 Analyse data to determine comparability of predicted forest carbon stocks to current available data.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Interpret numerical data and symbols on maps. • Collect, analyse and record complex statistical data. • Identify and extract relevant information from complex diagrams, graphs and charts. • Use complex numerical modelling calculations to predict biomass growth and carbon stock growth.
Reading skills to:	• Interpret complex information in a range of internal and external source documents to plan for sampling activities.
Oral communication skills to:	• Hold high-level consultative discussions to generate ideas for and negotiate purpose, objectives and scope of sampling program.
Writing skills to:	• Prepare detailed and accurate reports involving qualitative and quantitative content where precise meaning is required. • Report on effectiveness of programs and potential improvements including rationale for recommendations.

Assessment Requirements for FWPFGM5219 Undertake carbon stock sampling of forests and plantations

Modification History

elease	Comment
1	Replaces superseded equivalent unit FPIFGM5219 Undertake carbon stock sampling which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Design two measurement programs for two individual sites to calculate current and expected biomass and carbon stocks of:
  - trees above and below ground
  - other vegetation
  - litter layer
  - soil.
- Complete survey and sampling activities for one of those sites using the measurement plan designed.
- Record and analyse all data collected for the site, estimate current carbon stocks, select a growth model and predict and document biomass growth and carbon stocks.
- Complete a report on survey and sampling activities recommending improvements for future processes.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Requirements for obtaining permits and licences for site sampling activities and the authority from whom approval must be obtained.
- Characteristics and growth habits of local vegetation.
- Soil characteristics and topography of local area.

© Commonwealth of Australia, 2025 Skills Insight

- Purpose, features and application of measurement programs used to calculate current and expected biomass and carbon stocks of the following:
  - trees above and below ground
  - other vegetation
  - litter layer
  - soil
  - wood products.
- Data collection and sampling methods for estimating carbon stocks.
- Statistical analysis techniques applicable to biomass and carbon assessments.
- Methods used to predict biomass growth and carbon stock growth, specifically the use of growth models.
- Purpose, features and operation of survey and assessment equipment and tools, including:
  - geographic information systems
  - interpretation of topographic maps and aerial photography
- Organisational procedures specific to carbon stock sampling, including:
  - workplace health and safety with particular emphasis on risk assessment and control
  - communication reporting lines
  - recording and reporting sampling data.

Assessment Conditions

The following resources must be made available:

- topographic maps
- aerial photography
- geographic information systems
- documents and commonly used proformas for recording sampling data
- organisational procedures for carbon stock sampling.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM6201 Plan a biochar storage system for carbon capture and storage

Modification History

Release	Comment
1	Replaces superseded equivalent FPIFGM6201B Plan a bio-char storage system for carbon capture and storage, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to implement a bio-char storage system at senior management or project management level in forest/farm forest, sawmilling or timber treatment settings.

The unit applies to job roles covering project, sustainability or environmental management.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Forest Growing and Management

Sawmilling and Processing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
1. Assess bio-char carbon storage system feasibility	1.1 Research bio-char carbon storage systems. 1.2 Explore organisational need for bio-char carbon storage system and investigate context of requirements through consultation. 1.3 Investigate context of bio-char carbon storage system and clarify requirements with appropriate personnel. 1.4 Identify and document user requirements and environmental parameters. 1.5 Investigate bio-char carbon storage system options and identify installation, operation and maintenance requirements. 1.6 Make recommendations about need for and appropriate type of system based on findings.
2. Determine facility requirements	2.1 Select feed stock for bio-char process and calculate amount that can be obtained for pyrolysis. 2.2 Select method of pyrolysis based on feed stock and appropriate outputs. 2.3 Estimate costs of transporting liquid and solid by-products. 2.4 Assess amount of material to be processed and consider ability to feed into power grid. 2.5 Determine process conditions.
3. Design a bio-char carbon storage facility	3.1 Design facility to provide optimal conditions for carbon storage. 3.2 Identify and address legal requirements or government regulations impacting on proposed facility. 3.3 Document design specification and communicate relevant information. 3.4 Review overall operation and output of proposed facility for economic sustainability in line with long-term direction and purpose of organisation.
4. Plan implementation of bio-char carbon storage facility	4.1 Develop construction plan in line with accepted design principles. 4.2 Evaluate internal resource abilities and determine requirement for external expertise. 4.3 Record material, resource and supply provision requirements based on construction plan. 4.4 Estimate labour requirements based on work plans and

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	schedules. 4.5 Calculate operating expense budget, indicating input and output costs applicable to proposed facility.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Complete a range of highly technical and complex calculations involving input and output volumes. • Develop complex budgets for the construction of bio-char storage systems.
Oral communication skills to:	• Hold high-level consultative discussions to generate ideas for and negotiate requirements for bio-char storage systems.
Reading skills to:	• Interpret complex information in a range of internal and external source documents to evaluate and establish bio-char storage system feasibility.
Writing skills to:	• Document complex information on feasibility of constructing bio-char systems including detailed recommendations. • Document complex data in design specifications and construction plans.
Technology skills to:	• Assess, design and implement a bio-char storage systems

Unit Mapping Information

Assessment Requirements for FWPFGM6201 Plan a biochar storage system for carbon capture and storage

Modification History

Release	Comment
1	Replaces superseded equivalent FPIFGM6201B Plan a bio-char storage system for carbon capture and storage, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Conduct a feasibility study for the design and construction of a bio-char carbon storage for one of the following users:
  - harvesting operators
  - forest owners
  - sawmill operators
  - timber processing and manufacturing facilities
  - industries supplying feedstock
  - government departments and councils
  - agricultural businesses
- Complete a report recommending the optimum type of system to meet the user's needs including the method of pyrolysis.
- Develop design specifications, a construction plan and budget for building the facility.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Purpose and content, at an in-depth level of understanding, of mandated and voluntary industry codes of practice for operating bio-char storage systems.
- Carbon marketing principles.
- Quality management systems for chemical production.

© Commonwealth of Australia, 2025 Skills Insight

- Fundamental principles of chemistry as they apply to the operation and stability of bio-char facilities.
- Features and uses of environmental protection monitoring systems associated with a bio-char facility.
- Common user needs and requirements for bio-char storage systems, including:
  - by-products of a pyrolysis system
  - waste management options
  - carbon sequestration priorities
  - land management priorities
  - development priorities
  - investor interests
  - financial returns
  - environmental outputs
  - social responsibility
  - sustainability
  - input usage
- Meaning of pyrolysis, differing methods and benefits of each , including:
  - slow pyrolysis
  - fast pyrolysis
  - intermediate pyrolysis
  - carbonisation
  - gasification
- Types of feedstock used for bio-char processes, characteristics and range of outputs associated with each, including:
  - wood products, including:
    - harvesting residues
    - green mill residue
    - dry mill residue
  - residue from other wood fibre processing operations
  - agricultural waste
  - crops grown for the consumption of bio-char plants
  - manure and waste from intensive animal farming systems
  - municipal waste
- Process conditions for bio-char systems, including:
  - temperature
  - residence time
  - heating rate
  - feed stock preparation
- Format, content and use of design specifications and construction plans.

© Commonwealth of Australia, 2025 Skills Insight

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to document plans and reports.
- Template feasibility reports, design specifications and construction plans.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPFGM6203 Manage sustainable tree inventory

Modification History

Release	Comment
1	Replaces superseded equivalent FPIFGM6203 Manage sustainable tree inventory which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the outcomes required to develop a tree inventory plan to manage an inventory of forestry timber assets. The unit applies to those people who manage forests for enterprises but may also apply to people who have responsibility for sustainable tree management in urban or rural enterprises.

The unit applies to job roles including Forest Auditor, Forest Planner, Environmental Manager, Environmental Planner Forest Sustainability Manager And Sustainability Manager.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Forest Growing and Management

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Conduct risk assessment	1.1 Research and analyse sustainable tree management

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
for managing tree inventory	requirements. 1.2 Identify resources and site characteristics. 1.3 Research and assess external influences on tree inventory. 1.4 Identify risks and potential outcomes related to identified resources and site characteristics and document risk management strategy.
2. Obtain approvals for development of tree inventory plan	2.1 Consult stakeholders and obtain support for development of tree inventory plan and management approach. 2.2 Obtain approval for identified inventory plan and management approach.
3. Prepare tree inventory plan for sustainable forest management	3.1 Identify administrative tools, physical resources and recording methodology. 3.2 Identify forest estate and associated management requirements. 3.3 Forecast required human and financial resources to manage inventory. 3.4 Establish quality assurance practices for collecting, documenting and verifying data. 3.5 Clearly document plan and communicate to appropriate personnel.
4. Manage the implementation of tree inventory plan	4.1 Explain inventory plan requirements and responsibilities to participating stakeholders. 4.2 Provide stakeholder support to ensure quality outcomes and objectives are met. 4.3 Monitor finances and resources and maintain record keeping systems. 4.4 Monitor risks and implement contingency management processes.
5. Evaluate tree inventory plan	5.1 Collect, analyse and store data about tree inventory in line with organisational procedures. 5.2 Identify and investigate variations in tree inventory outcomes and objectives. 5.3 Consult appropriate stakeholders on variation between desired results and actual outcomes. 5.4 Evaluate outcomes and processes against tree inventory plan.

© Commonwealth of Australia, 2025 Skills Insight

ELEMENTS	PERFORMANCE CRITERIA
	5.5 Prepare recommendations for future plans based on consultation and analysis.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• Analyse complex numerical data involving areas, ratios, percentages, volumes, lengths and diameters.
Oral communication skills to:	• Hold high-level consultative discussions to generate ideas for and negotiate content of tree inventory plans.
Reading skills to:	• Interpret complex information in a range of source documents to research and develop tree inventory plans.
Writing skills to:	• Develop and document comprehensive tree inventory plans. • Report on effectiveness of inventory management approach and potential improvements including rationale for recommendations.
Planning and organising skills to:	• Source, collect and organise a range of data to inform plan content. • Plan and manage own timing and productivity to plan, implement and evaluate management of tree inventory.
Technology skills to:	• Use a computer, keyboard and software to prepare plans and reports.

elease	Comment
1	Replaces superseded equivalent FPIFGM6203 Manage sustainable tree inventory which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- Develop a comprehensive written plan to manage sustainability tree inventory for a given site.
- Incorporate these inclusions in the plan:
  - risk management strategy to manage and minimise risks
  - quality assurance practices for collecting, documenting and verifying data
  - required data collection and administrative tools
  - required human resources and responsibilities
  - data recording methodology
  - recording and reporting procedures.
- For a specified period, analyse data and record and report on the following types of outcomes:
  - established growth rates
  - established volumes
  - forecasted outputs
  - forecasted sustainability
  - monitored sustainability
  - preserved forest sustainability.
- Evaluate the effectiveness of the tree inventory plan and complete a report including recommendations for improving future plans and tree management approach.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- Role of wood or waste products in generating renewable energy through biomass.
- Behavioural characteristics of a range of tree species.
- Silvicultural practices associated with management objectives.
- Key sustainability indicators for tree management.
- Key content and application of mensuration theory.
- Risks involved managing a sustainable tree inventory and methods used to minimise impacts, including:
  - biological
  - pests and diseases
  - weather and climate change
  - economic risk
  - erosion
  - fire
  - market failure
  - natural disaster
  - sabotage
  - water
  - structural failure.
- External influences and how they impact on managing a sustainable tree inventory, including:
  - international and Australian forestry and environmental standards
  - state, territory and local laws
  - advisory standards and codes of practice
  - land tenure and access
  - neighbouring tenure and access
  - habitat
  - cultural and heritage sites
  - agriforestry arrangements
  - fire management
  - data availability
  - human resource skills and availability.
- Purpose, features and application of inventory management tools, including:
  - measuring or diameter tapes
  - dataloggers and laptops
  - log sheets
  - compass
  - clinometer
  - height sticks

© Commonwealth of Australia, 2025 Skills Insight

  - prisms
  - mobile GPS
  - maps
  - survey and title data
  - survey equipment
  - gantt charts
  - flow charts.
- Key features and benefits of different recording methodologies, including:
  - dataloggers
  - log sheets
  - manual or electronic data transfer
  - analytical techniques and formulae
  - radio, UV, laser advanced technology
  - digital dataloggers and laptop computers
  - desk or field surveys
  - testing and calibration records.
- Organisational procedures specific to managing sustainable tree inventory:
  - communication reporting lines
  - database management and document control.

Assessment Conditions

The following resources must be made available:

- Computers, keyboards, printers and software used to document plans and reports.
- Administrative tools and equipment for managing sustainable tree inventory:
  - filing systems
  - field templates
  - operational manual
  - land access information
  - gantt charts
  - flow charts.
- Documents and commonly used proformas used to document risk management strategies and tree inventory plans.
- Organisational procedures for managing sustainable tree inventory.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

© Commonwealth of Australia, 2025 Skills Insight

Assessors must:

- Hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR2203 Hook up felled logs using cables (choker)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR2203B Hook up felled logs using cables (choker), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to fasten choker cables around logs for yarding from the cutting area to the landing, and to assist with line shifts. Work is completed in a forest or forest farm setting.

The unit applies to choker setters in a forest or forest farm environment.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for choker setter operations	1.1 Review work order and where required check with appropriate personnel. 1.2 Identify type and quantity of logs to be extracted and assess area for

© Commonwealth of Australia, 2025 Skills Insight

	safety and environmental protection practices. 1.3 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.4 Plan choker setter and cable operations in line with work order.
2. Hook up logs	2.1 Identify audible or visual signal system to be used. 2.2 Select specific logs for next return prior to return of butt rigging in line with planned operations 2.3 Assess position of logs to be extracted in line with haul line, hook up point and likely movement. 2.4 Monitor stability of logs to be extracted and take precautions against movement in line with logging code of practice. 2.5 Direct and control positioning of butt rigging using signals and strawlines to facilitate planned hook ups. 2.6 Pull out slack for chokers and grapple ropes to allow safe hook up. 2.7 Set chokers or grapples close to end of logs. 2.8 Vacate area surrounding logs prior to signalling extraction. 2.9 Record and report hook up process and equipment faults to rigging slinger.
3. Assist with line shifts	3.1 Clear all logs to be hauled with existing line position before line shift is initiated. 3.2 Notch stumps in line with code requirements and rigging method to be used. 3.3 Pull slack on all lines prior to release of existing rigging. 3.4 Dismantle rigging components on existing line, check and set up on new line. 3.5 Move obstructions which may cause binding or damage during hauling. 3.6 Assist rigging slinger to rig spars, tail trees and intermediate supports.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine calculations to determine lift capacity for rigging.

© Commonwealth of Australia, 2025 Skills Insight

Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders • provide clear, unambiguous verbal and non-verbal haul signals.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders.

Writing skills to:	• complete accurate basic records for hook-up process and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation for and extraction of logs using work order to guide activities

Range of Conditions

Not Applicable

Assessment Requirements for FWPHAR2203 Hook up felled logs using cables (choker)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR2203B Hook up felled logs using cables (choker), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- safely and efficiently hook-up felled logs in line with work orders for recovery operations
- hook-up logs in varied weather conditions
- operate cable systems for felled logs including:
  - high lead (no skyline)
  - standing skyline
  - running skyline
- assist in shifting lines in line with the rigging slinger’s instructions

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content and application of applicable state or territory code of practice relevant to log recovery activities
- environmental protection practices for forest and forest farm settings:
  - safe disposal of waste material
  - cleaning of plant, tools and equipment
- key features of these varying environmental conditions and effects on log recovery:
  - fallen trees
  - general forest lean

© Commonwealth of Australia, 2025 Skills Insight

    - ground growth
    - ground hazards and obstacles
    - ground slope
    - density of trees
    - wet and adverse weather conditions
    - wind speed and direction
- characteristics of trees and logs can impact on hooking up felled logs with cables
- techniques used by choker setters in the log recovery process:
    - log hook-up methods
    - cable logging techniques
    - rigging techniques
- key features of these varying signal systems used for log recovery activities:
    - talk-e-tooter signals
    - two-way radio
    - visual signals
    - whistle signals
- typical industry chain of command for communication of log extraction signals
- purpose, features and operation of cable logging system components:
    - rigging components
    - cable systems:
- high lead (no skyline)
- standing skyline
- running skyline
- organisational procedures specific to log recovery activities:
    - workplace health and safety with particular emphasis on use of equipment
    - communication reporting lines
    - recording and reporting hook-up process and equipment faults.

Assessment Conditions

The following resources must be made available:

- cable systems:
    - high lead (no skyline)
    - standing skyline
    - running skyline
- yarder and anchors
- rigging equipment for log recovery:
    - blocks
    - bridling
    - butt rigging

© Commonwealth of Australia, 2025 Skills Insight

  - chokers and grapple ropes
  - intermediate supports
  - lines
  - mobile tail anchors
  - pins
  - ropes
  - shackles
  - sheaves
  - spars
  - straps
  - strawlines
  - tail rope
- signal system equipment
- personal protective equipment suitable for log recovery activities
- work order with specific instructions for log recovery activities
- template documents for recording hook-up process and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for log recovery activities.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR2204 Perform landing duties (chaser)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR2204B Perform landing duties (chaser), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to direct the placement of logs brought to the landing by cable operations, and unhook the logs from chokers. Work is completed in a forest or forest farm setting and includes assisting with line shifts.

The unit applies to chaser operators in a harvesting environment.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for chaser operations	1.1 Review work order and where required check with appropriate personnel. 1.2 Identify type and quantity of logs to be extracted and assess area for safety and environmental protection practices. 1.3 Select appropriate personal protective and other equipment and check for operational effectiveness.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan chaser and cable operations in line with work order.
2. Land and unhook logs	2.1 Identify audible or visual signal system to be used. 2.2 Monitor logs entering landing area and assist yarder to place them using signals in line with cable logging code of practice. 2.3 Check that logs have at least two thirds of their length on the landing before release. 2.4 Check stability of logs and adjust when chokers or grapple ropes are slackened. 2.5 Remove chokers or grapples, coil strawlines and check and adjust butt rigging in line with directions from yarder operator. 2.6 Maintain landing area to enable safe and clear log, equipment and personnel movement. 2.7 Record and report chaser process and equipment faults to yarder.
3. Assist with line shifts	3.1 Clear all logs to be hauled with existing line position before line shift is initiated. 3.2 Notch stumps in line with code requirements and rigging method to be used. 3.3 Pull slack on all lines prior to release of existing rigging. 3.4 Dismantle rigging components on existing line, check and set up on new line. 3.5 Move obstructions which may cause binding or damage during hauling. 3.6 Assist rigging slinger to rig spars, tail trees and intermediate supports.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• estimate length of logs for safe landing.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders • provide clear, unambiguous verbal and non-verbal haul signals.
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures

© Commonwealth of Australia, 2025 Skills Insight

	• work orders.
Writing skills to:	• complete accurate basic records for chaser process and equipment faults.

FWPHAR2205 Conduct mobile splitting operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR2205B Conduct mobile splitting operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to operate a mobile hydraulic splitting unit to split timber for use in rural settings or to produce firewood.

The unit applies to those conducting mobile splitting operations in a forest or farm forest setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage.

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for splitting.	1.1 Review and check work order with appropriate personnel. 1.2 Wear personal protective equipment (PPE). 1.3 Identify hazards and assess and control risk in the work area, in line with workplace requirements. 1.4 Select and inspect equipment for operational effectiveness in line

© Commonwealth of Australia, 2025 Skills Insight

	with manufacturer's recommendations. 1.5 Identify type and quantity of timber blocks to be split. 1.6 Position, secure and adjust hydraulic splitter in line with site procedures.
2. Split timber and record data.	2.1 Select and test vertical or horizontal splitting operations. 2.2 Ensure splitter is kept clear of timber shards and debris. 2.3 Position and secure timber blocks pre-cut to fit within the hydraulic splitter. 2.4 Split timber into sizes which suit standard fireplaces, in line with safe work procedure. 2.5 Stack or load split timber for transportation. 2.6 Set aside split timber that does not meet size requirements for recycling or re-use in line with site procedures. 2.7 Record and report splitting process and equipment faults to appropriate personnel, in line with site procedures.
3. Perform operator maintenance.	3.1 Perform equipment lock-out procedure in line with work health and safety (WHS) requirements and site procedures. 3.2 Check splitter for blunt or damaged condition in line with site procedures. 3.3 Remove, maintain, adjust or replace components, in line with manufacturer recommendations.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• count blocks to be split • position timber blocks • estimate timber sizes and lengths.
Reading skills to:	• interpet safety information • analyse a work order.
Writing skills to:	• record information, including lockout information, faults, log sheet data.
Technology skills to:	• operate and maintain a mobile hydraulic splitter.
Problem solving skills to:	• respond appropriately to faults, problems, hazards and risks • constantly monitor the work environment for emerging or

© Commonwealth of Australia, 2025 Skills Insight

	changing hazards and risks.

Assessment Requirements for FWPHAR2205 Conduct mobile splitting operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR2205B Conduct mobile splitting operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- set up and adjust a mobile hydraulic splitter for splitting operations in line with work order requirements, manufacturer recommendations and site procedures
- split timber using a mobile hydraulic splitter in line with safe work procedures
- dispose of discarded timber following site procedures for recycling or re-use
- record and report timber splitting process and equipment faults according to site procedures
- perform operator maintenance on a hydraulic splitter, including lockout procedure
- respond to a forest fire emergency according to site requirements
- identify hazards and assess and control risk in the work area according to workplace requirements:
  - preparation for emergency (forest fire, accident)
  - fatigue
  - adverse weather conditions.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- procedures for emergency response to forest fire

© Commonwealth of Australia, 2025 Skills Insight

- safe work procedures for conducting mobile splitting operations
- environmental protection requirements including re-use, recycling or safe disposal of waste material
- procedures for hazard identification and risk assessment and control in the work area, involving hazards and risks in mobile splitting operations
- procedures for recording and reporting timber splitting process and equipment faults
- operator maintenance on mobile hydraulic splitter and lockout procedures.

Assessment Conditions

The following resources must be made available:

- mobile hydraulic splitter, pre-cut timber blocks, log book
- work order
- personal protective equipment for conducting mobile splitting operations:
  - safety helmet
  - safety gloves
  - protective footwear
  - eye protection
  - hearing protection
  - high visibility clothing
  - leg protection (trousers or chaps)
  - respiratory protection
- relevant personnel for the purposes of communicating information

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR2206 Operate a mobile chipper/mulcher

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR2206B Operate a mobile chipper/mulcher, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to operate a mobile chipping or mulching unit to chip or mulch timber refuse such as branches and other timber waste left after felling operations. Work is completed in a forest or forest farm setting.

The unit applies to those who operate a mobile chipping or mulching unit in a forest environment.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for mobile chipping or mulching.	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Identify type and quantity of timber refuse to be chipped or

© Commonwealth of Australia, 2025 Skills Insight

	mulched. 1.4 Plan chipping or mulching activities in line with work order.
2. Chip or mulch timber refuse	2.1 Reject timber refuse assessed as unsuitable for chipping or mulching and dispose of or recycle in line with environmental protection practices. 2.2 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection requirements. 2.3 Position, secure and set up chipping and mulching unit in line with manufacturer's specifications and required size. 2.4 Direct timber refuse into chipper or mulcher at rate applicable to machine capacity. 2.5 Chip timber refuse to chip sizes specified in work order. 2.6 Respond to critical situations requiring emergency shutdown to prevent personal injury or damage to machine or product.
3. Complete operator maintenance.	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check cutters for wear and damage at appropriate or recommended intervals. 3.3 Remove, replace and dispose of cutters in line with manufacturer's recommendations, s ite procedures and environmental protection practices. 3.4 Complete operator maintenance tasks in line with manufacturer's recommendations and site procedures. 3.5 Record and report production outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders • read basic numerical machine settings and choose according to chip size • complete routine production records involving quantities tallied against orders.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

© Commonwealth of Australia, 2025 Skills Insight

Reading skills to:	• interpret workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for production outcomes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and processing activities using work order to guide activities.

Assessment Requirements for FWPHAR2206 Operate a mobile chipper/mulcher

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR2206B Operate a mobile chipper/mulcher, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete chipping and mulching jobs in line with individual work orders which prescribe different quantities of timber refuse and different chip sizes
- complete operator maintenance, including fuelling, safety checks, cleaning, lubricating, operational adjustments, cutter inspection, removal, disposal and replacement to manufacturer recommendations and site procedures.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest and forest farm settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
- types of timber refuse suitable and unsuitable for chipping and mulching
- purpose, features and operation of mobile chipping and mulching units
- capacity of chippers and mulchers to cope with differing sizes and diameters of branch
- feed rates at which waste is fed into chippers and mulchers to optimise output without damaging or blocking machinery
- methods for checking cutting blade condition

© Commonwealth of Australia, 2025 Skills Insight

- operator maintenance procedures including for fuelling, safety checks, cleaning, lubricating, operational adjustments, cutter inspection, removal, disposal and replacement
- common hazards associated with chipping and mulching operations and methods to minimise associated risks
- organisational procedures specific to chipping and mulching timber refuse:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting production outcomes and equipment faults.
  -

Assessment Conditions

The following resources must be made available:

- mobile chipping and mulching units feeding into a truck or other form of transportation:
  - truck mounted
  - trailer mounted
- tools and consumables for operator maintenance
- tools and equipment for removing and replacing cutters
- consumable cutters
- personal protective equipment suitable for chipping and mulching timber refuse
- timber refuse for processing
- manufacturers':
  - instructions for equipment use
  - recommendations for operator maintenance
- work order with specific instructions for chipping or mulching timber refuse
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for chipping and mulching timber refuse.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence
-

FWPHAR2207 Trim and cut harvested trees

Modification History

Release	Comment
1	Replaces equivalent FPIHAR2207A Trim and cut harvested trees, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to trim and cut harvested (felled) trees with a chainsaw for commercial production. Work is completed in a a forest or forest farm setting and includes operator maintenance.

The unit applies to Forestry Worker, Chainsaw Operator, Arboriculture Technician, Farm Forestry Worker, Plantation Forest Officer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for trimming and cutting	1.1 Identify site environmental protection measures and adhere to in line with relevant legislation and regulations 1.2 Review work order and where required check with appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Select appropriate personal protective and other equipment and check for operational effectiveness, including pre-start checks. 1.4 Plan trimming and cutting activities in line with work order and environmental conditions.
2. Visually assess trees and suitability for cutting.	2.1 Assess tree location and stability for conditions likely to affect safety of trimming and cutting activities. 2.2 Visually assess trees for defects, grades and recovery status. 2.3 Assess trees for extraction and suitable transport method. 2.4 Mark trees too dangerous to cut safely and refer to appropriate personnel.
3. Plan cutting.	3.1 Move or stabilise tree for safe cutting in line with site procedures. 3.2 Select cutting pattern to optimise time, volume recovery and quality. 3.3 Plan cutting sequence to maintain control of cut sections and minimise cutting problems. 3.4 Select, measure and mark cutting positions in line with work requirements and industry standard lengths. 3.5 Clear debris from work area to allow safe access and prevent saw damage and personal injury.
4. Use chainsaw to trim and cut trees	4.1 Monitor location and movement of other personnel and modify work to ensure safety. 4.2 Secure tree section on each side of planned cut; evaluate and control potential movement. 4.3 Operate saw to cut tree and adjust cutting technique in response to movement and condition of tree. 4.4 Complete cut once started and minimise capping and splitting. 4.5 Square cut butts, trim accessible branches and knots and remove head of tree. 4.6 Prepare logs for extraction in line with organisational requirements.
5. Complete operator maintenance	5.1 Inspect equipment on completion of trimming and cutting activities. 5.2 Follow organisational safety procedures to lock out equipment. 5.3 Check chain for bluntness or damage. 5.4 Remove, sharpen, adjust and replace chain and other components in line with manufacturer's recommendations. 5.5 Record and report production outcomes, equipment faults and

© Commonwealth of Australia, 2025 Skills Insight

	maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• estimate felled tree dimensions, including length, diameter and volume • plan time efficient cutting patterns and sequences • complete routine calculations and report on size, length, diameter and grade of cut trees.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work plans
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures • work orders • manufacturers' maintenance recommendations.
Writing skills to:	• complete accurate basic records for tree trimming and cutting process, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation for and cutting of trees using work order to guide activities.

Range of Conditions

Not Applicable

Assessment Requirements for FWPHAR2207 Trim and cut harvested trees

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR2207A Trim and cut harvested trees, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to trimming and cutting harvested trees
- effectively communicate and work safely
- safely and efficiently use a chainsaw to complete these activities:
  - trim and cut hardwood or softwood trees
  - delimb trees
  - trim branches
  - trim burls and other small growths
- use these cutting techniques:
  - bridging cuts
  - swinging cuts
  - side bind cuts
  - boring
  - wedge cut
  - use of wedges
- trim and cut trees in these environmental conditions:
  - dry weather condition
  - wet weather condition

© Commonwealth of Australia, 2025 Skills Insight

    - low and moderate wind speeds
- complete maintenance on a chainsaw.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features, operation and basic non-specialist repair and maintenance of chainsaws including:
    - pre-start up checks
    - inspection, identification and replacement of bar, chain and drive sprockets
    - chain sharpening
    - bar oil checks and top-up
    - aor filter, check, clean and replacement
    - refuelling
- range of chainsaw cutting techniques including:
    - bridging cuts
    - swinging cuts
    - side bind cuts
    - delimbing
    - boring
    - wedge cut
- use of wedges
- cutting patterns used to to optimise time and recovery of product from trees
- cutting sequences used to maintain control of cut sections and minimise cutting problems
- key features of these varying environmental conditions and effects on tree cutting and trimming activities:
    - general forest lean
    - ground growth
    - ground hazards and obstacles
    - ground slope
    - gullies
    - presence and density of seed and habitat trees
    - water courses
    - wet and adverse weather conditions
    - wind speed and direction
- typical tree defects and how these affect tree cutting activities and quality of finished product:
    - shakes
    - insect defects
    - knots and resin pockets
    - pipe

© Commonwealth of Australia, 2025 Skills Insight

  - lumps
  - bumps
  - drysides
- range of industry standard:
  - lengths and tolerances and applicable terminology
  - grades for log and applicable terminology
- methods for assessing chain condition
- organisational policies and procedures specific to tree trimming and cutting activities:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting production outcomes, equipment faults and maintenance requirements
- environmental protection practices for forest and farm forest settings:
  - soil and water protection
  - action to limit the impact to ground growth, canopy, density of trees
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste

Assessment Conditions

The following resources must be made available:

- chainsaws
- chainsaw fuel and oil containers
- hardwood or softwood trees for cutting
- hammer
- axe
- wedges
- cant hook or breaking bar
- tool belt
- loggers tape
- maintenance tools and equipment for chainsaws
- personal protective equipment suitable for cutting trees and maintaining chainsaws
- manufacturers' instructions for use and maintenance of equipment
- work order with specific instructions for tree cutting activities
- template reports for recording tree cutting outcomes, equipment faults and maintenance requirements
- organisational policies and procedures for tree trimming and cutting activities.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

© Commonwealth of Australia, 2025 Skills Insight

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR3201 Monitor log recovery (rigging slinger)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR3201B Monitor log recovery (rigging slinger), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan for and navigate the extraction or breakout of logs to the landing in a forest or forest farm setting. It requires the ability to direct choker setters, transmit signals to the yarder operator and assist with line shifts for cable logging operations.

The unit applies to job roles for monitoring log recovery including Rigging Slinger.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Prepare for rigging slinger operations	1.1 Review work plan and check where required with appropriate personnel. 1.2 Identify type and quantity of logs to be extracted and assess for safety and environmental protection practices. 1.3 Select appropriate equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.4 Plan cable operation activities in line with work order.
2. Plan breakout	2.1 Plan and complete breakout operations in line with environmental conditions and workplace health and safety (WHS) procedures. 2.2 Identify audible or visual signal system to be used. 2.3 Assess site, rigged cable system and landing for slope, haul line, backline, lift capacity and landing chute. 2.4 Identify obstacles to extraction operations and develop avoidance plan. 2.5 Identify logs to be recovered with current and future haul lines. 2.6 Assess information to plan extraction pattern for typical number and size of logs to be hauled. 2.7 Plan line shifts during hauling; establish and prepare future rigging points and rigging.
3. Direct hook up of logs	3.1 Select specific logs for next turn prior to return of butt rigging in line with planned operation. 3.2 Assess stability of logs to be extracted and take precautions against movement in line with code of practice. 3.3 Direct choker setters to prepare and hook up logs ready for extraction. 3.4 Give haul signals, in line with code of practice, when all persons are clear from logs and bight of ropes. 3.5 Monitor log movement and stop for corrective action when difficulties occur. 3.6 Maintain control of movement using signalling systems until payload is in clear sight of yarder operator. 3.7 Record and report breakout process and equipment faults in line with site procedures.

© Commonwealth of Australia, 2025 Skills Insight

4. Assist with line shifts	4.1 Select specific logs for next turn prior to return of butt rigging in line with planned operation. 4.2 Assess stability of logs to be extracted and take precautions against movement in line with code of practice. 4.3 Direct choker setters to prepare and hook up logs ready for extraction. 4.4 Give haul signals, in line with code of practice, when all persons are clear from logs and bight of ropes. 4.5 Monitor log movement and stop for corrective action when difficulties occur. 4.6 Maintain control of movement using signalling systems until payload is in clear sight of yarder operator. 4.7 Record and report breakout process and equipment faults in line with site procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of logs within work plans and complete basic calculations of time required to complete activities • complete routine calculations to determine lift capacity for rigging • complete routine calculations to plan extraction pattern for number and size of logs to be hauled.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work plans • provide clear, unambiguous verbal and non-verbal haul signals.

Reading skills to:	• interpret:
	  • WHS procedures
	  • work plans.

Writing skills to:	• complete accurate reports on breakout process and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation for and extraction of logs using work order to guide activities • coordinate the completion of log recovery activities for self and others.
Problem-solving skills	• identify operational, environmental and equipment problems and implement appropriate responses

© Commonwealth of Australia, 2025 Skills Insight

to:	
Teamwork skills to:	• monitor harvest team activities and provide directions to ensure efficient and safe log recovery.
Technology skills to:	• select, set up, use and dismantle appropriate rigging equipment for log recovery.

Assessment Requirements for FWPHAR3201 Monitor log recovery (rigging slinger)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR3201B Monitor log recovery (rigging slinger), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- safely and efficiently monitor log recovery
- perform rigging slinger operations to recover felled logs in line with a work order and within prescribed organisational tolerances
- plan the breakout process in line with site conditions
- monitor log recovery using one or more of the following cable systems
  - high lead (no skyline)
  - standing skyline
  - running skyline
- assist in shifting lines in line with the hook tender's instructions.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content and application of applicable state or territory code of practice relevant to log recovery activities
- key features of these varying environmental conditions and effects on log recovery:
  - fallen trees

© Commonwealth of Australia, 2025 Skills Insight

  - general forest lean
  - ground growth
  - ground hazards and obstacles
  - ground slope
  - density of trees
  - wet and adverse weather conditions
  - wind speed and direction
- environmental protection practices for forest and forest farm settings:
  - safe disposal of waste material
  - cleaning of plant, tools and equipment
- characteristics of trees
- industry standard lengths for logs
- techniques used by rigging slingers in the log recovery process:
  - log extraction methods
  - cable logging techniques
  - rigging techniques
- key features of these varying signal systems used for log recovery activities:
  - talk-e-tooter signals
  - two-way radio
  - visual signals
  - whistle signals
- typical industry chain of command for communication of information and instruction
- purpose, features and operation of cable logging system components:
- rigging components
- cable systems:
  - high lead (no skyline)
  - standing skyline
  - running skyline
- organisational procedures specific to log recovery activities:
- workplace health and safety with particular emphasis on use of equipment
  - communication reporting lines
  - recording and reporting breakout process and equipment faults.

Assessment Conditions

The following resources must be made available:

- organizational policies and procedures relevant to monitoring log recovery
- cable systems
- yarder and anchors
- rigging equipment for log recovery

© Commonwealth of Australia, 2025 Skills Insight

- signal system equipment
- personal protective equipment suitable for log recovery activities
- work plan for log recovery activities with specific instructions for the work site
- applicable state or territory code of practice
- template reports for recording breakout process and equipment faults
- a team of choker setters and yarder operators with whom the individual can interact.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR3210 Conduct mechanical processor operations

Modification History

Release	Comment
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to operate a wheeled or tracked mechanical processor in a commercial forest harvesting environment. Activities include processing trees mechanically, segregating, and stacking logs.

The unit applies to individuals who operate a wheeled or tracked mechanical processor. Operators generally work under broad direction and take responsibility for their work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare for operations	1.1 Prepare to work safely according to workplace requirements 1.2 Obtain and review environmental, regulatory and legal requirements for conducting mechanical processing operations 1.3 Review work plan and clarify requirements with appropriate

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
4. Segregate and stack logs	4.1 Locate stacks to provide appropriate space for the conduct of other landing operations in line with planned layout and site requirements 4.2 Position and construct log stacks to provide stability and minimise problems from slippage and falling of logs 4.3 Carry out maintenance of log stacks in line with planned layout and site requirements 4.4 Visually assess delivered logs and direct/move to appropriate location for further processing or stacking
5. Carry out machine operator maintenance	5.1 Follow equipment lock-out procedures in line with workplace health and safety requirements and site procedures 5.2 Conduct visual inspection and fault finding procedures in line with manufacturers' recommendations and site procedures 5.3 Conduct routine operational servicing to maintain optimum operational performance of equipment 5.4 Diagnose faults, malfunctions or problems with equipment and report in line with site procedures 5.5 Clean and store equipment, attachments and other ancillary equipment 5.6 Record and report mechanical processor operation results in line with site procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria

Skill	Description
Reading	• read and understand production plans and site safety and environmental management plans in a forest harvesting environment • read and understand standard operating procedures and/or manufacturers' instructions for the operation of forest harvesting machinery

© Commonwealth of Australia, 2025 Skills Insight

Skill	Description
Writing	• record operation, production and machine maintenance on paper based or electronic media
Oral Communication	• interact verbally and non-verbally using agreed systems and processes to communicate with others on site to ensure safe and effective machine operations • use appropriate vocabulary including technical language directly relevant to role
Numeracy	• interpret gauges relevant to safe operation of harvesting machinery • determine construction of stable log stack • estimate the weight of logs to determine loading requirements and compliance to machine specifications
Navigate the world of work	• understand main tasks, responsibilities and boundaries of own role
Interact with others	• use modes of communication suitable to purpose to confirm and clarify understanding • communicate and report operational and safety information to on-site personnel
Get the work done	• recognise and respond to routine problems • plan and organise own work activities and resources

Assessment Requirements for FWPHAR3210 Conduct mechanical processor operations

Modification History

Release	Comment
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- planned, prepared and safely and effectively operated a mechanical processor to process trees mechanically, segregate and stack logs
- followed work order for conducting mechanical processing
- operated mechanical processor safely and effectively within equipment capabilities and limitations
- adjusted operating techniques in response to site conditions
- maintained log stacks with consideration given to providing for anticipated stock levels, stock rotation requirements, size, segregation of lengths, species, grades
- visually assessed delivered logs for characteristics including species type, diameter, length and grade and direct to additional locations for further processing and stacking
- monitored trees for unexpected characteristics that may cause danger and referred to appropriate personnel
- established communication with other personnel and monitored their movements to maintain safety on site
- conducted pre and post operational checks, routine cleaning and operational servicing of equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a work order, production plan and site safety and environmental management plans
- health and operational hazards or risks related to mechanical processor operations and factors that can change or introduce new hazards

© Commonwealth of Australia, 2025 Skills Insight

- industry-accepted work health and safety risk control measures, legal obligations of the current Work Health and Safety Acts or Occupational Health and Safety Acts and regulations, and requirements of industry standards and/or codes of practice for mechanical processor operations as outlined in workplace procedures and production plan
- industry-accepted warning signs, their correct positioning, vehicle-to-vehicle communication systems and procedures to maintain communication and work safety during mechanical processor operations
- required emergency response procedure including firefighting resources and emergency response
- potential impacts of mechanical processor operations on onsite and offsite environmental values including cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion
- industry-accepted environmental control measures, environmental restrictions, legal obligations of the current Environment Protection Acts and regulations and requirements of industry standards and/or codes of practice for mechanical processor operations as outlined in workplace procedures and production plan
- tree shapes, species, quality characteristics and log defects particular to the site and production system
- effects of weather on ground conditions
- effects of slope and terrain conditions on machine stability and operation
- operational procedures and checks including start-up and shut-down procedures
- operating and maintaining machine, attachments and ancillary equipment in line with manufacturers' instructions
- industry-accepted reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a log landing site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - wheeled or tracked mechanical processor
  - personal protective equipment
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupational Health and Safety Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures for operating a mechanical processor
  - access to site emergency procedure

© Commonwealth of Australia, 2025 Skills Insight

- log sheets for recording measurement and operation

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3213 Conduct mechanically assisted tree falling operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR3213B Conduct mechanically assisted tree falling operations, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to use machinery, winches and cables to push or pull trees away from their natural direction of fall.

The unit applies to those conducting mechanically assisted tree falling operations in a forest or farm forest environment.

Licensing, legislative, regulatory or certification requirements apply to this unit in some state and territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for tree pushing or pulling	1.1 Review work plan and clarify with appropriate personnel. 1.2 Identify type and quantity of trees to be pushed or pulled and assess for safe working conditions. 1.3 Select appropriate cutting equipment and pushing or pulling

© Commonwealth of Australia, 2025 Skills Insight

	equipment for work and check for operational effectiveness.
2. Assess and plan tree pushing or pulling	2.1 Plan tree pushing or pulling activities are in line with site procedures, taking into consideration environmental requirements and conditions. 2.2 Assess tree location and stability for conditions likely to affect safety of tree pushing or pulling activities. 2.3 Visually assess tree for defects, grade and recovery status. 2.4 Mark trees too dangerous to be felled safely refer to appropriate personnel. 2.5 Clear growth around tree and clear either manually or mechanically. 2.6 Plan cutting sequence to control direction of the fall and minimise damage to the tree, hang ups and surrounding environment. 2.7 Plan and clear an escape route. 2.8 Establish and maintain communication with other personnel to ensure safety.
3. Push or pull trees	3.1 Pre start-up checks are carried out on equipment in line with site requirements. 3.2 Monitor movement and whereabouts of other personnel to ensure safety. 3.3 Remove and clear leaders in line with the tree pushing or pulling plan. 3.4 Unexpected characteristics of a tree are diagnosed and planning is reviewed. 3.5 Secure and tension winches, cables or machinery and make scarf cut in line with planned falling direction and safety requirements. 3.6 Make appropriate cuts below the scarf cut to assist the fall angle of the tree. 3.7 Use planned escape route once the tree begins to fall. 3.8 Monitor movement of the tree on the ground until stable and immediately flag and clear trees that hang up. 3.9 Clear the work site of refuse created by tree falling, following workplace guidelines, safe waste disposal and environmental care requirements.
4. Conduct operator maintenance	4.1 Inspect condition of tools and equipment on completion of felling activities. 4.2 Identify blunt or damaged chain or equipment for repair or replacement.

© Commonwealth of Australia, 2025 Skills Insight

	4.3 Remove, sharpen, maintain, adjust and refit chain and other components in line with manufacturer's recommendations. 4.4 Follow equipment lock-out procedures in line with safety and site procedures. 4.5 Record and report tree pushing or pulling activities and maintenance information according to workplace procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• determine the cutting sequence and the direction of fall to minimise damage on surrounding environment.
Communication skills to:	• interact verbally and non-verbally using hand signals and agreed gestures with others on site to ensure safe tree felling operations.
Reading skills to:	• interpret site requirements, environmental information and manufacturer’s instructions.
Writing skills to:	• complete log book requirements, maintenance records.
Problem solving skills to:	• identify problems and equipment faults and select treatments.

Range of Conditions

Assessment Requirements for FWPHAR3213 Conduct mechanically assisted tree falling operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR3213B Conduct mechanically assisted tree falling operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

- A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:
- prepare, plan, carry out mechanically assisted pushing and pulling operations to fall trees
- assess site and tree conditions and plan to work safely
- follow work plan for conducting mechanically assisted tree felling operations
- use cutting equipment safely including saws and chainsaws along with procedures for chainsaw lock-out
- use pulling or pushing equipment safely including excavators, winches and grabs
- plan cutting sequence to control the direction that trees fall and minimise damage to tree, equipment and surrounding environment
- establish communication with other personnel and monitor their movements to maintain safety on site
- use and maintain pushing and pulling tools, machinery and equipment
- conduct operator maintenance on a chainsaw.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace requirements and site standards for carrying out mechanically assisted tree falling operations
- environmental protection requirements
- operational procedures and checks including start-up and shut-down procedures

© Commonwealth of Australia, 2025 Skills Insight

- established communication channels and protocols to maintain safety
- tree pushing and pulling methods
- processes for managing risks and hazards associated with tree falling operations
- knowledge of defects in trees that can effect processing and cause risk
- chainsaw operation, cutting sequences and safety
- chainsaw chain and tree pushing or pulling equipment condition assessment and maintenance
- workplace health and safety requirements, fire protocols and emergency evacuation procedures.

Assessment Conditions

The following resources must be made available:

- machinery, winches and cables to push or pull trees
- site with trees that can be felled away from their natural direction of fall
- work order, workplace requirements and site standards for conducting mechanically assisted tree falling operations
- personal protective equipment for conducting mechanically assisted tree felling operations including:
  - safety helmet
  - safety gloves
  - protective footwear
  - eye protection
  - hearing protection
  - high visibility clothing
  - leg protection (trousers or chaps)

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR3215 Operate a heavy production mobile chipper

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR3215C Operate a heavy production mobile chipper, which was first released FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to operate a heavy production mobile chipping unit to chip logs or tree lengths on-site during forest harvesting operations.

The unit applies to those who operate a heavy production mobile chipping unit in a forest environment.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.
1. Plan and prepare for chipping	1.1 Review work order and clarify with appropriate personnel. 1.2 Identify and assess type and quantity of timber to be chipped to meet requirements for work order and safe working conditions. 1.3 Select equipment to meet to work requirements and check for operational effectiveness. 1.4 Plan chipping activities in line with site procedures and

© Commonwealth of Australia, 2025 Skills Insight

	environmental and heritage concerns 1.5 Position and set-up chipper to ensure stability and to effectively chip wood 1.6 Communication with others is established and maintained in line with WHS requirements.
2. Chip timber	2.1 Carry out pre-operational checks on the heavy production mobile chipper. 2.2 Start up chipper according to safe workplace requirements 2.3 Detect site hazards associated with chipper and plan safe operating techniques to minimise risk. 2.4 Direct timber into the chipper at a rate applicable to the capacity of the machinery and chip size specified in the work order. 2.5 Direct chipped timber into the back of a truck or other modes of transportation or for stockpile. 2.6 Establish and maintain communication with truck driver to ensure efficient and safe loading of chipped materials
3. Carry out machine operator maintenance	3.1 Lock-out chipper and shut down if required, in line with site procedures. 3.2 Conduct visual inspection to identify issues and faults. 3.3 Remove and replace worn components as required to fulfil the work order. 3.4 Clean, check and carry out routine maintenance tasks on chipper. 3.5 Record and report chipper operations, faults and maintenance activities.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Writing skills to:	• complete records, reports and maintenance logs.
Problem solving skills to:	• identify and resolve equipment issues and faults.

Assessment Requirements for FWPHAR3215 Operate a heavy production mobile chipper

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR3215C Operate a heavy production mobile chipper, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- operate a heavy production mobile chipper in line with work orders and fill trucks/trailers for transportation according to safe working requirements and environmental care procedures
- assess timber to be chipped for defects that will affect processing
- safely conduct start up and shut down of a heavy production mobile chipper in line with enterprise procedures
- carry out routine maintenance on a heavy production mobile chipper
- work safely and communicate effectively with others in the work area
- follow organisational policies and procedures relevant to operating a mobile chipper

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace policies and procedures for operating a heavy production mobile chipper
- environmental protection requirements
- operational procedures and checks including start-up and shut-down procedures
- characteristics of trees and timber defects that can cause processing problems
- chip types and quality
- established communication channels and protocols to maintain safety

© Commonwealth of Australia, 2025 Skills Insight

- processes for managing risks and hazards associated with chipping wood
- re-positioning and set up mobile chipper
- workplace health and safety requirements, fire protocols and emergency evacuation procedures
- procedures for recording and reporting workplace records and information.

Assessment Conditions

The following resources must be made available:

- a heavy production mobile chipper
- logs, trees and/or wood resource to be chipped
- work order, workplace requirements and site standards for operating a heavy production mobile
- truck, trailer or container for receiving chipped material
- relevant personnel for the purposes of communicating information
- personal protective equipment required to operate chipper.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR3220 Harvest trees manually (intermediate)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR3220 Harvest trees manually (intermediate), which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess harvest sites and trees to be harvested and to plan and safely carry out manual tree-felling operations using a chainsaw.

This unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and practical felling skills.

Persons competent in this unit should be able to effectively fell most trees except very large trees, and/or those with significant defects and/or characteristics that cause excessive complexity.

It applies to trees that have a diameter greater than the bar length of the chainsaw.

Trees typical to the scope of this unit the following characteristics:

- lean and weight distribution that can be assessed and readily adapted to falling direction with the use of wedges and/or control with hinge-wood
- various dimensions relative to local forest size distribution
- limited visible damage and/or defect
- species prone to free splitting and adverse reactions during felling
- single or multi-stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add complexity to the operation

The unit applies to felling trees in a commercial harvesting operation within a forest environment, producing forest products.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Determine harvesting requirements	1.1 Identify and comply with applicable work health and safety (WHS), environmental, legislative and organisational requirements relevant to harvesting trees 1.2 Identify and adhere to site environmental protection measures according to harvesting plan and relevant legislation and regulations 1.3 Review job requirements and check with appropriate personnel 1.4 Identify log extraction method and requirements 1.5 Identify requirements for product quality 1.6 Determine harvesting requirements, and plan tree felling sequence and general falling directions 1.7 Establish and maintain communication with others according to WHS requirements
2. Assess harvest site	2.1 Assess location and stability of harvest site for conditions likely to affect harvesting activities 2.2 Identify and assess environmental conditions according to harvest plan 2.3 Identify trees to be felled according to harvest plan 2.4 Assess factors affecting harvesting requirements and detect and control specific forest or site risks and hazards
3. Visually assess trees and plan felling	3.1 Assess factors affecting harvesting requirements and detect and control specific forest or site risks and hazards 3.2 Confirm tree is safe to fell 3.3 Check planned falling direction and propose deviation if required 3.4 Select cutting pattern to optimise time and manageable removal of sections 3.5 Plan sequence of cuts to fell tree according to standard felling procedures and log quality requirements 3.6 Assess limitations of own skills in safely felling trees, identify trees considered outside own skill level and seek assistance from

© Commonwealth of Australia, 2025 Skills Insight

	appropriate personnel where required 3.7 Select suitable escape route and clear of growth and other obstacles according to environmental care principles and statutory requirements 3.8 Note and monitor location and activity of other personnel in the work area and modify activity where required
4. Prepare equipment	4.1 Select tools and equipment appropriate to work requirements and check for operational effectiveness according to manufacturer recommendations 4.2 Sharpen and adjust chainsaw or change components according to manufacturer recommendations 4.3 Sharpen and adjust chainsaw or change components according to manufacturer recommendations
5. Fell trees	5.1 Fell individual trees using selected cutting techniques according to WHS and job requirements 5.2 Adjust cutting technique in response to movement and condition of tree 5.3 Use planned escape route when tree starts to fall and monitor the fall and movement of tree on ground until determined stable 5.4 Delay movement back into the felling area until all tree material, including from adjacent tree crowns, has fallen 5.5 Identify and implement procedures for removal of trees that are hung-up 5.6 Fell trees to meet production levels, log extraction methods and site requirements 5.7 Dispose of waste materials in line with environmental and operational requirements
6. Maintain equipment	6.1 Inspect equipment on completion of harvesting activities 6.2 Identify damaged saws and cutting attachments for repair or replacement according to organisational requirements and manufacturer recommendations 6.3 Remove, clean, adjust or replace chain and other components according to manufacturer recommendations 6.4 Maintain tools and equipment according to WHS requirements and manufacturer recommendations

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• estimate and measure tree dimensions, including height, length and diameter and volume • determine tree fall zone according to tree mass • plan time efficient cutting patterns and sequences. • calculate product mass of individual trees and determine fall zone
Communication skills to:	• select and use appropriate spoken communication strategies with work colleagues and other personnel on site when felling trees • interpret hand signals with other operators to ensure safe tree felling • ask questions to clarify contents of coupe plans

Reading skills to:	• interpret:
	  • workplace health and safety, industry standards and regulations for felling trees and other relevant tree felling procedures
	  • work orders and coupe plans
	  • manufacturers maintenance recommendations

Writing skills to:	• complete forms to record WHS considerations for felling trees • report equipment faults and request maintenance of equipment. • complete log book requirements
Planning and organising skills to:	• identify an unsafe tree. • efficiently and logically sequence the stages of preparation for and felling of trees using work order to guide activities.
Problem solving skills to:	• plan and apply the hierarchy of risk control • review and identify work requirements • recognise own limitations in conditions and trees for felling • identify problems and equipment faults and demonstrate appropriate response procedures

•

Assessment Requirements for FWPHAR3220 Harvest trees manually (intermediate)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR3220 Harvest trees manually (intermediate), which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- comply with applicable federal, state or territory legislative and regulatory requirements and codes of practice including WHS, environmental and organisational policies and procedures relevant to harvesting trees at an intermediate level
- comply with licensing or certification requirements relevant to harvesting trees at an intermediate level
- effectively communicate and use safe working practices, including maintaining an awareness of other personnel activity in the work area
- assess site conditions, by applying environmental protection measures, detecting hazards and own skill level for harvesting trees at an intermediate level
- conduct a tree assessment
- identify structural defects and stresses in trees and the impact on felling, including exclusion of trees from hand felling due to hazardous and difficult situations for assessment, monitoring and safe falling including a crown that contains dead or broken material, entanglement or malformation
- plan a felling sequence for individual trees and preparing surroundings including escape route
- fell a intermediate trees using appropriate cuts safely without damage to personnel, equipment and surrounding environment
- identify trees that are hung up
- select, prepare and maintain chainsaw equipment including recognising faults, problems and malfunctions

© Commonwealth of Australia, 2025 Skills Insight

- assess, plan and safely operate chainsaw equipment to manually harvest trees at an intermediate level
- use tree felling techniques including scarf cutting , back cutting to provide hinge-wood and the use of wedges to assist in controlling falling direction
- apply appropriate extraction methods
- apply specifications as outlined in harvesting plan
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace health and safety (WHS) requirements including:
  - PPE and clothing
  - safety equipment
  - first aid equipment
  - firefighting equipment
  - hazard and risk control procedures
  - fatigue management procedures
  - appropriate signage
  - elimination of hazardous materials and substances procedures
  - safe forest practices, including required actions relating to fire
  - techniques for manual handling, including shifting, lifting and carrying
- types and purposes of cuts to fell trees, including scarf cutting and back cutting to provide hinge-wood and maintain control of tree
- typical tree defects and how these affect tree felling activities:
  - shakes
  - insect defects
  - knots and resin pockets
  - pipe
  - drysides
- Identifying trees:
  - that contain hazards and are deemed unsafe to fell
  - considered outside own skill level
  - trees where cuts made may lead to loss of control of tree in felling
- hazards and related risks and the impact on felling trees of:
  - uneven and unstable terrain
  - unsafe trees
  - fires
  - overhead and underground services
  - excavations
  - traffic

© Commonwealth of Australia, 2025 Skills Insight

  - structures
  - hazardous materials
  - insects and animals
  - other personnel and machinery
- methods used to remove trees that are hung up and procedures for removal
- methods for assessing chain condition
- cutting patterns used to optimise time to fell trees
- environmental protection measures to follow when felling trees related to:
  - native vegetation
  - soil and water
  - heritage and archaeological artefacts
  - flora and fauna
  - geomorphologic features
  - landscape
  - external site pollution
  - recreational opportunities
  - regeneration opportunities
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- key features of these varying environmental conditions and their effects on intermediate tree felling and harvesting activities:
  - general forest lean
  - ground growth
  - ground hazards and obstacles
  - ground slope
  - gullies
  - presence and density of seed and habitat trees
  - water courses
  - wet and adverse weather conditions
  - wind speed and direction
- the use of types of tools and equipment for harvesting trees manually, and the procedures for their safe use, operation and maintenance including:
  - warning signs
  - chainsaw and components
  - PPE and clothing
  - first aid equipment
  - maintenance requirements
  - support tools
- components of a harvesting plan including an extraction plan, a traffic plan, environmental requirements, restricted areas, identified hazards and product volumes

© Commonwealth of Australia, 2025 Skills Insight

- log extraction methods including skidding, forwarding, using cable or shovel logging and following the harvest plan when felling trees
- work order information regarding
  - tree felling requirements
  - requirements for product quality
  - harvesting plan
- risk assessments for tree-felling including
  - ground and environmental conditions likely to affect harvesting activities:
    - ground stability
    - ground slope
    - forest lean
    - weather conditions
  - underground and overhead services
  - forest fire
  - position and movement of personnel working on the harvesting site
  - traffic management
  - safety signage warning of harvesting operations in the area.

Assessment Conditions

The following resources must be made available:

- workplace location or simulated workplace of a forest environment with trees typical to the scope of this unit
- PPE and clothing including:
  - safety helmet
  - safety gloves
  - protective footwear
  - eye protection
  - hearing protection
  - high visibility clothing
  - leg protection (trousers or chaps)
- materials and equipment including;
  - warning signs
  - chainsaw and components
  - first aid equipment
  - maintenance tools and equipment
  - support tools
  - manufacturers' instructions for use and maintenance of equipment
  - radio or communication device
  - fire fighting equipment (if prescribed)

© Commonwealth of Australia, 2025 Skills Insight

- specifications and work instructions, including
  - coupe plans
  - information and instructions relevant to tree-felling operations, including processing location details and trees to be felled and retained
  - policy and procedures for work health and safety (WHS)
  - risk assessment plan
  - general and specific environmental requirements
  - applicable state or territory logging code of practice
  - emergency and evacuation procedures
  - fire protocols

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR3221 Harvest trees manually (advanced)

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to assess harvest sites and trees to be harvested and to plan and safely harvest trees using a chainsaw.

This unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and advanced practical felling skills.

Persons competent in this unit should be able to effectively fell trees of any size, species and condition, including those with significant defects and characteristics that cause excessive felling complexity, that are deemed safe to fell.

Trees typical to the scope of this unit including the following characteristics:

- lean and weight distribution which adds significant complexity yet can be assessed and adapted to site requirements
- larger dimensions relative to local forest size distribution
- substantial lean
- damage and/or defect that requires complex felling techniques
- multi legged, hollow butts, culls, stags
- species prone to free splitting and adverse reactions during falling
- single or complex multi stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add significant complexity to the operation

The unit applies to those felling trees in a commercial harvesting operation within a forest environment, producing forest products.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for felling	1.1 Identify and comply with applicable work health and safety (WHS), environmental, legislative and organisational requirements relevant to harvesting trees 1.2 Identify and adhere to site environmental protection measures and harvest plan according to relevant legislation and regulations 1.3 Review and check job requirements with appropriate personnel 1.4 Select tools and equipment appropriate to work requirements and check for operational effectiveness according to manufacturer recommendations 1.5 Sharpen and adjust chainsaw or change components according to manufacturer recommendations 1.6 Assess tree and determine felling requirements 1.7 Identify and control potential and existing risks and hazards in the work area 1.8 Identify trees to be felled and retained and establish general falling direction 1.9 Identify log extraction method and requirements 1.10 Determine requirements for product quality 1.11 Establish and maintain communication with others according to WHS requirements
2. Assess conditions and surroundings	2.1 Identify and comply with site environmental concerns according to relevant federal, state or territory legislation and local regulations 2.2 Identify and assess environmental conditions according to harvesting plan 2.3 Assess general factors affecting felling requirements and detect and control specific forest or site risks and hazards
3. Assess tree and plan	3.1 Locate and visually assess tree for felling characteristics

© Commonwealth of Australia, 2025 Skills Insight

felling	3.2 Confirm tree is safe to fell 3.3 Assess and check required falling direction and possible deviation 3.4 Plan sequence of cuts to fell tree according to standard felling procedures and log quality requirements 3.5 Select suitable escape route and clear of growth and other obstacles according to environmental care principles and statutory requirements 3.6 Assess limitations of own skills in safely felling trees, identify trees considered outside own skill level and seek assistance from appropriate personnel where required 3.7 Note and monitor location and activity of other personnel in the work area and modify activity where required
4. Fell trees of any size, species and condition	4.1 Fell individual trees using planned cutting techniques according to site conditions, extraction method and at a safe distance from other personnel in the work area 4.2 Adjust cutting technique in response to movement and condition of tree 4.3 Use planned escape route when tree starts to fall and monitor the fall and movement of tree on ground until determined stable 4.4 Delay movement back into the felling area until all tree material, including from adjacent tree crowns, has fallen, and identify any dangerous tree branches that hang-up 4.5 Identify and implement procedures for removal of trees that are hung-up 4.6 Fell trees to meet production levels, log extraction methods and site requirements 4.7 Dispose of waste materials in line with environmental and operational requirements
5. Maintain equipment	5.1 Detect, rectify and report blunt or damaged saw chain according to workplace procedures 5.2 Monitor chainsaw for operational effectiveness and record and report faults, malfunctions and problems according to workplace procedures

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Skills Insight

Numeracy skills to:	• estimate and measure tree dimensions, including height, length and diameter and volume • plan time efficient cutting patterns and sequences • report on size, length, diameter and grade of felled trees. • calculate product mass of individual trees and determine fall zone.
Oral communication skills to:	• select and use appropriate spoken communication strategies with work colleagues and other personnel on site when felling trees • interpret hand signals with other operators to ensure safe tree felling • ask questions to clarify contents of coupe plans.

Reading skills to:	• interpret:
	  • workplace health and safety, industry standards and regulations for felling trees and other relevant tree felling procedures
	  • work orders and coupe plans
	  • manufacturers' maintenance recommendations.

Writing skills to:	• complete forms to record WHS considerations for felling trees • report equipment faults and request maintenance of equipment. • complete log book requirements.
Planning and organising skills to:	• identify an unsafe tree. • efficiently and logically sequence the stages of preparation for and felling of trees using work order to guide activities.
Problem solving skills to:	• plan and apply the hierarchy of risk control • review and identify work requirements • recognise own limitations in conditions and trees for felling • identify problems and equipment faults and demonstrate appropriate response procedures.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- comply with applicable federal, state or territory legislative and regulatory requirements and codes of practice including WHS, environmental and organisational policies and procedures relevant to harvesting trees at an advanced level
- comply with applicable licensing or certification requirements relevant to harvesting trees at an advanced level
- effectively communicate and use safe working practices, including maintaining an awareness of other personnel activity in the work area
- assess site conditions, by applying environmental protection measures, detecting hazards and own skill level for harvesting trees at an advanced level
- conduct a tree assessment
- Identify structural defects and stresses in trees and the impact on felling, including exclusion of trees from hand felling due to hazardous and difficult situations for assessment, monitoring and safe falling including a crown that contains dead or broken material, entanglement or malformation
- plan a felling sequence for individual trees and preparing surroundings including escape route
- harvest advanced trees using appropriate cuts safely and without causing damage to personnel, equipment and surrounding environment
- identify trees that are hung up
- select, prepare and maintain chainsaw equipment including recognising faults, problems and malfunctions
- assess, plan and safely operate chainsaw equipment to manually harvest trees at an advanced level

© Commonwealth of Australia, 2025 Skills Insight

- use tree felling techniques including scarf cutting and back cutting to provide hinge-wood, and the use of wedges to assist in controlling falling direction
- apply appropriate extraction methods
- apply specifications as outlined in harvesting plan

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace health and safety requirements including:
  - PPE and clothing
  - safety equipment
  - first aid equipment
  - firefighting equipment
  - hazard and risk control procedures
  - fatigue management procedures
  - appropriate signage
  - elimination of hazardous materials and substances procedures
  - safe forest practices, including required actions relating to fire
  - techniques for manual handling, including shifting, lifting and carrying
- types and purposes of cuts to fell trees, including scarf cutting and back cutting to provide hinge-wood and maintain control of tree
- typical tree defects and how these affect tree felling activities:
  - shakes
  - insect defects
  - knots and resin pockets
  - pipe
  - drysides
- Identifying trees:
  - that contain hazards and are deemed unsafe to fell
  - considered outside own skill level
  - trees where cuts made may lead to loss of control of tree in felling
- hazards and related risks and the impact on felling trees of:
  - uneven and unstable terrain
  - unsafe trees
  - fires
  - overhead and underground services
  - excavations
  - traffic
  - structures
  - hazardous materials

© Commonwealth of Australia, 2025 Skills Insight

  - insects and animals
  - other personnel and machinery
- methods used to remove trees that are hung up and procedures for removal
- methods for assessing chain condition
- cutting patterns used to optimise time to fell trees
- environmental protection measures to follow when felling trees related to:
  - native vegetation
  - soil and water
  - heritage and archaeological artefacts
  - flora and fauna
  - geomorphologic features
  - landscape
  - external site pollution
  - recreational opportunities
  - regeneration opportunities
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- key features of these varying environmental conditions and their effects on advanced tree felling and harvesting activities:
  - general forest lean
  - ground growth
  - ground hazards and obstacles
  - ground slope
  - gullies
  - presence and density of seed and habitat trees
  - water courses
  - wet and adverse weather conditions
  - wind speed and direction
- the use of types of tools and equipment for harvesting trees manually, and the procedures for their safe use, operation and maintenance including:
  - warning signs
  - chainsaw and components
  - PPE and clothing
  - first aid equipment
  - maintenance requirements
  - support tools
- components of a harvesting plan including an extraction plan, a traffic plan, environmental requirements, restricted areas, identified hazards and product volumes
- log extraction methods including skidding, forwarding, using cable or shovel logging and following the harvest plan when felling trees
- work order information regarding:

  - tree felling requirements
  - requirements for product quality
  - harvesting plan
- risk assessments for tree-felling including:
  - ground and environmental conditions likely to affect harvesting activities including ground stability, ground slope, forest lean and weather conditions
  - underground and overhead services
  - forest fire
  - position and movement of personnel working on the harvesting site
  - traffic management
  - safety signage warning of harvesting operations in the area.
  -

Assessment Conditions

The following resources must be made available:

- workplace location or simulated workplace of a forest environment with trees typical to the scope of this unit
- PPE and clothing including:
  - Safety helmet
  - Safety gloves
  - Protective footwear
  - Eye protection
  - Hearing protection
  - High visibility clothing
  - Leg protection (trousers or chaps)
- materials and equipment including:
  - warning signs
  - chainsaw and components
  - first aid equipment
  - maintenance tools and equipment
  - support tools
  - manufacturers' instructions for use and maintenance of equipment
  - radio or communication device
  - fire fighting equipment (if prescribed)
- specifications and work instructions, including:
  - coupe plans
  - information and instructions relevant to tree-felling operations, including processing location details and trees to be felled and retained
  - policy and procedures for work health and safety (WHS)
  - risk assessment plan

© Commonwealth of Australia, 2025 Skills Insight

  - general and specific environmental requirements
  - applicable state or territory logging code of practice
  - emergency and evacuation procedures
  - fire protocols
- relevant personnel for the purposes of communicating information.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- created an active site file for loading operation
- registered load and production information at start of loading operation
- set-up and/or edited the weight factors and default volume settings
- used software settings and calibration methods to conduct accurate calibrations of the weight scale and sensors
- edited parameter values for machine movements
- ended production and saved and transferred file for the production site by using a data storage system or email or mobile devices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- components of wireless weighing system and its mode of operation
- software and files used with on-board computers including basic features and applications
- navigating on-board computer menus, sub-menus and fields
- fields and data inputs required to start the loading operation
- setting-up and editing the weight factors and default volumes of a maximum load for a variety of tree assortments
- settings and methods for editing parameter values for machine movements
- methods to calibrate the weighing system and improve accuracy of measurements
- factors that affect accuracy of the weighing measurement
- ending production and saving and transferring files using a data storage system or mobile app
- methods to identify faults related to the on-board computer system and GPS.

© Commonwealth of Australia, 2025 Skills Insight

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a logging site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - forwarder equipped with on-board computer and weighing system
  - data storage system or mobile system/app for the purpose of saving and transferring production files
  - personal protective equipment required in harvesting operations
- specifications:
  - access to user manual for the on-board computer system

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPHAR3223 Use on-board computer systems for single grip harvester

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- used on-board computer system to process and mark logs safely and effectively in line with the log cutting instructions
- reloaded and/or created a felling site file in the cutting instruction file
- assigned log grades to buttons on the joystick keypad
- reset the harvesting head length counter
- uploaded, edited and saved harvester settings and parameters for feeding and sawing
- adjusted settings and monitored grapple or delimb arm pressures
- edited the diameter potentiometer' settings
- applied knowledge of species and quality characteristics to process trees and overridden the on-board computer settings to process trees into the highest value combination
- conducted accurate calibrations of harvesting heads
- conducted length and diameter accuracy checks of processed logs against cutting instructions
- saved production files on a data storage device and transferred files either manually or via mobile devices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- methods to correctly turn on/off the on-board computer system
- using the on-board computer keyboard and mouse or touchscreen
- navigating on-board computer menus, sub-menus and fields using cutting instructions, calibration and production files
- loading new cutting instruction files and reloading inactive files
- fields and data inputs required to start a processing operation
- editing cutting instruction file and restrictions

© Commonwealth of Australia, 2025 Skills Insight

- saving production, control measurement and calibration files and transferring files using a data storage system or via mobile app
- fields and information contained in the cutting instruction file including matrix displays, maximum damage and minimum quality allowances for log grades and bark function
- values in the price matrix and how they affect the performance of the cutting instruction file
- computer methods to adjust feed performance, feed ramping, grapple or delimb arm pressures and diameter potentiometer
- harvesting head settings
- settings to program quality grade buttons on the joystick keypad
- using harvester's controls and quality buttons correctly
- methods to override the computer and limitations or restrictions as prescribed by forest management company to prevent issues with the software and the machine
- length and diameter measuring system fitted on harvesting heads
- on-board computer methods to calculate a diameter at a given distance along the stem
- methods for calibrating the measuring system of harvesting head for length and diameter
- signs of wear and faults to harvester head mechanisms
- effects of worn mechanical linkages on the length and diameter measuring mechanisms
- methods to conduct and record length and diameter accuracy checks and frequency of measurements
- methods for calibrating and verifying measuring tools for length and diameter including tapes and callipers
- causes of manual and mechanical length and diameter measurement error
- methods to reset the harvesting head's length counter
- methods to identify faults related to the on-board computer system and GPS.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a logging site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - single grip harvester equipped with on-board computer system and GPS
  - standard and digital measuring tools for calibration
  - data storage system or mobile system/app for the purpose of saving and transferring production files
  - personal protective equipment required in harvesting operations
- specifications:
  - access to user manual for on-board computer system
  - access to sample cutting instruction, calibration and production files

© Commonwealth of Australia, 2025 Skills Insight

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3224 Operate crawler tractor

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to operate a crawler tractor for log production and use optimised production processes in a commercial forest harvesting environment. The main job functions are to move stems and/or logs from felling site to roadside or landing area. Other functions include product segregation, stacking, and removal of slash. Activities are to be conducted safely and effectively.

The unit applies to individuals who work as crawler tractor operators in small or larger harvesting crews. Operators generally work under broad direction to complete routine activities related to crawler tractor operations and take responsibility for their work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- planned, prepared and safely and effectively operated a crawler tractor to move products and/or slash in line with a production plan
- checked risks associated with the operation and applied standard operating procedures
- followed production plan requirements and site safety and environmental management plan
- determined suitability and stability of crawler tractor for operation and safe working load limits by considering machine and equipment specifications, terrain characteristics and type and size of stems and/or logs to be moved
- adjusted machine driving and positioning technique in response to terrain conditions
- applied machine manipulation techniques to move products and/or slash and minimise damage to products, machine and surrounding environment in line with the production plan requirements
- placed and stacked products for efficient extraction in line with the production plan requirements
- communicated effectively with others in the work area
- shut down, de-energised and isolated machine in line with workplace procedures and operator’s manual
- carried out routine maintenance on crawler tractor parts.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans

© Commonwealth of Australia, 2025 Skills Insight

- hazardous or safe working zones in forest harvesting operations
- health and operational hazards or risks related to crawler tractor operations and factors that can change or introduce new hazards
- industry-accepted work health and safety risk control measures, legal obligations of the current Work Health and Safety Acts or Occupational Health and Safety Acts and regulations, and requirements of industry standards and/or codes of practice for crawler tractor operations as outlined in workplace procedures and production plan
- industry-accepted warning signs, their correct positioning, vehicle-to-vehicle communication systems and procedures to maintain communication and work safety during crawler tractor operations
- required emergency response procedure including firefighting resources and emergency response
- potential impacts of crawler tractor operations on onsite and offsite environmental values including cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion
- industry-accepted environmental control measures, environmental restrictions, legal obligations of the current Environment Protection Acts and regulations and requirements of industry standards and/or codes of practice for crawler tractor operations as outlined in workplace procedures and production plan
- landings usage
- typical location of loading and/or landing site
- tree felling patterns
- extraction methods
- wood flow requirements and extraction and production bottlenecks particular to a production system
- techniques particular to a production system to avoid mechanical damage to stems and logs during moving and stacking; position and stack logs for efficient extraction
- effects of weather on ground conditions
- effects of slope and terrain conditions on crawler tractor stability and operation
- machine specifications, restrictions, applications and safe operating procedures, including stability and operation in different terrain conditions, slopes and road types and methods to shut down, de-energise and isolate the machine as outlined in workplace procedures or operator’s manual
- using machine cabin controls
- techniques for safe and efficient driving of crawler tractor
- methods to conduct machine pre-operational checks and detect faults as outlined in workplace procedures or operator’s manual
- location of machine’s major mechanical systems and parts of the machine in which energy is stored as outlined in operator manuals for safe and efficient conduct of the machine operator maintenance tasks
- machine maintenance and servicing requirements as outlined in user and operator manuals
- industry-accepted reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

© Commonwealth of Australia, 2025 Skills Insight

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a forest harvesting site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - crawler tractor
  - suitable stems/logs and/or slash to be moved
  - personal protective equipment required in harvesting operations
  - vehicle-to-vehicle communication system
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupation Health and Safety Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to production plan and site safety and environmental management plans
  - access to site emergency procedure
  - access to workplace standard operating procedures for single grip harvester or operator’s manual
  - access to user manual for vehicle-to-vehicle communication system

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3225 Operate excavator with log grapple

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to operate an excavator with log grapple for log production and use optimised production processes in a commercial forest harvesting environment. The main job functions are to load logs on trucks and/or sort log stacks at roadside or landing area for transportation. Other functions include slash removal. Activities are to be conducted safely and efficiently.

The unit applies to individuals who work as excavator with log grapple operators in small or larger harvesting crews. Operators generally work under broad direction to complete routine activities related to crawler tractor operations and take responsibility for their work.

This unit does not apply to excavator operations that undertake dogging, rigging and/or scaffolding work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

	loaded or sorted in line with the production plan requirements
3. Segregate and stack stems and/or logs	3.1 Visually assess and measure products for size, species and quality characteristics at the felling site and during stacking at the roadside or landing bay to ensure they are placed in the appropriate stack and in line with the production plan requirements 3.2 Mark and report logs that cannot be clearly and safely assessed in line with the production plan requirements 3.3 Position and construct stacks of stems or logs to avoid product damage, provide stability, restrict height for efficient extraction and facilitate safe access and conduct of other landing and machine operation in line with worksite layout and production plan requirements 3.4 Maintain stack separation and identification to ensure products are correctly presented on roadside and/or landing bay for an optimum transport and logistics cycle time in line with industry standards and production plan requirements 3.5 Clean area of all debris resulting from excavator with log grapple operation, in line with resource management policies
4. Carry out machine operator maintenance	4.1 Park, shut-down, de-energise and isolate excavator with log grapple in line with workplace procedures or manufacturers' recommendations 4.2 Clean, check and carry out routine maintenance tasks on excavator with log grapple to maintain optimum operational performance 4.3 Identify and report machine faults, malfunctions or problems in line with workplace procedures or manufacturers' recommendations 4.4 Clean work area and dispose of or recycle waste materials in line with site environmental management plan 4.5 Record excavator with log grapple operations and maintenance activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Skills Insight

Skill	Description
Reading	• read production plans, site safety and environmental management plans in a forest harvesting environment • read standard operating procedures and/or manufacturers' instructions for the operation of forest harvesting machinery
Writing	• record operation, production and machine maintenance on paper based or electronic media
Oral Communication	• interact verbally and non-verbally using agreed systems and processes to communicate with others on site to ensure safe and effective machine operations • use appropriate vocabulary including technical language directly relevant to role
Numeracy	• interpret gauges relevant to safe operation of harvesting machinery • determine construction of stable log stack • estimate the weight of logs to determine loading requirements and compliance to machine specifications
Navigate the world of work	• understand main tasks, responsibilities and boundaries of own role
Interact with others	• use modes of communication suitable to purpose to confirm and clarify understanding • communicate and report operational and safety information to on-site personnel
Get the work done	• recognise and respond to routine problems • plan and organise own work activities and resources

Assessment Requirements for FWPHAR3225 Operate excavator with log grapple

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- planned, prepared and safely and effectively operated an excavator with log grapple, to load logs/slash on trucks and/or sort and stack logs in line with a production plan
- checked risks associated with the operation and applied standard operating procedure
- followed production plan requirements and site safety and environmental management plan
- determined suitability and stability of the machine for operation by considering machine specifications, terrain characteristics and type and size of logs to be grappled
- adjusted machine positioning technique in response to terrain conditions
- demonstrated knowledge of log species, quality characteristics and defects in line with the production plan requirements
- applied machine techniques to drive, grapple, load and/or stack logs or slash and minimise damage to products, machine and surrounding environment in line with the production plan requirements
- placed, stacked and presented products for efficient transportation and identification in line with the production plan requirements
- communicated effectively with others in the work area
- shut down, de-energised and isolated machine in line with workplace procedures and operator’s manual
- carried out routine maintenance on the machine.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans
- hazardous or safe working zones in forest harvesting operations

© Commonwealth of Australia, 2025 Skills Insight

- health and operational hazards or risks related to excavator with log grapple and factors that can change or introduce new hazards
- industry-accepted work health and safety risk control measures, legal obligations of the current Work Health and Safety Acts or Occupational Health and Safety Acts and regulations and requirements of industry standards and/or codes of practice for excavator with log grapple operations as outlined in workplace procedures and production plan
- industry-accepted warning signs, their correct positioning, vehicle-to-vehicle communication systems and procedures to maintain communication and work safety during operations
- required emergency response procedure, including firefighting resources and emergency response
- potential impact of excavator with log grapple operations on onsite and offsite environmental values including cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion
- industry-accepted environmental control measures, restrictions, legal obligations of the current Environment Protection Acts and regulations and requirements of industry standards and/or codes of practice for excavator with log grapple operations as outlined in workplace procedures and production plan
- landings usage
- wood flow requirements and extraction and production bottlenecks particular to a production system
- log species, quality characteristics and defects particular to the site and production system
- regional quality requirements for log products with particular end uses, markets, and values
- maximum log damage or defect and minimum quality allowances particular to a production system
- techniques particular to a production system to avoid mechanical damage to logs during grappling, loading and stacking; separate and present logs for efficient transportation and identification of the product
- effects of weather on ground conditions
- effects of terrain conditions on machine stability and operation
- machine specifications, restrictions and safe operating procedures, including stability and operation in different terrain conditions, slopes and road types and methods to shut down, de-energise and isolate the machine as outlined in workplace procedures or operator's manual
- using machine cabin controls
- techniques for safe and efficient driving of the machine during operation
- methods to conduct machine pre-operational checks and detect faults as outlined in workplace procedures or operator's manual
- location of machine's major mechanical systems and parts of the machine in which energy is stored as outlined in operator manuals for safe and efficient conduct of the machine operator maintenance tasks
- machine maintenance and servicing requirements, as outlined in workplace procedures or operator's manual

© Commonwealth of Australia, 2025 Skills Insight

- industry-accepted reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a forest harvesting site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - excavator with log grapple
  - logs/slash for loading and/or segregation and stacking
  - personal protective equipment required in harvesting operations
  - vehicle-to-vehicle communication system
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupation Health and Safety Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to production plan, site operational plan and safety and environmental management plans
  - access to site emergency procedure
  - access to workplace standard operating procedures for excavator with log grapple or operator's manual
  - access to user manual for vehicle-to-vehicle communication unit

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3226 Operate feller buncher

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to operate a feller buncher for log production and use optimised production processes in a commercial forest harvesting environment. The main job functions are to fell trees and pre-bunch stems for further processing. Activities are to be conducted safely and to ensure optimal harvesting production.

The unit applies to individuals who work as feller buncher operators in small or larger harvesting crews. Operators generally work under broad direction to complete routine activities related to harvesting operations and take responsibility for their work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Nil

Unit Sector

Harvesting (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare to operate a feller buncher	1.1 Review production plan, confirm its targets for felling and processing and assess wood flow requirements to ensure efficient machine operation and overall productivity 1.2 Confirm, identify and report health, safety, environmental and

- wood flow requirements and extraction and production bottlenecks particular to a production system
- tree species, quality characteristics, shape and defects particular to the site and production system
- regional quality requirements for log products with particular end uses, markets and values
- maximum stump height requirements and methods to achieve maximum stump height in response to unexpected characteristics or condition of the trees and ground level
- maximum stem damage and defect allowance and minimum quality allowance particular to a production system
- techniques particular to a production system to avoid mechanical damage to, or breakage of, stems and standing trees during operation; avoid incorrect or excessive log butting; stack, separate and present logs for efficient transportation and identification of the product
- effects of weather on ground conditions
- effects of slope and terrain conditions on feller buncher stability and operation
- machine specifications, restrictions and safe operating procedures, including stability and operation in different terrain conditions, slopes and road types, chain shot rules, methods to shut down, de-energise and isolate the machine and optimal direction of travel as outlined in workplace procedures or operator’s manual
- using machine cabin controls

© Commonwealth of Australia, 2025 Skills Insight

- techniques for safe and efficient driving of feller buncher
- location of machine's major mechanical systems and parts of the machine in which energy is stored as outlined in operator manuals for safe and efficient conduct of the machine operator maintenance tasks
- method to conduct machine and cutting head attachment pre-operational checks and inspections to detect faults as outlined in workplace procedures or operator's manual
- machine maintenance and servicing requirements as outlined workplace procedures or operator's manual
- industry-accepted reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a forest harvesting site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - feller buncher
  - suitable trees to fell
  - personal protective equipment required in harvesting operations
  - vehicle-to-vehicle communication system
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupational Health and Safety Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to production plan, cutting instructions and safety and environmental management plans
  - access to site emergency procedure
  - access to workplace safety procedures for operating single grip harvester or operator's manual
  - access to user manual for vehicle-to-vehicle communication unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3227 Operate forwarder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to operate a forwarder for log production and use optimised production processes in a commercial forest harvesting environment. The main job functions are to load logs at felling or pre-bunching sites, transport and unload logs at a mill or landing area. Activities are to be conducted safely and efficiently.

The unit applies to individuals who work as forwarder operators in small to large harvesting crews. Operators generally work under broad direction to complete routine activities related to forwarding operations and take responsibility for their work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPHAR3227 Operate forwarder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- planned, prepared and safely and effectively operated a forwarder and equipment to load, transport and unload logs in stacks and/or on a truck
- checked risks associated with the operation and apply standard operating procedures
- followed production plan requirements and site safety and environmental management plan
- determined suitability and stability of forwarder for operation and safe working load limits, by considering capacity and limitation of machine, terrain characteristics and type, size and quantity of logs to be loaded
- adjusted machine driving and positioning techniques in response to terrain conditions
- applied loading, unloading and driving techniques to minimise damage to logs, standing trees, machine and environment in line with the production plan requirements
- placed, stacked and presented logs for efficient transportation and identification in line with the production plan requirements
- communicated effectively with others in the work area
- shut down, de-energised and isolated machine in line with workplace procedures and operator’s manual
- carried out routine maintenance on forwarder parts.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans
- hazardous or safe working zones in forest harvesting operations
- health and operational hazards or risks related to forwarder operations and factors that can change or introduce new hazards

© Commonwealth of Australia, 2025 Skills Insight

- industry-accepted work health and safety risk control measures, legal obligations of the current Work Health and Safety Acts or Occupational Health and Safety Acts and regulations and requirements of industry standards and/or codes of practice for single grip harvesting operations as outlined in workplace procedures and production plan
- industry-accepted warning signs, their correct positioning, vehicle-to-vehicle communication systems and procedures to maintain communication and workplace safety during forwarder operations
- required emergency response procedure including firefighting resources and emergency response
- potential impacts of forwarder operations on onsite and offsite environmental values including cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion
- industry-accepted environmental control measures, environmental restrictions, legal obligations of current Environment Protection Acts and regulations and requirements of industry standards and/or codes of practice for forwarder operations as outlined in workplace procedures and production plan
- landings usage, typical location of loading and/or landing site
- extraction methods for tree felling patterns
- wood flow requirements and extraction and production bottlenecks particular to a production system
- effects of weather on ground conditions
- effects of slope and terrain conditions on forwarder stability and operation
- log species, quality characteristics and defects particular to the site and production system
- regional quality requirements for log products with particular end uses, markets and values
- maximum log damage or defects and minimum quality allowances particular to a production system
- techniques particular to a production system to avoid mechanical damage to logs during loading, unloading and stacking; separate and present logs for efficient transportation and identification of the product
- machine specifications, restrictions and safe operating procedures including stability and operation in different terrain conditions, slopes and road types and methods to shut down, de-energise and isolate the machine as outlined in workplace procedures or operator's manual
- using machine cabin controls
- techniques to restrain logs safely
- techniques for safe and efficient driving of forwarder to landing area or the mill
- location of machine's major mechanical systems and parts of the machine in which energy is stored as outlined in operator manuals for safe and efficient conduct of the machine operator maintenance tasks
- methods to conduct machine pre-operational checks and detect faults as outlined in workplace procedures or operator's manual
- machine maintenance and servicing requirements as outlined in workplace procedures or operator's manual

- industry-accepted reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a forest harvesting site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - forwarder
  - suitable logs to load, unload and stack
  - personal protective equipment required in harvesting operations
  - vehicle-to-vehicle communication systems
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupational Health and Safety Acts , regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to production plan and safety and environmental management plans
  - access to site emergency procedure
  - access to workplace safety procedures for operating single grip harvester or operator's manual
  - access to user manual for vehicle-to-vehicle communication system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3228 Operate loader

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to operate an articulated front-end wheel loader for log production and use optimised production processes in a commercial forest harvesting environment. The main job functions are to load log trucks and/or sort log stacks at roadside or landing area for transportation. Other functions include slash removal. Activities are to be conducted safely and efficiently.

The unit applies to individuals who work as loader operators in small or larger harvesting crews. Operators generally work under broad direction to complete routine activities related to crawler tractor operations and take responsibility for their work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare to operate a loader	1.1 Review production plan, confirm its targets for felling and processing and assess wood flow requirements to ensure efficient machine operation and overall productivity 1.2 Confirm type, size and quantity of logs or slash to be clamped to

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	ensure that loads and machine are in line with safe working requirements and industry standards for operations 1.3 Confirm, identify and report health, safety, environmental and heritage risks of operation in line with standard operating procedures and site safety and environmental management plans 1.4 Apply risk control measures in line with standard operating procedures, site operational plan, legislative requirements and industry standards to eliminate or minimise risks 1.5 Identify emergency plan procedures to follow in the event of an emergency 1.6 Use production plan to identify layout of landing or roadside area and access to logs for efficient process and minimum interference with other forestry operations 1.7 Assess terrain characteristics to establish machine stability 1.8 Carry out pre-operational checks on machine in line with workplace procedures or manufacturers' recommendations to ensure optimal production performance and operational effectiveness
2. Operate loader to load log trucks and/or sort log stacks	2.1 Use industry-accepted warning signs, vehicle-to-vehicle communication systems and procedures to maintain communication and workplace safety during operation 2.2 Position loader for stability and safe access to logs/slash, by adjusting the technique in response to terrain conditions 2.3 Use machine cabin controls to clamp bunches of logs/slash, and load trucks and/or sort stacks, while ensuring that the bunch size is suited to the log clamp capacity and terrain conditions 2.4 Systematically load trucks and/or construct log/slash stacks by using handling techniques to avoid log damage in line with the production plan requirements and ensure safety and stability of truck and/or stacks 2.5 Use appropriate techniques to maintain log product separation in the truck when multiple product grades are loaded or in line with the production plan requirements 2.6 Drive the machine and manoeuvre log clamp safely and efficiently to avoid logs, machine and environment damage in line with the production plan requirements 2.7 Ensure all merchantable product and/or slash from the site is loaded or sorted in line with the production plan requirements

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
3. Segregate and stack stems and/or logs	3.1 Visually assess and measure products for size, species and quality characteristics at the felling site and during staking at the roadside or landing bay, to ensure they are placed in the appropriate stack and in line with the production plan requirements 3.2 Mark and report logs that cannot be clearly and safely assessed in line with the production plan requirements 3.3 Position and construct stacks of stems or logs to avoid product damage, provide stability, restrict height for efficient extraction and facilitate safe access and conduct of other landing and machine operations in line with worksite layout and production plan requirements 3.4 Maintain stack separation and identification to ensure products are correctly presented on roadside and/or landing bay for an optimum transport and logistics cycle time in line with industry standards and production plan requirements 3.5 Clean area of all debris resulting from loader operation in line with resource management policies
4. Carry out machine operator maintenance	4.1 Park, shut-down, de-energise and isolate loader in line with workplace procedures or manufacturers' recommendations 4.2 Clean, check and carry out routine maintenance tasks on loader to maintain optimum operational performance 4.3 Identify and report machine faults, malfunctions or problems in line with workplace procedures or manufacturers' recommendations 4.4 Clean work area and dispose of or recycle waste materials in line with site environmental management plan 4.5 Record loader operations and maintenance activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• read production plans, site safety and environmental management

© Commonwealth of Australia, 2025 Skills Insight

Skill	Description
	plans in a forest harvesting environment • read standard operating procedures and/or manufacturers' instructions for the operation of forest harvesting machinery
Writing	• record operation, production and machine maintenance on paper based or electronic media
Oral Communication	• interact verbally and non-verbally using agreed systems and processes to communicate with others on site to ensure safe and effective machine operations • use appropriate vocabulary, including technical language directly relevant to role
Numeracy	• interpret gauges relevant to safe operation of harvesting machinery • determine construction of stable log stack • estimate the weight of logs to determine loading requirements and compliance to machine specifications
Navigate the world of work	• understand main tasks, responsibilities and boundaries of own role
Interact with others	• use modes of communication suitable to purpose to confirm and clarify understanding • communicate and report operational and safety information to on-site personnel
Get the work done	• recognise and respond to routine problems • plan and organise own work activities and resources

Assessment Requirements for FWPHAR3228 Operate loader

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- planned, prepared and safely and effectively operated loader to load logs/slash on trucks and/or sort and stack logs in line with a production plan
- checked risks associated with the operation and applied standard operating procedures
- followed the production plan requirements and site safety and environmental management plans
- determined suitability and stability of the machine for operation by considering machine specifications, terrain characteristics and type and size of logs to be clamped
- adjusted machine positioning technique in response to terrain conditions
- demonstrated knowledge of log species, quality characteristics and defects in line with the production plan requirements
- applied machine techniques to drive, clamp, load and/or stack logs or slash and minimise damage to products, machine and surrounding environment in line with the production plan requirements
- placed, stacked and presented products for efficient transportation and identification in line with the production plan requirements
- shut down, de-energised and isolated machine in line with workplace procedures and operator's manual
- carried out routine maintenance on the machine.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans
- hazardous or safe working zones in forest harvesting operations
- health and operational hazards or risks related to loader and factors that can change or introduce new hazards

© Commonwealth of Australia, 2025 Skills Insight

- industry-accepted work health and safety risk control measures, legal obligations of the current Work Health and Safety Acts or Occupational Health and Safety Acts and regulations and requirements of industry standards and/or codes of practice for loader operations as outlined in workplace procedures and production plan
- industry-accepted warning signs, their correct positioning, vehicle-to-vehicle communication systems and procedures to maintain communication and work safety during operations
- required emergency response procedure, including firefighting resources and emergency response
- potential impacts of loader operations on onsite and offsite environmental values, including cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion
- industry-accepted environmental control measures, restrictions, legal obligations of the current Environment Protection Acts and regulations and requirements of industry standards and/or codes of practice for loader operations as outlined in workplace procedures and production plan
- landings usage
- wood flow requirements and extraction and production bottlenecks particular to a production system
- log species, quality characteristics and defects particular to the site and production system
- regional quality requirements for log products with particular end uses, markets and values
- maximum log damage or defect and minimum quality allowances particular to a production system
- techniques particular to a production system to avoid mechanical damage to logs during grappling, loading and stacking; separate and present logs for efficient transportation and identification of the product
- effects of weather on ground conditions
- effects of terrain conditions on machine stability and operation
- machine specifications, restrictions and safe operating procedures, including stability and operation in different terrain conditions, slopes and road types and methods to shut down, de-energise and isolate the machine as outlined in workplace procedures or operator's manual
- using machine cabin controls
- techniques for safe and efficient driving of the machine during operation
- methods to conduct machine pre-operational checks and detect faults, as outlined in workplace procedures or operator's manual
- location of machine's major mechanical systems and parts of the machine in which energy is stored, as outlined in operator manuals for safe and efficient conduct of the machine operator maintenance tasks
- machine maintenance and servicing requirements as outlined in workplace procedures or operator's manual
- industry-accepted reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

© Commonwealth of Australia, 2025 Skills Insight

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a forest harvesting site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - loader
  - logs/slash for loading and/or segregation and stacking
  - personal protective equipment required in harvesting operations
  - vehicle-to-vehicle communication system
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupation Health and Safety Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to production plan, operational plan and safety and environmental management plans
  - access to site emergency procedure
  - access to workplace standard operating procedures for loader or operator's manual
  - access to user manual for vehicle-to-vehicle communication system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3229 Operate single grip harvester

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to operate a single grip harvester for log production and use optimised production processes in a commercial forest harvesting environment. The main job functions are to fell trees, delimb, cut stems to optimum value and segregate log products. Activities are to be conducted safely and to ensure optimal value recovery and extraction of logs.

The unit applies to individuals who work as single grip harvester operators in small or larger harvesting crews. Operators generally work under broad direction to complete routine activities related to harvesting operations and take responsibility for their work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- planned, prepared and safely and effectively operated a skidder to move products and/or slash in line with production plan
- checked risks associated with the operation and applied standard operating procedures
- followed production plan requirements and site safety and environmental management plan
- determined suitability and stability of skidder for operation and safe working load limits by considering machine and equipment specifications, terrain characteristics and type and size of stems and/or logs to be moved
- adjusted machine driving and positioning technique in response to terrain conditions
- applied machine manipulation techniques to move products and/or slash and minimise damage to products, machine and surrounding environment in line with the production plan requirements
- placed and stacked products for efficient extraction in line with the production plan requirements
- communicated effectively with others in the work area
- shut down, de-energised and isolated machine in line with workplace procedures and operator's manual
- carried out routine maintenance on skidder parts.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans
- hazardous or safe working zones in forest harvesting operations
- health and operational hazards or risks related to skidder operations and factors that can change or introduce new hazards

© Commonwealth of Australia, 2025 Skills Insight

- techniques for safe and efficient driving of skidder
- methods to conduct pre-operational checks on machine and detect faults as outlined in workplace procedures or operator's manual
- location of machine's major mechanical systems and parts of the machine in which energy is stored as outlined in operator manuals for safe and efficient conduct of the machine operator maintenance tasks
- machine maintenance and servicing requirements as outlined in user or operator manuals
- industry-accepted reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Skills Insight

  - skills must be demonstrated in a forest harvesting site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - skidder
  - suitable stems/logs and/or slash to be skidded
  - personal protective equipment required in harvesting operations
  - vehicle-to-vehicle communication systems
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupation Health and Safety Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to production plan and site safety and environmental management plans
  - access to site emergency procedure
  - access to workplace standard operating procedures for skidder or operator's manual
  - access to user manual for vehicle-to-vehicle communication systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3231 Operate yarder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to operate a yarder for log production and use optimised production processes in a commercial forest harvesting environment. The main job functions are to lift and carry stems and/or logs on slopes from the stump to the roadside or landing area. Activities are to be conducted safely and efficiently.

The unit applies to individuals who work as yarder operators in small or larger harvesting crews. Operators generally work under broad direction to complete routine activities related to yarder operations and take responsibility for their work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare to operate a yarder	1.1 Confirm production plan targets for felling and processing and assess wood flow requirements to ensure efficient machine operation and overall productivity 1.2 Confirm type, size and quantity of stems and/or logs to be moved with yarder to ensure that loads, machine and cable system are in line

© Commonwealth of Australia, 2025 Skills Insight

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	with safe working load requirements and industry standards for operations 1.3 Confirm, identify and report health, safety, environmental and heritage risks of operation in line with standard operating procedures and site safety management plans 1.4 Apply risk control measures in line with standard operating procedures, site operational plan, legislative requirements and industry standards to eliminate or minimise risks 1.5 Identify emergency plan procedures to follow in the event of an emergency 1.6 Use production plans to identify location of landing area, extraction routes and entry points for efficient extraction of stems and/or logs and minimum interference with other forestry operations 1.7 Assess terrain characteristics to establish machine stability
2. Set up yarder	2.1 Use industry-accepted warning signs, vehicle-to-vehicle communication systems and procedures to maintain communication and workplace safety during yarder set-up and operation 2.2 Move yarder to the landing in line with industry standards 2.3 Position yarder on landing for stability in line with planned system design by adjusting the technique in response to terrain conditions and ensuring a stable level support base for outriggers 2.4 Check that tower or spar is rigged to suit system design and raised in line with manufacturers' recommendations and industry standards 2.5 Work with other personnel to tension lines with enough slack to facilitate yarder movements
3. Inspect and maintain cable system	3.1 Observe mechanical system components during normal operations, note faults and take corrective actions 3.2 Routinely inspect system components and maintain, repair or replace in line with industry standards 3.3 Routinely inspect guylines and adjust tension to equalise load in line with industry standards 3.4 Lubricate blocks to maintain operational condition 3.5 Identify repetitive damage of cable system and review and amend operational practices

© Commonwealth of Australia, 2025 Skills Insight

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
4. Haul stems and/or logs	4.1 Carry out pre-operational checks on machine and cable system in line with workplace procedures or manufacturers' recommendations to ensure optimal production performance and operational effectiveness 4.2 Perform yarder operations only in response to breakout, landing signals or own transmitted signals 4.3 Monitor, manage and control yarder mechanical systems to maintain log alignment and satisfy safe operating limits 4.4 Control tension in running and standing lines to balance the lift and deflection consistency with payload and rope capacities 4.5 Anticipate hang-ups and obstacles, halt haul and clear in cooperation with the rigging slinger 4.6 Use haul speed, line swing and bridling to position logs on the landing, control payloads and work with the chaser to optimise workflow 4.7 Position and construct stacks of stems or logs to avoid product damage, provide stability, restrict height for efficient extraction and facilitate safe access and conduct of other landing and machine operations in line with worksite layout and production plan requirements 4.8 Return rigging to extraction point and position in line with signals from the rigging slinger 4.9 Operate yarder to minimise breakage and damage to stems and/or logs, standing trees and environment in line with the production plan requirements
5. Carry out machine operator maintenance	5.1 Park, shut-down, de-energise and isolate yarder in line with workplace procedures or manufacturers' recommendations 5.2 Clean, check and carry out routine maintenance activities on yarder to maintain optimum operational performance 5.3 Identify and report machine faults, malfunctions or problems in line with workplace procedures or manufacturers' recommendations 5.4 Clean work area of all debris and waste resulting from yarder operation and dispose of or recycle waste materials in line with site environmental management plan 5.5 Record yarder operations and maintenance activities

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• read production plans, site safety and environmental management plans in a forest harvesting environment • read standard operating procedures and/or manufacturers' instructions for the operation of forest harvesting machinery
Writing	• record operation, production and machine maintenance on paper based or electronic media
Oral Communication	• interact verbally and non-verbally using agreed systems and processes to communicate with chaser, rigging slinger and others on site to ensure safe and effective machine and cable system operations • use appropriate vocabulary including technical language directly relevant to role
Numeracy	• interpret gauges relevant to safe operation of harvesting machinery • determine haul speed to optimise workflow • determine construction of stable log stack • estimate the weight of logs to determine loading requirements and compliance to machine and cable system specifications
Navigate the world of work	• understand main tasks, responsibilities and boundaries of own role
Interact with others	• use modes of communication suitable to purpose to confirm and clarify understanding • communicate and report operational and safety information to on-site personnel
Get the work done	• recognise and respond to routine problems • plan and organise own work activities and resources

Assessment Requirements for FWPHAR3231 Operate yarder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- planned, prepared and safely and effectively operated a yarder and cable system to lift and carry stems and/or logs on slopes from the stump to the roadside or landing area in line with a production plan
- checked risks associated with the operation and applied standard operating procedures
- followed production plan requirements and site safety and environmental management plan
- set up a yarder and adjusted machine positioning technique in response to terrain conditions
- assisted to shift lines in line with the hook tender’s instructions
- inspected and modified rigging
- pulled stems and/or logs from the stump to the roadside or landing area
- anticipated and cleared obstacles in cooperation with a rigging slinger
- applied speed, braking, drums and chokers techniques to manoeuver obstacles and minimise damage to products, machine, cables and surrounding environment in line with the production plan requirements
- placed and stacked products for efficient extraction in line with the production plan requirements
- communicated effectively with rigging slinger and others in the work area
- shut down, de-energised and isolated machine in line with workplace procedures and operator’s manual
- carried out routine maintenance on yarder parts.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans

© Commonwealth of Australia, 2025 Skills Insight

- hazardous or safe working zones in forest harvesting operations
- health and operational hazards or risks related to yarder operations and factors that can change or introduce new hazards
- industry-accepted work health and safety risk control measures, legal obligations of the current Work Health and Safety Acts or Occupational Health and Safety Acts and regulations and requirements of industry standards and/or codes of practice for yarder operations as outlined in workplace procedures and production plan
- industry-accepted warning signs, their correct positioning, vehicle-to-vehicle communication systems and procedures to maintain communication and workplace safety during yarder operations
- required emergency response procedure including firefighting resources and emergency response
- potential impacts of yarder operations on onsite and offsite environmental values including cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion
- industry-accepted environmental control measures, restrictions, legal obligations of the current Environment Protection Acts and regulations and requirements of industry standards and codes of practice for yarder operations as outlined in workplace procedures and production plan
- landings usage
- typical location of loading and/or landing site
- tree felling patterns
- extraction methods
- wood flow requirements and extraction and production bottlenecks particular to a production system
- effects of weather on ground conditions
- effects of slope and terrain conditions on yarder stability and operation
- machine specifications, restrictions and safe operating procedures including stability and operation in different terrain conditions and slopes and methods to shut down, de-energise and isolate the machine as outlined in in workplace procedures or operator’s manual
- cable systems used in yarder operations, application, maintenance and handling
- using machine cabin controls
- machine operating techniques to pull stems and/or logs and avoid mechanical damage to products during operations
- techniques to manoeuver obstacles and minimise damage to products, machine, cables and environment
- techniques for positioning and stacking logs for efficient extraction
- methods to conduct machine and cable system pre-operational checks and detect faults as outlined in workplace procedures or operator’s manual
- location of machine’s major mechanical systems and parts of the machine in which energy is stored as outlined in operator manuals for safe and efficient conduct of the machine operator maintenance tasks
- machine and cable systems maintenance and servicing requirements as outlined in user or operator manuals

© Commonwealth of Australia, 2025 Skills Insight

- industry-accepted reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

Assessment Conditions

Assessment of this unit of competency must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a forest harvesting site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - yarder
  - cable system for yarder
  - stems and/or logs to be carried with yarder
  - personal protective equipment required in harvesting operations
  - vehicle-to-vehicle communication system
- specifications:
  - access to workplace policies and procedures which cover current Work Health and Safety Acts or Occupation Health and Safety Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to workplace policies and procedures which cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forest harvesting operations
  - access to production plan and site safety and environmental management plans
  - access to site emergency procedure
  - access to workplace safe operating procedures for yarder or operator’s manual
  - access to user manual for vehicle-to-vehicle communication system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR4201 Apply tree jacking techniques

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR4201B Apply tree jacking techniques, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to use tree jacking techniques in the process of felling trees 180° away from their natural direction of fall using purpose built tree jacks. Techniques are used in a forest or farm forest setting.

The unit applies to job roles including Harvesting Supervisor, Harvesting Team Leader, Arboriculture Supervisor, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for tree jacking	1.1 Review work plan and check where required with appropriate personnel. 1.2 Identify type and quantity of trees to be tree jacked and assess activities for safety and environmental protection practices. 1.3 Select appropriate equipment and check for operational

© Commonwealth of Australia, 2025 Skills Insight

	effectiveness in line with manufacturer's recommendations. 1.4 Plan tree jacking activities in line with workplace health and safety (WHS) procedures and work plan.
2. Assess and plan tree jacking	2.1 Assess environmental conditions and use outcomes to plan felling of each tree. 2.2 Monitor location and movement of other personnel and modify work to ensure safety. 2.3 Assess tree, location and stability for conditions likely to affect safety of tree jacking activities. 2.4 Visually assess tree for defects, grade and recovery status. 2.5 Select escape route, clear route and growth around tree manually or mechanically. 2.6 Assess fall direction and allowable degree of error, considering hang ups, damage, extraction constraints and available open space. 2.7 Plan cutting sequence to control direction of fall and minimise damage to tree and surrounding environment; communicate to others. 2.8 Mark trees too dangerous to fell safely and refer to appropriate personnel.
3. Tree jack trees	3.1 Complete equipment pre start-up checks. 3.2 Remove and clear leaders in line with tree jacking work plan. 3.3 Diagnose unexpected characteristics of tree and review plan. 3.4 Make jacking slots to provide for placement of tree jacks in line with planned falling direction. 3.5 Adjust cutting technique and use tree jacks to control movement and direction of tree being felled. 3.6 Complete felling and use planned safe exit route in line with safety procedures. 3.7 Monitor ground movement of tree; assess and clear trees that hang up. 3.8 Record and report tree jacking process and equipment faults to appropriate personnel.
4. Complete operator maintenance	4.1 Follow organisational safety procedures to lock out equipment. 4.2 Check chain for bluntness or damage. 4.3 Remove, sharpen, adjust and replace chain and other components in line with manufacturer's recommendations. 4.4 Assess and adjust chainsaw set-up to suit cutting conditions. 4.5 Maintain operational condition of chainsaw to meet standards prior

© Commonwealth of Australia, 2025 Skills Insight

	to use. 4.6 Check and service tree jacks.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of trees within work plans and complete basic calculations of time required to complete activities • determine dimensions of trees through estimation or measurement and calculate appropriate quantities of tree jacks • complete calculations and report on size, length, diameter and grade of felled trees.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work plans • provide clear, unambiguous information about jacking and felling process to ensure safety of self and others.

Reading skills to:	• interpret:
	  • WHS procedures
	  • work plans
	  • manufacturers ‘maintenance recommendations.

Writing skills to:	• complete accurate reports on tree jacking process and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation for and felling of trees using work order to guide activities.
Problem-solving skills to:	• identify unexpected operational, environmental and equipment problems and implement appropriate responses.
Technology skills to:	• select, use and maintain appropriate machinery, tools and personal protective equipment used for tree jacking.

Assessment Requirements for FWPHAR4201 Apply tree jacking techniques

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR4201B Apply tree jacking techniques, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to tree jacking
- apply tree jacking techniques in line with the work order and within prescribed organisational tolerances
- conduct operator maintenance on a chainsaw.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- key features of these varying environmental conditions and effects on tree felling:
  - general forest lean
  - ground growth
  - ground hazards and obstacles
  - ground slope
  - gullies
  - presence and density of seed and habitat trees
  - water courses
  - wet and adverse weather conditions
  - wind speed and direction

© Commonwealth of Australia, 2025 Skills Insight

- environmental protection practices including:
  - safe disposal of waste material
  - cleaning of plant, tools and equipment
- typical tree defects and how these affect tree jacking and felling:
  - stability
  - insect defects
  - knots
  - resin pockets
  - shakes
- techniques used in the tree jacking process:
  - tree jacking
  - chainsaw cutting sequences and techniques used to control direction of fall
  - clearing trees that hang up
- communication methods used for tree jacking activities:
  - verbal
  - hand signals
  - eye contact with other operators
  - use of electronic communication devices
- typical industry chain of command for communication of information and instruction
- types of tree jacking tools and equipment; their purpose, features, operation and basic non-specialist repair and maintenance:
  - tree jacks
  - chainsaws
  - maintenance tools and equipment
  - personal protection equipment
- organisational procedures specific to tree jacking activities:
  - workplace health and safety with particular emphasis on pre-start up checks and equipment lock out for safe use of chainsaws
  - use and maintenance of equipment
  - communication reporting line during tree jacking process
  - recording and reporting tree jacking process and equipment faults.

Assessment Conditions

The following resources must be made available:

- tree jacks
- chainsaws
- maintenance tools and equipment for chainsaws and tree jacks
- personal protective equipment suitable for tree jacking activities and chainsaw maintenance
- manufacturers' instructions for use and maintenance of equipment

© Commonwealth of Australia, 2025 Skills Insight

- work plan for tree jacking activities with specific instructions for the work site
- relevant personnel for the purposes of communicating information
- template reports for recording tree jacking process and equipment faults
- organisational and site procedures for tree jacking activities.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR4202 Coordinate log recovery (hook tender)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR4202B Coordinate log recovery (hook tender), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to coordinate operational planning and setting up of cable log recovery systems in a forest or farm forest setting, including coordinating and supervising rigging slingers, yarders, choker setters and chasers.

The unit applies to job roles including Harvesting Supervisor, Harvesting Team Leader, and Forest Operations Supervisor.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Prepare for hook tender operations	1.1 Review work plan and where appropriate check with appropriate personnel. 1.2 Identify required type and quantity of cable recovery equipment and assess for safety and environmental protection practices. 1.3 Select appropriate equipment and check for operational effectiveness in line with manufacturer's recommendations 1.4 Plan cable operation activities in line with workplace health and safety (WHS) procedures and work plan.
2. Plan cable system layout	2.1 Obtain and evaluate information to plan cable system layout and inspect site for hazards and factors affecting harvesting operations. 2.2 Provide personnel with information about landing location and size, hauling boundaries, access routes and construction requirements. 2.3 Consider code of practice, site topography, minimising system design additions and select cable system type to optimise log extraction rate. 2.4 Identify general requirements for anchor points, backline and intermediate supports and provide instruction to fallers.
3. Coordinate yarder and cable system set up	3.1 Select rope sizes for lines in line with code of practice, yarder capacity and system design. 3.2 Select components and rigging to meet code of practice requirements and system design. 3.3 Inspect and install components and lines. 3.4 Direct and assist personnel to layout lines, select anchors and position mobile backstops. 3.5 Assess felled trees for location, size and obstructions; plan recovery extraction sequence to minimise line shifts, log and environmental damage. 3.6 Select support trees and provide directions for rigging. 3.7 Check unloaded and loaded system performance and calculate loads to ensure they are within system and equipment capacity. 3.8 Monitor operations, change and communicate procedures or system design to improve safety and payload efficiency.

© Commonwealth of Australia, 2025 Skills Insight

4. Coordinate rigging of spars, towers and trees	4.1 Check cable system plans and determine operational requirements for tower, spars and support trees. 4.2 Ensure rigging of spars, towers and trees complies with code of practice. 4.3 Check and select spars or support trees to be rigged, guylines and anchor points. 4.4 Select rigging and rope sizes to meet load. 4.5 Provide directions to check components for wear, failure or missing parts prior to rigging; identify faults and take corrective action. 4.6 Coordinate rigging on machine towers to prepare, assemble and fit operational lines, prior to raising, in line with system design. 4.7 Identify climbing and pass line equipment. 4.8 Coordinate guyline positioning and rigging within location angle requirements to provide minimal difference in length and tension. 4.9 Check system components for size, safe working load, layout, position, safety straps, joins, lead angles and operating angles.
5. Coordinate line shifts and rigging modifications	5.1 Anticipate line shifts and prepare required rigging in advance. 5.2 Diagnose limitations of system design or positioning and plan modifications in line with code of practice. 5.3 Monitor operations; change and communicate procedures to improve safety and payload efficiency. 5.4 Locate new support trees, anchor points and mobile tail anchor position; assign riggers to prepare and rig in line with system requirements. 5.5 Record and report breakout processes and equipment faults in line with site procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine calculations to optimise log extraction rate for number and size of felled trees • identify and interpret numerical requirements within codes of practice and manufacturer’s recommendations • complete calculations involving height, length, weight, tension,

© Commonwealth of Australia, 2025 Skills Insight

	angles, loads to determine efficient and safe operational capacity of rigging • identify boundaries on maps and plans and calculate spatial requirements for yarder and rigging operations.

Oral communication skills to:	• ask questions and actively listen to clarify:
	  • contents of work plans
	  • site personnel understanding of instructions
	• provide clear, unambiguous rigging instructions to site personnel
	• use language and concepts appropriate to individual social and cultural differences.

Reading skills to:	• interpret:
	  • WHS procedures
	  • work plans
	  • cable system plans
	  • topographic maps
	  • codes of practice.

Writing skills to:	• complete accurate reports on breakout process and equipment faults.
Initiative and enterprise skills to:	• initiate and determine the most time and cost effective method of log recovery.
Planning and organising skills to:	• design, plan and coordinate establishment of cable recovery systems.
Problem-solving skills to:	• anticipate operational, environmental and equipment problems and implement appropriate responses.
Teamwork skills to:	• lead the team of site personnel to ensure efficient and safe log recovery.
Technology skills to:	• select and coordinate installation of appropriate cable systems and rigging components to meet operational and environmental requirements.

•

Assessment Requirements for FWPHAR4202 Coordinate log recovery (hook tender)

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR4202B Coordinate log recovery (hook tender), which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- safely and efficiently design, plan and coordinate the establishment of cable recovery systems
- follow organisational policies and procedures relevant to coordinating log recovery (hook tender)
- coordinate hook tender operations
- establish these types of cable recovery systems:
  - high lead (no skyline)
  - standing skyline
  - running skyline
- coordinate line shifts
- establish these types of lines:
  - extensions
  - guylines
  - haulback lines
  - mainlines
  - skylines
  - strawlines

© Commonwealth of Australia, 2025 Skills Insight

- establish these types of anchors:
  - block stumps
  - mobile backstops
  - tailholds.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content and application of applicable state or territory code of practice for log recovery activities
- key features of these varying environmental conditions and effects on the layout, set up and operation of cable systems for log recovery:
  - fallen trees
  - general forest lean
  - ground growth
  - ground hazards and obstacles
  - ground slope
  - density of trees
  - wet and adverse weather conditions
  - wind speed and direction
- environmental protection practices for forest and forest farm settings:
  - safe disposal of waste material
  - cleaning of plant, tools and equipment
  - soil and water protection
- industry standard lengths for logs
- operational planning processes for:
  - designing and coordinating the establishment of cable recovery systems
  - determining the most time and cost effective method of log recovery
- techniques used in cable log recovery:
  - log extraction methods
  - rigging techniques
- typical industry chain of command for communication of information and instruction
- purpose, features and operation of cable logging system and rigging components:
  - cable systems:
    - high lead (no skyline)
    - standing skyline
    - running skyline
  - system design additions:
    - blind leads
    - bridling

© Commonwealth of Australia, 2025 Skills Insight

    - multispans
- yarders and anchors:
    - anchors
    - block stumps
    - mobile backstops
    - tailholds
- lines:
    - extensions
    - guylines
    - haulback lines
    - mainlines
    - skylines
    - strawlines
- towers
- spars and support trees
- organisational procedures specific to cable log recovery coordination:
    - workplace health and safety with particular emphasis on use of equipment
    - communication reporting lines during set up and operation of cable systems for log recovery
    - recording and reporting breakout process and equipment faults.

Assessment Conditions

The following resources must be made available:

- cable systems
- yarder and anchors:
    - anchors
    - block stumps
    - mobile backstops
    - tailholds
- lines:
    - extensions
    - guylines
    - haulback lines
    - mainlines
    - skylines
    - strawlines
- towers
- rigging equipment for log recovery
- personal protective equipment suitable for log recovery coordination

- applicable state or territory code of practice
- topographic maps for the site
- template reports for recording breakout process and equipment faults
- organisational procedures for log recovery coordination
- a team of rigging slingers, yarders, choker setters and chasers with whom the individual can interact.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPHAR4203 Design log landings and snig tracks

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR4203B Design log landings and snig tracks, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to design, plan and coordinate the development of log landings and snig tracks in a forest or farm forest setting and to provide support for their construction.

The unit applies to job roles including Harvesting Supervisor, Harvesting Team Leader, Farm Forestry Supervisor, Forestry Supervisor, Forestry Operations Supervisor, Propagation and Stand Health Supervisor and Tree Farm Supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan landing and recovery requirements	1.1 Analyse workplace health and safety (WHS) and regulatory requirements, standards and codes of practice for the design,

ELEMENTS *Elements describe the essential outcomes.*	**PERFORMANCE CRITERIA** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
	construction and operation of landings and snig tracks. 1.2 Obtain and assess information on logging methods, topography and environmental management considerations for site. 1.3 Identify landing location and construction requirements from harvest plan and inspect site to assess factors affecting operations. 1.4 Identify timeframe for use of site and likely weather conditions. 1.5 Calculate and document log extraction methods and storage requirements for landings, roads, tracks, equipment placement, falling and recovery rates and delivery schedules.
2. Design landing and snig tracks	2.1 Calculate specific landing site size and level to meet operational requirements, optimise construction time and minimise environmental damage. 2.2 Plan number and location of snig tracks to optimise track clearing and construction time, log handling capacity and minimise environmental damage. 2.3 Locate track and road entry points to landing in line with harvest plan, log handling procedures, vehicle and equipment access, turning and loading space requirements. 2.4 Design landing and track to provide for available equipment and access for construction. 2.5 Plan and document restoration of land on completion of operations. 2.6 Document landing design and track locations in line with regulation. 2.7 Record design and development process and report to appropriate personnel.
3. Coordinate landing and track development	3.1 Communicate landing and snig track design and construction plan to site personnel to enable preparation. 3.2 Develop operational procedures for tracks and landings with site personnel. 3.3 Provide technical assistance to site personnel for construction of landing and tracks. 3.4 Monitor construction of landing and tracks; review and modify design to account for unexpected ground, water, vegetation or other environmental conditions.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify boundaries and topographical measurements on maps and plans and calculate spatial requirements for landings and snig tracks • complete complex calculations involving rates of extraction, height, length, weight, vehicle turning and loading space to determine size and capacity of snig tracks.

Oral communication skills to:	• provide clear and unambiguous information about design plans to site personnel
	• ask open and closed probe questions and actively listen to clarify:
	  • issues arriving during construction
	  • site personnel understanding of plans and modifications
	• use language and concepts appropriate to individual social and cultural differences.

Reading skills to:	• interpret complex and unfamiliar:
	  • regulatory and environmental information affecting designs
	  • harvest plans
	  • topographic maps.

Writing skills to:	• document detailed and accurate designs for landings and snig tracks • develop and document operational procedures using language easily understood by construction and site personnel • complete detailed and accurate reports on the design and implementation process.
Initiative and enterprise skills to:	• initiate and determine the most time and cost effective plan for construction.
Planning and organising skills to:	• design, plan and coordinate landing and snig track development.
Problem-solving skills to:	• identify environmental issues during construction and implement appropriate modifications to designs.
Teamwork skills to:	• work as part of a team to develop plans, procedures and provide technical assistance to other team members during construction phase.
Technology skills to:	• use computers and software programs for documenting designs for landings and snig tracks.

Assessment Requirements for FWPHAR4203 Design log landings and snig tracks

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR4203B Design log landings and snig tracks, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- designing log landings and snig tracks in line with regulatory requirements, the work order and within prescribed organisational tolerances
- planning the layout of the landing and snig tracks in line with site conditions
- coordinating the development of the landing and snig tracks
- design and coordinate the development of these types of snig tracks:
  - emergency escape routes
  - equipment access tracks
  - hauling tracks
  - vehicular tracks

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content and application of applicable commonwealth, state, territory or local government regulations for the design, construction and operation of landings and snig tracks
- cable log recovery operations and log extraction methods
- key features of these varying environmental conditions and effects on the design and construction of landings and snig tracks:

© Commonwealth of Australia, 2025 Skills Insight

  - fallen trees
  - general forest lean
  - ground growth
  - ground hazards and obstacles
  - ground slope
  - density of trees
  - wet and adverse weather conditions
- environmental protection practices for forest and forest farm settings:
  - minimising temporary, short-term, long-term and permanent damage to natural vegetation and landscape
  - soil and water protection
  - returning the environment to its original or near to original condition on completion of operations
- purpose, features and operational requirements of these types of snig tracks:
  - emergency escape routes
  - equipment access tracks
  - hauling tracks
  - vehicular tracks
- purpose, features and operational requirements of:
  - landings
  - vehicles and equipment used on landings and snig tracks
- processes for:
  - designing and coordinating the development of landings and snig tracks
  - determining the most time and cost effective plan for construction
- typical industry chain of command for communication of information, instruction and technical advice
- organisational standards, policies and procedures for the design, construction and operation of landings and snig tracks:
  - workplace health and safety specific to the use of landings and snig tracks
  - environmental protection
  - documenting designs for landings and snig tracks
  - recording and reporting the design and implementation process.

Assessment Conditions

The following resources must be made available:

- computers and software programs used for documenting designs for landings and snig tracks
- applicable commonwealth, state, territory or local government regulations for the design, construction and operation of landings and snig tracks
- harvest plan for the site

© Commonwealth of Australia, 2025 Skills Insight

- topographic maps for the site
- template design plans for landings and snig tracks
- template reports for recording the design and implementation process
- organisational standards, policies and procedures for the design, construction and operation of landings and snig tracks.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPHAR4204 Plan and coordinate fire salvage operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR4204B Plan and coordinate fire salvage operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess, plan and coordinate salvaging trees of a commercially viable size, immediately after fire in a forest or farm forest setting, before degradation and insect infestation occur. It includes directing tree fellers and trimmers.

The unit applies to Forestry Supervisor, Harvesting Supervisors.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for salvage operations	1.1 Analyse workplace health and safety (WHS), environmental and regulatory requirements for fire salvage operations. 1.2 Check and review work order with appropriate personnel. 1.3 Contact local authority and obtain salvage approval. 1.4 Select appropriate equipment for work requirements and check for

© Commonwealth of Australia, 2025 Skills Insight

	operational effectiveness in line with manufacturers recommendations.
2. Plan salvage operations	2.1 Determine location using map and grid references, obtain land ownings and establish boundaries 2.2 Investigate and report on topography including slope, elevation, contours and soil type 2.3 Assess environmental conditions and plan site preparation, access and operational activities. 2.4 Plan and instigate environmental protection practices for the landscape, soil and drainage. 2.5 Assess and report on extent of fire damage. 2.6 Estimate and report on commercial viability of tree harvest and extraction. 2.7 Produce and check a written plan for all fire salvage operations.
3. Coordinate salvage operations	3.1 Communicate plans for clearing, trimming and felling operations to harvesting personnel. 3.2 Direct track builders to form access in line with salvage plan. 3.3 Direct and monitor clearing of burnt scrub and dangerous limbs. 3.4 Monitor movement and whereabouts of personnel and modify work in line with WHS requirements. 3.5 Assess tree location and stability for conditions likely to affect safety of felling activities. 3.6 Direct fellers to fall designated trees in line with salvage plan and WHS requirements. 3.7 Monitor use of mechanical equipment to minimise carbon emissions. 3.8 Coordinate haulage of logs from site and ensure landscape is left in a safe and tidy condition to allow regeneration to occur.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify grid measurements on maps to calculate and determine boundaries • interpret topographical maps to identify slope and elevation of site

© Commonwealth of Australia, 2025 Skills Insight

	• complete routine calculations to estimate commercial viability of harvest.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify: • contents of work plans • site personnel understanding of instructions • provide clear, unambiguous operational instructions to site personnel • use language and concepts appropriate to individual social and cultural differences.

Reading skills to:	• interpret:
	  • WHS and fire salvage procedures
	  • work plans
	  • topographic maps
	  • salvage approvals.

Writing skills to:	• complete detailed applications for salvage approvals • complete detailed and accurate reports on fire damage and commercial viability of tree harvest • document detailed and accurate fire salvage plans.
Planning and organising skills to:	• plan and coordinate all aspects of fire salvage operations.
Problem-solving skills to:	• identify operational, environmental and safety problems and implement appropriate responses.
Teamwork skills to:	• lead the team of site personnel to ensure efficient and safe tree harvest.
Technology skills to:	• use computers and software programs for documenting fire salvage plans • select equipment appropriate for the particular fire salvageoperation.

Assessment Requirements for FWPHAR4204 Plan and coordinate fire salvage operations

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR4204 Plan and coordinate fire salvage operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to planning and coordinating fire salvage operations
- estimate and report on the commercial viability of tree harvest and extraction for fire affected sites
- plan and coordinate fire salvage operations in line with community expectations and operational requirements
- coordinate personnel to follow planning, communications and scheduling for fire salvage operations
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content and application of applicable commonwealth, state, territory or local government regulations relevant to fire salvage operations
- environmental protection practices for forest and farm forest settings affected by fire:
  - safe disposal of waste material
  - cleaning of plant, tools and equipment

© Commonwealth of Australia, 2025 Skills Insight

    - recycling and re-use of timber with defects
    - minimising the impact of mechanical equipment on the environment
    - leaving the site in a safe and tidy condition to allow for regeneration
- sustainable forest management, at a basic level of understanding, and the role of salvaging fire affected trees in the recovery of fire damaged forests
- key impacts of fire on a forest site and effects on fire salvage operations:
    - characteristics of burnt trees
    - how fire has affected stability of trees
    - what fire has done to underlying scrub
    - how safe the forest is to enter
    - environmental hazards and risks to worker safety
- key processes in fire salvage operations:
    - planning and coordinating salvage operations
    - established chain of command for communication of information and instruction
    - methods to assess fire damaged trees
    - harvesting and extraction techniques for fire damaged trees
- types of equipment for trimming and felling fire damaged trees; their purpose, features and operation
- organisational standards, policies and procedures for the assessment, planning and coordination of fire salvage operations:
    - workplace health and safety specific to harvesting trees in fire damaged forests
    - environmental protection
    - recording and reporting on fire damage and commercial viability of tree harvest
    - documenting fire salvage plans

Assessment Conditions

The following resources must be made available:

- computers and software programs used for documenting fire salvage plans
- equipment for trimming and felling fire damaged trees
- personal protective equipment suitable for harvesting trees in fire damaged forests
- applicable commonwealth, state, territory or local government regulations relevant to fire salvage operations
- topographic maps for the site
- template reports for and reporting on fire damage and commercial viability of tree harvest
- template fire salvage plans
- organisational standards, policies and procedures for the assessment, planning and coordination of fire salvage operations
- a team of tree fellers and trimmers with whom the individual can interact.

Harvesting and Haulage

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan coupe harvesting	1.1 Access and interpret harvesting plan and check where required with appropriate personnel. 1.2 Calculate size of coupe and available timber. 1.3 Estimate equipment, human and other resource requirements. 1.4 Draw up personnel plans and schedules and notify coupe harvesting

© Commonwealth of Australia, 2025 Skills Insight

	date and location to employees. 1.5 Organise availability of appropriate equipment and ensure operational effectiveness. 1.6 Apply for planning permits.
2. Implement harvesting plans	2.1 Analyse and record forest type, topography and available species in line with harvesting plan. 2.2 Calculate gross area of coupe and determine nett area to be harvested. 2.3 Calculate and record volume estimates. 2.4 Implement and monitor operational activities including access, site preparation and environmental and workplace health and safety protection measures. 2.5 Contract cartage operators via tender and set cartage routes. 2.6 Produce, check and communicate schedule for harvesting.
3. Review harvesting work plan	3.1 Identify and evaluate problems encountered during harvesting and use information to enhance future planning. 3.2 Review and evaluate personnel and equipment efficiencies and use information to enhance future planning. 3.3 Identify and document environmental issues encountered during harvesting and feed into future planning processes. 3.4 Record harvesting plan implementation issues and report to appropriate personnel

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete complex calculations involving gross and nett spatial areas, volumes of extraction and numbers of required equipment, human and other resources.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of harvest plans.
Reading skills to:	• interpret detailed harvesting plans and permit applications.
Writing skills to:	• complete detailed planning permit applications • document detailed and accurate work plans

© Commonwealth of Australia, 2025 Skills Insight

	• complete detailed and accurate reports on harvesting plan implementation issues.
Planning and organising skills to:	• plan and organise all operational activities for harvesting.
Problem-solving skills to:	• identify environmental and operational issues during implementation and identify improvements for future planning processes.
Self-management skills to:	• self-manage own timing and productivity to implement harvesting plans.
Technology skills to:	• use computers and software programs for documenting harvest work plans • select equipment appropriate for the particular harvesting operation.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to implementing harvesting plans
- plan harvesting including
  - calculating timber
  - estimating and coordinating resources and equipment
  - obtaining planning permits
- implement harvesting plans including
  - calculating and reporting volume estimates
  - ensuring environmental protection requirements are adhered to
  - estimating and coordinating resources and equipment
  - tendering and issuing harvesting and cartage contracts
- reviewing harvesting plans

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- planning permit application and approval processes
- harvesting and extraction methods
- harvesting volume calculations and aspects

© Commonwealth of Australia, 2025 Skills Insight

- key features of operational issues for harvesting coupes:
  - site preparation
  - operation of landings and snig tracks
  - cartage operations
- environmental hazards and protection measures:
  - minimising temporary, short-term, long-term and permanent damage to natural vegetation and landscape
  - soil and water protection
  - safe disposal of waste material
  - cleaning of plant, tools and equipment
- workplace health and safety hazards, risks and control measures
- fire protection requirements
- wet weather operations and restrictions
- types of equipment used for harvest operation; their purpose, features and operation
- types of personnel used for harvest operations; an overview of job roles
- organisational standards, policies and procedures for harvest operations:
- documenting harvest work plans
- communication reporting lines
- recording and reporting harvest plan implementation issues.

Assessment Conditions

The following resources must be made available:

- computers and software programs used for documenting harvest work plans
- information on planning permits and application forms
- harvest plan with specific details for the coupe
- template harvest work plans
- organisational standards, policies and procedures for harvest operations

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

FWPHAR5201 Design harvesting plans

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR5201B Design harvesting plans, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to design forest or farm forest harvesting plans for established coupes to maximise output and cost efficiencies across multiple coupes in a number of locations.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage

Forest Growing and Management

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for coupe harvest design	1.1 Analyse workplace health and safety (WHS), environmental and regulatory requirements for the design and operation of harvest activities. 1.2 Determine coupe locations using map and grid references and

© Commonwealth of Australia, 2025 Skills Insight

	establish boundaries. 1.3 Identify local authority coverage, approved land use zonings and apply for additional approvals. 1.4 Obtain land ownings. 1.5 Analyse and consider ramifications of environmental issues documented in previous harvesting plans.
2. Design harvesting plans	2.1 Analyse and record topography, forest types and available species. 2.2 Calculate gross area of each coupe and determine nett area to be harvested. 2.3 Calculate and record volume estimates for each coupe. 2.4 Analyse and calculate harvesting and cartage requirements. 2.5 Assess environmental conditions and plan site preparation, access and operational activities. 2.6 Produce, check and communicate written harvesting plans in line with organisational formats and procedures.
3. Review harvesting plans	3.1 Review harvesting plans with other harvest plan designers. 3.2 Test and modify harvesting plans to suit each coupe. 3.3 Record and report final harvesting plans to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Learning skills to:	• collaborate with and consider feedback and advice from other harvest plan designers.
Numeracy skills to:	• identify grid measurements on maps to determine coupe locations and calculate boundaries • interpret topographical maps to identify slope and elevation of site • complete calculations involving gross and nett spatial areas, volumes of extraction and weight for cartage.

Oral communication skills to:	• clearly represent harvest plans to other harvest plan designers
	• ask questions and actively listen to:
	  • engage in a collaborative process with other harvest plan designers to generate and refine ideas
	  • seek feedback on proposed plan inclusions.

© Commonwealth of Australia, 2025 Skills Insight

Reading skills to:	• interpret:
	  • regulatory and environmental information affecting harvest plans
	  • local authority zoning and approval documents
	  • topographic maps.

Writing skills to:	• complete detailed approval applications • document detailed and accurate harvesting plans.
Initiative and enterprise skills to:	• initiate and determine the most time and cost effective plan for harvesting.
Planning and organising skills to:	• plan and organise collection of all required information and manage own timing and productivity to complete plans within deadlines
Problem-solving skills to:	• identify environmental and operational issues during planning and make appropriate modifications to plans.
Self-management skills to:	• self-manage completion of harvesting plans from inception through to documenting final plans.
Teamwork skills to:	• work as part of a team to develop plans and provide feedback and advice to other harvest plan designers
Technology skills to:	• use computers and software programs for documenting harvest plans.

Assessment Requirements for FWPHAR5201 Design harvesting plans

Modification History

Release	Comment
1	Replaces equivalent unit FPIHAR5201B Design harvesting plans, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- design and produce harvesting plans for coupes
- participate in the review and modification of harvesting plans produced by other harvest plan designers.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content and application of applicable commonwealth, state, territory or local government regulations and codes of practice relevant to harvest operations
- principles of harvest planning and contents of plans
- land use zoning and land owning approval processes
- harvesting and extraction methods
- key features of operational issues for harvesting coupes:
  - site preparation
  - operation of landings and snig tracks
  - cartage operations
  - environmental hazards and protection practices:

© Commonwealth of Australia, 2025 Skills Insight

    - minimising temporary, short-term, long-term and permanent damage to natural vegetation and landscape
    - soil and water protection
    - safe disposal of waste material
    - cleaning of plant, tools and equipment
  - workplace health and safety hazards, risks and control measures
  - fire protection requirements
  - wet weather operations and restrictions
- organisational standards, policies and procedures for the design and operation of harvest activities:
  - workplace health and safety for harvesting operations
  - environmental protection
  - documenting harvesting plans
  - communication reporting lines for plan content.
  -

Assessment Conditions

The following resources must be made available:

- computers and software programs used for documenting harvesting plans
- applicable commonwealth, state, territory or local government regulations and codes of practice relevant to harvest operations
- topographic maps for the site
- information on land use zonings and application forms
- template harvesting plans
- organisational standards, policies and procedures for the design and operation of harvest activities
- a team of harvest plan designers with whom the individual can interact.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW2201 Grade round poles and debarked logs

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2201B Grade round poles and debarked logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to visually evaluate pole and log characteristics and defects for classification into varying strength and appearance grades. It includes sorting poles and logs, and marking material in line with grade and on-site distribution.

The unit applies to job roles including Kiln Worker, Timber Grader, Treatment Plant Worker, Production Worker and Sawmill Worker.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for grading, sorting and marking	1.1 Review and check work order. 1.2 Identify site procedures for grading and sorting poles and debarked logs.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Locate type and quantity of poles and debarked logs to be graded, sorted and marked. 1.4 Select equipment for grading and check for operational effectiveness.
2. Grade, sort and mark poles and debarked logs	2.1 Visually assess length and diameter of poles or logs. 2.2 Review industry standards for ranges for sorting. 2.3 Identify material characteristics and defects of each pole or log against industry standards for grade type. 2.4 Measure, record and report moisture content. 2.5 Mark defects for docking. 2.6 Mark and sort material for grade classification, using markers or stickers that are easily interpretable 2.7 Record and report grading outcomes and distribution problems.
3. Distribute material	3.1 Move poles or logs to planned storage or processing operations. 3.2 Dispose of sub-standard material in line with site procedures and environmental requirements. 3.3 Monitor the movement of on-site movement of material and ensure intended flow is achieved. 3.4 Follow site procedures for labelling storage locations.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• count and measure poles or debarked logs and their moisture content.
Reading skills to:	• follow site procedures.
Writing skills to:	• record and report on grading outcomes.

Range of Conditions

Not Applicable

Assessment Requirements for FWPSAW2201 Grade round poles and debarked logs

Modification History

Release	Comment
1	Replaces equivalent FPISAW2201B Grade round poles and debarked logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to grading round poles and debarked logs
- efficiently and safely grade, sort and mark poles and debarked logs with varying moisture content and of varying size and length and colour in readiness for storage and/or processing
- accurately identify defects in poles and debarked logs poles and debarked logs
- distribute poles and debarked logs on site using designated equipment
- follow site procedures to accurately record and report information
- safely use moving and lifting equipment
- safely dispose of waste material
- follow procedures for storage and labelling.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- types of equipment used for grading and marking round poles and debarked logs, and their maintenance requirements including:
  - measuring equipment
  - moisture meters

© Commonwealth of Australia, 2025 Skills Insight

    - lifting equipment for the movement of poles or logs
- moisture content of poles and logs
- types of defects in poles and debarked logs, including:
    - warp
    - wane
    - curvature
    - shakes
    - insect defects
    - knots
    - resin pockets
- methods and equipment for moving poles and debarked logs, which includes:
    - conveyor belt systems
    - track systems
    - lifting equipment
    - fork lifts
    - slings
    - lifting/moving frames
    - trolley jacks
    - gantry cranes
    - dozers
    - loaders
    - manual handling
- methods of visual estimation, grading, colour identification and tagging
- sorting, marking and distribution processes
- industry standard diameters and lengths
- storage systems and labelling
- procedures for recording and reporting workplace information.
-

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures relevant to grading round poles and debarked logs
- poles or debarked logs of different size and type
- equipment for moving poles or debarked logs
- site procedures for poles or debarked logs
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- personal protective equipment suitable for grading round poles and debarked logs

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPSAW2202 Sort boards manually

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2202B Sort boards manually, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to conduct manual sorting operations to process and store boards of varying sizes. Work is completed in a forest products factory setting.

The unit applies to job roles including Kiln Worker, Timber Grader, Treatment Plant Worker, Production Worker and Sawmill Worker.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for sorting	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate equipment and personal protective equipment and check for operational effectiveness. 1.3 Identify type and quantity of boards for sorting and obtain from

© Commonwealth of Australia, 2025 Skills Insight

	storage location. 1.4 Plan sorting process in line with work order.
2. Sort boards	2.1 Follow organisational safety procedures throughout all sorting and distribution processes. 2.2 Identify board cross-sections, lengths and grades and allocate to storage bins or trays. 2.3 Assess board characteristics and defects visually. 2.4 Dispose of or recycle sub-standard boards in line with environmental protection practices or mark for docking. 2.5 Direct boards to subsequent operations in line with size and grade, maintaining material flow. 2.6 Check sorting to ensure board sizes are consistent with visual assessment. 2.7 Check operation of conveyors and bins regularly to ensure supply of boards to downstream processing. 2.8 Identify routine processing and equipment faults and resolve or report to appropriate personnel.
3. Distribute material	3.1 Move boards to storage location or transfer in line with work order. 3.2 Reject and dispose of sub-standard material in line with environmental protection practices. 3.3 Label storage locations in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amounts.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret detailed workplace health and safety and other organisational procedures • interpret detailed work orders.
Writing skills to:	• accurately record information on storage labels • complete accurate basic records for processing and equipment faults.

© Commonwealth of Australia, 2025 Skills Insight

Planning and organising skills to:	• efficiently and logically sequence the stages of sorting and distribution using work order to guide activities.
Problem-solving skills to:	• identify and dispose of sub-standard materials • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective equipment for sorting and distributing boards • efficiently and safely distribute boards on conveyers and monitor their operation.

Assessment Requirements for FWPSAW2202 Sort boards manually

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2202B Sort boards manually, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to sorting boards manually
- conduct manual sorting in readiness for allocation of boards to storage or downstream operations
- using transfer sorting equipment to distribute boards

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- sorting techniques and procedures
- grading markings and quality standards
- storage systems and labelling
- environmental protection practices for forest products factory settings:
  - disposing of, recycling and reusing timber
  - safe disposal of waste material
  - minimising carbon emissions
  - cleaning of plant, tools and equipment
- range of characteristics used to manually sort timber boards including:
  - type
  - finish quality

© Commonwealth of Australia, 2025 Skills Insight

    - timber defects
    - length
    - width
    - thickness
- range of industry-standard timber types and visual characteristics including:
    - native timber species
    - imported timber species
    - dressed timber
    - in-the-rough timber
    - stress and non-stress graded timber
    - preservative treated timber
- typical timber defects and how they affect ability to produce a quality finished product including:
    - incorrect moisture content
    - warp
    - wane
    - cupping
    - shakes
    - insect defects
    - knots
    - resin pockets
- range of industry standard lengths, cross sections, appearance grades and applicable terminology
- markings used on timber boards to identify grade
- typical work flow processes used to manually sort boards
- typical flow of timber board supply in and out of the sorting area
- typical industry and organisation specific storage layout and typical storage categories for timber boards
- methods to label timber in storage locations and common terms used
- purpose, features and operation of equipment used for sorting boards manually:
    - conveyor belt systems
    - track systems
    - different types of lifting equipment including:
        - fork lifts
        - slings
        - trolley jacks
        - gantry cranes
        - loaders
- organisational procedures specific to sorting boards manually:
    - workplace health and safety with particular emphasis use of personal protective and other equipment

© Commonwealth of Australia, 2025 Skills Insight

- communication reporting lines
- recording and reporting processing and equipment faults.

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures for sorting boards manually
- a selection of boards for sorting
- conveyors and transfer equipment
- lifting equipment including:
- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders
- storage racks and bins
- personal protective equipment suitable for sorting boards manually
- manufacturers' instructions and recommendations for use of equipment
- work order with specific instructions for board sorting requirements
- template documents for recording processing and equipment faults and labelling storage locations

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW2203 Sort boards mechanically

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2203B Sort boards mechanically, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to set up, operate and maintain a mechanical sorting machine to process boards of varying sizes. Work is completed in a forest products factory setting.

The unit applies to Sawmill Worker, Production Worker, Timber Grader.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for sorting	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate equipment and personal protective equipment and check for operational effectiveness. 1.3 Identify type and quantity of boards for sorting and obtain from storage location.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan sorting process in line with work order.
2. Set up board equipment	2.1 Complete pre start-up equipment checks to ensure operational effectiveness. 2.2 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.3 Identify board cross-sections, lengths and grades, and plan set size discriminations and timber flow. 2.4 Set up and start program linking board sizes to storage bins or trays and adjust to optimise storage space and operational effectiveness. 2.5 Check and correct operation of machine, gates, conveyors and bins regularly.
3. Co-ordinate material flow	3.1 Direct boards to subsequent operations in line with size and grade, maintaining material flow. 3.2 Inspect and monitor machine performance visually to ensure board sizes are consistent with machine settings. 3.3 Reject and dispose of sub-standard material in line with environmental protection practices. 3.4 Identify routine processing and equipment faults and resolve or report to appropriate personnel.
4. Complete operator maintenance	4.1 Follow organisational safety procedures to lock out equipment. 4.2 Clean and check size identification mechanisms, photo electric cells and reflectors or other switching systems. 4.3 Keep machine clear of dust and debris in line with organisational safety procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amounts • read basic numerical machine settings and set machine for dimensions and grades.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret:

© Commonwealth of Australia, 2025 Skills Insight

	• workplace health and safety and other organisational procedures • work orders • manufacturers' instructions.
Writing skills to:	• complete accurate basic records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of sorting and distribution using work order to guide activities.
Problem-solving skills to:	• identify and dispose of sub-standard materials • identify machine sorting errors and make adjustments for correct sorting of boards • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective equipment for sorting and distributing boards • efficiently and safely operate and monitor mechanical sorting machine.

FWPSAW2204 Dock boards with mechanical feed

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2204B Dock boards with mechanical feed, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to dock material to length with a power driven saw and the aid of a mechanical feed which is monitored for flow problems. Work is completed in a forest products factory setting and includes operator maintenance.

The unit applies to Sawmill Worker, Production Worker, Timber Grader.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for docking	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Plan board cutting pattern and saw set-up sequences in line with

© Commonwealth of Australia, 2025 Skills Insight

	work order.
2. Dock boards to length	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Mark boards and set stops for cutting. 2.3 Follow docking sequence to produce required quantity. 2.4 Check cuts for length and grade within set tolerance. 2.5 Dispose of incorrect cuts, off-cuts and sub-standard boards in line with environmental protection practices. 2.6 Monitor mechanical feed systems regularly for material flow problems and clear blockages. 2.7 Stack material in designated location safely, in line with work order. 2.8 Identify routine processing problems and resolve or report to appropriate personnel.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with environmental protection practices. 3.5 Complete basic non-specialist maintenance for equipment. 3.6 Keep machine clear of dust and debris in line with organisational safety procedures. 3.7 Record and report equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count number of boards to be cut • measure board length and cut within tolerances.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

© Commonwealth of Australia, 2025 Skills Insight

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and dispose of incorrect cuts and sub-standard boards • identify processing problems and faulty equipment and resolve by reporting or rectifying
Technology skills to:	• select and use appropriate personal protective equipment for docking boards • select use and maintain appropriate saws for docking boards • accurately identify and replace blunt or damaged saw blades.

Assessment Requirements for FWPSAW2204 Dock boards with mechanical feed

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2204B Dock boards with mechanical feed, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures docking boards with mechanical feed
- dock boards with mechanical feed in line with prescribed organisational tolerances
- stack batches of cut material in storage locations according to common size, length and angle in line with organisational requirements and OHS regulations
- complete these types of maintenance on a docking saw:
- cleaning the machine of wood chips and sawdust
- replacing blunt saw blades
- inspecting machine parts for wear or damage, including guards
- greasing and lubricating moving parts
- checking the operation of emergency stop buttons and lock out systems.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- characteristics of timber and timber features
- typical work flow processes for docking boards with mechanical feed
- cutting patterns for single cuts requiring one cutting pass
- environmental protection practices for forest products factory settings:

© Commonwealth of Australia, 2025 Skills Insight

    - reducing water and energy use
    - cleaning plant, tools and equipment
    - disposing of, recycling and reusing timber
- typical timber defects and how they affect ability to produce quality sawn boards:
    - warp
    - wane
    - cupping
    - shakes
    - insect defects
    - knots
    - resin pockets
- range of industry standard lengths, cross sections and tolerances and applicable terminology
- range of feed rates and how they affect production output and finished quality of boards
- storage layout and categories for stacking finished materials
- purpose, features and operation of equipment used to dock boards with mechanical feed:
    - measuring equipment
    - mechanical feed systems
    - power operated manually controlled docking and trimming saws:
        - saws with adjustable angle
        - saws with one blade
        - radial arm saws
        - table saws
        - bench saws
        - saws with automatic feed
    - maintenance tools and equipment for saws
- methods for assessing saw blade condition
- organisational procedures specific to docking boards with mechanical feed:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting processing problems and equipment faults.

Assessment Conditions

The following resources must be made available:

- tools and equipment used to dock boards with mechanical feed:
    - measuring equipment
    - mechanical feed systems
    - one or more of the following power operated manually controlled docking and trimming saws:

© Commonwealth of Australia, 2025 Skills Insight

    - saws with adjustable angle
    - saws with one blade
    - radial arm saws
    - table saws
    - bench saws
    - saws with automatic feed
- maintenance tools and equipment for saws
- consumable saw blades
- personal protective equipment suitable for docking boards with mechanical feed
- a selection of timber to be docked
- manufacturers':
    - instructions for equipment use
    - recommendations for repairing and maintaining equipment
- work order with specific instructions for cutting timber
- template documents for recording equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for docking boards with mechanical feed.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW2205 Assemble materials using nail plates

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2205B Assemble materials using nail plates, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare and assemble materials with nail plates; and to stack, strap and despatch them in readiness for transport to a construction site. Work is completed in a forest products factory setting.

The unit applies to Production Worker, Sawmill Worker, Manufacturing Assistant.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for assembly	1.1 Review construction plans and work order and where required clarify with appropriate personnel. 1.2 Identify and obtain type and quantity of material and nail plates to be assembled.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Select appropriate tools and equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.4 Identify and prepare set-up jigs required for construction.
2. Assemble materials	2.1 Select timber components from pre-cut material in line with cutting list. 2.2 Reject material with defects and dispose of in line with environmental protection practices. 2.3 Use equipment in line with organisational safety procedures, manufacturer’s instructions environmental protection practices. 2.4 Identify allowable number and position of joins from construction plan. 2.5 Position and clamp components in jigs ready for joining with allowable faults, joins and grain in line with construction standards and grading rules. 2.6 Staple components to maintain temporary alignment during assembly.
3. Install nail plates	3.1 Position material and nail plate press over joints. 3.2 Position nail plates on joints and install in line with construction plan. 3.3 Repair or dispose of substandard and damaged nail plates in line with environmental protection practices. 3.4 Correct assembly faults in line with organisational procedures 3.5 Identify routine processing and equipment faults and resolve or report to appropriate personnel.
4. Prepare material for despatch and report outcomes	4.1 Check finished material for quality and label in line with work order. 4.2 Remove components from jigs and safely stack in designated location. 4.3 Strap, pack and label finished material ready for transportation. 4.4 Avoid wastage of strapping and packaging materials and maximise use of recycled materials. 4.5 Complete production and quality records and report in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and

© Commonwealth of Australia, 2025 Skills Insight

are not explicit in the performance criteria.	

Numeracy skills to:	• interpret production data from construction plans and work orders to:
	  • count quantities of materials and nail plates and select appropriate sizes
	  • complete routine calculations for component layouts
	• accurately measure lengths and angles.

Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of construction plans and work orders • make accurate verbal reports on processing and equipment faults.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • construction plans and work orders
	  • manufacturers' instructions.

Writing skills to:	• produce basic clear labels for product identification and transportation • complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order and construction plan to guide activities.
Problem-solving skills to:	• identify and dispose of defective materials • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate machinery, tools and personal protective equipment used for assembling materials.

Assessment Requirements for FWPSAW2205 Assemble materials using nail plates

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2205B Assemble materials using nail plates, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to assembling materials using nail plates
- assemble materials using nail plates in line with a work order and construction plans
- strap, pack and label bundles of completed products

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- types of tools and equipment used for assembling products; their purpose, features and operation:
  - measuring equipment
  - assembly jigs
  - nail plate presses
  - staple guns
  - nail guns
  - compressor or compressed air supply
  - marking equipment
  - strapping equipment
- characteristics of timber

© Commonwealth of Australia, 2025 Skills Insight

- types of materials for assembling with nail plates and their purpose
- assembly sequences
- compliantly and construction standards
- typical assembly faults triggering correction to ensure product quality:
  - incorrectly positioned joints
  - timber splits from nailing
  - incorrectly positioned nail plates
- industry standard cross-sections, lengths and tolerances
- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
- typical timber defects and how these affect ability to produce a quality finished product:
  - warp
  - wane
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- storage layout and categories for stacking finished materials
- organisational procedures specific to assembling materials using nail plates:
  - workplace health and safety with particular emphasis on equipment lock out
  - use of equipment
  - communication reporting lines
  - recording and reporting production outcomes and equipment faults.
  -

Assessment Conditions

The following resources must be made available:

- tools and equipment used to assemble products:
  - measuring equipment
  - assembly jigs
  - nail plate presses
  - staple guns
  - nail guns
  - compressor or compressed air supply
  - marking equipment
  - strapping equipment

© Commonwealth of Australia, 2025 Skills Insight

- assembly hardware:
  - nail plates
  - nail gun nails
  - staples
- pre-cut sections of timber

personal protective equipment suitable for assembling materials

- manufacturers' instructions for equipment use
- work order and construction plan with specifications for assembling materials
- template documents for recording production outcomes and equipment faults
- organisational procedures for assembling materials using nail plates.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW2206 De-stack seasoning racks

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2206B De-stack seasoning racks, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess and control dried boards, separate them from seasoning racks, and monitor their use and supply for the timber dressing process. Work is completed in a forest products factory setting.

The unit applies to Sawmill Worker, Production Worker, Kiln Worker.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for de-stacking	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.3 Identify type and quantity of boards for de-stacking and plan de-stacking process in line with work order.

© Commonwealth of Australia, 2025 Skills Insight

2. De-stack racks	2.1 Assess boards visually for type, size and quality. 2.2 Measure moisture content of boards and approve for de-stacking. 2.3 Load racks onto separation equipment in line with organisational safety procedures. 2.4 Separate and load boards onto conveyor systems. 2.5 Remove bearers, spacing stick and other protective timber from boards and store for return to stacking area. 2.6 Reject and dispose of sub-standard materials in line with environmental protection practices. 2.7 Keep de-stacking area clear of timber scraps and dispose of these in line with environmental protection practices.
3. Monitor board usage and maintain supply	3.1 Monitor conveyor transfer procedures and keep free from blockages. 3.2 Supply racks to board separation equipment and maintain consistent dressing size and species in line with work order. 3.3 Receive changes to dressing process size and change board supply accordingly. 3.4 Monitor changeover points in line with organisational procedures. 3.5 Identify routine processing supply and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required materials within work orders and count finished numbers • complete routine measurements of timber moisture content.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures • work orders • manufacturers' recommendations • changed orders for dressing process size.

© Commonwealth of Australia, 2025 Skills Insight

Writing skills to:	• complete accurate basic records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and de-stacking work using work order to guide activities • respond to changes in orders by adjusting planned activities.
Problem-solving skills to:	• identify and dispose of defective materials • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective and other equipment for de-stack seasoning racks.

Assessment Requirements for FWPSAW2206 De-stack seasoning racks

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2206B De-stack seasoning racks, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to de-stacking seasoning racks
- de-stack seasoning racks in readiness for allocation of timber to storage or downstream operations including:
  - breaking down seasoning racks, moisture testing the boards and visually assessing their appearance quality
  - separating the boards from the rack bearers and spacing sticks
- accurately set board separation equipment parameters
- supply de-stacked timber for the dressing process

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of equipment used for drying timber:
  - seasoning racks:
    - air seasoning or kiln seasoning racks
    - timber, steel or mobile racks with bearers and spacing sticks
  - mechanical board separation machine and conveyor system
  - moisture probes

© Commonwealth of Australia, 2025 Skills Insight

- de-stacking techniques
- markings used on timber boards to identify grade
- methods used to measure moisture content of timber
- typical work flow processes used to de-stack seasoning racks
- typical flow of timber board supply in and out of the de-stacking area
- storage systems and labelling
- range of characteristics used to visually assess timber boards:
  - type
  - finish quality
  - timber defects
  - length
  - width
  - thickness
- environmental protection practices for forest products factory settings:
  - cleaning of plant, tools and equipment
  - reducing water and energy use
  - disposing of, recycling and reusing timber
  - disposal of waste material
- range of industry-standard timber types and visual characteristics:
  - native timber species
  - imported timber species
  - dressed timber
  - in-the-rough timber
  - stress and non-stress graded timber
  - preservative treated timber
- typical timber defects and how they affect ability to produce a quality finished product:
  - incorrect moisture content
  - warp
  - wane
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- range of industry standard lengths, cross sections, appearance grades and applicable terminology
- organisational procedures specific to de-stacking seasoning racks:
  - workplace health and safety with particular emphasis use of personal protective and other equipment
  - communication reporting lines

© Commonwealth of Australia, 2025 Skills Insight

- recording and reporting processing and equipment faults.
-

Assessment Conditions

The following resources must be made available:

- seasoning racks:
  - air seasoning or kiln seasoning racks
  - timber, steel or mobile racks with bearers and spacing sticks
- mechanical board separation machine with conveyor system
- moisture probes
- a selection of boards
- personal protective equipment suitable for de-stacking seasoning racks
- manufacturers' instructions and recommendations for use of equipment
- work order with specific instructions for separation and supply of timber
- template documents for recording processing and equipment faults
- organisational policies and procedures for de-stacking seasoning racks.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW2207 Round softwood logs

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2207B Round softwood logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to shape debarked logs into round poles to a set diameter for further down-stream processing. Work is completed in a forest products factory and includes assessing logs for diameter, species, faults and moisture content.

The unit applies to Sawmill Worker, Production Worker, Treatment Plant Worker.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for rounding	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Assess logs to be rounded for diameter, species, faults and moisture content. 1.4 Plan rounding process in line with work order.
2. Round logs	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up checks to ensure operational effectiveness. 2.3 Calibrate scanner in line with manufacturer's instructions. 2.4 Feed material into machine at feed rate in line with organisational procedures. 2.5 Maintain rounding process and adjust to maximise feed rate. 2.6 Check rounding process and conveyors regularly, adjusting to maintain desired quality and output. 2.7 Reject and dispose of sub-standard logs in line with environmental protection practices. 2.8 Direct rounded logs to designated area in line with work order. 2.9 Identify routine processing faults and resolve or report to appropriate personnel.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check cutters for bluntness or damage. 3.3 Remove and replace cutters in line with manufacturer's recommendations. 3.4 Dispose of used cutters in line with environmental protection practices. 3.5 Complete basic non-specialist maintenance for equipment. 3.6 Keep machine clear of dust and debris in line with organisational safety procedures. 3.7 Record and report equipment faults and maintenance requirements to appropriate personnel.
4. Complete handover	4.1 Complete and print production and quality records. 4.2 Create back-up files in line with organisational procedures. 4.3 Brief and hand over documentation to changeover operator.

Foundation Skills

This section describes those core and employment skills that are essential to performance and

© Commonwealth of Australia, 2025 Skills Insight

are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count number of logs to be rounded • complete routine calculations to measure log diameters and calibrate scanner for sizing • calculate the feed rate to optimise quality and quantity of production output.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and dispose of sub-standard logs • identify processing problems and faulty equipment and resolve by reporting or rectifying.
Teamwork skills to:	• complete a handover to incoming operators and share relevant information.
Technology skills to:	• select and use appropriate personal protective equipment for rounding logs • use a rounding plant to efficiently and safely round logs • operate the computerised controls and complete back-up files • accurately identify and replace blunt or damaged cutters.

Assessment Requirements for FWPSAW2207 Round softwood logs

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2207B Round softwood logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to rounding softwood logs
- round softwood logs in line with prescribed organisational specifications using a machine that shapes the debarked log into a round pole
- store poles in line with organisational requirements
- complete these types of basic non-specialist maintenance:
  - cleaning the machine of wood chips and sawdust
  - replacing blunt cutters
  - inspecting machine parts for wear or damage, including guards
  - greasing and lubricating moving parts
  - checking the operation of emergency stop buttons and lock out systems

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of equipment used to round softwood logs:
  - measuring equipment
  - rounding plant
  - scanners that calibrate dimension sizes
  - back –up computer device

© Commonwealth of Australia, 2025 Skills Insight

  - automated conveyor system to transport logs to and from the rounding plant
  - maintenance tools and equipment for cutters
- methods used to assess logs for:
  - diameter
  - curvature
  - faults
  - species
  - moisture content
- typical work flow processes for rounding logs
- typical flow of log supply in and out of the production area
- range of feed rates and how they affect production output and finished quality of rounded logs
- methods for assessing and rectifying typical scanner problems:
  - tangles
  - sorting pockets
  - monitor failure
- methods for assessing cutter condition
- log rounding systems, processes, feed rates and finish
- characteristics of timber
- storage systems and labelling
- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
- typical log defects and how they affect ability to produce quality rounded softwood logs:
  - warp
  - wane
  - curvature
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- organisational procedures specific to rounding logs:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing problems and equipment faults.
  -

FWPSAW2209 Dismantle, transport and assemble hand portable sawmill

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2209 Dismantle, transport and assemble hand portable sawmill, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to dismantle, transport and assemble a hand portable sawmill for the purposes of milling green boards at an on-site location. Work is completed in a forest products factory setting and off-site.

The unit applies to Production Worker, Saw Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

	equipment and check operational effectiveness in line with manufacturer's recommendations. 1.4 Plan dismantling, transport and set-up processes to optimise recovery time.
2. Dismantle, transport and assemble hand portable sawmill	2.1 Follow organisational safety procedures thoughout all processes. 2.2 Follow sequence of activities to dismantle sawmill in line with manufacturer's instructions. 2.3 Load and secure dismantled sawmill equipment for transportation, and move to new location. 2.4 Inspect proposed new work site for potential hazards and work flow interferences. 2.5 Identify safe site for logs, stacking of sawn boards and waste. 2.6 Follow sequence of activities to assemble hand portable sawmill in line with manufacturer's instructions. 2.7 Complete pre start-up checks on equipment to ensure operational effectiveness. 2.8 Identify routine processing and equipment faults and resolve or report to appropriate personnel.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with organisational procedures and environmental protection practices. 3.5 Complete basic non-specialist maintenance for equipment. 3.6 Record and report equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• calculate time required to complete dismantling, transport and set-up processes.
Oral communication	• ask open and closed probe questions and actively listen to clarify

Assessment Requirements for FWPSAW2209 Dismantle, transport and assemble hand portable sawmill

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2209 Dismantle, transport and assemble hand portable sawmill, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to dismantling, transporting and assembling a hand portable sawmill
- dismantle, transport and assemble a hand portable sawmill in readiness to produce green boards in line with a work order and within organisational specifications
- complete these types of basic non-specialist maintenance for hand portable sawmills:
  - cleaning the machine of wood chips and sawdust
  - replacing blunt and damaged saw blades
  - inspecting machine parts for wear or damage, including guards
  - greasing and lubricating moving parts
  - checking the operation of emergency stop buttons and lock out systems.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features, operation and basic non-specialist repair and maintenance for hand portable sawmills
- sequence of activities to dismantle and re-assemble hand portable sawmills
- workflow at the site location

© Commonwealth of Australia, 2025 Skills Insight

- appropriate locations for portable sawmills to optimise efficient and safe workflow
- methods for assessing saw blade condition
- identifying logs for sawing including:
  - assessment of diameter range
  - curvature
  - faults
  - species
  - moisture content
- environmental protection practices for forest products factory settings and off-site sawing locations:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing materials
- organisational procedures specific to dismantling, transporting and assembling portable sawmills:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- hand portable sawmills
- tools and equipment used to dismantle and assemble portable sawmills
- personal protective equipment suitable for dismantling, transporting and assembling portable sawmills
- manufacturers' instructions for dismantling, transporting and assembling portable sawmills
- work order for repair and maintenance activities with specific instructions for portable sawmill location.
- template documents for recording processing and equipment faults and maintenance requirements
- organisational procedures for dismantling, transporting and assembling portable sawmills.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and

© Commonwealth of Australia, 2025 Skills Insight

- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW2210 Prepare for timber treatment operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW2210B Prepare for timber treatment operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit describes the outcomes required to assist with the treatment of timber by monitoring operational details including timber flow to the treatment processing area, water requirements and preservative solution strength.

The unit applies to those who treat timber in a forest products factory setting. Job roles can include timber grader as well as kiln, sawmill, production or treatment plant operator.

Copper Chrome Arsenate (CCA) chemical is a restricted chemical product, which means that CCA can only be supplied to and handled by suitably trained and authorised persons.

The Australian Pesticides and Veterinary Medicines Authority (APVMA) advised that as of 1 July 2012, CCA products can only be supplied to, and used by, suitably trained persons authorised under a relevant state or territory law from that date.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

In Victoria, to comply with licence/permit requirements, organisations must ensure that employees working with CCA demonstrate competence in this unit (FWPSAW3201 Treat timber), or that persons working with CCA do so under the direct supervision (sight and sound) of a trained and authorised person.

For regulatory information and details in other states and territories refer to the state or territory licensing body.

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Set up for treating	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain chemicals and type and quantity of timber for treatment from storage. 1.4 Complete pre start-up equipment checks to ensure operational effectiveness.
2. Assist with treatment process	2.1 Monitor and maintain timber supply to the treatment process area. 2.2 Identify water requirements and check to ensure treatment process requirements are met. 2.3 Test moisture content of timber in line with organisational procedures. 2.4 Check and maintain strength of preservative solution at specified strength and volume. 2.5 Keep treating area clear of dust and debris in line with organisational safety procedures. 2.6 Safely handle treated timber and transfer to storage area. 2.7 Store chemicals in line with organisational safety procedures and report on stock levels. 2.8 Record and report processes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required timber within work orders and count numbers for treatment • calculate routine ratios for preservative solutions • complete basic measurements of moisture content in timber.
Oral communication	• ask open and closed probe questions and actively listen to clarify contents of work orders.

© Commonwealth of Australia, 2025 Skills Insight

skills to:	

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • safety data sheets, or equivalent plain English information for timber treatment chemicals.

Writing skills to:	• complete accurate basic records for chemical stock levels, processes and equipment faults.
Planning and organising skills to:	• efficiently check operational details at regular times during the production run using work order to guide activities.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- assist with the chemical timber treatment process in line with individual work orders for timber types, to be chosen from the following list:
  - native timber species
  - imported timber species
  - dressed timber
  - in-the-rough timber
  - stress and non-stress graded timber
  - sleepers
  - logs
  - rounded poles
  - beams
  - laminated beams
- across the above jobs, check and maintain the strength and volume of preservative solutions including:
  - water-borne solutions
  - oil-based solutions
  - solvent-based solutions
- at the completion of each of the above jobs, store chemicals and report on stock levels.
-

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for chemically treating timber:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of hazardous substances
- storage layout and categories for:
  - raw materials
  - storing finished boards
  - chemicals and preservative solutions
- properties, at a basic level of understanding, of chemicals used to treat timber and their purpose:
  - light organic solvent chemicals
  - preservative solutions:
- water-borne solutions
- oil-based solutions
- solvent-based solutions
- personal safety risks associated with handling and using chemicals and methods used to minimise these
- methods used to safely store chemicals
- typical work flow processes for chemically treating timber
- purpose, features and operation of equipment used to chemically treat timber including from the following list:
  - treaters
  - vats
  - ovens
  - resin tanks
  - effluent tanks
- organisational procedures specific to chemically treating timber including:
  - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
  - communication reporting lines
  - recording and reporting chemical stock levels, processes and equipment faults.

Assessment Conditions

The following resources must be made available:

- equipment used to chemically treat timber:
  - treaters
  - vats

© Commonwealth of Australia, 2025 Skills Insight

    - ovens
    - resin tanks
    - effluent tanks
- personal protective equipment required for chemically treating timber
- one or more of the following types of timber to be chemically treated:
    - native timber species
    - imported timber species
    - dressed timber
    - in-the-rough timber
    - stress and non-stress graded timber
    - sleepers
    - logs
    - rounded poles
    - beams
    - laminated beams
- light organic solvent chemicals used to treat timber
- one or more of the following preservative solutions:
    - water-borne solutions
    - oil-based solutions
    - solvent-based solutions
- manufacturers 'safety data sheets, or equivalent plain English information, for chemicals and preservative solutions
- work order with specific instructions for chemical treatment of timber
- template documents for recording chemical stock levels, processes and equipment faults
- organisational procedures for chemically treating timber
- a suitably licensed person to monitor and supervise handling of CCA during assessment

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for treating timber	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain chemicals and type and quantity of timber for treatment from storage. 1.4 Plan treating cycles in line with work order.
2. Use equipment to treat timber	2.1 Complete pre start-up equipment checks to ensure operational effectiveness. 2.2 Identify water requirements and check to ensure treatment process requirements are met. 2.3 Test moisture content of timber in line with organisational procedures. 2.4 Check, adjust and maintain strength of preservative solution at specified strength and volume. 2.5 Bring treating plant to full operating condition and regularly check operating parameters to ensure optimum output. 2.6 Load timber into treatment vessel and complete treatment cycles. 2.7 Brand treated timber in line with organisational procedures. 2.8 Safely handle treated timber and transfer to storage area.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check all treatment mechanisms for effective condition. 3.3 Keep machine clear of dust and debris in line with organisational safety procedures. 3.4 Store chemicals in line with organisational safety procedures and report on stock levels. 3.5 Record and report timber treating process and equipment faults to appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required timber within work orders and count numbers for treatment • calculate routine solution strengths and retention rates for preservative solutions • complete basic measurements of moisture content in timber.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	• safety data sheets, or equivalent plain English information, for timber treatment chemicals.

Writing skills to:	• complete accurate basic records for chemical stock levels, processes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of timber treatment processes using work order to guide activities.

Assessment Requirements for FWPSAW3201 Treat timber

Modification History

Release	Comment
1	Replaces equivalent FPISAW3201B Treat timber, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete chemical timber treatment processes in line with an individual work orders prescribing different timber types selected from the following list:
  - native timber species
  - imported timber species
  - dressed timber, stress and non-stress graded timber
  - in-the-rough timber
  - sleepers
  - logs, rounded poles
  - beams, laminated beams
- across the above jobs, check, adjust and maintain the strength and volume types of preservative solutions including:
  - water-borne solutions
  - oil-based solutions
  - solvent-based solutions
- at the completion of each of the above jobs, complete operator maintenance, store chemicals and report on stock levels.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- environmental protection practices for chemically treating timber:
  - reducing water and energy use
  - water management strategies
  - cleaning plant, tools and equipment
  - disposing of hazardous substances
- storage layout and categories for:
  - raw materials
  - storing finished boards
  - chemicals and preservative solutions
- purpose of treating timber
- characteristics of timber types, effects of the treatment process and appropriate range of temperatures
- properties, at a basic level of understanding, of chemicals used to treat timber and their purpose:
- water-borne, oil and solvent based preservative solutions with chemical treatments including:
  - creosote and modified creosote-based
  - copper chrome arsenate salts (CCA)
  - compounds of boron and fluoride salts
  - alkaline copper quaternary (ACQ)
  - light organic solvent-borne preservative (LOSP)
  - micronised copper azole (MCA or Tanalith E)
- personal safety risks associated with handling and using chemicals and methods used to minimise these
- methods used to safely store chemicals
- typical work flow processes and techniques for chemically treating timber:
  - full cell
  - modified cell
  - empty cell
  - immersion
  - rueping
  - double vacuum
  - dip diffusion
  - vat and sprays
- methods used to brand treated timber and range of industry and organisation markings:
  - burning
  - hammer impressions
  - ink
  - tags
- purpose, features and operation of equipment used to chemically treat timber including from the following list:

© Commonwealth of Australia, 2025 Skills Insight

  - treatment cylinders
  - working tanks
  - mix tanks
  - concentrate storage tanks
  - effluent tanks
  - vacuum pump and seals
- organisational procedures specific to chemically treating timber:
  - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
  - communication reporting lines
  - recording and reporting chemical stock levels, processes and equipment faults.
  -

Assessment Conditions

The following resources must be made available:

- one or more of the following types of equipment used to chemically treat timber:
  - treatment cylinders
  - working tanks
  - mix tanks
  - concentrate storage tanks
  - effluent tanks
- branding equipment and consumables
- personal protective equipment suitable for chemically treating timber
- one or more of the following types of timber to be chemically treated:
  - native timber species
  - imported timber species
  - dressed timber
  - in-the-rough timber
  - stress and non-stress graded timber
  - sleepers
  - logs
  - rounded poles
  - beams
  - laminated beams
- one or more of the following types of preservative solution:
  - water-borne solutions
  - oil-based solutions
  - solvent-based solutions
- manufacturers ‘safety data sheets, or equivalent plain English information, for chemicals and preservative solutions

© Commonwealth of Australia, 2025 Skills Insight

- work order with specific instructions for chemical treatment of timber
- template documents for recording chemical stock levels, processes and equipment faults
- organisational procedures for chemically treating timber
- relevant personnel for the purposes of communicating information
- a suitably licensed person to monitor and supervise handling of CCA during assessment.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3202 Produce sawn green boards

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3202B Produce sawn green boards, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to re-saw material to width and on the cant with sawing machinery to optimise timber conversion and usability. Work is completed in a forest products factory and includes operator maintenance.

The unit applies to Sawmilling Operator, Sawyer, or Benchman.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for conversion	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Plan timber conversion and saw set-up in line with work order. 1.4 Acquire the type and quantity of material to be cut from the storage

© Commonwealth of Australia, 2025 Skills Insight

	location.
2. Produce green boards	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Set saw, carriage and feed; check and adjust regularly to suit conversion plan, ordered sizes and tolerances. 2.3 Monitor timber quantity to ensure constant supply to the saw. 2.4 Maintain feed rate to optimise production without damaging boards or saw blade. 2.5 Dispose of incorrect cuts, off-cuts and sub-standard boards in line with environmental protection practices. 2.6 Stack material safely in line with work order. 2.7 Identify routine processing problems and resolve or report to appropriate personnel.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with and environmental protection practices. 3.5 Complete basic non-specialist maintenance for equipment. 3.6 Keep machine clear of dust and debris in line with organisational safety procedures. 3.7 Record and report equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count numbers of flitchs or cants to be sawn • interpret order sizes and set up saws to achieve correct depth, width and thickness of cut • calculate the feed rate to optimise quality and quantity of production output.
Oral communication	• ask open and closed probe questions and actively listen to clarify contents of work orders.

© Commonwealth of Australia, 2025 Skills Insight

skills to:	

Reading skills to:	• interpret detailed familiar and unfamiliar:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and dispose of incorrect cuts and sub-standard boards • identify processing problems and faulty equipment and resolve by reporting or rectifying

Assessment Requirements for FWPSAW3202 Produce sawn green boards

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3202B Produce sawn green boards, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce sawn green boards for one or more of these types of timber in line with an individual work order prescribing different lengths and tolerances and number of boards for each job:
  - hardwood
  - softwood
  - native timber species
  - imported timber species
- using one or more of the following saw types:
  - power operated, automatic feed controlled ripping saws
  - saws with adjustable cant (sloping table)
  - saws with one blade
  - rip saws
  - table saws
  - bench saws
- for each of the above jobs, stack batches of cut material in storage location according to common size, length width and cant
- complete these types of basic non-specialist maintenance:
  - cleaning the machine of wood chips and sawdust
  - replacing blunt saw blades

© Commonwealth of Australia, 2025 Skills Insight

- inspecting machine parts for wear or damage, including guards
- greasing and lubricating moving parts
- checking the operation of emergency stop buttons and lock out systems.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- typical timber defects and how they affect ability to produce quality sawn boards:
  - warp
  - wane
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- typical work flow processes for sawing green boards
- typical flow of flitch and cant supply into the sawing area
- range of cutting patterns used on green flitches and cants to achieve maximum output of green boards
- range of industry standard lengths, cross sections and tolerances and applicable terminology
- range of feed rates and how they affect production output and finished quality of green boards
- storage layout and categories for stacking finished materials
- purpose, features and operation of equipment used to produce sawn green boards:
  - measuring equipment
  - saws:
    - power operated, automatic feed controlled ripping saws
    - saws with adjustable cant (sloping table)
    - saws with one blade
    - rip saws
    - table saws
    - bench saws
  - maintenance tools and equipment for saws
- methods for assessing saw blade condition
- environmental protection practices for forest products factory settings:
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
- organisational procedures specific to producing sawn green boards:

© Commonwealth of Australia, 2025 Skills Insight

- workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
- communication reporting lines
- recording and reporting processing problems and equipment faults.
-

Assessment Conditions

The following resources must be made available:

- tools and equipment used to produce sawn green boards:
  - measuring equipment
  - one or more saws, which must be one or more of the following:
    - power operated, automatic feed controlled ripping saws
    - saws with adjustable cant (sloping table)
    - saws with one blade
    - rip saws
    - table saws
    - bench saws
- maintenance tools and equipment for saws
- consumable saw blades
- personal protective equipment suitable for producing sawn green boards
- a diverse, comprehensive and commercial range of green flitches and cants
- manufacturers':
  - instructions for equipment use
  - recommendations for repairing and maintaining equipment
- work order with specific instructions for cutting green timber boards
- template documents for recording equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for producing sawn green boards.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3203 Break down logs

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3203B Break down logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare logs for sawing, set up the processing of logs, break down logs into flitches or cants and maintain the production flow. Work is completed in a forest products factory and includes operator maintenance.

The unit applies to Sawmill Worker, Production Worker.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for sawing	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Plan sawing process in line with work order.
2. Break down logs	2.1 Use equipment in line with organisational safety procedures,

© Commonwealth of Australia, 2025 Skills Insight

	manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up checks to ensure operational effectiveness. 2.3 Use dogs to secure and align logs to saw and minimise damage. 2.4 Clear logs of foreign matter and feed into saw at feed rate in line with organisational safety procedures. 2.5 Check break down process regularly and adjust to maintain desired quality and output. 2.6 Reject and dispose of sub-standard material in line with environmental protection practices. 2.7 Direct broken down logs to designated area in line with work order. 2.8 Identify routine processing problems and resolve or report to appropriate personnel.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with environmental protection practices. 3.5 Complete basic non-specialist maintenance for equipment. 3.6 Keep machine clear of dust and debris in line with organisational safety procedures. 3.7 Record and report equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count number of logs to be sawn • complete routine calculations to determine correct angles for aligning logs to equipment • calculate the feed rate to optimise quality and quantity of production output.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders

© Commonwealth of Australia, 2025 Skills Insight

Reading skills to:	• interpret: • workplace health and safety and other organisational procedures • work orders • manufacturers' instructions and maintenance recommendations.
Writing skills to:	• complete accurate basic records for equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and dispose of sub-standard materials • identify processing problems and faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective equipment for breaking down logs • use saws to efficiently and safely break down logs • accurately identify and replace blunt or damaged saw blades.

Range of Conditions

Not Applicable

Assessment Requirements for FWPSAW3203 Break down logs

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3203B Break down logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to breaking down logs
- break down logs to produce sections in line with a work order and within prescribed organisational specifications
- complete these types of basic non-specialist maintenance:
  - cleaning the machine of wood chips and sawdust
  - replacing blunt saw blades
  - inspecting machine parts for wear or damage, including guards
  - greasing and lubricating moving parts
  - checking the operation of emergency stop buttons and lock out systems.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of equipment used to break down logs:
  - carriages:
    - standard three headed dog carriages
    - flat top carriages with head rigs
  - saws:
    - circular saws

© Commonwealth of Australia, 2025 Skills Insight

    - bench saws
    - overhead frame saws or band saws
  - mechanical feed
  - conveyor system to transport logs to and from the sawing area
  - maintenance tools and equipment for saws
- typical work flow processes for breaking down logs
- typical flow of log supply in and out of the sawing area
- range of cutting patterns used on logs to achieve maximum output of flitches and cants
- range of feed rates and how they affect production output and finished quality of flitches and cants
- characterstics of timber
- breakdown processes, feed rates and finish
- methods for assessing saw blade condition
- storage systems and labelling
- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
- typical log defects and how they affect ability to produce quality flitches and cants:
  - warp
  - wane
  - curvature
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- organisational policies and procedures specific to breaking down logs:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing problems and equipment faults.

Assessment Conditions

The following resources must be made available:

- one or more of the following carriages:
  - standard three headed dog carriages
  - flat top carriages with head rigs
- one or more of the following saws:
  - circular saws

© Commonwealth of Australia, 2025 Skills Insight

  - bench saws
  - overhead frame saws or band saws
- mechanical feed
- conveyor system to transport logs to and from the sawing area
- maintenance tools and equipment for saws
- consumable saw blades
- personal protective equipment suitable for rounding logs
- a selection of logs
- manufacturers':
  - instructions for equipment use
  - recommendations for repairing and maintaining equipment
- work order with specific instructions for breaking down logs and despatch to downstream processing
- template documents for recording equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for breaking down logs.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3205 Dry hardwood

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3205B Dry Hardwood, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to dry hardwood using a kiln.

The unit applies to those working in a forest products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Wood Panel and Board Production

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for drying	1.1 Review and check work order. 1.2 Locate required type and quantity of hardwood that has been through the conversion process and requires drying. 1.3 Select equipment and check for operational effectiveness. 1.4 Select oven sections and sample boards and cut boards following standard operating procedures.

© Commonwealth of Australia, 2025 Skills Insight

	1.5 Plan drying process.
2. Load kiln and control kiln conditions	2.1 Visually assess racks to be dried for consistent drying characteristics. 2.2 Measure and check moisture content of hardwood for drying. 2.3 Conduct pre start-up checks according to site requirements. 2.4 Follow emergency shutdown procedures when alarm is triggered. 2.5 Load kiln with racks selected for processing. 2.6 Weigh sample boards during drying and check results against standard operating procedures. 2.7 Position baffles and blankets. 2.8 Check and adjust kiln control settings are to meet drying schedules.
3. Unload kiln and process hardwood	3.1 Identify end point of drying and make kiln safe for entry. 3.2 Check hardwood for compliance with target moisture content 3.3 Follow site procedures for removal of moisture probes and baffles. 3.4 Monitor kiln charge and recondition or conduct high humidity treatment as appropriate 3.5 Move and store hardwood for processing. 3.6 Identify sub-standard material and recommend lower value product uses. 3.7 Clean work area according to site requirements. 3.8 Record drying process and report any equipment faults.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• measure temperatures, humidities and calculate moisture content.
Reading skills to:	• review manufacturer’s instructions for drying equipment.
Writing skills to:	• complete accurate basic records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and kiln drying work using work order to guide activities.
Problem-solving skills	• monitor kiln operation and respond to deficiencies by adjusting

© Commonwealth of Australia, 2025 Skills Insight

to:	drying conditions • respond to emergency situations and swiftly shut down kiln • identify and dispose of sub-standard materials • recognise faulty equipment and resolve by reporting or rectifying.

Assessment Requirements for FWPSAW3205 Dry hardwood

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3205B Dry Hardwood, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures for drying hardwood – work orders will include information regarding species colour, type, width, length, thickness, quantity, instructions for the environmental monitoring of work and procedures, environmental care requirements relevant to the work.
- use moisture probes and correctly calculate moisture content
- safely and efficiently use and maintain kilns and equipment for drying hardwood
- dry hardwood to specified end moisture content in readiness for storage and/or processing
- safely move and store dried hardwood according to site procedures
- accurately record and report on drying processes.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection requirements and organizational procedures for the safe disposal or recycling of waste material and the cleaning of plant, tools and equipment
- organisational and site policies and procedures for drying hardwood
- drying techniques
- kiln operations
- fire safety procedures
- visual assessment of materials for:

© Commonwealth of Australia, 2025 Skills Insight

  - stability
  - spacing of strips
  - support to minimise warping
- characteristics of hardwood which must include one or more of the following:
  - native timber species
  - imported timber species
  - dressed timber
  - in-the-rough timber
  - preservative treated timber
- methods for the measurement of moisture content and Equilibrium Moisture Content (EMC)
- storage systems and labeling processes
- baffles and blankets and their applications
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- kilns or vacuum dryers
- hardwood for drying
- personal protective equipment required for drying hardwood
- organisational policies and procedures for drying hardwood.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3206 Dry softwood

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3206B Dry softwood, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare timber racks for processing, load and unload conventional and high temperature kilns and to monitor and control kiln conditions to dry and recondition softwood. Work is completed in a forest products factory setting.

The unit applies to those who dry softwood using a kiln in a forest products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Wood Panel and Board Production

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for drying	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and use in line with manufacturer's recommendations. 1.3 Identify and obtain type and quantity of softwood to be dried from

© Commonwealth of Australia, 2025 Skills Insight

	conversion process. 1.4 Plan drying process in line with work order.
2. Load and control kiln conditions	2.1 Assess racks visually to ensure consistent drying requirements for timber and adjust as required. 2.2 Measure moisture content and routinely compare with anticipated levels in line with organisational procedures. 2.3 Complete pre start-up equipment checks to ensure operational effectiveness. 2.4 Load kiln with racks selected for processing and report to appropriate personnel. 2.5 Position baffles and blankets in line with manufacturer's instructions. 2.6 Adjust and check kiln control settings regularly in line with drying schedules and organisational safety procedures. 2.7 Follow emergency shutdown procedures when alarm is triggered.
3. Unload kiln and process softwood	3.1 Identify drying end point and make kiln safe for entry. 3.2 Open kiln and identify moisture content of processed softwood. 3.3 Remove moisture probes and baffles from timber. 3.4 Direct and move softwood to storage or processing operations in line with organisational procedures. 3.5 Identify sub-standard material and re-process or direct for lower value usage. 3.6 Keep work area clean and clear of debris in line with organisational safety procedures. 3.7 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine measurements of timber moisture levels • read basic kiln temperature settings; set and adjust levels according to drying requirements.
Oral communication	• ask questions and actively listen to clarify contents of work orders.

© Commonwealth of Australia, 2025 Skills Insight

skills to:	

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and recommendations.

Writing skills to:	• complete accurate basic records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and kiln drying work using work order to guide activities.
Problem-solving skills to:	• monitor kiln operation and respond to deficiencies by adjusting drying conditions • respond to emergency situations and swiftly shut down kiln • identify sub-standard material and re-process or direct for lower value usage • recognise faulty equipment and resolve by reporting or rectifying.

Assessment Requirements for FWPSAW3206 Dry softwood

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3206B Dry softwood, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- operate a kiln to dry one or more different types of softwood as listed below in line with an individual work order for each job:
  - imported timber species
  - dressed timber
  - in-the-rough timber
  - preservative treated timber.
- visually assess racks and make necessary adjustments for:
  - stability
  - spacing of strips
  - support to minimise warping.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - disposing of, recycling and reusing timber
- purpose of kiln drying softwood and meaning of equilibrium moisture content (EMC)
- characteristics of softwood and effects of the drying process

© Commonwealth of Australia, 2025 Skills Insight

- issues considered when visually assessing racks to ensure consistent drying requirements for timber:
  - stability
  - spacing of strips
  - support to minimise warping
- methods used to measure moisture content of timber before and after drying process
- typical work flow processes used to dry timber using kilns
- typical flow of timber board supply in and out of the drying area
- purpose, features and operation of equipment used for drying softwood:
  - different types of drying kilns:
    - conventional
    - high temperature
    - very high temperature
    - extremely high temperature
    - vaccum dryer
  - different types of lifting equipment:
    - fork lifts
    - slings
    - trolley jacks
    - gantry cranes
    - loaders
  - baffles and blankets
  - moisture probes
- organisational procedures specific to drying softwood:
  - workplace health and safety with particular emphasis use of personal protective and other equipment
  - kiln operation
  - communication reporting lines
  - recording and reporting processing and equipment faults.

Assessment Conditions

The following resources must be made available:

- one or more of the following types of drying kiln:
  - conventional
  - high temperature
  - very high temperature
  - extremely high temperature
  - vacuum dryer
- heat source which must be either steam, hot oil or gas

© Commonwealth of Australia, 2025 Skills Insight

- one or more of the following types of lifting equipment:
  - fork lifts
  - slings
  - trolley jacks
  - gantry cranes
  - loaders
- baffles and blankets
- moisture probes
- a diverse, comprehensive and commercial product range of softwood timber
- personal protective equipment suitable for kiln operation
- manufacturers' instructions and recommendations for use of equipment
- work order with specific instructions for the types and quantity of timber to be dried
- template documents for recording processing and equipment faults
- organisational procedures for drying softwood.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPSAW3207 Sharpen band saws

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3207B Sharpen band saws, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess the condition of band saw blades, set up the sharpening machine and sharpen saw blades with a grinder. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer, Sawyer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for sharpening	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.3 Plan sharpening process in line with work order.

© Commonwealth of Australia, 2025 Skills Insight

2. Assess condition and set up sharpening equipment	2.1 Follow organisational safety procedures thoughout all maintenance and repair processes. 2.2 Remove band saw blades from designated machinery. 2.3 Assess cutting performance of blade and determine need to replace or sharpen. 2.4 Assess condition of prior repairs and blade teeth, set and tension. 2.5 Select sharpening machine and change or dress grinding wheel. 2.6 Adjust machine settings to suit required blade geometry and set blade to manufacturer's recommendations. 2.7 Align blade tooth with machine feed mechanism.
3. Sharpen band saw blade	3.1 Conduct tests to ensure teeth and machine feed mechanism are aligned. 3.2 Establish depth of machine cut and in-feed from blade condition. 3.3 Monitor machine sharpening process to ensure correct grinding conditions and geometry. 3.4 Finalise process and check blade for sharpness, correct cutting angle and profile. 3.5 Identify damaged and exhausted saw blades and and dispose of these in line with environmental protection practices. 3.6 Package band saw for protection during return to service. 3.7 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	

Numeracy skills to:	• calculate requirements and:
	  • operate machine at correct speed, pitch and angle
	  • sharpen blades to correct set, tension and profile.

Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety procedures
	  • work orders
	  • manufacturers’ maintenance recommendations.

© Commonwealth of Australia, 2025 Skills Insight

Writing skills to:	• complete accurate basic records of processing and equipment faults..
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• assess blade condition and rectify faults through correct sharpening process • identify and dispose of exhausted and damaged blades • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for sharpening band saw blades • efficiently and safely sharpen band saw blades.

Range of Conditions

Assessment Requirements for FWPSAW3207 Sharpen band saws

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3207B Sharpen band saws, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to sharpening band saws
- sharpen band saws in line with a work order and within prescribed organisational requirements
- assess cutting performance as follows:
  - saw performance balanced against achievement of required production time
  - degree of deviation in the range of sawn products
- assess the condition of blade teeth for:
  - sharpness of each tooth
  - damage to teeth
  - pitch
  - number of teeth per metre
- operate the abrasive wheel at appropriate speed to remove material without affecting steel characteristics
- produce a quality of surface texture left by the abrasive wheel along the entire profile and at the intersection of all cutting edge angles.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- purpose, features and operation of band saws for which blades are sharpened
- features and names of different parts of band saw blades
- purpose, features and operation of tools and equipment used to sharpen band saw blades:
  - sharpening machines
  - grinding wheels
- importance of sharpening and setting teeth and tension to match requirements for:
  - characteristics of various materials sawn
  - speed of the sawing process
  - direction of the sawing process
  - cutting angle for sawing
  - saw blade specifications
- methods for:
  - removing saw blades from band saws
  - assessing saw blade condition
  - sharpening blades to specified requirements
  - setting teeth to a specified profile
  - setting tension of blades to specified requirements
  - aligning saw teeth
- tooth pitch and tooth angles at which blades are sharpened (blade geometry)
- range of speeds at which abrasive wheels can be operated without damaging blades
- organisational policies and procedures specific to sharpening band saw blades:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing materials

Assessment Conditions

The following resources must be made available:

- tools and equipment used to sharpen band saw blades:
  - sharpening machines
  - grinding wheels
- band saws for which blades are to be sharpened
- one or more of the following types of band saw blades to be sharpened:
  - wide band saw blades used for processing timber products
  - narrow band saw blades used for cutting both ferrous and non-ferrous materials

© Commonwealth of Australia, 2025 Skills Insight

- personal protective equipment suitable for sharpening band saw blades
- manufacturers' instructions for use, repair and maintenance of equipment
- work order for repair and maintenance activities with specific instructions for sharpening band saw blades in specified equipment
- template documents for recording processing and equipment faults
- organisational procedures for sharpening band saw blades.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3208 Sharpen circular saws

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3208B Sharpen circular saws, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess circular saw blade condition, set up for sharpening and sharpen saw blades with a manually controlled grinder. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer, Sawyer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for sharpening	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.3 Plan sharpening process in line with work order and site procedures.

© Commonwealth of Australia, 2025 Skills Insight

2. Assess condition and set up sharpening equipment	2.1 Follow organisational safety procedures thoughout all maintenance and repair processes. 2.2 Assess cutting performance of blade and determine need to replace or sharpen. 2.3 Assess prior repairs and condition of teeth, set, and straightness of blade. 2.4 Select sharpening machine with suitable wheel diameter and thickness and change, profile or grind wheel in line with manufacturer's instructions. 2.5 Adjust machine settings to suit required tooth profile geometry, blade set or kerf, blade thickness and diameter to manufacturer's recommendations. 2.6 Set up saw in grinder with appropriate attachments for tooth pitch.
3. Sharpen circular saw blade	3.1 Grind teeth face and gullet to achieve required sharpness and surface finish. 3.2 Maintain tooth profile to industry standards. 3.3 Keep variations in tooth height within industry or manufacturer tolerances for concentricity. 3.4 Control wheel and saw hand feeds to minimise wear, avoid burn marks and maintain smooth surface finish. 3.5 Identify damaged and exhausted circular saw blades and dispose of these in line with organisational procedures and environmental protection practices. 3.6 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• estimate speed at which the abrasive wheel can remove material without affecting steel characteristics when sharpening • measure cutting performance • complete precise calculations to machine teeth to correct • angle • pitch • height

© Commonwealth of Australia, 2025 Skills Insight

	• depth.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety procedures • work orders • manufacturer's instructions and maintenance recommendations.
Writing skills to:	• complete basic accurate records of processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• assess blade condition and rectify faults through correct sharpening process • identify and dispose of exhausted and damaged blades • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for sharpening circular saw blades • efficiently and safely sharpen circular saw blades.

FWPSAW3209 Align sawing production systems

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3209B Align sawing production systems, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to align canter rings and chipper heads for wood chipping equipment, which are used for both primary and secondary processing of solid wood products. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer, Sawyer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for aligning	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.3 Plan alignment process in line with work order.

© Commonwealth of Australia, 2025 Skills Insight

2. Conduct shut down	2.1 Follow organisational safety procedures thoughout all maintenance and repair processes. 2.2 Remove, replace and temporarily store mechanical and safety components to provide access to alignment parts. 2.3 Remove, replace and temporarily locate guides. 2.4 Keep work area clear of dust, off-cuts and debris in line with organisational safety procedures.
3. Align rings and heads	3.1 Access and interpret equipment history records, and manufacturer's recommendations. 3.2 Remove canter rings and chipper heads to be aligned. 3.3 Assess performance of canter rings and chipper heads and re-align, according to manufacturer's instructions. 3.4 Check saw for alignment and free operation. 3.5 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete precise calculations to align various parts of sawing systems according to specified settings.
Oral communication skills to:	• ask open and close probe questions and actively listen to clarify contents of works orders.
Reading skills to:	• interpret detailed and familiar documents: • workplace health and safety and organisational procedures • work orders • manufacturers’ instructions and maintenance recommendations.
Writing skills to:	• complete basic accurate records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• assess performance of canter rings and chipper heads and complete necessary re-alignment • recognise faulty equipment and resolve by reporting or rectifying.

© Commonwealth of Australia, 2025 Skills Insight

Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for aligning canter rings and chipper heads • efficiently and safely align canter rings and chipper heads.

Assessment Requirements for FWPSAW3209 Align sawing production systems

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3209B Align sawing production systems, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to aligning sawing production processes
- align these components of sawing production systems in line with an idividual work order for each job:
  - sawing machines
  - chipper heads
  - canters rings
  - feed systems including line bars and carriages
- remove and replace canter rings and chipper heads from equipment
- use an individual log of previous alignment measurements, settings, adjustments and timelines
- assess sawing machine and system performance against recovery percentages, product sizing and/or standard deviation and align components for improvement.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of:
  - sawing machines

© Commonwealth of Australia, 2025 Skills Insight

  - chipper heads
  - canters rings
  - feed systems including line bars and carriages
- purpose, features and operation of tools and equipment used to align sawing production systems
- importance of aligning various parts of sawing systems:
  - reducing sawing deviation, vibration, and downtime
  - increasing production rates
  - improving quality of sawn finish
- methods for:
  - assessing sawing machine and system performance against recovery percentages, product sizing and/or standard deviation
  - distmantling mechanical components of sawing machines
  - assessing performance of canter rings and chipper heads
  - aligning machine components to specified requirements
  - re-assembling sawing machines and testing operational effectiveness
- organisational policies and procedures specific to aligning sawing production systems:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing materials
  -

Assessment Conditions

The following resources must be made available:

- tools and equipment used to align sawing production systems:
  - tools for removing and adjusting mechanical parts
  - jigs
  - precision measuring equipment
  - laser equipment
  - surveying instruments
  - portable electrical lighting
  - feeler gauges
  - engineers rules
  - vernier callipers

© Commonwealth of Australia, 2025 Skills Insight

  - micrometers
  - plumb lines
  - piano wire or string lines
  - pointer
  - markers
  - portable computers that re-calibrate machine settings
- wood chipping equipment with canter rings and chipper heads
- personal protective equipment suitable for aligning sawing production systems
- manufacturers' instructions for use, repair and maintenance of equipment
- work order for repair and maintenance activities with specific instructions for aligning canter rings and chipper heads in specified equipment
- equipment history records
- template documents for recording processing and equipment faults
- organisational policies and procedures for aligning sawing production systems.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3210 File and set saws

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to position blades in jigs or vices, produce bevels along the back clearance angles of teeth, check blade clearance requirements and set teeth to site requirements. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer, Sawyer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for filing and saw setting	1.1 Review work order and, where required, check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with

© Commonwealth of Australia, 2025 Skills Insight

	manufacturer's recommendations. 1.3 Plan setting process in line with work order. 1.4 Follow organisational safety procedures throughout all maintenance and repair processes.
2. Set saw	2.1 Set up saw in selected jig to enable setting work. 2.2 Check kerf and finish requirements to suit machine horsepower, saw type and cutting conditions. 2.3 Examine individual teeth to check amount of setting required. 2.4 Maintain welding condition, saw temper and consistency of set between alternate teeth. 2.5 Measure and assess teeth for correct setting. 2.6 Bevel teeth and assess bevel length. 2.7 Apply set to teeth and allow for estimated spring back. 2.8 Check set to teeth using gauges in line with organisational procedures. 2.9 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete precise calculations to file and set saws to correct angle • estimate springback.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety procedures
	  • work orders
	  • manufacturer’s maintenance recommendations.

Writing skills to:	• complete basic accurate records of processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence stages of preparation and repair work using work order to guide activities.

© Commonwealth of Australia, 2025 Skills Insight

Problem-solving skills to:	• assess condition of saw teeth and complete necessary adjustments to set • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for filing and setting saws • efficiently and safely file and set saws.

Assessment Requirements for FWPSAW3210 File and set saws

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to filing and setting saws
- bevelling teeth and assessing bevel lengths, widths, angles and surface texture, in line with standard operating procedures and site production requirements
- removing and replacing saws from equipment
- setting teeth and assessing conditions in line with standard operating procedures
- complete these assessments on saw blade condition:
  - cracks and movement in existing welding repairs
  - altered temper and hardness of blade from excessive heat during cutting
  - weaknesses or damage caused through stress of bending teeth.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of saws for which blades are filed and set:
  - hand saws
  - band saws
  - circular saws
  - gang saws
- features and names of different parts of saw blades
- purpose, features and operation of tools and equipment used to file and set saw blades:
  - jigs
  - vices

© Commonwealth of Australia, 2025 Skills Insight

    - setting instruments; levers and gauges
    - automatic or hand-held grinders
    - bevel files
- importance of setting teeth to match requirements for:
    - characteristics of various materials sawn
    - speed of the sawing process
    - direction of the sawing process
    - cutting angle for sawing
    - saw blade specifications
- methods for:
    - removing saw blades from saws
    - assessing saw blade condition
    - setting teeth to a specified profile
    - grinding and bevelling teeth to required shape, tolerance and pitch
    - compensating for the effects of spring back
- tooth pitch and tooth angles at which blades are bevelled (blade geometry)
- characteristics of metal used in saw blades; causes and consequences of spring back
- organisational policies and procedures specific to filing and setting saw blades:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
    - reducing water and energy use
    - cleaning plant, tools and equipment
    - disposing of, recycling and reusing materials.

FWPSAW3211 Recondition guides

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3211B Recondition guides, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to review, adjust, grind or machine and replace saw guides in band saws and gang saws assuring smooth and straight running. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for reconditioning	1.1 Review work order and where required check with appropriate personnel. 1.2 Remove guides from machinery. 1.3 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.4 Plan reconditioning process in line with work order.

© Commonwealth of Australia, 2025 Skills Insight

2. Machine guides	2.1 Follow organisational safety procedures thoughout all maintenance and repair processes. 2.2 Review condition of saw guides to assess wear. 2.3 Select attachments for holding guides flat while grinding or machining. 2.4 Set up machining equipment to conduct reconditioning. 2.5 Examine and dress or sharpen tooling in line with safety procedures. 2.6 Remove scored material from guide by grinding or machining. 2.7 Select grinding or machining speeds and feeds to avoid burn marks on guides. 2.8 Recondition guides to meet geometric requirements of sawing equipment. 2.9 Segregate and dispose of unserviceable guides in line with environmental protection practices.
3. Remove, adjust and replace guides	3.1 Remove worn guides from carrier without damaging component. 3.2 Select replacement guides according to manufacturer's instructions. 3.3 Drill fastening holes and clean up surfaces around drill holes. 3.4 Insert new guides in carrier at correct position and required tolerance without damaging component. 3.5 Adjust guides to clearance in line with manufacturer's instructions. 3.6 Check clearance and guide security before starting saw. 3.7 Identify and report low stock and shortages of new guides in line with organisational procedures. 3.8 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• estimate required grinding wheel speed • complete precise calculations to • grind and sharpen guides to correct pitch and angle

© Commonwealth of Australia, 2025 Skills Insight

	• determine required tolerance for positioning guides.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret documents: • workplace health and safety and other organisational procedures • work orders • manufacturers' instructions and maintenance recommendations.
Writing skills to:	• complete accurate basic records for: • processing and equipment faults • stock requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• assess guide condition and rectify faults through correct reconditioning process • identify and dispose of unserviceable guides • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for reconditioning guides • efficiently and safely recondition guides.

Assessment Requirements for FWPSAW3211 Recondition guides

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3211B Recondition guides, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to reconditioning guides
- recondition guides in line with the work order and within prescribed organisational requirements
- remove and replace saw guides from equipment
- assess the condition of guides in line with standard operating procedures

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of band saws and gang saws for which guides are reconditioned
- features and names of different parts of guides and carriers
- purpose, features and operation of tools and equipment used to recondition guides:
  - grinding equipment
  - metal lathes
  - milling machines
- importance of reconditioning worn guides to the specified profile for continued straight and smooth running of saw blades
- methods for:
  - removing guides from saw blade carriers

© Commonwealth of Australia, 2025 Skills Insight

  - assessing condition of guides
  - grinding guide surface to restore it to a smooth flat surface using grinding equipment
  - machinging guide surface to restore it to a smooth flat surface using metal lathes or milling machines
  - re-inserting guides to carriers within allowable tolerances and adjusting clearances
- pitch and angles at which guides are ground or are sharpened (geometry)
- range of speeds at which grinders and machines can be operated without damaging guides
- organisational policies and procedures specific to reconditioning guides:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing materials

Assessment Conditions

The following resources must be made available:

- tools and equipment used to recondition guides:
- grinding equipment
- metal lathes
- milling machines
- band saws or gang saws with guides to be reconditioned
- replacement guides
- personal protective equipment suitable for reconditioning guides
- manufacturers' instructions for use, repair and maintenance of equipment
- work order for repair and maintenance activities with specific instructions for reconditioning guides in specified equipment
- template documents for recording processing and equipment faults
- organisational policies and procedures for reconditioning guides.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and

© Commonwealth of Australia, 2025 Skills Insight

- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3212 Sharpen tipped circular saws

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to assess the tipped circular saw blade condition, set up for sharpening and sharpen saw blades with an automated grinder. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for sharpening	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with

© Commonwealth of Australia, 2025 Skills Insight

	manufacturer's recommendations. 1.3 Plan sharpening process in line with work order..
2. Assess condition and set up sharpening equipment	2.1 Follow organisational safety procedures throughout all maintenance and repair processes. 2.2 Remove tipped circular saw blades or fit appropriate equipment to be sharpened in machinery. 2.3 Assess cutting performance of blade and determine need to replace or sharpen. 2.4 Assess condition of prior repairs, teeth and straightness of blade. 2.5 Select sharpening machine with suitable wheel diameter and change or dress grinding wheel. 2.6 Adjust machine settings to suit required blade geometry and set blade to manufacturer's recommendations. 2.7 Set up saw while in machine to ensure tooth profile and geometry are maintained.
3. Sharpen tipped circular saw blade	3.1 Prepare grinding coolant system in line with manufacturer’s instructions. 3.2 Select saw and grinding wheel angles, speeds and feeds to suit. 3.3 Grind teeth face and gullet to achieve required finish, maintaining original profile and pitch, according to industry standards. 3.4 Ensure variations in tooth height and depth of cut are within industry tolerances for concentricity. 3.5 Set wheel feeds and saw to minimise wear and avoid burn marks. 3.6 Dispose of unserviceable tipped circular saw blades in line with environmental protection practices. 3.7 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	

Numeracy skills to:	• complete precise calculations to machine teeth to correct:
	  • angle
	  • pitch
	  • height

© Commonwealth of Australia, 2025 Skills Insight

	• depth.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify content of work orders.

Reading skills to:	• interpret documents:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete basic accurate records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• assess blade condition and rectify faults through correct sharpening process • identify and dispose of unserviceable blades • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for sharpening tipped circular saw blades • efficiently and safely sharpen tipped circular saw blades.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to sharpening tipped circular saws
- sharpen tipped circular saws in line with the work order and within prescribed organisational requirements
- remove and replace tipped circular saw blades from equipment
- assess the condition of blade teeth for:
  - sharpness of each tooth
  - damage to teeth
  - pitch
  - number of teeth per metre.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of circular saws for which tipped blades are sharpened:
  - circular saws
  - hot saws
  - cold saws
- features and names of different parts of circular saw blades
- purpose, features and operation of tools and equipment used to sharpen tipped circular saw blades:
  - manually or automatically adjustable grinding machines

© Commonwealth of Australia, 2025 Skills Insight

    - abrasive wheels
- importance of sharpening and setting teeth and tension to match requirements for:
    - characteristics of various materials sawn
    - speed of the sawing process
    - direction of the sawing process
    - cutting angle for sawing
    - saw blade specifications
- methods for:
    - removing saw blades from circular saws
    - assessing saw blade condition
    - sharpening blades to specified requirements
    - setting teeth to a specified profile
    - setting concentricity of teeth
- tooth pitch and tooth angles at which blades are sharpened (blade geometry)
- range of speeds at which abrasive wheels can be operated without damaging blades
- organisational policies and procedures specific to sharpening tipped circular saw blades:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
    - reducing water and energy use
    - cleaning plant, tools and equipment
    - disposing of, recycling and reusing materials

Assessment Conditions

The following resources must be made available:

- tools and equipment used to sharpen tipped circular saw blades:
    - manually or automatically adjustable grinding machines
    - abrasive wheels
    - measuring tools equipment
- circular saws for which blades are to be sharpened:
    - circular saws
    - hot saws
    - cold saws
- tipped circular saw blades for sharpening
- replacement tips:
    - tungsten carbide

FWPSAW3213 Level and tension circular saws

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to level and tension circular saw blades and includes inspecting saws, repairing defects such as dished blades, damaged teeth and cracks, levelling ridges and lumps, and tensioning the saw. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for repair	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with

© Commonwealth of Australia, 2025 Skills Insight

	manufacturer's recommendations. 1.3 Plan levelling and tensioning process in line with work order.
2. Assess saw condition	2.1 Follow organisational safety procedures throughout all maintenance and repair processes. 2.2 Handle saws to avoid damaging teeth. 2.3 Clean foreign material on saw surfaces for inspection. 2.4 Inspect saw to assess condition of teeth and saw plate. 2.5 Declare saw unserviceable where hazardous defects are found. 2.6 Segregate and dispose of unserviceable saws in line with organisational procedures and environmental protection practices.
3. Level saw blades	3.1 Assess and match radial and circular ridges or lumps on both sides of blade. 3.2 Use gauges and straight edges in radial and circular directions and monitor for accuracy. 3.3 Remove ridges or lumps progressively through levelling and use stretcher or levelling rolls to flatten. 3.4 Control hammering and rolling patterns to reduce internal blade stresses and avoid spring back and re-occurring defects.
4. Tension saw blades	4.1 Assess consistency of required blade curvature with straight edge or tension gauge. 4.2 Tension and check blade to ensure tension amount, distribution, placement and level are in line with manufacturer’s recommendations. 4.3 Complete repairs to damaged saw blades and dispose of irreparable saw blades line with and environmental protection practices. 4.4 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• use gauges and straight edges to measure results of hammering and/or rolling the blade • complete precise calculations to correctly level and tension blades.

© Commonwealth of Australia, 2025 Skills Insight

Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret documents:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' maintenance recommendations.

Writing skills to:	• complete accurate basic records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• assess saw condition and complete necessary levelling and tensioning adjustments • identify and dispose of unserviceable saws • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for levelling and tensioning circular saws • efficiently and safely level and tension circular saws.

FWPSAW3214 Join band saw blades

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to assess the condition of band saw blades, to prepare and weld meeting ends and to finish the welded surface ready for operation. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for joining	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with

© Commonwealth of Australia, 2025 Skills Insight

	manufacturer's recommendations. 1.3 Remove band saw blades from machinery. 1.4 Plan joining process in line with work order.
2. Join or repair band saw blade	2.1 Follow organisational safety procedures throughout all maintenance and repair processes. 2.2 Obtain saw blank and cut to length or cut existing blade at weld defect. 2.3 Trim ends to obtain correct back alignment and pitch and/or shape to assist metal penetration. 2.4 Set up ends to specified tolerances in welder. 2.5 Apply weld to ensure metal penetrates through blade thickness and protect from accidental contact. 2.6 Grind surplus weld material from blade without burning or annealing metal. 2.7 Finish blade to eliminate bumps in blade surface. 2.8 Identify damaged blades or those with or sub-standard joins and dispose of these in line with environmental protection practices. 2.9 Package band saw for protection during return to service. 2.10 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	

Learning skills to:	• complete precise calculations to:
	  • cut blanks to correct length
	  • determine required tolerances.

Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work order.

Reading skills to:	• interpret of documents:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers’ maintenance recommendations.

Writing skills to:	• complete accurate basic records for processing and equipment

FWPSAW3215 Screen wood chips

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3215B Screen wood chips, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to screen wood chips for species, size and defects using mechanical screen processes. Work is completed in a forest products factory setting.

The unit applies to Sawmill Worker, Production Worker.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for screening	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and use in line with manufacturer's recommendations. 1.3 Identify and obtain type and quantity of wood chips to be screened from production process.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan screening process in line with work order.
2. Screen wood chips	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Start machines and feed systems and adjust screen to wood chip size. 2.4 Rake and clear coarse and fine screens to remove oversized material in line with organisational procedures. 2.5 Sample and analyse screening regularly to ensure wood chips conform to quality specifications and organisational requirements. 2.6 Reject and dispose of sub-standard material in line with environmental protection practices. 2.7 Monitor screening continually for matter which may cause contamination. 2.8 Monitor conveyor operations and clear jams to ensure free flow of output material to transfer systems. 2.9 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amounts. • read basic numerical machine settings and choose according to chip size • visually check sizes of wood chips.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and recommendations.

Writing skills to:	• complete accurate basic records for processing and equipment faults.

© Commonwealth of Australia, 2025 Skills Insight

Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and dispose of sub-standard materials • identify machine operations and take action to clear contaminant material and jams • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective equipment used for chip production • efficiently and safely operate and monitor mechanical wood chip machine.

Assessment Requirements for FWPSAW3215 Screen wood chips

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3215B Screen wood chips, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to screening wood chips
- screen wood chips in line with a work order and within prescribed organisational requirements
- direct wood chips to the transfer process in line with organisational requirements and OHS regulations
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of equipment used for screening wood chips:
  - conveyors, chutes or track systems that move processed wood chips from chipping machines to the screening system
  - different types of wood chip screening systems:
    - mechanical
    - automated
    - digitised
    - computer assisted
- range of characteristics used to screen and sort wood chips:
  - species

© Commonwealth of Australia, 2025 Skills Insight

  - size
  - moisture content
  - contaminants
- typical contaminants found in wood chips, and how they affect ability to produce quality products:
  - bark
  - charcoal
  - rock and metal
- industry and organisational specific quality specifications for wood chips
- stages of the wood chip production, screening and transfer process
- environmental protection practices for forest products factory settings:
  - cleaning of plant, tools and equipment
  - reducing water and energy use
  - disposing of, recycling and reusing timber
- typical flow of material supply in and out of the wood chip screening area
- organisational policies and procedures specific to screening woodchips:
  - workplace health and safety with particular emphasis use of personal protective and other equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults.
  -

Assessment Conditions

The following resources must be made available:

- conveyors, chutes or track systems that move processed wood chips from chipping machines to the screening system
- one or more of the following types of wood chip screening systems:
  - mechanical
  - automated
  - digitised
  - computer assisted
- a selection of wood chips
- personal protective equipment suitable for screening wood chips
- manufacturers' instructions and recommendations for use of equipment
- work order with specific instructions for screening of chips and the chip size
- documents, spreadsheets and commonly used proformas for recording processing and equipment faults
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for screening woodchips.

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPSAW3216 Transfer wood chips

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to operate the transfer process and transfer wood chips to stockpile or transport systems. Work is completed in a forest products factory setting.

The unit applies to Sawmill Worker, Production Worker, Machine Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to transfer wood chips	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness in line with manufacturer's recommendations.

© Commonwealth of Australia, 2025 Skills Insight

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Plan transferral process in line with work order. 1.4 Inspect deposit point for access and cleanliness.
2. Set up and use equipment for wood chip transfer	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Adjust machines and feed systems for wood chip transfer or transport. 2.4 Identify and obtain type and quantity of wood chips to be transferred. 2.5 Monitor conveyor operations and clear jams to ensure free flow of output material to transfer systems. 2.6 Use a chip slinger or air blower to transfer wood chips.
3. Complete wood chip transfer	3.1 Direct slinger or blower to enable filling or distribution over required area. 3.2 Check filling or distribution levels and stop or top up in line with work order. 3.3 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy skills to:	• Identify quantities of wood chip required within work orders and measure volume.
Oral communication skills to:	• Ask open and closed probe questions and actively listen to clarify contents of work orders.
Reading skills to:	• Interpret: • Workplace health and safety and other organisational

© Commonwealth of Australia, 2025 Skills Insight

Skill	Description
	procedures • Work orders • Manufacturers' instructions and maintenance recommendations.
Writing skills to:	• Complete accurate basic records for processing and equipment faults.
Planning and organising skills to:	• Efficiently and logically sequence the stages of preparation and transfer Work using work order to guide activities.
Problem-solving skills to:	• Monitor machine operations and take action to clear jams • Recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• Select and use appropriate personal protective equipment used for Transferring wood chips • Efficiently and safely operate and monitor slingers, blowers and conveyors.

FWPSAW3217 Hard face saw teeth

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to set the hard face machine and hard face the teeth of band, circular and gang saw blades. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare to hard face saw teeth	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate maintenance and personal protective equipment and check for operational effectiveness in line with manufacturer's

© Commonwealth of Australia, 2025 Skills Insight

	recommendations. 1.3 Plan hard facing process in line with work order.
2. Hard face saw teeth	2.1 Follow organisational safety procedures throughout all machining processes. 2.2 Select material stock and set up in machine following manufacturer's recommendations. 2.3 Make adjustments to machine variables to suit saw and material. 2.4 Align individual teeth to machine tip to ensure hard facing is applied to cutting surfaces. 2.5 Operate and adjust machine for variables to ensure material cohesion. 2.6 Check completed facing against specifications. 2.7 Identify routine processing and equipment faults and resolve or report to appropriate personnel

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify and adjust machine settings for correct temperature, pressure and weld time.
Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret documents:
	  • workplace health and safety procedures
	  • work orders
	  • manufacturers’ instructions and maintenance recommendations.

Writing skills to:	• complete basic accurate records of processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment to hard face saw teeth

Assessment Requirements for FWPSAW3217 Hard face saw teeth

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to hardfacing saw teeth
- hard face saw teeth in line with the work order and within prescribed organisational requirements
- remove and replace saw from equipment.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of saws for which teeth blades are hard faced:
  - band saws
  - circular saws
  - gang saws
- features and names of different parts of saw blades
- purpose, features and operation of tools and equipment used to hard face saw teeth:
  - resistance welding equipment
  - plasma transfer equipment
- methods for:
  - assessing saw blade condition
  - cohering the face to the existing face of saw blade teeth
  - assessing completed facings against specifications
- tooth pitch and tooth angles at which blades are sharpened (blade geometry)
- variable settings for machine operations and effects on material cohesion:

© Commonwealth of Australia, 2025 Skills Insight

  - pressure
  - temperature
  - current
  - voltage
  - weld time
  - vacuum
- organisational policies and procedures specific to hard facing saw teeth:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults.
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing materials.

Assessment Conditions

The following resources must be made available:

- tools and equipment used to hard face saw teeth:
  - resistance welding equipment
  - plasma transfer equipment
- blade saws to be hard faced from these types of saws:
  - band saws
  - circular saws
  - gang saws
- hard compound metal used to hard face saw teeth
- personal protective equipment suitable for hard facing saw teeth
- manufacturers' instructions for use, repair and maintenance of equipment
- work order for repair and maintenance activities with specific instructions for hard facing saw teeth in specified equipment
- documents, spreadsheets and commonly used proformas for recording processing and equipment faults
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for hard facing saw teeth.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessment Requirements for FWPSAW3219 Replace stellite tips

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3219B Replace stellite tips, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to replacing stellite tips
- replace stellite tips in line with the work order and within prescribed organisational requirements
- remove and replace stellite tips from equipment including:
  - braze new stellite tips onto the tooth face or tooth seat
  - replace tips that are broken, missing or worn out
  - rebuild broken or damaged tips
- remove and assess condition of stellite tips in line with standard operating procedures

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of saws for which stellite tips are replaced:
  - band saws
  - circular saws
  - gang saws
- features and names of different parts of saw blades
- purpose, features and operation of tools and equipment used to replace stellite tips:
  - automatic or semi-automatic tipping machines
  - brazing equipment and brazing material

© Commonwealth of Australia, 2025 Skills Insight

    - brazing jigs
- methods for:
    - removing saw blades from sawing equipment
    - assessing saw blade condition
    - removing stellite tips from saw blades
    - brazing new stellite tips onto the tooth face or gullet
- annealing processes and temperatures for stellite tips and saw blades
- appropriate tolerances for weld deposits and replacement tip sizes
- characteristics of metal used in saw blades and effects of brazing
- organisational policies and procedures specific to replacing stellite tips:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
    - reducing water and energy use
    - cleaning plant, tools and equipment
    - disposing of, recycling and reusing materials

Assessment Conditions

The following resources must be made available:

- tools and equipment used to replace stellite tips:
    - automatic or semi-automatic tipping machines
    - brazing equipment
    - brazing jigs
- one or more of the following types of saws to be repaired and maintained:
    - band saws
    - circular saws
    - gang saws
- stellite tips
- brazing material:
    - stellite rod
    - silver brazing rod
    - shim or ribbon
    - brazing flux
- personal protective equipment suitable for replacing stellite tips
- manufacturers' instructions for use, repair and maintenance of equipment
- work order for repair and maintenance activities with specific instructions for replacing stellite tips in specified equipment

© Commonwealth of Australia, 2025 Skills Insight

- documents, spreadsheets and commonly used proformas for recording processing and equipment faults
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for replacing stellite tips.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3220 Maintain wide band saw blades

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to level, tension, back-gauge, weld and replace teeth on wide band saw blades. Work is completed in a forest products factory setting.

The unit applies to job roles including Sawdoctor and Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for maintenance	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with

© Commonwealth of Australia, 2025 Skills Insight

	manufacturer's recommendations. 1.3 Plan maintenance process in line with work order.
2. Assess saw condition	2.1 Follow organisational safety procedures throughout all maintenance and repair processes. 2.2 Remove wide band and gang saws from machinery. 2.3 Handle saws to avoid damaging teeth. 2.4 Clean foreign material on blade surfaces for inspection. 2.5 Inspect saw to assess condition of teeth, tips and saw blade. 2.6 Check and mark teeth or tips requiring repair or replacement. 2.7 Declare saw unserviceable where hazardous defects are found. 2.8 Segregate and dispose of unserviceable saws in line with organisational procedures and environmental protection practices.
3. Level, tension and back-gauge saw blade	3.1 Assess and match ridges or lumps across and along saw on both sides of blade. 3.2 Use gauges and straight edges in both directions to test blade accuracy. 3.3 Remove ridges or lumps progressively through levelling and use stretcher or levelling rolls to flatten. 3.4 Localise stresses using controlled levelling or rolling patterns to avoid spring-back and re-occurrence of defects. 3.5 Check saw blade against required curvature using a gauge to identify tensioning requirements. 3.6 Obtain tension curvature across and along saw blade. 3.7 Check alignment of saw back against tolerances using a gauge; roll non-conforming areas to obtain required tolerance.
4. Repair teeth and blade cracks	4.1 Place saw blade in welding jig for heat application and welding activities. 4.2 Check amount of damaged tooth to be removed or crack to be repaired and mark weld line. 4.3 Remove metal to proposed line, prepare edge for welding and clean burn marks. 4.4 Apply heat and pressure to prepare worn, broken or ground surface for metal build up or replacement. 4.5 Build up or replace teeth or cracked area using material and processes that ensure specified metal penetration and density. 4.6 Use weld run-off tabs to limit stress and hollows at edges of saw blade.

© Commonwealth of Australia, 2025 Skills Insight

	4.7 Grind or file teeth or cracks to required shape, tolerance and pitch. 4.8 Dispose of saws with irreparable teeth, tips or blades in line with organisational procedures environmental protection practices. 4.9 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	

Numeracy skills to:	• use gauges and straight edges to:
	  • measure results of hammering and/or rolling the blade
	  • measure curvature
	  • check alignment against tolerances.

Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety procedures
	  • work orders
	  • manufacturers' maintenance recommendations.

Writing skills to:	• complete accurate basic records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages preparation and repair work using work using work order to guide activities.
Problem-solving skills to:	• assess blade condition and complete necessary levelling and tensioning adjustments and repair work • identify and dispose of unserviceable saws • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for maintaining wide band saw blades • efficiently and safely maintain wide band saw blades.

Assessment Requirements for FWPSAW3220 Maintain wide band saw blades

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to maintaining wide band saw blades
- maintain wide band and gang saw blades in line with the work order and within prescribed organisational requirements, including:
  - remove and replace saws from equipment
  - assess saw condition in line with standard operating procedures
- use welding processes and materials to produce:
  - weld beads which provides full penetration fusing together adjacent metal parts
  - welds free from any faults that would have the potential to weaken the strength and endurance capability of the weld deposit and weld zone.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of heavy duty wide band and gang saws for which repairs are completed
- features and names of different parts of wide band saw blades
- purpose, features and operation of tools and equipment used to repair and maintain wide band saw blades:
  - hammers
  - stretcher or tension rolls
  - levelling rolls

© Commonwealth of Australia, 2025 Skills Insight

  - tension gauges and straight edges
  - welding equipment and welding materials
- importance of levelling blades, setting tension, applying curvature and setting teeth to match requirements for:
  - characteristics of various materials sawn
  - speed of the sawing process
  - direction of the sawing process
  - cutting angle for sawing
  - saw blade specifications
- methods for:
  - removing saw blades from heavy duty wide band and gang saws
  - assessing saw blade condition
  - hammering, levelling and tensioning blades to specified requirements
  - applying curvature
  - welding to build up and replace teeth
  - grinding and filing teeth to required shape, tolerance and pitch
- characteristics of metal used in wide band saw blades and range of force which can be applied without damaging blades
- organisational policies and procedures specific to maintaining wide band saw blades:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing materials

Assessment Conditions

The following resources must be made available:

- tools and equipment used to repair and maintain wide band saw blades:
  - hammers
  - stretcher or tension rolls
  - levelling rolls
  - tension gauges and straight edges
  - welding equipment
  - welding jigs
  - run-off tabs
  - punches

© Commonwealth of Australia, 2025 Skills Insight

  - engineers hammers
  - angle grinders
  - sanders
  - hand files
  - abrasive paper or cloth
- welding material
- tools and equipment to be repaired and maintained:
  - large heavy duty wide band and gang saws used to cut timber
- personal protective equipment suitable for repairing and maintaining wide band saw blades
- manufacturers' instructions for use, repair and maintenance of equipment
- work order for repair and maintenance activities with specific instructions for repairing wide band and gang saw blades in specified equipment
- documents, spreadsheets and commonly used proformas for recording processing and equipment faults
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for maintaining wide band saw blades.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3221 Profile saw blanks

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to calculate blade lengths, and to produce tooth profiles to work orders and specifications. Work is completed in a forest products factory setting.

The unit applies to Sawdoctor, Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for profiling	1.1 Review work order and where required check with appropriate personnel. 1.2 Calculate numbers of band, wide band and gang saw blades to be profiled.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Select appropriate profiling and personal protective equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.4 Plan profiling process in line with work order.
2. Profile blanks	2.1 Follow organisational safety procedures throughout all machining processes. 2.2 Calculate key saw blade dimensions. 2.3 Obtain calculated blank length or cut from ribbon stock. 2.4 Set up press with punches to suit saw dimensions. 2.5 Punch first tooth in blank to align other teeth. 2.6 Punch remaining teeth to required pitch and tooth profile. 2.7 Assess performance of profiling equipment. 2.8 Dispose of irreparable saw blanks in line with environmental protection practices. 2.9 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	

Numeracy skills to:	• complete precise calculations to profile blade saws to correct:
	  • width
	  • length
	  • pitch
	  • gullet depth
	  • hook and back clearance angles.

Oral communication skills to:	• ask open and closed probe questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety procedures
	  • work orders
	  • manufacturers’ maintenance recommendations.

Writing skills to:	• complete accurate basic records for processing and equipment faults.
Planning and organising	• efficiently and logically sequence the stages of preparation and

© Commonwealth of Australia, 2025 Skills Insight

skills to:	profiling activities using work order to guide activities.
Problem-solving skills to:	• identify and dispose of irreparable saw blanks • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate profiling and personal protective equipment • efficiently and safely profile saw blades.

FWPSAW3222 Recondition band mill wheels

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3222B Recondition band mill wheels, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare the band mill, fit special grinders, grind the wheel profile and re-assemble the band mill in readiness for return of bandsaws and wide bandsaws to service. Work is completed in a forest and wood products factory setting.

The unit applies to Sawdoctor, Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for reconditioning	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.3 Plan reconditioning process in line with work order.

© Commonwealth of Australia, 2025 Skills Insight

2. Fit and grind wheel profile	2.1 Follow organisational safety procedures throughout all maintenance and repair processes. 2.2 Inspect and measure wheel to identify wear and grinding method. 2.3 Service, fit and align wheel grinder to wheel and band mill in line with manufacturer's instructions and recommended tolerances. 2.4 Make trial cut to check and further align grinder. 2.5 Grind wheel to remove all wear, ensuring face is not hollow. 2.6 Control grinding feeds to obtain required wheel profile and finish. 2.7 Measure wheel to ensure diameter of back and front edges are equivalent. 2.8 Measure wheel profile to ensure grinding has achieved required profile.
3. Reassemble band mill wheel	3.1 Remove grinder and base plate from band mill when grinding is complete. 3.2 Reassemble band mill components to manufacturer's instructions. 3.3 Set up band saw on mill to specified alignment. 3.4 Test band saw and mill to ensure correct operation. 3.5 Remove isolation padlocks or tags at completion of work in line with safety procedures. 3.6 Dispose of unserviceable wheels in line with organisational procedures and environmental protection practices. 3.7 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• accurately take wheel measurements • estimate the speed of band mill wheel rotation with the speed and depth of cut • complete precise calculations to achieve: • wheel alignment • alignment of saw guides to wheel faces • wheel thickness to manufacturer's specifications

© Commonwealth of Australia, 2025 Skills Insight

Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete basic accurate records of processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• assess wheel condition and rectify faults through correct grinding processes • identify and dispose of unserviceable wheels • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for reconditioning band mill wheels • efficiently and safely recondition band mill wheels.

Range of Conditions

Assessment Requirements for FWPSAW3222 Recondition band mill wheels

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3222B Recondition band mill wheels, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to reconditioning band mill wheels
- recondition band mill wheels in line with the work order and within prescribed organisational requirements
- remove and replace wheels from band mill if faces are to be resurfaced on a metal lathe
- assess band mill wheel conditions in line with standard operating procedures.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of a band and wide band saw mill wheels
- features and names of different parts of band mills
- purpose, features and operation of tools and equipment used to recondition band mill wheels:
  - grinding equipment
  - measuring equipment
- importance of aligning band mill wheels to the specified profile for continued accuracy during band saw operation
- methods for:
  - removing wheels from band mills

© Commonwealth of Australia, 2025 Skills Insight

  - assessing condition of wheels
  - grinding the faces of the band mill wheels to specified requirements
  - re-assembling band mill components
  - setting up band saw on mill to specific alignment
  - testing operational effectiveness of band saws and mills
- wheel profiles and appropriate tolerances
- range of speeds at which abrasive grinders can be operated without damaging band mill wheels
- organisational policies and procedures specific to reconditioning band mill wheels:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults.
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing materials.

Assessment Conditions

The following resources must be made available:

- tools and equipment used to recondition band mill wheels:
  - grinding equipment
  - measuring equipment
- band mills including the entire mechanical structure and componentry that make up the machine
- mill wheels to be reconditioned:
  - band and wide band mill wheels
- personal protective equipment suitable for reconditioning band mill wheels
- manufacturers' instructions for use, repair and maintenance of equipment
- work order for repair and maintenance activities with specific instructions for reconditioning band mill wheels in specified equipment
- template documents for recording processing and equipment faults
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for reconditioning band mill wheels.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

© Commonwealth of Australia, 2025 Skills Insight

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3223 Assess wood chips

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3223B Assess wood chips, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess wood chips for quality and contamination and to report on the outcomes for downstream processing. Work is undertaken in a forest and wood products factory setting.

The unit applies to Sawmill Worker, Production Worker, Chipper Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for assessment	1.1 Check work order requirements. 1.2 Obtain required type and quantity of wood chips for assessment. 1.3 Select moisture meters and testing equipment and check for operational effectiveness. 1.4 Plan testing procedures according to site procedures and environmental requirements.

© Commonwealth of Australia, 2025 Skills Insight

2. Collect and assess samples	2.1 Collect chip samples from designated locations and ensure they are kept free from mixing and contamination. 2.2 Collect wood chips at production, transport and storage for contaminants. 2.3 Review chip production, transport and storage processes for potential sources of contamination 2.4 Report problems with moisture content, size, shape, species and contamination. 2.5 Complete sampling records.
3. Test wood chips and report outcomes	3.1 Review chip specifications from production schedules and orders. 3.2 Test chips for moisture content, size distribution, shape and contamination. 3.3 Store chip samples and file test reports. 3.4 Communicate test results to production personnel to facilitate process control or changes 3.5 Modify test sampling processes in response to new problems and production changes. 3.6 Record and report testing process and equipment faults.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• measure moisture and chip size and quantities.

Assessment Requirements for FWPSAW3223 Assess wood chips

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3223B Assess wood chips, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to assessing wood chips
- assess wood chips in line with a work order and within prescribed organizational requirements for the following:
  - size distribution
  - shape
  - finish quality
  - contamination
  - faults
- safely use tools, machinery and equipment for assessing wood chips
- identify the following contaminants in wood chips:
  - disease
  - infestation
  - rot
  - paint
  - plastic
  - bark
  - charcoal
  - rock
  - metal
- measure moisture in wood chips

© Commonwealth of Australia, 2025 Skills Insight

- identify whether wood chips meet requirements for size and shape
- record sampling processes and outcomes of wood chip assessment.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- how wood chips are produced, transported and stored
- environmental protection requirements for the safe disposal of waste or contaminated wood chips
- organisational and site standards, requirements, policies and procedures for assessing wood chips
- environmental risks and hazards
- sampling and testing techniques
- types and characteristics of different wood chips
- visual assessment techniques
- storage systems and labelling
- tools and equipment and their safe use, operation and maintenance during the assessment of wood chips
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- wood chips
- equipment for measuring moisture in wood chips
- personal protective equipment
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- organisational policies and procedures relevant to assessing wood chips.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3224 Coordinate and monitor the wood chip stockpile

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3224B Coordinate and monitor the wood chip stockpile, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to coordinate and monitor the movement and distribution of wood chips to, from and over the stockpile, including movement and loading. The work is undertaken in a forest and wood products factory setting.

The unit applies to Production Worker, Chipper Operator, Machine Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan stockpile operations	1.1 Review orders, and requirements for wood chip movement. 1.2 Produce stockpile schedules according to site procedures. 1.3 Check wood chip supplies.
2. Control stockpile	2.1 Establish area for stockpile and estimate growth or contraction on basis of production and shipping schedules.

© Commonwealth of Australia, 2025 Skills Insight

	2.2 Review reach of chip slinging equipment. 2.3 Inspect stockpile and identify hazards within vehicle operational area.
3. Coordinate wood chip movement and loading	3.1 Select and allocate vehicles and attachments to spread chips and load transport. 3.2 Advise site of spreading, movement and loading operations. 3.3 Coordinate stockpile levelling in accordance with site procedures. 3.4 Coordinate and direct wood chip retrieval from the stockpile edges to transport. 3.5 Investigate, record and report on wood chip movement and equipment faults in accordance with organizational policies and procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• calculate area and volume of wood chips • calculate reach of wood slinging equipment.
Oral communication skills to:	• coordinate transport and direct movement of stockpile.
Problem solving skills to:	• manage hazards and ensure movement of wood chips to meet established schedules.
Planning and organising skills to:	• sequence activities for the movement of wood chips.

Range of Conditions

Not Applicable

Assessment Requirements for FWPSAW3224 Coordinate and monitor the wood chip stockpile

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3224B Coordinate and monitor the wood chip stockpile which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to coordinating and monitoring the wood chip stockpile
- plan, coordinate, communicate and schedule stockpile operations
- safely use, and direct others to safely use, chip slinging equipment
- maintain the stockpile so that it is stable, compact, and provides access for chip retrieval and for continued slinging
- safely direct others when chips are being delivered and transported by wheeled or tracked dozers or loaders
- maintain schedules so that sufficient quantities of chips are available to meet demands
- maintain accurate records about the stockpile and the movement of woodchips and follow organisational procedures.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose and safe use of equipment used in coordinating and monitoring the wood chip stockpile including:
  - wheeled dozers and loaders

© Commonwealth of Australia, 2025 Skills Insight

    - chip slinging equipment
- wood chip movement and loading procedures
- environmental protection requirements for maintenance and safe disposal of waste material from stockpiles, and the cleaning of plant, tools and equipment
- organisational and site policies and procedures relating to the wood chip stockpile
- environmental risks and hazards associated with stockpiles, which must include risks arising from forms of contamination
- wood chip movement and loading procedures
- procedures for recording and reporting workplace information
- maintenance procedures for tools and equipment.
-

Assessment Conditions

The following resources must be made available:

- organisational policies and procedures relevant to coordinating and monitoring the wood chip stockpile
- wood chip stockpile
- chip slinging equipment
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- personal protective equipment suitable for coordinating and monitoring the wood chip stockpile

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPSAW3225 Maintain frame saw blades

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3225B Maintain frame saw blades, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to hammer, tension, back-gauge, weld and replace teeth on frame saw blades. It includes inspecting saws, repairing defects including damaged or missing teeth and cracks, and hammering ridges and lumps. Work is completed in a forest and wood products factory setting.

The unit applies to Sawdoctor, Saw Repairer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for maintenance	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness in line with manufacturer's recommendations.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Plan repair process in line with work order.
2. Assess saw condition	2.1 Follow organisational safety procedures throughout all maintenance and repair processes. 2.2 Remove frame saw blades from machinery. 2.3 Handle saws to avoid damaging teeth. 2.4 Clean foreign material on saw surfaces for inspection. 2.5 Inspect saw to assess condition of teeth and saw blade. 2.6 Check and mark teeth and tips requiring repair or replacement. 2.7 Declare saw unserviceable where hazardous defects are found. 2.8 Segregate and dispose of unserviceable saws in line with organisational procedures and environmental protection practices.
3. Hammer, tension and back-gauge saw blade	3.1 Assess ridges or lumps across and along saw on both sides of blade. 3.2 Use gauges and straight edges in both directions to test blade accuracy. 3.3 Remove ridges or lumps progressively through hammering and use stretcher or levelling rolls to flatten. 3.4 Control hammering or rolling patterns to localise stresses to avoid spring-back and re-occurrence of defects. 3.5 Check saw blade against required curvature using a gauge to identify tensioning requirements. 3.6 Obtain tension curvature across and along saw blade. 3.7 Check alignment of saw back against tolerances using a gauge; roll non-conforming areas to obtain required tolerance.
4. Repair teeth	4.1 Place saw blade in welding jig for heat application and welding activities. 4.2 Check amount of damaged tooth to be removed and mark weld line. 4.3 Remove metal to proposed line, prepare metal edge for welding and clean burn marks. 4.4 Apply heat and pressure to prepare worn, broken or ground surface for metal build up or replacement. 4.5 Build up or replace teeth using material and processes that ensure specified metal penetration and density. 4.6 Use weld run-off tabs to limit stress and hollows at saw edges. 4.7 Grind or file teeth to required shape, tolerance and pitch. 4.8 Dispose of sub-standard saw blades in line with environmental

© Commonwealth of Australia, 2025 Skills Insight

	protection practices. 4.9 Identify routine processing and equipment faults and resolve or report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• use gauges and straight edges to: • measure results of hammering and/or rolling the blade • measure curvature • check alignment against tolerances.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety procedures • work orders • manufacturers' maintenance recommendations.
Writing skills to:	• complete accurate basic records for processing and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence stages of preparation and repair work using work order to guide activities.
Problem-solving skills to:	• assess blade condition and complete necessary levelling and tensioning adjustments and repair work • identify and dispose of unserviceable saws • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate repair, maintenance and personal protective equipment for maintaining frame saw blades • efficiently and safely maintain frame saw blades.

Assessment Requirements for FWPSAW3225 Maintain frame saw blades

Modification History

Release	Comment
1	New unit. Replaces equivalent unit FPISAW3225B Maintain frame saw blades, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to maintaining frame saw blades
- maintain frame saw blades in line with a work order and within prescribed organisational requirements
- remove and replace saws from equipment
- assess saw condition in line with standard operating procedures
- use welding processes and materials to produce:
  - welds which provides enough penetration to ensure strong cohesion
  - density that ensures the weld is free of holes and inclusions.
  -

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation heavy duty frame saws for which repairs are completed
- features and names of different parts of frame saw blades
- purpose, features and operation of tools and equipment used to repair and maintain frame saw blades:
  - hammers

© Commonwealth of Australia, 2025 Skills Insight

  - structure rolls
  - levelling rolls
  - tensioning instruments
  - gauges and straight edges
  - welding equipment and welding materials
- importance of levelling blades, setting tension, applying curvature and setting teeth to match requirements for:
  - characteristics of various materials sawn
  - speed of the sawing process
  - direction of the sawing process
  - cutting angle for sawing
  - saw blade specifications
- methods for:
  - removing saw blades from heavy duty frame saws
  - assessing saw blade condition
  - hammering, levelling and tensioning blades to specified requirements
  - applying curvature
  - welding to build up and replace teeth
  - grinding and filing teeth to required shape, tolerance and pitch
- characteristics of metal used in frame saw blades and range of force which can be applied without damaging blades
- organisational procedures specific to maintaining frame saw blades:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing materials
  -

Assessment Conditions

The following resources must be made available:

- tools and equipment used to repair and maintain frame saw blades:
  - hammers
  - structure rolls
  - levelling rolls
  - tensioning instruments

© Commonwealth of Australia, 2025 Skills Insight

  - gauges and straight edges
  - welding equipment
  - welding jigs
  - run-off tabs
  - punches
  - engineers hammers
  - angle grinders
  - sanders
  - hand files
  - abrasive paper or cloth
- welding material
- tools and equipment to be repaired and maintained:
- large heavy duty frame saws used to cut timber
- personal protective equipment suitable for repairing and maintaining frame saw blades
- manufacturers' instructions for use, repair and maintenance of equipment
- work order for repair and maintenance activities with specific instructions for repairing frame saw blades in specified equipment
- template documents for recording processing and equipment faults
- relevant personnel for the purposes of communicating information
- organisational policies and procedures for maintaining frame saw blades.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3226 Saw logs using CNC optimising systems

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3226B Saw logs using CNC optimising systems, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to set up and operate computer numerically controlled (CNC) optimising systems and saws to maximise timber output from every log. Work is completed in a forest and wood products factory and includes operator maintenance.

The unit applies to Benchman, Machine Operator, Timber Products Technician, Saw Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for machining	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for

© Commonwealth of Australia, 2025 Skills Insight

	operational effectiveness. 1.3 Plan log sawing process in line with work order.
2. Set up optimising system	2.1 Set CNC optimising program to job specifications. 2.2 Check safety equipment and saw and cutting mechanisms for safe and effective operation. 2.3 Adjust saw settings in line with work order. 2.4 Conduct trial runs to check system operation, accuracy and quality of finished work. 2.5 Complete final adjustments to CNC optimising program and equipment in line with organisational procedures.
3. Operate optimising log saw	3.1 Use equipment in line with organisational safety procedures, manufacturer’s instructions and environmental protection practices. 3.2 Complete pre start-up checks to ensure operational effectiveness. 3.3 Feed logs into machine, operate saw and monitor use to minimise waste and ensure quality product and output. 3.4 Repair or dispose of sub-standard product in line with environmental protection practices. 3.5 Direct processed logs to designated area in line with work order. 3.6 Identify routine processing problems and resolve or report to appropriate personnel.
4. Complete operator maintenance	4.1 Follow organisational safety procedures to lock out equipment. 4.2 Check saw blades for bluntness or damage. 4.3 Remove and replace saw blades in line with manufacturer's recommendations. 4.4 Dispose of used blades in line with environmental protection practices. 4.5 Complete basic non-specialist maintenance for equipment. 4.6 Keep machine clear of dust and debris in line with organisational safety procedures. 4.7 Record and report equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and

© Commonwealth of Australia, 2025 Skills Insight

are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count number of logs to be sawn • set numerical data on CNC optimising program to suit sizing specifications • calculate the feed rate to optimise quality and quantity of production output.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures • work orders • manufacturers' instructions and maintenance recommendations.
Writing skills to:	• complete accurate basic records for equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and repair or dispose of sub-standard products • identify processing problems and faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective equipment for sawing activities • use computerised operating controls for CNC optimising saws to efficiently and safely saw logs • accurately identify and replace blunt or damaged saw blades.

Assessment Requirements for FWPSAW3226 Saw logs using CNC optimising systems

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3226B Saw logs using CNC optimising systems, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to sawing logs using CNC optimising systems
- saw logs using CNC optimising systems in line with work order and within prescribed organisational tolerances
- set computer programs for the CNC optimising system to follow
- complete these types of basic non-specialist maintenance:
  - cleaning the machine of wood chips and sawdust
  - replacing blunt saw blades
  - inspecting machine parts for wear or damage, including guards
  - greasing and lubricating moving parts
  - checking the operation of emergency stop buttons and lock out systems.
  -

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber

© Commonwealth of Australia, 2025 Skills Insight

    - reducing water and energy use
- typical log defects and how they affect ability to produce quality flitches and cants:
    - warp
    - wane
    - curvature
    - cupping
    - shakes
    - insect defects
    - knots
    - resin pockets
- typical work flow processes for sawing flitches and cants with CNC optimising saws
- typical flow of log supply in and out of the sawing area
- range of cutting patterns used on logs to achieve maximum output of flitches and cants
- range of feed rates and how they affect production output and finished quality of flitches and cants
- purpose, features and operation of CNC optimising and other equipment used to saw flitches and cants:
    - CNC optimising saws
    - CNC computer program
    - mechanical feed
    - conveyor system to transport logs to and from the sawing area
    - maintenance tools and equipment for saws
- methods for assessing saw blade condition
- organisational procedures specific to operating CNC optimising saws:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting processing problems and equipment faults.
    -

Assessment Conditions

The following resources must be made available:

- CNC optimising saws
- CNC computer program
- maintenance tools and equipment for saws
- consumable saw blades
- personal protective equipment suitable for operating CNC optimising saws
- a diverse, comprehensive and commercial range of logs
- manufacturers':
    - instructions for equipment use

© Commonwealth of Australia, 2025 Skills Insight

    - recommendations for repairing and maintaining equipment
- work order with specific instructions for sawing logs and despatch to downstream processing
- template documents for recording equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for operating CNC optimising saws.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW3227 Select and saw logs in multi-species operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3227B Select and saw logs in multi-species operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to select and set up the processing of multi-species logs, saw logs into flitches or cants and maintain the production flow, allowing for changes in species. Work is completed in a forest and wood products factory and includes operator maintenance.

The unit applies to Sawmill Worker, Production Worker, Sawyer.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for sawing and select logs	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Select appropriate logs according to species and size or grade and

© Commonwealth of Australia, 2025 Skills Insight

	billet to suit work order. 1.4 Reject, segregate or dispose of defective logs in line with organisational procedures and environmental protection practices.
2. Break down logs	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up checks to ensure operational effectiveness. 2.3 Use dogs to secure and align logs to saw and minimise damage. 2.4 Clear logs of foreign matter and feed into saw at feed rate in line with organisational safety procedures. 2.5 Plan, maintain and adjust sawing sequence to produce required quantity of flitches or cants and maximise feed rate. 2.6 Check and adjust break down process regularly to maintain desired quality and output, allowing for defects and changes in species. 2.7 Direct flitches or cants to designated area in line with work order. 2.8 Identify routine processing problems and resolve or report to appropriate personnel.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with organisational procedures and environmental protection practices. 3.5 Complete basic non-specialist maintenance for equipment. 3.6 Keep machine clear of dust and debris in line with organisational safety procedures. 3.7 Record and report equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count number of logs to be sawn • measure log size across multiple species according to work orders

© Commonwealth of Australia, 2025 Skills Insight

	• complete routine calculations to determine correct angles for aligning logs to equipment • calculate the feed rate to optimise quality and quantity of production output.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and dispose of defective logs • identify processing problems and faulty equipment and resolve by reporting or rectifying.

Technology skills to:	• select and use appropriate personal protective equipment for selecting and sawing logs
	• identify:
	  • species and strength groups of logs
	  • recovery potential of logs
	  • blunt or damaged saw blades
	• use saws to efficiently and safely saw logs in multi-species operations.

Assessment Requirements for FWPSAW3227 Select and saw logs in multi-species operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3227B Select and saw logs in multi-species operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to selecting and sawing logs in multi-species operations
- select logs in line with production requirements and log utilisation, including assessment of
  - diameter range
  - curvature
  - faults
  - softwood species of various types
  - moisture content
- select and saw logs in multi-species operations to produce flitches in line with a work order and within prescribed organisational specifications
- adjust break down process regularly to allow for changes in species
- complete these types of basic non-specialist maintenance:
  - cleaning the machine of wood chips and sawdust
  - replacing blunt saw blades
  - inspecting machine parts for wear or damage, including guards
  - greasing and lubricating moving parts
  - checking the operation of emergency stop buttons and lock out systems.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of equipment used to saw flitches and cants:
  - carriages:
    - standard three headed dog carriages
    - flat top carriages with head rigs
  - saws:
    - circular saws
    - bench saws
    - overhead frame saws or band saws
- mechanical feed
- conveyor system to transport logs to and from the sawing area
- maintenance tools and equipment for saws
- typical range of industry and organisation specific species types:
  - visual characteristics of logs
  - recovery characteristics
- typical work flow processes for sawing flitches and cants
- methods of adjusting workflow and sawing schedule during operation to account for differences in species
- range of cutting patterns used on logs to achieve maximum output of flitches and cants
- different cutting patterns required for different species of trees
- assessment of logs for:
  - diameter range
  - curvature
  - faults
  - softwood species of various types
  - moisture content
- range of feed rates and how they affect production output and finished quality of flitches and cants
- typical flow of log supply in and out of the sawing area
- methods for assessing saw blade condition
- species and recovery characteristics of timber and timber defects
- cutting pattern requirements, feed rates and finish
- flow control systems and marking requirements
- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
- typical log defects and how they affect ability to produce quality flitches and cants:
  - warp

  - wane
  - curvature
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- organisational procedures specific to selecting and sawing logs in multi-species operations:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting processing problems and equipment faults.
  -

Assessment Conditions

The following resources must be made available:

- one or more of the following types of carriages:
  - standard three headed dog carriages
  - flat top carriages with head rigs
- one or more of the following types of saws:
  - circular saws
  - bench saws
  - overhead frame saws or band saws
- mechanical feed
- conveyor system to transport logs to and from the sawing area
- maintenance tools and equipment for saws
- consumable saw blades
- personal protective equipment suitable for selecting and sawing logs
- a selection of logs from different species of trees
- manufacturers':
  - instructions for equipment use
  - recommendations for repairing and maintaining equipment
- work order with specific instructions for selecting and sawing logs and despatch to downstream processing
- template documents for recording equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for selecting and sawing logs in multi-species operations.

Sawmilling and Processing

Elements and Performance Criteria

Element *Elements describe the essential outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Maintain quality output	1.1 Follow quality system procedures for use and care of blades. 1.2 Assess blades visually for defects before processing products and completing work.

© Commonwealth of Australia, 2025 Skills Insight

2. Apply blade design principles	2.1 Classify blades, according to type and style suitable for different saws and production requirements. 2.2 Identify and evaluate blade characteristics, properties and design capacities according to manufacturer's specifications and production requirements. 2.3 Select blades to suit material being cut and production requirements. 2.4 Plan sawing to minimise blade damage and wear and optimise blade lifespan.
3. Assess blade condition.	3.1 Identify machinery and equipment issues that can cause product waste and adversely affect blade lifespan; resolve during day to day activities. 3.2 Assess saw blade condition and recognise need to rectify blade wear and damage. 3.3 Record and report blade faults to appropriate personnel according to blade design specifications.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• measure blade characteristics for different blade types.

Reading skills to:	• interpret:
	  • organisational quality system procedures
	  • manufacturers' blade specifications and maintenance recommendations.

Writing skills to:	• complete accurate basic records for blade faults.
Planning and organising skills to:	• plan use of blades according to work activities.
Problem-solving skills to:	• identify machining problems and resolve to avoid blade damage • identify and report blade wear, damage and faults.
Technology skills to:	• select appropriate blades to suit materials and production requirements.

Assessment Requirements for FWPSAW3228 Apply principles of blade design to sawing procedures

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to applying principles of blade design to sawing procedures
- select blades for sawing procedures in line with environmental legislation and workplace procedures
- identify and evaluate blade characteristics, properties and design capacities for these types of blades:
  - circular saw blades
  - band saw blades
  - gang saw blades
  - wide saw blades
  - standard steel
  - tungsten tipped
  - stellite tipped
- assess saw blade condition and complete basic records of faults for each of the above types of blades
- select appropriate blades to suit material being cut and production requirements in line with three work orders.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of blades:

© Commonwealth of Australia, 2025 Skills Insight

    - circular saw blades
    - band saw blades
    - gang saw blades
    - wide saw blades
    - standard steel
    - tungsten tipped
    - stellite tipped
- properties of blades used in the forestry industry:
    - metal from which blades are made
    - tensile strength
    - geometry and concentricity
- characteristics of blades and names of different parts:
    - blade pitch
    - kerf
    - gullet
    - face
    - set
    - straightness
    - profile
    - angle
    - depth
    - teeth shape
    - application (cross cut or ripping)
    - number of teeth per metre
- methods to optimise the use of saw blades
- effects of different types of materials on saw blade wear
- typical machinery and equipment issues that can cause product waste and adversely affect blade lifespan
- methods for assessing saw blade condition
- organisational quality system procedures for use and care of blades.

Assessment Conditions

The following resources must be made available:

- blades for:
    - circular saws
    - band saws
    - gang saws
    - wide saws
- these styles of blade:

© Commonwealth of Australia, 2025 Skills Insight

  - standard steel
  - tungsten tipped
  - stellite tipped
- maintenance tools and equipment for blades
- personal protective equipment suitable for maintaining blades
- manufacturers' specifications for blade use and recommendations for repairing and maintaining blades
- template documents for recording blade faults
- relevant personnel for the purposes of communicating information
- work orders with specific information on materials to be cut and production requirements
- organisational quality system procedures for use and care of blades.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPSAW3229 Operate a portable sawmill

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3229B Operate a portable sawmill, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to produce sawn green boards using a portable sawmill in line with site requirements and to meet customer specifications. The work is performed in a forest setting

The unit applies to Sawyer, Machine Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for sawing	1.1 Review work order and confirm work requirements. 1.2 Select type and quantity of logs to be sawn 1.3 Select suitable equipment for the sawing process, check operational effectiveness and review manufacturer's instructions for use 1.4 Plan sawing process to optimise volume and quality of recovery.

© Commonwealth of Australia, 2025 Skills Insight

2. Break down logs	2.1 Check site for hazards and conduct pre start-up check. 2.2 Use cant hooks, winches or log rollers to position logs to be sawn, and stabilise with chock logs or pre-notched runners. 2.3 Review sawn board dimensions from customer orders or work order. 2.4 Identify log characteristics and estimate number of boards and sequence of cuts from an individual log. 2.5 Adjust saw, carriage and mill to suit dimensions of boards to be cut. 2.6 Operate saw ensuring that sawn edges are controlled. 2.7 Remove logs with defects, reject boards and off-cuts to waste or sawn recovery. 2.8 Record and report process and equipment faults.
3. Conduct operator maintenance	3.1 Follow equipment lock-out and site procedures when equipment is faulty. 3.2 Check saw and saw blades for bluntness or damage and repair or replace following manufacturer's instructions. 3.3 Clear area of dust and debris.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• calculate dimensions, and to estimate, measure and calculate numbers of logs and boards required.
Reading skills to:	• read manufacturer's instructions and work orders.
Writing skills to:	• record information.
Planning and organising skills to:	• sequence work activity.

Range of Conditions

Not Applicable

Assessment Requirements for FWPSAW3229 Operate a portable sawmill

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW3229B Operate a portable saw, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to operating a portable sawmill
- safely operate a portable sawmill to produce green boards to meet a work order
- assess logs for suitability for sawing
- use cant hooks, winches, log rollers and mechanical lifting equipment to position logs for sawing and ensure that logs are stable
- correctly position the carriage to support the saw and the log
- assess blades for replacement and conduct operator maintenance on portable sawmill machinery.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational policies and procedures for operating a portable sawmill
- features and safe use of portable sawmills and other equipment including:
  - cant hooks
  - winches
  - log rollers
  - mechanical lifting equipment
- prestart up checks for portable sawmills including:

© Commonwealth of Australia, 2025 Skills Insight

    - ensuring that the saw has been set-up correctly
    - ensuring that the blades are installed accurately
    - ensuring that the machinery is operating to optimum performance
- optimisation of log sawing including:
    - planning the cutting of a log to achieve the most from it (the most and widest boards possible)
    - ensuring environmental requirements are central to this planning process
- the characteristics of logs for sawing, which must include:
    - diameter range
    - curvature
    - faults
    - species
    - moisture content
- break down processes, feed rates and finish
- blade condition assessment
- log defects which includes:
    - defects arising from a change in moisture content
    - warp
    - wane
    - curvature
    - shakes
    - insect defects
    - knots and resin pockets
    - sweep
    - taper
    - end splits
    - shape
- environmental protection requirements for the safe disposal of waste material, and the cleaning of plant, tools and equipment
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- logs for sawing
- portable sawmill
- personal protective equipment
- work order
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- organisational policies and procedures relevant to operating a portable sawmill

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and

be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence

FWPSAW4201 Plan and monitor timber treatment plant operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW4201B Plan and monitor timber treatment plant operations, which was first released with FPI11 Forest and Forest Products Training Package version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan, monitor, modify and assess timber treatment plant operations, within the scope of the person's job and authority.

The unit applies to those who treat timber in a forest products factory setting such as a production or treatment plant supervisor.

Copper Chrome Arsenate (CCA) chemical is a restricted chemical product, which means that CCA can only be supplied and handled by suitably trained and authorised persons.

The Australian Pesticides and Veterinary Medicines Authority (APVMA) advised that as of 1 July 2012, CCA products can only be supplied to, and used by, suitably trained persons authorised under a relevant state or territory law from that date.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction.

In Victoria, to comply with licence/permit requirements, organisations must ensure that employees working with CCA demonstrate competence in this unit (FWPSAW3201 Treat timber), or that persons working with CCA do so under the direct supervision (sight and sound) of a trained and authorised person.

For regulatory information and details in other states and territories refer to the state or territory licensing body.

Pre-requisite Unit

Unit Sector

Sawmilling and Processing

© Commonwealth of Australia, 2025 Skills Insight

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan treatment plant procedures	1.1 Identify site-based workplace procedures relevant to treatment of timber. 1.2 Assess timber condition and characteristics and record moisture content. 1.3 Apply timber treatment schedules in line with site procedures and environmental requirements. 1.4 Plan and apply water management procedures. 1.5 Plan and prescribe waste minimisation and control measures. 1.6 Establish and maintain communication with others in line with organisational and workplace health and safety (WHS) requirements.
2. Monitor treatment plant performance	2.1 Check and interpret charge sheets to ensure accuracy. 2.2 Check and interpret reconciliation statements to ensure accuracy. 2.3 Check and analyse process trends for optimum performance. 2.4 Monitor treatment operations and output to record possible process improvements and to ensure maximum cost effectiveness. 2.5 Control non-conforming treated timber in line with site procedures and environmental requirements. 2.6 Investigate, record and report treatment operations, major problems and equipment faults in line with site requirements.
3. Modify operations and assess technical developments	3.1 Initiate approved modifications to schedules to ensure optimum performance. 3.2 Document and communicate treatment improvement modifications in line with site procedures. 3.3 Diagnose developments in treatment processes and related technology for possible implementation. 3.4 Analyse and assess technical developments for potential incorporation into existing plant operations and procedures. 3.5 Authorise, trial, document and introduce proposed developments into site operations. 3.6 Dispose of timber from unsuccessful trials in line with site procedures and environmental requirements.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Learning skills to:	• identify and follow safe timber treatment procedures from organisational and manufacturer requirements (written and verbal) • efficiently and effectively plan and monitor timber treatment plant operations.
Numeracy skills to:	• produce treatment schedules • interpret charge sheets, reconciliation statements and process trends • assess moisture content of timber.
Oral communication skills to:	• report major problems and equipment faults.
Reading skills to:	• analyse work orders to determine job requirements.
Writing skills to:	• record and report workplace information • maintain documentation accurately.

Assessment Requirements for FWPSAW4201 Plan and monitor timber treatment plant operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW4201B Plan and monitor timber treatment plant operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to planning and monitoring timber treatment plant operations
- assess, schedule and apply treatment plant procedures for timber samples
- monitor treatment plant performance and modify operations as required
- analyse and assess technical developments for incorporation into existing operations and procedures
- map processing conditions to establish trends and use this information for modifications
- modify timber treatment plant operations for the enterprise
- follow planning, communications and scheduling for timber treatment plant operations
- complete workplace documentation required for timber treatment plant operations including charge sheets to complete records of:
  - treatment plant charge
  - amount of power and energy developed and used, and
- reconciliation statements:
  - statements reflecting chemical usage and cost
  - treatment times for cycles
  - breakdown losses
  - energy costs
  - modification expenses.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational and site standards, requirements, policies and procedures for planning and monitoring timber treatment plant operations
- Australian Standards for Timber Treatment
- environmental protection requirements, including the safe disposal of waste material, the safe use and storage of chemicals and minimising carbon emissions
- typical work flow processes and techniques for chemically treating timber:
  - full cell
  - modified cell
  - empty cell
  - double vacuum
  - immersion
  - rueping
  - dip diffusion
  - vat and sprays
- moisture content of timber for treatment
- effective and efficient use of energy
- effective and efficient use of materials
- timber treatment plant operation procedures
- water management methodologies
- waste minimisation control measures
- treatment plant modification strategies
- technical development diagnosis and solution methodologies
- types of tools and equipment and procedures for their safe use, operation and maintenance
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- personal protective equipment suitable for chemically treating timber
- manufacturers ‘safety data sheets, or equivalent plain English information, for chemicals and preservative solutions
- work order with specific instructions for chemical treatment of timber
- template documents for recording chemical stock levels, processes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for chemically treating timber
- a suitably licensed person to monitor and supervise handling of CCA during assessment.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

FWPSAW4202 Plan and monitor saw log operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW4202B Plan and monitor saw log operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan flitch, cant sizes and cutting patterns and schedules, produce work orders for sawyers and to manage operational logistics for log sawing activities. Work is completed in a forest and wood products factory and also involves monitoring and evaluating processes to determine improvements.

The unit applies to Sawyer, Saw Operator, Sawmill supervisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan saw log operations	1.1 Assess individual logs for types of flitches and cants that can be cut and determine optimal cutting pattern. 1.2 Plan and document cutting patterns to maximise output and minimise wastage. 1.3 Develop timber cutting schedules and work orders and brief

© Commonwealth of Australia, 2025 Skills Insight

	sawyers in line with organisational procedures. 1.4 Identify variations in timber characteristics and report to sawyers.
2. Coordinate saw log operations	2.1 Assist sawyers to evaluate logs and sawing problems. 2.2 Monitor timber cutting processes; assess for quality of cutting pattern, suitability to log condition and ability to maintain schedule. 2.3 Modify cutting patterns and schedule to ensure optimum performance and communicate to sawyers. 2.4 Ensure processed logs are directed to designated area for storage or further processing. 2.5 Complete and maintain operating logs and cutting records in line with organisational procedures. 2.6 Investigate, record and report major processing and equipment faults and resolve or report to appropriate personnel.
3. Evaluate saw log performance	3.1 Monitor and evaluate saw log operations and output to determine process improvements. 3.2 Document process improvements and communicate to appropriate personnel in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• complete routine calculations to measure log diameters • complete complex calculations to determine: • potential volume return from logs • cutting schedules considering human and equipment resource capacity.
Oral communication skills to:	• provide clear and unambiguous information to sawyers about initial and changing cutting patterns and schedules.
Reading skills to:	• interpret basic operational cutting and processing logs completed by sawyers.

Writing skills to:	• develop comprehensive documents in a style and format easily understood by others:
	  • cutting patterns and schedules
	  • work orders
	  • reports on process improvements
	• complete accurate basic records of cutting output and equipment

© Commonwealth of Australia, 2025 Skills Insight

	faults.
Planning and organising skills to:	• source, collect and organise data to inform cutting schedules and process improvement reports • efficiently and logically manage operational logistics for log sawing activities.
Problem-solving skills to:	• assess timber cutting processes during operation and take quick action to modify cutting patterns and schedules to resolve output problems • investigate major equipment faults, consider systematic issues and resolve • analyse production problems, consider various solutions and determine process improvements.
Teamwork skills to:	• take responsibility for coordinating a team of sawyers for effective saw log operations.
Technology skills to:	• assess logs, determine cutting patterns and schedules to maximise production outcomes and monitor effective saw log operations • use a computer, keyboard and software to prepare cutting schedules, work orders and reports.

Assessment Requirements for FWPSAW4202 Plan and monitor saw log operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW4202B Plan and monitor saw log operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to planning and monitoring saw log operations
- planning and monitoring of saw log operations for the enterprise
- modify cutting patters and schedules or saw log operations
- coordinate personnel to follow planning, communications and scheduling for saw log operations

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- purpose, features and operation of equipment used for assessing logs
- capacity of log sawing equipment and systems
- methods used to assess logs for:
  - diameter
  - curvature
  - faults
  - species
  - moisture content
  - volume and type of flitches and cants that can be cut

© Commonwealth of Australia, 2025 Skills Insight

- stages of the log sawing process
- typical flow of log supply in and out of the sawing area
- cutting patterns used on logs to achieve maximum output of flitches or cants
- methods of determining cutting schedules to maximise efficient handling of logs to be sawn
- methods used to assess timber cutting processes for quality of outcomes and scheduling
- format, content and use of:
  - cutting pattern documents
  - cutting schedules
  - work orders
  - operating logs and cutting records
  - process improvement reports
- organisational procedures specific to planning and monitoring saw log operations:
- communication reporting lines for sawyer team members and self
- documenting cutting patterns, schedules, work orders and reports
- recording and reporting systematic equipment faults.

Assessment Conditions

The following resources must be made available:

- log measuring equipment
- moisture probes
- computers, keyboards, printers and software used to prepare planning and production documents
- personal protective equipment suitable for assessing logs
- a diverse, comprehensive and commercial range of logs
- template:
  - cutting pattern documents
  - cutting schedules
  - work orders
  - operating logs and cutting records
  - process improvement reports
  - record for equipment faults
- organisational procedures for planning and monitoring saw log operations
- relevant personnel for the purposes of communicating information
- a team of sawyers with whom the individual can interact.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting. Sawing operations must be present in order that the individual can monitor, assess and modify cutting patterns and schedules in response to changing circumstances.

FWPSAW4203 Coordinate timber drying operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW4203B Coordinate timber drying operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan and coordinate timber drying procedures. It includes managing the kiln and the schedules for drying timber.

The unit applies to operators who dry timber in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Timber Manufactured Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Plan drying procedures	1.1 Assess, measure and record moisture content and variations in timber. 1.2 Plan process cycles and develop timber drying schedule. 1.3 Review organisational policies and procedures for drying procedures and kiln management.

© Commonwealth of Australia, 2025 Skills Insight

2. Control drying operations	2.1 Implement standard operating procedures for the kiln. 2.2 Oversee loading of timber according to quantities scheduled for drying. 2.3 Check and analyse process trends. 2.4 Implement modifications for optimum performance in the drying process. 2.5 Check and control seasoning chambers throughout the drying process. 2.6 Oversee transfer and storage of dried timber.
3. Complete documentation	3.1 Complete operating logs and seasoning records. 3.2 Identify areas for improvement. 3.3 Record and report major problems and equipment faults.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• manage temperatures and drying times. • coordinate the quantity of timber.
Writing skills to:	• complete records and reports.
Planning and organising skills to:	• plan and organise production schedules.

Assessment Requirements for FWPSAW4203 Coordinate timber drying operations

Modification History

Release	Comment
1	Replaces equivalent unit FPISAW4203B Coordinate timber drying operations, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- assess, schedule and coordinate drying procedures for the enterprise
- monitor drying operations and output, and make necessary modifications
- coordinate timber drying operations for efficiency and safety
- resolve problems so that production schedules are met
- coordinate personnel to follow schedules for timber drying operations throughout all stages of the process.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- kilns and their features which must include:
  - low temperature kilns
  - conventional
  - high temperature kilns and vacuum dryers
- timber characteristics, timber moisture content and how to avoid cracking and deforming of timber in the drying process
- charge sheets
- the safe disposal of waste material
- organisational and site policies and procedures for timber drying operations

- mechanisms to ensure the efficient and effective use of energy
- timber drying operation procedures
- process cycles and modifications
- Procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- kiln or vacuum dryer
- timber for drying
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- personal protective equipment required for co-ordinating timber drying operations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPSAW4205 Plan and monitor timber conversion

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to plan the production of timber from flitches and cants in a timber processing facility. Work involves responsibilities in planning cutting patterns and schedules, coordinating sawing processes and monitoring equipment and output for improvement.

The unit applies to individuals who work as supervisors and production supervisors in timber processing facilities. They generally demonstrate autonomy, judgement and limited responsibility in known or changing contexts and within established parameters.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan timber production from flitches and cants	1.1 Review workplace health and safety requirements, environmental protection practices and emergency procedures according to

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	operational requirements 1.2 Identify and control hazards and use personal protective equipment according to workplace requirements and health and safety legislation to maintain safe work practices 1.3 Assess flitches and cants for types of timber that can be cut and determine the optimal cutting pattern 1.4 Plan and document cutting patterns to maximise output and minimise wastage 1.5 Develop timber cutting schedules and work orders and brief sawing operators according to workplace procedures 1.6 Identify variations in timber characteristics and report to sawing operators
2. Coordinate sawing operations for timber production	2.1 Assist sawing operators to evaluate flitches and cants and sawing problems 2.2 Monitor and assess timber cutting processes for the quality of cutting pattern, suitability to flitch or cant condition and ability to maintain production schedule 2.3 Modify cutting patterns and production schedule as required to ensure optimum performance, and communicate to sawing operators 2.4 Assist sawing operators to reject sub-standard flitches and cants and ensure they are disposed of according to environmental protection practices 2.5 Ensure processed timber is directed to a designated area for storage or further processing 2.6 Complete and maintain records of cutting output according to workplace procedures 2.7 Investigate, record and report major processing and equipment faults and resolve or report to appropriate personnel
3. Evaluate and determine process improvement	3.1 Monitor and evaluate timber conversion operations and output to determine process improvements 3.2 Document process improvements and communicate to appropriate personnel according to workplace procedures

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Numeracy	• Complete routine calculations to measure flitches and cants
	• Complete complex calculations to determine:
	  • potential volume return from flitches and cants
	  • cutting schedules considering human and equipment resource capacity

Navigate the world of work	• Understand main tasks, responsibilities and boundaries of own role • Take responsibility for coordinating a team of sawing operators for effective timber production operations
Interact with others	• Use modes of communication suitable for the purpose to facilitate process improvements
Get the work done	• Use a computer, keyboard and software to prepare cutting schedules, work orders and reports

Unit Mapping Information

Assessment Requirements for FWPSAW4205 Plan and monitor timber conversion

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- followed workplace health and safety requirements and environmental procedures for planning and monitoring timber production from flitches and cants
- planned and monitored timber production from flitches and cants
- modified cutting patterns and schedules for timber sawing operations
- coordinated personnel to follow planning, communications and scheduling of timber sawing operations for timber production.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to sawing operations for timber production as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures specific to planning and monitoring sawing operations for timber production:
  - health and safety, including the use of personal protective equipment (PPE)
  - communication reporting lines for sawyer team members and self
  - documenting cutting patterns, schedules, work orders and reports
  - recording and reporting systematic equipment faults
- environmental protection practices for disposing of, recycling and reusing timber
- purpose, features and operation of equipment used for assessing flitches and cants
- capacity of timber sawing equipment and systems
- methods used to assess flitches and cants for size, volume and type of timber that can be cut

© Commonwealth of Australia, 2025 Skills Insight

- methods used to assess timber for the sawn finish and dimensional consistency
- stages of the sawing process for timber production
- typical flow of flitch and cant supply in and out of the timber sawing area
- cutting patterns used on flitches and cants to achieve maximum output of timber
- methods of determining cutting schedules to maximise efficient handling of flitches and cants to be sawn
- methods used to assess timber cutting processes for the quality of outcomes and scheduling
- format, content and use of:
  - cutting pattern documents
  - cutting schedules
  - work orders
  - cutting records
  - process improvement reports.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - flitch and cant measuring equipment
  - computers, keyboards, printers and software used to prepare planning and production documents
  - PPE suitable for assessing flitches and cants
  - a diverse, comprehensive and commercial range of flitches and cants
- specifications:
  - cutting pattern documents
  - cutting schedules
  - work orders
  - cutting records
  - process improvement reports
  - record for equipment faults
  - workplace procedures for planning and monitoring timber production from flitches and cants, including health and safety and emergency procedures and environmental protection procedures
- relationships:
  - relevant personnel for the purposes of communicating information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPTMM2201 Cut material to length and angles

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM2201B Cut material to length and angles, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare and cut material to length, angle with a power driven saw and complete non-specialist saw maintenance. Work is completed in a forest and wood products factory setting.

The unit applies to Customer Service Officer, Machine Operator, Timber Products Worker, Manufacturing Assistant.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for cutting	1.1 Review work order and where required check with appropriate personnel. 1.2 Obtain type and quantity of material to be cut from storage location.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Select appropriate equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.4 Interpret cutting list in line with work order and organisational procedures. 1.5 Plan material cutting patterns and saw set-up sequences in line with work order.
2. Cut material to length and angle	2.1 Mark up material and set stops set in preparation for cutting. 2.2 Use equipment and machinery in line with organisational procedures, manufacturer's instructions and environmental protection practices. 2.3 Follow cutting sequence and patterns to produce required quantity. 2.4 Check cuts for length and angle within a set tolerance. 2.5 Dispose of incorrect cuts, off-cuts and material with defects in line with environmental protection practices. 2.6 Stack material safely in designated location in line with work order requirements. 2.7 Report processing and equipment faults to appropriate personnel.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock-out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with organisational procedures and environmental protection practices. 3.5 Keep saw area clear of dust, off-cuts and debris in line with organisational safety procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work plans and count raw materials • complete basic calculations of required length and angle to determine saw set up.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders • make accurate verbal reports on processing and equipment

© Commonwealth of Australia, 2025 Skills Insight

	faults.

Reading skills to:	• interpret:
	  • WHS and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select, use and maintain appropriate machinery, tools and personal protective equipment used for cutting activities.

Range of Conditions

Not Applicable

Assessment Requirements for FWPTMM2201 Cut material to length and angles

Modification History

Release	Comment
	Replaces equivalent FPITMM2201B Cut material to length and angles, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to cutting material to length and angle
- effectively communicate and follow safe work practices
- cut material to length and angle in line with a work order and within prescribed organisational tolerances
- conduct maintenance on a docking saw
- stack batches of cut material in line with organisational requirements and OHS regulations.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- storage layout and categories for:
  - raw materials
  - stacking finished materials
- characteristics of timber and timber defects:
- cutting patterns and sequences for single and compound angles
- industry standard cross-sections and lengths

© Commonwealth of Australia, 2025 Skills Insight

- types of cutting tools and equipment; their purpose, features, operation and basic non-specialist repair and maintenance:
  - measuring equipment
  - manually controlled docking and trimming saws
  - bench saws
  - radial arm saws
  - saws with adjustable angle
  - saws with automatic feed
  - saws with one blade
  - table saws
- methods for assessing saw blade condition
- organisational policies and procedures specific to cutting activities:
  - workplace health and safety with particular emphasis on equipment lock out
  - use and maintenance of equipment
  - communication reporting lines
  - recording and reporting cutting process and equipment faults
- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning of plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste

Assessment Conditions

The following resources must be made available:

- cutting tools and equipment:
  - measuring equipment
  - manually controlled docking and trimming saws
  - bench saws
  - radial arm saws
  - saws with adjustable angle
  - saws with automatic feed
  - saws with one blade
  - table saws
- maintenance tools and equipment for saws
- consumable components; saw blades
- personal protective equipment suitable for cutting activities
- a diverse, comprehensive and commercial product range of timber
- manufacturers' instructions for use and maintenance of equipment
- work order for cutting activities with specific instructions for the cutting and storage of timber and timber products
- relevant personnel for the purposes of communicating information

© Commonwealth of Australia, 2025 Skills Insight

- template reports for recording processing and equipment faults
- organisational policies and procedures for cutting activities

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPTMM2202 Machine material

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM2202B Machine material, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to operate basic static machines used for sawing, planing, sanding and drilling and complete non-specialist maintenance. Work is completed in a forest and wood products factory setting.

The unit applies to job roles including saw operator, timber manufacturing worker, timber products worker, customer service/sales assistant (timber merchandising), woodmachinist.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

	effectiveness in line with manufacturer's recommendations. 1.4 Plan material machining process in line with work order.
2. Set up machines	2.1 Check safety equipment, including emergency stops, gauges, guards and controls. 2.2 Complete machine settings and adjustments in line with job requirements and manufacturer's instructions. 2.3 Complete trial runs to check machine operation, accuracy and quality of finished work. 2.4 Accept or reject trialled material and dispose of in line with environmental protection practices. 2.5 Adjust machine setting as necessary.
3. Operate machines	3.1 Complete equipment pre start-up checks in line with organisational procedures. 3.2 Operate machine in line with manufacturer's instructions, safe operating procedures and environmental protection practices. 3.3 Monitor machine operation to ensure product quality and output. 3.4 Repair sub-quality items to minimise waste and recycle or discard others in line with environmental protection practices. 3.5 Stack material safely in designated location in line with work order requirements.
4. Complete operator maintenance	4.1 Follow organisational safety procedures to lock-out equipment. 4.2 Remove and replace fixed cutter heads in line with organisational procedures. 4.3 Joint straight cutters in line with organisational procedures. 4.4 Record and report machining outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

FWPTMM2203 Read and interpret timber truss, floor and/or frame fabrication plans

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM2203A Read and interpret timber truss, floor and/or frame fabrication plans, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to read and interpret truss, floor and frame fabrication plans showing construction details and component specifications. Work is completed in a forest and wood products factory setting.

The unit applies to Timber Manufactured Products Technician, Timber Fabricator, Machine Operator.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Review and clarify fabrication plans	1.1 Review and clarify fabrication plans and work order where required with appropriate personnel. 1.2 Interpret drawing views and notes and identify design requirements and restrictions. 1.3 Obtain additional information and data from appropriate personnel and sources.
2. Interpret fabrication plans	2.1 Interpret plan, work requirements and sequencing for application to assembly work. 2.2 Confirm layouts, spacing and sizing of individual structural members. 2.3 Allow for quantities of bracing and ancillaries for trusses or frames. 2.4 Interpret timber and hardware component details. 2.5 Identify, locate and label bracing points. 2.6 Establish a need for camber.
3. Confirm work order and fabrication plan	3.1 Follow workplace health and safety procedures throughout production activities. 3.2 Select and prepare set-up jigs required for construction. 3.3 Identify truss, floor or frame types and select timber type and species in line with plan. 3.4 Locate and select assembly hardware in line with fabrication plans and standards. 3.5 Visually assess characteristics and design details of material against plan. 3.6 Reject and dispose of sub-standard materials in line with environmental protection practices. 3.7 Discuss common site problems and suggest solutions for better meeting design requirements.
4. Confirm products to fabrication plan	4.1 Set components to include camber adjustments, overhang and other design requirements. 4.2 Position and install hardware on joints in line with plan specifications. 4.3 Correct assembly faults in line with site procedures. 4.4 Assess finished product for quality against assembly drawing and label in line with work order. 4.5 Record and report assessment outcomes to appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	

Numeracy skills to:	• interpret production data from fabrication plans to:
	  • complete calculations of sizes and spacing of individual structural members
	  • count quantities of timber and hardware components and select appropriate sizes
	  • accurately measure lengths, camber, overhang and cutting angles.

Oral communication skills to:	• ask questions and actively listen to clarify contents of fabrication plans and work orders.

Reading skills to:	• interpret:
	  • WHS and other organisational procedures
	  • fabrication plans and work orders.

Writing skills to:	• produce basic clear labels for product identification • complete accurate basic reports assessing finished product for quality and compliance with fabrication plans.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and reject sub-standard materials • identify assembly faults and resolve by making adjustments.
Technology skills to:	• select and use appropriate machinery, tools and personal protective equipment used for production activities.

FWPTMM3201 Convert timber

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3201B Convert timber, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare and re-saw material to width and on the thickness with a power driven saw to optimise timber conversion and usability. Work includes non-specialist saw maintenance and is completed in a forest and wood products factory setting.

The unit applies to Sawyer, Saw Operator, Machine Operator, Timber Products Technician.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Prepare for conversion	1.1 Review work order and where required check with appropriate personnel. 1.2 Obtain type and quantity of material to be converted from storage location. 1.3 Select appropriate equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.4 Plan timber conversion and saw set-up in line with work plan.
2. Produce boards	2.1 Set and regularly check saw, carriage and feed and adjust to suit conversion plan, ordered sizes and tolerances. 2.2 Use equipment and machinery in line with organisational procedures, manufacturer's instructions and environmental protection practices. 2.3 Monitor timber supply to ensure constant supply to saw. 2.4 Maintain feed rate and operate saw bench to produce boards without damage to boards or saw blade. 2.5 Dispose of incorrect cuts, off-cuts and material with defects in line with environmental protection practices. 2.6 Stack material safely in designated location in line with work order requirements. 2.7 Report processing and equipment faults to appropriate personnel.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock-out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with organisational procedures and environmental protection practices. 3.5 Keep saw area clear of dust, off-cuts and debris in line with WHS and site requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work plans and count raw materials • interpret order sizes and set up the saw to achieve correct depth, width and thickness of cut

© Commonwealth of Australia, 2025 Skills Insight

	• calculate the feed rate to optimise quality and quantity of production output.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders • make accurate verbal reports on processing and equipment faults.

Reading skills to:	• interpret:
	  • WHS and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select, use and maintain appropriate machinery, tools and personal protective equipment used for conversion activities.

Assessment Requirements for FWPTMM3201 Convert timber

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3201B Convert timber, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and practices relevant to converting timber of at least one of the following materials:
  - native timber species
  - imported timber species
  - dressed timber
  - in-the-rough timber
  - green timber
  - stress and non-stress graded timber
  - preservative treated timber
  - coated and/or treated timber products
  - beams or laminated beams
- cut material to width and thickness in line with work order and within prescribed organisational tolerances
- conduct operator maintenance on an automatic feed controlled rip saw
- stack batches of cut material in line with organizational requirements and OHS regulations

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- timber conversion processes including:
  - re-sawing in-the-rough boards to optimize single boards through cutting away waste edges
  - cutting boards into two or more boards thereby maximizing the amount of product in line with the work order
  - saw set up including setting depth, width and thickness of cut measured from the fence in line with product order and allowing for kerf (width of saw cut)
- storage layout and categories for:
  - raw materials
  - stacking finished materials, including
    - preparing for transport
    - categorizing in common size, length, width and thickness
    - marking lots in line with work order and site requirements
    - locating so as not to block access or passage
- characteristics of timber and timber defects including:
  - warp
  - wane
  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- cutting patterns and sequences
- tolerances
- saw feed rates
- industry standard cross-sections and lengths
- types of conversion tools and equipment; their purpose, features, operation and basic non-specialist repair and maintenance:
  - measuring equipment
  - automatic feed controlled ripping saws
  - saws with adjustable thickness (sloping table)
  - saws with one blade
  - rip saws
  - table saws
  - bench saws
- methods for assessing saw blade condition
- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning of plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- organisational procedures specific to conversion activities:

© Commonwealth of Australia, 2025 Skills Insight

- workplace health and safety with particular emphasis on equipment lock out
- use and maintenance of equipment
- communication reporting lines
- recording and reporting cutting process and equipment faults.

Assessment Conditions

The following resources must be made available:

- one or more of the following items of conversion equipment:
  - automatic feed controlled ripping saws
  - saws with adjustable thickness (sloping table)
  - saws with one blade
  - rip saws
  - table saws
  - bench saws
- measuring equipment
- maintenance tools and equipment for saws
- consumable components; saw blades
- a diverse, comprehensive and commercial product range of timber
- personal protective equipment suitable for conversion activities
- manufacturers' instructions for use and maintenance of equipment
- work order for conversion activities with specific instructions for the cutting and storage of timber and timber products
- template reports for recording processing and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for conversion activities.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence
-

FWPTMM3202 Manufacture using joinery machines

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3202B Manufacture using joinery machines, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare, cut and drill machined joints in timber using mortise and tenon machines, borers and routers. Work includes non-specialist equipment maintenance and is completed in a forest and wood products factory setting.

The unit applies to Machine Operator, Timber Manufactured Products Technician, Engineered Timber Products Technician.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Prepare for profiling	1.1 Review work order and where required check with appropriate personnel. 1.2 Obtain type and quantity of material to be machined from storage location. 1.3 Select appropriate equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.4 Identify process and material to be manufactured; select cutting blades or drills.
2. Set up profiling equipment	2.1 Complete equipment pre start-up checks in line with organisational procedures. 2.2 Select machine guides and attach to machinery. 2.3 Install cutting blades or drills into selected machinery. 2.4 Set depth and width of cut or hole in line with required process and to minimise waste. 2.5 Position material stack in close proximity to maximise ease of machine feeding. 2.6 Test equipment set-up for depth and width through trial run on timber and adjust as required.
3. Cut material to profile	3.1 Feed material into machine at feed rate prescribed by organisational requirements. 3.2 Use equipment and machinery in line with organisational procedures, manufacturer's instructions and environmental protection practices. 3.3 Follow, maintain and adjust manufacturing sequence to produce required quantity and maximise feed rate. 3.4 Check manufacturing process regularly and adjust to maintain desired depth and width. 3.5 Reject material with defects and dispose of in line with environmental protection practices. 3.6 Stack material safely in designated location in line with work order requirements. 3.7 Report equipment faults to appropriate personnel. 3.8 Complete and maintain accurate records and reports of machining outcomes in line with organisational procedures.

© Commonwealth of Australia, 2025 Skills Insight

4. Complete operator maintenance	4.1 Follow organisational safety procedures to lock-out equipment. 4.2 Check cutting blades and drills for bluntness or damage. 4.3 Remove and replace cutting blades and drills in line with manufacturer's recommendations. 4.4 Dispose of used blades and drills in line with organisational procedures and environmental protection practices. 4.5 Keep machine area clear of dust and debris in line with WHS and site requirements.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work plans and count raw materials • interpret order sizes and set up machinery to achieve correct depth and width of cut or hole • calculate the feed rate to optimise quality and quantity of production output.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders • make accurate verbal reports on equipment faults.

Reading skills to:	• interpret detailed familiar and unfamiliar:
	  • WHS and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic reports on machining outcomes.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify incorrect depths and widths through trial and make machine adjustments • identify and dispose of defected materials • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select, use and maintain appropriate machinery, tools and personal protective equipment used for machining activities.

Assessment Requirements for FWPTMM3202 Manufacture using joinery machines

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3202B Manufacture using joinery machines, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to manufacturing material using joinery machines
- cut and drill machined joints in line with the work order and within prescribed organizational specifications, including these processes:
  - drilling
  - boring
  - mortising
  - tenoning
  - trenching
  - grooving
  - rebating
  - beveling
  - routing
- stack batches of cut material in line with organizational requirements
- conduct operator maintenance on joinery machine equipment

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- features and uses of these types of machined joints:
  - grooves
  - rebates
  - bevels
  - trenches
  - mortises
  - tenons
  - holes
- cutting and drilling techniques and processes including feed rates and finish
- types of cutting and drilling tools and equipment; their purpose, features, operation and basic non-specialist repair and maintenance:
  - measuring equipment
  - saws
  - routing machines
  - single or double end tenoners
  - mortisers
  - borers
  - multi-borers
  - drill presses
  - mortising chisels
  - tenoning saws or chains
- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning of plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- organisational procedures specific to production activities using joinery machines:
  - workplace health and safety with particular emphasis on equipment lock out
  - use and maintenance of equipment
  - communication reporting lines
  - recording and reporting cutting process and equipment faults.

Assessment Conditions

The following resources must be made available:

- cutting and drilling tools and equipment:
  - measuring equipment
  - saws

© Commonwealth of Australia, 2025 Skills Insight

  - routing machines
  - single or double end tenoners
  - mortisers
  - borers
  - multi-borers
  - drill presses
- cutting blades and drills:
  - square and angular router cutting bits
  - drills in varying sizes
  - mortising chisels
  - tenoning saws and chains
  - trenching heads
- maintenance tools and equipment for cutting and drilling tools
- consumable components; cutting blades and drills
- personal protective equipment suitable for cutting and drilling activities
- a diverse, comprehensive and commercial product range of timber
- manufacturers' instructions for use and maintenance of equipment
- work order for production activities with specific instructions for the cutting, drilling and storage of timber and timber products
- template reports for recording processing and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for production activities using joinery machines.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPTMM3203 Estimate and cost job

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3203B Estimate and cost job, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to estimate resource requirements for the manufacture of products for a customer.

The unit applies to timber manufactured products' technician and customer service operators who calculate costs including labor, materials and time requirements and provide quotations to customers for an individual customer job.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Source information for quotations	1.1 Obtain information on customer requirements and where required discuss with relevant personnel and customer. 1.2 Assess product information for suitability to customer requirements.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Determine delivery point and methods of transportation in line with organisational procedures. 1.4 Source, select and interpret product costing information. 1.5 Record all details in line with organisational procedures.
2. Estimate materials, time and labour	2.1 Estimate types and quantities of materials required for product manufacture. 2.2 Estimate labour and other resource requirements to manufacture product and to provide required services. 2.3 Document estimate for manufacture and service provision and check against customer requirements.
3. Calculate and document customer cost	3.1 Calculate costs for total materials, labour and overheads in line with organisational procedures. 3.2 Calculate costs for services, transportation and fees. 3.3 Apply mark-up, in line with organisational procedures, and determine total cost to customer. 3.4 Document details of calculations and customer cost in line with organisational formats.
4. Check costing details and prepare quotation	4.1 Check costs and calculations against product and service components and customer requirements. 4.2 Prepare and provide quotation to customer in line with organisational procedures and formats. 4.3 Complete and maintain accurate records of quotations in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret routine product and costing information and calculate routine customer supply costs • interpret and calculate organisational mark-up rates • calculate the final customer cost and present accurate figures in quotations.
Oral communication skills to:	• ask questions and actively listen to clarify customer requirements.

© Commonwealth of Australia, 2025 Skills Insight

Reading skills to:	• interpret organisational procedures for WHS and quotation preparation
	• interpret the content of sometimes unfamiliar and detailed product information documents, including:
	  • in-house price lists, product description sheets or manuals
	  • supplier price lists, product description sheets or manuals
	• interpret pre-existing customer records:
	  • sales notes
	  • product requirements and special requests.

Writing skills to:	• develop, document and present complex quotations in a clear format • provide clear and unambiguous information about: • product and service options, inclusions and costs • quotation conditions and limitations.
Planning and organising skills to:	• prepare quotations in logical sequence and manage own timing and productivity to complete quotations within deadlines.
Problem-solving skills to:	• identify and resolve mistakes in calculations.
Technology skills to:	• use a computer, keyboard and software to prepare and provide quotations.

Range of Conditions

Not Applicable

Assessment Requirements for FWPTMM3203 Estimate and cost job

Modification History

Release	Comment
	Replaces equivalent unit FPITMM3203B Estimate and cost job, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- prepare and present quotations for custom made products chosen from the following list:
  - stairs
  - doors
  - windows
  - frames
  - beams
  - roof trusses
  - floor systems
  - wall frames
- sample quotations must include calculations for:
  - labor
  - materials
  - overheads
  - delivery and transportation
  - installation

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- primary components of consumer protection laws that relate to the provision of quotations and organisational responsibility for:
  - nominating and charging cancellation fees
  - providing information on potential price increases
  - providing refunds
  - supplying products as described or substituting suitable products when unable
- industry and specific organisational:
  - quotation systems
  - sources of costs for materials and labor to manufacture and install
  - sources of information on overheads and how overheads are applied to individual quotes
  - delivery types and costs
  - types of fees charged and sources of fee amounts
  - mark-up rates and procedures
  - formats for and inclusions of quotations presented to customers
  - procedures for documenting calculations, communicating quotations to customers and maintaining records.

Assessment Conditions

The following resources must be made available:

- computers, keyboards and printers
- industry current software programs used to prepare and provide quotations
- customer briefs on which to quote, including product requirements and special requests
- product and other organisational information, either electronic or hard copy:
  - in-house price lists, product description sheets or manuals
  - costs for materials and labor to manufacture and install
  - schedule of overhead costs
  - delivery types and costs
  - schedule of fees
- template:
  - customer files
  - quotations
- organisational procedures for:
  - applying mark-ups
  - charging fees
  - preparing and presenting quotations

© Commonwealth of Australia, 2025 Skills Insight

  - documenting calculations, communicating quotations to customers and maintaining records
- relevant personnel for the purposes of communicating information
- current plain English regulatory documents distributed by government regulators for consumer protection law.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPTMM3204 Interpret designs to prepare timber roof truss drawings and documents using computers

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3204A Interpret designs to prepare timber roof truss drawings and documents using computers, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to interpret designs and plans to produce roof truss drawings and production documents using computers in a timber production or design setting.

The unit applies to Production Manager, Designer, Timber Manufactured Products Technician.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Interpret plans and designs	1.1 Gather information about designs and plans, design factors and specifications. 1.2 Access and interpret industry and organisational codes and standards to ensure production of compliant drawings and production documents. 1.3 Identify stakeholders and consult where clarification is needed.
2. Create roof truss layouts	2.1 Design roof trusses to ensure compliance with identified standards. 2.2 Check computer software for currency. 2.3 Input design factors and data to software. 2.4 Identify pitching lines and load bearing points. 2.5 Input roof shapes and create roof truss layout. 2.6 Refer design requirements outside software limitations to appropriate personnel for resolution.
3. Review roof truss layouts	3.1 Identify available materials and other production efficiencies and amend designs. 3.2 Review designs to ensure identified standards are maintained. 3.3 Follow organisational procedures to refer design variations to relevant stakeholders where design varies from identified standards.
4. Create outputs	4.1 Prepare drawings and documentation in line with identified standards. 4.2 Store drawings and documentation and communicate to relevant stakeholders.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret numerical data from designs and plan specifications involving height, length , angles, shape, pitch and load • identify and interpret numerical requirements within industry and organisational codes and standards • input accurate numerical data into software systems • recognise and interpret computer outputs of non-conforming measurements.
Oral communication skills to:	• ask questions and actively listen to clarify contents of designs, plans and technical specifications

© Commonwealth of Australia, 2025 Skills Insight

	• clearly articulate reasons for variations from industry and organisational codes and standards.

Reading skills to:	• interpret:
	  • WHS procedures, industry and organisational codes and standards
	  • designs, plans and technical specifications.

Writing skills to:	• input accurate written text into software systems • produce accurate and detailed documents to support interpretation of drawings and assist with production.
Planning and organising skills to:	• plan and organise own work in logical sequence and manage own timing and productivity to complete drawings and documents within deadlines.
Problem-solving skills to:	• recognise software design limitations and non-conforming designs and refer to others for resolution.
Teamwork skills to:	• work as part of an internal and external design and construction team to produce compliant drawings and production documents.
Technology skills to:	• use a computer, keyboard and software to complete roof truss drawings and production documents.

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to interpreting plans and designs to prepare roof truss drawings and production documents using computers
- prepare roof truss drawings and production documents suitable for manufacture of roof trusses

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content and application of industry and organisational codes and standards for timber roof trusses including
  - Building Code of Australia
  - Australian Standards
  - organizational quality standards
- limits of ability and authority with respect to non-conforming design
- roof trusses including:
  - A Type truss

© Commonwealth of Australia, 2025 Skills Insight

    - Truncated standard truss
    - Girder truss
    - Truncated girder
    - Jack truss
    - Rafter truss
    - Gable truss
    - Saddle truss
    - Raking truss
- common industry standard sizes, profiles and spacing dimensions
- shapes of common roof types:
    - bell
    - bowstring
    - dual pitch
    - gabled
    - hipped
    - mansard
    - skillion
- for the drawing software:
    - available drawing types
    - design limitations
    - system functions and capabilities
    - methods to input and amend design factors and other data
    - methods to store and retrieve drawings
- organisational policies and procedures specific to producing drawings and documents using computers:
    - workplace health and safety
    - communication reporting lines for internal and external stakeholders
    - filing computerised drawings and documentation

Assessment Conditions

The following resources must be made available:

- computers, keyboards and industry current software programs used to produce drawings and documentation for roof truss layouts
- industry and organisational codes and standards for roof trusses
- designs, plans and technical specifications for roof trusses
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- organisational policies and procedures for producing drawings and documents using computers

Interpret plans and designs	1.1 Gather information about designs and plans, design factors and specifications. 1.2 Access and interpret industry and organisational codes and standards to ensure production of compliant drawings and production documents. 1.3 Identify stakeholders and consult where clarification is needed.
2. Create floor systems	2.1 Design floor systems to ensure compliance with identified standards. 2.2 Check computer software for currency. 2.3 Input applied loads and data to software. 2.4 Identify load transfers and load bearing points. 2.5 Input floor area and create floor systems layout. 2.6 Refer design requirements outside software limitations to appropriate personnel for resolution.
3. Review floor system layouts	3.1 Identify available materials and other production efficiencies and amend designs. 3.2 Review designs to ensure identified standards are maintained. 3.3 Follow organisational procedures to refer design variations to relevant stakeholders where design varies from identified standards.
4. Create outputs	4.1 Prepare drawings and documentation in line with identified standards. 4.2 Store drawings and documentation and communicate to relevant stakeholders.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret numerical data from designs and plan specifications involving area, angles and load • identify and interpret numerical requirements within industry and organisational codes and standards • input accurate numerical data into software systems • recognise and interpret computer outputs of non-conforming measurements.
Oral communication	• ask questions and actively listen to clarify contents of designs,

© Commonwealth of Australia, 2025 Skills Insight

skills to:	plans and technical specifications • clearly articulate reasons for variations from industry and organisational codes and standards.

Reading skills to:	• interpret:
	  • WHS procedures, industry and organisational codes and standards
	  • designs, plans and technical specifications.

Writing skills to:	• input accurate written text into software systems • produce of accurate and detailed documents to support interpretation of drawings and assist with production.
Planning and organising skills to:	• plan and organise own work in logical sequence and manage own timing and productivity to complete drawings and documents within deadlines.
Problem-solving skills to:	• recognise software design limitations and non-conforming designs and refer to others for resolution.
Teamwork skills to:	• work as part of an internal and external design and construction team to produce compliant drawings and production documents.
Technology skills to:	• use a computer, keyboard and software to complete floor system drawings and production documents.

Assessment Requirements for FWPTMM3205 Interpret designs to prepare timber floor system drawings and documents using computers

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3205A Interpret designs to prepare timber floor system drawings and documents using computers, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organizational policies and procedures relevant to interpreting plans and designs to prepare timber floor system drawings and production documents using computers
- prepare floor system drawings and production documents suitable for manufacture of floor systems

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content an application of industry and organisational codes and standards for timber floor systems
- limits of ability and authority with respect to non-conforming design
- common industry standard sizes, profiles and spacing dimensions
- complete drawings for each of the following types of floor system inclusions in line with an
- key features of these common types of floor system inclusions:
  - I-beams
  - laminated beams

© Commonwealth of Australia, 2025 Skills Insight

  - solid timber sections
  - webbed truss
- for the drawing software:
  - available drawing types
  - design limitations
  - system functions and capabilities
  - methods to input and amend design factors and other data
  - methods to store and retrieve drawings
- organisational policies and procedures specific to producing drawings and documents using computers:
  - workplace health and safety
  - communication reporting lines for internal and external stakeholders
  - filing computerised drawings and documentation

Assessment Conditions

The following resources must be made available:

- computers, keyboards and industry current software programs used to produce drawings and documentation for floor layouts
- industry and organisational codes and standards for floor systems
- designs, plans and technical specifications for floor systems
- relevant personnel for the purposes of communicating information
- documents, spreadsheets and commonly used proforma documents
- organisational policies and procedures for producing drawings and documents using computers

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPTMM3207 Set up timber floor trusses

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3207A Set up timber floor trusses, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to plan and set up the assembly of timber floor trusses using a purpose built jig or computer-operated truss table and to oversee the operation of the truss press.

The unit applies to machine operators and product technicians in a timber and wood products production environment at either a truss/frame fabrication facility or timber merchant's facility.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for assembly	1.1 Review and clarify constructions plans and work order with appropriate personnel. 1.2 Obtain type and quantity of material to be assembled and hardware from storage location. 1.3 Select appropriate tools and equipment and check for operational

© Commonwealth of Australia, 2025 Skills Insight

	effectiveness in line with manufacturer's recommendations. 1.4 Identify and prepare set-up table or jigs required for construction.
2. Set up floor truss	2.1 Assess product size and number of joints with table or jig area; plan sections and layout. 2.2 Select timber components from pre-cut material in line with cutting list and check for fit. 2.3 Select steel web components in line with construction plans and standards. 2.4 Position jig components to accurately locate and support assembly components and adjust jig or table to suit. 2.5 Position and clamp components in jigs ready for joining with allowable faults, joins and grain in line with construction standards and grading rules. 2.6 Set components to include adjustments, overhang and other design requirements. 2.7 Set up webs to nominated pattern configuration. 2.8 Identify defective components; dispose of or recycle in line with environmental protection practices. 2.9 Clamp and/or nail components to maintain temporary alignment during assembly
3. Control pressing operations	3.1 Coordinate truss-pressing operations to ensure finished product complies with customer orders. 3.2 Correct assembly faults in line with organisational procedures.
4. Prepare products for despatch and report	4.1 Assess finished product for quality against construction standards and label in line with work order. 4.2 Remove components from table or jigs and safely stack in designated location in line with work order requirements 4.3 Strap, pack and label finished ready for transportation. 4.4 Report equipment faults to appropriate personnel. 4.5 Complete and maintain accurate records and reports of assembly outcomes in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Skills Insight

Numeracy skills to:	• interpret production data from construction plans to:
	  • count quantities of timber and hardware components and select appropriate sizes
	  • complete calculations for section layouts
	  • accurately measure lengths, overhang and angles.

Oral communication skills to:	• ask questions and actively listen to clarify contents of constructions plans and work orders • make accurate verbal reports on equipment faults.

Reading skills to:	• interpret:
	  • WHS and other organisational procedures, constructions standards and grading rules
	  • construction plans and work orders
	  • manufacturer's instructions.

Writing skills to:	• produce basic clear labels for product identification and transportation • complete accurate basic reports on assembly outcomes.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify production problems involving defective components, assembly faults, faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate machinery, tools and personal protective equipment used to assemble timber floor trusses.

Assessment Requirements for FWPTMM3207 Set up timber floor trusses

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM3207A Set up timber floor trusses, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete assembly jobs, in line with an individual work order and construction plan chosen from the list below:
  - joist assembly
  - purlins assembly
  - chords assembly
  - beam assembly.
  -

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- quality requirements of national building codes and standards
- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - disposing of, recycling and reusing timber and other waste
- storage layout and categories for:
  - raw materials
  - stacking finished materials

© Commonwealth of Australia, 2025 Skills Insight

- characteristics of timber and timber defects
- assembly sequences and jig operation
- assembly, componentry and construction standards
- industry standard cross-sections and lengths
- types of tools and equipment for setting up timber floor trusses; their purpose, features, and operation including:
  - measuring equipment
  - electric circular saws
  - docking saws
  - drills
  - assembly jigs
  - assembly table
  - nail plate presses
  - staple guns
  - nail guns
  - compressor or compressed air supply
  - marking equipment
  - strapping equipment
- organisational procedures specific to setting up timber floor trusses including:
  - workplace health and safety
  - use of equipment
  - communication reporting lines
  - recording and reporting assembly outcomes and equipment faults
  - labelling products for identification and transportation.
  -

Assessment Conditions

The following resources must be made available:

- timber floor truss assembly tools and equipment which must include one or more of the following:
  - measuring equipment
  - electric circular saws
  - docking saws
  - drills
  - assembly jigs
  - assembly table
  - nail plate presses
  - staple guns
  - nail guns
- compressor or compressed air supply

© Commonwealth of Australia, 2025 Skills Insight

- marking equipment
- assembly hardware which must include one or more of the following:
  - nailing plates
  - floor truss plates
  - bracing
  - supplementary fittings and fixings
  - nail gun nails and staples
- personal protective equipment suitable for setting up timber floor trusses
- pre-cut sections of timber
- work order and construction plan with specifications for setting up timber floor trusses
- template reports for recording assembly outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for setting up timber floor trusses

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPTMM3208 Apply critical workplace processes in the manufacture of prefabricated timber building systems

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to conduct production tasks on an assembly line for panelised or modular prefabricated timber building systems safely and efficiently. Critical workplace processes covered in this unit include workplace health and safety, storage and handling of building materials for major timber building sub-assemblies, quality check at the workstations before and after assembly work and control of waste material for disposal.

The unit applies to individuals who work as operators in a prefabricated timber building systems manufacturing plant. These include wood machinists, carpenters or joiners, supervisors and other trade and multi-skilled operators. Operators generally work under broad or limited direction to complete routine activities related to their own work, and take responsibility for their work.

In order to undertake this unit, individuals must have a relevant qualification or equivalent.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Apply workplace health and safety during the assembly operation	1.1 Obtain and review workplace health and safety requirements and emergency procedures for assembly operation and, where required, check with appropriate personnel 1.2 Use personal protective equipment and identify and report hazards, accidents, incidents or near misses throughout assembly operation according to workplace requirements and health and safety legislation to maintain safe work practices
2. Store and handle building materials for major sub-assemblies	2.1 Use the storage system provided for tools, equipment and building materials to enhance accessibility, protect material, and replenishment of commonly used resources 2.2 Ensure that large sub-assemblies and materials are positioned according to workplace procedures for ease of access and safety, enabling optimal use of floor space and production efficiency
3. Check the quality of building materials before assembly work begins	3.1 Obtain and review task-specific information including design and production documents to ensure that product quality and production schedules and targets are met and that materials used conform to building products 3.2 Access building materials from storage, check the suitability for the task, quantity, relevant product certification and quality and assemble as required to meet design specifications, standards, codes, certification and production schedule 3.3 Ensure partition walls, floor elements and other regulated components are certified for thermal, acoustic and fire properties according to the design, local codes and standards 3.4 Report any incorrect information and unsuitable and non-conforming building materials to appropriate personnel for repairing the defect, resolving its cause and preventing recurrence 3.5 Access sub-assemblies from storage and check incoming variations in work processes or in design and equipment specifications 3.6 Address or report incoming variations to the appropriate personnel 3.7 Follow workplace procedures to ensure that the work is of the required standard and completed on time
4. Check the quality of completed sub-assembly product and process	4.1 Complete and check the quality of the assembly work to ensure it meets design specifications 4.2 Identify and rectify safety risks associated with manual handling

© Commonwealth of Australia, 2025 Skills Insight

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	of completed sub-assembly or prefabricated timber building system before its release to the next workstation or its delivery for on-site installation 4.3 Document and report time, product variations and work processes to identify non-value-added activities, delays and inefficiencies and initiate process improvement
5. Assess waste materials for reuse or disposal	5.1 Sort and store waste materials from assembly work according to health and safety procedures 5.2 Prepare waste materials for reuse or disposal according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Read a range of workplace documentation, including workplace health and safety plans, materials certification, design and production documents
Numeracy	• Calculate quantity, length, volume, area and waste associated with the assembly of prefabricated timber building systems
Navigate the world of work	• Take responsibility for decisions made to meet specifications and workplace requirements
Interact with others	• Understand what to communicate, with whom and how in routine work situations
Get the work done	• Take responsibility for planning and organising own workload

Assessment Requirements for FWPTMM3208 Apply critical workplace processes in the manufacture of prefabricated timber building systems

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least three occasions, the individual applied critical workplace processes in the manufacture of prefabricated timber building systems for one or more panelised or modular prefabricated timber building system types, including:

- cross-laminated timber floor and wall systems
- post and beam systems (Glulam, laminated veneer lumber)
- panelised floor cassette systems
- panelised wall systems (including cladding, insulation, windows or doors)
- panelised and pre-finished wall systems (inclining above, electrical, plumbing, mechanical or lining)
- pre-finished and fully finished timber-based modules.

In doing the above, the individual has:

- implemented workplace health and safety procedures and practices at the assembly workstation
- demonstrated safe and efficient work practice for storing and handling building materials and sub-assemblies according to workplace procedures
- reviewed design and production documents and understood assembly work requirements regarding quality, quantity and production schedules and targets
- checked the quality of building materials and sub-assemblies from previous work against design specifications and certification requirements before commencing the assembly work
- checked completed sub-assembly or prefabricated timber building system against specifications and safe manual handing before being released to the next workstation or delivered for on-site installation
- documented and reported time and product variations, defects and work processes efficiently and according to workplace procedures.

© Commonwealth of Australia, 2025
Skills Insight

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- task-specific information and requirements contained in drawings, design specifications, production schedules, work method statements, risk assessments and manufacturer information
- health and safety hazards or risks related to the assembly activity and as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides, including:
  - lifting and handling of large building materials and sub-assemblies, including the use of tools and handling equipment
  - methods of work
  - product storage
- workplace health and safety procedures and practices related to the assembly activities, including:
  - emergency response procedure and responsibilities when involved with fires, spillages and injuries relating to occupational activities
  - accident reporting procedures and responsibilities
  - safe use of personal protective equipment (PPE)
- efficient storage of building materials and replenishment systems in the off-site manufacture of prefabricated timber building systems
- methods for efficient handling and positioning of large timber building sub-assemblies and materials at workstations along assembly lines
- aspects of design specifications for a range of prefabricated timber building systems and their final application:
  - types, quantity, quality, sizes, suitability and sustainability of building materials including wood structural components and fixings; choice of materials and properties
  - services components including hydraulics, electrical or heating, ventilation and air conditioning
  - jurisdictional standards, codes and certifications for building materials, services, components and fixings in the location where prefabricated timber building systems are installed
  - regulated components, including partition walls and floor elements, and valid documentation for attesting compliance with thermal, acoustic and fire requirements
  - acceptable tolerances and continuity or discontinuity requirements for materials, insulation systems and services related to a range of prefabricated timber building systems; the importance for on-site installation and in-service life cycle
- workstations or operations associated with a particular production line for prefabricated timber building systems; order of sequence or flow of sub-assembled products and information between process activities
- bottleneck operations and causes for delays or inefficiencies, including product design variations and rework due to damage, material unavailability, poor quality, incorrect positioning in the sub-assembly area, design questions or errors

© Commonwealth of Australia, 2025
Skills Insight

- methods for and importance of reporting incorrect information, unsuitable building material resources, incoming defects and design variations
- elements associated with manual handling hazards and risks of completed timber building systems, including:
  - cut metal edges
  - exposed screw tips and nails
  - abrasion of insulation materials resting on metal edges
  - pinch points in connections
  - surfaces that can retain rainwater
- methods for sorting and storing waste materials.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workstation on an assembly line for prefabricated timber building systems or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - specialised tools and material handling equipment for the operational activity
  - building materials and sub-assemblies related to different prefabricated timber building systems
  - PPE used in the off-site manufacture of prefabricated timber building systems
- specifications:
  - access to drawings, design documentation, production schedules and targets, method statements, risk assessments, workplace health and safety procedures, manufacturer information, certification for regulated building material and building regulations
  - access to emergency procedures
  - access to templates for documenting and reporting issues regarding product quality and time and process variations
- timeframes:
  - according to the time specified in the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPTMM3209 Install prefabricated timber building systems on-site

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to position and connect panelised or modular prefabricated timber building systems safely and correctly during on-site installation.

The unit applies to individuals who work in the occupational area of installing prefabricated timber building structures. These include construction workers, carpenters or joiners and site supervisors. They generally work under broad or limited direction to complete routine activities related to their own work, and take responsibility for their work.

In order to undertake this unit, individuals must have a relevant trade qualification or equivalent.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Apply workplace health and safety during on-site installation	1.1 Obtain all workplace health and safety information to ensure that activities are performed safely 1.2 Identify workplace and task-specific hazards and report accidents, incidents or near misses during on-site installation according to workplace health and safety requirements to maintain a safe workplace 1.3 Identify and use required risk-control and safety measures and equipment according to workplace health and safety requirements
2. Plan and prepare for installation work	2.1 Obtain and review relevant workplace information, including task instructions, drawings, design specifications, schedules and manufacturer information, and seek clarification if necessary 2.2 Confirm installation timeframe and sequence with relevant stakeholders or personnel to meet design specifications and on-site work schedules 2.3 Review drawings and design specifications to identify the type, location and quantity requirements for fixings, connections and bracing 2.4 Check building structure, slab or floor area and report non-conformance as per workplace processes 2.5 Select tools, auxiliary materials and equipment for the installation of prefabricated timber building systems as required, and set up equipment to meet safe work requirements 2.6 Obtain information needed to ensure that the inspection, use, maintenance and storage of equipment comply with manufacturer directions 2.7 Maintain appropriate ongoing communications and briefings with key stakeholders, including feedback and timeline reviews, for the duration of the installation
3. Check prefabricated timber building systems logistics and storage on-site	3.1 Ensure prefabricated timber building systems are delivered on-site in-line with the phase of the construction project and installation 3.2 Ensure there is no risk of damage by weather (moisture), traffic or general construction to prefabricated timber building systems and that they are stored as close as practically possible to the construction site when storage is required 3.3 Check prefabricated timber building systems, connections and support points for quantity, quality, tolerance compliance and conformance and damage upon delivery, and report issues to the appropriate personnel or according to operational requirements

© Commonwealth of Australia, 2025 Skills Insight

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
4. Install prefabricated timber building systems	4.1 Use tools and equipment safely and correctly according to operational requirements and manufacturer specifications to measure, mark out, level, finish and secure prefabricated timber building systems according to specifications 4.2 Assist crane or dogger operators to lift prefabricated timber building systems in the sequential order and apply accurate placement and connection techniques to the required tolerances and specifications 4.3 Check corners and walls to ensure they are accurately levelled, plumbed and squared according to specifications and operational requirements 4.4 Check prefabricated timber building systems after installation against critical performance metrics and apply sealants as required to ensure compliance with fire, waterproofing and acoustic requirements and with design specifications 4.5 Protect prefabricated timber building systems from damage and adverse weather conditions during the installation work and other worksite activities
5. Complete installation	5.1 Complete installation within the required timeframe and according to on-site work schedules 5.2 Maintain and store hand and power tools, equipment and machinery according to operational requirements 5.3 Keep work area and access areas free of debris and waste material according to operational requirements 5.4 Record any quality checks and changes or variations applied to a prefabricated timber system during the on-site installation work, according to operational requirements and communicate the process

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**
Navigate the world of	• Take responsibility for decisions made to meet design

© Commonwealth of Australia, 2025 Skills Insight

Skill	Description
work	specifications and installation, storage and worksite requirements
Interact with others	• Understand what to communicate, with whom and how in routine work situations • Provide relevant information to others as required
Get the work done	• Take responsibility for planning and organising own workload • Assess effectiveness regarding how well the work was achieved and how closely the process followed the original plan and timeframes • Consider how to link with the work of others

Assessment Requirements for FWPTMM3209 Install prefabricated timber building systems on-site

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least three occasions, the individual has installed prefabricated timber building systems on-site, for two or more panelised or modular prefabricated timber building system types, including:

- cross-laminated timber floor and wall systems
- post and beam systems (Glulam, laminated veneer lumber)
- panelised floor cassette systems
- panelised wall systems (including cladding, insulation, windows or doors)
- panelised and pre-finished wall systems (inclining above, electrical, mechanical, plumbing or lining)
- pre-finished and fully finished timber-based modules.

In doing the above, the individual has:

- complied with health and safety requirements and regulations applicable to workplace operations
- identified design requirements and installation sequence of prefabricated timber building systems
- identified and selected correct fittings, connections, tie-downs and braces for the installation of prefabricated timber building systems
- checked suitability of building structure, slab or floor area for the installation of prefabricated timber building systems
- applied workplace quality procedures and processes in the context of installing prefabricated timber building systems
- selected and used processes, tools and equipment for measuring, marking out, levelling and securing prefabricated timber building systems into place
- placed prefabricated timber building system safely, efficiently and to required tolerances and installed connectors to required specifications
- checked that walls and corners are accurately levelled, plumbed and square
- identified typical faults and problems and rectified faults
- communicated efficiently with others, exchanging feedback and timeline reviews.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant current health and safety legislative obligations and workplace procedures as described in industry health and safety guides and site workplace health and safety plans
- hazards associated with the construction work and as identified through safe work method statements (SWMS), risk assessments, manufacturer technical information, regulations and industry health and safety guides, including but not limited to:
  - building systems and components
  - methods of work
  - waste material
  - risk of fire
  - power lines
  - cabling and plumbing
  - drains covered correctly
  - access and egress
- safety measures and equipment:
  - fire prevention and emergency procedures
  - evacuation procedure
  - signs and barricades
  - personal protective equipment (PPE)
  - fall prevention and fall arrest equipment
  - other methods for reducing the risk from fire and other hazards on a construction site as defined in the National Construction Code and site safety plan
- types of task-specific documents, their source, information included and how they are read and interpreted with reference to:
  - drawings
  - design specifications
  - on-site workflow, schedules and targets
  - method statements
  - risk assessments
  - progress charts and timetables
  - manufacturer information
  - product certifications
  - building regulations
- basic design and offsite manufacture processes for prefabricated timber building systems for recognising problems that arise from missing information, damaged or faulty prefabricated timber building systems and understanding methods to resolve them
- installation design specifications for different prefabricated timber building systems with reference to:

© Commonwealth of Australia, 2025 Skills Insight

  - installation sequence
  - lifting equipment, support connections and techniques
  - bracing techniques
  - technical properties and specific requirements of materials, elements, components, insulations and connections
  - mechanical fixings, tie-downs and braces, connection strengths and installation tolerances
- building checks before prefabricated timber building system installation and the importance of checking
- testing and checking of prefabricated timber building systems for quality assurance:
  - required tests for different prefabricated timber building system and methods to undertake them
  - test sampling and frequency of testing within a managed process
- specialised tools and equipment for installation and fixing of different prefabricated timber building systems and methods of operation
- methods for measuring and calculating the quantity, length, area, centre of gravity and mass of different prefabricated timber building systems for lifting and installation operations
- techniques for accurate placement of prefabricated timber building systems before the full installation
- problems or faults related to prefabricated timber systems, including materials, components, connections or insulations that arise from on-site installation and impact on structural, fire and acoustic performance of the system
- critical performance metrics used in the on-site installation operations of prefabricated timber building systems regarding quality, cycle time, productivity and inventory
- methods for reporting:
  - circumstances that affect the work cycle time
  - quality checks
  - product changes or variations during installation
- maintenance and servicing requirements for tools and equipment as outlined in workplace procedures or manufacturer manual
- waste management procedures regarding safe disposal and recycling.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a construction site or environment that accurately represents workplace conditions
- resources, equipment and materials:
  - specialised tools and equipment for installation and fixing of prefabricated timber building systems
  - prefabricated timber building systems, components, sections and fittings

© Commonwealth of Australia, 2025 Skills Insight

    - PPE, signs and barricades, fall prevention and fall arrest equipment used in building construction operations
- specifications:
    - access to workplace health and safety policies, SWMS, emergency procedures, fire safety plans, drawings, design specifications, on-site workflow, schedules and targets, work method statements, risk assessments, manufacturer information and operating instructions for specialised tools and equipment, product certifications and building regulations
- relationships:
    - team member(s) including licenced crane operator and licenced dogger to lift prefabricated timber building systems
- timeframes:
    - according to time specified in job sheet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPTMM4202 Diagnose and calculate production costs

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM4202B Diagnose and calculate production costs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to estimate resource requirements for production of a range of timber products; to calculate overarching production costs and determine general supply costs. The preparation of individual quotations for customers is covered in FWPTMM3203 Estimate and cost job. Work is completed in a forest products factory setting.

The unit applies to timber manufacturing and production supervisors determine production and supply costs for the provision or products, including all overheads, in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Gather and diagnose information	1.1 Obtain details of the particular product and competitors' products.

© Commonwealth of Australia, 2025 Skills Insight

	1.2 Obtain and analyse details of proposed production operation. 1.3 Access information on labour unit cost projections. 1.4 Source and analyse details of logistic support contracts and supply agreements. 1.5 Access details of proposed warehousing, physical distribution systems and related cost factors. 1.5 Analyse all production cost factors for establishing supply cost.
2. Estimate materials and labour	2.1 Estimate and record types and quantities of material required for production. 2.2 Estimate and record lead times and time requirements for production activities. 2.3 Estimate and record labour requirements for direct production and handling operations.
3. Calculate and document production cost	3.1 Determine production components contributing to overhead costs. 3.2 Determine type and percentage of overhead costs to be attributed to production in line with commercial and organisational procedures. 3.3 Calculate material, labour and overhead costs to determine total production costs. 3.4 Apply mark-up, in line with organisational procedures, and determine supply cost in conjunction with marketing and sales personnel. 3.5 Document details of calculations and supply cost in line with organisational formats.
4. Check and document details of production and supply costs.	4.1 Check costs and calculations against production requirements. 4.2 Report calculation processes and organise checking by relevant personnel for final authorisation. 4.3 Complete and maintain accurate records of production and supply costs in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and

© Commonwealth of Australia, 2025 Skills Insight

are not explicit in the performance criteria.	
Numeracy skills to:	• interpret production costing information and calculate complex production and supply costs • interpret and calculate organisational mark-up rates • present accurate figures in records of calculations, production and supply costs.
Oral communication skills to:	• clearly represent details of complex production costing information, calculations and rationale for proposed supply cost.

Reading skills to:	• interpret detailed and familiar organisational procedures for production costing
	• interpret complex documents about:
	  • supply and distribution contracts
	  • labour unit costs
	  • organisational overheads.

Writing skills to:	• develop, document and present complex production and supply costs in a clear format.
Planning and organising skills to:	• collect and organise data to inform production costing activities • plan and manage own timing and productivity to complete production costing within deadlines.
Problem-solving skills to:	• identify and resolve mistakes in calculations.
Teamwork skills to:	• consult with and seek feedback from other team members involved in determining production and supply costs. •
Technology skills to:	• use a computer, keyboard and software to prepare and record production and supply costs.

Range of Conditions

Not Applicable

Assessment Requirements for FWPTMM4202 Diagnose and calculate production costs

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM4202B Diagnose and calculate production costs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- diagnose and calculate production costs for at least two product ranges selected from this list:
  - pallets
  - crates
  - trellises
  - stairs
  - doors
  - windows
  - frames
  - beams
  - roof trusses
  - floor systems
  - wall frames.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- competitors' current products and services and price structure
- sources of negotiated cost of supply, contractual arrangements and preferred supplier arrangements
- sources of organisational costs for:
  - materials specific to production operations
  - labour unit costs specific to production operations
  - particular construction methods
  - complying with environmental protection practices
  - warehousing and distribution
- business overheads and how overheads are applied to individual production operations
- desired profit margins and appropriate commercial mark-ups to suit market acceptance
- organisational procedures for documenting calculations, communicating costs to relevant personnel and maintaining records.

Assessment Conditions

The following resources must be made available:

- computers, keyboards and printers
- industry current software programs used to calculate and document production and supply costs
- comprehensive information about the financial operating costs of a real or simulated business to determine production and supply costs
- relevant personnel for the purposes of communicating information
- organisational procedures for documenting calculations, communicating costs to relevant personnel and maintaining records.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPTMM4203 Install and commission CNC software

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM4203B Install and commission CNC software, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to install and commission computer numerically controlled (CNC) processes and machine control programs for CNC sizing machines and CNC machining and processing centres. Work is completed in a forest and wood products factory setting

The unit applies to managers or supervisors of timber manufacturing facilities who update machinery and commission new equipment in response to technological improvements and new operational imperatives.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for software	1.1 Diagnose program format and operational purpose and

© Commonwealth of Australia, 2025 Skills Insight

installation	identify specified applications. 1.2 Check specifications for intended operating conditions. 1.3 Check program instructions for compliance with specifications. 1.4 Counter set software timers to specification.
2. Install automatic process machine control programs	2.1 Select appropriate program loading technique. 2.2 Connect external loading devices correctly to automatic process machine control system. 2.3 Place machine control system in correct operational mode to accept program loading. 2.4 Download program in line with manufacturer's recommended procedure. 2.5 Check during and after downloading to ensure accurate and complete data transfer. 2.6 Disconnect external program loading devices and connections from process and machine control system.
3. Commission automatic process and machine control program	3.1 Monitor operation of equipment using the program for accuracy and safe performance. 3.2 Measure and check outputs for compliance with specifications. 3.3 Check external inputs for compliance with specifications. 3.4 Check total operation for compliance with specifications and resolve any issues. 3.5 Identify location for storage of program master copy and store accordingly. 3.6 Record installation and commissioning process and problems and report to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret sizing specifications for machines and monitor the operation of commissioned machines to ensure accurate calibration.
Reading skills to:	• interpret detailed and sometimes unfamiliar instructions for installing CNC software and commissioning machinery.

© Commonwealth of Australia, 2025 Skills Insight

Writing skills to:	• complete detailed and accurate reports on installation and commissioning processes and problems.
Planning and organising skills to:	• efficiently and logically manage operational logistics for installing software and commissioning machinery.
Problem-solving skills to:	• monitor machinery for compliance with calibration specifications and resolve any issues.
Technology skills to:	• use computerised operating controls for CNC machines to monitor accurate and safe performance.

Assessment Requirements for FWPTMM4203 Install and commission CNC software

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM4203B Install and commission CNC software, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- install and commission computer numerically controlled (CNC) software in CNC sizing machines and/or CNC machining and processing centres
- check that machine is operating safely and in line with its intended purpose and program
- complete a detailed and accurate report, for each installation, on the installation and commissioning process and problems encountered.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- for the CNC software:
- program format and operational purpose
- system functions and capabilities
- methods to install
- methods to commission machinery to operational specification
- requirements for safe storage of program master copy
- for the machine being commissioned:
- operational purpose and sizing specifications
- methods to monitor the operation of commissioned machines and check calibration

FWPTMM4204 Sample and test products to specifications

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM4204B Sample and test products to specifications, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to take product samples and to select and apply authorised testing procedures to ascertain the cause of a problem or to improve techniques.

The unit applies to those who interpret test results and reporting findings in a forest products factory setting. Testing can be for manufactured products, components, assemblies, raw materials, timber, metal alloys, glass, adhesives, fillers, finishes and any other entities produced by the organisation.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for testing	1.1 Select conforming or non-conforming products, materials or waste are for testing in line with organisational requirements.

© Commonwealth of Australia, 2025 Skills Insight

	1.2 Interpret product quality specifications and drawings and select test parameters. 1.3 Obtain type and quantity of entities for testing and note design features that impact on testing and inspection. 1.4 Select and calibrate appropriate equipment and check for operational effectiveness in line with manufacturer's recommendations. 1.5 Select and plan testing process in line with organisational procedures.
2. Test samples	2.1 Follow workplace health and safety procedures throughout testing activities. 2.2 Collect procedures and information on operator observation. 2.3 Analyse information on problems or improvement requirements. 2.4 Prepare samples and identify manufacturing dates, times and batches from production records. 2.5 Establish and review test data in line with organisational procedures. 2.6 Conduct test in line with industry standards and environmental protection practices. 2.7 Compare all collected data and check results by further sampling and testing.
3. Evaluate and report test outcomes	3.1 Evaluate test results for impact on production processes. 3.2 Take action to rectify or improve on achieved test results. 3.3 Develop recommendations and consider feasibility of suggestions. 3.4 Record test process, results and recommendations and report to production personnel to facilitate process control or change.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Learning skills to:	• test production samples and evaluate outcomes to inform new production techniques.
Numeracy skills to:	• determine appropriate numbers of entities for sample testing to provide reliable test results • interpret numerical production data from specifications, plans and drawings involving dimensions and mixture quantities • calculate and record dimensions and mixture quantities of

© Commonwealth of Australia, 2025 Skills Insight

	sampled entities and assess against quality specifications.
Oral communication skills to:	• ask questions and actively listen to consult with and seek feedback from production personnel.
Reading skills to:	• interpret information in product specifications and plans.
Writing skills to:	• clearly and accurately report on test process and test results • clearly represent rationale for recommended changes to future production processes.
Planning and organising skills to:	• efficiently and logically manage operational logistics for sample testing.
Problem-solving skills to:	• analyse production problems, consider various solutions and determine recommended changes.
Technology skills to:	• select, calibrate and use equipment appropriate for conducting tests • use a computer, keyboard and software to prepare reports.

Assessment Requirements for FWPTMM4204 Sample and test products to specifications

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM4204B Sample and test products to specifications, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- sample and test product types in line with authorised testing procedures including:
  - manufactured products
  - components
  - assemblies
  - raw materials
  - timber
  - metal alloys
  - glass
  - adhesives
  - fillers, finishes
  - any other entities produced by the organisation
- evaluate test results, for the selected range of products, and complete a detailed and accurate report, covering:
  - test process
  - size of sample
  - results of testing against product quality specifications and set tolerances
  - recommendations to facilitate process control or change.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for sampling and testing products in a forest products factory settings:
- reducing water and energy use
- safe use and storage of chemicals
- cleaning of plant, tools and equipment
- disposing of, recycling and reusing timber and other waste
- industry common and specific organisational:
- sampling and testing processes and techniques for products
- characteristics of raw materials and other entities
- testing conditions and facilities
- product quality specifications and set tolerances
- common types of tools and equipment used to test products; their purpose, features, operation and calibration requirements
- organisational procedures specific to sampling and testing products:
- workplace health and safety
- use of testing equipment
- sampling and testing processes
- communication reporting lines
- recording and reporting on test process and test results.

Assessment Conditions

The following resources must be made available:

- testing equipment, tools and gauges
- personal protective equipment suitable for sampling and testing products
- a comprehensive range of commercially available raw materials and other entities subject to testing
- product quality specifications and set tolerances
- templates for recording and reporting on test process and test results
- relevant personnel for the purposes of communicating information
- organisational procedures for sampling and testing products

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and

© Commonwealth of Australia, 2025 Skills Insight

- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Interpret plans or designs and create layouts	1.1 Identify and verify design inputs. 1.2 Check computer software for currency and use to prepare roof truss layouts and production documentation.

© Commonwealth of Australia, 2025 Skills Insight

	1.3 Resolve design requirements outside software limitations.
2. Review and test design options	2.1 Review and test roof truss layouts for optimal suitability for stakeholders. 2.2 Use effective processes to optimise roof truss layout and ensure stakeholder objectives are met.
3. Provide advice on design, production and installation issues	3.1 Prepare and document production and installation advice. 3.2 Communicate documented advice to all stakeholders, prior to and following installation.
4. Manage roof truss outputs	4.1 Certify roof truss design layouts in line with regulatory and organisational requirements and communicate to relevant stakeholders. 4.2 Store and maintain drawings and documentation in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.
• interpret numerical data from designs and plan specifications involving height, length , angles, shape, pitch and load • input accurate numerical data into software systems.
• interpret detailed and unfamiliar designs, plans and technical specifications.
• input accurate written text into software systems • produce accurate and detailed documents to support interpretation of drawings and assist with production and installation.
• plan and organise own work in logical sequence and manage own timing and productivity to complete drawings and documents within deadlines.
• recognise software design limitations and resolve.
• work as part of an internal and external design and construction team to produce compliant drawings and production documents.
• use a computer, keyboard and custom software to complete roof truss drawings, production and installation documents.

Assessment Requirements for FWPTMM4205 Prepare and advise on a broad range of timber roof truss details using computers

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM4205A Prepare and advise on a broad range of timber roof truss details using computers, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organizational policies and procedures relevant to preparing and advising on a broad range of timber roof truss details using computers
- prepare and advise on a broad range of timber roof truss details using computers
- prepare roof truss layouts and production documentation for roof truss types across the following list:
  - "A" type truss
  - truncated standard
  - raking truss
  - girder truss
  - truncated girder
  - jack girder
  - rafter truss
  - gable truss
  - saddle truss
  - bowstring truss
  - vaulted truss
  - truncated saddle

© Commonwealth of Australia, 2025 Skills Insight

-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- content and application of applicable regulations for certifying roof truss design layouts
- limits of personal ability and authority for non-conforming design including
  - Building Codes of Australia
  - Australian Standards
  - organisational quality standards
- common industry standard sizes, profiles and spacing dimensions
- shapes of common roof types:
  - bell
  - bowstring
  - dual pitch
  - gabled
  - hipped
  - mansard
  - skillion
- interaction between roof truss types
- design inputs including:
  - identified standards
  - pitching lines and load bearing points
- and design factors including:
  - roof material loads
  - wind zone and applied loads
  - commercial or residential output
  - additional roof loading
  - post disaster structures
  - roof shape
  - roof lines
- for the drawing software:
  - available drawing types
  - design limitations
  - system functions and capabilities
  - methods to input and amend design factors and other data
  - methods to store and retrieve drawings
- organisational procedures specific to producing drawings and documents and advising on roof truss details:
  - communication reporting lines for internal and external stakeholders

© Commonwealth of Australia, 2025 Skills Insight

- certifying roof truss layouts
- filing computerised drawings and documentation
-

Assessment Conditions

The following resources must be made available:

- computers, keyboards and industry current software programs used to produce drawings and documentation for roof truss layouts
- applicable regulations for certifying roof truss design layouts
- industry and organisational codes and standards for roof trusses
- designs, plans and technical specifications for roof trusses
- templates for developing production and installation advice
- template certification documents
- relevant personnel for the purposes of communicating information
- organisational procedures for producing drawings and documents and advising on roof truss details

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPTMM4206 Prepare and advise on a broad range of timber floor system details using computers

Modification History

Release	Comment
1	Replaces equivalent unit FPITMM4206A Prepare and advise on a broad range of timber floor system details using computers, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to prepare and advise on a broad range of timber floor system drawings, production documents and installation instructions using custom software. Work is completed in a timber production or design setting.

The unit applies to Customer Service / Sales Assistant (Retail or Wholesale), Customer Service Officer, Sales and Merchandising Team Leader, Sales and Merchandising Team Leader (Timber Products), Timber Advisor.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Interpret plans or designs and create	1.1 Identify and verify design inputs. 1.2 Check computer software for currency and use to prepare floor

© Commonwealth of Australia, 2025 Skills Insight

layouts	system layouts and production documentation. 1.3 Resolve design requirements outside software limitations.
2. Review and test design options	2.1 Review and test floor system layouts for optimal suitability for stakeholders. 2.2 Use effective processes to optimise floor system layout and ensure stakeholder objectives are met.
3. Provide advice on design, production and installation issues	3.1 Prepare and document production and installation advice. 3.2 Communicate documented advice to all stakeholders, prior to and following installation.
4. Manage floor system outputs	4.1 Certify floor system design layouts in line with legislative and organisational requirements and communicate to relevant stakeholders. 4.2 Store and maintain drawings and documentation in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• interpret numerical data from designs and plan specifications involving area, angles and load • input accurate numerical data into software systems.
Reading skills to:	• interpret detailed and unfamiliar designs, plans and technical specifications.
Writing skills to:	• input accurate written text into software systems • produce accurate and detailed documents to support interpretation of drawings and assist with production and installation.
Planning and organising skills to:	• plan and organise own work in logical sequence and manage own timing and productivity to complete drawings and documents within deadlines.
Problem-solving skills to:	• recognise software design limitations and resolve.
Teamwork skills to:	• work as part of an internal and external design and construction team to produce compliant drawings and production documents.
Technology skills to:	• use a computer, keyboard and custom software to complete floor system drawings, production and installation documents.

FWPTMM4208 Construct prototypes and samples for timber structures

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to construct prototypes and samples of timber structures in a production setting according to established plans, drawings or other specifications for testing the viability of timber construction methods.

The unit applies to individuals who work as timber fabricators, supervisors and designers of timber structures. They generally demonstrate autonomy, judgement and limited responsibility in known or changing contexts and within established parameters.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 Skills Insight

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for construction of prototypes and samples for timber structures	1.1 Review the purpose for prototype or sample, work order, prototype construction plans, workplace health and safety requirements, environmental protection practices and emergency procedures and, where required, clarify requirements with appropriate personnel 1.2 Identify and report hazards and use personal protective equipment according to workplace requirements and health and safety legislation to maintain safe work practices 1.3 Obtain the type and quantity of material to be assembled and hardware according to prototype construction plan and specifications 1.4 Select appropriate tools and equipment and check for operational effectiveness according to manufacturer recommendations 1.5 Plan and document stages of the prototype construction process
2. Set up equipment and components	2.1 Select and prepare set-up jigs required for prototype construction 2.2 Select timber components, check for compatibility with specifications and cut according to the prototype or sample plans 2.3 Position and clamp components in jigs ready for joining with allowable faults, joins and grain according to construction standards and grading rules 2.4 Identify defective components, incorrect timber cuts and off-cuts and dispose of or recycle according to environmental protection practices 2.5 Staple components to maintain temporary alignment during assembly
3. Construct and review prototypes and samples	3.1 Follow prototype construction plan throughout the assembly and conduct checks at designated points 3.2 Position and install hardware on joints to prototype specifications 3.3 Nail or staple temporary bracing to the product according to construction standards 3.4 Identify required modifications to designs and plans, and document and follow recommended changes 3.5 Correct construction faults according to recommendations 3.6 Review prototype or sample for the effectiveness of purpose and efficiency of timber construction methods 3.7 Record prototype or sample construction processes, problems and recommendations for change, and report to appropriate personnel

© Commonwealth of Australia, 2025 Skills Insight

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	3.8 Store temporary bracing, prototypes and samples and dispose of when not required according to environmental protection practices

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Numeracy	• Interpret production data from construction plans to:
	  • count quantities of timber and hardware components and select appropriate sizes
	  • complete calculations from plans
	• accurately measure dimensions and angles

Navigate the world of work	• Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Use modes of communication suitable for the purpose to confirm and clarify understanding • Work as part of a team to develop fit-for-purpose products and appropriate construction methods
Get the work done	• Recognise and respond to routine problems • Diagnose production problems involving design failures and construction difficulties, and resolve by modification and reporting

Assessment Requirements for FWPTMM4208 Construct prototypes and samples for timber structures

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- constructed at least two prototypes or samples according to an individual work order and construction plan for two or more of the following types of timber structures:
  - roof, wall and floor frames/trusses
  - staircases
  - door and window frames
  - structural beams
  - specialised pallets or crates
- reviewed each prototype or sample for effectiveness of purpose and efficiency of construction methods
- completed a detailed and accurate report on construction processes, problems and recommended changes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to constructing prototypes or sample for timber structures as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures specific to constructing prototypes and samples for timber structures:
  - health and safety, including the use of personal protective equipment (PPE)
  - use of equipment for prototype construction
  - communication reporting lines

© Commonwealth of Australia, 2025 Skills Insight

    - recording and reporting construction processes, problems and recommendations for change
- environmental protection practices for forest products factory settings:
    - reducing water and energy use
    - cleaning of plant, tools and equipment
    - disposing of, recycling and reusing timber and other waste
- timber species (native and imported), timber grades and treatments
- common timber characteristics, including defects, products and their uses
- construction sequences
- construction componentry and construction standards
- industry standard cross-sections and lengths
- tools, equipment and assembly hardware used to construct prototypes and samples of timber structures; their purpose, features and operation:
    - measuring equipment
    - assembly jigs
    - nail plate presses
    - nail and staple guns
    - compressor or compressed air supply
    - marking equipment
    - strapping equipment
    - nailing plates
    - gang nails
    - nail gun nails
    - staples.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - measuring equipment
    - assembly jigs
    - nail plate presses
    - staple guns
    - nail guns
    - compressor or compressed air supply
    - marking equipment
    - strapping equipment
    - assembly hardware

© Commonwealth of Australia, 2025 Skills Insight

  - temporary bracing
  - PPE suitable for constructing prototypes and samples
  - pre-cut sections of timber suitable for constructing prototypes and samples for timber structures
- specifications:
  - work order and construction plan with specifications for the assembly of prototypes and samples
  - template reports for recording construction processes, problems and recommendations for change
  - workplace procedures for constructing timber prototypes and samples, including health and safety and emergency procedures and environmental protection procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPTMM5202 Develop, trial and evaluate prototypes

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 3.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to develop, from design concepts, detailed prototype construction plans, specifications and work orders for use during trial construction phase. It also covers the outcomes required to coordinate the construction of prototypes and to complete evaluation and reporting requirements. Work is completed in a forest products factory setting.

The unit applies to Designer (Manufacturing and Engineered Wood Products), Production Manager (Timber Truss & Frame), Designer (Timber Truss & Frame)

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Timber Manufactured Products

Timber Merchandising

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*

© Commonwealth of Australia, 2025 Skills Insight

1. Develop prototype specifications	1.1 Access and interpret design concepts or specifications. 1.2 Prepare and document detailed prototype construction plans, specifications and work order for use during trial construction phase. 1.3 Specify prototype purpose and outline requirements from design concepts or customer requirements. 1.4 Complete a detailed analysis of options for materials and construction in line with organisational procedures and environmental protection practices. 1.5 Specify construction materials, requirements and methods based on option selected.
2. Plan and prepare prototype for construction	2.1 Source materials and hardware and other resources in line with site procedures and budgetary limits. 2.2 Assess and select suitable resources in line with options for materials detailed in prototype construction plan and specifications. 2.3 Source and select appropriate tools and equipment and check for operational effectiveness in line with manufacturer's recommendations. 2.4 Plan and document stages of the construction process. 2.5 Source, construct or prepare set-up jigs required for construction.
3. Produce the prototype	3.1 Monitor construction process to ensure construction plan is followed. 3.2 Ensure problems, issues, modifications and improvements are documented. 3.3 Analyse information in reports completed by construction personnel on prototype construction processes, problems, effectiveness of purpose and efficiency of construction methods. 3.4 Identify modifications or improvements to design and construction plan arising from construction of the prototype. 3.5 Evaluate results of construction process and make recommendations for future construction.
4. Trial and evaluate the prototype	4.1 Develop and document specific trial objectives and processes. 4.2 Inform personnel involved in the trial and evaluation of their responsibilities and functions. 4.3 Work with construction personnel to prepare and certify trial equipment, tools and materials prior to use. 4.4 Complete prototype trials in consultation with construction personnel. 4.5 Evaluate trial results, determine and document recommendations

© Commonwealth of Australia, 2025 Skills Insight

	for future production. 4.6 Maintain accurate records of trial and evaluation in line with organisational procedures.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Learning skills to:	• experiment with prototypes and evaluate trial outcomes to inform new production possibilities.
Numeracy skills to:	• calculate detailed dimension specifications for prototypes and clearly represent in construction plans.
Oral communication skills to:	• provide clear and unambiguous production instructions to others • consult with and seek feedback from other personnel involved in trials.
Reading skills to:	• interpret detailed and unfamiliar design concepts and reports on construction processes and problems.
Writing skills to:	• produce unambiguous construction plans, specifications and work orders in a style and format easily understood by construction team • clearly and accurately report on evaluations of trial results • clearly represent rationale for recommended changes to future production requirements.
Planning and organising skills to:	• efficiently and logically manage operational logistics for production trials.
Problem-solving skills to:	• analyse construction problems, consider various solutions and determine recommended changes.
Teamwork skills to:	• take a lead role in managing a team of construction personnel.
Technology skills to:	• use a computer, keyboard and software to prepare construction plans, specifications, work orders and trial reports.

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- coordinate the construction and trialling of at least two prototypes/samples from the following sample list:
  - roof, wall and floor frames/trusses
  - staircases
  - door and window frames
  - structural beams
  - specialised pallets or crates
- develop, for each, an individual construction plan and work order to include details of:
  - construction methods and sequence
  - materials to be used and quantities
  - tools and equipment to be used
  - labour requirements
- evaluate trial results, for each prototype, and complete a detailed and accurate report for each, covering:
  - strength
  - durability
  - operational effectiveness against purpose
  - efficiency of construction methods
  - impact of the production process on the environment
  - recommendations for future production processes.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- prototype trialling and evaluation processes
- features, at an in-depth level of understanding, of timber products subject to trial and evaluation:
  - product purpose
  - options for materials
  - construction componentry and standards
  - construction methods and sequence
  - types of tools and equipment used for construction
- impacts of production process on the environment and environmental protection practices for:
  - reducing water and energy use
  - cleaning of plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- certification requirements for trial equipment, tools and materials used during construction phase
- format, content and use of:
  - construction plans and specifications
  - work orders
  - reports evaluating trial outcomes
- organisational standards, policies and procedures for trialing and evaluating prototypes:
  - communication reporting lines for team involved in trials
  - certifying trial equipment, tools and materials
  - documenting plans and reports.

Assessment Conditions

The following resources must be made available:

- computers, keyboards and industry current software programs used to produce construction plans, work orders and reports evaluating trial outcomes
- comprehensive information about the design concept
- templates for:
  - construction plans and specifications
  - work orders
  - reports evaluating trial outcomes
  - certification documents
- relevant personnel for the purposes of communicating information
- organisational standards, policies and procedures for trialing and evaluating prototypes.

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPTMM5203 Generate and transfer complex computer-aided drawings and specifications

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPITMM5203B Generate and transfer complex computer-aided drawings and specifications, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Application

This unit of competency describes the skills and knowledge required to prepare complex drawings using computer-aided techniques and capabilities including three-dimensional (3-D) modelling and exploded assembly drawings. Work involves the conversion of drawings for computer numerical control (CNC) applications in an engineered wood or timber product manufacturing facility.

The unit applies to individuals who work as timber product designers and production managers. They generally demonstrate autonomy, judgement and defined responsibility in known or changing contexts and within broad but established parameters.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Timber Merchandising

Elements and Performance Criteria

Elements	Performance Criteria

© Commonwealth of Australia, 2025 Skills Insight

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for drawing	1.1 Identify type of drawings to be created with computer-aided design (CAD) systems and clarify where required with appropriate personnel 1.2 Select appropriate equipment and check for operational effectiveness according to manufacturer recommendations 1.3 Plan CAD process according to workplace procedures
2. Create exploded assembly drawings	2.1 Obtain and complete drawing preparations 2.2 Prepare 3-D models for all components 2.3 Create a perspective view of the model according to drawing specifications 2.4 Explode model, so all components are visible 2.5 Label all individual components according to workplace format 2.6 Complete quality checks to ensure the accuracy of outcomes 2.7 Store drawings according to workplace procedures
3. Create job sheets	3.1 Select and complete job sheet preparations 3.2 Set up job sheet template according to workplace formats 3.3 Create orthographic views and incorporate dimensions 3.4 Specify sequencing of machine operations and operator requirements 3.5 Prepare, review and test draft job sheets and amend as required 3.6 Store job sheets according to workplace procedures
4. Convert drawings for CNC applications	4.1 Identify and check conversion requirements from CNC machine specifications 4.2 Create layers and obtain additional information required for final conversion 4.3 Assign drawing entities to relevant layers 4.4 Convert drawings to the required file type 4.5 Store converted file according to workplace procedures 4.6 Record generation process and any equipment faults and report to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Reading	• Interpret detailed familiar and unfamiliar:
	  • workplace procedures for computer drawing activities
	  • templates
	  • CNC machine specifications

Writing	• Incorporate unambiguous notes, labels and instructions within drawings
Numeracy	• Calculate dimensions for product components and represent these in drawings
Navigate the world of work	• Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Use modes of communication suitable for the purpose to confirm and clarify understanding
Get the work done	• Use a computer, keyboard and the system capabilities of CAD system software to generate and transfer complex drawings • Recognise and respond to routine problems

Assessment Requirements for FWPTMM5203 Generate and transfer complex computer-aided drawings and specifications

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPITMM5203B Generate and transfer complex computer-aided drawings and specifications, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- generated and transferred the following types of complex computer-aided design (CAD) drawings:
  - three-dimensional (3-D) models
  - one-, two- and three-point perspective drawings
  - orthographic and exploded views
  - plans
  - diagrams
  - charts
  - elevations
- incorporated the following drawing entities into four types of complex CAD drawings:
  - lines
  - arcs
  - circles
  - text
  - hatch
  - dimensions
  - labels
- converted each complex CAD drawing for use in computer numerical control (CNC) machining centres
- created a job sheet for each complex CAD drawing

© Commonwealth of Australia, 2025 Skills Insight

- completed a basic report on drawing processes and equipment faults for each complex CAD drawing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- common products for which computer-aided drawings are produced, their features, use and standard material sizes
- ways in which computer-aided drawings are applied to CNC machines
- CNC specifications and sequencing of machine operations for the production of common products
- the drawing software:
  - available drawing types
  - system functions and capabilities
- methods to input and amend design factors and other data
- methods to:
  - prepare 3-D models
  - prepare perspective view
  - prepare orthographic view and incorporate dimensions
  - explode models
  - label components
  - convert drawings for CNC applications
  - store and retrieve drawings and job sheets
- formats for and inclusions of job sheets
- workplace procedures specific to producing drawings and documents using computers:
  - producing job sheets
  - filing computerised drawings and documentation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computers, keyboards and current software programs used to produce computer-aided drawings and job sheets
- specifications:
  - CNC machinery specifications
  - template job sheets
  - workplace procedures for producing drawings and documents using computers.

FWPTMM5205 Optimise CNC operations

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPITMM5201B Assess product feasibility of designs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the skills and knowledge required to optimise the overall performance of computer numerical control (CNC) sizing machines and CNC machining and processing centres, to maximise production output in a timber manufacturing facility.

The unit applies to individuals who work as managers or supervisors in timber manufacturing facilities. They generally demonstrate autonomy, judgement and limited responsibility in known or changing contexts and within established parameters.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Establish optimal operating conditions	1.1 Review workplace health and safety requirements and emergency procedures, identify and report hazards and use personal protective equipment according to workplace requirements throughout the optimisation process 1.2 Assess production potential of system components 1.3 Analyse production orders and plans to identify sustained production requirements 1.4 Identify and analyse integration options to establish optimal integration model 1.5 Assess and record software and programming requirements to attain and maintain optimal integration
2. Prepare for software installation	2.1 Diagnose program format and operational purpose and identify specified applications 2.2 Check specifications for intended operating conditions 2.3 Check program instructions for compliance with specifications 2.4 Counter set software timers to specification
3. Install and integrate automatic process machine control programs	3.1 Select appropriate program loading technique 3.2 Connect external loading devices correctly to automatic process machine control system 3.3 Place machine control system in a correct operational mode to accept program loading 3.4 Download program according to manufacturer recommended procedure 3.5 Check during and after downloading to ensure accurate and complete data transfer 3.6 Disconnect external program loading devices and connections from process and machine control system 3.7 Complete integration protocols and actions
4. Commission automatic process and machine control program	4.1 Monitor operation of equipment using the program for accuracy and safe performance 4.2 Measure and check outputs for compliance with specifications and ensure maximum output 4.3 Check external inputs for compliance with specifications

Assessment Requirements for FWPTMM5205 Optimise CNC operations

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPITMM5201B Assess product feasibility of designs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- installed and commissioned computer numerical control (CNC) integrated software to attain and sustain optimal integration in CNC sizing machines or CNC machining and processing centres to produce different outputs
- checked that machine is operating safely according to its intended purpose and program and to maximum output
- completed a detailed and accurate report, for each installation, on the installation and commissioning process and problems encountered.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks, including personal protective equipment (PPE), related to optimising CNC operations as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures for optimising CNC operations:
  - health and safety requirements
  - installing software and commissioning machinery
  - recording and reporting on installation and commissioning processes and problems
- the CNC software:
  - program format and operational purpose

© Commonwealth of Australia, 2025 Skills Insight

  - compatibility of two or more sets of software
  - system functions and capabilities
  - methods to install and collate two or more sets of software information established through a common identifier
  - methods to maximise the program to optimise machine output
  - methods to commission machinery to operational specification
  - requirements for safe storage of program master copy
- the machinery being commissioned:
  - operational purpose and sizing specifications
  - maximum production capacity
  - methods to monitor the operation of commissioned machines and check calibration.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - CNC sizing machines and CNC machining and processing centres
  - CNC software programs
  - PPE suitable for optimising CNC machines and operations
- specifications:
  - production plans and information on production orders
  - machine sizing specifications
  - instructions for installing CNC software and commissioning machinery
  - template reports for installation and commissioning processes and problems
  - workplace procedures for installing software and commissioning machinery, including health and safety and emergency procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPTMM5206 Plan production

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPITMM5206B Plan production, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- developed and documented whole of organisation comprehensive written production plans for a timber manufacturing facility
- evaluated production and output against productions plans
- produced written records of issues, and developed modified plans where required.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety and environmental protection obligations according to applicable Commonwealth, state, territory or local government regulations relevant to timber production
- production planning and evaluation processes
- features, at an in-depth level of understanding, of timber products subject to production planning:
  - product purpose
  - quantity and quality of materials
  - construction componentry and standards
  - construction methods and sequence
  - types of tools and equipment used for construction
  - labour requirements
- impacts of the production process on the environment and environmental protection practices for:

© Commonwealth of Australia, 2025 Skills Insight

    - reducing water and energy use
    - cleaning of plant, tools and equipment
    - disposing of, recycling and reusing timber and other waste
- workplace production capacity of machines and labour
- format, content and use of:
    - sales and market forecasts
    - production plans
- data required for the development of production plans:
    - reports and information on production times
    - output
    - employment costs, including overtime
    - business overheads
    - projected orders
    - material costs, supply, contractual arrangements and preferred supplier arrangements
    - distribution times and costs
- methods for evaluating production and output against plans, and issues to be considered:
    - speed of output (effective or slow)
    - quality of the completed product, finish and dimensional consistency
    - cost against budgets
    - labour and machine capacity
    - out-of-stock and overstock situations
    - management of suppliers to maintain an efficient supply
- workplace procedures for documenting plans and reports.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - computers, keyboards, printers and software used to document plans and reports
- specifications:
    - comprehensive information about the operation of real or simulated business to determine production plans
    - template production plans
    - workplace procedures for recording plans and reports.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPTMM5207 Assess timber product designs for feasibility

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- assessed and determined the feasibility of designs for three or more of the following product types:
  - pallets
  - crates
  - trellises
  - stairs
  - doors
  - windows
  - frames
  - beams
  - roof trusses
  - floor systems
  - wall frames
  - panelised and modular prefabricated timber building systems
- developed a set of assessment criteria and weighted scoring system to include details of:
  - functionality
  - safety
  - environmental impacts of product use
  - environmental impacts of product production
  - cost-effectiveness of production
  - marketability
  - competitiveness with similar products on the market
- completed a detailed and accurate report for each assessment providing the outcomes.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- product feasibility issues, including:
  - environmental impacts of product use and potential to minimise those impacts
  - functionality (ease of use and application together with its relevance for the desired purpose)
  - safety (potential to cause danger to someone or something and possibility for litigation against the enterprise)
  - environmental impacts of product production and the associated cost to the business
  - cost-effectiveness of the production
  - marketability (the potential for sale of the product)
  - competitiveness with similar products on the market
- sources of information on competitors' current products and price structure
- features, at an in-depth level of understanding, of production processes:
  - options for materials
  - construction methods and sequence
  - types of tools and equipment used for construction
- format, content and use of criteria for assessing the feasibility of designs:
  - qualitative and quantitative assessment criteria
  - scoring systems
  - weighting of scores according to the importance of the issue
- workplace procedures for:
  - determining design assessment criteria and completing assessments
  - communication reporting lines
  - recording and reporting assessment outcomes.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computers, keyboards and software programs used to produce assessment documents and reports on assessment outcomes
  - workplace procedures for design assessment activities
  - comprehensive information about the design concept
  - templates for assessment documents and reports on assessment outcomes.

© Commonwealth of Australia, 2025 Skills Insight

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	• Develop rapport with and nurture ongoing positive relationships with design team members • Provide clear and unambiguous information to staff about roles, responsibilities, targets and performance expectations • Discuss unsatisfactory performance in a professional and constructive manner
Numeracy	• Determine the quantity of design work and deadlines, and divide work activities into manageable units • Calculate human, material, equipment and system resources required to achieve design outcomes
Navigate the world of work	• Source, collect and organise data to inform design work plans • Understand main tasks, responsibilities and boundaries of own role • Take responsibility for leading a design team and for team outcomes
Get the work done	• Use a computer, keyboard and software to prepare design work plans and performance management records

Assessment Requirements for FWPTMM5208 Manage timber product design

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- managed timber product design according to design criteria and performance targets, including the establishment, planning, implementing and monitoring of the process
- determined, documented and communicated key performance indicators for the whole job and individual staff
- produced a written design work plan
- completed a basic report on the design process and problems encountered.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- content and application of applicable regulations for certifying final designs
- project management principles
- planning processes for a design job
- common products for which designs are produced, their features, use and individual design components
- design capacity of equipment and systems
- skill capabilities of design team members
- ways of breaking up design tasks into manageable parts for design team members, and methods to coordinate whole of job outcomes
- key performance indicators for design activities and methods of communicating these to team members:
  - producing designs in the time allocated
  - meeting specified design criteria
  - minimising the impact of production on the environment

© Commonwealth of Australia, 2025 Skills Insight

- format, content and use of:
  - design work plans
  - final designs
  - certification documents
  - records for performance management of team members
  - reports on design processes and problems
- methods to monitor and respond to team performance:
  - assessing skill capability and outputs
  - mentoring and coaching
  - conflict resolution and staff counselling
- workplace procedures for managing product designs:
  - communication reporting lines for design team
  - staff counselling
  - documenting design work plans and reports
  - certifying designs.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computers, keyboards, printers and software used to document plans and reports
- specifications:
  - comprehensive information about the operation of a real or simulated design job to manage plans and outcomes
  - template design work plans, reports and certification documents
  - workplace procedures for managing product designs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPTMM5209 Determine prefabricated timber building systems designs for compliance, manufacture and installation

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to determine design solutions for panelised and/or modular prefabricated timber building systems to meet structural and safety compliance, off-site manufacture and on-site installation. The main job functions are to facilitate collaborative design and achieve detailed and integrated design solutions for prefabricated timber building systems.

The unit applies to individuals who work as designers in a building design team. These include architects, design engineers, draftspersons, structural engineers, building services engineers, architectural technicians and timber systems designers from manufacturing plants. They demonstrate in-depth knowledge in a specific technical area and analyse, design and communicate solutions to sometimes complex problems.

In order to undertake this unit, individuals must have a relevant building design qualification or equivalent.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Timber Manufactured Products

Elements and Performance Criteria

Elements	Performance Criteria

© Commonwealth of Australia, 2025 Skills Insight

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Interact with supply chain stakeholders to design prefabricated timber building systems	1.1 Communicate with the developer during the design process to ensure that prefabricated timber building system is fully fit for purpose and meets client functional requirements 1.2 Use Building Information Modelling (BIM) system or similar and conduct further collaborative analysis with the fabricator, builder, component suppliers and regulators to achieve a design configuration that allows for lean processes during all stages of **timber building system life cycle**, meets regulations and does not complicate other design considerations 1.3 Ensure that the design accounts for fabrication capabilities 1.4 Implement a continuous improvement process during the design life of prefabricated timber building system to report, record and resolve issues
2. Determine design solutions and specifications for structural compliance	2.1 Identify the National Construction Code (NCC) Performance Requirements for structural robustness, which the prefabricated timber building system and its components need to satisfy 2.2 Discuss structural design actions with appropriate stakeholders to ensure that the prefabricated timber building system meets the minimum NCC structural requirements and performs without risks when used as intended through its design life 2.3 Obtain experimental and observational data for the strength of materials, structural components, connections or assemblies to determine design values, and consult with appropriate engineers to indicate the actual robustness and reliability of the physical building system 2.4 Contribute to the design verification for structural compliance and process documentation according to the NCC, standards and codes to facilitate design certification and approvals 2.5 Determine durability requirements for the materials of prefabricated timber building system according to the nominated design life and planned maintenance, and ensure that they are specified in design documentation for prefabricators
3. Determine design solutions and specifications for safety compliance	3.1 Determine early in the design process hazards to health and safety during all stages of prefabricated timber building system life cycle according to the workplace health and safety laws, regulations and the NCC 3.2 Determine and apply health and safety design control measures according to standards, codes and technical guides to eliminate or minimise health and safety risks during all stages of prefabricated

© Commonwealth of Australia, 2025 Skills Insight

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	timber building system life cycle 3.3 Verify design documentation and ensure that health and safety provisions are specified for all stages of prefabricated timber building system life cycle according to standards, codes and technical guides 3.4 Verify design documentation and ensure that detailed maintenance provisions are specified for all components of the prefabricated timber building system being designed according to its intended functions
4. Determine design solutions and specifications for services	4.1 Identify the NCC Performance Requirements for fire resistance and acoustic and thermal properties, which the prefabricated timber building system and its components need to satisfy 4.2 Verify design documentation and ensure that intended materials, separations, insulations, fire warnings and fire-fighting management systems are specified for the required fire, acoustic, thermal and waterproofing performance according to standards, codes and technical guides 4.3 Use design control actions to mitigate any possible effects of transportation, handling, on-site installation or maintenance on the integrity of intended connections, insulations or materials 4.4 Determine early in the design phase where points of entry are required in the prefabricated timber building system, components and materials for services installation 4.5 Verify design documentation and ensure that installation and connections provisions are specified for each service according to standards, codes and technical guides 4.6 Ensure that all tolerances for the prefabricated timber building system and its components are specified in the design specifications according to standards to facilitate off-site manufacture and on-site installation 4.7 Verify and ensure that approval and compliance certification for installation of services, partitions and floor elements are performed to the appropriate standards for thermal, acoustic and fire performance and according to local requirements before on-site installation
5. Determine design solutions and specifications for transportation and on-site installation	5.1 Determine maximum dimensions and weight for the building system being designed to meet restrictions provided by vehicles, lifting plants, road configuration around the construction site and local regulations 5.2 Ensure that lifting requirements are specified for all stages of the prefabricated timber building system life cycle in the design

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	documentation, and they are according to the NCC to facilitate and maintain prefabricated timber building system integrity and adequate performance 5.3 Determine the effects of cargo restraints and exposure to acceleration forces on the strength (structural attributes) of prefabricated timber building system during transportation, and use design control actions to allow for the forces applied 5.4 Verify the design and ensure that necessary restraint conditions during transport and residual risks to the prefabricated timber building systems resulting from transportation are specified 5.5 Ensure that the sequence for the installation of prefabricated timber building systems and components is specified in design documentation

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	• Communicate information verbally about complex, detailed technical design information
Numeracy	• Conduct complex structural design calculations
Navigate the world of work	• Monitor adherence to legal and industry standards and responsibilities
Interact with others	• Identify the perspectives of others as part of work role • Seek specialist input into problem-solving and decision-making
Get the work done	• Use three-dimensional models, BIM or computer-aided design tools to design, monitor design processes and access and organise complex design data

Assessment Requirements for FWPTMM5209 Determine prefabricated timber building systems designs for compliance, manufacture and installation

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that the individual has assessed complete sets of timber building design documentation for two construction projects relating to different classes of buildings that, as defined in the National Construction Code (NCC), allow the use of one or more panelised or modular prefabricated timber building system types, including:

- cross-laminated timber floor and wall systems
- post and beam systems (Glulam, laminated veneer lumber)
- panelised floor cassette systems
- panelised wall systems (including cladding, insulation, windows or doors)
- panelised and pre-finished wall systems (inclining above, electrical, mechanical, plumbing or lining)
- pre-finished and fully finished timber-based modules

In doing the above, the individual has:

- determined and confirmed with stakeholders whether the design is fit for purpose and meets capabilities within the supply chain regarding prefabrication, storage, transportation and on-site installation
- determined the compliance requirements of physical prefabricated timber building system for:
  - structural robustness
  - durability
  - fire resistance and acoustic and thermal properties
  - health and safety hazards during all stages of the life cycle
  - transportation
- assessed whether the design provides adequate solutions to meet all compliance requirements, determining design actions according to standards to fill the design gaps

© Commonwealth of Australia, 2025
Skills Insight

- verified design considerations regarding services installation and mitigation of possible effects during transportation, handling, on-site installation or maintenance
- verified the level of provisions in design documentation to demonstrate or specify:
  - structural compliance
  - health and safety information for each stage of prefabricated timber building system life cycle
  - prefabricated timber building system and components maintenance during prefabricated timber building system design life
  - materials, separations, insulations, fire warnings, a fire-fighting management system for required fire, acoustic, thermal and waterproofing performance
  - installation and connections requirements for each service
  - tolerances for prefabricated timber building system and its components
  - lifting requirements for each stage of prefabricated timber building system life cycle
  - restraint conditions during transportation
  - installation sequence for prefabricated timber building systems and components.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic uses of BIM (Building Information Modelling) software or similar for sharing and coordinating information among stakeholders during the prefabricated timber building system life cycle
- principles of collaborative design analysis:
  - Design for Manufacture and Assembly
  - lean processes (off-site manufacture, storage, transportation and on-site installation)
  - Failure Mode and Effects Analysis
- readily available prefabrication technologies for different types of prefabricated timber building systems (two- and three-dimensional) and components including:
  - structural timber
  - cross-laminated timber
  - laminated veneer lumber
  - Glulam
  - I-Joists
  - floor trusses
  - services
  - windows, glazing and plasterboard
- relevant legislation, standards and technical design guides or codes for:
  - structural design of prefabricated timber buildings and systems
  - implementation of safe design principles
  - installation of hydraulic, electrical, mechanical, fire protection and acoustic systems

© Commonwealth of Australia, 2025
Skills Insight

  - transportation restrictions and load restraint requirements
- NCC Performance Requirements for prefabricated timber building systems as classified via their function:
  - structural robustness
  - structural safety
  - fire resistance, thermal performance and acoustic performance
- elements of valid approval and compliance processes with reference to:
  - NCC assessments, calculations and evidence requirements for controlling the risk of structural failure and safety
  - fire, acoustic, thermal resistance and waterproofing of prefabricated timber building systems for complying with standards
- considerations and industry-accepted design solutions for prefabricated timber building systems (including structural and non-structural timber components and connections) as required by NCC, standards and technical design guides for:
  - structural robustness, verification methods and traceability of risks
  - structural durability with reference to environmental and specific conditions affecting durability of timber components and connections, high-risk areas within the building structure (including bathroom and external walls), specific hazards (particularly insect and fungal attack, weathering, moisture exposure and fire) and solutions considering preservative treatments, moisture contents, weatherproofing insulations and cladding
  - fire engineering measures, sound propagation and thermal resistance with reference to structural deflection of fire-rated elements and use of fire, vibrational/acoustical and thermal insulations; relevant design procedure for joint/connections involving timber structures to retain the integrity of insulation, material and system while considering effects of transport, handling and installation processes on connections
  - acceptable tolerances for material quality, off-site manufacture and on-site installation
  - services installation including hydraulic, electrical, mechanical, fire protection and acoustic systems
  - health and safety risks about the off-site manufacture, storage, transportation, on-site installation, use and maintenance of prefabricated timber building system
  - transportation and lifting requirements with reference to different load characteristics and appropriate road trucks and cranes or lifting plants, factors influencing lifting stability, behaviour/fatigue of timber and connections to temporary lifting loads, load restraint methods and friction factors affecting strength resistance and structural response of prefabricated timber building system
- design provisions and technical specifications as required by the Safe Design of Structures Code of Practice, NCC and other standards and technical guides for any person who carries out work activities in relation to a prefabricated timber building system:
  - health and safety provisions
  - connections specifications
  - design tolerances and specifications
  - thermal, acoustic and fire compliance provisions
  - transport and handling modes including lifting and stacking specifications

© Commonwealth of Australia, 2025
Skills Insight

- installation sequencing provision
- maintenance provision.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- resources, equipment and materials:
  - timber building design documentation for two construction projects relating to different classes of buildings that allow the use of panelised or modular prefabricated timber building systems
  - computer with internet access and BIM software that is currently used in building design practices to view and print three-dimensional models, finite element models, two-dimensional computer-aided design drawings and design documentation
  - access to current legislation, standards, codes and technical design guides relevant to prefabricated timber building systems
- specifications:
  - access to relevant codes, standards and government regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPTMM5210 Verify compliance and conformance of prefabricated timber building systems during manufacture

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to verify physical performance and compliance liability of panelised or modular prefabricated timber building systems and components during off-site manufacturing to ensure that delivered product matches the design specifications and regulatory obligations.

The unit applies to individuals who work as compliance officers, supervisors or managers in a prefabricated timber building systems manufacturing plant. Such individuals demonstrate deep knowledge in a specific technical area and analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to verify prefabricated timber building systems and components	1.1 Obtain and confirm production schedule, design documentation, plans, requirements, workplace health and safety requirements and established procedures relevant to the off-site manufacturing order 1.2 Identify certification and compliance requirements for prefabricated timber building system, components, materials and in-built services from design specifications or appropriate codes and standards 1.3 Identify tolerances for material quality, physical dimensions and service connections from design specifications 1.4 Prioritise and sequence verification work according to production schedules for completion within established timeframes 1.5 Consult appropriate personnel, testers and certifiers to coordinate verification work efficiently
2. Conduct verification for compliance and conformance	2.1 Verify that connections, structural components and physical dimensions of timber framing structure are appropriate for grade, thickness, tolerances and choice of materials according to minimum specified design requirements before installation services 2.2 Verify that provisions have been made for components including hydraulics, electrical and heating, ventilation, air conditioning mechanical services and plumbing 2.3 Ensure that partition/walls or floor elements are assembled according to design specifications, local codes and standards for minimising or eliminating continuity issues in the final, installed prefabricated timber building system 2.4 Verify regulated components including fire-rated walls or fire protection systems for conformance with performance requirements of relevant codes, standards and design specifications, and ensure that damage is minimised within the manufacturing environment 2.5 Ensure that any variations of material properties or system component decided during the off-site manufacture meet performance, design specification, relevant codes and standards 2.6 Ensure that off-site installation of services conform to the appropriate local standards and are approved before delivery to the construction site 2.7 Verify completed prefabricated timber building system to ensure that delivered product is safe for manual handling and meets design specifications and regulatory requirements

Assessment Requirements for FWPTMM5210 Verify compliance and conformance of prefabricated timber building systems during manufacture

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least three occasions, the individual has verified compliance and conformance of prefabricated timber building systems during manufacture for one or more of the following panelised or modular prefabricated timber building system types:

- cross-laminated timber floor and wall systems
- post and beam systems (Glulam, laminated veneer lumber)
- panelised floor cassette systems
- panelised wall systems (including cladding, insulation, windows or doors)
- panelised and pre-finished wall systems (inclining above, electrical, plumbing, mechanical or lining)
- pre-finished and fully finished timber-based modules

In doing the above, the individual has:

- implemented workplace health and safety procedures and practices during the compliance and conformance verification operation
- prioritised verification work according to production schedules
- verified relevant documentation and conducted audits correctly and efficiently against design specifications, local codes and standards for any of the following:
  - connections, structural components and physical dimensions of timber framing structure regarding grade, thickness, tolerances and choice of materials
  - services equipment including hydraulic, electrical and heating, ventilation, and air conditioning (HVAC) mechanical
  - partition/walls or floor elements of the structure
  - fire-rated walls or fire protection systems
  - variations of material properties or system component from design specifications
  - off-site installation of services
  - completed timber building system

© Commonwealth of Australia, 2025
Skills Insight

- identified non-conformant or non-compliant components of timber building systems
- recommended appropriate corrective actions
- reported legibly and accurately.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety procedures and practices related to the work activity
- provisions for components including hydraulics, electrical and HVAC mechanical services and plumbing
- verification procedures for product compliance and conformance in the manufacture of prefabricated timber building systems
- elements of valid and efficient manufacturing inspections, verifications and certification processes as outlined in national and international standards
- methods of verifying product quality (actual versus claimed quality) and compliance with the National Construction Code in regards to Performance Requirements
- certification requirements for thermal, acoustic and fire performance of partition and floor elements
- fire rating testing techniques
- certification requirements for hydraulics, electrical and HVAC mechanical services according to standards and manufacturer requirements
- hazards and risks associated with manual handling of prefabricated timber building systems that generally arise from off-site manufacture, including:
  - cut metal edges
  - exposed screw tips and nails
  - abrasion of insulation materials resting on metal edges
  - pinch points in connections
  - surfaces that can retain rainwater
- inspection reports and sign-off procedures as accepted by the industry or established within the workplace.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computers, keyboards, printers and software used to produce and maintain compliance system records and reports
- specifications:
  - access to industry-specific compliance standards and design documentation

© Commonwealth of Australia, 2025
Skills Insight

- access to production schedules
- access to comprehensive real or simulated certificates, test documentation and product/manufacturer specifications
- access to template inspection reports
- access to workplace policies and procedures for documenting and signing off inspections of product compliance and conformance.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPWPP2201 Cut panels

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2201B Cut panels, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to cut panels to size with a power driven saw. Work is completed in a forest products factory setting and includes operator maintenance.

The unit applies to production workers who cut panels in a forest and wood products factory setting and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for cutting	1.1 Review work order and where required check with appropriate personnel. 1.2 Obtain type and quantity of material to be cut from storage location. 1.3 Select appropriate personal protective and other equipment and check for operational effectiveness.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan material cutting patterns and saw set-up sequences in line with work order.
2. Cut material to size or angle	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Mark up material and set stops in preparation for cutting. 2.3 Follow cutting sequence and patterns to produce required quantity. 2.4 Check cuts for length and angle within set tolerances. 2.5 Dispose of incorrect cuts, off cuts and defective material in line with environmental protection practices. 2.6 Stack material safely in designated location in line with work order.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with environmental protection practices. 3.5 Keep machine clear of dust and debris in line with organisational safety procedures. 3.6 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count numbers of panels to be sawn • complete basic calculations of required length and angle to determine saw set up • measure finished dimensions against specifications and appropriate tolerances.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures

© Commonwealth of Australia, 2025 Skills Insight

	• work orders • manufacturer's instructions and maintenance recommendations.
Writing skills to:	• complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.

Assessment Requirements for FWPWPP2201 Cut panels

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2201B Cut panels, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce cut panels in line with an individual work orders that prescribe different lengths and tolerances and number of panels for each job; types of material includes:
  - medium density fibreboard
  - laminated veneer
  - chipboard
  - fibreboard
  - plywood
  - continuous ply
- across the above jobs, complete cutting patterns and sequences for single straight cuts and angles requiring one cutting pass set for multiple cuts of the same size
- for each of the above jobs, stack batches of cut panels in storage location according to common length and width
- after each of the above jobs, complete operator maintenance on the saw used.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment

© Commonwealth of Australia, 2025 Skills Insight

    - disposing of, recycling and reusing timber and other waste
- storage layout and categories for:
    - raw materials
    - stacking finished panels
- typical timber panel defects and how they affect ability to produce quality sawn panels:
    - warp
    - wane
    - cupping
    - shakes
    - insect defects
    - knots
    - resin pockets
- cutting patterns and sequences for single straight cuts and angles requiring one cutting pass
- range of industry standard lengths, cross sections and tolerances and applicable terminology
- purpose, features and operation of equipment used to cut panels:
    - measuring equipment
    - manually controlled docking and trimming saws
    - band saws
    - bench saws
    - panel saws
    - saws with adjustable angle
    - saws with one or multiple blades
    - table saws
- methods for assessing saw blade condition and completing basic non-specialist repair and maintenance for saws
- organisational procedures specific to cutting panels:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting production outcomes, equipment faults and maintenance requirements.
    -

Assessment Conditions

The following resources must be made available:

- tools and equipment for cutting panels:
    - measuring equipment
    - saws which must include one or more of the following:

© Commonwealth of Australia, 2025 Skills Insight

    - manually controlled docking and trimming saws
    - band saws
    - bench saws
    - panel saws
    - saws with adjustable angle
    - saws with one or multiple blades
    - table saws
- maintenance tools and equipment for saws
- consumable saw blades
- personal protective equipment suitable for cutting panels
- commercial timber which must include one or more of the following:
    - medium density fibreboard
    - laminated veneer
    - chipboard
    - fibreboard
    - plywood
    - continuous ply
- manufacturers' instructions for use and maintenance of equipment
- work order for cutting activities with specific instructions for cutting and storing panels
- template documents for recording production outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for cutting panels.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP2202 Surface treat raw board

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2202B Surface treat raw board, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to surface treat raw boards with chemical systems using spray boom equipment to temper wood panel products.

The unit applies to production workers who surface treat raw board in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for treating	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of raw boards for surface treatment from storage. 1.4 Select suitable feed rates and chemical products for material being

© Commonwealth of Australia, 2025 Skills Insight

	surface treated and plan process in line with work order.
2. Use equipment to surface treat raw boards	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Apply surface treatment, monitor and adjust additive flow rates continually. 2.3 Check spray operations continually; clear blockages and filters while maintaining spray coverage. 2.4 Check boards regularly for surface quality and contamination; take corrective action where required. 2.5 Remove defective boards from treatment process and review for disposal or re-treatment. 2.6 Dry material and stack safely in designated location.
3. Shut down and clean equipment	3.1 Coordinate shutdown procedures with other line operators in line with organisational safety procedures. 3.2 Turn off pumps and flush equipment in line with manufacturer's instructions. 3.3 Dispose of excess chemicals and flushing liquid in line with environmental protection practices. 3.4 Store equipment and chemicals in line with organisational procedures. 3.5 Record and report production outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count numbers of raw boards •
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures • work orders

© Commonwealth of Australia, 2025 Skills Insight

	• safety data sheets for surface treatment chemicals • manufacturers' instructions.
Writing skills to:	• complete accurate basic records for production outcomes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and dispose of defective boards or rectify • identify processing problems and faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective equipment for treating boards with chemicals • efficiently and safely operate spray boom equipment.

Range of Conditions

Not Applicable

Assessment Requirements for FWPWPP2202 Surface treat raw board

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2202B Surface treat raw board, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- surface treat raw boards in line with individual work orders for each job; types of board to treat includes:
  - medium density fibreboard
  - core for laminated veneer
  - chipboard
  - fibreboard
  - plywood
- at the completion of each of the above jobs:
  - shut-down and clean equipment in line with organisational safety procedures
  - dispose of excess chemicals in line with environmental protection practices
  - safely store unused chemicals
  - stack finished boards in storage location according to common size, thickness, length and surface treatment.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for surface treating raw boards:
  - reducing water and energy use

© Commonwealth of Australia, 2025 Skills Insight

    - cleaning plant, tools and equipment
    - disposing of, recycling and reusing timber
    - disposing of hazardous substances
- storage layout and categories for:
    - raw materials
    - stacking finished boards
- characteristics of timber panels and the effects of chemical treatment including:
    - medium density fibreboard
    - core for laminated veneer
    - chipboard
    - fibreboard
    - plywood
- properties, at a basic level of understanding, of chemicals used for surface treating raw boards and their purpose
- methods used to safely store chemicals
- typical work flow processes for surface treating raw boards
- purpose, features, operation, shut down and cleaning of compressor driven spray boom equipment
- range of appropriate chemical flow rates to avoid equipment blockages and optimise quality and quantity of production output
- organisational procedures specific to surface treating raw boards:
    - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
    - communication reporting lines
    - recording and reporting production outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- compressor driven spray boom equipment
- personal protective equipment suitable for surface treating raw boards
- raw boards which includes one or more of the following:
    - medium density fibreboard
    - core for laminated veneer
    - chipboard
    - fibreboard
    - plywood
- surface treatment chemicals
- manufacturers':
    - safety data sheets for surface treatment chemicals
    - instructions for equipment use

© Commonwealth of Australia, 2025 Skills Insight

  - recommendations for cleaning equipment
- work order with specific instructions for chemical treatment of timber panel products
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for surface treating raw boards.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP2203 Repair veneer and ply

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2203B Repair veneer and ply, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess and fill single thickness veneer, panel products and manufactured plywood to an acceptable level for continued use.

The unit applies to production operators and technicians who repair veneer and ply in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for repair	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair and personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of material to be repaired from veneer or plywood production process.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Select filler appropriate to work order.
2. Fill material	2.1 Follow organisational safety procedures throughout all repair processes. 2.2 Mix filler in line with manufacturer's instructions or obtain required quantity of pre-mixed filler. 2.3 Inspect veneer, panel or plywood for splits, voids and splintered or missing edges and mark for filling. 2.4 Apply filler to voids and allow to dry for sanding. 2.5 Apply mending tape to splits to retain veneer integrity.
3. Redistribute material	3.1 Regrade repaired veneer, panel and plywood in line with organisational procedures and industry standards. 3.2 Direct material to storage or processing operations in line with organisational procedures. 3.3 Dispose of irreparable material and excess filler in line with environmental protection practices. 3.4 Clean work area and store unused filler in line with organisational safety procedures. 3.5 Record and report production outcomes to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material for repair within work orders and count amounts • complete basic calculations for quantity of filler and mending tape to meet production requirements • calculate routine mixing ratios for fillers.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • safety data sheets for fillers
	  • manufacturers’ instructions.

© Commonwealth of Australia, 2025 Skills Insight

Writing skills to:	• complete accurate basic records for production outcomes.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and repair work using work order to guide activities.

Assessment Requirements for FWPWPP2203 Repair veneer and ply

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2203B Repair veneer and ply, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete repairs in line with individual work orders for the following types of material:
  - single thickness veneer
  - panel products
  - manufactured plywood
  - select and use the appropriate filler to complete repairs
- complete repairs for the following types of defects:
  - splits
  - voids
  - splintered and missing edges
- for each of the above jobs, visually inspect materials and re-classify their quality and use after repair.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for repairing veneer and ply:
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber

© Commonwealth of Australia, 2025 Skills Insight

    - disposing of hazardous substances
- typical flow of material supply in and out of the repair area
- features of typical defects in single thickness veneer, panel products and manufactured plywood:
    - splits
    - voids
    - splintered and missing edges
- typical work flow processes and repair techniques used to fill veneer, panel and plywood to an acceptable level for continued use
- properties, at a basic level of understanding, of fillers and their uses for repairing veneer, panel and plywood:
    - ready to use pre-mix fillers
    - two part fillers
    - waxes
- methods used to:
    - mix fillers
    - safely store fillers
- key features of and applicable terminology for industry standard grades for re-classifying quality of repaired veneer, panel and plywood
- organisational procedures specific to repairing veneer and ply:
    - workplace health and safety with particular emphasis on use of personal protective equipment and handling hazardous substances
    - communication reporting lines
    - recording and reporting production outcomes.

Assessment Conditions

The following resources must be made available:

- tools and equipment for repairing veneer and ply
- personal protective equipment suitable for repairing veneer and ply
- single thickness veneer, manufactured plywood and panel products; panels must include one or more of the following:
    - medium density
    - fibreboard
    - chipboard
    - fibreboard
- fillers which must include one or more of the following:
    - ready to use pre-mix fillers
    - two part fillers
    - waxes
- mending tape

© Commonwealth of Australia, 2025 Skills Insight

- manufacturers':
  - instructions for use equipment
  - safety data sheets for fillers
- work order with specific instructions for repairing veneer and ply
- template documents for recording production outcomes
- relevant personnel for the purposes of communicating information
- organisational procedures for repairing veneer and ply.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP2204 Repair veneer mechanically

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2204B Repair veneer mechanically, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess and patch single thickness veneer mechanically to an acceptable level for continued use.

The unit applies to production workers who repair veneer mechanically in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for repair	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of material to be repaired from the veneer production process.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Select patch strips in line with work order.
2. Patch veneer	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Set equipment controls and coordinate veneer flow with other operators to ensure minimal downtime. 2.4 Inspect veneer defects, cut patch strips minimising wastage and feed into machine. 2.5 Position veneer sheets to accept patch, and process. 2.6 Position out-feed bins or trays to collect repaired veneer and clear regularly. 2.7 Patch manually where mechanical process is not possible.
3. Redistribute material	3.1 Grade patched veneer in line with organisational procedures and industry standards. 3.2 Direct material to storage or processing operations in line with organisational procedures. 3.3 Dispose of irreparable material and excess patch strips in line with environmental protection practices. 3.4 Clean work area and store unused patch strips in line with organisational safety procedures. 3.5 Record and report production outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material for repair within work orders and count amounts • complete basic calculations for quantity of patch strip to meet production requirements • measure and cut patch strips to appropriate length for areas to be repaired.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

© Commonwealth of Australia, 2025 Skills Insight

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions.

Writing skills to:	• complete accurate basic records for production outcomes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and repair work using work order to guide activities.

FWPWPP2205 Prepare chip or fibre blends

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2205B Prepare chip or fibre blends, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required produce chip and fibre blends in readiness for the production of panel products. It includes operating a mixing system, monitoring production flow and completing operator maintenance.

The unit applies to production workers who prepare chip or fibre blends in a forest and wood products factory setting. It includes operating a mixing system, monitoring production flow and completing operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for mixing	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Select type and quantity of glue and other ingredients in line with

© Commonwealth of Australia, 2025 Skills Insight

	work order. 1.4 Plan mixing process in line with work order.
2. Mix ingredients	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Start and adjust ingredient mixing and feed systems to produce chip or fibre blend; check blend production regularly. 2.3 Monitor additive levels and replenish in line with mixing process requirements. 2.4 Take test samples of mix regularly in line with organisational procedures. 2.5 Keep material chutes free of blockages and where required correct system leakages.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Flush clean mixing systems and components in line with manufacturer's recommendations. 3.3 Isolate blender system and clean in line with and environmental protection practices. 3.4 Dispose of excess glue in line with environmental protection practices and store unused glue. 3.5 Keep machine clear of dust and debris in line with organisational safety procedures. 3.6 Record and report production outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of glue and other ingredients within work orders and count amounts • calculate routine mixing ratios for glue and other ingredients.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures

© Commonwealth of Australia, 2025 Skills Insight

	• work orders • safety data sheets for glue • manufacturers' instructions and maintenance recommendations.
Writing skills to:	• complete accurate basic records for production outcomes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify processing problems and faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use relevant personal protective equipment for preparing chip or fibre blends • efficiently and safely operate mixing systems.

Assessment Requirements for FWPWPP2205 Prepare chip or fibre blends

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2205B Prepare chip or fibre blends, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- prepare blends in line with individual work orders that prescribe different quantities for each job; types of blend include:
  - chip blend
  - fibre blend
- use water based and resin glues:
- across the above jobs, monitor and adjust the feed system with consideration given to:
  - white water
  - stock level
  - fibre consistency
  - feed level
  - steam flow
  - raw water
  - noise
  - power consumption.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for preparing chip and fibre blends:

© Commonwealth of Australia, 2025 Skills Insight

    - reducing water and energy use
    - cleaning plant, tools and equipment
    - disposing of hazardous substances
- storage layout and categories for:
    - raw materials
    - finished blends
- typical flow of material supply in and out of the blending area
- typical work flow processes for preparing chip and fibre blends
- methods used to:
    - mix glues
    - blend wood chips and glue
    - test samples of mix for consistency
    - safely store glue
- purpose, features, operation and basic non-specialist maintenance of equipment used to prepare chip and fibre blends:
    - mixer with pre-programmed mix quantities and cycles with manually controlled feed, blender and transfer systems
- organisational procedures specific to preparing chip and fibre blends:
    - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
    - communication reporting lines
    - recording and reporting production outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- mixer with pre-programmed mix quantities
- personal protective equipment suitable for preparing chip and fibre blends
- wood chips
- glue which must include one or more of the following:
    - water based
    - resin based
    - synthetic
- recipes for blending chips and fibre using glue
- manufacturers':
    - safety data sheets
    - instructions for equipment use
    - recommendations for maintaining equipment
- work order with specific instructions for the preparation of chip or fibre blends
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information

© Commonwealth of Australia, 2025 Skills Insight

- organisational procedures for preparing chip and fibre blends.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP2206 Prepare veneer for ply

Modification History

Release	Comment
1	Replaces equivalent FPIWPP2206B Prepare veneer for ply, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assemble multiple layers of veneer to form plywood panel.

The unit applies to production workers who prepare veneer for ply in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for assembly	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of material to be assembled from veneer production process.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Select production process in line with work order.
2. Bond veneers	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Adjust spreader stations to provide material delivery in line with required board cross-section distribution. 2.4 Apply glue to cross-grain veneer evenly and adjust glue feed, spread and tack levels regularly to achieve desired result. 2.5 Select and assemble cross-grain and long-grain veneer in required sequence. 2.6 Position veneer and feed according to required sequence, minimising gaps and mismatched edges. 2.7 Transfer completed assemblies for pressing.
3. Redistribute material	3.1 Grade assembled ply in line with organisational procedures and industry standards. 3.2 Direct material to storage or processing operations in line with organisational procedures. 3.3 Dispose of sub-standard material and excess glue in line with environmental protection practices. 3.4 Clean work area and store unused glue in line with organisational safety procedures. 3.5 Record and report production outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amounts • read and adjust basic numerical machine settings to apply correct quantities of glue.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational

© Commonwealth of Australia, 2025 Skills Insight

	procedures • work orders • safety data sheets for glue • manufacturers' instructions.
Writing skills to:	• complete accurate basic records for production outcomes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.

Assessment Requirements for FWPWPP2206 Prepare veneer for ply

Modification History

Release	Comment
1	Replaces equivalent FPIWPP2206B Prepare veneer for ply, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete production jobs to bond sheets of veneer in line with individual work orders for each job that prescribe:
  - varying thickness of sheets of veneer to be used
  - varying numbers of layers of veneer to be bonded
  - varying quantities of assembled ply to be produced
- for each of the above jobs, visually inspect assembled ply and grade according to industry and organisational standards.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
  - disposing of hazardous substances
- typical flow of material supply in and out of the veneer production area
- typical work flow processes and techniques used to bond sheets of veneer
- purpose, features and operation of ply assembly tables and glue spreading stations

© Commonwealth of Australia, 2025 Skills Insight

- appropriate parameters for rate of glue feed, spread and tack levels and effects of weather conditions on glue properties
- methods used to safely store glue
- key features of and applicable terminology for industry standard grades for assembled ply
- organisational procedures specific to preparing veneer for ply:
  - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
  - communication reporting lines
  - recording and reporting production outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- ply assembly tables with glue spreading stations
- personal protective equipment suitable for preparing veneer for ply
- a diverse range of commercial single thickness veneer of varying thicknesses
- glue mix
- manufacturers':
  - instructions for equipment use
  - safety data sheets for glue
- work order with specific instructions for preparing veneer for ply
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for preparing veneer for ply.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPWPP2207 Scarf edges of veneer

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2207B Scarf edges of veneer, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to overlap the end or edge of one piece of veneer over the end or edge of another (scarfing) to optimise its use in readiness for bonding to panel products.

The unit applies to production workers who scarf edges of veneer in a forest and wood products factory setting and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for scarfing	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of veneer to be scarfed from veneer production process.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan scarfing sequence and angle in line with work order.
2. Scarf veneer	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Set machine functions and feed rate for optimal product recovery. 2.4 Select scarfing method in line with veneer being joined. 2.5 Position veneer and feed at appropriate rate for machine speed and capacity, veneer condition and thickness. 2.6 Scarf veneer to specification and assess veneer visually throughout scarfing process for strength and production defects. 2.7 Coordinate out-feed to ensure efficient recovery of scarfed material.
3. Redistribute material	3.1 Assess joins and grade scarfed veneer in line with organisational procedures and industry standards. 3.2 Direct material to storage or processing operations in line with work order. 3.3 Dispose of sub-standard material in line with environmental protection practices. 3.4 Clean work area in line with organisational safety procedures.
4. Complete operator maintenance	4.1 Follow organisational safety procedures to lock out equipment. 4.2 Check cutters or blades for bluntness or damage. 4.3 Remove and replace cutters or blades in line with manufacturer's recommendations. 4.4 Keep machine clear of dust and debris in line with organisational safety procedures. 4.5 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amounts of veneer to be processed • complete routine calculations for angle of joins

© Commonwealth of Australia, 2025 Skills Insight

	• calculate feed rate to optimise quality and quantity of production output.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• logically sequence the stages of preparation and production using work order to guide activities.

Assessment Requirements for FWPWPP2207 Scarf edges of veneer

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2207B Scarf edges of veneer, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- scarf veneer in line with individual work orders that prescribe different lengths, widths, thicknesses and quantities for each job.
- for each of the above jobs, visually inspect veneer to re-classify its quality and use after scarfing.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing veneer and other waste
- typical flow of material supply in and out of the veneer scarfing area
- typical work flow processes and veneer scarfing techniques for optimising sheet sizes
- appropriate range of feed rates to produce specified joins and quality finish
- methods used to visually assess condition of veneer for strength and typical production defects:
  - overlaps

© Commonwealth of Australia, 2025 Skills Insight

  - gaps
  - veneer faults
  - joining spacing's
- key features of industry standard grades for re-classifying quality of scarfed veneer and applicable terminology
- purpose, features and operation of equipment used to scarf edges of veneer:
- specialised scarfing machines
- lifting equipment
- methods for assessing cutter and blade condition and completing basic non-specialist repair and maintenance for scarfing machines
- organisational procedures specific to scarfing edges of veneer:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting production outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- specialised scarfing machine
- continuous conveyor belt system
- lifting equipment
- maintenance tools and equipment
- consumable cutters and blades
- personal protective equipment suitable for scarfing veneer
- commercial veneer
- manufacturers' instructions for use and maintenance of equipment
- work order for with specific instructions for the scarfing of veneer
- template documents for recording production outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for scarfing veneer.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and

FWPWPP2208 Cut veneer

Modification History

Release	Comment
1	Replaces equivalent FPIWPP2208B Cut veneer, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to cut veneer to width and length in readiness for bonding to panel products.

The unit applies to production workers who cut veneer in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for cutting	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of veneer to be cut from veneer production process.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Select cutting process and plan in line with work order.
2. Operate equipment to cut veneer	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start up equipment checks to ensure operational effectiveness. 2.3 Coordinate conveyor and guillotine operation with veneer production. 2.4 Select optimal cutting positions to minimise defects and maximise full width sheets. 2.5 Complete cutting and monitor conveyor feed rate regularly for material flow problems. 2.6 Cut veneer to specification and assess veneer visually throughout cutting process for strength, gaps and defects.
3. Redistribute material	3.1 Direct material to storage or processing operations in line with organisational procedures. 3.2 Dispose of incorrect cuts, off cuts and defective material in line with environmental protection practices. 3.3 Clean work area in line with organisational safety procedures. 3.4 Record and report production outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amounts of veneer to be processed • complete basic calculations of required length and width to determine equipment set up.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions.

Assessment Requirements for FWPWPP2208 Cut veneer

Modification History

Release	Comment
1	Replaces equivalent FPIWPP2208B Cut veneer, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- cut veneer line with individual work orders that prescribe different lengths, width, tolerances and quantities for each job.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing veneer
- typical flow of material supply in and out of the veneer cutting area
- typical work flow processes and veneer cutting techniques for optimising sheet sizes
- methods used to visually assess condition of veneer for strength, gaps and typical defects:
  - incorrect moisture content
  - warp
  - wane
  - shakes
  - insect defects
  - splits

© Commonwealth of Australia, 2025 Skills Insight

  - knots
  - resin pockets
- purpose, features and operation of equipment used to cut veneer:
  - electronic guillotines
  - conveyor belt systems
  - different types of lifting equipment:
- fork lifts
- slings
- trolley jacks
- gantry cranes
- loaders
- organisational procedures specific to cutting veneer:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting production outcomes and equipment faults.
  -

Assessment Conditions

The following resources must be made available:

- electronic guillotines
- lifting equipment
- personal protective equipment suitable for cutting veneer
- commercial veneer
- manufacturers' instructions for use of equipment
- work order with specific instructions for cutting veneer
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for cutting veneer.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPWPP2209 Saw products from continuous ply

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2209B Saw products from continuous ply, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to use a power driven saw to saw panels to size from a roll of continuous ply.

The unit applies to production workers who saw products from continuous ply in a forest and wood products factory setting and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for cutting	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Obtain type and quantity of continuous ply to be cut from storage

© Commonwealth of Australia, 2025 Skills Insight

	location. 1.4 Plan material cutting patterns and saw set-up sequences in line with work order.
2. Cut continuous ply to size	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Mark material and set stops in preparation for cutting. 2.3 Set-up ply on in-feed and feed systems, check and regularly adjust rate. 2.4 Follow cutting sequence and patterns to produce required quantity. 2.5 Check cuts for length or angle within set tolerance. 2.6 Dispose of incorrect cuts, off cuts and defective material in line with environmental protection practices. 2.7 Stack material safely in designated location in line with work order.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check saw blades for bluntness or damage. 3.3 Remove and replace saw blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with environmental protection practices. 3.5 Keep work area clear of dust and debris in line with organisational safety procedures. 3.6 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amounts of continuous ply • complete basic calculations of required length and angle to determine saw set up • calculate the feed rate to optimise quality and quantity of production output • measure finished dimensions against specifications and appropriate tolerances.

© Commonwealth of Australia, 2025 Skills Insight

Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.

Assessment Requirements for FWPWPP2209 Saw products from continuous ply

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2209B Saw products from continuous ply, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce sawn panels from continuous ply in line with individual work orders prescribing different lengths and tolerances and number of panels for each job
- across the above jobs, complete cutting patterns and sequences for single straight cuts and angles requiring one cutting pass set for multiple cuts of the same size
- for each of the above jobs, stack batches of sawn panels in storage location according to common length
- after each of the above jobs, complete operator maintenance on the saw used.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber ply and other waste
- storage layout and categories for:
  - raw materials
  - stacking finished panels
- typical continuous ply defects and how they affect ability to produce quality sawn panels:

© Commonwealth of Australia, 2025 Skills Insight

    - warp
    - wane
    - cupping
    - shakes
    - insect defects
    - knots
    - resin pockets
- cutting patterns and sequences for single straight cuts and angles requiring one cutting pass
- range of industry standard lengths, tolerances and applicable terminology
- purpose, features and operation of equipment used to saw products from continuous ply:
    - measuring equipment
    - power operated, manually controlled docking and trimming saws with carriages
    - saws with adjustable angle
    - saws with one or multiple blades
    - bandsaws
    - panel saws
    - table saws
    - bench saws
    - feed systems with rollers which support continuous ply
- methods for assessing saw blade condition and completing and basic non-specialist repair and maintenance for saws
- organisational procedures specific to sawing products from continuous ply:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting production outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- tools and equipment for sawing products from continuous ply:
    - measuring equipment
    - saws which must include one or more of the following:
        - power operated, manually controlled docking and trimming saws with carriages
        - saws with adjustable angle
        - saws with one or multiple blades
        - bandsaws
        - panel saws
        - table saws

© Commonwealth of Australia, 2025 Skills Insight

    - bench saws
  - feed system with rollers which support continuous ply
- maintenance tools and equipment for saws
- consumable saw blades
- personal protective equipment suitable for sawing products from continuous ply
- a diverse range of continuous ply rolls
- manufacturers' instructions for use and maintenance of equipment
- work order with specific instructions for sawing and storing panels
- template documents for recording production outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for sawing products from continuous ply

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP2210 Cut panels to profile

Modification History

Release	**Comment**
1	Replaces equivalent FPIWPP2210B Cut panels to profile, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to cut panels to a profile, with shaping equipment, to produce moulded timber products.

The unit applies to production workers who cut panels to profile in a forest and wood products factory setting.and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for profiling	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Obtain type and quantity of panels for profiling from storage location.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Identify profile to be cut and select cutting blades.
2. Set up profiling equipment	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Follow lock-out procedures, select and attach machine guides and install cutting blades. 2.3 Set depth of cut or profile in line with required shape and to minimise waste. 2.4 Stack panels in close proximity to maximise ease of machine feeding. 2.5 Test equipment set up for correct alignment through trial run and adjust as required.
3. Cut material to profile	3.1 Feed panels into machine at feed rate prescribed by organisational requirements. 3.2 Follow, maintain and adjust cutting sequence to produce required quantity and maximise feed rate. 3.3 Check profiling process regularly and adjust to maintain desired depth and profile. 3.4 Dispose of incorrect cuts, off cuts and defective material in line with environmental protection practices. 3.5 Stack panels safely in designated location in line with work order.
4. Complete operator maintenance	4.1 Follow organisational safety procedures to lock out equipment. 4.2 Check cutting blades for bluntness or damage. 4.3 Remove and replace cutting blades in line with manufacturer's recommendations. 4.4 Keep machine clear of dust and debris in line with organisational safety procedures. 4.5 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count numbers of panels to be profiled • complete basic calculations of required depth of cut or profile to

Assessment Requirements for FWPWPP2210 Cut panels to profile

Modification History

Release	Comment
1	Replaces equivalent FPIWPP2210B Cut panels to profile, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce profiled panels for the following types of material in line with individual work orders that prescribe different profiles and number of panels for each job:
  - medium density fibreboard
  - laminated veneer
  - chipboard
  - fibreboard
- complete profiling of product chosen from the following list:
  - quad
  - beading
  - mouldings
  - shaped beams
  - architraves
  - skirting boards
  - scotia
- for each of the above jobs, stack batches of profiled panels in storage location according to common profile type and dimension
- after each of the above jobs, complete operator maintenance on the profiling equipment used.

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- storage layout and categories for:
  - raw materials
  - stacking finished panels
- typical timber panel defects and how they affect ability to produce quality profiled product:
  - warp
  - wane
  - cupping
  - holes
  - breakages
  - lifting veneer
  - bonding problems
- common profiles and applicable terminology
- common cutting patterns, sequences and appropriate feed rates used to achieve common profiles
- purpose, features and operation of equipment used to cut panels to profile:
  - measuring equipment
  - multi-head planing machines (four siders)
  - spindle moulders
  - routing machines
  - shaping machines
  - machine guides
- methods for assessing cutting blade condition and completing and basic non-specialist repair and maintenance for profiling equipment
- organisational procedures specific to cutting panels to profile:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting production outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

© Commonwealth of Australia, 2025 Skills Insight

- measuring equipment
- profiling equipment which includes one or more of the following:
  - multi-head planing machines (four siders)
  - spindle moulders
  - routing machines
  - shaping machines
  - machine guides
- maintenance tools and equipment
- consumable profile cutting blades in various shapes and sizes
- personal protective equipment suitable for cutting panels to profile
- commercial timber which includes one or more of the following:
  - medium density fibreboard
  - laminated veneer
  - chipboard
  - fibreboard
- manufacturers' instructions for use and maintenance of equipment
- work order for cutting activities with specific instructions for cutting and storing panels
- relevant personnel for the purposes of communicating information
- template documents for recording production outcomes, equipment faults and maintenance requirements
- organisational procedures for cutting panels to profile.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP2211 Move material by transfer equipment

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2211B Move material by transfer equipment, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to set up equipment, move timber products using transfer cars and rail systems and to shut down equipment. Work is completed in a forest products factory setting

The unit applies to Production worker (Laminates, Panel and Board, Veneer)

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.
1. Prepare to move material by transfer equipment	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Inspect type and quantity of material for relocation and check for potential hazards, obstructions and spillage.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan moving processes in line with work order.
2. Move material	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Use communication signals to notify nearby personnel of impending operation. 2.3 Select material to be moved and loading point, using schedules, orders and instructions. 2.4 Estimate material dimensions and weight to ensure load and equipment is stable. 2.5 Position and secure load using transfer car techniques in line with manufacturer's recommendations.
3. Shut down equipment	3.1 Clear material from transfer car prior to shutdown. 3.2 Coordinate shutdown with other line operators in line with organisational safety procedures. 3.3 Apply brakes and safety locks to prevent equipment from accidentally moving. 3.4 Complete routine post operational cleaning and checks in line with organisational procedures. 3.5 Clear material spillage from areas around rail system in line with environmental protection practices.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities and weight of material to be moved from work orders • complete routine calculations to determine material dimensions and weights for loading and transfer.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders • provide clear, unambiguous verbal and non-verbal communication signals.
Reading skills to:	• interpret: • workplace health and safety and other organisational procedures • work orders • manufacturers' instructions.

© Commonwealth of Australia, 2025 Skills Insight

Writing skills to:	• complete accurate basic records for process outcomes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and material moving and relocating, using work order to guide activities.
Problem-solving skills to:	• identify oversize, overweight and unstable items and make loading adjustments • recognise faulty equipment and resolve by reporting.
Technology skills to:	• select and use appropriate personal protective equipment for moving material • safely and efficiently use mechanical rail and transfer equipment.

Range of Conditions

Not Applicable

Assessment Requirements for FWPWPP2211 Move material by transfer equipment

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP2211B Move material by transfer equipment, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow organisational policies and procedures relevant to moving material by transfer equipment
- moving material by transfer car to convey material to or from production areas
- redistribute material on site using rail and transfer car
- respond to circumstances where loads and transfer equipment may become unstable through loading oversized or overweight materials.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for operating transfer equipment:
  - reducing water and energy use
  - cleaning plant, tools and equipment
- typical work flow processes for transferring timber and timber products to and from designated storage areas
- typical workplace hazards present during transfer operations and methods of minimising risks
- capacity of transfer equipment in relation to dimensions and weight
- methods to correctly load transfer equipment to ensure stability of load and equipment
- key features of these varying signal systems used for transfer processes:

© Commonwealth of Australia, 2025 Skills Insight

  - hand signals
  - whistles
  - sirens
  - loud speaker announcements
  - two way radios
- typical industry chain of command for communicating signals during transfer processes
- purpose, features, operation and shut down of equipment used to transfer timber and timber products:
  - rail and electrically powered rail mounted transfer car systems
  - 'follow me' trolleys
  - electronic-eye trolleys used in layup
- organisational procedures specific to transferring timber and timber products:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and recording transfer processes and equipment faults.

Assessment Conditions

The following resources must be made available:

- equipment used to transfer timber products which must include one or more of the following:
  - rail and electrically powered rail mounted transfer car systems
  - 'follow me' trolleys
  - electronic-eye trolleys used in layup
- communication equipment used to signal operation of transfer equipment
- personal protective equipment suitable for transferring timber products
- material for transfer including:
  - treated paper
  - wood chips
  - flakes
  - wood fibre
  - logs
  - bark
  - off-cuts
  - timber
  - raw board
  - panel products
  - veneer
- manufacturers’ instructions for equipment use

© Commonwealth of Australia, 2025 Skills Insight

- work order with specific instructions for moving timber and timber products to and from a designated storage area
- template documents for recording transfer processes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for transferring timber and timber products.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP3201 Produce veneer from debarked logs

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3201B Produce veneer from debarked logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to operate a specialised peeling lathe or rotary slicer to produce sheets of timber veneer from debarked logs. Work is completed in a forest products factory setting and includes operator maintenance.

The unit applies to production operators and technicians who produce veneer from debarked logs in a forest and wood products factory setting and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for peeling	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of debarked logs for peeling or slicing.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan veneer peeling or slicing process and thickness in line with work order.
2. Peel veneer	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Check suitability of log size and condition and load into lathe. 2.3 Place drive logs to maximise available veneer and remove waste product. 2.4 Set veneer peeling or slicing process for optimal veneer recovery and grading. 2.5 Adjust machine speed and control of veneer cut to suit log characteristics. 2.6 Dispose of defective material and log cores in line with environmental protection practices.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check cutting blades for bluntness or damage. 3.3 Remove and replace cutting blades in line with manufacturer's recommendations. 3.4 Dispose of used blades in line with environmental protection practices. 3.5 Keep machine clear of dust and debris in line with organisational safety procedures. 3.6 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count numbers of debarked logs for processing • complete routine calculations to measure log diameter and length • interpret order sizes and set up equipment to achieve veneer thickness to specifications.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

© Commonwealth of Australia, 2025 Skills Insight

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.

Assessment Requirements for FWPWPP3201 Produce veneer from debarked logs

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3201B Produce veneer from debarked logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce veneer from debarked logs in line with individual work orders specifying the use of different log species, diameter and length and prescribing varying veneer outputs in:
  - width
  - length
  - thickness
  - quantity
- after each of the above jobs, complete operator maintenance on the equipment used.
-

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
- reducing water and energy use
- cleaning plant, tools and equipment
- disposing of, recycling and reusing timber and other waste
- typical log defects and how they affect ability to produce quality veneer:
  - warp
  - wane

© Commonwealth of Australia, 2025 Skills Insight

  - cupping
  - shakes
  - insect defects
  - knots
  - resin pockets
- typical flow of material supply in and out of the production area
- typical work flow processes for producing veneer from debarked logs and peeling and slicing techniques to achieve veneer thickness to specifications
- appropriate range of feed rates for different log diameters and lengths
- purpose, features and operation of equipment used to produce veneer from debarked logs :
- specialised veneer peeling lathes
- rotary slicers
- methods for assessing cutting blade condition and completing basic non-specialist repair and maintenance
- organisational procedures specific to producing veneer from debarked logs:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
- communication reporting lines
- recording and reporting production outcomes, equipment faults and maintenance requirements.
-

Assessment Conditions

The following resources must be made available:

- specialised veneer peeling lathes or rotary slicers
- maintenance tools and equipment
- consumable cutting blades
- personal protective equipment suitable for producing veneer from debarked logs
- a diverse range of commercial debarked logs
- manufacturers' instructions for use and maintenance of equipment
- work order with specific instructions for cutting timber veneer from debarked logs
- template documents for recording production outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for producing veneer from debarked logs.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

FWPWPP3202 Paint panels

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3202B Paint panels, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to paint panels with water, oil or solvent based paints using roller coating line, spray booth or curtain coating equipment to finish coat wood panel products.

The unit applies to production operators and technicians who paint panels in a forest and wood products factory setting

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for painting	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective and other equipment and check for operational effectiveness. 1.3 Obtain type and quantity of panels for painting from storage.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Select panel painting process, feed rates and paints and plan in line with work order.
2. Paint panels	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Load paint products in equipment and apply paint to panel, monitoring and adjusting flow rates and viscosity continually. 2.3 Check paint operations regularly and clear blockages and filters to maintain paint coverage. 2.4 Check panels regularly for surface quality and contamination, and grade according to work order requirements. 2.5 Remove defective panels from painting process and review for disposal or re-painting. 2.6 Dry and stack material safely in designated location.
3. Shut down and clean equipment	3.1 Coordinate shutdown procedures with other line operators in line with organisational safety procedures. 3.2 Turn off pumps and flush equipment in line with manufacturer's instructions. 3.3 Dispose of excess paint and flushing liquid in line with environmental protection practices. 3.4 Store equipment and paint in line with organisational procedures. 3.5 Record and report production outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count numbers of panels • interpret order requirements and set up equipment to achieve correct flow rates and viscosity • calculate rate of paint application to optimise quality and quantity of production output.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret:

© Commonwealth of Australia, 2025 Skills Insight

	• workplace health and safety and other organisational procedures • work orders • safety data sheets • manufacturers' instructions.
Writing skills to:	• complete accurate basic records for production outcomes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.
Problem-solving skills to:	• identify and dispose of defective panels or rectify • identify processing problems and faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective equipment for painting panels • efficiently and safely operate painting equipment.

Assessment Requirements for FWPWPP3202 Paint panels

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3202B Paint panels, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- paint panels in line with individual work orders for each job; types of panels include:
  - medium density fibreboard
  - chipboard
  - fibreboard
  - plywood
- at the completion of each of the above jobs:
  - shut-down and clean equipment in line with organisational safety procedures
  - dispose of excess paint in line with environmental protection practices
  - safely store unused paint
  - stack finished panels in storage location according to common size, thickness, length and coating.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for painting panels:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
  - disposing of hazardous substances

© Commonwealth of Australia, 2025 Skills Insight

- storage layout and categories for:
  - raw materials
  - stacking finished panels
- characteristics of timber panels and the types of paint most suitable for application:
  - medium density fibreboard
  - chipboard
  - fibreboard
  - plywood
- properties, at a basic level of understanding, of paints:
  - water based
  - oil based
  - solvent based
- viscosity, film thickness and film wetness of paints
- methods used to safely store paint
- typical work flow processes for painting panels
- purpose, features, operation, shut down and cleaning of painting equipment including:
- roller coating lines
- spray booths
- curtain coating lines
- trays
- overflow trays
- thinner reservoirs
- spray guns
- roller coaters
- range of appropriate paint flow rates to avoid equipment blockages and optimise quality and quantity of production output
- organisational procedures specific to surface painting panels:
  - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
  - communication reporting lines
  - recording and reporting production outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- painting equipment which must include one or more of the following:
  - roller coating lines
  - spray booths
  - curtain coating lines
  - trays
  - overflow trays

© Commonwealth of Australia, 2025 Skills Insight

  - thinner reservoirs
  - spray guns
  - roller coaters
- personal protective equipment suitable for painting panels
- panels which must include one or more of the following:
  - medium density fibreboard
  - chipboard
  - fibreboard
  - plywood
- paint which must include one or more of the following:
  - water based
  - oil based
  - solvent based
- manufacturers':
  - safety data sheets for paint
  - instructions for equipment use
  - recommendations for cleaning equipment
- work order with specific instructions for painting panels
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for painting panels.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

FWPWPP3203 Produce fibre from chips

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3203B Produce fibre from chips, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to assess chips for production suitability, and operate a defribrator to convert wood chips to fibre for the production of medium density fibreboard.

The unit applies to production technician operators and machine operators in a forest and wood products factory setting and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Timber Manufactured Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for fibre production	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Identify type and quantity of wood chips for fibre production,

© Commonwealth of Australia, 2025 Skills Insight

	assess condition and select. 1.4 Plan defibrator process in line with work order.
2. Produce fibre	2.1 Use equipment in line with organisational safety procedures, manufacturer’s instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Adjust defibrator and feed systems to produce required fibre size; check and adjust regularly. 2.4 Monitor chip flow and pulp out-feed to prevent blockages to ensure optimum production rate. 2.5 Direct fibre output to storage bins in line with prescribed fill levels. 2.6 Respond to critical situations requiring emergency shutdown to prevent personal injury or damage to machine or product. 2.7 Dispose of sub-standard material in line with environmental protection practices.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check defibrator blades for bluntness or damage, remove and replace in line with manufacturer's recommendations. 3.3 Dispose of used blades in line with environmental protection practices. 3.4 Clean defibrator components in line with manufacturer's recommendations, keeping machine clear of dust and debris. 3.5 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and measure volume of wood chips • read basic numerical machine settings and choose according to required fibre size.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.
Reading skills to:	interpret:

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete fibre production jobs and safely operate defibrator in line with individual work orders prescribing different fibre size and quantity for each job
- complete assessments of the source wood chips for:
  - species
  - size
  - moisture content
  - contamination issues
  - monitor and adjust the feed system according to:
  - white water
  - stock level
  - fibre consistency
  - feed level
  - steam flow
  - raw water
  - noise
  - power consumption
- after each of the above jobs, complete operator maintenance on the defibrator.
-

© Commonwealth of Australia, 2025 Skills Insight

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for producing fibre from wood chips:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing fibre, pulp and other waste
- typical flow of material supply in and out of the fibre production area
- methods used to assess wood chips for:
  - species
  - size
  - moisture content
  - contamination issues
- typical work flow processes and techniques used to produce fibre from wood chips
- purpose, features and operation of equipment used to produce fibre from chips:
  - defibrator
  - feed system
- methods for assessing defibrator blade condition and completing basic non-specialist repair and maintenance
- organisational procedures specific to producing fibre from chips:
- workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
- communication reporting lines
- recording and reporting production outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- defibrator
- feed system
- maintenance tools and equipment
- consumable defribrator blades
- personal protective equipment suitable for producing fibre from chips
- wood chips from various timber species
- manufacturers' instructions for use and maintenance of equipment
- work order with specific instructions for assessing wood chips and producing fibre to a specified grade
- template documents for recording production outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for producing fibre from chips.

FWPWPP3204 Form board

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3204B Form board, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to spread chip and fibre blend over a former and press it with heat and pressure to produce hard panels of chipboard and fibreboard.

The unit applies to production operators and technicians who form boards in a forest and wood products factory setting and includes shutting down and cleaning equipment.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for forming	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of chip and fibre blend required for production.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan forming process in line with organisational procedures.
2. Prepare form board equipment	2.1 Maintain stock tanks at correct level in line with organisational requirements. 2.2 Adjust spreader stations to deliver material according to required board cross-section distribution. 2.3 Check operational condition and set-up of former to confirm mat condition. 2.4 Check forming equipment for defects and position to load press in line with manufacturer's instructions.
3. Operate equipment	3.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 3.2 Start former and forming line; operate and adjust to produce board in line with work order. 3.3 Set slitters or saws and cut formed board to required width and length. 3.4 Dispose of sub-standard boards in line with environmental protection practices. 3.5 Respond to critical situations requiring emergency shutdown to prevent personal injury or damage to machine or product.
4. Shut down and clean equipment	4.1 Clear material from conveyor belts prior to shut-down. 4.2 Coordinate shutdown with other line operators in line with organisational safety procedures. 4.3 Clear material spillage from areas around conveyors and forming stations in line with environmental protection practices. 4.4 Clean spreading stations, formers and forming lines internally and externally in line with environmental protection practices. 4.5 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and measure volume of flakes or fibre • read basic numerical machine settings to maintain correct stock

© Commonwealth of Australia, 2025 Skills Insight

	tank levels • interpret order sizes and set up equipment to achieve specified width and length of mat and boards.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders and coordinate shut-down procedures.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions.

Writing skills to:	• complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.

Assessment Requirements for FWPWPP3204 Form board

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3204B Form board, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce formed boards in line with individual work orders that prescribe different lengths, widths and quantities for each job; types of board are to include:
  - chipboard
  - fibreboard
- after each of the above jobs, complete operator maintenance to clean equipment.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber
  - disposing of hazardous substances
- typical flow of material supply in and out of the board forming area
- typical work flow processes and range of processing techniques used to form and trim boards from chip and fibre blends
- composition of chip and fibre blends
- purpose, features and operation of equipment used to form board:
  - spreading stations

© Commonwealth of Australia, 2025 Skills Insight

    - former and forming line
    - forming equipment:
- mats
- screens
- trays
- plates
    - slitters or saws
    - screens
    - stock tanks
- methods used to clean equipment
- organisational procedures specific to forming board:
    - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
    - communication reporting lines
    - recording and reporting production outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- tools and equipment used to form board:
    - spreading stations
    - former and forming line
    - forming equipment:
        - mats
        - screens
        - trays
        - plates
- slitters or saws
- screens
- stock tanks
- personal protective equipment suitable for forming board
- chip and fibre blends to be compressed
- manufacturers' instructions for use and cleaning of equipment
- work order with specific instructions for forming board
- template documents for recording production outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for forming board.

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
-

FWPWPP3205 Match and join veneer

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3205B Match and join veneer, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to match, stitch, tape or glue slices of veneer in readiness for bonding to panel products.

The unit applies to production operators and technicians who match and join veneer in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- clip veneer to form a straight edge and remove these types of defects in line with individual work orders that prescribe different dimensions and quantities:
  - uneven edges
  - split edges
  - excessive knots
- for each of the above jobs, visually inspect veneer to re-classify its quality and use after clipping.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing veneer
- typical flow of material supply in and out of the veneer clipping area
- typical work flow processes and veneer clipping techniques for optimising use of veneer panels
- methods used to visually assess condition of veneer for dimension, typical production and other defects:

© Commonwealth of Australia, 2025 Skills Insight

  - warp
  - wane
  - knots
  - splits
  - uneven edges
- key features of industry standard grades for re-classifying quality of clipped veneer and applicable terminology
- purpose, features and operation of equipment used to clip veneer:
- measuring tapes
- dial gauges
- clipping machines
- guillotines
- conveyor belt systems
- different types of lifting equipment:
  - fork lifts
  - slings
  - trolley jacks
  - gantry cranes
  - loaders
- organisational procedures specific to clipping veneer:
- workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
- communication reporting lines
- recording and reporting production outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- measuring tapes
- clipping machines
- guillotines
- lifting equipment
- personal protective equipment suitable for clipping veneer
- a diverse range of commercial veneer
- manufacturers' instructions for use of equipment
- work order with specific instructions for clipping veneer
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for clipping veneer

FWPWPP3208 Punch peg holes in panels

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3208B Punch peg holes in panels, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to punch peg holes in thin panel products to produce a peg board, using a hole punching machine.

The unit applies to production operators and technicians who punch peg holes in panels in a forest and wood products factory setting and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for hole punching	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of material to be punched from storage location.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan punching process and hole lay out in line with work order.
2. Punch peg holes	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Feed material into machine at prescribed feed rate. 2.4 Follow punching sequence, and adjust to produce required quantity and maximum feed rate. 2.5 Check punching process regularly and adjust to maintain desired quality and output. 2.6 Dispose of sub-standard material in line with environmental protection practices. 2.7 Stack material safely in designated location in line with work order.
3. Complete operator maintenance	3.1 Follow organisational safety procedures to lock out equipment. 3.2 Check punches for bluntness or damage. 3.3 Remove and replace punches in line with manufacturer's recommendations. 3.4 Keep machine area clear of dust and debris in line with organisational safety procedures. 3.5 Record and report production outcomes, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count number of panels to be punched • calculate the feed rate to optimise quality and quantity of production output.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders

Assessment Requirements for FWPWPP3208 Punch peg holes in panels

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3208B Punch peg holes in panels, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- produce punched panels in line with individual work orders for each panel type prescribing different hole layouts/patterns and number of panels; material type include:
  - medium density fibreboard
  - chipboard
  - fibreboard
- for each of the above jobs, stack batches of punched panels in storage location according to material type, dimension and hole layout/pattern
- after each of the above jobs, complete operator maintenance on the punching machine used.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- storage layout and categories for:
  - raw materials

© Commonwealth of Australia, 2025 Skills Insight

    - stacking finished panels
- typical panel defects and how they affect ability to produce quality punched panels:
    - warp
    - wane
    - cupping
- common uses for punched panels and typical hole layout/patterns
- typical work flow processes and veneer punching techniques for optimising use of panels
- appropriate range of feed rates to produce specified hole layout/pattern and quality finish
- features of defects in finished panels which would trigger rejection and disposal:
    - incorrect margins
    - incorrect patterns
    - doglegs
- purpose, features and operation of equipment used to punch peg holes in panels:
    - measuring equipment
    - punching machines
- methods for assessing punch condition and completing basic non-specialist repair and maintenance for punching machines
    - organisational procedures specific to punching peg holes in panels:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting production outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- measuring equipment
- punching machines
- maintenance tools and equipment
- personal protective equipment suitable for punching peg holes in panels
- commercial timber panels which must include one or more of the following:
    - medium density fibreboard
    - chipboard
    - fibreboard
- manufacturers' instructions for use and maintenance of equipment
- work order with specific instructions for the punching and storing timber panel products
- template documents for recording production outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for punching peg holes in panels.

© Commonwealth of Australia, 2025 Skills Insight

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP3209 Prepare resin and additives

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPIWPP3209B Prepare resin and additives, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the skills and knowledge required to mix glue, resin and additives for use in the production of engineered wood products.

The unit applies individuals who work as production operators and technicians in an engineered wood products facility. Operators generally work under broad or limited direction to complete routine activities related to their own work, and take responsibility for their work.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements	Performance Criteria

© Commonwealth of Australia, 2025 Skills Insight

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for mixing resin and additives	1.1 Review work order, workplace health and safety requirements, environmental protection practices and emergency procedures for mixing resin and additives and, where required, check with appropriate personnel 1.2 Identify and report hazards and use personal protective equipment according to workplace requirements and health and safety legislation to maintain safe work practices 1.3 Obtain the type and quantity of glue or resin to be mixed from a storage location 1.4 Select the mixing process and plan according to work order
2. Mix glue	2.1 Use equipment according to workplace health and safety procedures, manufacturer instructions and environmental protection practices 2.2 Measure and mix glue or resin ingredients and additives to ensure minimum wastage 2.3 Transfer mix to appropriate storage location or production equipment through transfer lines without contaminating 2.4 Monitor rate that glue or resins and additives are being added, and where required adjust pumps 2.5 Test mix samples regularly according to manufacturer instructions
3. Maintain and clean equipment	3.1 Clean mixing, storage and transfer equipment according to workplace health and safety procedures 3.2 Turn off pumps and flush equipment according to workplace health and safety procedures and manufacturer recommendations 3.3 Dispose of excess glue or resin and additives in line with environmental protection practices, and store equipment 3.4 Record and report production outcomes and equipment faults to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**

© Commonwealth of Australia, 2025 Skills Insight

Skill	Description
Numeracy	• Calculate the quantity of glue or resin to meet work order production requirements • Calculate routine mixing ratios for glue or resin and additives • Interpret numerical data from test samples
Reading	• Interpret safety data sheets for glue, resins and additives
Navigate the world of work	• Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Use modes of communication suitable for the purpose to confirm and clarify understanding
Get the work done	• Recognise and respond to routine problems by reporting or rectifying

Assessment Requirements for FWPWPP3209 Prepare resin and additives

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent unit FPIWPP3209B Prepare resin and additives, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- followed workplace health and safety requirements and environmental protection procedures for mixing resins and additives used in the production of engineered wood products
- mixed one or more of the following types of glues and resins according to an individual work order prescribing different quantities:
  - synthetic or animal-based adhesives
  - rubber-based adhesives
  - polyvinyl acetate
  - epoxy resins
  - formaldehydes
- taken samples and tested mix for:
  - mix quantities
  - setting speed
  - how weather conditions may be affecting the process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Skills Insight

- health and safety hazards or risks related to mixing resins and additives for the production of engineered wood products, as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures specific to mixing glue, resin and additives:
  - health and safety, with particular emphasis on equipment lockout, emergency procedures, use of personal protective equipment (PPE) and handling hazardous substances according to safety data sheets
  - use of equipment for mixing resins and additives
  - communication reporting lines
  - recording and reporting production outcomes and equipment faults
- environmental protection practices for preparing resins and additives:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of hazardous substances
- storage layout and categories for:
  - raw materials
  - finished mixes
- typical flow of material supply in and out of the mixing area
- typical workflow processes for mixing glue, resins and additives
- properties, at a basic level of understanding, of glue and resin types and their uses:
  - synthetic or animal-based adhesives
  - rubber-based adhesives
  - polyvinyl acetate
  - epoxy resins
  - formaldehydes
- properties, at a basic level of understanding, of additive types and their uses
- effects of weather conditions on bonding times
- methods used to:
  - mix glues, resins and additives
  - test samples of mix
  - safely store glues, resins and additives
- purpose, features, operation and basic non-specialist maintenance of mixing systems used to mix glue, resin and additives:
  - mixers with manually controlled feed
  - mixers with pre-programmed mix quantities.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Skills Insight

    - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - mixing system with transfer pumps
    - PPE suitable for mixing glue, resin and additives
    - glue, resin and additives used in the production of engineered wood products
- specifications:
    - recipes for mixing glues, resin and additives
    - manufacturer safety data sheets for glues, resins and additives, instructions for equipment use and recommendations for maintaining equipment
    - work order with specific instructions for mixing glue, resins and additives
    - template documents for recording production outcomes and equipment faults
    - workplace procedures for mixing glue, resin and additives, including health and safety and emergency procedures and environmental protection procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPWPP3211 Maintain caul plates and screens

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3211B Maintain caul plates and screens, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to clean, inspect and replace caul plates and screens in laminating and pressing equipment.

The unit applies to production operators and technicians who maintain caul plates and screens in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for maintenance	1.1 Review work order and where required check with appropriate personnel. 1.2 Select appropriate repair, maintenance and personal protective equipment and check for operational effectiveness. 1.3 Remove caul plates and screens for maintenance from designated machinery.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Plan maintenance process in line with work order.
2. Change, clean and polish caul plates	2.1 Follow organisational safety procedures and manufacturer's recommendations throughout all maintenance and repair processes. 2.2 Identify plates requiring cleaning and move from circuit to plate rack. 2.3 Process plates through full cleaning cycle; inspect for defects and separate for repair where required. 2.4 Dry plates, prepare for use and return to circuit. 2.5 Polish plates using polishing table and head. 2.6 Store polished plates for use in line with work order. 2.7 Store or dispose of unused chemicals in line with environmental protection practices.
3. Prepare backing screens	3.1 Roll screens from plate and secure. 3.2 Process screens through full cleaning cycle; stack and inspect for faults. 3.3 Identify defective screens, remove and dispose of these in line with environmental protection practices.
4. Remove and replace transport plates	4.1 Coordinate load shifting and transport requirements to remove and replace transport plates with minimal downtime. 4.2 Identify defective plates, remove from circuit and dispose of these in line with environmental protection practices. 4.3 Prepare and fit replacement plates. 4.4 Record and report process outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify and set cycle time for chemical and heat treatment baths • read basic numerical machine settings.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.
Reading skills to:	• interpret: • workplace health and safety and other organisational

© Commonwealth of Australia, 2025 Skills Insight

	procedures • work orders • safety data sheets for chemicals • manufacturers' instructions and maintenance recommendations.
Writing skills to:	• complete accurate basic records for process outcomes and equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of repair and maintenance activities using work order to guide activities.
Problem-solving skills to:	• identify and dispose of defective materials • recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate hand-held tools and personal protective equipment to complete maintenance and repairs • use chemical and heat treatment baths to maintain caul plates and screens.

Assessment Requirements for FWPWPP3211 Maintain caul plates and screens

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3211B Maintain caul plates and screens, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete maintenance jobs in line with individual work orders
- for each of the above jobs complete the following maintenance and repair activities:
  - process caul plates and screens through the full cleaning cycle which may be via chemical or heat treatment baths
  - polish caul plates to ensure optimum operation
  - inspect caul plates, screen and transport plates for defects and process for repair or dispose of.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for maintaining and repairing cauls and screens:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing defective materials
  - disposing of hazardous substances
- operational purpose and features of caul plates, screens and transport plates
- purpose, features and operation of tools and equipment used to maintain and repair caul plates and screens:

© Commonwealth of Australia, 2025 Skills Insight

  - chemical baths
  - heat treatment baths
  - polishing table and machinery
- methods used to remove and replace caul and transport plates
- typical defects and methods used to assess condition of caul plates, screens and transport plates:
  - buckling
  - buildup of board product
  - marking of plates
  - dents
- characteristics of metal used in caul plates and screens and how they respond to chemical and heat cleaning processes and polishing in the case of caul plates
- polishing techniques to ensure caul plate surfaces are smooth for optimum board separation
- methods used to safely handle and store chemicals used in the cleaning process
- organisational procedures specific to maintaining and repairing caul plates and screens:
  - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
  - communication reporting lines
  - recording and reporting process outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- equipment used to maintain and repair caul plates and screens:
  - chemical or heat treatment baths
  - polishing table and machinery
  - hand-held tools
- machinery containing caul plates and screens
- caul plates
- screens
- transport plates
- personal protective equipment suitable for maintaining and repairing caul plates and screens
- manufacturers':
  - safety data sheets for chemicals
  - instructions for equipment use
  - recommendations for cleaning and repairing equipment
- work order with specific instructions for maintenance of caul plates and screens in designated equipment
- template documents for recording process outcomes and equipment faults
- relevant personnel for the purposes of communicating information

© Commonwealth of Australia, 2025 Skills Insight

- organisational procedures for maintaining and repairing caul plates and screens.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP3212 Dry material

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Application

This unit of competency describes the outcomes required to dry materials in a continuous operating single or multi pass dryer or flash dryer using either steam, heated air or gas.

The unit applies to production operators and technicians who dry material in a forest and wood products factory setting and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

	operational effectiveness. 1.4 Plan drying process in line with work order.
2. Set up and operate equipment for drying material	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness, light furnace and monitor continually. 2.3 Follow emergency shutdown procedures in response to fire. 2.4 Set drying temperature, humidity and feed rate for optimal product recovery. 2.5 Position material and feed at rate appropriate to machine speed, capacity, treatment being dried, thickness and condition. 2.6 Assess material visually and measure moisture levels, ensuring outcomes in line with work order. 2.7 Coordinate out-feed to ensure efficient recovery of dried material. 2.8 Record and report on drying process to appropriate personnel.
3. Redistribute material	3.1 Regrade material in line with industry standards. 3.2 Direct material to storage or processing operations in line with organisational procedures. 3.3 Reject and dispose of defective material in line with environmental protection practices. 3.4 Clean work area in line with organisational safety procedures.
4. Complete operator maintenance	4.1 Follow organisational safety procedures to lock out equipment. 4.2 Check drying mechanisms for effective condition. 4.3 Check, and maintain oil levels, air filters, conveyors and chains in line with manufacturer's recommendations. 4.4 Keep machine clear of dust and debris in line with organisational safety procedures. 4.5 Record and report equipment faults and maintenance requirements to appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy skills to:	• Identify quantities of required material within work orders and count amounts • Read basic dryer temperature settings; set and adjust levels according to drying requirements • Calculate the feed rate to optimise quality and quantity of production output • Complete routine measurements of material moisture levels.
Oral communication skills to:	• Ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• Interpret:
	  • Workplace health and safety and other organisational procedures
	  • Work orders
	  • Manufacturers' instructions and maintenance recommendations.

Writing skills to:	• Complete accurate basic records of process outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• Efficiently and logically sequence the stages of drying activities using work order to guide activities.
Problem-solving skills to:	• Identify and dispose of defective materials • Identify situations requiring emergency shutdown and respond immediately • Recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• Select and use appropriate personal protective equipment for dryer Operation and maintenance tasks • Safely and efficiently operate single or multi pass dryer or flash dryer.

Assessment Requirements for FWPWPP3212 Dry material

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 2.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- operate a dryer to dry materials in line with individual work orders for each job prescribing different quantities; materials for drying include:
  - solid timber
  - flake
  - veneer
  - raw boards
  - laminated panels
  - veneered panels
  - plywood
- for each of the above jobs, direct materials to appropriate storage location or to downstream processing
- after each of the above jobs, complete operator maintenance on the dryer used.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for operating and maintaining dryers:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing defective materials
- purpose of drying materials
- characteristics of materials and effects of the drying process:

    - solid timber
    - flake
    - veneer
    - raw boards
    - laminated panels
    - veneered panels
    - plywood
- methods used to visually assess condition of materials and measure moisture content after the drying process
- typical work flow processes and drying techniques
- typical flow of material supply in and out of the drying area
- purpose, features and operation of equipment used for drying materials:
- different types of dryers:
    - continuous operating single pass or multi pass dryer
    - flash dryer
- furnaces operated with steam, hot oil and gas
- different types of lifting equipment including:
    - fork lifts
    - slings
    - trolley jacks
    - gantry cranes
    - loaders
- methods used to maintain dryers
- moisture probes
- organisational procedures specific to drying materials:
    - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
    - communication reporting lines
    - recording and reporting process outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- one or more of the following types of dryer:
    - continuous operating single pass or multi pass dryer
    - flash dryer
- furnace operated with one or more of the following:
    - steam
    - hot oil
    - gas

© Commonwealth of Australia, 2025 Skills Insight

- continuous conveyor belt system
- lifting equipment
- moisture probes
- maintenance tools and equipment
- personal protective equipment suitable for dryer operation and maintenance
- commercial material for drying which must include at least one of the following:
  - solid timber
  - flake
  - veneer
  - raw boards
  - laminated panels
  - veneered panels
  - plywood
- manufacturers':
  - instructions for equipment use
  - recommendations for maintaining equipment
- work order with specific instructions for the types and quantity of material to be dried
- template documents for recording process outcomes, equipment faults and maintenance requirements
- relevant personnel for the purposes of communicating information
- organisational procedures for drying materials.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP3214 Treat paper

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3214B Treat paper, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to treat paper with resin in readiness for use in the laminating process.

The unit applies to production operators and technicians who treat paper in a forest and wood products factory setting and includes operator maintenance.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for treating	1.1 Review work order and where required check with appropriate personnel. 1.2 Identify type and quantity of paper for treating. 1.3 Select appropriate personal protective equipment and check for operational effectiveness. 1.4 Plan treating processes in line with work order.

© Commonwealth of Australia, 2025 Skills Insight

2. Load paper	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Locate paper rolls and move to loader. 2.3 Complete pre start-up equipment checks to ensure operational effectiveness. 2.4 Thread paper and commence feed process, ensuring minimal paper damage. 2.5 Change rolls when depleted and in line with treatment requirements.
3. Operate treater equipment	3.1 Bring treater to full operating condition, and regularly check operating parameters in line with manufacturer's instructions. 3.2 Run treating line, keeping paper treated with foreign material clear of treating process. 3.3 Check resin parameters regularly and adjust in line with manufacturer's instructions. 3.4 Assess paper regularly, ensuring specified outcomes in line with work order. 3.5 Direct treated paper to storage or processing operations in line with organisational procedures.
4. Fill resin tank	4.1 Shut off resin feed from tanks in line with manufacturer's instructions. 4.2 Wash and drain resin tanks thoroughly in line with environmental protection practices. 4.3 Pump resin from delivery truck to tank, monitor to ensure successful transfer and complete appropriate documentation. 4.4 Wash area surrounding tank clear of any spillage in line with organisational safety procedures and environmental protection practices.
5. Operate effluent system	5.1 Clean effluent tanks regularly in line with environmental protection practices. 5.2 Add settling agents to effluent tanks according to required quantities and allow for settling. 5.3 Remove solids and dispose of in line with organisational safety procedures and environmental protection practices.
6. Complete operator maintenance	6.1 Follow organisational safety procedures to lock out equipment. 6.2 Check treating mechanisms for operational effectiveness. 6.3 Check, adjust and maintain vat and oven temperatures in line with

© Commonwealth of Australia, 2025 Skills Insight

	manufacturer's recommendations. 6.4 Dispose of excess resin in line with environmental protection practices. 6.5 Keep machine clear of dust and debris in line with organisational safety procedures. 6.6 Record and report paper treating process, equipment faults and maintenance requirements to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• read basic temperature settings; set and adjust levels according to treatment requirements • calculate the feed rate to optimise quality and quantity of production output • check and adjust resin feed quantities • complete routine calculations to add correct ratio of settling agent to effluent tanks.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • safety data sheets
	  • manufacturers' instructions and maintenance recommendations.

Writing skills to:	• complete accurate basic records for deliveries, process outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of paper treatment processes using work order to guide activities.
Problem-solving skills to:	• recognise faulty equipment and resolve by reporting or rectifying.
Technology skills to:	• select and use appropriate personal protective equipment to operate and maintain paper treatment equipment • efficiently and safely operate and maintain paper treatment

Assessment Requirements for FWPWPP3214 Treat paper

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3214B Treat paper, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete paper treatment processing in line with individual work orders for each job which prescribe different paper thicknesses and quantities
- for each of the above jobs, direct treated paper to appropriate storage location or to downstream processing
- after each of the above jobs, complete operator maintenance on paper treatment equipment used
- complete refill of resin tanks
- demonstrate cleaning process for effluent tanks.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for paper treatment processes:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - cleaning spillages and disposing of hazardous substances
- purpose of treating paper
- characteristics of paper, effects of the treatment process and appropriate range of temperatures
- properties, at a basic level of understanding, of resin types used to treat paper
- methods used to assess condition of paper for finish quality and faults

© Commonwealth of Australia, 2025 Skills Insight

- typical work flow processes and paper treatment techniques
- typical flow of material supply in and out of the paper treatment area
- purpose, features and operation of equipment used in the paper treatment process:
  - treaters
  - vats
  - ovens
  - resin tanks
  - effluent tanks
- methods used to:
  - safely handle chemicals used in the treatment process
  - pump deliveries of resin
  - clean effluent tanks
  - maintain paper treatment equipment
- organisational procedures specific to treating paper:
  - workplace health and safety with particular emphasis on equipment lock out, use of personal protective equipment and handling hazardous substances
  - communication reporting lines
  - recording and reporting deliveries, process outcomes, equipment faults and maintenance requirements.

Assessment Conditions

The following resources must be made available:

- equipment used in the paper treatment process which must include at least one of the following:
  - treaters
  - vats
  - ovens
  - resin tanks
  - effluent tanks
  - maintenance tools and equipment
- delivery truck loaded with resin
- personal protective equipment suitable for operation and maintenance of paper treatment equipment
- resin
- settling agents
- a diverse commercial range of paper of different thicknesses in roll form
- manufacturers':
  - safety data sheets
  - instructions for equipment use
  - recommendations for maintaining equipment

© Commonwealth of Australia, 2025 Skills Insight

- work order with specific instructions for the types and quantity of paper to be treated
- template documents for recording deliveries, process outcomes, equipment faults and maintenance requirements
- recording pest control outcomes
- relevant personnel for the purposes of communicating information
- organisational procedures for treating paper.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP3215 Cut paper

Modification History

Release	Comment
1	Replaces equivalent FPIWPP3215B Cut paper, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to cut resin impregnated paper of different thicknesses in roll form to width and length in readiness for lamination processes.

The unit applies to production operators and technicians who cut paper in a forest and wood products factory setting.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for cutting	1.1 Review work order and where required check with appropriate personnel. 1.2 Identify type and quantity of paper to be cut. 1.3 Select appropriate personal protective equipment and check for operational effectiveness. 1.4 Select cutting process and plan in line with work order.

© Commonwealth of Australia, 2025 Skills Insight

2. Cut paper	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Coordinate conveyor and guillotine operation with paper production. 2.4 Select optimal cutting positions to minimise defects and maximise full width sheets. 2.5 Monitor feed rate and conveyors regularly for material flow problems and complete paper cutting. 2.6 Assess paper visually throughout cutting process for strength and defects.
3. Redistribute material	3.1 Direct paper to storage or processing operations in line with work order. 3.2 Dispose of off cuts and defective material in line with environmental protection practices 3.3 Clean work area in line with organisational safety procedures. 3.4 Record and report production outcomes and equipment faults to appropriate personnel.

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amount of paper to be processed • complete basic calculations of required length and width to determine equipment set up.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions.

Writing skills to:	• complete accurate basic records for production outcomes and

© Commonwealth of Australia, 2025 Skills Insight

	equipment faults.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.

Range of Conditions

Not Applicable

Assessment Requirements for FWPWPP3215 Cut paper

Modification History

Release	Comment
1	Replaces equivalent FPIWPP3215B Cut paper, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- complete paper cutting in line with individual work orders prescribing different:
  - thickness of paper
  - width of cut
  - length of cut
  - cutting method
  - quantity to be processed
- for each of the above jobs, direct cut paper to appropriate storage location or to downstream processing.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing paper
- typical flow of material supply in and out of the paper cutting area
- typical work flow processes and paper cutting techniques for optimising sheet sizes
- methods used to visually assess condition of paper for strength and typical defects:

© Commonwealth of Australia, 2025 Skills Insight

  - incorrect moisture content
  - paper making defects
  - resin impregnating defects
- purpose, features and operation of equipment used to cut paper:
  - electronic guillotines
  - traversing rotary cutters
  - conveyor belt systems
- organisational procedures specific to cutting paper:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting production outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- electronic guillotines
- traversing rotary cutters
- personal protective equipment suitable for cutting paper
- a commercial range of resin impregnated paper of different thicknesses in roll form
- manufacturers' instructions for use of equipment
- work order with specific instructions for cutting paper
- relevant personnel for the purposes of communicating information
- template documents for recording production outcomes and equipment faults
- organisational procedures for cutting paper.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

FWPWPP3216 Press material using the daylight process

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3216B Press material using the daylight process, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to operate a heat driven press system to compress chips, flakes or fibre using the daylight process.

The unit applies to production operators and technicians who press material using the daylight process in a forest and wood products factory setting and includes shutting down and cleaning equipment.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Wood Panel Products

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.*
1. Prepare for pressing	1.1 Review work order and where required check with appropriate personnel. 1.2 Select personal protective equipment and check for operational effectiveness. 1.3 Obtain type and quantity of chips, flakes or fibre for pressing.

© Commonwealth of Australia, 2025 Skills Insight

	1.4 Select pressing process in line with organisational procedures.
2. Press material	2.1 Use equipment in line with organisational safety procedures, manufacturer's instructions and environmental protection practices. 2.2 Complete pre start-up equipment checks to ensure operational effectiveness. 2.3 Set press cycle times, pressures, temperatures and product parameters for production requirements. 2.4 Monitor pressed material and adjust position, feed rate, mat and press conditions accordingly. 2.5 Complete unload and reload cycles in line with organisational procedures. 2.6 Assess pressed material and thickness changes regularly and adjust former and press set-up to produce quality formed materials. 2.7 Check pressed material production regularly to ensure conformity with size requirements and work order.
3. Unload material	3.1 Open press in line with organisational safety procedures. 3.2 Separate material and forming equipment and remove from press using unloading equipment. 3.3 Load material into cooling receiver, trim check and unload. 3.4 Test material samples to confirm compliance with industry standards and check for defects. 3.5 Dispose of sub-standard material in line with environmental protection practices. 3.6 Transfer finished material for further processing in line with organisational procedures.
4. Shut down and clean equipment	4.1 Coordinate shutdown with other line operators in line with organisational safety procedures. 4.2 Strip and clean blending, press and handling equipment in line with manufacturer's instructions and environmental protection practices. 4.3 Check and clean press bars or stops, plates and screens. 4.4 Keep machine clear of dust and debris in line with organisational safety procedures. 4.5 Record and report production outcomes and equipment faults to appropriate personnel.

© Commonwealth of Australia, 2025 Skills Insight

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.	
Numeracy skills to:	• identify quantities of required material within work orders and count amounts • read basic numerical machine settings to set temperature, pressure and cycle times • complete routine calculations to determine thickness of pressed materials and trim to specified dimension.
Oral communication skills to:	• ask questions and actively listen to clarify contents of work orders.

Reading skills to:	• interpret:
	  • workplace health and safety and other organisational procedures
	  • work orders
	  • manufacturers' instructions.

Writing skills to:	• complete accurate basic records for production outcomes, equipment faults and maintenance requirements.
Planning and organising skills to:	• efficiently and logically sequence the stages of preparation and production using work order to guide activities.

Assessment Requirements for FWPWPP3216 Press material using the daylight process

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3216B Press material using the daylight process, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- compress material using the daylight process in line with individual work orders that prescribe different quantities; types of materials for compression include:
  - chips
  - fibre
  - flakes
- assess formed material for moisture content, weight, thickness, density and defects and adjust forming cycle times, pressures and temperatures to produce quality outputs
- after each of the above jobs, complete operator maintenance to clean equipment.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
  - reducing water and energy use
  - cleaning plant, tools and equipment
  - disposing of, recycling and reusing timber and other waste
- typical flow of material supply in and out of the pressing area
- typical work flow processes and processing techniques used to compress material using formers and a heat driven press system

© Commonwealth of Australia, 2025 Skills Insight

- purpose, features and operation of equipment used to press material using the daylight process:
  - daylight process presses driven by steam pressure, including pneumatic or hydraulic loading and unloading equipment
  - pre-presses
  - formers
  - forming equipment:
- mats
- screens
- trays
- plates
  - press bars or stops
  - cooling receivers
  - blending equipment
  - trimming equipment
- appropriate cycle times, pressures and temperatures for the materials that can be compressed:
  - chips
  - fibre
  - flakes
- methods used to assess formed material for moisture content, weight, thickness, density and defects
- features of typical defects in formed materials:
  - surface blemishes
  - discolouration
  - natural timber defects
  - forming deformities
- methods used to strip and clean equipment
- organisational procedures specific to pressing material using the daylight process:
  - workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
  - communication reporting lines
  - recording and reporting production outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- tools and equipment for pressing material using the daylight process which must include at least one of the following:
  - daylight process presses driven by steam pressure
  - pre-presses

© Commonwealth of Australia, 2025 Skills Insight

  - formers
  - forming equipment which must include at least one of the following:
- mats
- screens
- trays
- plates
  - press bars or stops
  - cooling receivers
  - blending equipment
  - trimming equipment
- personal protective equipment suitable for pressing material using the daylight process
- commercial material to be compressed which must include at least one of the following:
  - chips
  - fibre
  - flakes
- manufacturers' instructions for use and cleaning of equipment
- work order with specific instructions for pressing material using the daylight process
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for pressing material using the daylight process

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPWPP3217 Process production effluent

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3217B Process production effluent, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to operate the effluent plant and distribute waste water to pasture.
