FWP Forest and Wood Products Training Package

Release 9.0

CONTENTS

FWP Forest and Wood Products Training Package	27
FWP20122 Certificate II in Forest Operations	28
FWP20322 Certificate II in Timber and Wood Products Operations	36
FWP30122 Certificate III in Forest Operations	42
FWP30322 Certificate III in Timber and Wood Products Operations	53
FWP30622 Certificate III in Timber Building Products Supply	63
FWP30920 Certificate III in Timber Frame or Truss Manufacture	68
FWP31021 Certificate III in Saw Technology.....	71
FWP31121 Certificate III in Wood Machining.....	78
FWP31220 Certificate III in Timber Systems Design	83
FWP40121 Certificate IV in Forest Operations	86
FWP40222 Certificate IV in Timber and Wood Products Operations	92
FWP40420 Certificate IV in Timber Systems Design.....	98
FWP50121 Diploma of Forest Operations	101
FWPSS00068 Entry into a Saw Technician Role Skill Set.....	108
FWPSS00069 Entry into a Wood Machinist Role Skill Set	110
FWPSS00070 Process Control and Optimisation (Timber Sawmills) Skill Set.....	112
FWPSS00071 Foundational Leadership and Management (Log Yard Operations) Skill Set.....	114
FWPSS00072 Foundational Leadership and Management (Log Processing Operations) Skill Set.....	116
FWPSS00073 Foundational Leadership and Management (Timber Dry Mill Operations) Skill Set.....	118
FWPSS00074 Foundational Leadership and Management (Timber Kiln Drying Operations) Skill Set.....	120
FWPSS00075 Foundational Leadership and Management (Timber Treatment Operations) Skill Set.....	122
FWPSS00076 Foundational Leadership and Management (Engineered Wood Products Operations) Skill Set.....	124
FWPCOR2203 Follow environmental care procedures	126
Assessment Requirements for FWPCOR2203 Follow environmental care procedures ...	129
FWPCOR2205 Follow WHS policies and procedures.....	131
FPICOR2205B Follow OHS policies and procedures.....	133
Assessment Requirements for FWPCOR2205 Follow WHS policies and procedures.....	134
FWPCOR2206 Work effectively in the forest and wood products industry	136
Assessment Requirements for FWPCOR2206 Work effectively in the forest and wood products industry.....	139
FWPCOR2208 Communicate and interact effectively in the forest and wood products industry	141
Assessment Requirements for FWPCOR2208 Communicate and interact effectively in the forest and wood products industry.....	145
FWPCOR2209 Follow environmental protection procedures in forest and wood products operations	147
Assessment Requirements for FWPCOR2209 Follow environmental protection procedures in forest and wood products operations	150
FWPCOR2210 Follow workplace health and safety policies and procedures in forest and wood products operations	152
Assessment Requirements for FWPCOR2210 Follow workplace health and safety policies and procedures in forest and wood products operations	155
FWPCOR2211 Develop knowledge of the forest and wood products industry.....	157

Assessment Requirements for FWPCOR2211 Develop knowledge of the forest and wood products industry.....161

FWPCOR3205 Apply safety, health and environmental requirements in forest and wood products operations163

Assessment Requirements for FWPCOR3205 Apply safety, health and environmental requirements in forest and wood products operations166

FWPCOR4204 Monitor safety, health and environmental requirements in forest and wood products operations168

Assessment Requirements for FWPCOR4204 Monitor safety, health and environmental requirements in forest and wood products operations171

FWPCOR4205 Monitor and improve forestry operations173

Assessment Requirements for FWPCOR4205 Monitor and improve forestry operations 176

FWPCOT2206 Stack and bind material179

Assessment Requirements for FWPCOT2206 Stack and bind material182

FWPCOT2243 Tail out timber product and waste material184

Assessment Requirements for FWPCOT2243 Tail out timber product and waste material 187

FWPCOT2244 Operate and maintain a thicknesser.....190

Assessment Requirements for FWPCOT2244 Operate and maintain a thicknesser.....194

FWPCOT2246 Appearance grade hardwood sawn and milled products197

Assessment Requirements for FWPCOT2246 Appearance grade hardwood sawn and milled products200

FWPCOT2249 Visually stress grade hardwood.....202

Assessment Requirements for FWPCOT2249 Visually stress grade hardwood205

FWPCOT2250 Visually stress grade softwood.....207

Assessment Requirements for FWPCOT2250 Visually stress grade softwood210

FWPCOT2251 Visually stress grade cypress212

Assessment Requirements for FWPCOT2251 Visually stress grade cypress.....216

FWPCOT2254 Maintain chainsaws.....218

Assessment Requirements for FWPCOT2254 Maintain chainsaws221

FWPCOT2255 Store materials224

Assessment Requirements for FWPCOT2255 Store materials.....227

FWPCOT2257 Use hand-held tools229

Assessment Requirements for FWPCOT2257 Use hand-held tools.....232

FWPCOT2258 Assemble products235

Assessment Requirements for FWPCOT2258 Assemble products239

FWPCOT2259 Cut materials with a hand-held chainsaw.....242

Assessment Requirements for FWPCOT2259 Cut materials with a hand-held chainsaw 245

FWPCOT2260 Tally material.....247

Assessment Requirements for FWPCOT2260 Tally material250

FWPCOT2261 Process orders and prepare for despatch.....252

Assessment Requirements for FWPCOT2261 Process orders and prepare for despatch 255

FWPCOT2262 Cut material to shape using a saw257

Assessment Requirements for FWPCOT2262 Cut material to shape using a saw261

FWPCOT2263 Cross cut materials with a fixed saw.....264

Assessment Requirements for FWPCOT2263 Cross cut materials with a fixed saw267

FWPCOT2264 Follow quality and product care procedures in forest and wood products operations270

Assessment Requirements for FWPCOT2264 Follow quality and product care procedures in forest and wood products operations273

FWPCOT2265 Navigate in forest areas276

Assessment Requirements for FWPCOT2265 Navigate in forest areas.....279

FWPCOT2266 Operate brush cutter.....281

Assessment Requirements for FWPCOT2266 Operate brush cutter285

FWPCOT2267 Operate mobile hydraulic log splitter.....288
Assessment Requirements for FWPCOT2267 Operate mobile hydraulic log splitter.....292
FWPCOT2268 Cut timber or engineered wood product to length or dimensions294
Assessment Requirements for FWPCOT2268 Cut timber or engineered wood product to length or dimensions298
FWPCOT2269 Operate and maintain a table saw301
Assessment Requirements for FWPCOT2269 Operate and maintain a table saw.....305
FWPCOT2270 Cut wood material with pole saw for unblocking machinery components308
Assessment Requirements for FWPCOT2270 Cut wood material with pole saw for unblocking machinery components.....311
FWPCOT2271 Pack timber or wood products for despatch.....313
Assessment Requirements for FWPCOT2271 Pack timber or wood products for despatch316
FWPCOT2272 Rack timber or round poles.....318
Assessment Requirements for FWPCOT2272 Rack timber or round poles321
FWPCOT2273 Trim and cut felled trees324
Assessment Requirements for FWPCOT2273 Trim and cut felled trees.....328
FWPCOT2275 Fell trees manually (basic).....331
Assessment Requirements for FWPCOT2275 Fell trees manually (basic)335
FWPCOT3226 Assess timber for manufacturing potential.....338
Assessment Requirements for FWPCOT3226 Assess timber for manufacturing potential341
FWPCOT3234 Cut material using CNC sizing machines344
Assessment Requirements for FWPCOT3234 Cut material using CNC sizing machines 348
FWPCOT3271 Hand sharpen knives and blades for commercial and domestic cutting services351
Assessment Requirements for FWPCOT3271 Hand sharpen knives and blades for commercial and domestic cutting services.....354
FWPCOT3272 Set up and run multi-head moulder/planer to produce simple profiles...357
Assessment Requirements for FWPCOT3272 Set up and run multi-head moulder/planer to produce simple profiles361
FWPCOT3273 Set up and run multi-head moulder to produce complex profiles364
Assessment Requirements for FWPCOT3273 Set up and run multi-head moulder to produce complex profiles369
FWPCOT3274 Cut timber products using high-speed optimiser.....372
Assessment Requirements for FWPCOT3274 Cut timber products using high-speed optimiser.....376
FWPCOT3275 Set up, operate and maintain end matching machines379
Assessment Requirements for FWPCOT3275 Set up, operate and maintain end matching machines383
FWPCOT3276 Sharpen cutters using a straight knife grinder386
Assessment Requirements for FWPCOT3276 Sharpen cutters using a straight knife grinder.....390
FWPCOT3277 Sharpen cutters in head using a profile knife grinder.....393
Assessment Requirements for FWPCOT3277 Sharpen cutters in head using a profile knife grinder.....397
FWPCOT3278 Sharpen cutters in head using a straight knife grinder.....400
Assessment Requirements for FWPCOT3278 Sharpen cutters in head using a straight knife grinder.....404
FWPCOT3279 Assess and maintain saw technology tools407
Assessment Requirements for FWPCOT3279 Assess and maintain saw technology tools 411
FWPCOT3280 Replace saw blades, knives and guides414
Assessment Requirements for FWPCOT3280 Replace saw blades, knives and guides417
FWPCOT3281 Manufacture profile cutters420
Assessment Requirements for FWPCOT3281 Manufacture profile cutters423

FWPCOT3282 Assess and maintain saw blade and sawing machine performance426
Assessment Requirements for FWPCOT3282 Assess and maintain saw blade and sawing machine performance430
FWPCOT3283 Sharpen and position blades or knives in chipper, canter and reducer...433
Assessment Requirements for FWPCOT3283 Sharpen and position blades or knives in chipper, canter and reducer.....437
FWPCOT3286 Identify levelling and tensioning requirements for saw blades.....440
Assessment Requirements for FWPCOT3286 Identify levelling and tensioning requirements for saw blades443
FWPCOT3287 Operate CNC equipment for grinding, tensioning and levelling saw blades446
Assessment Requirements for FWPCOT3287 Operate CNC equipment for grinding, tensioning and levelling saw blades450
FWPCOT3289 Load and prove operating program for CNC machine.....452
Assessment Requirements for FWPCOT3289 Load and prove operating program for CNC machine.....456
FWPCOT3290 Apply knowledge of timber properties, sawmill operations and sawmilling equipment.....459
Assessment Requirements for FWPCOT3290 Apply knowledge of timber properties, sawmill operations and sawmilling equipment.....462
FWPCOT3291 Apply principles of timber and process optimisation in sawmill operations465
Assessment Requirements for FWPCOT3291 Apply principles of timber and process optimisation in sawmill operations.....468
FWPCOT3292 Calibrate and maintain scanning equipment used in sawmilling operations470
Assessment Requirements for FWPCOT3292 Calibrate and maintain scanning equipment used in sawmilling operations474
FWPCOT3293 Use scanning equipment for timber grading.....477
Assessment Requirements for FWPCOT3293 Use scanning equipment for timber grading481
FWPCOT3294 Swage and shape saw blades.....483
Assessment Requirements for FWPCOT3294 Swage and shape saw blades487
FWPCOT3295 Assess and maintain cutter performance490
Assessment Requirements for FWPCOT3295 Assess and maintain cutter performance 493
FWPCOT3297 Operate automated stacking equipment.....495
Assessment Requirements for FWPCOT3297 Operate automated stacking equipment..498
FWPCOT3298 Produce templates500
Assessment Requirements for FWPCOT3298 Produce templates.....504
FWPCOT3299 Cut timber or engineered wood product to profile506
Assessment Requirements for FWPCOT3299 Cut timber or engineered wood product to profile510
FWPCOT3301 Trim trees using a pole saw514
Assessment Requirements for FWPCOT3301 Trim trees using a pole saw.....518
FWPCOT3302 Access and provide timber and wood product information520
Assessment Requirements for FWPCOT3302 Access and provide timber and wood product information.....523
FWPCOT3303 Prepare sketches and drawings526
Assessment Requirements for FWPCOT3303 Prepare sketches and drawings529
FWPCOT3304 Take off material quantities532
Assessment Requirements for FWPCOT3304 Take off material quantities535
FWPCOT3305 Interpret and quote from manufactured timber product plans537
Assessment Requirements for FWPCOT3305 Interpret and quote from manufactured timber product plans540
FWPCOT3306 Rehabilitate tracks, quarries and landings542
Assessment Requirements for FWPCOT3306 Rehabilitate tracks, quarries and landings545
FWPCOT3307 Create drawings using computer aided design software548

Assessment Requirements for FWPCOT3307 Create drawings using computer aided design software551

FWPCOT3308 Assemble timber wall frames554

Assessment Re quirements for FWPCOT3308 Assemble timber wall frames557

FWPCOT3309 Assemble timber roof trusses560

Assessment Re quirements for FWPCOT3309 Assemble timber roof trusses564

FWPCOT3310 Prepare timber or related products to meet import/export compliance requirements.....567

Assessment Requirements for FWPCOT3310 Prepare timber or related products to meet import/export compliance requirements.....570

FWPCOT3311 Use environmental care procedures to undertake fire salvage operations572

Assessment Requirements for FWPCOT3311 Use environmental care procedures to undertake fire salvage operations576

FWPCOT3312 Implement environmentally sustainable work practices in the work area/work site578

Assessment Requirements for FWPCOT3312 Implement environmentally sustainable work practices in the work area/work site581

FWPCOT3313 Apply biodiversity protection principles.....583

Assessment Re quirements for FWPCOT3313 Apply biodiversity protection principles .587

FWPCOT3314 Comply with soil and water protection.....590

Assessment Re quirements for FWPCOT3314 Comply with soil and water protection ...593

FWPCOT3315 Transport forestry logs using trucks596

Assessment Re quirements for FWPCOT3315 Transport forestry logs using trucks601

FWPCOT3316 Transport forestry produce using trucks.....604

Assessment Re quirements for FWPCOT3316 Transport forestry produce using trucks 608

FWPCOT3317 Use chainsaw within a tree611

Assessment Re quirements for FWPCOT3317 Use chainsaw within a tree616

FWPCOT3318 Access, capture and communicate forestry field data using mobile devices620

Assessment Requirements for FWPCOT3318 Access, capture and communicate forestry field data using mobile devices.....624

FWPCOT3319 Read and interpret digital maps and forest operation plans627

Assessment Requirements for FWPCOT3319 Read and interpret digital maps and forest operation plans630

FWPCOT3320 Build and maintain timber stacks.....633

Assessment Re quirements for FWPCOT3320 Build and maintain timber stacks636

FWPCOT3321 Apply situational awareness and a safety mindset in operational forestry roles639

Assessment Requirements for FWPCOT3321 Apply situational awareness and a safety mindset in operational forestry roles.....643

FWPCOT3322 Apply quality and product care procedures in forest and wood products operations645

Assessment Requirements for FWPCOT3322 Apply quality and product care procedures in forest and wood products operations648

FWPCOT3323 Assess wood materials visually651

Assessment Re quirements for FWPCOT3323 Assess wood materials visually654

FWPCOT3324 Apply cultural heritage protection requirements in forest operations ...656

Assessment Requirements for FWPCOT3324 Apply cultural heritage protection requirements in forest operations659

FWPCOT3325 Operate four wheel drive vehicle on unsealed roads662

Assessment Requirements for FWPCOT3325 Operate four wheel drive vehicle on unsealed roads665

FWPCOT3326 Recover four wheel drive vehicle668

Assessment Re quirements for FWPCOT3326 Recover four wheel drive vehicle.....672

FWPCOT3327 Contribute to energy efficiency in the forest and wood products industry675
Assessment Requirements for FWPCOT3327 Contribute to energy efficiency in the forest and wood products industry678
FWPCOT3328 Operate four wheel drive vehicle in a towing situation.....680
Assessment Requirements for FWPCOT3328 Operate four wheel drive vehicle in a towing situation.....683
FWPCOT3329 Perform complex four wheel drive operations686
Assessment Requirements for FWPCOT3329 Perform complex four wheel drive operations690
FWPCOT3330 Apply tree jacking techniques in felling trees.....693
Assessment Requirements for FWPCOT3330 Apply tree jacking techniques in felling trees697
FWPCOT3331 Cut material using CNC sizing machines700
Assessment Requirements for FWPCOT3331 Cut material using CNC sizing machines704
FWPCOT3332 Machine timber or engineered wood products using CNC machining and processing centres.....707
Assessment Requirements for FWPCOT3332 Machine timber or engineered wood products using CNC machining and processing centres.....711
FWPCOT3333 Conduct heat plant operations714
Assessment Requirements for FWPCOT3333 Conduct heat plant operations718
FWPCOT3334 Conduct steam boiler operations721
Assessment Requirements for FWPCOT3334 Conduct steam boiler operations.....725
FWPCOT3335 Conduct operator level equipment maintenance in forest and wood products industry.....728
Assessment Requirements for FWPCOT3335 Conduct operator level equipment maintenance in forest and wood products industry.....731
FWPCOT3336 Coordinate set up and operation of timber finger jointing line.....734
Assessment Requirements for FWPCOT3336 Coordinate set up and operation of timber finger jointing line738
FWPCOT3337 Operate timber finger jointing line.....741
Assessment Requirements for FWPCOT3337 Operate timber finger jointing line745
FWPCOT3338 Identify glues and gluing systems used in production of wood products.748
Assessment Requirements for FWPCOT3338 Identify glues and gluing systems used in production of wood products751
FWPCOT3339 Grade wood product visually754
Assessment Requirements for FWPCOT3339 Grade wood product visually758
FWPCOT3340 Develop knowledge of log yard operations762
Assessment Requirements for FWPCOT3340 Develop knowledge of log yard operations765
FWPCOT3341 Coordinate and monitor wood chip stockpile768
Assessment Requirements for FWPCOT3341 Coordinate and monitor wood chip stockpile771
FWPCOT3342 Screen wood chips773
Assessment Requirements for FWPCOT3342 Screen wood chips.....776
FWPCOT3343 Test wood chips quality779
Assessment Requirements for FWPCOT3343 Test wood chips quality.....782
FWPCOT3344 Transfer wood chips.....785
Assessment Requirements for FWPCOT3344 Transfer wood chips788
FWPCOT3345 Develop knowledge of chain of custody certification requirements for forest and wood products.....790
Assessment Requirements for FWPCOT3345 Develop knowledge of chain of custody certification requirements for forest and wood products793
FWPCOT3346 Communicate effectively with general public or stakeholders concerned about forest practices.....795
Assessment Requirements for FWPCOT3346 Communicate effectively with general public or stakeholders concerned about forest practices.....798

FWPCOT3349 Assess timber against quality requirements and specifications800
Assessment Requirements for FWPCOT3349 Assess timber against quality requirements and specifications803
FWPCOT3350 Fell trees manually (intermediate).....807
Assessment Requirements for FWPCOT3350 Fell trees manually (intermediate)812
FWPCOT3351 Fell trees manually (advanced).....816
Assessment Requirements for FWPCOT3351 Fell trees manually (advanced)821
FWPCOT4209 Design timber structures825
Assessment Requirements for FWPCOT4209 Design timber structures.....828
FWPCOT4210 Provide specialised timber product solutions.....830
Assessment Requirements for FWPCOT4210 Provide specialised timber product solutions 834
FWPCOT4211 Monitor stock control procedures836
Assessment Requirements for FWPCOT4211 Monitor stock control procedures839
FWPCOT4212 Implement environmental management practices to a forestry operation site841
Assessment Requirements for FWPCOT4212 Implement environmental management practices to a forestry operation site845
FWPCOT4213 Monitor and manage product and service quality in the forest and wood products industry.....847
Assessment Requirements for FWPCOT4213 Monitor and manage product and service quality in the forest and wood products industry850
FWPCOT4214 Plan for and coordinate quarry operations852
Assessment Requirements for FWPCOT4214 Plan for and coordinate quarry operations 856
FWPCOT4215 Plan for and coordinate road construction and maintenance858
Assessment Requirements for FWPCOT4215 Plan for and coordinate road construction and maintenance862
FWPCOT4216 Plan for and coordinate construction of log landings and snig tracks864
Assessment Requirements for FWPCOT4216 Plan for and coordinate construction of log landings and snig tracks.....867
FWPCOT4217 Apply a safety mindset in forestry operations.....870
Assessment Requirements for FWPCOT4217 Apply a safety mindset in forestry operations874
FWPCOT4218 Manage business operations of a forestry contractor business.....877
Assessment Requirements for FWPCOT4218 Manage business operations of a forestry contractor business881
FWPCOT4219 Manage people practices in a forestry contractor business.....884
Assessment Requirements for FWPCOT4219 Manage people practices in a forestry contractor business889
FWPCOT4220 Plan for and coordinate log loading and haulage operations892
Assessment Requirements for FWPCOT4220 Plan for and coordinate log loading and haulage operations897
FWPCOT4221 Plan for and supervise log yard operations.....900
Assessment Requirements for FWPCOT4221 Plan for and supervise log yard operations 904
FWPCOT4222 Plan for and supervise timber treatment plant operations908
Assessment Requirements for FWPCOT4222 Plan for and supervise timber treatment plant operations912
FWPCOT4223 Assess requirements of chain of custody certification scheme for forest and wood products915
Assessment Requirements for FWPCOT4223 Assess requirements of chain of custody certification scheme for forest and wood products918
FWPCOT4224 Conduct internal audit of chain of custody certification for forest and wood products921

Assessment Requirements for FWPCOT4224 Conduct internal audit of chain of custody certification for forest and wood products925

FWPCOT4225 Apply principles of pneumatics and hydraulics to analyse potential equipment failures929

Assessment Requirements for FWPCOT4225 Apply principles of pneumatics and hydraulics to analyse potential equipment failures933

FWPCOT5210 Contribute to establishment and implementation of forest management systems.....936

Assessment Requirements for FWPCOT5210 Contribute to establishment and implementation of forest management systems940

FWPCOT5211 Implement forest management certification scheme.....943

Assessment Requirements for FWPCOT5211 Implement forest management certification scheme947

FWPCOT5212 Implement workplace sustainability practices in the forest and wood products industry.....950

Assessment Requirements for FWPCOT5212 Implement workplace sustainability practices in the forest and wood products industry954

FWPCOT5213 Contribute to and implement a community engagement plan956

Assessment Requirements for FWPCOT5213 Contribute to and implement a community engagement plan.....960

FWPCOT5214 Communicate forestry and forest science with stakeholders and the community.....963

Assessment Requirements for FWPCOT5214 Communicate forestry and forest science with stakeholders and the community.....967

FWPCOT5215 Apply innovative thinking to support forestry best practice.....970

Assessment Requirements for FWPCOT5215 Apply innovative thinking to support forestry best practice975

FWPFGM3208 Construct and maintain forest roads and tracks.....977

Assessment Requirements for FWPFGM3208 Construct and maintain forest roads and tracks981

FWPFIR2001 Follow fire prevention procedures984

Assessment Requirements for FWPFIR2001 Follow fire prevention procedures987

FWPFIR2002 Detect fire in a native forest or plantation.....989

Assessment Requirements for FWPFIR2002 Detect fire in a native forest or plantation 992

FWPFIR3001 Assess fire risk995

Assessment Requirements for FWPFIR3001 Assess fire risk.....998

FWPFIR3002 Apply communication protocols during post-bushfire vegetation clearing and clean-up operations1000

Assessment Requirements for FWPFIR3002 Apply communication protocols during post-bushfire vegetation clearing and clean-up operations.....1003

FWPFIR4001 Conduct tree hazard assessment post-fire1006

Assessment Requirements for FWPFIR4001 Conduct tree hazard assessment post-fire1009

FWPFOM5001 Contribute to and implement a forest establishment plan.....1012

Assessment Requirements for FWPFOM5001 Contribute to and implement a forest establishment plan1016

FWPFOM5002 Contribute to and implement a forest roading operational plan1019

Assessment Requirements for FWPFOM5002 Contribute to and implement a forest roading operational plan.....1022

FWPFOM5003 Contribute to and implement a forest harvesting plan.....1024

Assessment Requirements for FWPFOM5003 Contribute to and implement a forest harvesting plan1028

FWPFOM5004 Contribute to and implement a forest regeneration plan1031

Assessment Requirements for FWPFOM5004 Contribute to and implement a forest regeneration plan.....1035

FWPFOM5005 Contribute to and implement a biohazard contingency plan.....1038

Assessment Requirements for FWPFOM5005 Contribute to and implement a biohazard contingency plan.....1041

FWPFOM5006 Implement practices to maximise value from wood residues.....1044

Assessment Requirements for FWPFOM5006 Implement practices to maximise value from wood residues.....1047

FWPFOM5007 Contribute to and implement a silviculture regime for a plantation1050

Assessment Requirements for FWPFOM5007 Contribute to and implement a silviculture regime for a plantation1054

FWPFOM5008 Contribute to and implement a silviculture regime for native forest....1057

Assessment Requirements for FWPFOM5008 Contribute to and implement a silviculture regime for native forest.....1060

FWPFOM5009 Contribute to management and monitoring of forestry supply chains .1063

Assessment Requirements for FWPFOM5009 Contribute to management and monitoring of forestry supply chains1067

FWPFOM5010 Apply principles of forest science to optimise forest management practices1070

Assessment Requirements for FWPFOM5010 Apply principles of forest science to optimise forest management practices1073

FWPFOM5011 Assist with calculating costs and production targets for forestry operations1075

Assessment Requirements for FWPFOM5011 Assist with calculating costs and production targets for forestry operations1079

FWPFOM5001 Interpret and use image data in forestry planning and management ...1082

Assessment Requirements for FWPFOM5001 Interpret and use image data in forestry planning and management.....1085

FWPFOM5002 Source information on the contribution of forestry to carbon reduction strategies.....1088

Assessment Requirements for FWPFOM5002 Source information on the contribution of forestry to carbon reduction strategies.....1091

FWPFOM5003 Contribute to and implement a forest inventory program1093

Assessment Requirements for FWPFOM5003 Contribute to and implement a forest inventory program.....1097

FWPFOM5004 Contribute to the planning and conduct of forest valuation.....1099

Assessment Requirements for FWPFOM5004 Contribute to the planning and conduct of forest valuation.....1102

FWPFOM5005 Contribute to selection and application of forest growth models.....1105

Assessment Requirements for FWPFOM5005 Contribute to selection and application of forest growth models.....1108

FWPFOM5006 Analyse ecology of commercial native forests and plantations1111

Assessment Requirements for FWPFOM5006 Analyse ecology of commercial native forests and plantations1115

FWPFOM5007 Process and interpret harvester and forwarder optimisation data.....1118

Assessment Requirements for FWPFOM5007 Process and interpret harvester and forwarder optimisation data1121

FWPFOM5008 Create digital forest operational map.....1124

Assessment Requirements for FWPFOM5008 Create digital forest operational map...1127

FWPFOM5009 Create cutting instruction files for forestry harvesters.....1130

Assessment Requirements for FWPFOM5009 Create cutting instruction files for forestry harvesters1134

FWPFOM5010 Plan unmanned aerial vehicle (UAV) collection of forestry data1137

Assessment Requirements for FWPFOM5010 Plan unmanned aerial vehicle (UAV) collection of forestry data.....1140

FWPFRM5011 Quality assure forestry data acquisition by unmanned aerial vehicle (UAV).....1143
Assessment Requirements for FWPFRM5011 Quality assure forestry data acquisition by unmanned aerial vehicle (UAV).....1146
FWPHAR2201 Hook up felled trees (choker).....1149
Assessment Requirements for FWPHAR2201 Hook up felled trees (choker).....1152
FWPHAR2202 Perform landing duties (chaser).....1154
Assessment Requirements for FWPHAR2202 Perform landing duties (chaser).....1157
FWPHAR2208 Operate a mobile chipper/mulcher.....1159
Assessment Requirements for FWPHAR2208 Operate a mobile chipper/mulcher1163
FWPHAR2209 Trim and cut harvested trees1165
Assessment Requirements for FWPHAR2209 Trim and cut harvested trees1169
FWPHAR2210 Operate a forest machine simulator in a virtual environment.....1172
Assessment Requirements for FWPHAR2210 Operate a forest machine simulator in a virtual environment.....1175
FWPHAR3202 Monitor log recovery (rigging slinger).....1177
Assessment Requirements for FWPHAR3202 Monitor log recovery (rigging slinger)..1181
FWPHAR3203 Operate integrated or split flail and wood chipper with crane1183
Assessment Requirements for FWPHAR3203 Operate integrated or split flail and wood chipper with crane1187
FWPHAR3204 Operate split flail and wood chipper fed by mobile machine1190
Assessment Requirements for FWPHAR3204 Operate split flail and wood chipper fed by mobile machine1194
FWPHAR3205 Harvest trees manually (intermediate).....1197
Assessment Requirements for FWPHAR3205 Harvest trees manually (intermediate)..1202
FWPHAR3209 Harvest trees manually (advanced).....1205
Assessment Requirements for FWPHAR3209 Harvest trees manually (advanced).....1210
FWPHAR3212 Operate yarder1213
Assessment Requirements for FWPHAR3212 Operate yarder.....1218
FWPHAR3222 Use on-board computer systems for forwarder1221
Assessment Requirements for FWPHAR3222 Use on-board computer systems for forwarder.....1225
FWPHAR3232 Operate harvesting machine with winch-assist system.....1227
Assessment Requirements for FWPHAR3232 Operate harvesting machine with winch-assist system.....1231
FWPHAR3234 Conduct mechanical processor operations1234
Assessment Requirements for FWPHAR3234 Conduct mechanical processor operations 1239
FWPHAR3235 Conduct mechanically assisted tree falling operations.....1242
Assessment Requirements for FWPHAR3235 Conduct mechanically assisted tree falling operations1246
FWPHAR4206 Implement environmental management practices in timber harvesting operations1249
Assessment Requirements for FWPHAR4206 Implement environmental management practices in timber harvesting operations1252
FWPHAR4207 Conduct a wood volume and yield assessment.....1255
Assessment Requirements for FWPHAR4207 Conduct a wood volume and yield assessment.....1258
FWPHAR4208 Plan for and coordinate fire salvage operations1260
Assessment Requirements for FWPHAR4208 Plan for and coordinate fire salvage operations1264
FWPHAR4209 Plan for and coordinate forest harvesting operations.....1267
Assessment Requirements for FWPHAR4209 Plan for and coordinate forest harvesting operations1271

FWPHAR4210 Plan for and coordinate log recovery (hook tender)1273
Assessment Requirements for FWPHAR4210 Plan for and coordinate log recovery (hook tender)1278
FWPNSY2001 Collect tree seeds.....1281
Assessment Requirements for FWPNSY2001 Collect tree seeds1284
FWPNSY2002 Cut, sort and set cuttings1287
Assessment Requirements for FWPNSY2002 Cut, sort and set cuttings1290
FWPNSY2003 Follow quality procedures in forest nursery production1292
Assessment Requirements for FWPNSY2003 Follow quality procedures in forest nursery production1295
FWPNSY2004 Prick out and transplant tree seedlings1298
Assessment Requirements for FWPNSY2004 Prick out and transplant tree seedlings..1301
FWPNSY2005 Apply tree seed treatment.....1303
Assessment Requirements for FWPNSY2005 Apply tree seed treatment.....1307
FWPNSY3001 Graft nursery stock for planting in seed orchard1310
Assessment Requirements for FWPNSY3001 Graft nursery stock for planting in seed orchard1313
FWPNSY3002 Extract, clean, store and despatch tree seeds.....1315
Assessment Requirements for FWPNSY3002 Extract, clean, store and despatch tree seeds 1319
FWPNSY3003 Apply knowledge of tree stock growing in a forest nursery.....1322
Assessment Requirements for FWPNSY3003 Apply knowledge of tree stock growing in a forest nursery.....1325
FWPNSY3004 Identify, evaluate and mark quality seed trees1327
Assessment Requirements for FWPNSY3004 Identify, evaluate and mark quality seed trees.....1330
FWPNSY3005 Maintain seed orchard1332
Assessment Requirements for FWPNSY3005 Maintain seed orchard.....1335
FWPNSY3006 Manage mother plants1338
Assessment Requirements for FWPNSY3006 Manage mother plants1341
FWPNSY3007 Operate automated topping system as part of tree production nursery operations1344
Assessment Requirements for FWPNSY3007 Operate automated topping system as part of tree production nursery operations.....1348
FWPNSY3008 Operate automated seed sowing line for containerised forest seedling production1351
Assessment Requirements for FWPNSY3008 Operate automated seed sowing line for containerised forest seedling production.....1355
FWPSAW2212 Assemble materials using nail plates1358
Assessment Requirements for FWPSAW2212 Assemble materials using nail plates.....1361
FWPSAW2213 De-stack timber drying racks.....1364
Assessment Requirements for FWPSAW2213 De-stack timber drying racks1367
FWPSAW2214 Sort timber boards manually1370
Assessment Requirements for FWPSAW2214 Sort timber boards manually.....1373
FWPSAW3232 Sharpen band saw blades.....1376
Assessment Requirements for FWPSAW3232 Sharpen band saw blades1380
FWPSAW3233 Sharpen circular saw blades1383
Assessment Requirements for FWPSAW3233 Sharpen circular saw blades1387
FWPSAW3234 File and set saw blades for hand saws and circular saws1390
Assessment Requirements for FWPSAW3234 File and set saw blades for hand saws and circular saws.....1394
FWPSAW3235 Recondition saw guides1397
Assessment Requirements for FWPSAW3235 Recondition saw guides.....1400
FWPSAW3236 Sharpen tipped circular saw blades1403

Assessment Requirements for FWPSAW3236 Sharpen tipped circular saw blades1406
FWPSAW3237 Level and tension circular saw blades1409
Assessment Requirements for FWPSAW3237 Level and tension circular saw blades...1413
FWPSAW3238 Replace Stellite tips1416
Assessment Requirements for FWPSAW3238 Replace Stellite tips1420
FWPSAW3239 Assess and maintain wide band saw blades1423
Assessment Requirements for FWPSAW3239 Assess and maintain wide band saw blades 1427
FWPSAW3240 Assess and maintain band saw wheels1430
Assessment Requirements for FWPSAW3240 Assess and maintain band saw wheels ..1434
FWPSAW3242 Treat timber1437
Assessment Requirements for FWPSAW3242 Treat timber1441
FWPSAW3244 Align sawing production systems1445
Assessment Requirements for FWPSAW3244 Align sawing production systems.....1449
FWPSAW3245 Join band saw blades1452
Assessment Requirements for FWPSAW3245 Join band saw blades1455
FWPSAW3247 Replace tungsten tips1458
Assessment Requirements for FWPSAW3247 Replace tungsten tips1461
FWPSAW3251 Apply principles of blade design to sawing procedures1464
Assessment Requirements for FWPSAW3251 Apply principles of blade design to sawing
procedures1467
FWPSAW3252 Assemble, operate and dismantle a portable sawmill1470
Assessment Requirements for FWPSAW3252 Assemble, operate and dismantle a portable
sawmill.....1474
FWPSAW3253 Re-saw green timber1477
Assessment Requirements for FWPSAW3253 Re-saw green timber.....1481
FWPSAW3254 Control and monitor automated green mill saw line1484
Assessment Requirements for FWPSAW3254 Control and monitor automated green mill
saw line1487
FWPSAW3255 Operate conventional log breakdown saw line1490
Assessment Requirements for FWPSAW3255 Operate conventional log breakdown saw
line1494
FWPSAW3256 Select and saw logs in multi-species operations1497
Assessment Requirements for FWPSAW3256 Select and saw logs in multi-species
operations1501
FWPSAW3257 Operate timber drying kiln.....1504
Assessment Requirements for FWPSAW3257 Operate timber drying kiln.....1508
FWPSAW4206 Monitor output timber for optimum volume and value recovery1511
Assessment Requirements for FWPSAW4206 Monitor output timber for optimum volume
and value recovery.....1514
FWPSAW4207 Optimise timber production for volume and value recovery1517
Assessment Requirements for FWPSAW4207 Optimise timber production for volume and
value recovery.....1521
FWPSAW4208 Plan for and coordinate timber kiln drying operations1523
Assessment Requirements for FWPSAW4208 Plan for and coordinate timber kiln drying
operations1527
FWPSAW4209 Plan for and supervise log processing operations1530
Assessment Requirements for FWPSAW4209 Plan for and supervise log processing
operations1534
FWPSAW4210 Plan for and supervise timber dry mill operations1537
Assessment Requirements for FWPSAW4210 Plan for and supervise timber dry mill
operations1541
FWPSIL2001 Select and mark trees for tending operations1544
Assessment Requirements for FWPSIL2001 Select and mark trees for tending operations 1547

FWPSIL2002 Plant trees by hand.....1550
Assessment Requirements for FWPSIL2002 Plant trees by hand1553
FWPSIL2003 Prune trees.....1556
Assessment Requirements for FWPSIL2003 Prune trees.....1559
FWPSIL2004 Collect forest data or samples for assessment and analysis1562
Assessment Requirements for FWPSIL2004 Collect forest data or samples for assessment and analysis1565
FWPSIL2005 Measure trees1568
Assessment Requirements for FWPSIL2005 Measure trees.....1571
FWPSIL3001 Apply sustainable silviculture treatments.....1574
Assessment Requirements for FWPSIL3001 Apply sustainable silviculture treatments 1578
FWPSIL3002 Plant trees mechanically.....1581
Assessment Requirements for FWPSIL3002 Plant trees mechanically1584
FWPSIL3003 Use mechanised equipment for forestry site preparation.....1587
Assessment Requirements for FWPSIL3003 Use mechanised equipment for forestry site preparation.....1591
FWPSIL4001 Plan for and coordinate forest site preparation operations.....1595
Assessment Requirements for FWPSIL4001 Plan for and coordinate forest site preparation operations1598
FWPSIL4002 Plan for and coordinate thinning operations in a native forest or plantation1601
Assessment Requirements for FWPSIL4002 Plan for and coordinate thinning operations in a native forest or plantation.....1604
FWPSIL4003 Plan for and coordinate stem improvement operations1607
Assessment Requirements for FWPSIL4003 Plan for and coordinate stem improvement operations1610
FWPSIL4004 Plan for and coordinate forest establishment operations1613
Assessment Requirements for FWPSIL4004 Plan for and coordinate forest establishment operations1616
FWPSIL4005 Plan for and coordinate a stand health and nutrition program1619
Assessment Requirements for FWPSIL4005 Plan for and coordinate a stand health and nutrition program.....1622
FWPSIL4006 Plan for and coordinate a pests and diseases assessment.....1625
Assessment Requirements for FWPSIL4006 Plan for and coordinate a pests and diseases assessment.....1628
FWPSIL4007 Plan for and coordinate a regeneration rate assessment.....1630
Assessment Requirements for FWPSIL4007 Plan for and coordinate a regeneration rate assessment.....1633
FWPSIL4008 Plan for and coordinate a forest site assessment.....1635
Assessment Requirements for FWPSIL4008 Plan for and coordinate a forest site assessment.....1638
FWPSIL4009 Plan for and coordinate tending operations in a native forest or plantation1640
Assessment Requirements for FWPSIL4009 Plan for and coordinate tending operations in a native forest or plantation.....1644
FWPTMM2204 Machine material.....1647
Assessment Requirements for FWPTMM2204 Machine material1651
FWPTMM2205 Cut material to length and angles1654
Assessment Requirements for FWPTMM2205 Cut material to length and angles.....1657
FWPTMM3211 Manufacture using joinery machines.....1660
Assessment Requirements for FWPTMM3211 Manufacture using joinery machines...1664
FWPTMM3212 Estimate and cost job.....1667
Assessment Requirements for FWPTMM3212 Estimate and cost job1670
FWPTMM3213 Read and interpret timber truss or wall frame fabrication plans1673

Assessment Requirements for FWPTMM3213 Read and interpret timber truss or wall frame fabrication plans.....1676

FWPTMM3214 Assemble timber floor trusses.....1678

Assessment Re quirements for FWPTMM3214 Assemble timber floor trusses.....1682

FWPTMM3215 Work effectively in the timber systems design industry1685

Assessment Requirements for FWPTMM3215 Work effectively in the timber systems design industry1688

FWPTMM3216 Plane and sand engineered wood product.....1691

Assessment Re quirements for FWPTMM3216 Plane and sand engineered wood product1694

FWPTMM3217 Develop knowledge of plywood or laminated veneer lumber production1697

Assessment Requirements for FWPTMM3217 Develop knowledge of plywood or laminated veneer lumber production.....1700

FWPTMM3218 Develop knowledge of veneer preparation in plywood or laminated veneer lumber production.....1703

Assessment Requirements for FWPTMM3218 Develop knowledge of veneer preparation in plywood or laminated veneer lumber production.....1707

FWPTMM3219 Develop knowledge of reconstituted wood panel production.....1712

Assessment Requirements for FWPTMM3219 Develop knowledge of reconstituted wood panel production.....1715

FWPTMM3220 Develop knowledge of glue laminated timber or cross laminated timber production1718

Assessment Requirements for FWPTMM3220 Develop knowledge of glue laminated timber or cross laminated timber production1721

FWPTMM4209 Interpret details of timber roof trusses to inform design of plans and production documents1724

Assessment Requirements for FWPTMM4209 Interpret details of timber roof trusses to inform design of plans and production documents.....1727

FWPTMM4210 Interpret details of timber floor systems to inform design of plans and production documents1730

Assessment Requirements for FWPTMM4210 Interpret details of timber floor systems to inform design of plans and production documents.....1733

FWPTMM4211 Interpret details of timber wall frames to inform design of plans and production documents1736

Assessment Requirements for FWPTMM4211 Interpret details of timber wall frames to inform design of plans and production documents.....1739

FWPTMM4212 Calculate production costs1741

Assessment Re quirements for FWPTMM4212 Calculate production costs.....1744

FWPTMM4213 Test finger jointed timber1746

Assessment Re quirements for FWPTMM4213 Test finger jointed timber.....1749

FWPTMM4214 Test laminated wood product.....1752

Assessment Re quirements for FWPTMM4214 Test laminated wood product1755

FWPTMM4215 Plan for and coordinate timber product assembly1758

Assessment Requirements for FWPTMM4215 Plan for and coordinate timber product assembly1761

FWPTMM4216 Plan for and supervise engineered wood product operations1764

Assessment Requirements for FWPTMM4216 Plan for and supervise engineered wood product operations.....1768

AHCARB212 Operate and maintain stump grinding machines.....1771

Assessment Requirements for AHCARB212 Operate and maintain stump grinding machines.....1775

AHCARB318 Undertake aerial rescue.....1778

Assessment Re quirements for AHCARB318 Undertake aerial rescue1782

AHCARB319 Use arborist climbing techniques.....1786

Assessment Requirements for AHCARB319 Use arborist climbing techniques	1790
AHCBIO204 Follow site biosecurity procedures.....	1796
Assessment Requirements for AHCBIO204 Follow site biosecurity procedures	1800
AHCBIO303 Apply biosecurity measures.....	1803
Assessment Requirements for AHCBIO303 Apply biosecurity measures	1806
AHCCHM101 Follow basic chemical safety rules.....	1809
Assessment Requirements for AHCCHM101 Follow basic chemical safety rules	1812
AHCCHM201 Apply chemicals under supervision.....	1814
Assessment Requirements for AHCCHM201 Apply chemicals under supervision.....	1818
AHCCHM304 Transport and store chemicals	1821
Assessment Requirements for AHCCHM304 Transport and store chemicals.....	1825
AHCCHM307 Prepare and apply chemicals to control pest, weeds and diseases.....	1828
Assessment Requirements for AHCCHM307 Prepare and apply chemicals to control pest, weeds and diseases	1832
AHCCHM404 Develop procedures to minimise risks in the use of chemicals	1836
Assessment Requirements for AHCCHM404 Develop procedures to minimise risks in the use of chemicals	1840
AHCCHM405 Plan and implement a chemical use program.....	1843
Assessment Requirements for AHCCHM405 Plan and implement a chemical use program	1847
AHCECR502 Conduct biological surveys	1850
Assessment Requirements for AHCECR502 Conduct biological surveys	1853
AHCINF206 Install, maintain and repair farm fencing.....	1856
Assessment Requirements for AHCINF206 Install, maintain and repair farm fencing.	1859
AHCINF307 Plan and construct conventional fencing.....	1861
Assessment Requirements for AHCINF307 Plan and construct conventional fencing ..	1864
AHCIRG328 Operate irrigation controller and sensor technology.....	1866
Assessment Requirements for AHCIRG328 Operate irrigation controller and sensor technology.....	1869
AHCIRG346 Operate pressurised irrigation systems	1871
Assessment Requirements for AHCIRG346 Operate pressurised irrigation systems	1874
AHCLSC318 Erect timber structures and features	1877
Assessment Requirements for AHCLSC318 Erect timber structures and features	1880
AHCMOM202 Operate tractors.....	1882
Assessment Requirements for AHCMOM202 Operate tractors	1886
AHCMOM207 Conduct front-end loader operations	1888
Assessment Requirements for AHCMOM207 Conduct front-end loader operations	1892
AHCMOM208 Conduct excavator operations.....	1894
Assessment Requirements for AHCMOM208 Conduct excavator operations.....	1898
AHCMOM209 Conduct dozer operations	1900
Assessment Requirements for AHCMOM209 Conduct dozer operations	1904
AHCMOM216 Operate side by side utility vehicles.....	1906
Assessment Requirements for AHCMOM216 Operate side by side utility vehicles.....	1910
AHCMOM301 Coordinate machinery and equipment maintenance and repair.....	1913
Assessment Requirements for AHCMOM301 Coordinate machinery and equipment maintenance and repair	1917
AHCMOM306 Ground spread fertiliser and soil ameliorant.....	1919
Assessment Requirements for AHCMOM306 Ground spread fertiliser and soil ameliorant	1924
AHCMOM402 Supervise maintenance of property, machinery and equipment.....	1927
Assessment Requirements for AHCMOM402 Supervise maintenance of property, machinery and equipment	1931
AHCNRM507 Manipulate and analyse data within geographic information systems ...	1933
Assessment Requirements for AHCNRM507 Manipulate and analyse data within geographic information systems.....	1935

AHCNSY207 Undertake propagation activities.....1937
Assessment Requirements for AHCNSY207 Undertake propagation activities.....1940
AHCNSY314 Operate fertigation equipment.....1942
Assessment Requirements for AHCNSY314 Operate fertigation equipment1945
AHCOCM201 Maintain cultural sites1948
Assessment Requirements for AHCOCM201 Maintain cultural sites1951
AHCOCM401 Protect places of cultural significance1953
Assessment Requirements for AHCOCM401 Protect places of cultural significance1956
AHCPMG201 Treat weeds1959
Assessment Requirements for AHCPMG201 Treat weeds.....1962
AHCPMG202 Treat plant pests, diseases and disorders1965
Assessment Requirements for AHCPMG202 Treat plant pests, diseases and disorders1968
AHCPMG301 Control weeds.....1971
Assessment Requirements for AHCPMG301 Control weeds1975
AHCPMG302 Control plant pests, diseases and disorders.....1978
Assessment Requirements for AHCPMG302 Control plant pests, diseases and disorders1981
AHCPMG304 Use firearms to humanely destroy animals1984
Assessment Requirements for AHCPMG304 Use firearms to humanely destroy animals1988
AHCPMG309 Apply pest animal control techniques1991
Assessment Requirements for AHCPMG309 Apply pest animal control techniques.....1995
AHCSAW203 Conduct erosion and sediment control activities1998
Assessment Requirements for AHCSAW203 Conduct erosion and sediment control
activities.....2001
AHCSAW304 Implement erosion and sediment control measures2003
Assessment Requirements for AHCSAW304 Implement erosion and sediment control
measures2006
AHCWRK215 Collect and record production data2008
Assessment Requirements for AHCWRK215 Collect and record production data.....2011
AHCWRK314 Monitor weather conditions2013
Assessment Requirements for AHCWRK314 Monitor weather conditions.....2016
AHCWRK323 Operate in isolated and remote situations2018
Assessment Requirements for AHCWRK323 Operate in isolated and remote situations2021
AHCWRK404 Implement quality assurance procedures.....2024
Assessment Requirements for AHCWRK404 Implement quality assurance procedures2027
AHCWRK508 Interpret legislation2029
Assessment Requirements for AHCWRK508 Interpret legislation2032
AHCWRK509 Provide specialist advice to clients2034
Assessment Requirements for AHCWRK509 Provide specialist advice to clients2036
AHCWRK513 Write and present reports2038
Assessment Requirements for AHCWRK513 Write and present reports2041
AVIY0028 Operate remotely piloted aircraft in excluded category sub-2 kg operations2043
Assessment Requirements for AVIY0028 Operate remotely piloted aircraft in excluded
category sub-2 kg operations2047
BSBFIN501 Manage budgets and financial plans2050
Assessment Requirements for BSBFIN501 Manage budgets and financial plans2053
BSBHRM413 Support the learning and development of teams and individuals.....2055
Assessment Requirements for BSBHRM413 Support the learning and development of
teams and individuals2058
BSBINS201 Process and maintain workplace information2060
Assessment Requirements for BSBINS201 Process and maintain workplace information2062
BSBINS302 Organise workplace information.....2064
Assessment Requirements for BSBINS302 Organise workplace information2067
BSBLDR301 Support effective workplace relationships2069

Assessment Requirements for BSBLDR301 Support effective workplace relationships 2072
BSBLDR413 Lead effective workplace relationships2074
Assessment Requirements for BSBLDR413 Lead effective workplace relationships.....2077
BSBLDR414 Lead team effectiveness2079
Assessment Requirements for BSBLDR414 Lead team effectiveness.....2082
BSBOPS202 Engage with customers.....2084
Assessment Requirements for BSBOPS202 Engage with customers2087
BSBOPS304 Deliver and monitor a service to customers2089
Assessment Requirements for BSBOPS304 Deliver and monitor a service to customers 2092
BSBOPS305 Process customer complaints.....2094
Assessment Requirements for BSBOPS305 Process customer complaints2097
BSBOPS402 Coordinate business operational plans2099
Assessment Requirements for BSBOPS402 Coordinate business operational plans.....2102
BSBOPS403 Apply business risk management processes.....2104
Assessment Requirements for BSBOPS403 Apply business risk management processes2107
BSBOPS404 Implement customer service strategies.....2109
Assessment Requirements for BSBOPS404 Implement customer service strategies.....2112
BSBPEF202 Plan and apply time management.....2114
Assessment Requirements for BSBPEF202 Plan and apply time management2117
BSBPEF301 Organise personal work priorities2119
Assessment Requirements for BSBPEF301 Organise personal work priorities.....2122
BSBPEF402 Develop personal work priorities.....2124
Assessment Requirements for BSBPEF402 Develop personal work priorities2127
BSBPMG427 Apply project procurement procedures2129
Assessment Requirements for BSBPMG427 Apply project procurement procedures...2132
BSBPMG634 Facilitate stakeholder engagement.....2134
Assessment Requirements for BSBPMG634 Facilitate stakeholder engagement2137
BSBSTR402 Implement continuous improvement.....2139
Assessment Requirements for BSBSTR402 Implement continuous improvement2142
BSBTEC201 Use business software applications.....2144
Assessment Requirements for BSBTEC201 Use business software applications2146
BSBTWK201 Work effectively with others.....2148
Assessment Requirements for BSBTWK201 Work effectively with others2151
BSBWH5211 Contribute to the health and safety of self and others2153
Assessment Requirements for BSBWH5211 Contribute to the health and safety of self and others2156
BSBWH515 Lead initial response to and investigate WHS incidents2158
Assessment Requirements for BSBWH515 Lead initial response to and investigate WHS incidents.....2163

Assessment Requirements for BSBXTW301 Work in a team2174
BSBXTW401 Lead and facilitate a team.....2176
Assessment Requirements for BSBXTW401 Lead and facilitate a team.....2179
CPCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings.....2181
Assessment Requirements for CPCBC4001 Apply building codes and standards to the construction process for Class 1 and 10 buildings2185
CPCBC4024 Resolve business disputes2188
Assessment Requirements for CPCBC4024 Resolve business disputes.....2191
CPCCOM1015 Carry out measurements and calculations2193

Assessment Requirements for CPCCOM1015 Carry out measurements and calculations 2195

CPPCMN4008 Read plans, drawings and specifications for residential buildings2197

Assessment Requirements for CPPCMN4008 Read plans, drawings and specifications for residential buildings.....2202

FWPCOT2242 Segregate and sort logs.....2204

Assessment Requirements for FWPCOT2242 Segregate and sort logs2208

FWPCOT3202 Navigate in remote or trackless areas.....2211

Assessment Requirements for FWPCOT3202 Navigate in remote or trackless areas ...2214

FWPCOT3219 Produce standard truss or frame plans and details using computers2217

Assessment Requirements for FWPCOT3219 Produce standard truss or frame plans and details using computers.....2221

FWPCOT3270 Grade and mark logs.....2223

Assessment Requirements for FWPCOT3270 Grade and mark logs2227

FWPCOT4201 Produce complex truss and frame plans and details using computers ..2230

Assessment Requirements for FWPCOT4201 Produce complex truss and frame plans and details using computers.....2233

FWPCOT6210 Develop engineered wood products to meet energy efficient building design needs.....2236

Assessment Requirements for FWPCOT6210 Develop engineered wood products to meet energy efficient building design needs.....2240

FWPHAR3223 Use on-board computer systems for single grip harvester.....2243

Assessment Requirements for FWPHAR3223 Use on-board computer systems for single grip harvester.....2247

FWPHAR3224 Operate crawler tractor.....2250

Assessment Requirements for FWPHAR3224 Operate crawler tractor.....2254

FWPHAR3225 Operate excavator with log grapple2257

Assessment Requirements for FWPHAR3225 Operate excavator with log grapple2262

FWPHAR3226 Operate feller buncher.....2265

Assessment Requirements for FWPHAR3226 Operate feller buncher.....2270

FWPHAR3227 Operate forwarder.....2274

Assessment Requirements for FWPHAR3227 Operate forwarder.....2279

FWPHAR3228 Operate loader.....2282

Assessment Requirements for FWPHAR3228 Operate loader.....2287

FWPHAR3229 Operate single grip harvester.....2290

Assessment Requirements for FWPHAR3229 Operate single grip harvester2295

FWPHAR3230 Operate skidder2299

Assessment Requirements for FWPHAR3230 Operate skidder.....2303

FWPTMM3208 Apply critical workplace processes in the manufacture of prefabricated timber building systems2306

Assessment Requirements for FWPTMM3208 Apply critical workplace processes in the manufacture of prefabricated timber building systems.....2310

FWPTMM3209 Install prefabricated timber building systems on-site.....2313

Assessment Requirements for FWPTMM3209 Install prefabricated timber building systems on-site2317

FWPTMM5202 Develop, trial and evaluate prototypes.....2321

Assessment Requirements for FWPTMM5202 Develop, trial and evaluate prototypes.....2325

FWPTMM5209 Determine prefabricated timber building systems designs for compliance, manufacture and installation.....2328

Assessment Requirements for FWPTMM5209 Determine prefabricated timber building systems designs for compliance, manufacture and installation.....2333

FWPTMM5210 Verify compliance and conformance of prefabricated timber building systems during manufacture2337

Assessment Requirements for FWPTMM5210 Verify compliance and conformance of prefabricated timber building systems during manufacture2341

CPPSSI4038 Prepare and present GIS data2344

Assessment Re quire ments for CPPSSI4038 Prepare and present GIS data.....2347

CPPWMT3002 Conduct waste resource recovery2349

Assessment Re quire ments for CPPWMT3002 Conduct waste resource recovery2352

CPPWMT4003 Implement waste management plans2354

Assessment Re quire ments for CPPWMT4003 Implement waste management plans2357

CPPWMT4010 Assess and advise on waste avoidance options2359

Assessment Re quire ments for CPPWMT4010 Assess and advise on waste avoidance options2362

FBPOPR2074 Carry out manual handling tasks2364

Assessment Re quire ments for FBPOPR2074 Carry out manual handling tasks2367

FBPVIT3004 Monitor and maintain nursery plants2370

Assessment Re quire ments for FBPVIT3004 Monitor and maintain nursery plants2373

FSKLRG011 Use routine strategies for work-related learning2377

Assessment Re quire ments for FSKLRG011 Use routine strategies for work-related learning.....2379

FSKOCM007 Interact effectively with others at work.....2381

Assessment Re quire ments for FSKOCM007 Interact effectively with others at work ..2383

FSKRDG007 Read and respond to simple workplace information2385

Assessment Re quire ments for FSKRDG007 Read and respond to simple workplace information.....2387

FWP20122 Certificate II in Forest Operations

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 9.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Qualification Description

This qualification reflects the job of people who provide support to forest operations in a variety of forestry contexts. It is also suitable for learners involved in school-based VET traineeships and other VET in school programs.

Individuals with this qualification apply specialised skills and knowledge relevant to entry-level roles in forest operations. This includes a basic understanding of the industry and the risks involved in forest operations. They are also expected to conduct basic forest operations.

At this level, workers complete tasks under close supervision involving known routines and procedures but variable work tasks in collaboration with others.

This qualification enables specialisations in:

- Forest Nursery Production,
- Silviculture, or
- Timber Harvesting.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:
 - 5 core units
 - 8 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry-supported vocational outcome. Electives can be chosen to provide a general qualification or a qualification with a specialisation.

For the award of the *FWP20122 Certificate II in Forest Operations* choose:

- at least 6 units from the electives in Groups A to H
- up to 2 units from the remaining electives in Groups A to H, or from any currently endorsed Training Package or accredited course.

For the award of the *FWP20122 Certificate II in Forest Operations (Forest Nursery Production)* choose:

- at least 4 units from the electives in Groups B and/or F
- at least 2 units from the electives in Groups A to H, excluding specialisation electives already selected
- up to 2 units from the remaining electives in Groups A to H, or from any currently endorsed Training Package or accredited course.

For the award of the *FWP20122 Certificate II in Forest Operations (Silviculture)* choose:

- at least 4 units from the electives in Groups C and/or F
- at least 2 units from the electives in Groups A to H, excluding specialisation electives already selected
- up to 2 units from the remaining electives in Groups A to H, or from any currently endorsed Training Package or accredited course.

For the award of the *FWP20122 Certificate II in Forest Operations (Timber Harvesting)* choose:

- at least 4 units from the electives in Groups D and/or E
- at least 2 units from the electives in Groups A to H, excluding specialisation electives already selected
- up to 2 units from the remaining electives in Groups A to H, or from any currently endorsed Training Package or accredited course.

Core Units

FWPCOR2206	Work effectively in the forest and wood products industry
FWPCOR2208	Communicate and interact effectively in the forest and wood products industry

FWPCOR2209	Follow environmental protection procedures in forest and wood products operations
FWPCOR2210	Follow workplace health and safety policies and procedures in forest and wood products operations
FWPCOR2211	Develop knowledge of the forest and wood products industry

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A: Safety, Environment, Quality and Cultural Heritage

AHCOCM201	Maintain cultural sites
BSBWHS211	Contribute to the health and safety of self and others
FBPOPR2074	Carry out manual handling tasks
FWPCOT2264	Follow quality and product care procedures in forest and wood products operations
FWPCOT3314	Comply with soil and water protection
FWPCOT3324	Apply cultural heritage protection requirements in forest operations
HLTAID011	Provide First Aid
TLID0020	Shift materials safely using manual handling methods

Group B: Forest Nursery Production Operations

Seed Orchard

FWPNSY2001	Collect tree seeds
------------	--------------------

Tree Propagation

FWPNSY2002	Cut, sort and set cuttings
FWPNSY2004	Prick out and transplant tree seedlings
FWPNSY2005	Apply tree seed treatment

Tree Stock Quality

AHCBIO204	Follow site biosecurity procedures
FWPNSY2003	Follow quality procedures in forest nursery production

Nursery Equipment

AHCMOM202	Operate tractors
AHCMOM216	Operate side by side utility vehicles
TLID0007	Operate specialised load shifting equipment
TLILIC0003	Licence to operate a forklift truck

Group C: Silviculture Operations**Tree Planting**

FWPSIL2002	Plant trees by hand
------------	---------------------

Tree Pruning

FWPCOT3301	Trim trees using a pole saw
FWPCOT3317	Use chainsaw within a tree
FWPSIL2001	Select and mark trees for tending operations
FWPSIL2003	Prune trees

Forest Health

AHCPMG201	Treat weeds
AHCPMG202	Treat plant pests, diseases and disorders
FWPCOT2266	Operate brush cutter

Forest Inventory

FWPSIL2004	Collect forest data or samples for assessment and analysis
FWPSIL2005	Measure trees

Hand Tree Felling

FWPCOT2254	Maintain chainsaws
FWPCOT2273	Trim and cut felled trees
FWPCOT2275	Fell trees manually (basic)

UTV/ATV Vehicles

FWPCOT2265	Navigate in forest areas
FWPCOT3325	Operate four wheel drive vehicle on unsealed roads
FWPCOT3326	Recover four wheel drive vehicle

Group D: Timber Harvesting Operations

Commercial Manual Tree Felling

FWPHAR2209	Trim and cut harvested trees
------------	------------------------------

Mechanical Tree Felling

FWPHAR2210	Operate a forest machine simulator in a virtual environment
------------	---

Log Extraction, Landing and Loading

FWPHAR2201	Hook up felled trees (choker)
FWPHAR2202	Perform landing duties (chaser)

Log Sorting, Grading and Marking

FWPCOT2242	Segregate and sort logs
FWPCOT3270	Grade and mark logs

Group E: Fire Control

Bushfire Awareness and Prevention

FWPFIR2001	Follow fire prevention procedures
FWPFIR2002	Detect fire in a native forest or plantation
FWPFIR3002	Apply communication protocols during post-bushfire vegetation clearing and clean-up operations

Bushfire Suppression

PUAEQU001 *	Prepare, maintain and test response equipment
PUAFIR017	Work safely around aircraft
PUAFIR204 *	Respond to wildfire
PUAFIR210	Prevent injury
PUALAW001	Protect and preserve incident scene
PUAOPE013	Operate communications systems and equipment
PUATEA001	Work in a team

Prescribed Burning

PUAFIR201 *	Assist with prescribed burning
-------------	--------------------------------

Group F: Chemical Application

AHCCHM201	Apply chemicals under supervision
AHCCHM304	Transport and store chemicals
AHCCHM307	Prepare and apply chemicals to control pest, weeds and diseases

Group G: Other Operations**Fencing**

AHCINF206	Install, maintain and repair farm fencing
-----------	---

Site Access and Rooding

AHCSAW203	Conduct erosion and sediment control activities
-----------	---

In-field Processing

AHCARB212	Operate and maintain stump grinding machines
FWPCOT2267	Operate mobile hydraulic log splitter
FWPHAR2208	Operate a mobile chipper/mulcher

Drone Technology

AVIY0028	Operate remotely piloted aircraft in excluded category sub-2 kg operations
----------	--

Group H: Personal Effectiveness

BSBPEF202	Plan and apply time management
FSKOCM007	Interact effectively with others at work
FSKRDG007	Read and respond to simple workplace information
FSKWTG006	Write simple workplace information

Prerequisite requirements

Units listed in the *Prerequisite requirement* column that have their own prerequisite requirements are shown with an asterisk (*)

Unit of competency	Prerequisite requirement
PUAEQU001 Prepare, maintain and test response equipment	PUAFIR210 Prevent injury
PUAFIR201 Assist with prescribed burning	PUAFIR210 Prevent injury
PUAFIR204 Respond to wildfire	PUAFIR210 Prevent injury

FWP20322 Certificate II in Timber and Wood Products Operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Qualification Description

This qualification reflects the jobs of people who support production processes in timber and wood product production facilities. It is suitable for learners involved in school-based VET traineeships and other VET in school programs focused on the production of timber and wood products.

Individuals with this qualification apply skills and knowledge to work in operational support roles in the production of timber and wood products. They have a basic understanding of the employee responsibilities in the timber and wood products sector. They also possess the skills to work safely, contribute to teamwork in a production environment, operate basic equipment and grade, sort and stack timber or wood products.

At this level, workers complete work tasks under close supervision involving known routines and procedures.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:
 - 4 core units
 - 9 elective units.

Elective units must ensure the integrity of the alignment between the qualification and Australian Qualifications Framework (AQF) and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 3 units must be selected from Group A

- at least 3 units must be selected from Group B
- remaining units may be selected from Groups A to C and may include up to 2 units from any currently endorsed Training Package or accredited course.

Core Units

FWPCOR2208	Communicate and interact effectively in the forest and wood products industry
FWPCOR2210	Follow workplace health and safety policies and procedures in forest and wood products operations
FWPCOR2211	Develop knowledge of the forest and wood products industry
FWPCOT2264	Follow quality and product care procedures in forest and wood products operations

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A

Production effectiveness

FWPCOR2206	Work effectively in the forest and wood products industry
MSMOPS102	Perform tasks to support production
MSMPCI102	Apply effective work practices
TLIF0022	Conduct housekeeping activities

Basic support operations

FWPCOT2243	Tail out timber product and waste material
FWPCOT2257	Use hand-held tools
MEM11011 *	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

MEM16006 *	Organise and communicate information
MSFGN2001	Make measurements and calculations
TLID0020	Shift materials safely using manual handling methods

Group B

Timber grading

FWPCOT2246	Appearance grade hardwood sawn and milled products
FWPCOT2249	Visually stress grade hardwood
FWPCOT2250	Visually stress grade softwood
FWPCOT2251	Visually stress grade cypress

Machine operations

FWPCOT2244	Operate and maintain a thicknesser
FWPCOT2262	Cut material to shape using a saw
FWPCOT2263	Cross cut materials with a fixed saw
FWPCOT2268	Cut timber or engineered wood product to length or dimensions
FWPCOT2269	Operate and maintain a table saw
FWPCOT3337	Operate timber finger jointing line
FWPTMM220 4	Machine material
FWPTMM220 5	Cut material to length and angles

Blades and Cutters Maintenance

FWPCOT3271	Hand sharpen knives and blades for commercial and domestic cutting services
FWPCOT3276	Sharpen cutters using a straight knife grinder
FWPSAW3247	Replace tungsten tips
MEM05006 *	Perform brazing and/or silver soldering

Chemical handling

AHCCHM101	Follow basic chemical safety rules
AHCCHM201	Apply chemicals under supervision

Sorting, Stacking and Packing

FWPCOT2206	Stack and bind material
FWPCOT2271	Pack timber or wood products for despatch
FWPCOT2272	Rack timber or round poles
FWPCOT3320	Build and maintain timber stacks
FWPSAW2213	De-stack timber drying racks
FWPSAW2214	Sort timber boards manually

Timber Yard and Despatch

FWPCOT2255	Store materials
FWPCOT2259	Cut materials with a hand-held chainsaw
FWPCOT2260	Tally material
FWPCOT2261	Process orders and prepare for despatch

Load Handling

AHCMOM207	Conduct front-end loader operations
TLID0006	Move materials mechanically using automated equipment
TLID0007	Operate specialised load shifting equipment
TLID0015	Load and unload goods/cargo
TLID0016	Operate a forklift
TLILIC0003	Licence to operate a forklift truck

Group C**Other electives**

AHCWRK323	Operate in isolated and remote situations
FWPCOR2209	Follow environmental protection procedures in forest and

	wood products operations
FWPCOT2254	Maintain chainsaws
FWPCOT2270	Cut wood material with pole saw for unblocking machinery components
FWPCOT3202	Navigate in remote or trackless areas
FWPCOT3325	Operate four wheel drive vehicle on unsealed roads
HLTAID011	Provide First Aid

Prerequisite requirements

Units listed in the *Prerequisite requirement* column that have their own prerequisite requirements are shown with an asterisk (*)

Unit of competency	Prerequisite requirement
MEM05006 Perform brazing and or silver soldering	MEM11011 Undertake manual handling * MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM11011 Undertake manual handling	MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM16006 Organise and communicate information	MEM13015 Work safely and effectively in manufacturing and engineering

FWP30122 Certificate III in Forest Operations

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 9.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Qualification Description

This qualification describes the job of people who operate at a production level in a forest operation.

Individuals with this qualification apply specialised skills and knowledge relevant to operational roles in forest operations. This includes applying knowledge of health and safety responsibilities and protecting the environment, including the areas of cultural significance. They are also expected to operate equipment according to workplace procedures and conduct work tasks specific to a forest operation.

At this level, workers complete tasks under limited supervision and collaborate with others to meet productivity requirements.

This qualification enables specialisations in:

- Forest Nursery Production,
- Silviculture, or
- Timber Harvesting and Haulage.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:
 - 2 core units

- 11 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry-supported vocational outcome. Electives can be chosen to provide a general qualification or a qualification with a specialisation.

For the award of the *FWP30122 Certificate III in Forest Operations* choose:

- 1 unit from the electives in Group A or 2 units from the electives in Group B
- at least 7 units from the electives in Groups C to K
- up to 2 units from the remaining electives in Groups C to K, or from any currently endorsed Training Package or accredited course.

For the award of the *FWP30122 Certificate III in Forest Operations (Forest Nursery Production)* choose:

- at least 4 units from the electives in Groups D and/or I
- at least 5 units from the electives in Groups A to K, excluding specialisation electives already selected
- up to 2 units from the remaining electives in Groups A to K, or from any currently endorsed Training Package or accredited course.

For award of the *FWP30122 Certificate III in Forest Operations (Silviculture)* choose:

- 1 unit from the electives in Group A or 2 units from the electives in Group B
- at least 4 units from the electives in Groups E and/or I
- at least 3 units from the electives in Groups C to K, excluding specialisation electives already selected
- up to 2 units from the remaining electives in Groups C to K, or from any currently endorsed Training Package or accredited course.

For award of the *FWP30122 Certificate III in Forest Operations (Timber Harvesting and Haulage)* choose:

- 1 unit from the electives in group A or 2 units from the electives in Group B
- at least 4 units from the electives in Group F
- at least 3 units from the electives in Groups C to K, excluding specialisation electives already selected
- up to 2 units from the remaining electives in Groups C to K, or from any currently endorsed Training Package or accredited course.

-

Core Units

FWPCOR2206	Work effectively in the forest and wood products industry
FWPCOR2208	Communicate and interact effectively in the forest and wood products industry

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A: Safety and Environment

FWPCOR3205	Apply safety, health and environmental requirements in forest and wood products operations
------------	--

Group B: Safety and Environment

FWPCOR2209	Follow environmental protection procedures in forest and wood products operations
FWPCOR2210	Follow workplace health and safety policies and procedures in forest and wood products operations

Group C: Safety and Environment

AHCOCM401	Protect places of cultural significance
FWPCOT3311	Use environmental care procedures to undertake fire salvage operations
FWPCOT3312	Implement environmentally sustainable work practices in the work area/work site
FWPCOT3313	Apply biodiversity protection principles
FWPCOT3314	Comply with soil and water protection
FWPCOT3321 *	Apply situational awareness and a safety mindset in operational forestry roles
FWPCOT3322	Apply quality and product care procedures in forest and wood products operations
FWPCOT3324	Apply cultural heritage protection requirements in forest operations
HLTAID009	Provide cardiopulmonary resuscitation
HLTAID011	Provide First Aid
HLTAID013	Provide First Aid in remote or isolated site

HLTAID014	Provide Advanced First Aid
-----------	----------------------------

Group D: Forest Nursery Production Operations

Seed Orchard

FWPNSY3001	Graft nursery stock for planting in seed orchard
FWPNSY3002	Extract, clean, store and despatch tree seeds
FWPNSY3004	Identify, evaluate and mark quality seed trees
FWPNSY3005	Maintain seed orchard

Tree propagation

AHCNSY207	Undertake propagation activities
FWPNSY2005	Apply tree seed treatment

Tree Stock Growing

AHCWRK215	Collect and record production data
FBPVIT3004	Monitor and maintain nursery plants
FWPNSY3003	Apply knowledge of tree stock growing in a forest nursery
FWPNSY3006	Manage mother plants

Nursery Infrastructure

AHCIRG328	Operate irrigation controller and sensor technology
AHCIRG346	Operate pressurised irrigation systems
AHCNSY314	Operate fertigation equipment
FWPNSY3007	Operate automated topping system as part of tree production nursery operations
FWPNSY3008	Operate automated seed sowing line for containerised forest seedling production

Tree Stock Quality

AHCBIO303	Apply biosecurity measures
-----------	----------------------------

AHCWRK404	Implement quality assurance procedures
-----------	--

Group E: Silviculture Operations

Mechanical Site Preparation

FWPSIL3003	Use mechanised equipment for forestry site preparation
------------	--

Tree Planting

FWPSIL3002	Plant trees mechanically
------------	--------------------------

Forest Pruning

FWPCOT3301	Trim trees using a pole saw
FWPSIL2003	Prune trees
FWPSIL3001	Apply sustainable silviculture treatments

Forest Health

AHCMOM306	Ground spread fertiliser and soil ameliorant
AHCPMG301	Control weeds
AHCPMG302	Control plant pests, diseases and disorders
AHCPMG304	Use firearms to humanely destroy animals
AHCPMG309	Apply pest animal control techniques

Hand Tree Felling

AHCARB318 *	Undertake aerial rescue
AHCARB319	Use arborist climbing techniques
FWPCOT3317	Use chainsaw within a tree
FWPCOT3330	Apply tree jacking techniques in felling trees
FWPCOT3350	Fell trees manually (intermediate)
FWPCOT3351	Fell trees manually (advanced)

UTV/ATV Vehicles

FWPCOT2265	Navigate in forest areas
------------	--------------------------

FWPCOT3325	Operate four wheel drive vehicle on unsealed roads
FWPCOT3326	Recover four wheel drive vehicle
FWPCOT3328	Operate four wheel drive vehicle in a towing situation
FWPCOT3329	Perform complex four wheel drive operations

Group F: Timber Harvesting and Haulage Operations

Commercial Manual Tree Felling

FWPHAR3205	Harvest trees manually (intermediate)
FWPHAR3209	Harvest trees manually (advanced)

Mechanical Tree Felling

FWPHAR3226	Operate feller buncher
FWPHAR3229	Operate single grip harvester
FWPHAR3232	Operate harvesting machine with winch-assist system
FWPHAR3234	Conduct mechanical processor operations
FWPHAR3235	Conduct mechanically assisted tree falling operations

Log Extraction, Landing and Loading

FWPHAR3202	Monitor log recovery (rigging slinger)
FWPHAR3212	Operate yarder
FWPHAR3224	Operate crawler tractor
FWPHAR3225	Operate excavator with log grapple
FWPHAR3227	Operate forwarder
FWPHAR3228	Operate loader
FWPHAR3230	Operate skidder
TLILIC0024	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)

Log Sorting, Grading and Marking

FWPCOT3270	Grade and mark logs
FWPCOT3323	Assess wood materials visually

Haulage

FWPCOT3315	Transport forestry logs using trucks
FWPCOT3316	Transport forestry produce using trucks
TLIH0005	Interpret road maps and navigate pre-determined routes
TLIF2010	Apply fatigue management strategies

Technology and Digital Data

FWPCOT3318	Access, capture and communicate forestry field data using mobile devices
FWPCOT3319	Read and interpret digital maps and forest operation plans
FWPHAR3222	Use on-board computer systems for forwarder
FWPHAR3223	Use on-board computer systems for single grip harvester

Equipment Maintenance

AHCMOM301	Coordinate machinery and equipment maintenance and repair
FWPCOT3335	Conduct operator level equipment maintenance in forest and wood products industry

Group G: Site Access and Roding

AHCSAW304	Implement erosion and sediment control measures
FWPCOT3306	Rehabilitate tracks, quarries and landings
FWPFGM3208	Construct and maintain forest roads and tracks
RIIHAN308F	Load and unload plant
RIIMPO315E	Conduct tractor operations
RIIMPO317F	Conduct roller operations

RIIMPO318F	Conduct civil construction skid steer loader operations
RIIMPO319E	Conduct backhoe/loader operations
RIIMPO320F	Conduct civil construction excavator operations
RIIMPO321F	Conduct civil construction wheeled front end loader operations
RIIMPO322E	Conduct civil construction tracked front end loader operations
RIIMPO323E	Conduct civil construction dozer operations
RIIMPO324F	Conduct civil construction grader operations
RIIVEH304E	Conduct tip truck operations

Group H: Fire Control

Bushfire Awareness and Prevention

AHCWRK314	Monitor weather conditions
FWPFIR2001	Follow fire prevention procedures
FWPFIR3001	Assess fire risk
FWPFIR3002	Apply communication protocols during post-bushfire vegetation clearing and clean-up operations
FWPFIR4001	Conduct tree hazard assessment post-fire
PUAFIR323	Take local weather observations

Bushfire Suppression

PUAEQU001 *	Prepare, maintain and test response equipment
PUAFIR203 *	Respond to urban fire
PUAFIR204 *	Respond to wildfire
PUAFIR205 *	Respond to aviation incident (specialist)
PUAFIR207 *	Operate breathing apparatus open circuit
PUAFIR210	Prevent injury

PUAFIR220 *	Respond to isolated structure fire
PUAFIR303 *	Suppress wildfire
PUAFIR309 *	Operate pumps
PUAFIR325	Operate heavy plant in fire control operations
PUAFIR326	Push trees with machines in forest fire control operations
PUALAW002	Conduct initial investigation at incident scene
PUAOPE014	Navigate to an incident
PUATEA001	Work in a team
PUATEA002 *	Work autonomously
PUAWHS002 *	Maintain safety at an incident scene
RIIPGP201D	Conduct pump operations

Prescribed Burning

PUAFIR201 *	Assist with prescribed burning
-------------	--------------------------------

Group I: Chemical Application

AHCCHM304	Transport and store chemicals
AHCCHM307	Prepare and apply chemicals to control pest, weeds and diseases

Group J: Other Forestry Operations

Fencing

AHCINF307	Plan and construct conventional fencing
AHCLSC318	Erect timber structures and features

In-field Wood Chipping

FWPHAR3203	Operate integrated or split flail and wood chipper with crane
------------	---

FWPHAR3204	Operate split flail and wood chipper fed by mobile machine
------------	--

Group K: Personal Effectiveness

BSBLDR301	Support effective workplace relationships
BSBTWK201	Work effectively with others
FWPCOT3346	Communicate effectively with general public or stakeholders concerned about forest practices

Prerequisite requirements

Units listed in the *Prerequisite requirement* column that have their own prerequisite requirements are shown with an asterisk (*)

Unit of competency	Prerequisite requirement
AHCARB318 Undertake aerial rescue	HLTAID011 Provide First Aid AHCARB319 Use arborist climbing techniques
FWPCOT3321 Apply situational awareness and a safety mindset in operational forestry roles	FWPCOR3205 Apply safety, health and environmental requirements in forest and wood products operations or FWPCOR2210 Follow workplace health and safety policies and procedures in forest and wood products operations
PUAEQU001 Prepare, maintain and test response equipment	PUAFIR210 Prevent injury
PUAFIR201 Assist with prescribed burning	PUAFIR210 Prevent injury
PUAFIR203 Respond to urban fire	PUAFIR207 Operate breathing apparatus open circuit *
PUAFIR204 Respond to wildfire	PUAFIR210 Prevent injury
PUAFIR205 Respond to aviation incident (specialist)	PUAFIR203 Respond to urban fire *
PUAFIR207 Operate breathing apparatus open circuit	PUAFIR210 Prevent injury

PUAFIR220 Respond to isolated structure fire	PUAFIR210 Prevent injury
PUAFIR303 Suppress wildfire	PUAFIR204 Respond to wildfire *
PUAFIR309 Operate pumps	PUAEQU001 Prepare, maintain and test response equipment * And one of the following units: PUAFIR203 Respond to urban fire * PUAFIR204 Respond to wildfire * PUAFIR205 Respond to aviation incident (specialist) * PUAFIR220 Respond to isolated structure fire *
PUATEA002 Work autonomously	PUATEA001 Work in a team
PUAWHS002 Maintain safety at an incident scene	PUAFIR210 Prevent injury

FWP30322 Certificate III in Timber and Wood Products Operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Qualification Description

This qualification describes the skills and knowledge required by people who work in production level jobs in timber or wood product production facilities.

Individuals with this qualification apply specialised skills and knowledge to perform a variety of production roles. These include generic workplace skills in areas such as maintaining personal and team performance, problem solving and complying with health and safety, quality and chain of custody and environmental protection standards. In addition, people working at this level also hold specialised technical skills in areas such as equipment operation and maintenance, process monitoring, product testing and grading. These individuals also understand the production process and workflow in timber or wood products production environments.

At this level, workers complete tasks under limited supervision and collaborate with others to meet productivity requirements.

This qualification includes specialisations in:

- Timber Production
- Glue Laminated Timber or Cross Laminated Timber Production
- Plywood or Laminated Veneer Lumber Production
- Reconstituted Wood Panel Production.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:

- 2 core units
- 11 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry supported vocational outcome. Electives can be chosen to provide a general qualification or a qualification with a specialisation.

For the award of the *FWP30322 Certificate III in Timber and Wood Products Operations* choose:

- at least 5 units from the electives in Group A
- at least 4 units from the electives in Groups B to H
- remaining units can be selected from Groups A to H and can include up to 2 units from any currently endorsed Training Package or accredited course.

For the award of the *FWP30322 Certificate III in Timber and Wood Products Operations (Timber Production)* choose:

- at least 5 units from the electives in Group A
- at least 4 units from the electives in Groups B and/or G
- remaining units can be selected from Groups A to H and can include up to 2 units from any currently endorsed Training Package or accredited course.

For the award of the *FWP30322 Certificate III in Timber and Wood Products Operations (Glue Laminated Timber or Cross Laminated Timber Production)* choose:

- at least 5 units from the electives in Group A
- 1 unit from the electives in Group C
- at least 3 units from the electives in Groups G
- remaining units can be selected from Groups A to H and can include up to 2 units from any currently endorsed Training Package or accredited course.

For the award of the *FWP30322 Certificate III in Timber and Wood Products Operations (Plywood or Laminated Veneer Lumber Production)* choose:

- at least 5 units from the electives in Group A
- 2 units from the electives in Groups D
- at least 2 units from the electives in Group G
- remaining units can be selected from Groups A to H and can include up to 2 units from any currently endorsed Training Package or accredited course.

For the award of the *FWP30322 Certificate III in Timber and Wood Products Operations (Reconstituted Wood Panel Production)* choose:

- at least 5 units from the electives in Group A
- 1 unit from the electives in Group E
- at least 3 units from the electives in Group G
- remaining units can be selected from Groups A to H and can include up to 2 units from any currently endorsed Training Package or accredited course.

Core Units

FWPCOR3205	Apply safety, health and environmental requirements in forest and wood products operations
FWPCOT3322	Apply quality and product care procedures in forest and wood products operations

Elective Units

Group A: Quality processes

Production effectiveness

BSBXTW301	Work in a team
FWPCOR2208	Communicate and interact effectively in the forest and wood products industry
MSMOPS212	Use organisation computers or data systems
MSMSUP200	Achieve work outcomes

Competitive systems and practices

MSMSUP291	Participate in continuous improvement
MSMSUP390	Use structured problem-solving tools
MSS402042	Apply 5S procedures

Process monitoring

FWPCOT3323	Assess wood materials visually
MSMSUP230	Monitor process operations

Equipment maintenance

FWPCOT3335	Conduct operator level equipment maintenance in forest and wood products industry
MSMSUP240	Undertake minor maintenance
MSMSUP303	Identify equipment faults

Chain of custody

FWPCOT3345	Develop knowledge of chain of custody certification requirements for forest and wood products
------------	---

Grading and testing

FWPCOT2249	Visually stress grade hardwood
FWPCOT2250	Visually stress grade softwood
FWPCOT2251	Visually stress grade cypress
FWPCOT3270	Grade and mark logs
FWPCOT3339	Grade wood product visually
FWPTMM421 3	Test finger jointed timber
FWPTMM421 4	Test laminated wood product
MSL973022	Conduct laboratory-based acceptance tests for construction materials
MSMSUP292	Sample and test materials and product

Group B: Timber production**Product and process optimisation**

FWPCOT3290	Apply knowledge of timber properties, sawmill operations and sawmilling equipment
FWPCOT3291	Apply principles of timber and process optimisation in sawmill operations
FWPCOT3292	Calibrate and maintain scanning equipment used in sawmilling operations
FWPCOT3293	Use scanning equipment for timber grading

Log sawing

FWPSAW3254	Control and monitor automated green mill saw line
FWPSAW3255	Operate conventional log breakdown saw line
FWPSAW3256	Select and saw logs in multi-species operations

Timber stacking

FWPCOT3297	Operate automated stacking equipment
------------	--------------------------------------

FWPCOT3320	Build and maintain timber stacks
------------	----------------------------------

Timber drying

FWPSAW3257	Operate timber drying kiln
------------	----------------------------

Saw knives and blades maintenance

FWPCOT3271	Hand sharpen knives and blades for commercial and domestic cutting services
FWPCOT3276	Sharpen cutters using a straight knife grinder
FWPCOT3280	Replace saw blades, knives and guides
FWPCOT3282	Assess and maintain saw blade and sawing machine performance
FWPCOT3283	Sharpen and position blades or knives in chipper, canter and reducer
FWPCOT3295	Assess and maintain cutter performance
FWPSAW3233	Sharpen circular saw blades
FWPSAW3234	File and set saw blades for hand saws and circular saws

Group C: *Glue laminated timber or cross laminated timber production*

FWPTMM3220	Develop knowledge of glue laminated timber or cross laminated timber production
------------	---

Group D: *Plywood or laminated veneer lumber production*

FWPTMM3217	Develop knowledge of plywood or laminated veneer lumber production
FWPTMM3218	Develop knowledge of veneer preparation in plywood or laminated veneer lumber production

Group E: *Reconstituted wood panel production*

FWPTMM3219	Develop knowledge of reconstituted wood panel production
------------	--

Group F: Other wood products operations**Wood chips**

FWPCOT3341	Coordinate and monitor wood chip stockpile
FWPCOT3342	Screen wood chips
FWPCOT3343	Test wood chips quality
FWPCOT3344	Transfer wood chips

Wood pallets

FWPCOT2257	Use hand-held tools
FWPCOT2258	Assemble products

Prefabricated timber building systems

FWPTMM320 8	Apply critical workplace processes in the manufacture of prefabricated timber building systems
FWPTMM320 9	Install prefabricated timber building systems on-site

Group G: Common electives**Log yard**

AHCMOM207	Conduct front-end loader operations
FWPCOT3340	Develop knowledge of log yard operations
TLID2022	Conduct weighbridge operations

Timber preservation

FWPSAW3242	Treat timber
------------	--------------

Finger jointing

FWPCOT3336	Coordinate set up and operation of timber finger jointing line
FWPCOT3337	Operate timber finger jointing line

Gluing

FWPCOT3338	Identify glues and gluing systems used in production of wood products
------------	---

Dressing

FWPCOT2244	Operate and maintain a thicknesser
FWPCOT3272	Set up and run multi-head moulder/planer to produce simple profiles
FWPCOT3273	Set up and run multi-head moulder to produce complex profiles
FWPTMM220 4	Machine material
FWPTMM321 6	Plane and sand engineered wood product

Cutting to dimensions

FWPCOT2263	Cross cut materials with a fixed saw
FWPCOT2268	Cut timber or engineered wood product to length or dimensions
FWPCOT2269	Operate and maintain a table saw
FWPCOT3274	Cut timber products using high-speed optimiser
FWPSAW3253	Re-saw green timber
FWPTMM220 5	Cut material to length and angles

Machining

FWPCOT2262	Cut material to shape using a saw
FWPCOT3275	Set up, operate and maintain end matching machines
FWPCOT3299	Cut timber or engineered wood product to profile
FWPTMM321 1	Manufacture using joinery machines

CNC machining

FWPCOT3289	Load and prove operating program for CNC machine
------------	--

FWPCOT3331	Cut material using CNC sizing machines
FWPCOT3332	Machine timber or engineered wood products using CNC machining and processing centres

Load handling

AHCMOM207	Conduct front-end loader operations
AHCMOM208	Conduct excavator operations
AHCMOM209	Conduct dozer operations
TLID0015	Load and unload goods/cargo
TLID0020	Shift materials safely using manual handling methods
TLID3011	Conduct specialised forklift operations
TLILIC0003	Licence to operate a forklift truck

Energy generation

FWPCOT3333	Conduct heat plant operations
FWPCOT3334	Conduct steam boiler operations

Storage and despatch

FWPCOT3310	Prepare timber or related products to meet import/export compliance requirements
FWPCOT4211	Monitor stock control procedures
TLIA0015	Organise receipt and despatch operations

Waste management

CPPWMT3002	Conduct waste resource recovery
------------	---------------------------------

Group H: Other electives

FWPCOT3302	Access and provide timber and wood product information
FWPCOT3312	Implement environmentally sustainable work practices in the work area/work site
FWPCOT3325	Operate four wheel drive vehicle on unsealed roads

FWPCOT3326	Recover four wheel drive vehicle
FWPCOT3327	Contribute to energy efficiency in the forest and wood products industry
FWPCOT3328	Operate four wheel drive vehicle in a towing situation
FWPCOT3346	Communicate effectively with general public or stakeholders concerned about forest practices
FWPSAW3252	Assemble, operate and dismantle a portable sawmill
TLIF0009	Ensure the safety of transport activities (Chain of Responsibility)
HLTAID011	Provide First Aid

FWP30622 Certificate III in Timber Building Products Supply

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Qualification Description

This qualification reflects the role of people who undertake activities related to timber warehousing, transport and distribution and customer sales in the timber wholesale, hardware and timber supply and/or timber manufacturing sectors.

Individuals with this qualification apply a broad range of specialised skills and knowledge in varied contexts that involve processing orders and controlling stocks, transporting products, engaging with and selling to customers, and finding solutions to routine problems as they arise. They also take responsibility for their own organisation and outputs at the workplace.

This qualification has several employment pathways for typical operational environments and job roles in the timber building products supply sector:

- Timber Yard Operator
- Timber Warehouse Storeperson
- Timber Warehouse Coordinator
- Forklift Driver
- Timber Transport & Dispatch Coordinator
- Pickup and Delivery Driver
- Timber Sales Assistant
- Timber Sales Representative
- Customer Service Officer.

This qualification enables specialisations in:

- Warehousing,
- Logistics, or
- Customer Sales.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:
 - 3 core units plus
 - 10 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry-supported vocational outcome.

For the award of the *FWP30622 Certificate III in Timber Building Products Supply*, the electives are to be chosen as follows:

- at least 8 units from the electives listed below in Groups A - G
- up to 2 units from any currently endorsed Training Package or accredited course.

Where appropriate, electives may be packaged to provide a qualification with a specialisation.

Packaging for Specialisations

For the award of the *FWP30622 Certificate III in Timber Building Products Supply (Warehousing)*

- at least 5 units must be selected from Group A

For the award of the *FWP306222 Certificate III in Timber Building Products Supply (Logistics)*

- at least 5 units must be selected from Group B

For the award of the *FWP30622 Certificate III in Timber Building Products Supply (Customer Sales)*

- at least 5 units must be selected from Group C.

Core Units

BSBXTW301	Work in a team
FWPCOR3205	Apply safety, health and environmental requirements in forest and wood products operations
FWPCOT3302	Access and provide timber and wood product information

Elective Units

Group A: Warehouse/yard operations

FWPCOT2255	Store materials
FWPCOT2259	Cut materials with a hand-held chainsaw

FWPCOT2261	Process orders and prepare for despatch
FWPCOT2263	Cross cut materials with a fixed saw
FWPCOT2268	Cut timber or engineered wood product to length or dimensions
FWPCOT2271	Pack timber or wood products for despatch
FWPCOT2272	Rack timber or round poles
TLIA0022	Pick and process orders
TLIA0024	Replenish stock
TLID0020	Shift materials safely using manual handling methods
TLIX0013X	Maintain stock control and receivals

Group B: Dispatch, loading & unloading, transport

TLIA0004	Complete receipt and despatch documentation
TLIA0019	Despatch stock
TLID0015	Load and unload goods/cargo
TLIF0009	Ensure the safety of transport activities (Chain of Responsibility)
TLILIC0003	Licence to operate a forklift truck
TLILIC0024	Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)
TLILIC2014	Licence to drive a light rigid vehicle
TLILIC2015	Licence to drive a medium rigid vehicle

Group C: Customer sales and relationship

BSBOPS202	Engage with customers
BSBOPS304	Deliver and monitor a service to customers
BSBOPS305	Process customer complaints

CPPCMN4008	Read plans, drawings and specifications for residential buildings
FWPCOT3304	Take off material quantities
FWPCOT3305	Interpret and quote from manufactured timber product plans
SIRRRTF001	Balance and secure point-of-sale terminal
SIRXCEG003	Build customer relationships and loyalty
SIRXCEG005	Maintain business to business relationships
SIRXSLS001	Sell to the retail customer

Group D: Inventory / stock control

FWPCOT4211	Monitor stock control procedures
SIRRINV001	Receive and handle retail stock
TLIX0013X	Maintain stock control and receivals

Group E: Timber product knowledge

FWPCOT3310	Prepare timber or related products to meet import/export compliance requirements
FWPCOT3323	Assess wood materials visually
FWPCOT4210	Provide specialised timber product solutions

Group F: Digital systems

BSBTEC201	Use business software applications
SIRWSLS001	Process product and service data
TLIX0004X	Administer inventory systems

Group G: Other general

BSBOPS402	Coordinate business operational plans
-----------	---------------------------------------

FWP30920 Certificate III in Timber Frame or Truss Manufacture

Modification History

Release	Comments
Release 3	This version released with FWP Forest and Wood Products Training Package Version 8.0.
Release 2	This version released with FWP Forest and Wood Products Training Package Version 7.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Qualification Description

This qualification reflects the role of fabricators or manufacturers of timber wall frames or roof and or floor trusses in the timber truss and frame industry. In these roles they are required to communicate and work in teams within the fabrication workplace and safely use specialist equipment to cut timber and assemble wall frames and/or floor or roof trusses.

These individuals apply a broad range of skills and knowledge in varied contexts that involve operating equipment and following established manufacturing processes, finding solutions to routine problems as they arise. They are expected to take responsibility for their own outputs at the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:
 - 3 core units plus
 - 10 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least three units must be selected from Group A
- at least one unit must be selected from Group B
- remaining elective units can be selected from Group A, Group B or Group C and can include up to two units from any currently endorsed Training Package or accredited course.

Core Units

FWPCOT2257	Use hand-held tools
FWPCOT3226	Assess timber for manufacturing potential
FWPTMM321 3	Read and interpret timber truss or wall frame fabrication plans

Elective Units

Group A

BSBXTW301	Work in a team
FWPCOR2208	Communicate and interact effectively in the forest and wood products industry
FWPCOR2210	Follow workplace health and safety policies and procedures in forest and wood products operations
FWPCOT3322	Apply quality and product care procedures in forest and wood products operations
TLID0020	Shift materials safely using manual handling methods

Group B

FWPCOT3308	Assemble timber wall frames
FWPCOT3309	Assemble timber roof trusses
FWPTMM321 4	Assemble timber floor trusses

Group C

BSBINS201	Process and maintain workplace information
CPCCOM1015	Carry out measurements and calculations
FWPCOT2206	Stack and bind material
FWPCOT2255	Store materials
FWPCOT2268	Cut timber or engineered wood product to length or dimensions
FWPCOT3331	Cut material using CNC sizing machines
FWPTMM2205	Cut material to length and angles
MSMPCI102	Apply effective work practices
MSMSUP390	Use structured problem-solving tools
TLID0016	Operate a forklift

FWP31021 Certificate III in Saw Technology

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 8.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Qualification Description

This qualification reflects the job role of Saw Technicians who service, maintain and align saw blades, knives and guides for timber sawmilling machines and other applications. Saw Technicians may also inspect, test, maintain and troubleshoot mechanical components on sawing machine centres to achieve sawing production rates and product tolerances.

The elective groups and units of competency within this qualification can provide Saw Technicians with two pathway options. Saw Technicians can use the qualification to develop skills in performing general saw servicing operations or develop skills in saw maintenance engineering roles.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 26 units of competency:
 - 7 core units plus
 - 19 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- all 4 units must be selected from either Group A or Group B

- a minimum of 8 units must be selected from Group C
- remaining units can be selected from Group C and/or Group D and can include up to 2 units from any currently endorsed Training Package or accredited course.

Elective units must be relevant to work undertaken in the sawmilling and processing sector of the industry.

Core Units

BSBTWK201	Work effectively with others
FWPCOT3279	Assess and maintain saw technology tools
FWPCOT3283	Sharpen and position blades or knives in chipper, canter and reducer
FWPCOT3286	Identify levelling and tensioning requirements for saw blades
FWPCOT3290	Apply knowledge of timber properties, sawmill operations and sawmilling equipment
FWPSAW3247	Replace tungsten tips
FWPSAW3251	Apply principles of blade design to sawing procedures

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A – General electives (service operations)

FWPCOR2206	Work effectively in the forest and wood products industry
FWPCOR2208	Communicate and interact effectively in the forest and wood products industry
FWPCOR3205	Apply safety, health and environmental requirements in forest and wood products operations
MEM30032	Produce basic engineering drawings

Group B – General electives (maintenance engineering)

MEM09002 *	Interpret technical drawing
MEM13015	Work safely and effectively in manufacturing and engineering
MEM14006 *	Plan work activities
MEM16006 *	Organise and communicate information

Group C – Saw technology (service operations)

Servicing saw blades and guides

FWPCOT3280	Replace saw blades, knives and guides
FWPCOT3282	Assess and maintain saw blade and sawing machine performance
FWPCOT3287	Operate CNC equipment for grinding, tensioning and levelling saw blades
FWPCOT3294	Swage and shape saw blades
FWPSAW3232	Sharpen band saw blades
FWPSAW3233	Sharpen circular saw blades
FWPSAW3235	Recondition saw guides
FWPSAW3236	Sharpen tipped circular saw blades
FWPSAW3237	Level and tension circular saw blades
FWPSAW3238	Replace Stellite tips
FWPSAW3239	Assess and maintain wide band saw blades

Servicing cutters for timber processing

FWPCOT3276	Sharpen cutters using a straight knife grinder
FWPCOT3277	Sharpen cutters in head using a profile knife grinder
FWPCOT3278	Sharpen cutters in head using a straight knife grinder
FWPCOT3281	Manufacture profile cutters

FWPCOT3295	Assess and maintain cutter performance
FWPCOT3298	Produce templates

Servicing sawing machine

FWPSAW3240	Assess and maintain band saw wheels
FWPSAW3244	Align sawing production systems

Other services

FWPCOT2269	Operate and maintain a table saw
FWPCOT3271	Hand sharpen knives and blades for commercial and domestic cutting services
FWPSAW3234	File and set saw blades for hand saws and circular saws

Group D – Saw technology (maintenance engineering)

Mechanical maintenance

FWPCOT3335	Conduct operator level equipment maintenance in forest and wood products industry
MEM11011 *	Undertake manual handling
MEM12023 *	Perform engineering measurements
MEM12024 *	Perform computations
MEM18001 *	Use hand tools
MEM18002 *	Use power tools/hand held operations
MEM18055 *	Dismantle, replace and assemble engineering components

Welding

FWPSAW3245	Join band saw blades
MEM05006 *	Perform brazing and/or silver soldering

MEM05049 *	Perform routine gas tungsten arc welding
MEM05050 *	Perform routine gas metal arc welding

Quality processes

FWPCOT3291	Apply principles of timber and process optimisation in sawmill operations
FWPCOT3327	Contribute to energy efficiency in the forest and wood products industry
FWPCOT3349	Assess timber against quality requirements and specifications
MSMSUP390	Use structured problem-solving tools
MSS402042	Apply 5S procedures
MSS404056	Apply statistics to operational processes

Prerequisite requirements

Units listed in the *Prerequisite requirement* column that have their own prerequisite requirements are shown with an asterisk (*)

Unit of competency	Prerequisite requirement
MEM05006 Perform brazing and/or silver soldering	MEM11011 Undertake manual handling * MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM05049 Perform routine gas tungsten arc welding	MEM11011 Undertake manual handling * MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM05050 Perform routine gas metal arc welding	MEM11011 Undertake manual handling * MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate

	information *
MEM09002 Interpret technical drawing	MEM12023 Perform engineering measurements * MEM12024 Perform computations * MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM11011 Undertake manual handling	MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM12023 Perform engineering measurements	MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM12024 Perform computations	MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM14006 Plan work activities	MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *
MEM16006 Organise and communicate information	MEM13015 Work safely and effectively in manufacturing and engineering
MEM18001 Use hand tools	MEM11011 Undertake manual handling MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information*
MEM18002 Use power tools/hand held operations	MEM11011 Undertake manual handling MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information *

MEM18055 Dismantle, replace and assemble engineering components	MEM09002 Interpret technical drawing * MEM11011 Undertake manual handling * MEM12023 Perform engineering measurements * MEM13015 Work safely and effectively in manufacturing and engineering MEM16006 Organise and communicate information * MEM18001 Use hand tools * MEM18002 Use power tools/hand held operations *

FWP31121 Certificate III in Wood Machining

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 8.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Qualification Description

This qualification reflects the job role of Wood Machinists who work in a sawmill or other timber processing environment and set up, operate and maintain machines such as large automated planers/moulders and saws to cut, plane and profile timber to specifications. This involves interpreting work orders to establish job requirements, selecting and setting up knives and cutters to machinery, aligning knives, operating machines to cut, plane and profile timber, and cleaning and maintaining machines and equipment.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 27 units of competency:
 - 8 core units plus
 - 19 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- a minimum of 8 units must be selected from Group A
- a minimum of 4 units must be selected from Group B
- remaining units can be selected from Group A, B, C and/or D and can include up to 2 units from any currently endorsed Training Package or accredited course.

Elective units must be relevant to work undertaken in the sawmilling and processing sector of the industry.

Core Units

BSBTWK201	Work effectively with others
FWPCOR2206	Work effectively in the forest and wood products industry
FWPCOR2208	Communicate and interact effectively in the forest and wood products industry
FWPCOR3205	Apply safety, health and environmental requirements in forest and wood products operations
FWPCOT2257	Use hand-held tools
FWPCOT3290	Apply knowledge of timber properties, sawmill operations and sawmilling equipment
FWPCOT3322	Apply quality and product care procedures in forest and wood products operations
MSFDN4003	Produce patterns and templates

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A – Operating timber processing machines

FWPCOT2244	Operate and maintain a thicknesser
FWPCOT2269	Operate and maintain a table saw
FWPCOT3272	Set up and run multi-head moulder/planer to produce simple profiles
FWPCOT3273	Set up and run multi-head moulder to produce complex profiles
FWPCOT3274	Cut timber products using high-speed optimiser
FWPCOT3275	Set up, operate and maintain end matching machines

FWPCOT3289	Load and prove operating program for CNC machine
FWPCOT3332	Machine timber or engineered wood products using CNC machining and processing centres
FWPCOT3336	Coordinate set up and operation of timber finger jointing line
FWPCOT3337	Operate timber finger jointing line
FWPSAW3255	Operate conventional log breakdown saw line
MSFFM3032	Set up, operate and maintain sawing machines
MSFFM3037	Set up, operate and maintain routing and shaping machines

Group B – Grinding and maintaining cutting tools

FWPCOT3271	Hand sharpen knives and blades for commercial and domestic cutting services
FWPCOT3276	Sharpen cutters using a straight knife grinder
FWPCOT3277	Sharpen cutters in head using a profile knife grinder
FWPCOT3278	Sharpen cutters in head using a straight knife grinder
FWPCOT3280	Replace saw blades, knives and guides
FWPCOT3281	Manufacture profile cutters
FWPCOT3283	Sharpen and position blades or knives in chipper, canter and reducer
FWPCOT3286	Identify levelling and tensioning requirements for saw blades
FWPCOT3295	Assess and maintain cutter performance
FWPCOT3298	Produce templates
FWPSAW3233	Sharpen circular saw blades
FWPSAW3237	Level and tension circular saw blades
FWPSAW3247	Replace tungsten tips

FWPSAW3251	Apply principles of blade design to sawing procedures
------------	---

Group C – Grading and testing timber

FWPCOT2246	Appearance grade hardwood sawn and milled products
FWPCOT2249	Visually stress grade hardwood
FWPCOT2250	Visually stress grade softwood
FWPCOT2251	Visually stress grade cypress
FWPCOT3292	Calibrate and maintain scanning equipment used in sawmilling operations
FWPCOT3293	Use scanning equipment for timber grading
FWPCOT3349	Assess timber against quality requirements and specifications
FWPTMM421 3	Test finger jointed timber
FWPTMM421 4	Test laminated wood product
MSL973022	Conduct laboratory-based acceptance tests for construction materials
MSMSUP292	Sample and test materials and product

Group D – General electives

FWPCOT2243	Tail out timber product and waste material
FWPCOT3291	Apply principles of timber and process optimisation in sawmill operations
FWPCOT3304	Take off material quantities
FWPCOT3307	Create drawings using computer aided design software
FWPCOT3327	Contribute to energy efficiency in the forest and wood products industry
FWPCOT3335	Conduct operator level equipment maintenance in forest

	and wood products industry
MSMSUP390	Use structured problem-solving tools
MSS402042	Apply 5S procedures
MSS404056	Apply statistics to operational processes

FWP31220 Certificate III in Timber Systems Design

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 7.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Qualification Description

This qualification reflects the role of people who work as timber systems designers or estimators in the timber truss and frame industry. In these roles they are required to create drawings and produce estimates of material quantities and costs for timber frames or trusses from architectural plans and drawings and communicate effectively with customers and colleagues.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 13 units of competency:
 - 3 core units plus
 - 10 elective units.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least four units must be selected from Group A
- remaining elective units may be selected from Group A or Group B and up to two units may be selected from any currently endorsed Training Package or accredited course.

Core Units

FWPCOT3303	Prepare sketches and drawings
FWPCOT3304	Take off material quantities
FWPTMM321 5	Work effectively in the timber systems design industry

Elective Units

Group A

BSBXTW301	Work in a team
CPPCMN4008	Read plans, drawings and specifications for residential buildings
FWPCOR2208	Communicate and interact effectively in the forest and wood products industry
FWPCOR2210	Follow workplace health and safety policies and procedures in forest and wood products operations
FWPCOT3305	Interpret and quote from manufactured timber product plans
FWPCOT3307	Create drawings using computer aided design software

Group B

BSBINS302	Organise workplace information
BSBOPS304	Deliver and monitor a service to customers
BSBTEC201	Use business software applications
CPCCOM1015	Carry out measurements and calculations
FSKLRG011	Use routine strategies for work-related learning
FWPCOT3302	Access and provide timber and wood product information
MSMSUP200	Achieve work outcomes
MSMSUP390	Use structured problem-solving tools

FWP40121 Certificate IV in Forest Operations

Modification History

Release	Comments
Release 3	This version released with FWP Forest and Wood Products Training Package Version 9.0.
Release 2	This version released with FWP Forest and Wood Products Training Package Version 8.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Qualification Description

This qualification reflects the job of people who work as managers or crew leaders in forestry contractor businesses.

Individuals with this qualification apply a broad range of specialised skills and knowledge in forest operations management. This includes establishing operational plans for forestry operations and supervising teams involved in implementing operational plans in line with the requirements of a forest management organisation.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
 - 2 core units plus
 - 10 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 3 units must be selected from Group A

- at least 3 units must be selected from Group B
- remaining units can be selected from Groups A, B or C and can include up to 2 units from any currently endorsed Training Package or accredited course.

Core Units

FWPCOR4204	Monitor safety, health and environmental requirements in forest and wood products operations
FWPCOR4205	Monitor and improve forestry operations

Elective Units

Group A: Management Systems

Safety, Environment and Quality Management

AHCOCM401	Protect places of cultural significance
AHCMOM402	Supervise maintenance of property, machinery and equipment
FWPCOR2210	Follow workplace health and safety policies and procedures in forest and wood products operations
FWPCOR3205	Apply safety, health and environmental requirements in forest and wood products operations
FWPCOT4212	Implement environmental management practices to a forestry operation site
FWPCOT4213	Monitor and manage product and service quality in the forest and wood products industry
FWPCOT4217 *	Apply a safety mindset in forestry operations
FWPCOT4225	Apply principles of pneumatics and hydraulics to analyse potential equipment failures
FWPHAR4206	Implement environmental management practices in timber harvesting operations
HLTAID011	Provide First Aid
HLTAID014	Provide advanced First Aid
HLTAID016	Manage first aid services and resources

Business and People Management

FWPCOT4218	Manage business operations of a forestry contractor business
FWPCOT4219	Manage people practices in a forestry contractor business

Group B: Forest Operations Management

Silviculture

AHCCHM404	Develop procedures to minimise risks in the use of chemicals
AHCCHM405	Plan and implement a chemical use program
FWPCOT3351	Fell trees manually (advanced)
FWPSIL4001	Plan for and coordinate forest site preparation operations
FWPSIL4002	Plan for and coordinate thinning operations in a native forest or plantation
FWPSIL4003	Plan for and coordinate stem improvement operations
FWPSIL4004	Plan for and coordinate forest establishment operations
FWPSIL4005	Plan for and coordinate a stand health and nutrition program
FWPSIL4006	Plan for and coordinate a pests and diseases assessment
FWPSIL4007	Plan for and coordinate a regeneration rate assessment
FWPSIL4008	Plan for and coordinate a forest site assessment
FWPSIL4009	Plan for and coordinate tending operations in a native forest or plantation

Timber Harvesting

FWPFRM5007	Process and interpret harvester and forwarder optimisation data
FWPHAR3209	Harvest trees manually (advanced)
FWPHAR4207	Conduct a wood volume and yield assessment
FWPHAR4208	Plan for and coordinate fire salvage operations

FWPHAR4209	Plan for and coordinate forest harvesting operations
FWPHAR4210	Plan for and coordinate log recovery (hook tender)

Log Haulage

FWPCOT4220	Plan for and coordinate log loading and haulage operations
TLIF0014	Monitor the safety of transport activities (Chain of Responsibility)
TLIF4064	Manage fatigue management policy and procedures

Site Access and Roding

FWPCOT4214	Plan for and coordinate quarry operations
FWPCOT4215	Plan for and coordinate road construction and maintenance
FWPCOT4216	Plan for and coordinate construction of log landings and snig tracks

Fire Control

FWPFIR3001	Assess fire risk
FWPFIR3002	Apply communication protocols during post-bushfire vegetation clearing and clean-up operations
FWPFIR4001	Conduct tree hazard assessment post-fire
PUAFIR204 *	Respond to wildfire
PUAFIR210	Prevent injury
PUAFIR303 *	Suppress wildfire
PUAFIR402 *	Conduct simple prescribed burns
PUAFIR407	Interpret and analyse fire weather information
PUAFIR417 *	Supervise machinery use in wildfire operations
PUAFIR506 *	Conduct complex prescribed burns

Group C: Other

Stakeholder communication

BSBPMG634	Facilitate stakeholder engagement
FWPCOT3346	Communicate effectively with general public or stakeholders concerned about forest practices

Personal Development

BSBPEF402	Develop personal work priorities
FWPCOT5215	Apply innovative thinking to support forestry best practice

Prerequisite requirements

Units listed in the *Prerequisite requirement* column that have their own prerequisite requirements are shown with an asterisk (*)

Unit of competency	Prerequisite requirement
FWPCOT4217 Apply a safety mindset in forestry operations	FWPCOR3205 Apply safety, health and environmental requirements in forest and wood products operations or FWPCOR2210 Follow workplace health and safety policies and procedures in forest and wood products operations
PUAFIR204 Respond to wildfire	PUAFIR210 Prevent injury
PUAFIR303 Suppress wildfire	PUAFIR204 Respond to wildfire *
PUAFIR402 Conduct simple prescribed burns	PUAFIR303 Suppress wildfire *
PUAFIR417 Supervise use of machinery in wildfire operations	PUAFIR303 Suppress wildfire *
PUAFIR506 Conduct complex prescribed burns	PUAFIR303 Suppress wildfire *

FWP40222 Certificate IV in Timber and Wood Products Operations

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 8.1.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Qualification Description

This qualification reflects the skills and knowledge of people who work as production supervisors and technicians in a timber or wood products production facility.

Individuals with this qualification apply a broad range of advanced technical and supervisory skills. These include knowledge of timber or wood products production processes and the skills required to manage technical operations, address production issues, maintain individual and team performance, maintain equipment for stable and continuous operations, monitor health and safety, quality and environmental protection requirements in timber or wood products production facilities.

At this level, individuals are expected to work autonomously, exercise judgement in making workplace decisions, take responsibility for their own outputs at the workplace and supervise the work of others.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency consisting of 12 elective units.

Elective units must ensure the integrity of the alignment between the qualification and the Australian Qualifications Framework (AQF) and contribute to a valid, industry supported vocational outcome. The electives are to be chosen as follows:

- at least 1 unit from the electives in Group A
- at least 3 units from the electives in Group B
- at least 3 units from the electives in Group C
- up to 2 units from the electives in Group E
- remaining units can be selected from Groups A to F and can include up to 2 units from any currently endorsed Training Package or accredited course.

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A: Safety

BSBWHS515	Lead initial response to and investigate WHS incidents
FWPCOR4204	Monitor safety, health and environmental requirements in forest and wood products operations
HLTAID016	Manage first aid services and resources
TLIF0014	Monitor the safety of transport activities (Chain of Responsibility)

Group B: Quality systems

Competitive systems and practices

BSBSTR402	Implement continuous improvement
FWPCOT4213	Monitor and manage product and service quality in the forest and wood products industry
MSS402042	Apply 5S procedures
MSS403003	Contribute to improvements in competitive systems and practices
MSS403012	Facilitate change in a competitive systems and practices environment
MSS403022	Facilitate a Just in Time system
MSS404056	Apply statistics to operational processes
MSS405055	Manage application of Six Sigma for process control and improvement

MSS407026	Lead a process to determine and solve root cause for a complex problem
MSS407029	Improve visual management in the workplace

Chain of Custody

FWPCOT4223	Assess requirements of chain of custody certification scheme for forest and wood products
FWPCOT4224	Conduct internal audit of chain of custody certification for forest and wood products

Plant and equipment maintenance

AHCMOM402	Supervise maintenance of property, machinery and equipment
FWPCOT3282	Assess and maintain saw blade and sawing machine performance
FWPCOT3295	Assess and maintain cutter performance
FWPCOT4225	Apply principles of pneumatics and hydraulics to analyse potential equipment failures

Grading and testing

FWPTMM421 3	Test finger jointed timber
FWPTMM421 4	Test laminated wood product
MSL973022	Conduct laboratory-based acceptance tests for construction materials

Group C: Operations management

Timber production optimisation

FWPCOT3291	Apply principles of timber and process optimisation in sawmill operations
FWPSAW4206	Monitor output timber for optimum volume and value recovery
FWPSAW4207	Optimise timber production for volume and value

	recovery
--	----------

Production supervision

FWPCOT4221	Plan for and supervise log yard operations
FWPCOT4222	Plan for and supervise timber treatment plant operations
FWPSAW4208	Plan for and coordinate timber kiln drying operations
FWPSAW4209	Plan for and supervise log processing operations
FWPSAW4210	Plan for and supervise timber dry mill operations
FWPTMM421 5	Plan for and coordinate timber product assembly
FWPTMM421 6	Plan for and supervise engineered wood product operations

Operational planning

AHCWRK513	Write and present reports
BSBOPS402	Coordinate business operational plans
BSBOPS403	Apply business risk management processes
BSBPMG427	Apply project procurement procedures
FWPCOT3338	Identify glues and gluing systems used in production of wood products
FWPCOT4211	Monitor stock control procedures
FWPTMM421 2	Calculate production costs
MEM30021	Prepare a simple production schedule
TLIR4002	Source goods/services and evaluate contractors

Waste Management

CPPWMT4003	Implement waste management plans
CPPWMT4010	Assess and advise on waste avoidance options

Group D: Prefabricated timber building systems

FWPTMM5209	Determine prefabricated timber building systems designs for compliance, manufacture and installation
FWPTMM5210	Verify compliance and conformance of prefabricated timber building systems during manufacture

Group E: Leadership and personal effectiveness

BSBHRM413	Support the learning and development of teams and individuals
BSBLDR413	Lead effective workplace relationships
BSBPEF301	Organise personal work priorities
BSBXCM401	Apply communication strategies in the workplace
BSBXTW401	Lead and facilitate a team

Group F: Training and assessment

TAEDEL311	Provide work skill instruction
TAEDEL411	Facilitate vocational training
TAEDEL412	Facilitate workplace-based learning
TAEDEL414	Mentor in the workplace
TAEDES412	Design and develop learning programs

FWP40420 Certificate IV in Timber Systems Design

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 7.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Qualification Description

This qualification reflects the role of people who work as timber systems designers, estimators or detailers in the timber truss and frame industry. In these roles they are required to read architectural plans to calculate material quantities and costs, and produce building code compliant timber system wall and/or truss fabrication plans and documents.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
 - 6 core units plus
 - 9 elective units.

Elective units must ensure the integrity of the qualification's Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least five units must be selected from Group A
- remaining elective units may be selected from Group A or Group B and up to two units may be selected from any currently endorsed Training Package or accredited course.

Core Units

BSBXTW301	Work in a team
CPPCMN4008	Read plans, drawings and specifications for residential buildings
FWPCOT3303	Prepare sketches and drawings
FWPCOT3304	Take off material quantities
FWPCOT3305	Interpret and quote from manufactured timber product plans
FWPTMM321 5	Work effectively in the timber systems design industry

Elective Units

Group A

CPCCCBC4001	Apply building codes and standards to the construction process for Class 1 and 10 buildings
FWPCOT3219	Produce standard truss or frame plans and details using computers
FWPCOT4201	Produce complex truss and frame plans and details using computers
FWPCOT4209	Design timber structures
FWPTMM420 9	Interpret details of timber roof trusses to inform design of plans and production documents
FWPTMM421 0	Interpret details of timber floor systems to inform design of plans and production documents
FWPTMM421 1	Interpret details of timber wall frames to inform design of plans and production documents

Group B

AHCWRK509	Provide specialist advice to clients
BSBOPS404	Implement customer service strategies
CPCCCBC4024	Resolve business disputes

CPCCOM1015	Carry out measurements and calculations
FWPCOR2210	Follow workplace health and safety policies and procedures in forest and wood products operations
FWPCOT3307	Create drawings using computer aided design software
MSMSUP390	Use structured problem-solving tools
TAEDEL301	Provide work skill instruction
TLIJ0003	Apply quality systems

Qualification Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status

FWP50121 Diploma of Forest Operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Qualification Description

This qualification reflects the job of early-career foresters and forestry field officers with specialist roles in forest operations management and forest resource management.

Individuals with this qualification apply a broad range of advanced technical and management skills and forest knowledge to inform and contribute to forest management plans and manage forestry operations. This includes using industry-specific software, modelling and analysing forestry data and optimising forest management practice to improve production processes and wood flow outcomes.

At this level, individuals are expected to apply autonomy and judgement. They take responsibility for their own outputs at the workplace.

This qualification enables specialisations in:

- Forest Operations Management or
- Forest Resource Management.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency consisting of 12 elective units.

Elective units must ensure the integrity of the alignment between the qualification and Australian Qualification Framework (AQF) and contribute to a valid, industry-supported vocational outcome. Electives can be chosen to provide a general qualification or a qualification with a specialisation.

For the award of the *FWP50121 Diploma of Forest Operations* choose:

- at least 9 units from the electives in Groups A to D
- up to 2 units from Group E
- up to 1 unit from the remaining electives in Groups A to D or from any currently endorsed Training Package or accredited course.

For the award of the *FWP50121 Diploma of Forest Operations (Forest Operations Management)* choose:

- at least 6 units from Group A
- up to 2 units from Group E
- remaining units from Groups A to D and can include up to 1 unit from any currently endorsed Training Package or accredited course.

For the award of the *FWP50121 Diploma of Forest Operations (Forest Resource Management)* choose:

- at least 6 units from Group C
- up to 2 units from Group E
- remaining units from Groups A to D and can include up to 1 unit from any currently endorsed Training Package or accredited course.

Where two specialisations are completed, the award of the qualification would read (for example), *Diploma of Forest Operations (Forest Operations Management, Forest Resource Management)*.

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Group A: Forest Operations Management

Management Systems

BSBOPS403	Apply business risk management processes
BSBSTR402	Implement continuous improvement
BSBWHS515	Lead initial response to and investigate WHS incidents
FWPCOR4204	Monitor safety, health and environmental requirements in forest and wood products operations
FWPCOT5210	Contribute to establishment and implementation of forest management systems
FWPCOT5211	Implement forest management certification scheme
FWPCOT5212	Implement workplace sustainability practices in the forest and wood products industry

Operational Planning and Contract Management

AHCWRK513	Write and present reports
BSBFIN501	Manage budgets and financial plans
BSBOPS402	Coordinate business operational plans
FWPFOM5001	Contribute to and implement a forest establishment plan
FWPFOM5002	Contribute to and implement a forest roading operational plan
FWPFOM5003	Contribute to and implement a forest harvesting plan
FWPFOM5004	Contribute to and implement a forest regeneration plan
FWPFOM5005	Contribute to and implement a biohazard contingency plan
FWPFOM5006	Implement practices to maximise value from wood residues
FWPFOM5007	Contribute to and implement a silviculture regime for a plantation
FWPFOM5008	Contribute to and implement a silviculture regime for native forest
FWPFOM5010	Apply principles of forest science to optimise forest management practices
FWPFOM5011	Assist with calculating costs and production targets for forestry operations
PSPPCM007	Manage contracts

Supply chain

FWPFOM5009	Contribute to management and monitoring of forestry supply chains
------------	---

Group B: Fire Management

PUAFIR204*	Respond to wildfire
PUAFIR210	Prevent injury
PUAFIR303*	Suppress wildfire

PUAFIR406*	Develop simple prescribed burn plans
PUAFIR407	Interpret and analyse fire weather information
PUAFIR417*	Supervise machinery use in wildfire operations
PUAFIR501*	Conduct fire investigation and analysis activities
PUAFIR509	Implement prevention strategies
PUAFIR515*	Develop complex prescribed burn plans
PUALAW001	Protect and preserve incident scene
PUAOPE016*	Manage a multi-team sector

Group C: Forest Resource Management

Forest Valuation and Growth Modelling

FWPFRM5004	Contribute to the planning and conduct of forest valuation
FWPFRM5005	Contribute to selection and application of forest growth models

Forest Inventory

CPPSSI4038	Prepare and present GIS data
FWPFRM5001	Interpret and use image data in forestry planning and management
FWPFRM5002	Source information on the contribution of forestry to carbon reduction strategies
FWPFRM5003	Contribute to and implement a forest inventory program
FWPFRM5007	Process and interpret harvester and forwarder optimisation data
FWPFRM5008	Create digital forestry operational map
FWPFRM5009	Create cutting instruction files for forestry harvesters
FWPFRM5010	Plan unmanned aerial vehicle (UAV) collection of forestry data

FWPFRM5011	Quality assure forestry data acquisition by unmanned aerial vehicle (UAV)
------------	---

Biodiversity management

AHCECR502	Conduct biological surveys
AHCNRM507	Manipulate and analyse data within geographic information systems
AHCWRK508	Interpret legislation
FWPFRM5006	Analyse ecology of commercial native forests and plantations
MSS027014	Apply environmental legislation, codes and standards

Group D: Stakeholder Engagement and Innovation

FWPCOT5213	Contribute to and implement a community engagement plan
FWPCOT5214	Communicate forestry and forest science with stakeholders and the community
FWPCOT5215	Apply innovative thinking to support forestry best practice

Group E: Leadership and Personal Effectiveness

BSBHRM413	Support the learning and development of teams and individuals
BSBLDR413	Lead effective workplace relationships
BSBLDR414	Lead team effectiveness
BSBPEF301	Organise personal work priorities

Prerequisite requirements

Units listed in the *Prerequisite requirement* column that have their own prerequisite requirements are shown with an asterisk (*)

Unit of competency	Prerequisite requirement
--------------------	--------------------------

PUAFIR204 Respond to wildfire	PUAFIR210 Prevent injury
PUAFIR303 Suppress wildfire	PUAFIR204* Respond to wildfire
PUAFIR406 Develop simple prescribed burn plans	PUAFIR303* Suppress wildfire
PUAFIR417 Supervise machinery use in wildfire operations	PUAFIR303* Suppress wildfire
PUAFIR501 Conduct fire investigation and analysis activities	PUALAW001 Protect and preserve incident scene
PUAFIR515 Develop complex prescribed burn plans	PUAFIR303* Suppress wildfire
PUAOPE016 Manage a multi-team sector	One of the following: PUAFIR302* Suppress urban fire PUAFIR303* Suppress wildfire

FWPSS00068 Entry into a Saw Technician Role Skill Set

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Description

This skill set is designed to equip individuals with the technical skills and knowledge required to begin work as a Saw Technician. It covers how to sharpen, position, assess and maintain the cutting performance of sawing blades or knives and how to replace worn or damaged blades, knives and guides on circular saws, band saws, chippers and canterers in order to maintain quality production output. It includes how to replace worn or damaged tungsten tips and how to determine the required levelling and tensioning for circular, narrow and wide band saw blades removed from a sawing machine. The skills and knowledge for shutting down equipment and maintaining saw technology tools are also included.

Pathways Information

These units of competency provide credit towards *FWP31021 Certificate III in Saw Technology* from the FWP Forest and Wood Products Training Package.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

- FWPCOT3279 Assess and maintain saw technology tools
- FWPCOT3280 Replace saw blades, knives and guides
- FWPCOT3282 Assess and maintain saw blade and sawing machine performance
- FWPCOT3283 Sharpen and position blades or knives in chipper, canter and reducer
- FWPCOT3286 Identify levelling and tensioning requirements for saw blades
- FWPCOT3335 Conduct operator level equipment maintenance in forest and wood products industry
- FWPSAW3235 Recondition saw guides
- FWPSAW3244 Align sawing production systems
- FWPSAW3247 Replace tungsten tips

Target Group

This skill set is for individuals, production personnel and various tradespeople interested in beginning a Saw Technician career in the forest and wood products industry.

Suggested words for Statement of Attainment

These competencies from the FWP Forest and Wood Products Training Package meet the industry requirements for beginning a Saw Technician career in the forest and wood products industry.

FWPSS00069 Entry into a Wood Machinist Role Skill Set

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Description

This skill set is designed to equip individuals with the technical skills and knowledge required to begin work as a Wood Machinist. It covers how to assess timber supplied for machining operations against quality requirements and specifications, how to cut timber or engineered wood product with a table saw, and how to clear timber products and waste material from a sawing or machining operation. It includes how to operate a thicknesser to dress timber and how to diagnose and correct cutter performance. The skills and knowledge required for shutting down, maintaining and conducting routine fault repairs on wood machining equipment are also covered.

Pathways Information

These units of competency provide credit towards *FWP31122 Certificate III in Wood Machining* from the FWP Forest and Wood Products Training Package.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

- FWPCOT2243 Tail out timber product and waste material
- FWPCOT2244 Operate and maintain a thicknesser
- FWPCOT2269 Operate and maintain a table saw
- FWPCOT3295 Assess and maintain cutter performance
- FWPCOT3335 Conduct operator level equipment maintenance in forest and wood products industry
- FWPCOT3349 Assess timber against quality requirements and specifications

Target Group

This skill set is for individuals, production personnel and various tradespeople interested in beginning a Wood Machinist career in the forest and wood products industry.

Suggested words for Statement of Attainment

These competencies from the FWP Forest and Wood Products Training Package meet the industry requirements for beginning a Wood Machinist career in the forest and wood products industry.

FWPSS00070 Process Control and Optimisation (Timber Sawmills) Skill Set

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Description

This skill set provides the skills and knowledge required to manage process control and optimisation in a timber sawmill. This covers identifying opportunities for timber and workflow optimisation, monitoring output timber and developing and implementing a plan to ensure maximum volume and value recovery. It includes implementing six sigma to minimise defects and improve processes and/or products and reviewing Just in Time key performance indicators with appropriate personnel up and down the value stream to identify issues and take prompt actions.

Pathways Information

These units of competency provide credit towards *FWP40222 Certificate IV in Timber and Wood Products Operations* from the FWP Forest and Wood Products Training Package.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

- FWPCOT3291 Apply principles of timber and process optimisation in sawmill operations
- FWPSAW4206 Monitor output timber for optimum volume and value recovery
- FWPSAW4207 Optimise timber production for volume and value recovery
- MSS403022 Facilitate a Just in Time system
- MSS404056 Apply statistics to operational processes
- MSS405055 Manage application of Six Sigma for process control and improvement

Target Group

This skill set is for people who hold a team leader position or are interested in pursuing a management career in the timber and wood products industry.

Suggested words for Statement of Attainment

These competencies from the FWP Forest and Wood Products Training Package and MSS Sustainability Training Package meet the industry requirements for providing process management and optimisation skills for timber sawmill operations.

FWPSS00071 Foundational Leadership and Management (Log Yard Operations) Skill Set

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Description

This skill set provides the skills and knowledge required to manage and lead activities, communication strategies, teamwork, and processes for the 5S pillars and complex problem solving in log yard production operations in order to achieve team and organisational objectives.

Pathways Information

These units of competency provide credit towards *FWP40222 Certificate IV in Timber and Wood Products Operations* from the FWP Forest and Wood Products Training Package.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

- BSBOPS402 Coordinate business operational plans
- BSBXCM401 Apply communication strategies in the workplace
- BSBXTW401 Lead and facilitate a team
- FWPCOT4221 Plan for and supervise log yard operations
- MSS402042 Apply 5S procedures
- MSS407026 Lead a process to determine and solve root cause for a complex problem
- MSS407029 Improve visual management in the workplace

Target Group

This skill set is for log yard frontline and technically proficient production personnel who are interested in pursuing a leadership career in the forest and wood products industry.

Suggested words for Statement of Attainment

These competencies from the BSB Business Services Training Package, FWP Forest and Wood Products Training Package and MSS Sustainability Training Package meet the industry requirements for providing leadership in the forest and wood products industry.

FWPSS00072 Foundational Leadership and Management (Log Processing Operations) Skill Set

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Description

This skill set provides the skills and knowledge required to manage and lead activities, communication strategies, teamwork, and processes for the 5S pillars and complex problem solving in log processing operations in order to achieve team and organisational objectives.

Pathways Information

These units of competency provide credit towards *FWP40222 Certificate IV in Timber and Wood Products Operations* from the FWP Forest and Wood Products Training Package.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

- BSBOPS402 Coordinate business operational plans
- BSBXCM401 Apply communication strategies in the workplace
- BSBXTW401 Lead and facilitate a team
- FWPSAW4209 Plan for and supervise log processing operations
- MSS402042 Apply 5S procedures
- MSS407026 Lead a process to determine and solve root cause for a complex problem
- MSS407029 Improve visual management in the workplace

Target Group

This skill set is for log processing frontline and technically proficient production personnel who are interested in pursuing a leadership career in the forest and wood products industry.

Suggested words for Statement of Attainment

These competencies from the BSB Business Services Training Package, FWP Forest and Wood Products Training Package and MSS Sustainability Training Package meet the industry requirements for providing leadership in the forest and wood products industry.

FWPSS00073 Foundational Leadership and Management (Timber Dry Mill Operations) Skill Set

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Description

This skill set provides the skills and knowledge required to manage and lead activities, communication strategies, teamwork, and processes for the 5S pillars and complex problem solving in timber dry mill operations in order to achieve team and organisational objectives.

Target Group

This skill set is for engineered wood product frontline and technically proficient production personnel who are interested in pursuing a leadership career in the forest and wood products industry.

Suggested words for Statement of Attainment

These competencies from the BSB Business Services Training Package, FWP Forest and Wood Products Training Package and MSS Sustainability Training Package meet the industry requirements for providing leadership in the forest and wood products industry.

FWPCOR2203 Follow environmental care procedures

Modification History

Release	Comment
1	Replaces equivalent unit FPICOR2203B Follow environmental care procedures, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the outcomes required to identify, maintain and monitor environmental work practices: including recognising basic environmental risks and hazards, and implementing environmental policies and workplace or industry practices, with the aim of improving environmental care practices.

The unit applies those working in a broad range of job roles across different work settings, in a forest or harvesting environment, including saw mill, wood chip mill, veneer mill, board/plywood mill, timber treatment plant, forest products factory, and forest products sales and service, horticultural, domestic, local council and emergency services.

No licensing, legislative, regulatory, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management

Harvesting and Haulage

Sawmilling and Processing

Timber Manufactured Products

Timber Merchandising

Wood Panel Products

Timber Truss and Frame Design and Manufacture

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.</i>
1. Identify environmental care requirements	<p>1.1 Check work order and identify and clarify environmental care requirements with appropriate personnel.</p> <p>1.2 Identify environmental protection zones required by legislation or industry codes of practice.</p> <p>1.3 Identify and report existing and potential environmental risks and hazards to relevant personnel.</p> <p>1.4 Identify WHS requirements for managing environmental risks or performing environmental care.</p>
2. Ensure work practices follow environmental care requirements	<p>2.1 Follow applicable WHS, environmental, legislative and organisational requirements when responding to environmental risks or hazards.</p> <p>2.2 Select suitable resources to respond to environmental risk or hazard.</p> <p>2.3 Follow site procedures for dealing with environmental incidents, accidents, and emergencies.</p>
3. Seek opportunities to improve environmental care practices	<p>3.1 Suggest specific improvements to environmental care practices and resource efficiency to relevant personnel.</p> <p>3.2 Update knowledge of changes in environmental care.</p> <p>3.3 Record and report breaches or potential breaches of environmental regulations to relevant personnel in line with workplace procedures.</p>

Foundation Skills

This section describes those core and employment skills that are essential to performance and are not explicit in the performance criteria.

Numeracy skills to:	<ul style="list-style-type: none"> • calculate the probability of risks • estimate distance for buffer zones.
---------------------	---

Reading skills to:	<ul style="list-style-type: none">• interpret information about environmental care and safety procedures arising from environmental risks.

Assessment Requirements for FWPCOR2203 Follow environmental care procedures

Modification History

Release	Comment
1	<p>Replaces equivalent unit FPICOR2203B Follow environmental care procedures, which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.</p> <p>Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.</p>

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- follow site, legal and organisational requirements and protocols relevant to environmental care
- identify environmental hazards and risks that could occur in their own work setting
- calculate the probability and consequences of those risks
- respond to environmental risks safely and according to site procedures and scope of responsibility within the workplace.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- legal and organisational requirements and codes of practice relevant to environmental care
- environmental protection requirements related to the work setting and work role
- organisational and site standards relevant to environmental care procedures
- environmental care policies and practices
- risk management, hazards and hazard identification
- established workplace and site specific communication channels and protocols
- types of tools and equipment and procedures used in response to environmental hazards and risk, and the safe use and maintenance of these tools
- procedures for recording and reporting workplace and site specific information.

Assessment Conditions

The following resources must be made available:

- resources that would be used for environmental care
- organisational and site policies and procedures for environmental care.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

FWPCOR2205 Follow WHS policies and procedures

Modification History

Release	Comment
1	Replaces equivalent, FPICOR2205B Follow OHS policies and procedures which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.

Application

The unit of competency describes the outcomes required to follow WHS policies and procedures: it covers risk identification and emergency procedures that could reasonably be expected to occur in a forestry or wood products environment.

The unit applies to those working in a broad range of job roles across different work settings, including a forest environment, saw mill, wood chip mill, veneer mill, board/plywood mill, timber treatment plant, forest products factory, and forest products sales and service, horticultural, domestic, local council and emergency services.

Licensing, legislative, regulatory or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. In some states, this unit is one of a group of units required to obtain a Forest Operator Licence.

Assessment Requirements for FWPCOR2205 Follow WHS policies and procedures

Modification History

Release	Comment
1	<p>Replaces superseded equivalent, FPICOR2205B Follow OHS policies and procedures which was first released with FPI11 Forest and Forest Products Training Package Version 1. This is the first release of this unit in the new standards format.</p> <p>Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including 'Required Skills and Knowledge, Evidence Guide and Range Statement'.</p>

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- identify risks and hazards in the workplace and implement appropriate actions to address those risks and hazards
- use and maintain personal protective equipment and clothing to ensure their own safety
- follow emergency and evacuation procedures
- interpret and follow safety signs and symbols
- complete and maintain workplace information, records and reports about hazards, risks and incidents.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- legal and organisational requirements and codes of practice relevant to WHS
- enterprise and site standards, policies and procedures for WHS, as they apply to the job role
- environmental risks and hazard identification
- hazard and risk control
- equipment used for workplace health and safety, and procedures for its safe use and maintenance
- personal protective equipment and clothing and its properties
- firefighting equipment

- fatigue management
- elimination of hazardous substances
- machine guarding
- manual handling including shifting, lifting and carrying
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- personal protective equipment
- organisational policies and procedures
- manufacturer's instructions for the safe use of equipment.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.

Assessment Requirements for FWPCOR2206 Work effectively in the forest and wood products industry

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- identified one workplace requirement relevant to personal scope of activity that relates to each of the following:
 - workplace health and safety
 - employment
 - environmental protection
 - quality
 - security
 - confidentiality
 - reporting lines
- used equipment and tools appropriate to the work activity to complete assigned tasks for one work period/shift according to workplace instructions and quality requirements
- used and maintained personal protective equipment (PPE) and clothing to ensure personal safety
- identified, planned, prioritised and implemented work activities for one work period/shift
- asked feedback on own performance from supervisor and identified own skill development needs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state or territory legislation and regulations, standards, codes of practice and workplace procedures relevant to the individual's job role in the forest and wood products industry, including:
 - workplace health and safety

- employment
- environmental protection
- quality
- security
- confidentiality
- reporting lines
- workplace behaviour and conduct standards
- format and content of work order
- techniques for planning and prioritising work activities
- factors that may influence the quality of own work activities and outcomes and how to recognise these
- purpose, method and requirements for monitoring own work activities and outcomes within own scope of work
- functional, operational and maintenance aspects of tools and equipment used in the individual's job role in the forest and wood products industry
- workplace procedures regarding use of PPE for own work activities
- ways to identify own skill development needs.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest and wood products industry workplace or an environment that accurately represents workplace conditions
- resources:
 - tools, equipment and PPE relevant to work task
- specifications:
 - work order or instruction detailing work to be carried out
 - manufacturer specifications
 - commonwealth, state or territory legislation and regulations, standards, codes of practice relevant to work task
 - workplace procedures relevant to work task.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOR2208 Communicate and interact effectively in the forest and wood products industry

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- conducted one face-to-face communication with a co-worker on a forest or wood products work related matter
- applied hand or aural communication on one occasion to communicate in the workplace
- used electronic communications equipment on one occasion to communicate with a co-worker on a forest or wood products work related matter
- completed two workplace forms or documents to communicate on a forest or wood products work related matter
- taken part in one group discussion or meeting on a forest or wood products work related matter
- contributed to the maintenance of effective workplace relations on one occasion.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace communication procedures used in forest or wood products operations
- basic principles of effective face-to-face communication
- basic active listening and questioning techniques
- features, control functions and operating procedures for electronic communications equipment used in the forest and wood products industry
- procedures for small informal group activities and meetings in the workplace appropriate to job tasks and work site
- types, formats and purposes of print and electronic workplace forms and documents appropriate to job tasks and work site
- purpose, types and meanings of visual and aural communication used in the forest and wood products industry and appropriate to job tasks and work site:

- workplace signs and symbols
- workplace aural signals
- workplace hand signals
- basic principles of effective working relationships
- individual, social and cultural differences that occur in the workplace.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest and wood products industry workplace or an environment that accurately represents workplace conditions
- resources:
 - electronic communication equipment
 - workplace forms and documents
 - workplace signs and symbols
 - access to small informal group activity or meeting convened to consider a workplace matter
- specifications:
 - workplace communication procedures
 - manufacturer manuals for electronic communication equipment
 - workplace guides on signs and symbols
 - workplace guides on aural and hand signals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOR2209 Follow environmental protection procedures in forest and wood products operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to follow established environmental protection procedures when performing work in a forestry or wood products work environment.

The unit applies to individuals who work in a broad range of roles and operations in the forest and wood products industry and are required to follow environmental protection procedures when performing routine work activities.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and industry codes of practice that apply to the workplace.

No licencing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOR2209 Follow environmental protection procedures in forest and wood products operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, for one work period/shift, the individual has complied with workplace environmental protection requirements while performing personal work tasks related to a forest or wood products operation.

In performing this activity, the individual has:

- followed site, legal and workplace environmental protection requirements
- identified and reported to supervisor environmental hazards and associated risks that may be present in personal work setting
- responded to environmental risks safely and according to site procedures and scope of responsibility within the workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legal and workplace requirements and codes of practice relevant to environmental protection, as they apply to forest or wood products operations and the job role
- environmental protection requirements related to the work setting and work role
- workplace environmental protection procedures
- hazards and hazard identification, including associated risks and controls
- established workplace communication channels and protocols
- procedures for recording and reporting workplace and workplace specific information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work site, tools and equipment required for performing routine work activities associated with job role
- specifications:
 - environmental procedures relevant to the routine work activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version released with Forest and Wood Products Training Package Version 7.0

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, for one work period/shift, the individual has complied with workplace health and safety requirements while performing personal work tasks related to a forest or wood products operation, including:

- identified and reported to supervisor health and safety hazards and associated risks that may be present in personal work setting
- selected and implemented appropriate risk controls
- used equipment and tools appropriate to the work activity to complete assigned tasks according to workplace procedures
- used and maintained personal protective equipment (PPE) and clothing to ensure personal safety
- followed safety signs and symbols
- completed one routine hazard, accident or incident report.

There must also be evidence that the individual has participated in at least one emergency and evacuation drill.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace standards, codes of practice, policies and procedures for workplace health and safety, as they apply to forest or wood products operations and the job role
- hazards and hazard identification, including associated risks and controls
- functional, operational and maintenance aspects of tools and equipment used in the individual's job role in the forest and wood products industry
- workplace procedures regarding use of PPE and clothing for own work activities

- fatigue management
- manual handling techniques
- procedures for recording and reporting workplace information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - PPE relevant to work task
- specifications:
 - workplace health and safety policies and procedures relevant to the work activity
 - manufacturer instructions for the safe use of equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOR2211 Develop knowledge of the forest and wood products industry

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to develop a contemporary view of the industry, identify potential career pathways and be aware of both the impact and opportunities that are being created by technological innovation and improved environmental management in the industry.

The unit applies to individuals who are developing knowledge necessary for working in the forest and wood products industry, or for conveying the benefits of this industry and timber use to others.

The unit has wide application and may be used in workplaces, schools, adult and community learning organisations or registered training organisations to develop the forest and wood products industry knowledge of individuals. The unit may also be used as part of pre-vocational or new apprenticeship programs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOR2211 Develop knowledge of the forest and wood products industry

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- researched and produced a basic report on at least three social, cultural and/or economic benefits of the forest and wood products industry to Indigenous people and regional communities
- sought information from one industry professional about two transformative technologies in the forest and wood products industry
- researched and documented how sustainable development and biodiversity principles are implemented in the forest and wood products industry
- researched and explained to others three benefits of using timber as a building material.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes basic introductory knowledge, as an overview of the industry, of:

- commercial forestry operations in Australia:
 - forest management cycle
 - native forests and plantations
 - primary and secondary products of commercial forestry
 - social, cultural and economic importance of forests to stakeholders, including Indigenous people and regional communities
- structure of forest and wood products industry:
 - key sectors of the forest and wood products industry
 - products and services produced in each sector
 - the types of businesses operating in each sector
 - way in which the sectors interrelate

- sources of information on the structure of the forest and wood products industry
- types and sources of information on career options and pathways in the forest and wood products industry
- timber products:
 - types, properties and uses of Australian hardwood and softwood commercial timber species
 - benefits of using timber as a building material
 - emerging new uses of wood and wood residues
- impact of sustainability on forest and wood products industry:
 - importance of environmental care in the forest and wood products industry
 - principles of sustainable development and biodiversity and their application in the forest and wood products industry
 - climate change and carbon reduction strategies and their impact on the forest and wood products industry
 - sources of information on environmental management issues
- impact of technological innovation on the forest and wood products industry:
 - types and impact of transformative technologies impacting on the forest and wood products industry – genetics, harvesting and processing technologies
 - sources of information on transformative technologies.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- resources, equipment and materials:
 - online access to reference materials
 - reference materials and other sources of information on the forest and wood products industry appropriate for entry level workers, particularly learners who are involved in school-based VET traineeships and other VET in school programs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, for one work period/shift, the individual has applied workplace safety, health and environmental care (SHE) requirements while performing personal work tasks related to a forest or wood products operation, including:

- identified workplace safety, health and environmental care (SHE) goals, policies and procedures relevant to own scope of activities
- assessed, controlled and reported one SHE hazard and associated risks in own work area
- used equipment and materials according to workplace SHE policies and procedures.

There must be evidence that the individual has made one recommendation for the improvement of documented SHE procedures based on actual onsite setting/conditions and SHE work practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace SHE goals, policies and procedures related to forest or wood products operations:
 - purpose of workplace SHE goals, policies and procedures
 - implications of non-compliance with workplace SHE goals, policies and procedures
 - techniques for monitoring compliance with SHE policies and procedures
 - ways of responding to incidents of non-compliance with SHE policies and procedures
 - processes for monitoring workplace SHE outcomes
- SHE hazards and associated risks related to forest or wood products operations:
 - types and impact of hazards

- processes for the assessment, control and reporting of SHE hazards
- processes for improving work practices to mitigate SHE hazards
- SHE incidents and emergencies related to forest or wood products operations:
 - types and impact of SHE incidents and emergencies
 - processes for responding to SHE incidents and emergencies
 - procedures for reporting SHE incidents and emergencies
- personal protective equipment (PPE) and clothing and their properties
- integrating care for the environment, safety and health into day-to-day forest or wood products activities:
 - ways of integrating care for the environment, safety and health into day-to-day activities
 - reasons for integrating care for the environment, safety and health into day-to-day activities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - PPE
 - recording tool for reporting SHE hazards and associated risks
- specifications:
 - SHE policies and procedures relevant to the work activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOR4204 Monitor safety, health and environmental requirements in forest and wood products operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to monitor the implementation of workplace safety, health and environmental (SHE) policies and procedures in forest and wood products organisations.

This unit is not intended to describe the skills required to undertake a formal SHE audit of a work site.

The unit applies to individuals who work in a broad range of roles and operations in the forest and wood products industry and are required to monitor the implementation of safety, health and environmental protection procedures.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and industry codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOR4204 Monitor safety, health and environmental requirements in forest and wood products operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored the implementation of safety, health and environmental (SHE) policies and procedures for one forestry or wood products operation to ensure compliance with legislative requirements, environmental management systems and workplace policies and procedures.

In performing this activity, the individual has reviewed and identified areas for improvement for at least three of the following, and made recommendations for improvements in relation to SHE compliance:

- organisation of duties, equipment and materials
- SHE hazards and associated risk in the work area
- documented workplace instructions and procedures
- SHE or incident reports
- emergency and evacuation procedures
- staff training and operational controls.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for monitoring SHE policies and procedures in forest or wood products organisations
- workplace standards, requirements, policies and procedures relevant to monitoring SHE policies and procedures in forest or wood products organisations
- monitoring SHE hazards and associated risks related to forest or wood products organisations:

- types and impact of SHE hazards and associated risks
- SHE hazard and associated risk identification
- ways of assessing and controlling hazards and associated risks
- processes for monitoring and assessing SHE hazards and associated risks
- processes for analysing work instructions, practices and procedures in relation to SHE risks and hazards
- monitoring emergency procedures in forest or wood products organisations:
 - workplace procedures for responding to emergency situations
 - reasons for monitoring emergency procedures
 - processes for monitoring emergency procedures
 - processes for conducting post-emergency reviews
- monitoring SHE procedures in forest or wood products organisations:
 - types and purpose of SHE procedures
 - processes for monitoring compliance with workplace SHE procedures
 - ways of integrating care for safety, health and the environment into all workplace procedures
- procedures for recording and reporting workplace information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - forest or wood products work environment to enable monitoring of SHE practices
 - workplace SHE records
- specifications:
 - workplace health, safety and environment policy and procedures
 - workplace safety and environmental policies and procedures applicable to forest or wood products operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOR4205 Monitor and improve forestry operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to monitor and review forestry operations on a site with a view to recommending improvements to work practices, technologies and systems.

The unit applies to individuals whose job roles incorporate monitoring and reviewing forestry operations in a forest environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Core (COR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Monitor forestry operations	1.1 Establish and maintain communication with others according to workplace procedures 1.2 Monitor tasks in a safe manner according to legislative requirements, environmental management systems and workplace and procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Monitor organisation of duties, practices, equipment and materials according to workplace health and safety requirements and workplace procedures
2. Review improvement opportunities for forestry operations	<p>2.1 Review operational plans and site practices for potential improvement, modifications and time savings</p> <p>2.2 Monitor and record community and organisational environmental goals</p> <p>2.3 Monitor training and operational controls to ensure they are in line with workplace procedures</p> <p>2.4 Record and report improvement recommendations, including resourcing requirements</p> <p>2.5 Establish action plan to introduce change in consultation with appropriate personnel</p>
3. Trial improvements to work practices, technologies and systems used in forestry operations	<p>3.1 Develop and trial new work practices, systems and technologies on site following workplace health and safety requirements and workplace requirements</p> <p>3.2 Check new work practices, systems and technologies for effective improvements or time savings</p> <p>3.3 Identify any modifications that are required and communicate these to appropriate personnel for implementation</p> <p>3.4 Monitor environment impact of new work practices, systems and technologies</p> <p>3.5 Conduct progress reviews to assess impact of new work practices, systems and technologies on personnel, the workplace and the environment</p> <p>3.6 Record and report outcomes of trial to appropriate personnel according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Skill	Description
Reading	<ul style="list-style-type: none"> Extract information from industry guides and standard references
Writing	<ul style="list-style-type: none"> Complete workplace forms Annotate site plans
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and use active listening techniques to clarify contents of work orders Provide oral reports of on-site improvement measures
Numeracy	<ul style="list-style-type: none"> Interpret basic statistics on workplace performance

Assessment Requirements for FWPCOR4205 Monitor and improve forestry operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored and improved one aspect of a forestry operation work site, selected from the following:

- work practices
- technologies
- environmental management and procurement systems.

In performing this activity, the individual has:

- sought input from team members on site practices and operational outcomes
- reviewed operational plans and procedures
- confirmed community and organisational goals
- identified potential improvements
- prepared and discussed draft action plan for change with appropriate personnel
- implemented changes as a trial and monitored outcomes according to the agreed action plan
- reported outcomes of trial to appropriate personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for monitoring and reviewing forestry operations
- environmental protection requirements in forestry operations, including:
 - environmental sustainability
 - protection of watercourses and water quality

- soil and salinity management
- reduction and disposal of waste
- energy efficiency
- biodiversity and habitat protection
- conservation of natural resources
- fire management
- workplace standards, requirements, policies and procedures relevant to monitoring and reviewing forestry operations
- sustainable procurement practices in forestry operations, including selecting products and services based on how they minimise and monitor their impact on the environment
- types, uses, operation and maintenance of equipment used in forestry operations
- forestry operations, techniques and technology, including:
 - improvement of timber technology methodologies
 - on-site forestry operations
 - ancillary forest operations
- environmental risks and hazard identification associated to forestry operations
- environmental management systems used in forestry operations, including:
 - compliance, improvement and prevention
 - continuous cycle of plan, implement, monitor, review and improve environmental practices and systems
- established communication channels and protocols in forestry operations
- procedures for recording and reporting workplace information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - access to a forestry operation
- specifications:
 - workplace safety and environmental policies and procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2206 Stack and bind material

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to stack material, manually build packs and apply strapping and wrapping in a wood products processing setting.

The unit applies to sawmill workers, production workers or manufacturing assistants who undertake specified activities under the direction of more experienced workers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	<p>1.1 Determine job requirements from work order and confirm on-site timber stack plan, seeking clarification from appropriate person where required</p> <p>1.2 Confirm safety requirements for the task according to workplace safety procedures</p> <p>1.3 Identify and control hazards according to workplace safety procedures to ensure safety of self and others and avoid loss of</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>materials</p> <p>1.4 Inspect and check the type, quantity and quality of material to be packed for grading and labelling</p> <p>1.5 Select, fit and use appropriate personal protective equipment (PPE)</p> <p>1.6 Select and use appropriate methods of communication to ensure on-site safety and product quality</p>
2. Build packs manually	<p>2.1 Check labelled material tallies against delivery or job description requirements</p> <p>2.2 Select appropriate bearers to create sufficient space for mechanical lifting equipment</p> <p>2.3 Build stacks and restrain timber according to workplace safety procedures</p> <p>2.4 Place specified spacing sticks and protective strips squarely, evenly and consistently throughout the stacks</p> <p>2.5 Manage maximum height, width and length of stacks according to workplace safety requirements</p> <p>2.6 Dispose of faulty material and bearers according to workplace environmental requirements</p> <p>2.7 Label finished packs according to workplace procedures</p>
3. Strap and wrap packs	<p>3.1 Strap and wrap finished packs according to workplace requirements</p> <p>3.2 Avoid wastage of strapping and packaging materials, and maximise use of recycled materials</p> <p>3.3 Tighten straps to prevent component slippage, strap breakage and damage to materials</p> <p>3.4 Dispose of excess packing material according to workplace and environmental requirements</p> <p>3.5 Record and report production problems, outcomes and equipment faults to appropriate person</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for FWPCOT2206 Stack and bind material

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has stacked and bound three different product packages, and has:

- built packs manually following workplace requirements for dimension, component numbers, end and vertical alignment and bearer quality
- built packs allowing adequate space for mechanical lifting and transporting
- identified standard size materials using visual assessment or measurement processes
- applied protective strips to packs
- applied wrapping to packs to prevent water penetration during storage and transportation
- strapped packs
- labelled packs ready for storage or transportation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures relevant to stacking and binding material
- methods of visual estimation, grading, colour identification and tagging of materials:
 - sawn or dressed finished timber
 - differing timber species
 - preservative treated timber, including water borne preservatives and light organic solvent preservatives (LOSP)
 - panel products, laminated veneer, chipboard, fibreboard, medium density fibreboard and boards made from material other than wood
 - panels with various treatments, coatings and hardware items
- range of industry standard lengths, cross sections, appearance grades and applicable terminology

- operational and functional features of tools, equipment and plant:
 - plant used for mechanically lifting and transporting packs
 - equipment and tools used for binding materials
- workplace safety requirements relevant to stacking and binding material:
 - erecting signs and exclusion zones
 - safe work method statements (SWMS)
 - hazardous manual handling
 - plant and assistive lifting equipment
- processes and techniques of:
 - building, wrapping and strapping timber packs
 - communicating and reporting
 - recording and reporting production outcomes and equipment faults
 - labelling products for identification
 - selecting correct bearer dimension
- workplace and environmental requirements for disposing of waste.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a manufacturing or processing facility or timber yard or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - three different products to pack and bind
 - tools, mechanical lifting equipment and packing equipment to stack, bind and protect contents
- specifications:
 - access to workplace safety and environmental policies and procedures applicable to stacking and binding material
 - access to workplace procedures and forms for recording and labelling
 - access to work orders applicable to stacking and binding product packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2243 Tail out timber product and waste material

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to safely clear timber product and waste material as they emerge from a sawing or machining operation.

The unit applies to individuals who carry out tailing out functions in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for timber sawing or machining operation	1.1 Review work order and identify required finished timber sizes and quantities with the operator 1.2 Check sequence of cuts or machining passes with operator and work order when multiple cuts are required

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Review workplace health and safety procedures, including the use of personal protective equipment, equipment lock-out and safe manual handling techniques</p> <p>1.4 Identify, assess and take actions to mitigate risks and hazards associated with tailing out timber products and waste material</p> <p>1.5 Identify workplace environmental protection procedures for minimising and disposing of waste material, cleaning tools and equipment, and maximising energy efficiency</p>
2. Maintain the process workflow	<p>2.1 Clear timber product to maintain the process workflow according to sawing or machining speed, workplace safety requirements and production plans</p> <p>2.2 Clear sawn waste regularly according to workplace procedures and environmental requirements</p> <p>2.3 Assess timber product against product standards and, when necessary, return to the operator for further processing</p> <p>2.4 Identify and report problems in workflow or processing of timber product to the operator for resolution</p> <p>2.5 Dispose of faulty or defective timber product according to workplace procedures and environmental requirements</p>
3. Sort finished timber product and complete work records	<p>3.1 Assess finished timber product for standard sizes according to workplace procedures</p> <p>3.2 Sort and stack finished timber product according to workplace procedures and specific operational requirements</p> <p>3.3 Segregate and store, or direct, recoverable timber product and waste for further processing according to workplace procedures</p> <p>3.4 Record and report production and timber product quality information according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Skill	Description
Reading	<ul style="list-style-type: none"> Reads workplace health and safety and environment policies to identify procedures for clearing sawn waste from work area
Writing	<ul style="list-style-type: none"> Completes basic written production reports and tally sheets
Oral communication	<ul style="list-style-type: none"> Responds to oral questions on routine matters related to output quality
Numeracy	<ul style="list-style-type: none"> Uses basic arithmetic skills to determine quantity and dimensions of tail out materials Uses standard units of measure to determine dimensions of finished product Interprets charts and graphical information to gather data on stress-grading and standard timber profiles and cross-sections
Interact with others	<ul style="list-style-type: none"> Participates in conversations to inform maintenance staff about equipment faults
Get the work done	<ul style="list-style-type: none"> Identifies and responds to routine problems

Assessment Requirements for FWPCOT2243 Tail out timber product and waste material

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- safely cleared sawn or machined timber product and waste from a saw or machine while maintaining process flow
- in doing the above job, the individual has:
 - identified work requirements in conjunction with the machine operator
 - followed work order and relevant workplace health and safety and environmental protection procedures
 - checked, sorted and stacked the finished product
 - disposed of waste material
 - completed production reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety procedures for tailing out timber products:
 - standard operating procedure
 - personal protective equipment (PPE) requirements
 - procedures for safely disposing of waste material in an environmentally sustainable manner
- methods of controlling timber product:
 - timber product movement
 - position of the timber product being sawn or dressed
 - avoiding contact with saw or cutter
 - removing waste

- common work area and environmental hazards, risks and control techniques
- tailing out terminology, processes and procedures
- criteria for recycling and reusing material with faults or defects
- industry standard cross-section and length dimensions and tolerances
- communication channels and protocols used to ensure safety and productivity
- flow or control problems:
 - speed of production
 - flow of product
 - sharpness of blades or cutters
 - quality of materials
 - communication
 - housekeeping
 - burn marks
 - rough finish
 - tear out
 - machine marks
 - irregular size of the finished product
- mathematical procedures used to calculate timber size and dimension
- procedures for recording and reporting quality and production requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately reflects workplace conditions
- resources, equipment and materials:
 - timber cutting or machining equipment used in a timber processing or manufacturing facility
 - PPE suitable for tailing out timber product and waste material
 - one or more of the following types of sawn or machined timber product for tailing out: flitches, cants, timber boards, other timber products
- specifications:
 - access to template documents for recording production outcomes
 - access to work order detailing required finished timber product sizes and production timelines
 - access to written workplace procedures for tailing out.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT2244 Operate and maintain a thicknesser

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- set up, adjusted and operated a thicknesser to dress timber according to required dimensions, cutting sequence, feed rates and finish
- in doing the above job, the individual has:
 - reviewed work order to determine job requirements
 - followed work order and relevant workplace health and safety and environmental protection procedures
 - selected equipment and materials according to job requirements
 - planned the sequence of machine operations
 - identified and disposed of defective timber before processing
 - complied with workplace health and safety procedures relevant to dressing timber
 - assessed dressing conditions
 - adjusted conditions to optimise feed rate and maintain finished dimensions
 - completed basic routine equipment maintenance
 - completed production and maintenance reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- typical timber defects and potential impact on the quality of dressed timber product:
 - warp
 - wane
 - cupping
 - shakes

- insect defects
- knots
- resin pockets
- typical dressing problems triggering adjustment of process to ensure product quality:
 - blunt or damaged cutters
 - burn marks
 - extra cuts
 - excessive cutter marks
 - dimensional errors
- industry standards and terminology for timber profiles, lengths, cross-sections and tolerances
- types, purpose, features, operational procedures, components and basic maintenance requirements of thicknessers
- problems that can occur when dressing timber:
 - equipment faults and malfunctions
 - quality of product and machine settings
 - efficient rejection of defective timber before dressing
 - transfer and flow of material
 - dressing problems
 - feed rate
 - product finish
- methods for assessing cutters condition
- types of risk and hazards and mitigation measures associated with dressing timber
- workplace procedures specific to dressing timber:
 - workplace health and safety requirements, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling
 - selection, use and maintenance of equipment
 - communication reporting lines
 - recording and reporting production outcomes and equipment faults
- environmental protection practices for timber processing or manufacturing facilities:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing timber.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately reflects workplace conditions
- resources, equipment and materials:

- thicknesser
- maintenance tools and equipment
- consumable components of thicknesser
- PPE suitable for dressing timber
- a diverse, comprehensive and commercial range of timber
- specifications:
 - template documents for recording production outcomes and equipment faults
 - manufacturer specifications and instructions for thicknesser
 - work order detailing material to be dressed, special client requirements and production timelines
 - written workplace procedures for operating and maintaining thicknesser.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2246 Appearance grade hardwood sawn and milled products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to visually assess hardwood sawn and milled products for classification into various appearance grades.

The unit applies to individuals who grade hardwood sawn and milled products in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for appearance grading	1.1 Review and clarify work order with appropriate personnel to determine hardwood sawn and milled products to be graded 1.2 Review workplace health and safety procedures, including the use

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>of personal protective equipment, equipment lock-out and safe manual handling techniques</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with grading hardwood sawn and milled products</p> <p>1.4 Identify workplace environmental protection procedures for minimising and disposing of waste material, cleaning tools and equipment, and maximising energy efficiency</p> <p>1.5 Obtain type, dimension and quantity of sawn and milled products to be graded from storage locations</p> <p>1.6 Select equipment, including lifting equipment, appropriate to work order and check for safety and operational effectiveness</p> <p>1.7 Establish and maintain communication with others at the workplace to ensure safety</p>
2. Appearance grade products	<p>2.1 Visually assess the size of sawn and milled products according to industry standards and estimated number of ranges</p> <p>2.2 Evaluate the characteristics of each product against industry standards for grade type</p> <p>2.3 Measure moisture content and evaluate against standards and seasoning requirements</p> <p>2.4 Mark product characteristics for docking</p> <p>2.5 Sort and label product according to grade classification</p> <p>2.6 Reject and redirect sub-standard product for recycling or other uses according to workplace and environmental protection procedures</p> <p>2.7 Record and report grading outcomes and distribution problems to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Responds to verbal questions on matters related to grading

Skill	Description
	decisions and reuse or recycling of rejected materials
Numeracy	<ul style="list-style-type: none"> Compares length of product with industry standard for cross-section Measures moisture content using a moisture meter Calibrates measuring equipment
Navigate the world of work	<ul style="list-style-type: none"> Understands main tasks, responsibilities and boundaries of own role
Interact with others	<ul style="list-style-type: none"> Conducts conversations relevant to the role by explaining and responding to questions Uses non-verbal modes of communication to convey information related to grading operations
Get the work done	<ul style="list-style-type: none"> Identifies and responds to routine problems Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Assessment Requirements for FWPCOT2246 Appearance grade hardwood sawn and milled products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- appearance graded hardwood sawn products
- appearance graded hardwood milled products.

For each of the above jobs, the individual has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- visually assessed and evaluated the characteristics of the product against industry standards for grading hardwood sawn and milled products
- measured and evaluated moisture content against standards and seasoning requirements
- marked, sorted and labelled product according to the correct grade classification
- recorded and reported grading activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry standards and safe practices for grading hardwood sawn and milled products
- risks and hazards associated with timber grading
- workplace procedures for grading hardwood sawn and milled products:
 - health and safety, with particular emphasis on equipment lock-out and the use of personal protective equipment (PPE)
 - communication reporting lines
 - recording and reporting grading outcomes
- criteria for recycling and reusing, and redirecting sub-standard product for other use
- timber characteristics to be checked

- methods of visual estimation, grading, colour identification and tagging
- industry standard for cross-sections and lengths
- sorting, marking and distribution procedures
- types, safe operation and maintenance of tools and equipment used in grading operations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately reflects workplace conditions
- resources, equipment and materials:
 - hardwood sawn and milled products for grading
 - measuring equipment
 - moisture meters
 - lifting equipment for the movement of sawn and milled products
 - PPE suitable for grading hardwood sawn and milled products
- specifications:
 - templates for recording timber grading activities
 - work order detailing materials to be graded
 - workplace standards for grading hardwood sawn and milled products.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2249 Visually stress grade hardwood

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to visually stress grade hardwood for strength against set classifications detailed in Australian Standard AS2082 as a minimum standard.

The unit applies to those who visually stress grade hardwood in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for stress-grading	1.1 Review work order to determine job requirements and, where required, seek clarification from appropriate personnel 1.2 Review workplace health and safety procedures, including the use of personal protective equipment, equipment lock-out and safe manual

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>handling techniques</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with visually stress-grading hardwood</p> <p>1.4 Identify workplace environmental protection procedures for minimising and disposing of waste material, cleaning tools and equipment, and maximising energy efficiency</p> <p>1.5 Establish and maintain communication with others at workplace to ensure safety</p>
2. Set up materials for stress grading	<p>2.1 Identify grading requirements according to workplace procedures, standards and specifications</p> <p>2.2 Select materials, hardware items, tools and equipment appropriate to work order, and check for operational effectiveness</p> <p>2.3 Position hardwood to be graded to provide appropriate access and facilitate efficient workflow</p> <p>2.4 Identify routine processing problems, and resolve or report to appropriate personnel</p>
3. Evaluate hardwood	<p>3.1 Identify species and defects and check status of seasoning</p> <p>3.2 Accurately record size and tolerance measurements according to workplace requirements</p> <p>3.3 Establish characteristics and evaluate according to standards and product specifications</p> <p>3.4 Measure moisture content and evaluate against standards and seasoning requirements</p>
4. Grade hardwood	<p>4.1 Visually stress grade hardwood based on standards for the required structural grade</p> <p>4.2 Diagnose and check characteristics with the greatest limiting effect on the grade</p> <p>4.3 Assess the appearance, and mark and segregate sub-standard material for disposal, reuse or recycling according to workplace procedures and environmental requirements</p> <p>4.4 Despatch graded material to appropriate storage location</p> <p>4.5 Record and report results of grading according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Estimates sizes of hardwood Measures sizes of hardwood
Navigate the world of work	<ul style="list-style-type: none"> Understands main tasks, responsibilities and boundaries of own role
Interact with others	<ul style="list-style-type: none"> Uses modes of communication suitable to purpose to confirm and clarify understanding

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has visually stress graded hardwood and has:

- prepared for visual stress-grading of hardwood
- evaluated and visually stress graded hardwood in readiness for processing or storage
- followed work order and relevant workplace health and safety and environmental protection procedures
- accurately identified characteristics and defects in hardwood
- accurately interpreted grading standards and specifications
- communicated effectively with others at workplace
- followed workplace procedures, standards and codes of practice for visually stress-grading hardwood
- recorded and reported grading activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations, standards, codes of practice and established safe practices for visually stress-grading hardwood
- workplace standards, policies and procedures for visually stress-grading hardwood
- risks and hazards associated with grading timber
- criteria for recycling and reusing sub-standard material
- visual stress-grading techniques and methods
- grading markings and standards
- characteristics and properties of hardwood
- structural grade of hardwood

- storage systems and labelling procedures
- disposal methods for timber with defects or contamination, including recycling, reusing and redirecting
- workplace communication channels and protocols
- procedures for recording and reporting workplace information
- strategies for identifying and resolving problems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - hardwood for visual stress-grading
 - vernier callipers
 - moisture meters (resistance and/or capacitance)
 - tapes
 - marking implements
 - personal protective equipment required for stress-grading hardwood
- specifications:
 - work order with specific instructions for visually stress-grading hardwood
 - workplace procedures for visually stress-grading hardwood
 - regulations, standards, codes of practice and established safe practices, including Australian Standard AS2082.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2251 Visually stress grade cypress

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to visually stress grade Australian white cypress (*Callitris glaucophylla*) for strength against set classifications detailed in Section 3 of the Australian Standard AS2858 as a minimum standard.

The unit applies to individuals who visually stress grade cypress in a timber processing and manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT2251 Visually stress grade cypress

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has visually stress graded cypress, and has:

- prepared for visually stress-grading cypress
- followed work order and relevant workplace health and safety and environmental protection procedures
- evaluated and visually stress graded cypress in readiness for processing or storage
- accurately identified characteristics and defects in cypress
- accurately interpreted grading standards and specifications
- worked safely and communicated effectively with others at the work site
- followed workplace policies and procedures, standards and codes of practice for visually stress-grading cypress
- recorded and reported grading activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations, standards, codes of practice and established safe practices for visually stress-grading cypress, including Australian Standard AS2858
- workplace standards, policies and procedures for visually stress-grading cypress
- risks and hazards associated with grading timber
- grading markings and standards
- characteristics and properties of cypress
- visual stress-grading techniques and methods
- structural grade: structural conformity of the timber, consistency of the structural quality, and defects that may weaken strength, including knots, shakes and short grain

- appearance of contamination, surface characteristics and grain pattern
- criteria for recycling and reusing sub-standard material
- recycling timber with inappropriate defects or contamination
- reusing timber with inappropriate defects or contamination
- redirecting timber with inappropriate defects or contamination for energy recovery
- storage systems and labelling procedures
- workplace communication channels and protocols
- procedures for recording and reporting workplace information
- strategies for identifying and resolving problems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - cypress for visual stress-grading
 - work order, workplace requirements and site standards for visually stress-grading cypress
 - vernier callipers
 - moisture meters (resistance and/or capacitance)
 - tapes
 - marking implements
 - personal protective equipment required for visually stress-grading cypress
- specifications:
 - work order with specific instructions for visually stress-grading cypress
 - workplace procedures for visually stress-grading cypress
 - regulations, standards, codes of practice and established safe practices, including Australian Standard AS2858.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2254 Maintain chainsaws

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the knowledge and skills required to maintain fuel or electrically powered hand-held chainsaws. The unit includes completing routine maintenance service as well as periodic maintenance servicing and chain sharpening.

The unit applies to individuals who maintain chainsaws for or as part of arboriculture, forestry, horticulture, agriculture, conservation and land management, local government, emergency services and other government agency operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Assessment Requirements for FWPCOT2254 Maintain chainsaws

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on one occasion, the individual has:

- completed the routine and frequently required service requirements for one chainsaw according to manufacturer instructions
- completed the periodic service requirements for one chainsaw according to manufacturer instructions
- checked and sharpened at least two chains according to manufacturer instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, purpose, features and operation of chainsaws
- features and names of different parts of fuel powered and electrically powered chainsaws
- purpose, features and operation of tools and equipment used in chainsaw maintenance activities
- specifications and types of bars, chains and sprockets
- differences between frequent and periodic chainsaw maintenance requirements
- techniques for:
 - removing chains and other chainsaw components
 - assessing chain condition
 - sharpening chains to specified requirements
 - reassembling chainsaw components
 - assessing battery condition, if applicable, and visually inspecting state of electrical cords and plugs for electrically powered chainsaws
- hazards associated with maintaining chainsaws, and methods to minimise associated risks:
 - noise
 - fumes

- mechanical vibration
- hazardous substances
- cuts
- burns
- rotating parts
- electric shock for electrically powered chainsaws
- workplace procedures specific to maintaining chainsaws:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling
 - communication reporting lines
 - recording and reporting repairs, maintenance activities and equipment faults
- environmental protection practices relevant to maintaining chainsaws:
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials
 - disposing of hazardous substances.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace location or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - fuel or electrically powered hand-held chainsaws
 - tools and equipment used to maintain chainsaws
 - consumable chainsaw parts, oil and fuel
 - PPE required in chainsaw maintenance activities
- specifications:
 - access to work order or instruction detailing chainsaw maintenance activities to be carried out by operator
 - access to workplace safety and environmental policies and procedures applicable to chainsaw maintenance activities
 - access to workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

	walkways, personal injury and damage to material 1.5 Check material tallies against job quantity list and conformity against product specification 1.6 Report packs not meeting work order requirements or containing contaminated material to appropriate person
2. Prepare for storage	2.1 Determine method of handling products, and select lifting equipment or request assistance with lifting 2.2 Inspect and check the type and quantity of material for grading, labelling and storage 2.3 Sort and safely place materials to be stored on a stand, frame or on the ground 2.4 Regularly clear area of packing and loose material according to workplace safety requirements 2.5 Select and isolate required storage locations according to workplace procedures
3. Categorise, store and record materials	3.1 Separate material into grade, size, quality and category to meet product specification 3.2 Designate and label storage locations and safely store materials in designated areas 3.3 Discard material not meeting quality standard requirements 3.4 Complete and maintain records according to workplace procedures
4. Clean up	4.1 Clean work area and dispose of, recycle or reuse leftover material according to workplace environmental requirements 4.2 Clean and maintain tools, and report any faulty or damaged tools 4.3 Return tools and equipment to allocated storage areas

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for FWPCOT2255 Store materials

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has received, prepared and stored a minimum of three packs containing different products into an allocated storage area, and:

- visually checked product for alignment with quality and grade
- applied manual or mechanical handling techniques according to workplace safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures relevant to receiving and storing timber products
- methods of visual estimation, grading, colour identification and tagging
- industry standard lengths, cross sections, appearance grades of timber products
- processes, procedures and techniques for storing timber and timber products
- workplace safety requirements relevant to storing timber materials:
 - personal protective equipment (PPE)
 - hazardous manual handling
 - exposure to dust
- requirements for disposing of waste according to workplace safety and environmental procedures
- purpose, features and operation of lifting equipment:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- procedures for recording and reporting receipt of stock.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber manufacturing or processing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - packs of timber products
 - mechanical lifting equipment
 - PPE
- specifications:
 - access to workplace environmental policies and procedures relating to disposal of waste applicable to storing timber materials
 - access to work orders and workplace safety procedures relating to handling and storing timber materials
 - access to workplace procedures and forms for storing and recording storage outcomes
- relationships:
 - team members/supervisor to confirm work orders and report work-related issues.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2257 Use hand-held tools

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to select and use a variety of manual and powered hand-held tools for various tasks and complete basic non-specialist maintenance.

The unit applies to production workers, manufacturing assistants, timber manufacturing workers and sawmill workers who undertake specified activities under the direction of more experienced workers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use hand-held tools	1.1 Determine job requirements from work order or instruction and, where required, confirm with appropriate person 1.2 Confirm safety requirements for using hand-held tools according to workplace safety procedures 1.3 Select, fit and use personal protective equipment (PPE)

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Select hand-held tools appropriate for tasks and check for serviceability and safe operation according to manufacturer instructions</p> <p>1.5 Identify unsafe, faulty or damaged tools, remove from service and mark for repair or replacement according to workplace procedures</p>
2. Operate and maintain hand-held tools	<p>2.1 Use hand and power tools according to workplace safety procedures and manufacturer instructions</p> <p>2.2 Apply appropriate techniques when using tools to produce required production outcomes</p> <p>2.3 Check tool operation regularly to assess need for sharpening and other maintenance requirements</p> <p>2.4 Complete basic non-specialist maintenance for hand and power tools according to manufacturer recommendations and workplace safety procedures</p> <p>2.5 Record and report tool faults, serviceability issues and maintenance requirements to appropriate person</p>
3. Clean up	<p>3.1 Clean work area and dispose of, recycle or reuse leftover material according to workplace environmental policies and procedures</p> <p>3.2 Clean and maintain hand-held tools, and report any faulty or damaged tools</p> <p>3.3 Store tools according to workplace procedures</p>

Foundation Skills

Assessment Requirements for FWPCOT2257 Use hand-held tools

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has selected and safely used the correct hand-held tools for at least three wood product processing or manufacturing tasks.

In doing this, the individual has:

- selected, fitted and correctly used personal protective equipment (PPE)
- used at least three of the following tools:
 - handsaw
 - knife
 - chisel
 - hammer
 - hand drill
 - file
 - rasp
- used each of the following power or battery operated tools:
 - drill
 - grinder
 - sander
 - saw
 - nail gun
- used tools according to manufacturer instructions
- completed basic non-specialist maintenance for each of the tools used, according to manufacturer recommendations to:
 - sharpen
 - clean
 - lubricate
 - tighten
 - adjust

- check consumable components for bluntness, wear and other damage
- remove and replace consumable components.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of hand and power tools, and their functional and operational features:
 - techniques and safe use
 - non-specialist repair and maintenance
 - identifying and tagging faulty/damaged equipment
- battery operated power tools
- workplace safety requirements relevant to using hand-held manual and powered tools:
 - PPE
 - electrical hazards – use of residual current devices (RCD)
 - equipment lock-out
 - exposure to dust
 - exposure to excessive noise
- workplace procedures relevant to using, maintaining and storing hand-held-tools
- manufacturer specifications and operating instructions for hand-held tools
- environmental requirements for disposing of waste and used consumables relevant to using hand-held tools
- recording and reporting equipment faults and maintenance requests according to workplace or manufacturer policies and procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber manufacturing or processing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - manual and powered hand-held tools according to the Performance Evidence
 - PPE
- specifications:
 - access to work orders or instructions detailing wood product processing tasks to be conducted by the operator
 - access to workplace safety and environmental policies and procedures applicable to using manual and powered hand-held tools
 - access to manufacturer specifications and operator instructions for use and maintenance of manual and powered hand-held tools

- relationships:
 - person to confirm work orders and job tasks and report issues with workplace safety or hand-held tools to.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2258 Assemble products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assemble construction-ready timber products. This unit includes preparing for assembly work, assembling timber products, installing assembly hardware and stacking, strapping and labelling timber products ready for transportation.

The unit applies to individuals who assemble products in a timber product manufacturing facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for assembly work	1.1 Determine job requirements from work order or instruction and construction plans and, where required, seek clarification from appropriate person 1.2 Confirm safety requirements for the task according to workplace safety procedures 1.3 Identify, assess and take actions to mitigate risks and hazards

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>associated with the assembly of timber products</p> <p>1.4 Identify workplace environmental requirements for minimising and disposing of waste material, recycling and reusing materials and cleaning tools and equipment</p> <p>1.5 Consult with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Locate tools and equipment needed for the work, and check for correct operation and safety</p> <p>1.7 Identify and obtain the type and quantity of material and hardware to be assembled</p> <p>1.8 Select, fit and use personal protective equipment</p> <p>1.9 Identify and prepare set-up jigs required for assembly</p>
2. Set up timber components	<p>2.1 Select timber components from the pre-cut materials list</p> <p>2.2 Reject material with defects and dispose of following environmental requirements</p> <p>2.3 Use equipment following workplace safety requirements and manufacturer instructions</p> <p>2.4 Position and clamp timber components in jigs ready for joining, and check for allowable faults, joins and grain according to construction standards and grading rules</p>
3. Install assembly hardware	<p>3.1 Position and install hardware on joints according to construction plans</p> <p>3.2 Identify and correct assembly faults as required</p> <p>3.3 Identify routine processing and equipment faults and resolve or report to appropriate personnel</p>
4. Prepare timber products for despatch and report	<p>4.1 Check finished timber product for quality, and label according to work order</p> <p>4.2 Remove timber product from jigs and safely stack in a designated location</p> <p>4.3 Strap, pack and label finished timber products ready for transportation</p> <p>4.4 Avoid wastage of strapping and packaging materials and maximise use of recycled materials</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.5 Complete quality records and report production outcomes, equipment faults and maintenance requirements according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Extract relevant product information and job requirements from organisational and workplace documentation
Writing	<ul style="list-style-type: none"> Complete basic clear labels for product identification and transportation Use industry terminology to accurately complete records
Oral communication	<ul style="list-style-type: none"> Ask questions and actively listen to clarify contents of work plans Use clear and unambiguous language to coordinate work with team members
Numeracy	<ul style="list-style-type: none"> Count individual components and hardware and add together to calculate total quantities of appropriate sizes Complete routine calculations for component layouts

Assessment Requirements for FWPCOT2258 Assemble products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on three different occasions:

- assembled one or more timber products from the following list:
 - pallets
 - crates
 - trellis
 - stairs
 - doors
 - windows
 - beams
- prepared the timber products for transportation
- completed associated workplace documents
- followed work order or instruction, policies and procedures and current workplace safety and environmental requirements in completing the task

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace environmental requirements for assembling timber products
- regulations and standards related to timber products and grading
- workplace safety requirements for assembling timber products:
 - personal protective equipment (PPE)
 - equipment lock-out
 - use of equipment
 - electrical hazards
 - hazard identification and control measures

- exposure to excessive noise
- exposure to dust
- methods, processes and techniques for:
 - assembly sequences
 - storage layout and stacking finished timber products
- workplace requirements for recording and reporting production outcomes and equipment faults
- typical timber component defects and how these affect the ability to produce a quality finished product:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- typical assembly faults triggering a correction to ensure timber product quality:
 - incorrectly positioned joints
 - timber splits from nailing
 - incorrectly positioned hardware
- types, purpose, features and operation of tools, equipment and assembly hardware used for assembling timber products:
 - measuring equipment
 - assembly jigs
 - staple guns
 - nail guns
 - compressed air safety and operation
 - marking equipment
 - strapping equipment
 - nail gun nails
 - staples.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber product manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment used to assemble timber products

- assembly hardware
- PPE suitable for assembling timber products
- pre-cut sections of timber for using to assemble timber products
- specifications:
 - access to work order or instruction detailing timber products to be assembled by operator
 - access to timber product construction plans
 - access to workplace safety and environmental policies and procedures applicable to timber product assembly
 - access to workplace procedures and forms for recording production outcomes and equipment maintenance and faults
 - manufacturer specifications for equipment used to assemble timber products.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2259 Cut materials with a hand-held chainsaw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare and cut timber and polymer materials with a hand-held chainsaw. This unit includes preparing for work, cutting materials, maximising volume and quality of recovery material, and performing routine operator maintenance.

The unit applies to individuals who cut materials with a hand-held chainsaw in a variety of work settings, including sawmills, forest product manufacturing facilities, timber yards, horticultural environments, construction, polymer processing and other manufacturing settings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for operation	1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate person 1.2 Confirm safety requirements for the task according to workplace safety procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with using a hand-held chainsaw</p> <p>1.4 Identify workplace environmental requirements for minimising and disposing of waste material, recycling and reusing materials and cleaning tools and equipment</p> <p>1.5 Consult with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Locate hand-held chainsaw and other support equipment needed for the work and check for correct operation and safety</p> <p>1.7 Select, fit and use personal protective equipment</p> <p>1.8 Conduct pre-start-up checks of saw to determine serviceability according to manufacturer instructions</p>
2. Cut material	<p>2.1 Assess materials visually to identify defects that may present unsafe work conditions, and review cutting plan</p> <p>2.2 Place cutting supports to ensure a stable base</p> <p>2.3 Cut materials within workplace standard tolerances for length and angle relative to centre line</p> <p>2.4 Use cutting techniques to cut materials to industry standard lengths, maximising volume and quality of recovery material</p> <p>2.5 Operate chainsaw effectively according to manufacturer recommendations</p> <p>2.6 Clear and dispose of debris according to workplace procedures and environmental requirements</p> <p>2.7 Complete production and quality reports according to workplace procedures</p> <p>2.8 Identify processing problems and equipment faults and report to appropriate personnel</p>
3. Perform routine operator maintenance	<p>3.1 Isolate, clean and maintain chainsaw according to manufacturer recommendations and workplace procedures</p> <p>3.2 Identify blunt or damaged chain, and remove, replace or sharpen and adjust chain according to workplace procedures and manufacturer recommendations</p> <p>3.3 Record and report maintenance activities to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Extract relevant information and job requirements from relevant documentation
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Ask open and closed probing questions and actively listen to clarify job requirements Give clear and sequenced information and ask clarifying questions when coordinating tasks with team members and others

Assessment Requirements for FWPCOT2259 Cut materials with a hand-held chainsaw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- assessed and cut twenty individual pieces of material with a hand-held chainsaw to industry standard lengths, maximising volume and quality of recovery material
- followed a work order or instruction, workplace policy and procedures and current workplace safety and environmental requirements in completing the task
- inspected and carried out routine operator maintenance on one hand-held chainsaw.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry standards related to the safe use of hand-held chainsaws
- workplace environmental requirements for safe disposal of waste material
- workplace safety requirements related to the use of a hand-held chainsaw to cut materials:
 - hazards and control measures
 - exposure to dust
 - hazardous manual tasks
 - personal protective equipment (PPE)
- functions and operation of a hand-held chainsaw:
 - procedures, checks, start-up and shut-down procedures
 - capability and limitations
- communication channels and protocols to maintain safety
- types of defects in materials that can affect processing and cause risk
- workplace requirements for recording and reporting workplace and operational information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a manufacturing or processing facility, timber yard, horticultural setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a hand-held chainsaw and maintenance tools and equipment
 - PPE
 - materials for cutting
- specifications:
 - access to work order or instruction detailing the cutting activity to be conducted by operator
 - access to workplace safety and environmental policies and procedures applicable to cutting materials using a hand-held chainsaw
 - access to workplace procedures and forms for recording production outcomes and hand-held chainsaw maintenance and faults
 - manufacturer specifications for hand-held chainsaw
- relationships:
 - person to confirm work orders, coordinate workplace tasks and report maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT2260 Tally material

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- completed tallying of at least two different work orders including both timber and hardware items and fittings, and has also completed a tallying task for either:
 - a pack of random timber cross-sections, lengths or panel sizes or
 - a pack of set timber cross-sections, lengths or panel sizes
- completed tally sheets or electronic records for each tallying job
- completed records for non-conformances and damaged material identified during each tallying job.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- manual and electronic methods used to tally material in a forest product processing setting
- format, content and use of industry and workplace specific procedures to record and report tallies
- industry standard sizing and names for timber, timber profiles and boards
- industry and workplace standards and specifications for packaging timber products
- features of non-conformant packs
- purpose, features and use of tools for tallying in a forest products processing setting, including:
 - cyclic or periodic stocktaking
 - electronic bar coding equipment
 - manual tally sheets
- workplace procedures relevant to tallying material:
 - communication reporting lines
 - recording and reporting non-conformances and damaged material

- recording and reporting tallying results
- workplace safety requirements relevant to tallying materials:
 - hazard identification and controls
 - personal protective equipment (PPE)
 - manual handling.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber manufacturing or processing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - timber packs, timber and hardware items and fittings for tallying
 - PPE
 - tallying and recording tools and equipment
- specifications:
 - access to work orders or instructions detailing the tallying activity to be conducted
 - access to workplace safety and environmental policies and procedures applicable to tallying materials
 - access to workplace procedures and forms for recording tallies
- relationships:
 - person to confirm work orders and report production and quality issues.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT2261 Process orders and prepare for despatch

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and accurately processed orders and prepared products for despatch for two different orders.

In doing this, there must be evidence that the individual has:

- selected the correct quantity and quality of products as specified in product order and consignment documentation
- securely stacked and wrapped orders to prevent damage
- consolidated and labelled products ready for despatch
- followed workplace procedures to complete despatch documentation and stock records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- product orders, consignment documentation and workplace policies and procedures relating to processing orders and preparing for despatch
- functions and capabilities of order and despatch software systems
- storage layout, categories, labelling and identification systems of products in a forest product processing setting
- key features of the product range of the workplace
- order picking methods, sequencing and equipment
- transport conditions for different types of products
- packaging requirements to avoid damage
- environmental protection practices for packaging products for despatch
- avoiding waste when wrapping and packaging
- disposing of and recycling wrapping and packaging materials
- processing orders and despatching products, including:

- completion of required documentation and labelling
- communication reporting lines
- recording and reporting order and despatch problems
- workplace safety requirements related to processing orders and preparing for despatch:
 - assistive equipment to shift heavy items
 - hazardous manual tasks
 - hazard identification and controls
 - personal protective equipment (PPE).

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber yard, a timber manufacturing or processing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - products to prepare two different orders for despatch
 - order picking equipment and assistive equipment to shift heavy items
 - PPE
 - load and product labels
- specifications:
 - access to work orders or consignment documentation for timber product orders
 - access to workplace policies and procedures including safety and environmental requirements applicable to processing and recording orders
- relationships:
 - personnel to confirm product orders and consignment details and provide despatch requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2262 Cut material to shape using a saw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare and cut material to shape using sawing equipment to produce shaped timber products and to perform basic operator maintenance of sawing equipment.

The unit applies to production workers, sawmill workers, manufacturing assistants and saw operators who undertake specified activities under the instruction of more experienced workers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for shaping	1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate person 1.2 Confirm safety and environmental requirements for the task according to workplace procedures 1.3 Select, fit and use required personal protective equipment (PPE)

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify type and calculate quantity of materials to be shaped, and obtain from storage location</p> <p>1.5 Select equipment and check for operational effectiveness according to manufacturer specifications</p> <p>1.6 Identify profile to be cut and select cutting blades</p>
2. Set up shaping equipment	<p>2.1 Follow lock-out procedures, select and attach machine guides to machinery</p> <p>2.2 Check saw blade for sharpness and alignment</p> <p>2.3 Use equipment according to workplace safety and environmental procedures and manufacturer instructions</p> <p>2.4 Set cut in line with required shape and to minimise waste</p> <p>2.5 Stack materials in close proximity to maximise ease of machine feeding</p> <p>2.6 Test equipment set-up for correct alignment through trial run on timber, and adjust as required</p>
3. Cut material to shape	<p>3.1 Reject material with defects and dispose of according to workplace and environmental requirements</p> <p>3.2 Feed material into machine at feed rate prescribed in manufacturer instructions</p> <p>3.3 Follow, maintain and adjust cutting sequence to produce required quantity and maximise feed rate</p> <p>3.4 Check jig or shape line regularly and adjust to maintain desired cut</p> <p>3.5 Stack material safely in designated location according to workplace requirements</p> <p>3.6 Identify routine processing and equipment faults and resolve or report to appropriate person</p> <p>3.7 Complete production and quality records according to workplace procedures</p>
4. Complete operator maintenance	<p>4.1 Follow safety procedures to lock out equipment according to workplace procedures</p> <p>4.2 Check saw blades for bluntness or damage</p> <p>4.3 Remove and replace saw blades according to manufacturer recommendations and send used blades for re-sharpening or disposal</p> <p>4.4 Complete basic non-specialist maintenance for equipment</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>according to workplace procedures</p> <p>4.5 Keep machine area clear of dust, offcuts and debris</p> <p>4.6 Clean work area and reuse or recycle waste and dispose of debris according to workplace and environmental requirements</p> <p>4.7 Record and report equipment faults and maintenance requirements to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret relevant information from workplace and manufacturer documentation to safely operate and maintain equipment
Oral communication	<ul style="list-style-type: none"> Ask questions and actively listen to clarify work orders and job tasks Use industry terminology to clearly specify processing and equipment faults
Numeracy	<ul style="list-style-type: none"> Use basic mathematical formulas to calculate material quantities

Assessment Requirements for FWPCOT2262 Cut material to shape using a saw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, for at least two different work orders, cut material to shape and completed basic non-specialist maintenance, using one or more of the following saws:

- band saw
- jig saw
- computer numerical control (CNC) saw.

Material to be cut must include two or more of the following:

- native timber species
- imported timber species
- dressed timber
- in-the-rough timber
- stress and non-stress graded timber
- preservative treated timber
- medium density fibreboard
- laminated veneer
- chipboard
- fibreboard and other manufactured board products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, purpose, features, operation and basic non-specialist repair and maintenance of tools and equipment used for cutting material to shape, including:
 - measuring equipment

- band saws
- jig saws
- CNC saws
- machine guides
- methods for assessing saw blade condition
- shapes, feed rates and finish used for timber products
- environmental requirements for forest products processing settings:
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing timber
- storage layout and categories for:
 - raw materials
 - stacking finished materials
- typical timber defects and effect on producing a quality finished shaped timber product:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- workplace policies and procedures specific to cutting material to shape
- workplace safety requirements relevant to cutting materials using a saw:
 - equipment lock-out
 - use and maintenance of personal protective equipment (PPE), equipment and machinery
 - hazard identification and control measures
 - job safety and environmental analysis (JSEA)
- recording and reporting production outcomes and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber manufacturing or processing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - materials to cut to shape according to Performance Evidence
 - band, jig or CNC saw
 - PPE
- specifications:

- access to work orders and workplace procedures for cutting materials according to the Performance Evidence
- access to workplace safety and environmental policies and procedures applicable to cutting materials using a saw
- access to saw manufacturer specifications and operator instructions
- relationships:
 - person to confirm work orders and report equipment faults and equipment maintenance.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2263 Cross cut materials with a fixed saw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to position and saw timber pieces and timber packs with a fixed circular saw or fixed chainsaw. The unit includes preparing for work, cross cutting timber materials to industry standard lengths, maximising volume and quality of recovery material, and performing routine operator maintenance.

The unit applies to individuals who cross cut materials with a fixed saw in a timber yard and timber products manufacturing setting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate personnel 1.2 Confirm safety requirements for the job according to workplace health and safety procedures 1.3 Identify, assess and take actions to mitigate risks and hazards

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>associated with using a fixed saw</p> <p>1.4 Identify workplace environmental protection procedures for minimising and disposing of waste material, recycling and reusing materials, and cleaning tools and equipment</p> <p>1.5 Consult with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Locate saw and other support equipment needed for the work, and check for correct operation and safety</p> <p>1.7 Select, fit and use personal protective equipment</p> <p>1.8 Conduct pre-start-up checks of saw to determine serviceability according to manufacturer instructions</p>
2. Cross cut material	<p>2.1 Assess material visually to identify defects that may present unsafe work conditions, and review cut</p> <p>2.2 Cut material within workplace tolerances for length and angle relative to centre line</p> <p>2.3 Use cutting techniques to industry standard lengths, maximising volume and quality of recovery material</p> <p>2.4 Operate fixed saw effectively according to manufacturer recommendations</p> <p>2.5 Check and clear work area regularly according to workplace health and safety requirements and site procedures</p> <p>2.6 Dispose of sub-standard material according to workplace procedures and environmental requirements</p> <p>2.7 Identify and report problems with operation of saw according to workplace procedures</p>
3. Perform routine operator maintenance	<p>3.1 Lock out, clean and maintain fixed saw according to manufacturer recommendations and workplace procedures</p> <p>3.2 Identify blunt or damaged saws and replace or sharpen, according to workplace procedures and manufacturer recommendations</p> <p>3.3 Record and report fixed saw operations and maintenance to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine requirements
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Ask questions and actively listen to clarify contents of work plans Give clear and sequenced information and ask clarifying questions when coordinating tasks with team members and others

Assessment Requirements for FWPCOT2263 Cross cut materials with a fixed saw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- assessed and used a fixed saw to cross cut:
 - twenty individual pieces of timber to industry standard lengths, maximising volume and quality of recovery material
 - ten packs of timber
- inspected and carried out routine operator maintenance on one fixed saw on one occasion, including removing, sharpening and/or replacing blade or chain, according to manufacturer requirements.

There must also be evidence that in using the fixed saw the individual has followed a work order or instruction that is consistent with workplace policy and procedures and current workplace health and safety legislation, regulations and related industry standards and codes of practice.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace safety requirements and standards for operating, checking, starting up and shutting down a fixed saw
- environmental protection requirements and safe disposal of waste material
- hazards and risks associated with use of fixed saws
- cutting techniques for a fixed saw, including:
 - cutting positions
 - work order requirements
 - industry standard lengths

- straightness requirements
- cutting patterns
- maximising volume and quality of recovery requirements
- cutting procedures that minimise capping and splitting of material
- placing material on conveyor or carriage
- securing material
- cutting at optimum feed rate to avoid damage to saw blade
- techniques for clearing debris when cross cutting materials, including:
 - using hand tools and a water jet to clear debris from the surface of material
 - clearing the work area of offcuts
 - ensuring saw clearance around material
 - depositing off-cuts and debris in recognised areas
 - clearing surfaces of debris likely to cause saw damage in the cutting area
- equipment processes, technical capability and limitations of fixed saws
- industry standard length dimensions
- established communication channels and protocols to maintain safety
- processes for managing risks and hazards associated with fixed saw operations
- defects in timber that can affect processing and cause risk
- emergency evacuation procedures
- workplace requirements for recording and reporting information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber yard, timber manufacturing setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a fixed circular saw or fixed chainsaw
 - tools and equipment used to maintain fixed saws
 - spare parts and consumables for fixed saws
 - personal protective equipment required in fixed saw operations
- specifications:
 - access to work order or instruction detailing cutting activities to be carried out by operator
 - access to workplace safety and environmental policies and procedures applicable to the use of fixed saws
 - access to workplace procedures and forms for recording production outcomes and fixed saw maintenance
 - access to site emergency procedure

- access to workplace standard operating procedures or manufacturer manual for fixed saws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2264 Follow quality and product care procedures in forest and wood products operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0

Application

This unit of competency describes the skills and knowledge required to follow and monitor the quality procedures applying to own work and product output in the forest and wood products industry.

The unit applies to individuals working in a broad range of roles and operations in the forest and wood products industry in which there is a focus on maintaining quality and product care.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and industry codes of practice that apply to the workplace.

No licencing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for FWPCOT2264 Follow quality and product care procedures in forest and wood products operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, for one work period/shift, the individual has identified and followed workplace quality requirements while performing personal work tasks related to a forest or wood products operation.

In performing this activity, the individual has:

- confirmed quality requirements for the work task with supervisor
- inspected products processed during the work period/shift visually to ensure they meet product specifications and quality requirements
- identified and corrected quality problems or escalated issues to supervisor
- prepared quality and product care reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace quality and product care requirements and procedures in forest or wood products operations:
 - communicating product requirements and work output
 - product care and processing
 - identifying and resolving faults with product
 - minimising waste
 - recording and reporting workplace information
- forest or wood product specifications:
 - customer requirements
 - industry standard
 - enterprise standards

- environmental protection requirements related to forest or wood products operations:
 - identifying environmental risks and associated hazards
 - safely disposing of or recycling/re-using waste material as appropriate
 - minimising carbon emissions
 - minimising impact of the use of machinery and equipment on the environment
- mathematical procedures for estimating and measuring forest or wood product against specifications
- requirements of quality systems that may apply to product care and quality in forest or wood products operations
- assessing visual appearance of forest or wood products according to workplace procedures and nature of the product
- work health and safety policies and procedures relevant to forest or wood products operations:
 - personal protective equipment and clothing
 - safety equipment
 - first aid equipment
 - hazard identification and risk control
 - fatigue management
 - elimination of hazardous materials and substances
 - identifying hazards in the work process and assessing and controlling their risk
 - manual handling techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - materials and equipment relevant to the work task being performed
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to work task to be carried out
 - workplace quality requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2265 Navigate in forest areas

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to navigate in forest areas in situations where difficult environmental conditions and poor visibility are likely to occur.

The unit applies to individuals who may be required to navigate in forest areas as part of forestry operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

Assessment Requirements for FWPCOT2265 Navigate in forest areas

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and conducted one navigation activity in a forest area, and during this activity:

- followed workplace policies and procedures for navigating in forest areas
- planned route according to workplace procedures
- navigated to and from destinations according to the planned route and schedule using navigation aids that must be selected from:
 - compass
 - global positioning system (GPS)
 - cadastral maps (maps that show the boundaries and ownership of land parcels)
 - topographic maps
 - photographs and other digital imagery
- responded to environmental circumstances enroute and adapted by navigating alternative routes
- followed workplace health and safety procedures, including use of personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental protection practices for minimising damage to the local environment when navigating in forest areas
- purpose, features and operation of navigation equipment and aids, including:
 - compass
 - GPS
 - cadastral maps (maps that show the boundaries and ownership of land parcels)

- topographic maps
- photographs and other digital imagery
- advantages and disadvantages of different map and chart types, and sources of error
- representation of topographic features and symbols on maps and charts
- common scales used on maps and plans
- techniques for calculating and estimating distances and times within a particular activity context
- features and uses of environmental navigation aids:
 - survey markers
 - track markers
 - signs
 - arrows
 - natural landmarks
- PPE and clothing
- modes and methods of communication with others
- workplace health and safety procedures for navigation activities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - forest area to navigate
 - navigation equipment and resources
 - communication devices appropriate for use in remote or trackless areas
 - PPE
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to navigation task
 - workplace procedures related to navigation in forest areas.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2266 Operate brush cutter

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to plan for and safely cut vegetation using an industrial standard blade type brush cutter.

The unit applies to individuals who are involved in brush cutting operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for brush cutting	1.1 Determine job requirements from work order or instruction, and where required seek clarification from appropriate personnel 1.2 Confirm safety and environmental requirements for the task according to workplace procedures 1.3 Identify, assess and take actions to mitigate risks and hazards

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>associated with brush cutting operations</p> <p>1.4 Identify emergency and evacuation procedures to follow in the event of an incident or accident</p> <p>1.5 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Select tools, equipment, machinery and materials for brush cutting operations and check for serviceability according to workplace procedures</p> <p>1.7 Select, use and store personal protective equipment and clothing appropriate to work task</p> <p>1.8 Select appropriate cutting methods for identified types of vegetation and to optimise time and safety</p>
2. Operate brush cutter	<p>2.1 Use equipment according to workplace safety procedures, manufacturer instructions and environmental protection practices</p> <p>2.2 Use hand signals with other operators to maintain effective and safe operations</p> <p>2.3 Adjust brush cutter safety harness and handles to correct ergonomic position</p> <p>2.4 Monitor brush cutter for operational effectiveness, and refuel as required</p> <p>2.5 Operate brush cutter appropriate to site conditions and at a safe distance from other people present</p> <p>2.6 Dispose of cut vegetation according to workplace and environmental protection practices</p>
3. Complete operator maintenance	<p>3.1 Follow workplace safety procedures to lock out equipment</p> <p>3.2 Check brush cutter blades for bluntness or damage</p> <p>3.3 Remove and replace brush cutter blades and other operator-replaceable components in line with manufacturer recommendations</p> <p>3.4 Dispose of used blades according to workplace and environmental protection practices</p> <p>3.5 Record and report equipment faults and maintenance requirements to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Extract information from industry guides and standard references on brush cutting techniques
Writing	<ul style="list-style-type: none"> Complete workplace forms
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and use active listening techniques to clarify contents of work orders Provide oral reports on brush cutting operations
Numeracy	<ul style="list-style-type: none"> Estimate area and distance related to brush cutting operations Mix fuel according to manufacturer recommended ratios Measure fuel volumes

Assessment Requirements for FWPCOT2266 Operate brush cutter

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared for one brush cutting job and operated a brush cutter according to workplace safety procedures, manufacturer instructions and environmental protection practices to complete this job.

In performing this activity, the individual has:

- followed safety procedures, including the use of personal protective equipment (PPE)
- completed brush cutting job according to work order prescribing areas and types of vegetation to be cut
- disposed of cut vegetation according to workplace and environmental protection requirements
- completed operator maintenance tasks according to manufacturer requirements
- completed workplace records for equipment faults and maintenance requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- typical workplace hazards associated with operating brush cutters, and methods of minimising risks:
 - ground growth
 - ground slope
 - ground hazards
 - noise
 - weather
 - kickback
 - flying objects
- safe working distances from other people present

- safe handling, use, storing and transporting of fuels
- fuel types, measurements and mixing ratios
- purpose, features and safe operation of brush cutters
- the correct ergonomic position in which to conduct brush cutter operations, including using a safety harness and handle adjustments
- methods for assessing blade condition and removing and replacing blades
- operator maintenance tasks, including oil, fuel, safety checks, cleaning, lubricating, adjustments
- different types of vegetation and the appropriate brush cutting methods
- environmental protection practices for disposing of cut vegetation:
 - recycling vegetation where appropriate
 - sending vegetation to landfill only where it cannot be recycled
 - redirecting vegetation for energy recovery
- workplace procedures specific to brush cutting operations
- workplace health and safety procedures, with particular emphasis on equipment lock-out and use of PPE
- communication reporting lines
- recording and reporting equipment faults and maintenance requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - vegetated area for brush cutting operations
 - brush cutters and other tools, machinery, equipment and materials used in brush cutting operations
 - PPE suitable for brush cutting operations
- specifications:
 - access to work order or instruction, with specific instructions for brush cutting operations
 - access to workplace health, safety and environmental policies and procedures applicable to brush cutting operations
 - workplace procedures for brush cutting operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2267 Operate mobile hydraulic log splitter

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to operate a mobile hydraulic splitting unit to split timber for use in rural settings or to produce firewood.

The unit applies to individuals who operate mobile hydraulic splitting equipment as part of forestry operations.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for splitting operations	1.1 Determine job requirements from work order or instruction, and where required seek clarification from appropriate personnel 1.2 Confirm production targets and assess wood flow requirements to ensure efficient machine operation and overall productivity 1.3 Confirm safety and environmental requirements for the task according to workplace procedures 1.4 Identify, assess and take actions to mitigate risks and hazards

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>associated with machine operations</p> <p>1.5 Identify emergency plan procedures to follow in the event of an incident or accident</p> <p>1.6 Identify type and quantity of timber blocks to be split and quality requirements for split material</p> <p>1.7 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.8 Select, use and store personal protective equipment and clothing appropriate to work task</p> <p>1.9 Conduct pre-operational machinery and fuel checks, and position, secure and adjust hydraulic splitter according to manufacturer recommendations and workplace procedures</p>
2. Split timber and record data	<p>2.1 Select and test vertical or horizontal splitting operations</p> <p>2.2 Ensure splitter is kept clear of timber shards and debris</p> <p>2.3 Position and secure timber blocks pre-cut to fit within the hydraulic splitter</p> <p>2.4 Split timber into sizes that suit standard fireplaces, in line with safe work procedure</p> <p>2.5 Stack or load split timber for transportation</p> <p>2.6 Set aside split timber that does not meet size requirements for recycling or re-use according to workplace procedures</p> <p>2.7 Record and report production outcomes and equipment faults to appropriate personnel, according to workplace procedures</p>
3. Carry out machine operator maintenance	<p>3.1 Follow equipment lock-out procedures according to workplace health and safety requirements and workplace procedures</p> <p>3.2 Conduct visual inspection and fault finding procedures according to manufacturer recommendations and workplace procedures</p> <p>3.3 Conduct routine operational servicing to maintain optimum operational performance of equipment</p> <p>3.4 Diagnose faults, malfunctions or problems with equipment and report according to workplace procedures</p> <p>3.5 Clean and store equipment, attachments and other ancillary equipment</p> <p>3.6 Record and report splitter operation results according to workplace</p>

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up, adjusted and used a mobile hydraulic splitter to split timber for one job/work order.

In performing this activity, the individual has:

- followed safety procedures, including the use of personal protective equipment (PPE) and emergency response to forest fire
- determined type and quantity of timber blocks to be split
- confirmed quality specifications for the split material
- selected and used a suitable splitting method for the task
- stacked or loaded for transportation split timber and timber assigned for re-use and recycling
- disposed of timber residues following environmental protection requirements
- recorded and reported timber splitting production outcomes and equipment faults according to workplace procedures
- performed machine operator maintenance on a hydraulic splitter according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- procedures for emergency response to forest fire
- safe work procedures for conducting mobile splitting operations
- environmental protection requirements, including re-use, recycling or safe disposal of waste material
- procedures for hazard identification and risk assessment and control in the work area, involving hazards and risks in mobile splitting operations

- procedures for recording and reporting timber splitting production outcomes and equipment faults
- fuels for mobile hydraulic splitters
- procedures for safe handling, use, transport and storage of fuel
- operation and safety features of mobile hydraulic splitters
- operator maintenance on mobile hydraulic splitter, and lock-out procedures
- use of PPE and clothing relevant to mobile splitting operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - commercial quantity of pre-cut timber blocks
 - mobile hydraulic splitter and associated tools, equipment and materials
 - PPE required for operating mobile hydraulic splitter
- specifications:
 - work order or instruction detailing timber splitting task to be carried out
 - workplace health, safety and environmental policies and procedures applicable to the use of a mobile hydraulic splitter
 - workplace procedures related to the use of a mobile hydraulic splitter
 - manufacturer manual for mobile hydraulic splitter.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2268 Cut timber or engineered wood product to length or dimensions

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to prepare and cut timber or engineered wood product to length or dimensions with a power-driven saw, which may include a mechanical feed. The unit includes equipment maintenance on completion of operation.

The unit applies to individuals who cut timber or engineered wood products to length or dimensions with a power-driven saw in a wood products work environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT2268 Cut timber or engineered wood product to length or dimensions

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has cut to length or dimensions three standard packs from one of the following product types for three different work orders:

- timber varying in lengths and sectional sizes
- engineered wood product.

In performing this task, the individual has used one of the following items of equipment:

- manually controlled docking and trimming saw
- bench saw
- radial arm saw
- saw with adjustable angles
- saw with mechanical feed
- saw with one blade
- table saw
- saw with automatic feed
- other workplace equipment for cutting timber or engineered wood products to length or dimensions.

Also, in performing this task, the individual has:

- followed workplace procedures for cutting operation
- selected, fitted and used personal protective equipment (PPE)
- cut products to length or dimensions according to prescribed workplace tolerance
- stacked cut product in designated storage location according to common length and width
- completed operator maintenance on the saw used.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures relevant to cutting timber or engineered wood product using a power-driven saw
- processes, procedures and techniques for cutting timber or engineered wood product to length or dimensions, including:
 - optimal cutting practices to minimise waste
 - use and maintenance of docking equipment
 - stacking finished products
 - assessing saw blade condition
 - cleaning plant, tools and equipment
 - recording and reporting equipment faults and maintenance requirements
- cutting patterns and sequences for single angles requiring one cutting pass or single vertical cuts
- industry standard lengths, cross-sections, appearance grades, characteristics, properties, defects and limitations of timber or engineered wood product to be cut
- workplace health and safety requirements related to cutting timber or engineered wood product to length or dimensions, including:
 - hierarchy of risk controls
 - PPE
 - electrical hazards and use of residual current devices (RCD)
 - equipment lock-out
 - exposure to dust
 - exposure to excessive noise
 - hazardous manual tasks
- functional and operational features of tools and equipment used in workplace for cutting timber or engineered wood product to length or dimensions
- methods for stacking finished timber or engineered wood product products safely
- methods for assessing saw blade condition
- environmental requirements and practices for waste disposal.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing, manufacturing facility or timber yard, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - equipment to cut timber or engineered wood products to length or dimensions

-
- PPE suitable to the work activity
 - tools and materials required for saw maintenance
 - different types of timber or engineered wood products varying in lengths and sectional size
 - specifications:
 - work orders with specific instructions for cutting timber or engineered wood product
 - workplace health and safety and environmental protection policies and/or procedures applicable to timber or engineered wood product cutting operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2269 Operate and maintain a table saw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to use a table saw to cut timber or engineered wood products. This activity includes assessing sawing conditions and adjusting feed rate and sawing equipment to maximise product quality.

The unit applies to individuals who use a table saw to saw timber or engineered wood products in a wood products facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a table saw to perform one of the following tasks:

- cut two sets of distinct engineered wood products to length and/or width within specified tolerances
- re-saw two batches of timber or timber off-cuts to length and width within specified tolerances.

In performing this task, the individual has:

- followed work order and relevant workplace health and safety and environmental protection practices and/or procedures
- selected, fitted and used personal protective equipment (PPE)
- operated table saw according to workplace procedures
- assessed sawing conditions and maintained optimum sawing processes
- completed production and quality records for the job
- stacked cut materials in the designated storage location
- completed basic non-specialist maintenance on the saw used.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- timber or engineered wood products to be cut using a table saw, including:
 - range of industry standard lengths, cross-sections and tolerances and applicable terminology
 - typical cutting patterns

- defects and how they impact on the quality of finished products
- types, purpose, features, operation and basic non-specialist repair and maintenance of table saws
- methods for assessing saw blade condition and completing basic non-specialist repair and maintenance for saws
- problems that may occur during sawing operations, including:
 - equipment faults and malfunctions
 - quality of product and machine settings
 - transfer and flow of material
 - routine sawing problems
 - feed rate and product finish
 - infeed and outfeed systems
 - damage to sawn material
 - damage to saw blade
 - material positioning
- types of hazards and associated risks and mitigation measures with operating and maintaining table saws
- workplace procedures specific to operating and maintaining table saws, including:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of PPE and safe manual handling techniques
 - use and maintenance of equipment
 - communication reporting lines
 - recording and reporting of production outcomes and equipment faults
- environmental protection requirements and practices for forest products factory settings, including:
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing waste materials.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - table saw
 - tools and equipment for operator maintenance of table saw
 - PPE suitable for operating and maintaining a table saw
 - range of timber or engineered wood products

- specifications:
 - workplace health and safety and environmental protection policies and/or procedures applicable to using a table saw for cutting timber or engineered wood products
 - workplace procedures for operating and maintaining table saws
 - work order specifying final product dimensions and requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2270 Cut wood material with pole saw for unblocking machinery components

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to cut wood material at a distance reachable with manual blade and power-driven pole-mounted chain saws to unblock components of machinery.

The unit applies to individuals who operate a pole saw in a sawmill or timber processing environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

1. Prepare for cutting wood material to unblock machinery	1.1 Determine job requirements from work order or instructions and, where required, clarify with appropriate personnel

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
components	1.2 Confirm workplace health and safety requirements for task, including use of personal protective equipment 1.3 Identify and assess hazards and take actions to mitigate risks related to task 1.4 Select pole saw and complete pre-operational checks according to workplace requirements and cutting conditions 1.5 Apply and follow machinery lock-out procedures
2. Assess wood material to be cut	2.1 Establish and maintain communication with others in work area to ensure safety 2.2 Assess location and stability of wood material for conditions likely to affect safety of cutting operation 2.3 Identify wood material unable to be cut safely, and refer to appropriate personnel
3. Use pole saw to cut wood material and unblock machinery components	3.1 Operate pole saw to safely cut and remove wood material 3.2 Adjust cutting technique in response to machinery requirements and allowances 3.3 Ensure blockage is removed from machinery components whilst complying with safe work practices 3.4 Clear waste and debris from site according to workplace environmental protection practices and/or procedures
4. Conduct operator maintenance for pole saw	4.1 Clear pole saw of dust, shavings and debris 4.2 Check chain condition, particularly any sign of wear or damage 4.3 Remove, sharpen, tension, adjust, replace and lubricate chain and other components according to manufacturer recommendations 4.4 Recycle, reuse or dispose of chain and other components according to workplace environmental protection practices and/or procedures 4.5 Record and report cutting operations, pole saw faults and maintenance activities to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret routine workplace documents related to using pole saw for unblocking machinery components
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and actively listen to clarify contents of work orders
Numeracy	<ul style="list-style-type: none"> Determine diameters and lengths of wood material by visual estimation

Assessment Requirements for FWPCOT2270 Cut wood material with pole saw for unblocking machinery components

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on one occasion, the individual has used a manual blade pole saw or a power-driven pole-mounted chain saw to cut wood material at a reachable distance to unblock mechanical components of machinery.

In performing this task, the individual has:

- followed workplace procedures and safe work practices
- conducted pre-operational checks and adjustments of pole saw
- locked out machinery and assessed materials to be cut for safe working conditions
- adjusted operating techniques in response to wood material and machinery conditions
- carried out routine maintenance on pole saw, including cleaning, lubrication, chain tensioning and replacement
- recorded and reported cutting activities and maintenance.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace procedures related to using pole saws for unblocking machinery components, including:
 - health and safety, with emphasis on use of personal protective equipment (PPE) and machine lock-out
 - pole saw operation
 - communication channels and protocols
 - recording and reporting workplace information
 - environmental protection
- hazards and associated risks with using pole saw to unblock machinery components
- types of pole saws used to unblock machinery components, including:

- manual blade pole saws
- power-driven pole-mounted chain saws
- pole saw components, including blades, conveyors, chains, roller drums, pulleys
- methods for assessing condition of pole saw chain
- common fault-finding techniques and resolution strategies relevant to use of pole saws.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - pole saw used for unblocking machinery components
 - machinery to demonstrate wood material cutting and unblocking with a pole saw
 - PPE required for safely operating a pole saw
- specifications:
 - workplace health and safety and environmental protection policies and/or procedures applicable to use of pole saw for unblocking machinery components
 - workplace procedures for use of pole saw.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2271 Pack timber or wood products for despatch

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to plan and pack timber or wood products for routine and special orders and to modify packing in response to order changes in readiness for despatch to customers.

The unit applies to individuals who pack timber or wood products in a timber or wood products factory setting.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to pack timber or wood products orders	1.1 Review work order and clarify with appropriate personnel 1.2 Select and use personal protective and safety equipment appropriate to work requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Assess strength, flexibility and liability to damage of timber or wood products to be packed</p> <p>1.4 Ensure sizes and weights of planned pack are consistent with handling systems at despatch and delivery site</p> <p>1.5 Communicate information with relevant personnel, as required, according to workplace procedures</p>
2. Pack timber or wood products orders	<p>2.1 Select packing material to suit specific order requirements</p> <p>2.2 Apply packing methods according to relevant regulations and workplace procedures</p> <p>2.3 Use stacking, bracing and strapping methods to provide strength and minimise damage during transport</p> <p>2.4 Apply labelling methods according to workplace procedures</p> <p>2.5 Minimise and deal with bracing and strapping waste material according to workplace procedures, manufacturer recommendations and environmental protection requirements</p> <p>2.6 Report and rectify pack handling problems or product damage resulting from packing process</p>
3. Modify packing of timber or wood products in response to order changes	<p>3.1 Determine changes to type or quantity of timber or wood products to be packed</p> <p>3.2 Review or alter transport packing methods</p> <p>3.3 Report changes that may result in potential major problems with the customer</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret routine workplace documents, including procedures, orders, consignment documents, despatch schedules, product labels and stock records

Skill	Description
Writing	<ul style="list-style-type: none"> • Complete routine records of orders and despatch • Record information on despatch labels • Write routine reports about order and despatch problems
Oral communication	<ul style="list-style-type: none"> • Ask open and closed probing questions and actively listen to clarify contents of orders and consignment documentation • Provide clear instructions to delivery driver
Numeracy	<ul style="list-style-type: none"> • Determine numbers of goods on order documentation, and count items to match • Input accurate numerical data into stock records • Estimate with reasonable accuracy size and weight of packs to be distributed

Assessment Requirements for FWPCOT2271 Pack timber or wood products for despatch

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and packed timber or wood products for:

- one routine order in readiness for despatch to customers
- one special order in readiness for despatch to customers.

In performing each of these tasks, the individual has:

- followed workplace health and safety and environmental protection practices and/or procedures for packing timber or wood products
- packed timber or wood products according to work order
- stacked, braced, strapped and labelled packs of timber or wood products
- used appropriate labelling methods
- modified packing of routine order
- monitored, reported and rectified packing faults and handling problems

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- safe work procedures involved in packing and handling timber or wood products, including the use of personal protective equipment
- workplace environmental protection requirements and practices, including the safe and efficient disposal, recycling or re-use of waste material, including bracing and strapping waste material
- workplace procedures related to timber or wood products packing process, including:
 - identifying and resolving common faults and problems

- recording and reporting workplace information
- end-use of timber or wood products to be packed, and consequences of product damage resulting from packing process
- characteristics of pack shift and movement, its impact on safety and how to control it
- packing sequences and weight distribution and their impact on safety and productivity
- packing methods that apply to different types of timber or wood products, including stacking, bracing, and strapping
- tools and equipment used for packing, and procedures for their safe use and maintenance.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - timber or wood products to be packed
 - materials and equipment used to pack products
 - packing materials
 - labelling materials
 - personal protective equipment required for packing operations
- specifications:
 - work order or instruction detailing task to be carried out
 - workplace health and safety and environmental protection policies and/or procedures applicable to timber or wood products packing operations
 - workplace procedures for timber or wood products packing operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2272 Rack timber or round poles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to identify, sort and rack sawn boards, dressed boards or round poles. It includes verification of timber product or round poles to ensure appropriate quality and separation of material with faults.

The unit applies to individuals responsible for racking and storing timber or round poles in a timber production, log yard or storage facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT2272 Rack timber or round poles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has racked, according to a work order, one batch of one type of product selected from:

- round poles
- sawn boards
- dressed boards.

In performing this task, the individual has:

- followed workplace health and safety procedures for racking the product
- prepared, sorted and racked the product
- identified, separated and safely disposed of product with faults
- completed workplace records relevant to the work task.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of racking timber or round poles
- characteristics of a correctly assembled rack, which includes that timber or round poles racked have to be:
 - of similar grade, moisture content and drying characteristics
 - restrained and supported evenly along product full length and at both ends
 - spaced at regular intervals from product in adjacent rows
 - assembled with very even sides and ends so that the airflow into the rack from any direction is as regular as practical

- arranged so that the rack is rugged and its dimensions are optimised for integration with other fixed equipment
- techniques for racking timber or round poles
- industry standard diameters, lengths, cross-sections, tolerances, stress grades of timber or round poles product
- visual estimation techniques for length, diameter and cross-sections of timber or round poles product
- measurement techniques for length, diameter and cross-sections of timber or round poles product
- purpose and meaning of stress grade labels, colour identification marks, rack identification numbers and other tags used in timber or round poles production
- safe manual handling techniques related to racking timber or round poles
- purpose, features and operation of equipment used to rack timber or round poles
- requirements for quality and dimensions of bearers
- environmental protection requirements and practices for disposing of, recycling and reusing timber and other waste
- hazards and risks associated with timber or round poles racking operations
- workplace procedures related to racking timber or round poles, including:
 - health and safety, with particular emphasis on use of personal protective equipment (PPE) and safe manual handling
 - communication reporting lines
 - processes for reporting hazards and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, timber manufacturing plant, log yard facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment used to rack timber or round poles
 - PPE suitable for racking timber or round poles
 - quantities of timber or round poles to be racked
- specifications:
 - work order or instruction detailing racking activities to be carried out
 - workplace health and safety and environmental protection policies and/or procedures applicable to racking operations
 - workplace procedures for racking timber or round poles.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2273 Trim and cut felled trees

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit describes the skills and knowledge required to trim and cut felled trees with a chainsaw, and complete operator maintenance.

For the purpose of this unit of competency, a felled tree is any tree or part thereof, including, but not limited to, a tree trunk, branch or limb that has fallen or has been felled and is laying on the ground in a bushland, plantation, forested or other setting, including parkland, roadways and urban areas.

The unit applies to individuals who trim and cut felled trees as part of arboriculture, forestry, agriculture, conservation and land management, local government, emergency services and other government agency operations. With the exception of minor forest produce, this unit does not apply to commercial harvesting operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and industry codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
----------	----------------------

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for trimming and cutting felled trees	<p>1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate personnel</p> <p>1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with trimming and cutting felled trees</p> <p>1.4 Plan trimming and cutting activities according to work order or instruction and environmental conditions</p> <p>1.5 Consult and maintain communication with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Obtain tools and equipment needed for the work, and check for correct operation and safety</p> <p>1.7 Select, fit and use personal protective equipment</p>
2. Assess felled trees visually	<p>2.1 Inspect site for conditions likely to affect safe implementation of trimming and cutting activities</p> <p>2.2 Identify and report site environmental conditions to supervisor</p> <p>2.3 Assess felled tree visually to identify defects and stresses within felled tree</p> <p>2.4 Mark felled trees too dangerous to cut safely, and refer to appropriate personnel</p>
3. Plan cutting felled trees	<p>3.1 Move or stabilise felled tree for safe cutting according to workplace procedures</p> <p>3.2 Select cutting pattern to optimise time and ensure efficient removal of sections</p> <p>3.3 Identify options for utilisation of product</p> <p>3.4 Plan cutting sequence to maintain control of cut sections and minimise cutting problems</p> <p>3.5 Select cutting positions, considering felled tree stresses</p> <p>3.6 Clear debris from work area to allow safe access and prevent saw damage and personal injury</p>
4. Use chainsaw to trim and cut felled trees	<p>4.1 Monitor location and movement of other personnel, and modify work to ensure safety</p> <p>4.2 Establish and maintain communication with team members to ensure safety</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>4.3 Secure felled tree section on each side of planned cut as required, and evaluate and control potential movement</p> <p>4.4 Operate chainsaw to cut felled tree and limbs, and adjust cutting technique in response to movement and condition of felled tree and limbs</p> <p>4.5 Apply retrieval techniques for stuck, pinched or jammed part of chainsaws</p> <p>4.6 Prepare cut sections for removal from site</p>
5. Complete equipment maintenance	<p>5.1 Follow workplace health and safety procedures and manufacturer instructions to lock out equipment</p> <p>5.2 Check chain for bluntness or damage</p> <p>5.3 Remove, sharpen, adjust or replace chain and other components according to manufacturer recommendations</p> <p>5.4 Report trimming and cutting records, equipment faults and maintenance requirements to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine requirements
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Ask questions and actively listen to clarify contents of work plans

Assessment Requirements for FWPCOT2273 Trim and cut felled trees

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- assessed and planned trimming and cutting of one felled tree
- trimmed branches and cut sections of felled tree using all cuts listed below:
 - bridging cuts
 - swinging cuts
 - boring cuts
 - wedge cuts
 - ripping cuts
 - stagger or step cuts.

In performing this task, the individual has:

- followed workplace policies and procedures, current workplace health and safety legislation, regulations and related industry standards and codes of practice applicable to trimming and cutting felled tree operations
- checked and sharpened or changed a saw chain post trimming and cutting on one occasion according to manufacturer instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental protection measures suitable for a worksite where trimming and cutting operations are performed, including:
 - noise control
 - protection of flora, fauna and habitat

- protection of soil
- protection of water
- disposal, recycling and reuse of waste
- cleaning of plant, equipment and tools
- protection of adjacent land uses and fixed assets
- vehicle control
- access restrictions
- fire prevention
- protection of cultural heritage
- hazard control measures suitable for a worksite where trimming and cutting operations are performed, related to:
 - trees and other vegetation
 - ground conditions
 - noise
 - fire and other emergency situations
 - vehicle and traffic access
 - foot access
 - plant, tools and equipment
 - weather conditions
 - adjacent land uses
 - dangerous goods
- tree defects and how they affect tree cutting activities, including:
 - splits
 - falling damage
 - fire damage
 - insect infestation
 - pipe
 - shake
 - twist
 - knots and resin pockets
 - the presence of foreign bodies such as stakes and nails
- felled tree stresses and how they affect tree cutting activities, including:
 - tension (fibres being stretched)
 - compression (fibres being squashed)
 - neutral fibres
- chainsaw cutting techniques and associated hazards, including:
 - bridging cut
 - swinging cut
 - side bind cut
 - boring cut

- wedge cut
- ripping cut
- stagger or step cut
- cutting patterns used to optimise time and recovery of product from felled trees
- cutting sequences used to maintain control of cut sections and minimise cutting problems
- purpose and procedures for routine operator maintenance of chainsaws
- procedures used to free a pinched or stuck chainsaw
- methods for assessing chain condition
- workplace procedures specific to felled tree trimming and cutting activities, including:
 - workplace health and safety, with particular emphasis on equipment lock-out and use of personal protective equipment (PPE)
 - communication reporting lines
 - reporting felled tree cutting outcomes, equipment faults and maintenance requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - chainsaw and accessories
 - suitable felled trees to trim and cut
 - PPE required in trimming and cutting felled trees
 - communication system
- specifications:
 - access to workplace health and safety and environmental protection policies and/or procedures applicable to trimming and cutting operations and chainsaw use
 - access to workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT2275 Fell trees manually (basic)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to assess and fell basic trees manually using a chainsaw, and to complete routine operator chainsaw maintenance.

The unit applies to individuals who possess existing proficiency in operating a chainsaw and are required to fell basic trees as part of arboriculture, forestry, agriculture, conservation and land management, local government, emergency services and other government agency operations. With the exception of minor forest produce, this unit does not apply to commercial harvesting operations.

Trees typical to the scope of this unit may have some of the following characteristics:

- lean and where distribution of the crown weight does not create a complex situation to assess, place the cut or fall
- no excessive lean
- no visible damage or defect
- uniform in structure
- species that are not prone to free splitting and adverse reactions during felling
- single stem or non-complex multi-stems
- small or medium diameter that is not more than chainsaw bar length and can be safely felled using standard and basic felling techniques
- site characteristics that do not add significant complexity to the operation.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for felling	<p>1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate personnel</p> <p>1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task</p> <p>1.3 Identify hazards, assess risks, determine appropriate control measures and record findings to mitigate risks and hazards associated with felling basic trees by conducting a documented risk assessment according to workplace procedures</p> <p>1.4 Identify, assess and determine felling requirements of trees to be felled according to work order or instruction</p> <p>1.5 Consult and maintain communication with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Select, fit and use personal protective equipment</p> <p>1.7 Obtain tools and equipment needed for the work, and check for correct operation and safety</p>
2. Assess site conditions and surroundings	<p>2.1 Inspect site for conditions likely to affect safe implementation of felling activities</p> <p>2.2 Identify and report site environmental conditions to appropriate personnel</p> <p>2.3 Determine fall zone, and implement control measures to minimise risks and hazards in the zone according to safe work procedures</p> <p>2.4 Monitor location and activity of other personnel on worksite, and implement control measures according to workplace safety procedures</p>
3. Assess tree and plan felling	<p>3.1 Identify trees considered outside own skill level, and seek assistance from appropriate personnel where required</p> <p>3.2 Assess tree visually to identify felling characteristics, defects and stresses within tree</p> <p>3.3 Confirm that tree is safe to fell</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>3.4 Assess and check required felling direction and possible deviation</p> <p>3.5 Plan sequence of cuts to fell tree according to workplace felling procedures</p> <p>3.6 Identify suitable escape routes, and clear routes of growth and other obstacles according to environmental care, workplace and regulatory requirements</p>
4. Apply tree felling techniques	<p>4.1 Fell individual trees using selected cutting techniques according to current Australian Standards and industry codes of practice</p> <p>4.2 Adjust cutting technique in response to movement and condition of tree</p> <p>4.3 Use planned escape route when tree starts to fall, and monitor the fall of the tree until all movement has stopped</p> <p>4.4 Delay movement back into the felling area until all tree material, including material from adjacent tree crowns, has fallen or is stable enough to allow safe access back into felling area</p> <p>4.5 Report trees that are hung-up to appropriate personnel according to workplace procedures</p> <p>4.6 Dispose of waste materials according to workplace environmental protection practices and/or procedures</p>
5. Maintain chainsaw and cutting attachments	<p>5.1 Follow workplace health and safety procedures and manufacturer instructions to deactivate and isolate equipment</p> <p>5.2 Inspect chainsaw on completion of activities</p> <p>5.3 Inspect for damage to chainsaw and cutting attachments, and tag for repair, service or replacement according to workplace requirements and manufacturer recommendations</p> <p>5.4 Remove, clean, adjust, sharpen or replace chain and other components according to workplace requirements and manufacturer recommendations</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine requirements
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Select and use appropriate spoken communication strategies with work colleagues and other personnel on site when felling trees Interpret hand signals with other operators to ensure safe tree felling
Numeracy	<ul style="list-style-type: none"> Complete routine calculations and report on size, length and diameter of felled trees

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assessed, planned and conducted the felling of a minimum of three basic trees. In felling each tree, the individual has used a chainsaw with a bar length appropriate to the tree's diameter and made a standard scarf cut facing the direction of intended fall.

In performing this cut, the individual must have ensured that:

- the scarf cut includes a top cut angled at 30° to 45° and a depth of 1/4 to 1/3 of the tree diameter and a horizontal flat bottom cut that meets precisely with the lowest part of the top cut
- the back cut is parallel to and above the scarf line by 1/10 (or 10%) of the tree diameter
- a minimum 1/10 (or 10%) of the tree diameter remains uncut, leaving hinge wood.

In performing this cut, the individual must have also demonstrated, at least once, the application of the wedge technique to ensure that the tree falls in the direction intended by the scarf cut.

There must also be evidence that the individual has documented a risk assessment for at least one of the felled trees. This documentation must detail localised hazards and risks associated with tree felling and specify methods to minimise these risks.

In completing this work, the individual must demonstrate correct use of personal protective equipment and that, for each tree, the felling technique was consistent with current Australian Standards and industry codes of practice applicable to tree felling operations.

In addition, there must be evidence that, on at least one occasion, the individual has sharpened one chain, inspected and carried out routine maintenance on one chainsaw and its cutting attachments according to manufacturer requirements.

This work must comply with workplace policy and procedures and current workplace health and safety legislation and regulations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Australian Standards and codes of practice applicable to tree felling operations
- hazards and risks related to felling trees with chainsaws, and methods to minimise associated risks, including:
 - physical conditions of the site
 - unsafe/hazardous trees
 - fire and other emergency situations
 - overhead and underground services
 - nearby structures
 - standing vegetation in the intended direction of fall
 - falling branches
 - weather conditions
 - impediments of escape routes
 - vehicle and traffic access
 - people on or near worksite
 - machinery on or near worksite
 - carrying and transporting a chainsaw
 - user fatigue
- hazards related to maintaining chainsaws, and methods to minimise associated risks
- features of unsafe/hazardous basic trees and defects of trees and how they affect tree felling activities
- characteristics of basic trees
- methods used to identify basic trees:
 - that contain hazards and are deemed unsafe to fell
 - that are considered outside own skill level
 - where cuts made may lead to loss of control of tree in felling
- types and purposes of cuts to fell basic trees, including scarf cutting and back cutting using different methods to provide hinge wood and wedges to maintain control of tree
- methods for assessing chain condition
- types, safe use, operation and maintenance of chainsaws, support tools and attachments
- workplace procedures specific to felling trees with chainsaws, including:
 - workplace health and safety, with particular emphasis on deactivating and isolating equipment, use of personal protective equipment (PPE), safe manual handling and fire prevention measures
 - communication reporting lines
 - recording and reporting repairs, maintenance activities and equipment faults
- environmental protection requirements and practices that meet legal obligations and requirements of the industry, state and local standards and/or codes of practice for felling trees with chainsaws, including:

- protection of natural and cultural assets
- cleaning plant, tools and equipment
- disposing of, recycling and reusing materials
- disposing of hazardous substances.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - chainsaw and accessories
 - suitable trees to fell
 - PPE required in tree felling operations
 - communication system
- specifications:
 - workplace safety and environmental policies and/or procedures applicable to tree felling and chainsaw operations
 - site emergency procedure
 - workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3226 Assess timber for manufacturing potential

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assess timber for its manufacturing potential for frame or truss construction. It includes assessing timber for the ability to hold nail plates and retain engineered strength ratings.

The unit applies to timber fabricators or manufacturing assistants who take responsibility for organising and completing tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for assessing	1.1 Determine job requirements from work orders and identify type and quantity of material for processing, seeking clarification from appropriate person where required 1.2 Confirm safety and environmental requirements for the task according to workplace and environmental and safety procedures 1.3 Sequence stages for timber assessment and movement of materials

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	to maximise production outputs 1.4 Access storage area and select materials according to work order requirements
2. Assess timber	2.1 Assess timber visually and evaluate characteristics and defects against industry and Australian Standards to determine manufacturing potential 2.2 Measure sectional sizes and lengths of materials according to job specifications 2.3 Separate materials unsuitable for plating or sawing according to assessment 2.4 Orientate timber components to optimise use of characteristics
3. Distribute material	3.1 Organise movement of material for processing operations according to workplace procedures 3.2 Label material using numerical grades according to workplace procedures 3.3 Monitor on-site movement of material to ensure intended work flow is achieved 3.4 Recycle unsuitable timber for plating to minimise wastage, and relocate to storage area 3.5 Dispose of defective material according to workplace environmental policies and procedures 3.6 Record assessment outcomes and distribution problems, and report to appropriate person

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret information from industry standards to determine manufacturing potential of various timber characteristics

Skill	Description
Writing	<ul style="list-style-type: none"> Structure simple assessment reports using appropriate concise vocabulary
Oral communication	<ul style="list-style-type: none"> Ask questions and actively listen to confirm work orders or instructions

Assessment Requirements for FWPCOT3226 Assess timber for manufacturing potential

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has visually assessed at least three different types of timber for manufacturing potential for one timber wall frame and one timber roof or floor truss project, and has:

- used at least two of the following tools in assessments:
 - charts
 - gauges
 - picture cards
 - measuring equipment
- completed an assessment report for each project, identifying timber characteristics, defects and impacts on nail plate holding ability.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- guidelines, codes and standards for provisions of relevant engineered strength ratings and timber ability to hold nail plates
- workplace policies and procedures relating to timber assessment:
 - labelling of assessed timber products
 - lines of communicating and reporting
 - reporting and recording outcomes
 - orientating components to make best use of timber characteristics
- workplace safety and environmental procedures for undertaking timber assessment and disposal of defective timber products
- characteristics, properties and limitations of potential timber products for manufacturing

- defects of hardwoods and softwoods timber products and impacts on nail plate holding ability:
 - wane/want and collapse
 - bow, spring and twist
 - cupping and other distortion
 - knots and knot holes
 - borer damage
 - gum/resin veins and pockets
 - decay
 - end splits, internal checks and surface checks
 - low density material
 - compression failures and fractures
 - durability
 - heart in material
 - joint strength
- industry standard timber species and materials and nail plate holding ability:
 - native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - preservative treated timber
 - laminated veneer coated and treated timber products
- beams or laminated beams
- industry standard lengths, cross sections and grades, and impact on nail plate holding ability
- timber visual assessment techniques
- tools used to assess timber products:
 - charts
 - gauges
 - picture cards
 - measuring equipment
- industry terminology relating to assessing timber for manufacturing potential.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber fabrication workplace or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - tools to assess timber for manufacturing potential
 - at least three different types of timber to be assessed
- specifications:
 - access to work orders and standards and codes of practice related to assessing timber for manufacturing potential
 - access to workplace safety and environmental policies and procedures applicable to assessing timber in a fabrication workplace

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3234 Cut material using CNC sizing machines

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent FPICOT3234B Cut material using CNC sizing machines, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Application

This unit of competency describes the skills and knowledge required to set up and operate computer numerical control (CNC) sizing machines to achieve accurate dimensional cuts of engineered wood products and timber components in a manufacturing facility. Work also involves operator maintenance.

The unit applies to individuals who work as production workers, engineered timber products technicians, machine operators or timber fabricators. Operators generally work under broad or limited direction to complete routine activities related to their own work, and take responsibility for their work.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Common Technical

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for cutting engineered wood product or timber	<p>1.1 Review work order, specifications, workplace health and safety requirements, environmental protection practices and emergency procedures for CNC cutting operations and, where required, check with appropriate personnel</p> <p>1.2 Identify and report hazards and use personal protective equipment according to workplace requirements and health and safety legislation to maintain safe work practices</p> <p>1.3 Obtain the type and quantity of material to be cut from a storage location</p>
2. Set up the CNC sizing machine	<p>2.1 Set CNC optimising program to meet work specifications</p> <p>2.2 Check the CNC cutting machine mechanisms, emergency stops, gauges, guards and controls for safe and effective operation</p> <p>2.3 Adjust the CNC cutting machine settings according to work specifications</p> <p>2.4 Complete trial run to check system and machine operation for accuracy, quality and dimensions of finished work</p> <p>2.5 Accept or reject trialled material and dispose of according to environmental protection practices</p> <p>2.6 Complete final adjustments to CNC optimising program, cutting tools and equipment</p>
3. Operate the CNC sizing machine	<p>3.1 Use the CNC sizing machine, cutting tools and equipment according to workplace health and safety procedures, manufacturer instructions, operating capacity and purpose and environmental protection practices</p> <p>3.2 Feed engineered wood product or timber into the CNC machine, operate cutting tools according to tooling requirements and regularly monitor to minimise waste and ensure correct dimensions are produced</p> <p>3.3 Repair or dispose of incorrect cuts, off-cuts and material with defects according to environmental protection practices</p> <p>3.4 Identify routine processing problems and resolve or report to appropriate personnel</p>
4. Complete operator maintenance	4.1 Lock out the CNC sizing machine according to workplace health and safety procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.2 Check blades for bluntness or damage 4.3 Remove and replace blades according to manufacturer recommendations 4.4 Dispose of used blades according to environmental protection practices 4.5 Keep machine clear of dust and debris according to organisational safety procedures 4.6 Record and report production outcomes, machine and equipment faults and maintenance requirements to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Identify quantities of required material within work orders, and count numbers to be cut Set numerical data on CNC optimising program according to sizing specifications Calculate the feed rate to optimise quality and quantity of production output Measure finished dimensions against specifications and allowable tolerances
Navigate the world of work	<ul style="list-style-type: none"> Understand main tasks, responsibilities and boundaries of own role
Interact with others	<ul style="list-style-type: none"> Use modes of communication suitable for the purpose to confirm and clarify understanding
Get the work done	<ul style="list-style-type: none"> Recognise and respond to routine problems

Assessment Requirements for FWPCOT3234 Cut material using CNC sizing machines

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 4.0.
Release 1	This version replaces equivalent FPICOT3234B Cut material using CNC sizing machines, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- followed organisational workplace health and safety requirements and environmental protection procedures for cutting engineered wood product or timber using one or both of the following types of computer numerical control (CNC) sizing machines:
 - CNC beam saw
 - CNC double end profiling machine
- set computer programs for the CNC sizing machines according to work specifications
- cut one or more of the following types of engineered wood product or timber using the CNC sizing machines according to work specifications, manufacturer recommendations and within prescribed organisational tolerances:
 - glued laminated beams (glulam)
 - cross-laminated timber (CLT)
 - laminated veneer
 - chipboard
 - medium density fibreboard
 - dressed timber
 - preservative treated timber
- conducted operator maintenance on the CNC sizing machines, cutting tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to operating CNC sizing machines for cutting engineered wood products or timber as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace policies and procedures specific to cutting material using CNC sizing machines:
 - health and safety, with particular emphasis on equipment lockout and the use of personal protective equipment (PPE)
 - use of CNC sizing machines, cutting tools and equipment
 - communication reporting lines
 - recording and reporting production outcomes, machine and equipment faults and maintenance requirements
- environmental protection practices for manufacturing facilities:
 - reducing water and energy use
 - cleaning plant, cutting tools and equipment
 - disposing of, recycling and reusing timber and other waste
- range of cutting patterns used with CNC sizing machines to achieve accurate dimensions and quality of the finished product
- characteristics of timber, timber products and timber defects
- system functions and capabilities of CNC software for sizing machines, including cutting patterns and sequences
- purpose, features and operation of CNC sizing machines:
 - CNC beam saws
 - CNC double end profiling machines
- methods for assessing saw blade condition.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - one or both types of CNC sizing machines
 - computer program for sizing machines
 - maintenance tools for CNC sizing operations
 - saw blades suitable for CNC sizing machines
 - PPE suitable for cutting material using CNC sizing machines

- engineered wood product or timber suitable for cutting operations using CNC sizing machines
- CNC program suitable for the cutting operations
- specifications:
 - manufacturer instructions for use and maintenance of equipment
 - work order with specific instructions for cutting material using CNC sizing machines
 - workplace policies and procedures for cutting material using CNC sizing machines, including health and safety and emergency procedures and environmental protection procedures
 - template documents for recording production outcomes, equipment faults and maintenance requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3271 Hand sharpen knives and blades for commercial and domestic cutting services

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to hand sharpen knives and blades using files and grinders for a range of commercial and domestic services that use hand drill bits, hand chainsaw, scissors, wood chisels, garden tools and other cutting tools.

The unit applies to individuals who sharpen machine knives and blades in a saw technician workshop or sawmill facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3271 Hand sharpen knives and blades for commercial and domestic cutting services

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- prepared for hand sharpening of knives or blades
- safely and effectively hand sharpened knives or blades using powered and manual sharpening equipment
- removed and replaced knives or blades from designated machinery
- recorded and reported workplace activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations, standards, codes of practice and established safe practices for hand sharpening knives and blades
- geometry of knives and blades, including the pitch and angle that a knife or blade is sharpened at, allowing for the device that the knife or blade is in and the material to be cut
- defects in the cutting edges of knives and blades:
 - burrs
 - burns
 - chips
 - splits
 - dents
- characteristics of different types of metal knives and blades:
 - drill bits
 - hand chainsaw

- clipper blades
- gardening tools
- scissors
- wood chisels
- mincer blades
- shears
- other cutting equipment types with knives or blades
- sharpening methods and geometry:
 - pitch
 - depth of cut
 - speed the knife or blade is sharpened at to obtain a sharp edge
- basic knowledge of physics of knives or blades, including:
 - blade material and properties
 - impact of material-to-be-cut properties on knives or blades
 - direction of cut
 - forces on a knife or blade
 - heat removal when relevant
 - knife or blade configuration
- types, safe use and maintenance of manual sharpening equipment:
 - power-driven sharpening equipment with procedures for safe use and lock-out
 - files (round, triangular, square and flat)
 - honing tools
 - saw sets
- risks and hazards associated with hand sharpening knives and blades
- workplace procedures for hand sharpening knives and blades:
 - workplace health and safety with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling techniques
 - recording and reporting production outcomes and equipment faults
 - communication channels and protocols
- environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a saw technician workshop, a sawmill facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - PPE suitable for hand sharpening knives and blades

- equipment from which knives and blades are to be removed for inspection and sharpening
- knives and blades to be hand sharpened
- power-driven sharpening equipment with procedures for safe use and lock-out
- files (round, triangular, square and flat)
- honing tools
- saw sets
- specifications:
 - manufacturer instructions for use, repair and maintenance of equipment
 - work order with specific instructions for hand sharpening knives and blades
 - workplace procedures for sharpening knives and blades.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3272 Set up and run multi-head moulder/planer to produce simple profiles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to set up and run a computer numerically controlled (CNC) or semi-automated multi-head moulder/planer to produce timber with simple profiles such as DAR (dressed all round) boards, either with a square edge or pencil round edge, or skip-dressed boards.

The unit applies to individuals who set up and run multi-head moulders/planers in a timber processing or manufacturing facility to produce timber with simple profiles.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3272 Set up and run multi-head moulder/planer to produce simple profiles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- set up and run a multi-head moulder/planer to produce timber with any of the following simple profiles:
 - dressed all round (DAR) boards, either with a square edge or pencil round edge
 - skip-dressed boards
- in doing the above job:
 - followed work order and relevant workplace health and safety and environmental protection procedures
 - selected and fitted cutter heads for a profile specified in a work order
 - calibrated the moulder/planer to ensure output timber conforms to the required profile
 - run the moulder/planer
 - completed workplace reports on set-up, calibration and production activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features, operating parameters, components and operation of multi-head moulders/planers
- equipment used in setting up and running multi-head moulders/planers
- types of cutters used to produce simple profiles
- types and applications of simple profiles:
 - DAR timber boards, either with a square edge or pencil round edge
 - skip-dressed timber boards
- cutter head damage and defects:

- types
- effects
- corrective actions
- multi-head moulder/planer machine components:
 - cutters
 - fences
 - guides
 - bed plates
 - rollers
 - beam
- variables impacting on the finished quality of machined timber:
 - machine variables, including cutting speed, cutter pitch, feed speed, cutting angles, cutter sharpness
 - timber variables, including moisture content, grade, age, species
- feed rates and how they affect production output and finished quality of timber boards
- methods for calculating feed speed
- factors that impact on the selection of feed speed:
 - size
 - profile
 - species
- typical timber defects and how these impact on the quality of finished product:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- industry standard profiles, lengths, cross-sections and tolerances and applicable terminology
- cutting patterns used on boards to achieve maximum volume recovery
- methods for assessing cutter condition
- types of risk and hazards and mitigation measures associated with dressing boards using multi-head moulders/planers
- workplace procedures specific to dressing boards using multi-head moulders/planers:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling techniques
 - communication reporting lines
 - recording and reporting production outcomes, equipment faults and maintenance requirements
 - environment protection legislation relating to sawmill operations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - multi-head moulder/planer
 - cutters for simple profiles
 - tools for setting up and calibrating multi-head moulders/planers
 - PPE suitable for setting up and running multi-head moulders/planers
- specifications:
 - template documents for recording outcomes of setting up and running multi-head moulders/planers
 - manufacturer instructions for setting up and running multi-head moulders/planers
 - work order with specific instructions for setting up and running multi-head moulders/planers
 - workplace procedures for setting up and running multi-head moulders/planers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3273 Set up and run multi-head moulder to produce complex profiles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to set up and run a computer numerically controlled (CNC) or semi-automated multi-head moulder in a sawmill to produce timber with complex profiles such as tongue and groove flooring, lining board, shiplap, joinery profiles and other detailed mouldings.

The unit applies to individuals who set up and run multi-head moulders in a sawmill to produce timber with complex profiles.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

FWPCOT3274 Cut timber products using high-speed optimiser

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to prepare and cut timber products to differing lengths and angles using computer numerical control (CNC) optimising docking and trimming saws.

The unit applies to individuals who cut timber products using a high-speed optimiser in a timber processing or timber product manufacturing plant.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3274 Cut timber products using high-speed optimiser

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- cut three or more of the following timber products using a high-speed optimiser, according to work order:
 - laminated veneer timber
 - plywood
 - chipboard
 - medium density fibreboard
 - dressed timber
 - preservative treated timber
 - finger jointed timber
- in doing the above job, the individual has:
 - read and clarified work order
 - followed relevant workplace health and safety and environmental protection procedures
 - prepared computer numerical control (CNC) optimising saw for cutting timber product at a specified length and angle
 - identified cutting pattern
 - set optimising software program
 - operated machine and equipment according to manufacturer procedures
 - monitored production output and quality
 - performed operator maintenance.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- features, programming and operation of CNC optimising docking and trimming saws
- range of cutting patterns used with CNC optimising saws to achieve maximum output of timber product
- range of industry standard lengths, cross-sections and tolerances for relevant timber products and applicable terminology
- methods for assessing saw blade condition
- methods of monitoring production output and quality
- types of risk and hazards and mitigation measures associated with cutting timber products using high-speed optimisers
- workplace procedures specific to cutting timber products using high-speed optimisers:
 - workplace health and safety, with particular emphasis on equipment lock-out and use of personal protective equipment (PPE)
 - communication reporting lines
 - recording and reporting production outcomes, equipment faults and maintenance requirements
- environmental protection practices for timber processing or wood product manufacturing plants:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing timber and other waste.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a wood product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - CNC optimising docking and trimming saws
 - a computer program for optimising saws
 - maintenance tools and equipment for optimising saws
 - consumable saw blades
 - PPE suitable for cutting timber using high-speed optimisers
 - three or more of the following types of timber products: laminated veneer timber, plywood, chipboard, medium density fibreboard, dressed timber, preservative treated timber, finger jointed timber
- specifications:

- template documents for recording production outcomes, equipment faults and maintenance requirements
- manufacturer instructions for use and maintenance of equipment
- work order with specific instructions for cutting material using high-speed optimisers
- workplace procedures for cutting material using high-speed optimisers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3275 Set up, operate and maintain end matching machines

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to coordinate operational logistics for end matching activities that include planning schedules for operators, setting up equipment for production runs, resolving processing problems and coordinating equipment shut-down and maintenance.

The unit applies to individuals who set up, operate and maintain end matching operations in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

- completed production records
- coordinated shut-down and maintenance of end matching machine and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- operational capacity of end matching machine and equipment
- typical workflow processes for end matching operations
- methods of determining end matching schedules to maximise equipment, labour and material use
- format, content and use of end matching schedules
- monitoring processes for end matching machines and overall production process
- typical processing and equipment faults and solutions for minimal production disruption

- range of industry standard cross-sections for end matched timber products, their strength, tolerances and applicable terminology
- purpose, features, operation and maintenance requirements of equipment used to produce end matched products, including:
 - guides
 - cutters
 - conveyors
- types of risk and hazards and mitigation measures associated with end matching operations
- workplace procedures specific to coordinating end matching operations:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling techniques
 - use of end matching machine and equipment
 - communication reporting lines for operator team members and self
 - documenting and communicating end matching schedules
 - recording and reporting production outcomes and maintenance schedules
- environmental protection practices for timber processing or manufacturing facilities:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing timber and other waste.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - end matching equipment and associated repair and maintenance tools
 - computers, keyboards, printers and software to prepare end matching schedules and maintenance documents
 - PPE suitable for end matching operations
 - a diverse range of commercial timber
- specifications:
 - template documents for end matching schedules, production reports and maintenance reports
 - production orders with specific information about grades, quantities and cross-sections for specified end matched timber products
 - maintenance schedule for end matching equipment
 - workplace procedures for coordinating end matching operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3276 Sharpen cutters using a straight knife grinder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to sharpen cutters using a straight knife grinder.

The unit applies to individuals who sharpen cutters on a straight knife grinder for use on a moulder/planer to produce timber with simple profiles such as DAR (dressed all round) boards, either with a square edge or pencil round edge, or skip-dressed boards. Straight cutters are also used on veneer cutting machines and chippers.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	1.1 Review work order to determine job requirements and, where required, seek clarification from appropriate personnel 1.2 Review workplace health and safety procedures, including the use

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>of personal protective equipment, equipment lock-out and safe manual handling techniques</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with sharpening cutters using a straight knife grinder</p> <p>1.4 Identify workplace environmental protection procedures for minimising and disposing of waste material, cleaning tools and equipment, and maximising energy efficiency</p> <p>1.5 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Obtain tools, equipment and testing devices needed for the work and check for correct operation and safety</p>
2. Clean and check cutters before sharpening	<p>2.1 Clean cutters according to workplace procedures</p> <p>2.2 Check cutters for faults and take remedial action according to workplace procedures</p> <p>2.3 Match cutters in pairs for dimension, shape and weight, and mark according to workplace procedures</p>
3. Prepare grinder	<p>3.1 Clean grinder and work area according to workplace procedures</p> <p>3.2 Select grinding wheel and grinding speed according to workplace procedures</p> <p>3.3 Check grinding wheel for faults and take remedial action according to workplace procedures</p> <p>3.4 Fit grinding wheel and check grinder operation according to manufacturer and workplace procedures</p> <p>3.5 Check and dress grinding wheel according to manufacturer and workplace procedures</p>
4. Mount cutters and adjust grinder	<p>4.1 Set cutters in grinder according to manufacturer procedures</p> <p>4.2 Set grinding angle according to manufacturer and workplace procedures</p> <p>4.3 Adjust clearance between grinding wheel and cutters according to manufacturer specifications</p> <p>4.4 Set wheel advance according to manufacturer specifications</p> <p>4.5 Set traversing stops according to manufacturer specifications</p> <p>4.6 Check and top up coolant level according to manufacturer specifications</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
5. Sharpen cutters	<p>5.1 Clean and lubricate grinder as required, according to manufacturer specifications</p> <p>5.2 Select and fit correct grinding wheel and set angles according to manufacturer specifications</p> <p>5.3 Mount cutters for grinding according to manufacturer specifications</p> <p>5.4 Check operation of grinder for problems after the first pass according to workplace procedures</p> <p>5.5 Maintain coolant flow rate and cleanliness during wet grinding according to workplace procedures</p> <p>5.6 Sharpen cutter edges to the specified angle according to workplace procedures</p> <p>5.7 Ground cutter edges to a constant straight line according to workplace procedures</p> <p>5.8 Hone cutters and remove burrs according to workplace procedures</p> <p>5.9 Clean grinder after sharpening according to workplace procedures</p>
6. Check and store sharpened cutters	<p>6.1 Check cutter repairs and re-ground where required according to workplace procedures</p> <p>6.2 Set up balancing equipment according to manufacturer specifications</p> <p>6.3 Measure cutter weight and take remedial action when excess weight is detected according to workplace procedures</p> <p>6.4 Store cutters in matched pairs or sets according to workplace procedures</p> <p>6.5 Record and report work outcomes, equipment faults and maintenance requirements to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for FWPCOT3276 Sharpen cutters using a straight knife grinder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has sharpened cutters using a straight knife grinder and has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- cleaned and checked cutters prior to sharpening
- prepared the grinder
- mounted the cutters and adjusted the grinder
- checked and stored the sharpened cutters'
- completed workplace reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features, operating parameters, components and operation of straight knife grinders used to sharpen cutters
- equipment used in setting up and running straight knife grinders
- types of cutters used to produce simple profiles
- types, effects and remedial action for dealing with cutters faults:
 - warp
 - cracks
 - chips
 - burns
 - delamination
 - raised spots
- types, effects and remedial action for dealing with grinding wheel faults:

- cracks
- clogging
- effects of incorrect set-up of coolant flow, traversing stops, traversing speed, wheel advance, grinding angle
- problems associated with operation of grinder:
 - burning
 - incorrect grinding angle
 - incorrect cutter set-up
- defects in cutter edges after sharpening:
 - burning
 - chipping
- procedures for:
 - checking and cleaning cutters prior to sharpening
 - preparing grinder
 - mounting cutters in grinder
 - sharpening cutters
 - storing cutters
- types and applications of simple profiles:
 - dressed all round (DAR) boards, either with a square edge or pencil round edge
 - skip-dressed boards
- types and effects of hazards and control measures associated with using grinders:
 - grinding wheel disintegration
 - loose grinding wheel
 - exposure to grinding coolant
- workplace procedures specific to using straight knife grinders:
 - workplace health and safety, with particular emphasis on equipment lock-out, isolation procedures, machine guarding and use of personal protective equipment (PPE)
 - communication reporting lines
 - recording and reporting production outcomes, equipment faults and maintenance requirements
 - environment protection legislation relating to sawmill operations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - straight knife grinder
 - cutters for simple profiles

- tools for setting up straight knife grinder
- PPE for sharpening cutters using a straight knife grinder
- cutters
- lubricant
- coolant
- specifications:
 - template documents for recording work outcomes, equipment faults and maintenance requirements
 - manufacturer instructions for sharpening cutters using a straight knife grinder
 - work order with specific instructions for sharpening cutters using a straight knife grinder
 - workplace procedures for sharpening cutters using a straight knife grinder.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3277 Sharpen cutters in head using a profile knife grinder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to sharpen cutters in head using a profile knife grinder.

The unit applies to individuals who sharpen cutters in head on a profile knife grinder for use on a moulder in a timber processing facility to produce timber with complex profiles such as tongue and groove flooring, lining board, shiplap, joinery profiles and other detailed mouldings.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3277 Sharpen cutters in head using a profile knife grinder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has sharpened cutters in head using a profile knife grinder and has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- selected template that met profile requirements
- cleaned and checked cutters and cutter head before sharpening
- prepared the grinder
- mounted and adjusted cutter head and template in the grinder
- stored cutter head after sharpening
- completed workplace reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features, operating parameters, components and operation of profile knife grinders used to sharpen cutters in head
- equipment used in setting up and running profile knife grinders
- purpose of template and specifications
- components of cutter head
- types of cutters used to produce complex profiles
- types, effects and remedial action for dealing with cutter and cutter head faults:
 - warp
 - cracks
 - chips
 - burns

- delamination
- raised spots
- types of grinder wheels for sharpening various cutter profiles
- types, effects and remedial action for dealing with grinding wheel faults:
 - cracks
 - clogging
- effects of an incorrect set-up of coolant flow, traversing stops, traversing speed, wheel advance, grinding angle
- problems associated with the operation of grinder:
 - burning
 - incorrect grinding angle
 - incorrect cutter set-up
- defects in cutter edges after sharpening:
 - burning
 - chipping
 - grinding marks
- procedures for:
 - cleaning cutters and cutter head
 - preparing grinder
 - mounting and adjusting cutter head and template in the grinder
 - grinding and honing cutters in head
 - storing cutter head
- cutting angles for specific wood species and desired finish
- tolerances for concentricity and weight
- types and applications of complex profiles:
 - tongue and groove flooring
 - lining board
 - shiplap
 - joinery profiles and other detailed mouldings
- types and effects of hazards and control measure associated with using grinders:
 - grinding wheel disintegration
 - loose grinding wheel
 - exposure to grinding coolant
- workplace procedures specific to using profile knife grinders:
 - workplace health and safety, with particular emphasis on equipment lock-out, isolation procedures, machine guarding and use of personal protective equipment (PPE)
 - communication reporting lines
 - recording and reporting production outcomes, equipment faults and maintenance requirements
 - environment protection legislation relating to sawmill operations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - profile knife grinder
 - cutters in head for complex profiles
 - tools for setting up profile knife grinder
 - PPE for sharpening cutters in head using a profile knife grinder
 - coolant
- specifications:
 - template documents for recording work outcomes, equipment faults and maintenance requirements
 - manufacturer instructions for sharpening cutters in head using a profile knife grinder
 - work order with specific instructions for sharpening cutters in head using a profile knife grinder
 - workplace procedures for sharpening cutters in head using a profile knife grinder.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT3278 Sharpen cutters in head using a straight knife grinder

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 6.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has sharpened cutters in head using a straight knife grinder and has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- cleaned and checked cutter head prior to sharpening
- prepared the grinder
- mounted and adjusted cutter head in grinder
- stored cutter head after sharpening
- completed workplace reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features, operating parameters, components and operation of straight knife grinders used to sharpen cutters in head
- equipment used in setting up and running straight knife grinders
- components of cutter head
- types of cutters used to produce simple profiles
- types, effects and remedial action for dealing with cutter and cutter head faults:
 - warp
 - cracks
 - chips

- burns
- delamination
- raised spots
- types, effects and remedial action for dealing with grinding wheel faults:
 - cracks
 - clogging
- effects of incorrect set-up of coolant flow, traversing stops, traversing speed, wheel advance, grinding angle
- problems associated with operation of grinder:
 - burning
 - incorrect grinding angle
 - incorrect cutter set-up
- defects in cutter edges after sharpening:
 - burning
 - chipping
 - grinding marks
- procedures for:
 - cleaning cutter head
 - preparing grinder
 - mounting and adjusting cutter head in grinder
 - grinding and honing cutters in-head
 - storing cutter head
- tolerances for concentricity and weight
- types and applications of simple profiles:
 - dressed all round (DAR) boards, either with a square edge or pencil round edge
 - skip-dressed boards
- types and effects of hazards and control measures associated with using grinders:
 - grinding wheel disintegration
 - loose grinding wheel
 - exposure to grinding coolant
- workplace procedures specific to using straight knife grinders:
 - workplace health and safety, with particular emphasis on equipment lock-out, isolation procedures, machine guarding and use of personal protective equipment (PPE)
 - communication reporting lines
 - recording and reporting production outcomes, equipment faults and maintenance requirements
 - environmental protection legislation relating to sawmill operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - straight knife grinder
 - cutters in head for simple profiles
 - tools for setting up straight knife grinder
 - PPE for sharpening cutters in head using a straight knife grinder
 - cutters
 - lubricant
 - coolant
- specifications:
 - template documents for recording work outcomes, equipment faults and maintenance requirements
 - manufacturer instructions for sharpening cutters in head using a straight knife grinder
 - work order with specific instructions for sharpening cutters in head using a straight knife grinder
 - workplace procedures for sharpening cutters in head using a straight knife grinder.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3279 Assess and maintain saw technology tools

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to assess and maintain straight edges, hammers, measuring equipment, back gauges and tension gauges.

The unit applies to individuals who maintain saw technology tools in a timber products manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for maintenance	<p>1.1 Review work order to determine job requirements and, where required, seek clarification from appropriate personnel</p> <p>1.2 Review workplace health and safety procedures, including the use of personal protective equipment, equipment lock-out and safe manual</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>handling techniques</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with maintaining saw technology tools</p> <p>1.4 Identify workplace environmental protection procedures for minimising and disposing of waste material, cleaning tools and equipment, and maximising energy efficiency</p> <p>1.5 Select appropriate repair and maintenance tools and equipment, and check for operational effectiveness</p> <p>1.6 Plan maintenance process according to work order</p>
2. Maintain straight edge	<p>2.1 Assess straight edge damage and wear and select appropriate maintenance method</p> <p>2.2 Determine correct work angle for resurfacing or removal of wear</p> <p>2.3 Clamp straight edge at correct angle to prevent movement, vibration and slippage during the resurfacing process</p> <p>2.4 Inspect abrasive wheel or cutting tool, clean or change as required to suit work material removal, tolerance and surface texture requirements</p> <p>2.5 Grind, machine or file straight edge to remove distortions and maintain edge straightness and flatness without overheating or causing distortion</p> <p>2.6 Remove all signs of wear or damage from reference surfaces</p> <p>2.7 Clean straight edge and de-bur edges</p> <p>2.8 Dispose of distorted straight edge according to environmental protection practices</p> <p>2.9 Record and report maintenance activities to appropriate personnel</p>
3. Maintain tension gauges	<p>3.1 Select grinder or other safe and appropriate method for maintaining tension gauges according to workplace procedures</p> <p>3.2 Set grinder to produce required radius or circle diameter for the tension gauge</p> <p>3.3 Position tension gauge and clamp in grinder securely, ensuring cord height is central to gauge length and arc is ground square to plane of the gauge body</p> <p>3.4 Inspect grinding wheel and dress and change to suit work, material and required tolerance</p> <p>3.5 Grind gauge to required accuracy and profile until all visible edge</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>and face wear is removed</p> <p>3.6 Select and monitor grinding speed and feed rates to avoid overheating, distortion and burn marks</p> <p>3.7 Dispose of tension gauges distorted during the process according to environmental protection practices</p> <p>3.8 Record and report maintenance activities to appropriate personnel</p>
4. Maintain measuring equipment	<p>4.1 Access information required for maintenance or measuring equipment from manufacturer manuals</p> <p>4.2 Check and calibrate measuring equipment against manufacturer specifications</p> <p>4.3 Tag and remove from service faulty measuring equipment according to workplace procedures</p> <p>4.4 Clean and store measuring equipment according to workplace and equipment manufacturer specifications</p> <p>4.5 Record and report maintenance activities to appropriate personnel</p>
5. Maintain hammers	<p>5.1 Clean hammers according to manufacturer instructions</p> <p>5.2 Assess condition of hammers according to workplace and manufacturer procedures</p> <p>5.3 Grind and resurface worn hammers</p> <p>5.4 Remove unserviceable hammers from service, and replace according to workplace procedures</p> <p>5.5 Record and report maintenance activities to appropriate personnel</p>
6. Maintain back gauges	<p>6.1 Maintain back gauges according to manufacturer instructions</p> <p>6.2 Tag and remove from service damaged or worn back gauges</p> <p>6.3 Clean and store back gauges according to workplace procedures</p> <p>6.4 Record and report maintenance activities to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Extracts key information from operational manuals to determine safe operating procedures for equipment
Writing	<ul style="list-style-type: none"> Prepares routine written reports using required format, language and structure
Oral communication	<ul style="list-style-type: none"> Employs active listening and questioning to clarify content of work orders
Numeracy	<ul style="list-style-type: none"> Reads basic numeric setting on grinding wheels Estimates speeds to suit straight edge and tension gauge requirements Uses standard units of measurement for speed Interprets tension gauge markings
Navigate the world of work	<ul style="list-style-type: none"> Understands main tasks, responsibilities and boundaries of own role
Interact with others	<ul style="list-style-type: none"> Uses modes of communication suitable to purpose to confirm and clarify understanding
Get the work done	<ul style="list-style-type: none"> Recognises and responds to routine problems

Assessment Requirements for FWPCOT3279 Assess and maintain saw technology tools

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- assessed the condition of and maintained each of the following saw technology tools:
 - straight edges
 - hammers
 - measuring equipment
 - back gauges
 - tension gauges
- in doing the above job:
 - read and clarified a work order for assessing the condition and maintaining saw technology tools
 - followed work order and relevant workplace health and safety and environmental protection procedures
 - prepared for maintenance activities
 - maintained a straight edge
 - maintained a tension gauge
 - ground and resurfaced a hammer
 - maintained measuring equipment
 - maintained back gauge
 - completed workplace reports on maintenance activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of tools and equipment used to maintain saw technology tools:
 - grinding machines
 - grinding machine attachments
 - abrasive grinding wheels
- types, purpose, features and use of:
 - straight edges
 - hammers including doghead, twist face, cross face, combination
 - measuring equipment including micrometers, vernier callipers, feeler gauge, pressure gauge, setting gauge
 - back gauges
 - tension gauges
- methods for:
 - assessing condition of straight edges and tension gauges
 - selecting appropriate grinding wheels
 - selecting and preparing appropriate straight edge/tension gauge material
 - maintaining straight edges, back gauges and tension gauges to specified requirements
 - maintaining measuring equipment
 - grinding and resurfacing hammers
- angles at which straight edges and tension gauges are ground
- range of speeds at which abrasive wheels can be operated without damaging materials being processed
- types of risk and hazards and mitigation measures associated with maintaining saw technology tools
- workplace procedures specific to maintaining saw technology tools:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling
 - communication reporting lines
 - recording and reporting processing problems and equipment faults
- environmental protection practices for repairing and maintaining saw technology tools:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a saw technician workshop, a sawmill or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- grinding machines
- grinding machine attachments
- abrasive grinding wheels with suitable characteristics
- hand files
- oil stones
- straight edges, back gauges, hammers, measuring equipment and tension gauges
- PPE suitable for repairing and maintaining saw technology tools
- specifications:
 - template documents for recording maintenance activities
 - manufacturer instructions for use, repair and maintenance of equipment
 - work order with specific instructions for maintaining saw technology tools
 - organisational procedures for maintaining saw technology tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3280 Replace saw blades, knives and guides

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to remove blunt or damaged saw blades, knives and guides from circular saws, band saws, chippers and canters, and install reconditioned cutting components.

The unit applies to individuals who replace saw blades, knives and guides in saws, chippers and canters in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for replacement	1.1 Review work order to determine job requirements and, where required, seek clarification from appropriate personnel 1.2 Review workplace health and safety procedures, including the use

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>of personal protective equipment, equipment lock-out and safe manual handling techniques</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with replacing saw blades, knives, and guides</p> <p>1.4 Identify workplace environmental protection procedures for minimising and disposing of waste material, cleaning tools and equipment, and maximising energy efficiency</p> <p>1.5 Select appropriate repair and maintenance tools and equipment, including lifting equipment if required, and check for operational effectiveness</p> <p>1.6 Select replacement saw blades, knives and guides according to manufacturer recommendations</p> <p>1.7 Transport saw blades, knives and guides for replacement to designated machines, using mechanical lifting aids as required</p>
2. Replace saws, blades and guides	<p>2.1 Lock out machine and equipment according to workplace procedures, and remove mechanical and safety components to provide access to saw blades, knives and guides without damaging components</p> <p>2.2 Store removed components temporarily in a safe location</p> <p>2.3 Remove and replace saw blades, knives and guides according to manufacturer recommendations</p> <p>2.4 Re-attach and secure mechanical and safety components according to manufacturer recommendations</p> <p>2.5 Check serviced machine and equipment for correct alignment, position and overall free operational performance</p> <p>2.6 Dispose of used saw blades, knives and guides according to environmental protection practices, or transfer for reconditioning</p> <p>2.7 Record and report processing problems and equipment faults to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Measures precise alignment of blades and guides to specification Uses standard units of measurement to determine the precise location of components of saws and cutting equipment

Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- safely removed and replaced saw blades, knives and guides in one or more of the following types of saws and cutting machines:
 - circular saws
 - narrow or wide band saws
 - chippers
 - canters
- safely disposed of obsolete saw blades, knives and guides.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of tools and equipment used to remove and replace saw blades, knives and guides in saws, chippers and canters:
 - spanners
 - wrenches and sockets
- mechanical lifting aids, including:
 - block and chain
 - pedestrian operated crane
 - pulley system
- methods for:
 - isolation of machine and equipment

- removing mechanical and safety components without damaging these
- removing saw blades, knives and guides from saws, chippers and canters
- installing and checking replacement saw blades, knives and guides for correct alignment and free operation
- re-inserting guides to carriers within allowable tolerances and adjusting clearances
- features and names of different parts of saw blades, knives and guides for:
 - circular saws
 - chippers
 - canters
 - narrow and wide band saws
- mechanical and safety equipment components and their positioning and tolerance specifications in relation to other components, including:
 - electrical motors
 - riving knives
 - access covers
 - saw guards
 - extraction equipment
- environmental protection practices in timber processing and manufacturing facilities
- types of risk and hazards and mitigation measures associated with replacing saw blades, knives and guides
- workplace procedures specific to replacing saw blades, knives and guides:
 - workplace health and safety, with particular emphasis on equipment lock-out, the use of personal protective equipment (PPE) and safe manual handling techniques
 - communication reporting lines
 - recording and reporting of processing problems and equipment faults.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - one or more of the following types of saws and cutting machines for which saw blades, knives and guides are to be replaced: circular saws, chippers, canters, narrow and wide band saws
 - new or reconditioned saw blades, knives and guides for those machines
 - mechanical lifting aids
 - spanners, wrenches and sockets
 - PPE suitable for replacing saw blades, knives and guides
- specifications:

- template documents for recording processing problems and equipment faults
- manufacturer instructions for use, repair and maintenance of equipment
- work order with specific instructions for replacing saw blades, knives and guides in specified machine
- workplace procedures for replacing saw blades, knives and guides in saws, chippers and canters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3281 Manufacture profile cutters

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to manufacture profile cutters by selecting appropriate material and machining blanks to specified profiles. Profile cutters are used in moulders and planers to produce profiled timber.

The unit applies to individuals who manufacture profile cutters in a saw technician workshop or sawmill facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3281 Manufacture profile cutters

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has manufactured at least three cutters with different profiles, and has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- prepared to manufacture profile cutter
- machined blank to specification
- machined specified profiles
- checked profile surface finish and dimensions against specifications
- recorded and reported production output, processing problems and equipment faults.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic knowledge of physics of sawing, including:
 - saw blade material and properties
 - impact of timber properties on saw blades
 - direction of cut
 - forces on a blade
 - heat removal
 - sawtooth configuration
- features and operation of tools and equipment used to machine and profile blanks for profile cutters
- importance of manufacturing profile cutters to match requirements for:
 - characteristics of various materials sawn

- speed of the cutting process
- direction of the cutting process
- cutting angle
- profile cutter specifications
- methods for:
 - calculating profile cutter dimensions
 - machining and profiling blanks to the required profile
 - assessing surface finish and measuring the dimensions of the finished profile cutter against specifications and tolerances
- industry standard and organisational tolerances
- types of risk and hazards and mitigation measures associated with manufacturing profile cutters
- workplace procedures specific to manufacturing profile cutters:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling techniques
 - communication reporting lines
 - recording and reporting of processing problems and equipment faults
- environmental protection practices for timber processing and manufacturing facilities:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a saw technician workshop, a sawmill or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment used to machine and profile blanks for profile cutters
 - measuring equipment including vernier callipers, micrometers and rules
 - blank stock for profile cutters
 - PPE suitable for manufacturing profile cutters
- specifications:
 - template documents for recording processing problems and equipment faults
 - manufacturer instructions for use, repair and maintenance of equipment
 - work order for machining activities with specific instructions for manufacturing profile cutters
 - workplace procedures for manufacturing profile cutters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3282 Assess and maintain saw blade and sawing machine performance

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to assess and maintain the cutting performance of sawing blades or knives and sawing machines, including circular saws, band saws, chippers, canters and reducers.

The unit applies to individuals who assess and maintain the cutting performance of sawing machines and blades or knives in a timber sawmill environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3282 Assess and maintain saw blade and sawing machine performance

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, assessed cutting performance of one or more of the following sawing machines and associated sawing blades or knives:

- band saw
- circular saw
- chipper
- canter
- reducer.

In doing the above, the individual has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- monitored sawing operation and inspected sawing machine, in-feed and out-feed equipment and associated sawing blades or knives for identifying the types and the root cause of cutting problems
- assessed technical performance of sawing operation
- identified a safe course of action for rectifying the cutting problem
- reported on the cutting problem, fault diagnosis process and rectification outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of sawing machines and associated blades or knives, including one or more of the following:
 - band saws and band saw blades
 - circular saws and circular saw blades

- chippers, canters, reducers and associated blades or knives
- typical sawing problems, causes and solutions:
 - cuts not straight or clean
 - excess heat
 - pitch marks in the job
 - diamond shapes and roughness in the cut
 - saw blades changed too regularly
- typical causes of damage and poor saw performance:
 - forcing timber through the in-feed equipment
 - hydraulic and electrical system not performing well
 - damage from foreign matter
 - incorrect operating speeds
 - oversized material removal
 - incorrect setting of in-feed and out-feed equipment
 - poor sharpening or setting of sawing blades or knives
- methods for:
 - assessing condition and performance of sawing blades or knives and machine
 - diagnosing causes of damage and poor performance
 - rectifying problems and improving cutting performance
- types of risk and hazards and mitigation measures associated with assessing and maintaining cutting performance
- workplace procedures specific to assessing and maintaining cutting performance:
 - workplace health and safety, with particular emphasis on machine lock-out, use of personal protective equipment (PPE) and safe manual handling techniques
 - communication reporting lines
 - recording and reporting cutting problems, the fault diagnosis process and rectification outcomes
 - disposal of material and other waste.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - one or more of the following sawing machines and associated blades and knives: band saws, circular saws, chippers, canters, reducers
 - PPE suitable for assessing and maintaining saw performance
- specifications:
 - records of equipment fault and cutting performance

- template documents for recording and reporting cutting problems, the fault diagnosis process and rectification outcomes
- workplace procedures for assessing and maintaining sawing machine performance
- manufacturer instructions for use, repair and maintenance of sawing machine, including in-feed and out-feed equipment
- work order with specific instructions for assessing cutting performance of sawing machine and blades or knives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3283 Sharpen and position blades or knives in chipper, canter and reducer

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to set up, sharpen and use either Babbitt or set screw processes for positioning straight and angled blades or knives in disc chippers, chipping heads, canters and reducers to process logs.

The unit applies to individuals who work as saw technicians to sharpen and position blades and knives in a timber processing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3283 Sharpen and position blades or knives in chipper, canter and reducer

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has sharpened and set up blades or knives for one or more of the following timber sawing machines:

- chipper
- canter
- reducer.

In doing the above, the individual has:

- read and clarified work order to determine job requirements
- applied workplace health and safety requirements, including the use of personal protective equipment (PPE), equipment lock-out and safe manual handling techniques
- removed and replaced blade or knife for sharpening from the designated machine
- assessed blade or knife condition
- set up and operated grinder to sharpen blades or knives
- applied Babbitt process and set screw process for positioning blades or knives in the designated machine
- recorded and reported processing problems and equipment faults to appropriate personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of one of the following sawing machines for which blades and knives are sharpened:
 - chipper
 - canter
 - reducer

- fundamental blade or knife properties:
 - metal from which blades and knives are made
 - geometry
- features of a typical blade or knife defect:
 - burrs
 - burns
 - chips
 - splits
 - dents
- basic knowledge of physics of timber sawing:
 - blade or knife material and properties
 - impact of timber properties on blades or knives
 - direction of cut
 - forces on a blade or knife
 - heat removal
- purpose, features and operation of equipment used to sharpen and set up blades or knives:
 - grinding machines
 - grinding machine attachments
 - abrasive grinding wheels
 - Babbitt making equipment
 - set-screw equipment
- methods for:
 - removing blades or knives from machine
 - assessing blade or knife condition
 - selecting appropriate grinding wheels, diameter and material
 - cleaning blades or knives
 - sharpening blades or knives to specified requirements
 - reconditioning Babbitts and set screws
 - setting up blades or knives to specified requirements
- angles at which blades or knives are sharpened
- range of speeds at which abrasive wheels can be operated without damaging blades or knives
- coolants used in sharpening process, and impact on efficient sharpening
- types of risk and hazards and mitigation measures associated with sharpening and setting up blades and knives
- workplace procedures specific to sharpening and setting up blades and knives:
 - workplace health and safety, with particular emphasis on machine lock-out, the use of PPE and safe manual handling techniques
 - communication reporting lines
 - recording and reporting of processing problems and equipment faults

- environmental protection practices applicable to timber processing or manufacturing facilities.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - grinding machines and ancillary equipment
 - abrasive grinding wheels in a variety of diameters and types
 - Babbitt making equipment
 - one or more of the following machines for which blades and knives are to be sharpened: chipper, canter, reducer
 - suitable blades or knives for sharpening
 - consumable coolant and set screws
 - PPE suitable for sharpening and aligning blades and knives
- specifications:
 - template documents for recording production output, processing problems and equipment faults
 - manufacturer instructions for use, repair and maintenance of equipment
 - work order with specific instructions for sharpening and aligning blades and knives in specified machines
 - workplace procedures for sharpening and aligning blades and knives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3286 Identify levelling and tensioning requirements for saw blades

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to identify the levelling and tensioning requirements for circular, narrow and wide band saw blades that have been removed from the sawing machine.

The unit applies to individuals who identify levelling and tensioning requirements for saw blades used in sawmilling operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3286 Identify levelling and tensioning requirements for saw blades

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- inspected and determined the levelling and tensioning requirements for one or more of the following types of saw blades according to the work order:
 - circular
 - narrow band
 - wide band.
- In doing the above job, the individual has:
 - followed work order and relevant workplace health and safety and environmental protection procedures
 - identified, assessed and taken actions to mitigate risks and hazards associated with inspecting saw blades
 - used personal protective equipment (PPE) throughout the work
 - recorded inspection outcomes according to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- characteristics of circular, narrow and wide band saw blades
- purpose of levelling and tensioning saw blades
- consequences of incorrect levelling and tensioning of saw blades
- frequency and timing of levelling and tensioning saw blades
- terminology related to levelling and tensioning saw blades:
 - lump
 - ridge

- twist
- dished
- loose
- fast
- tight/stiff
- tension
- saw blade tools and equipment used in levelling and tensioning saw blades
- importance of levelling blades, setting tension and applying curvature to match requirements for:
 - characteristics of various materials sawn
 - speed of the sawing process
 - direction of the sawing process
 - cutting angle for sawing
 - saw blade specifications
- methods for:
 - removing saw blades from circular saws
 - assessing saw blade condition
 - levelling and tensioning blades to specified requirements
 - applying curvature
 - checking saw blades after levelling and tensioning
- characteristics of metal used in circular saw blades, and range of force that can be applied without damaging blades
- saw blade defects:
 - lumps, ridges, and twists
 - areas of excessive tension
 - areas of insufficient tension
 - compressive and tensile stresses
- types of risk and hazards and mitigation measures associated with inspecting, levelling and tensioning saw blades
- workplace policies and procedures specific to levelling and tensioning circular saw blades:
 - workplace health and safety, with particular emphasis on equipment lock-out and use of PPE
 - communication reporting lines
 - recording and reporting of processing and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest product factory setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - circular and band saw blades for inspection to determine levelling and tensioning requirements
 - PPE for inspecting, levelling and tensioning saw blades
- specifications:
 - template documents for recording levelling and tensioning requirements for saw blades
 - manufacturer instructions for levelling and tensioning saw blades
 - work order with specific instructions for inspecting and identifying the levelling and tensioning requirements of saw blades
 - workplace procedures for assessing the dimensional accuracy and surface quality of sawn timber products and determining the levelling and tensioning requirements of saw blades.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3287 Operate CNC equipment for grinding, tensioning and levelling saw blades

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to set up and operate computer numerical control (CNC) equipment for grinding, tensioning and levelling saw blades.

The unit applies to individuals who operate CNC equipment for grinding, levelling and tensioning saw blades in a saw technician workshop or sawmill for sawmilling operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- operated computer numerical control (CNC) equipment to grind, tension and level saw blades.

In doing the above job, the individual has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- identified, assessed and taken actions to mitigate risks and hazards associated with operating CNC equipment
- set, adjusted and tested CNC equipment
- performed routine maintenance of CNC equipment
- recorded and reported production outcomes, equipment faults and maintenance requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, components, uses and limitations of CNC equipment used for grinding, tensioning and levelling saw blades
- reasons for using CNC equipment
- elements of a basic CNC program
- function of elements in controlling the operation of a CNC machine
- machining operations
- methods for setting CNC program
- workflow processes

- reasons for testing and proving the CNC program
- procedures for editing the CNC program via the machine controller
- effects of editing on the operation of the CNC equipment and the part or product to be produced
- measuring equipment/techniques used to check for conformance to specification
- types of risk and hazards and mitigation measures associated with CNC machines
- maintenance and housekeeping requirements of CNC machines
- safe work practices and procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a saw technician workshop or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - CNC equipment for grinding, tensioning and levelling saw blades
 - hand tools, equipment and measuring devices required for use when using CNC equipment for grinding, tensioning and levelling saw blades
 - saw blades
 - personal protective equipment (PPE) for operating CNC equipment
- specifications:
 - template documents for recording production outcomes
 - manufacturer instructions for CNC equipment
 - work order with specific instructions for grinding, tensioning and levelling saw blades
 - workplace procedures for using CNC equipment to grind, tension and level saw blades.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3289 Load and prove operating program for CNC machine

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to load and prove a program for a computer numerical control (CNC) machine. This includes preparing for work, locating the CNC program file, checking the program for currency, loading the program correctly into the machine controller, checking for and dealing with fault/error messages, following proving/editing procedures and saving edited programs.

The unit applies to individuals who load and prove programs for CNC machines in a timber processing and manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3289 Load and prove operating program for CNC machine

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has loaded and proved the operating program for a computer numerical control (CNC) machine and has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- selected the correct CNC program file for the job
- loaded the operating program
- proved the operating program
- checked that all safety mechanisms are in place and that the machine is set correctly for the required operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features, operating parameters, components and operation CNC machines
- benefits of CNC machines
- type of products produced using CNC machines
- operational program software
- computing coding language used in the CNC programs being used
- function keys and operating system of the machine computer control system being operated
- procedures for accessing computer-controlled programs installed in the machine controller, including:
 - posting appropriate program to the machine
 - selecting tool specified by the program and for the material to be machined
 - selecting appropriate speeds and feeds

- hazards associated with loading and proving programs for CNC machines
- safety precautions to be taken when loading and proving operating programs for CNC machines
- methods for:
 - starting and stopping the machine in normal and emergency situations
 - handling and storing program files
 - loading, executing, editing and exiting operating programs
 - setting machine datums for each machine axis being used
 - identifying and dealing with error messages and faults on program or computer-controlled machine
 - placing the machine into correct operating mode and accessing program edit facility, in order to enter tooling data such as tool datums, positions, lengths, offsets and radius compensation
 - using tool posts, magazines and carousels and identifying the tools in relationship to the operating program
 - conducting trial runs, using single block run, dry run and feed and speed override controls
 - interpreting first and third angle drawings, metric measurements, workpiece reference points and system of tolerancing
 - checking before machine is operated in full program run mode
 - expressing machine tool and workpiece movements in terms of Cartesian coordinates
- purpose of tool compensation, including tool diameter, wear, nose radius, tool length
- industry standard profiles, lengths, cross-sections and tolerances and applicable terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - CNC machine
 - CNC operating program
 - personal protective equipment (PPE) for loading and proving operating programs for CNC machines
 - template documents for recording outcomes of setting up and calibration activities
- specifications:
 - manufacturer instructions for loading and proving program for CNC machine
 - work order with specific instructions for loading and proving program for CNC machine
 - workplace procedures for loading and proving program for CNC machine.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3290 Apply knowledge of timber properties, sawmill operations and sawmilling equipment

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to apply knowledge to identify the products, work processes and equipment in an operational sawmill. This includes identifying timber properties and defects and how these impact on sawing operations, timber volume and value recovery, process flow through a sawmill, quality requirements, the types, functions and capabilities of sawing machines and the regulatory arrangements that apply to sawmill operations.

The unit applies to individuals who work in various areas of sawmilling operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, identified the types and properties of timber, sawmilling products and processes and sawmilling equipment used in a sawmill and has:

- identified types, defects and properties of timber and their impact on sawing, timber volume and value recovery
- identified sawmill products and processes
- described types, functions and capabilities of sawing machines
- described key features of quality requirements
- identified the regulatory framework impacting on sawmilling operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- processes involved in conversion:
 - debarking
 - primary breakdown
 - secondary sawing
 - crosscutting
 - stacking
 - seasoning
 - residue removal
 - storage
- timber value and volume recovery:
 - definition

- ways of measuring
- species, grades and relative value of logs
- methods used for measurement of logs
- timber features and properties and potential impact on sawing, timber volume and value recovery
- timber defects and potential impact on sawing, timber volume and value recovery
- processes involved in converting sawlogs to timber
- process flow through sawmill
- location of main processes in sawmill
- type, grade, finish and value of sawn products and by-products
- type, function and capability of sawing machines
- production (volume) sawing
- grade (value) sawing
- types and functions of saw blades
- designed capability of sawing machines
- defects in timber due to conversion processes in sawmill
- types, purpose and process for recording quality data
- quality control processes
- workplace health and safety legislation relating to sawmill operations, including the use of personal protective equipment
- environmental protection legislation relating to sawmill operations
- industry codes of practice relating to sawmill operations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest product factory setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - workplace documents that provide basic information on work practices, procedures, processes or equipment
 - workplace documents that provide basic information on quality control processes, workplace health and safety and environment protection procedures
 - reference materials on timber properties and defects and regulatory framework impacting on sawmilling operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3291 Apply principles of timber and process optimisation in sawmill operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to apply optimisation principles in sawmilling operations to increase timber value and volume recovery. It includes identifying the drivers for optimisation, assessing opportunities for timber and workflow optimisation, identifying optimisation opportunities in own work area and participating in and evaluating optimisation initiatives.

The unit applies to individuals who are involved in timber and process optimisation in sawmilling operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3291 Apply principles of timber and process optimisation in sawmill operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, identified opportunities for timber and workflow optimisation in own work area and has:

- identified the drivers for optimisation
- distinguished between timber and workflow optimisation
- made recommendations to correct sub-optimal performance in own work area
- participated in one optimisation initiative.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- timber value and volume recovery:
 - definition
 - ways of measuring
- drivers for optimisation in sawmilling operations:
 - efficiency
 - productivity
 - quality
 - competitiveness
- distinction between timber and material flow optimisation
- measures to improve timber and material flow optimisation
- impact of timber and material flow optimisation on timber value and volume recovery in sawmill operations
- opportunities for timber optimisation in sawmilling operations in one or more of the following areas:

- log sorting
- sawing in the green mill
- dry mill processing
- grading
- timber treatment
- opportunities for material flow optimisation in sawmilling operations
- technologies applied to enhance timber and workflow optimisation in sawmill operations:
 - 3D, X-ray and acoustic scanning devices
 - automated transfer systems
 - computer-assisted machine centres for sawing and re-sawing
- work practices applied to enhance timber and workflow optimisation in sawmill operations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest product factory setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - workplace documents that provide basic information on work practices, procedures, processes or equipment performance in own work area
 - workplace documents that provide basic information on requirements or performance indicators in relation to timber value and volume recovery
 - access to and opportunity to participate in a real or simulated optimisation initiative relevant to sawmilling operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3292 Calibrate and maintain scanning equipment used in sawmilling operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to calibrate, adjust and test different forms of scanning equipment used in sawmilling operations, including optical (1–3 dimension), X-ray, microwave, multispectral and acoustic scanning equipment. It includes working safely, identifying the capability of scanning equipment in detecting timber characteristics and defects, following calibration procedures, and reporting on calibration outcomes.

The unit applies to individuals who calibrate different forms of scanning equipment used in sawmilling operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to calibrate scanning equipment	1.1 Review work order to determine job requirements and, where required, seek clarification from appropriate personnel 1.2 Review workplace health and safety procedures, including the use of personal protective equipment, equipment lock-out and safe manual handling techniques 1.3 Identify, assess and take actions to mitigate risks and hazards associated with working with scanning equipment 1.4 Identify and implement workplace procedures for minimising waste material and maximising energy efficiency 1.5 Obtain tools, equipment and testing devices needed for the work, and check for correct operation and safety
2. Calibrate scanning equipment	2.1 Identify capability and resolution of scanning equipment in detecting timber characteristics and defects 2.2 Identify calibration procedures and calibration points for scanning equipment 2.3 Identify and take into account factors that may impact on the accuracy of scanning equipment during the calibration process 2.4 Test and adjust scanning equipment as necessary to ensure equipment meets calibration requirements 2.5 Carry out calibration of scanning equipment efficiently without waste of materials or damage to apparatus, the surrounding environment or services, and using sustainable energy principles
3. Verify calibration outcome	3.1 Conduct a test for a benchmark object (the standard) to confirm accuracy and desired outcome from the process 3.2 Repeat calibration procedure if accuracy is not achieved 3.3 Record all calibration data accurately according to workplace and manufacturer requirements
4. Complete calibration activities	4.1 Document calibration status and report out-of-calibration scanning equipment 4.2 Lock out calibration scanning equipment according to workplace and safety requirements 4.3 Perform routine maintenance of scanning equipment according to workplace and manufacturer instructions 4.4 Clean work area according to workplace and safety requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for FWPCOT3292 Calibrate and maintain scanning equipment used in sawmilling operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, accurately calibrated scanning equipment used in sawmilling operations and has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- reviewed work order to determine job requirements
- used personal protective equipment (PPE), lock-out procedures and safe manual handling techniques
- identified, assessed and taken actions to mitigate risks and hazards associated with working with scanning equipment
- calibrated one or more of the following types of scanning equipment:
 - optical (1–3 dimension)
 - X-ray
 - microwave
 - multispectral
 - acoustic
- tested the calibration accuracy
- performed routine maintenance of scanning equipment
- recorded all calibration data accurately according to workplace and manufacturer requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of risk and hazards and mitigation measures associated with operating and calibrating scanning equipment

- types of scanning equipment:
 - optical (1–3 dimension)
 - X-ray
 - microwave
 - multispectral
 - acoustic
- methods for determining capability and resolution of different scanning equipment in detecting timber characteristics and defects, including:
 - thickness
 - shape
 - wane
 - knots
 - decay
 - foreign objects
 - heartwood
 - log stiffness
 - grain angle
 - colour check
 - stain
- calibration procedures and calibration points for scanning equipment
- function of key components of scanning equipment, operating principles, details of the pre-use, calibration and safety checks, and operating procedures for the items used
- factors that may impact on the accuracy of scanning equipment and their control
- role and importance of regular calibration checks and maintenance of equipment
- methods for testing calibration using a benchmark object (the standard)
- methods and frequency used to perform the checks and calibrations
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety requirements specific to the work task
- procedures for quarantining out-of-calibration equipment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest product factory setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - scanning equipment used in sawmill operations including one or more of the following: optical (1–3 dimension), X-ray, microwave, multispectral, acoustic scanning equipment
 - tools, equipment and testing devices used in calibrating scanning equipment

- PPE for operating and calibrating scanning equipment
- specifications:
 - template documents for recording calibration outcomes
 - manufacturer instructions for calibration of scanning equipment
 - work order with specific instructions for calibration of scanning equipment
 - workplace procedures for calibration of scanning equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT3293 Use scanning equipment for timber grading

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- operated, monitored and troubleshoot scanning equipment for timber grading
- in doing the above job, the individual has:
 - followed work order and relevant workplace health and safety and environmental protection procedures
 - identified, assessed and taken actions to mitigate risks and hazards associated with operating scanning equipment
 - set up and tested scanning equipment
 - performed routine maintenance on scanning equipment
 - recorded grading outcomes according to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- timber grading standards
- types of scanning equipment used for timber grading:
 - optical (1–3 dimension)
 - X-ray
 - microwave
 - multispectral
 - acoustic
- functions of key components of scanning equipment, operating principles, details of the pre-use, calibration and safety checks, and operating procedures for the items used
- factors that may impact on the accuracy of scanning equipment and their control

- methods used to:
 - set up and test scanning equipment
 - clean and maintain scanning equipment
- awareness of environmental sustainability issues as they relate to the work task
- types of risk and hazards and mitigation measures associated with operating scanning equipment for timber grading
- legal, ethical and work health and safety requirements specific to the work task
- typical flow of material supply in and out of the grading area
- range of industry standard strength grades and thresholds and applicable terminology
- markings used on timber boards to identify grades
- reason for independent testing of boards and processes for sampling and preparing boards for testing.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a sawmill or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - scanning equipment for timber grading including one or more of the following: optical, X-ray, microwave, multispectral, acoustic scanning equipment
 - personal protective equipment for operating scanning equipment for timber grading
 - a variety of timber for grading
- specifications:
 - template documents for recording grading outcomes
 - manufacturer instructions for scanning equipment
 - work order with specific instructions for using scanning equipment for timber grading
 - workplace procedures for grading timber using scanning equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3294 Swage and shape saw blades

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to widen and press into shape through a cold forming process the cutting points of saw teeth to create a block that has the required hook, back, tangential and radial clearance angles for efficient saw operation.

The unit applies to individuals who swage and shape saw blades in a saw technician workshop or sawmill.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3294 Swage and shape saw blades

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- safely swaged and shaped saw blades for circular and band saws
- in doing the above job, the individual has:
 - followed work order and relevant workplace health and safety and environmental protection procedures
 - set up equipment
 - recorded and reported production outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of circular and band saws for which saw blades are shaped and swaged
- features and names of different parts of circular and band saw blades
- purpose, features and operation of tools and equipment used to shape and swage blades:
 - swagers
 - swage clamps or vices
 - dies
 - measuring equipment
- importance of swaging and shaping saw blades to match requirements for:
 - characteristics of various materials sawn
 - speed of the sawing process
 - direction of the sawing process
 - cutting angle for sawing

- saw blade specifications
- techniques used to swage and shape saw teeth to specified hook, back, tangential and radial clearance angles
- industry standard and workplace tolerances
- types of risk and hazards and mitigation measures associated with swaging and shaping saw blades
- workplace procedures specific to swaging and shaping saw blades:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling
 - communication reporting lines
 - recording and reporting of processing problems and equipment faults
- environmental protection practices for repairing and maintaining tools and equipment in forest products factory settings:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a saw technician workshop, a sawmill or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - swagers
 - swage clamps or vices
 - dies
 - wire gauges
 - test bars
 - rules
 - micrometers
 - vernier callipers
 - saw blades for circular saws and band saws
 - PPE suitable for swaging and shaping saw blades
- specifications:
 - template documents for recording production output, processing problems and equipment faults
 - manufacturer instructions for the use of equipment and recommended specifications for swaging and shaping teeth
 - work order with specific instructions for swaging and shaping saw blades for specified equipment

- workplace procedures for swaging and shaping saw blades.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3295 Assess and maintain cutter performance

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to assess and maintain cutter performance in timber moulding and planing operations. This activity includes inspecting dressed timber, diagnosing cutter performance and rectifying problems with cutters or knives.

The unit applies to individuals who assess and maintain cutter performance in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	1.1 Review workplace health and safety requirements, including use of personal protective equipment, equipment lock-out and safe manual handling techniques

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Identify, assess and take actions to mitigate risks and hazards associated with assessing and maintaining the cutter and assembly components for moulding and planing machines</p> <p>1.3 Identify and implement environmental protection procedures for minimising and disposing of material, and maximising energy efficiency</p>
2. Inspect timber cutters and assembly components	<p>2.1 Obtain information relating to current and past performance problems and review to assess process problems</p> <p>2.2 Observe cutter, cutter block, spindles and associated assembly components under operating conditions to determine extent of problems</p> <p>2.3 Examine timber fed through the machine to determine potential causes of cutting problem</p> <p>2.4 Lock out machine and inspect cutters and assembly components to identify worn, broken and loose components</p>
3. Rectify problems with cutters and assembly components	<p>3.1 Diagnose possible causes with input from other personnel where required</p> <p>3.2 Discuss solutions with relevant personnel to identify and agree on preferred option</p> <p>3.3 Implement selected course of action, review dressing operation and results and communicate to appropriate personnel</p> <p>3.4 Record and report causes of problems and action taken according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Sources and extracts information from machine records, service history and log books to determine potential causes of cutting problems

Skill	Description
Oral communication	<ul style="list-style-type: none"> Employs active listening and questioning to clarify content of work orders
Numeracy	<ul style="list-style-type: none"> Locates and interprets routine numerical data involving angles, dimensions, and speeds in cutting performance records
Navigate the world of work	<ul style="list-style-type: none"> Understands main tasks, responsibilities and boundaries of own role
Interact with others	<ul style="list-style-type: none"> Uses modes of communication suitable to purpose to confirm and clarify understanding
Get the work done	<ul style="list-style-type: none"> Recognises and responds to routine problems

Unit Mapping Information

Assessment Requirements for FWPCOT3295 Assess and maintain cutter performance

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has successfully assessed and diagnosed three different problems related to cutter and cutter blocks performance for moulders or planers.

In doing the above, the individual has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- assessed performance of cutter and assembly components
- inspected timber and cutter and assembly components
- identified safe course of action for rectifying problem
- reported on problem, fault diagnosis process and rectification outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of cutter, cutter block and assembly components on moulders and planers
- typical causes of damage and poor cutter performance:
 - forcing timber through the machine
 - damage from foreign matter
 - incorrect operating speeds
 - oversized material removal
 - incorrect setting of machine
 - poor sharpening or setting of cutters or knives
 - worn or damaged components
- methods for:

- assessing condition of cutters and assembly components
- diagnosing causes of damage and poor performance
- rectifying problems and improving cutter performance
- types of risk and hazards and mitigation measures associated with assessing and maintaining cutter performance
- workplace procedures specific to assessing and maintaining cutter performance:
 - workplace health and safety, with particular emphasis on equipment lock-out and use of personal protective equipment (PPE)
 - communication reporting lines
 - recording and reporting cutting problems
 - diagnosis process and rectification outcomes
 - disposing of material.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - one or more of the following machines and associated cutters: moulder, planer
 - hand tools to carry out the work
 - PPE suitable for assessing and maintaining performance of cutters
- specifications:
 - records of equipment fault and cutting performance
 - template documents for recording and reporting cutting problems, the fault diagnosis process and rectification outcomes
 - workplace procedures for assessing and maintaining performance of cutters and associated equipment
 - manufacturer instructions for use, repair and maintenance of cutters and associated equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3297 Operate automated stacking equipment

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to use automatic or semi-automatic stacking equipment to build, monitor, strap and record packs of timber products in preparation for despatch.

The unit applies to individuals who operate automatic timber stacking equipment in the forest and wood products industry.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for stacking	<p>1.1 Review work order to determine job requirements and, where required, seek clarification from appropriate personnel</p> <p>1.2 Review environmental protection procedures and workplace health and safety requirements, including the use of personal protective</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>equipment, equipment lock-out and safe manual handling techniques</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with operating automatic timber stacking equipment</p> <p>1.4 Identify and implement workplace procedures for minimising and disposing of waste material, cleaning tools and equipment, and maximising energy efficiency</p> <p>1.5 Select tools and equipment, and check for operational effectiveness</p> <p>1.6 Obtain type and quantity of timber products to be stacked from a storage location</p> <p>1.7 Plan stacking process according to work order</p>
2. Stack, wrap and strap packs	<p>2.1 Set up stacking machine to produce specified pack sizes according to work order</p> <p>2.2 Build packs using timber products of a consistent type, size and thickness</p> <p>2.3 Check bearers and protective strips for uniform thickness and damage</p> <p>2.4 Place specified bearers, spacing sticks and protective strips squarely, evenly and consistently</p> <p>2.5 Monitor stacked timber product for grade and quality</p> <p>2.6 Reprocess or dispose of unacceptable components</p> <p>2.7 Stack packs to correct product count or dimension, and check the safety of stacking</p> <p>2.8 Strap, wrap and label packs according to workplace procedures</p> <p>2.9 Avoid wastage of strapping and packaging materials, and maximise use of recycled materials</p>
3. Complete operator maintenance	<p>3.1 Lock out equipment according to workplace safety procedures</p> <p>3.2 Check, maintain and clean automatic stacking machine mechanism</p> <p>3.3 Keep machine area clear of dust and debris according to workplace safety procedures</p> <p>3.4 Record and report production outcomes and equipment faults to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Extracts essential information from operational manuals to determine safe operating procedures for equipment
Writing	<ul style="list-style-type: none"> Prepares routine written reports using the required format, language and structure
Oral communication	<ul style="list-style-type: none"> Employs active listening and questioning to clarify the content of work orders
Numeracy	<ul style="list-style-type: none"> Counts numbers of timber products to be stacked, wrapped and packed Identifies quantities of timber products in work order Verifies quantities by re-counting components
Navigate the world of work	<ul style="list-style-type: none"> Understands main tasks, responsibilities and boundaries of own role
Interact with others	<ul style="list-style-type: none"> Uses modes of communication suitable to purpose to confirm and clarify understanding
Get the work done	<ul style="list-style-type: none"> Recognises and responds to routine problems

Assessment Requirements for FWPCOT3297 Operate automated stacking equipment

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has operated automatic or semi-automatic stacking equipment and has:

- followed work order and relevant workplace health and safety and environmental protection procedures
- stacked and built packs of timber using an automatic or semi-automatic stacking machine according to an individual work order prescribing different types, dimensions and numbers of timber products to be packed
- completed the following tasks for each pack:
 - applied protective strips to packs
 - applied wrapping to packs to prevent water penetration during storage and transportation
 - strapped packs
 - labelled packs ready for storage or transportation
- completed operator maintenance on the automatic or semi-automatic stacking machine
- recorded and reported production outcomes and equipment faults to appropriate personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of risk and hazards and mitigation measures associated with operating stacking equipment
- range of industry standard lengths, cross-sections, appearance grades, markings and applicable terminology for relevant timber products
- purpose, features and operation of automatic or semi-automatic stacking machines
- typical workflow processes used to build, wrap and strap packs automatically

- methods for labelling timber products and packs for identification
- quality requirements for packs
- workplace procedures specific to operating automatic stacking machines:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE), and safe manual handling
 - communication reporting lines
 - recording and reporting production outcomes and equipment faults
- environmental protection practices for stacking and binding material:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing timber and other waste.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - automatic or semi-automatic stacking machines
 - PPE suitable for operating automatic stacking machines
 - commercial quantities of timber products to be stacked, wrapped and strapped
 - materials from which to build packs
 - consumable strapping, packaging and labelling materials
- specifications:
 - work order with specific instructions for automatically stacking material
 - template documents for recording production outcomes and equipment faults
 - workplace procedures for operating automatic stacking machines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3298 Produce templates

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the outcomes required to produce templates that assist with the operation of static machines and computer numerically controlled (CNC) equipment used to produce shaped, tapered or moulded products.

The unit applies to individuals who produce templates for static CNC equipment used in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- produced templates according to the work order and product requirements
- in doing the above job, the individual has:
 - read and clarified work order for producing templates
 - applied workplace health and safety requirements, including use of personal protective equipment (PPE) and safe manual handling techniques, throughout the work
 - planned production of template
 - recorded and reported production outcomes and equipment faults to appropriate personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of patterns and templates and their purpose
- types and key features of equipment that are assisted by templates
- types and key features of shaped, tapered or moulded products produced with the assistance of templates
- characteristics of materials used for templates and how these affect template use:
 - strength
 - direction of grain
 - hardness
 - flexibility
- typical assembly sequences and range of techniques used to produce templates
- purpose, features and operation of equipment used to assemble templates
- purpose, features and use of assembly componentry
- types of risk and hazards and mitigation measures associated with producing templates

- workplace procedures specific to producing templates:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of PPE and safe manual handling techniques
 - communication reporting lines
 - recording and reporting production outcomes and equipment faults
- environmental protection practices for producing templates:

FWPCOT3299 Cut timber or engineered wood product to profile

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to use profiling equipment for cutting timber or engineered wood products to a profile to produce moulded products in a manufacturing facility.

The unit applies to individuals who work as benchman, machine operators, timber products technicians, production technicians and press operators.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Assessment Requirements for FWPCOT3299 Cut timber or engineered wood product to profile

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria of this unit.

There must be evidence that, on at least one occasion, the individual has:

- cut one or more of the following timber or engineered wood products to profile according to work order and prescribed workplace specifications:
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - preservative treated timber
 - medium density fibreboard
 - laminated veneer
 - chipboard
 - fibreboard
 - coated and/or treated timber products
 - glued laminated timber (glulam)
 - cross-laminated timber (CLT)

In doing the above job, the individual has:

- followed relevant workplace health and safety and environmental protection procedures to complete the work order
- conducted operator maintenance on profiling equipment
- stacked batches of cut timber or engineered wood product safely.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to operating profiling equipment for timber or engineered wood products as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures specific to cutting timber or engineered wood product to profile:
 - health and safety, with particular emphasis on equipment lock-out and the use of personal protective equipment (PPE)
 - use of timber profiling equipment
 - communication reporting lines
 - recording and reporting production outcomes, equipment faults and maintenance requirements
- environmental protection practices for timber manufacturing facilities:
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing timber and other waste
 - reducing water and energy use
- characteristics of timber or relevant engineered wood product
- storage systems and labelling procedures, including:
 - storage racks
 - storage bays
 - bins
 - stacks
 - pallet boxes
 - modularised storage components
 - temporary stacking bays
- storage layout and categories for:
 - raw materials
 - stacking finished timber products
- typical timber or engineered wood product defects and how they affect the ability to produce quality profiled product:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- range of common profiles and applicable terminology, including:
 - quad
 - beading
 - mouldings
 - shaped beams
 - architraves

- skirting boards
- scotia
- common cutting patterns used to achieve common profiles
- range of feed rates and how they affect production output and quality of the finished product
- purpose, features and operation of equipment used to cut timber or engineered wood product to profile:
 - measuring equipment
 - multi-head planing machines (four siders)
 - spindle moulders
 - routing machines
 - shaping machines
 - machine guides
- methods for assessing cutting blade condition.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - measuring equipment
 - profiling equipment including one or more of the following: multi-head planing machines (four siders), spindle moulders, routing machines, shaping machines
 - machine guides
 - maintenance tools and equipment for removing and replacing cutting blades
 - consumable profile cutting blades in various shapes and sizes
 - PPE suitable for cutting material to profile
 - timber or engineered wood product suitable for profiling operations
- specifications:
 - manufacturer instructions for use and maintenance of equipment
 - work order with specific instructions for cutting timber or engineered wood product to profile
 - workplace policies and procedures for cutting timber or engineered wood product to profile, including health and safety and emergency procedures and environmental protection procedures
 - template documents for recording production outcomes, equipment faults and maintenance requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3301 Trim trees using a pole saw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to use a fuel or battery powered pole saw to trim tree branches within safe height and angle limits.

The unit applies to individuals who operate pole saws to trim tree branches as part of arboriculture, forestry, agriculture, conservation and land management, local government, emergency services and other government agency operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for trimming	1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate personnel 1.2 Confirm safety and environmental requirements for the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>according to workplace procedures</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with using pole saw to trim branches</p> <p>1.4 Plan trimming activities according to workplace procedures</p> <p>1.5 Consult with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Obtain pole saw and other support equipment needed for the work</p> <p>1.7 Select, fit and use personal protective equipment</p> <p>1.8 Conduct pre-start-up checks of pole saw to determine serviceability according to manufacturer instructions</p>
2. Assess trees	<p>2.1 Identify and assess tree type, location and stability for safe working conditions</p> <p>2.2 Plan trim of tree according to workplace procedures and environmental conditions</p> <p>2.3 Identify trees unsafe to be trimmed, and refer to supervisor</p> <p>2.4 Identify hazards in immediate vicinity of the tree to be trimmed, and refer to supervisor</p> <p>2.5 Determine whether the height of branches to be trimmed is within safe reach and safe working angle when using the pole saw</p> <p>2.6 Establish general falling direction of branches to be trimmed, and identify clear escape routes</p>
3. Trim trees	<p>3.1 Trim accessible branches within safe height and angle limits according to work order or instructions and manufacturer recommendations</p> <p>3.2 Monitor location and movement of people in work area to ensure work site is safe</p> <p>3.3 Undertake sequence of cuts to trim tree branches</p> <p>3.4 Operate pole saw according to workplace procedures and manufacturer instructions, adjusting technique in response to condition of the tree</p> <p>3.5 Identify unexpected tree characteristics during trimming operations, and review tree assessment if required</p> <p>3.6 Complete cutting once initiated to minimise splitting</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	3.7 Clear cut branches from the site according to workplace procedures and environmental requirements
4. Conduct operator maintenance	4.1 Follow workplace safety procedures and manufacturer instructions to lock out equipment 4.2 Inspect condition of pole saw and other equipment on completion of trimming activities 4.3 Clear pole saw of dust, shavings and debris, and check for serviceability 4.4 Remove, sharpen, adjust or replace chain and other components according to manufacturer recommendations 4.5 Recycle, re-use or dispose of blunt or damaged chain and other components according to workplace procedures and environmental requirements 4.6 Record and report equipment faults and maintenance activity

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine requirements
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Ask questions and actively listen to clarify contents of work plans

Assessment Requirements for FWPCOT3301 Trim trees using a pole saw

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- assessed, planned and conducted the trimming of the accessible branches of six trees within safe height and angle limits using a pole saw
- followed workplace policies and procedures, current workplace health and safety legislation, regulations and related industry standards and codes of practice in completing the tree trimming work
- inspected and carried out routine operator maintenance on one pole saw on one occasion, including removing, sharpening, replacing and adjusting the chain, according to manufacturer requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and components of pole saws
- uses of pole saws to trim trees
- procedures for pole saw operations
- risks and hazards associated with trimming trees with a pole saw
- characteristics of trees and timber defects
- trimming sequence and pole saw cutting techniques for trimming trees
- safe height and angle limits for pole saw use when trimming trees
- criteria for assessing condition of pole saw chain
- procedures for removing, sharpening, adjusting or replacing pole saw chain and other components
- established communication channels and protocols for trimming trees with a pole saw
- problem identification and resolution strategies related to trimming trees with a pole saw

- procedures for recording and reporting workplace information related to trimming trees with a pole saw.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - an industry standard fuel or battery powered pole saw
 - tools and equipment used to maintain pole saws
 - consumable pole saw parts, oil and fuel
 - personal protective equipment required in pole saw operations
- specifications:
 - access to workplace safety and environmental policies and procedures applicable to use of pole saws for trimming branches
 - access to workplace procedures and forms for recording pole saw maintenance and faults
 - access to workplace standard operating procedures or operator manual for pole saws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3302 Access and provide timber and wood product information

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to apply wood and timber product knowledge in the workplace and promote the benefits of wood and timber products to a range of customers and others. The unit includes identifying wood and timber products, accessing accurate information on wood and timber products, and providing information to customers and others about those products.

The unit applies to individuals who work as customer service/sales assistants and sales and team leaders and are responsible for providing advice on timber and wood products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify types, characteristics and certification arrangements for wood	1.1 Identify physical and mechanical properties of wood and timber that affect wood and timber quality 1.2 Identify the names, types, uses and qualities of domestically

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
and timber products	sourced and imported wood and timber products 1.3 Identify the responsible agency, purpose and legal status of forest, wood and timber product certification, labelling and chain of custody schemes
2. Access information on wood and timber products	2.1 Identify sales or operational need for wood and timber product information 2.2 Identify and use a range of methods to access sources of wood and timber product information 2.3 Assess sources of wood and timber product information 2.4 Source specific product information to meet sales or operational need
3. Advise on wood and timber products	3.1 Promote characteristics and benefits of wood and timber products using correct industry terminology to customers and others 3.2 Respond to enquiries from customers and others using correct industry terminology about wood and timber products 3.3 Provide advice to customers and others on the suitability of wood and timber products for specific end uses 3.4 Provide advice to customers and others on common wood and timber treatment methods, preservatives and exposure hazards 3.5 Provide advice to customers and others on timber coatings and finishes for specific end uses
4. Maintain wood and timber product knowledge	4.1 Obtain information to update own knowledge of wood and timber products on an ongoing basis 4.2 Source and access information on current and emerging wood and timber product developments 4.3 Share new or updated wood and timber product information with colleagues

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine requirements Research, sort and interpret diverse wood and timber product information
Writing	<ul style="list-style-type: none"> Prepare notes and basic summaries of information
Oral communication	<ul style="list-style-type: none"> Question suppliers about wood and timber product details
Numeracy	<ul style="list-style-type: none"> Interpret diverse numerical and graphical information on wood and timber product characteristics Interpret volume and ratio data related to the use of wood and timber treatments, coatings and finishes

Assessment Requirements for FWPCOT3302 Access and provide timber and wood product information

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- researched and provided wood and timber product information in response to three different sales-related and/or operations-related enquiries
- used at least two of the following sources to access wood and timber product information for each of the above enquiries:
 - internet or intranet
 - supplier of the product
 - product library
 - product catalogue
 - trade and technical publications
 - tradespeople or timber industry professionals
 - social media websites
 - state and federal government information systems
- used correct industry terminology and common abbreviations in response to each of the above enquiries for product information
- shared product information with colleagues gained in responding to each of the above enquiries for product information.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- distinction between wood and timber
- distinction between softwood and hardwood
- names, types, uses and qualities of domestically sourced and imported wood and timber products, including products made from recycled wood

- suitable species and product types for wood and timber applications
- physical and mechanical properties of wood and timber
- criteria for determining wood and timber quality
- origin, name, appearance, properties, defects and uses of common timber species, including:
 - durability
 - density
 - sawing orientation
 - strength group
 - shrinkage
 - joint strength
 - lyctus susceptibility
 - fire rating
 - hardness
- methods, preservatives and exposure hazards relating to manufactured timber: engineered products, laminated veneer lumber (LVL), medium density fibreboard (MDF), plywood, and particle board
- manufacturer product literature covering features and benefits of wood and timber products, including:
 - carbon storage
 - low embodied energy
 - renewability
 - reuse
 - sustainability of the forest resources
 - new applications and services over alternative materials and products
- certification, labelling and chain of custody schemes and their purpose in the forestry industry
- timber grades and their uses for client applications
- procedures for matching timber coatings and finishes to specific end uses
- wood preservatives and associated safety data sheets
- techniques for maintaining wood and timber product knowledge
- procedures for recording and reporting information provided to customers.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace location or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - the internet

- digital device to access wood and timber product information
- industry sources of product information
- specifications:
 - access to work order or instruction detailing activities to be carried out by operator
 - access to documentation related to workplace health and safety, environmental, design and chain of custody of wood and timber products
 - access to workplace procedures and forms for providing advice and reporting/ keeping reports.
- relationships:
 - customers and colleagues with whom the individual can interact; these can be customers and colleagues in an industry workplace who are assisted by the individual during the assessment process; or individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3303 Prepare sketches and drawings

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify drawing conventions, structure design details and dimensions from construction plans and apply that information to prepare sketches and drawings that inform the fabrication plans.

The unit applies to timber advisors, customer service officers and timber frame and truss fabricators who would normally take responsibility for organising and completing tasks assigned to them without close supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan the work	1.1 Identify workplace policies and procedures relevant to preparing sketches and drawings and confirm job requirements from work order or instruction 1.2 Source relevant information and measurements from construction plans or on-site measurements 1.3 Identify areas of insufficient detail or inconsistency and seek

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>clarification from appropriate person</p> <p>1.4 Check details, dimensions, material type and design for accuracy according to workplace procedures</p> <p>1.5 Determine sketch or drawing type suitable to represent and clearly communicate design</p>
2. Confirm information	<p>2.1 Identify conventions and features to prepare a two-dimensional or three-dimensional sketch or drawing</p> <p>2.2 Collate information and check interrelationship with construction plans</p> <p>2.3 Confirm design details with relevant person according to work order or instruction</p>
3. Prepare sketches and drawings	<p>3.1 Select and set up appropriate drawing equipment according to workplace procedures</p> <p>3.2 Sketch design and include components, assembly methods and necessary accessories</p> <p>3.3 Select drawing views to present required information with minimal drawing complexity</p> <p>3.4 Prepare clear and accurate sketches and drawings according to work order or job specifications, workplace procedures and industry standards</p> <p>3.5 Incorporate explanatory notes within sketches and drawings</p> <p>3.6 Finalise and save sketches and drawings, and provide to appropriate person according to workplace procedures</p>

Assessment Requirements for FWPCOT3303 Prepare sketches and drawings

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared sketches and drawings for two different timber projects from the list below:

- timber floor truss
- timber wall frame, or
- timber roof truss.

One project must be a 2-dimensional and one must be a 3-dimensional drawing.

For each project there must be evidence that the individual has:

- interpreted structural details, design and measurements from construction plans
- applied drawing conventions to the sketches and drawings, and followed relevant workplace policies and procedures for producing, retaining and supplying sketches and drawings
- prepared sketches and drawings that clearly represent intended design of project.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of sketches and drawings used in timber frame and truss production:
 - isometric
 - orthographic
 - oblique
 - perspective
- drawing conventions and meaning:
 - title block
 - symbols and abbreviations

- line types
- dimension lines
- hatching
- scale
- details
- ways of incorporating features in sketches and drawings:
 - base lines
 - datum points
 - views and projections
 - details
 - dimensions and tolerances
 - instructions and notes
 - product and production symbols
- workplace policies and procedures related to producing, saving and supplying sketches and drawings
- drawing terminology
- methods of preparing, retaining and supplying sketches and drawings:
 - manual
 - electronic.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber systems design workplace or a simulated environment that accurately represents workplace conditions
- resources, equipment and materials:
 - manual or electronic drawing equipment and drawing materials
- specifications:
 - access to construction plans and specifications to inform sketches and drawings
 - access to work order or instruction detailing required projects for drawing.
- relationships:
 - person(s) to seek clarification from or confirm design details.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3304 Take off material quantities

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the knowledge and skills required to take off material quantities and estimate costs from completed designs and specifications. It involves itemising materials and detailing material sizes and quantities for the purpose of pricing.

The unit applies to designers (timber truss and frame), production fabricators (timber truss and frame) and timber manufactured products technicians who take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3304 Take off material quantities

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has taken off materials for a minimum of two different timber product designs, and has:

- identified material types, quantities and dimensions from production specifications
- created a take-off list to meet job requirements and minimise waste
- calculated cost of listed materials
- completed records of all calculations, material quantities, usage and pricing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- categories of different timber-based construction materials:
 - panels
 - sawn timber
 - laminated timber
 - timber species
 - manufactured timber
 - surface treated and finished
- timber fabrication industry standard material lengths and sheet sizes
- methods and processes used to:
 - calculate material quantities
 - minimise wastage
 - format for listing and categorising materials
- workplace policies and procedures to:
 - source cost of materials

- prepare, document and save material quantities and pricing.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber product design or fabrication facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - access to work orders, workplace policies and procedures and relevant workplace price lists for material costs
 - digital equipment and software to calculate, compile and save take-off material lists and costing documentation, if applicable according to workplace procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3305 Interpret and quote from manufactured timber product plans

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to process and prepare manual or electronic quotations from timber wall frame and timber floor and/or roof trusses product plans. It includes interpreting plan layouts and specifications to determine design, material types and material quantities to estimate costs.

The unit applies to timber truss or frame fabricators and timber systems designers who interpret plans and quote on timber and wood products and who take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3305 Interpret and quote from manufactured timber product plans

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a quotation for two different projects, each with a minimum area of 100 square metres as below:

- a timber wall frame, and
- either a timber floor truss or a timber roof truss, each of which must incorporate a minimum of two different truss types.

For each project there must be evidence that the individual has:

- conveyed technical information from plans and specifications in written, sketch or oral form
- accurately determined the size, section and length of materials manually or using a software program
- prepared and saved/filed a quotation in full
- produced and presented quotations within designated timeframes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- building standards and codes relevant to timber floor trusses, timber roof trusses and timber wall frames:
 - spans and sectional sizes
 - load-bearing details
 - wind bracing and tie down requirements
 - relationship between component loads and supports and spans
- workplace policies and procedures relating to quoting manufacture of timber products:
 - cost inclusions

- calculating and formatting quotations
- sources of material and labour costs
- common industry terminology for components of timber wall frames, roof and floor trusses
- processes, procedures and techniques of quoting:
 - methods to manually calculate quantities using tables and calculators
 - preparing and documenting computerised quotations
 - software programs to calculate quantities and costings

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber systems design or fabrication facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computer with building design industry and current business software programs
 - calculators
- specifications:
 - access to current building codes and standards relevant to frame and truss fabrication
 - access to workplace project quotation templates
 - access to design plans, technical specifications and notes for timber wall frames, timber roof and floor trusses on which to base a quotation
 - access to electronic or hard copy current material price lists, product description sheets or manuals

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3306 Rehabilitate tracks, quarries and landings

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify and plan for the rehabilitation of tracks, quarries and landings, and to conduct renovation and revegetation operations. The unit also includes the establishment of run-off and drainage channels.

The unit applies to individuals who work as forestry technicians, forestry operations supervisors, mobile plant operators, and harvesting technicians within a commercial forest environment and are responsible for rehabilitation operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for rehabilitation operations	1.1 Determine job requirements from work order or instruction, and where required, seek clarification from appropriate personnel 1.2 Confirm safety and environmental requirements according to

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>workplace procedures and regulatory and legislative information relating to the rehabilitation of the site</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with rehabilitation operations</p> <p>1.5 Identify and report existing and potential environmental risks and hazards to relevant personnel</p> <p>1.6 Consult and maintain communication with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.7 Obtain tools and equipment needed for the work, and check for correct operation and safety</p> <p>1.8 Inspect site and identify specific rehabilitation, revegetation and drainage requirements</p>
2. Plan rehabilitation operations	<p>2.1 Determine sequence of rehabilitation operations to ensure that resources, including people and equipment, are used efficiently and are available as required</p> <p>2.2 Advise relevant personnel of impending rehabilitation operations and any disruptions that may occur, according to workplace procedures</p> <p>2.3 Document the rehabilitation and revegetation works to be undertaken according to workplace procedures</p>
3. Implement repairs to tracks, quarries and landings	<p>3.1 Operate equipment according to manufacturer recommendations, and monitor performance to ensure efficiency and safety of operations</p> <p>3.2 Remove and store any recoverable timber</p> <p>3.3 Remove and dispose of any debris according to workplace procedures</p> <p>3.4 Renovate tracks, quarries and landings according to rehabilitation plan, industry codes of practice, work order and workplace procedures</p> <p>3.5 Establish run-off and drainage channels to approximate natural drain lines</p> <p>3.6 Record and report rehabilitation outcomes according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine requirements
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Select and use appropriate spoken communication strategies with work colleagues and other personnel on site Interpret hand signals with other operators to ensure safety of rehabilitation operations
Numeracy	<ul style="list-style-type: none"> Estimate quantity or amount of materials required for the rehabilitation Estimate time for sequencing tasks and the total time for the job

Assessment Requirements for FWPCOT3306 Rehabilitate tracks, quarries and landings

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- planned and implemented one rehabilitation operation involving a track, a quarry or a landing
- followed workplace policies and procedures, current workplace health and safety legislation, regulations and related industry standards and codes of practice applicable to rehabilitation operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry standards and codes of practice and workplace requirements for performing the rehabilitation of tracks, quarries and landings
- environmental protection requirements, including the safe disposal of waste material related to rehabilitation operations
- problem identification and resolution strategies, and common fault finding techniques related to rehabilitation operations
- tools and equipment used for rehabilitation of tracks, quarries and landings, their suitability for different procedures, and their safe use and maintenance
- mathematical procedures for estimating and measuring tasks, time and resources, including calculating time to complete rehabilitation tasks
- factors to consider in planning rehabilitation operations, which may include some of the following:
 - current state of the track, quarry or landing
 - natural water flow and water courses
 - recoverable logs and equipment
 - the impact of harvesting or transportation

- ground slope and stability
- damage to the environment
- weather conditions
- access to suitable equipment and other resources
- safety
- further damage that may result from renovations
- waste disposal
- procedures for recording and reporting workplace information related to rehabilitation operations
- water run-off patterns, soil types and erosion
- workplace health and safety practices related to rehabilitation operations:
 - manual handling techniques, including shifting, lifting and carrying
 - personal protective equipment (PPE) and clothing
 - techniques for elimination of hazardous materials and substances
- plants suitable for revegetation
- rehabilitation techniques, which may include some of the following:
 - pulling out and removing construction materials
 - breaking up ramps and constructions
 - filling and ripping surfaces
 - breaking up and burying crushed rock, sand and other stabilising materials
 - spreading and compacting top soil over base materials
- techniques for managing environmental risks and hazards related to rehabilitation operations, which may include some of the following:
 - uneven and unstable ground
 - overhead and underground services
 - excavations
 - hazardous materials
 - traffic
 - insects and animals
 - fires.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a commercial forest setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tracks, quarries or landings requiring rehabilitation
 - machinery and equipment necessary for the rehabilitation operations

- PPE required in rehabilitation operations
- communication system
- specifications:
 - access to workplace safety and environmental policies and procedures applicable to rehabilitation operations
 - access to workplace procedures and forms for recording rehabilitation outcomes
 - access to workplace standard operating procedures or operator manual for machinery and equipment necessary for rehabilitation operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3307 Create drawings using computer aided design software

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to produce various types of drawings using computer aided design software. It includes producing plans, diagrams, component details and linked materials lists.

The unit applies to timber truss or frame fabricators and engineered timber product technicians who create drawings of timber and wood products and who take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3307 Create drawings using computer aided design software

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has created a set of drawings using a design software program for at least one timber product project, and used the software to:

- manipulate the drawing origin and entities
- modify dimension styles
- access libraries and define and utilise symbols and abbreviations
- display various scaled views
- add title block
- prepare project to printing
- produce a linked materials list.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures relevant to using digital devices, software and creating drawings for a timber project
- capabilities, functions and processes of drawing software programs
- drawing outcomes:
 - orthographic
 - isometric
 - perspective
 - 2-dimensional (2D)
 - 3-dimensional (3D)
- drawing elements:
 - points, line angles, circles, arcs, planes, solids and figures

- shapes – squares, rectangles, triangles
- bisected and divided lines
- dimensions and hatchings
- drawing tools:
 - delete, fillet, chamfer, erase, trim/extend, break, undo and redo
 - zoom and pan
 - move, copy, rotate, mirror
 - polar and rectangular duplication
 - object snaps
 - dimension/measure/divide
 - scale
- drawing features:
 - built-in specifications
 - save
 - file import/export
 - print
- methods to:
 - set up system variables, menus and macros
 - prepare 2D drawings
 - prepare and explode detailed views
 - link drawing entities to materials lists
 - extract supplementary product dimension data from drawings
 - store and retrieve drawings and materials lists
- formats for and inclusions of materials lists according to workplace procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber fabrication facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computers with current software programs used to produce drawings and materials lists
- specifications:
 - access to workplace product information and fabrication plans on which to base drawings
 - access to workplace materials' lists templates
 - access to workplace policies and procedures for producing drawings and documents using computers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3308 Assemble timber wall frames

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assemble construction-ready timber wall frame sections. It includes packing and strapping frames in readiness for transport to a construction site.

The unit applies to frame fabricators, timber manufactured products technicians, jig setters, machine and saw operators who take responsibility for organising and completing tasks assigned to them without close supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3308 Assemble timber wall frames

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assembled a minimum of 50 lineal metres of timber wall frames that include:

- load-bearing and non-load-bearing frames
- internal, external corners and T-intersections
- strapping, packing, labelling and pre-slinging completed products ready for despatch.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace quality requirements relevant to assembling timber wall frames
- workplace environmental policy and procedures for disposing of, recycling and reusing waste materials
- workplace safety requirements relevant to assembling timber wall frames:
 - safe operation of machinery, tools and equipment
 - exposure to excessive noise
 - hazardous manual tasks
 - hazard identification and controls
 - use of personal protective equipment (PPE)
 - exposure to dust
- processes, procedures and techniques for:
 - flow of material supply in and out of the wall frame assembly area
 - assembly sequences using a jig or assembly table
 - stacking and storing materials
 - labelling products for identification and transportation

- stacking, binding and protecting finished products ready for despatch
- workplace communication and reporting lines
- recording and reporting assembly outcomes and equipment faults
- functional and operational features of tools, equipment and machinery:
 - measuring and marking equipment
 - electric circular saws
 - docking saws
 - drills
 - assembly jigs
 - assembly table
 - staple and nail guns
 - compressor or compressed air supply
 - strapping equipment
- characteristics, properties and limitations of timber products and components:
 - hardwood, softwood and manufactured timber products
 - metal connector plates and straps
- timber defects:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- industry terminology related to timber wall assembly:
 - studs
 - top and bottom plates
 - lintels
 - trimmers
 - nogging
 - bracing
- typical assembly faults triggering correction to ensure product quality:
 - incorrectly positioned joints
 - timber splits from nailing
 - incorrectly positioned hardware.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber frame fabrication facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - timber products and components to assemble timber frames
 - equipment, tools and machinery to assemble wall frames and finalise frames for despatch
- specifications:
 - access to work order or fabrication plan detailing frame assembly to be undertaken
 - access to workplace safety and environmental policies and procedures applicable to assembling timber wall frame
- relationships:
 - supervisor or team member.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT3309 Assemble timber roof trusses

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one occasion:

- assembled a minimum of two of the following:
 - standard type truss
 - truncated standard truss
 - girder truss
 - truncated girder
 - jack truss
 - gable truss
 - saddle/valley truss
- set up and operated a truss press
- labelled, strapped, packed and protected products ready for despatch.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace quality requirements relevant to assembling timber roof trusses
- workplace environmental policy and procedures for disposing of, recycling and reusing waste materials
- workplace safety requirements relevant to assembling timber roof trusses:
 - safe operation of machinery and equipment
 - exposure to excessive noise
 - hazardous manual tasks
 - hazard identification and controls
 - use of personal protective equipment (PPE)

- exposure to dust
- typical timber defects and impact on the finished product:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- processes, procedures and techniques for:
 - flow of material supply in and out of the roof truss assembly area
 - use of assembly componentry
 - assembly sequences and jig and press operation
 - stacking and storing materials
 - labelling products for identification and transportation
 - stacking, binding and protecting finished products ready for despatch
 - workplace communication and reporting lines
 - recording and reporting assembly outcomes and equipment faults
- truss types:
 - standard
 - truncated standard
 - girder truss
 - truncated girder
 - jack truss
 - gable truss
 - saddle/valley truss
- functional and operational features of tools, equipment and machinery for roof truss assembly:
 - electric circular saws
 - docking saws
 - drills
 - staple and nail guns
 - compressor or compressed air supply
 - nail plate presses
 - measuring and marking equipment
 - truss assembly tables
 - assembly jigs
 - strapping equipment
- range of industry standard lengths, cross sections and tolerances and applicable terminology relating to roof trusses

- typical assembly faults triggering correction to ensure product quality:
 - incorrectly positioned joints
 - timber splits from nailing
 - incorrectly positioned connector plates/straps.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber truss fabrication facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - timber products and connector plates
 - assembly tables or jigs to assemble timber roof trusses
 - truss press
- specifications:
 - access to work order or fabrication plan detailing truss assembly to be undertaken
 - access to workplace safety and environmental policies and procedures applicable to assembling timber roof trusses
- relationships:
 - supervisor or team member.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3310 Prepare timber or related products to meet import/export compliance requirements

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to ensure timber or related products meet compliance requirements for import/export. The unit includes reviewing existing workplace procedures for timber import/export for compliance with regulatory requirements, checking that import/export timber meets biosecurity requirements, and completing compliance documentation.

The unit applies to individuals who assess timber for import/export requirements in a variety of work settings, including:

- timber harvesting
- sawmill
- woodchip mill
- veneer mill
- board/plywood mill
- timber and wood products production
- timber and wood products sales and service.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review workplace procedures for compliance with regulatory requirements for the import/export of timber and related products	<p>1.1 Identify legal requirements for the import/export of timber and related products</p> <p>1.2 Identify biosecurity requirements for the import/export of timber and related products and the types and consequences for breaches of these requirements</p> <p>1.3 Examine workplace procedures to determine compliance with legal and biosecurity requirements for import/export timber or related products</p> <p>1.4 Report potential breaches of legal and biosecurity requirements according to workplace procedures</p>
2. Check import/export timber or related products for compliance with biosecurity requirements	<p>2.1 Identify import/export timber or related products and any associated documentation</p> <p>2.2 Assess properties of import/export timber or related products to determine risk of fungal disease and insect pests</p> <p>2.3 Examine timber or related products to identify potential biohazards associated with the particular species and undertake a risk assessment according to workplace procedures</p> <p>2.4 Determine the need to treat import/export timber or related products, and arrange required treatments according to workplace procedures and regulatory requirements</p> <p>2.5 Establish the need for phytosanitary certification for import/export timber or related products, and arrange appropriate certification, if required</p>
3. Complete compliance requirements	<p>3.1 Complete and check branding and labelling of timber or related products according to workplace procedures and regulatory requirements</p> <p>3.2 Obtain forest certification records and forward to relevant authorities according to workplace procedures and regulatory requirements</p> <p>3.3 Complete and submit compliance records and reports according to workplace procedures and regulatory requirements</p> <p>3.4 Report potential breaches of compliance requirements according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for FWPCOT3310 Prepare timber or related products to meet import/export compliance requirements

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared two consignments of timber or related products for either import or export, and has:

- checked and taken all necessary actions to ensure that timber for import/export complied with legal and biosecurity requirements
- correctly prepared all required compliance documentation for the import/export of the two consignments of timber or related products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations, standards and codes of practice for identifying import and export requirements of timber and related products, including knowledge of customs and biosecurity requirements
- workplace requirements, policies and procedures for identifying import and export requirements of timber and related products
- timber species identification techniques
- wood properties and how these relate to fungal and insect risks associated with importing/exporting timber
- range of timber treatments meeting biosecurity requirements
- branding and labelling requirements to ensure compliance
- forest certification systems and chain of custody procedures
- established communication channels and protocols
- workplace procedures for recording and reporting records and information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace location or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - timber for import or export
 - computing facilities for accessing online documentation and preparation of compliance documentation
- specifications:
 - access to work order or instruction detailing timber import/export activities to be carried out by operator
 - access to workplace policies and procedures, regulations and related industry standards and codes of practice applicable to timber import/export
 - access to workplace procedures and forms for recording compliance of timber import/export and reporting breaches.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3311 Use environmental care procedures to undertake fire salvage operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to undertake tree salvaging following forest fires in line with a salvage plan that incorporates environmental protection and sustainability principles.

The unit applies to individuals who work as forestry workers, harvesting technicians and mobile equipment operators as part of forestry, conservation and land management, local government, emergency services and other government agency operations and are involved in fire salvage operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for fire salvage operations	1.1 Determine job requirements from work order or instruction in relation to salvage schedule, and where required, seek clarification from appropriate personnel 1.2 Confirm safety, environmental care and cultural heritage protection requirements according to workplace procedures 1.3 Identify, assess and take actions to mitigate risks and hazards associated with fire salvage operations 1.4 Identify and report existing and potential environmental risks and hazards to relevant personnel 1.5 Identify and confirm preliminary site work and operational activities 1.6 Assess tree location and stability for conditions likely to affect safety and merchandising priorities 1.7 Confirm planning permits and access permission 1.8 Consult and maintain communication with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace 1.9 Obtain tools and equipment needed for the work, and check for correct operation and safety 1.10 Select, fit and use personal protective equipment
2. Perform fire salvage operations	2.1 Monitor movement and whereabouts of others on site 2.2 Undertake pre-harvesting environmental care requirements according to salvage plan and workplace procedures 2.3 Salvage designated trees according to salvage plan 2.4 Disperse or handle heads and non-merchantable stems according to work order 2.5 Haul logs to logs landings and ensure landscape is left in safe condition suitable for regeneration

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
3. Complete documentation	3.1 Tally and record product volumes from salvage site 3.2 Report variations according to workplace procedures 3.3 Record and report operations and environmental care procedures according to workplace procedures 3.4 Report breaches or potential breaches of relevant environmental regulations according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine requirements
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Select and use appropriate spoken communication strategies with work colleagues and other personnel on site Interpret hand signals with other operators to ensure safety of salvage operations
Numeracy	<ul style="list-style-type: none"> Complete routine calculations and report on size, length and diameter of salvaged trees

Assessment Requirements for FWPCOT3311 Use environmental care procedures to undertake fire salvage operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- applied environmental care procedures in undertaking one fire salvage operation
- followed workplace policies and procedures, current workplace health and safety legislation, regulations and related industry standards and codes of practice applicable to fire salvage operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace regulations, standards, codes of practice and established safe practices for using environmental care procedures to undertake fire salvage operations
- legislative, standard certification or management requirements relating to:
 - soil erosion mitigation
 - track, road, drainage and crossing maintenance
 - weed management
 - rehabilitation prescriptions
 - watercourse protection
 - flora and fauna management
 - run-off minimisation
 - buffer zone and filter strip maintenance
 - protection of remnant habitat
 - identification of cultural sites
- environmental protection, cultural heritage protection and sustainability principles related to fire salvage operations

- characteristics of trees and timber defects
- criteria for assessment of fire damaged trees:
 - stability
 - safety
 - merchantability
 - appropriate felling technique
- techniques, operations and strategies used to undertake fire salvage
- harvesting and extraction methods related to fire salvage operations
- communication channels and protocols, including notification to authorities, used during fire salvage operations
- problem identification and resolution strategies in relation to plant and equipment used in salvage operations
- procedures for recording and reporting workplace information related to fire salvage operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment required for fire salvage operations
 - a tree area suitable for salvage operations
 - personal protective equipment required in fire salvage operations
 - communication system
- specifications:
 - access to workplace safety and environmental policies and procedures applicable to fire salvage operations
 - access to site emergency procedure
 - access to workplace procedures and forms for recording and reporting operations and breaches of relevant environmental regulations
 - access to workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3312 Implement environmentally sustainable work practices in the work area/work site

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assess the environmental sustainability and efficiency of existing workplace practices, identify opportunities for improvement, develop and implement environmental sustainability and resource efficiency improvement plans, and monitor the impact of environmental sustainability and resource efficiency measures.

The unit applies to individuals who work in a wide range of roles across all forest industry sectors and are required to implement environmentally sustainable work practices within their work area.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned, implemented and monitored the outcomes of one environmental sustainability and resource efficiency improvement plan in a real or simulated workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental protection requirements related to a workplace:
 - safe disposal of waste material
 - safe use and storage of chemicals
 - minimisation of carbon emissions and noise
 - cleaning of plant, tools and equipment
 - care of surrounding environment
- workplace standards, requirements, policies and procedures associated with environmentally sustainable work practices:
 - environmental risks and hazards
 - procedures for minimising environmental impact
 - using energy effectively and efficiently
 - using material effectively and efficiently
 - environmental and resource use efficiency issues specific to industry practices
- sources of information on systems and tools for assessing environmental sustainability and the efficiency of resource use in the workplace.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - systems and tools for assessing environmental sustainability and the efficiency of resource use in the workplace
- specifications:
 - access to workplace environmental policies and procedures applicable to environmental sustainability and resource efficiency
 - access to workplace procedures and forms for recording environmental sustainability and resource efficiency information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3313 Apply biodiversity protection principles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to access, interpret and apply biodiversity principles and requirements to forestry operations, including monitoring work practices for compliance, and maintaining forest documentation and records.

The unit applies to individuals whose work involves ensuring biodiversity protection in operational forest environments.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3313 Apply biodiversity protection principles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- implemented biodiversity protection procedures in an operational forest on one occasion
- followed workplace policies and procedures, current legislation, regulations and related industry standards and codes of practice applicable to biodiversity protection in operational forest environments
- monitored work practices in one operational forest for consistency with biodiversity principles, and made at least one recommendation on ways of improving work practices to enhance biodiversity protection.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- applicable regulatory and legal requirements that affect forest operations in relation to ecological and biodiversity protection:
 - Environment Protection and Biodiversity Conservation Act 1999 (the EPBC Act)
 - Threatened Species Conservation Act
 - Native Vegetation Act
 - native forest legislation
 - private native forest codes
 - forest operational plans
 - environmental legislation, policy and procedures
 - environmental planning and assessment
 - specific site environmental management plans
 - relevant codes of practice
 - water catchment management

- surface and ground water conservation requirements
- relevant Australian standards and industry standards
- hazard reduction policy and procedures
- plantation legislation
- plantation and reforestation code
- fisheries and fish passage
- national parks and wildlife legislation
- good neighbour policies
- award and organisational agreements
- heritage and traditional landowner
- forest certification (Responsible Wood Certification Scheme and Australian Forestry Standard (AFS) certification)
- types or range of forest operational plans:
 - forest operations plan
 - harvesting plan
 - plantation establishment plan
 - coupe plan
 - roading plan
 - drainage plan
 - sediment and erosion control plan
- habitats, including any area or region local animals, plants or organisms may live or rely upon for food, water, shelter or breeding purposes:
 - habitat plants and trees (*specific species, burrow, food, roost and nest*)
 - recruitment trees
 - standing trees with hollows (dead and alive)
 - stags with roost sites
 - hollow logs
 - rocky outcrops
 - rock overhangs
 - caves
 - soil mounds
 - creeks, springs or river banks
 - sheltered valleys or canyons
 - wetlands
- any other site, feature or zone listed as habitat or potential habitat
- threatened and endangered plant and animal species
- protection zones and protection zone methods where operational conditions are varied by prescriptions for the management of ecological and biodiversity values:
 - buffer zones
 - filter strips

- riparian protection areas
- exclusion zones
- conservation management plan
- regulations, standards, codes of practice and established safe practices for ecological and biodiversity protection
- established communication channels and protocols for compliance with biodiversity protection principles
- procedures for recording and reporting workplace information related to biodiversity protection activities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in operational forest environments or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - personal protective equipment
 - communication system
- specifications:
 - access to workplace policies and procedures applicable to biodiversity protection operations
 - access to forest operational plans
 - access to workplace procedures and forms for recording biodiversity protection activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3314 Comply with soil and water protection

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to carry out soil erosion and sediment control works and pollution prevention measures in forestry operations and other work environments.

The unit applies to individuals who work as forestry technicians, nursery technicians, forestry operations supervisors, tree planters, silviculturists, arboriculture technicians and mobile equipment operators to implement erosion, sediment control and pollution prevention measures in a variety of work settings, including in forest, horticultural, domestic, local council and emergency services environments.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3314 Comply with soil and water protection

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- implemented either a soil or a water protection procedure in an operational work setting on one occasion
- followed workplace policies and procedures, current legislation, regulations and related industry standards and codes of practice applicable to soil and water protection operations
- monitored work practices in one operational work setting for consistency with soil and water protection requirements and made at least one recommendation on ways of improving work practices to enhance soil and water protection.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations, standards, codes of practice and established safe practices for soil and water protection procedures
- applicable regulations from all levels of government that affect operations in relation to soil and water protection:
 - regional agreements
 - relevant codes of practice
 - operational plans
- workplace standards, requirements, policies and procedures relevant to soil and water protection
- techniques and measures relevant to erosion mitigation:
 - walk-over techniques
 - minimal disturbance techniques
 - crown and cross fall drainage

- cross bank drainage
- relief culverts on roads
- mitre and table drains on roads
- armouring/gravelling of roads
- crossing and draining surfaces
- batter stabilisation
- contour banks and channels
- gabions
- sediment basins
- riparian buffer zones
- outlet protection structures
- revegetation
- factors that are likely to influence soil and water protection measures:
 - track and road maintenance
 - drainage structures
 - setting of contour lines
 - slope measurement techniques
 - boundaries and survey markers
 - site preparation techniques
 - site cultivation techniques
 - disposal of logging waste materials
 - windrowing placement and techniques
 - tree selection and felling techniques
 - log dump locations and techniques
 - log extraction and haulage techniques
 - clearing techniques
 - soil types
- environmental features that can be adversely affected if soil erosion occurs, or if inundated with sediment of other pollutants:
 - trees, understorey and other vegetation
 - drainage lines and drainage depressions
 - water course, creeks and rivers
 - lakes, swamps and wetlands
 - aquatic species
 - steep slopes
 - caves
 - historic and cultural heritage sites
 - road and water supply infrastructure
- other pollution control measures:
 - fuel containment barriers

- chemical spillage barriers
- containment and removal of work waste, rubbish litter and human waste
- risks and hazard identification relevant to soil and water protection
- established communication channels and protocols for compliance with soil and water protection
- procedures for recording and reporting workplace information related to soil and water protection activities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment and machinery required for soil and water protection operations
 - personal protective equipment used in soil and water protection operations
 - communication system
- specifications:
 - access to workplace policies and procedures applicable to soil and water protection operations
 - access to operational plans
 - access to access to workplace procedures and forms for recording soil and water protection activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3315 Transport forestry logs using trucks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to drive log trucks to and from forest harvesting sites, facilitate log loading and unloading, and deliver logs to their destination.

The unit applies to individuals who transport logs by driving heavy log vehicles in a variety of work settings, including forest environments, landings, log dumps, sawmills, wood chip mills, veneer mills, and board/plywood mills.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and chain of responsibility regulations, legislation and standards that apply to the workplace.

Licensing requirements apply to this unit. Users are advised to check with the relevant regulatory authority.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to transport logs	1.1 Determine job requirements from work order and schedules and, where required, seek clarification from appropriate personnel 1.2 Confirm safety and environmental protection requirements for

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>the task according to workplace procedures and chain of responsibility obligations</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with driving log trucks according to regulatory requirements and industry code of practice</p> <p>1.4 Obtain coupe map to identify forest harvesting site, truck entry, access and exit tracks and loading areas</p> <p>1.5 Determine required truck configuration to meet work order and loading and stability requirements, and confirm availability of truck and ancillary equipment or breach of requirements according to workplace procedures</p> <p>1.6 Participate in audits of loads for compliance with regulatory requirements for driving hours, load limits and dimensions as required</p> <p>1.7 Consult and maintain communication with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.8 Select, fit and use personal protective equipment</p> <p>1.9 Conduct pre-start-up checks, load restraint equipment and tag out and report any observed component wear or failure to the appropriate personnel for repair or replacement</p>
2. Plan route	<p>2.1 Select route and coupe entry and exits points to ensure efficient, safe and legal movement of logs, and compliance with environment protection procedures</p> <p>2.2 Confirm selected route complies with height, width, overhang and load limits of road infrastructure and environmental constraints</p> <p>2.3 Estimate time required to transport logs, and account for fatigue management guidelines</p> <p>2.4 Confirm route, timing and coupe entry and exit points with appropriate personnel</p>
3. Support log loading and load construction	<p>3.1 Access site and determine safe manoeuvring approach for loading area with worksite personnel</p> <p>3.2 Position truck in designated safe zone to avoid hazards and maximise load safety and security while loading</p> <p>3.3 Communicate with loader, from a designated safe zone, to assist with the placement of the logs on the vehicle to achieve the required</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>3.4 Communicate the remaining payload capacity and weight distribution with the loader from a designated safe zone</p> <p>3.5 Check that maximum permissible axle masses and total combination mass are not exceeded</p> <p>3.6 Check log placement for vertical containment before applying restraints</p> <p>3.7 Monitor loading and remotely communicate, from a designated safe zone, to the loader any adjustments required to log positioning to prevent stanchion damage</p> <p>3.8 Discuss any concerns about the positioning and/or size of the selected logs with the loader, and adjust if required</p>
4. Secure logs prior to transport	<p>4.1 Secure load with load restraint system for type and size of load according to industry guidelines, code of practice and transport regulatory requirements</p> <p>4.2 Re-tension manual restraint equipment as required to ensure the pre-tension is maintained, particularly as the load settles</p> <p>4.3 Use tensioning systems according to manufacturer recommendations</p> <p>4.4 Clean the trailer, tyres and the exterior of the load, if loaded, to remove debris before driving</p> <p>4.5 Fit overhang warning devices and signage to load to comply with transport regulatory requirements</p>
5. Transport logs	<p>5.1 Transport logs on planned or modified route, considering conditions, road surfaces and fatigue management practices</p> <p>5.2 Monitor condition of tracks and roads, and report unexpected ground, water, vegetation and other environmental conditions to appropriate personnel</p> <p>5.3 Drive truck legally and safely using primary and subsidiary controls appropriate to conditions</p> <p>5.4 Monitor truck gauges and warning devices to detect and respond to operating faults and ensure operational safety</p> <p>5.5 Communicate with other drivers and road users to inform location and potential hazards</p> <p>5.6 Conduct periodic load safety checks and re-tension load</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>according to road conditions, workplace procedures, industry code of practice and regulatory requirements</p> <p>5.7 Keep communication channels open to ensure location is known at all times to allow for emergency assistance</p>
6. Facilitate log unloading	<p>6.1 Complete site inductions and establish safe manoeuvring approach for unloading area with worksite personnel</p> <p>6.2 Follow site personnel directions to manoeuvre and park truck to avoid site and equipment hazards</p> <p>6.3 Shut down and secure truck in identified safe unloading zone</p> <p>6.4 Inspect load for log movement and make provisions to support logs requiring difficult control during release</p> <p>6.5 Release load securing devices in correct sequence for truck, trailer and load configuration and in line with site safe unloading procedures</p> <p>6.6 Make truck, trailer and ancillary equipment safe for return journey to coupe</p> <p>6.7 Record and report log haulage process, near miss incidents and truck operating faults to appropriate personnel according to workplace procedure</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for FWPCOT3315 Transport forestry logs using trucks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- planned and completed log haulage according to an individual work order and transport schedule of one mixed small load of logs and one similar large load of logs
- completed reports on the log haulage, near miss incidents and truck operating faults for each haulage operation.

In conducting this work, the individual has followed workplace policies and procedures, current workplace health and safety legislation, regulations and related industry standards and codes of practice applicable to transporting forestry logs using trucks.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and content of applicable Commonwealth, state or territory transport regulations for driving heavy logging vehicles, with particular emphasis on load limits, allowable dimensions, driving hours, fatigue management and required rest breaks
- applicable fall from heights regulations and compliance requirements
- environmental protection practices relevant to driving heavy logging trucks to minimise:
 - fuel consumption
 - emissions
 - noise
 - damage to soil, water and other aspects of habitat
- key features of site conditions and effects on driving heavy logging trucks:
 - sealed and unsealed roads and tracks
 - ground slope

- ground hazards and obstacles
- wind and dust
- fog and rain
- common safety hazards and risks associated with log haulage as outlined in industry code of practice methods used to assess vehicle condition and complete pre-start checks
- load construction practices used to eliminate or minimise risks as outlined in industry code of practice:
 - stanchion engagement and/or containment to prevent log loss in the event of limited load movement
 - load crowning and its relationship to load restraint
 - distribution of butts within the load and the effect on the load restraint and vehicle stability
 - distribution of weight across the load and the effect on the load restraint and vehicle stability
 - maximum permissible dimensions and masses including combination and axle
 - debris management and prevention of on-road projectiles
- load restraint practices used to eliminate or minimise risks as outlined in industry code of practice:
 - National Regulation Performance Standards for heavy vehicles (mass, dimension and loading) and their relationship to load restraint
 - principles of clamping and blocking for restraint
 - typical capacity and selection of load restraint systems
 - application of restraint required
 - effective use of blocking systems
- heavy vehicle stability and control practices used to eliminate or minimise risks as outlined in the industry code of practice:
 - evaluation of Static Roll Threshold and adjustment of load centre of gravity
 - assessment of vehicle condition
 - identification of hazardous driving conditions and/or environmental limitations and risk mitigation techniques
 - advantages of vehicle monitoring systems and how to operate them
- methods used to plan time-efficient routes and schedules to comply with regulations and environmental considerations
- features, capabilities and capacities of logging trucks and trailers:
 - rigid or articulated log trucks
 - semi-trailers
 - jinkers
 - quad-dogs
 - B doubles
 - two-bay skeletal trucks
- purpose, features, performance and safe operation of equipment:

- load restraint equipment, including stanchions, bolsters, grip plates, blocking systems, cab guards, lashings, automatic lashing tensioning systems, manual lashing tensioning systems
- active vehicle monitoring systems
- passive vehicle monitoring systems
- overhang warning devices, including flags, lights, reflectors and signs
- communication equipment, including two-way radio and hands-free mobile phones
- workplace procedures specific to transporting, loading and unloading logs:
 - workplace health and safety, with particular emphasis on rest breaks, emergency response procedures and use of personal protective equipment (PPE)
 - communication reporting lines
 - recording and reporting log haulage processes, near miss incidents and truck operating faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace on a heavy log track or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - log trucks and trailers suitable for transporting logs
 - load restraint equipment and overhang warning devices suitable for transporting logs
 - supply of logs for mixed small load of logs and similar large load of logs
 - communication equipment
 - PPE required in log haulage operations
- specifications:
 - access to work order or instruction detailing the log haulage activity to be conducted by operator
 - access to workplace safety and environmental protection policies and procedures applicable to log haulage operations
 - access to workplace procedures and forms for recording log haulage information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3316 Transport forestry produce using trucks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to drive trucks to and from forestry harvesting sites, facilitate loading and unloading, and deliver forestry produce to its destination. Produce could include bark, wood shavings, wood chips and biofuel materials.

The unit applies to individuals who transport forestry produce by driving heavy vehicles in a variety of work settings, including forest environments, log dumps, saw mills, wood chip mills, veneer mills, and board/plywood mills.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and chain of responsibility regulations, legislation and standards that apply to the workplace.

Licensing requirements apply to this unit. Users are advised to check with the relevant regulatory authority.

Assessment Requirements for FWPCOT3316 Transport forestry produce using trucks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- planned and completed all activities associated with forest produce haulage according to an individual work order and transport schedule prescribing different load quantities, coupe locations and destinations for each job, on three occasions
- completed reports on the forest produce haulage, near miss incidents and truck operating faults for each haulage operation.

In conducting this work, the individual has followed workplace policies and procedures, current workplace health and safety legislation, regulations and related industry standards and codes of practice applicable to transporting forestry produce using trucks.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and content of applicable Commonwealth, state or territory transport regulations for driving heavy forestry produce vehicles, with particular emphasis on load limits, allowable dimensions, driving hours, fatigue management and required rest breaks
- applicable fall from heights regulations and compliance requirements
- environmental protection practices relevant to driving heavy forestry produce trucks to minimise:
 - fuel consumption
 - emissions
 - noise
 - damage to soil, water and other aspects of habitat
- key features of these varying environmental conditions and effects on driving heavy forestry produce trucks:

- sealed and unsealed roads and tracks
- ground slope
- ground hazards and obstacles
- wind and dust
- fog and rain
- typical safety hazards present at loading and unloading facilities, and methods used to minimise associated risks
- methods used to:
 - plan time-efficient routes and schedules to comply with regulations and environmental considerations
 - safely load, restrain and unload forestry produce
- features, capabilities and capacities of forestry produce trucks and trailers
- purpose, features and safe operation of equipment used to load, unload and transport forestry produce:
 - load securing devices
 - communication equipment
- workplace procedures specific to transporting, loading and unloading forestry produce:
 - workplace health and safety, with particular emphasis on rest breaks and use of personal protective equipment (PPE)
 - communication reporting lines
 - recording and reporting forestry produce shifting processes and truck operating faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace on a heavy log track or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - trucks and trailers suitable for transporting forest produce
 - load securing and overhang warning devices suitable for transporting forest produce
 - supply of forest produce
 - communication equipment
 - PPE required in forest produce haulage operations
- specifications:
 - access to work order or instruction detailing the forest produce haulage activity to be conducted by operator
 - access to workplace safety and environmental policies and procedures applicable to forest produce haulage operations
 - access to workplace procedures and forms for recording forest produce haulage information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3317 Use chainsaw within a tree

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate a chainsaw at heights within a tree safely.

The unit applies to individuals who use chainsaws off ground when conducting tree trimming or dismantling work whilst working at height in arboriculture settings. They work under some supervision, generally within a team environment.

Individuals who use this unit will have had experience in using arborist climbing techniques and chainsaws in an arboriculture, forestry or related work context. This unit is not intended for use by novice or inexperienced chainsaw operators.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and industry codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	<p>1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate personnel</p> <p>1.2 Confirm safety and environmental protection requirements according to workplace procedures</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with using chainsaws off ground</p> <p>1.4 Identify emergency plan procedures to follow in the event of an emergency</p> <p>1.5 Erect warning and prohibition signs to indicate a hazardous worksite and that unauthorised access is prohibited according to workplace safety procedures</p> <p>1.6 Identify, assess and determine cutting requirements according to work order or instruction</p> <p>1.7 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.8 Select, fit and use personal protective equipment</p> <p>1.9 Obtain chainsaw appropriate for the task, height access equipment and other tools and equipment needed for the work, and check for correct operation and safety according to manufacturer recommendations and workplace procedures</p> <p>1.10 Confirm with appropriate personnel that one person is present on the ground during working at height operations and this person is competent and equipped to perform aerial rescue</p>
2. Assess site conditions and surroundings	<p>2.1 Inspect site for conditions likely to affect safe use of chainsaw off ground</p> <p>2.2 Observe weather conditions and assess likely impact on safe use of chainsaw off ground</p> <p>2.3 Identify and report site environmental conditions to appropriate personnel</p> <p>2.4 Determine work area and implement control measures to minimise risks and hazards in the area according to safe work procedures</p> <p>2.5 Monitor location and activity of other personnel on the worksite, and implement control measures according to workplace safety procedures</p>
3. Pre-start chainsaw	3.1 Fuel and lubricate saw on the ground according to manufacturer

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>instructions and workplace procedures</p> <p>3.2 Perform pre-start checks on chainsaw according to manufacturer instructions and workplace procedures</p> <p>3.3 Start chainsaw using cold and warm starting methods on the ground according to workplace safety procedures</p> <p>3.4 Confirm the chainsaw is running effectively prior to ascending tree</p> <p>3.5 Select, communicate to team members and apply appropriate method for sending chainsaw to the operator according to workplace health and safety procedures</p>
4. Carry out safe chainsaw operation	<p>4.1 Access tree safely and confirm that body positioning and movements are safe and ergonomically efficient according to current Australian Standards and workplace safety procedures</p> <p>4.2 Secure chainsaw whilst at height by means of a suitable lanyard</p> <p>4.3 Obtain the best available working position to minimise risk of being struck by saw or by severed pieces of wood</p> <p>4.4 Check that the chain of the saw is clear of obstructions, including climbing equipment, protective clothing or parts of the tree, before restarting in the tree</p> <p>4.5 Start chainsaw according to manufacturer instructions and workplace safety procedures</p> <p>4.6 Obtain confirmation from ground crew before performing cuts, using the call and response protocol</p> <p>4.7 Maintain proper control of the saw by gripping with two hands and keeping saw well clear of body and climbing equipment at all times according to workplace safety procedures</p> <p>4.8 Select and accurately apply a range of appropriate cuts according to current Australian Standards and industry codes of practice, to achieve required behaviour of cut piece according to workplace procedures</p> <p>4.9 Confirm the chainsaw is switched off, or the chain brake applied, after each cutting operation</p> <p>4.10 Apply safe technique for freeing a trapped chainsaw according to workplace safety procedures</p> <p>4.11 Apply safe cutting techniques according to current Australian Standards, and work positioning, to complete operational tasks according to work order or work instructions</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.12 Apply safe methods for returning chainsaw to the ground for refuelling according to workplace safety procedures
5. Carry out machine operator maintenance	5.1 Follow workplace safety procedures and manufacturer instructions to lock out equipment 5.2 Inspect chainsaw on completion of cutting activities 5.3 Identify damage to chainsaw and cutting attachments, and tag for repair, service or replacement according to workplace requirements and manufacturer recommendations 5.4 Remove, clean, adjust, sharpen or replace chain and other components according to workplace requirements and manufacturer recommendations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for FWPCOT3317 Use chainsaw within a tree

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual planned, prepared and safely and effectively operated a chainsaw at height in two trees and performed cuts according to a work order or work instructions and current Australian Standards and industry codes of practice applicable to the safe use of chainsaw in trees.

One tree must be in close proximity to a structure or other asset or replicated structure or asset and have a minimum height of 15 metres and canopy spread with a minimum of 10 metres. There must be a designated drop zone and cut material must be placed within this zone.

There must also be evidence that for each tree the individual has:

- applied safe and effective fall arrest positioning and cutting positioning to perform cuts
- applied safe and effective cutting techniques to achieve the required behaviour of cut piece for:
 - a horizontal branch with a diameter greater than 100 mm
 - a head or section of vertical timber with a diameter greater than the bar length of the saw
 - a leaning section or leader
- selected and used appropriate zone drops as required to ensure that all cut pieces land within the drop zone
- carried out routine maintenance on a chainsaw on two occasions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of

- types, cc rating, bar length and operation of chainsaws
- features and names of different parts of chainsaws

- workplace health and safety requirements according to the AS 2726.2 and AS 2727 or successor:
 - personal protective equipment (PPE) and clothing
 - safety equipment
 - first aid equipment
 - firefighting equipment
 - hazard and risk control procedures
 - fatigue management procedures
 - safety signage
 - safe workplace practices
- hazards and related risks associated with chainsaw use off ground, and methods to minimise associated risks:
 - physical conditions of the site
 - falls
 - strains
 - slips
 - dehydration
 - fire
 - overhead services
 - carrying saw and equipment
 - traffic
 - features and cutting actions of chainsaw
 - falling branches
 - overreaching
 - operating saw above head height
 - saw nicking
 - kickback
 - user complacency and fatigue
 - one-handed chainsaw use
 - structures
 - hazardous materials
 - insects and animals
 - people on or near worksite
 - machinery on or near worksite
- height access equipment:
 - belt and harness condition
 - adjustment on user
 - lanyard adjustment
 - chainsaw securing hook
 - specification

- maintenance
- purpose, features and operation of tools and equipment used in chainsaw use and maintenance activities
- specifications and types of bars, chains and sprockets
- techniques for:
 - removing chains and other chainsaw components
 - assessing chain condition
 - reassembling chainsaw components
- hazards associated with maintaining chainsaws, and methods to minimise associated risks:
 - noise
 - fumes
 - mechanical vibration
 - hazardous substances
 - cuts
 - burns
 - rotating parts
- cutting techniques according to the AS 4373 and AS 2727 or successor, and industry codes of practice
- safe procedures for raising and lowering chainsaw to and from ground
- workplace procedures specific to chainsaw use off ground:
 - workplace health and safety, with particular emphasis on equipment lock-out and use of PPE
 - communication reporting lines
 - recording and reporting repairs, maintenance activities and equipment faults
- heritage-listed trees protected by legislation in relevant jurisdictions
- environmental protection practices relevant to chainsaw use and maintenance:
 - protection of natural and cultural assets
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials
 - disposing of hazardous substances.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an arboricultural workplace or environment that accurately represents workplace conditions
- resources, equipment and materials:
 - chainsaws
 - height access equipment

- other tools and equipment needed for using chainsaws off ground and chainsaw maintenance
- chainsaw consumables
- trees
- person who is competent and equipped to perform aerial rescue
- PPE required in using chainsaws off ground and chainsaw maintenance
- specifications:
 - access to work order or instruction detailing off ground chainsaw operations to be carried out by operator
 - access to workplace policies and procedures that cover current workplace health and safety and environmental protection legislation and related industry standards and codes of practice applicable to off ground chainsaw operations
 - access to site emergency procedure
 - access to workplace safe operating procedures for off ground chainsaw operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up and use mobile or handheld devices such as a smartphone, personal digital assistant (PDA), portable media player, electronic organiser or data logger, for accessing, capturing, processing, exchanging and storing forestry field data. This unit includes selecting and using forestry applications on mobile devices, transferring data to and from mobile devices and optimising the performance of mobile devices.

The unit applies to individuals who are required to set up and use mobile devices to communicate field data as part of their work in forestry field operations in either a native forest or plantation setting.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements	Performance Criteria
----------	----------------------

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
<p>1. Set up and customise mobile device</p>	<p>1.1 Determine job requirements from work order, workplace health and safety, environmental protection and emergency procedures and, where required, seek clarification from appropriate personnel</p> <p>1.2 Identify and report hazards according to workplace health and safety requirements to maintain safe work practices</p> <p>1.3 Identify types, features, uses and limitations of mobile devices used in forestry field operations</p> <p>1.4 Access mobile network according to workplace procedures</p> <p>1.5 Prepare, set up and configure mobile device for use according to manufacturer and workplace procedures</p> <p>1.6 Select, use and customise interface features and settings to meet needs and improve efficiency according to manufacturer and workplace procedures</p> <p>1.7 Comply with workplace mobile device acceptable use policies</p>
<p>2. Select and use forestry applications and files on mobile device</p>	<p>2.1 Load or select forestry-related applications and files on mobile device</p> <p>2.2 Identify file formats appropriate for mobile devices</p> <p>2.3 Use software or tools to prepare or convert files to appropriate format for mobile devices</p> <p>2.4 Input forestry data using touch screen, stylus, keypad and voice command accurately into a mobile device</p> <p>2.5 Download and complete work-related forms and documentation</p> <p>2.6 Create text files, including notes and email, and graphic files, including sound recording, image and video capture, on mobile device</p> <p>2.7 Apply workplace procedures for checking quality and accuracy of data captured on mobile device</p> <p>2.8 Organise, store and retrieve data efficiently on a mobile device according to workplace procedures</p>
<p>3. Transfer data to and from mobile devices</p>	<p>3.1 Identify the types of secure connection methods used between devices</p> <p>3.2 Determine data storage capacity of mobile device relative to the data that will be collected</p> <p>3.3 Provide adequate data storage capacity using a storage card as necessary</p> <p>3.4 Transfer information to and from mobile devices using secure connection procedures</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>3.5 Synchronise mobile device data with source data according to workplace procedures</p> <p>3.6 Recognise copyright and other constraints on the use and transfer of information</p> <p>3.7 Follow workplace procedures for maintaining security of information when using mobile device</p>
4. Optimise performance of mobile device	<p>4.1 Identify factors that can affect performance of mobile device in forestry settings</p> <p>4.2 Apply techniques to optimise performance of mobile device according to manufacturer instructions and workplace procedures</p> <p>4.3 Apply diagnostic procedures to identify and solve routine problems with mobile device according to manufacturer instructions and workplace procedures</p> <p>4.4 Recognise limits of own knowledge and skill in relation to mobile devices and, when required, source expert advice on mobile device and associated applications according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret manufacturer and workplace instructions on use and operation of mobile devices to determine work requirements
Writing	<ul style="list-style-type: none"> Record routine text information related to forestry operations using mobile applications
Oral Communication	<ul style="list-style-type: none"> Ask questions to clarify instructions or information on use of mobile devices
Numeracy	<ul style="list-style-type: none"> Record routine numerical information related to forestry operations, using mobile applications Recognise numerical and mathematical symbols used on mobile devices and forestry applications

Assessment Requirements for FWPCOT3318 Access, capture and communicate forestry field data using mobile devices

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- configured and effectively operated a mobile device to access, capture and communicate forestry field data on four occasions according to a work order or work instructions
- applied at least two strategies to optimise performance of mobile device in a forestry setting.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- procedures for accessing mobile network:
 - connection protocols
 - VOIP
 - SMS
- procedures for setting up mobile device:
 - charging battery
 - password and login
 - SIM card
 - storage card
 - new connection
 - network settings
- types, features and procedures for using mobile devices – smartphones, tablets, PDAs, laptop computers
- types of mobile applications used to access, capture and communicate workplace and forestry data:

- proprietary
- open source
- forestry company-specific
- procedures for identifying version of mobile applications and checking for correct version
- procedures for accessing forestry-related mobile applications and files
- basic procedures for using mobile devices to record workplace and forestry data:
 - entering text
 - recording GPS coordinates
 - capturing individual points on screen or streaming
 - drawing on screen
 - loading and downloading files
 - capturing sound, video and images
 - using name, date and filing conventions
- factors influencing mobile device performance:
 - battery life
 - application and file use
 - device maintenance
 - network availability
 - interference
- procedures for optimising mobile device performance:
 - carrying out routine maintenance
 - Bluetooth or Wi-Fi turned off when not in use
 - closing applications after use
 - battery management
- types of forestry data collected on mobile devices:
 - inventory
 - quality assurance
 - survival rates
 - hazards
 - site preparation
 - plantation boundaries
 - residue assessment
 - special values
 - forest damage, including windthrow, burnt areas, pest and disease
 - harvest progress boundaries
- reasons and procedures for ensuring accuracy and quality of forestry data captured on mobile devices
- common problems associated with use of mobile devices and mobile applications in forestry settings
- mobile device acceptable use policies

- procedures for data security
- sources of expert advice on mobile devices and associated applications:
 - help menus
 - operator manual
 - following on-screen help
 - using diagnostic tools and wizards
 - forestry company IT specialists.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forestry or plantation setting
- resources, equipment and materials:
 - mobile device
 - access to forestry-related mobile applications and files
- specifications:
 - access to work order, instruction or production plan detailing activities to be carried out by operator that require use of mobile device
 - access to workplace safety policies and procedures applicable to use of mobile devices
 - access to site emergency procedure
 - access to user manual for mobile device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3319 Read and interpret digital maps and forest operation plans

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to read and interpret digital maps and forest operation plans. The unit also includes sourcing, downloading and using digital maps, recording details of physical features, hazards and forestry assets on digital maps, and sourcing, downloading and extracting information from forest operation plans.

The unit applies to individuals who use digital maps and operations plans as part of their work in forestry field operations in either a native forest or plantation setting.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- sourced, downloaded and used the functions in a digital map on four occasions to perform work functions in which the operator:
 - established and identified Global Positioning System (GPS) coordinates on map
 - applied processes to orientate self in relation to map based on field observations
 - used map functions to determine distance, direction, travelling time and routes between locations on map
 - located, labelled and entered attribute data and notes on physical features, hazards and forestry assets on map
 - captured digital images of physical features, hazards and forestry assets and plotted on map
 - hid or surfaced layers to view data on map
- sourced, downloaded and extracted information from a forest operation plan on four occasions to perform work functions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of digital maps:
 - general reference
 - topographical
 - thematic
 - cadastral maps and plans
- sources of digital maps:

- forest management companies
- government agencies
- commercial
- fundamental map reading skills:
 - title
 - coordinates
 - scale
 - legend
 - data frame
 - orientation
 - citation
- basic concepts of digital maps:
 - base map
 - layers – Light Detection and Ranging (LiDAR), satellite, aerial photograph
 - coordinates
 - vector vs raster spatial data
 - attribute data
 - file format
 - legend and symbology
- types of information contained on digital maps
- processes to download digital maps:
 - cloud storage services
 - emails
 - mobile applications
- processes to validate the data viewed on digital maps based on field observations
- forest operation plans:
 - purpose
 - intended users
 - format
 - information contained in forest operation plans
 - amendments
 - versions
 - key terms used in forest operation plan
 - processes to validate data in forest operation plan based on field observations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated in a forestry or plantation setting
- resources, equipment and materials:
 - mobile device
 - access to digital map application
 - access to digital map library
 - access to digital forest operation plan
- specifications:
 - access to work order or instruction detailing activities to be carried out by operator that require use of digital map and digital forest operation plan
 - access to workplace safety policies and procedures applicable to working in a forestry or plantation setting
 - access to workplace policies for acceptable use of mobile device
 - access to user manual for mobile device and technical instructions for use of digital map application.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3320 Build and maintain timber stacks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to safely build and maintain timber stacks in a variety of workplace settings, according to regulations and site procedures.

The unit applies to sawmill workers, production workers or manufacturing assistants who undertake specified activities under the direction of more experienced workers

Licensing, legislative or certification requirements apply to this unit but may differ according to state or territory jurisdiction. Users are advised to check with the relevant regulatory authority.

Assessment Requirements for FWPCOT3320 Build and maintain timber stacks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely built and maintained a minimum of four different timber stacks, and safely repaired faults in at least one timber stack.

In doing this, there must be evidence that the individual has:

- built stacks in accordance with traffic management plan, workplace safety and environmental procedures
- built stable and secure stacks protected from damage
- recorded and reported timber stack and fault information.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace safety and environmental requirements, site standards and workplace policies and procedures for building and maintaining timber stacks
- procedures, methods and techniques for:
 - levelling and stabilising individual packs
 - determining ratio, grading, colour identification and tagging of stacked timber
 - monitoring and inspecting packs
 - identifying and repairing common faults in stacks
 - partially or fully rebuilding and restabilising stacks using restraints
 - verbal and non-verbal communication
 - recording and reporting workplace information
- factors essential to building and maintaining timber stacks:
 - width, length, height and weight of stack
 - duration of storage

- type and strength of timber
- type of lifting equipment
- ground condition and stability in terms of slope, evenness, contamination and drainage
- air-drying structure
- unexpected obstacles
- slippery or uneven surfaces
- pedestrians on or near the timber stack
- visibility
- ground strength to withstand the load of stacks and machinery
- location of walkways, pathways and stores
- top surface of ground
- location of stack, inside, outside, under cover, in the open
- storage area organisation
- machinery and equipment requirements
- weather conditions
- selecting and using types and length of bearers:
 - straight and structurally sound
 - identical in length in cross-section
 - not protruding from the stack
 - not shorter than the stack
 - good condition and laid flat
 - able to withstand the environment
 - checked for consistent thickness and shape
 - correctly positioned
- factors contributing to avoidable loss:
 - inadequate stack support and unstable stacking
 - packs that are not level
 - exposing the stack to adverse drying conditions
 - inadequate stack conditions (poor drainage, stacks close to ground)
 - inappropriate site layout
 - inadequate stack protection and pack damage
 - timber stacked too high
- key components of a traffic management plan relevant to timber stacking
- industry terminology relevant to building and maintaining timber stacks to communicate safety issues, confirm job requirements and report product and stack issues and defects
- use and maintenance of timber stacking tools and equipment:
 - powered mobile machinery equipment faults or damage
- workplace safety requirements relevant to building and maintaining timber stacks:
 - impact of fatigue, and fatigue management
 - hazard identification and risk management

- hazardous manual tasks
- erection of exclusion zones and signage
- personal protective equipment (PPE)
- environmental requirements for recycling and reusing material with faults and safely disposing of waste material.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a manufacturing or processing facility or timber yard or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - products to build and maintain four timber stacks
 - tools and equipment to build and maintain timber stacks
 - personal protective equipment
- specifications:
 - access to workplace safety and environmental policies and procedures applicable to building and maintaining timber stacks
 - access to work order and traffic management plan to build and maintain timber stacks
- relationships:
 - person to confirm work orders and report issues with building and maintaining timber stacks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3321 Apply situational awareness and a safety mindset in operational forestry roles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required for applying situational awareness and a safety mindset while performing operational forestry-related tasks in team situations or when working in isolated, remote or out-of-line-of-sight situations.

The unit applies to those who work in operator roles in the forestry industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- FWPCOR3205 Apply safety, health and environmental requirements in forest and wood products operations

or

- FWPCOR2210 Follow workplace health and safety policies and procedures in forest and wood products operations.

Unit Sector

Common Technical (COT)

Assessment Requirements for FWPCOT3321 Apply situational awareness and a safety mindset in operational forestry roles

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied situational awareness and a safety mindset while working in an operational forestry role. Evidence must show that the individual has, on one occasion:

- demonstrated situational awareness when undertaking an operational task
- worked safely when undertaking an operational task
- effectively communicated with team members while undertaking an operational task
- safely performed work in an isolated, remote or out-of-line-of-sight situation
- followed workplace procedures for accessing first aid and safety equipment and dealing with stress, remoteness and fatigue.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- reasons for following safe work procedures
- features of a safety mindset:
 - safe use of equipment
 - awareness of surroundings
 - awareness of personal limitations
 - reporting problems
- hazards and associated risks in forestry operations
- types of risk control measures used in forestry operations
- principles of situational awareness:
 - show vigilance when approaching known hazards
 - identify potential problems from available information
 - monitor changes in work environment

- resolve uncertainty by seeking further information
- verify assumptions before proceeding with work activities
- principles of effective teamwork
- types and operation of electronic communication systems
- safe procedures for working in isolated, remote or out-of-line-of-sight situations
- characteristics of being fit for work
- reasons for reporting physically and psychologically fit for work
- signs of stress and fatigue in self and others
- techniques appropriate for operators for avoiding, reducing and coping with stress, remoteness and fatigue
- techniques for maintaining personal effectiveness and concentration under periods of stress and high workload
- techniques appropriate for operators for identifying personal limitations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- skills must be demonstrated in a forestry work site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - communications systems
- specifications:
 - work order or instruction detailing operational work to be performed
 - workplace health and safety policies and procedures applicable to operational work to be performed
 - workplace environmental protection policies and procedures applicable to operational work to be performed
 - workplace documentation for identifying, assessing and responding to risks and hazards in forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3322 Apply quality and product care procedures in forest and wood products operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to apply quality and product care procedures and monitor the quality of product output in the forest and wood products industry.

This unit applies to individuals working in a broad range of roles and operations in the forest and wood products industry in which there is a focus on applying quality procedures and monitoring product care.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for FWPCOT3322 Apply quality and product care procedures in forest and wood products operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, for one work period/shift, the individual has identified and applied workplace quality requirements while performing personal work tasks related to a forest or wood products operation.

In performing this activity, the individual has:

- inspected product visually prior to processing
- optimised resource recovery and product quality during processing based on tree or timber species, structure, features and characteristics
- monitored, identified and resolved faults with product
- checked final products against quality and customer requirements
- prepared final products for despatch according to workplace quality and product care procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace procedures relating to forest or wood product quality and care specified in performance evidence:
 - communicating product requirements and outcomes of product review
 - identifying and resolving faults with product
 - recording and reporting workplace information
 - maximising product or resource use
 - assessing timber for recovery
- environmental protection requirements in forest or wood products operations:
 - safely disposing of waste material
 - organisational guidelines for recycling defective product, off-cuts and residue

- indicators of sub-standard product in forest or wood products operations:
 - breakages
 - contamination
 - holes
 - insect attack
 - machine-caused defects
 - variable surface finishes
 - timber colour
- mathematical procedures for estimating and measuring product against specifications
- ways of optimising resource value and minimising waste in forest or wood products operations
- requirements of the following quality systems that would apply to product care and quality in forest and wood products operations:
 - enterprise-based system
 - ISO9000 series
 - second party certification
 - third party certification
- specifications of the forest or wood products being processed
- types of tools and equipment used in the forest or wood product process, and procedures for their safe use and maintenance
- work health and safety policies and procedures relevant to forest or wood products operations:
 - PPE and clothing
 - safety equipment
 - eliminating hazardous materials and substances
 - first aid equipment
 - identifying hazards in the work process and assessing and controlling their risk
 - managing fatigue
 - manual handling techniques
 - machine isolation and guarding.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - materials and equipment relevant to the work task being performed
 - PPE

- specifications:
 - order or instruction detailing work task to be carried out
 - workplace health and safety policies and procedures applicable to work task to be carried out
 - workplace environmental protection policies and procedures applicable to work task to be carried out
 - workplace quality requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3323 Assess wood materials visually

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to visually assess the characteristics of wood materials, identify any defects and imperfections, and forward the materials for storage or further processing.

The unit applies to individuals who assess materials visually in the forest and wood products industry.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for visual assessment of wood materials	1.1 Determine job requirements from work order or instruction, and where required seek clarification from appropriate personnel 1.2 Confirm safety and environmental requirements for the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>according to workplace procedures</p> <p>1.3 Identify, assess and take actions to mitigate hazards and associated risks related to work task</p> <p>1.4 Identify and confirm material to be visually assessed</p> <p>1.5 Select and check operational effectiveness of tools and equipment required for visually assessing materials</p> <p>1.6 Identify options for processing materials following assessment</p>
2. Assess wood material visually	<p>2.1 Assess material visually against industry standards to identify the characteristics of the material and any defects</p> <p>2.2 Mark defects for treatment according to workplace procedures</p> <p>2.3 Record and report assessment outcomes</p>
3. Distribute wood material	<p>3.1 Forward materials for storage or further processing according to workplace procedures</p> <p>3.2 Dispose of, recycle or reuse sub-standard materials according to workplace procedures</p> <p>3.3 Monitor on-site movement of material according to workplace procedures</p> <p>3.4 Label material for storage according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Use technical language to describe material characteristics
Writing	<ul style="list-style-type: none"> Use routine text and technical terms in written materials assessment reports
Oral communication	<ul style="list-style-type: none"> Ask questions to clarify industry standards for materials to be assessed
Numeracy	<ul style="list-style-type: none"> Interpret numerical and graphical information related to production and wood flow planning

Assessment Requirements for FWPCOT3323 Assess wood materials visually

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- assessed visually two different wood materials used in a forest or wood products operation against industry standards
- identified any defects and imperfections of the assessed wood material
- labelled and transferred assessed wood material to a storage facility or for further processing according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry standards and codes of practice related to the visual assessment of wood materials
- environmental protection requirements relevant to forest or wood products operations:
 - safe disposal of waste material
 - recycling and reuse of substandard materials
- workplace standards, policies and procedures relevant to visually assessing wood materials
- methods of visual estimation and assessment of wood materials
- typical wood material defects and characteristics
- treatment of wood materials for defects
- distribution processes for assessed wood materials
- storage systems and labelling used in forest or wood products operations
- types, safe use and maintenance of tools and equipment used for visually assessing wood materials
- procedures for recording and reporting workplace information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - wood materials for visual assessment
 - equipment and tools used in visual assessment of wood materials
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to work task to be carried out
 - workplace quality requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3324 Apply cultural heritage protection requirements in forest operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to identify and comply with cultural heritage, including Indigenous cultural heritage, protection requirements as specified in the forest operational plan and maps during forest operations.

The unit applies to individuals, including forestry workers, harvesting technicians and machine operators, who work in forest operations and are subject to legislative, contractual and negotiated cultural heritage protection requirements.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3324 Apply cultural heritage protection requirements in forest operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied cultural heritage protection requirements while performing personal work tasks related to a forestry operation in a forest or plantation setting.

In performing this activity, the individual has:

- identified requirements for cultural heritage protection and partnership arrangements for protection of cultural heritage
- located cultural heritage values as shown in the forest operational plan and maps
- reported cultural heritage site risks as a result of forestry operations to appropriate personnel
- established cultural heritage protection zones according to workplace procedures
- sought specialist advice for applying compliant cultural heritage protection measures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, regulations, standards, codes of practice, contractual arrangements and partnership agreements for implementing and monitoring cultural heritage protection measures related to forest operations
- workplace standards, requirements, policies and procedures on cultural heritage protection that apply to forest operations
- definition and components of cultural heritage in forest operations:
 - tangible culture such as buildings, monuments, landscapes, books, works of art and artefacts
 - intangible culture such as folklore, traditions, language and knowledge
 - natural heritage, including culturally significant landscapes and biodiversity

- distinction between cultural heritage and Indigenous cultural heritage
- the importance of Indigenous cultural heritage, including:
 - any place or object of significance to Indigenous people because of their traditions, observances, lore, customs, beliefs and history, including:
 - sacred sites
 - ceremonial sites
 - burial sites
 - rock art and engravings
 - ochre pits
 - scatter sites
 - scarred or carved trees
 - stone arrangements or bora rings
 - stone tool manufacture and grinding sites
 - artefacts
 - massacre sites
- key stakeholders engaged in protection of cultural heritage, including:
 - Indigenous organisations
 - government departments and agencies
 - land owners
 - forestry companies
 - other community organisations
- work practices and procedures for protecting cultural heritage sites and objects, including protection zone requirements, in forest operations
- work practices and activities that comply and do not comply with cultural heritage protection requirements in forest operations
- consequences of non-compliance with cultural heritage protection requirements in forest operations
- procedures for reporting non-compliance with cultural heritage protection requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, machinery, equipment and materials required to undertake job requirements specified in work order or instruction
 - forest operational plan and maps identifying location of cultural heritage, including Indigenous cultural heritage, sites and/or objects in and near the work site
 - signage, field markings and equipment for cultural heritage protection

- personal protective equipment
- specifications:
 - work instruction identifying job requirements and requirements to comply with cultural heritage protection requirements
 - workplace health, safety and environment policies and procedures applicable to work task to be carried out
 - workplace procedures for cultural heritage protection.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3325 Operate four wheel drive vehicle on unsealed roads

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the outcomes required to safely operate a four wheel drive vehicle on unsealed roads.

The unit applies to individuals who operate four wheel drive vehicles in a variety of work settings and industry sectors, including forestry, agriculture, construction, tourism and energy.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

Individuals must hold a driver licence or a provisional driver licence prior to commencing this unit of competency.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for operations	1.1 Access, interpret and apply vehicle manufacturer information relevant to operating a four wheel drive vehicle on unsealed roads 1.2 Identify the structural and handling differences between a

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	conventional two wheel drive vehicle and a four wheel drive vehicle 1.3 Determine type of operation and ensure safe operating conditions 1.4 Identify, fit and use suitable personal protective equipment 1.5 Perform pre-start checks 1.6 Establish and check communication with others, including convoy procedures 1.7 Secure loads according to safety, environmental and regulatory requirements 1.8 Research weather and topography for a planned trip on unsealed roads
2. Operate vehicle on unsealed roads	2.1 Check and change tyre pressure suitable for unsealed road according to workplace procedures 2.2 Continually monitor the track to identify hazards, assess risks and select the best route according to safety and environmental requirements 2.3 Identify situations where the engagement of four wheel drive is required and engage front hubs or centre differential lock where fitted 2.4 Use range, gear, speed, driving and braking technique appropriate to surface conditions while maintaining control of vehicle at all times 2.5 Check brake operation and undercarriage after operating vehicle on unsealed road conditions 2.6 Park and shut down vehicle
3. Ascend and descend slopes less than 15 degrees	3.1 Inspect intended vehicle path before negotiation of slope 3.2 Use appropriate range, gear, speed, driving and braking technique to negotiate a slope while maintaining control of vehicle 3.3 Use appropriate braking methods, user applied and vehicle controlled function, where fitted, to descend a slope 3.4 Maintain traction and minimise wheel spin 3.5 Apply appropriate automatic and manual techniques when vehicle cannot proceed any further on a slope
4. Complete operation	4.1 Conduct a post-trip inspection of vehicle 4.2 Complete post-trip documentation, including maintenance and minor repairs reports

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read and comprehend basic factual information on four wheel drive vehicle equipment labels and in manufacturer manuals
Writing	<ul style="list-style-type: none"> Complete workplace forms using required format, industry terminology and structure
Oral communication	<ul style="list-style-type: none"> Use effective verbal communication techniques to convey instructions to people involved in four wheel drive operation
Numeracy	<ul style="list-style-type: none"> Estimate time of a journey and fuel consumption

Assessment Requirements for FWPCOT3325 Operate four wheel drive vehicle on unsealed roads

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed each of the following tasks while driving a four wheel drive vehicle on unsealed roads:

- driven three separate ascents and three separate descents less than 15 degrees. In conducting this task, the individual has:
 - selected appropriate range and gearing
 - used foot brake effectively to control descent speed
 - used vehicle hill descent or similar function where available
 - used the most appropriate wheel placement
- used on one occasion traction aids and brakes when driving ascents and descents less than 15 degrees
- performed on two occasions a forward and a reverse stop start recovery on an incline according to the type of transmission
- demonstrated on one occasion the setting of vehicle controls for operation on unsealed roads. This may include:
 - the use of free wheel hubs if fitted
 - selection of low range in either manual or automatic vehicles
 - use of terrain selection system if fitted
 - use of differential locks if fitted
 - activation of traction control or terrain selection mode if fitted and where effective
- driven vehicle and operated vehicle controls and technology to avoid traction loss on unsealed roads in three of the following conditions:
 - loose gravel
 - ruts
 - loose material in centre and sides of track
 - corrugations

- mud
- rocky
- sand
- snow
- side slopes
- rutted
- water crossing
- fitted and used personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- structural differences between conventional two wheel drive and a four wheel drive, including:
 - purpose and use of front wheel hubs
 - factors affecting tyre selection and pressure
- environmental protection requirements affecting four wheel drive operations
- common unsealed road surface hazards:
 - loose gravel
 - ruts
 - loose material in centre and sides of track
 - corrugations
- pre-start checks for four wheel drive vehicle
- types of communication equipment, including:
 - personal location beacon (PLB)
 - phone
 - radio
 - vehicle/personnel tracking devices
- safe operating conditions for a four wheel drive vehicle:
 - interpreting weather conditions to determine suitability for driving
 - selecting routes to minimise damage to the environment
 - visibility
 - loading of four wheel drive, including techniques to reduce overloading
 - braking techniques
 - cornering techniques
- types of environmental risks and hazards associated with operating a four wheel drive vehicle on unsealed roads, including:
 - rocks and other unexpected obstacles
 - damage to vehicle
 - animals and objects in vehicle path

- slippery surfaces
- overhead tree limbs
- other vehicles
- fallen trees, limbs and logs
- flood
- poor visibility
- tyre pressure management principles for varying terrain types
- principles for effective self-recovery of vehicle via driving skills (not the use of recovery equipment such as straps or winches)
- communication channels and protocols
- techniques for travelling in convoy
- procedures for recording and reporting workplace information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site with access to unsealed roads
 - manual or automatic four wheel drive vehicle or all-wheel drive vehicle
 - PPE required for operating a four wheel drive on unsealed roads
 - relevant personnel for the purposes of communicating information
- specifications:
 - workplace safety and environmental policies and procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 2	This version released with Forest and Wood Products Training Package Version 8.0.
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- performed two kinetic rope and/or strap recoveries
- performed one of each of the following winch recoveries:
 - single line
 - double line
 - change of direction.

In conducting each of the above tasks, the individual has:

- estimated the recovery load using a recognised formula
- determined the Gross Vehicle Mass (GVM) of the vehicle/s in the recovery
- determined the rating of the equipment being used
- determined the most appropriate recovery strategy to be used
- assessed why the vehicle is bogged, taken action to ensure vehicle is in four wheel drive, taken action to clear obstructions from the vehicle, taken action to use traction boards where available, determined safest method of recovery if straps or winches are to be used
- determined the appropriate equipment to be used given the GVM, equipment rating and chosen strategy.

There must also be evidence that on one occasion the individual has joined two kinetic ropes and/or straps.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- safety procedures during recovery operations
- recognised formula used to estimate the recovery load and what variables apply to this formula
- reasons and procedures for establishing exclusion zone
- Gross Vehicle Mass (GVM):
 - identifying which vehicle's GVM should be used in relation to kinetic recovery
- ratings used on recovery equipment:
 - MBS (Minimum Breaking Strength) of ropes, straps and soft shackles
 - WLL (Working Load Limit) of hard shackles
 - drag chains
 - pulley blocks
 - pulley rings
 - winches (wire and/or rope)
- anchor point selection
- number, location and weighting of strap dampeners
- rated recovery points:
 - characteristics and purpose of rated recovery points
 - location of rated recovery points
 - what is and what is not a rated recovery point
- kinetic recovery:
 - kinetic recovery procedure
 - manufacturer recommendations on recovery techniques and equipment
- winches:
 - types, main components, ratings and manufacturer recommendation for use
 - effect of the layers of wrap of rope or wire on a winch drum
 - effects of a ring or snatch block on the load on a winch
 - impact of angle of rope or cable on recovery operation
 - procedures for easing the load on a winch
 - the reasons for not driving while winching
- maintenance of recovery gear:
 - straps/ropes
 - winches.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a work environment or an environment that accurately represents workplace conditions
 - work environment must include varied terrains and conditions from which to recover vehicle
- resources, equipment and materials:
 - four wheel drive to recover
 - rated recovery equipment for four wheel drive vehicle
 - relevant personnel for the purposes of communicating information
 - personal protective and safety equipment required for recovering a four wheel drive vehicle
- specifications:
 - workplace safety and environmental policies and procedures applicable to the recovery of four wheel drive vehicle.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3327 Contribute to energy efficiency in the forest and wood products industry

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to apply energy efficient work practices and contribute to improved energy use in the forest and wood products industry.

The unit applies to individuals working in a broad range of roles and operations in all sectors of the forest and wood industry.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify the importance of energy efficiency in forest or	1.1 Access workplace energy efficiency policies and procedures 1.2 Identify benefits of energy efficiency to the forest and wood

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
wood products operations	products industry 1.3 Apply life-cycle analysis to compare benefits of using wood products to other materials and promote outcomes to internal and external clients
2. Apply energy efficient work practices in forest or wood products operations	2.1 Follow workplace energy efficiency policy and procedures, including those related to recycling and waste management 2.2 Monitor own work practices to optimise energy efficiency
3. Identify opportunities to reduce energy use in forest or wood products operations	3.1 Participate in workplace reviews of energy use 3.2 Identify ways of improving energy efficiency in the workplace and report to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read industry literature on innovative energy efficiency policies, procedures and work practices
Writing	<ul style="list-style-type: none"> Complete forms and surveys related to energy use in the workplace
Oral communication	<ul style="list-style-type: none"> Apply effective oral communication skills to inform colleagues and respond to questions about energy efficiency
Numeracy	<ul style="list-style-type: none"> Interpret basic graphical information to monitor energy use in the workplace

Assessment Requirements for FWPCOT3327 Contribute to energy efficiency in the forest and wood products industry

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- applied two different energy efficient work practices in performing routine work tasks related to forest or wood products operations
- participated in one workplace review of energy use and made one suggestion for improving energy efficiency in the workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace standards, requirements, policies and procedures on energy efficiency that are applicable to forest or wood products operations
- environmental protection requirements related to forest or wood products operations, including the safe disposal of waste material and workplace recycling, recovery and waste management procedures
- workplace communication channels, protocols and procedures used in forest or wood products operations
- life cycle analysis of forest and wood products
- benefits of forest and wood products compared to other materials in terms of energy efficiency
- strategies for communicating the benefits of wood products over other materials to internal and external clients.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest and wood products industry workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - industry literature on energy use, energy efficiency and energy efficient work practices
- specifications:
 - workplace environmental policies and procedures applicable to energy use and efficiency in the workplace
 - workplace procedures on energy use and energy efficient work practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3328 Operate four wheel drive vehicle in a towing situation

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to tow a trailer using a four wheel drive vehicle.

The unit applies to individuals who operate four wheel drive vehicles in towing situations in a variety of work settings and industry sectors, including forestry, agriculture, construction, tourism and energy.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

Individuals must hold a driver licence or a provisional driver licence prior to commencing this unit of competency.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for towing	1.1 Confirm four wheel drive vehicle is operational, appropriate for the conditions and has the required towing capacity

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Check trailer compliance with safety regulatory requirements</p> <p>1.3 Check condition of trailer, suitability of trailer and coupling for use on rough terrain and braking system of trailer if required</p> <p>1.4 Check compatibility of trailer and four wheel drive vehicle for towing operations, including ground clearance and GCM (Gross Combined Mass) of trailer and vehicle</p> <p>1.5 Inspect and secure load onto trailer in accordance with safety and regulatory requirements</p> <p>1.6 Identify and follow safety, environmental and legal requirements relevant to towing a trailer with a four wheel drive vehicle</p> <p>1.7 Identify, fit and use suitable personal protective equipment</p> <p>1.8 Identify, select and check serviceability and rating of equipment required to carry out towing operations</p> <p>1.9 Identify, assess and take actions to mitigate risks and hazards associated with towing operations</p>
2. Use four wheel drive vehicle to tow a trailer	<p>2.1 Couple and uncouple trailer in accordance with safety requirements</p> <p>2.2 Apply safe four wheel driving skills while towing a trailer on sealed and unsealed road conditions</p> <p>2.3 Demonstrate safe braking procedures while towing a trailer on sealed and unsealed road conditions, including performing emergency stop</p> <p>2.4 Park four wheel drive vehicle and trailer</p>
3. Perform post-towing tasks	<p>3.1 Carry out inspection of vehicle and equipment following the towing operation</p> <p>3.2 Record and report activity and damage to vehicle or equipment as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read and comprehend basic factual information on road signs and in manufacturer manual
Writing	<ul style="list-style-type: none"> Complete workplace forms using required format and industry terminology
Oral communication	<ul style="list-style-type: none"> Use effective verbal communication and questioning techniques to convey information to other people involved in or observing towing operation
Numeracy	<ul style="list-style-type: none"> Measure, estimate and calculate weight and dimensions of trailer and load to be towed

Assessment Requirements for FWPCOT3328 Operate four wheel drive vehicle in a towing situation

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on one occasion, the individual has:

- correctly coupled and uncoupled a trailer to the towing vehicle
- performed the following tasks while operating a four wheel drive vehicle to tow a trailer on an unsealed road according to regulatory requirements:
 - driving forwards
 - reversing in a straight line
 - reversing around a corner
 - reversing into a parking bay
- conducted an emergency stop on an unsealed road while operating a four wheel drive vehicle with a trailer attached.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations, standards, codes of practice and established safe practices relevant to processes when towing a trailer with a four wheel drive vehicle
- risks and hazards associated with towing a trailer or other type of object with a four wheel drive vehicle related to:
 - load
 - vehicle capacity, condition and faults
 - trailer capacity, condition and faults
 - weather and environmental conditions
 - natural hazards
 - road or surface conditions and obstructions

- working in proximity to a trailer
- crush injuries
- risk management strategies:
 - appropriate vehicle and trailer clearance
 - correct load management
 - controlled braking methods using electric brakes, no brakes, override brakes
 - adequate movement of the tow system
 - making adjustment for extra length and width of trailers, and their tendency to ‘cut in’ on corners and curves
 - engaging a lower gear when travelling downhill with a trailer to give greater vehicle control and reduce load on brakes
 - ensuring mirrors on both sides of towing vehicle are properly adjusted to give a clear view of vehicles approaching from the rear
 - safe work practices
- equipment suitable for towing
- four wheel driving and towing techniques:
 - dealing with and avoiding trailer sway
 - changing trailer wheel
 - parking vehicle with trailer attached
- tools and equipment used when setting up and securing a trailer
- fitted and used personal protective equipment (PPE).

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site with varying terrain
 - manual or automatic four wheel drive vehicle
 - trailer to tow that includes a suitable load
 - PPE required for operating a four wheel drive on unsealed roads
 - relevant personnel for the purposes of communicating information
- specifications:
 - workplace safety and environmental policies and procedures applicable to the use of four wheel drive vehicles in towing situations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3329 Perform complex four wheel drive operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to safely operate four wheel drive vehicles in difficult terrain. Difficult terrain has surface conditions that include frequent steeps and/or rocks, slippery or sandy track sections, and including possible water crossings.

The unit applies to individuals who operate four wheel drive vehicles in a variety of work settings and industry sectors, including forestry, agriculture, construction, tourism and energy.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

Individuals seeking to undertake this unit should have prior experience in operating four wheel drive vehicles on unsealed surfaces.

Individuals must hold a driver licence or a provisional driver licence prior to commencing this unit of competency.

Pre-requisite Unit

Assessment Requirements for FWPCOT3329 Perform complex four wheel drive operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- assessed three separate ascents and three separate descents greater than 15 degrees for the safest route and the most appropriate wheel placement
- driven three separate ascents and three separate descents greater than 15 degrees, having selected appropriate range and gearing and using the most appropriate wheel placement
- used traction aids and/or brakes when driving ascents and descents greater than 15 degrees on one occasion
- performed a forward and a reverse stop start recovery on an incline according to the type of transmission on two occasions
- demonstrated the setting of vehicle controls for operation in complex terrain on one occasion. This must include:
 - the use of free wheel hubs, if fitted
 - selection of low range in either manual or automatic vehicles
 - use of differential locks, if fitted
 - activation of traction control or terrain selection mode, if fitted and where effective
- driven vehicle in difficult terrain and operated vehicle controls and technology to avoid traction loss in three of the following conditions:
 - mud
 - rocky
 - sand
 - side slopes
 - rutted
- completed two water crossing of at least axle depth
- recorded and reported repairs or replacement or damaged items on two occasions
- fitted and used personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- four wheel drive systems:
 - differences between four wheel drive, two wheel drive and all-wheel drive vehicles
 - types and operating principles of different four wheel drive systems
- planning trips
- sources of information for weather forecasts and road/track conditions:
 - water and food requirements for trip
 - emergency communication methods
 - first aid and first aid kit
- procedures for:
 - pre-departure vehicles check
 - track assessment
 - wheel placement over rutted, broken ground
 - using traction aids
 - driving ascents and descents greater than 15 degrees
 - performing a safe stop and start forward down a slope (greater than 15 degrees) and in reverse down a slope in manual or automatic vehicle
 - performing a water crossing of at least axle depth
 - driving in loose ground such as mud and sand
 - vehicle shutdown
- vehicle selection for complex four wheel drive activity:
 - high and low range or similar capability
 - requirement for wading depth according to manufacturer specifications
 - types, purpose and use of traction aids
 - types and uses of tyres for complex four wheel drive activity
 - impact of tyre pressure on traction
 - Gross Vehicle Mass (GVM) or Gross Vehicle Weight (GVW)
 - impact of loading and accessories on GVM or GVW
- type and use of personal protective equipment required for complex four wheel drive activity
- type of emergency equipment used in complex four wheel drive activity
- type and use of communications equipment used in remote locations
- purpose and procedures for securing loads
- types of road surfaces and impact on traction when ascending or descending steep slopes
- impact of wet weather on track conditions
- environmental impact of four wheel drive use on wet unsealed roads
- techniques for four wheel driving in difficult terrain
- reasons and procedure for post-trip vehicle inspection

- water crossings:
 - assessment of water crossings, including water base, water depth, flow rate and debris
 - vulnerable aspects of vehicle when completing water crossings
 - environmental impact of water crossings.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site with access to a water crossing and difficult terrain with safe entry into and out of a waterway, shallow run-ins and a firm base. Simulated water crossings are acceptable for assessment if no suitable crossing is available due to little or no water level or flooded and unsafe to cross
 - manual or automatic four wheel drive vehicle with a low range transmission or equivalent
 - PPE required for operating a four wheel drive in difficult conditions and waterways
- specifications:
 - workplace safety and environmental policies and procedures applicable to the use of four wheel drive vehicles in difficult conditions and waterways.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3330 Apply tree jacking techniques in felling trees

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to use tree jacking techniques in the process of felling trees 180 degrees away from their natural direction of fall using purpose-built tree jacks.

The unit applies to individuals whose job role involves using tree jacking techniques in the process of felling trees.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for tree jacking	1.1 Determine job requirements from work order or instruction, and where required seek clarification from appropriate personnel 1.2 Identify type and quantity of trees to be tree jacked and assess

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>activities for safety and environmental protection practices</p> <p>1.3 Confirm safety and environmental requirements for the task, including the use of personal protective equipment (PPE), according to workplace procedures</p> <p>1.4 Identify, assess and take actions to mitigate risks and hazards associated with tree jacking operations</p> <p>1.5 Identify emergency and evacuation procedures to follow in the event of an incident or accident</p> <p>1.6 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.7 Select tools, equipment, communication systems and materials for tree jacking, and check for serviceability according to workplace procedures</p>
2. Plan tree jacking	<p>2.1 Assess environmental conditions and use outcomes to plan felling of each tree</p> <p>2.2 Monitor location and movement of other personnel, and modify work to ensure safety</p> <p>2.3 Assess tree, location and stability for conditions likely to affect safety of tree jacking activities</p> <p>2.4 Visually assess tree for defects, grade and recovery status</p> <p>2.5 Select escape route, and clear route and growth around tree manually or mechanically</p> <p>2.6 Assess fall direction and allowable degree of error, considering hang ups, damage, extraction constraints and available open space</p> <p>2.7 Plan cutting sequence to control direction of fall and minimise damage to tree and surrounding environment</p> <p>2.8 Mark trees too dangerous to fell safely and refer to appropriate personnel</p> <p>2.9 Confirm chain of command for communication of information and instructions to ensure safety of tree jacking operation</p>
3. Tree jack trees	<p>3.1 Complete equipment pre-start-up checks</p> <p>3.2 Remove and clear leaders according to tree jacking work plan</p> <p>3.3 Diagnose unexpected characteristics of tree and review tree jacking work plan</p> <p>3.4 Make jacking slots to provide for placement of tree jacks</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>according to planned falling direction</p> <p>3.5 Adjust cutting technique and use tree jacks to control movement and direction of tree being felled</p> <p>3.6 Complete felling and use planned safe exit route according to safety procedures</p> <p>3.7 Monitor ground movement of trees and assess and clear trees that hang up</p> <p>3.8 Record and report tree jacking process and equipment faults to appropriate personnel</p>
4. Complete chainsaw and tree jack operator maintenance	<p>4.1 Follow workplace safety procedures to lock out equipment</p> <p>4.2 Check chain for bluntness or damage</p> <p>4.3 Remove, sharpen, adjust and replace chain and other components according to manufacturer recommendations</p> <p>4.4 Assess and adjust chainsaw set-up to suit cutting conditions</p> <p>4.5 Maintain operational condition of chainsaw to meet standards prior to use</p> <p>4.6 Check and service tree jacks according to manufacturer recommendations</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read routine, familiar workplace documents, including workplace health and safety procedures, work plans and manufacturer manuals
Writing	<ul style="list-style-type: none"> Complete basic written reports on tree jacking process and equipment faults
Oral communication	<ul style="list-style-type: none"> Ask questions and apply active listening skills to clarify contents of work plans Provide clear, unambiguous verbal directions to others about

Skill	Description
	jacking and felling process to ensure safety of self and others
Numeracy	<ul style="list-style-type: none"> Perform estimations and basic calculations related to number, time, length and diameter of trees

Assessment Requirements for FWPCOT3330 Apply tree jacking techniques in felling trees

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared, planned and applied tree jacking techniques on two trees according to work order and workplace and safety procedures.

In performing this activity, the individual has:

- assessed type, quantity and characteristics of trees to be jacked, as well as terrain and environmental conditions, to plan fall direction and take actions to mitigate risks and hazards
- made jacking slots, used tree jacks and fell trees using planned safe escape route according to safety procedures
- reported tree jacking process and equipment faults to appropriate personnel
- performed operator maintenance on a chainsaw on one occasion
- followed safety and environmental protection requirements for the task, including the use of personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of environmental conditions and effects on tree felling:
 - general forest lean
 - ground growth
 - ground hazards and obstacles
 - ground slope
 - gullies
 - presence and density of seed and habitat trees
 - water courses
 - wet and adverse weather conditions

- wind speed and direction
- environmental protection practices:
 - safe disposal of waste material
 - cleaning of plant, tools and equipment
- typical tree defects and how these affect tree jacking and felling:
 - stability
 - insect defects
 - knots
 - resin pockets
 - shakes
- techniques used in the tree jacking process:
 - tree jacking
 - chainsaw cutting sequences and techniques used to control direction of fall
 - clearing trees that hang up
- communication methods used for tree jacking activities:
 - verbal
 - hand signals
 - eye contact with other operators
 - use of electronic communication devices
- typical industry chain of command for communication of information and instruction
- types, purpose, features, operation and basic non-specialist repair and maintenance of tree jacking tools and equipment:
 - tree jacks
 - chainsaws
 - maintenance tools and equipment
 - personal protection equipment
- workplace procedures specific to tree jacking activities:
 - workplace health and safety, with particular emphasis on PPE, pre-start-up checks and equipment lock-out for safe use of chainsaws
 - use and maintenance of equipment
 - communication reporting line during tree jacking process
 - recording and reporting tree jacking process and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- trees to be felled that are 180 degrees away from their natural direction of fall
- tools and equipment for tree jacking operations, including tree jacks, chainsaws and maintenance tools and equipment for chainsaws and tree jacks
- PPE suitable for tree jacking activities and chainsaw maintenance
- specifications:
 - manufacturer instructions for use and maintenance of equipment
 - work order or instruction with specific instructions for tree jacking operations
 - workplace safety and environmental policies and procedures applicable to tree jacking operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3331 Cut material using CNC sizing machines

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to set up and operate computer numerical control (CNC) sizing machines to achieve accurate dimensional cuts of engineered wood products and timber components in a manufacturing facility. Work also involves operator maintenance.

The unit applies to individuals who work as production workers, engineered timber products technicians, machine operators or timber fabricators. Operators generally work under broad or limited direction to complete routine activities related to their own work and take responsibility for their work.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3331 Cut material using CNC sizing machines

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, during at least one operational interval, the individual has cut one or more of the following types of engineered wood product or timber according to work specifications and within prescribed organisational tolerances:

- glued laminated beams (glulam)
- cross-laminated timber (CLT)
- laminated veneer
- chipboard
- medium density fibreboard
- dressed timber
- preservative treated timber.

In performing this work, there must be evidence that the individual has:

- used one or more of the following types of computer numerical control (CNC) sizing machines:
 - CNC beam saw
 - CNC double end profiling machine
 - CNC controlled docking saws
 - CNC controlled length and angle saws
 - CNC controlled single end profiling machines
 - CNC controlled routing machines
 - CNC controlled moulders
 - CNC controlled sharpening machines
- set computer programs for the CNC sizing machines according to work specifications
- conducted operator maintenance on the CNC sizing machines, cutting tools and equipment

- followed workplace health and safety requirements, including the use of personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to operating CNC sizing machines for cutting engineered wood products or timber as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace policies and procedures specific to cutting material using CNC sizing machines:
 - health and safety, with particular emphasis on equipment lock-out and the use of PPE
 - use of CNC sizing machines, cutting tools and equipment
 - communication reporting lines
 - recording and reporting production outcomes, machine and equipment faults and maintenance requirements
- environmental protection practices for manufacturing facilities:
 - reducing water and energy use
 - cleaning plant, cutting tools and equipment
 - disposing of, recycling and reusing timber and other waste
- range of cutting patterns used with CNC sizing machines to achieve accurate dimensions and quality of the finished product
- characteristics of timber, timber products and timber defects
- system functions and capabilities of CNC software for sizing machines, including cutting patterns and sequences
- purpose, features and operation of CNC sizing machines used to cut engineered wood product or timber
- methods for assessing saw blade condition.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - CNC sizing machine
 - computer program for sizing machines
 - maintenance tools for CNC sizing operations
 - saw blades suitable for CNC sizing machines

- PPE suitable for cutting material using CNC sizing machines
- engineered wood product or timber suitable for cutting operations using CNC sizing machines
- CNC program suitable for the cutting operations
- specifications:
 - manufacturer instructions for use and maintenance of equipment
 - work order with specific instructions for cutting material using CNC sizing machines
 - workplace policies and procedures for cutting material using CNC sizing machines, including health and safety and emergency procedures and environmental protection procedures
 - template documents for recording production outcomes, equipment faults and maintenance requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT3332 Machine timber or engineered wood products using CNC machining and processing centres

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, for one production run, the individual has machined engineered wood product or timber using one type of computer numerical control (CNC) machining and processing centre selected from:

- CNC three-axis machining centre
- CNC multi-tasking machining centre
- CNC flat-bed router and mortiser.

In performing this task, the individual has machined one type of engineered wood product or timber selected from:

- glued laminated timber (glulam)
- cross-laminated timber (CLT)
- laminated veneer
- chipboard
- medium density fibreboard
- dressed timber
- preservative treated timber.

Also, in performing this task, the individual has:

- followed workplace health and safety and environmental protection practices and/or procedures
- set computer program, conducted a trial run and made necessary adjustments to ensure that quality and dimensions of finished work conform to work specifications
- run CNC machining and processing centre according to workplace operating procedures

- achieved finished dimensions within prescribed tolerances
- conducted operator maintenance on the CNC machining and processing centre.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards or risks related to operating a CNC machine and processing centre for engineered wood products and timber as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace policies and procedures specific to machining engineered wood products and timber using CNC machine and processing centres, including:
 - health and safety, with particular emphasis on equipment lock-out and the use of personal protective equipment (PPE)
 - use of CNC machines, cutting tools and equipment
 - communication reporting lines
 - recording and reporting production outcomes, machine and equipment faults and maintenance requirements
- environmental protection requirements and practices for timber manufacturing facilities, including:
 - reducing water and energy use
 - cleaning plant, cutting tools and equipment
 - disposing of, recycling and reusing timber and other waste
- range of cutting patterns used with CNC machining and processing centre to achieve accurate dimensions and quality of finished work
- system functions and capabilities of CNC software for machining and processing centre
- purpose, features and operation of CNC machining and processing centre and equipment used to machine engineered wood products or timber, including:
 - three-axis machining centres
 - multi-tasking machining centres
 - flat-bed routers and mortisers
 - dust extraction equipment
 - jigs and shaped templates for routing
- timber characteristics, timber products and timber defects
- methods for assessing condition of cutting tools.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - CNC machining and processing centre
 - CNC program suitable for the machining operation
 - dust extraction equipment
 - cutting tools and equipment suitable for CNC machining operation
 - maintenance tools suitable for CNC machining operation
 - PPE suitable for machining timber or engineered wood products using CNC machining and processing centres
 - engineered wood product or timber suitable for machining operations using CNC machining and processing centre
- specifications:
 - work order with specific instructions for machining timber or engineered wood products using CNC machining and processing centre
 - workplace operating procedure for CNC machining and processing centre
 - workplace policies and procedures for machining timber or engineered wood products using CNC machining and processing centre, including health and safety and emergency procedures and environmental protection polices and/or procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT3333 Conduct heat plant operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared for, started up, monitored and shut down heat plant operations for a timber or wood products production facility for two production cycles with different specified energy generation requirements.

In performing this task, the individual has:

- followed workplace health and safety requirements
- conducted pre-operational checks on heat plant
- diagnosed and adjusted control settings during operation
- identified and rectified or reported heat plant operating faults
- handled and labelled heat plant chemicals correctly
- prepared heat plant for periodic inspection
- completed operational and maintenance reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental protection requirements and practices for heat plant operations, including:
 - cleaning plant, tools and equipment
 - disposing of hazardous substances
- characteristics and dangers of heat and energy generated by heat plants
- purpose, features and operation of energy generating heat plants
- energy generation capacity of workplace heat plants
- processes for heat plant start-up, shutdown, cleaning and storage
- range of data used to evaluate heat plant performance, including:
 - heat levels

- pressure levels
- energy generation levels
- heat build-up
- system overload information
- monitor fuel usage
- past performance records
- types, uses and labelling of heat plant chemicals, including safe handling and storage
- methods used to:
 - monitor operation and diagnose status of heat plant
 - remove valves and fittings
 - clean plant and plant room
- workplace procedures specific to operating heat plants, including:
 - health and safety, with particular emphasis on emergency shutdown, equipment lock-out and use of personal protective equipment
 - communication reporting lines
 - recording and reporting on operational and fuel efficiency data, equipment faults and maintenance requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - energy generating heat plant
 - heat plant chemicals and labels
 - valves and tools for replacing valves
 - personal protective equipment suitable for operating heat plants
- specifications:
 - workplace procedures for operation of energy generating heat plants
 - templates for documenting relevant information on heat plant operations
 - manufacturer safety data sheets for chemicals used in heat plant operations
 - workplace health and safety and environmental protection policies and/or procedures applicable to energy generating heat plants.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3334 Conduct steam boiler operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to prepare for, start up, monitor, shut down and store a steam-generating boiler.

The unit applies to individuals who operate steam boilers in a timber or wood products production facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

This unit should not be used where the boiler equipment falls under the category for which a high risk work licence is required. Users are advised to check with the relevant regulatory authority for appropriate unit and licensing requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared for, started up, monitored and shut down a steam boiler in a timber or wood products production facility for two production cycles with different specified energy generation requirements.

In performing this task, the individual has:

- followed workplace health and safety and environmental protection practices and/or procedures
- conducted pre-operational checks on steam boiler
- diagnosed and adjusted control settings during operation
- identified and rectified boiler operating faults
- handled and labelled boiler house chemicals correctly
- prepared steam boiler for periodic inspection
- completed operational and maintenance reports.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental protection requirements and practices for boiler operations, including:
 - cleaning plant, tools and equipment
 - disposing of hazardous substances
- characteristics and dangers of steam
- purpose, features and operation of:
 - steam-generating boilers, including liquid or vapour restricted to water or steam
 - fuel and fuel supply system
- energy generation capacity of workplace steam boilers

- processes for boiler start-up, shutdown, cleaning and storage
- range of data used to evaluate boiler performance, including:
 - steam levels
 - pressure levels
 - energy generation levels
 - heat build-up
 - system overload information
 - test outcomes for water quality and chemicals
 - past performance records
- types, uses and labelling of boiler house chemicals, including safe handling and storage
- methods used to:
 - remove valves and fittings
 - clean boilers internally and externally
 - monitor operation and diagnose status of steam boiler
 - inspect boilers after shutdown
- workplace procedures specific to operating steam boilers, including:
 - boiler inspection and maintenance
 - health and safety, with particular emphasis on shutdown, equipment lock-out and use of personal protective equipment
 - communication reporting lines
 - recording and reporting on operational and fuel efficiency data, equipment faults and maintenance requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - steam-generating boiler
 - fuel and fuel supply system
 - boiler house chemicals and labels
 - valves and tools for replacing valves
 - personal protective equipment suitable for operating steam boilers
- specifications:
 - workplace procedures for steam boiler operations
 - templates for documenting relevant information on steam boiler operations
 - manufacturer safety data sheets for chemicals used in steam boiler operations

- workplace health and safety and environmental protection policies and/or procedures applicable to boiler operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to complete shutdown procedures, inspections, maintenance and routine fault repairs for equipment used in forest or wood products operations.

The unit applies to production operators who undertake routine maintenance tasks for equipment in forest and wood product work settings.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for routine maintenance of forest or	1.1 Confirm routine maintenance requirements of site equipment using workplace maintenance and servicing schedules and manufacturer specifications, and, where required, seek clarification from appropriate

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
wood product equipment	personnel 1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task 1.3 Identify and assess hazards and take actions to mitigate risks related to equipment maintenance work 1.4 Select and fit personal protective equipment required for task 1.5 Review information on prior equipment operation faults, malfunctions and frequent or recurring breakdowns 1.6 Plan sequence of maintenance activities, if required, to provide reliable equipment performance with minimal disruption to production
2. Shut down and isolate forest or wood product equipment	2.1 Implement equipment shutdown and isolation procedure according to manufacturer instructions and workplace procedures 2.2 Check equipment is depressurised, emptied, de-energised or bled according to manufacturer instructions 2.3 Install required safety and/or security lock-off devices and signage according to manufacturer instructions and workplace procedures 2.4 Conduct tests to ensure equipment is safely shut down and isolated according to manufacturer instructions and workplace procedures 2.5 Confirm shutdown and isolation complies with health and safety, legislative and regulatory requirements
3. Carry out routine maintenance of forest or wood product equipment	3.1 Inspect equipment and components to identify faults according to workplace procedure and routine maintenance requirements 3.2 Assess nature of equipment faults and maintenance or repairs required 3.3 Rectify routine faults and refer complex faults to relevant personnel according to workplace procedures
4. Complete routine maintenance of forest or wood product equipment	4.1 Dispose of non-repairable equipment or components according to workplace procedures, manufacturer recommendations and environmental protection requirements 4.2 Complete repair and maintenance records and reports according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret terminology in equipment operation and maintenance documents
Writing	<ul style="list-style-type: none"> Complete routine records related to equipment service and repair
Oral communication	<ul style="list-style-type: none"> Use open and closed questions and actively listen to clarify equipment servicing requirements
Numeracy	<ul style="list-style-type: none"> Perform routine measurements and calculations used in equipment maintenance Interpret numerical and graphical information relevant to equipment maintenance Interpret units of measurement used in equipment maintenance

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- completed inspections for two components of one item of forestry or wood products equipment as part of preventative maintenance
- conducted shutdown or isolation of one item of forestry or wood products equipment
- completed three basic non-specialist repairs selected from the list below for one item of forestry or wood products equipment as part of preventative maintenance:
 - cleaning
 - oil top-ups
 - processing tools changes
 - filter changes or cleaning
 - greasing
 - lubricating
 - pressure checks
 - removing and replacing machinery components
 - tightening, tensioning and adjusting equipment components
 - maintaining or replacing consumables
- completed records and reports on the repair and maintenance of the item of equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of forest or wood products equipment used at worksite, including respective technical capabilities and limitations

- importance of preventative maintenance
- components of forest or wood products equipment that increase the risk of breakdown and frequently malfunction
- techniques and requirements for checking components of forest or wood products equipment as part of preventive maintenance at worksite
- equipment isolation and shutdown procedures for equipment used in forest and wood products operations, including:
 - reasons, procedures and safety precautions for shutting down and isolating equipment
 - run down time
 - situations in which shutdown and isolation of equipment is required, including inspections, repairs, maintenance, assessments, adjustments and cleaning
 - reasons and procedures for purging, depressurising, emptying, de-energising or bleeding equipment
 - reasons and procedures for verifying equipment shutdown and isolation
 - legislation, regulations and Australian Standards pertaining to isolation and shutdown
 - types of safety/security lock-off devices and signage
 - reasons and procedures for installing lock-off devices and signage
- basic non-specialist repair and maintenance techniques for forest or wood products equipment, including:
 - cleaning
 - oil top-ups
 - processing tools changes
 - filter changes or cleaning
 - greasing
 - lubricating
 - pressure checks
 - removing and replacing equipment components
 - tightening, tensioning and adjusting equipment components
 - maintaining or replacing consumables
- procedure for assessing the nature of forest or wood products equipment faults, including:
 - cause
 - seriousness
 - likely repair requirements
 - potential for further damage and personal injury
 - availability of alternatives
 - reference to manufacturer instructions
- safe handling and disposal of waste materials, including lubricants, according to environmental protection requirements and practices
- workplace procedures relevant to preventative maintenance of forest or wood products equipment, including:
 - standard operating procedures

- health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment and handling hazardous substances
- communication reporting lines
- recording and reporting equipment faults, repair and maintenance actions.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - equipment items used at forest and wood product worksite to meet requirements specified in the performance evidence
 - manufacturer instructions for items of equipment
- specifications:
 - workplace procedures for maintaining forest or wood products equipment
 - workplace health and safety and environmental protection policies and/or procedures applicable to forest or wood products equipment maintenance.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3336 Coordinate set up and operation of timber finger jointing line

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to coordinate finger jointing operations, including planning schedules for operators, setting up equipment for production runs, resolving processing problems and coordinating equipment shutdown and maintenance.

The unit applies to individuals who coordinate the production of finger jointed timber in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3336 Coordinate set up and operation of timber finger jointing line

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated the set-up and operation of a finger jointing line for one production cycle according to work order and workplace health and safety requirements.

In performing this task, the individual has:

- assessed hazards associated with finger jointing operations
- developed and documented finger jointing schedule for one production cycle
- communicated finger jointing schedule to operators
- checked finger jointing equipment for safety and operational effectiveness
- complied with legislation, standards and codes of practice relevant to timber jointing operations
- set up finger jointing equipment to meet production requirements
- coordinated cutting of trial timber joints and checked against specifications
- coordinated start-up of finger jointing line in conjunction with operators
- monitored finger jointing operation to ensure safety, product quality and output
- identified and responded to routine processing and equipment faults
- completed production reports
- coordinated routine maintenance of finger jointing equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, standards and codes of practice relevant to timber jointing operations
- operational capacity of finger jointing equipment
- workflow processes for finger jointing operations

- methods of determining finger jointing schedules to maximise equipment, labour and material use
- format, content and use of finger jointing schedules
- monitoring processes for jointing machines and overall production process
- typical processing and equipment faults and solutions for minimal production disruption
- industry standard cross-sections, their strength, tolerances and applicable terminology
- purpose, features, operation and maintenance requirements of automated finger jointing line:
 - finger jointing machine stations and equipment
 - safety features
 - glue spreader
 - conveyors
- types of risk and hazards and mitigation measures associated with finger jointing operations
- workplace policies and procedures specific to finger jointing operations, including:
 - health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling techniques
 - use of finger jointing machine and equipment
 - communication reporting lines
 - recording and reporting finger jointing schedules, production outcomes and maintenance schedules, equipment faults and maintenance requirements
- environmental protection requirements and practices for timber processing and manufacturing facilities, including:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing, recycling and reusing timber and other waste.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computers, keyboards, printers and software used to prepare finger jointing schedules and maintenance documents
 - automated finger jointing line
 - consumable glue and cutters
 - PPE suitable for finger jointing operations
 - timber for finger jointing operations

- specifications:
 - production orders with workplace information about grades, quantities and cross-sections for specified finger jointed timber products
 - template documents for recording finger jointing schedules, production outcomes, and maintenance schedules for finger jointing equipment
 - workplace procedures for finger jointing operations
- relationships:
 - work team required for operation of finger jointing line.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3337 Operate timber finger jointing line

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to operate a timber finger jointing line. This includes performing pre-operational checks, carrying out in-feed operations, monitoring finger jointing operations and performing out-feed operations.

The unit applies to timber products operators involved with the production of finger jointed timber in a wood products production facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a finger jointing line, either individually or in a team, for one production run according to workplace safety and operating procedures, and produced finger jointed timber as directed by work instructions.

In performing this work, the individual has:

- complied with legislation, standards and codes of practice relevant to finger jointing operations
- completed pre-operational checks and start-up procedures for finger jointer
- checked, loaded and fed cleats/shooks to joining operations
- monitored operation to ensure continuity of production, minimise misfeeding and achieve required product quality
- removed substandard timber jointed product and stacked, packaged and labelled finger jointed products
- reported on production outcomes and product quality
- inspected finger jointer condition and notified appropriate personnel of any faults or maintenance needs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and function of timber finger jointer
- key requirements of legislation, standards and codes of practice relevant to finger jointing operations
- operating parameters and capability of timber finger jointing line specific to workplace environment, including:
 - maximum and minimum shook cross-sections

- maximum and minimum shook lengths
- maximum and minimum output lengths
- throughput speed
- operating components of timber finger jointing line, including:
 - face-to-face or edge-to-edge joint profile
 - trim saws
 - conveyor
 - scoring saws
 - glue applicator
 - cut off saw
 - press
 - crowder
 - automatic stacker
- types of glue used for producing finger jointed timber
- range of industry standard cross-sections for timber, their strength, tolerances and applicable terminology
- methods for assessing condition of cutters and blade associated with timber finger jointing line
- monitoring processes in timber finger jointing operations
- workplace procedures specific to producing finger jointed timber, including:
 - health and safety, with particular emphasis on the use of personal protective equipment and equipment lock-out
 - use and maintenance of equipment
 - communication reporting lines
 - recording and reporting production outcomes and equipment faults
 - environmental protection requirements and practices.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber products manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - finger jointer machine
 - personal protective equipment required for operation of finger jointer machine
 - cleats/shooks and glue used in finger jointing operations
- specifications:

- workplace health and safety and environmental protection policies and/or procedures applicable to finger jointing operations
- workplace procedures for finger jointing operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT3338 Identify glues and gluing systems used in production of wood products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has researched glues and gluing systems used in production of wood products and documented the following:

- properties and applications of two glues selected from the following different types of glues:
 - synthetic or animal-based adhesives
 - rubber-based adhesives
 - polyvinyl acetate
 - epoxy resins
 - formaldehydes – resorcinol formaldehyde (RF), phenol resorcinol formaldehyde (PRF), melamine urea formaldehyde (MUF)
 - polyurethanes
- functions, components, operating parameters and processing capacity of one semi-automatic or one automatic system for dosing, mixing and applying glues that is used in the production of wood products
- legislation, standards and codes of practice relevant to gluing operations
- glue testing procedure used for checking one of the following features of one type of glue:
 - mix quantities
 - setting speed
 - how weather conditions may be affecting the process
- likely cause of one adhesion failure.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, properties, preparation and applications, at a basic level of understanding, of glues used in production of wood products, including:
 - synthetic or animal-based adhesives
 - rubber-based adhesives
 - polyvinyl acetate
 - epoxy resins
 - formaldehydes – RF, PRF, MUF
 - polyurethanes
- key requirements of legislation, standards and codes of practice relevant to gluing operations
- exposure categories of glue types – internal, exterior protected, exterior exposed
- commercial product names of glue types used in production of wood products
- safe practices for handling, transporting, storing and disposing of glue, glue waste and containers
- shelf-life of glues used in production of wood products, including:
 - factors that influence shelf-life of glues – temperature, humidity, type of glue, viscosity, mix time, excessive hardener
 - work practices that maximise shelf-life – stock rotation, temperature control, and airtight containers
- factors that influence glue application and bonding in the production of wood products, including:
 - shelf-life
 - storage temperature
 - accurate measurement of ingredients
 - accurate mixing
 - correct glue spread
 - correct open assembly time
- glue ingredient specifications for the production of wood products
- health and safety hazards or risks related to glues and additives used in the production of wood products, as identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- methods used in the production of wood products to:
 - test samples
 - safely store glues
- types, functions, components, accessories and capacity of semi-automatic and automatic systems used in the production of wood products for dosing, mixing and applying glues
- sources of information on systems for dosing, mixing and applying glues
- reasons for using glue dosing, mixing and application systems in the production of wood products, including:
 - speed
 - controlling accuracy
 - consistency of product dimensions

- reducing mechanical injury
- causes of adhesion failure in the production of wood products.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - internet access and computer software and hardware for accessing technical information on glues and gluing systems used in the production of wood products
- specifications:
 - legislation, standards and codes of practice relevant to wood products gluing operations
 - industry guides and standard references on glues and gluing systems used in the production of wood products.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3339 Grade wood product visually

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to visually assess the characteristics and defects of wood products, including recycled timber, and establish whether the strength and/or appearance properties of the product are consistent and within the grade specifications required for end-use application.

The unit applies to individuals who visually grade wood products, including recycled timber, in a wood products production facility or other work environments.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3339 Grade wood product visually

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has graded, sorted and marked one product selected from the following list for one production run according to workplace procedures:

- chipboard
- coated and/or treated timber products
- cross arms for overhead lines
- crossings
- debarked logs
- decking for wharves and bridges
- dressed timber
- fibreboard
- in-the-rough timber
- laminated veneer
- medium density fibreboard
- mine guides
- piles
- plywood
- poles
- preservative treated timber
- recycled timber
- sleepers
- stress and non-stress graded timber
- timber from imported species
- timber from native species
- other engineered wood products.

In performing each of these tasks, the individual has:

- assessed wood product characteristics visually for strength and/or appearance
- complied with legislation, standards and codes of practice relevant to visual grading operations
- measured wood product moisture content and length requirements and tolerances against allowable limits for the wood product type and end-use application
- identified defects in wood products
- identified products that require docking, regrading or reworking and those that are rejected
- branded, labelled, stamped or marked each graded wood product to indicate compliance with relevant Australian Standard and/or CodeMark certification requirements
- safely used workplace equipment for lifting and moving materials
- arranged reuse, recycling or disposal of sub-standard wood product
- coordinated movement of graded material to storage or processing operations
- reported grading outcomes to appropriate personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- markings used on wood products to identify grades
- key requirements of legislation, standards and codes of practice relevant to visual grading operations, including:
 - Australian Standards
 - CodeMark certification
 - industry standards for cross-sections and lengths for different types of wood products
 - grade classifications for different types of wood products
- typical flow of material supply in and out of the grading area
- methods to label wood products for storage locations, and common terms used
- purpose, features and operation of equipment used to grade wood products, including moisture meters
- workplace health and safety procedures, with particular emphasis on use of personal protective equipment (PPE) and safe manual handling techniques
- types of risk and hazards and mitigation measures associated with grading and sorting activities
- equipment used for lifting and moving wood products
- types of timber products for grading and sorting
- methods of visual estimation, grading, colour identification and tagging of different types of wood products
- procedures for sorting, marking, distribution and storage of different types of wood products
- methods of assessing wood products for number and frequency of defects
- methods for determining and recording moisture content of wood products
- wood products defects, including:

- warp
- wane
- cupping
- shakes
- insect defects
- loose or missing knots
- resin pockets
- dents
- loose surface
- lifting coatings
- thin or missing coatings
- chipped edges
- splits
- voids
- splintered or missing edges
- pin holes
- criteria for disposal, recycling and reuse of sub-standard wood products
- methods for safe disposal of waste preservative treated timber.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - moving equipment
 - PPE suitable for grading, sorting and marking wood products
 - labelling materials
 - three different wood products for grading
 - storage locations for graded wood products
- specifications:
 - workplace procedures for grading and sorting activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3340 Develop knowledge of log yard operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to identify the layout and workflow in a log yard and to confirm the procedures, equipment and safety requirements associated with log yard operations.

The unit applies to operational staff who are engaged in a range of work roles in log yard operations in the forest and wood products industry.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine log yard operations, layout and workflow	1.1 Identify type, purpose and nature of operations of log yard 1.2 Identify layout and materials flow within log yard 1.3 Identify role and responsibilities of log yard controller and other

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	log yard team members 1.4 Determine log yard equipment and systems 1.5 Identify log stack characteristics in relation to safety, efficiency and log rotation 1.6 Assess operational problems and factors that impact on materials flow in log yard 1.7 Assess safety, materials handling and environmental hazards associated with log yard operations
2. Confirm log yard procedures, equipment and safety requirements	2.1 Determine workplace procedures, equipment and safety requirements for unloading/reloading logs 2.2 Identify workplace procedures for estimating log weights and volumes 2.3 Determine workplace procedures and safety requirements for using a weighbridge to weigh trucks and determine and record gross, net and tare weight 2.4 Confirm workplace procedures for log grading and dealing with out-of-specification logs 2.5 Identify log yard hazards and workplace procedures, equipment and safety requirements for log sorting, segregation and storage procedures 2.6 Identify workplace procedures for safely disposing of log yard residue and waste 2.7 Identify workplace procedures for log yard recording and reporting requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret routine workplace documents detailing workplace procedures relevant to log yard operations

Skill	Description

Assessment Requirements for FWPCOT3340 Develop knowledge of log yard operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- researched and documented layout and workflow in one log yard
- confirmed and compiled procedures, equipment information and safety requirements that apply to four different log yard operations selected from:
 - unloading/reloading
 - transport
 - grading
 - scaling
 - sorting
 - log storage
 - residue and waste management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of log yards, including:
 - traditional mill log yards
 - concentration log yards
 - log reload yards
- purpose of log yards, including:
 - connect raw material supply to manufacturing processes
 - maintain log quality
- log yard layout
- log yard operations, including:

- unloading/reloading
- transport
- grading
- scaling
- sorting
- log storage
- residue and waste management
- types, uses and operation of log yard equipment and systems, including:
 - front end loaders
 - log stackers
 - hydraulic log loaders
 - log sorting systems
 - weighbridges
 - sorting bunks
 - quality assurance systems
- characteristics of log stack, including:
 - label
 - length
 - diameter
 - grade
- influences of correct stacking on safety, efficiency and log rotation
- influences of movements and product being moved on log yard layout
- log yard operational problems, including:
 - vehicle movement planning within the log yard
 - empty trips
 - seasonality of raw material availability
 - log yard shape
 - in-flow management
 - poor surface material
- materials handling hazards and principles of safe materials handling in log yards, including:
 - reduce or eliminate unnecessary movements, and combine movements
 - increase the size and weight of quantity of material moved wherever possible
 - standardise types and sizes of equipment
 - use equipment that can perform multiple tasks unless specialized equipment is needed
 - select equipment to match all aspects of material and flow in the system
 - minimise the ratio of dead weight to total weight for all moves
 - maximise the load and minimise the distance on high-intensity moves
 - make low-intensity moves if long distances must be covered
 - pick up and set down whole load

- workplace procedures, equipment and safety requirements for log yard operations, including:
 - health and safety, with particular emphasis on identifying hazards and controlling associated risks in log yard operations
 - dealing with out-of-specification logs
 - documents that need to be completed in the log yard, including requirements for tracking and identifying stock in the log yard
- purpose, features and operation of electronic measuring equipment and weighbridges
- methods used to estimate log weights and volumes using formulas and data tables.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a log yard or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - reference materials on log yard operations
 - internet access and computer software and hardware for accessing technical information on log yard operations
- specifications:
 - sample log yard site plans
 - sample workplace policies and procedures that cover current regulations and related industry standards and codes of practice applicable to safe work in log yard operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3341 Coordinate and monitor wood chip stockpile

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to coordinate and monitor the movement and distribution of wood chips to, from and over the stockpile, including movement and loading.

The unit applies to individuals who plan and coordinate wood chip stockpile operations, including wood chip loading and movement, in forest and wood products work environments.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan wood chip stockpile movement operations	1.1 Determine job requirements from work order and, where required, seek clarification from appropriate personnel 1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task, including use of personal

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	protective equipment 1.3 Identify and assess hazards and take actions to mitigate risks related to wood chip stockpile operations 1.4 Produce stockpile schedules according to workplace procedures 1.5 Check wood chip supplies 1.6 Establish plan for stockpile operations, and communicate to team members and other appropriate personnel
2. Control wood chip stockpile	2.1 Establish area for stockpile, and estimate growth or contraction on basis of production and shipping schedules 2.2 Review reach of chip slinging equipment 2.3 Inspect stockpile and identify hazards within vehicle operational area 2.4 Monitor stockpile for signs of self-heating and fire, and take corrective action according to workplace procedures
3. Coordinate wood chip stockpile movement and loading	3.1 Select and allocate vehicles and attachments to spread chips and load transport 3.2 Advise team members and other personnel of spreading, moving and loading operations 3.3 Coordinate stockpile levelling in accordance with workplace procedures 3.4 Maintain stockpile so that it is stable, compact and provides access for chip retrieval and for continued slinging 3.5 Coordinate and direct wood chip retrieval from stockpile edges to transport 3.6 Maintain schedules so that sufficient quantities of chips are available to meet demand 3.7 Investigate, record and report on wood chip movement and equipment faults in accordance with workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret routine workplace documents related to coordinating wood chip stockpile

Assessment Requirements for FWPCOT3341 Coordinate and monitor wood chip stockpile

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- planned wood chip stockpile operations for one production period at one site
- established and controlled the wood chip stockpile during one production period at the site
- coordinated and monitored the loading, movement and distribution of wood chips to, from and over the wood chip stockpile during one production period at the site.

In performing these tasks, the individual has:

- followed workplace procedures
- safely used, and directed others to safely use, chip slinging equipment
- maintained wood chip stockpile to ensure stability, compactness and access for chip retrieval and ongoing slinging
- safely directed others when chips are delivered and transported by wheeled or tracked dozers or loaders
- maintained schedules to ensure that sufficient quantities of chips are available to meet demand
- maintained accurate records about stockpile and movement of woodchips.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and safe use of equipment used in coordinating and monitoring the wood chip stockpile including:
 - wheeled dozers and loaders
 - chip slinging equipment

- wood chip movement and loading procedures
- environmental protection requirements and practices for maintenance and safe disposal of waste material from stockpiles, and the cleaning of plant, tools and equipment
- environmental hazards and associated risks with stockpiles, including contamination
- workplace procedures relating to the wood chip stockpile
- causes and consequences of stockpile self-heating and fire
- wood chip movement and loading procedures
- workplace health and safety procedures including procedures for fire, emergency and evacuation
- procedures for recording and reporting workplace information
- maintenance procedures for tools and equipment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, wood chip processing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - wood chip stockpile
 - equipment used in wood chip stockpile operations, including chip slinging equipment, wheeled or tracked dozers or loaders
 - personal protective equipment suitable for coordinating and monitoring the wood chip stockpile
- specifications:
 - workplace procedures for planning, coordinating and monitoring a wood chip stockpile
 - workplace health and safety and environmental protection policies and/or procedures applicable to planning, coordinating and monitoring a wood chip stockpile
- relationships:
 - team members and relevant personnel for the purposes of communicating information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3342 Screen wood chips

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to use mechanical screen processes to separate oversize, over-thick, pins, fines and any contaminants in the wood chip flow from the accepted chips.

The unit applies to individuals who screen wood chips in wood processing work environments.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for wood chip screening	1.1 Determine job requirements from work order or instructions and, where required, check with appropriate personnel 1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task, including use of personal

Elements	Performance Criteria

Assessment Requirements for FWPCOT3342 Screen wood chips

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has screened wood chips using mechanical screen processes for one production period according to workplace procedures and quality specifications.

In performing this task, the individual has:

- operated wood chip screening system according to workplace health and safety and operating requirements
- adjusted operating parameters to accommodate specified wood chip size and production requirements
- monitored incoming wood chip supply and operation to detect and resolve operational problems and ensure product quality and efficient flow of output to transfer systems
- cleaned, checked and reported on condition of wood chip screening system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of screening wood chips
- operating capacity, parameters, features, components and operation of wood chips screening system
- characteristics used to screen and sort wood chips, including:
 - species
 - size
 - moisture content
 - contaminants
- typical contaminants found in wood chips and how they affect ability to produce quality products, including:
 - bark

- charcoal
- sand, stones and metal
- hazards associated with wood chips screening
- consequences of non-conformance of wood chips with quality standards
- typical flow of wood chips supply in and out of the screening area
- industry and workplace specific quality specifications for wood chips
- stages of the wood chip production, screening and transfer process
- operating faults and malfunctions related to wood chips screening system
- environmental protection requirements and practices for forest products factory settings, including:
 - cleaning of plant, tools and equipment
 - reducing water and energy use
 - disposal, recycling and reuse
- workplace policies and procedures specific to screening wood chips, including:
 - health and safety, with particular emphasis on the use of PPE, equipment lock-outs and isolation, emergency stops, machine guarding
 - communication reporting lines
 - recording and reporting processing and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, wood chip processing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - wood chips screening system
 - a selection of wood chips
 - PPE suitable for screening wood chips
- specifications:
 - workplace procedures for screening wood chips
 - production requirements
 - workplace health and safety and environment protection policies and/or procedures applicable to screening wood chips.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT3343 Test wood chips quality

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, for one production cycle, the individual has tested wood chips for each of the following quality criteria according to prescribed workplace requirements:

- size distribution
- shape
- moisture content
- contamination.

In performing this task, the individual has:

- identified and obtained appropriate type and quantity of wood chips for sampling
- used and checked accuracy of testing equipment
- produced and reported test results to appropriate personnel for downstream processing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- safe work practices associated with testing and reporting wood chip quality
- environmental protection requirements and practices for the safe disposal of waste or contaminated wood chips
- hazards associated with testing wood chips for quality
- workplace standards, requirements, policies and procedures for testing wood chips
- types and production characteristics of wood chips
- types of wood chip test and reasons for testing, including:
 - size distribution
 - moisture content

- contamination and bark content
- wood chip sampling and testing techniques
- procedures for ensuring the accuracy of testing equipment, including:
 - calibration
 - repeatability
 - check weights
- types and causes of contamination of wood chips, including:
 - disease
 - infestation
 - rot
 - paint
 - plastic
 - bark
 - charcoal
 - rock
 - metal
- workplace storage systems and labelling for wood chip samples
- wood chip testing equipment and its safe use, operation and maintenance
- workplace procedures for recording and reporting wood chip testing information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, wood chip processing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - equipment for testing wood chips
 - a selection of wood chips
- specifications:
 - workplace procedures for testing wood chips
 - workplace health and safety and environmental protection policies and/or procedures applicable to testing wood chips.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3344 Transfer wood chips

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to operate wood chip handling equipment to transfer wood chips to stockpile or transport systems.

The unit applies to individuals who transfer wood chips in wood processing work environments.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to transfer wood chips	1.1 Determine job requirements from work order or instructions and, where required, check with appropriate personnel 1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task, including use of personal

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>protective equipment</p> <p>1.3 Identify and assess hazards and take actions to mitigate risks related to operation of wood chip transferring equipment</p> <p>1.4 Inspect deposit point for access and cleanliness</p> <p>1.5 Complete pre-operational checks on wood chip transferring system according to manufacturer instructions and workplace procedures</p>
2. Set up and use equipment for wood chip transfer	<p>2.1 Start wood chip transferring system according to workplace procedure</p> <p>2.2 Set and adjust operating parameters and feed rate to achieve production requirements</p>
3. Monitor and control performance of wood chip transferring system	<p>3.1 Monitor and adjust control parameters to maintain product quality and efficient plant performance</p> <p>3.2 Clear jams to ensure free flow of output material</p> <p>3.3 Maintain production rate according to workplace procedures and process requirements to avoid system overload</p>
4. Complete wood chip transfer	<p>4.1 Direct slinger or blower to enable filling or distribution over required area</p> <p>4.2 Check filling or distribution levels and stop or top up according to job requirements</p> <p>4.3 Identify routine processing and equipment faults and resolve or report to appropriate personnel</p>
5. Perform operator maintenance on wood chip transferring system	<p>5.1 Shut down and isolate wood chip transferring system according to workplace health and safety procedures</p> <p>5.2 Clean wood chip transferring system according to manufacturer instructions</p> <p>5.3 Conduct visual inspection of wood chip transferring system according to workplace procedures</p> <p>5.4 Record and report system faults and maintenance requirements to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret routine workplace documents related to wood chips transferring processes
Writing	<ul style="list-style-type: none"> Complete routine records for wood chips transferring processes and equipment faults
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and actively listen to clarify job requirements
Numeracy	<ul style="list-style-type: none"> Identify quantities of required wood chips within work orders

Assessment Requirements for FWPCOT3344 Transfer wood chips

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a wood chip handling system to transfer wood chips to stockpile or transport systems for one production period according to workplace procedures and production requirements.

In performing this task, the individual has:

- operated wood chip transferring system according to workplace health and safety and operating requirements
- adjusted operating parameters to accommodate production requirements
- monitored incoming wood chip supply and operation to detect and resolve operational problems and ensure product quality and efficient plant performance
- directed wood chips to transport arrangements and stockpiles
- cleaned, checked and reported routine processing and equipment faults.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- operation capacity, parameters, features, components and operation of systems used for transferring wood chips
- stages of wood chip production, screening and transfer process
- typical flow of material supply in and out of wood chip production area
- hazards associated with transferring wood chips
- consequences of non-conformance with quality standards
- range of categories used for wood chips and visual characteristics, including:
 - species
 - size
 - moisture content

- workplace environmental protection requirements and practices specific to transferring wood chips, including:
 - cleaning of plant, tools and equipment
 - reducing water and energy use
- workplace policies and procedures specific to transferring wood chips, including:
 - workplace health and safety, with particular emphasis on the use of PPE, equipment lock-outs and isolation, emergency stops
 - communication reporting lines
 - recording and reporting processing and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a wood chip processing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - wood chips transferring system
 - a selection of wood chips
 - PPE suitable for transferring wood chips
- specifications:
 - workplace procedures for transferring wood chips
 - production requirements
 - workplace health and safety and environmental protection procedures applicable to transferring wood chips.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3345 Develop knowledge of chain of custody certification requirements for forest and wood products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to develop current understanding of the purpose of chain of custody certification in the wood and forest products industry, identify workplace chain of custody policy, procedures and documentation, and check for potential non-compliance with certification requirements in own area of work.

The unit applies to individuals who are engaged in forest and wood product procurement, processing, sales and distribution operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT3345 Develop knowledge of chain of custody certification requirements for forest and wood products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- identified the chain of custody certification body and chain of custody certification scheme relevant to own workplace
- identified workplace chain of custody procedures relevant to own work
- complied with legislation, standards and codes of practice relevant to chain of custody operations
- identified and confirmed the meaning of one chain of custody logo, trademark or label relevant to own work
- checked two workplace documents relevant to own work for compliance with chain of custody requirements
- identified one product group covered by certification system relevant to job role
- identified one potential non-compliance with chain of custody requirements relevant to own work and identified appropriate follow-up action.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of chain of custody certification
- legislation, standards and codes of practice relevant to chain of custody
- relationship between forest management certification and chain of custody certification
- objectives of chain of custody certification
- basic components of chain of custody system, including:
 - system for sourcing, purchasing, acquiring and receipting certified materials, including certification at product level, due diligence and illegal logging

- system for handling certified material including arrangements for keeping certified materials separated from non-certified materials
- system for providing certified material to customers
- compliance requirements
- title, purpose and basic content of chain of custody certification standards
- social, economic and environmental benefits of chain of custody for forest and wood products industry, enterprises, consumers
- chain of custody workplace procedures relevant to job role
- types of material – certified, neutral and other
- chain of custody implementation methods, including physical separation method, percentage-based method and credit method
- type and purpose of chain of custody workplace documentation relevant to job role
- product groups relevant to job role
- types, meaning and uses of chain of custody logos, trademarks and labels
- chain of custody record-keeping requirements relevant to job role
- purpose of chain of custody audits.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- resources, equipment and materials:
 - samples of chain of custody workplace documentation relevant to wood and forest products industry
 - chain of custody certification labels and logos relevant to wood and forest products industry
- specifications:
 - workplace chain of custody certification policy and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3346 Communicate effectively with general public or stakeholders concerned about forest practices

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to communicate effectively with the public or external stakeholders who are concerned about forest practices in a variety of settings. This may include protests, complaints and verbal dissent expressed in social and community situations, on social media, and in the workplace or forest worksite.

The unit applies to individuals who work in the forest and wood products industry, as well as related or similar industries, who may communicate with external stakeholders about forest practices.

All communications must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3346 Communicate effectively with general public or stakeholders concerned about forest practices

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- identified common concerns of key stakeholders who are affected by and/or interested in forest-related activities
- used appropriate strategies to engage with general public or external stakeholders to alleviate concerns regarding forest activities for at least two situations, one at a forest worksite and one in a public setting, while adhering to industry regulations, protocols, standards and workplace policies and procedures for building positive relationships
- assessed one difficult verbal interaction with general public or external stakeholders for effectiveness, and identified areas for improvement.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- external stakeholders with views on forest-related activities and their concerns, including:
 - affected stakeholders
 - interested stakeholders
- benefits to communities of forest-related activities, including:
 - social benefits
 - economic benefits
 - environmental benefits
- communication styles, techniques and strategies used in the forest industry for building positive relationships with general public or external stakeholders in a variety of settings, including:
 - social and community settings

- social media settings
- workplace or on-site settings
- workplace procedures for ‘unauthorised entry’ to forest site
- techniques and strategies for alleviating concerns of general public or external stakeholders about forest-related activities and managing difficult verbal situations
- industry regulations, protocols, standards and workplace policies and procedures for building positive relationships with general public and external stakeholders
- support services to deal with the impact of community and stakeholder relationships on health and wellbeing in the forest industry.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest and wood products work environment or an environment that accurately represents workplace conditions
- specifications:
 - workplace policies and procedures for external stakeholder engagement.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3349 Assess timber against quality requirements and specifications

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to evaluate timber against quality requirements and specifications for use in timber processing and manufacturing operations.

The unit applies to individuals who evaluate and select timber in a timber processing or manufacturing facility.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT3349 Assess timber against quality requirements and specifications

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- read and clarified work order to determine job requirements
- followed workplace health and safety requirements for assessing and selecting timber
- undertaken visual inspection of timber and identified defects
- evaluated timber characteristics, growth patterns, structure, durability and faults for suitability for end use applications and production purposes
- prepared timber for despatch
- recorded and reported on outcomes of timber selection.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- risks and hazards and mitigation measures associated with timber assessment and selection processes
- workplace procedures for assessing and selecting timber, including:
 - health and safety, with particular emphasis on use of personal protection equipment (PPE), equipment lock-out and safe manual handling techniques
 - environmental protection practices for minimising and disposing of waste material, cleaning tools and equipment, and maximising energy efficiency
 - communication reporting lines
 - recording and reporting on outcomes of timber selection
- defects in timber and process for visually inspecting timber for defects, including:
 - contamination
 - timber colours
 - insect attack

- surface finishes
- loose surfaces
- bubbles
- holes
- breakages
- machine-caused defects
- methods for assessing timber growth patterns, including make-up of a tree:
 - bark (cortex)
 - phloem
 - cambium layer
 - sapwood (xylem)
 - heartwood (truewood)
 - pith (medulla)
 - medullary rays
 - earlywood
 - latewood
 - growth rings
 - cellulose
 - hemicelluloses
 - lignin extractives
- methods of assessing timber for:
 - durability
 - strength
 - hardness
- rating for end use of timber, classification and measurement
- methods of assessing timber structures, including:
 - hardwood (pored wood) or softwood (non-pored wood)
 - vessels, fibres, ray cells, pits, tracheids
 - texture
- methods for seasoning timber
- timber characteristics, including:
 - colour
 - density
 - texture
 - grain
 - figure
 - qualities
 - end uses
- faults and features of timber, including:
 - bow

- spring
- twist
- warp
- wane
- cupping
- shakes
- insect defects
- fungi
- knots
- resin pockets
- wild grain
- sloping grain
- working properties of timber and methods to measure properties, including:
 - timber shrinkage
 - effects of light
 - density and deterioration of the timber
 - compressive and tensile stresses
 - modulus of elasticity
 - modulus of rupture
 - deformation
 - creep
 - surface hardness
 - moisture content of timber
- sawing patterns and suitability for different timber, including:
 - live-sawn
 - back sawn
 - quarter sawn.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing or manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment used to make timber selection
 - timber for selection and classification
 - PPE for assessing and selecting timber
- specifications:
 - documents, spreadsheets and commonly used template documents

- manufacturer instructions for use, repair and maintenance of equipment
- work order with specific instructions for timber assessment and selection
- workplace procedures for timber selection.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3350 Fell trees manually (intermediate)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to assess, plan and safely carry out manual felling of intermediate trees using a chainsaw. This unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and practical felling skills.

The unit applies to individuals who possess existing proficiency in operating a chainsaw and are required to fell intermediate trees as part of arboriculture, forestry, agriculture, conservation and land management, local government, emergency services and other government agency operations. With the exception of minor forest produce, this unit does not apply to commercial harvesting operations.

Individuals competent in this unit should be able to effectively fell most trees, except advanced trees and/or those with significant defects and/or characteristics that cause excessive complexity.

Trees typical to the scope of this unit may have some of the following characteristics:

- lean and where weight distribution that can be assessed and readily adapted to falling direction with the use of wedges and/or controlled with hinge wood of a larger size than typical for the local environment
- limited visible damage or defect
- multi-stems
- forward lean, backward lean or side lean
- small or medium size diameter trees that can be safely felled with intermediate felling techniques
- dead trees with minimal visible damage or defects that do not add significant complexity to the cutting technique
- various dimensions relative to other trees when working in a forest environment
- in local site conditions that add additional complexity to the felling operation, including site conditions that impact the working position of the operator or the natural direction of fall of the tree.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Assessment Requirements for FWPCOT3350 Fell trees manually (intermediate)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted a complete hazards and risks assessment of site, surroundings, and trees, planned risk control measures, selected appropriate cutting techniques, and conducted the felling of a minimum of four trees with intermediate characteristics.

The trees must be chosen according to the following criteria:

- at least one tree must have a diameter, measured at the point where the scarf cut is made, that is smaller than chainsaw bar length
- at least one tree must have a diameter, measured at the point where the scarf cut is made, that exceeds chainsaw bar length
- at least one tree must have a leaning characteristic and a diameter, measured at the point where the scarf cut is made, that is smaller than chainsaw bar length
- at least one tree must have a leaning characteristic and a diameter, measured at the point where the scarf cut is made, that exceeds chainsaw bar length.

In performing this task, the individual has used a chainsaw with a bar length appropriate to the tree's diameter and has applied:

- two different scarf cutting techniques
- two different back cutting techniques, which must be for either forward leaning, side leaning or back leaning trees
- the wedge technique, on one occasion, to ensure that the tree falls in the direction of the scarf cut.

The scarfing methods must be selected from the following:

- Standard
- Humboldt
- 90 degree scarf
- V scarf.

In performing all cuts, the individual must have complied with the following criteria:

- direction – the scarf must be in the direction of the desired fell
- depth – the depth of the scarf is 1/4 to 1/3 of the diameter of the tree
- size (width) of opening – 2/3 across the front of the tree
- top and bottom scarf cuts – the two cuts should meet without overcutting or undercutting, the scarf line is level and the scarf line is at 90 degrees to the intended direction of fall
- back cut height – the back cut is level and above the scarf line by about 1/10 (or 10%) of the tree diameter
- hinge wood thickness is about 1/10 (or 10%) of the tree diameter.

There must also be evidence that the individual has documented risk assessment for at least one of the felled trees. This documentation must detail localised hazards and risks associated with tree felling and specify methods to minimise these risks.

In addition, there must be evidence that the individual has conducted risk assessment for a minimum of two trees, in addition to the initial four.

In completing this work, the individual must demonstrate correct use of personal protective equipment and that, for each tree, the felling technique was consistent with current Australian Standards and industry codes of practice applicable to tree felling operations.

There must also be evidence that the individual has sharpened one chain, inspected and carried out routine maintenance on one occasion on one chainsaw and its cutting attachments according to manufacturer requirements.

This work must comply with workplace policy and procedures and current workplace health and safety legislation and regulations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Australian Standards and codes of practice applicable to tree felling operations
- hazards and risks related to felling trees with chainsaws, and methods to minimise associated risks, including:
 - physical conditions of the site
 - unsafe/hazardous trees
 - fire and other emergency situations
 - overhead and underground services
 - nearby structures
 - standing vegetation in the intended direction of fall
 - falling branches
 - weather conditions
 - impediments of escape routes
 - vehicle and traffic access
 - people on or near worksite

- machinery on or near worksite
- carrying and transporting a chainsaw
- user fatigue
- hazards related to maintaining chainsaws, and methods to minimise associated risks
- features of unsafe/hazardous intermediate trees and defects of trees and how they affect tree felling activities
- types and purposes of cuts to fell intermediate trees, including:
 - scarf cuts
 - back cuts using different methods to provide hinge wood and wedges to maintain control of tree
- characteristics of intermediate trees
- methods used to identify intermediate trees:
 - that contain hazards and are deemed unsafe to fell
 - that are considered outside own skill level
 - where cuts made may lead to loss of control of tree in felling
- methods used to remove trees that are hung up, and procedures for removal
- methods for assessing chain condition
- types, safe use, operation and maintenance of chainsaws, support tools and attachments
- workplace procedures specific to felling trees with chainsaws, including:
 - workplace health and safety, with particular emphasis on deactivating and isolating equipment, use of personal protective equipment (PPE), safe manual handling and fire prevention measures
 - communication reporting lines
 - recording and reporting repairs, maintenance activities and equipment faults
- environmental protection requirements and/or procedures that meet legal obligations and requirements of the industry, state and local standards and/or codes of practice for felling trees with chainsaws, including:
 - protection of natural and cultural assets
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials
 - disposing of hazardous substances.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - chainsaw and accessories
 - suitable trees to fell

- tools and equipment to fell trees
- PPE required in tree felling operations
- communication system
- specifications:
 - workplace health and safety and environmental policies and/or procedures applicable to tree felling and chainsaw operations
 - workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT3351 Fell trees manually (advanced)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to assess, plan and safely carry out manual felling of trees with advanced characteristics using a chainsaw. This unit covers the felling procedures for advanced trees with a level of complexity that requires significant tree assessment and advanced practical felling skills.

The unit applies to individuals who possess existing proficiency in operating a chainsaw and are required to fell advanced trees as part of arboriculture, forestry, agriculture, conservation and land management, local government, emergency services and other government agency operations. With the exception of minor forest produce, this unit does not apply to commercial harvesting operations.

Individuals competent in this unit should be able to effectively fell trees of any size, species and condition, including those with significant defects and characteristics that cause excessive felling complexity, that are deemed safe to fell.

Trees typical to the scope of this unit may have some of the following characteristics:

- lean and with weight distribution that adds significant complexity yet can be assessed and adapted to site requirements
- large diameter trees, but not exclusively, that can be safely felled with complex felling techniques
- heavy forward lean
- lean in a direction away from the fall zone or side-leaning to the available fall zone
- damage or defect that requires complex felling techniques, including trees with visible lightning damage, burnt out trees and those with fire damaged butts
- hung up trees that can be removed safely
- multi-legged, hollow butts, culls and stags
- species prone to free splitting and adverse reactions during felling
- complex multi-stems
- terrain, slope and environment that can add significant complexity to the operation.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for felling	1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate personnel 1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task 1.3 Identify hazards, assess risks, determine appropriate control measures and record findings to mitigate risks and hazards associated with felling advanced trees by conducting a documented risk assessment according to workplace procedures 1.4 Identify, assess and determine felling requirements of trees to fell according to work order or instruction 1.5 Consult and maintain communication with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace 1.6 Select, fit and use personal protective equipment 1.7 Obtain tools and equipment needed for the work, and check for correct operation and safety
2. Assess site conditions and surroundings	2.1 Inspect site for conditions likely to affect safe implementation of felling activities 2.2 Identify and report site environmental conditions to appropriate personnel 2.3 Determine fall zone and implement control measures to minimise risks and hazards in the zone according to safe work procedures 2.4 Monitor location and activity of other personnel on the work site,

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	and implement control measures according to workplace safety procedures
3. Assess tree and plan felling	<p>3.1 Identify trees considered outside own skill level, and seek assistance from appropriate personnel where required</p> <p>3.2 Assess tree visually to identify felling characteristics</p> <p>3.3 Assess trees and site to determine complexity of felling requirements</p> <p>3.4 Confirm tree is safe to fell</p> <p>3.5 Assess and progressively plan tree-felling sequence for individual trees</p> <p>3.6 Assess and check required felling direction and possible deviation</p> <p>3.7 Plan suitable escape routes, and clear routes of growth and other obstacles according to environmental care, workplace and regulatory requirements</p> <p>3.8 Plan sequence of cuts to fell tree according to standard felling procedures</p> <p>3.9 Assess need, safety and suitability of an industry approved technique and associated equipment to control tree fall</p> <p>3.10 Confirm planned escape route according to workplace procedures</p>
4. Apply tree-felling techniques	<p>4.1 Fell individual trees using planned and appropriate techniques according to current Australian Standards and industry codes of practice at a safe distance from other personnel, machinery, infrastructure and other assets in the work area</p> <p>4.2 Apply an industry approved technique and equipment to ensure that the tree falls in the direction of the scarf</p> <p>4.3 Adjust cutting technique in response to movement and condition of tree</p> <p>4.4 Use planned escape route when tree starts to fall, and monitor the fall of the tree until all movement has stopped</p> <p>4.5 Delay movement back into the felling area until all tree material, including from adjacent tree crowns, has fallen or is stable enough to allow safe access back into the felling area</p> <p>4.6 Identify procedures for removal of trees that are hung-up if safe to do so</p> <p>4.7 Dispose of waste materials according to workplace environmental</p>

Assessment Requirements for FWPCOT3351 Fell trees manually (advanced)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted a complete hazard and risk assessment of site, surroundings, and trees, planned risk control measures, selected appropriate cutting techniques and felled a minimum of six trees with advanced characteristics following workplace policies and procedures and current workplace health and safety legislation and regulations.

The trees must be chosen according to the following criteria:

- at least one tree to be selected from:
 - tree with a lean and a weight distribution that adds significant complexity, yet can be assessed and adapted to site requirements
 - tree leaning in a direction away from the fall zone, or side-leaning towards the available fall zone
- at least one tree with a heavy forward lean
- at least one tree that can be safely felled using one of the following complex felling techniques:
 - centre scarf technique
 - executing cuts from both sides of the tree during the scarf and back cut
- at least one tree exhibiting damage, defect or complex structure that requires complex felling techniques to be selected from the following:
 - tree with visible lightning damage
 - tree that is burnt out or has a fire-damaged butt
 - trees with complex multi-stems
 - tree with multi-legged growth or large multiple leaders
 - tree with a hollow
 - tree that is stag-dead or alive but in an advanced stage of decay
 - tree with complex large low branches.

There must also be evidence that the individual has documented a risk assessment for at least one of the felled trees. This documentation must detail localised hazards and risks associated with tree felling and specify methods to minimise these risks.

In completing this work, the individual must demonstrate correct use of personal protective equipment and that, for each tree, the felling technique used was appropriate and consistent with current Australian Standards and industry codes of practice applicable to tree felling operations.

There must also be evidence that the individual has sharpened one chain, inspected and carried out routine maintenance on one chainsaw and its cutting attachments on one occasion according to manufacturer requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Australian Standards and codes of practice applicable to tree felling operations
- hazards and risks related to felling trees with chainsaws, and methods to minimise associated risks, including:
 - physical conditions of the site
 - unsafe/hazardous trees
 - fire and other emergency situations
 - overhead and underground services
 - nearby structures
 - standing vegetation in the intended direction of fall
 - falling branches
 - weather conditions
 - impediments of escape routes
 - vehicle and traffic access
 - people on or near worksite
 - machinery on or near worksite
 - carrying and transporting a chainsaw
 - user fatigue
- hazards related to maintaining chainsaws, and methods to minimise associated risks
- features of unsafe/hazardous advanced trees and defects of trees and how they affect tree felling activities
- types and purposes of cuts to fell advanced trees:
 - scarf cut
 - back cut using different methods to provide hinge wood and wedges to maintain control of tree
- characteristics of advanced trees, considering features or factors that include:
 - lean and weight distribution

- heavy forward lean
- lean direction relative to fall zone
- tree diameter
- trees that have fallen but remain caught on other trees or structures
- damage or defects to trees from lightning, fire, or other causes
- structural particularities in trees
- species prone to splitting or reacting unpredictably during felling
- physical environment, including the terrain and slope where the tree is situated
- methods used to identify advanced trees, including those:
 - that contain hazards and are deemed unsafe to fell
 - that are considered outside own skill level
 - where cuts made may lead to loss of control of tree in felling
- methods used to remove trees that are hung up, and procedures for removal
- methods for assessing chain condition
- types, safe use, operation and maintenance of chainsaws, support tools and attachments
- workplace procedures specific to felling trees with chainsaws, including:
 - health and safety, with particular emphasis on deactivating and isolating equipment, use of personal protective equipment (PPE), safe manual handling and fire prevention measures
 - communication reporting lines
 - recording and reporting repairs, maintenance activities and equipment faults
- environmental protection requirements and practices that meet legal obligations and requirements of the industry, state and local standards and/or codes of practice for felling trees with chainsaws, including:
 - protection of natural and cultural assets
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials
 - disposing of hazardous substances.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - chainsaw and accessories
 - suitable trees to fell
 - tools and equipment to fell trees
 - PPE required in tree felling operations

- communication system
- specifications:
 - workplace health and safety and environmental protection policies and/or procedures applicable to tree felling and chainsaw operations
 - workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4209 Design timber structures

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to interpret plans, select options and detail design of timber structures including roof truss, wall frame and floor components for solid brick, brick veneer and timber frame domestic houses and free-standing or attached timber structures such as pergolas.

The unit applies to designers, customer service/sales assistants (retail or wholesale), customer service officers, sales and merchandising team leaders, sales and merchandising team leaders (timber products) and timber advisors who use specialised knowledge to complete routine and non-routine tasks, and use their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT4209 Design timber structures

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed floor trusses, wall framing and roof trusses for at least one structure with a minimum of 100 square metres.

In performing this design work, there must be evidence that the individual has:

- met the design requirements of the construction plan, building codes and standards
- prepared and documented designs for timber structures in line with an individual design and set of drawing views and notes
- interpreted and calculated loading conditions from construction plans and specifications
- interpreted and applied technical information and conveyed information in written, sketch and oral form.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures for designing and preparing drawings and documenting and communicating information relating to timber floor and wall frames and roof trusses.
- applicable building regulations, codes and standards relating to the design of timber structures:
 - AS1684 and supplementary tables
 - CSIRO supplementary tables
 - National Construction Code (NCC)
- dimensions defining geometry and loading of individual structural members
- industry standard layouts, spacing and sizing dimensions of individual members for timber floor, wall frames and roof trusses
- loads imposed on timber structures:
 - live and dead loads

- mass loads and externally applied loads (wind, surrounding structures, common/special building usage)
- construction industry terminology for all components of timber wall frames, roof and floor trusses
- characteristics, properties and limitations of timber products and components:
 - nail/connector plates
 - timber species and types
- processes and methods of:
 - producing structural layout drawings and assembly drawings
 - producing designs for timber floor, wall and roof structures
 - applying mass, wind, live and dead loads to a structure
 - determining impact of surrounding buildings
- key features of construction plans.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber fabrication facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - AS1684 and supplementary tables
 - CSIRO supplementary tables
 - National Construction Code (NCC)
- specifications:
 - access to construction plans and specifications to design timber structures
 - access to industry and workplace policies and procedures for designing timber structures
- relationships:
 - person to discuss design questions with.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4210 Provide specialised timber product solutions

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to provide advice and solutions to customers, clients and other sales staff using specialised wood and timber product knowledge. The unit includes advice on product selection, quality and quantity, price, services and warranties with respect to wood and timber products.

The unit applies to individuals who work as account sales staff, customer service/salespeople (retail or wholesale), customer service officers, sales team leaders, sales team leaders (timber products), timber advisers, and yard operators, and they are responsible for providing specialised advice on timber product solutions to customers and colleagues.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT4210 Provide specialised timber product solutions

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- prepared and provided wood and timber product solutions for two different customers/clients who required the application of specialised wood and timber product knowledge and effective customer/client management
- selected wood and timber products for three different applications that required specialised wood and timber product knowledge
- accessed and assessed information on two new wood and timber technology applications, and shared this information with staff, colleagues and/or customers/clients.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- common and specialised wood, timber and related products for domestic and commercial use
- properties, characteristics, features, grades and benefits of wood, timber and related products
- different timber treatments, suitable applications and impacts of different product options
- product fixing/construction and cross-trade issues, including fixing options, pre-priming of hardwood, moisture protection, design for moisture shedding, colour or finish
- sales-related information including pricing, warranty, payment options, delivery options
- specialist licensed trade installation information that impacts on product selection
- aspects of legislative, certification and design systems applicable to merchandising activities, including workplace health and safety, environmental, design, chain of custody, organisational and reporting/record-keeping requirements
- principles and practices for effective customer relationship management

- effective interpersonal communication techniques for sharing wood and timber product information with staff, colleagues and/or customers/clients
- sources of information and methods to use these sources to access information on new and emerging wood and timber technologies and products.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace location or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - wood and timber product information
- specifications:
 - access to customer/client requirements for wood and timber products
 - access to workplace documentation related to workplace health and safety, environmental, design and chain of custody of wood and timber products
 - access to workplace procedures and forms for providing advice to customers/clients and reporting/keeping records
- relationships:
 - customers and colleagues with whom the individual can interact; these can be customers and colleagues in an industry workplace who are assisted by the individual during the assessment process; or individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4211 Monitor stock control procedures

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to monitor stock line operations, stock inventory levels, and stock security. It includes identifying and rectifying problems and implementing ongoing solutions for smooth receipt and despatch of products.

The unit applies to customer service/sales assistants, customer service officers and timber advisors who use their own judgment to deal with predictable and unpredictable problems and decide on solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Monitor stock control	1.1 Delegate product group recording to appropriate person 1.2 Monitor stock levels and maintain at optimum level according to workplace procedures 1.3 Monitor stock reorder cycles and adjust to maintain consistent supply

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Analyse management inventory reports and, where required, take corrective action 1.5 Notify buyers of stock levels in line with workplace procedures
2. Monitor receipt and despatch of products	2.1 Delegate receipt and despatch of products to appropriate person 2.2 Monitor staff compliance with receipt and despatch procedures and documentation processes 2.3 Coordinate distribution of products within the workplace according to workplace procedures 2.4 Ensure incoming products and those for despatch are securely stored in designated location 2.5 Report anomalies in quantity or quality of received products 2.6 Inspect, assess and report stock damage and losses, against loss forecasts, and investigate unacceptable cases 2.7 Provide advice to management on appropriate way of dealing with damaged stock
3. Monitor and maintain site and stock security	3.1 Monitor effectiveness of site and stock security procedures, and provide feedback to management 3.2 Advise staff of security procedures for stores, and monitor compliance 3.3 Advise management of requirements for security policy development and training

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret and collect information from a variety of documents Extract, interpret and analyse information from reports to determine corrective action
Writing	<ul style="list-style-type: none"> Structure management reports and material loss reports using appropriate concise vocabulary

Skill	Description
	<ul style="list-style-type: none"> Document details and information relating to delegation of roles and responsibilities
Oral communication	<ul style="list-style-type: none"> Use appropriate vocabulary to advise staff of delegation of duties Use appropriate language and terminology to advise management of dealing with damaged stock and need for staff training

Assessment Requirements for FWPCOT4211 Monitor stock control procedures

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored receipt and despatch of a minimum of four different stocked products and has:

- followed workplace policies and procedures relevant to monitoring stock control
- appropriately delegated receipt, despatch and recording of stock
- monitored inventory levels and stock security
- implemented site security procedures for the control of stock.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- role limitations and responsibilities of self, other stock control personnel and buyers for maintaining stock
- typical product groups for forest product factories
- principles of stock control:
 - rotation and replenishment
 - product life cycle and maximising the use of all stock
 - financial implications of stock level control
- typical stock control processes:
 - recording incoming stock
 - recording and reporting discrepancies and quality deficiencies
 - recording stock levels
 - monitoring and maintaining quality of stock
 - monitoring and maintaining stock at optimum levels
 - maintaining security of stock

- waste handling, sorting, disposal and recycling
- workplace stock reorder cycles
- internal distribution processes
- reasons for stock loss and damage, and methods to control these
- layout of stores area in forest products factories
- environmental storage requirements to maintain materials in optimum condition
- methods to categorise and label stock materials
- format, content and use of stock control documents and reports
- features, functions and system capabilities of stock control software
- workplace policies and procedures specific to stock control, store and site security.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a manufacturing or process facility or timber yard or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - appropriate and sufficient products and stock
- specifications:
 - access to workplace policies and procedures relevant to monitoring stock control
 - access to workplace forms and documentation for monitoring stock
- relationships:
 - persons to delegate roles and responsibilities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4212 Implement environmental management practices to a forestry operation site

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to implement environmentally sustainable forest industry practices at a forestry operations work site. This includes undertaking consultative and audit processes to assess the effectiveness of environmental protection measures and to identify areas for improved practice.

The unit applies to individuals whose work involves applying environmental management practices to a forestry operation site.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and communicate measures	1.1 Consult site plans and documents to identify environment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
for enhancing environmental sustainability at forestry work site	<p>protection measures required at forestry work site</p> <p>1.2 Apply consultative processes to negotiate and agree on environment protection measures to be implemented, processes, objectives and timelines</p> <p>1.3 Establish action plan for implementation of environment protection measures</p> <p>1.4 Communicate action plan to contractors, site personnel and other stakeholders</p> <p>1.5 Confirm processes for assessing effectiveness of environment protection measures and revising measures to ensure ongoing improvement</p>
2. Maintain quality of water, water bodies and adjacent land areas	<p>2.1 Confirm environment protection measures to minimise the impact of forestry operations on water bodies/courses, adjacent land areas and water quality</p> <p>2.2 Source and use water from locations other than mains water according to workplace procedures and environmental requirements</p> <p>2.3 Optimise use of run-off water according to workplace procedures and environmental requirements</p> <p>2.4 Implement strategies to minimise the impact of forestry operations on the integrity of water bodies/courses, adjacent areas and water quality</p>
3. Maintain soil integrity	<p>3.1 Confirm environment protection measures to minimise the impact of forestry operations on soil degradation, soil erosion, soil compaction and the siltation of water bodies</p> <p>3.2 Implement environment protection measures to minimise soil erosion, nutrient removal, compaction, changes in organic matter content and soil water status</p>
4. Maintain integrity of natural and cultural heritage assets	<p>4.1 Confirm location of natural and cultural heritage assets in forestry operations site and adjacent land areas</p> <p>4.2 Confirm environment protection measures to minimise the impact of forestry operations on natural and cultural heritage assets</p> <p>4.3 Implement environment protection measures to minimise the impact of forestry operations on natural and cultural heritage assets</p>
5. Complete environmental audit	5.1 Determine need and confirm procedures for an environmental audit

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.2 Conduct environmental audit according to workplace procedures 5.3 Engage contractors, site personnel and other stakeholders in the conduct of the environmental audit 5.4 Document the outcomes of the environmental audit and provide detailed and verifiable recommendations for improvements to environment protection measures 5.5 Communicate outcomes of audit, including recommendations, to appropriate person according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read and interpret complex written documents and workplace procedures related to environment protection measures
Writing	<ul style="list-style-type: none"> Prepare written reports using technical language where precise meaning is required and rationale for recommendations is justified
Oral communication	<ul style="list-style-type: none"> Conduct face-to-face discussions with diverse audiences on environment protection measures
Numeracy	<ul style="list-style-type: none"> Analyse quantitative information and data

Assessment Requirements for FWPCOT4212 Implement environmental management practices to a forestry operation site

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented environmentally sustainable forest industry practices at one work site to minimise the impact of forestry operations on the environment and natural and cultural heritage assets.

In performing this activity, the individual has:

- identified and planned environmental protection measures for each of the following assets:
 - water bodies
 - soil
 - natural and cultural heritage
- communicated environmental protection measures to relevant contractors, site personnel and other stakeholders
- managed implementation of environmental protection measures for at least one asset type
- conducted and documented an environmental audit for at least one asset type that includes recommendations for improving environmental protection practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and key content of environmental protection laws applicable to forestry operations
- key content of current government and industry environmental sustainability initiatives, codes of practice and guidelines
- environmental sustainability protection measures for forest settings:
 - minimising temporary, short-term, long-term and permanent damage to natural flora, fauna and landscape

- returning the environment to its original or near to original condition on completion of activity
- soil and water protection
- management of fire and weeds
- disposing of, recycling and reusing timber and other waste
- composting waste
- safely cleaning plant, tools and equipment
- protecting flora and fauna
- maintenance of culturally significant landscapes, natural or anthropogenic formations and constructions
- measures to maintain integrity of water bodies/courses and adjacent land areas
- irrigation and watering strategies that aim to:
 - minimise evaporation
 - minimise run-off
 - accurately deliver water
- environment protection measures to minimise soil erosion, nutrient removal, compaction, changes in organic matter content and soil water status
- format, content and use of audit reports
- environment protection measures to conserve natural and cultural heritage assets
- workplace policies and procedures for sustainable forestry practices.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - access to a forestry operations work site
- specifications:
 - workplace safety and environmental policies and procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT4213 Monitor and manage product and service quality in the forest and wood products industry

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated, monitored and managed the quality of one product and associated supply services against quality system requirements for one forest or wood product workplace.

In performing this activity, the individual has:

- communicated quality requirements to team members
- monitored activities against workplace quality systems and procedures
- evaluated quality outcomes against quality standards and customer specifications
- remediated noncompliance and reported on performance to appropriate personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of quality systems for the forest and wood products industry and for the individual workplace
- format, content and use of:
 - industry and organisation specific quality standards
 - workplace policies and procedures that align to quality standards
 - quality system monitoring records
- techniques for monitoring product or service quality relevant to forest and wood products industry
- scheduling requirements for quality system monitoring activities
- record-keeping requirements for quality systems
- roles and responsibilities of quality system coordinators and production personnel in quality system management processes

- methods for communicating quality standards, policies, procedures and quality assurance monitoring activities to production and despatch personnel
- methods for assessing the quality of products and services provided by forest and wood product workplaces
- workplace procedures for documenting quality system records and reports.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood product work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing equipment to produce and maintain quality system records and reports
 - comprehensive real or simulated information to coordinate and monitor quality processes
 - production personnel with whom the individual can interact
- specifications:
 - workplace safety and environmental policies and procedures applicable to forestry or wood products work environments
 - workplace policies and procedures that align to industry and workplace-specific quality standards
 - workplace policies and procedures for documenting quality system records and reports
 - template for monitoring quality system records and reports
 - schedules for quality system monitoring activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4214 Plan for and coordinate quarry operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to plan for and develop a quarry (borrow pit) for the purpose of sourcing material for the construction and maintenance of forest roads and tracks.

The unit applies to individuals involved in planning and supervising quarry development as part of forestry operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for quarry development	1.1 Review need for and processes for establishing a quarry 1.2 Consult with relevant parties about possible quarry sites

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Inspect possible quarry sites and assess in terms of location, access to forestry operations, land tenure and quantity and quality of material available for extraction</p> <p>1.4 Analyse samples of materials from possible quarry sites and test for suitability</p> <p>1.5 Identify environmental protection, adjacent land use, regulatory or zoning issues that may impact on the selection of the proposed quarry site</p> <p>1.6 Conduct a cost-benefit analysis to assess the viability and lifespan of the proposed quarry site</p> <p>1.7 Determine the location of the quarry</p> <p>1.8 Determine and document operational and site procedures for quarry development</p> <p>1.9 Obtain necessary licences or permits for quarry development</p>
2. Coordinate quarry development	<p>2.1 Confirm type and quantity of material and methods of extracting material according to the quarry development plan</p> <p>2.2 Establish schedule for quarry development according to quarry development plan</p> <p>2.3 Identify, assess and take actions to mitigate risks and hazards associated with quarrying operations</p> <p>2.4 Coordinate and schedule people, materials and equipment required for quarry development</p> <p>2.5 Liaise with employees and contractors to ensure that a coordinated approach is taken to the development and implementation of work plans, road maintenance and construction plans associated with quarry development</p> <p>2.6 Monitor quarry development for compliance with quarry development plan and safety, regulatory and environmental requirements</p> <p>2.7 Document quarry development activities according to workplace procedures</p> <p>2.8 Adjust quarry development plan as required in accordance with workplace procedures</p>
3. Review quarry development	<p>3.1 Review approach to quarry development</p> <p>3.2 Monitor quarry development and identify potential improvements</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	according to workplace procedures 3.3 Report on outcomes of quarry development to appropriate personnel

Foundation Skills

Assessment Requirements for FWPCOT4214 Plan for and coordinate quarry operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated the development of one quarry (borrow pit) for sourcing material for the construction and maintenance of a forest road or track.

In performing this activity, the individual has:

- assessed site location, quantity and quality of materials and environmental protection requirements
- prepared site procedures and coordinated people, resources and equipment for the development of quarry
- monitored quarry development for compliance and identified methods of improvement
- recorded and reported on the outcomes of quarry development.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace procedures for planning, coordinating and reviewing the development of a quarry
- selection criteria for quarry sites
- types and properties of quarry materials and their use in the construction and maintenance of forest roads and tracks
- methods of testing quarry materials used in the construction and maintenance of forest roads and tracks
- quarrying operations
- planning and sequencing quarrying activities
- risks and hazards associated with quarrying
- methods of extraction from quarries:

- with plant and equipment
- using blasting methods
- project planning techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - potential quarry sites
 - plant, equipment and materials relevant to quarry operations
- specifications:
 - documentation related to quarry planning and permits
 - workplace safety and environmental policies and procedures applicable to quarry development
 - workplace policies and procedures relevant to quarry development.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT4215 Plan for and coordinate road construction and maintenance

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- prepared for, supervised and reported on one road construction activity based on an existing road construction and maintenance plan
- prepared for, supervised and reported on one road maintenance activity based on an existing road construction and maintenance plan.

For each of these activities, the individual has:

- confirmed road location and construction, transport and resources requirements
- coordinated people, resources and equipment
- planned operational procedures
- monitored and reported unexpected ground, water, vegetation or other environmental conditions
- maintained communication with operational staff, clients and contractors
- implemented workplace health and safety and environmental protection procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures for managing road construction and maintenance
- environmental risks and hazards associated with road construction
- protection zones for natural, drainage, cultural and social features
- types, safe use and maintenance of plant, equipment and tools used in road construction and maintenance
- characteristics and techniques for construction of all-weather logging roads and unsurfaced earth roads
- materials used for road construction and their properties, including:

- road base
- gravel
- crushed rock
- sand and bluestone
- cords and pipes for water crossings
- principles of road design and development, including:
 - control points
 - required grades
 - water crossing points and structures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a section of native forest or plantation for road construction and maintenance
 - plants, tools, materials and equipment for road construction and maintenance
 - work crew to supervise for road construction and maintenance
- specifications:
 - maps, plans, regulations and other documentation relevant to the construction and maintenance of roads in a forestry setting
 - workplace safety and environmental policies and procedures applicable to road construction and maintenance
 - workplace policies and procedures relevant to managing road construction and maintenance.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4216 Plan for and coordinate construction of log landings and snig tracks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to plan for and coordinate the construction of log landings and snig tracks in a forest or farm forest setting.

The unit applies to individuals involved in planning and supervising the construction of log landings and snig tracks as part of forestry operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify landing and recovery requirements	1.1 Gather information on the workplace health and safety and regulatory requirements, standards and codes of practice for the planning, construction and operation of landings and snig tracks

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Obtain and assess information on logging methods, topography and environmental management considerations for site</p> <p>1.3 Identify landing location and construction requirements from harvest plan, and inspect site to assess factors affecting operations</p> <p>1.4 Identify timeframe for use of site and likely weather conditions</p> <p>1.5 Determine log extraction methods and storage requirements for landings, roads, tracks, equipment placement, falling and recovery rates and delivery schedules</p>
2. Plan for landings and snig tracks construction	<p>2.1 Confirm specific landing site size and level from harvest plan meet operational requirements, optimise construction time and minimise environmental damage</p> <p>2.2 Confirm type, number and location of snig tracks from harvest plan optimise track clearing and construction time and log handling capacity, and minimise environmental damage</p> <p>2.3 Locate track and road entry points to landing according to harvest plan, log handling procedures, vehicle and equipment access, turning and loading space requirements</p> <p>2.4 Verify landing and track provide for available equipment and access for construction</p> <p>2.5 Confirm requirements for restoration of land on completion of operations</p>
3. Coordinate landing and track development	<p>3.1 Communicate approved landing and snig track construction plan to contractors and site personnel</p> <p>3.2 Develop operational procedures for tracks and landings with contractors and site personnel</p> <p>3.3 Provide technical assistance to contractors and site personnel for construction of landing and tracks</p> <p>3.4 Monitor construction of landing and tracks</p> <p>3.5 Review and modify plan to account for unexpected ground, water, vegetation or other environmental conditions</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret complex and unfamiliar regulatory and environmental information
Writing	<ul style="list-style-type: none"> Document detailed and accurate plans for landings and snig tracks Develop and document operational procedures using language easily understood by contractors and site personnel
Oral communication	<ul style="list-style-type: none"> Provide clear and unambiguous instructions to site personnel Ask open and closed questions and actively listen to clarify issues with contractors and site personnel
Numeracy	<ul style="list-style-type: none"> Complete complex calculations involving rates of extraction, height, length, weight, vehicle turning and loading space to determine size and capacity of snig tracks

Assessment Requirements for FWPCOT4216 Plan for and coordinate construction of log landings and snig tracks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and coordinated the construction of one log landing site and associated snig tracks within a forest or farm forest setting for storing logs prior to being dispatched.

In performing this activity, the individual has:

- assessed log harvesting and extraction methods, landing site location and operational and environmental protection requirements
- confirmed that construction specifications meet operational requirements, optimise construction time and track clearing, and have a minimal impact on the environment
- prepared operational procedures and coordinated people, resources and equipment for the construction
- monitored construction development and identified methods of improvement.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- content and application of applicable commonwealth, state, territory or local government regulations for the design, construction and operation of landings and snig tracks
- key features of these varying environmental conditions, and effects on the planning and construction of landings and snig tracks:
 - fallen trees
 - general forest lean
 - ground growth
 - ground hazards and obstacles
 - ground slope
 - density of trees

- wet and adverse weather conditions
- environmental protection practices for forest and forest farm settings:
 - minimising temporary, short-term, long-term and permanent damage to natural vegetation and landscape
 - soil and water protection
 - returning the environment to its original or near to original condition on completion of operations
- purpose, features and operational requirements of these types of snig tracks:
 - emergency escape routes
 - equipment access tracks
 - hauling tracks
 - vehicular tracks
- purpose, features and operational requirements of:
 - landings
 - vehicles and equipment used on landings and snig tracks
- processes for:
 - designing and coordinating the development of landings and snig tracks
 - determining the most time-effective and cost-effective plan for construction
- typical industry chain of command for communication of information, instruction and technical advice
- workplace standards, policies and procedures for the design, construction and operation of landings and snig tracks:
 - workplace health and safety specific to the use of landings and snig tracks
 - environmental protection
 - documenting designs for landings and snig tracks
 - recording and reporting the design and implementation process.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a native forest or plantation site in which landings and snig tracks are to be established
 - harvest plan for the site
 - topographic maps for the site
- specifications:
 - workplace safety and environmental policies and procedures applicable to the planning and construction of landings and snig tracks

- workplace policies and procedures for the planning and construction of landings and snig tracks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4217 Apply a safety mindset in forestry operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to apply a safety mindset while working in teams or when working alone, in isolation, remotely or out-of-line-of-sight in forestry operations. This includes the awareness and skills required to positively influence the safety culture of small peer-group teams.

The unit applies to those who have responsibility for leading small work teams in forestry operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- FWPCOR3205 Apply safety, health and environmental requirements in forest and wood products operations
- or
- FWPCOR2210 Follow workplace health and safety policies and procedures.

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Maintain situational	1.1 Maintain safety procedures when dealing with known hazards in

Assessment Requirements for FWPCOT4217 Apply a safety mindset in forestry operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied a safety mindset while working in forestry operations. Evidence must show that the individual has:

- demonstrated situational awareness in forestry operations
- made two safety related decisions in forestry operations
- maintained communication with team members while working in forestry operations
- applied safe work procedures on one occasion when working alone, in isolation or out-of-line-of-sight in forestry operations
- taken two actions to support safe teamwork in forestry operations
- applied one workplace procedure for dealing with stress, drug and alcohol use, remoteness or fatigue in self or others while working in forestry operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and associated risks in forestry operations:
 - types of hazards and associated risks
 - techniques for identifying hazards and assessing risks
 - procedures for reporting hazards and associated risks
 - risk assessment techniques
 - risk control measures for responding to known hazards
- principles of situational awareness and safety mindsets:
 - show vigilance when approaching known hazards
 - identify potential problems from available information
 - monitor changes in work environment

- resolve uncertainty by seeking further information
- verify assumptions before proceeding with work activities
- decision making in forestry operations:
 - techniques for decision making
 - types and sources of information used in making decisions related to forestry operations
- safe work procedures in forestry operations:
 - types and operation of safety monitoring systems
 - handover procedures
 - importance of communicating safety concerns openly
 - safe work procedures for working alone, in isolation or out-of-line-of-sight
 - workplace procedures for responding to incidents and emergencies in situations where team members are working alone, in isolation or out-of-line-of-sight
- type and operation of electronic communication and security systems related to forestry operations
- teamwork in forestry operations:
 - principles of effective teamwork
 - techniques for enhancing team awareness of work site safety and knowledge of safe work practices
- safety leadership:
 - features of safety culture in forestry operations
 - techniques for recognising and influencing other people's safety practices
- stress, fatigue and remoteness in forestry operations:
 - workplace procedures for avoiding, reducing and coping with stress, remoteness, alcohol and drug use and fatigue
 - signs of stress and fatigue in self and others
 - techniques for monitoring own and others' physical and psychological wellbeing
 - techniques for identifying personal limitations
- techniques for maintaining effectiveness and concentration under periods of stress and high workload.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forestry work site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - electronic communications systems
- specifications:

- workplace policies and procedures applicable to safe team and lone work in remote forestry operations
- workplace documentation for identifying, assessing and responding to hazards and associated risks in forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4218 Manage business operations of a forestry contractor business

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to manage the business operations of a forestry contractor business, including the development of strategic and operational plans and strategies for stakeholder engagement, marketing, tendering and service quality.

The unit applies to individuals who manage and operate forestry contractor businesses.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Set up strategic and operational plans for a forestry contractor business	1.1 Assess factors influencing the performance of a forestry contractor business 1.2 Identify the focus of the business by investigating market opportunities 1.3 Determine the most appropriate business and financial structure

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>for the forestry contractor business</p> <p>1.4 Develop a strategic plan for the forestry contractor business</p> <p>1.5 Develop a risk management strategy, including appropriate ways of mitigating risks for the operations of a forestry contractor business</p> <p>1.6 Establish a detailed operations plan that sets out clear action points to fulfil the strategic goals and objectives of the forestry contractor business</p>
2. Establish and implement stakeholder engagement strategy	<p>2.1 Identify key stakeholders that do or may impact on the operation and service delivery of the forestry contractor business</p> <p>2.2 Access and analyse information on the roles, influence and relative importance of key stakeholders</p> <p>2.3 Develop strategies for engaging with stakeholders</p> <p>2.4 Apply conflict resolution and negotiation techniques to reach mutually acceptable outcomes with stakeholders</p> <p>2.5 Identify and respond to factors that may negatively impact stakeholder communication</p> <p>2.6 Seek and analyse feedback on the effectiveness of the stakeholder engagement strategy</p>
3. Establish marketing strategy for forestry contractor business	<p>3.1 Develop the marketing strategy and plan for the forestry contractor business</p> <p>3.2 Develop, implement and monitor marketing activities according to the marketing plan</p> <p>3.3 Evaluate marketing activities to determine the effectiveness of the strategy and plan</p>
4. Establish sales and tendering strategy for forestry contractor business	<p>4.1 Identify the main features of the contract for forestry operations and the legal requirements and procedures relating to the commercial provision of forestry contractor services</p> <p>4.2 Promote forestry contractor services in compliance with legal requirements</p> <p>4.3 Maintain sales documentation according to legislative requirements</p> <p>4.4 Develop and implement procedures for identifying, evaluating and responding to tenders for the provision of forestry contractor services</p>
5. Negotiate with forest	5.1 Prepare for, undertake and finalise negotiations with forest

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
management companies, suppliers and other parties	management companies, suppliers and other parties according to organisational and legislative requirements 5.2 Employ effective communication and persuasive techniques and tactics to navigate difficult circumstances and achieve desired outcomes in negotiations 5.3 Ensure negotiation outcomes are documented, signed and exchanged between the forestry contractor business and other parties to the negotiation
6. Manage contracts for forestry contractor services	6.1 Implement a contract management strategy for a forestry contractor business 6.2 Monitor contract implementation to ensure that all obligations under the agreement are being met 6.3 Manage close-out and renewal of contract or transition to a new contract to provide forestry contractor services
7. Establish strategies for quality control in a forestry contractor business	7.1 Establish parameters for the delivery of quality forestry contractor services 7.2 Establish a quality management plan for the forestry contractor business 7.3 Apply procedures for identifying, assessing and responding to service quality issues 7.4 Evaluate the plan of the forestry contractor services and identify any opportunities for improvement

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read complex texts and industry materials in print and electronic form to gather information related to the management of forestry contractor businesses
Writing	<ul style="list-style-type: none"> Take notes, record outcomes and prepare agreement based on outcomes of complex negotiations using paper-based and digital

Skill	Description
	technologies
Oral communication	<ul style="list-style-type: none"> Ask and respond to questions to clarify information and represent viewpoints to others on routine and non-routine matters related to the business operations of forestry contractor businesses Use appropriate technical language to describe activities in the forest and wood products industry

Assessment Requirements for FWPCOT4218 Manage business operations of a forestry contractor business

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has reviewed two areas of business operations for one forestry contractor business selected from:

- strategic, operational and financial planning
- stakeholder management
- marketing strategies
- sales and tendering strategies
- business negotiations with external organisations
- contract management
- quality management

As a result of the review there must be evidence that the individual has completed two of the following tasks:

- prepared a written integrated strategic, operational and financial plan for a forestry contractor business
- prepared a written stakeholder management strategy for a forestry contractor business
- developed a written overall marketing strategy for a forestry contractor business
- prepared a written sales and tendering strategy for a forestry contractor business
- conducted negotiations with either a forest management company, supplier or other party on a matter related to the provision of forestry contractor services
- managed at least one contract for a forestry contractor service, including the management of the close-out and renewal of the contract or transition to a new contract for the provision of forestry contractor services
- prepared a written a quality management strategy for a forestry contractor business.

In undertaking each of these activities, the individual has:

- checked that the forestry contractor business complies with relevant legislative requirements

- reviewed the relevant business operation of the forestry contractor business
- benchmarked the business operations of the forestry contractor business
- identified business practices directed at improving the efficiency and effectiveness of existing business operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- strategic plan and operational planning for forestry contractor businesses
- business structures for forestry contractor businesses:
 - types of business structures
 - advantages and disadvantages of different business structures
- financial structures and responsibilities of forestry contractor businesses:
 - financial regulations and compliance requirements
 - sources of financial advice
 - types of financial reports and record-keeping
 - compliance requirements
- risk management for forestry contractor businesses:
 - types of risk
 - risk mitigation strategies
 - insurance requirements
- stakeholder management strategy:
 - strategies for engaging with stakeholders
 - techniques for managing stakeholder conflict
 - techniques for seeking and analysing feedback on the effectiveness of the stakeholder engagement strategy
- marketing strategies for forestry contractor businesses:
 - marketing techniques for forestry contractor businesses
 - ways of monitoring and evaluating effectiveness of marketing activities
- sales and tendering strategy for forestry contractor businesses
- negotiation, effective communication and persuasive techniques and tactics:
 - conflict resolution strategies
- contract management strategy for a forestry contractor business:
 - basic principles of contract law
- quality management strategy for forestry contractor businesses:
 - quality certification schemes in the forestry industry
 - quality principles, systems and plans
- procedures for identifying, assessing and responding to service quality issues.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - access to information on the business operations of a forestry contractor company
 - online access to reference materials related to the business operations of forestry contractor businesses
- specifications:
 - access to commonwealth and state legislation and regulations, codes of practice and industry guidelines relevant to the business operations of forestry contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1.1 Assess business compliance with requirements of Australian employment law	1.1 Identify the sources of employment law and the role of key regulatory institutions 1.2 Identify the relevance of key provisions of the Fair Work Act 2009 (Cth) to forestry contractor businesses 1.3 Outline key features of and difference between employment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>contracts, awards and registered agreements</p> <p>1.4 Identify pay and conditions of work for employees in a forestry contractor business, and check for compliance with relevant employment agreements, awards and legislation</p> <p>1.5 Review policies, procedures and supporting documentation for all forms of employee, engagement, separation and termination of a forestry contractor business for compliance with legislative requirements</p> <p>1.6 Review policies, procedures and supporting documentation relating to workplace discrimination and bullying and harassment of a forestry contractor business for compliance with legislative requirements</p> <p>1.7 Identify potential consequences of non-compliance with Australian employment law</p> <p>1.8 Identify sources of advice and ways of maintaining ongoing compliance with Australian employment law</p>
2. Create a fair and just culture in a forestry contractor business	<p>2.1 Identify values, beliefs and behaviours and role they play in shaping organisational culture of business</p> <p>2.2 Identify key features and principles of fair and just organisational culture</p> <p>2.3 Assess strategies for creating fair and just organisational culture in forestry contractor business</p> <p>2.4 Identify responsibilities of business owners, managers and employees in creating and maintaining fair and just organisational culture</p> <p>2.5 Apply principles of fair and just culture in making decisions when employees have acted in ways that are inconsistent with values and policies of forestry contractor business</p> <p>2.1 Identify values, beliefs and behaviours and role they play in shaping organisational culture of business</p> <p>2.2 Identify key features and principles of fair and just organisational culture</p> <p>2.3 Assess strategies for creating fair and just organisational culture in forestry contractor business</p> <p>2.4 Identify responsibilities of business owners, managers and employees in creating and maintaining fair and just organisational culture</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	2.5 Apply principles of fair and just culture in making decisions when employees have acted in ways that are inconsistent with values and policies of forestry contractor business
3. Manage employee lifecycle in a forestry contractor business	<p>3.1 Identify key stages of employee lifecycle in a forestry contractor business</p> <p>3.2 Establish succession plan for key roles in a forestry contractor business</p> <p>3.3 Review recruitment and onboarding policies, procedures and supporting documentation of forestry contractor business, and assess options for improving efficiency and effectiveness of existing processes</p> <p>3.4 Review staff training and development policies, procedures and supporting documentation of forestry contractor business, and assess options for improving the efficiency and effectiveness of existing processes</p> <p>3.5 Review staff retention policies, procedures and supporting documentation of forestry contractor business, and assess options for improving the efficiency and effectiveness of existing processes</p> <p>3.6 Review staff separation policies, procedures and supporting documentation of forestry contractor business, and assess options for improving the efficiency and effectiveness of existing processes</p> <p>3.7 Identify sources of advice on managing employee lifecycle in forestry contractor business</p>
4. Provide leadership and management in a forestry contractor business	<p>4.1 Model high standards of performance and ethical behaviour in operating forestry contractor business</p> <p>4.2 Provide leadership, direction and guidance to staff members of forestry contractor business</p> <p>4.3 Manage and monitor team performance in forestry contractor business</p> <p>4.4 Review performance management policies, procedures and supporting documentation of forestry contractor business, and assess options for improving efficiency and effectiveness of existing processes</p> <p>4.5 Plan, implement and monitor change management strategies associated with employee lifecycle within a forestry contractor business</p> <p>4.6 Identify sources of advice on leading and managing forestry</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	contractor business

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read complex texts and industry materials in print and electronic form to gather information related to people practices in forestry contractor businesses
Writing	<ul style="list-style-type: none"> Prepare complex written documents, including policy and procedures, for forestry contractor businesses
Oral communication	<ul style="list-style-type: none"> Ask and respond to questions to clarify information and represent viewpoints to others on routine and non-routine matters related to the people practices of forestry contractor businesses Use appropriate technical language to describe activities in the forest and wood products industry
Numeracy	<ul style="list-style-type: none"> Interpret complex numerical and graphical information related to planning and reviewing people practices of forestry contractor businesses

Unit Mapping Information

Assessment Requirements for FWPCOT4219 Manage people practices in a forestry contractor business

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has reviewed and identified improvements to two aspects of the people practices for one forestry contractor business selected from:

- employment policies and procedures
- creating a fair and just organisational culture
- succession planning for key roles
- recruitment, onboarding, development, retention and separation policies and procedures
- managing team performance
- change management.

In undertaking this activity, the individual has:

- checked that the forestry contractor business complies with relevant legislative requirements
- reviewed the relevant policy and procedures of the forestry contractor business
- benchmarked the people practices of the forestry contractor business
- identified options for improving the efficiency and effectiveness of existing people practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- employment law:
 - sources of employment law
 - role of key regulatory institutions
 - key provisions of the Fair Work Act 2009 (Cth) and relevance to forestry contractor businesses

- ways of determining pay and conditions of work for employees in a forestry contractor business as defined in employment agreements, awards and legislation
- legislative requirements related to employee separation and termination
- legislative requirements related to workplace discrimination and bullying and harassment
- consequences of non-compliance with Australian employment law
- sources of advice and ways of maintaining ongoing compliance with Australian employment law
- fair and just culture:
 - role of values, beliefs and behaviours in shaping fair and just organisational culture
 - strategies for creating a fair and just organisational culture in a forestry contractor business
 - responsibilities of business owners, managers and employees in creating and maintaining a fair and just organisational culture
 - techniques and tools for making fair and just decisions regarding employee behaviour
- employee lifecycle:
 - stages in employee lifecycle in forestry contractor business – attraction, recruitment, onboarding, development, retention, separation
 - reasons for and approaches to implementing each stage of the employee lifecycle
 - sources of advice on managing employee lifecycle in a forestry contractor business
- leadership and management of forestry contractor businesses:
 - features of effective leadership and management
 - ways of modelling high standards of performance and ethical behaviour
 - communication methods, communication barriers and strategies to improve workplace communication
 - qualities of effective teams and approaches to managing and monitoring individual and team performance
 - reasons for and approaches to giving and receiving feedback from employees
 - effective ways of planning, implementing and monitoring change.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - information on the people practices of a forestry contractor company
 - online access to reference materials related to the people practices of forestry contractor businesses
- specifications:

- commonwealth and state legislation and regulations, codes of practice and industry guidelines relevant to the people practices of forest contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4220 Plan for and coordinate log loading and haulage operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to plan for and coordinate log loading and haulage operations to facilitate the movement of logs from a native forest or plantation to an end point for processing.

The unit applies to individuals who plan and coordinate log loading and haulage operations.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Check access and landing areas used for	1.1 Inspect access and landing area to identify risks that may lead to

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
loading operations	<p>vehicle collisions and/or vehicle instability</p> <p>1.2 Check loading area to identify factors that may adversely impact on the effectiveness of on-board mass management systems such as load scales</p> <p>1.3 Confirm that the loading area surface is stable and is not subject to excessive compaction during loading operations that may result in on-board mass systems providing inaccurate axle mass information</p> <p>1.4 Consult with relevant personnel to confirm the maximum cross fall slope of landings and log loading areas for the effective operation of on-board mass management systems</p> <p>1.5 Confirm that the layout of the loading area does not adversely impact on the ability of both the loader and the driver to inspect the load configuration and to ensure that load restraint and load dimensions are correct</p>
2. Plan and select log haulage route	<p>2.1 Plan route, taking into account regulatory requirements, mass, dimension, fatigue and the correct matching of vehicle class, configuration, length and roadway</p> <p>2.2 Establish routes that minimise potential risks by assessing and taking into account weather conditions, changes in log dimensions, frequency of vehicles accessing the route, speed, fatigue, availability of locations to inspect load conditions and community activity on intended route</p> <p>2.3 Consult with other key parties, where possible, to integrate feedback relating to route planning and selection to reduce risks and inform future route planning</p> <p>2.4 Ensure near miss reporting systems are in place to permit feedback from drivers and others on risks impacting on the route and inform future route planning</p> <p>2.5 Inform driver and other relevant personnel of the selected route and associated conditions and timing for log haulage task</p>
3. Select haulage vehicle compatible with load	<p>3.1 Identify mass and dimensions of intended load</p> <p>3.2 Determine the appropriate vehicle for the haulage task</p> <p>3.3 Check that vehicle maintenance and pre-start check schedules are up-to-date and appropriate for the operating environment</p> <p>3.4 Confirm that the intended load can be transported in accordance with loading and stability requirements</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	3.5 Inform relevant parties if the intended load type is in breach of loading requirements
4. Coordinate and monitor implementation of log loading and haulage operations	<p>4.1 Plan rosters and schedules that meet contracted haulage requirements and which ensure that drivers do not exceed regulated driving hours, exceed speed limits, fail to meet minimum rest requirements or drive while impaired by fatigue</p> <p>4.2 Maintain records of drivers' activities, including work and rest times, according to workplace procedures</p> <p>4.3 Coordinate implementation and monitoring of procedures to ensure driver compliance with onsite traffic management plan</p> <p>4.4 Coordinate implementation and monitoring of procedures to ensure drivers do not work while impaired by fatigue or drive in breach of their work or rest options</p> <p>4.5 Coordinate implementation and monitoring of procedures to ensure vehicles are regularly maintained and that speed limiters, if fitted, function properly</p> <p>4.6 Coordinate implementation and monitoring of procedures to ensure that vehicles are safely loaded in a way that does not exceed mass or dimension limits</p> <p>4.7 Coordinate implementation and monitoring of procedures to ensure that drivers moving freight containers have a valid Container Weight Declaration</p> <p>4.8 Coordinate implementation and monitoring of procedures to ensure that loads are appropriately restrained with appropriate restraint equipment</p> <p>4.9 Coordinate implementation and monitoring of procedures to minimise environmental impact of loading and haulage operations</p> <p>4.10 Report to relevant personnel on implementation of log loading and haulage operations</p>
5. Participate in load audits	<p>5.1 Participate in load audits on a regular scheduled basis</p> <p>5.2 Use information derived from load audits to identify risks relating to particular haulage tasks and use this information to inform future planning</p>
6. Develop lead risk indicators and participate in incident reporting	<p>6.1 Ensure systems are in place for effective near miss reporting for the freight task/s by drivers and others</p> <p>6.2 Ensure that drivers are aware of their responsibilities for reporting</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>near misses</p> <p>6.3 Monitor outcomes of near miss reports to develop lead indicators for freight task/s</p> <p>6.4 Communicate lead indicators for the freight task/s to relevant parties that can influence the risk and control measures</p> <p>6.5 Ensure systems are in place for effective incident reporting and subsequent investigation/s</p> <p>6.6 Ensure incidents are assessed for actual or potential severity and suitable levels of investigation applied</p> <p>6.7 Record and analyse information on near misses, lead indicators and incidents and report to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read complex texts and industry materials in print and electronic form to gather information related to planning log loading and haulage operations

Assessment Requirements for FWPCOT4220 Plan for and coordinate log loading and haulage operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and coordinated one log loading and haulage operation to enable the movement of logs from a native forest or plantation to a processing facility, including:

- verified and confirmed that access and landing area meet requirements for log loading
- selected log haulage route according to regulatory requirements and vehicle and load characteristics
- verified that selected vehicle is suitable for the haulage task
- supervised log loading and haulage operations to ensure drivers followed the onsite traffic management plan, fatigue management plan, standards for safe load limits and load restraint methods and vehicle maintenance procedures, as well as practices for minimising environmental impact of loading and haulage operations
- established, assessed and reported outcomes of a near miss reporting system for drivers.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- log loading and haulage regulations and codes of practice
- factors to consider in checking access and landing areas:
 - minimise risk of vehicle collisions
 - maximise vehicle stability
 - maximise the effectiveness of on-board mass management systems such as load scales
 - ensure loading areas have surfaces that provide a stable area for loading of vehicles
 - cross fall slope of landings and log loading areas
 - maximise the ability of the loader and driver to inspect the load configuration to ensure load restraint and load dimensions are correct

- factors to consider in scheduling and routing:
 - mass and dimension of load
 - fatigue
 - correct matching of vehicle class, configuration, length and roadway permitting
 - permissible Gross Vehicle Mass (GVM)
 - Restricted Access Vehicles (RAV) network
- risks associated with scheduling and routing:
 - weather conditions
 - changes in log dimensions
 - frequency of vehicles accessing the route
 - speed
 - fatigue
 - availability of locations to inspect load conditions
 - community activity on intended route
- types, features and functions of on-board mass management systems
- near miss and incident reporting systems
- uses of near miss and incident data
- fatigue management guidelines
- procedures for:
 - determining appropriate vehicle for haulage task
 - vehicle maintenance
 - safe loading and unloading
 - moving freight containers
 - restraining loads
 - load audits
- vehicle capabilities and capacities
- load restraint standards and techniques
- mathematical procedures for calculating load sizes, estimating and recording weights, load restraint requirements, and work and rest times.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - requirements for a log loading and haulage operation
 - computing hardware and software for documenting plans and reports related to log loading and haulage operations

- reference materials, including harvest plan, topographic maps, road maps, haulage vehicle configuration, fatigue management and near miss and incident data
- access to site for log loading and haulage operation
- crew and infrastructure for log loading operation
- specifications:
 - access to workplace standards, policies and procedures for log loading and haulage operations
 - access to commonwealth, state, territory or local government regulations and codes of practice relevant to log loading and haulage operations
 - access to workplace health and safety policies and procedures applicable to log loading and haulage operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4221 Plan for and supervise log yard operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to manage log yard operations. This involves planning according to schedules and performance indicators, supervising plant operations, managing log stock, monitoring and assessing log yard processes and identifying process improvement.

The unit applies to individuals who are engaged in the planning and supervision of log yard operations in the forest and wood products industry.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT4221 Plan for and supervise log yard operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and supervised the operations of a log yard for two production cycles.

In performing this task, the individual has:

- communicated effectively and coordinated personnel to follow log yard planning, workplace procedures, including health and safety, environmental protection, quality and scheduling requirements
- complied with legislation, standards and codes of practice relevant to log yard operations
- monitored log yard operations against log yard schedule, targets, specifications and performance indicators and identified and rectified operational and equipment problems and faults
- monitored implementation of quality processes, including chain of custody requirements
- recorded and reported operations information, including output, quality, faults and safety data
- evaluated log yard operations and suggested one process improvement.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, standards and codes of practice relevant to log yard operations
- hazards and associated risks with log yard operations, and risk control strategies identified through risk assessments, manufacturer technical information, regulations and industry health and safety guides
- workplace procedures specific to planning and coordinating log yard operations, including:
 - health and safety, including use of personal protective equipment (PPE)

- environmental protection requirements and practices, including safe disposal of waste material
- quality assurance, including chain of custody requirements
- communication channels and protocols to communicate with team members
- recording and reporting information on output, quality, workplace health and safety and equipment faults
- types of log yards, including:
 - traditional mill log yards
 - concentration log yards
 - log reload yards
- purpose of log yards, including:
 - connect raw material supply to manufacturing processes
 - maintain log quality
- log yard layout
- log yard functions, including:
 - unloading/reloading
 - transport
 - debarking
 - grading
 - scaling
 - sorting
 - log storage
 - residue and waste management
- management of log stocks, including:
 - safely stacked and segregated
 - avoid degradation
 - identify out-of-specification logs
 - confirm log grades against quality requirements
 - maintain inventory levels
- role and responsibilities of log yard supervisor
- types, uses and operation of plant, machinery and equipment used in log yard operations
- log yard operational problems, including:
 - vehicle movement planning within log yard
 - empty trips
 - seasonality of raw material availability
 - log yard shape
 - in-flow management
 - poor surface material
- strategies to avoid log degradation, including:
 - plant and processing defects

- stock rotation
- stones
- barked
- debarked
- antiseptic treated
- methods for problem identification, including for equipment failures and bottlenecks in production process, and resolution strategies
- process improvement for log yard operations, including:
 - data
 - methods
 - participative approaches
 - communication.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, log yard plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - log yard and associated equipment
 - computers, keyboards, printers and software used to prepare planning and production documents
 - PPE relevant to log yard operations
- specifications:
 - log yard production schedule
 - templates for documenting relevant information on the log yard production and operations
 - workplace procedures for log yard operations
 - workplace health and safety and environmental policies and/or procedures applicable to log yard operations
- relationships:
 - work team for communicating requirements related to log yard operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4222 Plan for and supervise timber treatment plant operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to plan, supervise and optimise performance of timber treatment plant operations.

The unit applies to those individuals who supervise the chemical treatment of timber in a preservation facility.

State and territory regulations, standards and environmental protection licences apply in some jurisdictions to the timber preservation facilities and the use of chemicals used in timber treatment.

Copper chrome arsenate (CCA) is a restricted chemical product, regulated by the Australian Pesticides and Veterinary Medicines Authority (APVMA). This means CCA-treated timber can only be supplied to, and used by, suitably trained persons authorised under a relevant state or territory law.

In Victoria, to comply with licence/permit requirements, organisations must ensure that employees working with CCA demonstrate competence in FWPSAW3242 Treat timber (or the previous equivalent) or are under the direct supervision of a trained and authorised person.

For regulatory information and details in other states and territories, refer to the state or territory licensing body.

Pre-requisite Unit

Unit Sector

Common Technical (COT)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for implementing treatment plant operations	<p>1.1 Confirm workplace health and safety, environmental protection, containment, quality and operational practices and/or procedures for chemical treatment of timber</p> <p>1.2 Identify hazards, assess potential risks and confirm risk mitigation measures, including use of personal protective equipment, associated with timber treatment operations</p> <p>1.3 Confirm legislation, standards and codes of practice relevant to timber treatment plant operations</p> <p>1.4 Confirm type, components, operating parameters, capability and capacity of treatment plant</p> <p>1.5 Inspect raw materials, identify possible production and quality implications and communicate variations to production methods to team members</p> <p>1.6 Assess preservative type and formulation, treatment process, treatment suitability of wood and estimate solution absorption</p> <p>1.7 Apply timber treatment schedules according to workplace procedures and environmental protection practices and/or procedures</p> <p>1.8 Plan and prescribe waste minimisation and control measures</p> <p>1.9 Check serviceability of plant control and product testing equipment</p> <p>1.10 Establish and maintain communication with others according to workplace procedures and workplace health and safety requirements</p>
2. Supervise treatment plant operations	<p>2.1 Check and interpret charge sheets and reconciliation statements to ensure accuracy</p> <p>2.2 Check and analyse process trends for optimum performance</p> <p>2.3 Monitor treatment operations and output to record possible process improvements and to ensure maximum cost effectiveness</p> <p>2.4 Control non-conforming treated timber according to workplace procedures and environmental protection practices and/or procedures</p> <p>2.5 Investigate causes of solution imbalance and implement appropriate possible corrective actions</p> <p>2.6 Investigate, record and report treatment operations, operational problems and equipment faults according to workplace requirements</p> <p>2.7 Analyse treatment documents and reconciliations to identify</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	potential productivity improvements
3. Oversee treatment plant maintenance and inventory management requirements	3.1 Monitor implementation of routine and preventative maintenance and cleaning requirements 3.2 Maintain product and material inventory levels to meet production and contingency requirements
4. Modify operations to optimise performance	4.1 Initiate approved modifications to schedules to ensure optimum performance according to workplace procedures 4.2 Document and communicate treatment improvement modifications according to workplace procedures 4.3 Diagnose developments in treatment processes and related technology for possible implementation 4.4 Analyse and assess technical developments for potential incorporation into existing plant operations and procedures 4.5 Authorise, trial, document and introduce proposed developments into site operations 4.6 Dispose of timber from unsuccessful trials according to workplace procedures and environmental protection practices and/or procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Extract routine information from industry guides and standard references on timber treatment operations
Writing	<ul style="list-style-type: none"> Complete workplace reports legibly and accurately with correct details of timber treatment
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and use active listening techniques to clarify contents of work orders and to convey information
Numeracy	<ul style="list-style-type: none"> Interpret numerical data and trends relevant to timber treatment operations

Assessment Requirements for FWPCOT4222 Plan for and supervise timber treatment plant operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and supervised a timber treatment operation for two production cycles.

In performing this work, the individual has:

- followed workplace policies and procedures relevant to planning and monitoring timber treatment plant operations
- complied with legislation, standards and codes of practice relevant to timber treatment plant operations
- assessed, scheduled and applied treatment plant procedures for timber samples
- monitored treatment plant performance and modified operations as required
- analysed and assessed technical developments for incorporation into existing operations and procedures
- mapped processing conditions to establish trends and use this information for modifications
- modified timber treatment plant operations for the workplace, as required
- followed planning, communications and scheduling requirements for timber treatment plant operations
- completed charge sheets to complete records of:
 - treatment plant charge
 - amount of power and energy developed and used
- completed reconciliation statements detailing:
 - chemical usage and cost
 - treatment times for cycles
 - breakdown losses
 - energy costs
 - modification expenses.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace standards, requirements, policies and procedures for planning and monitoring timber treatment plant operations
- legislation, standards and codes of practice relevant to timber treatment operations
- environmental protection requirements and practices, including:
 - safe disposal of waste material
 - water management
 - safe use and storage of chemicals
 - minimisation of carbon emissions
 - water management
- hazards and potential risks associated with timber treatment operations, including chemical hazards and actions to mitigate risks associated with chemical use
- principles and purpose of treatment processes and their effect on wood impregnation
- advantages and limitations of different treatment processes
- types of biological attack and their impact in terms of visual appearance and degrading effect on wood, including:
 - decay
 - mould
 - fungi
- effect of surface mould and sapstain fungi on treatment uptake
- influence of moisture content and moisture gradient on treatment effectiveness
- operating parameters, capability and capacity of the treatment plant
- operating components of treatment plant
- plant control and product testing equipment
- factors for consideration when scheduling charges to optimise production throughputs
- preservative types and formulations
- causes of solution imbalance and possible corrective actions
- typical workflow processes and techniques for chemically treating timber, including:
 - full cell
 - modified cell
 - empty cell
 - double vacuum
 - immersion
 - rueping
 - dip diffusion
 - vat and sprays
- moisture content of timber for treatment
- effective and efficient use of energy and materials
- timber treatment plant operation procedures

- water management methodologies
- waste minimisation control measures
- treatment plant modification strategies
- technical development diagnosis and solution methodologies
- types of tools and equipment and procedures for their safe use, operation and maintenance
- procedures for recording and reporting workplace information
- maintenance requirements for treatment plants.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber treatment plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - timber treatment plant and associated equipment and materials
 - a suitably licensed person to monitor and supervise handling of copper chrome arsenate (CCA) during assessment, where CCA is used
 - personal protective equipment required for chemically treating timber
- specifications:
 - workplace health and safety and environmental protection policies and/or procedures applicable to chemically treating timber
 - templates or formats for records including charge sheets and reconciliation statements
 - workplace procedures for chemically treating timber
 - manufacturer safety data sheets for chemicals and preservative solutions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4223 Assess requirements of chain of custody certification scheme for forest and wood products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to identify and review the requirements of a chain of custody certification scheme operated by existing certification bodies for application in a forest or wood products business.

The unit applies to individuals who are responsible for the implementation and monitoring of chain of custody certification in forest and wood procurement, processing, sales and distribution operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified and documented the certification requirements for one chain of custody certification scheme applicable to a wood products business in relation to the following:

- standards to be met
- certification process
- legislation, standards and codes of practice relevant to chain of custody operations
- roles and responsibilities of personnel, suppliers and contractors
- sources of supply and destinations of certified products
- certification logos, trademarks and labels
- documentation to be maintained.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of chain of custody certification
- distinction between forest management certification and chain of custody certification
- objectives of chain of custody certification
- legislation, standards and codes of practice relevant to chain of custody operations
- social, economic and environmental benefits of chain of custody for forest and wood products industry, enterprises and consumers
- features, requirements and relative benefits of certification schemes
- chain of custody certification standards
- chain of custody certification bodies, including:
 - role

- objectives
- functions in chain of custody schemes, including:
 - standards setting
 - certification
 - accreditation functions
- key components of chain of custody system, including:
 - system for purchasing, acquiring and receipting certified materials
 - system for handling certified material, including methods for keeping them separated from non-certified materials
 - system for providing certified material to customers
- roles and responsibilities of personnel responsible for chain of custody implementation and monitoring in the workplace
- chain of custody certification process and period of chain of custody certification
- chain of custody certification requirements, including:
 - workplace chain of custody procedures
 - due diligence
 - responsible sourcing, including information requirements and verification of certification claims by suppliers
 - classification of materials (certified, neutral and other)
 - controlled sources
 - traceability
 - chain of custody implementation methods (physical separation, percentage and credit method)
 - record-keeping, including storage, retrieval and minimum maintenance period
 - staff and management training plan and training materials
 - subcontracting and outsourcing arrangements
- product groups, including:
 - types of product groups
 - certification requirements
 - procedures for identifying products covered by chain of custody certificates
 - procedures for sites that use different chain of custody methods for different product groups
- types, meaning and conditions of use of chain of custody logos and labels
- format, content and use of chain of custody workplace documents used for certification, audit and quality purposes, including:
 - timber source documents
 - processing records
 - quality records
 - numbering and labelling documents
- chain of custody internal audit processes, including:
 - purpose of internal audits

- scheduling of audits
- role of internal auditors
- process, documentation and reporting
- requirements for and methods of responding to non-compliances and process improvements identified by audit
- audit requirements for contractors and outsourcing arrangements
- chain of custody external audit processes, including:
 - purpose
 - timing and procedures
 - role of workplace personnel in external audits.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in timber and wood product work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - internet access and computer equipment to research information on chain of custody certification scheme
- specifications:
 - chain of custody certification scheme documentation including policy, procedures and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4224 Conduct internal audit of chain of custody certification for forest and wood products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to plan and implement an internal audit of chain of custody certification in a forest or wood products business.

The unit applies to quality assurance personnel, managers and other personnel who are responsible for scheduling, preparing for and conducting internal audits of chain of custody certification in forest and wood product procurement, processing, sales and distribution operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication. Individuals must comply with any qualification requirements for internal auditors set by the relevant chain of custody certification body.

Assessment Requirements for FWPCOT4224 Conduct internal audit of chain of custody certification for forest and wood products

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted one internal audit of chain of custody certification in either a forest and wood processing, sales or distribution business.

In performing this task, the individual has:

- sourced standards and internal audit requirements for the relevant chain of custody certification scheme
- complied with legislation, standards and codes of practice relevant to chain of custody operations
- communicated the internal audit process, requirements and findings to workplace personnel
- planned the internal audit
- explained features of ethical behaviour to audit team
- applied communication and negotiation skills to facilitate internal audit processes, including conducting one-on-one and group meetings and applying conflict resolution skills, as required
- identified and followed an audit trail
- identified, collected and analysed evidence
- gathered, analysed, recorded and distributed internal audit data using business information systems
- interpreted evidence and made compliance judgements
- prepared factual and objective written internal audit reports
- recommended corrective actions, if required
- verified implementation of corrective actions, if required.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, standards and codes of practice relevant to chain of custody operations, including current Australian Standard on internal auditing requirements
- ethical behaviour of internal auditors, including:
 - integrity
 - objectivity
 - confidentiality
 - competency
- purpose of internal audit of chain of custody certification
- chain of custody certification, including:
 - purpose of certification
 - roles and responsibilities of personnel responsible for chain of custody implementation and monitoring in workplace
 - chain of custody certification process and period of chain of custody certification
 - certification documentation, including product groups
 - chain of custody certification bodies and schemes
 - functions in chain of custody schemes
- key components of chain of custody system, including:
 - system for purchasing, acquiring and receipting certified materials
 - system for handling certified material and reason for separating from non-certified materials
 - system for providing certified material to customers
- chain of custody certification requirements, including:
 - workplace chain of custody procedures
 - responsible sourcing, including information requirements and verification of certification claims by suppliers
 - classification of materials (certified, neutral and other)
 - controlled sources
 - traceability
 - chain of custody implementation methods (physical separation method, percentage-based method and credit method)
 - types, meaning, conditions of use and correct use of chain of custody trademarks, logos and labels
- format, content and use of chain of custody workplace documents used for certification, audit and quality purposes, including:
 - timber source documents
 - receipts
 - processing records
 - quality records

- numbering and labelling documents
- workplace and chain of custody certification scheme internal audit requirements and processes, including:
 - scheduling of audits
 - role of internal auditors
 - process, documentation and reporting
 - procedures for multi-site audits
 - reasons for inclusion of contractors and organisations providing outsourced functions in internal audits
 - requirements for and methods of responding to non-compliances and process improvements identified by audit
 - relationship between internal and external audit processes
 - information needs and communication methods relevant for different groups and audience engaged in internal audit process
 - evidence appropriate for use in internal audit of chain of custody certification for forest and wood products
 - evidence collection methods
 - key features of legislation that impacts on the conduct of internal audit procedures, including privacy, workplace health and safety and anti-discrimination legislation
 - structure, authority levels and lines of reporting in workplace
 - vocabulary and terms relating to chain of custody certification for forest and wood products.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber and wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - internet access and computer equipment to research information on chain of custody certification scheme
- specifications:
 - workplace documentation relevant to operation of chain of custody certification scheme
 - chain of custody certification scheme documentation, including policy, procedures and standards
 - templates or formats for collecting evidence and completing audit report.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT4225 Apply principles of pneumatics and hydraulics to analyse potential equipment failures

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to apply the basic principles and applications of hydraulic and pneumatic systems and components of forest and wood products equipment to analyse potential pneumatic and/or hydraulic failures for supporting maintenance processes.

The unit applies to saw technicians and other technical experts who are responsible for the operation of saw shops, production lines and other forestry equipment and are required to have a working understanding of hydraulic and pneumatic principles and contribute to the identification of plant and equipment failures in order to communicate effectively with maintenance and engineering teams.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPCOT4225 Apply principles of pneumatics and hydraulics to analyse potential equipment failures

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- used a simple system diagram to describe the operation of:
 - one pneumatic system of an item of equipment used in forest or wood products operations
 - one hydraulic system of an item of equipment used in forest or wood products operations
- conducted basic failure modes, effects and root causes analysis on hydraulic or pneumatic components of an item of equipment used in forest or wood products operations
- provided one recommendation for reducing the risk of equipment failure or malfunction as part of preventative maintenance.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes basic knowledge of:

- key concepts of pneumatic power systems in worksite forest or wood products equipment, machines or plant, including:
 - purpose and advantages of pneumatic power transmission
 - terminology used in pneumatic power systems, including prime movers: linear, rotary, radial; pressure, flow, orifice flow, force, torque, holding pressure, load, lift, stroke
 - atmospheric, gauge and absolute pressure
 - vacuum
 - Pascal's law application to pneumatic power transmission
 - formulae for pressure, force
 - measurement units

- pneumatic power system operation in worksite forest or wood products equipment, machines or plant, including:
 - purpose of components, including mechanical, electrical and electronic components
 - types of gases
 - contamination
 - precision control
 - operational response rate
 - performance characteristics
 - difference between air production and air consuming systems
 - risks of pressure in hydraulic power systems, including actuator stopped or stalled, stored energy
 - hazards, including crushing and pinch points, sudden shoot out, presence of carbon monoxide in system, exposure to compressed air, split tube or pipe
 - types of frequent malfunctions during operations
- key concepts of hydraulic power systems in worksite forest or wood products equipment, machines or plant, including:
 - purpose and advantages of hydraulic power transmission
 - terminology used in hydraulic power systems – pressure, flow, force, torque, holding pressure, linear movement, rotary movement, load, lift
 - atmospheric, gauge, and absolute pressure
 - Pascal's law application to hydraulic power transmission
 - formulae – pressure, force
 - measurement units
- hydraulic power system operation in worksite forest or wood products equipment, machines or plant, including:
 - purpose and function of components, including mechanical, electrical and electronic components
 - types of fluids
 - contamination
 - pressure and flow control
 - performance characteristics
 - components, including reservoir, gauge, filter, control valves, pressure relief valves, pump, actuator, regulator
 - risks of pressure in hydraulic power systems, including pump running, pump stopped, stored energy
 - hazards, including crushing and pinch points, burns from hot oil at high pressure, fire from oil leaks, flailing hydraulic lines, injection of oil into the skin, oil leaks on floor, skin exposure to oil
 - types of frequent malfunctions during operations, including pressure fluctuation, fluid leakage and excessive temperature, overheating, excessive noise, insufficient power
- techniques for determining 'mean time between failures' (MTBF)

- techniques for undertaking failure modes, effects and root causes analysis on hydraulic and pneumatic components of worksite forest or wood products equipment, machines or plant.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - basic technical references relevant to hydraulic and pneumatic systems and components
- specifications:
 - workplace procedures and manufacturer specifications relevant to hydraulic and pneumatic power systems and components in forest and wood products equipment, machines and plant.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT5210 Contribute to establishment and implementation of forest management systems

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to contribute to the establishment and implementation of systems for forestry management that meet the requirements of international treaties, conventions and initiatives and commonwealth, state or territory law.

It applies to individuals who work in forestry management roles in a variety of work settings, such as native forests, plantations, agroforestry, farm forestry and forest management companies, and includes operations of all sizes.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has participated in the development, implementation and monitoring of a forest management compliance system or process that is relevant to one area of operation of a forestry organisation.

In doing this activity, the individual has:

- determined and reported on the compliance requirements of one area of operation of a forestry organisation in relation to:
 - commonwealth, state or territory law
 - local government regulations
 - international treaties, conventions and initiatives
- recommended processes for forest management and feedback systems and methods for gathering and monitoring forest management information
- assigned appropriate roles to personnel, facilitated appropriate training of personnel and implemented a feedback system
- made recommendations for required changes to forest management systems based on consultation and analysis.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- objectives and key content of commonwealth, state or territory and local government laws and regulation relevant to forest management:
 - land ownership
 - boundary management
 - environmental management
 - access

- silviculture
- harvesting
- forest protection
- methods to access, locate and select applicable objectives and key content of international and national treaties, conventions and initiatives
- key objectives of the current forest certification standards in Australia
- factors to be considered in assessing forest management issues inherent to different types of forests
- contemporary forest management issues that impact on the organisation and its practices
- scope of forest operations and activities of the organisation, including:
 - operations in national parks
 - other operations on public land
 - operations on private land
 - timber growing and harvesting
 - fire management
- techniques for monitoring forest management systems and processes for compliance with laws, international treaties, conventions
- strategic and operational factors impacting on organisational forest management processes and decision making, including:
 - fire management planning
 - flora and fauna planning
 - planning for environmental protection and monitoring
 - regulatory compliance issues
 - compliance with international treaties, conventions and initiatives
 - location and nature of sites
 - organisational policy and operational guidelines
 - public liabilities and exposure to risk
 - risk management strategies and policies.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computers, keyboards and software used to create system documents
 - commonwealth, state or territory laws and local government regulations (or plain English documents issued by regulators) relevant to forest management
 - international treaties, conventions and initiatives relevant to forest management

- publications and journals relevant to forest management
- specifications:
 - workplace safety and environmental policies and procedures applicable to forestry operations
 - industry and workplace-specific forest management systems and processes
 - workplace policies and procedures for documenting forest management systems and processes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT5211 Implement forest management certification scheme

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to implement and comply with the requirements of a forest management certification scheme as part of forest growing and management activities.

The unit applies to individuals who are responsible for the implementation of forest management certification schemes.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated all processes for one internal forest management certification scheme audit.

In performing this task, the individual has:

- prepared all required documents
- responded to audit reports and provided clear evidence of remedial actions taken for non-compliant issues
- prepared a written report on audit outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- forest certification:
 - purpose
 - benefits
 - forest management certification standards
 - procedures for gaining certification
 - schemes operating in Australia
- purpose and key content and of the Illegal Logging Prohibition Act 2012 or superseding law
- purpose and key content of the current Forest Management Certification and Chain of Custody standards applicable in Australia
- forest certification bodies and systems
- industry and workplace standards for managing the traceability of certification system documents

- format, content and use of documents and registers used for certification, audit and quality purposes, including:
 - timber source documents
 - quality records
 - numbering and labelling documents
- internal audit processes, including:
 - purpose of internal audits
 - scheduling requirements for audits
 - role of internal auditors
 - process for preparing and presenting required documents
 - requirements for and methods of responding to non-compliances and process improvements identified by audit
- workplace and legal requirements for reporting incidents of non-compliance
- format, content and use of the following plans and reports:
 - audit reports
 - system improvement plans
 - reports on system operation
 - reports on breaches of compliance
- workplace standards, requirements, policies and procedures for implementing forestry certification systems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computers, keyboards, printers
 - reference materials related to forest certification system, including standards and previous reports
- specifications:
 - workplace policies and procedures for implementing a forestry certification system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT5212 Implement workplace sustainability practices in the forest and wood products industry

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has incorporated sustainability principles into one existing workplace practice in an operational area in the forest and wood products industry.

In performing this activity, the individual has:

- identified sustainability requirements and changes necessary to work practices
- planned and supervised activities for implementing the recommended changes to work practices
- collected information, evaluated and reported on the outcomes of sustainability practices established in the workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- sustainability principles:
 - economic
 - social
 - environmental
- consultative mechanisms for incorporating sustainability principles into workplace policies, procedures and practices applicable to forest or wood products operations
- workplace practices in forest or wood products operations that incorporate sustainability principles
- ways of redesigning work practices in forest or wood products operations to address sustainability principles
- impact of work practices in forest or wood products operations on:
 - water quality and quantity

- energy use
- emissions
- Indigenous heritage
- fauna
- flora
- cultural environment
- sustainable work practices in forest or wood products operations:
 - disposing of, recycling and reusing timber and other waste
 - reducing use of toxic materials and hazardous chemicals
 - minimising resource use through changes in process, facility design and management
- change management principles and methods for implementing sustainability practices
- format, content and use of:
 - action plans
 - evaluation reports
- workplace procedures for recording and reporting evaluation outcomes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest and wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing equipment for preparation of action plans and reports
 - proformas for action plans and reports
- specifications:
 - workplace sustainability policy and procedures
 - workplace safety and environmental policies and procedures applicable to forest and wood products operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT5213 Contribute to and implement a community engagement plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to contribute to the development, implementation and review of community engagement plans that focus on forestry-related matters and achieving sustainable environmental, economic and community benefits.

This unit applies to individuals who are engaged in developing and implementing community engagement plans either as a discrete role or as part of a broader job role.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPCOT5213 Contribute to and implement a community engagement plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, under the supervision of a senior forester or other senior staff member with responsibility for community engagement, the individual has developed, coordinated and reviewed the implementation of one community engagement plan that is focused on addressing community views on a matter related to forestry operations.

In undertaking this activity, the individual has:

- analysed issues that require community engagement and identified target groups
- identified community engagement strategies and potential barriers to effective engagement
- produced draft community engagement plan and confirmed further actions
- communicated objectives and potential constraints on engagement and allocated resources, roles and responsibilities
- monitored, considered feedback from stakeholders and adjusted engagement plan
- assessed engagement outcomes against purpose and objectives and reported on community engagement plan effectiveness.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- community engagement theory and principles
- community engagement frameworks:
 - core principles and indicators
 - standards
 - performance rating measures
 - types, methods and levels of engagement
 - communication modes

- decision-making mechanisms
- common forest and wood products industry issues requiring community engagement, and a range of benefits of engaging community in consultation processes
- strategies, practices and techniques for community engagement
- relationship and partnership building principles and techniques
- communication styles appropriate for establishing and fostering transparent, trusting relationships or partnerships with individuals and communities
- leadership principles and the management of community engagement expectations
- strategies and processes for consultation with the community
- processes of individual advocacy and group advocacy
- organisational opportunities for community involvement
- constraints and barriers to community engagement
- demographic features of the local community:
 - socio-economic diversity
 - gender diversity
 - cultural mix
 - household structures
 - education levels
 - political orientations
 - religious beliefs
 - industry and business structures
- characteristics of local communities and factors affecting community engagement, such as:
 - dynamics of community
 - community power structures
 - big politics versus community politics (big 'P' vs little 'p')
 - collaborations
 - formal and informal community networks, partnerships and lobby groups
 - strength and views publicised by the business community and local media organisations
- workplace requirements, policies and procedures for the following:
 - building and maintaining community relationships
 - communication and media engagement.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - computing hardware and software for documenting community engagement plans
 - reference materials on community engagement, characteristics of local community, and forestry related issues that may require community engagement
- specifications:
 - workplace standards, policies and procedures for community engagement
 - workplace procedures for documenting and communicating community engagement plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPCOT5214 Communicate forestry and forest science with stakeholders and the community

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has determined an information need for a stakeholder and/or community group in relation to forestry and forest science and established, implemented and evaluated a plan for disseminating forestry and forest science information.

In performing this activity, the individual has:

- sought clarifications to ascertain the information need and characteristics of the target community and/or stakeholder group
- selected an effective and relevant mode of communication to address the information need and the target audience
- determined forestry and forest science activities and programs suitable for the need
- coordinated staff and resources to support delivery of forestry and forest science activities and programs
- developed and implemented an evaluation strategy for ongoing monitoring of the communication outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of forestry and forest science skills and information needs of community and stakeholder groups:
 - people at any level in the organisation who work within or for the forest
 - people outside the organisation who work within or for the forest
 - people who supply forestry services to the organisation, such as forestry contractors
 - people affected by organisational decisions or actions
 - people to whom the organisation provides programs to meet public and social accountability requirements

- students
- people with interest in the forest
- content of forestry and forest science programs and activities:
 - forest carbon
 - forest ecology
 - forest health and nutrition
 - forest resources
 - forest hydrology
 - forest soils
 - plantation establishment and design
 - forestry harvesting and haulage
 - post-harvest operations
 - new technologies
 - species
 - silvicultural regimes
 - pests and disease
 - forest maintenance
 - forest nursery production
 - fire protection
- ways of delivering forestry and forest science information and skills:
 - engagement in schools, vocational education and training and university education programs
 - community programs
 - self-help material
 - social media, web sites and online materials
 - advertising, brochures and promotional materials
 - field demonstrations
 - field inspections
 - media campaign
 - workshops
 - field days
 - lectures
 - information sessions
 - individual consultations
 - brochures
 - multimedia material
 - exhibitions
- features, benefits and practical application of promotional activities commonly used to promote forestry and forest science activities and programs to community and stakeholder groups.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing equipment to prepare plans and reports
 - resources for the delivery of forestry and forest science programs and activities
- specifications:
 - workplace policies and procedures regarding the delivery of forestry and forest science programs and activities to community and stakeholder groups.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPCOT5215 Apply innovative thinking to support forestry best practice

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to facilitate innovative thinking and best practice in forestry organisations.

It applies to individuals whose job roles involve overseeing work teams, business areas or processes who may use innovative thinking and practice to advance business objectives and promote best practice in forestry operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has completed each of the following activities within a business area of a forestry industry organisation:

- analysed and applied innovative thinking and practices to one operational issue
- shared information about one innovative idea with professional colleagues and facilitated consultative and communicative approaches to encourage innovative thinking
- consulted with the management on one innovation idea, created a project plan, coordinated activities according to the plan and monitored and reported on innovation outcomes to management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key concepts and theories relating to innovative thinking
- processes for fostering and stimulating innovation in forestry organisations:
 - processes for promoting innovative thinking and practice within an individual business area
 - specific management approaches that foster innovation
 - workplace methods and tools for generating new ideas and innovative thinking
 - technological developments affecting need for innovation
- innovation risks and challenges:
 - typical operational challenges and barriers to innovation within individual business areas, and methods to overcome
 - common risks associated with encouraging operational personnel to participate in innovative practice
- innovation requirements:

- need
- identifying and prioritising opportunities for innovation
- objectives
- deliverables
- quality standards
- resources
- building support for innovation
- learning from innovation efforts
- methods used to trial innovations:
 - focus group
 - pilot project
 - feasibility assessment
- project management:
 - planning
 - stakeholder engagement
 - risk management strategies
 - implementation and monitoring
 - reviewing outcomes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - research material, reports, journals on organisational innovative practice
 - workplace tools for generating new ideas and innovative thinking
- specifications:
 - workplace policies and procedures for supporting and approving innovative projects.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFGM3208 Construct and maintain forest roads and tracks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan, construct and maintain roads and tracks in a forest environment. The unit includes monitoring road or track conditions and coordinating maintenance work.

The unit applies to individuals who work as bulldozer operators, forestry technicians, harvesting technicians and mobile equipment operators in a commercial forest environment and are involved in forest road and track construction operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Growing and Management (FGM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for road or track construction work	1.1 Determine job requirements from work order or instruction, and where required, seek clarification from appropriate personnel 1.2 Confirm safety and environmental protection requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>according to workplace procedures</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with road and track construction operations</p> <p>1.5 Identify and report existing and potential environmental risks and hazards to relevant personnel</p> <p>1.6 Consult and maintain communication with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.7 Obtain tools and equipment needed for the work, and check for correct operation and safety</p>
2. Plan road or track	<p>2.1 Obtain topographical map of area and assess details in relation to environmental management considerations</p> <p>2.2 Plan road or track, including drainage and entry points that provide vehicle and equipment access, turning and loading space</p> <p>2.3 Prepare forest road or track construction plan that includes timelines, resources and equipment according to workplace procedures</p>
3. Construct road or track	<p>3.1 Establish line of road and remove obstacles according to plans</p> <p>3.2 Establish and maintain communication with others to ensure safe work</p> <p>3.3 Remove soil to establish base that has suitable width, slope and stability</p> <p>3.4 Construct water crossing points and drains and install fish ladders if required according to environmental requirements, workplace procedures and engineering designs</p> <p>3.5 Prepare and construct intersection points to provide suitable entry and exit levels and control water flow</p> <p>3.6 Place pipes or culverts and backfill and compact and armour outlets as required, consistent with predicted water volume</p> <p>3.7 Transfer, spread and compact base and surface material to meet planned road or track design</p> <p>3.8 Control and manoeuvre equipment to compact road material and stabilise adjacent soil during construction</p> <p>3.9 Prepare road or track surface suitable for moving logs, and for the manoeuvre and traction of equipment</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
4. Maintain road or track	<p>4.1 Monitor condition of road or track to identify specific damage likely to lead to safety or environmental issues, and report to appropriate personnel</p> <p>4.2 Redesign and remake areas of consistent damage with assistance from appropriate personnel</p> <p>4.3 Plan and carry out maintenance with minimal disruption to other work activities</p> <p>4.4 Record and report construction operations and maintenance according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine requirements
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Ask questions and actively listen to clarify contents of work plans Select and use appropriate spoken communication strategies with work colleagues and other personnel on site
Numeracy	<ul style="list-style-type: none"> Complete routine calculations to determine volume of road construction materials to construct and maintain tracks and roads

Assessment Requirements for FWPFGM3208 Construct and maintain forest roads and tracks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on one occasion, the individual has:

- planned and constructed one forest road or track according to workplace tolerances in an operational forest
- planned, carried out and reported on maintenance of one forest road or track according to workplace tolerances in an operational forest.

In completing this work, the individual has followed a work order or instruction, workplace policy and procedures and current workplace health and safety legislation, regulations and related industry standards and codes of practice applicable to forest road and track construction operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, regulations, standards, codes of practice and established safe practices for constructing and maintaining forest roads and tracks:
 - data relating to road requirements and restrictions
 - maximum road loads
 - likely weather conditions
 - expected timeframes
 - survey locations and requirements
 - water courses
 - location of log landings
 - road entry points
 - crossing or entry points for other roads and tracks

- budget
- environmental protection requirements relating to:
 - roadside conditions and climate
 - habitat trees
 - ground growth
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards
 - obstacles
- environmental values and aquatic ecosystems to be protected
- workplace procedures, checks and routine maintenance to be carried out on construction equipment
- forestry road construction methods
- risks and hazards associated with forest road and track construction
- road transport equipment requirements and capabilities in forest operations
- ground water behaviour that impact on the construction of forestry roads and tracks
- workplace health and safety requirements, fire protocols and emergency evacuation procedures relevant to forest road and track construction operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an operational forest or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment required for forest road and track construction operations
 - personal protective equipment
 - communication system
- specifications:
 - access to work order or instruction detailing forest road and track construction operations to be carried out by operator
 - access to workplace safety and environmental protection policies and procedures applicable to forest road and track construction operations
 - access to workplace procedures and forms for recording information related to constructing and maintaining forest roads and tracks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed each of the following fire prevention tasks while undertaking routine work activities in a daily forestry operation:

- checked serviceability of personal protective equipment and firefighting equipment
- identified potential ignition sources for the operation and followed workplace procedures to minimise fire risks
- checked fire weather information and warnings and assessed potential impacts/risks on forestry operations
- participated in routine fire risk reduction measures including site housekeeping practices and followed fire prevention safety signs and symbols during the work activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic features of fire risk management plan
- fire weather and impacts/risks on forestry operations
- fire weather warnings, including requirements of Fire Permit Periods and Total Fire Ban
- work practices designed to eliminate or minimise the risk of fire
- elements of fire
- fire hazards in the workplace
- fire prevention safety signs and symbols
- type and use of personal protective and firefighting equipment
- workplace housekeeping procedures designed to eliminate or minimise the risk of fire
- maintenance procedures designed to eliminate or minimise the risk of fire
- work practices designed to eliminate or minimise the risk of fire
- signs of fire

- procedures for safe handling, use, transport and storage of flammable liquids and gases in the workplace
- procedures for recording and reporting fire risk and incidents.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment, and materials:
 - personal protective clothing
 - firefighting equipment and materials
 - fire prevention signs and symbols
 - fire weather warnings
 - tools and equipment required for housekeeping, fuel modification or reduction and other routine fire risk reduction activities
- specifications:
 - fire risk management plan
 - workplace fire prevention and emergency procedures
 - workplace housekeeping and maintenance procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFIR2002 Detect fire in a native forest or plantation

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to safely and accurately detect fires in a native forest or plantation setting and accurately record and report sighting details to fire command or control. This work may be performed on the ground, from a fire tower or from an aircraft.

The unit applies to forestry workers engaged in field operations in a native forest or plantation setting.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPFIR2002 Detect fire in a native forest or plantation

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has detected a fire in a native forest or plantation setting and reported sighting details and fire detection process to the fire command or control.

In performing this activity, the individual has:

- located the fire's current position on a digital or print map or plan
- followed workplace procedures for recording the fire and maintaining a chronological log of sightings and fire weather data
- used workplace communication methods for reporting sighting details, including locations, bearings and estimated distances
- identified potentially hazardous situations and sought expert advice
- completed report on fire detection processes and outcomes as required by the workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- smoke:
 - meaning of colour
 - location
 - amount
- fire weather data:
 - wind
 - atmospheric humidity
 - temperature
 - procedures for measuring and recording fire weather data
- maps and plans:

- digital and print
- scale used on maps and plans
- map and plan reading techniques
- map and plan features
- types and operating procedures and protocols for mobile and other communications systems
- risks and hazards associated with fire detection activities
- sighting details:
 - locations
 - bearings
 - estimated distances
- terrain and geographical features visible from a tower or aircraft
- sources of specialist advice on fire and fire detection in forest and plantations:
 - supervisor
 - fire command or control
 - colleague
 - local fire brigade
 - forest management company
- fire command or control conventions for recording and reporting fire sightings
- workplace policies and procedures specific to detecting fires:
 - communication reporting lines
 - recording and reporting fires
 - emergency and evacuation
 - extreme weather.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital or print maps and plans of forest or plantation
 - mobile and other communications equipment suitable for communicating with fire command or control
 - access to fire weather data and current reports
- specifications:
 - access to workplace health, safety and environmental policies and procedures applicable to fire detection operations
 - access to user manual for mobile and other communications equipment

- access to workplace procedures for field operations and for recording and reporting on fire detection processes and outcomes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFIR3001 Assess fire risk

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to continually monitor and assess the potential for fire in forestry operations.

The unit applies to individuals working in a broad range of roles in forestry operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Fire Control (FIR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm measures to reduce fire risk	1.1 Determine requirements from site fire risk management plan, including agreed chain of command and control and responsibilities of forest personnel 1.2 Confirm site compliance with the firefighting requirements of relevant fire service or regulatory agency 1.3 Confirm firefighting equipment is fully assembled, available and ready for immediate use at all times 1.4 Check serviceability of communication systems and reception

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>levels</p> <p>1.5 Check features of forest area pertinent to fire risk, including fuel load, maintenance of fire trails, fuel breaks and water storages</p>
2. Evaluate fire risk	<p>2.1 Assess weather conditions, weather reports for changes in prevailing conditions, and fire weather warnings</p> <p>2.2 Identify potential ignition sources, including hot work, chainsaws, friction sources and machinery with potential to create fire hazards</p> <p>2.3 Identify quantity, type and arrangements of fuels found on site with potential to create fire hazards</p> <p>2.4 Assess topography and accessibility of coupe, including the location of escape routes and safe zones</p> <p>2.5 Identify other forest users and their compliance with fire risk management plan</p> <p>2.6 Review risk factors and assess fire risk of forestry activity being undertaken</p> <p>2.7 Determine fire risk level and mitigation measures required to reduce fire risk of forestry activity being undertaken</p>
3. Report fire risk	<p>3.1 Record fire risks associated with forestry activity being undertaken</p> <p>3.2 Report fire risk and potential mitigation measures to appropriate personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and extract basic information from print and electronic sources on fire risk assessment
Writing	<ul style="list-style-type: none"> Use technical and enterprise specific vocabulary to complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Use questioning skills to gather information from operational staff on fire risks

Skill	Description
Numeracy	<ul style="list-style-type: none"> Interpret numerical and graphical material in weather reports

Assessment Requirements for FWPFIR3001 Assess fire risk

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assessed the fire risk while undertaking routine work activities in a daily forestry operation.

In performing this activity, the individual has:

- checked serviceability of firefighting equipment and communication systems
- inspected forest area pertinent to fire risk, identified fire hazards and assessed associated fire risks and control measures factoring in:
 - weather conditions
 - quantity, type and arrangement of fuels
 - ignition sources
 - topography
 - accessibility of coupe
 - communication systems and reception levels
- recorded and reported fire risk and potential mitigation measures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- fire risk management plans
- weather conditions and their effect on fires:
 - winds
 - electrical storms
 - lightning
 - heat
 - humidity
- fire weather warnings

- fire risks and associated control measures:
 - weather history and patterns
 - quantity, type and arrangement of fuels
 - ignition sources, including hot work, chainsaws, friction sources and machinery with potential to create fire hazards
- factors contributing to the fire risk level
 - topography
 - coupe accessibility
 - availability of water
 - communication systems and reception levels
- features of forest areas pertinent to fire risk:
 - fuel load
 - maintenance of fire trails
 - fuel breaks
 - water storages
- firefighting equipment and communication systems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forestry work environment or an environment that accurately represents workplace conditions
- resources, equipment, and materials:
 - firefighting equipment
 - weather reports and fire weather warnings
- specifications:
 - access to fire risk management plans
 - access to workplace document for recording fire risks and incidents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFIR3002 Apply communication protocols during post-bushfire vegetation clearing and clean-up operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to recognise the command and communication structure and the communications plan that applies to a bushfire impacted area and to communicate effectively with others involved in vegetation clearing and clean-up operations on private and public land, including main roads.

The unit applies to contractors, including harvesting operators and arborists, and agency approved staff and volunteers who are engaged in vegetation clearing and clean-up operations in bushfire impacted areas.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and industry codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Fire Control (FIR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Communicate with relevant personnel during post-bushfire vegetation clean-up operations	1.1 Recognise roles and authority of personnel in relevant command and communication structure and communications plan 1.2 Participate in briefing and debriefing activities as requested by appropriate personnel 1.3 Identify and communicate situational needs using appropriate communication skills and communication technologies via the command and communication structure 1.4 Use correct terminology to facilitate effective communication with others involved in vegetation clearing and clean-up operations in bushfire impacted area 1.5 Communicate requirements to team members clearly and in a manner that reflects an appropriate level of authority 1.6 Seek and follow direction, advice and assistance as required and appropriate to the situation according to chain of command 1.7 Recognise and resolve communication difficulties and problems using appropriate communication techniques and technologies
2. Communicate complex information during post-bushfire vegetation clean-up operations	2.1 Convey complex information clearly, concisely and accurately to appropriate personnel 2.2 Confirm recipient understanding of information by requesting recipient to repeat message or confirm that message is received and understood, and adjust mode of communication where required
3. Overcome communication barriers during post-bushfire vegetation clean-up operations	3.1 Identify barriers to effective communication, and implement solutions within own level of authority, or report to appropriate personnel according to communication plan 3.2 Respond to conflict and potential for conflict with team members, bushfire agency personnel, people affected by bushfires, community representatives and others in a manner that prevents escalation

Foundation Skills

Assessment Requirements for FWPFIR3002 Apply communication protocols during post-bushfire vegetation clearing and clean-up operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual participated in a bushfire vegetation clearing or clean-up operation in two different actual or simulated bushfire impacted areas.

In performing each of these tasks, the individual has:

- communicated effectively with people involved in the bushfire vegetation operation in line with the command and communications structure and communications plan
- used correct terminology when communicating with people involved in the bushfire vegetation clearing or clean-up operation
- participated in briefing and debriefing activities
- communicated complex information related to the bushfire vegetation clearing or clean-up operation according to the command and communications structure and communications plan
- recognised communication barriers or possible conflict situations with team members or others in the bushfire impacted area, and devised solutions within own area of responsibility.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- bushfire and post-bushfire command and communications structure and communication plan, including:
 - management structure
 - communications plan
 - radio channels

- strategic telephone numbers
- digital platforms
- communication protocols as specified in Australasian Inter-service Incident Management System (AIIMS) command and communication structure relevant to individuals working in bushfire impacted areas, including local variations approved by individual states and territories and relevant agencies
- purpose, scheduling and format of briefings and debriefings related to bushfire vegetation operations
- bushfire warnings and advice applicable in bushfire impacted areas
- bushfire recovery plans and workplace procedures in relation to bushfire vegetation operations
- operational hazards and safe systems of work for personnel working in bushfire impacted areas
- layout of area under control and potential obstacles for contractors and others involved in bushfire vegetation operations
- procedures for contacting emergency personnel and other relevant stakeholders during bushfire vegetation operations
- stakeholders in bushfire and post-bushfire vegetation operations, including:
 - contractors
 - bushfire agency
 - bushfire recovery personnel
 - people affected by bushfires
 - community representatives
- terminology used in bushfire and post-bushfire operations and in relation to bushfire vegetation clearing and clean-up operations
- procedures for communicating and confirming understanding of complex information related to bushfire vegetation operations
- typical communication difficulties and problems that may occur in bushfire vegetation operations, and the appropriate action to be taken in each case.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - communication plan used in bushfire and post-bushfire operations
 - communications systems used in bushfire and post-bushfire operations
- specifications:
 - organisational description of chain of command in bushfire and post-bushfire operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFIR4001 Conduct tree hazard assessment post-fire

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to conduct hazard assessment of fire affected or fire damaged trees during the early stages of bushfire recovery and make recommendations on risk treatment.

The unit applies to individuals authorised by emergency management agencies to assess tree hazard during the early stages of bushfire recovery operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and industry codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for FWPFIR4001 Conduct tree hazard assessment post-fire

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted a hazard assessment of five fire damaged or fire affected trees, which include two different species.

In performing each of these tasks, the individual has:

- complied with health and safety requirements, including use of personal protective equipment
- conducted a dynamic risk assessment of route to and areas around tree
- identified risks to self and others posed by tree according to workplace procedures
- identified ecological, cultural and economic value of tree
- assessed and determined treatment options for tree
- reported on assessment and treatment options for tree.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety work procedures relevant to bushfire recovery operations
- workplace hazards and associated risks and controls in bushfire recovery operations, including those associated with fire affected and fire damaged trees
- tree species and effects of fire on different trees species
- hazards associated with fire affected and fire damaged trees
- factors influencing assessment of tree hazard risk and the values in retaining the tree, including:
 - structural characteristics of trees
 - likely timeframe in which the tree, limb or branch might be expected to fall
 - tree exposure to causal factors and external influences of tree hazard
 - quantity of trees to be assessed

- potential of tree to interact with other hazards or assets (e.g., power lines, buildings)
- operational context
- possible risk control measures that may be applied in context
- cultural, social or economic values associated with a tree or its immediate surroundings
- ecological values at the site
- external factors that increase potential tree hazard, including:
 - wind exposure
 - drought
 - stress and insect infestation
 - excessive drainage problems from land management operations
 - exposure to vibration from heavy plant or machinery
- other hazards at the site that increase potential tree hazard, including:
 - gas supplies
 - water supplies
 - powerlines (above and below ground)
 - adjacent buildings
 - features of adjacent trees
 - terrain features
- characteristics of hazardous trees, including:
 - dead and/or decaying tree and/or major branches
 - evidence of previous damage, including burn or mechanical processes
 - suspected loose or broken branches
 - evidence of longitudinal or torsion fractures
 - evidence of roots lifting or disturbed root system
 - significant lean with indicators of failure
 - cavities and hollows in the main trunk and root buttress area
- industry guidelines and agency approved policies and procedures for tree hazard management in bushfire recovery regarding:
 - tree hazard isolation
 - tree hazard marking and mapping symbols
 - tree hazard classes – clear and present danger tree (CPD), potential clear and present danger trees (potential CPD)
 - tree hazard treatment – removal of tree or removal of branch/limb, exclusion, communication of ongoing risk to relevant qualified personnel
- characteristics of culturally significant trees, including Aboriginal sacred trees, and workplace procedures for managing significant trees, including who to contact if a culturally significant tree is identified
- techniques for recording position of trees using Global Navigation Satellite System (GNSS)
- reporting procedures associated with tree hazards.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - fire damaged or fire affected trees
 - communications systems relevant to work activity
 - equipment and materials relevant to work activity
 - personal protective equipment relevant to work activity
 - GNSS
- specifications:
 - workplace health and safety and environmental protection policies and/or procedures relevant to work activity
 - workplace documentation for recording information relevant to work activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPFO5001 Contribute to and implement a forest establishment plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, under the supervision of a senior forester, the individual has contributed to the development of one forest establishment plan.

In undertaking this activity, the individual has:

- confirmed requirements pertinent to forest establishment planning
- conducted site assessment obtaining information from relevant sources to include in the plan
- established performance indicators
- designed at least one of the following components:
 - roads
 - fences
 - drainage channels
 - forest area boundaries
- confirmed contractual requirements for the forest establishment operations, monitored contractor compliance in relation to at least one of the following:
 - production
 - environmental protection
- presented recommendations for future improvements to planning and implementation of forest establishment operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state or territory or local government legislative and regulatory requirements and codes of practice relevant to designing plantations
- relevant species characteristics and selection information, including:

- appropriate species
- provenance
- distribution and hardiness of trees to be sown or planted to suit the area to be planted
- factors relevant to a site assessment:
 - soil types
 - site rainfall characteristics
 - understory species
 - canopy
 - general forest lean
 - wind speed and direction
 - fallen trees
 - retained vegetation
 - density of trees
 - ground slope
 - soil and water protection
 - ground hazards and obstacles
 - contingencies for modifying operations during wet or other adverse weather conditions
 - hygiene of the area
 - relevant commonwealth, state or territory, and local legislation and regulations
- design components, including:
 - roads
 - fences
 - drainage channels
 - forest area boundaries
- site factors to consider in forest establishment planning:
 - areas visible from critical observer points, such as lookouts, nearby towns and major highways
 - modification of visible edges with retention of existing vegetation or planting of other species
 - age class boundaries and timing of establishment to minimise the visual and environmental impact of site preparation and harvesting and the risk of loss due to natural disasters
 - opportunities to enhance connective values of existing native vegetation
 - the presence of important cultural, archaeological, historic, recreational, scenic, geomorphic or biological sites within the plantation area that may be affected by plantation operations, and measures that could be taken to protect these sites
 - intensity, location and design of roads
 - consultation with Indigenous communities, neighbouring landholders and local landcare groups
- environmental protection requirements relevant to plantation design
- workplace policies and procedures for designing plantations:

- tending plans
- harvesting plans
- workplace marketing and strategic plans
- plans or regulations relating to chemical use and environmental requirements
- environmental risks and hazards in the area of the proposed site
- common diseases, pests and nutritional deficiencies that affect plantations
- the principles of good forest establishment planning.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing hardware and software for documenting forest establishment plans
- specifications:
 - reference materials, including topographic maps, information on land use zonings and application forms, template forest establishment plans
 - requirements for a forest establishment plan
 - workplace safety and environmental policies and procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWP FOM5002 Contribute to and implement a forest roading operational plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, under the supervision of a senior forester, the individual has developed one forest roading operational plan and overseen road construction.

In performing this activity, the individual has:

- confirmed requirements pertinent to forest roading operational planning and scope of logging operations
- consulted with appropriate personnel on draft forest roading operational plan
- coordinated forest roading operations and monitored compliance against performance indicators and specifications
- prepared recommendations for future improvements to planning and implementation of forest roading operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures for managing road construction and maintenance
- environmental risks and hazards associated with road construction
- materials used for road construction and their properties, including:
 - road base
 - gravel
 - crushed rock
 - sand and bluestone
 - cords and pipes for water crossings
- logging operations and log extraction methods
- road construction and maintenance procedures
- principles of road design and development, including:

- control points
- required grades
- water crossing points and structures
- types of tools, plant and equipment used for road construction, and procedures for their safe use and maintenance.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a section of native forest or plantation for road construction or maintenance
- specifications:
 - maps, plans, regulations and other documentation relevant to the construction and maintenance of roads in a forestry setting
 - workplace safety and environmental policies and procedures applicable to road construction and maintenance
 - workplace policies and procedures relevant to managing road construction and maintenance.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFOM5003 Contribute to and implement a forest harvesting plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to contribute to the development and implementation of a forest harvesting plan for established coupes with the aim of maximising output and cost efficiencies.

The unit applies to individuals who are involved in developing and implementing forest harvesting plans.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Operations Management (FOM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for developing forest harvesting plan	1.1 Assess workplace health and safety, environmental and regulatory requirements for harvest activities

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Determine coupe locations using map and grid references, and establish boundaries</p> <p>1.3 Identify local authority coverage and approved land use zonings, and apply for approvals</p> <p>1.4 Obtain land ownings according to workplace procedures</p> <p>1.5 Assess ramifications of environmental issues documented in previous harvesting plans</p> <p>1.6 Report outcomes of initial findings to appropriate personnel, and confirm further actions</p>
2. Support development of forest harvesting plan	<p>2.1 Assess and record topography, forest types and available species</p> <p>2.2 Calculate gross area of each coupe and determine net area to be harvested</p> <p>2.3 Calculate and record volume estimates for each coupe</p> <p>2.4 Determine harvesting and cartage requirements</p> <p>2.5 Assess environmental conditions and plan site preparation, access and operational activities</p> <p>2.6 Liaise and seek support from senior personnel during preparation of draft harvesting plan, as required</p> <p>2.7 Produce draft harvesting plan according to workplace procedures</p> <p>2.8 Forward draft harvesting plan to appropriate personnel and confirm further actions</p>
3. Coordinate implementation of harvesting plan	<p>3.1 Confirm contractual arrangements with contractors for implementation of harvesting plan</p> <p>3.2 Monitor ongoing implementation of harvesting operations against harvesting plan</p> <p>3.3 Monitor contractor compliance with production, environment protection and other contractual requirements</p> <p>3.4 Identify and resolve contractor non-compliances within scope of responsibility and workplace procedures</p> <p>3.5 Report on implementation of harvesting plan to appropriate personnel</p>
4. Review implementation of harvesting plan	<p>4.1 Gather and assess information on implementation of harvesting plan according to workplace procedures</p> <p>4.2 Consult with contractors, senior personnel and other stakeholders</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	on potential improvements to harvesting plan 4.3 Forward report on review of harvesting plan, including suggestions for future improvements to planning and implementation of harvesting operations, to appropriate personnel

Foundation Skills

Assessment Requirements for FWP FOM5003 Contribute to and implement a forest harvesting plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, under the supervision of a senior forester, the individual has developed a harvesting plan for an established coupe and overseen harvesting operations.

In undertaking this activity, the individual has:

- confirmed requirements pertinent to forest harvesting planning and obtained approvals for land use zoning and land owning
- determined coupe locations, assessed site conditions and calculated area and volumes to be harvested
- planned site preparation, including access to site and operational activities
- consulted with appropriate personnel on draft harvesting plan
- confirmed contractual requirements for the forest harvesting operations, monitored contractor compliance in relation to at least one of the following:
 - production
 - environmental protection
- presented recommendations for future improvements to planning and implementation of forest harvesting operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state, territory or local government regulations and codes of practice relevant to harvesting operations
- harvesting plans:
 - principles of harvest planning
 - purpose of harvesting plans
 - format and content of harvesting plans

- land use zoning and land owning approval processes
- harvesting and extraction methods
- operational issues impacting on harvesting operations:
 - contractual arrangements with harvesting contractors and other suppliers
 - site preparation
 - operation of landings and snig tracks
 - cartage operations
 - environmental hazards
 - physical and cultural environment protection practices
 - workplace health and safety hazards
 - risks and control measures
 - fire protection requirements
 - wet weather operations and restrictions
- workplace standards, policies and procedures for the design and implementation of harvest activities:
 - workplace health and safety for harvesting operations
 - environmental protection
 - documenting harvesting plans
 - communication reporting lines for plan content.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - access to coupes to be harvested
 - computing hardware and software for documenting harvesting plans
- specifications:
 - reference materials for coupes to be harvesting, including topographic maps, information on land use zonings and application forms, template harvesting plans
 - workplace standards, policies and procedures for the development and implementation of harvesting plans
 - access to commonwealth, state, territory or local government regulations and codes of practice relevant to harvesting operations
 - workplace safety and environmental policies and procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPFOM5004 Contribute to and implement a forest regeneration plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, under the supervision of a senior forester, the individual has developed one forest regeneration plan and overseen forest regeneration operations.

In undertaking this activity, the individual has:

- confirmed requirements pertinent to forest regeneration planning
- obtained information from relevant sources to include in the plan
- consulted with appropriate personnel on draft forest regeneration plan
- coordinated and monitored forest regeneration operations against budget, schedule, performance indicators and objectives
- prepared recommendations for future improvements to planning and implementation of forest regeneration operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state or territory legislation, regulations, standards, codes of practice for forests
- workplace policies and procedures on forest regeneration
- environmental protection requirements for forests, including:
 - soil disturbance measures
 - retention tree damage
 - fungal hygiene measures
 - identification of habitat trees
 - chemical handling and application procedures
- authorisations and permits relevant to forest regeneration plans:

- permits
- approvals
- licences relating to neighbouring properties
- methods of regeneration, including:
 - prescription burning
 - infill planting to support directional natural regeneration
 - pathways
 - direct seeding
 - crop tree retention
- stakeholders relevant to forest regeneration plans, including:
 - clients
 - neighbours
 - relevant groups/bodies
 - local, state and federal government bodies and agencies
 - local interest/lobby groups
 - friends' groups
 - representatives of industry bodies
- principles of forest science relevant to regeneration and revegetation:
 - biology of the target species
 - hydrology and hydrological principles
 - original and potential ecosystems for the target area
 - common diseases, pests and nutritional deficiencies
 - soil types and structure
 - plant identification and classification
 - ecology and ecological interactions
 - seed collecting and distribution seasons for the target species
- procedures for recording workplace information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - forest area for developing a forest regeneration plan
 - computing hardware and software for documenting forest regeneration plans
- specifications:

- reference materials, including topographic maps, information on land use zonings and application forms, template forest regeneration plans
- workplace standards, policies and procedures for the development and implementation of forest regeneration plans
- access to commonwealth, state, territory or local government regulations and codes of practice relevant to forest regeneration
- workplace safety and environmental policies and procedures applicable to forest regeneration operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFOM5005 Contribute to and implement a biohazard contingency plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to contribute to the development and implementation of plans to manage the risk of biohazard incidents involving fungal, viral, bacterial, insect and vertebrate infestations. Plans are developed to ensure hazards are controlled and that any infestation has minimal social, economic and environmental impact.

The unit applies to individuals who are involved in developing and implementing plans to manage the risk of biohazard incidents.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPFO5005 Contribute to and implement a biohazard contingency plan

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, under the supervision of a senior forester, the individual has developed, coordinated, reviewed and reported on the implementation of one biohazard contingency plan to manage the risk of at least one biohazard selected from the following type of infestations in a forest and wood products industry setting:

- fungal
- viral
- bacterial
- insect
- vertebrate.

In undertaking this activity, the individual has:

- checked traceability chain for biohazard documentation for legal and system compliance
- evaluated workplace biohazard contingency management practices
- conducted risk assessment for the potential of biohazard infestations, checked that adequate risk controls are in place
- documented routine infestation treatments, action plans, communication protocols and training and induction for workforce in a draft biohazard contingency plan and confirmed further actions
- coordinated resources, monitored activities and reported on biohazard contingency plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state or territory legislation and regulations relevant to managing biohazards and controlling infestations

- industry and workplace standards for managing the traceability chain of biohazard documentation
- characteristics of a range of potential biohazards present in forest and wood products industry operations, including:
 - fungal hazards
 - viral hazards
 - bacterial hazards
 - insect hazards
 - vertebrate hazards
- methods used to control biohazard infestations and limit the spread:
 - eradication
 - quarantine
 - fumigation
 - use of pesticides
 - use of biological controls
 - culling of infected plants
- economic impacts of biohazard infestations and methods used to estimate monetary losses:
 - loss of forest values
 - loss of current markets
 - loss of potential markets
 - damage to trading status
- environmental impacts of biohazard infestations
- purpose, format, content and use of biohazard contingency plans
- methods used to train personnel on the content of biohazard contingency plans and their role in implementing it
- workplace procedures for documenting and communicating plans.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing hardware and software for documenting biohazard contingency plans
- specifications:
 - commonwealth, state or territory legislation and regulations relevant to managing biohazards and controlling infestations
 - industry and workplace standards for managing the traceability chain of biohazard documentation

- worksheets and proformas commonly used to develop, implement, monitor, evaluate and communicate a biohazard contingency plan
- workplace standards, policies and procedures for managing risks of biohazard infestations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFOM5006 Implement practices to maximise value from wood residues

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to evaluate and implement effective wood management practices that ensure maximum product value recovery and adherence to environmentally sustainable principles. It can apply to the full scope of forest and wood products industry workplaces and to operations of all sizes.

The unit applies to individuals who are responsible for maximising product value recovery in forest operations.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPFO5006 Implement practices to maximise value from wood residues

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed, documented and coordinated the execution and evaluation of one wood value maximisation plan for a forest or wood products operation.

In performing this activity, the individual has:

- established the extent of the wood value maximisation strategy, as well as the legal, occupational, environmental, and best practise standards
- detailed the methodology for the execution of wood value maximisation, including timetable, budget, legal requirements, technology, materials, and resources required, as well as the most relevant practices.
- communicated production schedule for maximising the value of the product according to the plan
- monitored and reported implementation of the plan against methodology and production schedule
- provided recommendations for future improvements based on information, data analysis and consultative processes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state or territory legislation or regulations applicable to wood management practices
- current government and industry initiatives, codes of practice and guidelines relevant to wood management practices
- different applications for wood and residue material, markets and general market value:
 - poles
 - piles and bridge timbers

- veneer logs
- saw logs
- chip logs
- charcoal logs
- woody biomass
- structural and non-structural timbers
- timber composites
- timber panel products
- timber engineered products
- eucalyptus oil
- extractives
- potential uses for wood residues and by-products, markets and general market value
- production practices that avoid or reduce wood residues
- role of wood or waste products in generating renewable energy through biomass
- authorisations, permits and licences relating to:
 - sites or properties
 - hours of operation
 - use and application of chemicals
 - environmental issues
- processes and practices for:
 - internal and external consultation
 - developing and implementing value maximisation plans
 - collecting and analysing relevant data
 - evaluating and modifying plans
- format, content and use of value maximisation plans.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing equipment to prepare wood value maximisation plans
- specifications:
 - comprehensive information about the operation of a real or simulated business to determine value maximisation practices
 - workplace policies and procedures regarding wood value maximisation
 - access to workplace safety and environmental policies and procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFOM5007 Contribute to and implement a silviculture regime for a plantation

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to select a silviculture regime consistent with plantation management objectives, and contribute to the planning, implementation and monitoring of a silviculture regime for a plantation.

The unit applies to individuals who undertake forester or forestry field officer job roles in the forest industry.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has participated in the design, coordination and monitoring of a silviculture regime for one plantation operation.

In performing this activity, the individual has:

- confirmed plantation management objectives and sourced pertinent information to identify the silviculture regime
- prepared prescriptions, established schedules and calculated costs for at least three plantation silviculture operations from the following:
 - site establishment
 - planting
 - spacing and thinning
 - tending and pruning
 - perennial and annual weeds controls
 - browsing controls
 - use of herbicides, pesticides and fertilisers
 - crop protection measures
 - harvesting
 - surveys for post-harvest monitoring
- confirmed contractual requirements for one plantation silviculture operation and monitored and reported on contractor compliance
- monitored effectiveness of one plantation silviculture operation and presented recommendations for future improvements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- plantation management objectives:
 - social
 - economic
 - environmental
- types and characteristics of plantation silviculture regimes
- purpose of plantation silviculture regime:
 - production of wood and non-wood products
 - water yield
 - providing habitat for wildlife
 - carbon sequestration
- components of plantation silviculture regime:
 - management objectives
 - silviculture operations
 - monitoring and protection
- approaches to planning, implementing and monitoring plantation silviculture operations:
 - harvesting
 - site establishment
 - planting
 - spacing and thinning after establishment
 - pruning
 - stocking standards
 - browsing controls
 - managing pests and disease
 - crop protection measures – fire, wind
 - surveys for post-harvest monitoring
 - survival assessments
 - remedial treatments
- key elements of a prescription for plantation silviculture operations
- techniques for monitoring silviculture operations in plantations
- techniques for the design, implementation and analysis of outcomes of post-harvest surveys.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a plantation work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a plantation

- computing hardware and software for planning, implementing and monitoring plantation silviculture operations
- stand data required for plantation silviculture operations
- specifications:
 - workplace policies and procedures regarding plantation silviculture operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has participated in the design, coordination and monitoring of a silviculture regime for one native forest stand.

In performing this activity, the individual has:

- confirmed native forest management objectives and sourced pertinent information to identify the silviculture regime
- prepared prescriptions, established schedules and calculated costs for at least three plantation silviculture operations from the following:
 - regeneration
 - harvesting
 - survey for post-harvest monitoring
 - seed collection, preparation and sawing for meeting regeneration stocking standards
 - browsing controls
 - crop protection
- confirmed contractual requirements for one native forest silviculture operation and monitored and reported on contractor compliance
- monitored effectiveness of one native forest silviculture operation and presented recommendations for future improvements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- native forest management objectives:
 - social
 - economic

- environmental
- assessment of forest condition for selection of silviculture practices:
 - forest type
 - forest age structure
 - forest components and their condition
 - forest structure
 - wildlife habitat
 - forest generation
 - evidence of past disturbances (fire, logging) that may have influenced the growing stock condition
- types and characteristics of native forest silviculture regimes
- purpose of native forest silviculture regime:
 - support production of wood and non-wood products
 - water yield
 - creating ideal conditions for regeneration
 - providing habitat for wildlife
 - carbon sequestration
 - maintaining a diverse forest ecosystem
- components of silviculture regime:
 - management objectives
 - harvesting systems
 - regeneration treatment
 - monitoring and protection
- approaches to planning, implementing and monitoring native forest silviculture operations:
 - harvesting
 - thinning
 - regeneration
 - seed collection, preparation and sowing
 - stocking standards
 - surveys for post-harvest monitoring
 - browsing controls
 - crop protection measures – fire, wind
 - remedial treatments
- key elements of a prescription for forestry operations
- techniques for monitoring silviculture operations in native forests
- techniques for the design, implementation and analysis of outcomes of post-harvest surveys.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a native forest stand
 - computing hardware and software for planning, implementing and monitoring silviculture operations
 - stand data required for silviculture operations
- specifications:
 - workplace policies and procedures regarding native forest silviculture operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPFO5009 Contribute to management and monitoring of forestry supply chains

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has contributed to the management and monitoring of an established forestry supply chain for one forestry enterprise.

In performing this activity, the individual has:

- conducted an analysis of at least three supply chain characteristics chosen from the following and identified two areas for improvement:
 - commercial and customer relationships
 - distribution and purchasing channels
 - material flows
 - end-to-end costs
 - key performance indicators (KPIs)
 - operations and outcomes
 - compliance with legal, ethical, environmental, corporate social responsibility and sustainability requirements
 - forestry supply chain vulnerabilities
- supervised and assisted in the completion of tasks and milestones for one forestry supply chain operation during an operational cycle
- evaluated and identified at least one supply chain activity and/or model that may result in cost and time savings for the workplace and made recommendations for improvements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- terminology used in forestry supply chain operations:
 - demand

- demand planning
- market segments
- channels
- production
- make to order
- make to stock
- supply
- order acceptance
- order fulfilment
- distribution
- objectives of inventory management:
 - maximise customer service
 - minimise inventory holding cost
 - maintain stock quality
 - maximise production efficiency
 - maximise transport efficiency
- communication strategies and channels used in forestry supply chains
- digital systems and applications used in a forestry supply chain
- forestry supply chain policies and procedures
- supplier capabilities and capacities
- forestry supply chain operations, including:
 - commercial agreements and contractual requirements
 - customer service levels
 - delivery timeframes
 - inventory flow and management
 - investment returns and cost controls
 - methods of pricing and payment terms
 - product sourcing
 - purchasing and distribution channels
 - quality control standards
 - value adds
 - stakeholder relationships
 - supply chain documentation
 - strategies that support continuous improvement activities
- forestry supply chain information requirements:
 - orders
 - production
 - inventory
 - procurement
 - transport capacity

- forestry supply chain traceability arrangements, including chain of custody and chain of responsibility requirements
- monitoring forestry supply chain:
 - commercial and customer relationships
 - distribution and purchasing channels
 - material flows
 - end-to-end costs
 - KPIs – production, procurement, transport, inventory management
 - operations and outcomes
 - compliance with legal, ethical, environmental, corporate social responsibility and sustainability requirements
 - forestry supply chain vulnerabilities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing hardware and software required for operation of supply chain management system
 - comprehensive information about the operation of a forestry supply chain
- specifications:
 - workplace policies and procedures regarding forestry supply chain management and monitoring.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFOM5010 Apply principles of forest science to optimise forest management practices

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to apply principles of forest science related to soil, water, landslide and nutrient management to optimise forest management practices.

The unit applies to individuals who undertake forester and forestry field officer job roles in the forest industry.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Operations Management (FOM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess forest soil quality	1.1 Identify the physical and chemical properties of major soil types 1.2 Identify the erodibility of different soil types 1.3 Access and interpret soil maps and online soil information services

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	to determine the soil type for a given location 1.4 Determine the soil profile and horizons for a given site 1.5 Apply procedures for testing soil nutrients 1.6 Interpret soil sample results in terms of the implications for forest management 1.7 Identify strategies for maintaining and improving soil quality on sites where forest management activities are practiced
2. Assess impact of forestry on landslide hazards	2.1 Recognise different types and causes of landslides and other forms of mass movement 2.2 Identify the effects of forest operations on the occurrence of landslides 2.3 Identify strategies for mitigating landslide hazards on sites where forest management activities are practiced
3. Assess impact of forestry on water quality and quantity	3.1 Assess the impact of forestry operations on water yield and water quality 3.2 Assess the cumulative effects of harvesting within catchments on water runoff and erosion 3.3 Classify streams according to erosion risk, and establish prescriptions for their protection 3.4 Identify ways of protecting drainage depressions in order to prevent movement of sediment, nutrients and chemicals into watercourses 3.5 Determine site rehabilitation/revegetation processes for at-risk riparian zones
4. Assess the impact of nutrient management on commercial forestry	4.1 Identify types and sources of elements essential to plant growth 4.2 Identify the effects of nutrient deficiencies and disorders on the management of commercial forestry 4.3 Explain the impact of fertiliser applications in commercial forestry 4.4 Determine nutrient management requirements for a forest stand according to workplace procedures 4.5 Develop a prescription that sets out fertilising requirements for a forest stand according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret complex written, technical information in source documents related to optimising forest management practices
Writing	<ul style="list-style-type: none"> Design, develop and revise strategic documents appropriate to audience and context
Oral communication	<ul style="list-style-type: none"> Use active listening and questioning techniques to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Analyse and compare complex statistical information related to soil, water and nutrient management

Assessment Requirements for FWPFO5010 Apply principles of forest science to optimise forest management practices

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has optimised at least one forest management practice through the use of forest science principles related to any of the following areas:

- soil quality and erosion control
- water quality and quantity
- landslide mitigation
- nutrient management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- physical and chemical properties of major soil types
- erodibility of different soil types
- human and natural factors impacting on soil mass movement
- techniques for interpreting soil maps, including the soil classification system
- techniques for constructing soil profiles
- procedures for testing soil nutrients and interpreting soil sample results
- strategies for maintaining and improving soil quality on forestry sites:
 - limit the area of compacted soils
 - maintain favourable conditions for forest growth
 - retain and enhance carbon storage to support soil ecologic functions
 - limit impacts of roads and landings
- different types and causes of landslides and other forms of mass movement
- effects of forest operations on the occurrence of landslides
- strategies for mitigating landslide hazards on sites where forest management activities are practiced

- impact of forestry operations on water yield and water quality
- cumulative effects of harvesting within catchments on water runoff and erosion
- techniques for classifying streams according to erosion risk
- ways of protecting drainage depressions
- rehabilitation/revegetation processes for at-risk riparian zones
- types and sources of elements essential to plant growth
- effects of nutrient deficiencies and disorders on the management of commercial forestry
- impact of fertiliser applications in commercial forestry
- nutrient management requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a native forest or plantation stand
 - computing hardware and software for preparing reports and analysing data related to soil, water, landslide and nutrient management
 - stand data related to soil, water, landslide and nutrient management.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to calculate costs and production targets for a forestry operation	1.1 Determine production requirements of forestry operations in terms of quantity, quality, timelines and delivery of product 1.2 Assess production site, labour cost and availability, equipment requirements and other factors that may impact production

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Assess logistic support contracts, supply agreements or equivalent that may impact production</p> <p>1.4 Assess legislative, regulatory and environmental requirements that may impact production</p> <p>1.5 Convert information gathered on forestry operation to usable form, and stored ready for retrieval and application according to workplace information management procedures</p>
2. Set production targets for a forestry operation	<p>2.1 Identify factors affecting production output of forestry operation</p> <p>2.2 Estimate time requirements for forestry operation, including lead times, according to workplace procedures</p> <p>2.3 Set production targets for a forestry operation according to workplace procedures</p> <p>2.4 Determine the impact of operational variables on proposed production targets according to workplace procedures</p> <p>2.5 Liaise with and seek support from senior personnel during preparation of draft production targets, as required</p> <p>2.6 Document draft production targets according to workplace procedures</p> <p>2.7 Verify draft production targets with appropriate personnel as required</p> <p>2.8 Document and store details of production targets for future reference according to workplace procedures</p>
3. Calculate the cost of a forestry operation	<p>3.1 Estimate labour, equipment and material requirements for proposed forestry operation</p> <p>3.2 Calculate total labour, equipment and material costs, including contingency, according to workplace procedures</p> <p>3.3 Identify components contributing to overhead costs</p> <p>3.4 Determine and calculate overhead costs to be attributed to forestry operation in accordance with workplace procedures</p> <p>3.5 Calculate total cost of forestry operation, including overheads, margins and allowance for profit, according to workplace procedures</p> <p>3.6 Apply procedures to calculate unit/daily rate from element costing according to workplace procedures</p> <p>3.7 Document details of costs according to workplace procedures</p> <p>3.8 Verify costs, calculations and other details with appropriate</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	personnel as required 3.9 Document and store details of cost of forestry operation for future reference enterprise information management procedures
4. Apply the contract costing method to a forestry operation	4.1 Calculate costs of forestry operations using the contract method 4.2 Compare the costs of forestry operations using this method with the unit cost model 4.3 Identify and report on implications of applying the contract cost model for a forestry operation
5. Compare calculations with actual cost and production data	5.1 Review calculated costs and production targets for forestry operation 5.2 Collate data on actual costs and production and compare with calculations 5.3 Identify and account for discrepancies between calculations and actual costs and production data 5.4 Report on comparison of calculations and actual costs and production data to appropriate personnel, noting potential implications for future setting of costs and production targets

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret complex written, technical information in source documents related to the costs and production targets for forestry operations
Writing	<ul style="list-style-type: none"> Design, develop and revise strategic documents appropriate to audience and context
Oral communication	<ul style="list-style-type: none"> Use active listening and questioning techniques to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Calculate costs of forestry operations and compare actual and predicted costs

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has calculated the costs and set production targets for one forestry operation.

In undertaking this activity, the individual has:

- gathered and collated information required to calculate costs and set production targets for one forestry operation
- set production targets for the forestry operation and identified operational variables that may impact on the achievement of set targets
- identified fixed and variable costs of the forestry operation
- identified and assessed the impact of using different costing methods
- determined the total estimated cost of the forestry operation
- prepared written reports on the actual and estimated cost and production of the forestry operation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- factors affecting production output of forestry operations:
 - site access and conditions
 - weather conditions
 - tree characteristics
 - environmental protection measures
 - equipment
 - labour
 - communications

- procedures for setting production targets for forestry operations
- operational variables that may impact on production targets
- components of labour costs
- overhead costs:
 - office and administration costs
 - business insurance
 - fees and charges
 - training costs
 - capital equipment
 - machinery
 - personnel transport
- contract cost method as applied to forestry operations
- fixed and variable costs of a forestry operation
- costing procedures for a forestry operation
- mathematical formulae and processes relevant to costing a forestry operation
- workplace approach to overhead costs, margins and allowances for profit
- workplace procedures for calculating unit/daily rate
- workplace information management processes, including storage requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing hardware and software required for costing and setting production targets for forestry operations
 - data required for costing and setting production targets for forestry operations
- specifications:
 - workplace policies and procedures regarding costing and setting production targets for forestry operations
 - access to workplace environmental policies and procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5001 Interpret and use image data in forestry planning and management

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency specifies the skills and knowledge required to select and interpret image data, including satellite images, aerial photographs, LiDAR images and other remotely sensed or scanned data used in forestry planning and management. The unit covers accessing image data, querying and interpreting image data from different sources, collating image data and archiving image data. The unit requires the ability to use geographic information system (GIS) software to access, manipulate, archive, retrieve and validate image data.

The unit applies to individuals who work as GIS officers, harvest managers, forestry planners, forestry supervisors and field foresters in a forest or plantation setting.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Resource Management (FRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select image data for use in forestry planning and management	1.1 Identify and document image data requirements in consultation with appropriate persons 1.2 Retrieve image data from data storage and other sources according

Assessment Requirements for FWPFRM5001 Interpret and use image data in forestry planning and management

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has selected and interpreted one satellite image, one aerial photograph and one LiDAR image in order to complete a workplace task related to a forestry planning or management issue.

In undertaking these activities, the individual has:

- accessed and validated different types of image data
- manipulated and interpreted image data
- identified forest attributes, such as vegetation characteristics and disease symptoms in trees and forest areas, using image data
- used GIS software
- reported and maintained information on details of forest attributes and topographic information
- archived and retrieved image data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, uses and benefits and limitations of image data:
 - satellite images
 - aerial photographs
 - LiDAR images
 - other remotely sensed or scanned data
- sources of image data used in forestry planning and management
- principles of remote sensing
- principles of satellite remote sensing
- techniques for working with LiDAR data

- aerial photograph interpretation techniques
- common data transfer formats, including:
 - Australian Spatial Data Transfer Standard (SDTS)
 - Drawing Exchange Format (DXF) files
 - JPEG files
 - Vector Product Format (VPF) data
- forest types and structures and type of information, including:
 - area
 - height
 - species
 - crown cover
 - crown form
 - disturbance
 - aspects to be considered as part of the environmental management process
- applications of image data in forestry planning and management:
 - terrain analysis
 - forest management
 - recultivation
 - updating of existing forest inventories
 - forest cover type discrimination
 - the delineation of burned areas
 - identification of cleared areas
 - forest fire extent and damage
 - assessment of impact of natural events on forests
- procedures for collating image data
- procedures for archiving image data
- procedures for transferring image data from supplied format into format required for work task
- purpose and use of image metadata, including:
 - availability
 - conditions of use
 - coordinate system
 - currency
 - custodian
 - data accuracy
 - data description
 - date of acquisition
 - licence
 - quality
 - source

- spatial data acquisition methodologies
- version control
- techniques for operating, querying and browsing image databases
- geographic information system (GIS) software
- methods for assessing, verifying and validating image data and image data sources
- legal requirements for accessing, storing, retrieving and archiving image data, including data privacy and information copyright.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - image data, including satellite images, aerial photographs, LiDAR images and other remotely sensed or scanned data used in forestry planning and management
 - computer hardware required to run GIS software package
 - GIS software package
 - internet access
- specifications:
 - access to workplace policies and procedures applicable to operating computer software and hardware
 - access to manufacturer manual for computing equipment and technical instructions for use of GIS software package.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5002 Source information on the contribution of forestry to carbon reduction strategies

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to source and disseminate information on the contribution of forestry to carbon reduction and forest carbon stock measurement and monitoring.

The unit applies to individuals who are involved in carbon reduction activities in the forestry industry.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Resource Management (FRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Collate and disseminate information on forestry contribution to carbon	1.1 Source information on role of forests in carbon cycle and impact of climate change on tree physiology and forest ecosystems

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
reduction	<p>1.2 Research contribution of forests to climate change mitigation and how sustainable forestry practices support carbon reduction strategies, including carbon sequestration and emissions trading schemes</p> <p>1.3 Prepare and present information to professional and non-professional audiences on contribution of forestry to carbon reduction</p>
2. Collate and disseminate information on techniques for estimating forest carbon stock	<p>2.1 Source workplace policies and procedures and reference materials on estimating forest carbon stocks</p> <p>2.2 Gather information on methods for measuring and monitoring forest carbon stocks</p> <p>2.3 Research quality assurance and quality control procedures required to ensure reliability of measurements, data entry, data analysis and data archiving when conducting forest carbon inventory</p> <p>2.4 Review processes involved in interpreting sampling data and estimating carbon stocks from collected data</p> <p>2.5 Source information on processes involved in using growth models to predict biomass and carbon stocks and comparing predicted forest carbon stocks to current available data</p> <p>2.6 Prepare and present information to professional and operational personnel on estimating forest carbon stocks</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret complex technical information on different methods for estimating forest carbon stocks and changes in carbon stock
Writing	<ul style="list-style-type: none"> Prepare written information on complex technical matters for use by a range of professional and non-professional audiences
Oral communication	<ul style="list-style-type: none"> Apply effective communication skills to ask questions and seek clarification on complex and unfamiliar technical concepts related to the contribution of forestry to carbon reduction

Skill	Description
Numeracy	<ul style="list-style-type: none"> Collect, analyse and record complex statistical data related to sample site selection, sampling methods and interpretation of sampling data

Assessment Requirements for FWPFRM5002 Source information on the contribution of forestry to carbon reduction strategies

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- researched and presented information on the contribution of forestry to carbon reduction to one professional and one operational audience
- researched and presented information on estimating forest carbon stock to one professional and one operational audience.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the role of forests in the carbon cycle
- the impact of climate change on tree physiology and forest ecosystems
- the role of forests in climate change mitigation
- the key features and role of forestry in carbon reduction strategies:
 - carbon sequestration
 - emissions trading schemes
- key concepts used in estimating forest carbon stocks:
 - carbon pools
 - biomass
 - carbon stock
 - carbon fluxes
- types of carbon pools:
 - above ground biomass
 - below ground biomass
 - dead wood

- litter
- soil organic carbon
- methods for estimating forest carbon stocks and changes in carbon stock:
 - estimation by default factors
 - estimation by modelling
 - estimation by measurement
- techniques for measuring land areas
- sampling design and sampling methods for estimating carbon stocks
- techniques for conducting measurements in sampling plots
- quality assurance and quality control techniques used in forest carbon inventory
- statistical analysis techniques applicable to biomass and carbon assessments
- methods used to predict biomass growth and carbon stock growth, specifically the use of growth models.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - reference materials on carbon reduction strategies and estimating forest carbon stock
- specifications:
 - workplace policies and procedures on estimating forest carbon stock.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPFRM5003 Contribute to and implement a forest inventory program

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, under the supervision of a senior forester, the individual has planned, implemented and assessed one forest inventory program.

In undertaking this activity, the individual has:

- followed workplace policies and procedures relevant to planning and managing an inventory program
- planned and implemented an inventory assessment process that involves:
 - calculating the current and expected wood volume and yield within a forest, or
 - establishing a monitoring process to enable reporting against marketing, strategic and business plans
- implemented an inventory program in line with documented plan and budget and making adjustments to plan or program
- selected sampling techniques and created sampling designs
- reviewed inventory program and used findings to document improvements to future assessments
- prepared and presented a detailed report, including costs, processes and analysis of findings of the program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- requirements for an inventory program
- site factors impacting on forest inventory programs
- timeline and budget for inventory program
- sampling techniques, methods of measurement and frequency of inventory assessment
- stakeholder consultation techniques

- structure and format of inventory program and performance indicators
- resources and authorisations required for inventory programs
- monitoring processes for reporting against marketing, strategic and business plans
- monitoring procedures for compliance with environmental, safety, workplace and legislative requirements
- procedures for recording and reporting workplace information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computing hardware and software for documenting forest inventory program
 - reference materials for data, images, geographic and topographic information, maps and diagrams relating to inventory assessments
- specifications:
 - requirements for a forest inventory program
 - workplace standards, policies and procedures for forest inventory planning
 - workplace safety and environmental policies and procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5004 Contribute to the planning and conduct of forest valuation

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to contribute to the selection and application of appropriate forest valuation methods to value forest stands.

The unit applies to individuals who undertake forester or forestry field officer job roles in the forest industry.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Resource Management (FRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Recommend forest valuation method	1.1 Determine reasons for proposed forest valuation 1.2 Research legislative requirements, accounting standards set by the Australian Accounting Standards Board (AASB) and industry standards that apply to forest valuation in Australia

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Research features, applications and data requirements of different forest valuation methods</p> <p>1.4 Establish criteria for selecting a forest valuation</p> <p>1.5 Apply selection criteria to recommend the appropriate forest valuation method</p> <p>1.6 Forward recommendation to appropriate personnel and confirm further actions</p>
2. Support forest valuation process	<p>2.1 Confirm and record data on ownership, boundaries, forest inventory, yield estimates and the characteristics and treatments that have been applied to the stand</p> <p>2.2 Conduct forest valuation in accordance with legislative requirements, AASB accounting standards and industry standards</p> <p>2.3 Liaise with and seek support from senior personnel during valuation process, as required</p> <p>2.4 Verify accuracy and reliability of collated data and seek additional information required to confirm valuation as required</p> <p>2.5 Analyse forest stand valuation methods, including quoted price in the market, transactions, present value, lump sum and cost based and select the most suitable for use</p> <p>2.6 Apply software program for valuing forest assets according to workplace procedures</p> <p>2.7 Select alternative valuation methods for forest estates or plantations with particular characteristics</p>
3. Document forest valuation	<p>3.1 Prepare draft valuation report using an agreed method, highlighting findings and rationale</p> <p>3.2 Forward draft valuation report to appropriate personnel and confirm further actions</p> <p>3.3 Maintain records and documentation according to workplace procedures</p>

Foundation Skills

Assessment Requirements for FWPFRM5004 Contribute to the planning and conduct of forest valuation

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, under the supervision of a senior forester, the individual has planned and conducted a valuation of one forest stand.

In undertaking this activity, the individual has:

- used one of the following valuation methods:
 - quoted price in the market
 - transactions method
 - present value method
 - lump sum method
 - cost based methods
- completed a draft valuation report highlighting findings and rationale.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- reasons for obtaining a forest valuation:
 - sale of forest
 - insurance
 - asset valuation for company accounts
 - land use comparisons
 - project evaluation
 - strategic planning equipment
- types, application and advantages and disadvantages of forest valuation methods:
 - quoted price in the market
 - transactions method

- present value method
- lump sum method
- cost based methods
- stand characteristics and treatments:
 - species
 - seed/genetic source
 - year of establishment or regeneration treatment
 - initial stocking
 - fertiliser and weedicide treatments
 - pruning
 - thinning
 - insect and disease attacks and treatments
 - growth, mortality and removals
- methods for valuing forest estates or plantations with particular characteristics:
 - valuing the highest and best use
 - immature forests
 - native forests
 - leased forests
 - joint venture and share farming forests
 - multiple use forests
- software programs for valuing forest assets.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a forest stand to be valued
 - computing hardware and software for forest valuation
 - stand data for forest valuations
- specifications:
 - reference materials for coupes to be valued, including topographic maps, information on land use zonings, harvesting plans, and stand characteristics and treatments
 - access to legislative requirements, the accounting standards set by the Australian Accounting Standards Board (AASB) and industry standards that apply to forest valuation in Australia
 - workplace policies and procedures regarding forest valuation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5005 Contribute to selection and application of forest growth models

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to select and apply a forest growth model to forecast forest growth and yield of a forest stand and to compare forecasts with actual yields.

The unit applies to individuals who undertake forester or forestry field officer job roles in the forest industry.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Resource Management (FRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select method of forecasting forest growth and yield	1.1 Classify stand characteristics that most affect forest growth and yield 1.2 Research different methods of forecasting forest growth and yield

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Determine the key features and data requirements for different forest growth models</p> <p>1.4 Establish criteria for selecting a method of forecasting forest growth and yield</p> <p>1.5 Apply the selection criteria to determine the appropriate method for forecasting forest growth and yield for a stand</p>
2. Apply a forest growth model to forecast forest growth and yield	<p>2.1 Explain how growth models are used to compare results of different silvicultural regimes and scheduling pruning and thinning operations to forestry personnel</p> <p>2.2 Determine the data, including site index, species and genotype, age, establishment stocking, current stocking and basal area, required to simulate forest growth and forecast yield using a growth model</p> <p>2.3 Acknowledge the limitations of inventory data and the effects of inaccurate data from pre-harvest inventory on forecasts</p> <p>2.4 Use a simple stand volume formula to derive the total stand volume for a set of forecasts of basal area and mean top height</p> <p>2.5 Derive current annual increment and mean annual increment</p> <p>2.6 Use a stand growth model software package to simulate the growth and yield of a stand from establishment to clear felling</p>
3. Compare forecasts with actual harvest yields	<p>3.1 Review forecasted yield data for a forest stand</p> <p>3.2 Collate actual harvest yield data for a forest stand, and compare with forecast yield</p> <p>3.3 Document and account for discrepancies between actual and forecast harvest yield</p> <p>3.4 Report on comparison of forecast and actual harvest yield to appropriate personnel, noting potential implications for silviculture practices and forest growth modelling techniques</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret complex written, technical information in source documents related to forest growth models
Writing	<ul style="list-style-type: none"> Design, develop and revise strategic documents appropriate to audience and context
Oral communication	<ul style="list-style-type: none"> Use active listening and questioning techniques to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Analyse and compare complex statistical information related to forest growth and yield

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- simulated the growth and yield of one stand from establishment to clear felling using a stand growth model software package. In undertaking this activity, the individual has:
 - determined data requirements for simulation
 - selected a stand growth model software package
 - assessed quality of inventory data
 - applied software package to simulate stand growth and yield
 - compared and reported on forecast and actual yields.
- simulated the yield of one stand with a recorded silvicultural history and a current inventory data using a stand growth model. In undertaking this activity, the individual has:
 - determined data requirements
 - selected a stand growth model
 - assessed quality of recorded silvicultural history and current inventory data
 - applied model to simulate stand growth and yield
 - compared and reported on forecast and actual yields.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- distinguishing between growth and yield
- methods of forecasting growth and yield:
 - continuous forest inventories
 - permanent sample plots
 - replicated trials

- growth models
- types, features and data requirements of growth models:
 - stand-based models
 - individual tree models
 - diameter class models
- advantages and disadvantages of different forest growth models
- stand characteristics that affect growth and yield:
 - mix of species in a stand
 - stand age
 - site quality
 - density or stocking
 - competition
- stand growth terminology:
 - annual increment
 - mean annual increment
 - annual compound interest rate of growth
- growth model software packages
- inputs to a growth model software package and their limitations:
 - basal area increment factors
 - Weibull functions and breakage functions
 - taper and volume tables
 - site and regime variables
 - log cutting patterns
- formula for calculating forest growth and yield
- techniques for comparing forecasts with actual harvest yields.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - growth model software packages
 - computing hardware required for operation of growth model software packages
 - stand data to be inputted into growth model software package
- specifications:
 - workplace policies and procedures regarding forest growth modelling.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- conducted one biodiversity evaluation in either a native forest or a plantation. In undertaking this activity, the individual has:
 - applied knowledge of forest ecology, biodiversity and the impact of forestry practices on biodiversity
 - established objectives of biodiversity evaluation and its relationship with the regulatory framework
 - planned and implemented biodiversity evaluation according to workplace procedures
 - briefed forestry personnel on biodiversity evaluation
 - gathered, collated and analysed data
 - sought support from senior personnel during planning and implementation of biodiversity evaluation
 - analysed and reported findings of biodiversity evaluation to appropriate personnel
- monitored biodiversity management and conservation practices in one forestry operation in either a native forest or plantation. In undertaking this activity, the individual has:
 - applied knowledge of forest ecology and the impact of forestry practices on biodiversity
 - selected an appropriate method and identified personnel and resources required for monitoring biodiversity management and conservation practices in one forestry operation
 - briefed forestry personnel on the reasons and methods for monitoring biodiversity management and conservation practices in the selected forestry operation
 - gathered, collated and analysed data on forestry operation
 - reported outcomes of monitoring activities to appropriate personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- structure and composition of native forests and plantations
- ecological processes:
 - succession
 - disturbance
 - predation
 - competition
 - climatic
 - hydrological
 - nutrient cycles
 - element cycling, such as carbon sequestration
- flora and fauna species of high conservation significance:
 - types
 - habitat
 - conservation and management strategies
- ecosystem services provided by commercial native forests and plantations:
 - provisioning – water provision, biomass for timber, biomass for firewood, honey, fodder
 - regulating – water flow regulation, soil retention, carbon sequestration and storage, pollination, habitat for species, air filtration, pest and disease control
 - cultural – recreation and tourism, social and community connection, cultural heritage connection, amenity, education and research
- impact of forest management activities on biodiversity:
 - establishment
 - harvesting
 - regeneration
 - road and track construction
 - silvicultural practices
 - haulage
- international conventions and national, state and territory legislation, policies and agreements relating to biodiversity management and conservation
- biodiversity evaluation:
 - methods for evaluating biodiversity values
 - ground survey techniques
 - planning tools and databases
 - procedures to assess habitat suitability for forest-dependant threatened or priority species
 - procedures for identifying and assessing vegetation communities

- procedures for planning and implementing a biodiversity evaluation
- procedures for monitoring biodiversity management and conservation practices in forestry operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a native forest or plantation stand
 - computing hardware and software for preparing reports and analysing data related to biodiversity conservation and management
 - stand data related to biodiversity conservation and management
- specifications:
 - workplace policies and procedures related to the conduct of biodiversity evaluations
 - access to workplace policies and procedures that cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5007 Process and interpret harvester and forwarder optimisation data

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to use and apply a software program for processing harvesting and forwarding optimisation data, compatible with Standard for Forest Machine Data and Communication (StanForD), to monitor wood flow planning and production. This unit includes confirming wood flow planning and production data requirements, accessing StanForD compliant data, using software application features to process data and conduct production and wood flow analysis, and generating reports of production and wood flow across sites, machines and time.

The unit applies to individuals who work as foresters, harvesting managers, wood flow coordinators, value recovery coordinators, forestry planners and forestry contractors in a forest or plantation setting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPFRM5007 Process and interpret harvester and forwarder optimisation data

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has used a StanForD compatible software program to process harvesting and forwarding optimisation data for monitoring wood flow and production in a forestry or plantation setting.

In undertaking these activities, the individual has used the software program and relevant:

- harvester production files to produce six separate reports. Each report must be on one of the following aspects of harvester production:
 - comparison of wood flow production against planned production
 - monitoring harvested log volume by length and diameter classes or actual length and diameter
 - monitoring trees removed from a stand, including diameter distributions of stems harvested
 - comparison of harvester data against docket or target data
 - comparison of operator use of optimiser and manual over-ride
 - mapping of harvester Global Positioning System (GPS) falling location data to identify areas harvested within the forest to current date
- harvester calibration files to generate one report on calibration across harvesters within pre-determined limits
- forwarder production files to produce three separate reports. Each report must be on one of the following aspects of forwarder production:
 - monitoring forwarded logs by length and value
 - monitoring forwarded logs by weight
 - monitoring forwarded log by product type.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of

- Standard for Forest Machine Data and Communication (StanForD) data standards and file types
- machine types and their capability
- principles of value and value recovery in timber harvesting
- wood flow planning procedures
- uses of harvester and forwarder data:
 - improve value and volume recovery
 - production reporting and planning
 - monitor volumes of product length mix from areas being harvested
 - monitor production targets against production data (stem count by diameter at breast height class)
 - map and monitor area harvested in thinning and clear-fell operations
 - reduce production risks through fewer rejects
 - monitor machine calibration
 - monitor cutting strategies
 - monitor operator value recovery
- machine measurement accuracy and calibration and impact on data accuracy
- causes of harvester and docket or target data mismatch:
 - operators not correctly recording harvest data
 - missing bark function
 - different use of conversion factors
 - harvester calibration control checks
- basic GPS concepts
- software package for processing optimisation data:
 - procedures for inputting data and generating reports
 - terminology
- procedures for receiving and transferring data files, constructing reports and recording maintenance
- antivirus software procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:

-
- computer software for analysing harvester and forwarder data
 - computer hardware
 - internet access
 - StanForD compliant data on harvesting operations
 - specifications:
 - workplace policies and procedures applicable to using computer software and hardware
 - production plan
 - workplace safe operating procedures for using computer software and hardware
 - user manual for computer software and hardware.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5008 Create digital forest operational map

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to create digital forest operational maps. This includes determining map specifications, selecting and setting up Geographic Information System (GIS) software package, creating, reviewing and finalising a map, and sharing the map with end-users.

The unit applies to individuals who work as GIS officers, harvest managers, forestry planners, forestry supervisors and field foresters in a forest or plantation setting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Resource Management (FRM)

Assessment Requirements for FWPFRM5008 Create digital forest operational map

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has used a Geographic Information System (GIS) software program to create and share three forestry operational maps according to a work order or work instructions.

In undertaking these activities, the individual has:

- confirmed format, extent, content, scale and intended use of map
- selected base map and added layers
- configured pop-ups and added item information to map
- proofed the draft map and fixed any errors
- saved and stored draft map
- shared draft map for review
- made changes to map based on feedback and workplace procedures
- saved and shared final version of map with intended users.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- range and functionality of GIS software packages
- basic GIS concepts:
 - sources and types of spatial data and projections
 - application areas
 - map features
 - map layers
- procedure to create digital maps:
 - choose base map

- select data
- add layers with relevant data
- change styles
- configure pop-ups
- save map
- proofread map
- share map
- georeferencing maps
- reasons and procedures for checking accuracy, integrity and completeness of data
- fundamental features of maps:
 - title
 - coordinates
 - scale
 - legend
 - data frame
 - orientation
 - citation
- forest operational maps:
 - purpose
 - intended users
 - format
 - information contained in forest operation maps
 - amendments
 - versions.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computer hardware required to run GIS software package
 - GIS software package
 - internet access
- specifications:
 - work order or instruction detailing requirements for forestry operational map
 - workplace safety and environmental protection plans
 - workplace acceptable use policies for use of computing equipment

- manufacturer manual for computing equipment and technical instructions for use of GIS software package.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5009 Create cutting instruction files for forestry harvesters

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to create cutting instructions, which are also known as bucking instructions or APT files, for forestry harvesters. This unit includes sourcing and collecting data sets for use in creating cutting instructions, using a software package to create cutting instructions for forestry harvesters, trialling and editing cutting instructions and transmitting cutting instructions to end-users.

The unit applies to individuals who work as foresters, wood flow coordinators or value recovery coordinators in mechanised harvesting operations in a forest or plantation setting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Forest Resource Management (FRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	1.1 Confirm availability of computer hardware and software required to create cutting instruction files for forestry harvesters 1.2 Check software, hardware and internet access for serviceability

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Confirm functionality of antivirus software and procedures
2. Source and collect data sets	2.1 Source data sets required for the creation of cutting instructions according to software developer specifications and workplace procedures 2.2 Confirm accuracy and format of data sets according to workplace procedures
3. Use software package to create cutting instruction files	3.1 Open software from a laptop computer, personal computer or network terminal and use menus and tools to find the option for creating new cutting instructions 3.2 Use operator manual and online help function to locate details of software features and instructions for use 3.3 Open cutting instructions template for the relevant harvester, and check the version type according to software developer instructions 3.4 Create, name and save new cutting instructions file according to software developer instructions and workplace procedures 3.5 Create value/product matrix according to software developer instructions and workplace procedures 3.6 Enter value and product information and product limitation data according to software developer instructions and workplace procedures 3.7 Enter site details, including site location, harvesting contractor and site crew, according to software developer instructions and workplace procedures 3.8 Save cutting instructions file according to software developer instructions and workplace procedures 3.9 Perform routine checks to ensure accuracy of data and data entry in accordance with workplace procedures
4. Trial and edit cutting instructions	4.1 Establish trial method, objectives and processes according to workplace procedures 4.2 Brief personnel involved in trial and evaluation of draft cutting instructions on their responsibilities and functions according to workplace procedures 4.3 Trial draft cutting instructions and capture and record results according to workplace procedures 4.4 Evaluate trial results and edit cutting instructions according to

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	outcomes of trial and workplace procedures
5. Transmit cutting instructions to end-users	5.1 Disseminate cutting instructions to end-users according to workplace procedures 5.2 Evaluate feedback on cutting instructions from users, respond to issues and problems consistent with own scope of responsibility, and record potential improvements to cutting instructions according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read operating procedures, online help and/or software developer instructions
Writing	<ul style="list-style-type: none"> Use routine text and technical terms in production of documents and reports on trialling of cutting instructions
Oral communication	<ul style="list-style-type: none"> Ask questions to clarify data requirements and data accuracy
Numeracy	<ul style="list-style-type: none"> Interpret numerical and graphical information used in software program

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on two occasions, the individual has created two sets of cutting instructions.

In performing this work, undertaking this activity, the individual has:

- collected relevant data sets for the two sets of cutting instructions
- used a software program to create cutting instructions for a forestry harvester for:
 - one a single assortment of log product
 - one a multiple assortment of log products
- trialled both sets of cutting instructions
- evaluated trial results and edited cutting instructions according to outcomes of trial
- disseminated both sets of cutting instructions to relevant end-users
- evaluated feedback on cutting instructions from users, responded to issues and problems consistent with own scope of responsibility, and recorded potential improvements to cutting instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Standard for Forest Machine Data and Communication (StanForD) data standards, machine types and their capability
- data sets:
 - log specifications
 - product value
 - machine type
- product limitations:

- small end diameter (SED)
- large end diameter (LED)
- stem length
- overcuts
- principles of value and value recovery in timber harvesting
- StanForD harvester standards and files
- purpose of cutting instructions or bucking files (APT files)
- software used to create cutting instructions
- different approaches to bucking:
 - profit-based bucking
 - demand bucking
- sources of data sets required for creation of cutting instructions:
 - log specifications manual
 - company data on log pricing
 - company protocols for naming conventions
 - forest operation plan for site details
- methods for confirming accuracy and format of data required for creation of cutting instructions
- methods of opening cutting instructions template for the relevant harvester and checking the version type
- reasons for selecting correct cutting instructions template for harvester
- methods for naming and saving cutting instructions
- value/product matrix:
 - methods for creating
 - methods for entering data
- procedures for trialling and editing draft cutting instructions
- reasons for trialling cutting instructions
- reasons and procedures for using simulation software in trialling cutting lists
- procedures for transmitting cutting instructions to end-users
- terminology associated with software package
- file and record maintenance procedures
- antivirus software procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a real or simulated forestry work environment forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- computer software for creating cutting instructions for harvester
- computer hardware
- internet access
- data sets required for creation of cutting instructions
- specifications:
 - workplace policies and procedures applicable to using computer software and hardware
 - production plan
 - workplace safe operating procedures for using computer software and hardware
 - user manual for computer software and hardware.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5010 Plan unmanned aerial vehicle (UAV) collection of forestry data

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to plan unmanned aerial vehicle (UAV) collection of forestry data. This includes preparing for UAV data collection, interpreting user requirements or specifications for spatial and environmental data collection, identifying the UAV platform and sensors required for the data collection task, and preparing a data collection plan.

The unit applies to individuals whose work involves planning UAV collection of forestry data in a forest or plantation setting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Resource Management (FRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for UAV collection of forestry	1.1 Review work order, workplace health and safety, environmental protection and emergency procedures to determine job requirements

Elements	Performance Criteria

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and developed a written data collection plan for two different unmanned aerial vehicle (UAV) forestry data collection tasks.

In undertaking this activity, the individual has:

- reviewed work order, workplace health and safety, environmental protection and emergency procedures associated with work task
- selected type and payload of UAV platform best suited to data collection task
- planned UAV forestry data collection to comply with legislative, regulatory and workplace requirements
- identified contingency measures for minimising delays in UAV forestry data collection
- planned workflow for managing UAV forestry data collection
- prepared written forestry data collection plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- benefits of using UAVs in forestry related spatial and environmental data collection
- types of forestry data collected by UAVs:
 - plantation forestry
 - inventory management
 - tree height mapping
 - tree survival counts
 - identification and mapping of cutover areas
 - mapping of wind damage

- plantation health and disease
- communication of forest change
- post-planting stocking and survival
- weed mapping and classifying species
- analysis of regeneration
- monitoring fire and its impact
- quantifying gaps
- post-harvest waste assessment and soil displacement estimation
- types, designs, components and capabilities of UAVs:
 - fixed-wing
 - single-rotor
 - multi-rotor
 - hybrid systems
- UAV payloads:
 - active
 - passive
- types and capabilities of UAV sensors used in forestry:
 - LiDAR
 - multispectral
 - hyperspectral
 - RGB
- UAV ground control station (GCS):
 - basic GCS capabilities
 - peripheral components
 - support equipment
 - mission software tools
 - GCS configuration
- integration of unmanned aerial vehicle and sensors
- file formats
- procedures for workflow planning
- factors impacting on UAV data collection
- regulatory restrictions on UAV use and data collection
- types and ways of overcoming potential delays and setbacks in UAV data collection.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - computer hardware and software
 - internet access
- specifications:
 - work order or instruction detailing requirements for forestry-related spatial and environmental data collection
 - workplace policies and procedures that cover current Work Health and Safety Acts or Occupation Health and Safety Acts, regulations and related industry standards and codes of practice applicable to UAV operations
 - workplace policies and procedures that cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to UAV operations
 - workplace safety and environmental protection plans
 - user manual and technical instructions for UAV equipment and related software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPFRM5011 Quality assure forestry data acquisition by unmanned aerial vehicle (UAV)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to quality assure forestry data acquisition by unmanned aerial vehicle (UAV). This includes establishing quality criteria for UAV data acquisition, conducting pre-flight and post-flight quality assurance checks of UAV data acquisition and preparing a UAV data acquisition quality assurance report.

The unit applies to individuals whose work involves planning UAV collection of forestry data in a forest or plantation setting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Resource Management (FRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish quality criteria for UAV forestry data acquisition	1.1 Confirm UAV forestry data acquisition workflow according to workplace and end-user requirements 1.2 Identify common problems in UAV forestry data acquisition 1.3 Confirm quality assurance checkpoints and associated quality

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	criteria for UAV data acquisition
2. Check UAV forestry data acquisition against quality criteria	<p>2.1 Confirm UAV forestry data collection requirements and proposed UAV data collection method</p> <p>2.2 Conduct pre-flight checks, including flight plan, sensor settings and ground control plan, before the flight, and rectify non-compliances according to workplace procedures</p> <p>2.3 Conduct post-flight quality assurance checks of UAV data acquisition, including standard data and UAV data specific checks, and identify measures to address non-compliances according to workplace procedures</p> <p>2.4 Produce initial compliance and quality assurance report on UAV forestry data, highlighting areas of non-compliance, required remedial actions, and arrangements for repeating quality assurance checks according to workplace procedures</p>
3. Prepare UAV forestry data acquisition quality assurance report	<p>3.1 Produce final compliance and quality assurance report to validate that UAV forestry data is accurate, reliable and fit for use according to workplace procedures</p> <p>3.2 Forward forestry data files for processing according to workplace procedures</p>

Assessment Requirements for FWPFRM5011 Quality assure forestry data acquisition by unmanned aerial vehicle (UAV)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned, conducted and reported on pre-flight and post-flight quality assurance checks of forestry data acquisition for three unmanned aerial vehicle (UAV) flights.

In undertaking this activity, the individual has:

- confirmed quality assurance checkpoints and associated quality criteria for UAV forestry data acquisition
- checked UAV forestry data acquisition against quality criteria
- produced final compliance and quality assurance report to validate that UAV forestry data is accurate, reliable and fit for use
- forwarded forestry data files for processing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- problems associated with UAV data acquisition:
 - equipment and sensor
 - data
 - data collection
 - data management
- UAV project plan checks:
 - flight plan
 - sensor settings
 - ground control plan
- standard UAV data checks:

- delivery completeness and file corruption
- file naming, attributes and coordinate system
- form comparison
- classification statistics
- accuracy of control network
- UAV data specific checks:
 - imagery resolution and overlap
 - image quality
 - imagery-survey control alignment
 - point cloud quality assessment and vertical accuracy
 - DSM quality assessment and accuracy
 - existence of data
 - data extent and coverage
 - internal voids
- file formats
- compliance and quality assurance report:
 - format
 - procedures
- workflow for UAV data acquisition.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computer hardware and software
 - internet access
 - UAV data
- specifications:
 - work order or instruction detailing requirements for planning, conducting and reporting on pre-flight and post-flight quality assurance checks of UAV data acquisition
 - workplace policies and procedures that cover current Work Health and Safety Acts or Occupation Health and Safety Acts, regulations and related industry standards and codes of practice applicable to UAV operations
 - workplace policies and procedures that cover current Environment Protection Acts, regulations and related industry standards and codes of practice applicable to UAV operations

- workplace safety and environmental protection plans
- user manual and technical instructions for UAV equipment and related software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR2201 Hook up felled trees (choker)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to fasten choker cables around logs for yarding from the falling area to the landing, and to assist with other duties.

The unit applies to individuals who work as choker setters in cable logging operations in a forest or plantation harvesting environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards and codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage (HAR)

Elements and Performance Criteria

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- planned and hooked up four turns of felled logs following workplace policies and procedures and related industry codes of practice for log recovery operations
- assisted in shifting lines according to instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- content and application of applicable state or territory code of practice relevant to log recovery activities
- environmental protection practices for forest and plantation operations:
 - safe disposal of waste material
 - cleaning of tools and equipment
- key features of varying site conditions, hazards and their effects on log recovery
- characteristics of trees and logs that can impact on hooking up felled logs with cables
- techniques used by choker setters in the log recovery process
- types and key features of signal systems used for log recovery activities:
 - tooter signals
 - two-way radio
 - visual signals
- industry codes of practice for communication of log extraction signals
- purpose, features, rigging components and operation of cable logging system
- workplace procedures specific to log recovery activities:

- workplace health and safety with particular emphasis on equipment lock-out, use of personal protective equipment (PPE), safe manual handling and fire prevention measures
- communication reporting lines
- reporting hook-up safety and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of company must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a working cable logging operation
- resources, equipment and materials:
 - active cable logging system
 - PPE required in cable logging operations
- specifications:
 - access to workplace safety and environmental protection policies and procedures applicable to log recovery and cable logging activities
 - access to workplace standard operating procedures or operator manual for cable logging equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPHAR2202 Perform landing duties (chaser)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- planned and unhooked four turns, with at least one of these turns containing multiple logs, following workplace policies and procedures and related industry codes of practice for log recovery operations
- assisted in shifting lines according to instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- content and application of applicable state or territory code of practice relevant to log recovery activities
- environmental protection practices for forest and plantation operations:
 - safe disposal of waste material
- key features of varying site conditions, hazards and their effects on log recovery
- characteristics of trees and logs that affect chaser operations in a harvesting environment
- techniques used by chasers to unhook logs at the landing site
- key features of signal systems used for log recovery activities:
 - tooter signals
 - two-way radio
 - visual signals
- industry codes of practice for communication of log extraction signals
- workplace procedures specific to log recovery activities, including:
 - workplace health and safety with particular emphasis on equipment lock-out, use of personal protective equipment (PPE), safe manual handling and fire prevention measures

- communication reporting lines
- reporting chaser safety and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a working cable logging operation
- resources, equipment and materials:
 - active cable logging system
 - PPE required in cable logging operations
- specifications:
 - access to workplace safety and environmental protection policies and procedures applicable to log recovery and cable logging activities
 - access to workplace standard operating procedures or operator manual for cable logging equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR2208 Operate a mobile chipper/mulcher

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate a hand-fed or machine-fed mobile chipping or mulching unit to chip or mulch timber refuse such as branches and other timber waste.

The unit applies to individuals who operate mobile chippers/mulchers as part of arboriculture, forestry, agriculture, conservation and land management, local government, emergency services and other government agency operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPHAR2208 Operate a mobile chipper/mulcher

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- assessed, planned and conducted the chipping or mulching of two different species of material
- followed workplace policy and procedures and current workplace health and safety legislation, regulations and related industry standards and codes of practice applicable to wood chipping or mulching operations
- inspected and carried out routine operator maintenance on one mobile chipper/mulcher on one occasion according to manufacturer requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental protection practices related to wood chipping or mulching operations:
 - energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing waste products
- types of material suitable and unsuitable for chipping and mulching
- types, purpose, features and operation of mobile chipping and mulching units
- capacity of chippers and mulchers to cope with differing sizes and diameters of branch
- feed rates at which material is fed into chippers and mulchers to optimise output without damaging or blocking machinery
- feeding techniques to minimise operator exposure to injury
- techniques for loading chipped/mulched material into truck or transport vehicle
- criteria and methods for checking cutting blade condition

- operator maintenance procedures for fuelling, safety checks, cleaning, lubricating, operational adjustments and cutter inspection for wear or damage, replacement and disposal
- common hazards associated with chipping and mulching operations and methods to minimise associated risks
- workplace procedures specific to chipping and mulching:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling
 - communication reporting lines
 - recording and reporting production outcomes and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting
- resources, equipment and materials:
 - mobile chipper or mulcher
 - truck or transport vehicle suitable for transporting chipped/mulched material if required by site requirements
 - material to chip or mulch
 - PPE required in chipping and mulching operations
 - communication system
- specifications:
 - access to workplace safety and environmental protection policies and procedures applicable to chipping or mulching operations
 - access to workplace standard operating procedures or operator manual for mobile chippers or mulchers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR2209 Trim and cut harvested trees

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the outcomes required to trim and cut harvested (felled) trees with a chainsaw for commercial production and complete operator maintenance.

The unit applies to individuals who trim and cut felled trees as part of commercial forestry operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and industry codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for trimming and cutting felled trees	1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate personnel 1.2 Confirm safety and environmental protection requirements for the task according to workplace procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with trimming and cutting felled trees</p> <p>1.4 Plan trimming and cutting activities according to work order or instruction, harvesting and site plans and environmental conditions</p> <p>1.5 Consult and maintain communication with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Select, fit and use personal protective equipment</p> <p>1.7 Obtain tools and equipment needed for the work, and check for correct operation and safety</p>
2. Assess felled trees visually	<p>2.1 Inspect site for conditions likely to affect safe implementation of trimming and cutting activities</p> <p>2.2 Assess felled trees visually to identify defects, grades and recovery status</p> <p>2.3 Assess felled trees for extraction</p> <p>2.4 Mark felled trees too dangerous to cut safely, and refer to appropriate personnel</p>
3. Plan cutting felled trees	<p>3.1 Move or stabilise felled tree for safe cutting according to workplace procedures</p> <p>3.2 Select cutting pattern to optimise time, volume recovery and quality</p> <p>3.3 Plan cutting sequence to maintain control of cut sections and minimise cutting problems</p> <p>3.4 Select, measure and mark cutting positions according to workplace procedures and industry standard lengths</p> <p>3.5 Clear debris from work area to allow safe access and prevent saw damage and personal injury</p>
4. Use chainsaw to trim and cut felled trees	<p>4.1 Monitor location and movement of other personnel, and modify work to ensure safety</p> <p>4.2 Operate saw to cut felled tree and adjust cutting technique in response to movement and condition of felled tree</p> <p>4.3 Complete cut once started and minimise capping and splitting</p> <p>4.4 Apply retrieval techniques for stuck, pinched or jammed part of chainsaws</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.5 Square cut butts, trim accessible branches, bumps and burls and remove head of felled tree
5. Complete operator maintenance	5.1 Inspect equipment on completion of trimming and cutting activities 5.2 Follow workplace safety procedures to lock out equipment 5.3 Check chain for bluntness or damage 5.4 Remove, sharpen, adjust or replace chain and other components according to manufacturer recommendations and workplace procedures 5.5 Report production outcomes, equipment faults and maintenance requirements to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for FWP HAR2209 Trim and cut harvested trees

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assessed, planned and conducted the trimming and cutting of six felled trees using a chainsaw to optimise time, volume recovery and quality.

In performing this work, there must be evidence that the individual:

- demonstrated three or more cut types from the list below:
 - bridging cuts
 - swinging cuts
 - side bind cuts
 - boring cuts
 - wedge cuts
 - ripping cuts
 - step cuts
- followed workplace policy and procedures, current workplace health and safety legislation, regulations and related industry standards and codes of practice applicable to cutting felled tree operations
- checked and sharpened or changed a saw chain on one occasion according to manufacturer instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- chainsaw cutting techniques used to trim and cut felled trees:
 - bridging cut
 - swinging cut
 - side bind cut

- boring cut
- wedge cut
- ripping cut
- step cut
- felled tree stresses and how they affect tree cutting activities:
 - tension (fibres being stretched)
 - compression (fibres being squashed)
 - neutral fibres
- optimisation in trimming and cutting operations:
 - time
 - value recovery
 - manageable removal of logs
- cutting patterns used to optimise time and recovery of product from felled trees
- cutting sequences used to maintain control of cut sections and minimise cutting problems
- hazards and risks associated with site conditions and effects on chainsaw operations
- methods to identify and explain how timber defects may affect the chainsaw operation
- industry standards:
 - lengths and tolerances and applicable terminology
 - grades for log and applicable terminology
- methods for assessing chain condition
- workplace policies and procedures specific to tree trimming and cutting activities:
 - workplace health and safety, with particular emphasis on equipment lock-out, use of personal protective equipment (PPE) and safe manual handling
 - communication reporting lines
 - recording and reporting production outcomes, equipment faults and maintenance requirements
 - codes of practice
 - harvest plans
- environmental protection practices for harvesting operations:
 - soil and water protection
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing timber and other waste.

Assessment Conditions

Assessment of the skills for this unit of competency must take place under the following conditions:

- physical conditions:
 - competency is to be assessed in a commercial forest operation or a simulated environment that accurately reflects performance in a real workplace setting
- resources, equipment and materials:

- chainsaw and accessories
- suitable felled trees to trim and cut
- PPE required in trimming and cutting felled trees
- communication system
- specifications:
 - access to work order or instruction detailing cutting and trimming operations to be carried out by chainsaw operator
 - access to workplace safety and environmental protecting policies and procedures applicable to trimming and cutting operations and chainsaw use
 - access to workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR2210 Operate a forest machine simulator in a virtual environment

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to use a forestry machine simulator in a virtual forest environment for practicing work methods before learning to operate real equipment.

This unit does not provide technical skills and knowledge that enable a person to operate a forestry machine in the workplace, but rather provides foundation skills in forestry machine operations.

This unit does not include the use of on-board computing functions.

The unit applies to entry level workers who intend to pursue further training and work as forest machine operators in a forest or plantation setting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FWPHAR2210 Operate a forest machine simulator in a virtual environment

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has used a simulator to demonstrate the operation of one type of forest machine in four different harvesting scenarios consistent with workplace conditions.

In undertaking this activity, the individual has:

- reviewed simulator activity requirements
- completed operator log-in
- identified forest machine simulator controls and functions
- selected and used simulator controls to drive forest machine and perform basic machine crane functions
- optimised position of forest machine in the virtual forest environment and selected correct angle and alignment of boom and attachments during simulated operation
- responded to variation in production targets, tree type, slope and terrain characteristics during simulation
- responded to on-screen and instructor advice and take corrective actions as required
- reviewed personal performance data on operation of forest machine simulator.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, uses, capacity of forest machines
- pre-operational checks for forest machines, including service points
- basic components of forest machines
- forest machine hand controls and functions
- operator techniques for safe and efficient operations of forest machines
- basic machine alignment and boom geometry

- basic terminology related to forest machine operations
- basic effects of slope, weather and terrain conditions on forest machine stability and operation
- basic work site and communication requirements
- hazardous or safe working zones in forest machine operations
- health and operational hazards or risks related to forest machine operations
- personal protective equipment required in forest machine operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a simulated environment that represents forest machine operations consistent with workplace conditions
- resources, equipment and materials:
 - forest machine simulator.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3202 Monitor log recovery (rigging slinger)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan for and navigate the extraction or breakout of logs to the landing in a forest or plantation operation. The unit includes directing choker setters, transmitting signals to the yarder operator and assisting with line shifts for cable logging operations.

The unit applies to individuals who work as a rigging slinger operator in cable logging operations in a forest or plantation harvesting environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Assessment Requirements for FWP HAR3202 Monitor log recovery (rigging slinger)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- planned and performed rigging slinger operations on four turns following workplace policies and procedures and related industry codes of practice for log recovery operations
- assisted in shifting lines according to hook tender instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- content and application of applicable state or territory code of practice relevant to log recovery activities
- key features of varying site conditions, hazards and their effects on log recovery
- environmental protection practices for forest and plantation operations:
 - safe disposal of waste material
 - cleaning of plant, tools and equipment
- characteristics of trees that affect rigging slinger operations in a harvesting environment
- industry standard lengths for logs
- techniques used by rigging slingers in the log recovery process
- key features of varying signal systems used for log recovery activities:
 - tooter signals
 - two-way radio
 - visual signals
- purpose, features and operation of cable logging system components, including:
 - rigging components
 - cable systems

- workplace procedures specific to log recovery activities:
 - workplace health and safety, with particular emphasis on use of personal protective equipment (PPE), safe manual handling and fire prevention measures
 - communication reporting lines
 - reporting breakout safety and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a working cable logging operation
- resources, equipment and materials:
 - active cable logging system
 - PPE required in cable logging operations
- specifications:
 - access to workplace safety and environmental protection policies and procedures applicable to log recovery and cable logging activities
 - access to site emergency procedure
 - access to workplace standard operating procedures or operator manual for cable logging equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3203 Operate integrated or split flail and wood chipper with crane

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate an integrated or split flail debarker and wood chipper with crane in an infield wood chipping operation. This unit includes preparing for infield wood chipping activities, conducting pre-operational machinery checks, setting up machinery, loading whole trees and logs with crane, monitoring machine operations, and implementing machine maintenance.

The unit applies to individuals who work as infield wood chipping machine operators in a commercial forest environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWP HAR3203 Operate integrated or split flail and wood chipper with crane

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- planned, prepared and operated either an integrated or split flail and wood chipper with crane on four separate occasions in an infield wood chipping operation according to a work order or instructions
- carried out routine machine maintenance on two occasions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans
- health and safety requirements related to operating an integrated or split flail and wood chipper with crane in infield wood chipping operations:
 - hazardous or safe working zones
 - workplace hazards or risks related to the operation
 - factors that can change or introduce new hazards
 - risk control measures
 - legal obligations and industry standards and/or codes of practice requirements
 - warning signs and their correct positioning
 - vehicle-to-vehicle communication systems and procedures to maintain communication and workplace safety during operations
 - emergency response procedure and firefighting resources
- environmental care related to infield wood chipping operations:

- potential impacts of infield wood chipping operations on onsite and offsite environmental values (cultural heritage, flora and fauna, ground compaction, water contamination and soil erosion)
- control measures, restrictions, legal obligations and industry standards and codes of practice requirements related to the operation
- procedures for safe operation of integrated or split flail and wood chipper with crane:
 - pre-operational checks and detect faults
 - machine stability in different terrain conditions and slopes
 - shut down
- factors and their effects on the stability and operation of integrated or split flail and wood chipper with crane
 - slope and terrain conditions
 - machine specifications and restrictions
- reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, and machine maintenance
- woodchip specifications
- features of integrated or split flail and wood chipper with crane:
 - static/mobile
 - integrated/split flail – chipper
 - crane
 - chains, knives and anvils
 - machine components
 - machine capacity
 - machine preparation and positioning
- techniques for determining and optimising feed rate
- influences on feed rate for flail/chipper:
 - machine capacity
 - type and condition of timber
 - product type and quality requirements
 - loading capacity of transport vehicles
- procedures for loading chips into truck for transport
- mass and load covering requirements of transport vehicles
- machine maintenance, servicing requirements and procedures for removing, replacing and disposing of chains, chipper knives, counter knives and anvil.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an infield wood chipping setting

- resources, equipment and materials:
 - integrated or split flail and wood chipper with crane
 - whole trees and logs to be chipped
 - personal protective equipment required in infield wood chipping operations
 - vehicle-to-vehicle communication system
 - truck to load
- specifications:
 - access to work order or instruction detailing infield wood chipping activities to be carried out by operator
 - access to workplace safety and environmental protection policies and procedures applicable to infield wood chipping operations
 - access to production plan
 - access to workplace safe operating procedures or operator manual for integrated or split flail and wood chipper with crane
 - access to user manual for vehicle-to-vehicle communication system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3204 Operate split flail and wood chipper fed by mobile machine

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate a split flail and wood chipper fed by a mobile machine in an infield wood chipping operation. This unit includes preparing for infield wood chipping activities, conducting pre-operational machinery checks, setting up machinery, loading whole trees and logs with mobile machine, monitoring machine operations, and implementing machine maintenance.

The unit applies to individuals who work as infield wood chipping machine operators in a commercial forest or land clearing settings.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWP HAR3204 Operate split flail and wood chipper fed by mobile machine

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- planned, prepared and operated a split flail and wood chipper fed by mobile machine in an infield wood chipping operation according to a work order or instructions
- carried out routine machine inspection/maintenance on start-up and shutdown of operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans
- health and safety requirements related to operating a split flail and wood chipper fed by a mobile machine in infield wood chipping operations:
 - hazardous or safe working zones
 - workplace hazards and risks associated with the operation
 - factors that can change or introduce new hazards
 - risk control measures
 - legal obligations and industry standards and/or codes of practice related to the operation
 - warning signs and their correct positioning
 - vehicle-to-vehicle communication systems and procedures to maintain communication and workplace safety during operations
 - emergency response procedure and firefighting resources
- environmental care related to infield wood chipping operations:

- potential impacts of operation on onsite and offsite environmental values (cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion)
- control measures, restrictions, legal obligations and industry standards and codes of practice requirements related to the operation
- procedures for safe operation of split flail and wood chipper:
 - pre-operational checks and detect faults
 - machine stability in different terrain conditions and slopes
 - shut down
- factors and their effects on the stability and operation of split flail and wood chipper:
 - slope and terrain conditions
 - machine specifications and restrictions
- reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, and machine maintenance
- woodchip specifications
- features of split flail and wood chipper:
 - static/mobile
 - chains, knives and anvils
 - machine components
 - machine capacity
 - machine preparation and positioning
- procedures for loading chips into truck for transport
- mass and load covering requirements of transport vehicles
- techniques for determining and optimising feed rate
- influences on feed rate for flail/chipper:
 - machine capacity
 - type and condition of timber
 - product type and quality requirements
 - loading capacity of transport vehicles
- machine maintenance, servicing requirements and procedures for removing, replacing and disposing of chains and cutters.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an infield wood chipping setting
- resources, equipment and materials:
 - split flail and wood chipper
 - mobile machine to feed flail and chipper
 - whole trees and logs to be chipped

- personal protective equipment required in infield wood chipping operations
- vehicle-to-vehicle communication system
- truck to load if applicable
- specifications:
 - access to work order or instruction detailing infield wood chipping activities to be carried out by operator
 - access to workplace safety and environmental protection policies and procedures applicable to infield wood chipping operations
 - access to production plan
 - access to workplace safety and environmental protection plans
 - access to site emergency procedure
 - access to workplace safe operating procedures or operator manual for split flail and wood chipper
 - access to user manual for vehicle-to-vehicle communication system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3205 Harvest trees manually (intermediate)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assess harvest sites and trees to be harvested and to plan and safely carry out manual tree-felling using a chainsaw as part of a commercial forestry operation. The unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and practical felling skills.

Individuals competent in this unit should be able to effectively fell most trees except very large trees, and/or those with significant defects and/or characteristics that cause excessive complexity.

Trees typical to the scope of this unit may have some of the following characteristics:

- lean and weight distribution that can be assessed and readily adapted to falling direction with the use of wedges and/or control with hinge-wood
- limited visible damage and/or defect
- multi-stems
- forward lean, backward lean or side lean
- small or medium size diameter that can be safely felled with intermediate felling techniques
- dead trees with minimal visible damage or defects that do not add significant complexity to the cutting technique
- various dimensions relative to other trees when working in a forest environment
- in local site conditions that add additional complexity to the felling operation, including site conditions that impact the working position of the operator or the natural direction of fall of the tree.

The unit applies to individuals who fell intermediate trees as part of commercial forestry operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for harvesting	1.1 Determine job and product quality requirements from work order or instruction and, where required, seek clarification from appropriate personnel 1.2 Confirm safety and environmental protection requirements for the task according to workplace procedures and harvesting plan 1.3 Identify, assess and take actions to mitigate risks and hazards associated with felling trees 1.4 Plan tree harvesting activities according to work order or instruction and environmental conditions 1.5 Consult and maintain communication with team members and other appropriate personnel to ensure that work is coordinated effectively with others in the workplace 1.6 Select, fit and use personal protective equipment 1.7 Obtain tools and equipment needed for the work, and check for correct operation and safety 1.8 Sharpen and adjust chainsaw or change components according to manufacturer recommendations
2. Assess harvest site	2.1 Assess location and stability of harvest site for conditions likely to affect harvesting activities 2.2 Identify and assess environmental conditions according to harvest plan 2.3 Identify trees to be felled according to harvest plan 2.4 Identify log extraction method and requirements 2.5 Determine harvesting requirements and plan tree felling sequence and general falling directions

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	2.6 Assess factors affecting harvesting requirements and detect and control specific forest or site risks and hazards
3. Assess trees and plan felling	<p>3.1 Assess tree visually to identify felling characteristics</p> <p>3.2 Confirm tree is safe to fell</p> <p>3.3 Check planned falling direction and propose deviation if required</p> <p>3.4 Select cutting pattern to optimise time, value recovery and manageable removal of sections</p> <p>3.5 Plan sequence of cuts to fell tree according to standard felling procedures and log quality requirements</p> <p>3.6 Identify trees considered outside own skill level and seek assistance from appropriate personnel where required</p> <p>3.7 Identify suitable escape routes and clear of growth and other obstacles according to environmental care principles and workplace procedures</p> <p>3.8 Note and monitor location and activity of other personnel in the work area and modify activity where required</p>
4. Fell trees	<p>4.1 Fell individual trees using selected cutting and directional falling techniques according to current Australian Standard and industry code of practice</p> <p>4.2 Adjust cutting and directional falling techniques in response to movement and condition of tree</p> <p>4.3 Use planned escape route when tree starts to fall and monitor the fall of the tree until all movement has stopped</p> <p>4.4 Delay movement back into the felling area until all tree material, including from adjacent tree crowns, has fallen or is stable enough to allow safe access back into the felling area</p> <p>4.5 Identify procedures for removal of trees that are hung-up if safe to do so</p> <p>4.6 Fell trees to meet production levels, log extraction methods and site requirements</p> <p>4.7 Dispose of waste materials according to environmental requirements and workplace procedures</p>
5. Maintain chainsaw and cutting attachments	5.1 Follow workplace health and safety procedures and manufacturer instructions to lock out equipment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.2 Inspect chainsaw on completion of activities 5.3 Inspect for damage to chainsaw and cutting attachments and tag for repair, service or replacement according to workplace requirements and manufacturer recommendations if required 5.4 Remove, clean, adjust, sharpen or replace chain and other components according to workplace requirements and manufacturer recommendations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation to determine work requirements
Writing	<ul style="list-style-type: none"> Use technical and workplace specific vocabulary to accurately and legibly complete workplace records and forms
Oral communication	<ul style="list-style-type: none"> Select and use appropriate spoken communication strategies with work colleagues and other personnel on site when felling trees Interpret hand signals with other operators to ensure safe tree felling
Numeracy	<ul style="list-style-type: none"> Complete routine calculations and report on size, length, diameter of felled trees

Assessment Requirements for FWPHAR3205 Harvest trees manually (intermediate)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assessed, planned and conducted the felling of six intermediate trees with a chainsaw, optimising time, value recovery and manageable removal of sections.

In completing this work, the individual must demonstrate that, for each tree, the falling technique was consistent with current Australian Standards and industry codes of practice applicable to tree felling operations.

There must also be evidence that the individual has inspected and carried out routine maintenance on one chainsaw and its cutting attachments on one occasion according to manufacturer requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Australian Standards and codes of practice applicable to tree felling operations
- workplace health and safety requirements applicable to tree felling operations:
 - personal protective equipment (PPE) and clothing
 - safety equipment
 - first aid equipment
 - firefighting equipment
 - hazard and risk control procedures
 - fatigue management procedures
 - appropriate signage
 - elimination of hazardous materials and substances procedures

- safe forest practices, including required actions relating to fire
- techniques for manual handling (shifting, lifting and carrying)
- state/territory forest codes of practice applicable to tree felling operations
- types and purposes of cuts to fell trees:
 - scarf cutting
 - back cutting using different methods to provide hinge-wood and wedges to maintain control of tree
- optimisation in tree felling operations:
 - time
 - value recovery
 - manageable removal of sections
- typical tree defects and how they affect tree felling activities
- methods used to identify intermediate trees:
 - trees that contain hazards and are deemed unsafe to fell
 - trees that are considered outside own skill level
 - where cuts made may lead to loss of control of tree in felling
- hazards and risks related to falling trees with chainsaws and methods to minimise associated risks
- methods used to remove trees that are hung up, and procedures for removal
- methods for assessing chain condition
- cutting patterns used to optimise time to fell trees
- environmental protection measures that meet legal obligations and requirements of the industry, state and local standards and/or codes of practice for falling trees with chainsaws:
 - protection of natural and cultural assets
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials
- types, safe use, operation and maintenance of chainsaws, support tools and attachments
- components of a harvesting plan:
 - extraction plan
 - traffic plan
 - environmental requirements
 - restricted areas
 - identified hazards
 - product volumes
- log extraction methods (skidding, forwarding, using cable or shovel logging)
- work order information regarding:
 - tree felling requirements
 - requirements for product quality
- harvesting plan.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace location or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - chainsaw and accessories
 - suitable trees to fell
 - tools and equipment to fell trees
 - PPE required in tree felling operations
 - communication system
- specifications:
 - access to safety and environmental protection workplace policies and procedures applicable to tree felling and chainsaw operations
 - access to harvesting plan
 - access to workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3209 Harvest trees manually (advanced)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the knowledge and skills required to assess harvest sites and trees to be harvested and to plan and safely harvest trees using a chainsaw as part of a commercial forestry operation. The unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and advanced practical felling skills.

Individuals competent in this unit should be able to effectively fell trees of any size, species and condition, including those with significant defects and characteristics that cause excessive felling complexity, that are deemed safe to fell.

Trees typical to the scope of this unit may have some of the following characteristics:

- lean and weight distribution that adds significant complexity yet can be assessed and adapted to site requirements
- large diameter trees, but not exclusively, that can be safely felled with complex felling heavy forward lean
- lean in a direction away from the fall zone or side-leaning to the available fall zone
- damage or defect that requires complex felling techniques, including trees with visible lightning damage, burnt out trees and those with fire damaged butts
- hung up trees that can be removed safely
- multi legged, hollow butts, culls, stags
- species prone to free splitting and adverse reactions during falling
- complex multi stems
- diameter of tree greater than chainsaw bar length
- terrain, slope and an environment that can add significant complexity to the operation.

The unit applies to individuals who fell advanced trees as part of commercial forestry operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWP HAR3209 Harvest trees manually (advanced)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assessed, planned and conducted the felling of six advanced trees with a chainsaw, optimising time, value recovery and manageable removal of sections.

In completing this work, the individual must demonstrate that, for each tree, the falling technique was consistent with current Australian Standards and industry codes of practice applicable to tree felling operations.

There must also be evidence that the individual has inspected and carried out routine maintenance on one chainsaw and its cutting attachments on one occasion according to manufacturer requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Australian Standards and codes of practice applicable to tree felling operations
- workplace health and safety requirements applicable to tree felling operations:
 - personal protective equipment (PPE) and clothing
 - safety equipment
 - first aid equipment
 - firefighting equipment
 - hazard and risk control procedures
 - fatigue management procedures
 - appropriate signage
 - elimination of hazardous materials and substances procedures
 - safe forest practices, including required actions relating to fire

- techniques for manual handling (shifting, lifting and carrying)
- state/territory forest codes of practice applicable to tree felling operations
- optimisation in tree felling operations:
 - time
 - value recovery
 - manageable removal of sections
- types and purposes of cuts to fall advanced trees:
 - scarf cutting
 - back cutting using different methods to provide hinge-wood and wedges to maintain control of tree
- typical tree defects and how they affect tree felling activities
- methods to identify advanced trees:
 - trees that contain hazards and are deemed unsafe to fell
 - trees considered outside own skill level
 - where cuts made may lead to loss of control of tree in felling
- hazards and risks related to falling trees with chainsaws, and methods to minimise associated risks
- methods used to remove trees that are hung up, and procedures for removal
- methods for assessing chain condition
- cutting patterns used to optimise time to fell trees
- environmental protection measures that meet legal obligations and requirements of the industry, state and local standards and/or codes of practice for falling trees with chainsaws:
 - protection of natural and cultural assets
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing materials
- types, safe use, operation and maintenance of chainsaws, support tools and attachments
- components of a harvesting plan:
 - extraction plan
 - traffic plan
 - environmental requirements
 - restricted areas
 - identified hazards
 - product volumes
- log extraction methods (skidding, forwarding, using cable or shovel logging)
- work order information regarding:
 - tree felling requirements
 - requirements for product quality
 - harvesting plan.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace location or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - chainsaw and accessories
 - suitable trees to fell
 - tools and equipment to fell trees
 - personal protective equipment required in tree felling operations
 - communication system
- specifications:
 - access to workplace safety and environmental protection policies and procedures applicable to tree felling and chainsaw operations
 - access to harvesting plans
 - access to workplace standard operating procedures or operator manual for chainsaws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3212 Operate yarder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate a yarder for log production and use optimised production processes in a commercial forest harvesting environment.

The unit applies to individuals who work as yarder operators in cable logging operations in a forest or plantation harvesting environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation, standards and codes of practice that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage (HAR)

Assessment Requirements for FWP HAR3212 Operate yarder

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- operated a yarder and cable system safely and effectively by performing at least four turns to lift and carry stems and/or logs on slopes from the stump to the roadside or landing area according to a production plan
- carried out routine maintenance on a yarder.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a production plan and site safety and environmental management plans
- hazardous or safe working zones in cable harvesting operations
- health and workplace hazards or risks related to yarder operations, and factors that can change or introduce new hazards
- industry-accepted work health and safety risk control measures, legal obligations and requirements of industry standards and/or codes of practice for yarder operations as outlined in workplace procedures and production plan
- warning signs, their correct positioning, vehicle-to-vehicle communication systems and procedures to maintain communication and workplace safety during yarder operations
- required emergency response procedure, including firefighting resources and emergency response
- potential impacts of yarder operations on onsite and offsite environmental values, including cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion
- environmental control measures, restrictions, legal obligations and requirements of industry standards and codes of practice for yarder operations as outlined in workplace procedures and production plan

- landings usage
- wood flow requirements and extraction and production bottlenecks particular to a production system
- effects of weather on ground conditions
- effects of slope and terrain conditions on yarder stability and operation
- machine specifications, restrictions and safe operating procedures, including stability and operation in different terrain conditions and slopes, and methods to shut down, de-energise and isolate the machine as outlined in workplace procedures or operator manual
- cable systems used in yarder operations
- machine cabin controls and operating procedures
- machine operating techniques to pull stems and/or logs and avoid mechanical damage to products during operations
- techniques to minimise damage to products, machine, cables and environment
- methods to conduct machine and cable system pre-operational checks and detect faults as outlined in workplace procedures or operator manual
- location of machine's major mechanical systems and parts of the machine in which energy is stored as outlined in operator manuals for safe and efficient conduct of the machine operator maintenance tasks
- machine and cable systems maintenance and servicing requirements as outlined in user or operator manuals
- reporting requirements regarding site, incident and hazard, personal reporting, production and machine maintenance.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a working cable logging operation
- resources, equipment and materials:
 - active cable logging system
 - personal protective equipment required in harvesting operations
- specifications:
 - access to workplace safety and environmental protection policies and procedures applicable to forest harvesting operations
 - access to production plan
 - access to site emergency procedure
 - access to workplace standard operating procedures or operator manual for cable logging equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3222 Use on-board computer systems for forwarder

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 5.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Application

This unit of competency describes the skills and knowledge required to use on-board computer technology and software for forwarders to optimise loading processes after processing and extraction in a commercial forest harvesting environment.

The unit applies to individuals who work as forwarder operators. Operators generally work under broad direction to complete routine activities related to harvesting operations and take responsibility for their work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Start up and shut down the on-board computer	1.1 Start up the on-board computer and respond to display prompts by pressing the appropriate buttons 1.2 Edit settings in work mode display to update information about

	<p>operator and the start and end of the shift</p> <p>1.3 Check that a connection exists between the weight scale and the Bluetooth modem where fitted</p> <p>1.4 Use mouse buttons and keyboard to shut down the computer</p>
2. Create an active site file	<p>2.1 Use menus and fields to create a new site, select, disable or add tree assortments to the new site and press button to complete file set up</p> <p>2.2 Use work mode feature and icons to view basic information about machine, engine and auxiliary functions</p> <p>2.3 Use quick adjustment menu and/or the setting mode to select and adjust parameter values for machine movements</p> <p>2.4 Return to work mode display and select option to start new load</p>
3. Register load / production information	<p>3.1 Identify on screen that GPS system is active to ensure it runs correctly and report faults to appropriate personnel in line with workplace procedures</p> <p>3.2 Start loading operations and use registration button and software functions to register and edit load or production parameters according to machine configuration and equipment profile</p> <p>3.3 Use the weight menu to set-up or edit the weight factors and default volumes of a maximum full load for specific tree assortments</p> <p>3.4 Use work mode display and system messages to view information about loading and standard machine operation according to load parameters and machine configuration</p>
4. Calibrate machine weight scale where fitted	<p>4.1 Use calibration menu and methods to conduct regular reference calibration of Active Load Space pressure sensors to ensure accuracy of weighing measurements</p> <p>4.2 Use calibration menu and methods to conduct regular dynamic and static reference calibration of the boom weight scale to ensure accuracy of weighing measurements</p> <p>4.3 Regularly check and reset grapple to the 'zero point', by using reset button on the keyboard panel</p> <p>4.4 Check the static calibration factor for possible changes in weight calibrations</p> <p>4.5 Identify and report faults and errors related to the on-board computer system</p>
5. Store, access and retrieve production data	<p>5.1 Use software menu, sub-menus and display prompts to end production site file and save on a data storage device</p> <p>5.2 Transfer files between computers or via mobile devices and</p>

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 5.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all the elements and performance criteria of this unit. There must be evidence that, on at least one occasion, the individual has:

- created an active site file for loading operation
- registered load and production information at start of loading operation
- set-up and/or edited the weight factors and default volume settings
- used software settings and calibration methods to conduct accurate calibrations of the weight scale and sensors where fitted
- edited parameter values for machine movements
- ended production and saved and transferred file for the production site by using a data storage system or email or mobile devices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- components of wireless weighing system and its mode of operation where fitted
- software and files used with on-board computers including basic features and applications
- navigating on-board computer menus, sub-menus and fields
- fields and data inputs required to start the loading operation
- setting-up and editing the weight factors and default volumes of a maximum load for a variety of tree assortments
- settings and methods for editing parameter values for machine movements
- methods to calibrate the weighing system and improve accuracy of measurements
- factors that affect accuracy of the weighing measurement
- ending production and saving and transferring files using a data storage system or mobile app

- methods to identify faults related to the on-board computer system and global positioning system (GPS).

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a logging site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - forwarder equipped with on-board computer and weighing system
 - data storage system or mobile system/app for the purpose of saving and transferring production files
 - personal protective equipment required in harvesting operations
- specifications:
 - access to user manual for the on-board computer system

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3232 Operate harvesting machine with winch-assist system

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate a harvesting machine with a winch-assist system. This unit includes planning for work, identifying hazards and risks, assessing worksite conditions, safely and securely positioning the anchor and carrying out machine operator maintenance.

The unit applies to individuals who work as winch-assisted harvester operators in a forest or plantation setting.

Individuals undertaking this unit must be competent operators of at least one of the following types of forest machines: skidder, forwarder, harvester or feller buncher.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWP HAR3232 Operate harvesting machine with winch-assist system

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- planned, prepared and safely and effectively operated two different types of harvesting machines with winch-assist system on two occasions according to a work order or work instructions. The harvesting machines must be selected from the following:
 - skidder
 - forwarder
 - harvester
 - feller buncher
- carried out routine maintenance on a harvesting machine with winch-assist system on two occasions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements in production, site safety and environmental management plans relevant to forest harvesting operations
- industry standards, codes of practice and guidelines for harvesting on steep slopes and their requirements as outlined in site safety and environmental management plans
- safe work procedures and safe working zones in forest harvesting operations
- hazards and risks related to operating harvesting machines with winch-assist system, and factors that can change or introduce new hazards
- types and correct positioning of warning signs, vehicle-to-vehicle communication systems, and procedures to maintain communication and workplace safety during winch-assist harvesting operations
- firefighting and emergency response procedures

- potential impacts of winch-assist harvesting operations on onsite and offsite environmental values:
 - cultural heritage
 - flora
 - fauna
 - ground compaction
 - water contamination
 - soil erosion
- environmental protection procedures relevant to forest harvesting operations
- types of winch-assist systems:
 - systems with one cable, where the winch is attached to the harvesting machine (integral)
 - systems with one or more winches fitted to a machine positioned at the top of an incline (independent)
- reasons for using winch-assist system:
 - safety
 - available steep slope fibre
 - reduce manual felling
- maximum safe slope for using harvesting machines with winch assist system
- features of winch-assist system:
 - cables and end termination fittings
 - safety, braking and emergency backup systems
- procedures for operating winch assist system:
 - pre-start checks of cables and end termination fittings
 - operation of controls for winch-assist system
 - procedures for positioning machine on slope
 - techniques to increase traction and maximise stability of harvesting machine before and during operation
 - methods to detect faults as outlined in operator manual
 - machine and cable systems maintenance and servicing requirements as outlined in operator manual
- criteria for safe placement of winch-assist machine:
 - access
 - ground stability
 - alignment to felling face
 - cable path
 - cable departure point from anchor
- effects of slope and terrain conditions on machine stability and operation
- harvesting machine types, specifications, restrictions and safe operating procedures, stability and operation in different terrain conditions and slopes, and methods to shut down the machine as outlined in workplace procedures or operator manual

- reporting requirements regarding site, incident and hazard, personal reporting, check-in, production, machine maintenance and block completion.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest harvesting setting
- resources, equipment and materials:
 - harvesting machines with winch-assist system
 - trees to be harvested
 - personal protective equipment required in harvesting operations
 - vehicle-to-vehicle communication system
- specifications:
 - access to work order or instruction detailing harvesting activities to be carried out by operator
 - access to workplace safety and environmental protection policies and procedures applicable to forest harvesting operations
 - access to harvesting plan
 - access to site emergency procedure
 - access to workplace safe operating procedures or operator manual for harvesting machine and winch-assist system
 - access to user manual for vehicle-to-vehicle communication system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPHAR3234 Conduct mechanical processor operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned, prepared and safely and effectively operated a wheeled or tracked mechanical processor to process one batch of trees and to segregate and stack logs in a commercial forest harvesting environment.

In undertaking this activity, the individual has:

- determined job requirements from work order or instruction
- complied with workplace health and safety requirements, including use of personal protective equipment (PPE) and machine guards, for the task
- operated mechanical processor safely and effectively within equipment capabilities and limitations
- adjusted operating techniques in response to site conditions
- maintained log stacks, with consideration given to providing for anticipated stock levels, stock rotation requirements, size, segregation of lengths, species, grades
- visually assessed delivered logs for characteristics including species type, diameter, length and grade, and directed to additional locations for further processing and stacking
- monitored trees for unexpected characteristics that may cause danger and referred to appropriate personnel
- established communication with other personnel and monitored their movements to maintain safety on site
- conducted pre-operational and post-operational checks, routine cleaning and operational servicing of equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information and requirements contained in a work order, production plan and site safety and environmental management plans

- health and operational hazards or risks related to mechanical processor operations, and factors that can change or introduce new hazards
- industry-accepted work health and safety risk control measures, legal obligations of the current Work Health and Safety Acts or Occupational Health and Safety Acts and regulations, and requirements of industry standards and/or codes of practice for mechanical processor operations as outlined in workplace procedures and production plan
- the types and correct positioning of industry-accepted warning signs, vehicle-to-vehicle communication systems and procedures to maintain communication and work safety during mechanical processor operations
- required emergency response procedures, including firefighting resources and emergency response
- potential impacts of mechanical processor operations on on-site and off-site environmental values, including cultural heritage, flora, fauna, ground compaction, water contamination and soil erosion
- industry-accepted environmental control measures, environmental restrictions, legal obligations of the current Environment Protection Acts and regulations and requirements of industry standards and/or codes of practice for mechanical processor operations as outlined in workplace procedures and production plan
- tree shapes, species, quality characteristics and log defects particular to the site and production system
- effects of weather on ground conditions
- effects of slope and terrain conditions on machine stability and operation
- operational procedures and checks, including start-up and shutdown procedures
- operating and maintaining machine, attachments and ancillary equipment in line with manufacturer instructions
- industry-accepted reporting requirements regarding site, incidents and hazards, personal reporting, check-in, production, machine maintenance and block completion.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - log landing site
 - wheeled or tracked mechanical processor
 - log sheets for recording measurement and operation
 - PPE suited for operation of a mechanical processor
- relationships:
 - on site personnel for individual to interact with and monitor their movements
- specifications:

- workplace health, safety and environmental policies and procedures applicable to mechanical processor operations
- workplace policies and procedures for operating a mechanical processor
- workplace emergency procedure.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR3235 Conduct mechanically assisted tree falling operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to use machinery, winches and cables to push or pull trees away from their natural direction of fall.

The unit applies to individuals who operate mechanically assisted tree falling equipment as part of forestry operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for tree pushing or pulling	1.1 Determine job requirements from work order or instruction and, where required, seek clarification from appropriate personnel 1.2 Confirm safety and environmental requirements, including use of personal protective equipment (PPE), for the task according to workplace procedures 1.3 Identify, assess and take actions to mitigate risks and hazards

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>associated with mechanically assisted tree falling operations</p> <p>1.4 Identify emergency plan procedures to follow in the event of an incident or accident</p> <p>1.5 Select appropriate cutting equipment and pushing or pulling equipment for work, and check for operational effectiveness</p> <p>1.6 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.7 Identify type and quantity of trees to be pushed or pulled, and assess for safe working conditions</p> <p>1.8 Plan tree pushing or pulling activities according to workplace procedures and environmental requirements</p>
2. Assess and plan tree pushing or pulling	<p>2.1 Assess tree location and stability for conditions likely to affect safety of tree pushing or pulling activities</p> <p>2.2 Visually assess tree for defects, grade and recovery status</p> <p>2.3 Mark trees too dangerous to be felled safely and refer to appropriate personnel</p> <p>2.4 Apply manual or mechanical techniques to clear growth around tree</p> <p>2.5 Plan cutting sequence to control direction of the fall and minimise damage to the tree, hang-ups and surrounding environment</p> <p>2.6 Plan and clear an escape route</p> <p>2.7 Establish and maintain communication with other personnel to ensure safety</p>
3. Push or pull trees	<p>3.1 Perform pre-start-up checks on equipment according to workplace procedures</p> <p>3.2 Monitor movement and whereabouts of other personnel to ensure safety</p> <p>3.3 Remove and clear leaders according to tree pushing or pulling plan</p> <p>3.4 Identify and diagnose unexpected tree characteristics, and review planned actions</p> <p>3.5 Check winches, cables and machinery for correct tension and position and make scarf cut according to planned falling direction and safety requirements</p> <p>3.6 Make appropriate cuts below scarf cut to assist fall angle of tree</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>3.7 Use planned escape route once tree begins to fall</p> <p>3.8 Monitor movement of tree on ground until stable, and immediately flag and clear trees that hang up</p> <p>3.9 Clear work site of refuse created by tree falling following workplace environmental care procedures</p> <p>3.10 Record and report tree pushing or pulling operations according to workplace procedures</p>
4. Conduct operator maintenance	<p>4.1 Follow equipment lock-out procedures according to workplace procedures and manufacturer specifications</p> <p>4.2 Inspect condition of tools and equipment on completion of felling activities</p> <p>4.3 Identify blunt or damaged chainsaw chain</p> <p>4.4 Remove, sharpen, maintain, adjust and refit chainsaw chain and other components according to manufacturer recommendations</p> <p>4.5 Assess and adjust chainsaw setup according to workplace procedures</p> <p>4.6 Check and service tree pushing or pulling equipment according to workplace procedures</p> <p>4.7 Record and report equipment maintenance activities according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read safety plans and instructions relevant to mechanically assisted tree falling operation
Writing	<ul style="list-style-type: none"> Complete paper-based or electronic forms to record production and maintenance information
Oral communication	<ul style="list-style-type: none"> Ask questions to clarify work instructions

Skill	Description
Numeracy	<ul style="list-style-type: none"> Estimate height and distance between trees

Assessment Requirements for FWPHAR3235 Conduct mechanically assisted tree falling operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has used machinery, winches and cables to push or pull one tree away from the natural direction of fall.

In undertaking this activity, the individual has:

- prepared, planned and carried out mechanically assisted pushing and pulling operations to fall one tree
- assessed site and tree conditions and planned to work safely
- complied with safety and environmental requirements including use of personal protective equipment (PPE)
- followed work plan for conducting mechanically assisted tree falling operations
- used cutting equipment safely, including saws and chainsaws, along with procedures for chainsaw lock-out
- directed pulling or pushing equipment safely, including excavators, winches and grabs
- planned cutting sequence to control the direction that tree falls and minimise damage to tree, equipment and surrounding environment
- established communication with other personnel and monitored their movements to maintain safety on site
- used and maintained pushing and pulling tools, machinery and equipment
- conducted operator maintenance on a chainsaw.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for conducting mechanically assisted tree falling operations

- environmental protection requirements, including the safe disposal of waste material and the cleaning of plant, tools and equipment
- risks and hazards associated with mechanically assisted tree falling operations
- characteristics of trees and timber defects
- workplace standards, requirements, policies and procedures for conducting mechanically assisted tree falling operations
- tree pushing or pulling methods
- chainsaw operation, cutting sequences and safety
- procedures for condition assessment of chainsaw chain and tree pushing or pulling equipment
- types of tools and equipment used in mechanically assisted tree falling operations, and procedures for their safe use, operation and maintenance
- procedures for recording and reporting workplace records and information
- workplace health and safety requirements, fire protocols and emergency evacuation procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site with trees that can be felled away from their natural direction of fall
 - chainsaws, machinery or winches and cables to push or pull trees, and consumable materials used in mechanically assisted tree falling operations
 - PPE required for conducting mechanically assisted tree falling operations
- relationships
 - work team and other personnel in proximity to work site
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to conducting mechanically assisted tree falling operations
 - workplace procedures related to conducting mechanically assisted tree falling operations
 - manufacturer manual for chainsaw.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWP HAR4206 Implement environmental management practices in timber harvesting operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to manage timber harvesting operations to minimise environmental impact and meet the environmental management requirements specified in the relevant harvest plan.

The unit applies to individuals whose work involves applying environmental management practices to forest harvesting operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify environmental management requirements in forest	1.1 Review harvest plan to identify features of the environment that require protection and required environmental protection measures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
harvest plans	<p>1.2 Identify resources required to implement the environmental protection measures specified in the harvest plan</p> <p>1.3 Recognise legislative, regulatory and business consequences of non-compliance with environmental management requirements in harvest plans</p> <p>1.4 Confirm environmental management indicators for the forest harvesting operation</p> <p>1.5 Confirm methods used to monitor compliance with and achievement of the environmental management indicators</p>
2. Apply environmental management requirements for a forest harvesting operation	<p>2.1 Communicate environmental management requirements and strategies to work team involved in harvesting operation prior to starting work</p> <p>2.2 Manage harvesting operation to comply with environmental management indicators, workplace procedures and harvest plan requirements</p> <p>2.3 Identify non-compliances with environmental management indicators according to workplace procedures</p> <p>2.4 Rectify and report non-compliances with environmental management indicators according to workplace procedures</p> <p>2.5 Assess root cause of non-compliance and implement appropriate changes in work practices</p>
3. Monitor implementation of environmental management requirements for a forest harvesting operation	<p>3.1 Implement strategies for monitoring compliance with environmental management indicators</p> <p>3.2 Record performance against environmental management indicators for all harvesting stages, including pre-harvesting and post-harvesting, according to workplace and contractual requirements</p> <p>3.3 Report performance against environmental management indicators to appropriate stakeholders according to legislative and contractual requirements</p> <p>3.4 Analyse environmental management data from tree harvesting operations to assist with planning future harvesting operations</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret complex and unfamiliar regulatory and environmental information affecting harvest plans
Writing	<ul style="list-style-type: none"> Complete routine forms related to environmental management practices used in forest harvest operations
Oral communication	<ul style="list-style-type: none"> Use interactive communication techniques to communicate information on environmental management practices to forest harvest work teams Ask open and closed probe questions to confirm that work team members are aware of environmental management practices to be used in forest harvest operations
Numeracy	<ul style="list-style-type: none"> Perform routine calculations related to the collation and analysis of environmental management indicators for forest harvesting operations

Assessment Requirements for FWP HAR4206 Implement environmental management practices in timber harvesting operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed one management strategy for one timber harvesting operation to minimise environmental impact and meet the environmental management requirements specified in the relevant harvest plan.

In undertaking this activity, the individual has:

- reviewed the harvest plan to identify environmental assets, environmental indicators and environment protection measures
- identified resources required to implement the environmental protection measures specified in the harvest plan
- confirmed methods used to monitor compliance with and achievement of environmental management indicators
- communicated environmental management requirements and strategies to work team
- coordinated harvesting operation to comply with environmental management indicators, workplace procedures and harvest plan requirements
- monitored achievement of environmental management requirements and identified non-compliances with indicators
- recorded and reported performance against environmental management indicators.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonwealth, state, territory or local government regulations and codes of practice relevant to environmental management in harvest operations
- features of the environment that may require protection in harvesting operations:
 - adjacent properties

- physical structures
- environmentally sensitive sites
- waterways and riparian areas
- Indigenous and other culturally important sites
- archaeological sites
- soil
- endangered plant and animal species
- habitats
- environmental management strategies used in harvesting operations to minimise or avoid environmental damage associated with:
 - fuel storage
 - machine servicing
 - tree felling, log extraction and machinery operation
 - logging debris and slash
 - spread of weeds and pests
 - water runoff
 - road construction
 - disposal of waste material
 - cleaning plant, tools and equipment
- environmental management indicators:
 - water quality and quantity
 - soil condition
 - native flora and fauna protection
 - maintenance of culturally significant landscapes, natural or anthropogenic formations and constructions
- strategies for monitoring compliance with environmental management indicators:
 - field checks
 - documentation
- harvest plans:
 - purpose of harvest plans
 - format, content and use of plans
 - method of identifying environmental protection requirements in harvest plans
- types, purpose and ways of determining buffer zones, protected areas and erosion control measure.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - harvest plan
 - a coupe for a harvesting operation
- specifications:
 - workplace policies and procedures for meeting the environmental management requirements of harvest plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPHAR4207 Conduct a wood volume and yield assessment

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, for a sample area, planned, implemented, reported on and reviewed one wood volume and yield assessment that includes:

- timber volume by class sizes
- timber quality
- timber damage
- form and rates of growth.

In undertaking this activity, the individual has:

- determined the sample area for the assessment
- documented a plan to assess wood volume and yield for the sample area
- negotiated a schedule for the assessment with other forest personnel
- coordinated personnel and resources for the assessment and obtained permits
- directed data collection activities
- ensured compliance with quality, workplace health and safety and environment protection procedures throughout the assessment
- accurately and safely calculated wood volume and yield from the sample area
- recorded and reported wood volume and yield assessment results
- reviewed assessment procedures for potential improvements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures for conducting a wood volume and yield assessment
- volumes and yields associated with different species that includes:
 - quantity (gross volume) of timber per hectare

- estimated yield (net volume) of useable timber per hectare
- assessment techniques and methods for measuring and calculating wood volume and yield equipment for conducting a wood volume and yield assessment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - an area of forest in which to conduct a wood volume and yield assessment
 - equipment for conducting a wood volume and yield assessment
- specifications:
 - work instructions for conducting a wood volume and yield assessment
 - workplace safety and environmental policies and procedures applicable to forestry operations
 - workplace procedures for conducting a wood volume and yield assessment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR4208 Plan for and coordinate fire salvage operations

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to plan and coordinate a salvage operation to recover commercially viable trees, immediately after fire in a forest or farm forest setting, before degradation and/or insect infestation occurs.

The unit applies to individuals involved in planning and supervising fire salvage operations as part of forestry operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and coordinated one fire salvage operation.

In undertaking this activity, the individual has:

- produced a salvage plan
- confirmed workplace health and safety procedures, including the use of personal protective equipment (PPE), lock-out procedures and safe manual handling techniques
- confirmed regulations, prescriptions and standards relevant to fire salvage operations
- consulted with key stakeholders, including local community and land owners, on the proposed fire salvage operation
- coordinated the salvage operation
- coordinated haulage of logs from site according to workplace procedures
- coordinated post-salvage landscape works to allow regeneration according to salvage plan and workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations, prescriptions and standards relevant to fire salvage operations environmental protection practices for forest and farm forest settings affected by fire:
 - safe disposal of waste material
 - cleaning of plant, tools and equipment
 - recycling and re-use of timber with defects
 - minimising the impact of mechanical equipment on the environment
 - leaving the site in a safe and tidy condition to allow for regeneration

- sustainable forest management, at a basic level of understanding, and the role of salvaging fire affected trees in the recovery of fire damaged forests
- key impacts of fire on a forest site, and effects on fire salvage operations:
 - characteristics of burnt trees
 - how fire has affected stability of trees
 - what fire has done to underlying scrub
 - how safe the forest is to enter
 - environmental hazards and risks to worker safety
- key processes in fire salvage operations:
 - planning and coordinating salvage operations
 - established chain of command for communication of information and instruction
 - methods to assess fire damaged trees
 - harvesting and extraction techniques for fire damaged trees
- types of equipment for trimming and felling fire damaged trees; their purpose, features and operation
- workplace standards, policies and procedures for the assessment, planning and coordination of fire salvage operations:
 - workplace health and safety specific to harvesting trees in fire damaged forests
 - environmental protection
 - recording and reporting on fire damage and commercial viability of tree harvest
 - documenting fire salvage plans.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a forestry site for salvage operations
 - PPE, personnel, equipment and materials required for fire salvage operations
- specifications:
 - workplace policies and procedures on fire salvage operations
 - workplace safety and environmental policies and procedures applicable to fire salvage operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWP HAR4209 Plan for and coordinate forest harvesting operations

Modification History

Release	Comments
Release 2	This version released with FWP Forest and Wood Products Training Package Version 8.0.
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and coordinated harvesting operations according to a harvesting plan for one established coupe.

In performing this task, the individual has:

- confirmed workplace health and safety procedures, including the use of personal protective equipment (PPE), lock-out procedures and safe use of plant and equipment
- confirmed chain of command for communicating instructions and information
- reviewed harvesting plan, produced harvesting schedule and identified all personnel, equipment and materials required for harvesting operation
- coordinated and monitored the implementation of the harvesting plan for the coupe
- monitored compliance with environmental protection, health and safety and workplace procedures and harvest plan requirements
- reviewed harvesting operations, evaluated problems and reported to appropriate personnel
- used information gathered from review of harvesting operation in planning future harvesting operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- planning permit application and approval processes
- harvesting and extraction methods
- harvesting volume calculations
- key features of operational issues for harvesting coupes, including:

- site preparation
- operation of landings and snig tracks
- cartage operations
- environmental hazards and protection measures, including:
 - minimising temporary, short-term, long-term and permanent damage to natural vegetation and landscape
 - soil and water protection
 - safe disposal of waste material
 - cleaning of plant, tools and equipment
- workplace health and safety hazards, risks and control measures
- fire protection requirements
- wet weather operations and restrictions
- types, features, purpose and operation of equipment used for harvest operation
- personnel used for harvest operations
- workplace policies and procedures for harvest operations, including:
 - documenting harvest work plans
 - communication reporting lines
- recording and reporting harvest plan implementation issues.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a coupe for a harvesting operation
- specifications:
 - harvest plan
 - workplace policies and procedures for implementing harvest plans
 - workplace health and safety and environmental protection policies and/or procedures applicable to forestry operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPHAR4210 Plan for and coordinate log recovery (hook tender)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to coordinate operational planning and setting up of cable log recovery systems as part of forestry operations, including coordinating and supervising rigging slingers, yarders, choker setters and chasers.

The unit applies to individuals whose job role includes coordinating the operational planning and setting up of cable log recovery systems.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Harvesting and Haulage (HAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for hook tender operations	1.1 Determine job requirements from work order or instruction, and where required seek clarification from appropriate personnel

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Confirm safety and environmental requirements, including use of personal protective equipment, for the task according to workplace procedures</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with cable operation activities</p> <p>1.4 Identify emergency and evacuation procedures to follow in the event of an incident or accident</p> <p>1.5 Confirm chain of command for communication of information and instructions and consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Identify required type and quantity of cable recovery equipment, and assess for safety and operational effectiveness in line with manufacturer recommendations</p> <p>1.7 Plan cable operation activities according to workplace procedures</p>
2. Plan cable system layout	<p>2.1 Obtain and evaluate information to plan cable system layout and inspect site for hazards and factors affecting harvesting operations</p> <p>2.2 Provide personnel with information about landing location and size, hauling boundaries, access routes and construction requirements</p> <p>2.3 Consider code of practice, site topography and minimising system design additions, and select cable system type to optimise log extraction rate</p> <p>2.4 Identify general requirements for anchor points, backline and intermediate supports, and provide instruction to fallers</p>
3. Coordinate yarder and cable system setup	<p>3.1 Select rope sizes for lines according to code of practice, yarder capacity, system design and manufacturer recommendations</p> <p>3.2 Select components and rigging to meet code of practice requirements, system design and manufacturer recommendations</p> <p>3.3 Inspect and install components and lines</p> <p>3.4 Direct and assist personnel to lay out lines, select anchors and position mobile backstops</p> <p>3.5 Assess felled trees for location, size and obstructions</p> <p>3.6 Plan recovery extraction sequence to minimise line shifts, log and environmental damage</p> <p>3.7 Select support trees and provide directions for rigging</p> <p>3.8 Check unloaded and loaded system performance, and calculate</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	loads to ensure they are within system and equipment capacity 3.9 Monitor operations and change and communicate procedures or system design to improve safety and payload efficiency
4. Coordinate rigging of towers, trees and yarders	4.1 Check cable system plans and determine operational requirements for tower and support trees 4.2 Ensure rigging of towers and trees complies with code of practice and manufacturer recommendations 4.3 Check and select support trees to be rigged, guylines and anchor points 4.4 Select rigging and rope sizes to meet load 4.5 Provide directions to check components for wear, failure or missing parts prior to rigging 4.6 Identify faults and take corrective action 4.7 Coordinate rigging on machine towers to prepare, assemble and fit operational lines, prior to raising according to system design 4.8 Identify climbing and pass line equipment 4.9 Coordinate guyline positioning and rigging within location angle requirements to provide minimal difference in length and tension 4.10 Check system components for size, safe working load, layout, position, safety straps, joins, lead angles and operating angles
5. Coordinate line shifts and rigging modifications	5.1 Anticipate line shifts and prepare required rigging in advance 5.2 Diagnose limitations of system design or positioning, and plan modifications according to code of practice and manufacturer recommendations 5.3 Monitor operations, and as required change and communicate procedures to improve safety and payload efficiency 5.4 Locate new support trees, anchor points and mobile tail anchor position 5.5 Assign riggers to prepare and rig according to system requirements 5.6 Record and report production processes and equipment faults according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read and comprehend familiar workplace documents, including workplace health and safety procedures and operational manuals
Writing	<ul style="list-style-type: none"> Complete workplace forms and reports on breakout process and equipment faults
Oral communication	<ul style="list-style-type: none"> Ask questions and actively listen to clarify contents of work plans Provide clear, unambiguous rigging instructions to site personnel
Numeracy	<ul style="list-style-type: none"> Complete routine calculations to optimise log extraction rate for number and size of felled trees Identify and interpret numerical requirements within codes of practice and manufacturer recommendations Complete calculations involving height, length, weight, tension, angles and loads to determine efficient and safe operational capacity of rigging Identify boundaries on maps and plans, and calculate spatial requirements for yarder and rigging operations

Assessment Requirements for FWP HAR4210 Plan for and coordinate log recovery (hook tender)

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated the operational planning and setting up of one cable log recovery system.

In undertaking this activity, the individual has:

- planned and coordinated the establishment of one of the following cable recovery systems:
 - high lead (no skyline)
 - standing skyline
 - running skyline
- complied with safety and environmental requirements, including use of personal protective equipment (PPE)
- confirmed chain of command for communication of information and instructions and consulted with appropriate personnel to ensure that work is coordinated effectively with others in the workplace
- coordinated rigging of towers, trees and yarders according to workplace policies and procedures and related industry codes of practice for log recovery operations
- coordinated line shifts and rigging modifications according to workplace policies and procedures and related industry codes of practice for log recovery operations
- monitored operations and as required changed and communicated procedures to improve safety and payload efficiency
- recorded and reported production processes and equipment faults according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- content and application of applicable industry code of practice for log recovery activities
- key features of these varying environmental conditions and effects on the layout, setup and operation of cable systems for log recovery:
 - fallen trees
 - general forest lean
 - ground growth
 - ground hazards and obstacles
 - ground slope
 - density of trees
 - wet and adverse weather conditions
 - wind speed and direction
- environmental protection practices for cable logging operations:
 - safe disposal of waste material
 - cleaning of plant, tools and equipment
 - soil and water protection
- industry standard lengths for logs
- operational planning processes for:
 - designing and coordinating the establishment of cable recovery systems
 - determining the most time and cost effective cable system for log recovery
- techniques used in cable log recovery:
 - log extraction methods
 - rigging techniques
- typical industry chain of command for communication of information and instruction
- cable logging systems and rigging components
- system design additions:
 - blind leads
 - bridling
 - multispans
- yarders and anchors:
 - anchors
 - block stumps
 - mobile backstops
 - tailholds
- lines:
 - extensions
 - guylines
 - haulback lines
 - mainlines
 - skylines
 - strawlines

- towers and support trees
- workplace procedures specific to cable log recovery coordination:
 - workplace health and safety, with particular emphasis on use of equipment
 - communication reporting lines during setup and operation of cable systems for log recovery
 - recording and reporting production process and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an active cable logging operation or an environment that accurately reflects workplace conditions
- resources, equipment and materials:
 - coupe with logs for recovery
 - cable system and associated rigging equipment for log recovery yarder and anchors
 - PPE suitable for log recovery coordination
- relationships:
 - a team of rigging slingers, yarders, choker setters and chasers with whom the individual can interact
- specifications:
 - workplace safety and environmental policies and procedures applicable to cable logging operations
 - workplace procedures for cable logging operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPNSY2001 Collect tree seeds

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has collected, assessed, cleaned and stored one batch of seeds for one species of tree.

In undertaking this activity, the individual has:

- identified the location and obtained appropriate approvals for the collection of tree seeds
- collected tree seed from plants and planted areas using the appropriate method selected from:
 - climbing
 - shaking
 - shooting
 - ground collection
- used the appropriate separation methods selected from:
 - hand selection
 - wind separation/winnowing
 - sieving
 - vibrating
 - flotation
 - drying
 - husk crumbling
- packaged tree seed for storage using appropriate technique
- treated collected tree seed to prevent deterioration using methods selected from:
 - heat
 - mechanical
 - chemical
- controlled the following environmental factors when packaging collected tree seeds:
 - temperature
 - light

- moisture
- recorded details of tree seed species, weight and place of origin
- complied with workplace safety procedures, including the use of personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- collection techniques according to health of parent plant:
 - hand picking
 - careful and selective pruning
- common separation methods used to treat and weigh seed:
 - hand selection
 - wind separation/winnowing
 - sieving
 - vibrating
 - flotation
 - drying
 - husk crumbling
- seed treatment and packaging processes, including storage requirements for different seed species
- types of information recorded for seed collection:
 - time and date of harvest
 - time and date of receipt
 - weight
 - seed origin
- common pests and diseases that infect seed species, and visual characteristics
- seed treatment methods to prevent deterioration:
 - heat
 - mechanical
 - chemical
- packaging and storage techniques for seed collection:
 - vacuum sealing
 - use of inert atmospheres: nitrogen and carbon dioxide
- controls for the packing environment:
 - temperature
 - light
 - moisture
- environmental protection practices for forest environment setting:
 - the safe disposal of waste material

- returning the environment to its original or near to original condition on completion of activity
- procedures for minimising environmental impact
- safe use, handling, storage and transport of chemicals
- workplace procedures specific to collecting seed:
 - work health and safety, with particular emphasis on use of PPE and handling hazardous substances
 - communication reporting lines
 - recording and reporting seed collection information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site for tree seed collection, separation, treatment and packaging
 - tools, machinery, equipment and materials for tree seed collection, separation, treatment and packaging
 - PPE suitable for seed collection, separation, treatment and packaging
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to seed collection, separation, treatment and packaging
 - workplace procedures for seed collection, separation, treatment and packaging.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPNSY2002 Cut, sort and set cuttings

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that individual has cut, sorted and set one batch of cuttings for one species of forest tree.

In undertaking this activity, the individual has:

- selected and used cutting and conditioning techniques, prepared the growing environment and set cuttings according to the individual species to ensure maximum viability of plants
- complied with workplace safety standards, including use of personal protective equipment (PPE)
- disposed of discarded cuttings according to environmental protection practices
- competed workplace records for production outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, causes and consequences of spoilage and contamination of plant cuttings
- cleaning techniques, features and uses of cleaning products for plant preparation areas to avoid contamination of plants
- for the range of plants propagated by the workplace:
 - cutting techniques
 - pre-planting conditioning techniques, nutritional treatments and storage requirements to ensure maximum viability of plants
 - suitable growing environments to ensure maximum viability of plants
 - common pests, diseases and nutritional deficiencies and visual characteristics
- methods of remedial action for plants affected by pests and diseases:
 - removal of infected material
 - treatment of site with chemicals

- methods used to control weeds:
 - weed-mat
 - slatted benches
 - chemical solutions
- purpose, features and safe operation of equipment used to cut, sort and set cuttings
- environmental protection practices for disposing of plant cuttings:
 - recycling material where appropriate
 - sending pruned to landfill only where it cannot be recycled
- procedures for safe use, handling, storage and transport of chemicals
- workplace procedures specific to cutting, sorting and setting cuttings:
 - workplace health and safety, with particular emphasis on use of PPE and handling hazardous substances
 - communication reporting lines
 - recording and reporting site production outcomes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - commercial quantities of plants to be propagated
 - tools, machinery, equipment and materials used in cutting, sorting and setting operations, including motorised or electrically powered automated systems or manually operated equipment and tools, pest control chemicals and weed retardants
 - PPE suitable for cutting, sorting and setting operations
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to cutting, sorting and setting operations
 - workplace procedures for cutting, sorting and setting cuttings
 - safety data sheets for chemicals or plain English equivalent documents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPNSY2003 Follow quality procedures in forest nursery production

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to observe quality requirements in tree nursery production.

The unit applies to individuals working as arboriculture workers, farm forestry workers, forestry workers, nursery workers, plantation establishment workers, plantation forest officers and silviculturists who are involved in tree nursery operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Nursery Production (NSY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess quality of tree seedlings	1.1 Identify characteristics of quality tree seedlings according to industry standards and client requirements

Elements	Performance Criteria

Assessment Requirements for FWPNSY2003 Follow quality procedures in forest nursery production

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has followed forest nursery quality procedures in performing one workplace task.

In undertaking this activity, the individual has:

- visually assessed seedling quality according to workplace procedures, client requirements and industry standards
- accessed and applied workplace information on quality requirements for own work
- monitored and measured seedlings during the growing season and implemented remedial actions as required
- identified and responded to out-of-specification or unacceptable inputs and/or outputs, such as making adjustments within level of responsibility and/or reporting
- maintained quality of own work
- recorded quality data in required format according to workplace procedures
- complied with safety and environmental requirements, including use of personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- tree nursery quality policy, procedures and responsibilities
- tree nursery quality requirements:
 - inputs
 - seedlings
 - other outputs
 - processes
 - workplace health and safety

- environmental practices
- client requirements:
 - quality of the plant
 - delivery of the timelines
- determinants of seedling quality:
 - genetic quality of seed used in the nursery
 - physical growth of the seedling
- characteristics of quality tree seedlings:
 - healthy, vigorously growing and free of diseases
 - robust and woody single stem, free of deformities
 - stem is sturdy and has a large root collar diameter
 - crown is symmetrical and dense
 - root system that is free of deformities
 - dense root system with many fine, fibrous hairs with white root tips
 - ‘balance’ between shoot and root ratio
 - accustomed to short periods without water
 - accustomed to full sunlight
- techniques for visually assessing seedling quality
- sources of advice on quality requirements for own work
- methods and reasons for monitoring and measuring seedlings during the growing season
- remedial actions for responding to out-of-specification seedling
- monitoring, inspection and checking procedures relating to workplace quality requirements
- evidence of out-of-specification or unacceptable performance
- procedures for responding to out-of-specification or unacceptable performance
- responsibilities for reporting and recording quality information
- quality recording requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tree seedlings
 - PPE appropriate for work task
- specifications:
 - workplace quality requirements
 - industry standards for tree seedling production

- workplace health, safety and environmental policies and procedures applicable to tree nursery operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPNSY2004 Prick out and transplant tree seedlings

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to prick out, transplant and pot on tree seedlings and rooted cuttings mainly for revegetation/regeneration production.

The unit applies to individuals who prick out and transplant tree seedlings in commercial and non-commercial tree production.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Nursery Production (NSY)

Assessment Requirements for FWPNSY2004 Prick out and transplant tree seedlings

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- pricked out tree seedlings according to production requirements in a daily operation
- transplanted and potted on tree seedlings and rooted cuttings according to production requirements in a daily operation.

In undertaking this activity, the individual has:

- complied with safety and environmental requirements, including use of personal protective equipment (PPE)
- selected tools, equipment and materials for the task
- applied all required techniques in pricking out, transplanting and potting on tree seedlings and rooted cuttings
- checked, cleaned and stored tools and equipment after pricking out and transplanting operations
- reused, recycled or disposed of waste according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- typical workplace hazards associated with pricking out and transplanting operations, and methods of minimising risks
- reasons for pricking out and using particular techniques
- reasons for transplanting and using particular techniques
- reasons for potting on
- root system quality:

- tap root distortion
- lateral root distortion
- impact of root distortion on tree stability
- pricking out tree seedling techniques:
 - extracting seedlings from trays
 - pricking out techniques
 - root positioning techniques
 - firming-in technique that maintains root orientation
 - techniques for watering-in seedlings
- transplant transfer techniques for tree species
- potting on intervals and techniques for tree species
- purpose, features and safe operation of tools and equipment used in pricking and transplanting operations
- workplace procedures specific to pricking and transplanting operations:
 - workplace health and safety, with particular emphasis on risk control and use of personal protective equipment
 - communication reporting lines.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a tree production work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tree seedlings
 - tools, equipment and materials used in pricking out and transplanting operations
 - PPE suitable for use in pricking out and transplanting operations
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to pricking out and transplanting operations
 - workplace procedures for pricking out and transplanting operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPNSY2005 Apply tree seed treatment

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to apply tree seed treatment technologies for disease control, insect pest control and yield enhancement. Seed applied technologies include inoculants, herbicide safeners, micronutrients, plant growth regulators, seed coatings and colorants.

The unit applies to individuals who use seed treatment processes in commercial and non-commercial tree production.

All work must be carried out to comply with workplace procedures according to state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FWPNSY2005 Apply tree seed treatment

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has treated one batch of tree seeds for one of the following:

- disease control
- insect pest control
- yield enhancement.

In undertaking this activity, the individual has:

- complied with safety and environmental requirements, including use of personal protective equipment (PPE) and safe use of chemicals
- conducted pre-treatment quality checks of seed, seed treatment products and seed treatment equipment
- selected, implemented and monitored appropriate seed treatment process
- recorded production and treatment data
- maintained records of equipment calibration, maintenance and equipment faults or malfunctions and corrective actions taken
- tagged and reported faulty and/or defective equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and applications of tree seed treatments:
 - inoculants
 - herbicide safeners
 - micronutrients

- plant growth regulators
- seed coatings
- colorants
- sources of information on tree seed treatment
- reasons for using tree seed treatment:
 - pest control
 - insect pest control
 - yield enhancement
- tree species where chemical seed treatments are used
- methods for:
 - verifying quality and suitability of seed, seed treatment products and equipment
 - selecting seed treatment method
 - identifying critical control points in seed treatment process
 - monitoring seed treatment process
 - safe use, handling, storage and transport of chemicals
 - packaging, labelling, transporting and storing treated seed
- assessment of treated seed properties:
 - uniformity of treatment coating of individual seeds
 - presence and amount of treated seed dust
- environmental sustainability issues as they relate to the work task
- work health and safety requirements specific to the work task.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a tree production work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a commercial quantity of tree seed for treatment
 - PPE, seed treatment equipment and seed treatment products
- specifications:
 - workplace procedures for tree seed treatment
 - workplace health, safety and environmental policies and procedures applicable to tree seed treatment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPNSY3001 Graft nursery stock for planting in seed orchard

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out two separate grafting operations on plants of different species and has applied appropriate post-grafting management techniques for both plants.

In undertaking this activity, the individual has:

- complied with safety and environmental requirements, including use of personal protective equipment (PPE) and safe disposal of waste materials
- selected tools, equipment and materials for grafting operations and checked for serviceability
- collected material for potential scion wood and implemented workplace procedures to maintain viability of the material
- appraised and selected scion wood for propagation
- grafted scion wood onto selected root stock
- applied post-grafting management techniques.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- grafting methods
- types of tools and equipment used in grafting operations, including hand-held tools, including a grafting or budding knife, secateurs and grafting tape, and procedures for their safe use and maintenance
- process for collecting material for potential scion wood
- process for selection of scion wood
- techniques for grafting scion wood onto selected root stock
- post-grafting management techniques

- pre-planting treatments to prepare for grafting
- water and nutrient requirements for grafted plants
- conditioning and storage requirements for grafted plants
- impact of different growing environments on grafted plant, including:
 - heat
 - light
 - humidity
 - moisture
- procedures for safe use, handling, storage and transport of chemicals
- problem identification and resolution strategies, and common fault finding techniques in relation to grafting operations
- remedial treatment on grafted plants, including pest and disease control methods
- procedures for recording and reporting workplace information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - commercial quantity of trees, scion wood and root stock for grafting operations
 - tools, equipment, materials and storage facilities used in grafting operations
 - PPE suitable for grafting operations
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to grafting operations
 - workplace procedures for grafting operations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPNSY3002 Extract, clean, store and despatch tree seeds

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to extract, clean, store and despatch tree seeds.

The unit applies to individuals who are involved in tree nursery operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Nursery Production (NSY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for processing tree seeds	1.1 Determine job requirements from work order or instruction, and where required seek clarification from appropriate personnel 1.2 Confirm safety and environmental requirements, including use of personal protective equipment, for the task according to workplace procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with extracting, cleaning, storing and despatching tree seeds</p> <p>1.4 Identify emergency and evacuation procedures to follow in the event of an incident or accident</p> <p>1.5 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Select tools, equipment and materials, and check for serviceability according to workplace procedures</p>
2. Extract tree seed	<p>2.1 Receive and visually assess seed bearing material, and ensure species is identified on container label</p> <p>2.2 Weigh and allocate identifiers according to workplace procedures</p> <p>2.3 Select appropriate extraction units and equipment, and check for operational effectiveness</p> <p>2.4 Operate and monitor seed extraction systems to extract maximum seed yield</p> <p>2.5 Inspect seed capsules and reprocess as required to ensure maximum yield</p> <p>2.6 Clean, maintain and calibrate extraction units and equipment, and report abnormal operation or faults in equipment for corrective action</p> <p>2.7 Dispose of residue and other waste material according to workplace procedures</p> <p>2.8 Clean and maintain work areas according to workplace procedures</p> <p>2.9 Record and report results of seed extraction process</p>
3. Clean, treat and store tree seed	<p>3.1 Separate seeds from other materials, weigh and store according to workplace procedures</p> <p>3.2 Treat seeds to prevent deterioration according to seed species and workplace procedures</p> <p>3.3 Record seed information onto inventory system accurately according to workplace procedures</p> <p>3.4 Package seed for storage according to workplace procedures</p>
4. Prepare tree seed sample for viability testing	<p>4.1 Identify and check seed sample for testing according to work order</p> <p>4.2 Remove seed sample from lot and prepare for testing according to workplace procedures</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>4.3 Clearly label and package representative seed sample for despatch to testing body according to workplace procedures</p> <p>4.4 Record seed sample information onto inventory system accurately according to workplace procedures</p>
5. Despatch tree seed	<p>5.1 Interpret and check seed request specifications with appropriate personnel</p> <p>5.2 Retrieve seed from storage, and calculate quantities and species of seed to meet request specifications</p> <p>5.3 Weigh, document and place each seed species in an appropriate container in line with request requirements and workplace procedures</p> <p>5.4 Mix multiple seed lots thoroughly, as required in line with request specifications</p> <p>5.5 Label seed and seed mixtures according to workplace procedures</p> <p>5.6 Organise and undertake despatch of seed in line with request specifications and workplace procedures</p> <p>5.7 Record seed processing results onto inventory system according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> • Read and follow information on equipment and in workplace procedure manuals on safety and environmental requirements when processing seed • Interpret instructions combining written and pictorial information on equipment or in operational manuals
Writing	<ul style="list-style-type: none"> • Complete seed records and labels accurately and legibly using correct technical and enterprise specific vocabulary
Oral communication	<ul style="list-style-type: none"> • Ask open and closed questions and use active listening techniques to clarify contents of work orders

Skill	Description
Numeracy	<ul style="list-style-type: none"> Calculate seed weight and quantity using scales Identify and calculate percentages in specifications for seed mix Estimate impact of time on storage of seed Estimate time to complete work tasks when processing seed Undertake numerical calculations on seed processing equipment

Assessment Requirements for FWPNSY3002 Extract, clean, store and despatch tree seeds

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has extracted, cleaned, stored and despatched one batch of tree seeds.

In undertaking this activity, the individual has:

- extracted tree seed using appropriate items of equipment selected from:
 - kilns operated by gas, solar energy, oil or electricity
 - sieves of various sizes
 - air-drying racks and trays
 - conveyor belt
 - computer controlled extraction systems
- cleaned, treated and stored one batch of tree seed
- prepared one tree seed sample for viability testing
- despatched one batch of seed in line with seed request specifications
- complied with safety requirements, including use of personal protective equipment (PPE)
- recorded seed processing information and results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- tree seed species and structure
- tree seed source classes
- methods to treat seed
- methods for testing, packaging and storing tree seed species using:
 - vacuum sealing
 - use of inert atmospheres, including nitrogen and carbon dioxide

- methods for controlling the packing environment, including temperature, light and moisture
- types, operation and maintenance procedures for seed processing equipment, including electric and manual scales, packaging material, seed cleaning machine, seed lot mixing device, lifting equipment
- seed separation methods:
 - hand selection
 - wind separation and winnowing
 - sieving
 - vibrating
 - flotation
 - drying
 - crumbling of husks
 - computer controlled extraction systems
- seed despatch process:
 - seed species
 - seed batching and mixing
 - pure graded seed
 - sowing rate
 - despatch container
 - method of despatch
 - sowing equipment to be used
- methods for recording seed processing information and results and maintaining workplace information
- impact and application procedures of seed treatments, including fungicides and cleaning
- hazards associated with the storage, treatment and despatch of seed
- seed species and treating, packaging and storage processes
- seed treatments and storage requirements for different seed species
- types of diseases and pests likely to infect the species
- workplace procedures for recording and reporting workplace seed information, including:
 - species
 - time and date of harvest
 - time and date of receipt into the store
 - place or origin of seed
 - container identifier
- request specifications, including:
 - seed species
 - percentage of seed mix
 - pure graded seed
 - rate of sown
 - dispatch container

- method of dispatch
- sowing equipment to be used
- appropriate container criteria:
 - length of time seed will be stored
 - method to be used to transport seed
 - equipment to be used for sowing seed
 - quantity of seed
 - size of individual seeds
- methods for viability testing tree seed samples.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest or wood products work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tree seed bearing material
 - workplace location or simulated workplace, required to extract, treat, store and despatch tree seed
 - materials and equipment relevant to tree seed extraction and processing work
 - PPE suitable for work involving the extraction, cleaning, storing and despatching of tree seeds
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to tree seed extraction and processing work.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPNSY3003 Apply knowledge of tree stock growing in a forest nursery

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to identify the production cycle for bare root and container grown seedlings and cuttings, assess the impact of tree stock conditioning and tree stock topping practices on seedling quality and implement mycorrhizae inoculation required to optimise production in a forest nursery.

The unit applies to individuals working as arboriculture workers, farm forestry workers, forestry workers, nursery workers, plantation establishment workers, plantation forest officers and silviculturists who are involved in tree nursery operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Nursery Production (NSY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Communicate	1.1 Document and disseminate information to nursery staff on the key

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
information on the production cycle for bare root and container grown seedlings and cuttings	stages and timing of the bare root production cycle in a forest nursery 1.2 Document and disseminate information to nursery staff on the key stages and timing of the production cycle of container grown cuttings and seedlings in a forest nursery
2. Assess the impact of tree stock conditioning on seedling characteristics and quality	2.1 Collate and review information on the influence of seed sowing times on the minimum height and timing of undercutting 2.2 Chart the influence of seed spacings on root volume, foliage illumination and conditioning effectiveness 2.3 Gather and review information on the influence of the spacing of cuttings on stem diameter, shoot development and root system quality 2.4 Record the seasonal growth patterns of unconditioned seedlings in relation to the effects of spacing on seedling morphology 2.5 Gather and review data on the growth patterns of seedlings subject to mechanical conditioning in relation to seedling sturdiness 2.6 Monitor the influence of types and timing of conditioning treatments on seedling morphology and physiology 2.7 Review the influence of types and timing of conditioning treatments on root system quality
3. Review the impact of tree stock topping practices on seedling characteristics and quality	3.1 Compare the impact of topping before and after undercutting on fibrous root development 3.2 Monitor the impact of re-topping on bud and shoot development 3.3 Record the effects of topping severity on seedling malformation
4. Inoculate seedbeds with mycorrhizae	4.1 Identify different types of mycorrhizal fungi 4.2 Identify the types of mycorrhizal fungi associated with different tree species 4.3 Confirm operational, safety and environmental protection procedures, including use of personal protective equipment for inoculating seedbeds with mycorrhizae 4.4 Select and check for serviceability tools, equipment and materials for inoculating seedbeds according to workplace procedures 4.5 Inoculate seed beds with mycorrhizae in accordance with workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Extract information from industry guides and standard references on nursery practices related to tree stock growing
Writing	<ul style="list-style-type: none"> Complete workplace forms and record observations on seedling quality and characteristics
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and use active listening techniques to seek and gather information on forest tree propagation
Numeracy	<ul style="list-style-type: none"> Apply basic mathematical functions to count, calculate area, estimate seedling spacing and measure seedling dimensions

Assessment Requirements for FWPNSY3003 Apply knowledge of tree stock growing in a forest nursery

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied knowledge of tree stock growing in a forest nursery.

In undertaking this activity, the individual has:

- prepared and communicated information to nursery staff on the production cycle of bare root and container grown cuttings and seedlings
- collated and assessed information on the impact of two tree stock conditioning practices on seedling characteristics and quality
- collated and assessed information on the impact of tree stock topping and re-topping practices on seedling characteristics and quality
- followed operational, workplace health and safety and environmental protection procedures, including the use of personal protective equipment (PPE), in inoculating one seedbed with mycorrhizae.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key stages and timing of the production cycle of bare root cuttings and seedlings
- key stages and timing of the production cycle of container grown cuttings and seedlings in a forest nursery
- tree stock conditioning:
 - techniques
 - prerequisites for effective tree stock conditioning – seed sowing times and seed spacing
 - tree stock conditioning principles
- tree stock topping principles:

- topping techniques
- impact of topping either before or after undercutting on fibrous root development
- impact of re-topping on bud and shoot development
- impact of topping severity on seedling malformation
- mycorrhizal fungi:
 - types of mycorrhizal fungi
 - association of mycorrhizal fungi with softwood and hardwood species
 - the mechanism of mycorrhizal association and its importance to tree health
 - seed bed inoculation techniques
 - operational, workplace health and safety and environmental protection procedures, including the use of PPE, for inoculating seedbeds with mycorrhizae.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a tree production work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - PPE, tools, equipment and materials required for inoculating seedbeds with mycorrhizae
 - forest tree nursery.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPNSY3004 Identify, evaluate and mark quality seed trees

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified, evaluated, marked and located the position of one seed tree according to work instructions.

In undertaking this activity, the individual has:

- confirmed safety and environmental requirements, including use of personal protective equipment (PPE) for the task
- selected and checked for serviceability tools, equipment and materials
- identified the position, provenance, characteristics and suitability for seed production of one proposed seed tree
- marked and demarcated the seed tree within the general stand according to workplace procedures
- recorded and reported position of the seed tree using hard copy maps/plans, Global Positioning System (GPS) coordinates or digital maps according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- species, provenances and stand of seed trees
- evaluation criteria for seed trees:
 - health
 - vigour
 - freedom from pests
 - stem straightness
 - branch size
 - branch angle
 - branching patterns

- spiral grain
- wood density
- stem fluting
- flowering size
- tools and equipment used in seed orchard maintenance
- silvicultural history of stand in which seed tree is located:
 - establishment success
 - pruning practices
 - thinning schedules
- techniques for marking and demarcating seed trees
- techniques for recording position of seed trees:
 - maps
 - plans
 - GPS.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - stands of trees with potential seed trees
 - tools, equipment, materials and PPE used in identifying, evaluating, marking and locating seed trees
- specifications:
 - work instructions for identifying, evaluating, marking and recording the position of potential seed trees
 - workplace health, safety and environmental policies and procedures applicable to identifying, evaluating and marking seed trees.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FWPNSY3005 Maintain seed orchard

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied silvicultural techniques to maintain one seed orchard.

In undertaking this activity, the individual has:

- applied each of the following sward maintenance activities as required:
 - mowing
 - fertiliser application
 - weed control
 - promotion of pollinators
- applied each of the following seed orchard maintenance and genetic improvement activities as required:
 - fungi and pest control
 - watering and fertilising
 - roguing
 - thinning and pruning
 - flower induction
 - frost mitigation
 - cutting and grafting
- complied with workplace safety and environmental requirements, including use of personal protective equipment (PPE) and safe use of chemicals \
- recorded outcomes of all sward maintenance and seed orchard maintenance according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- seed orchards:
 - types of seed orchards – clonal and seedling seed orchards
 - size and longevity of seed orchards
 - factors influencing location of seed orchards
 - establishment of seed orchards
 - spacing of trees in seed orchards
 - principles of seed orchard design
 - seed orchard plan
 - pollination in seed orchards
- PPE, tools and equipment used in seed orchard maintenance
- safe use of chemicals
- risk and hazards associated with seed orchard maintenance
- seed orchard maintenance and genetic improvement activities:
 - fungi and pest control measures
 - watering and fertilising
 - roguing
 - thinning and pruning
 - flower induction
 - frost mitigation
 - cutting and grafting
- sward maintenance activities:
 - mowing
 - fertiliser
 - weed control
 - promoting pollinators.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - seed orchard
 - PPE, tools and equipment used in seed orchard maintenance
 - seed orchard plan

- specifications:
 - workplace health, safety and environmental policies and procedures applicable to seed orchard maintenance.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to manage mother plants	1.1 Determine job requirements from work order or instruction, and where required seek clarification from appropriate personnel 1.2 Confirm safety and environmental requirements, including use of personal protective equipment and safe chemical handling procedures,

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>for the task according to workplace procedures</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with managing mother trees</p> <p>1.4 Identify emergency and evacuation procedures to follow in the event of an incident or accident</p> <p>1.5 Consult with appropriate personnel to ensure that work is coordinated effectively with others in the workplace</p> <p>1.6 Select tools, equipment and materials, and check for serviceability according to workplace procedures</p>
2. Select mother plants	<p>2.1 Identify characteristics of plants that are suitable for use as mother plants</p> <p>2.2 Select plants for use as mother plants</p> <p>2.3 Follow workplace procedures for establishment of mother plants</p> <p>2.4 Classify mother plants according to types and varieties</p> <p>2.5 Label mother plants according to workplace procedures</p>
3. Maintain mother plants	<p>3.1 Set lighting level to maintain plants in vegetative phase</p> <p>3.2 Prune and train mother trees to maximise the number of healthy branches that can be trimmed to create clones</p> <p>3.3 Manage tree canopies to avoid overcrowding and maintain light penetration</p> <p>3.4 Water and fertilize mother plants according to workplace procedures and safety requirements</p> <p>3.5 Test plant material for viruses and other organisms according to workplace procedures and safety requirements</p> <p>3.6 Implement pest and insect control measures according to workplace procedures and safety requirements</p> <p>3.7 Maintain records of mother plants</p>
4. Replace mother plant	<p>4.1 Assess strength of clones</p> <p>4.2 Retire existing mother plants and replace with clones</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Extract information from industry guides and standard references on techniques for maintenance of mother plants
Writing	<ul style="list-style-type: none"> Complete workplace forms and plant labels
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and use active listening techniques to clarify contents of work orders
Numeracy	<ul style="list-style-type: none"> Apply basic arithmetic functions to complete records related to mother plant maintenance

Unit Mapping Information

Assessment Requirements for FWPNSY3006 Manage mother plants

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed mother plants in a tree nursery.

In undertaking this activity, the individual has:

- confirmed safety and environmental requirements, including use of personal protective equipment (PPE) and safe chemical handling procedures
- identified one plant suitable for use as a mother plant using industry accepted criteria
- maintained one mother plant in a tree nursery
- maintained records of one mother plant according to workplace procedures
- determined the need to replace one existing mother plant
- retired one existing mother plant and replaced with clone.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- uses of mother plants:
 - cloning
 - scion
 - rootstock
- advantages of creating clones:
 - size
 - quality
 - yield
 - shortening growing cycle
- genetic relationship between mother plants and clones
- life cycle of mother plants

- characteristics of plants suitable for use as mother plants:
 - strong roots
 - strong stem
 - resistant to pests and fungi
 - large harvest yield
 - steady easy maturation
 - premium example of species
 - free of disease
 - healthy and vigorous enough to withstand material donation
- maintenance requirements of mother plants:
 - lighting
 - pruning and training
 - managing tree canopy
 - watering
 - fertilising
 - testing plant material for viruses and other organisms
 - pest and insect control measures
- techniques and requirements for maintaining mother plants in pots
- reasons for keeping mother trees in vegetative state
- safe handling, use, storage and transport of chemicals
- hazards and risks associated with maintaining mother plants.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - mother plant and clones
 - tools, equipment, materials and PPE required for work task
- specifications:
 - workplace health, safety and environmental policies and procedures applicable to tree nursery operations

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPNSY3007 Operate automated topping system as part of tree production nursery operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to operate an automated topping system as part of tree production nursery operations.

The unit applies to individuals who operate automated topping systems as part of tree production nursery operations.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Nursery Production (NSY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	1.1 Determine job requirements from work order or instruction, and where required seek clarification from appropriate personnel 1.2 Confirm safety and environmental requirements, including use of personal protective equipment and machine guards, for the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>according to workplace procedures</p> <p>1.3 Identify, assess and take actions to mitigate risks and hazards associated with working with automated topping system</p> <p>1.4 Consult with team members to ensure that automated topping system operations are coordinated effectively</p> <p>1.5 Select seedlings to be trimmed according to job requirements</p> <p>1.6 Confirm production capacity and full range of functions of automated topping system</p>
2. Set up topping system	<p>2.1 Check existence and serviceability of safety equipment, including emergency stops, gauges, guards and controls</p> <p>2.2 Select topping system program and make adjustments according to job requirements and manufacturer instructions</p> <p>2.3 Load and/or position seedlings according to manufacturer instructions and production requirements</p> <p>2.4 Conduct trial runs to check topping operation, accuracy, alignment and that finished product meets quality requirements</p> <p>2.5 Make necessary adjustments to topping system settings based on outcomes of trial runs</p>
3. Operate topping system	<p>3.1 Complete automated topping system start-up procedure according to manufacturer instructions</p> <p>3.2 Operate automated topping system according to designed capacity, purpose and manufacturer recommendations</p> <p>3.3 Monitor topping system operation to ensure product quality and output</p> <p>3.4 Minimise waste according to workplace and environmental protection procedures</p> <p>3.5 Recycle, reuse or dispose of cuttings according to workplace procedures</p> <p>3.6 Identify problems with the required work and/or the operation of the automated topping system, and rectify or report to appropriate persons</p> <p>3.7 Shut topping system down according to workplace procedures</p> <p>3.8 Record production outcomes and equipment faults or malfunctions and corrective actions taken according to workplace procedures</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
4. Maintain topping equipment	4.1 Perform routine maintenance according to purpose and manufacturer recommendations 4.2 Tag and report faulty and/or defective equipment according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret complex written, technical information in operating manuals to confirm equipment operations and perform troubleshooting
Writing	<ul style="list-style-type: none"> Complete routine workplace records related to equipment faults and product quality
Oral communication	<ul style="list-style-type: none"> Use active listening and questioning techniques to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Perform routine calculations related to time, dimensions, production capacity, volume and number

Assessment Requirements for FWPNSY3007 Operate automated topping system as part of tree production nursery operations

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and maintained an automated topping system as part of tree production nursery operations for one batch in one production run.

In undertaking this activity, the individual has:

- determined job requirements
- confirmed safety and environmental requirements, including use of personal protective equipment (PPE) and emergency stops, gauges, guards and controls
- selected seedlings to be trimmed according to job requirements
- confirmed production capacity and full range of functions of automated topping system
- selected topping system program and loaded and/or positioned seedlings
- conducted trial runs to check topping operation, accuracy, alignment and that finished product met quality requirements
- operated and monitored topping system
- recorded production outcomes and equipment faults or malfunctions and corrective actions taken
- performed routine operator maintenance on topping machine system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, functions, components, accessories and capacity of automated topping systems used in tree production nursery operations
- types of blades:
 - reciprocating
 - rotating
- sources of information on automated topping system operation and maintenance

- reasons for using automated topping systems in tree production nursery operations:
 - speed
 - controlling accuracy
 - consistency of product dimensions
 - reducing mechanical injury
- methods for:
 - setting up automated topping system
 - selecting programs for automated topping system
 - operating automated topping system
 - quality assurance
 - troubleshooting automated topping system
 - maintaining automated topping system
 - maintaining and/or replacing blades
 - reporting machinery faults and material defect
- basic components and functions of mechatronic systems:
 - sensors
 - actuators
 - controllers
 - mechanical components
- environmental sustainability issues as they relate to the work task
- workplace health and safety requirements specific to the work task.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - an automated topping system for forestry nursery production
 - commercial quantities of seedlings to be topped
 - PPE suitable for operation of automated topping system
- relationships:
 - work team for seed sowing line
- specifications:
 - workplace procedures for setting up, operating and maintaining automated topping systems
 - workplace health, safety and environmental policies and procedures applicable to forestry nursery production.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPNSY3008 Operate automated seed sowing line for containerised forest seedling production

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to operate a seed sowing line as part of containerised forest seedling production.

The unit applies to individuals who operate seed sowing lines in commercial tree production nurseries.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Forest Nursery Production (NSY)

Assessment Requirements for FWPNSY3008 Operate automated seed sowing line for containerised forest seedling production

Modification History

Release	Comments
Release 1	This version released with Forest and Wood Products Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and maintained an automated seed sowing line for containerised forest seedling production for one batch in one production run.

In undertaking this activity, the individual has:

- determined job requirements
- confirmed safety and environmental requirements, including use of personal protective equipment (PPE) and emergency stops, gauges, guards and controls
- selected and loaded correct species, quantity, size and grade of tree seed, media and type and number of trays/containers
- confirmed production capacity and full range of functions of seed sowing line
- selected seed sowing line program and conducted trial runs to check seed sowing line operation and quality of finished product
- operated and monitored tree seed sowing equipment including recording production outcomes and equipment faults or malfunctions
- taken corrective actions in response to machine faults and performed routine operator maintenance on tree seed sowing equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, functions, components, accessories and capacity of seeding systems used in containerised forest seedling production
- sources of information on seed sowing line operation and maintenance
- reasons for using seed sowing line for containerised forest seedling production:
 - sowing speed
 - controlling accuracy

- reducing mechanical injury of seeds
- reducing the occurrence of skips, missed seed placement and multiple sown seeds
- types and application of containers/trays
- types and purpose of seed treatments
- types and characteristics of media
- methods for:
 - setting up seed sowing line
 - selecting programs for seed sowing line
 - operating seed sowing line
 - quality assurance
 - troubleshooting seed sowing line
 - maintaining seed sowing line
 - reporting machinery faults and material defects
- basic components and functions of mechatronic systems:
 - sensors
 - actuators
 - controllers
 - mechanical components
- environmental sustainability issues as they relate to the work task
- work health and safety requirements specific to the work task.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a forest work environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a seed sowing line for forestry nursery production
 - commercial quantities of seed, containers and media
 - PPE for operation of seed sowing line
- relationships:
 - work team for seed sowing line
- specifications:
 - workplace procedures for setting up, operating and maintaining seed sowing line
 - workplace health, safety and environmental policies and procedures applicable to forestry nursery production.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPSAW2212 Assemble materials using nail plates

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare and assemble materials using nail plates. It includes stacking, strapping and despatching products in readiness for transport to a construction site.

The unit applies to production workers, sawmill workers and manufacturing assistants who undertake specified activities under the direction of more experienced workers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for assembly	1.1 Determine job requirements from production plan or work order and seek clarification from appropriate person where required 1.2 Identify and obtain type and quantity of material and nail plates in preparation for assembling 1.3 Confirm safety requirements for assembling materials using nail plates according to workplace safety procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Select, fit and use personal protective equipment (PPE)</p> <p>1.5 Select appropriate tools and equipment, and check for operational effectiveness according to manufacturer recommendations</p>
2. Assemble materials	<p>2.1 Select pre-cut timber components from material cutting list</p> <p>2.2 Reject material with defects and dispose of according to environmental requirements</p> <p>2.3 Use equipment following workplace safety and environmental requirements and manufacturer instructions</p> <p>2.4 Identify allowable number and position of joins from production plan</p> <p>2.5 Position and clamp components ready for joining with allowable faults, joins and grain according to construction standards and grading rules</p> <p>2.6 Staple components to maintain temporary alignment during assembly</p>
3. Install nail plates	<p>3.1 Locate nail plates, position nail plate press over joints and install nail plates according to production plan</p> <p>3.2 Repair or dispose of substandard and damaged nail plates according to workplace and environmental requirements</p> <p>3.3 Correct assembly faults according to workplace procedures</p> <p>3.4 Identify and resolve routine processing and equipment faults, and report to appropriate person</p>
4. Prepare material for despatch and report outcomes	<p>4.1 Check finished material for quality, and label according to work order</p> <p>4.2 Remove components from machinery and safely stack in designated location</p> <p>4.3 Strap, pack and label finished material ready for transportation</p> <p>4.4 Avoid wastage of strapping and packaging materials and maximise use of recycled materials</p> <p>4.5 Clean work area and recycle, reuse or dispose of waste according to workplace and environmental requirements</p> <p>4.6 Complete production and quality records and report according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Produce labels that accurately identify products in production plans and work order ready for transportation Complete workplace records accurately and legibly using technical and industry specific vocabulary
Oral communication	<ul style="list-style-type: none"> Listen actively to clarify contents of production plans and work orders Report processing and equipment faults accurately and unambiguously using industry terminology
Numeracy	<ul style="list-style-type: none"> Use addition and multiplication to calculate quantity of individual and total components and nail plates

Unit Mapping Information

Assessment Requirements for FWPSAW2212 Assemble materials using nail plates

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assembled materials using nail plates for two different work orders or production plans, and has:

- determined the quality of materials and discarded non-compliant materials
- safely and correctly used machinery, equipment and nail plate press to assemble materials
- followed workplace policies and procedures relevant to assembling materials using nail plates
- strapped, packed and accurately labelled completed bundles in preparation for transport.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- production plans, work orders and manufacturer specifications for using nail plates
- workplace safety and environmental policies and procedures relating to material assembly with nail plates
- relevant standards and specifications for timber assembly using nail plates
- the purpose, features and operation of various types of tools and equipment used for assembling products:
 - measuring equipment
 - assembly machinery
 - nail plate presses
 - staple guns
 - nail guns
 - compressor or compressed air supply
 - marking equipment
 - strapping equipment

- methods, processes and techniques of:
 - assembling materials using nail plates
 - layout, storing and stacking of finished materials
 - recording and reporting production outcomes and equipment faults
 - workplace communication
- assembly sequences
- typical assembly faults triggering correction to ensure product quality:
 - incorrectly positioned joints
 - timber splits from nailing
 - incorrectly positioned nail plates
- industry standard cross-sections, lengths and tolerances
- environmental requirements for disposing of, recycling and reusing timber
- characteristics of timbers and typical timber defects which impact nail plate usage:
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- workplace safety requirements relevant to assembling material using nail plates:
 - hazard identification and control measures
 - use of equipment and equipment lock-out
 - personal protective equipment (PPE)
 - hazardous manual tasks.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a manufacturing or processing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment and machinery to assemble materials
 - materials and nail plates to assemble products
 - PPE
- specifications:
 - access to workplace safety and environmental policies and procedures applicable to assembling materials using nail plates
 - access to nail plate manufacturer specifications and instructions

- access to work orders or production plans to assemble materials using nail plates
- relationships:
 - person to confirm work order and report production and equipment issues.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPSAW2213 De-stack timber drying racks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to assess dried timber boards, separate them from seasoning racks, monitor transfer and maintain timber board supply for dressing process.

The unit applies to individuals who de-stack timber drying racks in a dry mill or sawmill work environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for de-stacking timber drying racks	1.1 Determine job requirements from work order or instructions and, where required, check with appropriate personnel 1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task, including use of personal

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	protective equipment 1.3 Identify and assess hazards and take actions to mitigate risks related to de-stacking timber drying racks 1.4 Identify type and quantity of boards for de-stacking operation 1.5 Check equipment used in de-stacking timber drying racks for operational effectiveness
2. De-stack timber drying racks	2.1 Assess timber boards visually for type, size and quality 2.2 Measure moisture content of timber boards and approve for de-stacking 2.3 Load racks onto separation equipment according to workplace procedures 2.4 Separate and load timber boards onto conveyor systems 2.5 Remove bearers, spacing stick and other protective items from timber boards and store for return to stacking area 2.6 Reject and dispose of sub-standard materials according to workplace environmental protection practices and/or procedures 2.7 Keep de-stacking area clear of timber scraps and dispose of waste according to workplace environmental protection practices and/or procedures
3. Monitor transfer and maintain supply of timber board to subsequent operation	3.1 Monitor conveyor transfer procedures and keep free from blockages 3.2 Supply racks to timber board separation equipment by maintaining consistent size and species for dressing operation according to work order 3.3 Change timber board supply in response to changes to size for dressing process 3.4 Monitor changeover points according to workplace procedures 3.5 Identify routine process supply and equipment faults, and resolve or report to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret routine workplace documents related to de-stacking timber drying racks
Writing	<ul style="list-style-type: none"> Complete routine records for processing and equipment faults
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and actively listen to clarify contents of work orders

Assessment Requirements for FWPSAW2213 De-stack timber drying racks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has de-stacked timber drying racks and maintained the supply of timber boards for dressing process for one production period according to workplace operating procedures.

In performing this task, the individual has:

- followed workplace health and safety and environmental protection practices and/or procedures
- completed pre-operational check and operated equipment involved in de-stacking timber drying racks
- measured moisture content and visually assessed quality of timber boards
- separated timber boards from the rack bearers and spacing sticks
- maintained the required supply of de-stacked timber for dressing process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of equipment used for drying timber
- types and components of timber drying racks, including:
 - air seasoning or kiln seasoning racks
 - timber, steel or mobile racks with bearers and spacing sticks
- mechanical timber board separation machine and conveyor system
- methods used to measure moisture content of timber
- techniques for de-stacking timber drying racks
- markings used on timber boards to identify grade
- workflow processes used to de-stack timber drying racks
- flow of timber board supply in and out of de-stacking area

- timber storage systems and labelling
- characteristics used to visually assess timber boards, including:
 - type
 - finish quality
 - timber defects
 - length
 - width
 - thickness
- typical timber defects and how they affect ability to produce a quality finished product, including:
 - incorrect moisture content
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- range of industry standard lengths, cross-sections, appearance grades and applicable terminology
- workplace procedures specific to de-stacking timber drying racks, including:
 - health and safety, with particular emphasis on use of personal protective and other equipment
 - communication reporting lines
 - recording and reporting processing and equipment faults
- workplace environmental protection requirements and practices for timber processing operations, including:
 - cleaning of plant, tools and equipment
 - reducing water and energy use
 - disposing of, recycling and reusing timber
 - disposal of waste material.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- timber drying racks to de-stack
- mechanical board separation machine with conveyor system
- moisture probes
- personal protective equipment suitable for de-stacking seasoning racks
- specifications:
 - workplace procedures for de-stacking seasoning racks
 - workplace health and safety and environmental protection policies and/or procedures applicable to de-stacking seasoning racks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPSAW2214 Sort timber boards manually

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to conduct manual sorting of timber boards of varying sizes and store or distribute for downstream operations.

The unit applies to individuals who sort timber boards in a sawmill or wood products work environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for sorting timber boards	1.1 Determine job requirements from work order or instructions and, where required, check with appropriate personnel 1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task, including use of personal

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	protective equipment 1.3 Identify and assess hazards and take actions to mitigate risks related to timber sorting operation 1.4 Identify type and quantity of timber boards for sorting, and confirm allocation of sorted timber boards to storage and/or downstream operations 1.5 Check timber sorting and transferring equipment for operational effectiveness
2. Sort and distribute timber boards	2.1 Assess timber board characteristics and defects visually 2.2 Identify timber board cross-sections, lengths and grades and allocate to storage bins or trays 2.3 Move sorted timber boards by size and grade to storage location or direct to subsequent operations according to work order while maintaining material flow 2.4 Check operation of conveyors and bins regularly to ensure supply of boards to downstream processing 2.5 Identify routine process and equipment faults and resolve or report to appropriate personnel
3. Complete timber boards sorting operation	3.1 Reject and dispose of sub-standard material according to workplace environmental protection practices and/or procedures or mark for docking 3.2 Label storage locations according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret workplace documentation related to sorting timber boards
Writing	<ul style="list-style-type: none"> Complete routine records for sorting process and equipment faults

Skill	Description
Oral communication	<ul style="list-style-type: none"> Ask open and closed questions and actively listen to clarify contents of work orders
Numeracy	<ul style="list-style-type: none"> Determine quantities of required material within work orders and count amounts

Assessment Requirements for FWPSAW2214 Sort timber boards manually

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has sorted timber boards manually by size and grade for allocation to storage or downstream operations for one production run according to prescribed specifications.

In performing this task, the individual has:

- followed workplace health and safety and environmental protection practices and/or procedures
- assessed timber board dimensions, characteristics and defects visually
- used transfer sorting equipment to distribute boards to storage or subsequent operations while maintaining material flow
- disposed of or recycled sub-standard boards or marked for docking.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace procedures for manual sorting, storage and labelling of timber boards
- timber types, including:
 - native timber species
 - imported timber species
 - dressed timber
 - in-the-rough timber
 - stress and non-stress graded timber
 - preservative treated timber
- characteristics used to manually sort timber boards, including:
 - type

- finish quality
- timber defects
- length
- width
- thickness
- typical timber defects and how they affect ability to produce a quality finished product, including:
 - incorrect moisture content
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- range of industry standard lengths, cross-sections, appearance grades and applicable terminology
- markings used on timber boards to identify grade
- workflow processes used to manually sort timber boards
- flow of timber board supply in and out of sorting area
- storage layout and storage categories for timber boards
- methods to label timber in storage locations and common terms used
- purpose, features and operation of equipment used for sorting boards manually, including:
 - conveyor belt systems
 - track systems
 - lifting equipment including forklifts, slings, trolley jacks, gantry cranes, loaders
- workplace procedures specific to sorting timber boards manually, including:
 - health and safety, with particular emphasis on use of personal protective equipment (PPE) and other equipment
 - communication reporting lines
 - recording and reporting processing and equipment faults
- workplace environmental protection requirements and practices for timber processing operations, including:
 - cleaning of plant, tools and equipment
 - disposing of, recycling and reusing timber
 - safe disposal of waste material.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - a selection of timber boards for sorting
 - equipment for sorting and transferring timber boards
 - PPE suitable for sorting timber boards manually
- specifications:
 - work order or instruction detailing board sorting requirement
 - workplace health and safety and environmental protection policies and/or procedures applicable to sorting timber boards manually.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FWPSAW3232 Sharpen band saw blades

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 5.0.

Application

This unit of competency describes the skills and knowledge required to assess the condition of narrow and wide band saw blades, set up the sharpening machine and sharpen saw blades with a grinder.

The unit applies to individuals who sharpen band saws in a saw technician workshop or sawmill.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit
