Assessment Requirements for HLTAHW058 Prepare for and support childbirth

Release: 1

Assessment Requirements for HLTAHW058 Prepare for and support childbirth

Modification History

Release	Comments
Release 1	<p>This version was released in <i>HLT Health Training Package release 1.0</i> and meets the requirements of the New Standards for Training Packages.</p> <p>Significant changes to elements and performance criteria. New evidence requirements for assessment, including volume and environment requirements Prerequisite units removed</p>

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be evidence that the candidate has:

- prepared for and supported at least five women during the pregnancy and birthing process, including:
 - communicating effectively with each client and family if available to obtain information and ensure understanding of information provided
 - providing treatment, medicine and other health care services appropriate to interpartum health in a safe and effective manner and within guidelines
 - liaising between service providers, individuals, families and community groups
 - holistically evaluating the impact of treatment on client's physical, mental and emotional condition and behaviour
 - performing all required assessments to determine health of the client and baby
 - interpreting assessment outcomes to determine course of action for health care, including issues requiring immediate action
 - utilising referral services as necessary
 - recognising situations requiring immediate or urgent action and taking appropriate action as required within current job role, legislative requirements and organisation procedures
 - supporting the client to attend appointments for monitoring of own and baby's health.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role.

This includes knowledge of:

- birthing practices suitable for culturally safe and positive birth outcomes
- organisation policies and procedures relating to client confidentiality
- anatomy/physiology, pharmacology, pathology and basic microbiology relevant to pregnancy, maternal and/or infant health
- knowledge of microbiology relevant to maternal and/or infant health and prevention of infection or cross infection
- health conditions, obstetric problems and associated issues related to pregnancy, maternal and infant health
- medical problems occurring in pregnancy requiring referral and follow-up
- relevant assessment methods and use of associated equipment and testing procedures
- relevant treatments, medicines and associated care services available
- risks and contraindications associated with relevant treatments and medication
- realistic expectation of client condition during monitoring of progress
- obstetric problems, including:
 - antepartum haemorrhage
 - vaginal discharges
 - fluid loss from the vagina
 - ruptured membranes (including onset of labour, prolapsed cord, infection)
 - abdominal pain in pregnancy (including braxton hicks contractions and labour contractions)
 - pre-term labour
 - breech presentation
 - post-partum or intrapartum haemorrhage
 - shoulder dystocia
 - retained placenta
 - obstructed labour
 - eclampsia
- vital signs during childbirth or delivery, including:
 - TPR
 - blood pressure
 - auscultation of foetal heart rate
 - blood glucose level
 - foetal palpation
 - fundal height measurements
 - urinalysis
 - weight
 - monitoring progress of labour
 - bloods
 - rate of contractions
- baseline observations including, but not limited to:
 - temperature, pulse, respiration

- blood pressure
- blood loss per vaginum
- condition of fundus
- rate of contractions
- progress of labour
- documentation of findings from a physical assessment and follow-up as per policy and procedures manual
- pain assessment
- blood sugar levels
- pulse oximetry
- recognition of significant abnormalities in cardiotocograph (CTG) reading
- immediate care required for newborns, including:
 - use of humidicribs
 - intravenous infusions
 - blood sugar levels
 - skin-to-skin contact and breastfeeding in the first hour after birth
 - weight, length and head circumference measurements
 - temperature
 - respiratory rate
 - APGAR scoring and assessment
 - resuscitation
 - oxygen administration.

Assessment Conditions

Skills must be demonstrated working:

- in a health service or centre
- individually or as a member of a multidisciplinary primary health care team
- with Aboriginal and/or Torres Strait Islander clients and communities.

In addition, simulations and scenarios must be used where the full range of contexts and situations cannot be provided in the workplace or may occur only rarely. These are situations relating to emergency or unplanned procedures (such as unplanned or emergency births) where assessment in these circumstances would be unsafe or is impractical.

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

Assessment must be undertaken by a workplace assessor who has expertise in this unit of competency and who is:

- an Aboriginal and/or Torres Strait Islander Health Worker

or:

- accompanied by an Aboriginal and/or Torres Strait Islander person who is a recognised member of the community with experience in primary health care.
