Assessment Requirements for HLTAMB014 Transport non-emergency patients under operational conditions

Release: 2

Assessment Requirements for HLTAMB014 Transport non-emergency patients under operational conditions

Modification History

Release	Comments
Release 2	This version was released in <i>HLT Health Training Package release 4.1</i> . Updated Assessment Conditions to permit assessment to be performed in simulation.
Release 1	This version was released in <i>HLT Health Training Package release 3.0</i> and meets the requirements of the 2012 Standards for Training Packages. Minimal changes to the elements and performance criteria. New evidence requirements for assessment including volume and frequency requirements. Supersedes HLTAMBT301B

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- checked the safety of transport vehicle and safely transported 3 different non-emergency patients under operational conditions including loading and unloading.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- methods of loading and unloading non-emergency patients
- organisation policy and procedures for vehicles used for transportation of non-emergency patients, equipment in vehicles and vehicle checks
- relevant acts, regulations and organisation policies procedures related to transport of non-emergency patients including:
 - manual handling and lifting
 - care and/or restraint of patient during transportation – for example a patient with a mental health condition or a child
 - non-emergency patient care procedures during transportation

- State/Territory road rules and regulations when driving emergency vehicles
- stock inventory and the safe storage and disposal of pharmacological products
- use of communications equipment and systems, and knowledge of relevant procedures
- vehicle and non-emergency resources organisation operating procedures.

Assessment Conditions

Skills must be demonstrated in an operational vehicle used for the transport of non-emergency patients. This may be in the workplace or in a simulated environment on 3 separate occasions. Driving skills must have been demonstrated at least once using simulation prior to any demonstration in the workplace.

Assessment must ensure the use of:

- suitable facilities, resources and equipment as per local governing body including:
- transport vehicle (emergency or non-emergency)
- communication protocols, devices and equipment used in emergency vehicles
- modelling of industry operating conditions including access to real people when using simulations and scenarios to demonstrate transporting non-emergency patients.

Non-emergency patient is defined as an individual that requires transport, but may not require active treatment by a clinician while en route to a receiving facility (i.e. hospital) - simulation.

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.
