<td>Release 1</td>
<td>This version was released in <em>HLT Health Training Package release 3.0</em> and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Minimal change to knowledge evidence. Supersedes HLTEN609B</td>

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- undertaken nursing work in accordance with Nursing and Midwifery Board of Australia professional practice standards, codes and guidelines
- performed the following nursing care interventions on no fewer than 3 people in a respiratory care setting in the workplace:
  - care of an arterial line
  - positive airway pressure (CPAP) and bilevel positive airway pressure (BiPAP)
  - care of permanent and temporary mechanical ventilation including suctioning and bagging
  - tracheal suction via an endotracheal tube (ETT)
  - assisted with the insertion or removal of pleural and intercostal drains
  - administered oxygen based on interpretation of oximetry readings or blood gas analysis in consultation with registered nurse
- in undertaking the above, use advanced communication skills and medical terminology to communicate effectively with the person, family or carer, and the registered nurse and other health professionals to record or report the person’s outcomes.
Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- respiratory anatomy, physiology and pathology, sufficiently in-depth and specialised to make considered judgements and to make a professional contribution to respiratory nursing care
- respiratory conditions including:
  - acute respiratory distress syndrome
  - asthma
  - bronchitis, bronchiolitis, bronchiectasis (acute and chronic)
  - chronic obstructive airway disease
  - cystic fibrosis
  - emphysema
  - haemothorax
  - lung cancer
  - pulmonary oedema
  - pneumonia
  - pulmonary Embolism (PE)
  - pneumothorax
  - sleep Apnoea
  - tuberculosis (TB)
- actual and potential problems from respiratory conditions including:
  - aspiration
  - hypoxia
  - hypercapnia
  - inability to clear secretions
  - inability to cough
  - inability to protect airway
  - respiratory failure
  - shortness of breath
- potential nursing interventions related to respiratory conditions including:
  - administration of non-invasive ventilation, CPAP and BiPAP
  - assisting with insertion and removal of pleural drains
  - care of an arterial line and interpretation of blood gas analysis
  - care of a person with a tracheostomy
    - tracheostomy dressing
    - tracheal suction via an endotracheal tube (ETT) or tracheostomy
  - interpreting the results of oximetry readings
  - respiratory assessment:
• chest auscultation
• inspection
• pulse oximetry
• respiratory rate
• pulse rate
• blood pressure
• sedation score
• past medical history
• accessory muscles in use when breathing
• degree of shortness of breath (SOB)
• interpreting results of spirometry testing
• surgical procedures for respiratory conditions.

Assessment Conditions
Skills must have been demonstrated in the workplace with the addition of simulations and scenarios where the full range of contexts and situations cannot be provided in the workplace. The following conditions must be met for this unit:
• use of suitable facilities, equipment and resources in line with the Australian Nursing and Midwifery Accreditation Council’s Standards including:
  • simulated learning environment with simulation manikins suitable for advanced clinical nursing skills
  • arterial lines
  • CPAP and BiPAP (non-invasive) devices
  • oxygen therapy equipment
  • pleural drains
  • suctioning equipment
  • vital sign monitoring equipment
  • progressive notes of a de-identified person’s medical history
  • organisation policy and procedures on which the candidate bases the planning
  • modelling of industry operating conditions including access to real people for simulations and scenarios in enrolled nursing work.

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.
In addition, assessors must hold current registration as a Registered Nurse with Nursing and Midwifery Board of Australia.
