Assessment Conditions

Skills must have been demonstrated in the workplace or in a clinical environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - client information – case history, treatment plan
  - futon
  - linen
- modelling of industry operating conditions, including provision of services to the general public
- clinic supervision by a person who meets the assessor requirements outlined below for at least 120 of the 200 hours of client consultation work

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

In addition, assessors must:

- have at least 3 years current clinical experience working as a Shiatsu therapist providing services to the general public
- hold practising membership of an Australian professional body that represents Shiatsu therapists
- fulfil the continuing professional development requirements of the professional body to which they belong

HLTSHU007 Provide oriental therapies treatments

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements.

Application

This unit describes the skills and knowledge required to prepare for and provide therapeutic oriental therapies treatments based on the outcomes of an existing health assessment and treatment plan.

This unit applies to therapists who work with oriental therapies as part of a broader complementary health practice.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare client for treatment	1.1 Interpret treatment plans and clearly outline how the treatment will be provided and managed 1.2 Explain factors which may interfere with the effectiveness of the treatment 1.3 Inform and advise client about possible physical or emotional reactions during and following a session

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Follow established protocols to physically prepare the client for treatment
	1.5 Confirm client consent for treatment
2. Apply therapeutic techniques	2.1 Determine treatment sequence, location and degree of pressure according to assessment indications
	2.2 Apply oriental therapy techniques protocol
	2.3 Use the condition and response of the client as a continual feedback to the initial assessment
	2.4 Position client to optimise their comfort and support while allowing for optimum application of techniques
	2.5 Maintain therapist postures that ensure a controlled distribution of body weight
	2.6 Maintain client-focused attention throughout the treatment session
	2.7 Recognise reactions to treatment and respond promptly according to clients needs
3. Provide advice and resources to the client	3.1 Educate client in relevant and practical techniques that support the treatment plan
	3.2 Answer client queries with clarity, using appropriate language
	3.3 Use honesty and integrity when explaining treatment plans, schedules and recommendations to the client
	3.4 Promote client independence and responsibility in treatment
	3.5 Discuss and agree on evaluation strategies
	3.6 Accurately document treatment provided and details of client communications

© Commonwealth of Australia, 2025 HumanAbility

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTSHU007 Provide oriental therapies treatments

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of oriental therapies client consultation work
- prepared for and managed at least 60 oriental therapies treatment sessions - clients must include males and females from different stages of life with varied presentations
- used the following techniques and sequences according to clients needs:
  - acupressure
  - moxibustion
  - cupping
  - meridian stretching techniques
  - demonstration and explanation of suggested corrective postures, stretches, movements
- provided other advice to support optimum health:
  - lifestyle
  - dietary
  - yoga
  - relaxation
  - meditation
  - poultices and liniments

© Commonwealth of Australia, 2025 HumanAbility

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- legal and ethical considerations (national and state/territory) for client assessment:
  - codes of conduct
  - duty of care
  - informed consent
  - mandatory reporting
  - practitioner/client boundaries
  - privacy, confidentiality and disclosure
  - records management
  - working role boundaries:
    - working within scope of practice
    - presenting symptoms that require referral to a medical practitioner
  - work health and safety
- oriental therapies treatment techniques, how to apply them, what each technique does, what effects it might have, and what the contraindications are, for the following:
  - acupressure
  - moxibustion
  - cupping
  - meridian stretching techniques
  - corrective postures, stretches, movements
- potential reactions during treatment and how to respond:
  - discomfort
  - emotional reactions
  - feedback - verbal, tactile, visual
  - muscular spasms
  - body temperature discomfort
  - deep relaxation
- potential reactions following treatment and appropriate client advice
- types of advice and resources that can be provided to clients for their use outside the clinical environment:
  - advice about nutritional actions based on 8 principal patterns and 6 pathogenic influences
  - medicinal teas and meals
  - seasonal adjustments
  - poultices and liniments
- documentation requirements for recording treatment details
- basic structure and function of western medicine systems and regions of the body

© Commonwealth of Australia, 2025 HumanAbility

- common disease states and functional problems of each body system
- fundamental principles of biomechanics

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated clinical environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - client information, case history, treatment plan
  - futon
  - linen
- modelling of industry operating conditions, including provision of services to the general public
- clinic supervision by a person who meets the assessor requirements outlined below for at least 120 of the 200 hours of client consultation work

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

In addition, assessors must:

- have at least 3 years current clinical experience working as a Shiatsu therapist providing services to the general public
- hold practising membership of an Australian professional body that represents Shiatsu therapists
- fulfil the continuing professional development requirements of the professional body to which they belong

HLTSHU008 Adapt Shiatsu and oriental therapies practice to meet specific needs

Modification History

Release	Comments
Release 2	Corrections to typographical errors in Performance Evidence. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements. Removed prerequisite.

Application

This unit describes the skills and knowledge required to adapt assessment and treatment strategies to meet the needs of clients of different genders and at different stages of life. It also includes the requirement to be able to identify and respond to other specific needs with which the practitioner may be unfamiliar.

This unit applies to Shiatsu therapists.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Adapt assessment and treatment strategies to stages of	1.1 Anticipate and take account of varying potential client sensitivities to ensure client dignity is maintained

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
life	1.2 Tailor approaches that take account of different cognitive abilities of clients at different stages of life 1.3 Adjust physical processes to take account client capabilities and physical body features 1.4 Recognise norms and deviations associated with age and gender 1.5 Identify when consent from others is required, and obtain and document according to legal and ethical requirements
2. Respond to unfamiliar presentations	2.1 Recognise situations where presenting cases or aspects of presenting cases fall outside current knowledge base or expertise 2.2 Refer client to other practitioners when case is not appropriate to own scope of practice 2.3 When appropriate to continue with the case, identify, access and interpret sources of additional information and advice 2.4 Enhance own capacity to deal with the case by conducting case specific research 2.5 Integrate findings into client treatment plans and record details
3. Extend and expand own knowledge base	3.1 Pro-actively identify and respond to professional development opportunities 3.2 Develop and adjust work practices as part of ongoing practice development

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

© Commonwealth of Australia, 2025 HumanAbility

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for HLTSHU008 Adapt Shiatsu and oriental therapies practice to meet specific needs

Modification History

Release	Comments
Release 2	Corrections to typographical errors in Performance Evidence. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements. Removed prerequisite.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of Shiatsu and oriental therapies client consultation work
- managed at least 60 Shiatsu/oriental therapies assessment and treatment sessions - clients must include males and females from different stages of life with varied presentations
- effectively adapted communication, assessment and treatment strategies to meet client needs
- conducted case specific research for at least 3 cases, where key aspects of the condition are not known to the candidate

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- legal and ethical considerations (national and state/territory) for working with specific groups:
  - children in the workplace

© Commonwealth of Australia, 2025 HumanAbility

  - codes of conduct
  - discrimination:
    - age
    - disability
    - racial
    - sex
  - duty of care
  - informed consent
  - mandatory reporting
  - practitioner/client boundaries
  - privacy, confidentiality and disclosure
  - records management
  - work role boundaries:
    - working within scope of practice
    - presenting symptoms that require referral to a medical practitioner
  - work health and safety
- treatment management factors that must be considered for clients of different genders and at different stages of life:
  - case taking
  - variations in approach to physical examination and treatment
  - home recommendations
- major developmental milestones for different stages of life
- features of common health conditions that affect the following groups and how those conditions are assessed and treated in the Shiatsu/oriental therapies framework:
  - children
  - adolescents
  - adult females at different stages of life
  - adult males at different stages of life
- factors for consideration when providing any form of end of life/palliative care
- professional responsibilities when presenting cases fall outside of practitioner's current scope, including:
  - when referral is appropriate or required
  - information and advice sources
  - case research techniques

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated clinical environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - client information, case history, treatment plan

© Commonwealth of Australia, 2025 HumanAbility

  - futon
  - linen
- modelling of industry operating conditions, including provision of services to the general public
- clinic supervision by a person who meets the assessor requirements outlined below for at least 120 of the 200 hours of client consultation work

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

In addition, assessors must:

- have at least 3 years current clinical experience working as a Shiatsu therapist providing services to the general public
- hold practising membership of an Australian professional body that represents Shiatsu therapists
- fulfil the continuing professional development requirements of the professional body to which they belong

HLTSHU009 Monitor and evaluate traditional oriental medicine treatments

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. New unit.

Application

This unit describes the skills and knowledge required to monitor and evaluate treatments provided within the traditional oriental medicine framework, both from an individual client and whole of practice professional development perspective.

This unit applies to practitioners using Shiatsu and other oriental therapies.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Evaluate client progress	1.1 Seek client feedback about treatment impacts and compliance with the treatment plan 1.2 Make own observations and assessment of client changes based on oriental medicine framework 1.3 Evaluate treatment impacts in relation to client's physical, qi and emotional wellbeing 1.4 Compare changes and improvements with

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	expectations in the treatment plan, existing research and evidence from own practice
	1.5 Seek additional information from clients when progress suggests this is needed
	1.6 Accurately document progress in client treatment plan
2. Adjust treatment based on evaluation	2.1 Determine the need for adjustment to treatment plan based on evaluation of client progress
	2.2 Identify and respond to factors that may be inhibiting client progress
	2.3 Adjust treatment plans based on outcomes and sources of research or evidence that support massage practice
	2.4 Accurately document any adjustments to treatment plans
3. Develop practice from client evaluation	3.1 Review progress of clients in context of own individual practice
	3.2 Identify areas of own practice for further research or development to support client outcomes
	3.3 Pro-actively seek and respond to professional development opportunities

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for HLTSHU009 Monitor and evaluate traditional oriental medicine treatments

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. New unit.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of Shiatsu/oriental therapy client consultation work
- managed at least 60 Shiatsu/oriental therapies assessments and treatment sessions - clients must include males and females from different stages of life with varied presentations
- monitored and evaluated Shiatsu and oriental therapies treatments provided to at least 5 different clients with at least 3 treatments per client

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- legal and ethical considerations (national and state/territory) for monitoring and evaluation:
  - children in the workplace
  - codes of conduct
  - duty of care
  - informed consent
  - mandatory reporting
  - practitioner / client boundaries
  - privacy, confidentiality and disclosure
  - records management

© Commonwealth of Australia, 2025 HumanAbility

    - work role boundaries
        - working within scope of practice
        - presenting symptoms that require referral to a medical practitioner
    - work health and safety
- types of criteria by which Shiatsu and oriental therapies treatments are evaluated
- methods of monitoring treatment progress
    - re-assessment
    - client feedback
- barriers to therapeutic progress and ways to respond within a Shiatsu/oriental therapies framework
- expectations of treatment for different conditions and client groups, and factors that impact on those expectations:
    - client history
    - contraindications
    - compliance
    - interactions with other treatments
    - impact of external environment
    - evaluation of appropriateness of style and technique
    - client general health
    - presenting condition
- sources of research and evidence that support traditional oriental medicine practice
- the role of maintaining personal health and awareness

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated clinical environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - client information, case history, treatment plan
    - futon
    - linen
- modelling of industry operating conditions, including provision of services to the general public
- clinic supervision by a person who meets the assessor requirements outlined below for at least 120 of the 200 hours of client consultation work

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

In addition, assessors must:

- have at least 3 years current clinical experience working as a Shiatsu therapist providing services to the general public

© Commonwealth of Australia, 2025 HumanAbility

- hold practising membership of an Australian professional body that represents Shiatsu therapists
- fulfil the continuing professional development requirements of the professional body to which they belong

HLTSTE001 Clean and disinfect reusable medical devices

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Application

This unit describes the skills and knowledge required to follow procedures for the sorting, inspection, cleaning and thermal disinfection of soiled reusable medical devices, including the effective use of equipment and completion of quality checks and documentation.

This unit applies to individuals working under general supervision and within established procedures in a range of health service organisations.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes of a *unit of competency*	*The Performance Criteria specify the level of performance required to demonstrate achievement of the Element*
1. Receive and sort contaminated items	1.1 Follow procedures for collection and transport of items to the cleaning area as required 1.2 Sort reusable items and safely dispose of single use reusable medical devices

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes of a *unit of competency*	*The Performance Criteria specify the level of performance required to demonstrate achievement of the Element*
	1.3 Check for completeness of set and for multi-part items
	1.4 Identify and separate items requiring segregation or specialised processing
	1.5 Identify and respond to priority processing requirements
	1.6 Report faulty and damaged items to designated person
2. Prepare contaminated items for cleaning and disinfection	2.1 Complete initial pre-cleaning and waste removal processes
	2.2 Prepare specialised items for specific cleaning procedures
	2.3 Select cleaning processes and equipment based on manufacturer's recommendations and evaluation of item construction and composition
	2.4 Disassemble instruments for cleaning and disinfection according to manufacturer's guidelines
3. Complete cleaning and thermal disinfection processes	3.1 Organise workflow using dirty to clean principle
	3.2 Interpret operating instructions for cleaning and drying equipment, and test and prepare for use as per organisation procedures
	3.3 Complete water quality tests as required
	3.4 Select, use and correctly measure chemical products according to safety data sheets
	3.5 Complete required manual cleaning with hot water rinsing and drying
	3.6 Use soaking, flushing and brushing techniques as required for reusable medical devices with particular structures
	3.7 Operate cleaning appliances using safe manual

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes of a *unit of competency*	*The Performance Criteria specify the level of performance required to demonstrate achievement of the Element*
	handling techniques
	3.8 Select washer disinfector cycle based on required parameters for specific reusable medical devices
	3.9 Minimise waste during the cleaning and disinfection process
	3.10 Identify faulty or damaged equipment, and report to designated person
4. Check quality of cleaning and thermal disinfection	4.1 Inspect cleanliness and dryness according to standards and procedures
	4.2 Monitor and document processes, check processes and respond to routine problems
	4.3 Complete and archive quality management documentation according to organisation procedures
	4.4 Identify faults or shortcomings in the cleaning and disinfection process and take action within scope of own work role

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for HLTSTE001 Clean and disinfect reusable medical devices

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established procedures, work processes and national standards for the sorting, disassembly, cleaning and thermal disinfection of reusable medical devices on at least 3 occasions:
  - identified and responded to routine process and maintenance problems and variations
  - addressed relevant work health and safety, infection control and manual task requirements

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- existence and basic requirements of AS/NZS 4187, and its role in the sterilisation workplace
- reusable medical devices (RMD) product families and associated cleaning requirements, including detergents and brushes
- types and features of cleaning and drying equipment, and their monitoring and maintenance requirements

© Commonwealth of Australia, 2025 HumanAbility

- steps in the cleaning and disinfection work flow process and the reasons for design of work area
- water quality testing processes
- testing processes for cleaning equipment
- key aspects of thermal disinfection, including:
  - terminology
  - conditions and parameters for thermal disinfection
  - lethality of a moist heat process for a range of temperatures
- quality indicators for cleaning and disinfection processes
- safe work practices in the cleaning area:
  - manual task risk factors and how to control for them
  - infection control and Spaulding's classification
  - personal protective equipment (PPE)

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - reusable medical devices requiring cleaning
  - operational cleaning and drying equipment
  - cleaning procedures to be followed by the candidate
  - equipment operation manuals
  - personal protective equipment
  - quality assurance documentation
- modelling of industry operating conditions, including:
  - speed and timing requirements for the cleaning process
  - presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTSTE002 Inspect and pack reusable medical devices

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Application

This unit describes the skills and knowledge required to prepare, assemble and package cleaned reusable medical devices according to manufacturer's instructions.

This unit applies to individuals working under general supervision and within established procedures in a range of health service organisations.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
1. Prepare for inspection and packing	1.1 Select and wear appropriate attire and ensure personal hygiene preparations are followed 1.2 Clean area prior to processing according to infection control guidelines 1.3 Test packing equipment in readiness for use and accurately document results

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
2. Inspect reusable medical devices	2.1 Sort items according to priority, specialties and packaging requirements and product families
	2.2 Inspect items for cleanliness and dryness and reprocess where required
	2.3 Inspect items for functionality and completeness according to organisation requirements
	2.4 Follow safe procedures for insulation testing as required
	2.5 Use illuminated magnifier appropriately
	2.6 Identify loan items and implantable items
	2.7 Identify, report, remove and/or replace damaged/faulty items and items due for preventative maintenance
	2.8 Report missing items according to organisation policies and protocols
3. Prepare and assemble reusable medical devices	3.1 Select, inspect and prepare instrument trays or rigid sterilisation containers against checklists
	3.2 Open and unlock items with hinges/ratchets
	3.3 Disassemble/loosen multi-part instruments and re-assemble to ensure sterilant contact on all surfaces according to manufacturer’s instructions
	3.4 Lubricate according to manufacturer instructions
	3.5 Prepare hollow ware items with all openings facing the same direction
	3.6 Protect delicate and sharp items in accordance with organisation policies and procedures
	3.7 Use chemical indicators according to standards
4. Package reusable medical devices	4.1 Select packaging systems with reference to sterilisation method

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
	4.2 Use safe manual handling techniques
	4.3 Interpret operating instructions for packaging equipment and use equipment safely
	4.4 Pack, secure and label sterile barrier systems to comply with aseptic removal principles
	4.5 Assemble and package thermally disinfected reusable medical devices for transfer to appropriate location
	4.6 Complete accurate quality assurance documentation

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for HLTSTE002 Inspect and pack reusable medical devices

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established procedures, work processes and national standards for the inspection, assembly, packaging and labelling of reusable medical devices on at least 3 occasions
- operated and monitored equipment on at least 3 occasions, including illuminated magnifier
- completed accurate quality assurance documentation
- addressed relevant work health and safety, infection control and manual handling requirements
- identified and responded to routine process and maintenance problems and variations

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- packaging in relation to client safety, and implications of negligence
- existence and basic requirements of AS/NZS 4187, and its role in packaging
- features of inspection and test equipment and processes, including:
  - air guns

© Commonwealth of Australia, 2025 HumanAbility

    - lighted magnification
    - heat sealer
    - height adjustable work stations
    - insulation testing
    - labelling systems
    - instrument checklists
- wrapping and packaging materials and techniques:
    - relationship of sterile barrier systems and wrapping material to sterilisation method used
    - sealing materials
    - single use and reusable sterile barrier systems
    - rigid reusable container systems
- classes of chemical indicators
- identification and traceability systems
- performance qualification for packaging
- features of quality assurance documentation
- safe work practices in the sterilisation work area:
    - manual task risk factors and how to control for them
    - infection control
    - personal hygiene

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - wrapping and packaging materials
    - heat sealing equipment
    - sterile barriers systems
    - reusable medical devices:
    - personal hygiene hair ware
    - quality assurance documentation
    - procedures to be followed by the candidate
- modelling of industry operating conditions, including:
    - speed and timing requirements for the checking and packaging process
    - presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors

HLTSTE003 Sterilise loads

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Application

This unit of competency describes the skills and knowledge required to follow correct procedures to select and operate sterilisation equipment, interpret steriliser function and parameters in the provision of sterilised reusable medical devices, appropriately load items for sterilisation, and to release sterilised items for distribution. This competency unit does not deal with ethylene oxide sterilisation.

This unit applies to individuals working under general supervision and within established procedures in a range of health service organisations, including hospitals and specialist sterilisation facilities.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
1. Prepare sterilisation equipment	1.1 Clean and check steriliser, and accessory equipment according to manufacturer’s recommendations

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
	1.2 Conduct, interpret and record performance test cycles
	1.3 Interpret and accurately document results from physical and chemical tests
2. Load steriliser	2.1 Select sterilisation method according to reusable medical devices (RMD) manufacturer requirements
	2.2 Assign appropriate cycle and batch control number and complete documentation correctly
	2.3 Check packaging, sealing and labelling for compatibility with organisation policies and procedures
	2.4 Check load content and configuration for compliance with annual steriliser performance qualification
	2.5 Load steriliser to ensure sterilant contact and according to manufacturer's recommendations
	2.6 Add additional test items such as biological indicator or process challenge device according to organisation protocol
3. Operate steriliser	3.1 Check steriliser function for sterilant availability
	3.2 Check function of physical process recording accessories
	3.3 Select appropriate cycle in accordance with organisation policies and procedures
	3.4 Identify, report and action faults according to manufacturer's recommendations and organisation policies and procedures
4. Unload and release sterilised loads	4.1 Check and interpret sterilisation cycle parameters and chemical monitors, and record results on completion of cycle
	4.2 Remove sterilised load immediately on completion of cycle
	4.3 Remove compromised items, dismantle for

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
	reprocessing and record details
	4.4 Unload cooled load using appropriate handling techniques
	4.5 Complete documentation of the sterilising cycle for parametric release
	4.6 Complete documentation of the sterilising cycle for parametric release
	4.7 Check and document additional load release tests
	4.8 If used, incubate and check results of biological indicators
5. Comply with quality management requirements	5.1 Adhere to operational monitoring and testing, performance qualification and maintenance of sterilisers and associated equipment
	5.2 Comply with documentation requirements for sterilising cycles, batch control and load release control
	5.3 Report and document all steriliser faults/malfunction and load non-conformance/non-compliance
	5.4 Store and archive documentation in accordance with organisation policies and procedures

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for HLTSTE003 Sterilise loads

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established procedures, work processes and national standards to prepare, operate, load and unload sterilisers and release the sterilised loads on at least three occasions, including:
  - correctly interpreting test results
  - accurately completing all documentation for cycles, tests and load content, including specialised items
  - addressing relevant work health and safety, infection control and manual handling requirements
  - identifying and responding to routine problems within delegated authority

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- terminology used in sterilising and methods of sterilisation used in Australia
- environmental conditions required for efficient functioning of a sterilisation area, including:
  - quarantine protocols
  - conditions and parameters for successful sterilisation

© Commonwealth of Australia, 2025 HumanAbility

- cleaning protocols and special requirements for sterilisers, trolleys and carriages
- features of sterilisation process that influence sterilisation outcomes, including:
  - cycle stages and physical parameters that determine sterilisation outcomes
  - differences between methods of low temperature sterilisation processes including hydrogen peroxide and peracetic acid
  - the biocidal action of chemical sterilants and impact on sterilisation outcomes
  - monitoring equipment and procedures
- features of steam sterilisation that influence sterilisation outcomes, including:
  - cycle stages and physical parameters that influence sterilisation outcomes
  - principles of steam generation and steam quality that impact on sterilisation outcomes
  - significant mechanical components of steam sterilisers
  - the biocidal action of steam under pressure and the impact on sterilisation outcomes
  - monitoring equipment and procedures
- performance testing:
  - air removal test
  - process challenge device
  - leak rate test
  - physical, chemical and biological monitoring devices
- requirements of quality assurance documentation, including release processes
- safe work practices in the sterilisation work area:
  - manual task risk factors and how to control for them
  - infection control
  - personal hygiene

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - steam sterilisers
  - reusable medical devices
  - personal protective equipment
  - quality assurance print outs and documentation
  - workplace procedures to be followed
- modelling of industry operating conditions, including:
  - speed and timing requirements for the sterilisation process
  - presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTSTE004 Manage sterile stock

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Application

This unit of competency describes the skills and knowledge required to apply procedures for handling, storing and maintaining sterile stock.

This unit applies to individuals working under general supervision and within established procedures in a range of health service organisations.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
1. Store sterile stock	1.1 Select and wear attire, ensuring personal hygiene preparations are in accordance with organisation policies and procedures
	1.2 Decant sterile stock supplied in external containers/packaging prior to transfer into the sterile stock area

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
	1.3 Identify and clean the dedicated area for storing sterile stock, following required documentation processes
	1.4 Restrict access and minimise traffic in the sterile stock area
2. Maintain packaging integrity	2.1 Minimise handling of sterile stock
	2.2 Inspect items for packaging integrity, labelling and batch control
	2.3 Follow organisation procedures for non-conforming stock
	2.4 Complete protective packaging as required
3. Maintain stock levels	3.1 Comply with sterile stock rotation practices
	3.2 Identify, remove and re-process or discard stock not complying with inventory control guidelines
	3.3 Assess and calculate stock and imprest levels
	3.4 Correctly interpret order requirements
	3.5 Prepare, fill and distribute orders to relevant destination using required documentation
	3.6 Document and report supply discrepancies according to procedures
4. Transport sterile stock	4.1 Clean and maintain trolleys and containers using appropriate cleaning procedures
	4.2 Load and handle transport equipment safely
	4.3 Follow designated route and timetable for transporting sterile stock
	4.4 Package any high-level disinfected or off-site delivery items in secure sealable easy to clean containers
5. Complete quality	5.1 Follow batch control identification procedures

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
management requirements	5.2 Accurately complete sterile stock ordering documentation
	5.3 Assist with recall procedures according to instructions

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTSTE004 Manage sterile stock

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established procedures, work processes and national standards for sterile stock management on at least 3 occasions, including:
  - maintaining environmental conditions
  - maintaining stock at required levels
  - handling stock that maintains sterile condition
  - responding to non-conformance
- accurately completed documentation using manual or computerised systems
- addressed relevant work health and safety, infection control and manual handling requirements

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- storage and stock management principles for sterile stock:
  - types of storage requirements
  - time-related shelf life
  - event-related shelf life
  - factors that affect shelf-life of sterile stock

© Commonwealth of Australia, 2025 HumanAbility

    - procedures to restrict access
    - quality assurance documentation
- recall procedures
- features of a transport system required to maintain sterility of packaged items
- safe work practices in the sterilisation work area:
    - manual task risk factors and how to control for them
    - infection control
    - personal hygiene
    - personal protective equipment (PPE)

Assessment Conditions

Skills must have been demonstrated in a sterile storage area within the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources:
    - a designated sterile area
    - sterile stock items
    - stock management and ordering systems
    - transport equipment
    - quality assurance documentation
    - workplace procedures to be followed
- modelling of industry operating conditions, including presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTSTE005 Care for reusable medical devices

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Application

This unit describes the skills and knowledge required to follow procedures for preparing, handling and inspecting of reusable medical devices during the reprocessing process.

This unit applies to individuals working under general supervision and within established procedures in a range of health service organisations.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes of a *unit of competency*	*The Performance Criteria specify the level of performance required to demonstrate achievement of the Element*
1. Prepare and handle reusable medical devices during reprocessing	1.1 Identify and sort reusable medical devices according to reprocessing requirements 1.2 Identify faulty reusable medical devices and report in line with relevant requirements, policies and procedures 1.3 Disassemble according to manufacturer’s guidelines

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes of a *unit of competency*	*The Performance Criteria specify the level of performance required to demonstrate achievement of the Element*
	1.4 Complete initial cleaning and waste removal processes
	1.5 Select preparation and cleaning processes suited to the design and composition of instruments
2. Inspect cleaned reusable medical devices	2.1 Inspect instruments during and after processing in line with requirements of specific item
	2.2 Inspect instruments with textured surfaces for retained debris under lighted magnification
	2.3 Inspect instruments for completeness and working function
	2.4 Follow safe work practices to conduct insulation testing as required
	2.5 Identify faults and address in line with scope of own work role

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTSTE005 Care for reusable medical devices

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisite.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established procedures, work processes and national standards for the preparing, cleaning and inspecting of reusable medical devices on at least 3 occasions, including:
  - disassembly and re-assembly of multi-part reusable medical devices
  - inspection of reprocessed reusable medical devices, including:
    - scissors
    - box joints and screw joints
    - instruments with long shafts
- prepared, cleaned and inspected a range of reusable medical devices, including:
  - solid items
  - those requiring disassembly
  - those with textured surfaces
  - delicate items
  - manual and powered items
  - cannulated items
  - blind ended instruments
- identified and responded to routine process and maintenance problems and variations

© Commonwealth of Australia, 2025 HumanAbility

- addressed relevant work health and safety, infection control and manual handling requirements

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- duty of care and impact of instrument care on operative procedures and patient-care outcomes
- existence and basic requirements of AS/NZS 4187, and its role in surgical instrument care
- role of Therapeutic Goods Administration (TGA) for manufacturing registration
- product families both basic categories and instruments for specialties
- use of reusable medical devices in different operative procedures
- cleaning, testing and inspection requirements for reusable medical devices:
  - systems for identifying instruments
  - instrument design and composition and their relationship to reprocessing requirements
  - suitable detergents for different items
  - soaking to remove dyes and adhesives
  - leak testing and requirements for the processing of flexible endoscopes
  - lubrication requirements
  - importance of maintaining passivation layer
  - items requiring insulation testing and impact of insulation testing on client care
- instrument repair requirements and process

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - soiled reusable medical devices
  - operational cleaning and drying equipment
  - cleaning procedures to be followed by the candidate
  - personal protective equipment
- modelling of industry operating conditions, including:
  - speed and timing requirements for the cleaning process
  - presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTSTE006 Chemically disinfect reusable medical devices

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisites.

Application

This unit describes the skills and knowledge required to follow procedures to determine disinfection requirements, safely undertake the chemical disinfection process, and complete quality checks and documentation for reusable medical devices.

This unit applies to individuals working under general supervision and within established procedures in a range of health service organisations.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes of a unit of competency	*The Performance Criteria specify the level of performance required to demonstrate achievement of the Element*
1. Prepare for chemical disinfection process	1.1 Determine disinfection requirements based on Spaulding's classification 1.2 Complete initial cleaning and waste removal processes

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes of a unit of competency	*The Performance Criteria specify the level of performance required to demonstrate achievement of the Element*
	1.3 Prepare specialised items for specific cleaning processes
	1.4 Select cleaning processes according to manufacturer's recommendations
	1.5 Disassemble items for cleaning and disinfection according to manufacturer's guidelines
2. Complete chemical disinfection processes	2.1 Test and configure automated chemical disinfection machines according to procedures and manufacturer's recommendations
	2.2 Correctly interpret safety data sheets (SDS)
	2.3 Select and use instrument grade chemical disinfectants and liquid chemical sterilants according to SDS
	2.4 Make accurate measurements and calculations in chemical use
	2.5 Follow correct methods of use in accordance with manufacturer's guidelines
	2.6 Operate machines according to manufacturer's guidelines and standards
	2.7 Minimise waste during the disinfection process
	2.8 Monitor hazards during disinfection processes
	2.9 Check and complete process records
3. Check quality of chemical disinfection processes	3.1 Complete monitoring and control according to standards and manufacturing guidelines
	3.2 Use chemical test strip indicators as per manufacturer's instructions
	3.3 Complete quality management documentation
	3.4 Identify faults in the disinfection process and take action within scope of own work role

© Commonwealth of Australia, 2025 HumanAbility

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTSTE006 Chemically disinfect reusable medical devices

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisites.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established procedures, work processes and national standards for the chemical disinfection of reusable medical devices on at least 3 occasions
- operated and monitored chemical disinfection equipment, including selection of appropriate disinfectants for different reusable medical devices
- identified and respond to routine process and maintenance problems and variations
- addressed relevant work health and safety, infection control and risk management requirements
- completed accurate documentation of tests, cycles and proof of process for manual or automated processes

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- role of chemical disinfection in client safety, and the implications of negligence
- existence and basic requirements of AS/NZS 4187 for chemical disinfection
- key aspects of Gastroenterological Nurses College of Australia (GENCA) Guidelines
- fundamental knowledge of microbiology in relation to disinfection

© Commonwealth of Australia, 2025 HumanAbility

- key aspects of chemical disinfection, including:
  - terminology
  - reusable medical devices requiring disinfection
  - Spaulding's classification
  - conditions and parameters for successful chemical disinfection
  - range and selection of effective chemical disinfectants based on chemical application, type of reusable medical device and manufacturer's instructions
  - Therapeutic Goods Administration (TGA) requirements for compliance, validation of disinfectant classification (registered or listed), efficacy and disinfectant labelling
  - specific monitoring equipment and procedures
  - documentation
- quality indicators for chemical disinfection
- safe work practices:
  - fume extraction devices
  - leak testing
  - infection control principles
  - microbiological testing
  - personal protective equipment (PPE)
  - protection of reusable medical devices from recontamination
  - manual task risk factors and how to control for them
  - infection control

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources:
  - chemical disinfection equipment and accessories
  - monitoring and reporting equipment
  - reusable medical devices requiring chemical disinfection
- modelling of industry operating conditions, including:
  - speed and timing requirements for the cleaning process
  - presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTSTE007 Monitor and maintain cleaning and sterilisation equipment

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTSTE407C//HLTSTE408C. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Application

This unit of competency describes the skills and knowledge required to plan and implement monitoring and maintenance requirements for cleaning and sterilisation-related equipment.

This unit applies to those working in a senior or team leader role in sterilisation services and/or reprocessing areas.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
1. Plan for monitoring and maintenance	1.1 Contribute to determination of scope and nature of monitoring and maintenance requirements 1.2 Address needs for preventative maintenance as part of the planning process 1.3 Prepare work schedules according to operational

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element* requirements and manufacturer's guidelines
2. Monitor and maintain equipment performance	2.1 Complete planned and random checks of equipment performance 2.2 Evaluate numerical and technical data to validate equipment performance and identify issues 2.3 Troubleshoot discrepancies in accordance with manufacturer's guidelines 2.4 Report issues beyond scope of responsibility without delay and according to organisation procedures 2.5 Liaise with maintenance personnel as required 2.6 Assist with implementation of contingency plans and review of critical incidents according to job role
3. Maintain records and reports	3.1 Ensure that monitoring, maintenance and repair records are complete, correct and within the work area 3.2 Evaluate and act upon non-compliant records and reports 3.3 Assist with management of recall processes 3.4 Maintain and upgrade equipment information according to current requirements
4. Review performance	4.1 Evaluate equipment performance and determine the need for changes to related work processes 4.2 Seek feedback from colleagues and end users 4.3 Assess the need for new equipment based on monitoring and provide input to purchase and commissioning 4.4 Provide input to management processes based on reviews undertaken

Assessment Requirements for HLTSTE007 Monitor and maintain cleaning and sterilisation equipment

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTSTE407C//HLTSTE408C. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- assisted with the development, implementation and evaluation of monitoring and maintenance plans for at least 2 types of cleaning equipment including at least 1 type of steriliser

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- features, functions and tracking and monitoring systems of different reprocessing equipment:
  - ultrasonic washers
  - washer-disinfectors
  - automated lubrication devices
  - leak testers
  - dryers
  - insulation testers
  - steam sterilisers

© Commonwealth of Australia, 2025 HumanAbility

  - heat sealers
  - low temperature sterilisers
- administration and record keeping requirements:
  - testing and monitoring
  - validation requirements
  - maintenance and repair
  - recall systems
  - reporting as per AS/NZS 4187

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - cleaning and sterilisation equipment
  - test data for analysis
  - documentation for completion
  - equipment manuals and maintenance and repair records
- modelling of industry operating conditions, including presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTSTE008 Monitor quality of cleaning, sterilisation and packaging processes

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTSTE409C//HLTSTE410B. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisites.

Application

This unit of competency describes the skills and knowledge required to determine quality compliance requirements, and to assist with development and documentation of monitoring programs to ensure those requirements are met.

This unit applies to those working in a senior or team leader role in sterilisation services and/or reprocessing areas.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
1. Determine quality requirements	1.1 Contribute to risk analysis to determine scope and nature of quality requirements according to relevant standards

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance required to demonstrate achievement of the element*
	1.2 Contribute to the development and documentation of monitoring programs for sterilisation processes
	1.3 Provide information about monitoring requirements to relevant colleagues
2. Verify effectiveness of processes	2.1 Evaluate processes against quality requirements
	2.2 Obtain technical and numerical data through use of testing and monitoring systems
	2.3 Correctly interpret data from testing and monitoring systems
	2.4 Determine need for independent verification and take action accordingly
3. Monitor administration	3.1 Monitor accuracy and completeness of records
	3.2 Evaluate and act upon non-compliant records and reports
	3.3 Maintain and update information on reporting requirements for use by sterilisation staff
4. Monitor and report on compliance	4.1 Evaluate performance against quality parameters and determine need for changes to work processes
	4.2 Adjust work processes based on outcomes of evaluation
	4.3 Seek feedback from staff and end users
	4.4 Pro-actively share information with relevant management personnel

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

© Commonwealth of Australia, 2025 HumanAbility

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTSTE008 Monitor quality of cleaning, sterilisation and packaging processes

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTSTE409C//HLTSTE410B. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Removed prerequisites.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- contributed to the development and use of monitoring programs according to national standards for at least 2 types of cleaning processes
- contributed to the development and use of monitoring programs according to national standards for both a packaging process and a sterilisation process, including:
  - documented risk analysis
  - process verification systems
  - record keeping systems
  - work instructions for monitoring processes
- evaluated incidences of non-compliance and contributed to appropriate responses

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- testing systems requirements for cleaning, packaging, sterilisation and storage according to relevant standards

© Commonwealth of Australia, 2025 HumanAbility

- administration and record keeping requirements for testing, monitoring and maintenance
- types of process problems that occur, reasons for these occurring and ways to resolve them
- risk control solutions and how these are implemented
- scope of job role and delegation and escalation within scope of job role

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - test manufacturer's recommendations
  - work instructions
  - maintenance records
  - AS/NZS 4187 standards

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors

HLTTCM001 Develop Traditional Chinese Medicine (TCM) remedial massage practice

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Application

This unit describes the skills and knowledge required to establish the foundations of Traditional Chinese Medicine (TCM) remedial massage practice, evaluate what makes a sustainable practice and then to develop an approach to own practice. It also includes the ability to communicate key information about TCM to others.

This unit applies to TCM remedial massage therapists.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Establish foundations of TCM massage practice	1.1 Identify, access and interpret information on central philosophies of TCM remedial massage 1.2 Evaluate the TCM remedial massage system of treatment and its application to current health issues 1.3 Compare and contrast TCM, other complementary health modalities and broader health practice

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
2. Represent the TCM framework	2.1 Determine information needs of different individuals and groups 2.2 Identify key messages that represent the philosophy and practice of TCM remedial massage 2.3 Communicate information about TCM remedial massage at level of depth appropriate to audience needs
3. Determine requirements for sustainable TCM massage practice	3.1 Identify key issues that affect the development and sustainability of professional practice 3.2 Identify economic, environmental, human and social considerations, and their impact on professional practice 3.3 Access, interpret and collate current information that supports professional practice
4. Develop approach to own practice	4.1 Reflect on professional goals and aspirations 4.2 Identify and assess professional opportunities in TCM remedial massage practice 4.3 Reflect on opportunities and constraints of individual personal circumstances 4.4 Make decisions about practice direction, based on reflection and research 4.5 Develop practical strategies that address own practice goals

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this

Assessment Requirements for HLTTCM001 Develop Traditional Chinese Medicine (TCM) remedial massage practice

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- used critical thinking skills to:
  - reviewed and reflected on information from a range of sources about TCM remedial massage practice
  - evaluated and articulated requirements for sustainable TCM remedial massage practice
- communicated key messages about TCM remedial massage to meet the information needs of at least three different individuals or groups
- developed goals for own practice that reflect the values and philosophies of TCM

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- philosophies and principles of TCM:
  - historical development
  - central philosophies
    - meridians and meridian therapy
    - yin and yang
    - five elements
    - Qi, blood, body fluid and body essence

© Commonwealth of Australia, 2025 HumanAbility

    - five zang and six fu organs system
    - aetiology - six pathogenic factors and seven emotions
    - mechanism of TCM diseases
    - importance of personal health strategy
  - philosophical tradition of western and eastern body therapies
    - rationalistic, analytical approach to an understanding of disease
    - vitalistic, empirical approach to health
    - nature of the dynamic interchange between the physical, mental, social, environmental and spiritual landscape
  - TCM remedial massage system of treatment and effects of application to the body surface
  - different styles of treatments and their key features and purpose
    - relaxation
    - tonification
- key features of complementary therapies used in conjunction with TCM massage, including:
  - gua sha
  - cupping
  - acupuncture
  - moxibustion
- place of TCM in relation to allied health services
- professional networks and industry bodies
- different models of professional practice and their key features:
  - sole practitioners
  - employment opportunities
- components of sustainable practice:
  - economic – opportunities and viability
  - environmental
  - human – personal health, professional development
  - social responsibility
- legal and ethical considerations (national and state/territory) and how these are applied in individual practice:
  - children in the workplace
  - codes of conduct
  - continuing professional education
  - discrimination
  - dignity of risk
  - duty of care
  - human rights
  - informed consent

© Commonwealth of Australia, 2025 HumanAbility

- insurance requirements
- mandatory reporting
- practitioner/client boundaries
- privacy, confidentiality and disclosure
- records management
- work role boundaries – responsibilities and limitations
- work health and safety

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. Where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as using suitable facilities, equipment and resources.

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTTCM002 Perform Traditional Chinese Medicine (TCM) remedial massage health assessments

Modification History

Release	Comments
Release 2	This version was released in *HLT Health Training Package release 3.0.* Update to mapping and metadata. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTTCM501C/HLTTCM502D/HLTTCM507C. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements.

Application

This unit describes the skills and knowledge required to obtain information from clients about their needs, apply the four methods of Traditional Chinese Medicine (TCM) assessment and then bring information together to make a syndrome differentiation and treatment plan for remedial massage needs.

This unit applies to TCM remedial massage therapists.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Determine scope of client needs	1.1 Explore and clarify client expectations
	1.2 Provide clear information about scope and limits of services to be provided
	1.3 Collect accurate and relevant health record and document in a TCM form, which can be interpreted readily by other professionals
	1.4 Recognise needs that are beyond scope of own practice and make referrals to other health care professionals as required
	1.5 Identify and respond to any barriers to information gathering and assessment
	1.6 Seek client information respectfully and sensitively
	1.7 Manage information in a confidential and secure way
2. Perform TCM four diagnostic methods	2.1 Provide information about TCM four diagnostic methods process and obtain client consent to proceed
	2.2 Follow clinical and practitioner hygiene procedures
	2.3 Respect client dignity and anticipate sensitivities
	2.4 Seek client feedback on comfort levels
	2.5 Assess client through observation, auscultation/ olfaction, interrogation and palpation methods
	2.6 Integrate four diagnostic methods information gathering techniques
	2.7 Use ongoing questioning with client to gain further information as required
	2.8 Accurately document information from the physical assessment
3. Develop treatment plan	3.1 Correlate results of TCM four diagnostic methods with case history
	3.2 Consider any available western medical information and incorporate into analysis within scope of own practice

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	3.3 Bring together TCM and western approaches to pathology
	3.4 Make TCM syndrome differentiation according to eight principles, internal organs, Qi, blood and body fluid, and to the other syndrome differentiation methods
	3.5 Analyse TCM syndrome and identify condition according to stage and related implications by assessing signs and symptoms
	3.6 Identify pre-requisites or contraindications to treatment
	3.7 Use professional judgement to draw substantiated conclusions about treatment needs
	3.8 Establish expected treatment outcomes based on the remedial massage framework and evidence
	3.9 Accurately document proposed treatment plan
4. Confirm TCM syndrome differentiation and treatment plan with client	4.1 Discuss TCM syndrome differentiation and rationale with the client
	4.2 Assign and agree treatment priorities in consultation with the client
	4.3 Schedule times and session lengths suited to the required techniques and sequences
	4.4 Respond to client enquiries using language the client understands
	4.5 Discuss referral and collaborative options with the client according to individual needs

Foundation Skills

Assessment Requirements for HLTTCM002 Perform Traditional Chinese Medicine (TCM) remedial massage health assessments

Modification History

Release	Comments
Release 2	This version was released in *HLT Health Training Package release 3.0.* Update to mapping and metadata. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTTCM501C/HLTTCM502D/HLTTCM507C. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of TCM remedial massage client consultation work
- prepared for and managed at least 100 TCM remedial massage assessments - clients must include males and females from different stages of life with varied presentations
- used the TCM remedial massage framework to assess client therapeutic needs:
  - used observation, auscultation/olfaction, interrogation and palpation diagnostic methods to collect useful information
  - used different TCM syndrome differentiation knowledge to gather and analyse client conditions
- interacted effectively with clients:
  - clearly articulated information about services, treatment options and rationale
  - engaged clients in decision making

© Commonwealth of Australia, 2025 HumanAbility

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- legal and ethical considerations (national and state/territory) for client assessment:
  - codes of conduct
  - duty of care
  - informed consent
  - mandatory reporting
  - practitioner/client boundaries
  - privacy, confidentiality and disclosure
  - records management
  - working role boundaries
    - working within scope of practice
    - presenting symptoms that require referral to a medical practitioner
  - work health and safety
- referral options for practitioners:
  - professional health services including complementary health modalities
  - community resources and support services
  - types and availability of further medical testing
- factors and barriers that may impact on assessment, including:
  - physical
  - psychological
  - cultural
- factors that affect individual health status, including:
  - constitution
  - lifestyle
  - diet
  - personal and medical history
  - values and attitudes
  - balance of rest and activity
  - physical environment
  - social environment
- factors for consideration for different genders and ages:
  - women
  - men
  - children and adolescents
  - older people
- client information required for assessment and the scope and depth of information needed regarding:

© Commonwealth of Australia, 2025 HumanAbility

- client objectives and expectations
- client history and its components
- client current state of health
- main clinical complaints
- signs and symptoms
  - onset
  - duration
  - location
  - quality and severity
  - non-verbal
- different ways that signs and symptoms of conditions present:
  - physical
  - psychological
  - social
  - spiritual
- features of signs and symptoms
- philosophy and principles of TCM remedial massage framework, including examination of entirety, combination of disease diagnosis and syndrome differentiation, together using of all diagnostic methods
- TCM four diagnostic methods:
  - observation: spirit, complexion, body shape, deformity, posture and tongue and coating
  - interrogation: chief complaint(s), history of present illness, emotional symptoms, pain, energy level, diet and appetite, stools and urine, female specific presentations
  - auscultation/olfaction**:** voice, breathing, sighing, cough, hiccup and belching, body smelling
  - palpation: pulse taking, chest, abdomen and four limbs palpation, channels and acu-points palpation
- TCM syndrome differentiation:
  - TCM syndrome identification according to eight principles
  - TCM syndrome identification according to internal organs
  - TCM syndrome identification according to Qi, blood and body fluid
  - TCM syndrome identification according to the others differentiation methods
- possible reactions, contraindications to treatment and/or limitations for assessment:
  - common contra-indications of TCM remedial massage - agnogenic spin injury, fracture, severe internal organ diseases, infection diseases, severe skin diseases
  - limitations of TCM remedial massage - lack of the structures, including lack of anatomic structure, pathology change at certain areas, weakness in specificity, lack of prognosis
- disease processes and affecting factors for a range of common diseases:
  - body constitution

© Commonwealth of Australia, 2025 HumanAbility

  - diet
  - exercise
  - emotion
  - lifestyle
  - treatment methods
- basic physiology and anatomy according to TCM framework
- relational dynamics within and between human behaviour, anatomy and physiology, pathology and the natural world
- aetiology and pathology
- disease causation, acute and chronic inflammatory processes, wound healing and haemorrhage processes
- infectious and immunity process
- character and function of channels and points
- influence of rest and activity on health status
- relationship between physical and social environment and health
- treatment planning techniques and considerations

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated clinical environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - health assessment/client consultation forms
  - private consultation area
  - massage table
  - massage towels
- modelling of industry operating conditions, including provision of services to the general public
- clinic supervision by a person who meets the assessor requirements outlined below for at least 120 of the 200 hours of client consultation work

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

In addition, assessors must:

- have at least 3 years current clinical experience working as a TCM remedial massage therapist providing services to the general public
- hold practising membership of an Australian professional body that represents TCM remedial massage therapists
- fulfil the continuing professional development requirements of the professional body to which they belong

HLTTCM003 Provide Traditional Chinese Medicine (TCM) remedial massage treatments

Modification History

Release	Comments
Release 2	This version was released in *HLT Health Training Package release 3.0.* Update to mapping and metadata. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Supersedes HLTTCM503D. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements.

Application

This unit describes the skills and knowledge required to prepare for and provide therapeutic Traditional Chinese Medicine (TCM) massage treatments based on the outcomes of an existing health assessment and treatment plan.

This unit applies to TCM remedial massage therapists.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Prepare client for treatment	1.1 Interpret treatment plan and clearly outline how the

	treatment will be provided and managed
	1.2 Explain factors which may interfere with the effectiveness of the treatment
	1.3 Inform the client of possible physical or emotional reactions during and following a session and the appropriate course of action to take
	1.4 Follow established protocols to physically prepare the client for treatment
	1.5 Confirm client consent for treatment
2. Apply therapeutic techniques	2.1 Determine treatment sequence, location and degree of pressure according to assessment indications and treatment plan
	2.2 Apply TCM remedial massage techniques protocol
	2.3 Use the condition and response of the client as a continual feedback to the initial assessment
	2.4 Position client to optimise their comfort and support while allowing for optimum application of techniques
	2.5 Maintain appropriate therapist postures that ensure a controlled distribution of body weight
	2.6 Maintain client-focused attention throughout the treatment session
	2.7 Recognise reactions to treatment and respond promptly
3. Provide advice and resources for the client	3.1 Educate client in relevant and practical techniques that support the treatment plan
	3.2 Answer client queries with clarity, using language the client understands
	3.3 Use honesty and integrity when explaining treatment plans, schedules and recommendations to the client
	3.4 Promote client independence and responsibility in treatment

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	3.5 Discuss and agree on evaluation strategies
	3.6 Accurately document treatment provided and details of client communications

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Minimum clinic hours added. Additional assessor requirements.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of TCM remedial massage client consultation work
- prepared for and managed at least 100 different TCM remedial massage treatment sessions - clients must include males and females from different stages of life with varied presentations
- used all of the following essential manual techniques according to the TCM remedial massage framework:
  - press (an fa)
  - rub (mo fa)
  - push (tui fa)
  - grasp (na fa)
  - acupressure (dian xue fa)
  - pinch (nie fa)
  - roll (gun fa)
  - knead (rou fa)

© Commonwealth of Australia, 2025 HumanAbility

- separate (bo fa)
- twist (cuo fa)
- vibrate (zhen fa)
- shake (dou fa)
- percussion (kou fa)
- circumduct (yao fa)
- stretch (bashen fa)

- applied the following essential methods according to client needs:
  - cupping (ba guan)
  - skin Scraping (gua sha)
  - moxibustion (ai jiu)

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- legal and ethical considerations (national and state/territory) for client assessment:
  - codes of conduct
  - duty of care
  - informed consent
  - mandatory reporting
  - practitioner/client boundaries
  - privacy, confidentiality and disclosure
  - records management
  - working role boundaries
    - working within scope of practice
    - presenting symptoms that require referral to a medical practitioner
- work health and safety (WHS)
- location of acupressure points on the 12 primary meridians, ren mai and du mai
- TCM remedial massage techniques/methods and how to apply them, including what each technique does, what effects it might have and what the cautions and contraindications are, for the following:
  - press (an fa)
  - rub (mo fa)
  - push (tui fa)
  - grasp (na fa)
  - acupressure (dian xue fa)
  - pinch (nie fa)
  - roll (gun fa)
  - knead (rou fa)

© Commonwealth of Australia, 2025 HumanAbility

  - separate (bo fa)
  - twist (cuo fa)
  - vibrate (zhen fa)
  - shake (dou fa)
  - percussion (kou fa)
  - circumduct (yao fa)
  - stretch (bashen fa)
- contraindications to treatment:
  - the client who has excessive agitation, violent rage or deep sorrow conditions
  - the client who is extremely hungry
  - the client who has infectious and inflammatory diseases
  - the client who has circulatory condition which could result haemorrhaging
  - at client's bone fracture site
  - at client's skin area with eczema or tinea conditions
  - at a client's bleeding area
  - at a client's lumps and tissue change site
  - heavy manipulation/pressure to the client's abdomen and lumbosacral area during pregnancy or menstruation
  - heavy manipulation/pressure for a client who is old, young and frail
- potential reactions during treatment and how to respond:
  - syncope
  - excessive sweating
  - discomfort
  - emotional reactions
  - muscular spasms
  - body temperature discomfort
- potential reactions following treatment and appropriate client advice:
  - exacerbation of pain
  - muscle sensitivity
  - sleepiness
  - types of advice and resources that can be provided to clients for their use outside the clinical environment
  - diet
  - exercise
  - lifestyle
- documentation requirements for recording treatment details
- common disease states and functional problems of each body system
- fundamental principles of biomechanics
- major endangerment sites and therapist responsibility and limitations - areas where nerves and blood vessels lie close to the skin and are not well protected, including:

© Commonwealth of Australia, 2025 HumanAbility

  - anterior triangle of the neck
  - posterior triangle of the neck
  - anterior throat
  - axillary area
  - twelfth rib dorsal body
  - inguinal triangle
  - umbilicus area
- essential methods:
  - cupping (ba guan)
  - skin Scraping (gua sha)
  - moxibustion (ai jiu)

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated clinical environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - client information – case history, treatment plan
  - private consultation area
  - massage table
  - massage towels
  - massage oils
  - cups
  - gua sha facilities
- modelling of industry operating conditions, including provision of services to the general public
- clinic supervision by a person who meets the assessor requirements outlined below for at least 120 of the 200 hours of client consultation work

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

In addition, assessors must:

- have at least 3 years current clinical experience working as a TCM remedial massage therapist providing services to the general public
- hold practising membership of an Australian professional body that represents TCM remedial massage therapists
- fulfil the continuing professional development requirements of the professional body to which they belong

HLTTCM004 Adapt Traditional Chinese Medicine (TCM) remedial massage practice to meet specific needs

Modification History

Release	Comments
Release 2	Corrections to typographical errors in Performance Evidence. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTTCM504C/HLTTCM505C. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements.

Application

This unit describes the skills and knowledge required to adapt assessment and treatment strategies to meet the needs of clients of different genders and at different stages of life. It also includes the requirement to be able to identify and respond to other specific needs with which the practitioner may be unfamiliar.

This unit applies to Traditional Chinese Medicine (TCM) remedial massage therapists.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Adapt assessment and treatment strategies to stages of life	1.1 Anticipate and take account of varying potential client sensitivities to ensure client dignity is maintained 1.2 Tailor approaches that take account of different cognitive abilities of clients at different stages of life 1.3 Adjust physical processes to take account of client capabilities and physical body features 1.4 Recognise norms and deviations associated with age and gender 1.5 Identify when consent from others is required, and obtain and document according to legal and ethical requirements
2. Respond to unfamiliar presentations	2.1 Recognise situations where presenting cases or aspects of presenting cases fall outside current knowledge base or expertise 2.2 Refer client to other practitioners when case is not appropriate to own scope of practice 2.3 When appropriate to continue with the case, identify, access and interpret sources of additional information and advice 2.4 Enhance own capacity to deal with the case by conducting case specific research 2.5 Integrate findings into client treatment plans and record details
3. Extend and expand own knowledge base	3.1 Pro-actively identify and respond to professional development opportunities 3.2 Develop and adjust work practices as part of ongoing practice development

© Commonwealth of Australia, 2025 HumanAbility

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTTCM004 Adapt Traditional Chinese Medicine (TCM) remedial massage practice to meet specific needs

Modification History

Release	Comments
Release 2	Corrections to typographical errors in Performance Evidence. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTTCM504C/HLTTCM505C. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence. Minimum clinic hours added. Additional assessor requirements.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of TCM remedial massage client consultation work
- managed at least 100 TCM remedial massage assessment and treatment sessions - clients must include males and females from different stages of life with varied presentations
- effectively adapted communication, assessment and treatment strategies to meet client needs
- conducted case specific research for at least 3 cases, where key aspects of the condition are not known to the candidate

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

© Commonwealth of Australia, 2025
HumanAbility

- legal and ethical considerations (national and state/territory) for working with specific groups:
  - children in the workplace
  - codes of conduct
  - discrimination:
    - age
    - disability
    - racial
    - sex
  - duty of care
  - informed consent
  - mandatory reporting
  - practitioner/client boundaries
  - privacy, confidentiality and disclosure
  - records management
  - work role boundaries:
    - working within scope of practice
    - presenting symptoms that require referral to a medical practitioner
  - work health and safety
- treatment management factors that must be considered for clients of different genders and at different stages of life
  - case taking
  - variations in approach to physical examination
- major developmental milestones for different stages of life
- features of common health conditions that affect the following groups and how those conditions are assessed and treated in the TCM remedial massage framework:
  - children
  - adolescents
  - adult females at different stages of life
  - adult males at different stages of life
  - those with traumatic conditions
- factors for consideration when providing any form of palliative care
- professional responsibilities when presenting cases fall outside of practitioner's current scope, including:
  - when referral is appropriate or required
  - information and advice sources
  - case research techniques
- theory of gynaecology and obstetrics according to TCM, including:
  - birth options and settings
  - contraindications and precautions

HumanAbility

  - cultural perspectives on birth and birthing
  - gestational disorders
  - gynaecological and obstetric TCM physiology, pathology, aetiology, diagnosis, differentiation of gynaecological conditions
  - pre and post-partum disorders
  - the development of TCM gynaecology and obstetrics
  - the TCM Remedial Massage therapist as part of the neonatal health practitioner team
  - the treatment of pain, anxiety and other conditions during labour
  - therapeutic principles and methods
- theory of paediatric massage according to TCM, including:
  - contraindications and precautions
  - paediatric TCM physiology, pathology, aetiology, diagnosis, differentiation of paediatric conditions
  - the development of paediatric TCM
- theory of TCM traumatology:
  - contraindications and precautions
  - functional and clinical anatomy
  - stretches, mobilisations and remedial exercises in TCM traumatology
  - TCM pathology, aetiology, diagnosis and differentiation of traumatic disorders
  - the development of TCM traumatology
  - the use of liniments, poultices and ointments

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated clinical environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - client information – case history, treatment plan
  - private consultation area
  - massage table
  - massage towels
  - massage oils
  - cups
  - gua sha facilities
- modelling of industry operating conditions, including provision of services to the general public
- clinic supervision by a person who meets the assessor requirements outlined below for at least 120 of the 200 hours of client consultation work

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors

HLTTCM005 Monitor and evaluate Traditional Chinese Medicine (TCM) remedial massage treatments

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. New unit.

Application

This unit describes the skills and knowledge required to monitor and evaluate Traditional Chinese Medicine (TCM) remedial massage treatments, both from an individual client and whole of practice professional development perspective.

This unit applies to TCM remedial massage therapists.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Evaluate client progress	1.1 Seek client feedback about treatment impacts and compliance with the treatment plan 1.2 Make own observations and assessment of client changes based on TCM remedial massage framework 1.3 Evaluate treatment impacts in relation to client's physical, mental, spiritual and emotional wellbeing 1.4 Compare changes and improvements with expectations in the treatment plan, existing research and evidence from own practice

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	1.5 Seek additional information from clients when progress suggests this is needed
	1.6 Accurately document progress in client treatment plan
2. Adjust treatment based on evaluation	2.1 Determine the need for adjustment to treatment plan based on evaluation of client progress
	2.2 Identify and respond to factors that may be inhibiting client progress
	2.3 Adjust treatment plans based on outcomes and sources of research or evidence that support massage practice
	2.4 Accurately document any adjustments to treatment plans
3. Develop practice from client evaluation	3.1 Review progress of clients in context of own individual practice
	3.2 Identify areas of own practice for further research or development to support client outcomes
	3.3 Pro-actively seek and respond to professional development opportunities

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this

Assessment Requirements for HLTTCM005 Monitor and evaluate Traditional Chinese Medicine (TCM) remedial massage treatments

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. New unit.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- performed the activities outlined in the performance criteria of this unit during a period of at least 200 hours of client consultation work
- managed at least 100 TCM remedial massage assessment and treatment sessions - clients must include males and females from different stages of life with varied presentations
- monitored and evaluated TCM remedial massage treatments provided to at least 5 different clients with at least 3 treatments per client

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- types of criteria by which TCM treatments are evaluated
- expectations of treatment for different conditions and client groups, and factors that impact on those expectations:
  - client history
  - contraindications
  - compliance
  - interactions with other treatments
- methods of monitoring treatment progress
  - re-assessment
  - client feedback

© Commonwealth of Australia, 2025 HumanAbility

- barriers to therapeutic progress and ways to respond within a TCM framework
- sources of research and evidence that support TCM remedial massage practice
- principles underpinning continuation or variation of treatment

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated clinical environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - client information – case history, treatment plan
  - private consultation area
  - massage table
  - massage towels
  - massage oils
  - cups
  - gua sha facilities
- modelling of industry operating conditions, including provision of services to the general public
- clinic supervision by a person who meets the assessor requirements outlined below for at least 120 of the 200 hours of client consultation work

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors

In addition, assessors must:

- have at least 5 years current clinical experience working as a TCM remedial massage therapist providing services to the general public
- hold practising membership of an Australian professional body that represents TCM remedial massage therapists\
- fulfil the continuing professional development requirements of the professional body to which they belong

HLTTHE001 Handle and care for operating theatre equipment

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTTH302D/HLTTH404D. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements.

Application

This unit describes the skills and knowledge required to prepare theatre equipment, provide basic maintenance support, and contribute to effective use of equipment by providing basic instruction to others on equipment operation.

This unit applies to operating theatre technicians and other theatre staff who work under supervision in the operating theatre.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Select and prepare operating theatre equipment	1.1 Identify equipment and consumables requirements, based on consultation with operating theatre team, review of operating list and surgeon preferences 1.2 Set up, correctly position, and check equipment and consumables in accordance with standard and additional infection control procedures

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	1.3 Assemble, connect and test components in accordance with specific equipment requirements
	1.4 Re-position equipment during theatre procedures, as required by specific procedure
	1.5 Accurately document the use of theatre equipment as required
	1.6 Withdraw from use and replace equipment if considered not safe for use
2. Support equipment maintenance	2.1 Identify and correct minor equipment problems within scope of own job role
	2.2 Refer equipment maintenance to a specialist as required by scope and nature of problem and organisation policy and procedures
	2.3 Maintain accurate maintenance log book as required
	2.4 Schedule equipment for maintenance based on the needs of the operating theatre
	2.5 Maintain communication with relevant operating theatre staff in relation to equipment maintenance
3. Disassemble and store operating theatre equipment	3.1 Follow shut-down procedures in accordance with manufacturer’s recommendations
	3.2 Assemble and disassemble equipment in accordance with manufacturer’s recommendations and manual task risk principles
	3.3 Dispose of waste in accordance with infection control protocols and organisation policies and procedures
	3.4 Clean equipment using cleaning agent suited to the equipment and in accordance with organisation policy and procedures
	3.5 Safely store equipment in accordance with manufacturer’s recommendations and manual task risk principles

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
4. Contribute to operating theatre operations	4.1 Provide clear and correct instructions on equipment operation to individual members of the theatre team as required 4.2 Review equipment effectiveness from a theatre technician's perspective and provide feedback to relevant personnel 4.3 Participate as required in team evaluations of equipment being considered for potential purchase and share information from the theatre technician's perspective

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Unit Mapping Information

Assessment Requirements for HLTTHE001 Handle and care for operating theatre equipment

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTTH302D/HLTTH404D. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established technical, infection control and safety procedures and instructions for set-up, shut-down, cleaning and storage of operating theatre equipment on at least 3 occasions
- performed routine maintenance procedures on at least 3 different types of equipment

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- scope of operating theatre technician role in working with equipment, including limitations
- medico-legal implications in relation to the use of equipment by the technician in the operating suite environment
- standard and additional infection control procedures that apply to:
  - the operating theatre environment
  - equipment within the operating theatre
- types of theatre equipment and their purpose, including:
  - theatre fixtures and fittings

© Commonwealth of Australia, 2025 HumanAbility

  - furniture
  - surgical equipment
  - consumables and their sustainable use
- features of operating theatre equipment in relation to:
  - set up
  - assembly and connection
  - preparation for use
  - safe manual handling and risk factors for manual tasks
- intra-operative client safety considerations concerning the location and movement of equipment
- routine equipment maintenance procedures, including:
  - checking
  - calibration
  - cleaning
  - replacement of consumables
  - scheduled maintenance
- types of problems that occur with operating theatre equipment and when specialist maintenance is required
- procedures for organising specialist maintenance

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a fully equipped operating theatre
  - documented procedures for the candidate to follow
- modelling of industry operating conditions, including presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors

HLTTHE002 Assist with preparation of clients for operative procedures

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Removed prerequisite.

Application

This unit of competency describes the skills and knowledge required to prepare, transfer and position clients for operative procedures.

This unit applies to operating theatre technicians and other theatre staff who work under the supervision of the anaesthetist and other members of the operating room team.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Prepare clients for procedure	1.1 Determine preparation needs from review of information
	1.2 Select and use personal protective equipment appropriate to procedure
	1.3 Adopt standard and additional infection control guidelines and precautions according to organisation

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	documented procedure
	1.4 Attach equipment safely and securely to appropriate sites
	1.5 Safely detach equipment when no longer required with minimum risk of damage to client, staff or equipment
	1.6 Safely store equipment in accordance with manufacturer's recommendations, or prepare ready for re-use
	1.7 Follow established procedures if equipment is found to be faulty
2. Assist with client transfer	2.1 Identify correct operating table and table orientation before client is transferred
	2.2 Inform relevant personnel of actions to be performed
	2.3 Detach equipment not required following correct procedure and infection control requirements
	2.4 Safely and correctly adjust equipment attached to client during transfer
	2.5 Maintain a safe working area and clear passage at all times assessing and controlling for manual task risk factors
	2.6 Minimise and respond to client discomfort during transfer
	2.7 Re-connect and position equipment once transfer is completed following infection control requirements
	2.8 Maintain client's dignity before, during and after transfer
3. Position clients for operative procedure	3.1 Inform client of positioning procedure, reassure and seek co-operation as required
	3.2 Ensure relevant equipment is available and correctly positioned
	3.3 Take into account individual client needs and confirm

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	with relevant personnel
	3.4 Follow correct manual handling procedures and seek assistance
	3.5 Safely position client to meet the requirements of the anaesthetist and surgeon and the clients condition
	3.6 Seek confirmation of correct position from anaesthetist and surgeon
	3.7 Maintain the client in correct position as required, using assistive equipment when available
	3.8 Maintain client's dignity during positioning

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTTHE002 Assist with preparation of clients for operative procedures

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Removed prerequisite.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established technical, infection control and safety procedures and instructions for the preparation, transfer and positioning of at least 3 different clients

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- legal and ethical considerations for theatre work and how these are applied in organisations, including:
  - children in the workplace
  - duty of care
  - informed consent
  - mandatory reporting
  - privacy, confidentiality and disclosure
  - records management
  - work role boundaries – responsibilities and limitations when working with clients
  - work health and safety

© Commonwealth of Australia, 2025 HumanAbility

- standard and additional infection control procedures that apply to the operating theatre environment
- features and functions of equipment that needs be handled when preparing clients:
  - during transfer
  - during positioning
- medical terms used in the operating room relevant to technician work
- additional infection control procedures that apply to the operating theatre environment
- human anatomy and physiology in relation to client transfer and positioning, including:
  - normal and abnormal body positions
  - joint movement
  - features of body locations where equipment may need to be attached/detached
- different positions required for operative procedures, associated risks, and how to position clients, including:
  - supine
  - prone
  - lateral
  - lithotomy
- risks, precautions and techniques for protecting clients during moving and positioning
- safe manual handling and risk factors for manual tasks

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a fully equipped operating theatre
  - beds
  - documented procedures that the candidate follows
- modelling of industry operating conditions, including presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors

HLTTHE003 Provide intra-operative equipment and technical support

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements.

Application

This unit describes the skills and knowledge required to provide equipment and technical support during operative procedures.

This unit applies to operating theatre technicians and other theatre staff who work under the direction of surgical and anaesthetic medical staff.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Maintain sterile field	1.1 Conform with aseptic principles when moving around a sterile field to prevent contamination 1.2 Report personal and other staff breaches of aseptic principles to the relevant staff in accordance with organisation policy and procedures

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
2. Monitor equipment performance	2.1 Switch on warning devices and check correct operation
	2.2 Check levels of gas, electrical and vacuum supplies are adequate for procedure and confirm back-up supply as required
	2.3 Observe equipment while in use, recognise faults, and take immediate action to avoid danger to clients, staff and equipment in accordance with organisation policy and procedures
	2.4 Follow established procedures to rectify faulty equipment
	2.5 Complete accurate equipment documentation in accordance with organisation policy and procedures
3. Attach and detach equipment	3.1 Select and use appropriate personal protective equipment
	3.2 Select appropriate client attachments and attach safely and securely to appropriate sites under the guidance of medical staff
	3.3 Re-position client attachments during theatre procedures as required
	3.4 Safely detach client attachments using techniques that minimise risk of damage to client, staff or equipment
	3.5 Provide counter-traction during orthopaedic and plastic procedures and manipulations as directed
4. Connect irrigation	4.1 Select correct irrigation and sequencing for operative procedure under the guidance of the medical staff
	4.2 Check information about irrigation type, sterile integrity and expiry date
	4.3 Connect irrigation to sterile giving set using correct aseptic techniques

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	4.4 Change irrigation using aseptic techniques
	4.5 Communicate the volume, type and number of irrigation bags to scout nurse
	4.6 Dispose of used irrigation bags/giving sets according to organisational policy and procedures
5. Adjust surgical equipment	5.1 Handle surgical equipment under the guidance of medical staff and within manufacturer's guidelines
	5.2 Connect surgical equipment to electrical, vacuum, gas supply in accordance with standard operating procedures
	5.3 Adjust surgical equipment settings in accordance with manufacturer's guidelines under guidance of surgical and anaesthetic medical staff
	5.4 Clearly communicate accurate readings to medical staff as required
	5.5 Recognise and clearly communicate alarms/warnings, abnormal readings and equipment usage times to medical staff as required
	5.6 Use aseptic techniques to pass sterile equipment/lines from the surgical team and connect to surgical equipment

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for HLTTHE003 Provide intra-operative equipment and technical support

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed established technical, infection control and safety procedures and instructions for equipment support in a range of different situations, including at least one of each of the following:
  - during emergencies
  - re-positioning
  - change of surgical procedure

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- scope of operating theatre technician role in working with equipment, including limitations
- medico-legal implications in relation to the use of equipment by the technician in the operating suite environment
- standard and additional infection control procedures that apply to:
  - the operating theatre environment
  - equipment within the operating theatre

© Commonwealth of Australia, 2025 HumanAbility

- types of surgical equipment, their purpose and specific hazards and precautions in relation to safety of client and staff, including:
  - electrical safety
  - settings of equipment
- features and use of surgical equipment in relation to:
  - set up
  - assembly and connection
  - preparation for use
  - safe manual handling
- irrigation equipment, its use and associated hazards
- human anatomy and physiology in relation to client transfer and positioning, including:
  - normal and abnormal body positions
  - joint movement
  - features of body locations where equipment may need to be attached/detached
- different positions required for operative procedures, associated risks, and how to position clients, including:
  - supine
  - prone
  - lateral
  - lithotomy
- operating room air-conditioning and ventilation systems and their impact on the technician's role and work practices

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - fully equipped operating theatre
  - documented procedures that the candidate must follow
- modelling of industry operating conditions, including presence of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTWHS001 Participate in workplace health and safety

Modification History

Release	Comments
Release 3	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Updated to incorporate content of unit HLTWHS200A. Revised scope of unit to reflect requirements of workers. New evidence requirements for assessment.

Application

This unit describes the skills and knowledge required for workers to participate in safe work practices to ensure their own health and safety, and that of others.

The unit applies to all workers who require knowledge of workplace health and safety (WHS) to carry out their own work, either under direct supervision or with some individual responsibility.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 HumanAbility

Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Follow safe work practices	1.1 Follow workplace policies and procedures for safe work practices 1.2 Identify existing and potential hazards in the workplace, report them to designated persons, and record them according to workplace procedures 1.3 Follow workplace emergency procedures
2. Implement safe work practices	2.1 Identify and implement WHS procedures and work instructions 2.2 Identify and report incidents and injuries to designated persons according to workplace procedures 2.3 Take actions to maintain safe housekeeping practices in own work area
3. Contribute to safe work practices in the workplace	3.1 Raise WHS issues with designated persons according to organisational procedures 3.2 Participate in workplace safety meetings, inspections and consultative activities 3.3 Contribute to the development and implementation of safe workplace policies and procedures in own work area
4. Reflect on own safe work practices	4.1 Identify ways to maintain currency of safe work practices in regards to workplace systems, equipment and processes in own work area 4.2 Reflect on own levels of stress and fatigue, and report to designated persons according to workplace procedures

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

- *Reading* – in order to accurately read and interpret workplace safety policies and

© Commonwealth of Australia, 2025 HumanAbility

procedures including safety signs, dangerous goods classifications and safety instructions

The remaining foundation skills essential to performance are explicit in the performance criteria of this unit

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTWHS001 Participate in workplace health and safety

Modification History

Release	Comments
Release 3	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Updated to incorporate content of unit HLTWHS200A. Revised scope of unit to reflect requirements of workers. New evidence requirements for assessment.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be demonstrated evidence that the candidate has completed the following tasks at least once in line with state/territory WHS regulations, relevant codes of practice and workplace procedures:

- contributed to a WHS meeting or inspection in workplace
- conducted a workplace risk assessment and recorded the results
- consistently applied workplace safety procedures in the day-to-day work activities required by the job role
- followed workplace procedures for reporting hazards
- followed workplace procedures for a simulated emergency situation.

© Commonwealth of Australia, 2025 HumanAbility

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- state/territory legislation and how it impacts on workplace regulations, codes of practice and industry standards, including:
  - state/territory WHS authorities
  - rights and responsibilities of employers and workers, including duty of care
  - hazardous manual tasks
  - infection control
- safety signs and their meanings, including signs for:
  - dangerous goods classifications
  - emergency equipment
  - personal protective equipment (PPE)
  - specific hazards such as sharps, radiation
- hazard identification, including:
  - definition of a hazard
  - common workplace hazards relevant to the industry setting
  - workplace procedures for hazard identification
- workplace emergency procedures
- workplace policies and procedures for WHS

Assessment Conditions

Skills must be demonstrated:

- in the workplace

OR

- in an environment that provides realistic in-depth industry validated scenarios and simulations to assess candidates' skills and knowledge.

Assessment must ensure use of:

- current workplace policies and procedures for WHS
- PPE relevant to the workplace and job role of the worker

In addition, assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTWHS002 Follow safe work practices for direct client care

Modification History

Release	Comments
Release 2	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Revised scope of unit to reflect requirements of workers in direct client care environment. New evidence requirements for assessment.

Application

This unit describes the skills and knowledge required for a worker to participate in safe work practices to ensure their own health and safety, and that of others in work environments that involve caring directly for clients. It has a focus on maintaining safety of the worker, the people being supported and other community members.

This unit applies to all workers who require knowledge of workplace health and safety (WHS) to carry out their own work, in both centre-based and home-based service provision.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 HumanAbility

Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Follow safe work practices for direct client care	1.1 Follow workplace policies and procedures for safe work practices 1.2 Identify existing and potential hazards in the workplace, report them to designated persons, and record them according to workplace procedures 1.3 Identify any client-related risk factors or behaviours of concern, report them to designated persons, and record them according to workplace procedures 1.4 Follow workplace policies and procedures to minimise risk 1.5 Identify and report incidents and injuries to designated persons according to workplace procedures
2. Follow safe work practices for manual handling	2.1 Follow manual handling procedures and work instructions for minimising manual handling risk 2.2 Identify manual handling hazards and report in line with workplace procedures 2.3 Apply control measures for minimising manual handling risk
3. Follow safe work practices for infection control	3.1 Follow standard precautions as part of own work routine to prevent the spread of infection 3.2 Recognise situations when additional infection control procedures are required 3.3 Apply additional precautions when standard precautions alone may not be sufficient to prevent transmission of infection 3.4 Identify risks of infection and report them according to workplace procedures
4. Contribute to safe work practices in the workplace	4.1 Raise WHS issues with designated persons according to organisational procedures 4.2 Participate in workplace safety meetings, inspections and consultative activities

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
	4.3 Contribute to the development and implementation of safe workplace policies and procedures in own work area
5. Reflect on own safe work practices	5.1 Identify ways to maintain currency of safe work practices in regards to workplace systems, equipment and processes in own work role
	5.2 Reflect on own levels of stress and fatigue, and report to designated persons according to workplace procedures
	5.3 Participate in workplace debriefing to address individual needs

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

- *Reading* – in order to accurately read and interpret workplace safety policies and procedures including safety signs, dangerous goods classifications and safety instructions

The remaining foundation skills essential to performance are explicit in the performance criteria of this unit

Assessment Requirements for HLTWHS002 Follow safe work practices for direct client care

Modification History

Release	Comments
Release 2	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Revised scope of unit to reflect requirements of workers in direct client care environment. New evidence requirements for assessment.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be demonstrated evidence that the candidate has completed the following tasks at least once in line with state/territory WHS regulations, relevant codes of practice and workplace procedures:

- contributed to a workplace WHS meeting or inspection
- conducted a workplace risk assessment and recorded the results
- consistently applied workplace safety procedures in the day-to-day work activities required by the job role, including:
  - infection control
  - hazardous manual tasks
  - use of personal protective equipment
  - reporting incidents
- followed workplace procedures for at least one simulated emergency situation.

© Commonwealth of Australia, 2025 HumanAbility

Knowledge Evidence

The candidate must demonstrate knowledge of:

- state/territory legislation and how it impacts on workplace regulations, codes of practice and industry standards, including:
  - state/territory WHS authorities
  - rights and responsibilities of employers and workers, including duty of care
  - hazardous manual tasks
  - infection control
- safety symbols and their meanings, including signs for:
  - poisons
  - emergency equipment
  - personal protective equipment (PPE)
  - specific hazards such as sharps, radiation
- hazard identification, including:
  - definition of a hazard
  - common workplace hazards relevant to the industry setting including hazardous manual tasks, infection control risks and personal safety risks
  - workplace procedures for hazard identification
  - strategies minimising risk
- safety considerations when working in a home-based environment, including:
  - rights and responsibilities of workers and clients
  - basic home fire safety including high-risk groups, behaviour that contributes to fire injury and fatalities, and smoke alarm placement, installation and maintenance.
  - risks to personal safety
  - common sources of infection and means to minimise transfer of infectious diseases
  - fundamentals of the muscoskeletal system and practices to minimise injury to self and clients
- workplace emergency procedures
- workplace policies and procedures for WHS

Assessment Conditions

Skills must be demonstrated:

- in the workplace

OR

- in an environment that provides realistic in-depth industry validated scenarios and simulations to assess candidates' skills and knowledge.

In addition, assessment must ensure use of:

© Commonwealth of Australia, 2025 HumanAbility

- current workplace policies and procedures for WHS
- PPE relevant to the workplace and job role of the worker

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTWHS003 Maintain work health and safety

Modification History

Release	Comments
Release 3	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Updated to include relevant content from HLTWHS401A. Revised scope of unit to reflect requirements of supervisor and/or line manager.

Application

This unit describes the skills and knowledge required to implement and monitor work health and safety (WHS) policies, procedures and work practices as part of a small work team.

This unit applies to workers who have a key role in maintaining WHS in an organisation, including duty of care for other workers.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Contribute to workplace procedures for identifying hazards and controlling risks	1.1 Identify existing and potential hazards and record them according to workplace procedures 1.2 Contribute to the development of strategies for implementing risk controls in line with workplace procedures and policies 1.3 Implement risk controls in line with the hierarchy of risk control and workplace and legislative requirements 1.4 Identify and report issues with risk controls, including residual risk, in line with workplace and legislative requirements
2. Implement policies and procedures into work team processes	2.1 Regularly provide information about WHS policies and procedures to the work team 2.2 Provide information about identified hazards and the outcomes of risk assessment and risk controls to the work team 2.3 Monitor housekeeping practices to ensure that WHS policies and procedures are followed 2.4 Maintain WHS incident records in the work area according to workplace procedures and legislative requirements
3. Support consultation, cooperation and communication	3.1 Support workplace consultative procedures by encouraging work team participation in consultative activities 3.2 Report health and safety issues in line with workplace procedures and legislative requirements 3.3 Encourage and assist work team members to contribute to WHS

© Commonwealth of Australia, 2025 HumanAbility

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

- *Written communication* – in order to complete a workplace risk assessment and complete a workplace incident report in line with regulatory guidelines and organisational policies
- *Oral communication* – in order to accurately present information to a small group of at least two participants

The remaining foundation skills essential to performance are explicit in the performance criteria of this unit

Assessment Requirements for HLTWHS003 Maintain work health and safety

Modification History

Release	Comments
Release 3	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Updated to include relevant content from HLTWHS401A. Revised scope of unit to reflect requirements of supervisor and/or line manager.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be demonstrated evidence that the candidate has completed the following tasks at least once in line with state/territory WHS regulations, relevant codes of practice and workplace procedures:

- conducted a workplace risk assessment and recorded the results, including:
  - identification of hazards and potential hazards
  - risk assessment
  - strategies for minimising risk, and
  - analysis of residual risk
- provided WHS information to at least two workers, including:
  - explanation of WHS policies and procedures
  - demonstration of safe housekeeping practices
  - correct use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 HumanAbility

- consistently monitored safety procedures in the day-to-day work activities required by the job role
- completed a workplace incident report
- followed workplace procedures for a simulated emergency situation

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- State/territory legislation and how it impacts on workplace regulations, codes of practice and industry standards, including:
  - state/territory WHS authorities
  - rights and responsibilities of persons conducting a business or undertaking (PCBUs), officers and workers, including duty of care
  - legislative requirements for record-keeping and reporting
  - regulatory requirements relevant to the particular industry/type of work site
  - hazardous manual tasks
  - infection control
- Hazards common to the work environment and how they cause harm
- Principles of hazards and risk assessment, including:
  - hazard identification procedures
  - risk assessment process
  - residual risk
  - risk controls
  - hierarchy of control
- Workplace emergency procedures
- Workplace policies and procedures for WHS.

Assessment Conditions

Skills must be demonstrated in the workplace.

In addition, simulations and scenarios must be used where the full range of contexts and situations cannot be provided in the workplace or may occur only rarely. These are situations relating to emergency or unplanned procedures where assessment in these circumstances would be unsafe or is impractical.

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

© Commonwealth of Australia, 2025 HumanAbility

Assessment must ensure use of:

- current workplace policies and procedures for WHS.

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTWHS004 Manage work health and safety

Modification History

Release	Comments
Release 2	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Updated to include relevant content from HLTWHS401A. Revised scope of unit to reflect requirements of managers and/or persons conducting a business or undertaking (PCBUs).

Application

This unit describes the skills and knowledge required to establish, maintain and evaluate work health and safety (WHS) policies, procedures and programs in the relevant work area, according to WHS legislative requirements.

This unit applies to workers who have responsibility for WHS as part of their role, including workers with obligations under WHS legislation, persons conducting a business or undertaking (PCBUs), or their officers (as defined by relevant legislation).

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Establish work health and	1.1 Access and interpret legislation, regulations, code

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
safety practices	of conduct and workplace policies and procedures for WHS
	1.2 Develop procedures for ongoing hazard identification, and assessment and control of associated risks
	1.3 Ensure risk controls and hazard-specific procedures are consistent with the hierarchy of control and are monitored to support compliance with legislative and regulatory requirements
	1.4 Identify requirements for expert WHS advice, and request this advice as required
2. Facilitate consultation, cooperation and communication	2.1 Develop and provide consultative WHS activities to provide advice in relation to work health and safety issues
	2.2 Monitor processes for ensuring that workers have an opportunity to contribute feedback on health and safety issues
	2.3 Document outcomes of consultation and communicate to workers
	2.4 Develop and implement processes to ensure that responsibilities and duties are documented and accountability processes are in place
	2.5 Implement and monitor training programs to ensure identified WHS training requirements are addressed, including induction process
3. Monitor compliance with risk control processes	3.1 Develop WHS record-keeping policies and procedures and provide information to workers
	3.2 Monitor hazard, incident and injury reporting processes to meet legislative requirements and to inform future prevention strategies
	3.3 Evaluate WHS record-keeping policies and procedures for compliance with legislative requirements

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
4. Evaluate and maintain WHS	4.1 Determine WHS priorities in consultation with work group 4.2 Develop a WHS action plan taking account of priorities and training needs 4.3 Identify potential barriers to improvement 4.4 Establish processes to monitor achievement against the plan and update plans as required

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

- *Written communication* – in order to complete a workplace risk assessment and develop a WHS action plan in line with regulatory guidelines and organisational policies
- *Oral communication* – in order to accurately present information to a small group of at least two participants

The remaining foundation skills essential to performance are explicit in the performance criteria of this unit

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be demonstrated evidence that the candidate has completed the following tasks at least once in line with state/territory WHS regulations, relevant codes of practice and workplace procedures:

- conducted a workplace risk assessment and recorded the results, including:
  - identification of hazards and potential hazards
  - risk assessment
  - evaluation of policy/procedure in line with state/territory legislation and industry guidelines
  - development of risk controls and measures
- conducted the following consultative activities with at least two workers:
  - information session about workplace policies and procedures, including demonstration of personal protective equipment (PPE) where required for the job role
  - consultative discussion regarding outcomes of a workplace risk assessment, including risk controls and measures developed as part of the risk assessment process

© Commonwealth of Australia, 2025 HumanAbility

- monitored workplace compliance with WHS procedures
- developed a WHS action plan, including strategies for monitoring and review
- coordinated workplace procedures for a simulated emergency situation.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- state/territory legislation and how it impacts on workplace regulations, codes of practice and industry standards, including:
  - state/territory WHS authorities
  - rights and responsibilities of persons conducting a business or undertaking (PCBUs), officers and workers, including duty of care
  - legislative requirements for record-keeping and reporting
  - due diligence and general duty requirements
  - regulatory requirements relevant to the particular industry/type of work site
  - legislative requirements for consultation
  - hazardous manual tasks
  - infection control
- hazards common to the work environment and strategies for minimisation
- requirements for WHS policies, including:
  - hazard, incident and injury reporting
  - hazard identification, risk assessment and control
  - human resources policies and procedures
  - consultation and participation
  - incident investigation and record-keeping
  - quality system documentation
  - designated person/s for raising issues
  - workplace support services
  - use of personal protective equipment (PPE)
  - emergency procedures
- principles of hazard and risk management, including:
  - risk analysis
  - hazard identification procedures
  - hierarchy of control and its application
  - principles of risk assessment
  - examples of health and safety benchmarks
  - principles of safe design processes

Assessment Conditions

Skills must be demonstrated in the workplace.

HLTWHS005 Conduct manual tasks safely

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Application

This unit describes the skills and knowledge required to recognise potentially hazardous manual tasks, and then to prepare for and complete those tasks in a safe manner.

This unit applies to all workers involved in manual handling tasks.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice. The Hazardous manual tasks code of practice applies to this work.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Identify manual tasks involving risk	1.1 Recognise manual tasks that may involve risk to self or others 1.2 Identify risk factors that make the manual task hazardous 1.3 Determine the nature and extent of the risk 1.4 Follow organisation procedures for controlling

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	hazardous manual tasks
2. Prepare for manual tasks	2.1 Prepare workplace layout and environment according to organisation procedures
	2.2 Organise task and workflow appropriately
	2.3 Prepare and package loads for movement, taking account of specific requirements for different materials and organisation procedures
	2.4 Select and use personal protective equipment appropriate to the task
	2.5 Ensure task is within personal capabilities
3. Complete manual tasks	3.1 Use appropriate posture and handling techniques to reduce muscle load on exertion
	3.2 Select, adjust and use mechanical aids and handling devices according to manufacturers instructions
	3.3 Pace and schedule tasks according to procedures
4. Contribute to safe work practices	4.1 Identify hazardous manual tasks and report to supervisor according to organisation procedures
	4.2 Follow organisation procedures for reporting symptoms of injury or actual injury to self and others
	4.3 Participate in workplace safety activities and contribute to the improvement of manual tasks
	4.4 Contribute to risk management approach to reduce risks from manual tasks

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and

Assessment Requirements for HLTWHS005 Conduct manual tasks safely

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed legally compliant workplace procedures to prepare for and complete at least 3 different manual tasks relevant to the work role
- contributed to a consultation process about improving manual handling safety

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- key information from work health and safety (WHS) regulations relating to manual tasks and national code of practice
- role and responsibilities of the employer and employees in relation to manual handling safety
- ways in which individual workers are involved in consultation about workplace health and safety
- reporting mechanisms required for workplace injury and compensation claims
- key aspects of the risk management approach to manual tasks
- risk factors and potential sources of risks of hazardous manual tasks:
  - repetition

© Commonwealth of Australia, 2025 HumanAbility

    - forces
    - postures
    - vibration
    - systems of work
- types of manual task activity and the types of injuries that can result
- the relationship between the human body and risk of injury from performing manual tasks
- functions of the human body:
    - basic function of the spine
    - body postures
    - types of muscles
    - principles of levers
- manual handling techniques that support safe work practice:
    - preparing the load/client
    - preparing the environment
    - using the stronger muscles in the legs where possible, rather than spinal muscles
    - maintaining a neutral spine when lifting and carrying
    - using two hands to lift or carry
    - keeping the load close to the body/centre of gravity
    - avoiding lifting objects above shoulder height
    - minimising repetitive movements
    - positions not held for long periods of time
    - avoiding twisting by repositioning feet whilst turning
- types and operational features of mechanical aids, tools and equipment

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - compliant workplace procedures
    - materials, loads and equipment as required by the individual workplace
- modelling of industry operating conditions, including:
    - presence of hazards
    - integration of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

HLTWHS006 Manage personal stressors in the work environment

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment including volume and frequency requirements.

Application

This unit describes the skills and knowledge required to maintain health and wellbeing by preventing and managing personal stress.

This unit applies to work in a range of health and community services settings, in particular work roles that operate in high stress situations and circumstances.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Develop strategies to manage personal stress	1.1 Recognise sources of stress in own job role 1.2 Recognise triggers and own response to stress 1.3 Identify strategies to effectively prevent, reduce and manage stress 1.4 Identify internal and external options and resources for

© Commonwealth of Australia, 2025 HumanAbility

	additional support
	1.5 Develop a personal stress management plan that responds to identified stressors and triggers
2. Implement stress management strategies	2.1 Use strategies from personal stress management plan that address personal triggers and stressors
	2.2 Organise own workload to minimise stress and inform relevant personnel of any variations and difficulties affecting work requirements
	2.3 Identify and adopt strategies to balance work/life priorities
3. Evaluate stress reducing strategies	3.1 Monitor and review effectiveness of stress management strategies
	3.2 Adjust strategies not meeting the desired outcome and recognise when additional resources and/or support is needed
	3.3 Access internal or external options and resources for additional support to meet desired outcomes of the stress management plan

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to *performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTWHS006 Manage personal stressors in the work environment

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment including volume and frequency requirements.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- developed, implemented and reviewed 1 personal stress management plan that includes identified sources, triggers and responses to stress
- used strategies from personal stress management plan to manage 2 stressful situations in the workplace involving colleagues and/or clients

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- sources of stress and how they manifest in health and/or community services work environment including:
  - complex client behaviour (emotional, aggressive, cognitive deficit, non-compliance)
  - grief and loss experienced by workers
  - exposure to stressful working conditions and stressful incidents
- work planning and prioritisation techniques e.g. time management strategies
- legal rights relating to the Fair Work Act
- services available for referral, both within the organisation and in the community e.g. informal/formal debriefing sessions and/or workplace counselling

© Commonwealth of Australia, 2025 HumanAbility

- self-care techniques including:
  - impact of exercise, diet and nutrition on physical health
  - work/life balance strategies
  - complementary and alternative health options

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. Where simulation is used, it must reflect real working conditions by modelling industry operating conditions and contingencies, as well as, using suitable facilities, equipment and resources.

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

LGACOM407B Manage finances within a budget

Modification History

LGACOM407B Release 2: Layout adjusted. No changes to content.

LGACOM407B Release 1: Primary release.

Unit Descriptor

This unit covers allocating funds, managing cash flows and preparing financial reports. It is appropriate for council staff with authority and responsibility for the management of budgeted funds.

Application of the Unit

This unit supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is essential. The unique nature of councils, as a tier of government directed by elected members and reflecting the needs of local communities, must be appropriately reflected.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Allocate funds	1.1. Funds are allocated according to agreed priorities and council requirements. 1.2. All ***relevant people*** are kept informed of resource decisions, allocations and usage. 1.3. Records of resource allocation and usage are current and complete according to relevant legislation and council or departmental requirements.
2. Manage cash flow	2.1. All documentation on cash flow is up to date and accurate. 2.2. Cash receipts and payments are monitored against budgeted cash flow. 2.3. Relevant employees and departments are consulted to determine the likely pattern of cash flows and to anticipate any unusual receipts or payments. 2.4. Forecasts of future cash flows are made in accordance with available information. 2.5. Cash budgets are presented in the approved format and clearly indicate net cash requirements. 2.6. Significant deviations from the projected cash flow requirements are identified, assessed and appropriate action is taken. 2.7. Cash budgets are developed to ensure effective utilisation of available funds whilst maintaining an adequate level of liquidity.
3. Monitor and control activities against budget	3.1. Systems are implemented to facilitate timely and accurate monitoring of actual income and expenditure against budgetary predictions. 3.2. Actual income and expenditure are checked against budgets at regular designated intervals. 3.3. Deviations from expected budget estimates or expenditure are identified and addressed and/or reported according to council requirements. 3.4. Departments and relevant employees are advised of financial status with regard to budget allocations and expenditure.
4. Prepare reports	4.1. Accurate, clear and concise financial reports are prepared within required time frames according to council or departmental ***auditing and legislative requirements***.

© Commonwealth of Australia, 2025 HumanAbility

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit

Required Skills

- forecasting
- contingency management
- review
- reporting
- consultation

Required Knowledge

- relevant legislation and Australian accounting standards
- auditing requirements
- relevant council or departmental requirements and guidelines, and including sustainability practices
- budget processes and procedures
- relevant accounting procedures

Evidence Guide

Overview of assessment requirements	A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit are also required to be demonstrated.
Critical aspects of evidence to be considered	The demonstrated ability to: • identify unexpected changes, such as loss of income or funding, and minimise impact • manage finances within budget • manage any variations in accordance with council procedures.
Context of assessment	Assessment of performance requirements in this unit should be undertaken within the context of the local government framework. Competency is demonstrated by performance of all stated criteria, including the Range of Variables applicable to

© Commonwealth of Australia, 2025 HumanAbility

	the workplace environment.
Method of assessment	The following assessment methods are suggested: • observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies • written and/or oral questioning to assess knowledge and understanding • completion of workplace documentation • third-party reports from experienced practitioners • completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor.
Evidence required for demonstration of consistent performance	Evidence should be gathered over a period of time in a range of actual or simulated management environments.
Resource implications	Access to a workplace or simulated case study that provides the following resources: • financial management systems and records • copies of relevant legislation and accounting standards • examples of council guidelines and procedures

Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

Relevant people may include:	• employees affected by the budget • management • finance department • elected members • any relevant people or bodies outside council • contractors • members of the public
Auditing and legislative requirements may include:	• Australian accounting standards • local government act • regulations

LGACOM503B Prepare a budget

Modification History

LGACOM503B Release 2: Layout adjusted.

LGACOM503B Release 1: Primary release.

Unit Descriptor

This unit covers the development and finalisation of a budget. The unit is appropriate for council staff responsible for the preparation of budgets in their capacity as supervisors, departmental managers or project managers.

Application of the Unit

This unit supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is essential. The unique nature of councils, as a tier of government directed by elected members and reflecting the needs of local communities, must be appropriately reflected.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect and collate relevant data	1.1.***Data*** required for ***budget*** preparation is identified and accessed. 1.2.Previous budgets and the financial implications of council's current activities and plans are analysed and evaluated. 1.3.***Relevant people*** are consulted and given the opportunity to contribute to the budget planning process. 1.4.Possible changes of circumstance that will impact on the budget are identified. 1.5.Any anomalies in the information received are checked with the appropriate person.
2. Justify proposals for expenditure	2.1.Estimates of costs and benefits are made that are supported by valid and relevant information. 2.2.Assessments of alternative courses of action are considered in making the final recommendations. 2.3.Appropriate members of staff are encouraged to contribute to the recommendations. 2.4.The net benefits likely to be achieved from the expenditure are clearly indicated. 2.5.Possible future variations in levels of activity are taken into account. 2.6.Recommendations are presented clearly, concisely and in an appropriate format. 2.7.Where challenges to the proposal are made, further explanation is given to promote acceptance. 2.8.Estimates are compared with actual costs and benefits and used to improve future calculations.
3. Seek out alternative or additional financial opportunities	3.1.Effective and comprehensive methods for discovering alternative or additional sources of funding or income are employed. 3.2.Sources of funding or income are assessed to ensure they comply with council objectives and policies. 3.3.Management/council approval for funding submission or income-generating activity is obtained where necessary. 3.4.Funding proposals are prepared and submitted.
4. Prepare draft budget for comment	4.1.The draft budget is prepared to accurately reflect the financial requirements of the department, service or council.

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	4.2. he draft budget is clear and accurate and presented in an appropriate format. 4.3.Income and expenditure estimates are clearly identified and are supported by valid, reliable and relevant information. 4.4.The draft budget is prepared consistent with council objectives and ensures the efficient and effective operation of council in the short, medium and long term. 4.5.The draft budget is completed within required time frame. 4.6.The draft budget is circulated to appropriate people for comment.
5. Prepare final budget	5.1.Comments on draft budget are considered and relevant people are advised of implications. 5.2.Required modifications to draft budget are agreed and incorporated. 5.3.Proposed budget is completed in required format within required time frame. 5.4.Proposed budget is negotiated through appropriate budgetary meeting. 5.5.***Relevant people*** are informed of budget requirements in a timely and accurate manner.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit

Required Skills

- negotiation with internal and external customers
- report presentation
- financial analysis and research
- interpretation
- consultation in a culturally diverse workforce.

Required Knowledge

- relevant financial and accounting standards
- council policies and procedures
- budget processes and procedures
- relevant computer software

LGAEHRW505B Implement strategies to minimise the impact of waste on the environment

Modification History

LGAEHRW505B Release 2: Layout adjusted.

LGAEHRW505B Release 1: Primary release.

Unit Descriptor

This unit covers the implementation and monitoring of strategies to reduce the impact of waste on the environment.

Application of the Unit

This unit supports the attainment of skills and knowledge required for competent workplace performance within councils of varying size and locations. Knowledge of the legislation and regulations within which councils must operate is essential. The role of council staff, elected members and management in protecting and managing the natural and built environment must be appropriately reflected.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine the effectiveness of the environmental impact of current practices	1.1 Impact of existing ***waste*** management practices is noted against legislation, industry standards, and council and community requirements and expectations. 1.2 Data contributing to ***cost-benefit analysis*** is collected on existing waste management practices. 1.3 The effects of existing waste practices on the environment are regularly monitored. 1.4 The waste impact cycle is monitored for components of ***waste stream*** in council area. 1.5 Resource usage in waste impact cycle is measured accurately.
2. Monitor waste reduction targets	2.1 Targets for reducing ***impact*** of waste are monitored in accordance with community standards and relevant authority requirements. 2.2 Performance is measured accurately, regularly and in a cost-effective manner. 2.3 Statistical comparisons are made between targets and performance to establish accurately if targets have been met.
3. Contribute to the development of a waste impact reduction plan	3.1 Consultation with the community and relevant ***authorities*** and organisations is undertaken as directed to assist in developing targets and ***strategies*** to reduce waste impact. 3.2 Criteria to prioritise strategies are suggested. 3.3 Information to assist comparison with similar methods in practice elsewhere and assess effectiveness of strategies is contributed. 3.4 Appropriate trial and sampling techniques are followed.
4. Follow strategies to reduce waste impact	4.1 Strategic priorities are followed to provide the most effective resolution of issues within available resources. 4.2 Processes are monitored to ensure the strategy is achieving objectives and modifications are suggested as required. 4.3 Program time lines, schedules and targets are followed to enable strategy objectives to be met.
5. Monitor effectiveness of strategies to reduce waste	5.1 ***Data*** is collected and analysed on a regular basis to provide accurate measures of performance. 5.2 Comparisons are made with strategy objectives to assess effectiveness. 5.3 Changes to implemented strategy are suggested as warranted to ensure outcomes are achieved. 5.4 Information obtained during monitoring and review is

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	suggested to develop new strategies based on accumulated knowledge and experience.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit

Required Skills

- technical and community research
- support analysis
- consultation

Required Knowledge

- waste management practices
- waste impact on environment
- waste reduction practices
- monitoring processes
- council budgeting and planning processes
- regulations
- standards
- policies
- legislation
- community needs and expectations
- relevant organisations

Evidence Guide

Overview of assessment requirements	A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit are also required to be demonstrated.
Critical aspects of evidence to be considered	• Data on the waste stream is collected and analysed to standards of council plans. • Council policies, protocols and relevant legislation are

© Commonwealth of Australia, 2025 HumanAbility

	followed in monitoring waste activity. • Consultation is undertaken as directed to identify strategies and distribute information. • Strategy implementation and monitoring is undertaken to identified standards
Context of assessment	On the job or in a simulated work environment.
Relationship to other units(prerequisite or co-requisite units)	To enable holistic assessment this unit may be assessed with other units that form part of the job role in particular: LGAEHRW503B Implement programs for disposal and containment of waste.
Method of assessment	The following assessment methods are suggested: • observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies • written and/or oral questioning to assess knowledge and understanding • completing workplace documentation • third-party reports from experienced practitioners • completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor
Evidence required for demonstration of consistent performance	Evidence will need to be gathered over time across a range of variables.
Resource implications	Access to a workplace or simulated case study that incorporates the following resources: • relevant data on different waste streams • real or simulated consultation process • relevant legislation, regulations, standards and policies

Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

LMTGN2005B Perform minor maintenance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to provide minor maintenance of production machines.

Application of the Unit

Application of the Unit

The unit applies to the checking of machine performance and the undertaking minor adjustments to production machines.

Work involves limited discretion, initiative and judgement on the job in own work, including liaison with specialist mechanics and technicians.

Work may be conducted in a variety of environments, such as operational workplace activities, restricted space and hazardous, controlled or exposed conditions.

Work may be undertaken on a range of machines that may include microprocessor or computer controls.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

© Commonwealth of Australia, 2025 HumanAbility

This unit requires apply problem solving skills and initiative and enterprise to identify and act on minor machine faults within area of own responsibility. This unit also requires planning and organising to safely and efficiently use, check and clean and lubricate machines and technology used in TCF industries. Communication skills are also required to document and report faults and maintenance information.

Licensing/Regulatory Information

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Operate machine and assess performance	1.1 Machine is started and stopped according to manufacturer requirements.
	1.2 Machine operation is monitored to ensure correct procedures are assessed and product meets quality standards.
	1.3 Problem with machine is identified and reported.
2 Rectify minor machine fault	2.1 Minor machine and associated equipment and tool faults are identified and addressed where necessary to meet specified requirements, and are reported.
	2.2 Major machine or product faults are identified and documented, and appropriate personnel informed.

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	2.3 Machine maintenance records and other documentation are accurately completed.
3 Clean and lubricate machine	3.1 Machine is cleaned according to ***OHS practices*** and schedules, and manufacturer cleaning instructions.
	3.2 Machine is lubricated according to workplace requirements and schedules, and manufacturer lubricating instructions.
4 Check machine operation	4.1 Machine is checked to ensure correct operation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates knowledge of:

- procedures and guidelines for safe operation of machines
- typical fault conditions and related fault finding procedures
- basic machine maintenance and repair techniques
- technical specifications manuals
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- assess operating performance of machine
- start and stop machines according to specifications
- monitor machine operations, including machine production readings
- recognise fault conditions
- rectify minor machine faults or problems as required
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

© Commonwealth of Australia, 2025 HumanAbility

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence	Demonstrates skills and knowledge to: • operate machines correctly • monitor machine performance against machine specifications • make minor adjustments • complete records accurately and completely • apply OHS practices in work operations
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment • recognising and adapting to cultural differences in the workplace, • including modes of behaviour and interactions
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions

© Commonwealth of Australia, 2025 HumanAbility

that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
OHS practices	OHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may relate to: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • environmental practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- inspection and testing processes
- test equipment and its operation
- setting and adjustment requirements
- characteristics of materials
- recording and reporting procedures
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- interpret technical data
- set and operate test and inspection equipment and tools
- test and inspect samples
- apply safety practices
- interpret and apply established procedures
- document, assess and transfer information
- read, interpret and follow information on work specifications, standard
- operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence	Demonstrates skills and knowledge to: • clarify and confirm requirements • select appropriate materials • ensure machines are calibrated, adjusted and operated correctly • conduct quality inspection and testing of samples • apply OHS practices in work operations • record and report results accurately
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if

© Commonwealth of Australia, 2025 HumanAbility

the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Test or inspection may include:	• visual checking • colour matching • weighing, height • weight • thickness measuring • moisture measuring • measuring rubbing fastness • stretch • wear • cracking • colour • gloss • softness • handle • texture • light and colour fastness • heat fastness • tensile characteristics • flexibility
Equipment may include:	• purpose built and general test or inspection equipment related to the particular requirements
OHS practices	OHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may relate to: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • environmental practices

LMTGN2008B Coordinate work of team or section

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to coordinate work of a team or section.

Application of the Unit

Application of the Unit

The unit applies to coordination and monitoring of the work of a team or section.

Work requires discretion, initiative and judgement on the job in own work. Work may be conducted in a variety of environments, such as operational workplace activities, restricted space, and hazardous, controlled or exposed conditions.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

Team work and communication skills are central to this unit to ensure team performance meets production and organisational requirements. This unit also requires planning and organising skills and an ability to apply problem solving strategies to identify and

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and coordinate work schedules	1.1 Tasks, jobs and work priorities are confirmed with supervisor or manager. 1.2 Tasks are assigned to team, section and individuals. 1.3 Priority of tasks is communicated to team, section or individuals. 1.4 Materials are organised to meet work requirements.
2 Monitor performance and quality	2.1 Required work standard is communicated to team, section or individuals to ensure understanding of task requirements. 2.2 Standard of performance, including quality standards, of team, section or individuals, is monitored to ensure achievement of outcomes and is reported. 2.3 Instruction and support are provided, as required, in order to achieve standards and outcomes. 2.4 Proposals for improvements to work processes, efficiency and organisation are communicated and reported to ***appropriate personnel***.

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
3 Monitor application of OHS	3.1 Implementation of OHS and environmental standards and procedures are monitored to achieve safety standards and requirements in the workplace. 3.2 Proposals for prevention or correction of problems are identified and communicated and reported to appropriate personnel, according to ***OHS practices***.
4 Communicate with work team, section, individuals	4.1 All information affecting work, including OHS and quality standards is explained logically in an easily understood manner to individuals and teams, as required. 4.2 Feedback from team, section members and individuals is sought to assist in effective operation of team or section.
5 Report work of team or section	5.1 Reports and documentation on team or section performance and outcomes are provided to line supervisor and management, as required. 5.2 Team or section performance and outcomes, which impact on operations of other sections, are communicated effectively and promptly, as required, to appropriate personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- production and workflow system in the team
- factors and constraints that impact on effective workflow
- effective work methods to achieve production objectives and timelines
- methods for monitoring and coordinating the use of resources
- quality assurance standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- prioritise resources (machines, staff, materials and production processes)
- allocate work to team or section members
- identify and report problems with workflow
- maintain and update monitoring procedures
- analyse and record results according to workplace practices

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

Demonstrates skills and knowledge to:

- organise work tasks, work processes and staff
- meet efficiency standards
- advise appropriate ways of correcting non-compliance and inefficiencies
- apply techniques to monitor work
- apply OHS practices in work operations
- maintain accurate records

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks according to instructions
- working systematically with attention to detail
- identifying improvements and avoiding damage
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions

Resource implications

Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.

© Commonwealth of Australia, 2025 HumanAbility

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Appropriate personnel may include:	• line supervisor or manager • team or section leaders • supervisors or managers in other sections • technical specialists
OHS practices	OHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may relate to: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • environmental practices

LMTGN2010B Perform tasks to support production

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to perform tasks to support production.

Application of the Unit

Application of the Unit

The unit applies to a range of manual tasks that support production processes and which are not covered by a specific unit of competency. Production support tasks include cleaning and housekeeping, assisting in loading, feeding and unloading of transporting equipment, loading and unloading of materials from machines, storing materials, and recording and documenting.

Work may be conducted in a variety of environments, including operational workplace activities, restricted space and hazardous, controlled or exposed conditions.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

© Commonwealth of Australia, 2025 HumanAbility

This unit requires the application of skills associated with self management to follow instructions when performing a range of production tasks. Team work and communication skills are also required to understand what is required to provide support to others in a production environment. This unit also requires an ability to plan and organise own duties and use basic tools and equipment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Perform general production-related duties and tasks	1.1 Required duties and tasks are clarified with a supervisor or team member. 1.2 Required ***equipment and tools*** are organised, and checked to confirm good working condition. 1.3 Questions are asked to confirm procedures and ensure own knowledge and skill is adequate to perform tasks. 1.4 Tasks are performed to meet requirements.
2 Perform general cleaning duties	2.1 Cleaning duties are clarified to establish requirements. 2.2 Personal safety equipment, where needed, is selected and used correctly according to ***OHS practices***.

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	2.3 Appropriate cleaning equipment for specific tasks is determined, prepared and used.
	2.4 Procedures for handling, storage and disposal of cleaning liquids are implemented according to manufacturer specifications.
	2.5 Cleaning is assessed against housekeeping requirements.
3 Assist in transfer or removal of materials or products where required	3.1 Requests are received and, where relevant, tasks are organised, confirmed and recorded according to specified procedures.
	3.2 Assistance is provided in transfer or removal of materials or products as required.
	3.3 Appropriate methods and manual handling techniques are used.
4 Complete documentation	4.1 Documentation associated with tasks, where relevant, is accurately completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- procedures and requirements for cleaning and housekeeping
- use of products and materials
- maintenance planning and workplace practices
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- use and dispose of a range of chemical cleaning agents, sealants and lubricants, where required
- interpret and apply established procedures
- document and transfer information
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence	Demonstrates skills and knowledge to: • undertake basic production tasks • handle materials and products • clean equipment, machines and work environment • document work and maintain records as required • apply OHS practices in work operations
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.

LMTGN3001B Control production in a section of a textiles, clothing and footwear enterprise

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers the skills and knowledge to control operations within a section of a textiles, clothing and footwear (TCF) enterprise, to ensure production is efficient and meets established targets.

Application of the Unit

Application of the Unit

The unit applies to scheduling activities, allocation of resources, monitoring productivity and addressing obstacles to efficiency. It applies to an area of production within an enterprise and within established guidelines.

Work would be conducted largely independently and with accountability for own results, including, carrying out assigned tasks, coordinating processes, and setting and working to deadlines.

Work may be self-directed and unsupervised.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with planning and organising of staff, resources and technology required for a

© Commonwealth of Australia, 2025 HumanAbility

range production tasks. Team work and communication skills are also required to provide instruction on production requirements and interpret and complete production information. This unit also requires an ability to apply problem solving strategies to rectify operational problems.

Licensing/Regulatory Information

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify requirements for efficient production	1.1 Machine operations, staff, resources and production processes within work area are identified. 1.2 Production targets for work area are identified. 1.3 Quality standards and ***OHS practices*** for work area are identified. 1.4 ***Key conditions*** affecting production are identified. 1.5 Supply and ***production scheduling*** requirements for area are identified.
2 Monitor and assess production efficiency	2.1 Compliance to specified requirements is checked to ensure efficiency is maintained. 2.2 Non-compliance is identified, reported or recorded and investigated to determine causes.

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	2.3 Production outcomes are assessed against targets.
	2.4 Ongoing monitoring activities are implemented to assess production efficiency.
	2.5 Additional information is sought as required to monitor efficiency.
3 Control production to achieve efficiency targets	3.1 Production standards are set or interpreted to meet production targets.
	3.2 Corrective or preventative action is recommended and implemented.
	3.3 Targets and procedures are communicated to relevant personnel in a logical and easily understood manner.
	3.4 Supply of resources is managed and ensured as required.
	3.5 Maintenance of machinery is scheduled as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- production and workflow system in the workplace
- factors and constraints that impact on effective workflow
- ways of controlling factors and constraints
- cost effective work methods to achieve production objectives and timelines
- methods for monitoring and controlling the use of resources
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- interpret workflow plans
- schedule and prioritise resources (machines, staff, materials and production processes)
- clarify and communicate tasks, roles and responsibilities
- allocate work for team members
- identify and report problems with workflow
- establish, maintain and update monitoring procedures
- identify and interpret product specifications
- set and adjust machines according to workplace practices

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- select, organise and weigh raw materials
- analyse and record results according to workplace practices
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

Demonstrates skills and knowledge to:

- organise machine operations, staff and production processes
- meet production processes efficiency standards
- implement appropriate ways of correcting non-compliance and inefficiencies
- apply techniques to monitor production work
- monitor changes to production processes
- apply OHS practices in work operations
- check production outputs against specifications
- maintain accurate records

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks according to instructions
- working systematically with attention to detail
- identifying improvements and avoiding damage
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions

LMTGN3005B Plan tasks to assist production operations

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to assist in production planning by performing specific planning tasks.

Application of the Unit

Application of the Unit

The unit applies to planning of tasks to assist production operations. Tasks may include the development of rosters, OHS practices, workplace procedures, documentation practices and organisational systems.

Work requires discretion, initiative and judgement.

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of planning and organising skills to develop and implement a production plan. Team work and communication skills are central to interpreting production information and ensuring production plan is implemented effectively in the workplace. New information and learning from

© Commonwealth of Australia, 2025 HumanAbility

implementation should be used to improve plan development and implementation.

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Clarify planning requirements	1.1 Planning requirements are discussed with supervisor and work brief is confirmed.
	1.2 Timeline, jobs, and work priorities associated with ***planning task*** are confirmed with supervisor or manager.
	1.3 Workplace practices and documentation requirements associated with planning task are assessed for relevance.
	1.4 ***Key personnel*** associated with planning task are identified.
2 Conduct planning task	2.1 Planning task requirements are communicated to team, section or individuals as required to secure positive input.
	2.2 Previous and current work practices, organisational guidelines, documentation systems and quality standards are assessed and relevant criteria are applied to planning task.
	2.3 ***Planning tools and techniques*** are used.
	2.4 Key personnel are consulted during planning activity.

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	2.5 Proposals for plan are developed to meet planning requirements.
	2.6 Planning proposal is tested with key personnel.
3 Apply plan	3.1 Plan is implemented.
	3.2 Implementation of plan is monitored to assess plan suitability.
	3.3 ***OHS practices*** are integrated into plan.
	3.4 Improvements to plan are identified and applied.
4 Communicate plan to work team, section, individuals	4.1 All plan information affecting work, including OHS practices and quality standards is explained logically in an easily understood manner to individuals and teams.
	4.2 Feedback from team, section members and individuals is sought to assist in effective operation of team or section.
	4.3 Plan and implementation practices are documented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- production and workflow system
- factors and constraints that impact on task
- effective work methods to achieve production objectives and timelines
- documentation practices
- quality standards and procedures
- scheduling techniques
- resourcing policies
- general staffing levels, capabilities and application of standard times
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- prioritise work
- manage time
- organise
- use planning tools
- analyse
- apply relevant arithmetic calculations

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence	Demonstrates skills and knowledge to: • organise work tasks, work processes and staff • meet work process efficiency standards • use suitable planning techniques • implement and monitor plan • apply OHS policies in work operations • maintain accurate records
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions

LMTGN4005A Plan and implement production within a work area

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers the skills and knowledge required to plan and implement production within a work team within a textiles, clothing or footwear (TCF) industry workplace.

Application of the Unit

Application of the Unit

This unit applies to determining, planning, implementing and monitoring production work flow within a work team in a TCF workplace where discretion and judgement may be required, for both self and others, in planning and selecting processes, procedures or outcomes. Work may be conducted in a variety of environments, ie operational workplace activities, restricted space, hazardous, controlled or exposed conditions.

TCF production areas may include:

- textile production
- clothing production
- footwear production
- early stage wool processing
- cotton ginning
- leather production
- millinery
- canvas and sails production
- laundry operations
- dry cleaning operations

Operations may cover various time scales to reflect seasonal planning

Work may be conducted in small to large scale enterprises and may involve individual and team activities.

© Commonwealth of Australia, 2025 HumanAbility

The unit is applied according to OHS and workplace practices of the enterprise, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with planning and organising production requirements, processes and schedules for a work team. This unit also requires an ability to implement and problem solve production processes. Communication skills will be used to interpret production requirements, organise work team, communicate with team and individuals and maintain records.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
1 Determine ***production requirements***	1.1 Projected quantity and quality requirements, standard times and production capacities are identified
	1.2 ***Production process*** and material handling options are identified
	1.3 Resources required for the project or production order are established
2 Prioritise work	2.1 Work is prioritised taking into account production demands, customer requests and requirements and efficiency standards of the workplace
3 Sequence production	3.1 Steps required for the process are identified ensuring most efficient use of resources
	3.2 Documentation is prepared in accordance with workplace practices
4 Organise team and resources	4.1 Work team is selected and organised in accordance with workplace practices
	4.2 Facility, equipment and material and resources required for the production process are identified and organised in accordance with the ***production schedule*** and ***OHS practices***
5 Implement and monitor work flow	5.1 Work flow is monitored to ensure production schedule is maintained
	5.2 Methods are implemented to ensure that work is directed to each work area or location as required, and potential congestion areas are identified
	5.3 Troubleshooting occurs on a regular basis in response to breakdowns, absenteeism and other factors
6 Implement variations to production plan	6.1 Systematic implementation of variations to the production plan are coordinated to ensure production meets the schedule and specifications
	6.2 Work is re-allocated in accordance with production priorities, where required
	6.3 Inefficiencies are identified and dealt with in accordance with workplace production practices
	6.4 Team or individual responsibilities are defined and communicated
7 Maintain records	7.1 Records are maintained and reports prepared, where necessary, in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- work organisation systems and workplace organisation features
- production planning processes, such as material supply etc.
- safety and environmental aspects of relevant workplace activities
- OHS practices, including hazard identification and control measures
- quality practices
- workplace practices

recording and reporting practices

Demonstrates skills to:

- interpret and use data from a range of sources
- sequence production
- monitor workflow
- organise resources
- respond to breakdowns, absenteeism, etc.
- coordinate variations to production plan
- document and transfer information
- read, interpret and follow information on work specifications, , standard operating procedures and work instructions and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Employability Skills Statement, Elements and Performance Criteria, Range Statement and Assessment Guidelines for this Training Package.

Critical aspects of evidence to be considered

Demonstrates skills and knowledge to:

- establish production requirements

© Commonwealth of Australia, 2025 HumanAbility

The Evidence Guide provides advice on assessment and must be read in conjunction with the Employability Skills Statement, Elements and Performance Criteria, Range Statement and Assessment Guidelines for this Training Package.

	• prioritise work • select and organise work team • ensure efficiency of production schedule • deal with inefficiencies • apply OHS practices in production operations • maintain accurate records
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks • identifying improvements • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment used and work processes • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions • completing work systematically with attention to detail without damage to goods and equipment
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent Assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if

© Commonwealth of Australia, 2025 HumanAbility

the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Production planning may relate to:	• establishing an overall plan for manufacture/product delivery • repetitive production runs • short runs • quick changes • a diversity of styles • indent orders • stock services replenishment
Production process may include:	• JIT • VAM • quick response • quality circles • team processes • benchmarking
Product schedule may include:	• plant layout and machine involvement and personnel required for particular operations
OHS practices	OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • other OHS practices relevant to the job and enterprise

LMTLA2001A Conduct safe handling of laundry chemicals

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to handle and work with chemicals commonly used in laundry operations.

Application of the Unit

Application of the Unit

This unit applies to the safe preparation, use and storage of laundry chemicals according to industry regulations and codes of practice that govern the control of chemicals in the workplace. Chemicals may include chemicals used in commercial laundries such as detergents and bleaches.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

The unit is applied according to OHS and workplace practices of the enterprise, which may include:

- Material Safety Data sheets (MSDS)
- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality, and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with self management when conducting work to ensure workplace safety procedures, personal protective equipment and personal

© Commonwealth of Australia, 2025 HumanAbility

responsibilities are followed to ensure the safety of self and others when working with cleaning chemicals. This unit also requires an ability to access and communicate information on cleaning chemicals.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access workplace information on ***cleaning chemicals***	1.1 Relevant regulations and codes of practice relating to the control of hazardous substances are identified 1.2 ***Workplace information*** regarding the safe handling of cleaning chemicals is accessed 1.3 Workplace procedures relating to cleaning chemicals are identified 1.4 Personal responsibilities in working with cleaning chemicals are identified 1.5 Material Safety Data Sheets (MSDS) for cleaning chemicals are identified and ***common terminology*** interpreted
2. Identify control measures	2.1 Risks associated with cleaning chemicals are identified 2.2 Measures for controlling risks associated with cleaning chemicals are identified

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	2.3 Personal Protective Equipment relevant to the use of cleaning chemicals are identified
3. Apply safe handling of cleaning chemicals	3.1 Personal Protective Equipment is used correctly
	3.2 Work area is adequately ventilated and ignition sources eliminated
	3.3 Cleaning chemicals are handled and stored according to OHS practices and workplace requirements.
	3.4 Machinery and equipment associated with use of cleaning chemicals are operated safely
	3.5 OHS issues, faults, or emergencies are reported to the relevant personnel
	3.6 Accidents and emergencies are acted upon according to procedures for the cleaning chemical
	3.7 Housekeeping is conducted and work area standards maintained
	3.8 Cleaning chemicals are disposed of according to regulatory requirements, including MSDS recommendations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level

Demonstrates knowledge of:

- regulations and codes of practice which govern the control of cleaning chemicals in the workplace
- workplace procedures relating to cleaning chemical use
- personal responsibilities in the control of cleaning chemicals in the workplace
- risks of exposure to chemicals by absorption, inhalation and ingestion
- health risks arising from exposure to cleaning chemicals
- the meaning of common MSDS terms
- risks associated with operating machinery or equipment that use cleaning chemicals
- procedures for the mixing of chemicals and other agents
- correct use of Personal Protective Equipment
- workplace procedures for the reporting of emergencies or OHS issues
- workplace procedures for the control of chemical spills and fires
- OHS practices, including hazard identification and control measures

Demonstrates skills to:

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- differentiate between toxic agents, corrosives, reactives; and flammables and combustibles.
- identify and locate MSDS and other available safety information on cleaning chemicals
- read, interpret, and follow information on work specifications, standard operating procedures and work instructions, Material Safety Data Sheets, and other reference material
- use Personal Protective Equipment
- transfer, store and dispose of cleaning chemicals safely
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

Demonstrates skills and knowledge to:

- identify and apply workplace information on cleaning chemicals
- apply safety procedures in working with cleaning chemicals used in the workplace
- apply control measures to address risks
- respond appropriately to accidents and incidents
- complete required reporting and documentation.

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks
- identifying improvements
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment used and work processes

© Commonwealth of Australia, 2025 HumanAbility

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

	• recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions • completing work systematically with attention to detail without damage to goods and equipment
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Workplace information may include:	• Material Safety Data Sheets for hazardous substances • workplace procedures • signage and labelling • verbal instruction
Cleaning chemicals may include:	• liquid silicon • detergent • chlorine bleach • oxybleach • builder • starch • fabric conditioner • laundry sour

© Commonwealth of Australia, 2025 HumanAbility

	• caustic alkali
Personal responsibilities may include:	• following OHS procedures • following workplace procedures • reporting incidents • using personal protective equipment
Risks may include:	• mixing of chemicals • spills and leaks in the workplace • chemical fires • exposure to perchlorethylene or other cleaning chemicals via absorption, inhalation or ingestion
OHS practices may include:	OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include: • Material Safety Data Sheets • manual handling techniques • standard operating procedures • Personal Protective Equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • other OHS practices relevant to the job and enterprise
Common MSDS terms include:	• acute effect • acute toxicity • asphyxiant • ceiling • carcinogen • chronic effect • chronic toxicity • combustible material • corrosive • decomposition • dermal • flash point • flammable material • ingestion • irritant • mutagen

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for wash	1.1 Production schedule and work load priorities are correctly identified and followed
	1.2 Washing machine loads and ***washing requirements*** are confirmed
	1.3 Laundry chemicals are prepared for use
	1.4 Washing sequences are identified and followed for a given process or product
	1.5 Safety procedures, including the use of protective clothing, to be undertaken when handling soiled product are identified
	1.6 Operator manuals are accessed as required
2 Operate automatic washing extractor	2.1 Automatic washing machine is loaded with correct weight according to workplace procedures and ***OHS practices***
	2.2 Laundry chemicals correctly dosed and applied according to load requirements

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	2.3 Program is selected according to load requirements
	2.4 Washing machine is operated in accordance with operating instructions
	2.5 Washing machine operation is monitored and any inconsistencies are identified and reported
	2.6 Washing machine is unloaded using correct manual handling techniques where required
3 Operate manual washing extractor	3.1 Manual washing extractor is loaded with correct weight according to workplace procedures and OHS practices
	3.2 Laundry chemicals are correctly dosed and applied according to load requirements
	3.3 Washing machine is operated in accordance with operating instructions
	3.4 Washing machine operation is monitored and any inconsistencies are identified and reported
	3.5 Washing is unloaded using appropriate manual handling techniques where required
4 Complete wash	4.1 Washing is transferred to next operation
	4.2 Housekeeping is conducted to maintain work area standards
	4.3 Standardised documentation is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Demonstrates knowledge of:

- machine operation and program selection
- characteristics and hazards of chemicals and dispensing systems
- safe handling of laundry chemicals
- safety and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- workplace procedures
- OHS practices, including hazard identification and control measures
- procedures for clean up of spills
- quality practices
- practices for recording and reporting

Demonstrates skills to:

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- use and handle chemicals safely
- maintain quality requirements for each stage of the process
- communicate effectively within the workplace
- apply defined procedures
- receive and transfer information
- read, interpret, and follow information on work specifications , standard operating procedures and work instructions, and other reference material
- maintain accurate records
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered	Demonstrates skills and knowledge to: • interpret production schedules and work load priorities • interpret and apply washing specifications • calculate correct chemical dosage • use washing machines safely and efficiently
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks • identifying improvements • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment used and work processes • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions • completing work systematically with attention to detail without damage to goods and equipment
Resource	Access is required to real or appropriately simulated situations,

LMTLA2003A Control washing extractor operation

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to determine requirements for wash loads and control and monitor washing machine operation and processing of product to required specifications and quality.

Application of the Unit

Application of the Unit This unit applies to controlling washing machine operation and involves chemical dispensing and monitoring procedures to required specifications.

Laundry or operating procedures can relate to:

- manual handling
- safe handling of chemicals
- preparation of chemical products
- preparation of dispensing systems
- quality control requirements

Procedures may relate to:

- chemical specifications, handling and use
- machines manual over-riding technology application
- identification of faults
- manual handling for loading and unloading machines
- safe use of machines
- quality control requirements
- working in confined spaces

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

This unit is applied according to OHS and workplace practices of the enterprise, which may include:

© Commonwealth of Australia, 2025 HumanAbility

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with planning and organising of wash loads, machinery and chemicals required for washing operations, as well as the application of knowledge of the technology used to ensure optimal outcomes. This unit also requires the ability to access and interpret information to determine washing requirements and monitor washing performance. Problem solving skills may also be required to identify operational faults.

LMTLA2004A Perform linen rewash

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to identify stains and select rewash methods for linen to meet laundry specifications and quality requirements.

Application of the Unit

Application of the Unit This unit applies to relating to product rewash procedures and operating machines. It involves chemical dispensing and monitoring procedures.

Laundry or operating procedures can relate to:

- manual handling
- safe handling of chemicals
- preparation of chemical products
- preparation of dispensing systems
- quality control requirements

Procedures and specifications may relate to:

- chemical specifications and handling and use
- machine manual overriding technology
- identification of faults
- manual handling for loading and unloading machines
- safe use of machines
- working in confined spaces
- quality control requirements

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine rewash requirements	1.1 Steps for identifying the stained product are followed in accordance with ***OHS practices***, including use of personal protective equipment

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	1.2 Stain is identified and classified into categories
	1.3 Rewash requirements for the identified stain and product type are determined
2 Carry out rewash procedure	2.1 Preparation for rewash is assessed in accordance with ***machine*** operation procedures
	2.2 Chemical products are prepared and used according to supplier and laundry requirements and prewash applied as required
	2.3 Machine is operated in accordance with manufacturer's and workplace procedures
	2.4 Washing extractor operation is monitored to ensure correct function
	2.5 Operating faults are identified and reported
3 Complete rewash	3.1 Data is recorded and stored in accordance with industry and workplace procedures
	3.2 Linen is transferred to next operation
	3.3 Work area housekeeping standards are maintained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Demonstrates knowledge of:

- characteristics of stains, their relevant identification procedures and removal techniques
- machine operation, program selection, and monitoring procedures
- characteristics and hazards of chemicals and dispensing systems
- infection control policies and procedures
- quality practices
- safety and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- workplace practices
- OHS practices, including hazard identification and control measures
- practices for recording and reporting

Demonstrates skills to:

- recognise, identify, and assess the range of common stains normally encountered
- use machines and related equipment, including dispensing and dosing systems
- prepare and monitor chemicals safely
- interpret material safety data sheets (MSDS)

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- identify and tag out faulty machinery
- maintain quality requirements for each stage of the process
- document, assess, and transfer information
- read, interpret, and follow information on work specifications , standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

Demonstrates skills and knowledge to:

- follow steps for correct stain identification
- select and determine appropriate rewash requirements for a range of applications
- prepare and use chemicals
- complete linen rewash safely and efficiently, to quality standards
- monitor process operation

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks
- identifying improvements
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment used and work processes
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
- completing work systematically with attention to detail without damage to goods and equipment

© Commonwealth of Australia, 2025 HumanAbility

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Machine may include:	Microprocessor or computer controlled and can relate to various types of laundry equipment including: • automatic washing extractors • manual washing extractors • continuous batch washers • weighing machines • chemical dosing equipment
OHS practices	OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to operate hydro extractors throughout the hydro extraction process to meet laundry specifications and quality requirements.

Application of the Unit

Application of the Unit

This unit applies to operating extractors and machines. It may involve the use of manual or spring loading.

Laundry and operating procedures can relate to:

- manual handling techniques
- equipment operation
- fault identification
- machine isolation
- quality control requirements
- classification of products
- safety checks
- foreign objects

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

This unit is applied according to OHS and workplace practices of the enterprise, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of

extraction machine	procedures 2.2 Machines are monitored during operation to ensure correct balance is maintained 2.3 Machines are loaded and unloaded using appropriate manual handling techniques or by correctly operating loading and unloading equipment 2.4 Operating faults are identified and reported 2.5 Records are completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level

Demonstrates knowledge of:

- machine operation and monitoring procedures
- level of operator responsibility for equipment maintenance and monitoring
- safety and environmental aspects related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- workplace practices
- OHS practices, including hazard identification and control measures
- quality practices
- practices for recording and reporting

Demonstrates skills to:

- use extractors and related equipment
- identify operational faults
- classify and sort product
- maintain quality requirements for each stage of the process
- apply defined procedures
- receive and transfer information
- read, interpret, and follow information on work specifications , standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Employability Skills Statement, Elements and Performance Criteria, Range Statement and Assessment Guidelines for this Training Package.

Critical aspects of evidence to be considered	Demonstrates skills and knowledge to: • ensure equipment is prepared for operation • load extractor appropriately • monitor process operation • identify faults
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks • identifying improvements • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment used and work processes • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions • completing work systematically with attention to detail without damage to goods and equipment
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different

© Commonwealth of Australia, 2025 HumanAbility

work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Machines may include:	• hydro extraction machine (manual loading, spring loaded trolleys) • membrane press • hydraulic rams • conveying equipment • transfer equipment
OHS practices	OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • other OHS practices relevant to the job and enterprise

Unit Sector(s)

Sector Laundry Operations

© Commonwealth of Australia, 2025 HumanAbility

LMTLA2006A Perform conditioning and drying processes

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required for the conditioning and drying of products according to laundry procedures and quality requirements.

Application of the Unit

Application of the Unit

This unit applies to conditioning and drying processes and operating machines. It includes preparation for the finishing process.

Laundry or operating procedures can relate to:

- manual handling techniques
- laundry procedures for loading and unloading
- machine safety checks
- auto lint filters
- spontaneous combustion prevention
- identification of faults
- safe use of machines
- quality control requirements

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

This unit is applied according to OHS and workplace practices of the enterprise, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or

© Commonwealth of Australia, 2025 HumanAbility

section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with communication to interpret production schedules, planning and organising of conditioning and drying operations as well as an application of knowledge of the technology used in the laundry industry. This unit also requires the ability to recognise and report operational faults.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare ***machines*** for operation	1.1 Production schedule and workload priorities are correctly interpreted and followed 1.2 Schedules for the cleaning of dryer filters are interpreted and followed 1.3 Procedures for drying machine start up are performed in accordance with manufacturers' specifications and workplace procedures

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	1.4 Operator manuals are accessed as required
2 Classify product	2.1 Product classification is checked and sorted according to finishing requirements
3 Operate dryer	3.1 ***Drying programs*** are followed for given product type and size of load
	3.2 Dryers are loaded and unloaded using manual handling techniques or by correctly operating loading and unloading equipment
	3.3 Appropriate cycle, timing and temperature for loads are selected, where required
	3.4 Records are completed
	3.5 Dryer is operated in accordance with operating instructions ***and OHS practices***
	3.6 Dryers are monitored for correct operation
	3.7 Dryer operating faults are identified and reported
	3.8 Risks associated with spontaneous combustion are identified and product cool down procedures are followed
	3.9 Unloading is assessed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level

Demonstrates knowledge of:

- machine operation, program selection, and monitoring procedures
- level of operator responsibility for equipment maintenance and monitoring
- characteristics and hazards of working with heat and steam
- procedures for product cool down and minimisation of spontaneous combustion
- safety and environmental aspects of related to workplace and machine and equipment operation and manual handling, including consumable or hazardous materials
- workplace practices
- OHS practices, including hazard identification and control measures
- quality practices
- practices for recording and reporting

Demonstrates skills to:

- use machines and related equipment
- classify and sort product

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- follow dryer cleaning schedule
- identify faults
- maintain quality requirements for each stage of the process
- interpret and apply established procedures
- document, assess, and transfer information
- read, interpret, and follow information on work specifications , standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

Demonstrates skills and knowledge to:

- interpret production schedules and work load priorities
- load machine appropriately
- select program
- monitor process operation

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks
- identifying improvements
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment used and work processes
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
- completing work systematically with attention to detail without damage to goods and equipment

© Commonwealth of Australia, 2025 HumanAbility

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Machines may include	• dryers • loading and unloading equipment • conveyors • transfer equipment
Drying program may include	• drying cycles • temperature • time
OHS practices	OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks

© Commonwealth of Australia, 2025 HumanAbility

- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other OHS practices relevant to the job and enterprise

Unit Sector(s)

Sector Laundry Operations

LMTLA2007A Finish products for despatch

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to operate finishing equipment, inspect products and fold and prepare finished products for despatch.

Application of the Unit

Application of the Unit

This unit applies the operation of finishing equipment.

Laundry or operating procedures can relate to:

- manual handling techniques
- machine operation
- procedure for coding and rewash
- reporting procedures for faults, safety checks, etc.
- classification of products (code, number, tying, wrapping, customer)

Procedures may relate to:

- machines manual over-riding technology application
- identification of faults
- manual handling for loading and unloading machines
- safe use of machines
- quality control requirements

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

This unit is applied according to OHS and workplace practices of the enterprise, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions

© Commonwealth of Australia, 2025 HumanAbility

- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with planning and organising of resources and machinery for the required work, as well as applying skills and knowledge of machines and equipment to ensure production outcomes are met for finishing operations. This unit also requires an ability to interpret schedules and determine finishing requirements and recognise and act on faults or quality inconsistencies.

	• recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions • completing work systematically with attention to detail without damage to goods and equipment
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.

Finishing equipment may include:	• pressing equipment, which may include:
	  • roller or chest ironer
	  • towel folder or team folder
	  • tunnel finishers or steam tunnel
	  • stacker or feeder
	  • trouser topper
	  • trouser legger
	  • dolly
	  • puffer
	  • dry press
	  • hand iron

© Commonwealth of Australia, 2025 HumanAbility

- hot head press
- coat press
- feeding equipment
- single or multi roller iron

OHS practices

OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include:

- manual handling techniques
- standard operating procedures
- personal protective equipment
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other OHS practices relevant to the job and enterprise

LMTLA2008A Repair damaged laundry items

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to perform repairs on laundry items.

Application of the Unit

Application of the Unit This unit applies to operating machines and performing repairs. It involves the operation of related mending equipment.

Laundry or operating procedures may relate to:

- repairing and resizing
- recycling
- condemning articles
- recoding
- repairs on theatre linen (according to AS 2892)
- manual handling techniques
- safe use of machines and related equipment
- reporting procedures for faults, safety checks, etc.
- quality assurance

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

The application of this unit is according to OH&S practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or

© Commonwealth of Australia, 2025 HumanAbility

section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with problem solving repair requirements, planning and organising machines and equipment and applying knowledge of repairing processes. This unit also requires an ability to complete repair records.

LMTLA2009A Inspect, fold and pack theatre linen

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required for the final checking and inspection of clean theatre linen to ensure customer requirements and quality standards have been met.

Application of the Unit

Application of the Unit

This unit applies to the inspection, folding and packing of theatre linen. It includes the sorting, folding and packing processes.

Special instructions or requirements could include:

- packaging requirements, including configuration, wrapping, labelling
- final finishing instructions for theatre packs
- rework classification or instructions

Laundry or operating procedures may relate to:

- hospital theatre pre-pack specifications
- reject classifications
- coding systems
- manual handling techniques
- safe use of machines and related equipment
- reporting procedures for non-conformance, faults, safety checks, etc.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

This unit is applied according to OHS and workplace practices of the enterprise, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures

© Commonwealth of Australia, 2025 HumanAbility

- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of problem solving skills to classify linen and implement protocols and procedures for hygiene, infection control, coding and packaging for theatre linen. This unit also requires the ability to plan and organise materials, equipment and resources for packing theatre linen and complete required documentation.

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Check and classify cleaned theatre linen	1.1 Environmental standards for packing of theatre linen are applied and maintained 1.2 Role of hygiene and infection control in theatre linen is identified 1.3 Personal protective equipment is identified and applied

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	1.4 Clean theatre linen is checked for grease, stains, lint, identifying markers, damage, quality and wear
	1.5 Reject linen is classified for rework, rewash or condemning as required
2 Fold theatre linen	2.1 Product is folded according to hospital theatre specifications and relevant Australian Standards
	2.2 Hospital and laundry linen coding systems are applied
3 Pack product for dispatch	3.1 Packaging and storage equipment is checked for cleanliness
	3.2 Package content requirements are determined
	3.3 Packs are configured according to hospital theatre and laundry procedures
	3.4 Packs are wrapped according to hospital theatre requirements and specifications
	3.5 Final finish of theatre packs is assessed
	3.6 Packed product is recorded and documented according to laundry requirements
4 Dispatch product	4.1 Protective covering requirements for products are determined
	4.2 Products are loaded into ***transport equipment*** using safe manual handling techniques
	4.3 Orders are assigned according to transport requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level

Demonstrates knowledge of:

- inspection techniques and procedures
- procedures for folding and packing articles
- procedures for tracking product
- AS/ANZ 4187:2003: 3.1 to 3.6
- processes for classification of products for rework
- quality and environmental standards and specifications
- safety and environmental aspects of related to workplace operation and manual handling, including consumable or hazardous materials
- workplace practices
- OHS practices, including hazard identification and control measures
- quality practices

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- practices for recording and reporting

Demonstrates skills to:

- apply environmental standards for packing
- perform inspection procedures
- recognise non-conformances
- practice infection control procedures
- classify reject linen for rework
- maintain quality requirements for each stage of the process
- interpret and apply established procedures
- document, assess and transfer information
- read, interpret, and follow information on work specifications , standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

Demonstrates skills and knowledge to:

- identify and confirm inspection requirements
- check theatre linen
- determine process for non-conformance to standards
- pack products appropriately

Consistency in performance

Consistently applies skills and knowledge when:

- organising work
- completing tasks
- identifying improvements
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents

© Commonwealth of Australia, 2025 HumanAbility

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

	• assessing operational readiness of equipment used and work processes • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions • completing work systematically with attention to detail without damage to goods and equipment
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Transport equipment may include:	• trolleys • bins • baskets • racks • vehicles • cages
Machines and equipment may include:	• light intensifying table • thermal patching machine • de-linting equipment • paper bags, laminate bags, non-linen wraps, linen wraps, indicator

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered	Demonstrates skills and knowledge to: • confirm requirements • prepare products for storage or despatch • pack products appropriately • compile orders for despatch
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks • identifying improvements • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment used and work processes • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions • completing work systematically with attention to detail without damage to goods and equipment
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Prepare product may include:	• care requirements • packaging • correct labelling and identification
Transport or storage equipment may include:	• trolleys • bins • baskets • racks • vehicles • weighing machines • conveyor equipment • tying, wrapping, banding and hanging equipment (including heat shrink equipment) • auto ID equipment, bar coding equipment • folding equipment • shelving • cages • linen covers
OHS practices	OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include: • manual handling techniques • standard operating procedures • personal protective equipment • safe materials handling • taking of rest breaks • ergonomic arrangement of workplaces • following marked walkways • safe storage of equipment • housekeeping • reporting accidents and incidents • other OHS practices relevant to the job and enterprise

MSL922001A Record and present data

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to record and store data, perform simple calculations of scientific quantities and present information in tables and graphs. The unit of competency requires personnel to solve predictable problems using clear information or known solutions. Where alternatives exist, they are limited or apparent.

Application of the Unit

Application of the unit	This unit of competency is applicable to production operators, field assistants and laboratory assistants working in all industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Record and check data	1.1. Enter data into laboratory information system or record sheets as directed 1.2. Check data to identify transcription errors or atypical entries 1.3. Rectify errors in data using enterprise procedures
2. Calculate simple scientific quantities	2.1. Calculate simple scientific quantities using given formulae and data 2.2. Ensure calculated quantities are consistent with estimations and expectations 2.3. Report all calculated quantities with appropriate precision and units
3. Present data in tables, charts and graphs	3.1. Present data accurately in tables and charts using given formats and scales 3.2. Recognise and report obvious features and trends in data
4. Store and retrieve	4.1. File and store data in accordance with enterprise

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
data	procedures 4.2. Maintain enterprise confidentiality standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • performingsimple calculations • preparing and interpreting straightforward tables, graphs and charts • applying calculations in the workplace • coding, recording and checking data accurately • presenting accurate results in the required format • recognising obvious trends in data • maintaining the confidentiality of data in accordance with workplace and regulatory requirements
Required knowledge
Required knowledge includes: • concepts of metrology • the international system of units (SI) • relevant scientific and technical terminology • procedures for coding, entering, storing, retrieving and communicating data • procedures for verifying data and rectifying mistakes • conversion of units involving multiples and submultiples • significant figures, estimation, approximation, rounding off • substitution of data in formulae • calculations involving fractions, decimals, proportions and percentages • procedures for maintaining and filing records, security of data

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • accurately code, check and record data in the required format • calculate simple scientific quantities • recognise obvious trends in data • maintain the confidentiality of data.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit may be assessed with technical units, such as: • *MSL973001A Perform basic tests* • *MSL973002A Prepare working solutions* • *MSL973007A Perform microscopic examination*. Resources may include: • data sets and records • computer and relevant software or laboratory information system • relevant enterprise procedures.
Method of assessment	The following assessment methods are suggested: • review of data worksheets, calculations, graphs and tables prepared by the candidate • review of records transcribed, maintained or stored by the candidate • feedback from supervisors and peers • observation of the candidate as they record data and perform calculations • questions to assess understanding of relevant procedures and trends in data. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting. **Construction materials** A laboratory assistant is given 20 soil samples and asked to test their moisture content by weighing each sample, placing them in an oven for 24 hours and then reweighing them. The assistant performs the tests in accordance with the standard method and then calculates the % water content by dividing the weight loss by the wet weight and multiplying by 100. He/she checks the results. After entering them into the laboratory information management system (LIMS), they notice that they are consistently less than the previous results recorded for soils at the same site. The assistant reports the discrepancy to the supervisor who checks whether the oven was operated at the required temperature. The supervisor then discovers that the assistant has calculated the moisture content by dividing the weight loss by the wet weight instead of the dry weight. The assistant recalculates the moisture content for the 20 samples and notes that the results are now consistent with previous results. **Manufacturing** On Friday, a laboratory assistant performs the routine set of temperature, pressure and humidity measurements at 10 sites in a refinery. They enter the data on a pre-prepared data sheet that also contains the data recorded for the previous days of that week. The assistant checks the data for any significant variations to that recorded previously. They notice that for site #5, the temperature reading is 250(C which is 100(C below the expected value. The assistant repeats the measurement and gets the same result. After returning to the laboratory, the assistant enters the data into the LIMS

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	and reports the odd result to their supervisor. The supervisor contacts the site manager and finds out that the pipeline at site #5 has been isolated as part of unscheduled maintenance in that part of the site.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include: • Australian and international standards such as: • AS ISO 1000-1998 The international system of units (SI) and its application • national measurement regulations and guidelines
Concepts of metrology	Concepts of metrology may include: • that all measurements are estimates • measurements belong to a population of measurements of the measured parameters • repeatability • precision • accuracy • significant figures • sources of error • uncertainty • traceability
Data	Data may be recorded on:

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• worksheets • spreadsheets or databases linked to information management systems Data may include results of: • observations • tests and measurements • surveys Data may be presented in the form of: • graphs • tables • control charts • semi-quantitative observations expressed on a scale (for example, 1 to 4 or + to ++++)
Simple calculations	Simple calculations may be performed with or without a calculator or computer software and may include scientific quantities such as: • decimals, fractions, ratios, proportions and percentages • perimeters, areas, volumes and angles • concentration • unit conversion, multiples and submultiples • use of significant figures, rounding off, estimation and approximation • substitution of data in formulae • conversions between SI units • areas (m^2) and volumes (mL, L, m^3) of regular shapes (e.g. packaging and moulds) • average mass, mass %, density, specific gravity, moisture, relative and absolute humidity • ratios, such as mass to mass, mass to volume and volume to volume percentages • industry specific ratios, such as g/cm^2 , kg/m^2 • concentration (for example, g/100mL, mg/L, mg/(L, dilution mL/L) • statistical values such as mean, median, mode and standard deviation • average count, colonies per swab surface and cell counts (live and dead/total) • process variables, such as pressure, velocity

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	and flow rates • % content of moisture, ash, fat, protein, alcohol, sulphur dioxide and trace metals, such as calcium or zinc • food properties, such as % concentration (dry), friability, bitterness, brix, free amino nitrogen, diastatic power, calorific content and yeast viability
Obvious features and trends in data	Obvious features and trends in data could include: • maximum and minimum values • spread of data • increasing/decreasing data, rate of change • outliers, data beyond control limits or normal range
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Unit Descriptor

Unit descriptor	This unit of competency covers the general cleaning of work surfaces, cleaning and storage of equipment and the monitoring of laboratory stocks under direct supervision.

Application of the Unit

Application of the unit	This unit of competency is applicable to laboratory assistants and instrument operators working in all industry sectors. This unit of competency forms a major part of the work of laboratory assistants. They work in accordance with work instructions and standard operating procedures which incorporate all relevant aspects of occupational health and safety (OHS) legislation and the codes, guidelines, regulations and Australian standards applying to environmental hazards and dangerous goods. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Clean work preparation areas	1.1. Clean preparation areas using appropriate cleaning agents and equipment according to enterprise procedures 1.2. Remove spillages, if they occur, using appropriate agents, personal protective equipment and enterprise procedures 1.3. Collect and segregate wastes in accordance with enterprise procedures, relevant codes and regulations
2. Clean and store equipment	2.1. Collect used equipment, inspect for faults and, where necessary, remove from service 2.2. Use appropriate agents, apparatus and techniques to clean equipment 2.3. Store clean equipment in the designated locations and manner

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
3. Monitor stocks of materials and equipment	3.1. Perform stock checks and maintain records of usage as directed 3.2. Store labelled stocks for safe and efficient retrieval 3.3. Inform appropriate personnel of impending stock shortages to maintain continuity of supply
4. Maintain a safe work environment	4.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other personnel 4.2. Report potential hazards and/or maintenance issues in own work area to designated personnel 4.3. Minimise the generation of wastes and environmental impacts 4.4. Dispose of wastes in accordance with enterprise procedures, relevant codes and regulations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- safely cleaning work preparation areas and equipment using appropriate cleaning agents, equipment and techniques
- safely removing spillages and disposing of wastes
- minimising the exposure to hazards of self, others and the laboratory
- safely storing equipment and materials using enterprise procedures, relevant codes and guidelines
- monitoring and reporting stock levels and the condition of laboratory materials and equipment
- keeping accurate, up-to-date records
- reporting potential hazards and maintenance issues using enterprise procedures

Required knowledge

Required knowledge includes:

- enterprise procedures for the cleaning of work preparation areas, materials and equipment

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
• storage requirements for specific materials and equipment • enterprise procedures for minimisation and disposal of waste • enterprise procedures for monitoring of laboratory stocks • information contained in material safety data sheets (MSDS) for materials handled regularly during the performance of maintenance tasks • relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • follow enterprise procedures, relevant codes and guidelines when maintaining the laboratory/field workplace • work safely and minimise exposure of hazards to self, others and the laboratory • keep accurate up-to-date records and report potential hazards and maintenance issues.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL943002A Participate in laboratory/field workplace safety*. Resources may include: • access to work preparation areas, stocks, materials and equipment • cleaning, decontamination and/or disinfection agents and equipment • personal protective equipment • stock order firms, labels and records/forms.
Method of assessment	The following assessment methods are suggested: • observation of the candidate's techniques for cleaning

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	and/or removal of spillages and waste disposal • review of stock records completed by the candidate • feedback from supervisors and peers • questioning to assess underpinning knowledge of regulations and procedures where direct observation is difficult (such as dealing with hazards) and choice of materials and equipment. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting. **Manufacturing** On receipt of a bulk container of cleaning or sanitising agent, a laboratory assistant always attached to the container a description of its method of use. The assistant also attached a list of the surfaces, apparatus, utensils and machines that could be safely treated with that chemical agent as outlined in the company's quality manual. This practice reduced the likelihood of misuse of the chemical, wastage, damage to equipment and inadequate cleaning and sanitation. **Biomedical and environmental** Laboratory assistants and technical officers routinely examine fluids for micro-organisms using a microscope. They examine fluids, such as urine, seawater, chlorinated pool water, water from catchment areas and bottled water. To maintain microscopes in working order, they

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	thoroughly clean the stage, oculars and each objective after use and sometimes between samples. The 100X objective requires particular care since this is the oil immersion objective. The oil is slightly acidic and will slowly corrode the objective if it is not cleaned thoroughly and regularly. After using the 100X objective they also take care not to drag the other objectives through the oil. **Food processing** A laboratory assistant regularly uses standard pH solutions to calibrate the laboratory's pH meters. The assistant is aware from the label that the shelf life of these solutions after opening is two months and records the opening and disposal dates on the container. The assistant is also aware that the shelf life of unopened buffer solutions is twelve months from the date of manufacture and monitors this by noting the production date on the bottle. Requests for stock replacement take into account the normal rate of use of these buffer solutions so that unopened bottles have not reached their expiry date before use.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include: • Australian and international standards such as: • AS 1678 Emergency procedure guide - Transport

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• AS 1940-2004 Storage and handling of flammable and combustible liquids • AS 2252 Biological safety cabinets • AS 3780-2008 The storage and handling of corrosive substances • AS 4332-2004 The storage and handling of gases in cylinders • AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories • AS/NZS 1269 Set:2005 Occupational noise management set • AS/NZS 1337 Eye protection • AS/NZS 2161 Set:2008 Occupational protective gloves set • AS/NZS 2210:1994 Occupational protective footwear • AS/NZS 2243 Set:2006 Safety in laboratories set • AS/NZS 2243.8:2006 Safety in laboratories - Fume cupboards • AS/NZS 2865 Set:2005 Safe working in a confined space set • AS/NZS 2982.1:1997 Laboratory design and construction - General requirements • AS/NZS 4187:2003 Cleaning, disinfecting and sterilising reusable medical and surgical instruments and equipment, and maintenance of associated environments in health care facilities • AS/NZS 4452:1997 The storage and handling of toxic substances • AS/NZS 4501 Set:2008 Occupational clothing set • AS/NZS ISO 14000 Set:2005 Environmental management standards set • animal welfare legislation and codes of practice • Australian code of good manufacturing practice for medicinal products (GMP) • Australian Dangerous Goods Code • Australian Quarantine and Inspection Service (AQIS) Export Control (Orders) Regulations

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	1982 • Australian Quarantine and Inspection Service (AQIS) Import Guidelines • Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Codes of Practice • enterprise or standard operating procedures (SOPs) • equipment manuals and warranties, supplier catalogues and handbooks • gene technology regulations • guide to physical containment levels and facility types • HB 9-1994 Occupational personal protection • material safety data sheets (MSDS) • National Code of Practice for the labelling of workplace substances (NOHSC:2012 (1994)) • national environment protection measures • National Health and Medical Research Council (NHMRC) Guidelines • national measurement regulations and guidelines • occupational health and safety (OHS) national standards and codes of practice • principles of good laboratory practice (GLP) • Therapeutic Goods Regulations 1009
Equipment, **material procedures and facilities**	Equipment, material procedures and facilities may include: • animal cages • autoclaves • balances • blenders, centrifuges and separating equipment • brushes • cell counters and staining machines • colorimeters/spectrometers and polarimeters • compaction rammers and soil classification equipment • conductivity meters and pH meters • dishwashers, refrigerators, freezers, ovens, microwave ovens, incubators and water baths • disintegration apparatus, thermometers and incubators

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• fume hoods, biohazard containers and biological safety cabinets • gas cylinders • glassware, plastic ware; glass, plastic and quartz cuvettes • hotplates, mantles, burners and muffle furnaces • instrument chart recorders, penetrometers, force measuring equipment and tensiometers • light and fluorescence microscopes • melting point apparatus, viscometers and hardness testing equipment • microtomes and tissue processors • mixing and separating equipment such as centrifuges, rifflers and splitters and mixers • noise meters and blasting meters • optical microscopes • pipettes, burettes and volumetric glassware • shovels, scoops, plates, rods, cylinder moulds and buckets • steel ruler/tapes and spirit levels • thermometers, thermohygrographs, instrument chart recorders, hydrometers, pH meters and ion-selective electrodes • ultrasonic cleaners • vehicles
Typical materials	Typical materials may include: • consumable items, such as syringes, pipette tips, weigh boats • disposable clothing and personal protective equipment • distilled water, reagents, chemicals, disinfectants, detergents, agar media and plates • equipment spares, such as fuses, bulbs and batteries • oils/lubricants, fuels, industrial gases and cryogenics, such as dry ice and liquid nitrogen • paper and stationery • reference samples and standards
Maintenance	Maintenance may include: • checking serviceability before storage • cleaning

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• prevention of contamination • storing
Cleaning requirements	Cleaning requirements may include: • decontamination and/or disinfection • hygiene monitoring • minimising environmental impacts • operation of automatic cleaning apparatus, such as pipette washer, ultrasonic cleaners and dishwashers • sterilisation and disposal of wastes using boiling, high pressure air or steam, microwaves, chemicals, gas, filtration, ultraviolet radiation and autoclaving • use of specialised techniques, such as chromic acid baths and soaking in hypochlorite
Preparation areas	Preparation areas may include: • benches • fume cupboards • sheds • sinks
Agents for cleaning	Agents for cleaning may include: • cleaning solutions • decontaminants • organic solvents
Spillages	Spillages may include: • chemicals • radioactive materials • biologically active materials
Wastes	Wastes may include: • broken glass • batteries • disposable personal protective equipment • excess test samples • micro-organisms • plastic and metals • sharps • solvents • spent reagents

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• spent samples and test pieces • used containers, boxes, bags and palettes
Stock records	Stock records may include: • calibration and maintenance history • data sheets • handbooks, warranty documents, catalogues, manuals and MSDS • records of usage, loans and breakages
Communication	Communication could involve other people, such as: • laboratory, production, administration and cleaning staff • internal/external contractors • emergency personnel
Maintenance issues	Maintenance issues could involve: • checking materials and equipment are fit for purpose • equipment malfunction • hygiene issues • potential hazards, incidents and emergencies • recycling and waste disposal • spillages, leakages, breakages and contamination • stock requirements and shortages
Hazards	Hazards may include: • aerosols from broken centrifuge tubes and pipetting • chemicals, such as acids, heavy metals, pesticides and hydrocarbons • crushing, entanglement and cuts associated with moving machinery or falling objects • cryogenics, such as dry ice and liquid nitrogen • electric shock • fluids under pressure, such as steam and industrial gas cylinders • manual handling, working at heights and working in confined spaces • microbiological organisms and agents associated with soil, air, water, blood and blood

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	products, and human or animal tissue and fluids • occupational overuse syndrome, slips, trips and falls • pedestrian and vehicular traffic • sharps, broken glassware and hand tools • solar radiation, dust and noise • sources of ignition, flammable liquids and gases
Established safe work practices	Established safe work practices may include: • applying containment procedures through the use of appropriate equipment, such as biohazard containers, laminar flow cabinets, Class I, II and III biohazard cabinets and Class PCII, PCIII, and PCIV physical containment facilities • ensuring access to service shut-off points • following established manual handling procedures for tasks involving manual handling • handling and storage of all hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions • identifying and reporting operating problems or equipment malfunctions • labelling of samples, reagents, aliquoted samples and hazardous materials • recognising and observing hazard warnings and safety signs • reporting to appropriate personnel of abnormal emissions, discharges and airborne contaminants, such as noise, light, solids, liquids, water/waste water, gases, smoke, vapour, fumes, odour and particulates • use of MSDS • use of personal protective equipment, such as hard hats, hearing protection, gloves, safety glasses, goggles, face guards, coveralls, gown, body suits, respirators and safety boots
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Apply quality control procedures	1.1. Record data for quality control purposes 1.2. Recognise and report non-conformances in keeping with job role and quality procedures
2. Contribute to quality improvements	2.1. Review own work practices for opportunities to continuously improve performance 2.2. Identify and report opportunities for improvements in procedures, processes and equipment in work area
3. Maintain commitment to enterprise quality standards in own work	3.1. Maintain an objective of 'right first time' 3.2. Conduct work in accordance with sustainable energy work practices 3.3. Minimise waste and rework in accordance with enterprise guidelines 3.4. Demonstrate 'job ownership' for whole tasks through a commitment to finish and follow-up 3.5. Ensure that personal actions conform with the code of ethics relevant to the workplace

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
4. Assist in maintaining customer relationships	4.1. Demonstrate an understanding of the business goals, products and services of the enterprise when dealing with customers in relation to own function 4.2. Communicate appropriately with customers in keeping with knowledge and authority limitations and quality requirements
5. Update knowledge and skills as required	5.1. Recognise own strengths and limitations and take advantage of opportunities for skill development

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- applying the required quality control procedures
- providing quality products and services to customers consistent with the job role
- resolving simple customer requirements
- minimising waste and rework
- contributing to improvements in productivity and quality through teamwork and commitment to personal work standards

Required knowledge

Required knowledge includes:

- concepts of metrology
- continuous improvement and waste minimisation principles
- enterprise procedures associated with the candidate's regular technical duties
- layout of the enterprise, divisions and laboratory
- lines of communication
- organisational structure of the enterprise
- products and services provided by the enterprise
- quality requirements of the candidate's job role and functions
- recording, reporting and document control requirements
- relevant health, safety and environment requirements
- role of internal and external audits
- role of laboratory services to the enterprise and customers

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
• scheduling of tests and procedures to meet customer requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • apply the required quality control principles and procedures to their work • contribute to improvements in productivity and quality • maintain their personal commitment to quality objectives.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL913001ACommunicate with other people* • technical units of competency dealing with sampling and testing. Resources may include: • enterprise quality manual and procedures • standard operating procedures (SOPs).
Method of assessment	The following assessment methods are suggested: • review of quality control data collected by the candidate • review of quality improvements suggested by the candidate • feedback from supervisors and peers • oral or written questions about quality concepts and enterprise procedures • flow charts or diagrams prepared by the candidate to describe work flows and workplace layout (alternatively, the candidate could explain existing

	charts or diagrams). In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting. **Manufacturing** Laboratory assistants must have a good working knowledge of quality control procedures and how they contribute to the achievement of enterprise quality objectives. An assistant was measuring the moisture content of coke by a standard method. The SOP for this test stated that the limits for moisture should be between 2% and 5% by weight. The assistant obtained a result of 5.8%. The assistant had followed the SOP correctly and performed the determination in triplicate and had confidence in the precision of the result. The assistant recognised and reported the non-conformance to the laboratory supervisor. The production manager took corrective action and modified the drying process to reduce the moisture content and provide a product which met the customer's requirements. **Biomedical** A laboratory assistant working in the pathology department of a rural hospital was responsible for serum lithium estimations by flame photometry. When asked by the office staff when the lithium results would be ready, the assistant replied that the testing schedule of the laboratory meant that the test would not be done until the

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	following week and asked why the office staff needed to know. The answer was that an outpatient clinic was being held, and the results were needed for a consultation. Although samples were often taken a week before the clinic was to be held, the assistant realised that results were not always ready for the clinic because of the testing schedule of the laboratory. The assistant reported the situation to the laboratory supervisor. The supervisor rescheduled lithium testing to match the clinic times, so that results would always be ready for the clinic consultation. This pleased the clinic staff, the patient did not waste a visit, the office staff no longer got irate phone calls and the quality of service was improved overall. **Food processing** A fruit processing company produced many tonnes of solid vegetable waste annually. This was dumped as landfill at considerable cost and the local council was concerned that the method of disposal was not sustainable. The laboratory assistants at the company were included in a quality improvement team to investigate the problem. The team concentrated on alternative production methods to minimise waste yields and additional production methods that would enable the waste to be profitably utilised. They identified four potential uses of the waste: a source of pectin, alcohol and sugar and conversion of raw fruit peel to glazed peel. A cost-benefit analysis was performed in consultation with supporting industries, including a local winery to assess the merits of these value adding activities. The outcome was that the amount of waste produced by the company was significantly reduced with much of the waste channelled into marketable products with full cost recovery. After some initial doubts, the laboratory personnel realised that they were able to make useful contributions to the project. As a result, they became part of an ongoing investigation of waste minimisation and value adding practices.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include:
	• Australian and international standards, such as:
	  • AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
	  • AS/NZS ISO 9000 Set:2008 Quality management systems set
	• Australia New Zealand Food Standards (ANZFS) Code
	• Australian code of good manufacturing practice for medicinal products (GMP)
	• customer specific requirements/standards
	• National Association of Testing Authorities (NATA) Accreditation programs requirements
	• principles of good laboratory practice (GLP)
	• Therapeutic Goods Regulations 1009

Quality control procedures	Quality control procedures may include: • standards imposed by regulatory and licensing bodies • enterprise quality procedures • working to a customer brief and associated quality procedures • checklists to monitor job progress against agreed time, costs and quality standards • the use of hold points to evaluate conformance • the use of inspection and test plans to check compliance
Concepts of metrology	Concepts of metrology may include: • that all measurements are estimates

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• measurements belong to a population of measurements of the measured parameters • repeatability • precision • accuracy • significant figures • sources of error • uncertainty • traceability
Sustainable energy principles and work practices	Sustainable energy principles and work practices may include: • examining work practices that use excessive electricity • switching off equipment when not in use • regularly cleaning filters • insulating rooms and buildings to reduce energy use • recycling and reusing materials wherever practicable • minimising process waste
Reporting	Reporting may involve: • verbal responses • data entry into laboratory information management system (LIMS) or enterprise databases • brief written reports using enterprise proformas
Quality improvement opportunities	Quality improvement opportunities that relate to the work of laboratory assistants could include: • improved methods for sampling, testing and recording data • improved hygiene and sanitation procedures • minimisation of waste and rework • improved laboratory layout and work flow
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform setup and pre-use checks of laboratory equipment	1.1. Perform laboratory equipment setup and pre-use checks in accordance with enterprise procedures 1.2. Perform safety checks in accordance with relevant enterprise and instrumental procedures 1.3. Identify faulty or unsafe components and equipment and report to appropriate personnel 1.4. Complete instrument log books/records to meet enterprise requirements
2. Perform calibration checks	2.1. Start up equipment according to operating procedures 2.2. Use specified standards for calibration check 2.3. Check equipment as per calibration procedures and schedules 2.4. Record all calibration data accurately and legibly 2.5. Compare data with specifications and/or previous records to identify non-compliant equipment 2.6. Quarantine out of calibration equipment
3. Assist with equipment maintenance	3.1. Ensure all equipment work areas are clean during and after equipment use 3.2. Perform basic maintenance in accordance with enterprise procedures 3.3. Clean and store equipment according to enterprise

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	and/or manufacturer's specifications/procedures 3.4. Identify and replace, repair or dispose of damaged/worn equipment as appropriate
4. Maintain records	4.1. Record and report information on unsafe or faulty equipment according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- performing setup, pre-use checks and shutdown procedures
- performing calibration checks of basic equipment using standard procedures
- obtaining readings of the required accuracy and precision
- identifying non-compliant equipment from specifications and/or previous checks
- recognising non-standard behaviour of instruments
- assisting with maintaining equipment in working order by performing basic maintenance tasks
- following all relevant occupational health and safety (OHS) requirements
- following enterprise recording and reporting procedures

Required knowledge

Required knowledge includes:

- operational principles and methods for equipment use
- basic sources of error in equipment operation and their control
- role and importance of correct calibration
- basic equipment maintenance procedures
- enterprise communication and reporting procedures
- relevant OHS and environment requirements

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • perform setup pre-use checks and shutdown procedures • perform calibration checks of basic equipment using standard procedures • obtain readings of the required accuracy and precision • recognise non-standard behaviour of instruments • assist with maintaining equipment in working order by performing basic maintenance tasks • follow all relevant OHS requirements • follow enterprise recording and reporting procedures.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL973001A Perform basic tests*. Resources may include: • standard laboratory equipped with appropriate equipment and reference materials • enterprise procedures and standard methods, equipment manuals • calibration check standards and procedures • maintenance procedures.
Method of assessment	The following assessment methods are suggested: • review of the quality of test data/results achieved by the candidate over time • inspection of records and workplace documentation completed by the candidate • feedback from peers and supervisors • observation of the candidate performing calibration checks and basic maintenance tasks In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. **Manufacturing and construction materials testing** Laboratory assistants perform calibration checks and operate a range of laboratory equipment to ensure the quality of products. For example, the labelling on fertilisers specifies the total percentage of nitrogen [N or N(t)], the total percentage of phosphorus [P or P(t)] in all forms and the total percentage of potassium [K]. A 5-10-5 fertiliser contains 5% N, 10% P and 5% K. During the manufacture of fertiliser, an assistant in a quality control laboratory measures the concentration of nitrogen, phosphorus and potassium using standard analytical methods to ensure that the final products are within prescribed specifications. The assistant must pay particular attention to the equipment calibration check. If the equipment is out of calibration no amount of testing skill will result in accurate results. Selling out of specification fertiliser could result in a product recall or claims from users against the manufacturer. **Biomedical and environmental services** Laboratory assistants are quite often involved in routine collections and culturing of cells. Bacterial cells are often cultured and grown to large populations in order to provide material from which to extract biological materials. A quick method of determining when the cell growth has yielded enough cells is to determine the absorbance of the cell culture by measuring absorbance at 600 nm. An absorbance of 1 to 1.5 will give a good

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	cell harvest. This method relies on the assistant being able to perform calibration checks on an ultraviolet-visible (UV-VIS) spectrometer. **Food and beverage processing** A laboratory assistant in the quality control laboratory of a fruit canning company is required to perform calibration checks and maintain and operate a range of equipment, including a pH meter. Canned pears, for example, are routinely checked for pH to ensure safe heat processing. While checking the calibration of the pH meter with the standard buffer solutions, the laboratory assistant found that stable pH readings could not be obtained. On closer inspection, it was found that the pH probe was damaged. This was reported to the supervisor. The probe was replaced and the meter was re-checked for calibration in readiness for routine testing. **Construction Materials Testing** A laboratory assistant has been allocated the task of performing in-house calibration checks on the laboratory's equipment. He/she has previously prepared a wall chart for the year that shows when the required calibration checks fall due in accordance with the NATA Field Application Document (FAD) for construction materials testing. The assistant consults the wall chart and notes that this month's calibration checks include checking the: • ice points of the liquid-in-glass thermometers • working sieves against the reference set • compaction hammers for compliance with specifications • repeatability of the balances. A full calibration of one of the laboratory's nuclear density gauges is also required. He/she then telephones the local calibration authority to book the nuclear gauge in for calibration and prepares to perform the other in-house checks.

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Log samples	1.1. Record date (and time of arrival, if required) of samples at enterprise 1.2. Check and match samples with request forms before they are accepted 1.3. Enter samples into the laboratory information management system (LIMS) 1.4. Apply required document tracking mechanisms 1.5. Process 'urgent' test requests according to enterprise requirements 1.6. Ensure security and traceability of all information, laboratory data and records
2. Address customer service issues	2.1. Report to referring client when samples and request forms do not comply with enterprise requirements 2.2. Refer to supervisor for instruction where 'return to source' is inappropriate or not possible 2.3. Maintain confidentiality of all client/enterprise data

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	and information 2.4. Ensure that information provided to customers is accurate, relevant and authorised for release 2.5. Deal with customers politely and efficiently and in accordance with enterprise procedures
3. Prepare samples for testing	3.1. Perform physical separation of the samples, as required 3.2. Prepare the required number of sub-samples 3.3. Perform chemical separation of the samples as required 3.4. Place samples in appropriate transport media, if appropriate 3.5. Monitor and control sample conditions before, during and after processing
4. Distribute samples	4.1. Group samples requiring similar testing requirements 4.2. Distribute samples to work stations maintaining sample integrity 4.3. Distribute request forms for data entry or filing in accordance with enterprise procedures 4.4. Check that samples and relevant request forms have been received by laboratory personnel
5. Maintain a safe work area and environment	5.1. Apply safe work practices to ensure personal safety and that of other laboratory personnel 5.2. Use appropriate protective equipment to ensure personal safety when sampling, processing, transferring or disposing of samples 5.3. Report all accidents and spillages to supervisor 5.4. Clean up splashes and spillages immediately using appropriate techniques and precautions 5.5. Minimise the generation of wastes and environmental impacts 5.6. Ensure the safe disposal of hazardous materials and other laboratory wastes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- receipt and logging in of samples
- checking of samples for history and acceptable transport conditions
- preparing and sub-sampling of samples
- labelling samples accurately and completely
- using standard precautions when dealing with potentially hazardous materials
- applying knowledge of the relationship between specific sample preparation and associated tests
- clarifying specific client requirements with appropriate personnel promptly
- labelling and storing samples in a way which maintains sample integrity and traceability
- disposing of samples following required procedures
- maintaining equipment and the workspace

Required knowledge

Required knowledge includes:

- enterprise procedures for the receipt, documentation, distribution and storage of samples
- potentially hazardous and unstable nature of samples
- requirement of specified sample types for specific tests
- importance of maintaining effective customer relations
- sample storage and transport requirements
- relevant health, safety and environment requirements

Specific industry

Additional knowledge requirements may apply for different industry sectors. For example:Biomedical laboratories:

- potentially infective nature of all biological materials
- nature of unstable solutions, such as anti-coagulated whole blood
- non-conformance of clotted samples for procedures, such as routine haematological tests

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • safely receive and log samples in accordance with enterprise procedures • apply knowledge of the relationship between sample preparation requirements and associated tests • deal with customers politely and efficiently • recognise and deal with problems according to enterprise procedures • maintain sample integrity and traceability.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL913001A Communicate with other people* • *MSL943002A Participate in laboratory/field workplace safety*. Resources may include: • a selection of sample containers, tubes, request forms and sample documentation • simulated samples when an authentic sample is unavailable or inappropriate.
Method of assessment	The following assessment methods are suggested: • review of sample receipt and preparation records prepared by the candidate • feedback from supervisors and peers • direct observation of sample receipt and preparation • questioning to assess knowledge of procedures where direct observation is difficult (such as sample receipt and preparation in the field). In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting. **Environmental** A laboratory assistant at a hazardous liquid waste recycling plant is required to log in all samples, match all samples with the in-house profile of the source of the waste, label them and activate the tracking procedure. He/she then prepares a sample for a series of standard tests which are determined by the profile of the waste material (acid or alkali, organic or heavy metal, etc). Given the hazardous nature of the waste, the laboratory assistant must use appropriate safety equipment at all times and ensure the safe disposal of all hazardous material. The assistant must work efficiently as these procedures are activated upon arrival of a road tanker and when the hazardous waste has been verified and judged acceptable for treatment at the plant by the laboratory supervisor. The laboratory assistant also liaises with the truck driver, or the referring client, should the samples (and/or subsequent tests) not comply with enterprise conditions for receiving the hazardous waste. **Construction materials testing and mineral assay** A laboratory assistant has received a consignment of disturbed soil samples from a client for classification testing. A test request and field logs have been sent by mail. Each sample is bagged and labelled, with the label showing the name of the client, project, date and sampling location, and a field description of the material. The laboratory policy is that samples weighing more than 20 kg must be bagged so that the individual bags do not exceed this limit and labelled as bag 1 of ..., bag 2 of ..., etc. The assistant checks to ensure all component bags of such samples are present. He/she is careful to handle the

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	samples using safe manual handling techniques. The assistant arranges the samples in order of location and reconciles them with the test request and logs. Two samples have been shown on the request but have not been received. The assistant emails the technician who despatched them and subsequently is advised that they were overlooked during despatch and will be forwarded as soon as possible. The assistant compares the samples with the field descriptions and finds that they match. Samples that are not designated for testing immediately are set aside in the laboratory store. The remainder are placed in trays for drying in the 50ºC oven. The tray numbers are carefully written on the respective worksheets. When the samples have dried and cooled they are split out sufficiently for sieve analysis and plasticity testing, making allowance for the maximum particle size of each sample. The assistant is careful to avoid raising dust during the process. **Biomedical** A laboratory assistant has just started a shift in specimen reception and puts on a coat and gloves before touching any samples. There is a pile of samples and forms in the sample box. In some cases, the samples and forms are enclosed in a plastic bag. In other cases, they are seemingly unconnected. The assistant notices that one of the samples has a bloodstained label. She/he quickly examines the samples, isolates the leaking sample in a lockable plastic bag and places the related request form in the bag's separate compartment. The assistant then disposes of her/his dirty gloves. The assistant now logs all samples into the computer, placing to one side a sample and request form that is inadequately labelled. She/he makes a note to call the referring doctor as soon as possible. The assistant places the haematology samples in the colour-coded tray and calls the laboratory for their pickup. She/he then calls the doctor of the patient whose sample is inadequately labelled. She/he records the missing date of birth on the request form, and then barcode/labels tubes for the samples' testing. Within 30 minutes, she/he has cleared the first rush of samples. She/he takes the time to carefully empty the bin of wastes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret test requirements	1.1. Review test request to identify samples to be tested, test method and equipment involved 1.2. Identify hazards and enterprise controls associated with the sample, preparation methods, reagents and/or equipment
2. Prepare sample	2.1. Record sample description, compare with specification, record and report discrepancies 2.2. Prepare sample in accordance with appropriate standard methods
3. Check equipment before use	3.1. Set up test equipment in accordance with test method 3.2. Perform pre-use and safety checks in accordance with enterprise procedures and manufacturer's instructions 3.3. Identify faulty or unsafe equipment and report to appropriate personnel 3.4. Check calibration status of equipment and report any out of calibration items to appropriate personnel
4. Perform tests on samples	4.1. Identify, prepare and weigh or measure sample and standards to be tested

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	4.2. Conduct tests in accordance with enterprise procedures 4.3. Record data in accordance with enterprise procedures 4.4. Perform calculations on data as required 4.5. Identify and report out of specification or atypical results promptly to appropriate personnel 4.6. Shut down equipment in accordance with operating procedures
5. Maintain a safe work environment	5.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 5.2. Minimise the generation of wastes and environmental impacts 5.3. Ensure safe disposal of laboratory and hazardous wastes 5.4. Clean, care for and store equipment and reagents as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting enterprise procedure or standard methods accurately
- using safety information, such as material safety data sheets (MSDS) and performing procedures safely
- checking test equipment before use
- completing all tests within required timeline without sacrificing safety, accuracy or quality
- calculating, recording and presenting results accurately and legibly
- maintaining security, integrity and traceability of all samples, data/results and documentation
- cleaning and maintaining equipment

Required knowledge

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge includes: • concepts of metrology • the international system of units (SI) • purpose of test • principles of the standard method • pre-use equipment checks • relevant standards/specifications and their interpretation • sources of uncertainty in measurement and methods for control • enterprise and/or legal traceability requirements • interpretation and recording of test result, including simple calculations • procedures for recognition/reporting of unexpected or unusual results • relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • accurately interpret enterprise procedures or standard methods • complete all tests within the required timeline without sacrificing safety, accuracy or quality • demonstrate close attention to the accuracy and precision of measurements and the data obtained • maintain the security, integrity and traceability of all samples, data/results and documentation.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL922001A Record and present data*. Resources may include: • standard laboratory equipped with appropriate

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	equipment standards and materials • enterprise procedures and standard methods, and equipment manuals • MSDS.
Method of assessment	The following assessment methods are suggested: • review of the quality of test data/results achieved by the candidate over time • inspection of records and workplace documentation completed by the candidate • feedback from peers and supervisors • observation of the candidate performing a range of basic tests • oral or written questioning to check underpinning knowledge of test procedures. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. **Manufacturing** Standard testing methods may be viewed as legal requirements that must be followed to ensure that a product manufactured in a chemical plant meets the specification by which it is sold to the customer. Technical assistants perform tests in a quality control laboratory to ensure that material meets legal requirements and the material is safe and effective in use. Peroxides may be present in ether as a result of

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	light-catalysed air oxidation. Peroxides are toxic and can give rise to mixtures which are explosive when distilled. Technical assistants test ether to ensure that the level of peroxide is within acceptable limits. The test is done by shaking ether with a solution of potassium iodide. After standing for 30 minutes in the dark the yellow colour of the aqueous phase, due to the liberation of iodine, must not be more intense than a prepared standard solution. These tests ensure the quality and safety of the ether. **Food processing** A snack food company produces a range of high quality, impulse purchase snack foods. Some of these products are moisture and/or oxygen sensitive and are therefore packaged in multi-layer flexible packaging to provide optimum shelflife. The packaging must also be able to withstand the rigours of the production and distribution process. While the packaging is purchased to meet the shelflife and distribution specifications, the quality assurance program requires the periodic evaluation of the packaging materials against these specifications. A laboratory assistant uses standard methods to test the tearing resistance, bursting strength, impact resistance and permeability and/or leakage of the snack food packaging. Tests are also conducted on aspects of the manufacturing process that can affect shelflife. These tests involve the measuring of the heat-seam strength and the sealing performance of the closure process. The test results are recorded by the laboratory assistant to verify the conformance of the materials to the supplier specifications and of the process to the manufacturing specifications. The assistant reports any anomalies or non-conformances to the appropriate personnel. **Construction materials testing** A technician performs an Aggregate Stripping Test (AS 1141.50) and enters the results in the laboratory's information management system (LIMS). The resulting 20-30% stripped values (i.e. 70-80% adhering) indicate a 'fail' result. The technician notes that he has repeated the test and obtained the same 'fail' result. The laboratory manager reviews the results and asks the technician to explain how he performed the test. He describes how he prepared 3-4 mm thick plates of bitumen and binding agent in the mould and then placed 50 small clean pieces of aggregate on top. After treatment in an oven for 24

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	hours and a 50°C water bath in accordance with the test method, the technician had then carefully pulled out the pieces of aggregate and avoiding any twisting motion. He then estimated the % of bitumen adhering to each of the stones with the expectation that the stripped value would be about 5% (i.e. 95% adhering). The manager is satisfied that the technician has performed the test in accordance with the method and suggested that he now re-run the test with a known aggregate as a control. This test gives a stripped value of 5-7% (i.e. 93-95% adhering). The manager is now sufficiently confident of the laboratory's results to sign and issue the test report and explain the aggregate's 'test failure' to the client.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include:
	• Australian and international standards, such as:
	  • AS ISO 1000-1998 The international system of units (SI) and its application
	  • AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
	  • AS/NZS 2243 Set:2006 Safety in laboratories set
	• Australian code of good manufacturing practice for medicinal products (GMP)
	• calibration and maintenance schedules

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• enterprise recording and reporting procedures • equipment manuals • equipment startup, operation and shutdown procedures • MSDS and safety procedures • material, production and product specifications • national measurement regulations and guidelines • principles of good laboratory practice (GLP) • production and laboratory schedules • quality manuals • standard operating procedures (SOPs)
Concepts of metrology	Concepts of metrology may include: • that all measurements are estimates • measurements belong to a population of measurements of the measured parameters • repeatability • precision • accuracy • significant figures • sources of error • uncertainty • traceability
Preparation of samples	Preparation of samples may include: • sub-sampling or splitting using procedures, such as riffling, coning and quartering, manual and mechanical splitters • diluting samples • physical treatments, such as ashing, dissolving, filtration, sieving, centrifugation and comminution • moulding, casting or cutting specimens
Typical tests carried out by laboratory/field assistants	Typical tests carried out by laboratory/field assistants may include: • visual/optical tests of appearance, colour, texture, identity, turbidity, refractive index (alcohol content and Baume/Brix) • physical tests: • density, specific gravity and compacted

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	density • moisture content and water activity • particle size, particle shape and size distribution • chemical tests: • gravimetric • colorimetric • electrical conductivity (EC) and pH • specific ions using dipsticks and kits • nutrients (e.g. nitrates and orthophosphates) using basic kits • ashes, including sulphated ashes • biological/environmental tests: • pH, oxygen reduction potential (ORP), dissolved oxygen (DO) and (EC) • E coli using test kits • surface hygiene/presence of microbes • packaging tests: • tearing resistance, bursting strength and impact resistance • permeability and/or leakage • mechanical tests: • Emerson class • concrete slump
Measurements	Measurements may include: • simple ground surveys • meteorological parameters, such as wind direction/strength, rainfall, maximum/minimum temperature, humidity and solar radiation • simple background radiation survey • production/process parameters, such as temperature, flow and pressure • gas levels in a confined space
Common measuring equipment	Common measuring equipment may include: • dimension apparatus • DO and EC • analogue and digital meters and charts/recorders

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• basic chemical and biological test kits • dipsticks and site test kits (e.g. HACK) • timing devices • temperature measuring devices, such as thermometers and thermocouples
Hazards	Hazards may include: • electric shock • biohazards, such as microbiological organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids • solar radiation, dust and noise • chemicals, such as sulphuric acid, fluorides and hydrocarbons • aerosols • sharps, broken glassware and hand tools • flammable liquids • dry ice and liquid nitrogen • fluids under pressure • sources of ignition • occupational overuse syndrome, slips, trips and falls • manual handling, working at heights and working in confined spaces • crushing, entanglement and cuts associated with moving machinery or falling objects
Enterprise controls to address hazards	Enterprise controls to address hazards may include: • use of MSDS • use of signage, barriers and service isolation tags • use of personal protective equipment, such as hard hats, hearing protection, sunscreen lotion, gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits, respirators and safety boots • use of appropriate equipment, such as biohazard containers and cabinets and laminar flow cabinets • recognising and observing hazard warnings and safety signs

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• labelling of samples, reagents, aliquoted samples and hazardous materials • handling and storage of all hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions, and enterprise procedures and regulations • cleaning and decontaminating equipment and work areas regularly using recommended procedures • following established manual handling procedures for tasks involving manual handling
Minimising environmental impacts	Minimising environmental impacts may involve: • recycling of non-hazardous waste, such as chemicals, batteries, plastic, metals and glass • appropriate disposal of hazardous waste • correct disposal of excess sample/test material • correct storage and handling of hazardous chemicals
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

MSL973002A Prepare working solutions

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to prepare working solutions and to check that existing stocks are suitable for use. Calculations of quantities, choice of reagent grades and required dilutions will be specified by the supervisor.

Application of the Unit

Application of the unit	This unit of competency is applicable to laboratory assistants working in all industry sectors. Test solutions include those required to perform laboratory tests. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Safely use laboratory chemicals, glassware and equipment	1.1. Apply appropriate safety precautions for use of laboratory equipment and hazardous chemical materials 1.2. Use appropriate laboratory glassware and measuring equipment 1.3. Clean and store glassware and equipment in accordance with enterprise procedures
2. Make up working solutions	2.1. Identify the relevant standard methods for solution preparation 2.2. Assemble specified laboratory equipment 2.3. Select and prepare materials and solvent of specified purity 2.4. Measure appropriate quantities of reagents for solution preparation and record data 2.5. Prepare labels and log solution details in laboratory register 2.6. Transfer solutions to appropriately labelled containers
3. Check existing stock of solutions	3.1. Monitor shelf life of working solutions according to laboratory procedures

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	3.2. Replace out-of-date or reject solutions according to laboratory procedures 3.3. Conduct routine titrimetric analyses, if appropriate, to determine if solutions are fit for purpose

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using appropriate materials, equipment and procedures to prepare solutions
- following appropriate occupational health and safety (OHS), and hygiene procedures, if appropriate
- using all equipment safely and efficiently
- using enterprise procedures to calculate concentrations
- identifying solutions not fit for use
- using titrations to determine the concentration of solutions
- labelling, storing and disposing of solutions appropriately
- recording and presenting data appropriately

Required knowledge

Required knowledge includes:

- relevant biological, chemical, food and laboratory terminology
- principles of metrology
- the international system of units (SI)
- concentration terms, such as % w/w, % w/v, % v/v, ppm (mg/L) and molarity
- basic theory of acids, bases, salts, buffers and neutralisation
- enterprise procedures for preparing solutions
- calculations required to prepare specified amounts of solutions of specified concentration
- appropriate OHS procedure for preparing, handling and disposal of solutions
- use of material safety data sheets (MSDS)
- relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • prepare working solutions in compliance with relevant standards, appropriate procedures and/or enterprise requirements • follow OHS procedures to safely use laboratory chemicals glassware and equipment • make up working solutions according enterprise procedures • check existing stocks of solutions as being fit for purpose.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL922001A Record and present data* • *MSL943002A Participate in laboratory/field workplace safety*. Resources may include: • standard laboratory equipped with appropriate equipment and reagents • SOPs and testing methods • access to appropriate containers and storage facilities.
Method of assessment	The following assessment methods are suggested: • inspection of solutions prepared, labelled and stored by the candidate • review of solution records and workplace documentation completed by the candidate • feedback from peers and supervisors • observation of the candidate preparing working solutions • oral or written questioning. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting. **Manufacturing** When starting materials used for the manufacture of common household materials are in transit from the supplier to the manufacturer, they may degrade if subjected to conditions, such as heat, moisture, light and oxygen. Even when the supplier ships quality materials to the manufacturing plant, the materials may be sub-standard when they arrive. Quality control tests are designed to test starting materials to ensure they are within specification. For example, aspirin forms salicylic acid when stored under adverse conditions. Laboratory assistants prepare and monitor the quality of solutions, such as ferric chloride solution, which gives an intense violet colour when added to salicylic acid but gives no colour with aspirin. Absence of the violet colouration indicates that breakdown of the aspirin hasn't occurred. **Biomedical** A laboratory assistant made up 1 litre of buffer solution using buffer tablets and a 1 litre volumetric flask as specified in the method. To ensure the solution was suitable for use the assistant measured the pH and found it was within acceptable range. The assistant then appropriately labelled a storage vessel and stored the buffer according to requirements. By following enterprise procedures the shelf life of the buffer was maximised.

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	Environmental An environmental laboratory is contracted to determine the acidity of water samples taken from local lakes and streams. A laboratory assistant is required to make up small batches of 0.01M sodium hydroxide and to determine its concentration by titrating it against a standard solution of potassium acid phthalate using phenolphthalein indicator. This procedure is carried out monthly to ensure that the concentration of the sodium hydroxide solution is accurately known. Alternatively, the laboratory assistant may be required to prepare and standardise a fresh batch of sodium hydroxide on a monthly basis. In this case, he/she must understand the underpinning knowledge of basic acid/base theory, potential problems of interferences (such as slow absorption of carbon dioxide by sodium hydroxide solution) so as to ensure that the concentrations of workup solutions are accurately known. He/she must also be skilled in calculating and performing dilution when required to prepare such low concentrations (0.01M) of working solutions.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include: • Australian and international standards, such as: • AS 2163-2000 Laboratory glassware - Measuring cylinders

MSL973003A Prepare culture media

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to prepare culture media which is free of contamination to facilitate optimal growth of organisms and cells. It includes the ability to organise the materials, equipment and work environment and follow standard methods.

Application of the Unit

Application of the unit	This unit of competency is applicable to laboratory assistants in the biomedical, biological, environmental, food processing and pharmaceutical industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare culture media	1.1. Prepare mixture of media and solvent to ensure solution and even settling of heat soluble materials 1.2. Label media to allow tracking in subsequent processes 1.3. Use a vessel large enough to endure adequate mixing and heating of the media 1.4. Dispense media into vessels for sterilisation, leaving room for expansion during heating and cooling
2. Sterilise media	2.1. Load the steriliser in keeping with maximum permitted loads and appropriate positioning of materials 2.2. Ensure a sterilisation indicator is correctly placed with the load to monitor sterilisation process 2.3. Operate sterilisation cycle in accordance with manufacturer's requirements to achieve sterilisation at the required settings 2.4. Cool media to the temperature specified in the media formulation procedures
3. Pour, label and store media	3.1. Add labile constituents where necessary, under conditions that will not lead to their denaturation or

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	contamination of media 3.2. Ensure even mixing of additives and media before dispensing 3.3. Aseptically dispense media to minimise occurrence of procedural contamination 3.4. Label media to allow for selection, avoiding areas of the culture vessel required for examination of colony growth 3.5. Store media to maximise shelf life and minimise contamination 3.6. Date batch media to ensure correct batch rotation 3.7. Incubate control plates as a sterility check
4. Perform quality control checks	4.1. Inspect media for any evidence of possible contamination or problems with structure or sterilisation 4.2. Check useability of selective media by growth of expected organism 4.3. Check stored stocks at regular intervals for conformance to required standards
5. Maintain work area and equipment to prevent cross-infection and contamination	5.1. Use personal protective equipment and safe work practices to ensure safety of self and others 5.2. Place disposable and reusable items into relevant receptacles 5.3. Clean and disinfect work area and equipment after use 5.4. Transport disposable and reusable contaminated materials to relevant areas for disinfection, sterilisation and cleaning or disposal

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • calculating mass and volume • measuring accurately

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
• making media to support growth of the relevant micro-organism or tissue • preventing cross-contamination • following enterprise procedures consistently • labelling and storing culture media according to enterprise procedures • accurately recording data • reporting non-compliance, anomalies or out of specification results • sorting, collecting, treating, recycling or disposing of waste • using appropriate personal protective equipment
Required knowledge
Required knowledge includes: • basic microbiological concepts and terminology such as growth rates in culture, production of gas and haemolysis of red cells in media • growth requirements of micro-organisms (bacteria, fungi, protozoans, viruses and multi-cellular parasites) in terms of their laboratory culture • the purpose, content and features of culture media and the relationship between the correct preparationof culture media and the optimal growth of organisms or cells • nature, properties and use of a range of biological media • the relationship between sterile practices, hygiene procedures and the ability to obtain growth free of contamination • the importance of physical requirements, such as pH and temperature on optimal growth of organisms and cells • the effect of inappropriate storage on culture media quality and performance • cleaning and sanitising requirements of equipment and work area • relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure candidates can: • prepare culture media which is free of contamination to facilitate the optimal growth of organisms and

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	cells • use appropriate sterilisation techniques, such as maintaining adequate space between containers • perform post-sterilisation procedures, such as dispensing or adding using aseptic technique • ensure the sterilised media has cooled down sufficiently to ensure that heat labile constituents, such as blood, hormones or antibodies are not inactivated when added to the media • consistently follow enterprise procedures • report non-compliances, anomalies or out of specification results.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL943002A Participate in laboratory/field workplace safety* • *MSL973004A Perform aseptic techniques*. Resources may include: • work schedule and enterprise procedures, including advice on safe work practices • relevant equipment and personal protective equipment • MSDS.
Method of assessment	The following assessment methods are suggested: • review of quality assurance results and examination of batches of media prepared by the candidate • observation of the candidate preparing culture media • written and/or oral questioning to assess underpinning knowledge. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting. **Food processing** A laboratory assistant's task was to prepare and pour agar plates in readiness for milk sampling. The assistant collected all the equipment and material needed to make an agar plate and ensured the working area was suitably prepared. The agar solution was carefully prepared and poured into a large conical flask prior to sterilisation in the autoclave. On completion of the sterilisation cycle, the agar was cooled to 42ºC in a water bath. It was then poured into the plates after flaming the neck of the flask. The lids were quickly replaced on the plates to minimise contamination. The plates were then stored. Any excess plates were bagged in a laminar flow unit and then placed in the fridge. The equipment was hot washed and the benches swabbed with 70% ethanol solution. **Biomedical** Media preparation is a routine task of the technical assistant. The methods and standard procedures are all documented but common working knowledge and standard 'don'ts' are not always written into the methods. Some ingredients, such as labile nutrients and antibiotics must be added under sterile conditions after the basic ingredients have been mixed and autoclaved. In one laboratory there is a list of ingredients not to be autoclaved posted on the notice board, in the media recipe book and for good measure, on the autoclave itself. One day, a technical assistant who was preparing media added all the ingredients, including the glucose, then autoclaved all 20L of it. The technical assistant learned the consequences of not paying full attention to the procedure the hard way and spent most of the day removing the 'toffee' residue from inside the autoclave!

	automated media preparation equipment • principles of good laboratory practice (GLP) • production schedules and instructions • standard operating procedures (SOPs)
Equipment	Equipment may include: • balance • pH meter • hot plate stirrer and Bunsen burners • autoclave and Arnold steamer • membrane filtration equipment • measuring cylinders, flasks and glassware and Petri dishes • distilled water apparatus • automatic agar pourers • labelling equipment • refrigerators • sterilisation indicators • self-refilling syringes • Falcon dishes • media storage bottles and tissue culture bottles
Media	Media maybe prepared from: • formulated powders obtained from microbiological companies • first principles under supervision of a technical officer or scientist
Cell and tissue culture media	Cell and tissue culture media may include: • agars • broths • solutions • slopes • basic balanced salt solutions, such as Hank's or Kreb-Ringer's • deeps • enriched media, such as blood sugar, chocolate agar, tetrathionate broth and selenite broth • control media • differential media, such as eosin-methylene blue agar and MacConkey's agar • selective media, such as deoxycholate-citrate

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	agar, Lowenstein-Jensen medium • tissue culture media • labile constituents, such as blood, hormones or antibodies
Sterilisation techniques	Sterilisation techniques may include: • autoclaving • steam and membrane filtration • boiling • microwaving • radiation • high temperature • high pressure steam • gas • chemical treatments
Quality control checks	Quality control checks may include: • streaking out of cultures to a single colony • lawn cultures
Hazards	Hazards may include: • micro-organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids • sources of heat, such as ovens, burners and autoclaves • sharps and broken glassware • fluids under pressure and such as steam • radiation used for sterilisation
Safe work practices	Safe work practices may include: • use of MSDS • use of personal protective equipment, such as safety glasses, gloves and coveralls • use of biohazard containers and laminar flow cabinets • correct labelling of reagents and hazardous materials • handling and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations • allowing the chamber pressure of the autoclave

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	to return to zero and temperature to cool to 80-90ÂºC before opening autoclave door to prevent boil over or plugs/caps being blown off flasks or tubes • regular cleaning and/or decontaminating equipment and work areas
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

MSL973004A Perform aseptic techniques

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to perform aseptic techniques to maintain the integrity of both the sample source and the sample. It applies to sampling techniques in tissue culture and to generic microbiological procedures.

Application of the Unit

Application of the unit	This unit of competency is applicable to laboratory assistants and technicians working in the field or laboratory in the biomedical, biological, food processing and environmental industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare for aseptic sampling or transfer	1.1. Ensure that any sampling procedure conforms with the requirements of the sampling plan 1.2. Use specified personal protective clothing and equipment 1.3. Prepare the work area for safe and effective sample transfer 1.4. Select equipment and materials specified by the procedure 1.5. Organise equipment to minimise contamination during manipulations 1.6. Label containers for clear identification 1.7. Record details in relevant log or database
2. Transfer materials aseptically	2.1. Protect the integrity of the sample source by sterilising the sampling site and the mouth of transport or culture vessel 2.2. Sterilise inoculating loops and/or pipette where used

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	to prevent contamination 2.3. Perform transfer while minimising opportunities for contamination and cross-infection 2.4. After transfer, and before sealing the transport or culture vessel, flame the vessel mouth to maintain sterility 2.5. Re-sterilise inoculating loops, minimising the generation of aerosols 2.6. Perform quality control checks, if required 2.7. Label transport or culture vessels for clear identification
3. Maintain work area and equipment to prevent cross-infection and contamination	3.1. Place disposable and reusable items into relevant receptacles 3.2. Clean and disinfect work area and equipment after use 3.3. Transport disposable and reusable contaminated materials to relevant areas for disinfection, sterilisation and cleaning or disposal

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- sterilising equipment such as flasks, loops and pipettes
- handling of laboratory equipment and glassware to prevent contamination
- streak plating of inoculations
- sampling transfers
- labelling and storing culture media according to enterprise procedures
- recording data accurately
- reporting non-compliance, anomalies or outofspecification results
- sorting, collecting, treating, recycling or disposing of waste
- following enterprise procedures consistently
- using appropriate personal protective equipment

Required knowledge

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge includes: • the relationship between sterile practices, hygiene procedures and the ability to obtain growth free of contamination • cleaning and sanitising requirements of equipment and work areaand effects of physical and chemical agents on microbial growth and death • principles of infection control related to occupational health and safety (OHS), sampling and transfer of materials in microbiological investigations • disinfection and sterilisation procedures used in the collection, processing and safe disposal of samples and materials • importance of pure culture techniques and aseptic transfer to the successful microbiological investigation and correct interpretation of laboratory results • growth requirements of micro-organisms (bacteria, fungi, protozoans, viruses and multi-cellular parasites) in terms of their laboratory culture • relevant health, safety and environment requirements **Specific industry** Additional knowledge requirements may apply for different industry sectors. For example: Food processing: • food spoilage symptoms • food safety principles • beneficial/detrimental organisms relevant to specific food industry sector

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	In particular, assessors should look to see that the candidate: • follows established laboratory procedures, including recording of samples, operation of equipment and cleaning/decontamination • prevents cross-contamination of sample source and sample

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	• manipulates equipment to prevent contamination of culture medium during transfer • sterilises equipment as required to prevent cross-contamination of work area, personnel and environment.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL943002A Participate in laboratory/field workplace safety* • *MSL973003A Prepare culture media*. Resources may include: • standard laboratory with appropriate equipment and materials • enterprise procedures and standard methods • MSDS.
Method of assessment	The following assessment methods are suggested: • review of quality assurance results and examination of samples transferred by the candidate • observation of the candidate successfully transferring a range of samples • written and/or oral questioning to assess underpinning knowledge. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	competency and show its relevance in a workplace setting. **Food processing** As part of the quality assurance program at an ice-cream manufacturer, six ice-creams were removed from the production line, placed in sterile bags and then stored in a freezer in the microbiology laboratory. Later in the morning, the laboratory assistant removed the samples from the freezer, registered the samples with the date received and test code and signed the register book. She/he then placed the samples in a water bath set at 42(C. While the samples were melting, the laboratory assistant labelled the respective agar plates with the registered codes. Using aseptic techniques she/he carefully transferred 1ml of ice-cream mix into the total plate count agar. The plates were then placed in the incubator. The final results were noted and recorded. **Biomedical** In preparation for antibiotic sensitivity testing and biochemical identification of presumed pathogenic bacteria, a technical assistant was asked to prepare a sterile peptone suspension of a lactose fermenting colony. The colony had been previously identified by the supervisor on a MacConkey's agar plate. The assistant labelled a 5mL tube of peptone broth with the sample number and a code for the identified colony and then donned a pair of disposable gloves. Bringing the labelled tube and the MacConkey's plate near to the Bunsen, she/he took an inoculating loop and sterilised it in the incandescent flame. She/he carefully cooled the loop in a sterile area of the agar and gently scraped off half the colony. With the other hand, and in the vicinity of the heated air of the Bunsen, she/he removed the cover of the peptone tube in her/his crooked finger. In a continuous and coordinated way she/he flamed the lip of the tube and emulsified the colony in the broth. She/he then flamed the lip of the tube and replaced its cover. Finally, the technical assistant re-sterilised the inoculating loop by introducing and holding it in the Bunsen flame to minimise the generation of bacterial aerosols.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include:
	• Australian and international standards, such as:
	  • AS/NZS 2243 Set:2006 Safety in laboratories set
	  • AS/NZS 2982.1:1997 Laboratory design and construction - General requirements
	  • AS/NZS 4187:2003 Cleaning, disinfecting and sterilising reusable medical and surgical instruments and equipment and maintenance of associated environments in health care facilities
	  • AS/NZS ISO 14000 Set:2005 Environmental management standards set
	• HB 9-1994 Occupational personal protection
	• Australia New Zealand Food Standards (ANZFS) Code
	• Australian code of good manufacturing practice for medicinal products (GMP)
	• Australian Dangerous Goods Code
	• client and product specifications
	• manufacturer's instructions or verbal direction from laboratory manager, supervisor or senior technician
	• material safety data sheets (MSDS)
	• National Code of Practice for the labelling of workplace substances [NOHSC:2012 (1994)]
	• National Health and Medical Research Council (NHMRC) Guidelines
	• OHS national standards and codes of practice

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• operation and maintenance manuals for automated media preparation equipment • principles of good laboratory practice (GLP) • production schedules and instructions • standard operating procedures (SOPs)
Personal protective equipment	Personal protective equipment may include: • gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits and respirators • biohazard containers and laminar flow cabinets
Sample pot and transfer media and the subculturing and/or passaging of culture	Sample pot and transfer media and the subculturing and/or passaging of culture to: • sterile broth • media for isolation of colony • tissue culture media • media for continuous culture systems
Samples	Samples may include: • body fluids and liquids • water and soil • sterile pharmaceuticals • yeasts and moulds • milk and yoghurt • swabs and smears • propagation tissue • plant material • fermented foods and beverages
Equipment	Equipment may include: • transfer equipment, such as inoculating loops, pipettes (quantitative and qualitative), flasks, tubes and spatulas • Bunsen burners and bench incinerators • anaerobic jars • incubators, water baths, refrigerators, freezers and possibly dry ice and liquid nitrogen cylinders • laminar flow units and biohazard cabinets • autoclave or pressure cooker • swabs • continuous culture systems

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
The range of material	The range of material may involve: • solid and/or liquid media • supplied media, such as media manufactured in the enterprise or raw material supplies for media • disinfecting and sterilising agents and materials, such as methylated spirits, ethanol and ether • disposable equipment and clothing • tissue culture media • growth media in broths, plates, deeps or slopes • receptacles for safe disposal of wastes and for processing of reusable materials • bar coding material and labels
Sterilisation techniques	Sterilisation techniques may include: • autoclaving • flaming • steam and membrane filtration • boiling • microwaving • radiation • high temperature • high pressure steam • gas and chemical treatments
Quality control checks	Quality control checks may include: • streaking out of cultures to a single colony • lawn cultures
Hazards	Hazards may include: • accessing the sample from difficult or dangerous areas • dry ice and liquid nitrogen vapour • ultraviolet (UV) light sources • heat from Bunsen burners • molten agar • sharps • hazardous substances and/or infectious agents
Workplace information	Workplace information may include: • SOPs

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• specifications for safe waste disposal of bio-hazardous materials • production schedules and instructions • work notes • MSDS • manufacturer's instructions • verbal instructions from laboratory manager, supervisor or senior technician • guidelines for small scale genetic manipulation work
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret test requirements	1.1. Review test request to identify samples to be tested, test method and equipment involved 1.2. Identify hazards associated with the sample, preparation methods and equipment and implement enterprise control measures
2. Set up work area for preparation and examination of samples	2.1. Collect equipment and arrange the workspace so that equipment can be used safely and efficiently 2.2. Perform pre-use and safety checks to ensure equipment is fit for purpose and report faulty or unsafe equipment to appropriate personnel
3. Prepare samples for examination	3.1. Log and label samples according to enterprise procedures to ensure traceability 3.2. Check suitability of the original and prepared sample for the examination and report unsuitable samples to appropriate personnel 3.3. Prepare and store the sample for examination following enterprise methods

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
4. Set up and use a light microscope	4.1. Set up the light path to optimise resolution 4.2. Select the appropriate objectives and filter for the sample being examined 4.3. Ensure that the lenses are clean 4.4. Adjust settings and alignment of the light path to optimise performance 4.5. Place sample correctly on the stage
5. Observe, identify and report sample characteristics	5.1. Recognise and identify significant sample characteristics 5.2. Perform required calculations accurately 5.3. Prepare and view control samples and check that results are consistent with expected values 5.4. Identify and report out of specification or atypical results promptly to appropriate personnel 5.5. Record and report data in accordance with enterprise procedures
6. Maintain a safe work environment	6.1. Ensure safety and minimise cross-contamination through the use of personal protective clothing and safety equipment 6.2. Handle all samples and equipment in accordance with enterprise safety protocols 6.3. Clean up spills using appropriate techniques to protect personnel, work area and environment 6.4. Minimise generation of waste and environmental impacts 6.5. Collect and dispose of all wastes safely 6.6. Report hazards and incidents to designated personnel using enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: • setting up the workbench and microscope ergonomically

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
• setting up, cleaning and using a light microscope to achieve optimum resolution of the specimen • using personal protective clothing and other safety equipment correctly • performing counts on samples • performing basic measurements using grids • logging and tracking samples through all steps from receiving a sample through to completion of a procedure and reporting • interpreting and recording test results, including simple calculations • correctly handling and storing samples and equipment
Required knowledge
Required knowledge includes: • parts and functions of a light microscope • importance and appropriate use of controls and certified reference materials • hazards and risks in laboratories associated with performing microscopic examination • enterprise and/or legal traceability requirements • relevant health, safety and environment requirements **Specific industry** Additional knowledge requirements may apply for different industry sectors. For example: Biological industry: • basic structure and function of cells and organelles • basic classes and classification of organisms of organisms, such as prokaryotes, eukaryotes, plants, animals, bacteria, viruses and prions • cell physiology and processes, such as simple and facilitated diffusion, plasmolysis, osmosis, tonicity, active transport, energy production, mitosis, motility, phagocytosis and pinocystosis • purposes and mechanisms of staining (e.g. Gram +ve and -ve)

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • follow enterprise standards, procedures and practices • prepare suitable samples • recognise, identify and document significant sample characteristics • set up a light microscope for optimal resolution • maintain personal safety and that of others • minimise cross-contamination and contamination of the laboratory and environment.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL922001A Record and present data* • *MSL933002A Contribute to the achievement of quality objectives* • *MSL943002A Participate in laboratory/field workplace safety* • *MSL953001A Receive and prepare samples for testing*. Resources may include: • standard laboratory equipped with appropriate equipment, such as light microscopes and samples • enterprise procedures, standard methods and materials.
Method of assessment	The following assessment methods are suggested: • observation of the candidate performing microscopic examinations • review of data records prepared by the candidate, such as counts, observations and results • feedback from supervisors and peers about adherence to enterprise/technical procedures • questioning to assess underpinning knowledge. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting. **Construction materials testing** The supply of river sand is running out and quarries are accessing alternative sources of sand for use in concrete mixes in construction. The sand should not be an aggregate that is likely to break down into smaller particles. A technician in a quarry company is required to analyse samples of crushed rock using a light microscope. The technician looks for characteristics of the sample, such as angularities, roundness, sharpness, cracks, presence of organic matter, mineral structure and whether the particles are a conglomerate. If the sample does not meet the characteristics, the company will need to treat it to make it suitable for use in concrete mixes (for example by washing, crushing and sieving). **Food processing** A customer complaint is received about the baking properties of a flour delivery. The laboratory assistant at the flour mill is given the task of testing the starch content of the suspect flour. He/she prepares iodine stained samples of the returned flour and a range of baked and partially baked products prepared from it. First, the assistant makes up fresh iodine staining solution and then prepares slides of each sample for microscopic examination. He/she identifies the characteristic starch granules of the flour sample and records the degree of gelatinisation in the starch granules in the baked samples. He/she discusses the results with the supervisor and prepares a report for the customer. **Biomedical** A laboratory assistant works in the microbiology laboratory of a public hospital and is responsible for

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	preparing and staining sputum smears from patients for micro and culture. The assistant puts on a clean gown and gloves before collecting the specimens from the reception area of the laboratory. The assistant prepares cultures of the sputum specimens on simple and selective media before preparing, fixing and staining smears for microscopic examination. The results are checked by the supervisor, entered into the laboratory information management system (LIMS) and sent to the appropriate section of the hospital. **Environmental** A laboratory assistant prepares media for plant tissue culture. There has been some contamination of Gram-positive bacteria in the last two batches and the supervisor has initiated an overhaul of the preparation and aliquotting procedure. The laboratory assistant has been asked to follow the new procedure exactly and to remove samples at each stage of ingredient addition for microscopic examination. The laboratory assistant records the exact addition amounts, batch numbers and brands of the reagents, the location of the addition (which biohazard cabinet), the equipment used and the pre-sterilisation records of all equipment. The laboratory assistant then prepares slides, fixes them and performs a Gram stain on each of the aliquots removed from the new preparation run. Microscopic analysis of each aliquot reveals nil contamination. The supervisor decides that there has been a breach in the old procedure and the laboratory assistant is asked to follow the new procedure and to perform a routine microscopic check on all batches for the next month.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include:
	• Australian and international standards, such as:
	  • AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
	  • AS/NZS ISO 9000 Set:2008 Quality management systems set
	  • AS/NZS 2243 Set:2006 Safety in laboratories set
	• principles of good laboratory practice (GLP)
	• Australian code of good manufacturing practice for medicinal products (GMP)
	• safety manuals
	• quality manuals and equipment and procedure manuals
	• standard operating procedures (SOPs)
	• material safety data sheets (MSDS)
	• enterprise recording and reporting procedures
	• production and laboratory schedules
	• material, production and product specifications

Preparation of samples	Preparation of samples may include: • aseptic transfer of specimen • centrifugation • cooling • drying • filling a counting chamber in one continuous flow without bubbles or overflow • filtration • fixing of films to minimise cell damage and the production of artefacts • labelling • mounting of stained films, sections and whole mounts to ensure long term preservation • permanent labels for smears, films and sections for presentation, storage and retrieval • physical or chemical separation

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• selection of diluent to preserve or enhance visibility of the cells to be counted • selection, filling and cover slipping of a clean, dry counting chamber to ensure even distribution of cells during filling • serial dilution to enable individual cells to be reliably counted • staining of fixed material to illustrate required characteristics • sub-sampling • thin film or smear on a slide
Checking sample condition	Checking sample condition may include: • labelling • spillage • spoilage due to incorrect storage and transport conditions • temperature control • suitability for the examination
Pre-use checks	Pre-use checks may include: • calibration • cleaning/checking use by dates of reagents • routine maintenance
Equipment	Equipment may include: • glass slides • counting chambers (e.g. haemocytometer) • optical graticules and stage micrometers • tissue culture flasks
Light microscopes	Light microscopes may include: • bright field illumination microscopic examination up to 1000x magnification • stereomicroscopes and dissection microscopes • compound microscopes • phase contrast microscopes • inverted microscopes
Biological samples	Biological samples may include: • smears, impression smears, sections, squashes, films and whole mounts • a monolayer of cells in smears and films

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• fixed smears for demonstration of bacteria by the methylene blue and Gram staining techniques • blood films stained by a Romanowsky technique to clearly show differentiation of granulocytes • stained sections of animal tissues using regressive haematoxylin and eosin to differentiate cytoplasmic and nuclear detail • differentially stained monocotyledon and dicotyledon stem sections to demonstrate the structure of vascular bundles (xylem, phloem and cambium) • stained whole mounts of helminths • whole mounts, such as liver flukes, planaria and samples of animal faeces to demonstrate ova, cysts and larvae • pond water organisms • onion root tip squash • midstream sample of urine
Physical samples	Physical samples may include: • sand • asbestos fibres • coal samples • construction testing materials • geological specimens
Checking prepared samples	Checking prepared samples may include looking for: • clean and scratch-free microscope slides to reduce artefacts • preparation according to SOPs • a homogeneous suspension of sample • films and smears that have been fixed rapidly • thin films with a monolayer of cells • appropriate whole mounts for intact organisms • correct sample identification during and after processing
Sample characteristics	Sample characteristics are restricted to what can be viewed by bright light microscopy and may include:

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• shape and size of particles • presence of contamination • colour • consistency and variability • number of cells (e.g. cells in blood or other particulate samples, such as a yeast suspension or pollen grains) • type of cells, percentage of atypical cells, presence/absence of cells, size of cells, viable and non-viable cells and trajectory • presence of stained material, such as starch • colour/staining and morphology • motility
Calculations	Calculations may include: • dilutions • percentage viability • number of cells in original sample after dilution • calculation of cells/ml in a number of squares of a counting chamber
Hazards	Hazards may include: • micro-organisms and agents associated with soil, air, water, blood and blood products and human or animal tissue and fluids • chemicals and stains • sharps and broken glassware • aerosols
Safety practices and personal protective equipment	Safety practices and personal protective equipment may include: • use of MSDS • use of personal protective equipment, such as safety glasses, gloves and coveralls • use of biohazard containers and laminar flow cabinet • correct labelling of reagents and hazardous materials • handling and storing hazardous materials and equipment in accordance with labels, MSDS and manufacturer's instructions • ergonomic layout, correct illumination and

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	organisation of workbench • regular cleaning and/or decontamination of equipment and work areas
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to interpret work requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine biological procedures, including sample preparation. These procedures may involve several steps and are used to classify cell types, species and biologically active compounds by analysing their biological and chemical characteristics. This unit includes data processing, interpretation of results and troubleshooting obvious departures from standard procedures.

Application of the Unit

Application of the unit	This unit of competency is applicable to technical assistants working in the biomedical, environmental, biotechnology and education industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Interpret and schedule work requirements	1.1. Review work request to identify samples, required procedures and materials/equipment/instruments involved 1.2. Identify hazards and enterprise control measures associated with the sample, preparation methods, reagents and/or equipment 1.3. Plan parallel work sequences to optimise throughput of multiple sets of samples, if appropriate
2. Receive and prepare biological samples	2.1. Log samples using standard operating procedures (SOPs) 2.2. Record sample description, compare with specification and note and report discrepancies 2.3. Prepare samples in accordance with testing

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	requirements 2.4. Ensure traceability of sample from receipt to reporting of results
3. Perform techniques that assist in the classification of a cell or species	3.1. Select suitable techniques in accordance with enterprise requirements and methods 3.2. Set up and use equipment and reagents in accordance with the method 3.3. Perform techniques in accordance with the method
4. Perform techniques that analyse biological activity	4.1. Select suitable techniques in accordance with enterprise requirements and methods 4.2. Set up and use equipment and reagents in accordance with the method 4.3. Perform techniques in accordance with the method
5. Process and interpret data	5.1. Record test data noting atypical observations 5.2. Construct calibration graphs, if appropriate, and compute results for all samples from these graphs 5.3. Ensure calculated values are consistent with expectations 5.4. Record and report results in accordance with enterprise procedures 5.5. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required 5.6. Interpret trends in data and/or results and report out of specification or atypical results promptly to appropriate personnel 5.7. Determine if obvious procedure or equipment problems have led to atypical data or results
6. Maintain a safe work environment	6.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 6.2. Minimise the generation of wastes 6.3. Ensure the safe disposal of biohazardous wastes 6.4. Clean, care for and store equipment and reagents as required
7. Maintain laboratory records	7.1. Record approved data into enterprise system 7.2. Maintain confidentiality and security of enterprise information and laboratory data 7.3. Maintain equipment and calibration logs in accordance with enterprise procedures

© Commonwealth of Australia, 2025 HumanAbility

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using instruments for qualitative and/or quantitative analysis
- sample preparation and separation techniques
- performing calibration checks
- metrology techniques underpinning test/procedure including estimating uncertainty
- maintaining and evaluating reagents
- troubleshooting basic equipment/method
- preparingand using calibration graphs and calculating results using appropriate units and precision
- applying theoretical knowledge to interpret gross features of data and make relevant conclusions such as identifying atypical results as out of normal range or an artefact
- tracing and sourcing obvious causes of an artefact
- recording and communicating results in accordance with enterprise procedures
- maintaining security, integrity, traceability of samples, sub-samples, test data, results and documentation

Required knowledge

Required knowledge includes:

- hazards and risks in biological laboratories
- principles and concepts related to equipment/instrument operation and testing
- function of key components of the equipment/instrument and/or reagents
- effects of modifying equipment/instrument variables
- basic equipment/method troubleshooting procedures
- calculation steps to give results in appropriate units and precision
- sources of uncertainty in measurement and methods for control
- importance and appropriate use of controls and certified reference materials
- enterprise and/or legal requirements for traceability
- relevant health, safety and environmental requirements

© Commonwealth of Australia, 2025 HumanAbility

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • interpret test procedures accurately • prepare and test samples using procedures appropriate to the nature of sample • perform calibration checks (if required) • safely operate test equipment to enterprise standards and/or manufacturer's specification • prepare calibration graphs and calculate results in appropriate units and precision • apply basic theoretical knowledge to interpret gross features of data and make relevant conclusions • identify atypical results as out of normal range or an artefact using reference material or quality control sera • trace and source obvious causes of an artefact • communicate problems to a supervisor or outside service technician • record and communicate results according to enterprise procedures • maintain security, integrity, traceability and identity of samples, sub-samples and documentation • follow OHS procedures and principles of GLP.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL924001A Process and interpret data* • *MSL974003A Perform chemical tests and procedures*. Resources may include: • standard laboratory equipped with appropriate test equipment and instruments, reagents and materials • SOPs and testing methods.
Method of assessment	The following assessment methods are suggested:

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	• review of results obtained by the candidate over a period of time to ensure accuracy, consistency and timeliness • review of testing records and workplace documentation completed by the candidate • observation of candidate conducting a range of biological procedures • feedback from peers and supervisors • oral or written questioning of biological concepts, principles and enterprise procedures. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. **Biomedical** (**1**) A laboratory technician conducts a screening test for parasites in stool samples. She/he checks the sample identification details, cross-checks the sample barcode with the request slip and the data entry in the laboratory information management system (LIMS). The technician locates the test method and then examines the sample container to ensure that it has not leaked and that there is sufficient volume for the test. She/he prepares the sample by adding solvent to a portion and shaking it before placing it in a centrifuge. After satisfactory separation, she/he pipettes a small quantity of the top layer of solvent onto a glass slide and adds iodine as a stain. The technician carefully views the slide using x40

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
	magnification and searches for eggs. She/he enters a nil result in the LIMS and disposes of the sample in accordance with enterprise procedures. **Biomedical** (**2**) A technical officer is requested to determine the total protein concentration of a blood sample using colorimetry. After checking the condition of the sample, she/he collects the Biuret reagent from the refrigerator, the required number of tubes and protein control samples and standards specified in the method. The officer labels the tubes and then accurately dispenses the correct volumes of reagent, standards, controls and samples into them. The solutions are thoroughly mixed using a vortex mixer and allowed to stand for five minutes for the reaction to occur. She/he records absorbance readings for each tube and prepares a calibration curve. The officer reads the concentration values from the graph for the control and test samples and checks the control data against the expected values. As these fall within the accepted range, she/he enters the test results into the LIMS.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include: • Australian and international standards, such as: • AS 2134.1-1999 Recommended practice for chemical analysis by atomic absorption

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	spectrometry - Flame atomic absorption spectrometry • AS 2162.1-1996 Verification and use of volumetric apparatus - General - Volumetric glassware • AS 3753-2001 Recommended practice for chemical analysis by ultraviolet/visible spectrophotometry • AS ISO 1000-1998 The international system of units (SI) and its application • AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories • AS/NZS 2243 Set:2006 Safety in laboratories set • AS/NZS ISO 9000 Set:2008 Quality management systems set • Australian code of good manufacturing practice for medicinal products (GMP) • calibration and maintenance schedules • enterprise recording and reporting procedures • equipment manuals • equipment startup, operation and shutdown procedures • industry methods, such as Royal Australian Chemical Institute (RACI) and/or American Association of Cereal Chemists (AACC) methods for inorganic constituents • material safety data sheets (MSDS) and safety procedures • material, production and product specifications • national measurement regulations and guidelines • principles of good laboratory practice (GLP) • production and laboratory schedules • quality manuals and equipment and procedure manuals • SOPs • waste minimisation and safe disposal procedures
Biological principles and concepts underpinning tests and	Biological principles and concepts underpinning tests and procedures may include:

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
procedures	• molecular interactions within the compounds of nucleic acids and nucleotides, proteins and amino acids, carbohydrates, lipids and vitamins, influencing structure, activity, chemical reactivity and physical properties, including solubility, energy levels and emission/absorption spectra • chemical and biochemical characteristics of lipids, carbohydrates, nucleic acids and proteins influencing structure, function and reactivity both in vitro and in vivo • chemical significance of biologically significant ions, such as calcium, zinc, iron, magnesium, sodium, potassium, chloride and phosphate • key metabolic pathways and the significance of initial nutrients, products and wastes on those pathways • structure and function of organelles, cells, plant and animal tissue and organs • interrelationships of biological systems (carbon cycle, energy cycle and the web of life) • classifications, such as bacteria, viruses, yeasts, single cell, multi-cellular, plants, animals, prions, helminths, prokaryotes and eukaryotes • phases of the cell cycle • Mendelian genetics, such as inheritance, meiosis, karyotypes, dominant and recessive traits, genotypes and phenotypes, and pedigrees • significance of the genetic code and transcription and translation • cell membrane activity, including diffusion (passive, facilitated and active), osmosis, tonicity and plasmolysis • staining reactions involving acid/base, redox, complex ion formation, solubility and equilibrium
Techniques for preparation of samples	Techniques for preparation of samples may include: • dissection, such as preparation of thymus extracts from mice • extraction (e.g. solvent extraction) • filtration (e.g. filter water samples and plate the

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	

	sediment onto agar plates for incubation and growth of E. coli)
	• separation (e.g. dialysis)
	• precipitation and flocculation
	• centrifugation (excluding ultra centrifugation)
	• chromatography:
	  • gel filtration chromatography (e.g. crude purification of proteins)
	  • affinity chromatography (e.g. purification of immunoglobulins)
	• electrophoresis:
	  • polyacrylamide gel electrophoresis for separation of DNA segments
	  • agarose gel electrophoresis
	  • capillary electrophoresis
	  • gradient gel electrophoresis

Techniques to classify cells or species	Techniques to classify cells or species may include:
	• classification of species according to taxa
	• classification of cells according to microscopic or staining characteristics
	• characteristics of bacterial colonies:
	  • growth on differential media
	  • colony morphology (size and shape)
	  • biochemical reactions, such as miniaturised test strips, redox reactions and sugar tests

Techniques to analyse chemical and biological characteristics	Techniques to analyse chemical and biological characteristics may include:
	• staining:
	  • Gram stain for gram negative and positive bacteria
	  • Romanowsky stain for blood films
	  • Haematoxylin and Eosin for tissue sections
	  • Oil red O for fatty cellular inclusions
	  • spore staining
	  • flagella staining
	• microscopic examination:
	  • light
	  • phase contrast

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	• bright field • dark ground • enumeration • colorimetry and spectrophotometry: • ultraviolet/visible • fluorimetric • infrared • flame emission • atomic absorption spectrometry • electrochemistry: • pH • ion selective electrodes and polarography (e.g. concentration of chloride ions) • chromatography: • column and thin layer analytical and preparative chromatography • gas and liquid chromatography for purity, raw material and formulation checks
Hazards	Hazards may include: • microbiological organisms and agents, associated with soil, air, water, blood and blood products, and human or animal tissue and fluids • chemicals, such as acids, solvents and stains • aerosols from broken centrifuge tubes and pipetting • sharps and broken glassware • flammable liquids and gases • cryogenics, such as dry ice and liquid nitrogen • fluids under pressure, such as steam, hydrogen in gas liquid chromatography and acetylene in atomic absorption spectrometry • sources of ignition • disturbance or interruption of services
Hazard control measures	Hazard control measures may include: • ensuring access to service shut-off points • recognising and observing hazard warnings and safety signs • labelling of samples, reagents, aliquoted

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	samples and hazardous materials • handling and storage of hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions • identifying and reporting operating problems or equipment malfunctions • cleaning and decontaminating equipment and work areas regularly using enterprise procedures • using personal protective clothing and equipment, such as gloves, safety glasses, coveralls and gowns • using containment facilities (PCII, PCIII and PCIV physical containment laboratories), containment equipment (biohazard containers, laminar flow cabinets, Class I, II and III biohazard cabinets) and containment procedures • following established manual handling procedures • reporting abnormal emissions, discharges and airborne contaminants, such as noise, light, solids, liquids, water/waste water, gases, smoke, vapour, fumes, odour and particulates to appropriate personnel
Disposal of biohazardous wastes	Disposal of biohazardous wastes may include: • collection for sterilisation by autoclaving (e.g. autoclaving of microbiological plates) • appropriate storage (e.g. of waste containing radioactive isotopes) • use of biohazard waste containers
Records	Records may include: • test calibration results • equipment use, maintenance and servicing history • faulty or unsafe equipment • batch number, catalogue number and use by date for analytical kits
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

PSPPM402B Manage simple projects

Modification History

Release	TP Version	Comments
3	PSP12V1	Unit descriptor edited.
2	PSP04V4.2.	Layout adjusted. No changes to content.
1	PSP04V4.1	Primary release.

Unit Descriptor

This unit covers management of generally low risk projects that may be small scale and managed by one person or a person with a small team. It includes implementing project start-up activities, coordinating project implementation, monitoring the project and arranging follow-up activities. Contract management requirements are not included as this aspect is addressed by units of competency within the Competency field of *Procurement and Contract Management*.

In practice, managing simple projects overlaps with other generalist and specialist work activities such as applying government processes, using resources, gathering information, managing contracts etc.

This unit, and unit *PSPPM405A Administer simple projects*, are mutually exclusive. One or the other, but not both, may contribute to a qualification.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 HumanAbility

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.	Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. **Implement start-up activities**	1.1 The ***project plan*** is updated with confirmed information for key dates and activities, resources and project governance details in accordance with the project implementation strategy. 1.2 Project ***stakeholders'*** understanding of and agreement to fulfil the project requirements and their roles and responsibilities are confirmed. 1.3 ***Required systems*** are established and maintained throughout the project in accordance with the project plan. 1.4 A working knowledge of ***project management tools*** is used to facilitate integration of project activities and achievement of project outcomes.
2. **Coordinate project implementation**	2.1 ***Integration*** and ***management*** of project activities are handled in accordance with the project plan. 2.2 Stakeholder input and expectations are managed and their commitment is maintained throughout the life of the project in accordance with organisational policy and procedures and the project plan. 2.3 Disagreements and disputes are resolved or referred to a higher authority in accordance with organisational policy and procedures. 2.4 Project ***change proposals*** are received and changes are recommended/made in accordance with the project plan, and documented in accordance with ***policy and procedures***.
3. **Monitor project**	3.1 All aspects of the project are continually monitored and

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	corrective action is taken as necessary to maintain progress in accordance with the project plan.
	3.2 Consultation and reporting mechanisms are applied in accordance with the communication plan when dealing with management, staff and/or contractors, steering committee members or other stakeholders.
	3.3 Project governance plans and any related contracts are monitored, reviewed and amended as appropriate, and results are reported in accordance with the communication plan.
	3.4 Project progress is monitored against agreed milestones in accordance with the project plan to provide a measure of performance throughout the life of the contract.
	3.5 Programmed review of objectives and achievement is implemented in accordance with the project plan.
4. Arrange project follow-up activities	4.1 Project deliverables are analysed against ***specifications***, performance standards and project objectives, under broad guidance, and the results are reported to stakeholders.
	4.2 An initial support package or product manual is produced, if required, to provide guidance for stakeholders who will be required to apply the project results.
	4.3 The support package includes options for stakeholders to take account of environmental and cultural factors in applying project results.
	4.4 Operational and support authorities are consulted to research any testing/trialling/building requirements resulting from the project, and evaluation of any recommendations are included in the project report.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- leading and mentoring people to achieve project deliverables
- maintaining agreement of stakeholders and team members to timelines, roles and responsibilities
- communicating with stakeholders and team members using a range of communication styles to suit different audiences and purposes

© Commonwealth of Australia, 2025 HumanAbility

- responding to diversity, including gender and disability
- using project management tools applicable to small scale or low risk projects
- applying ethical decision making and problem solving related to project management of small scale or low risk projects
- writing recommendations and preparing implementation support packages requiring precision of expression
- applying workplace safety procedures in line with project requirements
- accessing/preparing information electronically or in hard copy

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- legislation, organisational policies and procedures that may impact on project management, for example:
  - public sector codes of ethics/conduct
  - occupational health and safety and environment requirements
  - project governance requirements
  - quality standards
- risk management
- procurement guidelines
- human resources
- equal employment opportunity, equity and diversity principles
- project management tools to suit a range of small scale or low risk projects
- project management principles
- organisational and political context

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
  - PSPETHC401A Uphold and support the values and principles of public service
  - PSPGOV402B Deliver and monitor service to clients

© Commonwealth of Australia, 2025 HumanAbility

- PSPGOV403B Use resources to achieve work unit goals
- PSPGOV411A Deal with conflict
- PSPGOV412A Use advanced workplace communication strategies
- PSPGOV422A Apply government processes
- PSPLEGN401A Encourage compliance with legislation in the public sector
- PSPPROC410A Administer contracts
- PSPPM401B Design simple projects
- PSPPM403B Close simple projects

- *Excluded units* that may not contribute to the same qualification as this unit:
  - PSPPM405A Administer simple projects

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- simple projects managed in a range of (3 or more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, guidelines, procedures and protocols relating to project management
- workplace project documentation
- scenarios and case studies
- examples of project management tools

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when implementing projects, including coping with difficulties, irregularities and breakdowns in routine
- simple projects managed in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse

© Commonwealth of Australia, 2025 HumanAbility

backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- demonstration
- portfolios
- questioning
- scenarios
- authenticated evidence from the workplace and/or training courses

For consistency of assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.

Project plan will include some or all of:

- acquisition strategies
- budget and financial management strategy
- contract management
- cost estimates
- evaluation criteria
- expected outcomes/measurable benefits of the project
- facilities
- inclusions and exclusions from project
- information/communication strategy
- intellectual property strategies
- milestones

© Commonwealth of Australia, 2025 HumanAbility

- objectives
- outputs/project deliverables and their acceptance criteria
- people plan including human resource management and human resource development
- performance criteria/indicators
- project control mechanisms
- project implementation strategy
- project governance strategy
- purpose
- quality assurance
- quality control
- quality standards for project
- rationale
- required project resources
- resource management
- risk management
- roles and responsibilities
- schedule/timeline
- task/work breakdown structure (WBS)

Stakeholders may include:

- project sponsor/funding bodies
- clients or customers (internal and external)
- industry
- other agencies
- general public
- relevant interest groups
- unions
- functional areas
- the organisation's senior management
- Ministers
- project team
- steering committee members
- end user
- supplier/service provider

Required systems for project management may include:

- planning and monitoring system
- financial management including:
  - budget allocation/funding
  - income generated
  - expenditure
- recordkeeping for documented information such as:

© Commonwealth of Australia, 2025 HumanAbility

- correspondence
- quality data including survey, needs, test results
- contracts
- time allocated and spent on each aspect of the project
- progress reports
- performance reports against milestones
- project outcomes
- samples, prototypes, models

Project management tools may include:

- risk analysis
- organisational project governance framework
- communications plan
- reporting framework
- project management software and other tools:
  - Gantt and bar charts
  - Program Evaluation and Review Technique (PERT) charts
  - Critical Path Method
  - cost schedule control system
  - logistics support analysis
  - life cycle cost analysis
  - spreadsheets
  - recording systems - electronic and manual

Integration of project activities may include:

- scope
- time
- cost
- quality
- human resources
- communications
- risk
- procurement

Management may include:

- scope management
- communication and reporting
- schedule management
- financial management
- quality management
- resources management
- people management
- logistics management
- risk management

© Commonwealth of Australia, 2025 HumanAbility

	• contract management • change management
Change proposals may include:	• scope • administration • engineering, technical, technology changes • time • cost • resources

Policy and procedures may include:	• government legislation (Federal, State and Local) affecting organisation's administration such as:
	  • public sector management acts
	  • financial management and accounting legislation and regulations
	  • privacy legislation
	• government and organisational guidelines and procedures relating to:
	  • project governance
	  • resourcing
	  • security
	  • strategic plans
	  • recruitment
	  • risk management
	  • procurement guidelines
	  • designation approvals
	  • industrial agreements

Specifications may include:	• functional • technical • performance • material

PUAECO002A Process emergency incident calls and enquiries

Modification History

PUAECO002A Release 2: Layout adjusted. No changes to content.

PUAECO002A Release 1: Primary release.

Unit Descriptor

This unit covers the competency required to receive and respond to incoming calls and enquiries in an emergency communications centre or an information hotline.

Application of the Unit

This unit applies to personnel who process emergency calls for assistance and routine enquiries in an emergency communications centre.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive incoming incident calls/enquiries	1.1 ***Routine and emergency incident calls*/*enquiries*** are answered promptly using standard agency answering protocols and telephony system, ***related equipment*** and computer aided dispatch system, in accordance with ***organisational policies and procedures.***
	1.2 Relevant information of the caller/incident/enquiry is ***established*** in accordance with organisational policies and procedures.
	1.3 ***Factors which may affect the caller's ability to provide accurate information*** are assessed and taken into consideration.
	1.4 ***Type of incident call*/*enquiry*** is determined quickly and accurately, and call authenticity is determined, in accordance with organisational protocols.
	1.5 ***Details*** of the incident call/enquiry are obtained and accurately ***logged***, in accordance with organisational policies and procedures.
	1.6 Appropriate response is ensured by interacting with other relevant personnel.
2. Provide information to caller/s in possible danger	2.1 ***Potential danger*** to caller/s is assessed quickly and accurately.
	2.2 ***Safety information appropriate to the situation and caller's needs*** is communicated clearly.
3. Locate an incident	3.1 Organisation's area/s of operational responsibility is identified.
	3.2 Appropriate directories, ***maps*** and databases are used to find incident location/s.
	3.3 Calls/enquiries are ***concluded*** in accordance with organisational policies and procedures.
4. Action received request	4.1 Request for assistance is actioned in accordance with organisational policies and procedures.
	4.2 ***Information*** is ***summarised and communicated*** using clear and appropriate language, in accordance with organisational policies and procedures.
	4.3 Follow-up procedures and notifications to other emergency services or agencies are implemented as required.
5. Operate equipment	5.1 Appropriate ***equipment*** is chosen for the task, context and needs of the incident.
	5.2 Equipment is used and operated safely in accordance

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	with organisational and manufacturer's instructions.
	5.3 Faulty equipment is identified and reported in accordance with organisational policies and procedures, and alternative strategies are employed when necessary.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- accurately record and relay information
- apply relevant organisational policies and procedures to support appropriate response decisions
- control the conversation to ensure necessary information is obtained from the caller
- deal with difficult and distressed callers
- communicate orally and in writing
- use telephony equipment, radios, computer systems and associated software
- employ fault bypass procedures
- maintain readiness in periods of low operational activity
- read and interpret basic maps to identify location of incident
- respond calmly to multiple demands in high operational activity
- type with speed/accuracy in accordance with organisational specifications
- use appropriate questioning techniques
- use codes, abbreviations or specialist terminology in the transmission of information
- use equipment designed to receive incoming incident calls/enquiries in accordance with organisational and supplier procedures
- use equipment relating to incident/information management
- use language appropriate to the caller
- use voice procedures consistent with organisational procedural requirements

Required Knowledge

- area of operations
- codes, abbreviations or specialist terminology used by the organisation when receiving or taking action in response to incoming incident calls/enquiries
- communications equipment used in the management of incidents and non operational enquiries
- telephone communication techniques such as responding to queries clearly and concisely; ensuring appropriate referral processes are followed; exercising discretion and confidentially; taking follow-up steps where appropriate; displaying empathy;

© Commonwealth of Australia, 2025 HumanAbility

effectively handling caller behaviour (such as aggressive, angry, controlled, distressed, hysterical, passive, scared, timid); effectively responding to callers whose first language is not English or who have difficulties with the English language; effectively responding to the age of the caller; questioning caller in such a way that allows the caller to respond in a timely manner; using open and closed questioning

- organisational policies, procedures and practices
- organisational resources such as aerial appliances (hydraulic/telescopic ladder, hydraulic platform, combination ladder/platform); aircraft (helicopters and fixed wing); special appliances (hazardous materials response vehicles, specialist rescue vehicles, special materials carriers [foam, breathing apparatus], command and control vehicles); vehicles (pumpers/tankers/combinations; heavy, medium, light; four-wheel drive)
- relevant legislation and regulation
- stress management techniques
- time management techniques
- types of emergencies (with regards to relevant legislation)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessment must confirm the ability to: • recognise the difference between routine and emergency incident calls/enquiries • effectively handle incident calls/enquiries • use techniques to obtain information in as short a time as possible • take appropriate action in accordance with organisational procedures as a result of the incoming incident call/enquiry • use relevant technology for the recording of requests for assistance/enquiries in accordance with organisational policies and procedures. **Consistency in performance** Competency should be demonstrated over time during emergency communications centre operations or simulated operations that include critical and non-critical situations across a range of different callers, types of emergencies and level of activity.
Context of and specific	**Context of assessment**

© Commonwealth of Australia, 2025 HumanAbility

resources for assessment	Competency should be assessed in the workplace or in a simulated workplace environment under conditions expected in the workplace. **Specific resources for assessment** Access is required to: • agency protocol documentation • back-up systems • operations and systems manuals • organisational documentation • relevant databases • telephony system • training databases, where available • training manual • workplace expert/s.
Method of assessment	This unit may be assessed with the following units: • PUAECO001A Operate telephony systems • PUAECO003A Operate and control radio networks • PUAECO004A Operate computer aided dispatch system. In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook. Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment. Assessment may occur in an operational environment or in an industry-approved simulated work environment. Forms of assessment that are typically used include: • direct observation • interviewing the candidate • journals and workplace documentation • third party reports from supervisors • written or oral questions.

Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised***

© Commonwealth of Australia, 2025 HumanAbility

wording in the Performance Criteria is detailed below.

Routine and emergency incident calls/enquiries may include:	• administrative queries • requests for general organisational information • requests for help in critical situations • requests for help in non-critical situations
Related equipment may include:	• computers (data transfer from other agencies) • electronic indicators (such as fire alarms) • paging systems • radio • telephonic services
Organisational policies and procedures may include:	• mutual aid, memorandum of understanding with other agency/s • organisation's approach to environmental management and sustainability • procedures which concern the operations of the organisation in an emergency situation • procedures which are not of an emergency nature but may affect the organisation's operations in an emergency • procedures which form part of the day-to-day running of the organisation • procedures which concern the operations of other agencies, services and organisations which may be required to attend emergency situations
Establishing relevant information of the caller/incident/enquiry may include:	• active listening skills (such as clarifying, giving full attention to the caller, maintaining contact with the caller and prompts, summarising, using open questions) • appropriately responding to cultural diversity and people with specific needs • controlling the call • effective communication skills, techniques and resources • questioning techniques
Factors which may affect the caller's ability to provide accurate information may include:	• ability to speak • age • call difficulties such as call being disconnected • impact of alcohol or drugs • knowledge of the area (for example, a tourist may have limited knowledge) • language spoken • level of distress • mental health

© Commonwealth of Australia, 2025 HumanAbility

Type of incident call/enquiry may include:	• alarm • HAZMAT • motor vehicle accident • rescue • structure • vegetation

Details of the incident call/enquiry may include:	• address
	• caller name and phone number
	• location:
	  • commonplace name
	  • cross streets
	  • distinguishing features
	  • landmarks
	  • latitude and longitude
	  • marine chart
	  • nearest intersection
	  • position in street
	  • rural addressing
	  • suburb, town, city
	  • street number
	  • type

Logging incident calls/enquiries may include:	• checking permit log and plotted fires • creating incident file and verifying and saving details • liaising with fire towers • making appropriate records • phoning alarmed premises

Potential danger may include:	• danger from animals, building debris or dangerous goods and hazardous substances
	• factors associated with caller health or wellbeing such as being older or having a physical disability which may mean the caller is not able to evacuate; language difficulties; panic and shock
	• factors which may impact on caller's ability to reach safety:
	  • ability to speak
	  • effects of alcohol and/or drugs
	  • age
	  • knowledge of the area/location
	  • language/s spoken
	  • level of distress

© Commonwealth of Australia, 2025 HumanAbility

	• mental health • telephone difficulties such as call being disconnected • smoke inhalation • structural collapse • vehicle ignition
Safety information appropriate to the situation and caller's needs may include:	• drop to floor to reach exit • immediate evacuation in accordance with building evacuation plan • leave area by recommended route • stand in an identified location to wait for the appliance and fire crew • use appropriate protective clothing
Maps may include	• books of maps • computer-generated maps • road maps • street directories • topographical maps • tourist maps
Concluding calls/enquires may include:	• confirmation of response • reassurance • pre-arrival instructions
Information may include:	• environmental factors • factors affecting agency's operational readiness • risks associated with the incident • topography • weather conditions
Summarising and communicating information may include:	• informing other public safety agencies and relevant stakeholders about the response • maintaining liaison with colleagues • notifying senior management and other organisations as required • providing information pre-arrival of the emergency service/s
Equipment may include:	• computer back-up systems • computer hardware - other than the organisation's primary computer hardware system (such as portable computers) • computer software - other than the organisation's primary computer software program/s (such as mapping programs, word processing, hazardous materials databases)

© Commonwealth of Australia, 2025 HumanAbility

- facsimile
- landline, mobile and satellite telephones - other than the organisation's primary telephone system
- pager systems
- printers
- recording equipment
- remotely controlled fire station equipment
- security equipment
- signalling devices (such as alarm telemetry equipment)

PUAECO003A Operate and control radio networks

Modification History

PUAECO003A Release 2: Layout adjusted. No changes to content.

PUAECO003A Release 1: Primary release.

Unit Descriptor

This unit covers the competency required to efficiently operate and control radio networks and equipment.

Application of the Unit

This unit applies to emergency communications centre personnel who operate and control radio networks to respond to organisational requests and to support operational events.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use radio networks	1.1 Radio network is accessed in accordance with organisational procedures. 1.2 ***Radio equipment*** is operated in accordance with manufacturer's instructions. 1.3 Appropriate channels, frequencies and talk groups are allocated, selected and deselected in accordance with organisational policies and procedures. 1.4 Appropriate codes, terminology, pro-words, call signs and abbreviations are used to receive and transmit information. 1.5 Organisational radio protocols are used to transmit and receive messages. 1.6 Radio contact is monitored in accordance with organisational procedures. 1.7 Network is controlled and coordinated to ensure equitable access and prioritisation of operations. 1.8 Network is operated in accordance with relevant legislation and organisational operational requirements. 1.9 Equipment is used safely in accordance with the organisational and manufacturer's instructions.
2. Identify faults in the radio network	2.1 Technical faults in the radio network are identified and ***appropriate action is taken.*** 2.2 ***Back-up or alternative systems*** are utilised when primary system fails or when required. 2.3 Equipment is tested in accordance with organisational procedures.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- enunciate clearly
- communicate effectively
- receive messages
- transmit messages
- use call up sequence

© Commonwealth of Australia, 2025 HumanAbility

Required Knowledge

- basic principles of radio operation
- organisational specific communication protocols
- phonetic alphabet/figures/language
- principal components of radios
- radio network/system
- radio procedures (call signs, vehicle codes, codes, terminology, pro-words and abbreviations)
- readability table
- voice procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessment must confirm the ability to: • enunciate clearly and concisely • use communication protocols • operate equipment correctly within organisational benchmarks • respond to calls from the field in a timely and effective manner • work effectively in stressful situations • maintain control over the network • operate effectively in routine and peak conditions of operational activity. **Consistency in performance** Competency should be demonstrated over time during emergency communications centre operations or simulated operations that include critical and non-critical situations.
Context of and specific resources for assessment	**Context of assessment** Competency should be assessed in the workplace or in a simulated workplace environment under conditions expected in the workplace. **Specific resources for assessment** Access is required to:

© Commonwealth of Australia, 2025 HumanAbility

	• alternative technologies • back-up systems • communications protocol handbooks • manufacturers' operating instructions • operations and systems manuals • organisational documentation • primary and back-up/alternative radio network • relevant databases • training databases, where available • training manual • workplace expert/s.
Method of assessment	This unit may be assessed with the following unit: • PUAECO004A Operate computer aided dispatch system. In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook. Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment. Assessment may occur in an operational environment or in an industry-approved simulated work environment. Forms of assessment that are typically used include: • direct observation • interviewing the candidate • journals and workplace documentation • third party reports from supervisors • written or oral questions.

Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

Radio equipment may include:	• antenna • associated computer equipment • portable/mobile radios and attached equipment (microphone)

© Commonwealth of Australia, 2025 HumanAbility

	• repeaters (static and portable) • transceivers and attached equipment (foot pedal, microphone)
Organisational policies and procedures may include:	• legislation relevant to the organisation • operational, corporate and strategic plans • operational performance standards • operational policies and procedures • organisational personnel and occupational health and safety practices and guidelines • organisational quality standards • organisation's approach to environmental sustainability
Taking appropriate action may include:	• identifying technical faults • dealing with identified faults if within own area of responsibility • referring identified faults to supervisor or appropriate personnel
Back up or alternative systems may include:	• alternative frequencies and spectrums • alternative networks • landline network • mobile phone network • relay systems • satellite phone

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Operate dispatch systems	1.1 Computer aided dispatch (CAD) log on and shift change protocols are implemented. 1.2 CAD, other interfaces and associated equipment are set up and navigated for optimum operation. 1.3 CAD is interrogated to retrieve required information. 1.4 Data is accurately recorded in accordance with organisational procedures. 1.5 Relevant data/information is continually monitored, maintained and updated, in accordance with organisational protocols. 1.6 Entries are checked for accuracy and corrective action is taken, in accordance with organisational procedures and system capacity. 1.7 Incident completion processes are implemented in the CAD. 1.8 Equipment is used safely in accordance with organisational and manufacturer's instructions.
2. Identify faults in the CAD	2.1 Technical faults in the CAD are identified and ***appropriate action is taken.*** 2.2 ***Back-up systems*** are utilised when primary system fails. 2.3 Deficiencies or opportunities for improvement are reported in accordance with organisational policies and procedures. 2.4 Systems and equipment are tested in accordance with organisational policies and procedures. 2.5 Test issues are referred to supervisor and/or relevant personnel.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- accurately record and relay information
- assess and prioritise information appropriately
- multi task
- operate a computer

© Commonwealth of Australia, 2025 HumanAbility

- operate and adapt to different programs/databases
- operate CAD during peak activity
- process data
- retrieve information
- type with speed/accuracy in accordance with organisational specifications

Required Knowledge

- codes, terminology, pro-words and abbreviations
- databases (fire alarm, mapping, hazardous substances)
- message notification systems such as pager networks, SMS, short data messaging
- organisational resource availability and locality
- organisational procedures and protocols
- relevant computer operations and functions
- relevant legislation and regulations
- specific program/database operations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessment must confirm the ability to: • multi task • effectively apply computer skills and knowledge • manage an incident from creation to finalisation, using the equipment effectively • use and work with relevant programs/databases. **Consistency in performance** Competency should be demonstrated over time during emergency communications centre operations or simulated operations that include critical and non-critical situations.
Context of and specific resources for assessment	**Context of assessment** Competency should be assessed in the workplace or in a simulated workplace environment under conditions expected in the workplace. **Specific resources for assessment** Access is required to: • back-up systems

© Commonwealth of Australia, 2025 HumanAbility

	• CAD work station • relevant databases • operations and systems manuals • organisational documentation • training databases, where available • training manual • workplace expert/s.
Method of assessment	This unit may be assessed with the following unit: • PUAECO002A Process emergency incident calls and enquiries. In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook. Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment. Assessment may occur in an operational environment or in an industry-approved simulated work environment. Forms of assessment that are typically used include: • direct observation • interviewing the candidate • journals and workplace documentation • third party reports from supervisors • written or oral questions.

Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

Taking appropriate action may include:	• identifying technical faults • dealing with identified faults if within own area of responsibility • referring identified faults to supervisor or appropriate personnel
Back-up systems may include:	• Bbck-up CAD systems • manual systems

SIRCDIS301 Accept prescriptions and return dispensed medicines to customers

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is an updated unit, based on and equivalent to SIRPDIS001A Accept prescriptions and deliver medicine.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to collect and verify customer's prescription-related information, lodge scripts for dispensing, and return dispensed prescription items to customers on behalf of the dispensing pharmacist.

Application of the Unit

This unit applies to pharmacy assistants and dispensary assistants who work in community pharmacies.

A person undertaking this role is required to work under the direct supervision of a pharmacist.

Licensing/Regulatory Information

All relevant federal, state or territory legislation, Pharmacy Board of Australia Guidelines, and established practice and quality assurance standards are to be met.

Pre-Requisites

SIRCHCS201 Support the supply of Pharmacy Medicines and Pharmacist Only Medicines

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Verify prescription and customer details.	1.1. Approach ***customer*** and accept prescriptions in a timely manner. 1.2. Check ***customer's prescriptions*** for ***legality, validity and completeness***. 1.3. Confirm ***customer details***. 1.4. Respect customer privacy and confidentiality when requesting and providing information.
2. Confirm customer prescription needs.	2.1. Identify and confirm items to be dispensed. 2.2. Provide brand substitution information and determine customer preference. 2.3. Flag and refer ***prescription discrepancies*** and other situations requiring additional assistance to appropriate pharmacy staff or a pharmacist. 2.4. Advise customers of expected prescription preparation time, including ***delaying factors*** or delivery times as appropriate. 2.5. Lodge verified prescriptions together with relevant recorded customer information for dispensing.
3. Return prescribed medicines to customers.	3.1. Verify that dispensed prescriptions have been checked by a pharmacist and check dispensed medicines to ensure customer's requested items and quantities have been dispensed. 3.2. Verify that the customer receives the correct medicine and that the customer or their agent signs and dates the prescription as confirmation of receipt. 3.3. Explain ***information provided on medicines*** and question to confirm customer understanding. 3.4. Refer customers to a pharmacist in situations requiring additional assistance or therapeutic advice. 3.5. Supply dispensed medicines promptly in ***appropriate packaging***. 3.6. Provide information on other products where required to effectively use medicines supplied. 3.7. Retain store-filled prescriptions in a nominated secure area.

© Commonwealth of Australia, 2025 HumanAbility

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - ask questions to identify and confirm customer requirements
  - explain information contained on cautionary and advisory labels in a level of English suited to the customer's communication requirements
  - question to confirm that the customer understands the information provided
  - invite further questions from the customer
  - provide relevant information to the dispensing pharmacist and other staff members where required
  - seek direction from the dispensing pharmacist
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- literacy skills to:
  - check prescription information
  - read cautionary and advisory medicine labels
  - record customer information
- planning and organising skills to:
  - plan and carry out work to meet dispensary workflow requirements
  - provide timely delivery of dispensed items to customers
- teamwork skills to operate as part of a dispensing team

Required knowledge

- brand substitution information, including:
  - product costing policy reflecting brand price premiums and therapeutic premiums
  - the term 'bio-equivalent' products as defined by the Therapeutic Goods Administration (TGA)
- pharmacy procedures relating to:
  - accepting prescriptions
  - accessing and using pharmacy information systems required by the role
  - circumstances under which referral to a pharmacist or other pharmacy staff is required
  - collecting and supplying information to an agent acting on behalf of a customer
  - delivering dispensed prescriptions
  - maintaining the privacy and confidentiality of customer information
  - offering brand substitution
- Pharmaceutical Benefits Scheme (PBS) and Medicare Australia system, and supply rules

© Commonwealth of Australia, 2025 HumanAbility

relating to:

- customer eligibility and access
- payments for general customers (without concessional cards) and concessional customers
- co-payments
- safety net entitlements
- supplying repeat prescriptions

- privacy principles as they relate to accepting prescriptions and delivering medicine

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • accept and lodge prescriptions for dispensing • identify different types of prescriptions and entitlements • follow verification procedures when providing dispensed medicines to customers • operate as part of a dispensing team and provide relevant information to a pharmacist and other pharmacy staff as required • provide prescription information to customers in ways appropriate to customer needs and demonstrate appropriate techniques to confirm understanding • recognise and act on situations requiring referral to a pharmacist or other pharmacy staff.
Context of and specific resources for assessment	Assessment must ensure that competency is: • consistently demonstrated over a period of time and observed by the assessor or the technical expert working in partnership with the assessor as described in the assessment • demonstrated in a real pharmacy workplace environment that meets Pharmacy Board of Australia and relevant industry standards for dispensary operations, which may include client interruptions and involvement in other related activities normally expected in the pharmacy. Assessment must ensure access to: • a range of customers with different prescription requirements and entitlements who are typical of the customer base

© Commonwealth of Australia, 2025 HumanAbility

- dispensed medicines for return to customers
- relevant documentation, such as:
  - PBS information
  - pharmacy procedures
  - prescriptions.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the learner performing a range of tasks in an actual or simulated work environment, over sufficient time to demonstrate handling of a range of contingencies, which may include:
  - accepting prescriptions and delivering medicine to a range of customers
  - completing pharmacy documentation relevant to accepting prescriptions
  - returning dispensed medicines to customers
  - seeking direction from the dispensing pharmacist
- role plays to confirm communication skills that meet diverse customer requirements
- written or oral questions appropriate to the language and literacy level of the learner to test relevant underpinning knowledge
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customer may include people:

- from a range of social, cultural and ethnic backgrounds and with varying mental and physical abilities
- visiting the pharmacy, contacting the pharmacy by phone, or in their own home
- with special needs, such as:

© Commonwealth of Australia, 2025 HumanAbility

- the elderly
- infants

- who are:
  - drug or alcohol affected
  - emotionally unstable
  - mentally unstable
  - physically unwell.

Customer's prescriptions may include:

- a limited approved range of scripts from providers, including:
  - dentists
  - doctors
  - nurse practitioners
  - optometrists
  - podiatrists
  - veterinary surgeons
- National Health scripts
- private scripts
- repatriation scripts or Veteran Affairs scripts.

Legality, validity and completeness may include:

- adequate written instructions on the dosage regimen
- compliance with timing rules to fill repeat scripts
- doctor's or prescribing practitioner's full name, current address, telephone number and date
- name of medicine, quantity prescribed and clearly indicated dosage directions
- currency of prescription
- clear prescription with no indication of tampering or forgery
- self-treatment instructions that meet legal and regulatory requirements.

Customer details may include:

- full name and current address
- date of birth where patient is elderly (over 70 years) or young (under 12 years)
- entitlement number, if any, under the PBS
- Medicare details
- private health cover and receipt requirements
- allergies or adverse reactions suffered in the past to medications
- current use of other medications, including complementary medicines.

Prescription discrepancies may include:

- incomplete or incorrect prescriber or customer details
- out-of-date prescriptions
- prescriptions marked 'cancelled' or in other ways that

© Commonwealth of Australia, 2025 HumanAbility

	indicate they have been dispensed and completed
	• invalid prescriptions, such as:
	  • forged or altered information
	  • written by prescriber for self-treatment
	• requests for excessive quantities.

Delaying factors may include:	• out-of-stock prescribed medicines • special preparation requirements, e.g. compounded products.
Information provided on medicines may include:	• pharmacy labels • cautionary or advisory labels • additional information or advice prepared by a pharmacist • information provided by the supplier • self-care and health information • Consumer Medicine Information (CMI).

Appropriate packaging may include:	• packaging that protects customer privacy and medicine handling requirements, such as:
	  • light-sensitive tray-controlled packaging
	  • opaque packaging
	  • paper bags
	  • packaging determined by the pharmacist.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Confirm customer delivery requirements.	1.1. Identify ***pharmacy products*** to be delivered to customer. 1.2. Identify prescription items required. 1.3. Confirm ***customer details***. 1.4. Confirm ***delivery information*** with the customer.
2. Prepare and plan prescription deliveries.	2.1. Confirm that items are ***ready for delivery***. 2.2. Liaise with a pharmacist to confirm method of providing customer advice. 2.3. Prepare items for delivery to meet ***handling and storage*** requirements. 2.4. Confirm that ***delivery documentation*** is accurate and complete. 2.5. Use available aids to plan the most efficient delivery route. 2.6. Schedule deliveries to suit requirements of the pharmacy and customers.
3. Distribute medicine to customers outside the community pharmacy.	3.1. Verify customer or agent identity and any special delivery instructions. 3.2. Explain ***information provided on medicines*** and, where instructed by the pharmacist, question to confirm customer or agent's understanding. 3.3. Request a dated signature as evidence of receipt of goods. 3.4. Arrange for pharmacist follow-up in situations requiring additional assistance or therapeutic advice. 3.5. Finalise the sales transaction if appropriate.
4. Reconcile delivered items and records.	4.1. Reconcile medicines and other items collected for delivery with items distributed. 4.2. Reconcile cash payment with the value of items sold. 4.3. Complete delivery documentation and records. 4.4. Follow pharmacy procedures to make alternative arrangements where unplanned factors have prevented delivery of medications.

© Commonwealth of Australia, 2025 HumanAbility

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - confirm that the person receiving medicines and delivery information is authorised to do so
  - confirm that the person receiving medicines is not a child
  - explain information contained on cautionary and advisory labels in a level of English suited to customer communication requirements
  - question to confirm that the customer correctly understands the information provided
  - invite further questions from the customer
  - seek direction from the dispensing pharmacist
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- literacy skills to:
  - follow pharmacy procedures
  - check prescription information
  - read directions and maps to locate addresses and plan efficient delivery routes
- planning and organising skills to:
  - plan delivery routes to achieve efficient delivery outcomes
  - arrange for a customer to make contact with a pharmacist where more detailed support or advice is required
- problem-solving skills to respond to situations where no authorised person is available to receive items

Required knowledge

- pharmacy procedures relating to:
  - delivery of prescription items to customers outside the pharmacy
  - response to unavailability of the customer or an authorised agent to accept delivery
  - responding to customer questions
  - arranging for a pharmacist to provide follow-up therapeutic advice and information to the customer
  - protecting security of self, product and cash
  - response in the event of theft, loss or accident
- product and delivery:
  - charges
  - payment options and procedures
- privacy principles as they relate to home delivery of medicines
- label information, such as:

© Commonwealth of Australia, 2025 HumanAbility

  - dosage regimen, e.g. dose time in relation to food
  - frequency
  - duration of treatment
  - special storage requirements, e.g. cold chain
- role boundaries and responsibilities and circumstances under which referral to a pharmacist or other pharmacy staff is required

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • apply pharmacy procedures when delivering dispensed medicines and other products outside the pharmacy • provide information in ways appropriate to customer needs and demonstrate relevant techniques to confirm understanding • apply correct storage and transport conditions and any special delivery requirements for dispensed items • recognise and arrange follow-up contact, in situations requiring referral to a pharmacist.
Context of and specific resources for assessment	Assessment must ensure that competency is: • demonstrated over a period of time and observed by the assessor or the technical expert working in partnership with the assessor as described in the assessment • demonstrated in a real workplace environment that meets relevant industry standards and which may include client interruptions and involvement in other related activities normally expected in the pharmacy. Assessment must ensure access to: • a range of customers or their agents with different locations and delivery requirements who are typical of the customer base • dispensed items and other products for delivery to the customer or their agent • dispensed items requiring special handling • delivery documentation and record-keeping systems

© Commonwealth of Australia, 2025 HumanAbility

- payment systems
- relevant documentation, such as:
  - customer details
  - delivery checklists
  - maps or location information
  - pharmacy procedures
  - real or simulated prescriptions
  - CMI.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the candidate:
  - preparing for deliveries
  - delivering items to customers outside the pharmacy
  - completing documentation and records relevant to delivering prescription and other pharmacy items
  - seeking direction from the dispensing pharmacist
- review of portfolios of evidence and third-party workplace reports of on-the-job performance
- role plays to:
  - confirm communication skills that meet diverse customer requirements
  - demonstrate understanding of contingency management procedures
- written or oral questions appropriate to the language and literacy level of the learner to test relevant underpinning knowledge.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Pharmacy products may include:

- prescription medicines
- Pharmacy Medicines (S2)

© Commonwealth of Australia, 2025 HumanAbility

	• non-scheduled pharmacy products.

Customer may include people:	• from a range of social, cultural and ethnic backgrounds and with varying mental and physical abilities
	• in their own home or contacting the pharmacy by phone
	• in residential care settings
	• with special needs, such as:
	  • the elderly
	  • infants
	• who are:
	  • drug or alcohol affected
	  • emotionally unstable
	  • mentally unstable
	  • physically unwell.

Customer details may include:	• patient name • delivery address • telephone number • suitable delivery times • specific location advice.
Delivery information may include:	• items on the prescriptions to be dispensed • other products required • estimated delivery time • persons authorised to accept delivery • payment method.
Ready for delivery may include:	• assembled items are complete, clearly and correctly labelled, and match customer requirements • a pharmacist has verified dispensed items • required information and advice accompanies the items • items are packaged appropriately to protect customer privacy and product integrity.
Handling and storage requirements may include:	• temperature control and cold chain items • light-sensitive items • heat-sensitive items.
Delivery documentation may include:	• prescription documentation to be signed by customer or agent • self-care and health information • other information supplied by a pharmacist • delivery check sheets • customer location details.
Information provided on medicines may include:	• pharmacy labels • cautionary and advisory labels • additional information or advice prepared by a

SIRWSLS303 Analyse and achieve sales targets

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is a revised unit, based on and equivalent to SIRWSLS005A Analyse and achieve sales targets.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to set, analyse and achieve personal sales targets to guide performance and monitor the progress of sales against business objectives.

The unit covers identifying factors affecting sales performance, reviewing and analysing personal sales outcomes against agreed sales targets, and implementing strategies to attain sales targets, according to business policy and procedures.

Application of the Unit

This unit applies to frontline sales personnel.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Analyse sales targets.	1.1. Confirm ***team sales targets*** according to ***business policy and procedures***. 1.2. Analyse personal sales targets against ***agreed parameters***. 1.3. Regularly monitor progress towards sales targets. 1.4. Analyse performance of different customers and areas to determine common factors supporting or deterring sales.
2. Determine factors affecting attainment of sales targets.	2.1. Evaluate ***factors affecting sales performance*** against the agreed sales targets. 2.2. Anticipate and address factors likely to impinge upon attainment of sales targets. 2.3. Approve amended or new sales targets according to business policy and procedures.
3. Attain sales targets.	3.1. ***Initiate actions*** to address customers with under-performing sales, and report progress to senior management in line with standard organisational policies and procedures. 3.2. Identify customers with strong sales performance and initiate actions to extend sales opportunities and sustain customer loyalty. 3.3. Identify changing business circumstances that may influence capacity to meet or exceed sales targets and determine a course of action to address the challenge. 3.4. Report sales progress to senior management using standard organisational policies and procedures.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- collecting, analysing and organising skills to:
  - confirm and implement sales targets

© Commonwealth of Australia, 2025 HumanAbility

    - determine factors affecting sales performance
    - establish personal sales targets against agreed parameters
    - monitor progress towards sales targets
- literacy and numeracy skills to:
    - document procedures for improving sales
    - read and interpret information
    - review personal sales outcomes
- planning and organising skills to plan personal tasks and priorities
- time management skills to initiate regular evaluation of sales performance and adjust strategies and targets where required

Required knowledge

- business plans and targets affecting personal sales targets
- business policy and procedures
- customer needs
- factors affecting sales
- parameters determining successful attainment of personal sales targets
- range of products and services
- relevant business policy and procedures
- relevant legislation and statutory requirements relating to the retail industry, including
    - work health and safety (WHS)
    - consumer law
    - commercial law and legislation
- territory characteristics and features
- types of business customers

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • collects and organises information to review and analyse personal sales outcomes against agreed sales targets, according to business policy and procedures • identifies factors affecting sales performance and develops strategies to attain sales targets.
Context of and specific resources for	Assessment must ensure access to: • a business-to-business sales work environment

© Commonwealth of Australia, 2025 HumanAbility

assessment	• relevant documentation, such as:
	  • business policy and procedures
	  • business plans and objectives
	• a range of customers with different requirements.

Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of performance in the workplace • customer feedback • written or verbal questioning to assess knowledge and understanding • review of portfolios of evidence and third-party workplace reports of on-the-job performance.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

Team may include:	• business team • full-time, part-time, casual or contract staff • people from a range of cultural, social and ethnic backgrounds • people with a range of responsibilities and job descriptions • people with varying degrees of language and literacy • small work teams.
Sales targets may vary, according to:	• merchandising and sales strategy • product or service • promotional strategies and their duration, cycle, territory coverage and product or service focus • sales strategy.
Business policy and procedures in relation to:	• approval processes • interaction with colleagues • interaction with customers • sale of products and services

© Commonwealth of Australia, 2025 HumanAbility

	• sales planning and evaluation.
Agreed parameters may include:	• customer accounts • customer satisfaction • market share • price • territory • trading terms • volume.
Factors affecting sales performance may include:	• associated promotions • associated sales • competitor activities • customer requirements • logistics • market share • merchandise availability • presentation or merchandising of the product • promotional tie-ins or co-location • quality of products or services.

Initiating actions to address customers with under-performing sales may include:	• assessing the impact of competitor's products and ability to offer better solution
	• exiting unviable relationship with customer
	• identifying reasons that may limit sales, including:
	  • product suitability
	  • quality of customer service
	  • viability of the product line to the customer's business
	• offering alternative products.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Manage receipt, dispatch and storage of merchandise.	1.1. Receive, dispatch and store merchandise according to ***store policy and procedures***. 1.2. Determine cost-effective and efficient methods for goods movement according to store policy. 1.3. Implement maintenance procedures for storage areas and ***equipment*** according to store policy.
2. Manage stock control.	2.1. Implement store policy and procedures in regard to ***stock control*** and inventories. 2.2. Establish and implement store procedures to monitor and control stock levels. 2.3. Maintain budgeted stock levels. 2.4. Establish and implement stocktaking procedures. 2.5. Establish and implement ***contingency plans*** in regard to stock delivery times. 2.6. Document and prepare accurate ***reports*** on stock inventories.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- technical skills to use electronic recording equipment
- time management skills to maintain stock levels according to store policy and procedure requirements
- literacy and numeracy skills to:
  - maintain stock control reports and documentation
  - process orders
  - maintain delivery and supply records
  - maintain stock distribution records
  - maintain stock recording systems

© Commonwealth of Australia, 2025 HumanAbility

- analyse data
- prepare and present reports

Required knowledge

- store policy and procedures in regard to:
  - receipt of goods from suppliers
  - dispatch of goods
  - shrinkage prevention
  - waste controls
  - safety controls
  - secure storage in an appropriate environment
  - equipment used to move stock
- store systems and equipment for stock recording and control
- inventory control
- storage security
- licensing requirements for operating moving equipment (if applicable)
- relevant legislation and statutory requirements
- relevant industry codes of practice
- Work Health and Safety (WHS) legislation and codes of practice

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- plans, coordinates and implements activities associated with receipt, dispatch, storage and movement of merchandise according to store policy and procedures, including OHS policies and guidelines
- implements maintenance procedures for storage areas and equipment according to store policy
- plans, coordinates and implements activities associated with stock control, including:
  - monitoring and controlling stock levels
  - establishing and maintaining stocktaking procedures
  - documenting and reporting on inventories according to store policy and procedures.

© Commonwealth of Australia, 2025 HumanAbility

Context of and specific resources for assessment	Assessment must ensure access to:
	• a retail work environment
	• relevant documentation, such as:
	  • store policy and procedures on inventory control
	  • legislation and statutory requirements
	  • industry codes of practice
	  • WHS legislation and codes of practice
	• access to:
	  • a stock control system
	  • stock control equipment
	  • a team.

Methods of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of performance in the workplace • third-party reports from a supervisor • written or verbal questioning to assess knowledge and understanding • review of portfolios of evidence and third-party workplace reports of on-the-job performance.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Store policy and procedures in regard to:	• receipt of goods from suppliers • dispatch of goods • shrinkage prevention • waste controls • safety controls • secure storage • stock control and inventories.
Equipment may include:	• electronic bar coding equipment • weighing machines • thermometers

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Instruct and coordinate staff.	1.1. Communicate and demonstrate store ***display standards and requirements*** to ***staff***. 1.2. Identify occurrence and timing of promotions and special events and inform staff. 1.3. Identify items to be advertised or promoted, according to store merchandising policy and inform staff. 1.4. Identify appropriate timing for dismantling and disposing of displays and inform staff.
2. Supervise construction and maintenance of presentations.	2.1. Plan and coordinate promotions and special events as directed by management. 2.2. Plan and supervise construction and maintenance of ***displays*** in order to achieve balance and visual impact. 2.3. Ensure product or service ***display information*** accurately depicts product or service being promoted. 2.4. Ensure displays are completed according to required time schedule, with minimum disruption to ***customer*** service and traffic flow. 2.5. Ensure displays are constructed and maintained in a safe and secure manner. 2.6. Regularly monitor replenishment of merchandise and rotation of stock on store displays and take action as required.
3. Implement merchandise pricing.	3.1. Implement store policy and procedures in regard to pricing and ticketing. 3.2. Identify current prices for products and services and amend according to store policy. 3.3. Inform team members of price changes and current pricing policies.
4. Review merchandise presentations.	4.1. Evaluate promotions or special events against sales turnover and store presentation standards. 4.2. Evaluate merchandise presentation against sales turnover and store presentation standards. 4.3. Provide management with feedback in regard to improvement of

© Commonwealth of Australia, 2025 HumanAbility

store marketing and promotional activities.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and interpersonal skills to:
  - give instructions
  - provide feedback to management through clear and direct communication
  - provide information to staff
  - share information
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- literacy and numeracy skills to:
  - prepare machine or manual labels and tickets
  - present and price merchandise
  - read and interpret store policies and procedures
- observation skills to assess display and presentation compliance with visual merchandising standards
- technology skills to operate and maintain electronic labelling and ticketing equipment
- team leadership skills to:
  - instruct and support staff
  - supervise staff activities

Required knowledge

- availability and use of materials
- correct storage procedures for labelling and ticketing equipment and materials
- load-bearing capacity of fixtures and display areas
- location of display areas
- manufacturer specifications for the use of electronic labelling and ticketing equipment
- occurrence and timing of store promotions, including advertising, catalogues and special offers
- pricing procedures, including GST requirements
- principles and techniques of interpersonal communication skills
- principles of display and design
- procedure for accessing information and implementing price changes
- relevant industry codes of practice relating to coordinating merchandise presentation
- relevant legislation and statutory requirements relating to coordinating merchandise presentation, including Australian Consumer Law

© Commonwealth of Australia, 2025 HumanAbility

- relevant work health and safety (WHS) legislation and codes of practice
- store policies and procedures in regard to:
  - efficient use of resources
  - merchandise range
  - merchandising, pricing and ticketing
  - minimum stock levels required
  - stock rotation and replenishment
  - storage of stock
- store promotional themes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- implements and instructs staff regarding store display, merchandising, ticketing and pricing policies and procedures
- coordinates and monitors display, promotion and presentation of merchandise according to store policies and procedures and legislative requirements
- identifies products to be advertised or promoted according to store merchandising policies
- coordinates construction and maintenance of displays within time schedule set in regard to advertising, catalogues, special offers and in-store promotions in a safe and secure manner
- informs staff of pricing policies, promotions, special events, display standards and requirements, and timing for dismantling and disposing of displays
- evaluates and reports effectiveness of store merchandising and promotional activities to management and staff as required by store policies and procedures.

Context of and specific resources for assessment

Assessment must ensure access to:

- a real or simulated retail work environment
- pricing and ticketing equipment
- merchandise for display
- display materials and props
- relevant documentation, such as:
  - store policy and procedures manuals on merchandising
  - WHS requirements

© Commonwealth of Australia, 2025 HumanAbility

- manufacturer instructions and operation manuals on electronic ticketing equipment
- legislation and statutory requirements
- industry codes of practice
- a work team.

Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of performance in the workplace • third-party reports from a supervisor • customer feedback • answers to questions about specific skills and knowledge.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

Display standards and requirements may include:	• maintaining existing displays • safety • setting up new displays • ticketing and display signage.
Staff may be:	• from a range of social, cultural and ethnic backgrounds • from within or outside own work team • full-time, part-time, casual or contract.
Displays may be located in a variety of areas, including:	• fixtures on floor • interior or exterior • permanent or temporary • publicly accessible areas • shelves • walls • windows.
Display information may include:	• discount information • price

© Commonwealth of Australia, 2025 HumanAbility

- product brand
- special guarantees
- product characteristics, such as:
  - size
  - weight capacity
  - materials.

Customers may include:

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Interpret a visual merchandising plan.	1.1. Identify ***design requirements*** of visual merchandising plan or manual. 1.2. Source ***resources required*** to implement plan. 1.3. Identify ***factors that may affect the plan***. 1.4. Apply organisation's visual merchandising standards to the plan.
2. Monitor display requirements.	2.1. Regularly monitor display to ensure it meets the requirements of the ***visual merchandising plan***. 2.2. Identify ***damage or changes to the display***. 2.3. Take action to rectify unwanted changes to the display.
3. Maintain displays in line with organisational requirements and plan.	3.1. Maintain display so that it is clean and tidy. 3.2. Make additions or changes to display to ensure it consistently adheres to the visual merchandising plan. 3.3. Maintain organisation's requirements for visual merchandising in the display.
4. Contribute to the visual merchandising standards of the organisation.	4.1. Interpret visual merchandising standards of the organisation. 4.2. Identify opportunities for improving visual merchandising standards. 4.3. Make contributions to the visual merchandising standards as appropriate.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- artistic interpretation skills to create displays according to visual merchandising standards
- communication skills to share ideas
- creative thinking skills to generate ideas for improving visual merchandising standards
- literacy skills to interpret visual merchandising manuals

© Commonwealth of Australia, 2025 HumanAbility

- observation skills to identify damage to displays or deviations from visual merchandising standards
- practical skills to maintain and update displays according to the visual merchandising plan

Required knowledge

- basic design principles
- basic principles of visual merchandising
- work health and safety (WHS) requirements relating to monitoring displays
- organisation's visual merchandising principles
- resources required to implement visual merchandising plans
- procedures for safe use of tools, equipment and materials used in visual merchandising displays

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- interprets and identifies the design requirements of a visual merchandising plan
- monitors the display closely and completes regular maintenance to ensure it meets the requirements of the visual merchandising plan and the organisation's visual merchandising standards
- contributes appropriately to the ongoing development of the organisation's visual merchandising standards.

Context of and specific resources for assessment

Assessment must ensure access to:

- a real or simulated retail visual merchandising work environment
- relevant documentation, such as:
  - store policy and procedures manuals
  - store visual merchandising standards.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge.

Guidance information

Holistic assessment with other units relevant to the industry sector,

© Commonwealth of Australia, 2025 HumanAbility

for assessment workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

Design requirements may include:
- colours used
- functionality
- layout of display
- location of display in store
- merchandise for display
- size of display.

Resources required may include:
- fixtures and fittings
- lights
- materials
- people
- supports
- time.

Factors that may affect the plan may include:
- availability of display stands and structures
- availability of staff
- budget requirements
- merchandise availability
- store promotions
- time requirements.

Visual merchandising plan may include:
- display location
- retail image
- store plan and design.

Damage or changes to the display may include:
- changes in the appearance of the display
- damage to fixtures, fittings or display supports
- damage to items on display.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- interpersonal skills to:
  - carry out market research
  - generate ideas and discuss with relevant personnel through clear and direct communication

© Commonwealth of Australia, 2025 HumanAbility

- ask questions to identify and confirm requirements
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- collaborate with team members

- literacy and numeracy skills to:
  - interpret store policy and procedures
  - conduct research
  - analyse data
  - generate reports

Required knowledge

- store policy and procedures in regard to:
  - accessing documentation
  - promoting store image
- market research methods
- evaluation methods
- creative thinking techniques
- techniques in interpersonal communication

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- analyses components of the store image by accessing relevant store documentation
- promotes the store image in an appropriate manner
- researches market demands using appropriate market research techniques
- accurately profiles store customers
- generates ideas for attracting customers to store
- selects and develops a suitable idea in collaboration with others
- presents and discusses idea with supervisor
- evaluates idea to ensure that it meets requirements for target customers
- implements the idea according to store policies and budgetary requirements.

© Commonwealth of Australia, 2025 HumanAbility

Context of and specific resources for assessment	Assessment must ensure access to:
	• a retail work environment
	• relevant documentation, such as:
	  • store policy and procedures manuals
	  • store documentation in relation to store image
	  • market data.

Methods of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of the candidate in the workplace • third-party reports from a supervisor • case studies • research reports • written or verbal questioning to assess knowledge and understanding • review of portfolios of evidence and third-party workplace reports of on-the-job performance.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Components of the store image may include:	• logo • products • services • layouts • displays • tickets • visual merchandising • promotional events and themes.
Store documentation may include:	• sales reports • customer surveys • market research.
Appropriate areas for research	• location

© Commonwealth of Australia, 2025 HumanAbility

may focus on:	• consumer • product • brand • price • layout • advertising.
Market research techniques may include:	• interviews • observations • surveys • questionnaires.
Store policy may relate to:	• marketing • market research.
Data may include:	• internal: customer orders, random surveys, complaints, returns • external: ABS statistics, books, newspaper reports, supplier information.
Customers may include:	• new or repeat contacts • external and internal contacts • business customers or individuals • customers with routine or special requests • people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.
Demographic ***profile*** may include:	• age • buying power • family structures • employment patterns • education levels • tourism • mobility • occupations • marital status • cultural and ethnic background • income levels • population size.
Changing trends may include:	• tourism • immigration • technology • selling approaches

© Commonwealth of Australia, 2025 HumanAbility

	• leisure time • environmental issues • discount operators • quality demands • advances in technology.
Customer demands may vary according to:	• preference • health factors • age • cultural group • dietary issues • price.
Ideas may be generated using techniques such as:	• product association • brainstorming • visualising • telling stories • creative writing • lateral thinking • mind mapping, drawings • using prompts.
Methods for attracting customers may include:	• advertising • seasonal promotions • new product launches • public relations • publicity.
Relevant personnel may include:	• team leader • supervisor • manager.
Methods used to ***evaluate*** ideas may include:	• developing checklists • discussing the process with colleagues or supervisors • writing a report of the outcomes.

SIRXRPK001A Recommend health and nutritional products

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
Second Release	Editorial updates

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to recommend and provide advice on health and nutritional products and services to customers.

Application of the Unit

This unit applies to frontline service personnel who provide advice to customers and other sales staff on a range of health and nutritional products and services,, including their characteristics, features, indications, contra-indications, technical information and storage requirements.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Research and develop product knowledge.	1.1. Develop ***product knowledge*** by accessing relevant ***sources of information***. 1.2. Research and apply ***comparisons between products***.
2. Identify health and nutritional products.	2.1. Identify store health ***product range*** according to relevant product information.
3. Recommend health and nutritional products.	3.1. Apply product knowledge to advise ***customers*** and other ***members of staff*** on available products. 3.2. Convey product information according to ***legislative requirements*** to assist customers' purchase decisions. 3.3. Promote specials and new lines to customers according to store ***policy and procedures***. 3.4. Recommend ***complementary products*** to clients according to store policy.
4. Advise on health and nutritional services.	4.1. Advise customers on store range of products, services and complementary therapy consultant services where applicable according to store policy and procedures. 4.2. Question customers to determine nature of problem and offer solutions according to nature of problem, available product information, and store policy. 4.3. Schedule appointments with complementary therapy consultant services, where applicable, according to availability of consultant and store procedures.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- interpersonal communication skills to:
  - develop and apply product knowledge by providing advice to customers and staff, including those with special needs such as dietary

© Commonwealth of Australia, 2025 HumanAbility

    - promote products and advise on health and nutritional services through clear and direct communication
    - ask questions to identify and confirm requirements, use language and concepts appropriate to cultural differences
    - use and interpret non-verbal communication
    - handle difficult customers
- literacy skills to:
    - read and interpret product labels
    - read and understanding store policy and procedures
    - schedule appointments where required
- numeracy skills to price, estimate and weigh products

Required knowledge

- store policy and procedures in regard to:
    - sales and customer service
    - methods of dealing with special needs and requests of customers
    - customer complaints
- store health and nutritional product and service ranges, including new lines and seasonal promotions
- indications and contra-indications of health and nutritional products
- relevant industry codes of practice, including:
    - advertising (Therapeutic Goods Administration)
    - stock procurement and stock dispensing
- Complementary Healthcare Council of Australia (CHC) guidelines
- relevant legislation and statutory requirements, including Australian Consumer Law

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • consistently applies store policy and procedures that comply with consumer law and legislative requirements regarding the selling of health and nutritional products and services • continually updates and applies product knowledge in regard to current store health products and services to provide comprehensive advice to customers and staff

© Commonwealth of Australia, 2025 HumanAbility

- consistently advises customers and informs sales team members of major characteristics of store range of health products, including product type, purpose, features and benefits, price, basic production methods and storage requirements
- consistently advises customers on store health services available, and schedules appointments with complementary therapists where applicable.

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant sources of product information
- relevant documentation, such as:
  - store policy and procedures manuals
  - industry codes of practice and relevant legislation
- an appropriate range of health and nutritional products and services
- a range of customers with different requirements.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- a role play
- customer feedback
- written or verbal answers to questions about specific skills and knowledge
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Product knowledge may include:

- type
- purpose

© Commonwealth of Australia, 2025 HumanAbility

- basic production methods
- features and benefits
- price
- storage requirements
- shelf life
- indications for product use
- contra-indications for traditional and alternative medicines and treatments.

Sources of information may include:

- store or supplier product manuals
- brochures
- product labels
- internet
- designated staff
- product seminars.

Comparisons between products may relate to:

- features and benefits
- method of production
- price
- storage requirements and shelf life.

Product range may include:

- organic food and genetically modified organism (GMO) free
- nutritional supplements such as:
  - vitamins, minerals, amino acids and other nutritional supplements
  - herbs and homeopathic products
  - cell salts
  - food supplements
  - sports supplements and drinks
  - special dietary foods
- complementary medicines and therapies
- natural cosmetics
- health devices such as:
  - water filters
  - magnetic products
  - crystals
- bulk, pre-packaged, refrigerated or fresh produce
- confectionery, snack foods and drinks
- books
- music.

Customers may include:

- those with routine or special requests, including

© Commonwealth of Australia, 2025 HumanAbility

	dietary requirements • regular and new customers • people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.
Members of staff may include:	• new or existing staff • full-time, part-time or casual • people with varying levels of language and literacy • people from a range of cultural, social and ethnic backgrounds.
Legislative requirements may include:	• consumer law • food safety regulations • Trade Practices and Fair Trading Acts • waste disposal • hazardous substances and dangerous goods • environmental protection • pricing procedures, including GST requirements • WHS • privacy laws • customs regulations.
Policy and procedures in regard to:	• selling health and nutritional products and services • interaction with customers • scheduling appointments.
Complementary products may include:	• herbal, homeopathic and aromatherapy products • other natural and traditional remedies (e.g. Chinese, Ayurvedic, Bach flower essences) • massage oils • personal hygiene products • natural make-up products.

SIRXSLS201 Sell products and services

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is a revised unit, based on and equivalent to SIRXSLS001A Sell products and services.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to sell products and services in a retail environment.

It involves the use of sales techniques and encompasses key selling skills, from approaching the customer to closing the sale.

It requires a basic level of product knowledge and the recognition and demonstration of verbal and non-verbal communication skills to determine customer requirements, sell the benefits of products and services, overcome objections and close sales.

Personal evaluation is used to maximise sales, according to industry codes of practice, relevant legislation and store policy.

Application of the Unit

This unit applies to frontline sales personnel.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Develop and apply product knowledge.	1.1. Develop ***product knowledge*** by accessing ***relevant sources of information*** and confirm with relevant staff. 1.2. Apply knowledge of the use and application of relevant products and services in interactions with customers according to store policy and ***legislative requirements***. 1.3. Identify gaps in product knowledge and resolve by accessing relevant sources of information.
2. Approach customer.	2.1. Identify ***customers*** by name where possible. 2.2. Develop knowledge of customer buying behaviour by accessing relevant sources of information. 2.3. Determine and apply appropriate timing of customer approach according to store policy and customer behaviour. 2.4. Initiate customer contact according to store policy. 2.5. Convey a positive impression to encourage customer interest according to store policy.
3. Gather and respond to information.	3.1. Apply questioning techniques and listening skills to determine customer buying motives and requirements. 3.2. Interpret and clarify non verbal communication cues. 3.3. Direct customer to specific merchandise according to customer requirements and store policy.
4. Sell benefits.	4.1. Match customer needs to appropriate products and services. 4.2. Communicate knowledge of product features and benefits clearly to customers. 4.3. Describe product use and safety requirements to customers. 4.4. Refer customers to appropriate product specialist as required. 4.5. Answer ***routine customer questions*** about merchandise accurately and honestly or refer to senior sales staff.

© Commonwealth of Australia, 2025 HumanAbility

5. Overcome objections.	5.1. Identify and acknowledge customer objections according to store policy. 5.2. Categorise objections into price, time and merchandise characteristics and consider solutions. 5.3. Offer solutions to customer objections according to store policy. 5.4. Apply ***problem solving*** within personal scope of responsibilities to overcome customer objections or refer to senior staff.
6. Close sale.	6.1. Monitor, identify and respond appropriately to customer buying signals. 6.2. Encourage customer to make purchase decisions. 6.3. Select and apply appropriate method of closing sale.
7. Maximise sales opportunities.	7.1. Recognise and apply opportunities for making additional ***sales*** according to store policy. 7.2. Advise customer of complementary products or services according to customer's identified need. 7.3. Review personal sales outcomes and consider strategies to maximise future sales in consultation with relevant staff.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Re**quired skills**

- communication and interpersonal skills to:
  - handle difficult customers
  - verbal and non-verbal communication skills to:
    - question, listen and observe
    - overcome objections and close sale
- literacy and numeracy skills to:
  - handle payments for goods
  - read product information
  - read store policies and procedures
  - record information
  - weigh and measure goods
- selling skills to use a range of selling techniques

Required knowledge

- customer types and needs, including:
  - customer behaviour and cues

© Commonwealth of Australia, 2025 HumanAbility

    - customer buying motives
    - demographics, lifestyle and income
    - individual and cultural differences
    - types of customer needs, such as:
        - functional
        - psychological
- relevant industry codes of practice, legislation and statutory requirements relating to the sale of products and services
- selling techniques, including:
    - add-ons and complementary sales
    - closing techniques
    - opening techniques
    - overcoming customer objections
    - recognising buying signals
    - using strategies to focus customer on specific merchandise
- specific product knowledge for area or section
- store merchandise and service range
- store policies and procedures in regard to:
    - allocated duties and responsibilities
    - selling products and services and sales performance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- applies product knowledge and uses appropriate sales approach to sell the benefits of products and services, overcome objections and close sales
- uses questioning, listening and observation skills to determine customer requirements
- applies store policies and procedures in regard to selling products and services
- maximises sales opportunities according to store policies and procedures
- applies industry codes of practice, relevant legislation and statutory requirements in regard to selling products and services
- evaluates personal sales performance to maximise future

© Commonwealth of Australia, 2025 HumanAbility

sales.

Context of and specific resources for assessment	Assessment must ensure access to: • a real or simulated retail work environment • relevant documentation, such as policy and procedures manuals • a range of customers with different requirements • a range of merchandise and products appropriate to the retail workplace • product labels and sources of product information.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of the candidate in the workplace • customer feedback • answers to questions about specific skills and knowledge • review of portfolios of evidence and third-party workplace reports of on-the-job performance.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the individual, accessibility of the item, and local industry and regional contexts) may also be included.

Product knowledge may include:	• features and benefits • handling and storage requirements • price • safety features • stock availability • use-by dates • warranties.
Relevant sources of information may include:	• demonstrations • internet • labels • product profiles

© Commonwealth of Australia, 2025 HumanAbility

	• staff members • store or supplier product manuals • store tours • videos.
Legislative requirements may include:	• industry codes of practice • liquor laws • lottery legislation • work health and safety (WHS) • sale of second-hand goods • sale of X and R-rated products • tobacco laws • Australian consumer law and fair trading Acts • trading hours • transport, storage and handling of goods.
Customers may include:	• customers with routine or special requests • internal and external contacts • new or repeat contacts • people from a range of social, cultural and ethnic backgrounds • people with varying physical and mental abilities.
Routine customer questions may relate to:	• availability • features and benefits • price and price reductions • quality.
Problem solving may be affected by:	• resource implications • store policies and procedures.
Sales transactions may be completed:	• face-to-face • online • over the telephone.

SISCAQU001 Test pool water quality

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to conduct pool water tests, record test results and make visual ongoing checks.

This unit applies to those working as pool attendants or aquatic operators in aquatic environments, such as council or commercially operated aquatic and leisure centres. Work is performed according to public health regulatory requirements, organisational policies and procedures, and relevant legislation.

Work may be carried out under supervision or with some autonomy, depending on the individual situation and job role.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 HumanAbility

1. Conduct pool water tests.	1.1 Complete routine pool water tests according to public health regulatory requirements. 1.2 Interpret test results and compare with public health regulatory requirements. 1.3 Identify and report pool water test irregularities to appropriate personnel for corrective action. 1.4 Respond to contamination incidents within scope of own role. 1.5 Conduct regular sample collection and initiate corrective actions as required. 1.6 Perform regular visual checks of pool water quality, identify issues and initiate corrective actions when required.
2. Record test results.	2.1 Record pool water test results accurately. 2.2 Update swimming pool log according to aquatic facility specifications.

Foundation Skills

Foundation skills essential to performance in this unit are explicit in the performance criteria of this unit of competency.

Assessment Requirements for SISCAQU001 Test pool water quality

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- test pool water for the following on a minimum of four separate occasions:
  - free chlorine and/or total bromine
  - total chlorine
  - combined chlorine
  - pH
  - total alkalinity
  - cyanuric acid
  - calcium hardness
  - total hardness
  - temperature
- perform routine visual checks for pool water quality.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- legislation and organisational policies and procedures:
  - public health regulatory requirements in the local area
  - health acts
  - infectious diseases regulations
  - dangerous goods act and regulations
  - work health and safety/occupational health and safety
  - environmental legislation
  - local government regulation
  - roles, responsibilities and limitations of own role
- pool water chemistry terms and their meaning:
  - pH levels
  - alkalinity
  - chlorine and or bromine

© Commonwealth of Australia, 2025 HumanAbility

  - temperature
  - calcium hardness
- types of pool water tests, their purpose and testing procedures
- visual checks made by pool attendants
- equipment and resources used for testing pool water quality
- responses to contamination incidents.

Assessment Conditions

Skills must be demonstrated in:

- a workplace or simulated aquatic facility with an operating pool.

Assessment must ensure use of:

- pool water testing apparatus
- public health regulatory documentation
- organisational policies and procedures.

Assessment activities that allow the individual to:

- conduct regular pool water tests within industry realistic timeframes.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SISCAQU004 Develop and implement pool water maintenance procedures

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to develop, implement, monitor and evaluate systems and procedures for the maintenance of quality pool water in an aquatic recreation facility.

This unit applies to those working autonomously in aquatic leisure centres or community pools, in roles such as program coordinators, swim school coordinators, recreation coordinators or duty managers. Work is performed according to relevant legislation, and organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Develop pool water maintenance	1.1 Evaluate pool water quality maintenance and treatment needs according to regulatory framework.

© Commonwealth of Australia, 2025 HumanAbility

procedures.	1.2 Develop and document systems for pool water maintenance in consultation with appropriate personnel.
2. Implement pool water maintenance procedures.	2.1 Provide accurate and current information and instruction to staff about legislative and technical requirements. 2.2 Delegate testing and treatment tasks according to staff skills. 2.3 Test pool water quality following established procedures. 2.4 Interpret results of tests made by self and others and identify where correction is needed. 2.5 Calculate the amount of chemicals required to correct chemical imbalances in pool water. 2.6 Select and use chemical dosing equipment for treatment of pool water according to manufacturer specifications. 2.7 Monitor pool water quality on ongoing basis, identify issues of concern and respond according to agreed procedures. 2.8 Identify and respond to emergency situations according to agreed procedures. 2.9 Complete accurate documentation
3. Evaluate pool water maintenance procedures.	3.1 Assess effectiveness of pool water maintenance procedures against testing and treatment records. 3.2 Identify and document potential improvements to maintenance procedures. 3.3 Communicate improvements and changes to relevant staff and stakeholders.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret technical content of regulatory requirements.

Assessment Requirements for SISCAQU004 Develop and implement pool water maintenance procedures

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- develop and document pool water maintenance procedures that meet regulatory requirements for at least one aquatic facility that incorporate:
  - monitoring and treatment procedures for:
    - microbiological levels
    - disinfectant levels
    - pH levels
    - clarity levels
  - staff training requirements
  - safety procedures
  - emergency response procedures
  - documentation and reporting
- implement and evaluate pool water maintenance procedures for at least one aquatic facility
- implement emergency procedures in the event of a chemical emergency on at least one occasion.

Knowledge Evidence

Demonstrated knowledge required to do the task outlined in elements and performance criteria of this unit:

- legislation and industry standards relevant to aquatic facility maintenance with specific focus on local requirements:
  - work health and safety/occupational health and safety
  - dangerous goods act and regulations
  - local government regulations
  - building codes and regulations
- organisational policies and procedures:
  - standard operating conditions and levels
  - work health and safety/occupational health and safety
  - risk assessment and control

© Commonwealth of Australia, 2025 HumanAbility

  - handling of hazardous chemicals
  - emergency response
- factors that affect pool water treatment needs in different contexts:
  - condition of aquatic facility
  - location
  - size
  - nature of services provided
  - availability of resources
- characteristics of water quality:
  - pH levels
  - alkalinity
  - chlorine and / or bromine
  - temperature
  - calcium hardness
  - disinfectant levels
- waterborne bacteria and how to enable these to be monitored and controlled safely:
  - pseudomonas
  - aeruginosa
- consultation and communication mechanisms to develop and implement procedural systems
- content considerations for procedure documents:
  - specific testing and treatment procedures
  - safety requirements (chemicals, plant and equipment)
  - emergency response
  - training requirements
  - documentation and reporting requirements
- water treatment processes:
  - routine pool water tests
  - pool water microbiological tests
  - superchlorination
  - shock dosing
  - dechlorination
  - ozonisation or use of sanitizer
  - pool water filtration and recirculation
  - backwashing
  - manual removal of visible contaminants
- features and sources of products for pool water quality maintenance.

© Commonwealth of Australia, 2025 HumanAbility

Assessment Conditions

Skills must be demonstrated in:

- a workplace or simulated aquatic facility or environment.

Assessment must ensure use of:

- a pool for which a maintenance program would be developed
- information about pool water quality maintenance to allow the individual to develop a tailored system
- organisational policies and procedures
- incident reporting documentation
- resources to maintain facility and equipment.

Assessment activities that allow the individual to:

- implement and monitor pool quality maintenance over time
- respond to a chemical emergency situation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SISCAQU008 Instruct water familiarisation, buoyancy and mobility skills

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to develop lesson plans and instruct a broad range of clients in water familiarisation, buoyancy and mobility skills. This involves using drills, activities and games according to best practice principles of aquatic activities.

This unit applies to those conducting learn-to-swim and water safety classes in swimming pools and confined natural shallow water venues. Work is performed according to relevant legislation including working with children and/or vulnerable people checks, organisational policies and procedures and best practice principles.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

1. Develop lesson plans.	1.1 Consider participant group characteristics and identify water familiarisation, buoyancy and mobility skills to be developed. 1.2 Assess participant readiness. 1.3 Determine appropriate instructional methods to acquire the relevant skills. 1.4 Determine appropriate drills, activities and/or games for the participant group. 1.5 Develop and document lesson plans that incorporate key instructional information.
2. Conduct lessons.	2.1 Allocate sufficient space, assemble resources and check equipment for maintenance requirements. 2.2 Provide clear and accurate instruction on drills, activities and/or games. 2.3 Appropriately introduce participants to the water. 2.4 Demonstrate skills and techniques, and monitor the participation and performance of each participant. 2.5 Observe participant movement through water according to principles of movement in water and adjust or refine individual or group performance, as required. 2.6 Select and use communication techniques that encourage and support participants. 2.7 Modify activity, as required according to participant needs and factors that affect skills acquisition. 2.8 Respond to participants experiencing difficulties and answer questions as required. 2.9 Monitor time and complete drills, activities or games within time allocated. 2.10 Complete lesson documentation.
3. Review and adapt instruction.	3.1 Request and respond to feedback from participants. 3.2 Identify aspects needing further emphasis or attention in future sessions. 3.3 Review own performance and identify areas needing improvement. 3.4 Implement modifications to future instruction in response to feedback and review of participant progress.

Assessment Requirements for SISCAQU008 Instruct water familiarisation, buoyancy and mobility skills

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- instruct water familiarisation, buoyancy and mobility skills according to legal, ethical and organisational requirements
- develop and implement at least three lesson plans that individually or cumulatively incorporate the following aspects of water familiarisation, buoyancy and mobility skills and documents the teaching points, class formations, safety and equipment:
  - water familiarisation:
    - entering, leaving and moving through water
    - getting face wet
    - submerging and opening eyes under water
    - regaining a standing position
    - breathing
  - buoyancy and mobility:
    - front, back and side floating
    - gliding
    - torpedo
    - sculling
    - treading water
    - stroke exploration
- use and modify the following instructional strategies for individuals and groups:
  - whole skill
  - whole, progressive part, whole
  - progressive part
  - demonstration
  - command and response
  - experiential or problem-solving
  - techniques to encourage the reluctant participant
- reflect on the following key aspects of instruction:
  - the lesson
  - teaching methods used

© Commonwealth of Australia, 2025 HumanAbility

- risk management
- potential ways to enhance learning opportunities.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- legal, ethical and organisational requirements and responsibilities for instruction:
  - work health and safety/occupational health and safety
  - working with children
  - duty of care/safe conduct of activities
  - best practice principles of aquatic activities
  - mandatory reporting
  - implications of negligence
  - waivers and exclusion clauses
  - insurance
  - anti-discrimination and equal opportunity
  - privacy and confidentiality
  - communication protocols
  - a recognised swimming teachers code of conduct
  - swimwear and personal protective equipment
- characteristics of participant groups and appropriate drills for the various characteristics:
  - age
  - stage of development
  - physical or intellectual characteristics
  - cultural and situational factors
- aspects of a body in water:
  - body position and density
  - vertical and lateral rotation
  - balance
- forces effecting movement through water and the factors that affect each force:
  - buoyancy:
    - density
    - shape
    - symmetry and asymmetry

    - water friction
    - levers
  - resistance:
    - skin
    - frontal
    - eddy
- principles of session planning to develop activity-specific plans:
  - expectations and aspirations of clients
  - numbers of clients
  - client background, experience and developmental stage
  - staff and financial resources
  - cultural and political influences
  - involvement and interest of parents
  - length and number of sessions
  - equipment, materials and provisions
  - precautions and other health and safety information
- learning styles to enable the use of a variety of activities to cater for different client learning preferences:
  - auditory
  - kinaesthetic
  - visual
  - sensory
- principles of growth and development to select and sequence appropriate tasks and activities
- instructional methods and strategies, how and when they are used:
  - whole skill
  - whole, progressive part, whole
  - demonstration
  - command and response
  - experiential or problem-solving
  - techniques for reluctant participants
- conditions, factors and external influences that effect participant uptake of skill:
  - physical, intellectual and emotional characteristics
  - environmental conditions
  - other facility users
  - spectators
  - parents
  - other instructors
  - background noise and distractions
  - class size

© Commonwealth of Australia, 2025 HumanAbility

  - water depth
  - available water space
- potential areas of ongoing instructor improvement:
  - knowledge
  - instructional skills and techniques
- communication techniques that support and encourage participants
- group control techniques
- principles of movement in water and best practice principles of aquatic activities to enable safe, effective and consistent instruction in buoyancy and mobility skills
- water familiarisation, buoyancy and mobility skills to enable accurate and comprehensive instruction to participants
- use, care and maintenance of equipment
- cardiopulmonary resuscitation techniques to enable initial response to emergencies as per Australian Resuscitation Council (ARC) guidelines.

Assessment Conditions

Skills must be demonstrated in:

- a workplace or simulated aquatic facility or confined natural shallow water environment.

Assessment must ensure use of:

- organisational policies and procedures appropriate to risk management
- swimming instructional equipment
- participants to whom instruction is provided, these can be:
  - participants in a workplace, or
  - individuals who participate in project activities, role plays or simulated activities, set up for the purpose of assessment, within a training organisation.

Assessment must ensure access to:

- first aid facilities and equipment.

Assessment activities that allow the individual to:

- develop and conduct lessons in industry required timeframes
- respond to problems that typically arise in water familiarisation, buoyancy and mobility skills instruction.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SISFFIT003 Instruct fitness programs

Modification History

Not applicable.

Application

This unit describes the performance outcomes, knowledge and skills required to plan, instruct and evaluate a variety of fitness programs and circuit sessions aimed at the health-related components of fitness. It involves programming and instruction of cardiovascular, resistance and flexibility programs for low or moderate risk clients who have completed industry endorsed pre-exercise screening and risk stratification procedures.

This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment. Work is performed according to relevant legislation and organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify client fitness	1.1 Consider and confirm client needs, expectations and

© Commonwealth of Australia, 2025 HumanAbility

requirements.	preferences using suitable questioning techniques. 1.2 Review and advise client of outcomes of pre-exercise health screening procedures. 1.3 Refer client to medical or allied health professionals as required. 1.4 Identify potential barriers to participation. 1.5 Develop and document client profile for re-evaluation purposes.
2. Develop program plans.	2.1 Determine type of training, training methods and equipment required to achieve client goals. 2.2 Calculate total training volume required to achieve client goals. 2.3 Develop and document program plans that incorporate key instructional information to target components of fitness. 2.4 Develop customised training sessions that include a variety of exercises and equipment to meet client needs.
3. Conduct exercise sessions.	3.1 Allocate sufficient space, assemble resources and check equipment for safety and maintenance requirements. 3.2 Provide clear exercise instructions and confirm client understanding. 3.3 Demonstrate exercises, techniques and equipment to client. 3.4 Monitor participation and performance to identify signs of exercise intolerance and modify as required. 3.5 Select and use communication techniques that encourage and support clients. 3.6 Modify session as required considering basic mechanics, safety and fitness outcomes. 3.7 Respond to clients experiencing difficulties and answer questions as required. 3.8 Complete session documentation and progress notes.
4. Evaluate program.	4.1 Monitor and evaluate exercise program at appropriate intervals. 4.2 Request and respond to feedback from clients. 4.3 Review own performance and identify areas needing improvement. 4.4 Identify aspects needing further emphasis or attention in future sessions. 4.5 Evaluate program or activities and discuss modifications to program. 4.6 Document and update records of evaluation and modification of programs.

© Commonwealth of Australia, 2025 HumanAbility

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret fitness industry and equipment manufacturer guidelines • interpret pre-exercise health screening results and documentation.
Oral communication skills to:	• use active listening and questioning techniques to determine client preferences and offer and explain suitable exercises and programs.
Numeracy skills to:	• calculate heart rate and use exercise intensity guidelines, including rate of perceived exertion • determine availability and appropriate timing for area use • determine safe and effective timing within sessions and programs.
Learning skills to:	• maintain current knowledge of fitness training methods and equipment.
Problem-solving skills to:	• modify session and program as required with consideration and awareness of expected training adaptations specific to client.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for SISFFIT003 Instruct fitness programs

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role. This must include period(s) totalling at least eight hours comprising at least eight different client contact sessions, and:

- plan, document, implement and evaluate at least five fitness programs using the principles of program design to suit the needs of clients with goals related to health-related components of fitness
- plan, document, implement and evaluate at least three circuit training sessions with interrelated components
- conduct sessions that individually or cumulatively incorporate:
  - demonstration, explanation, and instruction in the following:
    - cardiovascular exercises
    - dynamic warm-up and cool-down components
    - resistance exercises:
      - squat
      - static lunge
      - push-up
      - triceps dips
      - prone back extension
      - shoulder press
      - abdominal crunches
      - bent over row
      - lateral raise
      - modified dead lift
      - prone hover
    - flexibility exercises – static and dynamic stretches
  - injury prevention strategies specific to client needs and program
- modify programs for clients, addressing at least three of the following:
  - technical requirements
  - changing needs due to fitness adaptations
  - changing goals
  - client needs, objectives, likes and dislikes

© Commonwealth of Australia, 2025 HumanAbility

- technical difficulty adjustments of exercises.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- legislative and regulatory requirements regarding fitness programs, sessions and circuit sessions:
  - work health and safety/occupational health and safety
  - duty of care
- organisational policies and procedures in regards to:
  - pre-session screening
  - overcrowding
  - ventilation and/or climate control
  - hygiene
  - participant to instructor ratio
  - emergency
  - risk management
  - standards of personal presentation
  - participant's clothing and footwear
  - use, care and maintenance of equipment
- principles of program design:
  - FITT
  - overload
  - progression
  - specificity
- fitness program planning for improvement of health-related components of fitness:
  - body composition
  - muscle endurance
  - muscle strength
  - cardiorespiratory endurance
  - flexibility
- program design and variables relevant to health-related components of fitness and factors affecting program design
- components of a circuit training session plan:
  - phases:
    - preparation
    - conditioning
    - recovery
    - adaptation

© Commonwealth of Australia, 2025 HumanAbility

    - rest intervals
    - required equipment
    - floor plan for equipment arrangement
- circuit training session planning considerations and inclusions:
    - equipment
    - layout
    - number of participants
    - phases of session
- training methods and consideration of intensity, program types, sets and reps, circuits, matrices, super-sets, pre-fatigue and interval training
- benefits of fitness sessions and circuit sessions
- contraindications and precautions to participation in session, and suitable modification options for participants where the safety of the participant is not compromised
- exercises and programming requirements for:
    - flexibility:
        - dynamic or active range of motion
        - static
    - muscular endurance and strength:
        - balance and coordination
        - body weight
        - equipment
    - cardiorespiratory endurance
- effects of different exercises on the major body systems:
    - cardiovascular
    - muscular
    - nervous
    - skeletal
- methods of monitoring exercise intensity, techniques and progression:
    - heart rate
    - rate of perceived exertion
    - observation of technique
    - completed sets and repetitions
    - loads lifted
- manufacturer and exercise equipment specifications for safe use and techniques
- signs and symptoms of exercise intolerance
- motivational techniques and exercise adherence strategies.

Assessment Conditions

Skills must be demonstrated in:

© Commonwealth of Australia, 2025 HumanAbility

- a fitness industry workplace or simulated environment with clients with real or simulated health and fitness goals..

Assessment must ensure access to:

- legislation and organisational policies and procedures in relation to fitness programs and circuit training
- industry endorsed risk stratification procedures.

Assessment must ensure use of:

- a variety of fitness industry standard equipment:
  - resistance
    - free weights
    - machines
    - proprioception and stability training equipment
  - cardiovascular training
- an appropriate area for the delivery of circuit training sessions
- client record forms
- documented session plans with inclusion of identified modifications/adjustments needed
- clients; these can be:
  - clients in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment within a training organisation.

Assessment activities that allow the individual to:

- develop a variety of fitness programs over a period of time suitable for ensuring adequate time for the client to achieve several health-related components of fitness goals
- demonstrate ability to instruct a variety of circuit sessions, catering for :
  - beginners, intermediate and advanced participants
  - low and high impact.

Assessors must satisfy the Standards for Registered Training Organisation’s requirements for assessors, and:

- have achieved a Certificate IV in Fitness or above; and
- have at least 1 year consecutive post qualification fitness industry experience in the application of the skills and knowledge of the Certificate IV in Fitness.

SISFFIT013 Instruct exercise to young people aged 13 to 17 years

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to plan, instruct and evaluate exercise for young people aged thirteen to seventeen years. It requires the ability to supervise young people using fitness facilities and relevant equipment to promote functional capacity and fitness.

It involves using industry endorsed risk management protocols when determining the provision of suitable exercise services. This may include guidance from relevant medical or allied health professionals.

This unit applies to personal trainers who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work autonomously in controlled and uncontrolled fitness environments.

Work is performed according to relevant legislation including working with children or vulnerable people checks, and organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	**PERFORMANCE** CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify fitness requirements.	1.1 Consider and discuss needs, expectations and preferences using suitable questioning techniques. 1.2 Review and advise participant and parent or carer of outcomes of pre-exercise health screening procedures. 1.3 Refer participant to medical or allied health professionals as required. 1.4 Select and use appropriate baseline functional capacity or fitness assessments, as required. 1.5 Identify potential barriers to participation. 1.6 Develop and document client profile for re-evaluation purposes.
2. Plan exercise session.	2.1 Determine type of training, training methods and equipment required to achieve participant goals. 2.2 Gain parent or carer consent for participation in specified exercise program. 2.3 Develop and document program plans that incorporate participant goals, abilities, and stage of growth and development within instructional information. 2.4 Develop customised training sessions that include a variety of exercises and equipment to meet participant needs.
3. Instruct exercise session.	3.1 Allocate sufficient space, assemble resources and check equipment for safety and maintenance requirements. 3.2 Provide clear exercise instructions and confirm participant understanding. 3.3 Demonstrate exercises, techniques and equipment to participant. 3.4 Monitor participation and performance to identify signs of exercise intolerance and modify as required. 3.5 Select and use communication techniques that encourage and support participants. 3.6 Modify session as required considering basic mechanics, safety and fitness outcomes. 3.7 Respond to participants experiencing difficulties and answer questions as required. 3.8 Complete session documentation and progress notes.

© Commonwealth of Australia, 2025 HumanAbility

4. Evaluate exercise session.	4.1 Monitor and evaluate exercise session at appropriate intervals. 4.2 Evaluate exercise session according to participant, parent or carer feedback, professional judgement and outcomes of sessions. 4.3 Review own performance and identify areas needing improvement. 4.4 Identify aspects needing further emphasis or attention in future sessions. 4.5 Evaluate program or activities and discuss modifications to future sessions. 4.6 Document and update records of evaluation and modification.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION

Reading skills to:	• interpret equipment manufacturer guidelines to determine:
	  • appropriate use of equipment and facilities to instruct children and adolescents
	  • required adaptations to equipment, facilities or exercise to maximise safety, participation and enjoyment of sessions
	• comprehend organisational policies and procedures regarding roles and responsibilities in exercise prescription and supervision of children and adolescents within the fitness facility or organisation.

Oral communication skills to:	• provide accurate information to children, adolescents, and parents or carers • interact with children, adolescents and parents or carers in an appropriate manner • encourage children and adolescents to participate in an active lifestyle and exercise program.
Numeracy skills to:	• work within time schedules of facilities and program requirements.
Learning skills to:	• maintain knowledge of current industry methods of pre-exercise screening, baseline assessments of fitness and functional capacity and exercise training methods for children and adolescents.

Assessment Requirements for SISFFIT013 Instruct exercise to young people aged 13 to 17 years

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- conduct age and skill appropriate baseline assessments:
  - functional motor skills
  - cardiovascular
  - strength
  - agility
  - flexibility
- plan, implement and evaluate at least five fitness programs for young people that reflect appropriate developmental stages, age and ability variations that incorporate:
  - appropriate selection and monitoring of a range of gym-based cardiovascular and resistance equipment, according to industry guidelines
  - demonstration, explanation, and instruction of exercises relevant to age group
  - suitable order and sequence of activities
  - session components that target the needs and goals of the individual
  - suitable duration, intensity, volume
  - appropriate music selection, where appropriate
  - developmental stages of children and adolescents and age variations in physical, mental and social abilities
  - monitoring of client intensity, techniques, posture and safety
  - technique correction
- use the following communication skills:
  - clear verbal communication
  - modelling and demonstration
  - motivational techniques.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- legislative and regulatory requirements regarding safe and appropriate conduct of exercise for children and young adolescents:

© Commonwealth of Australia, 2025 HumanAbility

    - work health and safety/occupational health and safety
    - duty of care
    - working with children and/or vulnerable people
    - privacy
    - anti-discrimination
- organisational policies and procedures in regards to:
    - industry endorsed risk management protocols, exercise implications and referral requirements
    - ventilation and/or climate control
    - hygiene
    - emergency
    - risk management
    - standards of personal presentation
    - participant's clothing and footwear
    - use, care and maintenance of equipment
    - equipment use and maintenance
    - client supervision
    - incident reporting
- exercise programming and progression principles:
    - FITT
    - overload
    - specificity
    - phasing
    - warm-up
    - conditioning
    - cool down
- health-related components of fitness:
    - cardiorespiratory endurance
    - muscular endurance
    - muscular strength
    - flexibility
    - body composition
- functional exercises for motor skills related to participant needs:
    - hopping, jumping, throwing, kicking, running, walking, skipping
    - agility, proprioception, balance, reaction time and speed based exercises
- purpose and use of gym equipment:
    - free weights
    - pin-loaded resistance equipment
    - skipping ropes
    - balls, including medicine and fit balls

© Commonwealth of Australia, 2025 HumanAbility

    - resistance bands
    - mats
    - cardiovascular equipment, for example treadmill and stepper
- anatomy and physiology related to children and adolescents:
    - thermoregulation
    - cardiovascular system
    - musculoskeletal system
    - nervous system
    - respiratory system
- principles of paediatric and exercise science to enable selection of exercises appropriate to participant characteristics and needs:
    - growth and maturation
    - coordination development and control
    - stability
    - posture in children
    - fundamental skills
    - aerobic capacity
- stages of growth and development in children and adolescents to enable effective planning of programs and selection of exercises:
    - physical
    - social
    - emotional
- exercise implications of age and stages of growth and development:
    - changes in growth rate
    - effect of exercise on growth and development
    - social development
    - physiological characteristics of the child through developmental stages
    - session structures for different ages and/or abilities
    - coordination and motor development
    - communication and instructional skill difficulties
    - behavioural change and social needs
    - exercise requirements for different stages of development
- signs and symptoms of major types of injuries typical to children and young adolescents:
    - sprains
    - osteochondroses (severs, patellofemoral pain syndrome, legg-calve-perthes)
    - shoulder instability
    - joint hypermobility
- injury risks related to exercise participation of children and young adolescents
- motivational techniques which incorporate:
    - goal setting

© Commonwealth of Australia, 2025 HumanAbility

  - positive feedback
  - foundation of play in exercise prescription
- signs and symptoms of exercise intolerance and appropriate management strategies
- the medical and allied health sector to enable appropriate recommendations or referrals be made to parents or carers.

Assessment Conditions

Skills must be demonstrated in:

- a fitness industry workplace or simulated environment that offers a variety of appropriate services and facilities suitable for youth aged 13-17 years.

Assessment must ensure use of:

- a variety of equipment appropriate for use by children and young adolescents
- industry endorsed risk stratification procedures
- organisational policies and procedures related to working with children
- session plan templates with space to identify modifications/adjustments needed
- participants aged 13-17 years; these can be:
  - participants in the workplace, or
  - individuals who participate in project activities, role plays or simulated activities, set up for the purpose of assessment, within a training organisation.

Assessment must ensure access to:

- manufacturer guidelines on equipment safety and usage.

Assessment activities that allow the individual to:

- use fitness industry endorsed risk stratification procedures and conduct baseline assessments suitable for adolescents aged 13 years and over:
  - functional motor skills, i.e. hopping, jumping, throwing, kicking, running, walking, skipping
  - cardiovascular endurance
  - muscle strength and endurance
  - agility
  - flexibility
  - body composition, if appropriate.

Assessors must satisfy the Standards for Registered Training Organisation’s requirements for assessors, and:

- have achieved a Diploma of Fitness or above; and

© Commonwealth of Australia, 2025 HumanAbility

- have at least 1 year consecutive post qualification fitness industry experience in the application of the skills and knowledge of the Diploma of Fitness.

SISFFIT014 Instruct exercise to older clients

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to plan, instruct and evaluate exercise for male clients aged forty five and over, and female clients aged fifty five and over. It requires the ability to provide instruction of exercise programs aimed at improving health and fitness for older clients, with consideration of aspects of healthy ageing. It also covers promotion of incidental physical activity to clients to minimise the risk of developing sedentary lifestyle behaviours. It involves using industry endorsed risk stratification procedures when determining the provision of suitable advice and referral requirements.

This unit applies to fitness instructors who work in a variety of fitness locations such as fitness, leisure and community centres. These individuals typically work independently with some level of autonomy in a controlled environment.

Work is performed according to relevant legislation and organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify client fitness requirements.	1.1 Consider and confirm client needs, expectations and preferences using suitable questioning techniques. 1.2 Review and advise client of outcomes of pre-exercise health screening procedures. 1.3 Refer client to medical or allied health professionals as required. 1.4 Select and use appropriate baseline functional capacity or fitness assessments, as required. 1.5 Identify common barriers to exercise participation by older clients. 1.6 Recognise and explain benefits of exercise for older populations and the role of exercise in reducing risks associated with ageing. 1.7 Receive guidance from medical or allied health professionals for exercise participation, as required. 1.8 Develop and document client profile for re-evaluation purposes.
2. Develop program plans.	2.1 Identify settings and program considerations that support safe and sustainable exercise participation for older clients. 2.2 Determine type of training, training methods and equipment required to achieve client goals. 2.3 Develop and document program plans that incorporate instructional information and guidance from medical or allied health professionals if required. 2.4 Explain benefits of exercise and anticipated structural and physiological adaptations as they relate to client goals and needs. 2.5 Develop customised training sessions that include a variety of exercises and equipment to meet client needs. 2.6 Discuss and confirm client understanding of potential signs and symptoms of intolerance contraindications to exercise and recommended precautions.
3. Instruct exercise session.	3.1 Allocate sufficient space, assemble resources and check equipment for safety and maintenance requirements. 3.2 Provide clear exercise instructions and confirm client understanding. 3.3 Demonstrate exercises, techniques and equipment to

© Commonwealth of Australia, 2025 HumanAbility

	client. 3.4 Explain any precautions for exercise relevant to client age, ability and risk status. 3.5 Monitor participation and performance to identify signs of exercise intolerance and modify as required. 3.6 Monitor client intensity, techniques, posture and safety, and modify program as required. 3.7 Seek ongoing guidance from, or refer client to, medical or allied health professionals, as appropriate. 3.8 Select and use communication techniques that encourage and support clients. 3.9 Modify session as required considering basic mechanics, safety and fitness outcomes. 3.10 Respond to clients experiencing difficulties and answer questions as required. 3.11 Complete session documentation and progress notes.
4. Evaluate program.	4.1 Monitor and evaluate exercise program at appropriate intervals. 4.2 Provide written and verbal feedback to medical or allied health professionals, as required. 4.3 Request and respond to feedback from clients. 4.4 Review own performance and identify areas needing improvement. 4.5 Identify aspects needing further emphasis or attention in future sessions. 4.6 Evaluate program or activities and discuss modifications to program. 4.7 Document and update records of evaluation and modification of programs.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret and evaluate pre-exercise screening and baseline assessment results.
Oral communication skills to:	• explain course of action, including referral and fitness services, as required.

Assessment Requirements for SISFFIT014 Instruct exercise to older clients

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role. This must include period(s) totalling at least five hours comprising at least five different client contact sessions and:

- use industry endorsed pre-exercise screening tools and risk stratification processes to identify the risk level of at least ten older clients
- prepare referral letters to relevant medical or appropriate allied health professionals with supporting pre-exercise health screening documentation for at least two older clients
- plan, document, implement and evaluate suitable exercise programs within scope of practice for older clients:
  - three clients that don’t require guidance or instruction provided by medical or allied health professionals
  - two clients in response to guidance or instruction provided by medical or allied health professionals
- conduct sessions that incorporate:
  - appropriate selection and monitoring of a range of equipment appropriate for the client’s functional ability, according to industry guidelines
  - demonstration, explanation, and instruction of exercises
  - injury prevention strategies specific to client needs and to minimise the risk of falls
  - suitable order and sequence of activities
  - session components that target the needs and goals of the individual
  - suitable duration, intensity, volume
  - ongoing clear and constructive feedback to clients and, where required, medical or allied health professionals
  - use of evidence based exercise adherence strategies
  - minimise the risk of falls
  - variations and structure suitable to the needs of the older client
  - provision of hydration and rest opportunities as required
  - explanation of the role of exercise and incidental physical activity in prevention of chronic diseases and functional decline that may or may not be associated with ageing and reducing the risk of falls
- modify programs for clients, addressing at least three of the following:
  - technical requirements

© Commonwealth of Australia, 2025 HumanAbility

  - changing needs due to fitness adaptations
  - changing goals
  - client needs, objectives, likes and dislikes
  - technical difficulty adjustments of exercises
  - medical or allied health professional feedback
- conduct periodic ongoing evaluation of outcomes from fitness programs in accordance with the established program goals and industry best practice.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- legislative and regulatory requirements regarding specific population exercise participation:
  - privacy
  - anti-discrimination
  - work health and safety/occupational health and safety
  - duty of care
- organisational policies and procedures in regards to specific population exercise participation:
  - industry endorsed risk management protocols, exercise implications and referral requirements
  - overcrowding
  - ventilation and/or climate control
  - hygiene
  - emergency
  - standards of personal presentation
  - participant’s clothing and footwear
  - use, care and maintenance of equipment
- precautions to exercise relevant to the older adults in accordance with industry guidelines where applicable
- signs and symptoms of exercise intolerance and appropriate management strategies
- situations where cessation of exercise program is required, this may include but is not limited to:
  - chest pain at rest or during activity
  - severe breathlessness/feeling faint/dizziness/loss of balance
  - unusual fatigue or shortness of breath
  - asthma aggravation/attack
  - significant muscle, bone or joint pain (beyond what is normally expected during exercise)

© Commonwealth of Australia, 2025 HumanAbility

    - situation whereby the fitness professional makes a judgement that continuing the session is beyond their professional capabilities and scope of practice, and could potentially compromise client health and safety
- role of medical or allied health professionals for referral processes:
    - accredited exercise physiologist
    - accredited practising dietician
    - chiropractor
    - continence nurse advisor
    - general practitioner
    - occupational therapist
    - osteopath
    - physiotherapist
    - podiatrist
    - psychologist
    - remedial massage therapist
    - sports doctor
- typical anatomical and physiological considerations for older adults
- common barrier to exercise participation:
    - perceived versus actual barriers
    - initial low fitness level
    - time and access to facilities
    - self-consciousness in client
- methods to overcome barriers to exercise adherence:
    - goal setting
    - feedback
    - healthy habits
- health-related components of fitness:
    - body composition
    - flexibility
    - muscle strength
    - muscle endurance
    - cardiovascular endurance
- awareness of major types of injuries or conditions that may present in older clients that may require referral to a relevant medical or appropriate allied health professional:
    - sprains
    - musculoskeletal
    - cardiovascular
    - respiratory
    - other
- importance of strength and balance training in falls prevention

© Commonwealth of Australia, 2025 HumanAbility

- exercise considerations in regards to the following components of ageing process, injuries and conditions:
  - physiological
  - biomechanical
  - psychological
  - behavioural change and social needs
  - lifestyle and cultural
  - general population characteristics
- awareness of the following injury risks or considerations that may be related to older clients:
  - inadequate skill and physical preparation
  - overtraining
  - biomechanics and exercise technique
  - physical and mental preparation
  - poor core and postural awareness
  - fatigue and recovery
  - history of falls
  - incontinence
- benefits of exercise related to older populations:
  - increased muscle mass
  - maintenance of bone health
  - joint health
  - minimising fat levels to prevent disease
  - improved ability to function in everyday tasks and reduced risk of functional decline that is often associated with ageing
  - prevention of chronic disease related to sedentary lifestyles and ageing
  - reduced risk of falls
- concepts of healthy ageing
- risks of leading a sedentary ageing lifestyle:
  - falls
  - low bone density
  - cardiovascular deficiency.

Assessment Conditions

Skills must be demonstrated in:

- a fitness industry workplace or simulated environment with clients with real or simulated health and fitness goals.

Assessment must ensure access to:

© Commonwealth of Australia, 2025 HumanAbility

- organisational policies and procedures related to older clients
- manufacturer guidelines on equipment safety and usage.

Assessment must ensure use of:

- a variety of equipment appropriate for use by older clients
- industry endorsed risk stratification procedures
- session plan templates with space to identify modifications/adjustments needed
- older clients; these can be:
  - older clients in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessment activities that allow the individual to:

- develop a variety of exercise programs for older clients over a period of time, ensuring adequate time to allow for the implementation of required modifications
- provide advice regarding fitness services and facilities for older clients
- complete and update client records:
  - pre-exercise screening documents
  - program as prescribed
  - modifications
  - client consent
  - copies of any communications.

Assessors must satisfy the Standards for Registered Training Organisation's requirements for assessors, and:

- have achieved a Certificate IV in Fitness or above; and
- have at least 1 year consecutive post qualification fitness industry experience in the application of the skills and knowledge of the Certificate IV in Fitness.

SISFFIT019 Incorporate exercise science principles into fitness programming

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to incorporate an understanding of exercise science principles into fitness instruction, programming and provision of fitness advice.

This unit applies to the use of physiological and mechanical principles in training to improve the health- and skill-related components of fitness of clients who have recently completed industry endorsed pre-exercise screening and risk stratification procedures.

This unit applies to personal trainers who typically work autonomously in controlled and uncontrolled fitness environments. Work is performed according to relevant legislation and organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

essential outcomes	demonstrate achievement of the element.
1. Consolidate understanding of exercise science principles.	1.1 Source and access information on exercise science principles relevant to fitness outcomes. 1.2 Discuss/explain how understanding of exercise science principles contribute to safe/optimum technique and skill development. 1.3 Use a wide range of terminology relevant to exercise science principles and fitness outcomes.
2. Apply knowledge to own professional practice.	2.1 Assess ways in which knowledge of exercise science principles may be used, adapted or challenged in instruction and provision of fitness advice. 2.2 Identify current and emerging knowledge of exercise science principles relevant to development of own professional practice. 2.3 Use knowledge of exercise science principles in day-to-day professional practice. 2.4 Modify approach to fitness programming activities and advice as required.
3. Maintain and update knowledge of exercise science principles.	3.1 Identify and use opportunities to update and expand own knowledge of exercise science principles. 3.2 Monitor response to changes made to own professional practice or instruction. 3.3 Continue to adjust own practice to optimise results.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Oral communication skills to:	• provide clients with information related to exercise in a manner which they can understand and implement to their exercise sessions.
Numeracy skills to:	• calculate forces and implement basic biomechanical concepts and mathematical equations • interpret how equipment and body position can be changed to alter the forces applied to the body.
Learning skills to:	• ensure application of up-to-date exercise science principles.
Problem-solving skills to:	• accommodate the changing anatomical and physiological responses of the body to exercise programming and

© Commonwealth of Australia, 2025 HumanAbility

	instruction • determine how equipment and body position can be changed to alter the forces applied to the body.
Planning and organising skills to:	• develop exercise programs that incorporate complex understanding of the anatomical and physiological adaptations that occur from different types of exercise.

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role. This must include period(s) totalling at least five hours comprising at least five different client contact sessions in a mixture of controlled and uncontrolled environments, and:

- effectively use knowledge of exercise science principles to improve own instructional practice to plan and instruct at least five different client sessions
- conduct sessions that individually or cumulatively incorporate:
  - a variety of exercises which are targeted at health- and skill-related components of fitness, for achieving improvements and adaptations in:
    - muscle contractility and force
    - bone strength
    - nervous system activation
    - submaximal and resting heart rates
    - cardiovascular system adaptations
  - variations of exercise
  - with and without equipment
  - exercises to change:
    - joint action
    - stabilisation of the body
    - forces which act on the body during exercise
  - variations in the contribution of energy from three different energy systems
  - consideration of:
    - musculoskeletal anatomy and physiology
    - mechanical principles
    - physiology concepts.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures in relation to:
  - work health and safety/occupational health and safety

© Commonwealth of Australia, 2025 HumanAbility

  - confidentiality of client information
  - ethical considerations
- industry endorsed client pre-exercise health screening processes
- industry endorsed risk stratification procedures, exercise implications and referral requirements
- the physiology related to achieving improvements in the following health-related components of fitness:
  - body composition
  - flexibility
  - muscle strength
  - muscle endurance
  - cardiorespiratory endurance
- the physiology related to achieving improvements in the following skill-related components of fitness:
  - balance
  - agility
  - power
  - speed
  - reaction time
  - coordination
  - proprioception
- musculoskeletal anatomy and physiology related to achieving improvements in fitness:
  - structure and function of the skeleton
  - joints in the skeleton
  - cellular structure of muscle fibres
  - sliding filament theory
  - effects of different types of exercises on muscle fibre types
  - muscle attachment sites for the major muscles of the body
  - structure, range of motion and function of muscles, muscle groups and directional terms
  - location and function of skeletal muscle involved in physical activity
  - anatomical axis and planes with regard to joint actions and different exercises
  - joint actions brought about by specific muscle group contractions
  - joints/joint structure with regard to range of motion/movement and injury risk
  - joint movement potential and joint actions
  - the specific roles of the nervous system in controlling skeletal muscle:
    - the central nervous system
    - the peripheral nervous system including somatic and autonomic nervous systems
  - nervous control and transmission of a nervous impulse
  - structure and function of a neuron

© Commonwealth of Australia, 2025 HumanAbility

  - role of a motor unit
  - function of muscle proprioceptors and the stretch reflect
  - reciprocal inhibition and its relevance to exercise
  - the neuromuscular adaptations associated with exercise training
  - the benefits of improved neuromuscular coordination/efficiency to exercise performance
- concepts and principles of mechanics relevant to fitness:
  - forces which act on the body during exercise
  - common biomechanical terms
  - lever system in the body
  - structure and function of the stabilising ligaments and muscles of the spine
  - the local muscle changes that can take place due to insufficient stabilisation
  - the potential effects of poor posture on movement efficiency
  - the potential problems that can occur as a result of postural deviations
  - the benefits, risks and applications of the following types of stretching: static (passive and active) and dynamic
  - proprioceptive neuromuscular facilitation (PNF)
  - different exercises that can improve posture
- concepts and principles of the physiology of the body in relation to fitness:
  - the function of heart valves
  - coronary circulation
  - short and long term effects of exercise on blood pressure
  - the effects of exercise on bones and joints including the significance of weight bearing exercise
  - delayed onset muscle soreness (DOMS)
  - exercises or techniques likely to cause delayed onset muscle soreness
  - the short and long term effects of different types of exercise on muscle
  - the benefits and limitations of different methods of monitoring exercise intensity including: talk test, rate of perceived exertion
  - heart rate monitoring and the use of different hear t rate zones
  - physiological responses to physical activity in various environmental conditions
- the expected physiological responses, and appropriate action, to:
  - a single bout of exercise
  - physical activity in various environmental conditions
  - long term exercise programs
- scope of practice for a personal trainer.

Assessment Conditions

Skills must be demonstrated in:

© Commonwealth of Australia, 2025 HumanAbility

- a fitness industry workplace or simulated environment with clients with real or simulated health and fitness goals.

Assessment must ensure access to:

- current industry endorsed best practice for client pre-exercise health screening and risk stratification
- organisational policies and procedures relevant to incorporating exercise science principles into fitness programming.

Assessment must ensure use of:

- informed consent forms
- client record forms
- planning and evaluation documentation with inclusion of identified improvements to professional practice
- clients; these can be:
  - clients in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessment activities that allow the individual to:

- demonstrate ability to incorporate exercise science principles into the instruction of sessions catering for:
  - beginners, intermediate and advanced participants
  - low and high impact.

Assessors must satisfy the Standards for Registered Training Organisation's requirements for assessors, and:

- have achieved a Diploma of Fitness or above; and
- have at least 1 year consecutive post qualification fitness industry experience in the application of the skills and knowledge of the Diploma of Fitness.

SISFFIT031 Implement injury prevention strategies

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to incorporate an understanding of injury prevention into fitness instruction, programming and provision of fitness advice. It involves the application of foundation knowledge and skills to support the encouragement of healthy posture, effective movement patterns and safe exercise technique.

This unit requires the ability to screen the injury risk of clients who have a history of current and/or recurrent injury, within the scope of practice as part of or following industry endorsed pre-exercise screening and risk stratification protocols.

It applies to advanced personal trainers who analyse the risk of injury, re-injury or development of avoidable injury complications as well as client response to injury prevention in consultation with relevant medical or allied health professionals. Advanced personal trainers typically work autonomously in controlled and uncontrolled fitness environments. Work is performed according to relevant legislation and organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Consolidate understanding of injury prevention.	1.1 Source and access information on injury prevention relevant to prevention of recurrence or development of secondary injuries. 1.2 Source and analyse data on common injuries for clients using fitness services. 1.3 Use knowledge of injury prevention strategies in day-to-day professional practice. 1.4 Discuss/explain how understanding of injury prevention strategies contribute to safe/optimum technique and skill development. 1.5 Use a wide range of terminology relevant to injury prevention and fitness outcomes.
2. Analyse client risk of injury.	2.1 Conduct pre-exercise screening using industry endorsed screening protocols. 2.2 Review client history of injury, fitness level and risk factors that may lead to injury or complications for specific fitness activities. 2.3 Observe and analyse client movement and exercise capacity against accepted movement analysis and exercise technique standards. 2.4 Determine need for further functional evaluation and refer client to appropriate allied health professional as required.
3. Develop and implement injury prevention strategies.	3.1 Analyse various exercises, exercise techniques and fitness activities in relation to injury risk. 3.2 Develop injury prevention strategies in consultation with client, and appropriate allied health professional as required. 3.3 Explain injury prevention strategies to client. 3.4 Use preventative strategies in fitness instruction, programming and provision of advice to minimise likelihood of client injury. 3.5 Monitor client progress and seek guidance from, or provide feedback to, allied health professional as required. 3.6 Adjust preventative measures and interventions in response to ongoing client monitoring. 3.7 Maintain client records of injury prevention strategies.

© Commonwealth of Australia, 2025 HumanAbility

4. Update knowledge of injury trends and prevention.	4.1 Evaluate own professional performance and identify potential improvements for future implementation of injury prevention strategies. 4.2 Identify and use opportunities to update and expand own knowledge of injury trends, preventative measures and interventions. 4.3 Monitor response to changes made to own professional practice or instruction. 4.4 Continue to adjust own practice to optimise results.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• source and comprehend often complex injury prevention information and evidence-based research • interpret pre-exercise screening and fitness appraisal information.
Writing skills to:	• develop detailed client profiles and training records pertaining to prevention strategies and guidance received from medical or allied health professionals.
Oral communication skills to:	• use open and closed probe questioning techniques to: • determine client history of injury, fitness level and risk factors.
Teamwork skills to:	• collaborate with various professionals and client in order to establish and follow through with the most appropriate injury prevention strategies for the client, if required.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for SISFFIT031 Implement injury prevention strategies

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role. This must include period(s) totalling at least fifteen hours comprising at least ten different client contact sessions, and:

- effectively use knowledge to improve own professional practice for injury screening, developing and monitoring injury prevention strategies in at least five different client sessions
- conduct sessions that individually or cumulatively incorporate:
  - pre-exercise screening using industry endorsed protocols, including:
    - history of injuries
    - current function at past injury sites
    - industry endorsed risk stratification
  - observation and analysis of the following using at least three functional movements for each client in line with accepted movement and technique standards:
    - functional movement capacity for at least five clients using exercise observation in all of the following movement patterns and scenarios:
      - push
      - pull
      - squat
      - lunge
      - rotate
      - overhead press
      - overhead pull
      - with and without equipment
      - loaded and unloaded
  - records of gait observation for at least three clients:
    - view:
      - anterior
      - posterior
      - lateral
    - gait cycle:
      - stance phase

© Commonwealth of Australia, 2025 HumanAbility

    - swing phase
    - flight phase
    - double stance phase
  - evaluation:
    - ankle
    - foot
    - tibia
    - knee
    - pelvis
    - trunk
    - head
    - arm
  - foot cycle:
    - foot strike
    - mid–stance
    - toe off
  - evaluation of:
    - sequence of movement at each joint
    - sequence of muscle actions
    - efficiency of movement
- evidence-based injury prevention strategies supported by relevant research regarding the cause and prevalence of commonly occurring injuries:
  - incidence
  - severity
  - prevalence
  - cause
  - type of injuries
- implementation of at least three injury prevention measures for each client, involving:
  - screening
  - protective equipment
  - hydration and healthy eating
  - pre-exercise, warm-up and stretching
  - neural stretching
  - recovery strategies and physical conditioning
  - frequency and duration of participation
  - correction of technique
  - checking for adequate rehabilitation following injury
  - appropriate management of risk factors that may predispose the client to further injury

© Commonwealth of Australia, 2025 HumanAbility

- staff training about risks, referral and appropriate exercise programming for specific populations
- collaboration with medical or allied health professional, stakeholders and clients to develop, implement and monitor injury prevention and management strategies.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- legislation and regulatory requirements:
  - appropriate collection and storage of client information
  - application of legal and ethical limitations of own role
  - work health and safety/occupational health and safety
  - equipment safety standards
- defined roles and responsibilities of the advanced personal trainer and their ethical and legal limitations in implementing injury prevention and management strategies
- risk factors associated with a range of injuries:
  - personal and internal factors
  - past injury to an area
  - biomechanics
  - exercise technique
  - extrinsic factors
  - equipment used
  - gender
  - age – growing as well as ageing bodies
  - training load (acute and cumulative)
  - fitness level
  - posture
  - trainer/instructor knowledge and skill
- basic principles of biomechanics to enable the application of appropriate techniques and strategies to minimise injuries for specific fitness activities
- correct execution and teaching points for the following primal functional movement patterns and the implications of results in regards to injury prevention strategies:
  - push
  - pull
  - squat
  - lunge
  - rotate
  - overhead press
  - overhead pull

© Commonwealth of Australia, 2025 HumanAbility

- pathology of common injury for specific activities, and injury response and the phases of healing and repair:
  - primary or secondary
  - direct or indirect
  - acute or overuse
  - musculoskeletal
- anatomy of the musculoskeletal system and its supporting systems to enable the design of appropriate programs
- function of the neuromuscular system to enable design of appropriate programs
- range of motion and stretching techniques to enable inclusion of exercise variables to suit client functional capacity
- role of exercise and fitness in the prevention, management and rehabilitation of common exercise related injuries and falls prevention
- appropriate measures for joint mobility:
  - visual observation
  - use of appropriate equipment
  - joint specific range of movement
  - tests for specific joints
  - segmental mobility of vertebral section
  - active range
  - functional range
  - hypo or hypermobile joints
  - contralateral
  - symptoms
- common types of re-occurring injuries:
  - sprains
  - strains
  - primary or secondary
  - direct or indirect
  - acute or overuse
  - musculoskeletal
- appropriate tests for muscular strength:
  - relative strength
  - muscular endurance including functional endurance
  - primal functional movement patterns and muscle activation for muscle groups used:
    - push
    - pull
    - squat
    - lunge
    - rotate
    - overhead press

© Commonwealth of Australia, 2025 HumanAbility

    - overhead pull
- functional anatomy of joints:
    - glenohumeral:
        - bones
        - ligaments
        - related structures
        - muscles acting on the joint

  - stability of major joint complexes

© Commonwealth of Australia, 2025 HumanAbility

  - muscle strength and activation
  - neuromuscular control
  - sitting/standing/supine positions
- processes for, and reasons for referral to appropriate medical or allied health professionals:
  - pain upon presentation to initial session/induction
  - history of uncontrolled/unresolved pain
  - pain during movement or exercise
  - static postural deviations
  - an inability to correct static or dynamic posture
  - restricted joint range of movement, strength imbalance or balance, stability or coordination concern that is limiting function
  - a diagnosed muscle, bone or joint problem with medical or allied health advice that the problem could be made worse by participating in physical activity/exercise
  - client history of an injury that has resulted in residual functional limitation
- industry endorsed scope of practice.

Assessment Conditions

Skills must be demonstrated in:

a fitness industry workplace or simulated environment with clients with real or simulated health and fitness goals.

Assessment must ensure access to:

- anatomical and physiological information and resources related to injury prevention
- anatomical models or images
- legislation and organisational policies and procedures in relation to injury prevention strategies.

Assessment must ensure use of:

- planning and evaluation templates with space to identify improvements to professional practice
- client record forms
- fitness industry standard equipment suitable for analysing client risk of injury and conducting range of movement tests
- industry endorsed client pre-exercise health screening and risk stratification tools
- at least four of the following postural screening equipment:
  - plumb line
  - grid
  - photographic technology

© Commonwealth of Australia, 2025 HumanAbility

  - video analysis
  - tape measure
  - goniometer
  - flexometer
  - plurimeter
  - pressure biofeedback unit
- medical or allied health professionals for referral processes; these can be:
  - medical or allied health professionals in the workplace, or
  - individuals who participate in project activities, role plays or simulated activities, set up for the purpose of assessment, within a workplace or training organisation
- clients; these can be:
  - clients in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessment activities that allow the individual to:

- demonstrate ability to incorporate injury prevention knowledge into the instruction of sessions, catering for:
  - beginners, intermediate and advanced participants
  - low and high impact.

Assessors must satisfy the Standards for Registered Training Organisation's requirements for assessors, and:

- have achieved a Diploma of Fitness or above; and
- have at least 2 years consecutive post qualification fitness industry experience in the application of the skills and knowledge of the Diploma of Fitness.

SISFFIT526A Deliver prescribed exercise to clients with musculoskeletal conditions

Modification History

Not Applicable

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge to deliver prescribed exercise programs to stable clients with musculoskeletal conditions, in collaboration with medical or allied health professionals.

Application of the Unit

This unit applies to specialised exercise trainers, whose clients have been provided an exercise prescription from an accredited exercise physiologist or relevant medical or allied health professional.

The specialised exercise trainer applies the understanding and skills to deliver the program and modify the program in terms of frequency, mode, intensity and volume to accommodate the progression of the client within the parameters prescribed by the accredited exercise physiologist or relevant medical or allied health professional.

They apply self directed application of knowledge and skills related to musculoskeletal conditions, and exercise judgment in delivering the prescribed exercise. The specialised exercise trainer demonstrates the ability to analyse the clients responses to exercise and where appropriate consult with the accredited exercise physiologist or relevant medical or allied health professional.

Licensing/Regulatory Information

No licensing, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Consult with referred clients presenting with stable musculoskeletal considerations.	1.1. Receive exercise referral from an accredited exercise physiologist or relevant ***medical or allied health professional***. 1.2. Confirm exercise referral has sufficient detail to allow flexibility for modifications to accommodate progression of the ***client***. 1.3. Become familiar with typical adverse signs and symptoms that may arise during exercise for this pathology. 1.4. Discuss with the client their complete exercise history and their ***musculoskeletal condition*** and record relevant information according to ***relevant legislation*** and ***organisational policies and procedures***. 1.5. Explain the physiology of musculoskeletal considerations and associated ***risk factors*** to the client in simple terms and confirm client understanding. 1.6. Explain to the client the causes and consequences of specific musculoskeletal conditions in the context of their effect on exercise capacity and conditions. 1.7. Explain to the client the role of physical activity in managing musculoskeletal conditions and enhancing health.
2. Deliver prescribed exercise programs.	2.1. Undertake appropriate ***fitness assessments*** as required. 2.2. Work with ***medical or allied health professional*** to deliver an exercise plan in accordance with recognised exercise recommendations, fitness test results, client limitations, and potential interactions of medications.

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	2.3. Explain to the client the role of ***muscular conditioning***, and the reasons for their inclusion as part of the client's exercise prescription. 2.4. Explain to the client the exercise variables to be delivered in the context of managing their specific musculoskeletal conditions. 2.5. Apply ***instructional techniques*** to ensure safe and appropriate application of the ***exercise program*** by the client. 2.6. Demonstrate the safe and appropriate use of selected ***exercise equipment*** and report or address any unsafe equipment according to organisational policies and procedures.
3. Monitor and review clients responses to the prescribed exercise program	3.1. Monitor perceived exercise intensity and make adjustment as required. 3.2. Assess the client's performance and explain and correct any unsafe exercise procedures. 3.3. ***Monitor client responses*** for any typical signs and ***symptoms requiring intervention*** that may occur during exercise. 3.4. Recognise ***signs of an unstable condition*** and refer the client back to an appropriate ***medical or allied health professional***. 3.5. Report outcomes to referral source as well as client. 3.6. Discuss the information obtained through observation of the client's static and dynamic ***posture*** with the referring accredited exercise physiologist, or relevant medical or allied health professional to deliver an exercise program to reduce the progression of ***postural variances*** and to minimise the risk of injury during fitness activities.
4. Apply extensive knowledge of musculoskeletal anatomy and physiology to the delivery of exercise for moderate risk clients.	4.1. Identify major bones, joints and their related connective tissue structures, and the major muscles acting on these joints when delivering exercise programs for clients. 4.2. Identify and describe to clients the ***functional anatomy of the major joints*** when delivering rehabilitation exercise programs for clients with musculoskeletal conditions. 4.3. Apply knowledge of the structure and function of the ***musculoskeletal system*** and basic biomechanics to posture, functional stability and locomotion when delivering exercise programs for ***moderate risk***

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	clients.
	4.4. Apply an understanding of the fundamental structural and functional differences affecting the mobility and stability of the pectoral girdle, pelvic girdle and vertebral column when undertaking screening and programming for clients with postural concerns.
	4.5. Apply the structural adaptations of musculoskeletal tissue in response to exercise, mechanical stress and disease to exercise programming for moderate risk clients.
	4.6. Explain to clients the process of bone remodelling and muscle tissue repair in response to injury when dealing with musculoskeletal conditions.
	4.7. Describe the effects of ageing and inactivity on musculoskeletal tissue and apply to exercise delivery to clients.
	4.8. Apply the effect of individual structural differences on exercise performance to the delivery of exercise programs for moderate risk clients.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to elicit and convey information to clients with musculoskeletal conditions to enable the delivery and modification of appropriate and effective exercise prescription
- problem-solving skills to;
  - identify adverse signs and symptoms requiring intervention and
  - unsafe exercise performance
  - recommend appropriate changes in consultation with an appropriate medical or allied health professional
- team work skills to work collaboratively with medical or allied health professionals according to legal and ethical considerations
- analytical skills to interpret information on the health and functional status of clients with musculoskeletal conditions in terms of their medical conditions, risk factors, medical treatments and exercise history
- decision making skills to determine appropriate instructional techniques
- literacy skills to accurately document and report on client progress.

© Commonwealth of Australia, 2025 HumanAbility

Required knowledge

- anatomy of the musculoskeletal system and its supporting systems
- function of the musculoskeletal systems to enable design of appropriate programs
- the pathology of musculoskeletal conditions and considerations in relation to the conditions of the client
- directional and movement terminology to enable effective communication with medical or allied health professionals
- range of motion and stretching techniques to enable the inclusion of exercise variables to suit client's functional capacity
- structural and physiological changes consistent with the pathology of disease states or conditions affecting the musculoskeletal system
- risk factors and contraindications associated with musculoskeletal conditions to enable the provision, monitoring and adjustment of safe and effective exercise
- effect of musculoskeletal conditions on the acute response to exercise to enable assessment of the individual's functional capacity when developing exercises
- categories of medications used to manage musculoskeletal conditions such as nonsteroidal anti-inflammatory drugs (NSAIDs) and their effects on the condition
- medical and anatomical terminology to interpret referrals from medical or allied health professionals
- relevant legislation and organisational policies and procedures to maintain the safety of clients and the confidentiality of client information
- causes and consequences of specific musculoskeletal considerations in the context of their effect on exercise capacity
- principles of biomechanics to enable the application of appropriate exercise techniques for specific fitness activities
- the role of physical activity in managing musculoskeletal conditions and enhancing health
- use, care and maintenance of facility equipment to maintain safety of clients and other facility users.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • communicates effectively with accredited exercise physiologist or relevant medical or allied health professional regarding health and functional status of

© Commonwealth of Australia, 2025 HumanAbility

	the referred client • effective communication skills to discuss aspects of exercise prescription with clients • when appropriate, react to adverse events to deal with exercise program problems and issues • ability to correctly interpret the exercise prescription and make modifications consistent with prescribed parameters and scope of practice • safely and effectively delivers exercise for referred clients with musculoskeletal conditions and recommends appropriate alterations according to client's physical and motivational responses • monitors and maintains the safety of clients, exercise equipment and the exercise setting and applies effective contingency management techniques to deal with problems and issues that may arise during the exercise program • applies all relevant legal and ethical requirements when discussing and recording client information • demonstrates appropriate manner, empathy and patience when working with clients
Context of and specific resources for assessment	Assessment must ensure demonstration of skills over a period of time within a facility where a variety of exercise modes and equipment are available to support effective musculoskeletal exercise. Assessment must also ensure access to: • facility where a variety of exercise modes and equipment are available, such as exercise machines, weight machines, exercise mats and adequate floor space • a range of clients with real or simulated musculoskeletal conditions from a range of ages • a range of real or simulated medical or allied health professionals referrals for a range of clients with musculoskeletal conditions and risk factors • demonstration of skills on sufficient occasions to determine competence in interpreting relevant information and delivering the prescribed exercise program for a range of clients with a range of musculoskeletal conditions • relevant documentation such as client record forms.

© Commonwealth of Australia, 2025 HumanAbility

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of consulting with clients and adjusting standard exercise prescriptions in consultation with an appropriate medical or allied health professional, to account for a range of musculoskeletal conditions and risk factors to focus on functional capacity and health rather than physical fitness
- observation of dealing effectively with a range of contingencies such as real or simulated client injuries or inability to complete the exercise prescription
- oral and or written questioning to assess knowledge of the physiology of musculoskeletal conditions, medications and associated risk factors
- third-party reports from a supervisor detailing work performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- SISFFIT523A Deliver prescribed exercise to clients with cardiorespiratory conditions

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Medical or allied health professional may include:

- sports physician
- sports doctor
- general practitioner
- physiotherapist
- accredited exercise physiologist
- occupational therapist
- remedial massage therapist
- chiropractor
- osteopath
- accredited practising dietician

© Commonwealth of Australia, 2025 HumanAbility

	• psychologist • aboriginal health worker • diabetes educator.
Client may include:	• aged • sedentary • overweight • presenting with additional medical or psychological conditions (including trauma) • athletes.
Relevant legislation may include:	• Occupational Health and Safety • duty of care • privacy • codes of practice • fair trading.
Organisational policies and procedures may include:	• Occupational Health and Safety • emergency procedures • risk management • use of client record systems • collection and use of client information • equipment use and maintenance • client supervision • incident reporting • client screening procedures • client referral procedures.
Risk factors may include:	• family history • obesity • joint trauma and injury • menopause in females • repetitive occupational use • physical inactivity • eating disorders • low body weight and calcium intake • smoking.
Fitness assessment may include:	• cardiovascular response to exercise • range of movement • strength • girth measurements. • posture.
Muscular conditioning may include:	• muscular strength • muscular power • muscular endurance.

© Commonwealth of Australia, 2025 HumanAbility

Instructional techniques may include:	• establishing rapport • instructional position • demonstration and motivational strategies • positive feedback.
Exercise program may include:	• exercise selection, sequence and variety • logical progression • warm-up and cool-down • stretching.
Exercise equipment may include:	• cardiovascular equipment • resistance training machines: • hydraulic machines • aquatic equipment • resistance bands • free weights.
Monitor client responses may include:	• rating of perceived exertion (RPE) • heart rate measures • 'talk test' • possible fluctuations in blood glucose levels and dehydration.
Symptoms requiring interjection may include:	• shortness of breath at rest or with mild exertion • dizziness or syncope • orthopnea or paroxysmal nocturnal dyspnea • palpitations or tachycardia • intermittent claudication • unusual fatigue or shortness of breath with usual activities • illness or sickness • lack of functional strength • neck soreness or strain • pain on movement of any body part.
Procedures to respond to symptoms requiring interjection include:	• cessation and modification of activity • first aid • emergency medical assistance • referral.
Signs of unstable condition may include:	• fatigue and weakness • cardiac pain • breathlessness • oedema • palpitations • claudication pain • dizziness.

© Commonwealth of Australia, 2025 HumanAbility

Posture may include:	• static
	• dynamic
	• standing
	• sitting
	• supine
	• specific observations of standing posture:
	  • head and neck
	  • thoracic spine
	  • rib cage
	  • shoulder position
	  • scapula position
	  • elbow position
	  • lumbar spine
	  • pelvis
	  • abdominals
	  • femur
	  • knee
	  • patella
	  • foot position.

Postural variances may include:	• structural • functional • kyphosis • rounded shoulders • winging of scapula • scoliosis • increased lordosis • decreased lordosis • excessive posterior pelvic tilt • excessive anterior pelvic tilt • genu varum • genu valgum • increased pronation of foot and or ankle complex • increased supination of foot and or ankle complex • hyperextension of knees • lateral tilt of pelvis • lateral tilt of head.
Functional anatomy of the joints may include:	• glenohumeral • bones: • humerus

© Commonwealth of Australia, 2025 HumanAbility

- scapula
- clavicle
- ligaments:
  - corocohumeral
  - corococlavicular
  - glenohumeral
  - transverse humeral

Major joints may include:

- intervertebral
- glenohumeral
- elbow
- radiocarpal
- sacroiliac
- hip (coxal)
- tibiofemoral
- patello-femoral
- ankle.

Joint movement may include:

- flexion
- extension
- dorsiflexion
- plantar flexion
- horizontal flexion
- horizontal extension
- abduction
- adduction
- circumduction
- rotation
- supination
- pronation
- inversion
- eversion
- protraction
- retraction
- elevation
- depression.

Muscles may include:

- erector spinae
- trapezius
- rectus abdominis
- internal obliques
- external obliques
- multifidus
- quadratus lumborum
- iliopsoas
- latissimus dorsi
- rhomboid major

- muscle contraction:
  - sliding filament theory
  - length-tension relationship
- attachments:
  - origin
  - insertion
- role of muscle contraction:
  - agonist
  - antagonist
  - fixator
  - synergist
- skeletal muscle fibre types:
  - slow twitch oxidative
  - fast twitch oxidative-glycolytic
  - fast twitch glycolytic
  - distribution and recruitment of different fibre types
- physiological adaptations due to training:
  - hypertrophy
  - increased strength
  - increased extensibility
- muscle actions of major muscles.

Moderate risk client may include:

- chronic disease state
- medical condition or injury
- under prescribed medication
- symptoms of cardiorespiratory disease
- moderate or high risk as identified by medical or allied health professional
- aged and sedentary
- musculoskeletal moderate risk includes:
  - history of injury to back or neck or joints or

SISSSCO307 Provide nutrition information to athletes

Modification History

The release details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Release	Comments
1	Replaces and is equivalent to SISSCGP309A Develop nutritional strategies. Updated and equivalent. Updated to reflect current industry dietary nutrition guidelines. Title change. No changes to competency outcome. Unit re-categorised from Coaching General Principles to Sport Coaching to better reflect the intent of the unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to enable coaches to provide information to support their athletes to apply the principles and practices of nutrition to achieve peak performance in the relevant sporting activity.

Application of the Unit

This unit applies to those working autonomously and within supervisory roles in a sport and recreation environment. It applies to personnel who are responsible for coaching athletes in a sport-specific training or competition setting.

Licensing/Regulatory Information

No licensing, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Analyse information.	1.1 Collect and analyse relevant and current information from a range of ***sources*** in relation to the ***principles of sports nutrition for training and performance.***
	1.2 Identify ***support personnel*** and ***resources*** available to assist ***athletes*** with nutritional issues.
	1.3 Assess athlete's information needs in relation to nutrition for peak performance in relevant sporting activity.
	1.4 Assess athlete's information needs in relation to nutrition for peak performance in relevant sporting activity.
2. Liaise with nutritional support personnel.	2.1 Select appropriate support personnel to assist athletes.
	2.2 Consult with sports nutritional personnel to identify the specific ***nutritional requirements*** for training and performance in the sporting activity.
	2.3 Identify ***nutritional practices*** to enhance peak performance in the sporting activity.
	2.4 Confirm scope of authority with key personnel in relation to role within sport structure.
3. Provide information to athletes.	3.1 Assess nutrition needs and preferences of athletes in relation to sporting activity.
	3.2 Inform athletes of the nutritional requirements for peak performance in the relevant sporting activity.
	3.3 Present information to athletes in a style appropriate to the needs of the athletes and the coaching setting.
	3.4 Use appropriate activities and learning experiences to deliver information.
	3.5 Check understanding of athletes regarding nutritional requirements for peak sporting performance using appropriate ***approaches*** and encourage athletes to clarify information.
	3.6 Encourage athletes to seek advice and support from identified nutritional support personnel.
4. Assist athletes to implement	4.1 Select implementation ***strategies*** to enhance peak performance in the sporting activity in consultation with the athlete and

© Commonwealth of Australia, 2025 HumanAbility

nutritional practices.	nutritional support personnel. 4.2 Assist and support athletes to implement selected strategies in training and competition according to organisational policies and procedures. 4.3 Monitor implementation of nutritional practices during training or competition according to organisational policies and procedures. 4.4 Identify ***symptoms*** associated with eating disorders and refer athletes to sports physician or accredited sports dietitian. 4.5 Refer athletes who have symptoms of ***nutritional deficiencies and eating disorders*** to nutritional support personnel for treatment.
5. Evaluate the effect of nutritional practices on the performance of athletes.	5.1 Analyse the performance of athletes in competition situations. 5.2 Review effectiveness of strategies in consultation with athletes and support staff and make adjustments where required.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - build rapport with athletes and support personnel
  - access, analyse and convey information about the principles and practices of nutrition for training and peak performance to athletes
  - negotiate appropriate strategies to enhance peak performance with athletes and seek feedback on their effectiveness
- language and literacy skills to access and interpret information on the principles of nutrition for peak performance relevant to the appropriate sport
- problem solving skills to:
  - assess effectiveness of nutritional practices to enhance performance and to modify accordingly
  - recognise nutritional issues and refer these to appropriate support personnel.

Required knowledge

- nutrition guidelines to enable the provision of accurate information about the principles and practices of sports nutrition for training and peak performance to athletes
- principles and practices of nutrition for training and peak performance relevant to specific activity or sport to enable appropriate advice and support to be provided to athletes in specific settings

© Commonwealth of Australia, 2025 HumanAbility

- appropriate body weight monitoring methods in order to assist athletes to monitor their weight effectively
- principles of safe weight loss and weight gain principles in order to support athletes to adopt nutrition principles maintain an appropriate weight for peak performance
- principles of hydration and fluid replacement practices in order to correctly inform athletes
- organisational policies and procedures to enable athletes to implement strategies regarding nutritional practices in a professional and supported manner
- information sources regarding principles and practices of nutrition for peak performance.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- acquires, selects and adapts information on sports nutrition principles and practices to develop and maintain professional knowledge for own sporting area
- works with support personnel to identify nutritional requirements for sport-specific peak performance and selects and communicates information appropriate to the needs of athletes
- consults with athletes and support personnel to develop, implement and review strategies to enhance peak performance and to support them in a coaching setting
- monitors nutritional practices of athletes and refers issues of nutritional deficiencies to appropriate support personnel
- develops a rapport with athletes and encourages them to clarify information and access supporting resources.

Context of and specific resources for assessment

Assessment must ensure interaction with a range of athletes specific to the candidate's current or intended coaching role to demonstrate competency and consistency of performance.

Assessment must also ensure access to:

- a sport-specific training or competition setting
- athletes and support personnel
- sources of information about nutritional principles and practices for peak performance
- current organisational policies and procedures that

© Commonwealth of Australia, 2025 HumanAbility

	impact on implementation of nutritional practices for peak performance.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of interaction with athletes and support personnel including discussions and implementation of nutritional practices for peak performance • observation of consultation with athletes to review strategies to support them to apply nutritional practices to achieve peak performance • oral or written questioning to assess knowledge of the principles of nutrition for peak performance • third party reports from coaches or other support staff detailing examples of interactions and discussions with athletes and support personnel such as the implementation of strategies to support athletes with nutrition.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. • relevant sport-specific coaching units of competency.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sources may include:	• sporting bodies • sponsors • other coaches • government bodies • support services • multimedia • information kits.
Principles of sports nutrition for training and performance may include:	• the dietary guidelines for Australians • macro- and micro-nutrient intake to enhance training: • eating and drinking before and during exercise

© Commonwealth of Australia, 2025 HumanAbility

- recovery nutrition
- managing physique (weight gain or loss)
- hydration and fluid replacement
- body image.

Support personnel may include:

- accredited sports dietician
- psychologist
- sport administrators
- other coaches
- team managers
- sports physician
- sports trainer
- sports doctor
- sports scientists
- parents or guardians.

Resources may include:

- sporting bodies
- sponsors
- coaches
- government bodies
- support services.

Nutrition requirements may include:

- daily nutrient and fluid intake to support health and training demands
- nutrition presentation for competition:
- carbohydrate loading
- pre-event meal
- hydration
- food and fluid intake during the event
- food and fluid intake after the event
- food and fluid intake during travel
- sports foods, dietary supplements and ergogenic aids.

Nutritional practices may include:

- daily intake of a wide and varied diet
- maintenance of an appropriate physique
- nutrient intake prior to and the day of competition
- food and fluid intake during the competition or event
- appropriate use of sports foods and/or ergongenic aids
- food and fluid intake after the competition or event.

Approaches may include:

- discussions
- open questions.

© Commonwealth of Australia, 2025 HumanAbility

Strategies may include:	• educational programs • eating plans • intervention strategies • development of ethical codes and policies.
Symptoms may include:	• fatigue • loss of endurance • increase in occurrences of colds and infections • irritability.

Nutritional deficiencies and eating disorders may include:	• vitamin/mineral deficiencies (common: iron, calcium, Vitamin D)
	• chronic dehydration
	• female athlete triad:
	  • low energy availability
	  • menstrual dysfunction
	  • suboptimal bone mineral density
	• anorexia nervosa
	• bulimia nervosa.

SISSSPT307A Conduct advanced taping

Modification History

Not Applicable

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge to apply taping and bracing techniques including knee joints, Achilles, shoulders and elbows to assist athletes in relation to ongoing injury prevention and post-injury support.

Application of the Unit

This unit applies to personnel working autonomously as sports trainers who are responsible for performing pre- and post-event taping as part of providing injury prevention and treatment for athletes, and providing treatment to assist with injury rehabilitation in a sport-specific training or competition setting such as on the playing field, court, change rooms, open or enclosed areas at sporting events, accommodation venues or in transit.

Licensing/Regulatory Information

No licensing, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range

ELEMENT	PERFORMANCE CRITERIA
	statement. Assessment of performance is to be consistent with the evidence guide.
1. Prepare for taping.	1.1. Identify the ***purpose for taping***. 1.2. Consult with athletes to identify ***contraindications and precautions*** for taping according to ***organisational policies and procedures*** and ***relevant legislation***. 1.3. Refer the ***athlete*** to appropriate personnel in the ***medical support team*** or a ***health care professional*** as required. 1.4. Explain ***aims and objectives*** of the taping or bracing technique to athletes. 1.5. Explain ***pre-taping requirements*** to athletes. 1.6. Select ***appropriate tape*** and ***associated products*** for taping and or bracing of relevant area. 1.7. Position the athlete for effective taping according to organisational policies and procedures.
2. Apply taping techniques.	2.1. Apply ***techniques for taping or bracing*** of ***relevant joints*** to prevent injury and or provide post-injury support according to ***basic principles of biomechanics***. 2.2. Apply tape adherent where additional adherence is required. 2.3. Apply a ***barrier*** where the athlete is allergic to adherent. 2.4. Check circulation around taped area. 2.5. Seek ***feedback*** from athlete and adjust taping where appropriate.
3. Remove tape.	3.1. Remove tape using appropriate ***equipment*** and techniques. 3.2. Apply tape remover sprays or solutions as required.
4. Implement self-care.	4.1. Apply ***ergonomic practices*** to taping according to organisational policies and procedures. 4.2. Adopt ***self-care protocols*** according to organisational policies and procedures and relevant legislation.
5. Evaluate the taping.	5.1. Seek and acknowledge feedback from athletes and relevant personnel on the effectiveness of the taping. 5.2. Identify areas where taping techniques could be improved and ways of obtaining this improvement.

© Commonwealth of Australia, 2025 HumanAbility

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - consult with athletes to establish the presence of contraindications
  - refer areas beyond own responsibility to appropriate medical personnel
  - convey information to athletes about taping and or bracing objectives and techniques
- problem-solving skills to:
  - select and apply appropriate taping techniques for relevant area
  - determine situations requiring attention from a medical support team or health professional
- self-management skills to review effectiveness of taping in achieving initial aims and objectives of taping.

Required knowledge

- legislation and organisational policies and procedures to enable the safe conduct of all activities
- principles of biomechanics as they relate to taping and or bracing to enable understanding of human movement and the impact of injury
- anatomy and physiology of elbow, knee, Achilles and Acromioclavicular (AC) joint and their relationship to other body systems to enable understanding of human performance in a sport or physical activity
- contraindications and precautions for taping or bracing to ensure effective prevention or management of injury
- types and qualities of tapes and their uses for different joints to enable joints to be taped effectively
- principles of taping and bracing techniques to enable treatment to be carried out safely and effectively.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

© Commonwealth of Australia, 2025 HumanAbility

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • communicates effectively with athletes to determine contraindications to taping and or bracing, clearly convey information about the purpose and process of taping and refer athlete to medical personnel as appropriate • selects and safely applies appropriate taping and bracing techniques which includes elbows, shoulders, achilles and knees and removes tape effectively with minimum discomfort to the athlete • completes taping activities within organisational safety systems and implements self care protocols.
Context of and specific resources for assessment	Assessment must ensure completion of multiple taping of elbows, shoulders and knees to demonstrate competency and consistency of performance. Assessment must also ensure access to: • a sporting environment appropriate to taping • facilities for taping requirements • athletes participating in sport or physical activity • taping equipment and products.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • observation of applying appropriate taping techniques to relevant areas • observation of interaction with athletes, including eliciting information about contraindications and previous injuries and dealing appropriately with contingencies • oral or written questioning to assess knowledge of the relationship of the musculoskeletal system to correct taping techniques • third-party reports from a supervisor detailing performance. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: • SISSSPT305A Support sports injury management.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Purpose for taping may include:	• injury prevention • post injury management.
Contraindications and precautions for taping may include:	• diabetes • pain • elevated body temperature • swelling and inflammation • circulatory dysfunction • infection • allergic reaction to taping materials • cuts or wounds • previous injury.
Organisational policies and procedures may include:	• occupational health and safety • ***collecting health information from athletes*** • ***privacy*** • Code of Ethics • Code of Conduct • sports taping guidelines.
Relevant legislation may include:	• occupational health and safety • duty of care.
Athletes may include:	• beginner through to high performance level competitors • athletes under 16 years of age who require parent or guardian consent prior to being included in a training program • female or male athletes • athletes with a disability or special needs.
Medical support team may include:	• physiotherapist • chiropractor • osteopath.
Health care professionals may include:	• medical practitioner • physiotherapist • chiropractor • osteopath • paramedic.

© Commonwealth of Australia, 2025 HumanAbility

Aims and objectives may include:	• prevention of injury • management of existing injuries • stabilisation of joints.
Pre-taping requirements may include:	• clean, dry skin • shaving.
Appropriate tape may include:	• tape size • tape adhesiveness • tape removability • rigid adhesive tape • elastic adhesive tape • covering tape.
Associated products may include:	• vaseline and gauze pads • hypoallergenic material • underwrap • cushioning foam • tape adherent • tape remover • elbow braces.

Techniques for taping or bracing of relevant joints may include:	• elbows:
	  • figure 6 or 8
	• full shoulder:
	  • anchor strips
	  • figure 8
	  • repeat strapping
	  • overlapping spirals
	• knees:
	  • anchor strips
	  • repeat taping
	• Achilles joint:
	  • anchor strips
	  • 2-3 stirrups
	  • figure 6 or 8
	  • heel lock
	  • locking tape.

Basic principles of biomechanics may include:	• major muscle actions and movements • joint mechanics.
Barriers may include:	• hypoallergenic material • underwrap.
Feedback may include:	• pins and needles

© Commonwealth of Australia, 2025 HumanAbility

	• numbness • pain • tightness.
Equipment may include:	• blunt nose scissors • tape cutters.
Ergonomic practices may include:	• body positioning • body weight • posture • hand positions • height of table.
Self-care protocols may include:	• regular breaks • correct posture.

SISSSTC301A Instruct strength and conditioning techniques

Modification History

Not Applicable

Unit Descriptor

This unit describes the performance outcomes, knowledge and skills required to use drills, exercises and activities to instruct strength and conditioning techniques to individual athletes or groups of athletes according to their sport-specific needs, or those undertaking fitness programs to achieve personal fitness goals.

Application of the Unit

This unit applies to coaches working with individuals or teams. It also applies to fitness instructors who provide a range of fitness programs and services to individuals or groups. The unit is applicable to those working with sporting groups, in fitness centres, gyms or autonomously in the fitness industry.

Licensing/Regulatory Information

No licensing, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA

unit of competency.	required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Assess current status of athlete or athletes.	1.1. Select appropriate ***testing protocols*** and implement to assess current fitness level of ***athlete or athletes***. 1.2. Evaluate the ***training background and exercise history*** of athlete or athletes. 1.3. Identify the ***techniques of strength and conditioning*** to be developed with relevant ***support personnel*** according to the needs of the athlete or group.
2. Select the appropriate strength and ***conditioning program***.	2.1. Select ***core lifts and exercises*** to meet the identified needs of the athlete or athletes and ***organisational policies and procedures***. 2.2. Incorporate drills, ***exercise techniques*** and activities into the program to instruct a strength and conditioning program. 2.3. Select appropriate equipment to be used as part of the strength and conditioning program according to organisational policies and procedures.
3. Prepare for strength and conditioning session.	3.1. Allocate sufficient space and ***resources*** for the drill, activity or game. 3.2. Check exercise area is free from obstacles prior to commencement of session. 3.3. Check ***equipment*** is in good working order prior to commencement of session. 3.4. Quarantine and report faulty equipment according to organisational policies and procedures. 3.5. Arrange equipment according to exercise plan and relevant legislation and organisational policies and procedures.
4. Instruct strength and conditioning session.	4.1. Communicate session objectives and the ***benefits*** of strength and conditioning to athlete or athletes. 4.2. Explain ***common types of injuries*** that would prevent participation in the session and confirm athlete or athletes are not affected. 4.3. Instruct session according to strength and conditioning plan, relevant legislation and organisational policies and procedures and ***best practice principles of strength and conditioning training***. 4.4. Demonstrate and instruct correct use of equipment

ELEMENT	PERFORMANCE CRITERIA
	according to organisational policies and procedures and manufacturer's instructions.
	4.5. Demonstrate exercises within the strength and conditioning class using appropriate ***instructional techniques***.
	4.6. Monitor athlete intensity, technique and safety during the class.
	4.7. Incorporate ***motivation techniques*** to maximise exercise program adherence.
5. Evaluate the strength and conditioning program and make modifications.	5.1. Review athlete's or athletes' training diary or diaries to monitor ongoing progress.
	5.2. Implement modifications to the program where relevant to meet identified needs.
	5.3. Use testing protocols to assess athlete's ongoing progress.
	5.4. Review own performance and identify potential improvements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - instruct effective strength and conditioning techniques
  - give and receive feedback
- teamwork skills to be able to coach and mentor an athlete through a strength and conditioning program
- technology skills to assess athletes and select exercises and drills for use within the program
- planning and organising skills to implement a plan for strength and conditioning for an individual or group
- literacy and numeracy skills to enable the review of training diaries and the timely completion of sessions.

Required knowledge

- motivational techniques to provide appropriate feedback to athletes
- the major body systems, bones, joints muscles and their function to enable the selection, instruction and adjustment of appropriate exercises to meet the needs of athletes

© Commonwealth of Australia, 2025 HumanAbility

- legislation and organisational policies and procedures to enable the safe delivery of exercise programs including the safe use of equipment and a safe learning environment
- drills, activities and games to teach the techniques of strength and conditioning
- physiological, psychological and biomechanical changes that occur with strength and conditioning training to enable informed planning and instruction of sessions and prompt response to athlete difficulties during the class.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • instructs strength and conditioning classes that meet athlete expectations, comply with legislative and organisational requirements, and are of sufficient duration to allow the candidate to demonstrate the use of drills, activities and games to instruct in strength and conditioning techniques • assesses athletes current training status and needs and applies knowledge of human anatomy and physiology to select and modify an appropriate program • carries out tasks responsibly and safely using an athlete centred approach to encourage athlete participation using appropriate motivational and communication strategies.
Context of and specific resources for assessment	Assessment must ensure the conduct of multiple strength and conditioning sessions that meet the needs of individuals, groups or sports and are of sufficient breadth and duration to demonstrate competency and consistency of performance. Assessment must also ensure access to: • an environment with appropriate facilities, equipment and materials such as free weight or hydraulic equipment • a range of athletes with real or simulated strength and conditioning goals

© Commonwealth of Australia, 2025 HumanAbility

- documentation such as strength and conditioning programs and manufacturer's specifications for equipment use.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of preparation and instruction of a strength and conditioning session, including the selection of exercises for a program
- observation of interaction with a range of participants, including conveying information for safe participation in strength and conditioning sessions and motivating athletes to achieve desired outcomes
- oral or written questioning to assess knowledge of physiological, psychological and biomechanical changes that occur during strength and conditioning training
- third-party reports from a supervisor detailing work performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- SISSSTC402A Develop strength and conditioning programs.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Testing protocols may include:

- core stability
- aerobic performance
- anaerobic performance.

Athlete or Athletes may include:

- different ages
- those with specific conditioning goals
- *experienced or inexperienced*
- female or male
- competitor in team or individual sports

© Commonwealth of Australia, 2025 HumanAbility

	• amateur or professional.
Training background and exercise history may include:	• type of training program • length of recent regular participation in previous training programs • level of intensity involved in previous training programs • exercise technique experienced.

Techniques of strength and conditioning may include:	• resistance training:
	  • whole body or compound exercises for specific muscle groups or isolation
	• aerobic endurance
	• anaerobic endurance:
	  • high intensity short interval training
	• flexibility:
	  • stretching
	• elastic energy
	• abdominal
	• core stability.

Support personnel may include:	• administrators • coaches • sports scientists • sports medicine providers • parents or guardians.

Core lifts and exercises may include:	• abdominal
	• roll outs
	• reverse crunches
	• side bends
	• prone and hold
	• back:
	  • bent over row
	  • lateral pull down
	• biceps:
	  • biceps curl
	  • hammer curl
	• calves and ankles:
	  • standing calf or heel raise
	  • peroneal flexions and wobble board
	• chest:
	  • flat bench press and dumbbell version
	  • incline dumbbell press and barbell version
	• forearms:

© Commonwealth of Australia, 2025 HumanAbility

- wrist curl
- hip or thigh:
  - hip sled
  - back squat
  - forward lunge
- shoulders:
  - seated shoulder press
  - machine shoulder press
- triceps:
  - lying triceps extension
  - triceps pushdown
- power exercises:
  - push press and push jerk
  - clean and power clean
- proprioception and neuromuscular coordination exercises.

Organisational policies and procedures may include:

- occupational health and safety
- athlete assessment procedures
- use, checking and storage of equipment
- tagging faulty or damaged equipment
- emergency procedures
- confidentiality of participant information
- time constraints and scheduling requirements.

Exercise techniques may include:

- hand grips
- stable body and limb positioning
- movement range of motion and speed
- breathing
- spotting.

Equipment may include:

- cardiovascular equipment
- free weight equipment
- hydraulic equipment
- exercise balls
- bars
- steps
- bands
- resistance equipment
- pin loaded equipment
- electronically braked equipment
- air braked equipment
- pool based equipment.

© Commonwealth of Australia, 2025 HumanAbility

Benefits may include:	• physiological • psychological • social • improved performance in chosen sport or competition.
Common types of injuries may include:	• *muscle or soft tissue injury* • *back injury*.
Best practice principles of strength and conditioning training may include:	• the sport's coaches or instructors code of conduct policy developed by the peak bodies responsible for the development of teaching and coaching • Australian Sports Commission Harassment-free Sport policy • Australian Sports Commission's drugs in sport policy • National Activity Organisation's regulations and guidelines.
Instructional techniques may include:	• establishing a rapport • *verbal and non-verbal communication* • demonstration strategies • motivational strategies.
Motivation techniques may include:	• goal setting • positive feedback.

ELEMENT	PERFORMANCE CRITERIA
	conditioning training.
	3.4. Ensure correct use of equipment during strength and conditioning session, according to organisational policies and procedures and manufacturer's instructions.
	3.5. Establish ongoing liaison between ***other coaches and specialists*** where coaches and specialists work with the same athlete to ensure a consistent approach to the strength and conditioning program.
4. Monitor, evaluate and modify the strength and conditioning program.	4.1. Evaluate the program according to methods established and documented within the strength and conditioning program plan.
	4.2. Monitor use of equipment according to exercise plan and relevant legislation and organisational policies and procedures.
	4.3. Review each athlete's or athletes' training diary or diaries to monitor ongoing progress.
	4.4. Use assessment measures to assess athlete's ongoing progress.
	4.5. Seek and receive feedback from participating athletes and support personnel.
	4.6. Implement modifications to the program, where relevant, to meet identified needs.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - liaise with other coaches and trainers
  - give and receive feedback from athletes
- problem-solving skills to select appropriate techniques and strategies for the program to meet the stated objectives
- planning and organising skills to schedule the strength and conditioning program
- technology skills to assess the fitness and condition of athletes and other participants
- literacy skills to:
  - document evaluation methods
  - record feedback

© Commonwealth of Australia, 2025 HumanAbility

- read and understand policies and procedures information.

Required knowledge

- the major body systems, bones, joints, muscles and their function to enable the selection, instruction and adjustment of appropriate exercises to meet the needs of athletes
- anatomical, physiological and biomechanical differences of athletes including age and sex
- physiological adaptation to strength and conditioning training
- current strength and conditioning training techniques
- exercise prescription and exercise order principles
- physical constraints that may affect planning for strength and conditioning program
- legislation organisational policies and procedures to enable the safe delivery of exercise programs including the safe use of equipment and a safe learning environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the following is essential: • assesses athlete's or athletes' current training status and needs and applies knowledge of human anatomy and physiology to develop programs to meet stated objectives for strength and conditioning • plans strength and conditioning classes that meet athlete expectations, comply with legislative and organisational requirements, and are of sufficient duration to allow the candidate to demonstrate the use of strength and conditioning techniques • evaluates and modifies the training program according to feedback received and the results of evaluation procedures.
Context of and specific resources for assessment	Assessment must ensure development and implementation of multiple strength and conditioning programs to demonstrate competency and consistency of performance in the provision of core strength and conditioning techniques according to the specific needs of individuals, groups or sports.

© Commonwealth of Australia, 2025 HumanAbility

Assessment must also ensure access to:

- an environment with appropriate facilities, equipment and materials such as free weight or hydraulic equipment
- a range of athletes with real or simulated strength and conditioning goals
- documentation such as athlete's performance history and manufacturer's specifications for equipment use.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of preparation and planning for a strength and conditioning program, including the assessment of athletes
- observation of interaction with a range of participants, including conveying information for safe participation in strength and conditioning sessions and monitoring the use of equipment
- oral or written questioning to assess knowledge of physiological, psychological and biomechanical changes that occur during strength and conditioning training
- third-party reports from a supervisor detailing work performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- SISSSTC301A Instruct strength and conditioning techniques
- SISXCAI405A Conduct individualised long term training programs.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Needs and requirements may

- competition performance
- pre-adolescent

© Commonwealth of Australia, 2025 HumanAbility

include:
- mature aged
- disability
- reconditioning
- rehabilitation.

Profiles may include:
- physical
- psychological
- tactical
- technical
- leadership skills.

Assessment measures may include:
- discussion with trainees
- physical ability tests
- trials
- performances in familiar environment
- performances in unfamiliar environment
- field assessments of fitness components
- performance history.

Objectives may include:
- enjoyment
- competition or performance
- selection
- tapering
- peaking
- maintenance.

Athlete or Athletes may include:
- *experienced or inexperienced*
- female or male
- competitor in team or individual sports
- amateur or professional.

Support personnel may include:
- administrators
- coaches
- sports scientists
- sports medicine providers
- parents or guardians.

Career phase may include:
- novice
- intermediate
- advanced.

Training phase may include:
- macro-cycles
- micro-cycles
- meso-cycles
- pre-season
- in-season
- post-season
- four year Olympic cycle.

© Commonwealth of Australia, 2025 HumanAbility

Core lifts and exercises may include:	• abdominal • roll outs • reverse crunch • side bends • prone and hold • back • biceps • calves and ankles • chest • forearms • hip or thigh • shoulders • triceps • power exercises • proprioception and neuromuscular coordination exercises.
Techniques of strength and conditioning may include:	• resistance training • aerobic endurance • anaerobic endurance • flexibility and stretching • elastic energy • abdominal • core stability.
Organisational policies and procedures may include:	• occupational health and safety • athlete assessment procedures • confidentiality of athlete information • emergency procedures • time constraints and scheduling requirements • use of venue • equal opportunity.
Fixed points may include:	• structure and subdivision of performance levels • availability of facilities • rules of the activity • rules of the competition or performance • intended peaks • selection dates and criteria • availability of support personnel.
Exercise selection may include:	• types of resistance training exercises • movement analysis of sport • athlete's exercise technique experience • available equipment and training time.

© Commonwealth of Australia, 2025 HumanAbility

Exercise order may include:	• core followed by assisted exercises • pre-exhaustion method • alternated upper and lower body exercise • supersets and compound sets.
Equipment may include:	• cardiovascular equipment • free weight equipment • hydraulic equipment • innovative equipment • exercise balls • bars • steps • bands • plyometric training systems • resistance equipment • pool based equipment.
Resource requirements may include:	• ratio of coaches to athletes • ratio of equipment to athletes • access to first aid facilities • access to equipment • appropriate facilities.
Evaluation methods may include:	• fitness assessments • lab assessments • discussion with participants • training and competitive performances • training diaries.
Strength and conditioning training methods may include:	• ***work duration***, ***rest periods and frequency*** • ***periodisation*** • ***training load***, ***repetition and volume*** • rehabilitation and reconditioning • core stability.
Best practice principles of strength and conditioning training may include:	• the sports coaches' or instructors' code of conduct policy developed by the peak bodies responsible for the development of teaching and coaching • Australian Sports Commission Harassment-free Sport policy • Australian Sports Commission's drugs in sport policy • National Activity Organisation's regulations and guidelines.
Other coaches and or specialists	• health professionals • physiologists

SITHCCC103 Prepare sandwiches

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITHCCC007A Prepare sandwiches. Unit structure made consistent across all cooking units. Re-worked Elements, Performance Criteria, Required Skills and Knowledge to better articulate content. Any 'must' statements in Range moved to Required Knowledge and Critical aspects for assessment.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare and present a variety of sandwiches in a commercial kitchen or catering operation.

Application of the Unit

This unit applies to hospitality and catering organisations, and to people who make sandwiches, either pre-prepared or on demand according to customer requests. Sandwiches may be classical or modern, hot or cold, of varying cultural and ethnic origins and use a variety of fillings and types of bread. People undertaking this role usually work under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

This unit must be assessed after the following prerequisite unit:	
SITXFSA101	Use hygienic practices for food safety

© Commonwealth of Australia, 2025 HumanAbility

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Select ingredients.	1.1 Confirm ***sandwich*** requirements, based on standard recipes or customer requests. 1.2 Identify and select bread types and fillings taking account of quality, freshness and stock rotation requirements.
2. Make sandwiches.	2.1 Use sandwich-making ***methods*** based on requirements. 2.2 Cut ingredients and completed sandwiches to ensure uniformity of presentation. 2.3 Combine ingredients appropriately based on flavour combinations, customer preference or standard recipes. 2.4 Use toasting and heating equipment safely. 2.5 Make sandwiches in a logical and sequential manner. 2.6 Minimise waste and store re-usable by-products.
3. Present and store sandwiches.	3.1 Present sandwiches on appropriate serviceware. 3.2 Add suitable garnishes as required. 3.3 Visually evaluate dish and ***adjust presentation***. 3.4 Store sandwiches in appropriate ***environmental conditions***.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- initiative and enterprise skills to minimise wastage
- literacy skills to interpret standard recipes or orders
- numeracy skills to count portions and use features of heating equipment
- planning and organising skills to complete the making process in a logical way
- problem-solving skills to:

© Commonwealth of Australia, 2025 HumanAbility

  - evaluate quality of sandwich ingredients and finished items and make adjustments to ensure a quality product
  - adjust appearance of food products according to identified deficiencies
- self-management skills to manage own speed, timing and productivity.

Required knowledge

- culinary terms and trade names for different types of sandwiches and breads
- characteristics of different sandwiches:
  - appearance and presentation
  - bread variations
  - classical and contemporary variations
  - combinations of ingredients
  - freshness and other quality indicators
  - service style
  - trends
- contents of stock date codes and rotation labels
- mise en place and preparation methods for sandwiches
- equipment used to produce sandwiches:
  - essential features and functions
  - safe operational practices
- storage of sandwiches:
  - correct environmental conditions to ensure food safety
  - appropriate methods to optimise shelf life.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• prepare a variety of sandwiches of different types using different breads and ingredients
	• prepare a quantity of sandwiches within commercial time constraints
	• present sandwiches attractively
	• integrate knowledge of:
	  • different sandwich and bread types
	  • features, functions and safe use of food preparation

© Commonwealth of Australia, 2025 HumanAbility

equipment
- food safety practices for handling and storing different food types.

Context of and specific resources for assessment

Assessment must ensure use of:

- an operational food preparation area for sandwich production with the fixtures, large and small equipment defined in the Assessment
- Guidelines; this can be a:
  - real industry workplace
  - simulated industry environment such as a training kitchen servicing customers
- industry-realistic ratios of staff to customers
- food preparation lists and standard recipes
- a variety of commercial ingredients for preparing sandwiches.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the individual preparing for and producing sandwiches
- evaluation of the taste and visual appeal of sandwiches prepared by the individual
- use of visual and taste recognition exercises so the individual can identify ingredient and product characteristics
- written or oral questioning to assess knowledge of culinary terms, quality indicators for sandwiches and appropriate environmental storage
- conditions
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITHCCC202 Produce appetisers and salads.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work

© Commonwealth of Australia, 2025 HumanAbility

environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sandwiches may be:	• chequerboard • club • domino • filled rolls • focaccia • open • pinwheel • pullman.
Methods may include:	• cutting • garnishing • layering • moulding • piping • portioning • spreading.

To ***adjust presentation*** may involve:	• changing accompaniments and garnishes to maximise eye appeal:
	  • balance
	  • colour
	  • contrast
	• changing plated food for practicality of:
	  • customer consumption
	  • service
	• wiping drips or spills.

Environmental conditions relates to appropriate:	• atmosphere • humidity • light • packaging • temperature • use of containers • ventilation.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Select ingredients.	1.1 Confirm ***food production requirements*** from food preparation list and standard recipes. 1.2 Calculate ingredient amounts according to requirements. 1.3 Identify and select ingredients from stores according to recipe, quality, freshness and stock rotation requirements.
2. Select, prepare and use equipment.	2.1 Select ***equipment*** of correct type and size. 2.2 Safely assemble and ensure cleanliness of equipment before use. 2.3 Use equipment safely and hygienically according to manufacturer instructions.
3. Assemble and prepare ingredients.	3.1 Weigh and measure ingredients and create portions according to recipe. 3.2 Prepare, cut and portion ingredients according to recipe and cooking style. 3.3 Minimise waste and store reusable by-products.
4. Cook dishes.	4.1 Use cookery methods for ***dishes*** following standard recipes. 4.2 Complete cooking process in a logical and safe manner. 4.3 Identify problems with the cooking process and take corrective action. 4.4 Work cooperatively with colleagues to ensure timely preparation of dishes. 4.5 Present dishes according to recipe.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 HumanAbility

Required skills

- initiative and enterprise skills to minimise wastage
- literacy skills to read menus, recipes and task sheets
- numeracy skills to:
  - calculate the number of portions
  - weigh and measure ingredients
  - determine cooking times and temperatures
- planning and organising skills to work in a logical and planned way
- problem-solving skills to respond to problems in the cooking process
- self-management skills to:
  - work safely in the kitchen
  - deal with pressure of work and kitchen conditions
- technology skills to use food preparation and cooking equipment.

Required knowledge

- characteristics of different food types, their use in different dishes and the effects of different cookery methods on those foods, including:
  - dairy products
  - dry goods
  - fruit
  - general food items:
    - batters
    - coatings
    - condiments and flavourings
    - garnishes
    - oils
    - sauces
  - meat
  - poultry
  - seafood
  - vegetables
- the meaning and role of mise en place in the process of preparing, cooking and presenting food
- culinary terms and principles and practices of different cookery methods including:
  - baking
  - blanching
  - boiling
  - braising
  - deep-frying
  - grilling

© Commonwealth of Australia, 2025 HumanAbility

- poaching
- roasting
- shallow frying:
  - pan-frying
  - sauté
  - stir-frying
- steaming
- stewing
- microwaving
- contents of stock date codes and rotation labels
- equipment used for cookery methods:
  - essential features and functions
  - safe operational practices.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• follow standard recipes for dishes that together use all of the following ingredients:
	  • dairy products
	  • dry goods
	  • fruit
	  • general food items
	  • meat
	  • poultry
	  • seafood
	  • vegetables
	• complete mise en place activities for different dishes
	• use a range of cookery methods to prepare dishes including:
	  • baking
	  • blanching
	  • boiling
	  • braising

© Commonwealth of Australia, 2025 HumanAbility

- deep-frying
- grilling
- poaching
- roasting
- shallow frying:
  - pan-frying
  - sauté
  - stir-frying
- steaming
- stewing
- microwaving

- produce food for multiple customers within commercial time constraints
- integrate knowledge of:
  - major food types, culinary terminology and equipment as they relate to the required methods of cookery
  - features, functions and safe use of food preparation equipment
  - food safety practices for handling and storing different food types.

Context of and specific resources for assessment

Assessment must ensure use of:

- an operational commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment
- Guidelines, including items for all defined cookery methods; this can be a:
  - real industry workplace
  - simulated industry environment such as a training kitchen servicing customers
- food preparation lists and standard recipes
- a variety of commercial ingredients
- industry-realistic ratios of kitchen staff to customers.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the individual cooking dishes
- evaluation of the taste and visual appeal of dishes prepared by the individual
- use of projects that allow assessment of the individual's ability to produce a variety of dishes for different

© Commonwealth of Australia, 2025 HumanAbility

	occasions • use of visual and taste recognition exercises so the individual can identify ingredient and product characteristics • written or oral questioning to assess knowledge of culinary terms, quality indicators for dishes, equipment and cookery methods • review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.
Guidance information for assessment	The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example: • SITHCCC204 Produce vegetable, fruit, egg and farinaceous dishes • SITHCCC207 Use cookery skills effectively.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Food production requirements may include:	• deadlines • portion control • quantities to be produced • special customer requests • special dietary requirements.

Equipment may include:	• bains marie
	• blenders
	• cooking ranges:
	  • electric
	  • gas
	  • induction
	• crockery
	• cutlery
	• food processors and mixers
	• knives and knife sharpening equipment
	• fryers
	• grills and griddles

© Commonwealth of Australia, 2025 HumanAbility

- microwaves
- ovens
- pans
- salamanders
- scales
- slicers
- steamers
- thermometers
- utensils.

Dishes may include:

- appetisers
- breakfast items
- café-style items
- dishes of limited complexity:
  - containing a small number of ingredients
  - requiring a single cookery method
- fast food
- partially-prepared items
- pasta dishes.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Select ingredients.	1.1 Confirm ***food production requirements*** from food preparation list and standard recipes. 1.2 Calculate ingredient amounts according to requirements. 1.3 Identify and select ***appetiser and salad ingredients*** from stores according to recipe, quality, freshness and stock rotation requirements.
2. Select, prepare and use equipment.	2.1 Select ***equipment*** of correct type and size. 2.2 Safely assemble and ensure cleanliness of equipment before use. 2.3 Use equipment safely and hygienically according to manufacturer instructions.
3. Portion and prepare ingredients.	3.1 Sort and assemble ingredients according food production sequencing. 3.2 Weigh and measure ingredients and create portions according to recipe. 3.3 Clean and cut salad ingredients using basic culinary cuts according to quality standards. 3.4 Minimise waste and store reusable by-products.
4. Prepare appetisers and salads.	4.1 Select and use relevant ***cookery methods*** for salads and appetisers. 4.2 Prepare sauces and dressings according to recipe. 4.3 Follow standard recipes and make ***food quality adjustments*** within scope of responsibility.
5. Present and store appetisers and salads.	5.1 Present dishes on appropriate serviceware. 5.2 Add dips, sauces and garnishes according to standard recipes and regional variations. 5.3 Visually evaluate dish and ***adjust presentation***. 5.4 Store dishes in appropriate ***environmental conditions***.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- initiative and enterprise skills to minimise wastage
- literacy skills to:
  - read and interpret food preparation lists, standard recipes, date code and stock rotation labels and manufacturer instructions for equipment
  - write notes on recipe requirements and calculations
- numeracy skills to:
  - calculate the number of portions
  - weigh and measure ingredients
  - determine cooking times and temperatures
- planning and organising skills to efficiently sequence the stages of food preparation and production
- problem-solving skills to:
  - evaluate quality of ingredients and finished dishes and make adjustments to ensure a quality product
  - adjust taste, texture and appearance of food products according to identified deficiencies
- self-management skills to manage own speed, timing and productivity
- technology skills to use food preparation and cooking equipment.

Required knowledge

- culinary terms and trade names for ingredients commonly used in the production of different appetisers and salads
- characteristics of different appetisers and salads:
  - appearance and presentation
  - classical and contemporary variations
  - freshness and other quality indicators
  - historical and cultural derivations
  - nutritional value
  - service style
  - taste
  - texture
- contents of stock date codes and rotation labels
- mise en place requirements for appetisers and salads
- cookery methods for appetisers and salads
- dressings and sauces for salads
- equipment used to produce appetisers and salads:

© Commonwealth of Australia, 2025 HumanAbility

  - essential features and functions
  - safe operational practices
- storage of appetiser and snack products:
  - correct environmental conditions to ensure food safety
  - appropriate methods to optimise shelf life.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• follow standard recipes to prepare multiple and varying appetisers and salads using a range of preparation and cookery methods
	• produce food for multiple customers within commercial time constraints
	• integrate knowledge of:
	  • quality indicators for appetisers and salads
	  • cookery methods
	  • features, functions and safe use of food preparation equipment
	  • appropriate environmental storage conditions
	  • food safety practices for handling and storing different food types.

Context of and specific resources for assessment	Assessment must ensure use of:
	• an operational commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment
	• Guidelines; this can be a:
	  • real industry workplace
	  • simulated industry environment such as a training kitchen servicing customers
	• industry-realistic ratios of kitchen staff to customers
	• food preparation lists and standard recipes
	• a variety of commercial ingredients.

Method of assessment	A range of assessment methods should be used to assess

practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the individual preparing for and producing appetisers and salads
- evaluation of the taste and visual appeal of appetisers and salads prepared by the individual
- projects that allow assessment of the individual's ability to produce a variety of appetisers and salads
- use of visual and taste recognition exercises so the individual can identify ingredient and product characteristics
- written or oral questioning to assess knowledge of culinary terms, quality indicators for appetisers and salads, equipment, cookery methods
- and appropriate environmental storage conditions
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITHCCC103 Prepare sandwiches.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Food production requirements may include:

- deadlines
- portion control
- quantities to be produced
- special customer requests
- special dietary requirements.

Appetisers and salad may include:

- appetisers:
  - antipasto
  - canapés
  - finger foods
  - hors d'oeuvres

© Commonwealth of Australia, 2025 HumanAbility

- savouries
- tapas

- salads:
  - classical and modern
  - cold, hot or warm
  - ethnic recipes
  - fruit salads.

Ingredients may include:

- condiments
- dressing ingredients
- eggs
- farinaceous products
- fruits
- herbs and spices
- poultry
- meats
- seafood
- vegetables
- specific ingredients for particular dishes and cuisines.

Equipment may include:

- cutting, chopping and slicing implements
- spinners
- strainers.

Cookery methods may include:

- blanching
- frying
- grilling
- roasting
- steaming.

Food quality adjustments may relate to:

- taste:
  - bitter
  - salty
  - sour
  - sweet
  - umami
- temperature
- texture:
  - clean
  - creamy
  - crispy
  - crunchy
  - fibrous

© Commonwealth of Australia, 2025 HumanAbility

	• moist • mousse • rich • slippery • smooth • velvety.

To ***adjust presentation*** may involve:	• changing accompaniments and garnishes to maximise eye appeal:
	  • balance
	  • colour
	  • contrast
	• changing plated food for practicality of:
	  • customer consumption
	  • service
	• wiping drips or spills.

Environmental conditions relates to appropriate:	• atmosphere • humidity • light • packaging • temperature • use of containers • ventilation.

5.5 Reconstitute stocks, sauces and soups to required consistencies.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- initiative and enterprise skills to minimise wastage
- literacy skills to:
  - read and interpret food preparation lists, standard recipes, date code and stock rotation labels and manufacturer instructions for equipment
  - write notes on recipe requirements and calculations
- numeracy skills to:
  - calculate the number of portions
  - weigh and measure ingredients
  - determine cooking times and temperatures
- planning and organising skills to efficiently sequence the stages of food preparation and production
- problem-solving skills to:
  - evaluate quality of ingredients and finished dishes and make adjustments to ensure a quality product
  - adjust taste, texture and appearance of food products according to identified deficiencies
- self-management skills to manage own speed, timing and productivity
- technology skills to use food preparation and cooking equipment.

Required knowledge

- culinary terms and trade names for ingredients commonly used in the production of different stocks, sauces and soups:
  - convenience products
  - thickening agents
- characteristics of different stocks, sauces and soups:
  - appearance and presentation
  - dishes to which they are matched and where they are needed
  - freshness and other quality indicators
  - historical and cultural derivations
  - nutritional value
  - service style
  - taste
  - texture

© Commonwealth of Australia, 2025 HumanAbility

- contents of stock date codes and rotation labels
- mise en place requirements for stock, sauces and soups
- preparation methods for stocks, sauces and soups
- equipment used to produce stocks, sauces and soups:
  - essential features and functions
  - safe operational practices
- storage of products:
  - correct environmental conditions to ensure food safety
  - appropriate methods to optimise shelf life.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• produce a variety of stocks, sauces and soups from different recipes and cultural backgrounds, including:
	  • sauces:
	  • reduced
	  • thickened
	  • hot, warm and cold emulsion
	  • soups both hot and cold:
	  • clear
	  • broth
	  • purée
	  • cream
	  • bisque
	  • stocks
	• produce food for multiple customers within commercial time constraints
	• integrate knowledge of:
	  • quality indicators for stocks, sauces and soups
	  • different types of stocks, sauces and soups
	  • features, functions and safe use of food preparation equipment
	  • food safety practices for handling and storing

© Commonwealth of Australia, 2025 HumanAbility

different food types.

Context of and specific resources for assessment	Assessment must ensure use of:
	• an operational commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment
	• Guidelines; this can be a:
	  • real industry workplace
	  • simulated industry environment such as a training kitchen servicing customers
	• industry-realistic ratios of kitchen staff to customers
	• food preparation lists and standard recipes
	• a variety of commercial ingredients.

Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • direct observation of the individual preparing for and producing stocks, sauces and soups • evaluation of the taste and visual appeal of stocks, sauces and soups prepared by the individual • projects that allow assessment of the individual's ability to produce a variety of stocks, sauces and soups • use of visual and taste recognition exercises so the individual can identify ingredient and product characteristics • written or oral questioning to assess knowledge of culinary terms, quality indicators for stocks, sauces and soups, equipment, cookery • methods and appropriate environmental storage conditions • review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.
Guidance information for assessment	The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present

with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Food production requirements may include:	• deadlines • portion control • quantities to be produced • special customer requests • special dietary requirements.
Stocks and ***sauces*** may include:	• béchamel • chicken and fish velouté • demi-glacé • fruit based sauces • herb based sauces • hollandaise and béarnaise • jus and coulis • mayonnaise based sauces • yoghurt based sauces.
Equipment may include:	• food processor • mouli • stock pots.

Thickening agents may include:	• beurre mani
	• bread
	• flour:
	  • arrowroot
	  • corn
	  • potato
	• modified starch
	• roux:
	  • white
	  • blond
	  • brown
	• sabayon.

Convenience products may include:	• boosters • bouillons • flavour enhancers • stocks.

Food quality adjustments may relate to:	• taste:
	  • bitter
	  • salty
	  • sour

© Commonwealth of Australia, 2025 HumanAbility

- sweet
- umami

- temperature
- texture:
  - clean
  - creamy
  - crispy
  - crunchy
  - fibrous
  - moist
  - mousse
  - rich
  - slippery
  - smooth
  - velvety.

To ***adjust presentation*** may involve:

- changing accompaniments and garnishes to maximise eye appeal:
  - balance
  - colour
  - contrast
- changing plated food for practicality of:
  - customer consumption
  - service
  - wiping drips or spills.

Environmental conditions relates to appropriate:

- atmosphere
- humidity
- light
- packaging
- temperature
- use of containers
- ventilation.

dishes.	5.4 Store dishes in appropriate ***environmental conditions***.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- initiative and enterprise skills to minimise wastage
- literacy skills to:
  - read and interpret food preparation lists, standard recipes, date code and stock rotation labels and manufacturer instructions for equipment
  - write notes on recipe requirements and calculations
- numeracy skills to:
  - calculate the number of portions
  - weigh and measure ingredients
  - determine cooking times and temperatures
- planning and organising skills to efficiently sequence the stages of food preparation and production
- problem-solving skills to:
  - evaluate quality of ingredients and finished dishes and make adjustments to ensure a quality product
  - adjust taste, texture and appearance of food products according to identified deficiencies
- self-management skills to manage own speed, timing and productivity
- technology skills to use food preparation and cooking equipment.

Required knowledge

- culinary terms and trade names for ingredients commonly used in the production of different vegetable, fruit, egg and farinaceous dishes
- characteristics of different vegetable, fruit, egg and farinaceous dishes:
  - appearance and presentation
  - freshness and other quality indicators
  - historical and cultural derivations
  - nutritional value
  - service style
  - taste
  - texture
- contents of stock date codes and rotation labels
- mise en place requirements for vegetable, fruit, egg and farinaceous dishes
- cookery methods for vegetable, fruit, egg and farinaceous dishes:

© Commonwealth of Australia, 2025 HumanAbility

  - boiling
  - frying
  - poaching
  - scrambling
- culinary uses of eggs:
  - aerating
  - setting
  - coating
  - enriching
  - emulsifying
  - glazing
  - clarifying
  - garnishing
  - thickening
- equipment used to produce vegetable, fruit, egg and farinaceous dishes:
  - essential features and functions
  - safe operational practices
- storage of products:
  - correct environmental conditions to ensure food safety
  - appropriate methods to optimise shelf life.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• follow standard recipes to prepare multiple and varying vegetable, fruit, egg and farinaceous dishes
	• prepare dishes using a range of cookery methods, including:
	  • boiling
	  • braising
	  • frying:
	  • deep
	  • shallow
	  • poaching

© Commonwealth of Australia, 2025 HumanAbility

- roasting
- scrambling
- stewing

- use eggs for different culinary purposes, including:
  - aerating
  - binding
  - setting
  - coating
  - enriching
  - emulsifying
  - glazing
  - clarifying
  - garnishing
  - thickening
- prepare fresh pasta
- produce food for multiple customers within commercial time constraints
- integrate knowledge of:
  - quality indicators for vegetable, fruit, egg and farinaceous dishes
  - accompaniments and sauces for vegetable, fruit, egg and farinaceous dishes
  - features, functions and safe use of food preparation equipment
  - food safety practices for handling and storing vegetable, fruit, egg and farinaceous products and dishes.

Context of and specific resources for assessment

Assessment must ensure use of:

- an operational commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment
- Guidelines; this can be a:
  - real industry workplace
  - simulated industry environment such as a training kitchen servicing customers
- industry-realistic ratios of kitchen staff to customers
- food preparation lists and standard recipes
- a variety of commercial ingredients.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

© Commonwealth of Australia, 2025 HumanAbility

- direct observation of the individual preparing for and producing vegetable, fruit, egg and farinaceous dishes
- evaluation of the taste and visual appeal of vegetable, fruit, egg and farinaceous dishes prepared by the individual
- projects that allow assessment of the individual's ability to produce a variety of vegetable, fruit, egg and farinaceous dishes
- use of visual and taste recognition exercises so the individual can identify ingredient and product characteristics
- written or oral questioning to assess knowledge of culinary terms, quality indicators for vegetable, fruit, egg and farinaceous dishes,
- equipment, cookery methods and appropriate environmental storage conditions
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITHCCC202 Produce appetisers and salads.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Food production requirements may include:

- deadlines
- portion control
- quantities to be produced
- special customer requests
- special dietary requirements.

Vegetable, ***fruit***, ***egg and farinaceous dishes*** may include:

- farinaceous:
  - couscous
  - cracked wheat
  - noodles
  - pasta

© Commonwealth of Australia, 2025 HumanAbility

- polenta
- pulses
- rice
- semolina

- fruit and vegetables:
  - dried
  - fresh
  - frozen
- egg:
  - breakfast items
  - fresh pastas
  - pastries.

Equipment may include:

- bains marie
- blenders
- cooking ranges:
  - electric
  - gas
  - induction
- crockery
- cutlery
- food processors and mixers
- knives and knife sharpening equipment
- fryers
- grills and griddles
- microwaves
- ovens
- pans
- salamanders
- scales
- slicers
- steamers
- thermometers
- utensils.

Food quality adjustments may relate to:

- taste:
  - bitter
  - salty
  - sour
  - sweet
  - umami
- temperature

© Commonwealth of Australia, 2025 HumanAbility

- texture:
  - clean
  - creamy
  - crispy
  - crunchy
  - fibrous
  - moist
  - mousse
  - rich
  - slippery
  - smooth
  - velvety.

Adjust presentation may involve:

- changing accompaniments and garnishes to maximise:
  - balance
  - colour
  - contrast
  - eye appeal
  - taste
- changing plated food for practicality of:
  - customer consumption
  - service
- wiping drips or spills.

Environmental conditions may include:

- atmosphere
- humidity
- light
- packaging
- temperature
- use of containers
- ventilation.

SITHCCC205 Produce cook-chill and cook-freeze foods

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	New unit. Replaces cook-chill and cook-freeze components of: SITHCCC017A Organise bulk cooking operations, SITHCCC032A Apply cook-chill production processes and SITHCCC034A Apply cook-freeze production processes.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to safely produce bulk amounts of cook-chill and cook-freeze foods. It requires the ability to select, prepare and portion bulk ingredients and to use equipment and a range of cookery methods to cook, chill, freeze and store food.

Application of the Unit

Cook-chill and freeze foods may be entire meals or individual items. This unit applies to all hospitality and catering organisations which produce bulk amounts of precooked food which is chilled or frozen. It is then transferred to internal or external service outlets for rethermalisation.

These organisations include hotels, restaurants, educational institutions, correctional centres, health establishments, defence forces, cafeterias, kiosks, cafes, canteens, residential caterers, meals-on-wheels services in-flight and other transport caterers, event and function caterers.

It mainly applies to operational kitchen and catering personnel who work with very little independence and under close supervision. This includes catering assistants and cooks.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

This unit must be assessed after the following prerequisite unit:

© Commonwealth of Australia, 2025 HumanAbility

SITXFSA101	Use hygienic practices for food safety

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Select ingredients.	1.1 Confirm food production requirements from food preparation list. 1.2 Calculate ingredient amounts according to requirements. 1.3 Identify and select ingredients from stores according to recipe, quality, freshness and stock rotation requirements. 1.4 Check perishable supplies for spoilage or contamination prior to preparation.
2. Select, prepare and use equipment.	2.1 Select equipment of correct type and size. 2.2 Safely assemble and ensure cleanliness of equipment before use. 2.3 Use equipment safely and hygienically according to manufacturer instructions.
3. Portion and prepare bulk ingredients.	3.1 Sort and assemble bulk ingredients according to the sequencing of food production. 3.2 Weigh and measure wet and dry bulk ingredients according to the recipe and quantity of bulk food items required. 3.3 Minimise waste to maximise profitability of food items produced.
4. Cook and portion bulk food items.	4.1 Produce food using cookery methods to achieve desired product characteristics. 4.2 Follow standard recipes and make food quality adjustments within scope of responsibility. 4.3 Maintain optimum quality of food for cook-chill and freeze processes. 4.4 Cook food to specified temperatures for cook-chill and

© Commonwealth of Australia, 2025 HumanAbility

	cook-freeze production and within safe tolerances for microbiological change.
	4.5 Portion food items to minimise waste and maximise yield and profitability of food.
5. Chill food and store under refrigeration.	5.1 Use blast and water bath chilling methods to chill foods and meet time and temperature standards.
	5.2 Maintain the quality of food throughout the chilling process.
	5.3 Select appropriate containers for storage and label and code clearly.
	5.4 Store food dynamically using first in–first out methods.
	5.5 Meet time and temperature standards for storage to minimise spoilage according to food safety procedures and standards.
	5.6 Continually monitor storage temperatures to avoid food spoilage.
6. Package, freeze and store cooked food.	6.1 Select appropriate containers for freezer storage and label and code clearly.
	6.2 Meet time and temperature standards for freezer storage to minimise spoilage according to food safety procedures and standards.
	6.3 Freeze food in batches, according to food safety procedures and standards, allowing each freezing cycle to be completed.
	6.4 Place food items in appropriate storage once the freezing cycle and labelling is complete.
	6.5 Continually monitor freezer temperatures to avoid food spoilage.
7. Transfer cook-chill and cook–freeze foods.	7.1 Safely transfer food from production kitchen to service areas and outlets by refrigerated transport or insulated containers.
	7.2 Check and record temperature levels at despatch and receipt.
	7.3 Protect food from dangerous temperatures during the transfer process.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- initiative and enterprise skills to minimise wastage
- literacy skills to:
  - read and comprehend food preparation lists, recipes, date code and stock rotation labels and manufacturer instructions for equipment
  - write notes on recipe and temperature requirements

© Commonwealth of Australia, 2025 HumanAbility

- numeracy skills to:
  - calculate the number of portions
  - weigh and measure bulk ingredients
  - determine cooking times and temperatures
- planning and organising skills to efficiently sequence the stages of food preparation and production
- problem-solving skills to:
  - evaluate quality of ingredients and finished dishes and make adjustments to ensure a quality product
  - adjust taste, texture and appearance of food products according to identified deficiencies
  - monitor temperatures and adjust according to identified discrepancies
- self-management skills to manage own speed, timing and productivity
- technology skills to use food preparation, cooking chill and freezing equipment.

Required knowledge

- characteristics and uses of different precooked food types subject to chilling and freezing:
  - culinary terms and trade names
  - bulk foods
  - plated meals
  - sous-vide products
  - meals-on-wheels
  - takeaway meals
- contents of stock date codes and rotation labels
- indicators of spoilage and contamination of perishable supplies in storage
- mise en place requirements for producing cook-chill and cook-freeze foods
- methods to chill foods:
  - blast
  - water bath
- food safety procedures and standards for preparing cook-chill and cook-freeze foods
- food safety procedures and standards for storage of chilled and frozen food:
  - appropriate containers
  - labelling and coding
  - first in first out methods
  - storage environments
  - temperature specifications for storage
- temperature specifications and methods for transferring chilled and frozen foods
- equipment used to produce cook-chill and cook-freeze foods:
  - essential features and functions
  - safe operational practices.

© Commonwealth of Australia, 2025 HumanAbility

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- safely produce a variety of bulk amounts of cook-chill and cook-freeze foods to meet multiple and diverse food service requirements
- integrate knowledge of:
  - essential features, functions and safe use of food preparation equipment
  - food safety procedures and standards for storage of chilled and frozen food
  - temperature specifications and methods for transferring chilled and frozen foods
- produce cook-chilled and cook frozen food items within in commercial time constraints.

Context of and specific resources for assessment

Assessment must ensure use of:

- an operational commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment
- Guidelines including specific equipment for producing cook-chill and cook-freeze foods; this can be a:
  - real industry workplace
  - simulated industry environment such as a training kitchen servicing food production orders
- food preparation lists
- a variety of commercial ingredients for the bulk production of cook-chill and cook-freeze food.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the individual preparing and cooking cook-chill and cook-freeze food items
- evaluation of the taste and visual appeal of dishes produced by the individual
- projects that allow assessment of the individual's ability to produce a bulk amount of cook-chill and coo

© Commonwealth of Australia, 2025 HumanAbility

freeze foods for a set menu for an
- event, function or meeting within designated deadlines
- written or oral questioning to assess knowledge of:
  - characteristics and uses of different precooked food types
  - methods to chill and freeze foods
  - food safety procedures
  - temperature specifications
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- BSBSUS201A Participate in environmentally sustainable work practices
- BSBWOR202A Organise and complete daily work activities
- SITHCCC307 Prepare food to meet special dietary requirements
- SITXFSA201 Participate is safe food handling practices
- SITXFSA202 Transport and store food
- TLIE1005A Carry out basic workplace calculations.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Food production requirements may include:

- deadlines
- portion control
- quantities to be produced
- special customer requests
- special dietary requirements
- standard recipes.

Ingredients may include:

- cold
- dry goods
- frozen

© Commonwealth of Australia, 2025 HumanAbility

- perishable supplies
- raw foods
- wet goods.

Equipment includes:

- fixed and hand-held cooking equipment
- general cooking equipment
- cooking equipment specific to cook-freeze and cook-chill processes:
  - blast chiller
  - blast freezer
  - chilling equipment
  - ice slurry tumbler
  - pasteurising equipment
  - pH tester
  - suitable refrigerated storage area
  - thermocouple chilling equipment
- packaging material
- vacuum sealing equipment.

Foods may include:

- entire meals
- individual food items
- meals-on-wheels
- plated meals
- sous-vide products
- takeaway items.

Cookery methods may include:

- baking
- boiling
- chargrilling and barbecuing
- deep-frying
- grilling
- hot plate
- microwaving
- poaching
- reducing
- roasting
- steaming
- stewing
- whisking, folding, piping and spreading.

Product characteristics include:

- appearance
- colour
- consistency
- moisture content
- shape

© Commonwealth of Australia, 2025 HumanAbility

- size
- structure
- taste
- texture.

Food quality adjustments may relate to:

- ratio of wet to dry ingredients
- taste:
  - acidic
  - bitter
  - salty
  - spicy
  - spicy (heat)
  - sweet
  - umami
- temperature
- texture:
  - a light or heavy mouth feel
  - clean
  - creamy
  - crispy
  - crunchy
  - fibrous
  - intense
  - marshmallow like
  - moist
  - mousse
  - rich
  - slippery
  - smooth
  - velvety.

Appropriate storage may relate to use of appropriate:

- atmosphere
- chillers
- coolrooms
- freezers
- humidity
- light
- packaging
- refrigerators
- temperature
- containers
- ventilation.

SITHCCC307 Prepare food to meet special dietary requirements

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITHCCC029A Prepare foods according to dietary and cultural needs. Title changed to better reflect the intent and content of the unit. Unit structure made consistent across all cooking units. Re-worked Elements, Performance Criteria, Required Skills and Knowledge to more fully articulate content.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare dishes for people who have special dietary needs for health, lifestyle and cultural reasons. It requires the ability to confirm the dietary requirements of customers, use special recipes, select special ingredients and produce food to satisfy special requirements.

This unit does not include menu planning for special diets which is found in the unit SITHKOP402 Develop menus for special dietary requirements.

Application of the Unit

This unit applies to all hospitality and catering organisations which prepare and serve food. This includes hotels, restaurants, educational institutions, health establishments, defence forces, cafeterias, kiosks, cafes, residential caterers, in-flight and other transport caterers, event and function caterers.

It applies to cooks and patissiers who usually work under the guidance of more senior chefs.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

© Commonwealth of Australia, 2025 HumanAbility

Pre-Requisites

This unit must be assessed after the following prerequisite unit:	
SITXFSA101	Use hygienic practices for food safety

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Confirm special dietary requirements and select ingredients.	1.1 Confirm the ***dietary*** and ***cultural food requirements*** of the ***customer***. 1.2 Liaise with ***others*** to clarify requirements. 1.3 Confirm health consequences of ignoring special dietary requirements of customers. 1.4 Access special dietary recipes and select specialised ***ingredients***. 1.5 Identify, from recipes and packaging, ingredients that may cause health consequences due to food allergies or intolerance. 1.6 Exclude ingredients from dishes as requested by the customer.
2. Prepare foods to satisfy nutritional and special dietary requirements.	2.1 Follow special recipes to produce dishes for those with special dietary and cultural food requirements. 2.2 Modify menu items to meet different dietary requests by excluding or substituting ingredients while maintaining equivalent nutritional value. 2.3 Communicate specific dietary or cultural requirements for food preparation to other team members. 2.4 Select appropriate ingredients to ensure optimum nutritional quality of dishes. 2.5 Use appropriate equipment and cooking techniques for specific diets.

© Commonwealth of Australia, 2025 HumanAbility

2.6 Employ suitable preparation and cooking techniques to retain optimum nutritional values.

2.7 Present nutritionally balanced food in an appetising and attractive manner.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - discuss and confirm dietary requirements with customers
  - discuss special food preparation requirements with kitchen team members
- literacy skills to:
  - read and comprehend special dietary recipes and packaging labels
  - write notes on recipe requirements and calculations
- numeracy skills to weigh and measure ingredients
- planning and organising skills to efficiently sequence the stages of food preparation and production
- problem-solving skills to:
  - consider and respond to special customer needs and requests
  - adjust standard menu items to meet special customer requests
- self-management skills to manage own speed, timing and productivity
- technology skills to use food preparation and cooking equipment.

Required knowledge

- culinary terms and trade names for:
  - substitute ingredients used to produce dishes with special dietary recipes
  - ingredients suitable for meeting basic nutritional needs
  - ingredients that cause common allergic reactions
  - food additives and preservatives
- main types and culinary characteristics of special diets that are part of contemporary Australian society:
  - diabetic
  - gluten free
  - low cholesterol
  - low fat
  - low gluten
  - sugar free
  - vegan

© Commonwealth of Australia, 2025 HumanAbility

- meaning of:
  - drug–food interactions
  - food allergy
  - food intolerance
- key health and legal consequences of failing to address special requirements:
  - allergic reactions
  - anaphylaxis
  - food sensitivity or intolerance reactions
- main types and culinary characteristics of cultural diets that are part of contemporary Australian society:
  - halal
  - Hindu
  - kosher
  - vegetarian
- basic principles and practices of nutrition, including:
  - nutrients and their food sources
  - influences on food choice
  - food and beverage selection influences
  - food labelling and interpretation
  - role and implications of using food additives and preservatives
  - health implications of food choices
  - role of good nutrition in avoiding dietary diseases
  - effects of various cooking methods and food storage on nutrients
- primary components of Dietary Guidelines for Australians, including those for older Australians, children and adolescents.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • follow special recipes to prepare and produce a variety of dishes to meet multiple and diverse requests of customers with special dietary requirements • modify a range of recipes and menu items to meet different dietary requests by excluding or substituting ingredients while maintaining equivalent nutritional value

© Commonwealth of Australia, 2025 HumanAbility

- demonstrate knowledge of:
  - key health and legal consequences of failing to address special requirements
  - main types and culinary characteristics of special and cultural diets that are part of contemporary Australian society
- produce special dishes for multiple customers within commercial time constraints.

Context of and specific resources for assessment

Assessment must ensure use of:

- an operational commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment Guidelines; this can be a:
  - real industry workplace
  - simulated industry environment such as a training kitchen servicing customers
- industry-realistic ratios of kitchen staff to customers
- recipes for special dietary requirements
- Dietary Guidelines for Australians, including those for older Australians, children and adolescents
- a variety of commercial ingredients for special dietary and cultural dishes.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the individual preparing for and producing a range of dishes for customers with special dietary requirements
- evaluation of the taste and visual appeal of dishes produced by the individual
- use of problem-solving exercises so the individual can identify and evaluate the dietary needs of different types of customer and provide responses
- projects that allow assessment of the individual's ability to produce, within designated deadlines, a variety of special dishes that meet the cultural food requirements of a designated customer group attending a cultural event or function
- written or oral questioning to assess knowledge of:
  - meaning food allergies and intolerance and common allergic and food intolerance reactions
  - health and legal consequences of non-compliance with special requests
  - characteristics of special and cultural diets

© Commonwealth of Australia, 2025 HumanAbility

- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITHPAT306 Produce desserts
- SITXFSA201 Participate in safe food handling practices
- TLIE1005A Carry out basic workplace calculations
- any commercial cookery, commercial catering, patisserie or Asian cookery unit.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Dietary requirements may include:

- diabetic
- contemporary eating regimes:
  - elimination
  - liver cleansing
  - macrobiotic
- exclusions for:
  - allergies
  - contraindications with medicines
  - food intolerance
- fluids
- food preferences
- food restrictions
- gluten-free
- high carbohydrate
- high or low-energy
- high or low-protein
- high-fibre
- lacto-ovo
- low-carbohydrate
- low-cholesterol
- low-fat
- low gluten

© Commonwealth of Australia, 2025 HumanAbility

- low-kilojoule
- modified sodium or potassium
- modified texture
- nutritional requirements
- portion size
- vegan
- vegetarian.

Cultural food requirements may include:

- cultural or religious dietary:
  - needs
  - requirements
  - sanctions
- halal
- Hindu
- kosher
- vegetarian.

Customer may include:

- adolescents
- athletes
- children
- defence forces
- health care customers
- infants
- international tourists
- people from different socio-economic groups
- people from specific cultural or religious groups
- the:
  - aged
  - ill
  - injured
  - obese
- those with particular nutritional interests
- those with varying nutritional and energy requirements due to physical condition.

Others may include:

- allied health professionals
- customers
- diet technicians
- dieticians
- family members
- health and medical personnel
- nutritionists
- religious personnel
- supervisors and managers.

© Commonwealth of Australia, 2025 HumanAbility

Ingredients may include:

- fat-free
- low-carbohydrate
- low-fat
- low gluten
- low-kilojoule
- low-sugar
- substitutes:
  - gluten-free flour
  - yeast-free flour
  - non-sugar sweeteners
- sugar-free
- those without known allergic reactions
- vegan.

SITHKOP101 Clean kitchen premises and equipment

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	N Replaces but is not equivalent to SITHCCC004B Clean and maintain kitchen premises. Title simplified. Unit has tighter focus on cleaning kitchens to avoid food safety issues. Some Performance Criteria removed which duplicated content of related unit SITHACS101 Clean premises and equipment. Re-worked Elements, Performance Criteria, Required Skills and Knowledge to more fully articulate content. Moved to new competency field – Kitchen Operations to better reflect the content of this unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to clean food preparation, storage areas and equipment in commercial kitchens to ensure the safety of food. It requires the ability to work safely and to use resources efficiently to reduce negative environmental impacts.

Application of the Unit

This unit is particularly important within a food safety regime and applies to all hospitality and catering organisations with kitchen premises including permanent or temporary kitchens or smaller food preparation areas. These can be found within restaurants, cafes, kiosks, cafeterias, clubs, hotels, attractions and in catering facilities.

It applies to kitchen personnel who work with very little independence and under close supervision including kitchen attendants and stewards. It can also apply to cooks and chefs in small organisations.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

© Commonwealth of Australia, 2025 HumanAbility

Pre-Requisites

This unit must be assessed after the following prerequisite unit:	
SITXFSA101	Use hygienic practices for food safety

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Clean and sanitise kitchen equipment.	1.1 Select and prepare ***cleaning agents and chemicals*** according to product instructions. 1.2 Clean and sanitise ***kitchen equipment*** to ensure safety of food prepared and served to customers. 1.3 Store cleaned equipment in designated place.
2. Clean serviceware and utensils.	2.1 Sort ***serviceware and utensils*** and load dishwasher with appropriate items. 2.2 Hand wash any items not appropriate for dishwasher. 2.3 Dispose of broken or chipped serviceware, within scope of responsibility, and report losses to supervisors. 2.4 Ensure that sufficient supplies of clean, undamaged crockery are available at all times during the service period.
3. Clean and sanitise kitchen premises.	3.1 Follow organisational cleaning schedules. 3.2 Clean and sanitise ***kitchen surfaces*** and ***food preparation and storage areas*** to ensure the safety of food prepared and served to customers. 3.3 Clean areas of animal and pest waste and report incidents of infestation. 3.4 Follow ***safety procedures*** in the event of a chemical accident. 3.5 Sort and remove ***linen*** according to organisational procedures. 3.6 Sort and promptly dispose of ***kitchen waste*** to avoid cross

© Commonwealth of Australia, 2025 HumanAbility

	contamination with food stocks.
4. Work safely and reduce negative environmental impacts.	4.1 Use cleaning agents, chemicals and ***cleaning equipment*** safely and according to manufacturer instructions. 4.2 Use ***personal protective equipment*** and safe manual handling techniques when cleaning equipment and premises. 4.3 Reduce negative environmental impacts through efficient use of energy, water and other resources. 4.4 Sort general waste from ***recyclables*** and dispose of them in designated recycling bins. 4.5 Safely dispose of all kitchen waste, especially ***hazardous substances***, to minimise negative environmental impacts.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to report and discuss the disposal of broken serviceware and infestation incidents
- literacy skills to:
  - read and comprehend workplace documents or diagrams that interpret the content of:
    - cleaning schedules
    - safety procedures
    - Material Safety Data Sheets (MSDS) and product instructions for cleaning agents and chemicals
    - manufacturer’s instructions for equipment
  - write simple notes to report broken serviceware
- numeracy skills to calculate the dilution requirements for chemicals and cleaning products
- planning and organising skills to efficiently sequence the stages of cleaning kitchen equipment and premises
- problem-solving skills to:
  - identify and dispose of unsafe chipped or broken serviceware
  - identify and report on pest infestations
  - recognise a chemical accident and follow safety procedures to avoid food contamination
- self-management skills to manage own speed, timing and productivity
- teamwork skills to support cooking staff by cleaning equipment, serviceware and utensils continuously for their availability
- technology skills to use automatic dishwashers and reassemble kitchen equipment after cleaning.

© Commonwealth of Australia, 2025 HumanAbility

Required knowledge

- hygiene and cross-contamination issues for kitchens and the importance and purpose of cleaning regimes
- different types of cleaning and sanitising products, chemicals for kitchens and equipment:
  - uses
  - safe use
  - safe storage
- safe practices for using and storing hazardous substances
- content of MSDS for cleaning agents and chemicals or plain English workplace documents or diagrams that interpret the content of MSDS
- cleaning sanitising and disinfecting methods for:
  - kitchen floors, shelves and walls
  - kitchen equipment, serviceware and utensils
- correct use of personal protective equipment
- safe manual handling techniques for cleaning equipment and premises, especially bending, lifting and carrying heavy equipment
- environmental impacts of cleaning commercial kitchens and equipment and minimal impact practices to reduce these especially those that relate to water and energy use
- correct and environmentally sound disposal methods for kitchen waste including hazardous substances and recyclable glass and plastic bottles and containers
- equipment used to clean kitchen premises and equipment:
  - essential features and functions
  - safe operational practices
- for the specific organisation:
  - contents of cleaning schedules
  - contents of safety procedures for chemical accidents
  - reporting mechanisms for infestations
  - standards of presentation for the premises.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

	• commercial cleaning schedules
	• safety procedures for chemical accidents
	• MSDS for cleaning agents and chemicals and or plain English workplace documents or diagrams that interpret the content of MSDS.

Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
	• direct observation of the individual cleaning a fully equipped commercial kitchen and storage areas
	• inspection of areas cleaned by the individual
	• written or oral questioning to assess knowledge of:
	  • the importance and purpose of cleaning regimes
	  • different types of cleaning agents and chemicals
	  • cleaning sanitising and disinfecting methods
	  • disposal methods for waste and hazardous substances

© Commonwealth of Australia, 2025 HumanAbility

- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- BSBSUS201A Participate in environmentally sustainable work practices
- BSBWOR202A Organise and complete daily work activities
- BSBWOR203B Work effectively with others
- SITXWHS101 Participate in safe work practices
- SITXWHS301 Identify hazards, assess and control safety risks
- TLIE1005A Carry out basic workplace calculations.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Cleaning agents and chemicals include:

- automatic dishwasher:
  - liquid
  - powder
  - tablets
- bleach
- cleaning agents for specialised surfaces
- deodorisers
- dishwashing liquid
- disinfectants
- floor cleaners
- glass cleaner
- pesticides
- stainless steel cleaner and polish
- window cleaner.

Kitchen equipment includes:

- appliances
- cooking equipment
- dishwashers

© Commonwealth of Australia, 2025 HumanAbility

- extraction fans
- garbage bins
- glasswashers
- measures
- mechanical food preparation equipment:
  - bowl choppers
  - commercial mixers food processors, blenders and attachments
  - mincers
  - slicing machines
- ovens
- scales
- thermometers.

Serviceware and utensils may include:

- chopping boards
- containers
- cooking utensils
- crockery
- cutlery
- dishes
- glassware
- graters
- knives
- pans
- pots.

Kitchen surfaces include:

- floors
- shelves
- walls.

Food preparation and storage areas include:

- benches and working surfaces
- cool rooms
- cupboards
- freezers
- fridges
- microwaves
- ovens
- storerooms
- stoves.

Safety procedures may relate to:

- disposal of contaminated food
- first aid
- treatment of food preparation area and equipment to avoid any risk to food.

Linen may include:

- cleaning cloths

© Commonwealth of Australia, 2025 HumanAbility

- clothing
- napkins
- serving cloths
- tablecloths
- tea towels.

Kitchen waste may include:

- animal fat
- any used or out of date ingredient or food item
- broken serviceware
- cooking oils
- food waste
- ghee
- grease
- hazardous substances
- oils
- pest waste.

Cleaning equipment may include:

- cloths
- dishwashers
- brooms, brushes and dustpans
- buckets
- cleaning cloths
- floor scrubbers or polishers
- mops
- pressurised steam and water cleaners
- swabs
- waste sink for mops.

Personal protective equipment may include:

- face masks
- gloves
- goggles
- rubber aprons.

Recyclables may include:

- glass bottles and jars
- plastics
- paper and cardboard
- tin or aluminium containers
- fruit and vegetable matter.

Hazardous substances may include:

- animal fat
- chemicals
- cleaning agents
- cooking oils
- ghee
- grease.

SITXFSA101 Use hygienic practices for food safety

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXOHS002A Follow workplace hygiene procedures. Updated and re-categorised to Food Safety.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use personal hygiene practices to prevent contamination of food that might cause food-borne illnesses. It requires the ability to follow predetermined organisational procedures and to identify and control food hazards.

Application of the Unit

This unit applies to all tourism, hospitality and catering organisations with permanent or temporary kitchen premises or smaller food preparation or bar areas.

This includes restaurants, cafes, clubs, hotels, bars, tour operators, attractions, function, event, exhibition and conference caterers, educational institutions, aged care facilities, correctional centres, hospitals, defence forces, cafeterias, kiosks, canteens, fast food outlets, residential caterers, in-flight and other transport caterers.

It applies to food handlers which can be any person who directly handles food or food contact surfaces food such as cutlery, plates and bowls. People at many levels use this skill in the workplace during the course of their daily activities, including cooks, chefs, caterers, kitchen stewards, kitchen hands, bar and food and beverage attendants and sometimes room attendants and front office staff.

Licensing/Regulatory Information

Food handlers must comply with the requirements contained within the Australia New Zealand Food Standards (ANZFS) Code (the Code).

© Commonwealth of Australia, 2025 HumanAbility

In some states and territories businesses are required to designate a food safety supervisor who is required to be certified as competent in this unit through a registered training organisation.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Follow hygiene procedures and identify food hazards.	1.1 Follow organisational ***hygiene procedures***. 1.2 Promptly report ***unsafe practices*** that breach hygiene procedures. 1.3 Identify ***food hazards*** that may affect the health and safety of customers, colleagues and self. 1.4 Remove or minimise the hygiene hazard and report to appropriate person for follow up.
2. Report any personal health issues.	2.1 Report any personal ***health issues*** likely to cause a hygiene risk. 2.2 Report incidents of food contamination resulting from personal health issues. 2.3 Cease participation in food handling activities where a health issue may cause food contamination.
3. Prevent food contamination.	3.1 Maintain clean clothes, wear required personal protective clothing and only use organisation-approved bandages and dressings. 3.2 Prevent food contamination from clothing and ***other items worn***. 3.3 Prevent unnecessary direct contact with ready to eat food. 3.4 Avoid ***unhygienic personal contact*** with food or ***food contact surfaces***.

© Commonwealth of Australia, 2025 HumanAbility

	3.5 Avoid ***unhygienic cleaning practices*** that may cause food-borne illnesses.
4. Prevent cross contamination by washing hands.	4.1 ***Wash hands at appropriate times*** and follow hand washing procedures consistently. 4.2 Wash hands using ***appropriate facilities***.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to verbally report hygiene hazards and poor organisational practice
- literacy skills to comprehend workplace documents or diagrams that interpret the content of:
  - organisational food safety program
  - hygiene and food safety procedures
  - Hazard Analysis and Critical Control Points (HACCP) practices
- problem-solving skills to identify and report hygiene hazards.

Required knowledge

- basic aspects of national, state or territory food safety laws, standards and codes. This would include:
  - meaning of contaminant, contamination and potentially hazardous foods as defined by the Code
  - hygiene actions that must be adhered to by businesses to avoid food-borne illnesses
  - employee responsibility to participate in hygienic practices
  - reasons for food safety programs and what they must contain
  - role of local government regulators
  - ramifications of failure to observe food safety law and organisational policies and procedures
- basic aspects of HACCP method of controlling food safety
- for the specific industry sector and organisation:
  - major causes of food contamination and food-borne illnesses
  - sources and effects of microbiological contamination of food
  - workplace hygiene hazards when handling food and food contact surfaces
  - basic content of organisational food safety program
  - the contents of hygiene and food safety procedures
  - hygienic work practices for individual job roles and responsibilities.

© Commonwealth of Australia, 2025 HumanAbility

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- integrate the use of predetermined hygiene procedures and food safety practices within day-to-day food handling work functions
- integrate, into daily work activities, knowledge of the basic aspects of food safety standards and codes and the ramifications of disregarding this.

Context of and specific resources for assessment

Assessment must ensure use of:

- an operational commercial food preparation area, bar or kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment Guidelines; this can be a:
  - real industry workplace
  - simulated industry environment such as a training kitchen servicing customers
- food ingredients and ready to eat food items
- current plain English regulatory documents distributed by the national, state, territory or local government food safety authority
- the Code
- current commercial food safety programs, policies and procedures used for the management of food safety.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the candidate using hygienic work practices during an integrated assessment of operative functions, such as cleaning and tidying bars, cooking at a camp site, preparing meals in a commercial kitchen, storing unused foodstuffs
- use of problem-solving exercises so the individual can respond to a range of situations where food hazards exist
- written or oral questioning to assess knowledge of the content of hygiene procedures and food safety standards and codes
- review of portfolios of evidence and third-party workplace

© Commonwealth of Australia, 2025 HumanAbility

reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITXFSA201 Participate in safe food handling practices
- SITXFSA202 Transport and store food
- any commercial cookery, commercial catering, patisserie, Asian cookery or food and beverage unit involving food preparation.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hygiene procedures:

- may cover:
  - cleaning and sanitising practices to avoid contamination of food
  - food storage
  - handling and disposal of garbage
  - personal hygiene
  - regular hand washing
  - safe and hygienic handling of food and beverages
  - safe handling and disposal of linen and laundry
  - suitable dress and personal protective equipment and clothing
  - use of cleaning equipment, clothes and materials to avoid contamination of food
- may be:

© Commonwealth of Australia, 2025 HumanAbility

- covered by staff training programs
- documented in the organisational food safety program
- required by the national food safety code.

Unsafe practices may include:

- being asked to participate in unhygienic work practices
- food handling practices that may result in the contamination of food
- ignoring the direction of:
  - hygiene signage
  - supervisors
  - managers
- lack of:
  - required hygiene signage
  - training in hygiene procedures
- outdated practices not in keeping with current organisational procedures
- poor personal hygiene and cleaning practices that may result in cross-contamination of food and other items
- practices inconsistent with organisational food safety program
- seeing others using unhygienic work practices
- use of broken or malfunctioning equipment.

Food hazards may include:

- airborne dust
- colleagues without appropriate training or understanding of good hygiene practices, policies and procedures
- contaminated food
- contaminated garbage
- dirty equipment and utensils
- equipment not working correctly, such as fridge and temperature probes
- items, such as linen, tea towels and towels that may be contaminated with human waste, such as blood and body secretions
- use of practices not in keeping with current organisational activities
- vermin.

Health issues may relate to:

- airborne diseases
- food borne diseases
- infectious diseases.

Other items worn may include:

- bandages
- hair accessories
- jewellery
- watches.

© Commonwealth of Australia, 2025 HumanAbility

Unhygienic personal contact may involve:	• transferring micro-organisms by:
	  • blowing nose
	  • coughing
	  • drinking
	  • eating
	  • scratching skin and hair
	  • sneezing
	  • spitting
	  • touching wounds
	• transmitting tobacco products by smoking.

Food contact surfaces may include:	• chopping boards • containers • cooking utensils • crockery • cutlery • glassware • pots and pans • sinks • workbenches.

Unhygienic cleaning practices may involve:	• cleaning food contact surfaces with linen, tea towels and towels that may be contaminated with human waste:
	  • blood
	  • body secretions
	  • faeces
	• using dirty:
	  • cleaning cloths
	  • tea towels
	• spreading bacteria from bathroom or bedroom areas to mini-bar or kitchen areas in an accommodation facility.

Wash hands at appropriate times might include:	• before commencing or recommencing work with food
	• immediately after:
	  • handling raw food
	  • smoking, coughing, sneezing, blowing the nose, eating, drinking, and touching the hair, scalp or any wound
	  • using the toilet.

Appropriate facilities for hand washing may include:	• designated hand washing sink • liquid soap • single use towels • warm running water.

SITXFSA202 Transport and store food

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXFSA003A Transport and store food in a safe and hygienic manner. Prerequisite removed. Title simplified. Minor adjustments to expression of content to streamline and improve unit. Wording adjusted to better reflect regulatory requirements.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to transport food from a food preparation area to another location. It also deals with holding or storage on arrival.

Application of the Unit

This unit applies to catering operations where food is transported from the preparation area to another location and stored on arrival. This could include restaurants, educational institutions, aged care facilities, hospitals, defence forces, cafeterias, kiosks, cafes, residential catering, in-flight and other transport catering, events catering and private catering. It applies to food handlers who directly handle food when transporting and storing food. People at many levels use this skill in the workplace including cooks, chefs, caterers and catering assistants.

The person transporting the food may or may not be driving the vehicle.

Licensing/Regulatory Information

Food handlers involved in transporting and storing food must comply with the requirements contained within the Australia New Zealand Food Standards (ANZFS) Code (the Code). Business may be required to implement a food safety program and food handlers would need to comply with the transportation provisions.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Transport food safely and hygienically.	1.1 Select suitable food ***transportation*** vehicles according to ***legislative requirements***. 1.2 Package, load, restrain and unload food appropriately. 1.3 Use hygienic food safety practices for food transportation 1.4 Use safe manual handling techniques when moving and storing food. 1.5 Maintain records of food transportation as required.
2. Store food safely and hygienically.	2.1 Select food storage conditions for ***specific food types***. 2.2 Maintain ***environmental conditions*** for specific food types to ensure freshness, quality and appearance. 2.3 Ensure storage and holding methods optimise nutritional quality and comply with relevant stock control principles. 2.4 Use hygienic food safety practices and observe work health and safety procedures and practices. 2.5 Keep storage areas free from contaminants and pests.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to:
  - read work instructions and food labels

© Commonwealth of Australia, 2025 HumanAbility

  - complete records of food transportation
- numeracy skills to calculate quantities during the packing and unpacking process
- problem-solving skills to deal with routine food handling, storage and transportation problems.

Required knowledge

- basic aspects of national, state or territory food safety laws, standards and codes, including:
  - actions that must be adhered to by organisations
  - employee responsibility to participate in hygienic practices
  - reasons for food safety programs, when they are required for transportation activities and what they must contain
  - role of local government regulators
  - ramifications of failure to observe food safety law and organisational policies and procedures
  - meaning of contaminant, contamination and potentially hazardous foods as defined by the Code
- advantages and disadvantages of different forms of transport for particular food items, quantities and circumstances
- safe storage principles and practices for different food types, including storage options
- characteristics of different food items and conditions required to maintain optimum freshness, palatability and safety, including:
  - dairy
  - dried goods
  - eggs
  - frozen food
  - fruit and vegetables
  - meat and fish
- for the specific industry sector and organisation:
  - sources and effects of microbiological contamination of food in transit
  - methods of transportation and storage to ensure the safety of food
  - temperature controls and temperature danger zones, for storage of main food types used in the business
  - the contents of food safety transportation procedures included in organisational food safety program
- safe manual handling techniques, in particular loading and unloading, lifting and dealing with heated surfaces.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the

© Commonwealth of Australia, 2025 HumanAbility

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• transport and store food items according to food safety requirements and regulations
	• demonstrate knowledge of specific requirements for different food types, including:
	  • dairy
	  • dried goods
	  • eggs
	  • frozen food
	  • fruit and vegetables
	  • meat and fish.

Context of and specific resources for assessment	Assessment must ensure use of: • vehicles suitable for the transportation of food • food ingredients and ready to eat food items to be transported • industry-current equipment for the transportation and storage of food • current plain English regulatory documents distributed by the national, state, territory or local government food safety authority • the Code • current commercial food safety programs, policies and procedures used for the management of food safety.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • direct observation of the individual transporting and storing food items • inspection of food transported and stored by the individual • use of case studies to assess knowledge of requirements for different food types • written or oral questioning to assess knowledge of food safety requirements • review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.
Guidance information for	The assessor should design integrated assessment

© Commonwealth of Australia, 2025 HumanAbility

assessment	activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example: • SITHCCC104 Package prepared foodstuffs • SITXFSA101 Use hygienic practices for food safety.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Type of ***transportation*** used may include:	• cars • refrigerated trucks • trolleys, carts and buggies • vans.
Legislative requirements refer to federal, state or territory, and local regulations and guidelines and may apply to:	• food safety programs • lining • sealing • temperature.
Specific food types may include:	• dairy • dried goods • eggs • frozen food • fruit and vegetables • meat and fish.
Environmental conditions may relate to:	• humidity • light • pests • temperature.

SITXFSA401 Develop and implement a food safety program

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXFSA002A Develop and implement a food safety program. Prerequisite removed. Minor adjustments to expression of content to streamline and improve unit. Wording adjusted to better reflect regulatory requirements.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop, implement and evaluate a food safety program for the all stages in the food production process including receipt, storage, preparation, service and disposal. It requires the ability to determine program requirements and prepare policies and procedures for other personnel to follow.

Application of the Unit

This unit applies to all tourism, hospitality and catering organisations with permanent or temporary kitchen premises or smaller food preparation areas.

This includes restaurants, cafes, clubs, hotels, tour operators, attractions, function, event, exhibition and conference caterers, educational institutions, aged care facilities, correctional centres, hospitals, defence forces, cafeterias, kiosks, canteens, fast food outlets, residential caterers, in-flight and other transport caterers.

A food safety program would most commonly be based on the Hazard Analysis and Critical Control Points (HACCP) method but this unit can apply to other food safety systems.

It applies to senior personnel who work independently and who are responsible for making strategic decisions on establishing and monitoring risk control systems for food-related hazards. This could include chefs, kitchen managers, catering managers, fast food store managers and owner-operators of small business catering operations or retail food outlets.

© Commonwealth of Australia, 2025 HumanAbility

Licensing/Regulatory Information

Food businesses must comply with requirements contained within the Australia New Zealand Food Standards (ANZFS) Code (the Code). The Code contains a non-mandatory standard for the development of a food safety program.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Evaluate organisational requirements for food safety program.	1.1 Evaluate ***organisational characteristics*** that impact on food safety. 1.2 Examine food handling operations and processes and identify potential or existing ***food hazards***. 1.3 Identify ***critical control points*** in food preparation system where food hazards must be controlled. 1.4 Identify product suppliers and determine quality assurance specifications for foodstuffs supplied. 1.5 Evaluate existing product specifications for food items prepared and sold. 1.6 Evaluate existing ***policies and procedures*** and monitoring practices, including record keeping, and assess need for change.
2. Develop food safety program to control hazards.	2.1 Consult with stakeholders in program development. 2.2 Integrate regulatory requirements and standards into policies and procedures. 2.3 Establish and document critical control points and control methods for each point. 2.4 Develop procedures for systematic ***monitoring of controls*** and associated record keeping.

© Commonwealth of Australia, 2025 HumanAbility

	2.5 Develop corrective action procedures for uncontrolled hazards.
	2.6 Develop or modify and record product specifications covering food items prepared and sold.
	2.7 Identify training needs and develop training program.
	2.8 Develop schedule for regular review of food safety program.
	2.9 Document food safety program and provide to regulatory authorities as required.
3. Implement food safety program.	3.1 Communicate food safety programs, policies, procedures and product specifications to colleagues and ensure display of appropriate signage and access to information.
	3.2 Organise appropriate training and mentoring.
	3.3 Monitor operational activities to ensure that policies and procedures are followed.
	3.4 Manage response to ***incidents of uncontrolled food hazards*** and oversee implementation of corrective action procedures.
	3.5 Make changes to practices that led to the food safety breach, and document, communicate and implement changes.
	3.6 Maintain ***food safety management documents***.
4. Participate in food safety audit.	4.1 Ensure food safety program is audited as required by legislation.
	4.2 Participate in food safety program audits and provide assistance to inspectors.
	4.3 Retain records of food audits according to legislative requirements.
5. Evaluate and revise food safety program.	5.1 Conduct scheduled review of food safety program in consultation with colleagues.
	5.2 Validate required food safety controls.
	5.3 Review policies, procedures, product specifications, monitoring systems and record keeping methods, and revise as required.
	5.4 Prepare and document amended food safety program and provide to regulatory authorities as required.
	5.5 Communicate changes and monitor inclusion in production processes.
	5.6 Identify and respond to additional training needs based on changes to food safety practices.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 HumanAbility

Required skills

- communication skills to:
  - consult on and review food safety program
  - provide information to colleagues
- critical thinking skills to evaluate and respond to a range of strategic and operational factors that influence the food safety program
- literacy skills to:
  - interpret sometimes complex materials describing regulatory requirements relating to food safety
  - develop and write comprehensive food safety programs and procedures
- numeracy skills to work with the concepts of measurement
- planning and organising skills to coordinate and respond to multiple and interrelated operational challenges
- problem-solving skills to proactively identify and respond to systemic operational issues.

Required knowledge

- ptions for the structure and implementation of a food safety program, including the use of the HACCP method as the basis
- consultative and communication mechanisms used by organisations to develop and implement procedural systems
- key features of federal, state or territory and local food safety compliance requirements as they impact food safety program development, including:
  - contents of national codes and standards that underpin regulatory requirements
  - components of a food safety program, especially procedures and monitoring documents
  - local government food safety regulations and audit frequencies
  - consequences of failure to observe food safety policies and procedures
  - meaning of contaminant, contamination and potentially hazardous foods as defined by the Code
- HACCP or other food safety system principles, procedures and processes as they apply to particular operations and different food types, including:
  - critical control points for the specific food production system and the predetermined methods of control, especially time and temperature controls used in the storage, preparation, display, service and cooking, cooling and transporting of food
  - methods of food storage, production, display, service and cooking, cooling and transporting, especially, appropriate temperature levels for each of these processes
  - main types of safety hazards and contamination
  - conditions for development of microbiological contamination
  - environmental conditions, including temperature controls, for storage
  - temperature danger zone and the two-hour and four-hour rule
- equipment operating procedures, especially how to calibrate, use and clean a temperature probe and how to identify faults

© Commonwealth of Australia, 2025 HumanAbility

- choice and application of cleaning, sanitising and pest control equipment and materials
- high risk customer groups, such as:
  - children or babies
  - pregnant women
  - aged persons
  - people with immune deficiencies or allergies.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• develop and implement a complete food safety program in line with regulatory requirements, that includes:
	  • policies
	  • procedures
	  • product specifications
	  • monitoring documents
	• monitor, evaluate and make ongoing improvements to food safety program over a period of time
	• demonstrate knowledge of food safety systems and options for a service industry food preparation organisation.

Context of and specific resources for assessment	Assessment must ensure use of:
	• an operational food preparation area or commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment Guidelines; this can be a:
	  • real industry workplace
	  • simulated industry environment such as a training kitchen servicing customers
	• current plain English regulatory documents distributed by the national, state, territory or local government food safety authority
	• the Code
	• current commercial food safety programs, policies and procedures used for the management of a food

© Commonwealth of Australia, 2025 HumanAbility

preparation team.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- review of a completed food safety program developed by the individual inclusive of policies, procedures and product specifications
- use of case studies to assess ability to develop programs to meet differing workplace needs, including responding to uncontrolled hazards
- written or oral questioning to assess knowledge of regulatory requirements and food safety systems, such as HACCP and their application to different situations
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- BSBWRT401A Write complex documents
- SITHKOP403 Coordinate cooking operations
- SITHKOP404 Plan catering for events or functions.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Organisational characteristics may include:

- clientele:
  - at risk client groups with a higher than average risk of harm from food contamination, such as:
    - aged persons
    - children or babies
    - people with immune deficiencies or allergies
    - pregnant women
- equipment
- existing prerequisite programs
- facilities
- food items prepared and sold

© Commonwealth of Australia, 2025 HumanAbility

- re-thermalisation and service requirements
- size and nature of organisation.

Food hazards may be:

- actual or potential
- chemical
- environmental
- insects and vermin
- microbiological:
  - bacteria
  - natural poisons
  - moulds
  - yeast
- physical:
  - broken glass
  - metal
  - foreign objects
- process-related where food is vulnerable to contamination:
  - displayed food
  - need for food to be touched by hand
  - re-thermalisation or defrosting
  - processes involving temperatures that promote rapid growth of micro-organisms.

Critical control points include:

- receiving
- storing
- preparing
- processing
- displaying
- serving
- packaging
- transporting
- disposing.

Policies and procedures may relate to:

- audit
- cleaning and sanitation
- communication
- contingency management
- corrective actions
- equipment maintenance
- evaluation
- food:
  - supply
  - receiving

© Commonwealth of Australia, 2025 HumanAbility

- storage
- preparation
- display
- service
- disposal

- hazards:
  - control methods for each critical point
  - corrective actions
  - systematic monitoring of hazard controls and record keeping
- personal considerations:
  - dress
  - hygiene
  - protective equipment and clothing
- pest control
- record maintenance
- training.

Monitoring of controls may involve:

- bacterial swabs and counts
- checking and recording that food is stored in appropriate timeframes
- chemical tests
- monitoring and recording food temperatures
- monitoring and recording temperature of cold and hot storage equipment
- visual examination of food for quality review.

Incidents of uncontrolled food hazards may include:

- customer complaints
- existence of pests and vermin
- food not under temperature control
- food poisoning
- misuse of single use items
- spoilt or contaminated food
- stocks of out-of-date foodstuffs
- unclean equipment.

Food safety management documents may include:

- audit reports
- audit tables
- customer complaint forms
- documented food safety program
- food flow diagrams
- food production records
- hazard analysis table
- incident reports where food hazards are found not to be

© Commonwealth of Australia, 2025 HumanAbility

under control
- policies, procedures and product specifications
- records of the monitoring of hazard controls, including:
  - any record required by local legislation
  - illness register
  - list of suppliers
  - temperature control data
  - training logs
- verification records.

SITXINV202 Maintain the quality of perishable items

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.1	Editorial correction to modification history.
1.0	N Replaces but is not equivalent to SITHCCC003B Receive and store kitchen supplies. There was confused intent with, and duplication across, the two units SITXINV001A Receive and store stock and SITHCCC003B Receive and store kitchen supplies. The unit SITXINV001A Receive and store stock covered stock control for all types of stock. This unit now only covers the particular skills and knowledge required to store perishable supplies in optimum conditions to minimise wastage and avoid food safety hazards. New title applied for clarity. Moved to Inventory competency field to better reflect the content of this unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to maintain the quality of perishable supplies for commercial cookery or catering operations. It requires the ability to store perishable supplies in optimum conditions to minimise wastage and avoid food contamination.

It does not include general stock control processes which are covered by the unit SITXINV201 Receive and store stock.

Application of the Unit

This unit is particularly important within a food safety regime and applies to hospitality and catering organisations including hotels, restaurants, clubs, educational institutions, health establishments, defence forces, cafeterias, residential caterers, in-flight and other transport caterers, event and function caterers.

People at many levels use this skill in the workplace during the course of their daily activities including cooks, chefs, caterers, and kitchen attendants.

© Commonwealth of Australia, 2025 HumanAbility

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

This unit must be assessed after the following prerequisite unit:	
SITXFSA101	Use hygienic practices for food safety

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Store supplies in appropriate conditions.	1.1 Conduct ***temperature checks*** on delivered goods ensuring they are within specified tolerances. 1.2 Record temperature results according to organisational procedures. 1.3 Identify any ***deficiencies***, with delivered food items, ***reject supply*** within scope of responsibility or report findings. 1.4 Choose and prepare correct ***environmental conditions*** for the storage of perishable ***supplies***. 1.5 Date code all perishable supplies to maximise use. 1.6 Promptly store supplies in appropriate storage area to minimise wastage and avoid food contamination.
2. Maintain perishable supplies at optimum quality.	2.1 Regularly check and adjust the environmental conditions of all storage areas and equipment to maintain perishable supplies at optimum quality. 2.2 Conduct temperature checks according to food safety

© Commonwealth of Australia, 2025 HumanAbility

	procedures and protect supplies from spoilage. 2.3 Protect supplies from damage of cross-contamination and pests. 2.4 Rotate perishable supplies for maximum use according to expiration dates.
3. Check perishable supplies and dispose of spoilt stock.	3.1 Regularly check all perishable supplies for ***quality***. 3.2 Inspect items for animal and pest damage and report incidents of infestation. 3.3 Identify any deficiencies, report findings or dispose of any non-usable supplies within scope of responsibility. 3.4 Safely dispose of spoilt stock and waste to minimise negative environmental impacts.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to make simple verbal reports on the disposal of perished supplies
- literacy skills to:
  - read and comprehend date code and stock rotation labels
  - write date code and stock rotation labels and simple documents that record temperature results
- numeracy skills to:
  - use a thermometer correctly to measure temperatures
  - estimate times for regular temperature checks
- planning and organising skills to regularly check and adjust the environmental conditions of storage areas
- problem-solving skills to:
  - evaluate quality of stored supplies and make adjustments to their storage conditions to ensure a quality product
  - monitor storage temperatures and adjust according to identified discrepancies
  - identify unsafe and perished supplies and dispose of them
- teamwork skills to report incidents of spoilage to supervisors
- technology skills to use thermometers and adjust temperature and humidity controls on storage equipment.

Required knowledge

- contents of stock date codes and rotation labels
- meaning of:
  - wastage to a commercial catering organisation and reasons to avoid it

© Commonwealth of Australia, 2025 HumanAbility

    - contaminated food as defined by the Australia New Zealand Food Standards (ANZFS) Code
- reasons for protecting food from contamination
- different types of contamination:
    - microbiological
    - chemical
    - physical
- methods of rejecting contaminated food
- correct environmental storage conditions for the main food types used in a commercial kitchen:
    - beverages
    - dairy products
    - canned products
    - dry goods
    - food
    - frozen goods
    - fruit
    - meat
    - oils
    - poultry
    - seafood
    - vacuumed sealed items
    - vegetables
- food safety procedures and standards for storage of perishable supplies:
    - appropriate containers
    - labelling and coding
    - first in first out methods
    - storage environments
    - temperature, humidity, light and ventilation specifications for storage
    - cleaning and sanitising processes for food storage areas
    - quarantining the storage of items that are likely to be the source of contamination of food, including chemicals, clothing and personal belongings
- indicators of spoilage and contamination of perishable supplies:
    - degradation of flavour, aroma, colour and texture
    - enzymic browning
    - drying and hardening
    - crystalisation
    - infestation of animal and pest waste
    - mould
    - exposed packaged food through damaged packaging

© Commonwealth of Australia, 2025 HumanAbility

  - odour
- correct and environmentally sound disposal methods for kitchen waste and hazardous substances.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• maintain the quality of a diverse range of perishable supplies for commercial cookery or catering operations including these main food groups:
	  • beverages
	  • dairy products
	  • canned products
	  • dry goods
	  • frozen goods
	  • fruit
	  • meat
	  • oils
	  • poultry
	  • seafood
	  • vacuumed sealed items
	  • vegetables
	• integrate knowledge of:
	  • correct environmental storage conditions for the main food types
	  • food safety procedures and standards for storage of perishable supplies
	  • indicators of spoilage and contamination of perishable supplies
	• integrate checks on perishable supplies with other duties and within commercial time constraints.

Context of and specific resources for assessment	Assessment must ensure use of: • an operational commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment Guidelines;

© Commonwealth of Australia, 2025 HumanAbility

this can be a:

- real industry workplace
- simulated industry environment such as a training kitchen servicing customers

- thermometers and temperature recording charts
- a diverse and comprehensive range of perishable food supplies.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the individual date coding perishable supplies and storing them in appropriate environmental conditions
- evaluation of temperature records completed by the individual
- problem solving exercise to assess the individual's ability to identify a range of spoilt and contaminated food items
- written or oral questioning to assess knowledge of correct environmental storage conditions, food safety procedures and standards and indicators of spoilage and contamination
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITHCCC104 Package prepared foodstuffs
- SITHCCC205 Produce cook-chill and cook freeze foods
- SITHCCC206 Rethermalise chilled and frozen foods
- SITXINV201 Receive and store stock
- SITXWHS101 Participate in safe work practices
- TLIE1005A Carry out basic workplace calculations.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate,

© Commonwealth of Australia, 2025 HumanAbility

accessibility of the item, and local industry and regional contexts) may also be included.

Temperature checks may relate to:	• cold or chilled foods • frozen foods • ingredients • raw foods • reheated foods or ingredients.

Deficiencies may include:	• contaminated food
	• food that is intended to be:
	  • frozen but has thawed
	  • chilled but has reached a dangerous temperature zone
	• packaged food that is exposed through damaged packaging.

To ***reject supply*** may involve:	• rejecting supply immediately on delivery by supplier • rejecting supply of goods delivered under concession and not formally received • quarantining contaminated food from other food until the rejection is finalised • returning food to the supplier • disposing of contaminated food with consent of the supplier.

Environmental conditions may involve:	• correct application of humidity and temperature controls
	• correct ventilation
	• protecting perishables from exposure to:
	  • heating or air conditioning
	  • accidental damage through people traffic
	  • environmental heat and light
	• sanitary cleanliness
	• storing perishables:
	  • in dry stores
	  • in cool rooms
	  • in freezers
	  • in refrigerators
	  • sanitised and hygienic conditions
	  • at room temperature.

Supplies include:	• beverages • dairy products • canned products • dry goods • food • frozen goods

© Commonwealth of Australia, 2025 HumanAbility

- fruit
- meat
- oils
- poultry
- seafood
- stock on hand
- vacuumed sealed items
- vegetables.

Quality may include:

- currency of best by or use by dates
- freshness
- size
- weight.

SITXINV401 Control stock

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comment
1.0	N Replaces but is not equivalent to SITXINV002A Control and order stock. Title simplified. Re-worked Elements, Performance Criteria, Required Skills and Knowledge to more fully articulate content. Technology skills and knowledge added. Prerequisites removed.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to process stock orders, maintain stock levels, minimise stock losses, manage stocktakes and maintain all documents that relate to the administration of any type of stock.

Application of the Unit

This unit applies to the tourism, travel, hospitality and event industry sectors.

The unit is relevant to organisations where stock control is an integral and essential part of business operations, and where there are complex ordering and control issues to be considered. The unit is not appropriate for situations where stock management is very simple, such as controlling stationery supplies in a small office.

It applies to stock control personnel who operate independently, have responsibility for others and make a range of decisions on the overall administration of stock.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 HumanAbility

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Maintain stock levels and records.	1.1 Use ***stock control systems*** and equipment to administer all stock control and ordering processes. 1.2 Monitor and maintain ***stock*** levels to meet organisational requirements. 1.3 Monitor stock security and adjust procedures as required. 1.4 Inform colleagues of their individual stock ordering responsibilities. 1.5 Maintain records of stock levels and create reports according to organisational procedures. 1.6 Monitor stock performance, and identify and report fast or slow selling items. 1.7 Monitor and adjust stock reorder cycles.
2. Process stock orders.	2.1 ***Process orders*** for stock according to organisational procedures. 2.2 Maintain stock levels and record current accurate details. 2.3 Check and record incoming stock against purchase and supply agreements.
3. Minimise stock losses.	3.1 Regularly check the storage of stock and ensure its ***protection***. 3.2 Identify, record and report ***stock losses***. 3.3 Identify avoidable losses and establish reasons for them. 3.4 Recommend solutions and implement procedures to prevent future losses.
4. Follow up orders.	4.1 Monitor the delivery of stock to ensure agreed deadlines are met. 4.2 Liaise with suppliers to ensure continuity of supply. 4.3 Resolve routine supply problems or refer to appropriate person for action.

© Commonwealth of Australia, 2025 HumanAbility

	4.4 Distribute stock within the organisation according to required allocations.
5. Organise and administer stocktakes.	5.1 Organise stocktakes at appropriate intervals. 5.2 Allocate stocktaking responsibilities to staff and supervise the operation of the stocktake. 5.3 Produce accurate stocktake reports within designated timelines.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - liaise with suppliers about deliveries and discrepancies
  - discuss reasons for stock losses with staff
  - provide clear directions to staff about their stocktaking responsibilities
- critical thinking skills to analyse stock performance, and identify fast or slow-selling items
- literacy skills to:
  - read and interpret supplier purchasing agreements, purchase orders, records of incoming stock and organisational procedures
  - write detailed reports on stock levels, performance, losses and stocktakes
- numeracy skills to calculate supplier costs and complex order costs, reconcile incoming stock and invoices against purchase orders, calculate complex details of stock on hand and stock losses and produce complex numerically based reports
- planning and organising skills to efficiently order and maintain stock so that stock levels meet organisational requirements
- problem-solving skills to identify reasons for stock losses, recommend solutions and implement procedures to prevent future losses
- teamwork skills to direct staff on ordering responsibilities and supervise staff participation in stocktakes
- technology skills to use:
  - a computer and keyboard
  - the system capabilities and functions of a stock control system
  - electronic equipment used for stock control.

Required knowledge

- principles of stock control, including:
  - rotation and replenishment
  - product life cycle and maximising the use of all stock
  - checking for slow moving items

© Commonwealth of Australia, 2025 HumanAbility

  - segregation of non-food items from food items that have potential to cross-contaminate
- for the specific industry sector:
  - different types of computer stock control systems used, their functions and features
  - electronic equipment used for stock control; their functions and features
  - stock security systems
  - types of storage and their suitability for different kinds of stock

methods to monitor and maintain stock levels

- for the specific organisation:
  - relevant stock, including product life and storage requirements for specific goods
  - departmental or individual stock ordering responsibilities
  - full content of stock control and security procedures
  - sources of information on negotiated cost of supply, contractual arrangements and preferred supplier arrangements
  - full content of stock ordering procedures and documents
  - stock reorder cycles
  - stock level reports
  - stock performance reports
  - stock loss reports
  - full content of stocktake procedures, documents and reports
- reasons for stock loss and damage and methods to control these.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • order, control and administer continuous and efficient supply of a diverse range of stock • monitor and maintain stock levels over a stock life-cycle period which includes a stocktake • produce and distribute multiple and diverse stock control reports • complete stocktakes • integrate, into daily work activities, knowledge of stock control procedures • complete stock order and reporting activities within

© Commonwealth of Australia, 2025 HumanAbility

commercial time constraints.

Context of and specific resources for assessment

Assessment must ensure use of:

- a real or simulated tourism, hospitality or event industry stock control environment where stock levels are monitored and maintained
- computers, printers and stock control software systems currently used by the tourism, hospitality or event industry
- electronic equipment used for stock control
- a diverse and comprehensive range of tourism, hospitality or event industry stock items that are monitored and maintained
- current commercial stock control procedures and documentation for the ordering, monitoring and maintenance of stock.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation, using role plays, of the individual:
  - resolving stock delivery issues with suppliers
  - supervising the operation of a stocktake
- projects and activities that allow assessment of the individual's ability to:
  - process stock orders
  - monitor and maintain stock levels over a stock life-cycle period which includes a stocktake
- review of reports prepared by the individual:
  - stock level
  - stock performance
  - stock loss
- use of problem-solving activities so the individual can suggest methods for minimising stock losses
- written or oral questioning to assess knowledge of the principles of stock control, procedures for stock management and stocktakes
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

© Commonwealth of Australia, 2025 HumanAbility

- BSBWRT401A Write complex documents
- SITXMGT401 Monitor work operations
- SITXWHS401 Implement and monitor work health and safety practices.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Stock control systems may involve:

- bin cards
- imprest
- integrated point-of-sale systems
- ledgers
- stock control procedures, template documents and reports for:
  - ordering
  - levels
  - loss
  - performance
  - monitoring of quality
  - receipt
  - reorder cycles
  - rotation
  - security
  - stocktakes
  - valuation
  - wastage
- storage requirements for different kinds of stock
- use of :
  - electronic stock control equipment
  - stock control software systems.

Stock may include:

- alcohol
- cleaning agents and chemicals
- customer travel products:
  - luggage labels
  - travel bags

© Commonwealth of Australia, 2025 HumanAbility

- travel wallets
- tickets
- vouchers

- event supplies
- food:
  - dairy products
  - dry goods
  - frozen goods
  - fruit
  - meat
  - poultry
  - seafood
  - vegetables
- fuel:
  - aircraft
  - coaches
  - hire cars
  - vessels
- general stores
- housekeeping supplies
- linen
- merchandise
- non-alcoholic beverages:
  - mixers
  - juice
  - soft drink
  - tea coffee
- uniforms.

Process orders may involve:

- any method of ordering:
  - electronic
  - email
  - on-line
  - telephone
  - face-to-face
- placing an order for future delivery
- purchasing goods face-to-face and taking immediate delivery.

Protection may involve:

- avoiding cross contamination
- correct application of humidity and temperature controls
- correct ventilation

© Commonwealth of Australia, 2025 HumanAbility

	• securing stock • storing stock in correct location and conditions to avoid damage • treating pest and vermin infestations.
Stock losses may involve:	• inappropriate storage conditions • lack of rotation leading to product deterioration • overstocking • pests or vermin • theft.

TAEASS301B Contribute to assessment

Modification History

Version	Comments
TAEASS301B	Released with *TAE10 Training and Education Training Package version 2.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to contribute to the assessment process.

Application of the Unit

This unit typically applies to a person with technical or vocational expertise who is in a supervisory or mentoring/coaching work role and for whom collecting evidence for assessment is an adjunct to principal work responsibilities.

This unit is performed under the following conditions:

- the necessary assessment tools and assessment resources to guide the evidence collection process have been provided
- any adjustments to tools are determined by the qualified assessor (as defined by the Australian Quality Training Framework and the assessor requirements of the relevant training package), who provides guidance and supervision.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency .	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Clarify role and responsibilities in the assessment process	1.1 Discuss and confirm ***purpose of assessment*** with ***relevant people***
	1.2 Discuss and confirm ***benchmarks for assessment*** with qualified assessor
	1.3 Access, read and clarify ***assessment plan*** with qualified assessor
	1.4 Discuss and agree with qualified assessor the specific responsibilities in gathering evidence and types of evidence to be gathered
2. Confirm organisational arrangements for evidence gathering	2.1 Access and confirm relevant ***assessment system policies and procedures;*** organisational, legal and ethical requirements; and other relevant advice on assessment
	2.2 Clarify nominated ***assessment tools*** and methods for collecting evidence with qualified assessor, to ensure that procedures to be followed and instruments to be used are clear
	2.3 Discuss and confirm with relevant people ***assessment context,*** including candidate's characteristics and any need for ***reasonable adjustments***
	2.4 Confirm and arrange ***resource requirements*** in consultation with relevant people
3. Collect evidence in accordance with the assessment plan	3.1 Explain assessment process to candidate, including the different responsibilities of the parties involved, and refer any candidate issues or concerns to qualified assessor prior to undertaking assessment activities
	3.2 Use ***assessment instruments*** to gather quality evidence within available time and resources, according to organisational, legal and ethical requirements
4. Record and report findings	4.1 Organise and provide evidence to the qualified assessor in a format suitable for analysis according to assessment system policies and procedures

© Commonwealth of Australia, 2025 HumanAbility

	4.2 Actively seek feedback from the qualified assessor on whether evidence-gathering activities meet the principles of assessment and whether evidence collected meets the rules of evidence 4.3 Document areas for improvement in collecting evidence, for future assessment activities

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- observation skills to observe candidate performance
- cognitive and interpretation skills to ensure collection of valid and reliable evidence
- organisational skills to collect evidence
- time-management skills to schedule assessment events and activities
- literacy skills to:
  - read and interpret relevant information
  - prepare required documentation and collate evidence in required format
- communication skills to:
  - discuss evidence-gathering processes with practitioners and candidates
  - provide constructive and supportive feedback
  - ask appropriate questions to clarify and confirm instructions for evidence gathering
  - provide clear and concrete options and advice.

Required knowledge

- competency-based assessment, including:
  - criterion referenced
  - competency standards as the benchmarks for assessment
  - competency-based reporting
- principles of assessment
- rules of quality evidence
- different purposes of assessment
- diversity of assessment contexts
- evidence, including different types of evidence
- evidence-gathering methods – what are assessment methods and different types of methods
- purpose and features of assessment tools and assessment plans
- potential barriers and processes relating to evidence-gathering procedures and assessment processes
- organisational assessment system policies and procedures relevant to this unit of competency

© Commonwealth of Australia, 2025 HumanAbility

- technical or subject area being assessed
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation, that may affect training and assessment in the vocational education and training sector
- OHS relating to the work role, and OHS considerations to be included in collecting evidence, including:
  - hazard identification and risk control measures
  - requirements for reporting hazards and incidents
  - emergency procedures
  - procedures for use of relevant personal protective equipment
  - safe use of relevant equipment
  - sources of OHS information
  - role of key workplace personnel
  - responsibilities of learners.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • carry out a minimum of three evidence-gathering activities, with different candidates for each activity • present documentation of the evidence in a clear and concise manner • present documented feedback from others involved in the assessment.
Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	

© Commonwealth of Australia, 2025 HumanAbility

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Purpose of assessment may be:	• recognise current existing competency of candidates • determine if competency has been achieved following learning • establish candidate progress towards achievement of competence • determine language, literacy and numeracy needs of candidate • certify competence through a Statement of Attainment • establish progress towards a qualification • determine training gaps of candidate • measure work performance • classify employee and support career progression • meet organisational requirements for work, such as operating equipment or developing new skills • satisfy licensing or regulatory requirements.
Relevant people must include:	• qualified assessors • candidates.
Benchmarks for assessment:	• refer to criteria against which candidate is assessed • may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications.
Assessment plan must include:	• purpose and aims of assessment • context of assessment • relevant benchmarks for assessment • other assessment information and documentation identified as relevant.
Assessment system policies and procedures may include:	• candidate selection • rationale and purpose of competency-based assessment • assessment records, data management and information management • recognition of current competency, recognition of prior learning and credit arrangements.
Assessment tools include:	• the learning or competency unit(s) to be assessed • the target group, context and conditions for the assessment • the tasks to be administered to the candidate • an outline of the evidence to be gathered from the candidate • the evidence criteria used to judge the quality of performance

© Commonwealth of Australia, 2025 HumanAbility

	(i.e. the assessment decision-making rules) • the administration, recording and reporting requirements • the evidence of how validity and reliability have been tested and built into the design and use of the tool.
Assessment context may include:	• environment in which assessment will be carried out • relationship between units of competency and candidate's workplace • time period over which assessment takes place.

Reasonable adjustments may include:	• taking into account candidate's language, literacy and numeracy requirements
	• providing personal support services, such as arranging for:
	  • member of the community to accompany the candidate
	  • reader
	  • interpreter
	  • attendant carer
	  • scribe
	• using adaptive technology or special equipment
	• providing flexible assessment sessions to allow for such things as fatigue or administering of medication
	• format of assessment materials, such as:
	  • in Braille
	  • in first language
	  • use of audiotape or videotape
	• making adjustments to the physical environment
	• revising proposed assessment methods and instruments
	• considering age and gender
	• considering cultural beliefs, traditional practices and religious observances.

Resource requirements may include:	• resources specific to evidence-gathering activities • access to assessors • access to policy and procedures • access to subject and technical experts • OHS requirements • plant, equipment and technology.

Assessment instruments may include:	• instruments developed by an assessor as part of formative or summative assessment activities, including:
	  • profiles of acceptable performance measures
	  • templates and proformas
	  • specific questions or activities
	  • evidence and observation checklists
	  • checklists for the evaluation of work samples

© Commonwealth of Australia, 2025 HumanAbility

	• recognition portfolios • candidate self-assessment materials • instruments developed elsewhere that have been modified by the assessor for use with a particular client group.

TAEASS401B Plan assessment activities and processes

Modification History

Version	Comments
TAEASS301B	Released with *TAE10 Training and Education Training Package version 2.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and organise the assessment process, including recognition of prior learning (RPL), in a competency-based assessment system. It also includes the development of simple assessment instruments.

Application of the Unit

This unit typically applies to assessors and workplace supervisors with assessment planning responsibilities; and trainers or other assessors responsible for planning assessment, including RPL.

The unit is suitable for those with an existing assessment strategy which documents the overall framework for assessment.

ELEMENT	PERFORMANCE CRITERIA
unit of competency.	*is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Determine assessment approach	1.1 Identify candidate and confirm ***purposes and context of assessment/RPL*** with relevant people according to l***egal, organisational and ethical requirements*** 1.2 Identify and access ***benchmarks for assessment/RPL*** and any specific assessment guidelines
2. Prepare the assessment plan	2.1 Determine evidence and ***types of evidence*** needed to demonstrate competence, according to the ***rules of evidence*** 2.2 Select ***assessment methods*** which will support the collection of defined evidence, taking into account the context in which the assessment will take place 2.3 Document all aspects of the ***assessment plan*** and confirm with relevant personnel
3. Develop assessment instruments	3.1 Develop ***simple assessment instruments*** to meet target group needs 3.2 Analyse ***available assessment instruments*** for their suitability for use and modify as required 3.3 ***Map assessment*** instruments against unit or course requirements 3.4 Write clear instructions for candidate about the use of the instruments 3.5 Trial draft assessment instruments to validate content and applicability, and record outcomes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- cognitive interpretation skills to:
  - interpret competency standards and other assessment documentation, including material

© Commonwealth of Australia, 2025 HumanAbility

relating to reasonable adjustment
    - identify opportunities for integrated competency assessment
    - contextualise competency standards to the operating assessment environment, including RPL
    - consider access and equity needs of diverse candidates
- technology skills to use appropriate equipment and software to communicate effectively with others
- research and evaluation skills to:
    - obtain competency standards, assessment tools and other relevant assessment resources
    - research candidate characteristics and any reasonable adjustment needs
    - evaluate feedback, and determine and implement improvements to processes
- literacy skills to read and interpret relevant information to design and facilitate assessment and recognition processes
- communication skills to discuss assessment, including RPL processes with clients and other assessors
- interpersonal skills to:
    - demonstrate sensitivity to access and equity considerations and candidate diversity
    - promote and implement equity, fairness, validity, reliability and flexibility in planning an assessment processes.
- **Required knowledge**
- ethical and legal requirements of an assessor
- competency-based assessment, including:
    - work focused
    - criterion referenced
    - standards based
    - evidence based
- different purposes of assessment and different assessment contexts, including RPL
- how to read and interpret the identified competency standards as the benchmarks for assessment
- how to contextualise competency standards within relevant guidelines
- four principles of assessment and how they guide the assessment process
- purpose and features of evidence, and different types of evidence used in competency-based assessments, including RPL
- rules of evidence and how they guide evidence collection
- different types of assessment methods, including suitability for collecting various types of evidence
- assessment instruments and their purpose; different types of instruments; relevance of different instruments for specific evidence-gathering opportunities.

© Commonwealth of Australia, 2025 HumanAbility

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Evidence of the ability to:
	• plan and organise the assessment process on a minimum of two occasions
	• collect evidence that demonstrates:
	  • documented assessment plans
	  • having covered a range of assessment events
	  • catering for a number of candidates
	  • different competency standards or accredited curricula
	  • an RPL assessment
	  • contextualisation of competency standards and the selected assessment tools, where required
	  • incorporation of reasonable adjustment strategies
	  • development of simple assessment instruments for use in the process
	  • organisational arrangements.

Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided. Assessment must ensure access to training products, such as training packages and accredited course documentation.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 HumanAbility

Purposes of assessment/ RPL may include:	• recognising current existing competence of candidates • determining if competence has been achieved following learning • establishing candidate progress towards achievement of competence • determining language, literacy and numeracy needs of candidates • certifying competence through a qualification or Statement of Attainment • licensing or regulatory requirements.

Context of assessment/ RPL may include:	• environment in which the assessment/RPL will be carried out, including real or simulated workplace
	• opportunities for collecting evidence in a number of situations
	• relationships between competency standards and:
	  • evidence to support RPL
	  • work activities in the candidate's workplace
	  • learning activities
	• who carries out the assessment/RPL.

Organisational, legal and ethical requirements may include:	• assessment system policies and procedures
	• assessment strategy requirements
	• reporting, recording and retrieval systems for assessment, including RPL
	• quality assurance systems
	• business and performance plans
	• access and equity policies and procedures
	• collaborative and partnership arrangements
	• defined resource parameters
	• mutual recognition arrangements
	• industrial relations systems and processes, awards, and enterprise agreements
	• Australian Quality Training Framework
	• registration scope
	• human resources policies and procedures
	• legal requirements, including:
	  • anti-discrimination
	  • equal employment opportunity
	  • job role, responsibilities and conditions
	• relevant industry codes of practice
	• confidentiality and privacy requirements
	• OHS considerations, including:
	  • ensuring OHS requirements are adhered to during the

© Commonwealth of Australia, 2025 HumanAbility

	assessment process • identifying and reporting OHS hazards and concerns to relevant personnel.
Benchmarks for assessment/RPL may include:	• criterion against which the candidate is assessed or prior learning recognised, which may be: • competency standard/unit of competency • assessment criteria of course curricula • performance specifications of an enterprise or industry • product specifications.
Types of evidence may include:	• direct • indirect • supplementary.
Rules of evidence ensure that evidence collected is:	• valid • sufficient • authentic • current.
Assessment methods are the particular techniques used to gather evidence and may include:	• direct observation, for example: • real work/real time activities at the workplace • work activities in a simulated workplace environment • structured activities, for example: • simulation exercises and role-plays • projects • presentations • activity sheets • questioning, for example: • written questions, e.g. on a computer • interviews • self-assessment • verbal questioning • questionnaires • oral or written examinations (applicable at higher AQF levels) • portfolios of evidence, for example: • collection of work samples compiled by candidate • product with supporting documentation • historical evidence • journal or log book • information about life experience • review of products, for example: • testimonials and reports from employers and supervisors

© Commonwealth of Australia, 2025 HumanAbility

	• evidence of training • authenticated prior achievements • interview with employer, supervisor, or peer.
Assessment plan may include:	• overall planning document describing: • what is to be assessed • when assessment is to take place • where assessment is to take place • how assessment is to take place.
Simple assessment instruments may include:	• instruments developed by an assessor as part of formative or summative assessment activities, including: • profiles of acceptable performance measures • templates and proformas • specific questions or activities • evidence and observation checklists • checklists for the evaluation of work samples • recognition portfolios • candidate self-assessment materials • instruments developed elsewhere that have been modified by the assessor for use with a particular client group.
Available assessment instruments may include:	• commercially available instruments • those created by others inside the registered training organisation.
Map assessment means:	• showing a clear relationship between the evidence and the requirements of the unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to assess the competence of a candidate.

Application of the Unit

This unit typically applies to assessors.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria

1. Prepare for assessment	1.1 Interpret ***assessment plan*** and confirm organisational, legal and ethical requirements for conducting assessment with relevant people 1.2 Access and interpret relevant ***benchmarks for assessment*** and nominated ***assessment tools*** to confirm the requirements for evidence to be collected 1.3 Arrange identified material and physical resource requirements according to assessment system policies and procedures 1.4 Organise ***specialist support*** required for assessment 1.5 Explain, discuss and agree details of the assessment plan with candidate
2. Gather quality evidence	2.1 Use agreed ***assessment methods*** and instruments to gather, organise and document evidence in a format suitable for determining competence 2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence 2.3 Determine opportunities for evidence gathering in actual or simulated activities through consultation with the candidate and relevant personnel 2.4 Determine opportunities for integrated assessment activities and document any changes to assessment instruments where required
3. Support the candidate	3.1 Guide candidates in gathering their own evidence to support recognition of prior learning (RPL) 3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to ***individual differences*** and enables two-way ***feedback*** 3.3 Make decisions on reasonable adjustments with the candidate, based on candidate's needs and characteristics 3.4 Access required specialist support in accordance with the assessment plan 3.5 Address any OHS risk to person or equipment immediately
4. Make the assessment decision	4.1 Examine collected evidence and evaluate it to ensure that it reflects the evidence required to demonstrate competence 4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence 4.3 Make assessment decision in line with agreed assessment procedures and according to agreed assessment plan 4.4 Provide clear and constructive feedback to candidate regarding

© Commonwealth of Australia, 2025 HumanAbility

	the assessment decision and develop any follow-up action plan required
5. Record and report the assessment decision	5.1 Record assessment outcomes promptly and accurately 5.2 Complete and process an assessment report according to agreed assessment procedures 5.3 Inform other relevant parties of the assessment decision according to confidentiality conventions
6. Review the assessment process	6.1 Review the assessment process in ***consultation*** with relevant people to improve own future practice 6.2 Document and record the review according to relevant assessment system policies and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
  - break down competency standards
  - interpret assessment tools and other assessment information, including those used in RPL
  - identify candidate needs
  - make judgements based on assessment of available evidence
- observation skills to:
  - recognise candidate's prior learning
  - determine candidate's performance
  - identify when candidate may need assistance during the assessment processes
- research and evaluation skills to:
  - access required human and material resources for assessment
  - access assessment system policies and procedures
  - access RPL policies and procedures
  - evaluate evidence
  - evaluate assessment process
- cognitive skills to:
  - weigh up the evidence and make a judgement
  - consider and recommend reasonable adjustments
- decision-making skills to:
  - recognise a candidate's prior learning

© Commonwealth of Australia, 2025 HumanAbility

    - make a decision on a candidate's competence
- literacy skills to:
    - read and interpret relevant information to conduct assessment
    - prepare required documentation and records or reports of assessment outcomes in required format
- communication and interpersonal skills to:
    - explain the assessment, including RPL process
    - give clear and precise instructions
    - ask effective questions
    - provide clarification
    - discuss process with other relevant people
    - give appropriate feedback
    - discuss assessment outcome
    - use language appropriate to candidate and assessment environment
    - establish a working relationship with candidate.

Required knowledge

- competency-based assessment, including:
    - vocational education and training as a competency-based system
    - criterion-referenced assessment as distinct from norm-referenced assessment
    - competency standards as the basis of qualifications
    - structure and application of competency standards
    - principles of assessment and how they are applied
    - rules of evidence and how they are applied
    - range of assessment purposes and assessment contexts, including RPL
    - different assessment methods, including suitability for gathering various types of evidence, suitability for content of units, and resource requirements and associated costs
    - reasonable adjustments and when they are applicable
    - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
    - potential barriers and processes relating to assessment tools and methods
    - assessment system, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the vocational education and training sector, such as:
    - copyright and privacy laws in terms of electronic technology
    - security of information

© Commonwealth of Australia, 2025 HumanAbility

  - plagiarism
  - training packages and competency standards
  - licensing requirements
  - industry and workplace requirements
  - duty of care under common law
  - recording information and confidentiality requirements
  - anti-discrimination, including equal employment opportunity, racial vilification and disability discrimination
  - workplace relations
  - industrial awards and enterprise agreements
- OHS responsibilities associated with assessing competence, such as:
  - requirements for reporting hazards and incidents
  - emergency procedures
  - procedures for use of relevant personal protective equipment
  - safe use and maintenance of relevant equipment
  - sources of OHS information.
-

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• assess competence of a number of candidates within the vocational education and training context against different units of competency or accredited curricula, following the relevant assessment plan
	• assess at least one candidate for RPL
	• consider reasonable adjustment and the reasons for decisions in at least one assessment
	• cover an entire unit of competency and show:
	  • the application of different assessment methods and instruments involving a range of assessment activities and events
	  • two-way communication and feedback
	  • how judgement was exercised in making the assessment decision
	  • how and when assessment outcomes were recorded and reported

© Commonwealth of Australia, 2025 HumanAbility

	• assessment records and reports completed in accordance with assessment system and organisational, legal and ethical requirements • how the assessment process was reviewed.
Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment plan may include:	• overall planning, describing:
	  • what is to be assessed
	  • when assessment is to take place
	  • where assessment is to take place
	  • how assessment is to take place.

Benchmarks for assessment:	• refer to a criterion against which the candidate is assessed • may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications.
Assessment tools include:	• the learning or competency unit(s) to be assessed • the target group, context and conditions for the assessment • the tasks to be administered to the candidate • an outline of the evidence to be gathered from the candidate • the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) • the administration, recording and reporting requirements • the evidence of how validity and reliability have been tested and built into the design and use of the tool.

© Commonwealth of Australia, 2025 HumanAbility

Specialist support may include:	• assistance by third party, such as carer or interpreter • support from specialist educator • provision of developed online assessment activities • support for remote or isolated candidates and assessors • support from subject matter or safety experts • advice from regulatory authorities • assessment teams and panels • support from lead assessors • advice from policy development experts.

Assessment methods include:	• particular techniques used to gather different types of evidence, such as:
	  • direct observation
	  • structured activities
	  • oral or written questioning
	  • portfolios of evidence
	  • review of products
	  • third-party feedback.

Individual differences may include:	• English language, literacy and numeracy barriers • physical impairment or disability • intellectual impairment or disability • medical condition that may impact on assessment, such as arthritis, epilepsy, diabetes and asthma • learning difficulties • mental or psychological disability • religious and spiritual observances • cultural images and perceptions • age • gender.
Feedback may include:	• ensuring assessment/RPL process is understood • ensuring candidate concerns are addressed • enabling questions and answers • confirming outcomes • identifying further evidence to be provided • discussing action plans • confirming gap training needed • providing information regarding available appeal processes • suggesting improvements in evidence gathering and

© Commonwealth of Australia, 2025 HumanAbility

	presentation.
Consultation may involve:	• moderation with other assessors, or training and assessment coordinators • discussions with client, team leaders, managers, RPL coordinators, supervisors, coaches and mentors • technical and subject experts • English language, literacy and numeracy experts.

TAEASS403B Participate in assessment validation

Modification History

Version	Comments
TAEASS403B	Released with *TAE10 Training and Education Training Package version 2.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to participate in an assessment validation process.

Application of the Unit

This unit typically applies to those participating in assessment validation. It does not address leading the validation process.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria

1. Prepare for validation	1.1 Discuss and confirm the approach to validation according to defined purposes, context, and relevant ***assessment system policies and procedures***
	1.2 Analyse relevant ***benchmarks for assessment*** and agree on the evidence needed to demonstrate competence
	1.3 Arrange ***materials*** for ***validation activities***
2. Contribute to validation process	2.1 Demonstrate active ***participation*** in validation sessions and activities using appropriate communication skills
	2.2 Participate in validation sessions and activities by applying the principles of assessment and rules of evidence
	2.3 Check all documents used in the validation process for accuracy and version control
3. Contribute to validation outcomes	3.1 Collectively discuss validation findings to support improvements in the quality of assessment
	3.2 Discuss, agree and record recommendations to improve assessment practice
	3.3 Implement changes to own assessment practice, arising from validation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- planning skills to participate in validation activities within agreed timeframes
- problem-solving skills to identify information that is inconsistent, ambiguous or contradictory
- evaluation skills to:
  - determine evidence requirements from competency standards
  - review assessment process, tools and methods
  - review collected evidence
- communication skills to share information in validation meetings.

Required knowledge

- how to interpret competency standards and other related assessment information to determine the evidence needed to demonstrate competence, including:
  - criterion-referenced assessment as distinct from norm-referenced assessment

© Commonwealth of Australia, 2025 HumanAbility

  - various reasons for carrying out validation and the different approaches to validation that may be appropriate before, during and after assessment
  - critical aspects of validation, including validation of assessment processes, methods and products
  - relevant OHS legislation, codes of practice, standards and guidelines, impacting on assessment
  - legal and ethical requirements of assessors, particularly in relation to validation activities
- principles of assessment
- rules of evidence.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • actively participate in a minimum of two validation sessions or meetings which, in combination, address the critical aspects of validation using different validation approaches and activities • clearly explain purposes of validation and the legal and ethical responsibilities of assessors • collate documentation relating to validation process in a logical manner • demonstrate communication and liaison with relevant people • provide feedback and interpret documentation in validation sessions • record contribution to validation findings.
Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided. Assessment must ensure access to: • assessment reports and records • other documentation relevant to validation.
Method of assessment	
Guidance information	

© Commonwealth of Australia, 2025 HumanAbility

for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment system policies and procedures may include:	• candidate selection • rationale and purpose of competency-based assessment • assessment records, and data and information management • recognition of current competency, recognition of prior learning and credit arrangements • assessment reporting procedures • assessment appeals • candidate grievances and complaints • validation • evaluation and internal audit • costs and resourcing • access and equity, and reasonable adjustment • partnership arrangements • links with human resource or industrial relations system • links with overall quality management system.
Benchmarks for assessment:	• refers to criterion against which the candidate is assessed • may be one or more units of competency or assessment criteria of course curricula.
Materials may include:	• assessment tools • samples of collected evidence • documentation outlining the basis of assessment decisions • reports and records of assessment decisions • samples of benchmarks of appropriate evidence • Assessment Guidelines of the relevant training packages • information from the evidence guide of the relevant units of competency.

Validation activities may include:	• analysing and reviewing:
	  • assessment tools
	  • collected evidence
	  • assessment decisions and records of assessment outcomes

© Commonwealth of Australia, 2025 HumanAbility

	• other aspects of assessment policies, processes and outcomes • recording evidence of validation processes and outcomes.
Participation may include comparison and evaluation of:	• assessment practices • assessment plans • interpretation of units of competency • assessment methods and instruments • assessment decisions • collected evidence.

TAEDEL301A Provide work skill instruction

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to conduct individual and group instruction and demonstrate work skills, using existing learning resources in a safe and comfortable learning environment. The unit covers the skills and knowledge required to determine the success of both the training provided and one's own personal training performance. It emphasises the training as being driven by the work process and context.

Application of the Unit

Application of the unit	This unit supports a wide range of applications across any workplace setting and so can be used by any organisation. Its use is not restricted to training organisations.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2025 HumanAbility

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise instruction and demonstration	1.1. Gather information about ***learner characteristics*** and learning needs 1.2. Confirm a ***safe learning environment*** 1.3. Gather and check ***instruction and demonstration objectives*** and seek assistance if required 1.4. Access and review relevant ***learning resources*** and ***learning materials*** for suitability and relevance, and seek assistance to interpret the contextual application 1.5. Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6. Notify learners of ***details*** regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1. Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2. Follow the learning program and/or delivery plan to cover all learning objectives 2.3. Brief learners on any ***OHS procedures*** and requirements prior to and during training 2.4. Use ***delivery techniques*** to structure, pace and enhance learning 2.5. Apply ***coaching*** techniques to assist learning 2.6. Use communication skills to provide information,

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	instruct learners and demonstrate relevant work skills 2.7. Provide opportunities for practice during instruction and through work activities 2.8. Provide and discuss feedback on learner performance to support learning
3. Check training performance	3.1. Use ***measures*** to ensure learners are acquiring and can use new technical and generic skills and knowledge 3.2. Monitor learner progress and outcomes in consultation with learner 3.3. Review relationship between the trainer/coach and the learner and adjust to suit learner needs
4. Review personal training performance and finalise documentation	4.1. Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement 4.2. Maintain, store and secure learner records according to organisational and legal requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- verbaland non-verbal communication techniques, such as:
  - asking relevant and appropriate questions
  - providing explanations
  - demonstrating
  - using listening skills
  - providing information clearly
- safety skills to implement OHS requirements, by acting and responding safely in order to:
  - identify hazards
  - conduct prestart-up checks if required
  - observe and interpret learner behaviour that may put people at risk
- time-management, skills to:

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

- ensure all learning objectives are covered
- pace learning

- reflection skills in order to:
  - identify areas for improvement
  - maintain personal skill development
- literacy skills to:
  - complete and maintain documentation
  - read and follow learning programs and plans
  - read and analyse learner information
- technology skills to operate audio-visual and technical equipment
- interpersonal skills to:
  - engage, motivate and connect with learners
  - provide constructive feedback
  - maintain appropriate relationships
  - establish trust
  - use appropriate body language
  - maintain humour
  - demonstrate tolerance
  - manage a group
  - recognise and be sensitive to individual difference and diversity
- observation skills to:
  - monitor learner acquisition of new skills, knowledge and competency requirements
  - assess learner communication and skills in interacting with others
  - identify learner concerns
  - recognise learner readiness to take on new skills and tasks

Required knowledge

- learner characteristics and needs
- content and requirements of the relevant learning program and/or delivery plan
- sources and availability of relevant learning resources and learning materials
- content of learning resources and learning materials
- training techniques that enhance learning and when to use them
- introductory knowledge of learning principles and learning styles
- key OHS issues in the learning environment, including:
  - roles and responsibilities of key personnel
  - responsibilities of learners
  - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
procedures • risk controls for the specific learning environment

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• carry out aminimum of three training sessions, involving demonstrating and instructing particular work skills for different groups; with each session addressing:
	  • different learning objectives
	  • a range of techniques and effective communication skills appropriate to the audience.

Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Learner characteristics may include:	• language, literacy and numeracy levels • learning styles • past learning and work experiences • specific needs • workplace culture.
Safe learning environment may include:	• exit requirements • personal protective equipment • safe access • safe use of equipment.

Instruction and demonstration objectives may include:	• competencies to be achieved
	• generic and technical skills, which may be:
	  • provided by the organisation
	  • developed by a colleague
	  • individual or group objectives
	  • learning outcomes.

Learning resources may include:	• any material used to support learning, such as:
	  • learner and user guides
	  • trainer and facilitator guides
	  • example training programs
	  • specific case studies
	  • professional development materials
	  • assessment materials
	• a variety of formats
	• those produced locally
	• those acquired from other sources.

Learning materials may include:	• handouts for learners • materials sourced from the workplace, e.g. workplace documentation, operating procedures, and specifications.
Details may include:	• location and time • outcomes of instruction or demonstration • reason for instruction or demonstration • who will be attending instruction session.

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
OHS procedures may include:	• emergency procedures • hazards and their means of control • incident reporting • use of personal protective equipment • safe work practices • safety briefings • site-specific safety rules.
Delivery techniques may include:	• coaching • demonstration • explanation • group or pair work • providing opportunities to practise skills and solve problems • questions and answers.
Coaching may include:	• learning arrangements requiring immediate interaction and feedback • on-the-job instruction and 'buddy' systems • relationships targeting enhanced performance • short-term learning arrangements • working on a one-to-one basis.
Measures may include:	• informal review or discussion • learner survey • on-the-job observation • review of peer coaching arrangements.

TAEDEL401A Plan, organise and deliver group-based learning

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to plan, organise and deliver training for individuals within a group.

Application of the Unit

Application of the unit	This unit typically applies to a person working as an entry-level trainer, teacher or facilitator in or with a training and assessment organisation. The person will be working from a learning program developed by someone else, and structuring the learning around that program.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret learning environment and delivery requirements	1.1. Access, read and interpret ***learning program documentation*** to determine delivery requirements 1.2. Use available information and documentation to identify group and individual learner needs and learner characteristics 1.3. Identify and assess constraints and risks to delivery 1.4. Confirm personal role and responsibilities in planning and delivering training with relevant personnel
2. Prepare session plans	2.1. Refine existing learning objectives according to program requirements and specific needs of individual learners 2.2. Develop ***session plans*** and document these for each segment of the learning program 2.3. Use knowledge of learning principles and theories to generate ideas for managing session delivery
3. Prepare resources for delivery	3.1. Contextualise existing learning materials to meet the needs of the specific learner group 3.2. Finalise learning materials and organise facility, technology and equipment needs in time for delivery of learning sessions 3.3. Confirm overall delivery arrangements with relevant personnel
4. Deliver and facilitate training sessions	4.1. Conduct each session according to session plan, modified where appropriate to meet learner needs 4.2. Use the diversity of the group as another resource to

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	support learning 4.3. Employ a range of delivery methods as training aids to optimise learner experiences 4.4. Demonstrate effective facilitation skills to ensure effective participation and group management
5. Support and monitor learning	5.1. Monitor and document learner progress to ensure outcomes are being achieved and individual learner needs are being met 5.2. Make adjustments to the delivery sessions to reflect specific needs and circumstances 5.3. Manage ***inappropriate behaviour*** to ensure learning can take place 5.4. Maintain and store learner records according to organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- presentation skills to ensure delivery is engaging and relevant, including:
  - synthesising information and ideas
  - preparing equipment, such as data projectors and computer presentation applications
  - speaking with appropriate tone and pitch
  - using language appropriate to audience
  - encouraging and dealing appropriately with questions
- group facilitation skills to ensure that:
  - every individual has an opportunity for participation and input
  - group cohesion is maintained
  - behaviour that puts others at risk is observed, interpreted and addressed
  - discussion and group interaction are enhanced
- conflict resolution and negotiation skills to:
  - identify critical points, issues, concerns and problems
  - identify options for changing behaviours
- oral communication and language skills to:

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
• motivate learners to transfer skills and knowledge • engage with the learner • interpersonal skills to maintain appropriate relationships and ensure inclusivity • observation skills to monitor individual and group progress
Required knowledge

• introductory knowledge of learning theories
• sound knowledge of learning principles
• sound knowledge of learner styles
• industry area and subject matter of the delivery
• learner group profile, including characteristics and needs of individual learners in the group
• content and requirements of the learning program and/or delivery plan
• different delivery methods and techniques appropriate to face-to-face group delivery
• techniques for the recognition and resolution of inappropriate behaviours
• behaviours in learners that may indicate learner difficulties
• organisational record-management systems and reporting requirements
• evaluation and revision techniques
• specific resources, equipment and support services available for learners with special needs
• relevant policy, legal requirements, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the vocational education and training sector
• OHS relating to the facilitation of group-based learning, including:
  • assessment and risk control measures
  • reporting requirements for hazards
  • safe use and maintenance of relevant equipment
  • emergency procedures
  • sources of OHS information
  • role of key workplace persons
• policies and procedures relevant to the learning environment

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

© Commonwealth of Australia, 2025 HumanAbility

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. Arange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• facilitate group-based learning by preparing and delivering a series of training sessions, including:
	  • at least two consecutive sessions, of a duration commensurate with a substantive training session (e.g. 40-60 minutes), that follow one of the learning program designs
	  • at least one session delivered to a different learner group, with evidence of how the characteristics and needs of this group were addressed
	• identify and respond to diversity and individual needs
	• access and use documented resources and support personnel to guide inclusive practices.

Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided. Assessment must ensure access to: • training products, such as training packages and accredited course documentation.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	

Learning program documentation may include:	• competencies or other benchmarks to be achieved
	• for each chunk or segment of the learning program:
	  • specific learning outcomes derived from the benchmarks
	  • overview of content to be covered
	  • learning resources, learning materials and activities
	  • delivery methods
	• number and duration of training sessions or classes required, and overall timelines
	• OHS issues to be addressed in delivery
	• identification of assessment points to measure learner progress
	• assessment methods and tools to be used to collect evidence of competency, where assessment is required.

Session plans may include:	• outline of objectives and content to be addressed • plan of delivery methods and learning activities to be used within the session • timelines and duration for each learning activity • formative assessment points and opportunities • learning materials required.
Inappropriate behaviour may include:	• violent or inappropriate language • verbal or physical abuse or bullying • insensitive verbal or physical behaviour towards other learners or the trainer/facilitator, including cultural, racial, disability or gender-based insensitivities • dominant or overbearing behaviour • disruptive behaviour • non-compliance with safety instructions.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish effective work environment for learning	1.1. Establish and agree upon objectives and scope of the work-based learning 1.2. Analyse work practices and routines to determine their effectiveness in meeting established learning objectives 1.3. Identify and address ***OHS implications*** of using work as the basis for learning
2. Develop a work-based learning pathway	2.1. Address ***contractual requirements*** and responsibilities for learning at work 2.2. Arrange for integration and monitoring of external learning activities with the ***work-based learning pathway*** 2.3. Obtain agreement from relevant personnel to implement the work-based learning pathway
3. Establish the learning-facilitation relationship	3.1. Identify context for learning and individual's learning style 3.2. Select appropriate technique or process to facilitate learning and explain the basis of the technique to learner 3.3. Develop, document and discuss ***individualised learning plan*** with learner 3.4. Access, read and interpret documentation outlining the OHS responsibilities of the various parties in the

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	learning environment 3.5. Monitor supervisory arrangements appropriate to learner's levels of knowledge, skill and experience to provide support and encouragement and ensure learner's health and safety
4. Implement work-based learning pathway	4.1. Sequence introduction of workplace tasks, activities and processes to reflect the agreed work-based learning pathway 4.2. Explain objectives of work-based learning and the processes involved to learner 4.3. Encourage learner to take responsibility for learning and to self-reflect 4.4. Develop techniques that facilitate learner's transfer of skills and knowledge
5. Maintain and develop the learning/facilitation relationship	5.1. Prepare for each session 5.2. Structure learning activities to support and reinforce new learning, build on strengths, and identify areas for further development 5.3. Observe learner cues and change approaches where necessary to maintain momentum 5.4. Practise ***ethical behaviour*** at all times 5.5. Monitor effectiveness of the learning/facilitation relationship through regular meetings between the parties
6. Close and evaluate the learning/facilitation relationship	6.1. Carry out the closure smoothly, using appropriate interpersonal and communication skills 6.2. Seek feedback from learner on the outcomes achieved and value of the relationship 6.3. Evaluate and document process, including ***impact***, ***self evaluation and reflection***, and file according to legal and organisational requirements
7. Monitor and review the effectiveness of the work-based learning pathway	7.1. Document work performance and learning achievement and keep records according to organisational requirements 7.2. Evaluate effectiveness of the work-based pathway against the objectives, processes and techniques used 7.3. Recommend improvements to work-based practice in light of the review process

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- oral communication and language skills to:
  - motivate the learner
  - transfer skills and knowledge
- interpersonal skills to maintain appropriate relationships
- observation skills to monitor individual progress
- literacy skills to:
  - read and interpret organisational documents, legal documents and contracts
  - complete and maintain documentation
- organisational skills to provide guidance and feedback to individuals
- communication skills, including:
  - using effective verbal and non-verbal language
  - using critical listening and questioning techniques
  - giving constructive and supportive feedback
  - assisting learners to paraphrase advice or instructions back to the trainer/facilitator
  - providing clear and concrete options and advice
  - using appropriate industry/profession terminology and language
  - ensuring language, literacy and numeracy used is appropriate to learners

Required knowledge

- systems, processes and practices within the organisation where work-based learning is taking place
- operational demands of the work and impact of changes on work roles
- organisational work culture, including industrial relations environment
- systems for identifying skill needs
- introductory knowledge of different learning styles and how to encourage learning in each, for example:
  - visual learners
  - audio learners
  - kinaesthetic learners
  - theoretical learners
- relevant policy, legislation, codes of practice and national standards that may affect training and assessment in the vocational education and training sector
- OHS relating to the work role, including:
  - hazards relating to the industry and specific workplace

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE
• reporting requirements for hazards and incidents • specific procedures for work tasks • safe use and maintenance of relevant equipment • emergency procedures • sources of OHS information

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. Arange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• prepare and facilitate work-based learning
	• provide evidence of a minimum of two examples of developing work-based learning pathways, that include:
	  • identifying needs for learning
	  • analysing work practices, work environment and work activities
	  • organising and allocating work in a way that reflects learning needs and provides effective learning opportunities through work processes
	• provide a minimum of two examples of a learning facilitation relationship being conducted:
	  • with different individuals
	  • demonstrating communication skills and flexibility
	  • demonstrating one or more of the processes or techniques identified.

Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be

EVIDENCE GUIDE	
	provided. Assessment must ensure access to information about work activities.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
OHS implications may include:	• OHS obligations • workplace OHS policies and procedures • ensuring work practices, routines and proposed changes do not pose a risk to learners and others.
Contractual requirements may include:	• training plans under apprenticeships/traineeships • requirements of government-funded training programs, such as Workplace English Language and Literacy (WELL).
Work-based learning pathway may include:	• identifying specific goals for work-based learning • identifying job tasks or activities to be included in learning process • appropriate sequencing of job tasks/activities to reflect learner incremental development • direct guidance and modelling from experienced co-workers and experts • opportunities for practice.
Individualised learning plan may include:	• information about individual's learning style, learner characteristics, and the context for learning • clear boundaries and expectations of the learning/facilitation relationship • documented equity or additional support needs for the

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
	learner • performance benchmarks to be achieved • activities and processes which together will achieve the benchmarks.
Ethical behaviour includes:	• trust • integrity • privacy and confidentiality of the session • following organisational policies • knowing own limitations • having a range of other intervention referrals ready when needed • honesty • fairness to others.
Impact may be:	• successful achievement, rate of achievement, or lack of achievement of identified goals • achievement of other outcomes as a result of the relationship • development of new goals • new or increased motivation to learn • greater capacity to learn • increase in learner's self-confidence.

Self-evaluation and reflection may include:	• asking critical questions about:
	  • own ability
	  • what worked or didn't work
	  • how the relationship building process could be improved
	• reviewing records and journals on sessions and critically evaluating own performance
	• reviewing feedback from learner and identifying critical aspects and areas for improvement.

TAEDEL404A Mentor in the workplace

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to establish and develop a professional mentoring relationship with a learner, in particular an apprentice or trainee employed by, or undertaking work placement in, a workplace. It includes establishing the need for mentoring, developing a mentoring plan/framework, facilitating and monitoring the mentoring relationship, and evaluating the effectiveness of mentoring.

Application of the Unit

Application of the unit	This unit typically applies to workplace supervisors or other work colleague with responsibility for mentoring in the workplace.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2025 HumanAbility

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop a mentoring plan	1.1. Identify scope and boundaries of the ***mentoring*** relationship according to organisational procedures 1.2. Establish ***ground rules*** and negotiate realistic expectations 1.3. Establish and maintain confidentiality of the relationship in accordance with ***legislation***, ***policy and procedures***
2. Facilitate mentoring relationship	2.1. Develop learner's confidence, self-esteem, respect and trust in the mentoring relationship 2.2. Share personal experiences and knowledge with the person being mentored according to agreed objectives 2.3. Support the person being mentored to develop and use skills in problem solving and decision making 2.4. Use personal and professional networks to assist the person being mentored 2.5. Provide information, guidance and constructive guidance to enhance engagement in the workplace 2.6. Use ***techniques for resolving differences*** without damaging the relationship, and obtain assistance according to organisational policy and procedures
3. Monitor mentoring relationship	3.1. Provide planning assistance and guidance as requested by the person being mentored in a form

© Commonwealth of Australia, 2025 HumanAbility

ELEMENT	PERFORMANCE CRITERIA
	and style to suit their requirements 3.2. Provide feedback to the person being mentored on progress towards achieving the expectations and goals of the mentoring process 3.3. Recognise and discuss changes in the ***mentoring relationship*** with appropriate ***stakeholders*** 3.4. Negotiate and manage closure of the mentoring arrangement once objectives have been met
4. Evaluate effectiveness of mentoring	4.1. Establish and discuss ***benefits*** gained from the mentoring process 4.2. Reflect on and articulate the personal benefits gained from providing mentoring 4.3. Identify and report the outcomes of the mentoring arrangement and the ***benefits to the organisation*** according to organisational policy and procedures to improve the mentoring system or program

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

• planning and time-management skills to mentor in a workplace
• oral communication and language skills to motivate learners
• organisational skills to provide guidance and feedback to individuals
• interpersonal skills to:
  • engage in relationship building, including building trust and maintaining confidentiality
  • respond to diversity, including gender and disability
• communication skills to use a range of communication strategies, including listening, questioning, and giving andreceiving feedback
• initiative and enterprise skills to apply procedures relating to OHS and environmentallegislation in the context of workplace mentoring

Required knowledge
• relevant policy, legislation, codes of practice and national standards likely to impact on the provision of workplace mentoring • training contracts and responsibilities of employer, registered training organisation

© Commonwealth of Australia, 2025 HumanAbility

REQUIRED SKILLS AND KNOWLEDGE

(RTO) and funding body
• training plans and responsibilities
• training products and strategies for learning
• mentoring methodologies and strategies
• acceptable behaviour in the mentoring relationship
• equal employment opportunity, equity and diversity principles
• OHS relating to the work role, including:
  • hazards relating to the industry and specific workplace
  • reporting requirements for hazards and incidents
  • specific procedures for work tasks
  • safe use and maintenance of relevant equipment
  • emergency procedures
  • sources of OHS information

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. Arange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • prepare a mentoring plan between the mentor and learner that reflects the scope and substance expected within a plan prepared for a learner undertaking a contracted apprenticeship or traineeship • facilitate at least three mentoring sessions • provide information on sessions, including comments and notes from both mentor and learner.
Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be

EVIDENCE GUIDE	
	provided.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	

Mentoring may include:	• long-term focus on personal growth and learning
	• wide range of learning oriented to:
	  • support
	  • guidance in personal or career growth
	• relationship, not just a procedure or activity
	• one person professionally assisting the career development of another.

Ground rules may include:	• training for mentoring partners • mentoring agreement • active involvement of both partners in the mentoring process.

Legislation, ***policy and procedures*** may include:	• commonwealth and state or territory legislation and regulations, such as:
	  • privacy legislation
	  • equal employment opportunity, anti-discrimination and harassment legislation
	  • OHS legislation
	  • user choice
	• organisational policy, procedures and protocols.

Techniques for resolving differences	• finding a mutually beneficial solution • self-disclosure

© Commonwealth of Australia, 2025 HumanAbility

RANGE STATEMENT	
may include:	• inviting discussion • providing explanations • accessing assistance.
Mentoring relationship may include:	• informal workplace development program • formal mentoring process associated with a contracted apprenticeship or traineeship, involving a formal training plan.
Stakeholders may include:	• trainee or apprentice • manager or supervisor • RTO • learning support services, including assistive technology and diagnostic testing • funding organisation • supplier of learning resources.
Benefits may include:	• insights into organisational culture, attitudes and expected behaviours • supportive environment in which successes and failures can be evaluated • networking opportunities • development of workplace competence and self-confidence • recognition and job satisfaction • mutual respect.
Benefits to the organisation may include:	• increased productivity • new competencies in the person being mentored • staff motivation • more committed, involved and responsible learners.

TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a forklift in compliance with the relevant state/territory authority licence requirements and regulations, in a variety of operational contexts.

It includes checking forklift condition, driving forklift to fulfil operational requirements, and monitoring and maintaining forklift performance and site conditions.

Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) authority.

Operation of a forklift is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 HumanAbility

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check forklift condition	1.1 Condition of forklift is checked for compliance with WHS/OHS and workplace requirements for warning devices, manufacturer specifications and nature of load shifting task
	1.2 Attachments are checked to ensure appropriate adjustment and operation
	1.3 Mirrors and seats are adjusted for safe operation by driver
	1.4 Logbooks are checked and appropriate workplace documentation is completed in accordance with workplace requirements
2 Drive forklift	2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturer instructions
	2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
	2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques
	2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning
	2.5 Forklift is parked, shut down and secured in accordance with manufacturer specifications, regulations and workplace procedures
3 Operate forklift to handle loads	3.1 Lifting task to be undertaken is appropriately planned, and correct lifting truck and attachments are selected
	3.2 Load is lifted, carried, lowered and set down in accordance with WHS/OHS legislation, manufacturer specifications and company procedures
4 Monitor site conditions	4.1 Hazards and traffic flow are identified when selecting the most efficient route and appropriate adjustments are made
	4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs

© Commonwealth of Australia, 2025 HumanAbility

5 Monitor and maintain forklift performance	5.1 Performance and efficiency of vehicle operation is monitored during use 5.2 Defective/irregular performance and malfunctions are reported to relevant personnel 5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2010A Operate a forklift.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids, and carrying out lubrication processes
- communicating and working effectively with others
- completing relevant documentation
- ensuring forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of forklift and its equipment, and taking appropriate action as required
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 HumanAbility

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- forklift handling procedures
- high risk work licence requirements
- operating hazards and related defensive driving and hazard control techniques
- operational emergency procedures
- pre-operational checks carried out on forklift and related action
- principles of stress management when driving a forklift
- relevant duty of care requirements for operating a forklift
- relevant WHS/OHS and environmental procedures and regulations
- site layout and obstacles
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF3091A Apply awareness of dangerous goods and hazardous materials requirements

Modification History

Not applicable.

Unit Descriptor

This unit involves the skills and knowledge required to identify and apply an awareness of dangerous goods and hazardous materials requirements. It includes identifying legislation relating to dangerous goods and hazardous materials; segregating dangerous goods and hazardous materials; and dealing with incidents involving dangerous goods and hazardous materials.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

This unit is intended for persons with minimal or no contact with explosives or dangerous goods as part of their job role but who do require an awareness of how dangerous goods and hazardous materials are labelled and segregated when being transported.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not Applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify and apply appropriate legislation related to transporting dangerous goods and hazardous materials	1.1 Legislation and organisational policies and procedures relating to the transport of dangerous goods and hazardous materials are identified and accessed 1.2 Labelling of different types of dangerous goods and hazardous materials is identified from accessed documentation 1.3 Hazardous loads are identified from transport manifests
2 Separate dangerous goods and hazardous materials	2.1 Where applicable, dangerous goods are correctly separated in line with relevant documentation and according to class and subsidiary risk information
3 Deal with incidents involving dangerous goods and hazardous materials	3.1 Where possible information is obtained for dangerous goods and hazardous materials involved 3.2 If applicable, documentation is checked for compliance with separation rules in accordance with organisational procedures 3.3 Information regarding dangerous goods and hazardous materials is relayed to the appropriate persons and authorities

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

© Commonwealth of Australia, 2025 HumanAbility

Required knowledge:

- Relevant federal, state and territory regulations and codes pertaining to identifying and labelling dangerous goods and hazardous materials, including appropriate sections of the current Australian Dangerous Goods (ADG) Code and any other applicable legislation
- Risks and hazards when transporting dangerous goods and hazardous materials
- Labelling of dangerous goods and hazardous materials

Required skills:

- Communicate effectively with others
- Read and interpret instructions, procedures, information and signs relevant to transporting dangerous goods and hazardous materials
- Identify dangerous goods and hazardous materials labels
- Operate electronic communication equipment in line with required protocol
-
-

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

© Commonwealth of Australia, 2025 HumanAbility

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and/or equipment, and/or
	  • applicable documentation, including, workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through activities in an appropriately simulated environment, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Classes of dangerous goods and hazardous materials are:	• as defined in the respective Australian codes
Standard marking and signage for identified dangerous goods and hazardous materials are:	• as required in the respective Australian codes
Personnel may include:	• organisational personnel • emergency services • contractors • official representatives • other network access providers
Communication in the work area may include:	• telephone • fax • electronic, including email and internet

© Commonwealth of Australia, 2025 HumanAbility

	• radio
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	• company procedures • enterprise procedures • organisational procedures • established procedures

Information and documents may include:	• dangerous goods identification numbers, codes, markings and signs
	• codes of practice, including:
	  • ADG Code
	  • International Maritime Dangerous Goods (IMDG) Code
	  • Australian and international explosives codes
	• manifests, bar codes, goods and container identification
	• supplier instructions
	• client instructions
	• material safety data sheets (MSDS)
	• emergency procedures

Applicable regulations and legislation may include:	• current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
	  • Australian and International Dangerous Goods Codes
	  • Australian Marine Orders and the IMDG Code
	  • International Air Transport Association (IATA) Dangerous Goods by Air regulations
	  • Australian and international explosives codes
	• relevant state or territory legislation relating to:
	  • environmental protection
	  • equal employment opportunity and affirmative action
	  • OH&S
	• workplace relations regulations

TLIP5037A Develop workplace policy and procedures

Modification History

Release 1. This is the first release of this unit

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop and implement a workplace policy, including the modification of the policy to suit changed circumstances.

This unit requires the ability to access industry information, applicable legislative and occupational health and safety (OHS)/workplace health and safety (WHS) guidelines.

While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant national, state and territory legislation, regulations and codes of practice impact upon this unit.

Application of the Unit

This unit addresses the knowledge, processes and techniques necessary to develop and implement a workplace policy.

This unit applies to people with managerial responsibilities who undertake work developing workplace strategies, including the development and implementation of policy and supporting procedures. It includes communicating with relevant stakeholders, developing and monitoring policies, and reviewing and improving policies.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Develop workplace policy	1.1 Workplace policy requirements are identified
	1.2 Information is gathered from a range of sources to plan and develop policy
	1.3 Stakeholders are identified and consulted as a key component of the policy development process
	1.4 Policy option recommendations are made based on likely effectiveness, timeframes and cost
	1.5 Identified workplace policy requirements are reflected in policy developed
	1.6 Appropriate methods of implementation are agreed
2 Communicate workplace policy	2.1 Workplace policy and expected outcomes are promoted to key stakeholders
	2.2 Expected outcomes, activities to be undertaken and assigned responsibilities are communicated with those involved in implementing the policy
3 Implement workplace policy	3.1 Workplace policy implementation procedures are developed and communicated to stakeholders
	3.2 Strategies for continuous improvement are implemented
	3.3 Responsibility to use recording systems for tracking continuous improvement is established and assigned
4 Review workplace policy implementation	4.1 Outcomes are documented and feedback is provided to key personnel and stakeholders
	4.2 Outcomes of policy implementation are investigated
	4.3 Records to identify trends that may require remedial action are monitored and used to promote continuous improvement of performance

© Commonwealth of Australia, 2025 HumanAbility

4.4 Policy and or procedures are modified as required to ensure improvements are made

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Best practice approaches relevant to own work area
- Equal employment opportunity, equity and diversity principles, and work health and safety (WHS)/occupational health and safety (OHS) implications of policy being developed
- Legislation, regulations and codes of practice applicable to industry and organisation
- Quality assurance systems relevant to own organisation
- Relevant industry standards
- Relevant organisational policies, procedures and protocols

Required skills:

- Adjust communication to suit different audiences
- Consult on and validate policy
- Effectively manage different points of view and dissenting stakeholders
- Prepare written reports using precise expression, language and structures suited to the intended audience
- Read and evaluate complex and formal documents such as policy and legislation
- Research, analyse and present information
- Respond effectively to diversity
- Work as a member of a team

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in	Evidence of the following is essential: • involvement as a key person in planning, developing and implementing organisational policy that complies with

© Commonwealth of Australia, 2025 HumanAbility

this unit	legislative requirements • implementing strategy, as part of the policy, that has been devised, implemented and reviewed • communicating with stakeholders to discuss possible approaches to policy development and implementation, and contributing to the resolution of disputes among stakeholders • reviewing and improving policies by identifying improvements and benchmarking against industry best practice, and attempting new approaches over time.
Context of and specific resources for assessment	Assessment must ensure: • access to an actual workplace or simulated environment • access to relevant legislation/standards/guidelines • access to a range of workplace documentation and personnel, information and resources (such as compliance obligations, organisational plans, work responsibilities) • access to reports from other parties involved in developing and implementing policy • evidence is collected over time, involving both formative and summative assessment • evidence is relevant to the particular workplace role, including work area, equipment, systems, and documentation.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • response to case studies • review of policy developed and procedural documentation outlining the approach taken • review of implementation strategy, plans and work plans • analysis of methods used to involve stakeholders in policy development, implementation and review • analysis of inefficiencies or opportunities for improvements identified in the workplace • observation over time in relation to review of work area relating to policy and procedures being developed.

© Commonwealth of Australia, 2025 HumanAbility

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace policy requirements may include:	• client requirements • codes of practice • community issues • legislative or regulatory requirements • organisational requirements • supplier requirements
Sources may include:	• organisational specifications • regulatory or legislative sources • relevant personnel
Stakeholders may include:	• clients • employees of the organisation • government • local community • other organisations • regulators • specialists from outside the organisation with particular technical expertise • suppliers
