Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to create visual design components for interactive media using industry standard authoring tools.

Application of the Unit

This unit applies to concept artists, web and digital media designers, game designers, animators and other personnel working in the digital media industry.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>
## Elements and Performance Criteria

| 1. Identify commonly used visual design components for games and interactive media | 1.1 Obtain *project brief and documents*  
1.2 Identify features of visual design components for interactive media  
1.3 Discuss *design considerations* for designing an interactive visual design component |
|---|---|
| 2. Identify graphics software packages used for visual design | 2.1 Identify and review the range of industry standard *graphics software* available  
2.2 Assess the software related to visual design component requirements  
2.3 Discuss *technical specifications* for rendering and editing processes  
2.4 Select graphics software package |
| 3. Use graphics software | 3.1 Run graphics software and become familiar with the interface  
3.2 Create new files and organise a file structure  
3.3 Learn required tools and features used to create visual design components |
| 4. Create visual design components for an interactive media | 4.1 Design the visual components of a basic *graphical user interface (GUI)* for interactive media  
4.2 Consider the interactive elements of GUI  
4.3 Document the design  
4.4 Use graphics software to create visual design components to be used for the GUI |
| 5. Evaluate implementation | 5.1 Demonstrate implementation to relevant *personnel*  
5.2 Evaluate the usability of design components  
5.3 Reflect on possible changes to improve the visual design and interactivity of components |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
  - analyse documentation and images to inform implementation of visual design components
  - interpret briefs, work instructions, and technical and conceptual information

- communication skills to:
  - check and confirm design requirements
  - communicate complex designs in a structured format drawn from industry standards, styles and techniques
  - communicate technical requirements related to graphics requirements

- initiative and enterprise skills to exercise a high level of creative ingenuity in visual design and innovation

- literacy and numeracy skills to:
  - develop technical design documents
  - read briefs, work instructions, and technical and conceptual information

- planning and organisational skills to:
  - establish clear roles and goals to achieve required game development outcomes
  - refer decisions to a higher project authority for review and endorsement

- problem-solving skills to recognise and address potential quality issues and problems at design development stage

- research skills to undertake practical, technical and desktop research into visual design components for interactive media

- technical skills to:
  - translate design requirements into specifications
  - use correct file formats.

Required knowledge

- basic programming techniques
- human resources required in the process of creating visual design components and the technology requirements
- technical constraints that hardware imposes on software development, graphics requirements, code development and creative visual design
- techniques for applying concept development skills
- techniques for applying concept visualisation skills.
# Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Evidence of the ability to:</td>
</tr>
<tr>
<td></td>
<td>* demonstrate original and innovative approaches to the creative development of a GUI</td>
</tr>
<tr>
<td></td>
<td>* maintain integrity of the design brief</td>
</tr>
<tr>
<td></td>
<td>* develop concept art and design specifications for splash screens, start screens and game field screens consistent with a design brief</td>
</tr>
<tr>
<td></td>
<td>* develop technical specifications for visual design components and overall usability.</td>
</tr>
</tbody>
</table>

<table>

background may need additional support.

In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Project brief and documents may include: | concept drawings  
|                                             | designer’s notes  
|                                             | development-environment description  
|                                             | help notes  
|                                             | information design  
|                                             | interactive media design document  
|                                             | operating manual  
|                                             | storyboard  
|                                             | style and design principles  
|                                             | style and medium  
|                                             | target market information  
|                                             | technical design document  
|                                             | technical design review process.  
| Design considerations may include: | aesthetics  
|                                             | cultural context  
|                                             | genre  
|                                             | resource limitations and constraints  
|                                             | target market.  
| Graphics software may include: | 3-D paint  
| | Fireworks  
| | Illustrator  
| | Mudbox  
| | Photoshop  
| | Z Brush.  
| Technical specifications may include: | backup procedures  
| | delivery platform  
| | disc or memory space  
| | format for final product  
| | navigation design  
| | pixel size  
| | polygon count  
| | source code and game assets archiving  
| | target market.

Innovation and Business Skills Australia
Graphical user interface elements may include:

- buttons and button clicks
- command acknowledgements
- edit boxes
- file saving and loading
- icons
- list boxes
- markers
- menus
- options and settings
- picture boxes
- pointers
- radio buttons
- scroll bars
- shell
- splash screens
- text boxes
- window opening
- windows.

Personnel may include:

- animators
- concept artists
- game-play designers
- graphic designers
- instructional designers
- modellers
- motion-capture technicians
- other specialist staff
- other technical staff
- producers
- programmers
- project manager
- sound engineers
- team members
- technical director
- writers.
