ICP10 Printing and Graphic Arts

Release: 2.0

CONTENTS

ICP10 Printing and Graphic Arts Training Package	13
Preliminary Information	14
Training Package Details.....	15
List of AQF Qualifications	16
Units of competency in this Training Package and their prerequisites.....	18
Mapping of Qualifications.....	38
Overview	44
Qualifications Framework.....	52
Qualification Pathways.....	59
Skill Sets	65
Employability Skills	66
Examples from this Training Package of Employability Skills	71
Qualifications.....	72
Competency Standards - Industry Contextualisation.....	72
Assessment Guidelines.....	73
Appendices.....	93
ICP20110 Certificate II in Printing and Graphic Arts (General).....	99
ICP20210 Certificate II in Printing and Graphic Arts (Desktop Publishing)	106
ICP20310 Certificate II in Printing and Graphic Arts (Digital Printing).....	111
ICP20410 Certificate II in Printing and Graphic Arts (Print Production Support)	116
ICP20510 Certificate II in Printing and Graphic Arts (Screen Printing).....	122
ICP20610 Certificate II in Printing and Graphic Arts (Converting, Binding and Finishing).....	128
ICP20710 Certificate II in Printing and Graphic Arts (Sacks and Bags).....	134
ICP20810 Certificate II in Printing and Graphic Arts (Cartons).....	140
ICP20910 Certificate II in Printing and Graphic Arts (Corrugating)	145
ICP21010 Certificate II in Printing and Graphic Arts (Mail House).....	150
ICP21110 Certificate II in Printing and Graphic Arts (Ink Manufacture).....	155
ICP30112 Certificate III in Printing and Graphic Arts (Graphic Design Production)	160
ICP30212 Certificate III in Printing and Graphic Arts (Graphic Pre-press)	166
ICP30312 Certificate III in Printing and Graphic Arts (Multimedia).....	171
ICP30412 Certificate III in Printing and Graphic Arts (Digital Printing)	176
ICP30512 Certificate III in Printing and Graphic Arts (Printing)	182
ICP30612 Certificate III in Printing and Graphic Arts (Screen Printing)	190
ICP30712 Certificate III in Printing and Graphic Arts (Print Finishing).....	196
ICP30812 Certificate III in Printing and Graphic Arts (Sacks and Bags)	201
ICP30912 Certificate III in Printing and Graphic Arts (Cartons and Corrugating)	206
ICP31012 Certificate III in Printing and Graphic Arts (Mail House)	211
ICP31112 Certificate III in Printing and Graphic Arts (Ink Manufacture)	217
ICP40110 Certificate IV in Printing and Graphic Arts (Graphic Pre-press).....	222
ICP40210 Certificate IV in Printing and Graphic Arts (Multimedia)	227
ICP40310 Certificate IV in Printing and Graphic Arts (Printing).....	233
ICP40410 Certificate IV in Printing and Graphic Arts (Print Finishing)	238
ICP40510 Certificate IV in Printing and Graphic Arts (Mail House)	243
ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales).....	248
ICP40710 Certificate IV in Printing and Graphic Arts (Process Leadership).....	253
ICP50110 Diploma of Printing and Graphic Arts (Digital Production)	258
ICP50210 Diploma of Printing and Graphic Arts (Multimedia)	263
ICP50310 Diploma of Printing and Graphic Arts (Printing).....	268
ICP50410 Diploma of Printing and Graphic Arts (Management/Sales).....	273

ICP50510 Diploma of Printing and Graphic Arts (Process Improvement).....	278
ICPCF105C Operate in-line mail machine.....	283
ICPCF202C Handline mail	290
ICPCF203C Collate and insert mail manually	296
ICPCF204C Operate addressing machine.....	301
ICPCF208C Set up and operate a cheque mailer machine	307
ICPCF209C Set up and operate in-line mail machine.....	314
ICPCF2101C Set up and run machine for sewing	321
ICPCF2104C Set up single-faced web.....	326
ICPCF2106C Set up double-faced web	333
ICPCF2108C Produce basic folded and glued cartons.....	340
ICPCF220C Produce basic converted or finished product	348
ICPCF221C Set up and produce basic guillotined product	362
ICPCF222C Set up and operate in-line cutter.....	372
ICPCF223C Set up machine for cutting (trimming).....	378
ICPCF224C Produce cut (trimmed) product	386
ICPCF225C Set up machine for basic flat-bed die cutting or embossing	394
ICPCF226C Produce basic flat-bed die cut or embossed product	404
ICPCF227C Set up machine for basic rotary die cutting or embossing	415
ICPCF228C Produce basic rotary die cut or embossed product.....	425
ICPCF231C Set up machine for basic flat-bed cutting	435
ICPCF232C Produce basic flat-bed cut product.....	445
ICPCF235C Set up machine for basic rotary cutting.....	456
ICPCF236C Produce basic rotary cut product	466
ICPCF241C Set up machine for basic single or continuous folding.....	477
ICPCF242C Produce basic single or continuous folded product.....	487
ICPCF243C Set up machine for basic collating or inserting (sheet/section)	497
ICPCF244C Produce basic collated or inserted (sheet/section) product	504
ICPCF245C Set up and produce hand-collated or -inserted product.....	512
ICPCF261C Set up machine for basic adhesive, mechanical or thermal fastening	519
ICPCF262C Produce basic adhesive, mechanical or thermal fastened product	529
ICPCF263C Set up and produce hand-fastened product.....	540
ICPCF281C Set up machine for basic laminating	549
ICPCF282C Produce basic laminated product	557
ICPCF294C Set up profile cutting for envelope manufacture.....	565
ICPCF297C Clean sack and bag machines	571
ICPCF298C Run and monitor sack and bag machines	578
ICPCF3100C Run and monitor in-line tube making machine for sack or bag manufacture.....	584
ICPCF3101C Run and monitor in-line bottom making machine for sack or bag manufacture	591
ICPCF3102C Set up and monitor in-line scoring, folding and gluing machine for sack or bag manufacture	597
ICPCF3103C Run and monitor envelope manufacturing machines.....	603
ICPCF3105C Produce single-faced web	609
ICPCF3106C Set up machine for basic carton folding and gluing.....	618
ICPCF3107C Produce double-faced web.....	625
ICPCF3109C Produce complex folded and glued cartons	634
ICPCF311C Prepare for cutting forme and stripper making.....	642
ICPCF312C Set cutting forme and strippers	647
ICPCF320C Produce complex converted or finished product.....	653
ICPCF321C Set up and produce complex guillotined product.....	666
ICPCF326C Undertake pre make-ready for die cutting	676
ICPCF327C Set up machine for complex rotary die cutting or embossing.....	682

ICPCF328C Produce complex rotary die cut or embossed product	691
ICPCF341C Set up machine for complex sequenced or multiple folding.....	701
ICPCF342C Produce complex sequenced or multiple folded product.....	711
ICPCF343C Set up machine for complex collating or inserting (sheet/section/reel)	720
ICPCF344C Produce complex collated or inserted (sheet/section/reel) product	730
ICPCF361C Set up machine for complex adhesive, mechanical or sewn fastening.....	739
ICPCF362C Produce complex adhesive, mechanical or sewn fastened product.....	748
ICPCF369C Set up and produce hand-made box.....	757
ICPCF371C Decorate paper	763
ICPCF381C Set up machine for complex laminating.....	771
ICPCF382C Produce complex laminated product.....	780
ICPCF391C Use electronic monitoring systems (converting and finishing).....	789
ICPCF392C Produce product on window gluer.....	798
ICPCF393C Set up machine for envelope manufacture.....	806
ICPCF395C Set up and operate folder gluer machine	813
ICPCF396C Set up in-line scoring, folding and gluing machine for envelope manufacture.....	819
ICPCF398C Set up in-line bottom making machine for sack or bag manufacture	825
ICPCF399C Set up in-line tube making machine for sack or bag manufacture.....	831
ICPCF406C Set up and load in-line smart card machine	837
ICPCF407C Operate a smart card machine and pack product	843
ICPCF410C Set up machine for complex carton folding and gluing	850
ICPCF425C Set up machine for complex flat-bed die cutting or embossing	857
ICPCF426C Produce complex flat-bed die cut or embossed product.....	866
ICPCF465C Set up and produce hand-bound book	876
ICPCF467C Restore books	884
ICPIM211C Select and prepare materials for production.....	894
ICPIM221C Blend chemicals	900
ICPIM251C Filter and pack product.....	907
ICPIM331C Manufacture inks and coatings.....	913
ICPIM335C Manufacture varnish and resin	922
ICPKN311C Apply knowledge of the graphic pre-press sector.....	931
ICPKN312C Apply knowledge of printing machining	939
ICPKN313C Apply knowledge and requirements of the converting, binding and finishing sector	947
ICPKN314C Apply knowledge and requirements of the screen printing sector.....	955
ICPKN315C Apply knowledge and requirements of the multimedia sector	963
ICPKN316C Apply knowledge and requirements of paper and printing processes	971
ICPKN317C Apply knowledge and requirements of the ink manufacturing sector	979
ICPKN318C Apply knowledge and requirements of mail house operations.....	985
ICPKN319C Apply knowledge and processes of converting paper-based products	994
ICPKN320C Apply knowledge and requirements of information technology systems in the printing industry	1002
ICPKN321A Apply knowledge and requirements of digital production	1010
ICPMM263C Access and use the Internet.....	1019
ICPMM296C Create and test a CD-ROM/DVD	1024
ICPMM321C Capture a digital image	1030
ICPMM322C Edit a digital image	1036
ICPMM344C Manipulate and incorporate audio into multimedia presentations	1041
ICPMM346C Incorporate video into multimedia presentations	1049
ICPMM491D Create an extensible document	1057
ICPMM492D Create an extensible style sheet	1063
ICPMM581C Manage multimedia production	1069
ICPMM582C Manage multimedia projects	1075

ICPPP211C Develop a basic design concept.....	1083
ICPPP221C Select and apply type.....	1092
ICPPP223C Photograph a line image	1098
ICPPP224C Produce pages using a page layout application.....	1104
ICPPP225C Produce graphics using a graphics application	1110
ICPPP231C Manually combine spot colour and basic four-colour images.....	1118
ICPPP232C Electronically combine and assemble data.....	1124
ICPPP252C Output images.....	1131
ICPPP260C Proof images.....	1136
ICPPP266C Produce relief plates	1141
ICPPP267C Produce offset lithographic plates.....	1146
ICPPP268C Make photopolymer plates (flexographic)	1153
ICPPP269C Produce photopolymer plates for pad printing	1159
ICPPP272C Produce gravure cylinders manually	1165
ICPPP281C Design basic carton.....	1171
ICPPP283C Prepare artwork for screen printing	1177
ICPPP284B Produce PDF files for online or screen display	1185
ICPPP285A Scan a mono image	1192
ICPPP286A Scan images for reproduction.....	1198
ICPPP311C Develop a detailed design concept.....	1204
ICPPP321C Produce a typographic image	1212
ICPPP322C Digitise images for reproduction	1219
ICPPP323C Photograph and produce halftone images.....	1225
ICPPP324C Create pages using a page layout application	1232
ICPPP325C Create graphics using a graphics application	1242
ICPPP331C Manually combine complex four-colour images.....	1250
ICPPP333C Electronically combine complex images	1257
ICPPP334C Prepare an imposition format for printing processes	1264
ICPPP352C Output complex images.....	1270
ICPPP360C Undertake special colour proofing.....	1277
ICPPP370C Produce multiple image plates.....	1283
ICPPP372C Produce gravure cylinders electronically	1289
ICPPP382C Produce computer image for screen printing	1295
ICPPP385C Operate a database for digital printing	1302
ICPPP386C Undertake digital proofing	1309
ICPPP396A Generate high-end PDF files.....	1315
ICPPP397A Transfer digital files	1322
ICPPP411C Undertake a complex design brief.....	1329
ICPPP421C Compose and evaluate typography	1338
ICPPP422C Digitise complex images for reproduction	1345
ICPPP423C Apply colour to design brief	1351
ICPPP430C Manage colour	1358
ICPPP435C Generate complex imposition	1367
ICPPP452C Output complex images direct to plate or press	1373
ICPPP481C Design complex carton	1382
ICPPP484C Set up and operate automated workflow.....	1389
ICPPP485C Develop a digital data template	1397
ICPPP494C Develop document content and structure.....	1403
ICPPR211C Mount and proof flexographic plates for basic printing	1410
ICPPR214C Produce basic flexographic printed product	1418
ICPPR222C Produce basic gravure printed product	1428
ICPPR232C Produce basic lithographic printed product.....	1439
ICPPR242C Produce basic pad printed product	1450

ICPPR261C Set up for foil stamping	1461
ICPPR262C Produce foil stamped product	1471
ICPPR271C Set up for basic coating.....	1482
ICPPR272C Produce basic coated product	1492
ICPPR282C Produce and manage basic digital print.....	1503
ICPPR283A Use digital media consumables	1514
ICPPR284A Introduction to colour management.....	1520
ICPPR285A Use digital workflow	1527
ICPPR286A Finish a digital product.....	1534
ICPPR287A Use digital processes.....	1543
ICPPR288A Produce basic relief printed product.....	1549
ICPPR313C Set up for basic flexographic printing.....	1560
ICPPR314C Produce complex flexographic printed product.....	1572
ICPPR321C Set up for basic gravure printing.....	1584
ICPPR322C Produce complex gravure printed product.....	1594
ICPPR331C Set up for basic lithographic printing	1606
ICPPR332C Produce complex lithographic printed product	1616
ICPPR341C Set up for basic pad printing.....	1629
ICPPR342C Produce complex pad printed product.....	1639
ICPPR382C Produce and manage complex digital print	1650
ICPPR383C Prepare for personalised digital printing.....	1662
ICPPR384A Set up and produce basic digital print	1668
ICPPR385A Apply software applications to digital production	1679
ICPPR386A Troubleshoot digital media	1687
ICPPR387A Use colour management for production.....	1694
ICPPR388A Preflight and import complex images for digital devices	1703
ICPPR389A Manage digital files	1711
ICPPR390A Generate a proof for digital production.....	1717
ICPPR392A Set up and produce specialised digital print.....	1724
ICPPR393A Set up for basic relief printing	1733
ICPPR394A Produce complex relief printed product	1745
ICPPR411C Mount and demount flexographic plates for complex printing	1758
ICPPR413C Set up for complex flexographic printing	1768
ICPPR414C Produce specialised flexographic printed product.....	1781
ICPPR421C Set up for complex gravure printing	1791
ICPPR422C Produce specialised gravure printed product.....	1802
ICPPR431C Set up for complex lithographic printing	1812
ICPPR432C Produce specialised lithographic printed product	1824
ICPPR441C Set up for complex pad printing	1836
ICPPR442C Produce specialised pad printed product.....	1846
ICPPR451C Set up for complex relief printing.....	1857
ICPPR452C Produce specialised relief printed product	1869
ICPPR471C Set up for complex coating	1880
ICPPR472C Produce complex coated product.....	1890
ICPPR484C Prepare for variable data printing	1901
ICPPR491C Use on-press monitoring of print quality	1907
ICPPR492C Use on-press print control devices	1914
ICPPR493C Set up and monitor in-line printing operations.....	1920
ICPPR494A Apply advanced software applications to digital production.....	1929
ICPPR495A Set up and use complex colour management for production	1938
ICPPR496A Set up and produce complex digital print.....	1947
ICPPR513C Set up for specialised flexographic printing	1957
ICPPR521C Set up for specialised gravure printing	1969

ICPPR531C Set up for specialised lithographic printing.....	1980
ICPPR541C Set up for specialised pad printing	1993
ICPPR551C Set up for specialised relief printing.....	2003
ICPPR552A Manage digital production workflow	2015
ICPSP211C Reclaim screen automatically	2022
ICPSP215C Prepare screen.....	2030
ICPSP221C Prepare substrate.....	2038
ICPSP222C Prepare and cut screen print substrate.....	2046
ICPSP233C Manually prepare direct emulsion stencil	2051
ICPSP235C Prepare stencil using photographic indirect method.....	2060
ICPSP270C Manually prepare and produce screen prints	2069
ICPSP271C Manually produce basic screen prints	2078
ICPSP273C Semi-automatically produce basic screen prints.....	2086
ICPSP275C Automatically produce basic screen prints	2094
ICPSP281C Finish screen print products	2103
ICPSP282A Prepare film for basic screen printing	2110
ICPSP311C Reclaim screen manually	2117
ICPSP333C Automatically prepare direct emulsion stencil	2124
ICPSP337D Prepare stencil using photographic capillary method.....	2133
ICPSP339C Prepare stencil using direct projection method	2141
ICPSP341C Prepare stencil using direct electronic imaging method	2150
ICPSP351C Prepare machine and drying/curing unit	2159
ICPSP371C Manually produce complex screen prints.....	2168
ICPSP373C Semi-automatically produce complex screen prints	2177
ICPSP374C Operate a semi-automatic screen printing machine	2186
ICPSP375C Automatically produce complex screen prints.....	2195
ICPSP376C Operate an automatic screen printing machine.....	2204
ICPSP382C Produce computer image for screen printing.....	2213
ICPSP383A Prepare film for complex screen printing.....	2220
ICPSU120C Pack product.....	2229
ICPSU201C Prepare, load and unload reels and cores on and off machine.....	2235
ICPSU202C Prepare, load and unload product on and off machine	2242
ICPSU203C Prepare and maintain the work area.....	2249
ICPSU207C Prepare machine for operation (basic).....	2256
ICPSU208C Operate and monitor machines (basic)	2263
ICPSU211C Prepare ink and additives.....	2271
ICPSU212C Prepare coatings and adhesives.....	2278
ICPSU216C Inspect quality against required standards.....	2284
ICPSU221C Pack and dispatch product	2290
ICPSU222C Pack and dispatch solid waste	2297
ICPSU224C Perform basic machine maintenance.....	2303
ICPSU225C Perform small machine maintenance	2312
ICPSU235C Lift loads mechanically	2319
ICPSU236C Shift loads mechanically	2324
ICPSU241C Undertake warehouse or stores materials processing.....	2330
ICPSU243C Reconcile process outputs.....	2338
ICPSU260C Maintain a safe work environment.....	2343
ICPSU261C Follow OHS practices and identify environmental hazards.....	2351
ICPSU262C Communicate in the workplace.....	2358
ICPSU263C Perform basic industry calculations	2364
ICPSU271C Provide basic instruction for a task	2370
ICPSU280C Enter data into electronic system.....	2375
ICPSU281C Use computer systems	2380

ICPSU311C Prepare ink and additives (advanced)	2385
ICPSU321C Pack and dispatch (advanced).....	2392
ICPSU323C Dispose of waste.....	2400
ICPSU342C Undertake inventory procedures	2405
ICPSU345C Purchase materials and schedule deliveries	2410
ICPSU351C Undertake basic production scheduling	2417
ICPSU352C Plan operational processes.....	2422
ICPSU357C Apply quick changeover procedures	2430
ICPSU362C Communicate as part of a work team	2436
ICPSU381C Operate and maintain computer resources.....	2441
ICPSU389C Undertake basic root cause analysis	2450
ICPSU417C Perform laboratory quality tests of materials and finished product	2457
ICPSU455C Supervise and schedule work of others	2464
ICPSU456C Control production.....	2471
ICPSU458C Monitor production workflow.....	2476
ICPSU464C Provide customer service and education	2481
ICPSU482C Troubleshoot and optimise materials and machinery.....	2487
ICPSU485C Implement a Just-in-Time (JIT) system.....	2494
ICPSU486C Mistake proof a production process	2501
ICPSU487C Analyse manual handling processes	2508
ICPSU488C Ensure process improvements are sustained	2515
ICPSU516C Set and apply quality standards.....	2522
ICPSU553C Prepare production costing estimates.....	2530
ICPSU554C Manage teams	2537
ICPSU561C Implement and monitor OHS.....	2544
ICPSU583C Troubleshoot and optimise the production process	2552
ICPSU684C Determine and improve process capability	2561
AUM4012A Apply quality assurance techniques.....	2567
BSBCCO201A Action customer contact.....	2575
BSBCM401A Make a presentation.....	2585
BSBCUS301B Deliver and monitor a service to customers.....	2593
BSBCUS401B Coordinate implementation of customer service strategies	2601
BSBCUS501C Manage quality customer service	2609
BSBDES302A Explore and apply the creative design process to 2D forms.....	2616
BSBDES601A Manage design realisation.....	2624
BSBFLM309C Support continuous improvement systems and processes.....	2632
BSBINN201A Contribute to workplace innovation.....	2641
BSBINN301A Promote innovation in a team environment.....	2649
BSBIPR601A Develop and implement strategies for intellectual property management.....	2658
BSBITU306A Design and produce business documents.....	2668
BSBMGT402A Implement operational plan	2676
BSBMGT403A Implement continuous improvement.....	2684
BSBMGT515A Manage operational plan	2691
BSBMGT516C Facilitate continuous improvement	2699
BSBMGT608C Manage innovation and continuous improvement.....	2707
BSBMKG401B Profile the market	2714
BSBMKG413A Promote products and services.....	2727
BSBMKG501B Identify and evaluate marketing opportunities.....	2735
BSBPMG401A Apply project scope management techniques	2744
BSBPRO401A Develop product knowledge	2751
BSBREL401A Establish networks.....	2759
BSBREL402A Build client relationships and business networks	2766
BSBSLS402A Identify sales prospects	2775

BSBSLS404A Secure prospect commitment.....	2783
BSBSLS405A Support post sale activities.....	2791
BSBSLS501A Develop a sales plan.....	2799
BSBSMB301A Investigate micro business opportunities	2806
BSBSMB402A Plan small business finances.....	2814
BSBSMB403A Market the small business	2822
BSBSMB404A Undertake small business planning	2830
BSBSUS201A Participate in environmentally sustainable work practices.....	2841
BSBSUS301A Implement and monitor environmentally sustainable work practices	2849
BSBSUS501A Develop workplace policy and procedures for sustainability	2863
BSBWOR301B Organise personal work priorities and development.....	2874
BSBWOR402A Promote team effectiveness	2882
BSBWOR404B Develop work priorities	2890
BSBWOR501B Manage personal work priorities and professional development	2898
BSBWOR502B Ensure team effectiveness.....	2905
CUFANM301A Create 2D digital animations	2913
CUFANM302A Create 3D digital animations	2923
CUFANM303A Create 3D digital models	2936
CUFANM401A Prepare 3D digital models for production.....	2946
CUFANM403A Create titles for screen productions	2957
CUFANM503A Design animation and digital visual effects	2968
CUFCMP301A Implement copyright arrangements.....	2981
CUFDIG201A Maintain interactive content.....	2990
CUFDIG302A Author interactive sequences.....	2997
CUFDIG304A Create visual design components	3006
CUFDIG401A Author interactive media	3018
CUFDIG403A Create user interfaces.....	3030
CUFDIG404A Apply scripting language in authoring	3042
CUFDIG501A Coordinate the testing of interactive media products	3049
CUFDIG502A Design web environments	3058
CUFDIG503A Design e-learning resources	3071
CUFDIG504A Design games.....	3086
CUFDIG505A Design information architecture	3099
CUVACD101A Use basic drawing techniques	3110
CUVACD201A Develop drawing skills to communicate ideas	3116
CUVACD401A Integrate colour theory and design processes.....	3122
CUVGRD302A Use typography techniques	3128
ICADBS504A Integrate database with a website.....	3137
ICANWK414A Create a common gateway interface script.....	3142
ICAWEB409A Develop cascading style sheets.....	3149
ICAWEB410A Apply web authoring tool to convert client data for websites	3154
ICAWEB418A Use development software and IT tools to build a basic website.....	3163
ICAWEB419A Develop guidelines for uploading information to a website	3171
ICAWEB421A Ensure website content meets technical protocols and standards.....	3179
ICAWEB429A Create a markup language document to specification	3187
ICAWEB502A Create dynamic web pages.....	3193
ICAWEB510A Analyse information and assign meta-tags.....	3198
MSACMC210A Manage the impact of change on own work	3204
MSACMC410A Lead change in a manufacturing environment	3212
MSACMS200A Apply competitive manufacturing practices	3222
MSACMS201A Sustain process improvements	3230
MSACMT230A Apply cost factors to work practices	3237
MSACMT240A Apply 5S procedures in a manufacturing environment	3244

MSACMT270A Use sustainable energy practices.....	3253
MSACMT271A Use sustainable environmental practices	3260
MSACMT280A Undertake root cause analysis.....	3268
MSACMT440A Lead 5S in a manufacturing environment	3276
MSACMT621A Develop a Just in Time (JIT) system	3284
MSAENV272B Participate in environmentally sustainable work practices	3294
MSAENV472B Implement and monitor environmentally sustainable work practices...	3303
MSAPMSUP390A Use structured problem solving tools.....	3313
MSL933001A Maintain the laboratory/field workplace fit for purpose	3319
MSL954001A Obtain representative samples in accordance with sampling plan	3334
MSL973001A Perform basic tests.....	3347
MSL973002A Prepare working solutions	3359
MSL974001A Prepare, standardise and use solutions.....	3370
SIRXCCS005A Manage business customers	3382
SIRXCCS006A Maintain business to business relationships.....	3390
SIRXSLS001A Sell products and services	3398
SIRXSLS002A Advise on products and services.....	3408
SIRXSLS005A Manage sales and service delivery.....	3416
SIRXSLS008A Develop a sales strategy.....	3427
TAEASS402B Assess competence.....	3435
TAEDEL402A Plan, organise and facilitate learning in the workplace	3444
TLIA2043A Consolidate mail	3454
TLIA2041A Manually sort mail and parcels.....	3462
TLIA2047A Stream mail.....	3470
TLIW3006A Operate computerised mail and parcels sorting equipment.....	3478

Preliminary Information

Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version 2 - check whether this is the latest version by going to the National Training Information Service (www.ntis.gov.au) and locating information about the Training Package. Alternatively, contact Innovation and Business Industry Skills Council at <http://www.ibsa.org.au> to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Packages national code (which remains the same during its period of endorsement).

Version modification history

ICP10 Printing and Graphic Arts Training Package Version 2 is a revision of ICP10 Version 1, which was endorsed on 14 February 2011. The change to all Certificate III qualifications in this version was made to better reflect the skills required by someone operating at a Certificate III / Grade 5 production level worker.

Training Package Details

Training Package Code:	ICP10
Training Package Name:	Printing and Graphic Arts
First Published:	2010
Print Version Number:	2
Endorsed Date:	14 June 2012
Copyright Year:	2012
Training Package Review Date:	5 April 2013

List of AQF Qualifications

Qualification Code	Title
ICP20110	Certificate II in Printing and Graphic Arts (General)
ICP20210	Certificate II in Printing and Graphic Arts (Desktop Publishing)
ICP20310	Certificate II in Printing and Graphic Arts (Digital Printing)
ICP20410	Certificate II in Printing and Graphic Arts (Print Production Support)
ICP20510	Certificate II in Printing and Graphic Arts (Screen Printing)
ICP20610	Certificate II in Printing and Graphic Arts (Converting, Binding and Finishing)
ICP20710	Certificate II in Printing and Graphic Arts (Sacks and Bags)
ICP20810	Certificate II in Printing and Graphic Arts (Cartons)
ICP20910	Certificate II in Printing and Graphic Arts (Corrugating)
ICP21010	Certificate II in Printing and Graphic Arts (Mail House)
ICP21110	Certificate II in Printing and Graphic Arts (Ink Manufacture)
ICP30112	Certificate III in Printing and Graphic Arts (Graphic Design Production)
ICP30212	Certificate III in Printing and Graphic Arts (Graphic Pre-press)
ICP30312	Certificate III in Printing and Graphic Arts (Multimedia)
ICP30412	Certificate III in Printing and Graphic Arts (Digital Printing)
ICP30512	Certificate III in Printing and Graphic Arts (Printing)
ICP30612	Certificate III in Printing and Graphic Arts (Screen Printing)
ICP30712	Certificate III in Printing and Graphic Arts (Print Finishing)
ICP30812	Certificate III in Printing and Graphic Arts (Sacks and Bags)
ICP30912	Certificate III in Printing and Graphic Arts (Cartons and Corrugating)
ICP31012	Certificate III in Printing and Graphic Arts (Mail House)

Qualification Code	Title
ICP20110	Certificate II in Printing and Graphic Arts (General)
ICP20210	Certificate II in Printing and Graphic Arts (Desktop Publishing)
ICP31112	Certificate III in Printing and Graphic Arts (Ink Manufacture)
ICP40110	Certificate IV in Printing and Graphic Arts (Graphic Pre-press)
ICP40210	Certificate IV in Printing and Graphic Arts (Multimedia)
ICP40310	Certificate IV in Printing and Graphic Arts (Printing)
ICP40410	Certificate IV in Printing and Graphic Arts (Print Finishing)
ICP40510	Certificate IV in Printing and Graphic Arts (Mail House)
ICP40610	Certificate IV in Printing and Graphic Arts (Management/Sales)
ICP40710	Certificate IV in Printing and Graphic Arts (Process Leadership)
ICP50110	Diploma of Printing and Graphic Arts (Digital Production)
ICP50210	Diploma of Printing and Graphic Arts (Multimedia)
ICP50310	Diploma of Printing and Graphic Arts (Printing)
ICP50410	Diploma of Printing and Graphic Arts (Management/Sales)
ICP50510	Diploma of Printing and Graphic Arts (Process Improvement)

Units of competency in this Training Package and their prerequisites

Native units in ICP10 Training Package	
Code	Title
Converting Binding and Finishing	
ICPCF105C	Operate in-line mail machine
ICPCF202C	Handline mail
ICPCF203C	Collate and insert mail manually
ICPCF204C	Operate addressing machine
ICPCF208C	Set up and operate a cheque mailer machine
ICPCF209C	Set up and operate in-line mail machine
ICPCF220C	Produce basic converted or finished product
ICPCF221C	Set up and produce basic guillotined product
ICPCF222C	Set up and operate in-line cutter
ICPCF223C	Set up machine for cutting (trimming)
ICPCF224C	Produce cut (trimmed) product
ICPCF225C	Set up machine for basic flat-bed die cutting or embossing
ICPCF226C	Produce basic flat-bed die cut or embossed product
ICPCF227C	Set up machine for basic rotary die cutting or embossing
ICPCF228C	Produce basic rotary die cut or embossed product
ICPCF231C	Set up machine for basic flat-bed cutting
ICPCF232C	Produce basic flat-bed cut product
ICPCF235C	Set up machine for basic rotary cutting
ICPCF236C	Produce basic rotary cut product
ICPCF241C	Set up machine for basic single or continuous folding

Native units in ICP10 Training Package	
Code	Title
ICPCF242C	Produce basic single or continuous folded product
ICPCF243C	Set up machine for basic collating or inserting (sheet/section)
ICPCF244C	Produce basic collated or inserted (sheet/section) product
ICPCF245C	Set up and produce hand-collated or -inserted product
ICPCF261C	Set up machine for basic adhesive, mechanical or thermal fastening
ICPCF262C	Produce basic adhesive, mechanical or thermal fastened product
ICPCF263C	Set up and produce hand-fastened product
ICPCF281C	Set up machine for basic laminating
ICPCF282C	Produce basic laminated product
ICPCF294C	Set up profile cutting for envelope manufacture
ICPCF297C	Clean sack and bag machines
ICPCF298C	Run and monitor sack and bag machines
ICPCF2101C	Set up and run machine for sewing
ICPCF2104C	Set up single-faced web
ICPCF2106C	Set up double-faced web
ICPCF2108C	Produce basic folded and glued cartons
ICPCF311C	Prepare for cutting forme and stripper making
ICPCF312C	Set cutting forme and strippers
ICPCF320C	Produce complex converted or finished product
ICPCF321C	Set up and produce complex guillotined product
ICPCF326C	Undertake pre make-ready for die cutting
ICPCF327C	Set up machine for complex rotary die cutting or embossing
ICPCF328C	Produce complex rotary die cut or embossed product

Native units in ICP10 Training Package	
Code	Title
ICPCF341C	Set up machine for complex sequenced or multiple folding
ICPCF342C	Produce complex sequenced or multiple folded product
ICPCF343C	Set up machine for complex collating or inserting (sheet/section/reel)
ICPCF344C	Produce complex collated or inserted (sheet/section/reel) product
ICPCF361C	Set up machine for complex adhesive, mechanical or sewn fastening
ICPCF362C	Produce complex adhesive, mechanical or sewn fastened product
ICPCF369C	Set up and produce hand-made box
ICPCF371C	Decorate paper
ICPCF381C	Set up machine for complex laminating
ICPCF382C	Produce complex laminated product
ICPCF391C	Use electronic monitoring systems (converting and finishing)
ICPCF392C	Produce product on window gluer
ICPCF393C	Set up machine for envelope manufacture
ICPCF395C	Set up and operate folder gluer machine
ICPCF396C	Set up in-line scoring, folding and gluing machine for envelope manufacture
ICPCF398C	Set up in-line bottom making machine for sack or bag manufacture
ICPCF399C	Set up in-line tube making machine for sack or bag manufacture
ICPCF3100C	Run and monitor in-line tube making machine for sack or bag manufacture
ICPCF3101C	Run and monitor in-line bottom making machine for sack or bag manufacture
ICPCF3102C	Set up and monitor in-line scoring, folding and gluing machine for sack or bag manufacture
ICPCF3103C	Run and monitor envelope manufacturing machines
ICPCF3105C	Produce single-faced web

Native units in ICP10 Training Package	
Code	Title
ICPCF3106C	Set up machine for basic carton folding and gluing
ICPCF3107C	Produce double-faced web
ICPCF3109C	Produce complex folded and glued cartons
ICPCF406C	Set up and load in-line smart card machine
ICPCF407C	Operate a smart card machine and pack product
ICPCF410C	Set up machine for complex carton folding and gluing
ICPCF425C	Set up machine for complex flat-bed die cutting or embossing
ICPCF426C	Produce complex flat-bed die cut or embossed product
ICPCF465C	Set up and produce hand-bound book
ICPCF467C	Restore books
Ink Manufacturing	
ICPIM211C	Select and prepare materials for production
ICPIM221C	Blend chemicals
ICPIM251C	Filter and pack product
ICPIM331C	Manufacture inks and coatings
ICPIM335C	Manufacture varnish and resin
Knowledge	
ICPKN311C	Apply knowledge of the graphic pre-press sector
ICPKN312C	Apply knowledge of printing machining
ICPKN313C	Apply knowledge and requirements of the converting, binding and finishing sector
ICPKN314C	Apply knowledge and requirements of the screen printing sector
ICPKN315C	Apply knowledge and requirements of the multimedia sector

Native units in ICP10 Training Package	
Code	Title
ICPKN316C	Apply knowledge and requirements of paper and printing processes
ICPKN317C	Apply knowledge and requirements of the ink manufacturing sector
ICPKN318C	Apply knowledge and requirements of mail house operations
ICPKN319C	Apply knowledge and processes of converting paper-based products
ICPKN320C	Apply knowledge and requirements of information technology systems in the printing industry
ICPKN321A	Apply knowledge and requirements of digital production
Multimedia	
ICPMM263C	Access and use the Internet
ICPMM296C	Create and test a CD-ROM/DVD
ICPMM321C	Capture a digital image
ICPMM322C	Edit a digital image
ICPMM344C	Manipulate and incorporate audio into multimedia presentations
ICPMM346C	Incorporate video into multimedia presentations
ICPMM491D	Create an extensible document
ICPMM492D	Create an extensible style sheet
ICPMM581C	Manage multimedia production
ICPMM582C	Manage multimedia projects
Pre-press	
ICPPP211C	Develop a basic design concept
ICPPP221C	Select and apply type
ICPPP223C	Photograph a line image
ICPPP224C	Produce pages using a page layout application

Native units in ICP10 Training Package	
Code	Title
ICPPP225C	Produce graphics using a graphics application
ICPPP231C	Manually combine spot colour and basic four-colour images
ICPPP232C	Electronically combine and assemble data
ICPPP252C	Output images
ICPPP260C	Proof images
ICPPP266C	Produce relief plates
ICPPP267C	Produce offset lithographic plates
ICPPP268C	Make photopolymer plates (flexographic)
ICPPP269C	Produce photopolymer plates for pad printing
ICPPP272C	Produce gravure cylinders manually
ICPPP281C	Design basic carton
ICPPP283C	Prepare artwork for screen printing
ICPPP284B	Produce PDF files for online or screen display
ICPPP285A	Scan a mono image
ICPPP286A	Scan images for reproduction
ICPPP311C	Develop a detailed design concept
ICPPP321C	Produce a typographic image
ICPPP322C	Digitise images for reproduction
ICPPP323C	Photograph and produce halftone images
ICPPP324C	Create pages using a page layout application
ICPPP325C	Create graphics using a graphics application
ICPPP331C	Manually combine complex four-colour images
ICPPP333C	Electronically combine complex images

Native units in ICP10 Training Package	
Code	Title
ICPPP334C	Prepare an imposition format for printing processes
ICPPP352C	Output complex images
ICPPP360C	Undertake special colour proofing
ICPPP370C	Produce multiple image plates
ICPPP372C	Produce gravure cylinders electronically
ICPPP382C	Produce computer image for screen printing
ICPPP385C	Operate a database for digital printing
ICPPP386C	Undertake digital proofing
ICPPP396A	Generate high-end PDF files
ICPPP397A	Transfer digital files
ICPPP411C	Undertake a complex design brief
ICPPP421C	Compose and evaluate typography
ICPPP422C	Digitise complex images for reproduction
ICPPP423C	Apply colour to design brief
ICPPP430C	Manage colour
ICPPP435C	Generate complex imposition
ICPPP452C	Output complex images direct to plate or press
ICPPP481C	Design complex carton
ICPPP484C	Set up and operate automated workflow
ICPPP485C	Develop a digital data template
ICPPP494C	Develop document content and structure
Printing	
ICPPR211C	Mount and proof flexographic plates for basic printing

Native units in ICP10 Training Package	
Code	Title
ICPPR214C	Produce basic flexographic printed product
ICPPR222C	Produce basic gravure printed product
ICPPR232C	Produce basic lithographic printed product
ICPPR242C	Produce basic pad printed product
ICPPR261C	Set up for foil stamping
ICPPR262C	Produce foil stamped product
ICPPR271C	Set up for basic coating
ICPPR272C	Produce basic coated product
ICPPR282C	Produce and manage basic digital print
ICPPR283A	Use digital media consumables
ICPPR284A	Introduction to colour management
ICPPR285A	Use digital workflow
ICPPR286A	Finish a digital product
ICPPR287A	Use digital processes
ICPPR288A	Produce basic relief printed product
ICPPR313C	Set up for basic flexographic printing
ICPPR314C	Produce complex flexographic printed product
ICPPR321C	Set up for basic gravure printing
ICPPR322C	Produce complex gravure printed product
ICPPR331C	Set up for basic lithographic printing
ICPPR332C	Produce complex lithographic printed product
ICPPR341C	Set up for basic pad printing
ICPPR342C	Produce complex pad printed product

Native units in ICP10 Training Package	
Code	Title
ICPPR382C	Produce and manage complex digital print
ICPPR383C	Prepare for personalised digital printing
ICPPR384A	Set up and produce basic digital print
ICPPR385A	Apply software applications to digital production
ICPPR386A	Troubleshoot digital media
ICPPR387A	Use colour management for production
ICPPR388A	Preflight and import complex images for digital device
ICPPR389A	Manage digital files
ICPPR390A	Generate a proof for digital production
ICPPR392A	Set up and produce specialised digital print
ICPPR393A	Set up for basic relief printing
ICPPR394A	Produce complex relief printed product
ICPPR411C	Mount and demount flexographic plates for complex printing
ICPPR413C	Set up for complex flexographic printing
ICPPR414C	Produce specialised flexographic printed product
ICPPR421C	Set up for complex gravure printing
ICPPR422C	Produce specialised gravure printed product
ICPPR431C	Set up for complex lithographic printing
ICPPR432C	Produce specialised lithographic printed product
ICPPR441C	Set up for complex pad printing
ICPPR442C	Produce specialised pad printed product
ICPPR451C	Set up for complex relief printing
ICPPR452C	Produce specialised relief printed product

Native units in ICP10 Training Package	
Code	Title
ICPPR471C	Set up for complex coating
ICPPR472C	Produce complex coated product
ICPPR484C	Prepare for variable data printing
ICPPR491C	Use on-press monitoring of print quality
ICPPR492C	Use on-press print control devices
ICPPR493C	Set up and monitor in-line printing operations
ICPPR494A	Apply advanced software applications to digital production
ICPPR495A	Set up and use complex colour management for production
ICPPR496A	Set up and produce complex digital print
ICPPR513C	Set up for specialised flexographic printing
ICPPR521C	Set up for specialised gravure printing
ICPPR531C	Set up for specialised lithographic printing
ICPPR541C	Set up for specialised pad printing
ICPPR551C	Set up for specialised relief printing
ICPPR552A	Manage digital production work flow
Screen Printing	
ICPSP211C	Reclaim screen automatically
ICPSP215C	Prepare screen
ICPSP221C	Prepare substrate
ICPSP222C	Prepare and cut screen print substrate
ICPSP233C	Manually prepare direct emulsion stencil
ICPSP235C	Prepare stencil using photographic indirect method
ICPSP270C	Manually prepare and produce screen prints

Native units in ICP10 Training Package	
Code	Title
ICPSP271C	Manually produce basic screen prints
ICPSP273C	Semi-automatically produce basic screen prints
ICPSP275C	Automatically produce basic screen prints
ICPSP281C	Finish screen print products
ICPSP282A	Prepare film for basic screen printing
ICPSP311C	Reclaim screen manually
ICPSP333C	Automatically prepare direct emulsion stencil
ICPSP337D	Prepare stencil using photographic capillary method
ICPSP339C	Prepare stencil using direct projection method
ICPSP341C	Prepare stencil using direct electronic imaging method
ICPSP351C	Prepare machine and drying/curing unit
ICPSP371C	Manually produce complex screen prints
ICPSP373C	Semi-automatically produce complex screen prints
ICPSP374C	Operate a semi-automatic screen printing machine
ICPSP375C	Automatically produce complex screen prints
ICPSP376C	Operate an automatic screen printing machine
ICPSP382C	Produce computer image for screen printing
ICPSP383A	Prepare film for complex screen printing
Support	
ICPSU120C	Pack product
ICPSU201C	Prepare, load and unload reels and cores on and off machine
ICPSU202C	Prepare, load and unload product on and off machine
ICPSU203C	Prepare and maintain the work area

Native units in ICP10 Training Package	
Code	Title
ICPSU207C	Prepare machine for operation (basic)
ICPSU208C	Operate and monitor machines (basic)
ICPSU211C	Prepare ink and additives
ICPSU212C	Prepare coatings and adhesives
ICPSU216C	Inspect quality against required standards
ICPSU221C	Pack and dispatch product
ICPSU222C	Pack and dispatch solid waste
ICPSU224C	Perform basic machine maintenance
ICPSU225C	Perform small machine maintenance
ICPSU235C	Lift loads mechanically
ICPSU236C	Shift loads mechanically
ICPSU241C	Undertake warehouse or stores materials processing
ICPSU243C	Reconcile process outputs
ICPSU260C	Maintain a safe work environment
ICPSU261C	Follow OHS practices and identify environmental hazards
ICPSU262C	Communicate in the workplace
ICPSU263C	Perform basic industry calculations
ICPSU271C	Provide basic instruction for a task
ICPSU280C	Enter data into electronic system
ICPSU281C	Use computer systems
ICPSU311C	Prepare ink and additives (advanced)
ICPSU321C	Pack and dispatch (advanced)
ICPSU323C	Dispose of waste

Native units in ICP10 Training Package	
Code	Title
ICPSU342C	Undertake inventory procedures
ICPSU345C	Purchase materials and schedule deliveries
ICPSU351C	Undertake basic production scheduling
ICPSU352C	Plan operational processes
ICPSU357C	Apply quick changeover procedures
ICPSU362C	Communicate as part of a work team
ICPSU381C	Operate and maintain computer resources
ICPSU389C	Undertake basic root cause analysis
ICPSU417C	Perform laboratory quality tests of materials and finished product
ICPSU455C	Supervise and schedule work of others
ICPSU456C	Control production
ICPSU458C	Monitor production workflow
ICPSU464C	Provide customer service and education
ICPSU482C	Troubleshoot and optimise materials and machinery
ICPSU485C	Implement a Just-in-Time (JIT) system
ICPSU486C	Mistake proof a production process
ICPSU487C	Analyse manual handling processes
ICPSU488C	Ensure process improvements are sustained
ICPSU516C	Set and apply quality standards
ICPSU553C	Prepare production costing estimates
ICPSU554C	Manage teams
ICPSU561C	Implement and monitor OHS
ICPSU583C	Troubleshoot and optimise the production process

Native units in ICP10 Training Package	
Code	Title
ICPSU684C	Determine and improve process capability

Imported units of competency in ICP10 qualifications		
Code	Title	Origin
AUM4012A	Apply quality assurance techniques	AUM08
BSBCMM401A	Make a presentation	BSB07
BSBCUS301B	Deliver and monitor a service to customers	BSB07
BSBCUS401B	Coordinate implementation of customer service strategies	BSB07
BSBCUS501C	Manage quality customer service	BSB07
BSBDES302A	Explore and apply the creative design process to 2D forms	BSB07
BSBDES601A	Manage design realisation	BSB07
BSBFLM309C	Support continuous improvement systems and processes	BSB07
BSBINN201A	Contribute to workplace innovation	BSB07
BSBINN301A	Promote innovation in a team environment	BSB07
BSBIPR601A	Develop and implement strategies for intellectual property management	BSB07
BSBITU306A	Design and produce business documents	BSB07
BSBMGT402A	Implement operational plan	BSB07
BSBMGT403A	Implement continuous improvement	BSB07
BSBMGT515A	Manage operational plan	BSB07
BSBMGT516C	Facilitate continuous improvement	BSB07
BSBMGT608C	Manage innovation and continuous improvement	BSB07

Explanation of the review date

The review date (shown on the title page and in the header of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Endorsed Training Packages and their components remain current until they are reviewed or replaced.

Overview

What is a Training Package?

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing peoples skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2007 (AQTF 2007), and Training Packages endorsed by the National Quality Council (NQC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

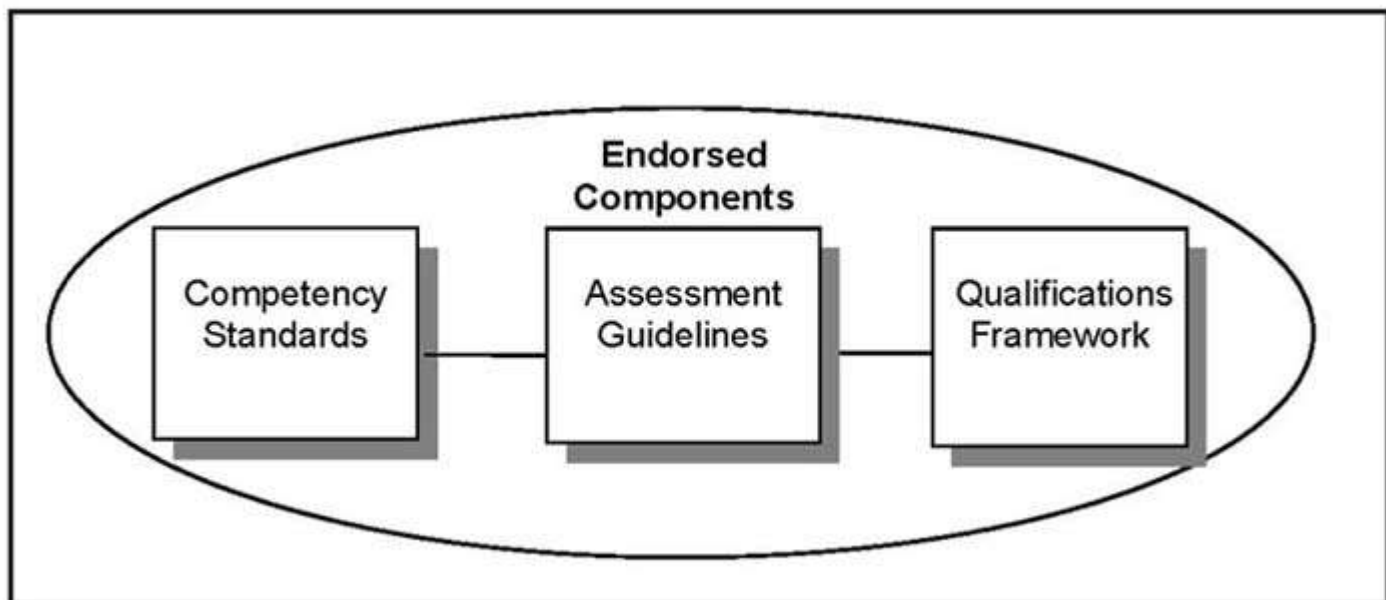

Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2007.

Training Package Components

Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2007. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

Qualifications Framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the "packaging rules". The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.

Where such materials have been quality assured through a process of "noting" by the NQC, they display the following official logo. Noted support materials are listed on the National Training Information Service (NTIS), together with a detailed description and information on the type of product and its availability < www.ntis.gov.au >.

It is not compulsory to submit support materials for noting; any resources that meet the requirements of the Training Package can be used.

Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, **and with the code always before the title.**

Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example FNS10. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example FNS10110. Qualification codes are developed as follows:

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are **not** used);
- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in ICPKN321A;
- the first three characters signify the Training Package - ICP10 - in the above example and up to eight characters, relating to an industry sector, function or skill area, follow;

- the last character is always a letter and identifies the unit of competency version. An "A" at the end of the code indicates that this is the original unit of competency. "B", or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and
- where changes are made that alter the outcome, a new code is assigned and the title is changed.

Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package Titles

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

Qualification Titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words "in" for Certificates I to IV, and "of" for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example Telecommunications; and
- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example:

- ICPCF105C Operate in-line mail machine

Unit of Competency Titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

- ICPCF105C Operate in-line mail machine

Historical and General Information

The ICP10 Printing and Graphic Arts Training Package covers all aspects of the printing and graphic arts industry from design through to the production of products in material or electronic form.

The ICP10 Printing and Graphic Arts Training Package contains 385 units of competency – 291 ICP specific and 94 imported units of competency and 34 qualifications. There are eight competency streams or groups:

- Support – SU
- Pre-press – PP
- Multimedia – MM
- Printing – PR
- Screen printing – SP
- Converting, binding and finishing – CF
- Ink manufacture – IM
- Knowledge – KN

In 2009 industry identified a need for broadly based training in Digital Technology to be included in ICP05. The Training Package was enhanced to:

- incorporate relevant digital units into the Certificate III in Printing and Graphic Arts (Printing) as elective units
- ICP20305 Certificate II in Printing and Graphic Arts (Instant Print) and ICP30405 Certificate III in Printing and Graphic Arts (Instant Print) were modified to include the relevant digital units. The qualifications were then re-coded and re-titled as (Digital Printing).

All other qualifications were updated to include environmental units and a range of additional elective units. The packaging rules were also changed to remove all ambiguities and create greater flexibility.

Introduction to the Industry

The printing and graphic arts industry is a major manufacturing industry in Australia and its products are used by every other industry sector. It is a critical, enabling industry supporting the operations of businesses and organisations across all industry sectors.

Of the estimated 6,900 enterprises in the printing and graphic arts industry approximately 6,000 (or 88%) of them are small businesses with fewer than 20 employees. The major sectors within the printing and graphic arts industry are:

- Printing
- Graphic media
- Converting, binding and finishing

- Sacks and bags
- Mail house
- Cartons and corrugations
- Ink manufacture.

In February 2010 approximately 53,000 people were employed in the printing and graphic arts industry, with the majority working full time. The median age of workers in 2009 was 42 years.

The printing industry is male-dominated with male workers making up 68.2% of the total workforce in the year to February 2009. The industry has a predominantly full-time workforce with 84.9% of workers employed full-time in the year to February 2009, well above the all-industry figure of 71.5%.

In 2010 attention was drawn to the ageing of the printing industry workforce due to the low number of new workforce entrants over recent years. This may well change with the technological changes occurring in the industry – it is likely that it will become more attractive to new and younger entrants.¹

The Australian Government report *Employment Outlook for Manufacturing*, produced by the Department of Education, Employment and Workplace Relations (DEEWR), 2010², includes information on the ‘Printing (including Recorded Media)’ workforce. It can be found at www.skillsinfo.gov.au.

Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*. The 2007 version of the *AQF Implementation Handbook* is expected to be available on the Australian Qualifications Framework Advisory Board (AQFAB) website www.aqf.edu.au during September 2007, and in print in October 2007 (obtain the hard copy by contacting AQFAB on phone 03 9639 1606 or email at aqfab@curriculum.edu.au).

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...
- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the *AQF Implementation Handbook* and the AQTF 2007 *Essential Standards for Registration*.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/course(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the AQTF 2007 *Essential Standards for Registration*.

Under the AQTF 2007, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

Certificate II

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;
- take limited responsibility for own outputs in work and learning.

Certificate III

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others.

Certificate IV

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters
- demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an abstract level.
- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
- Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

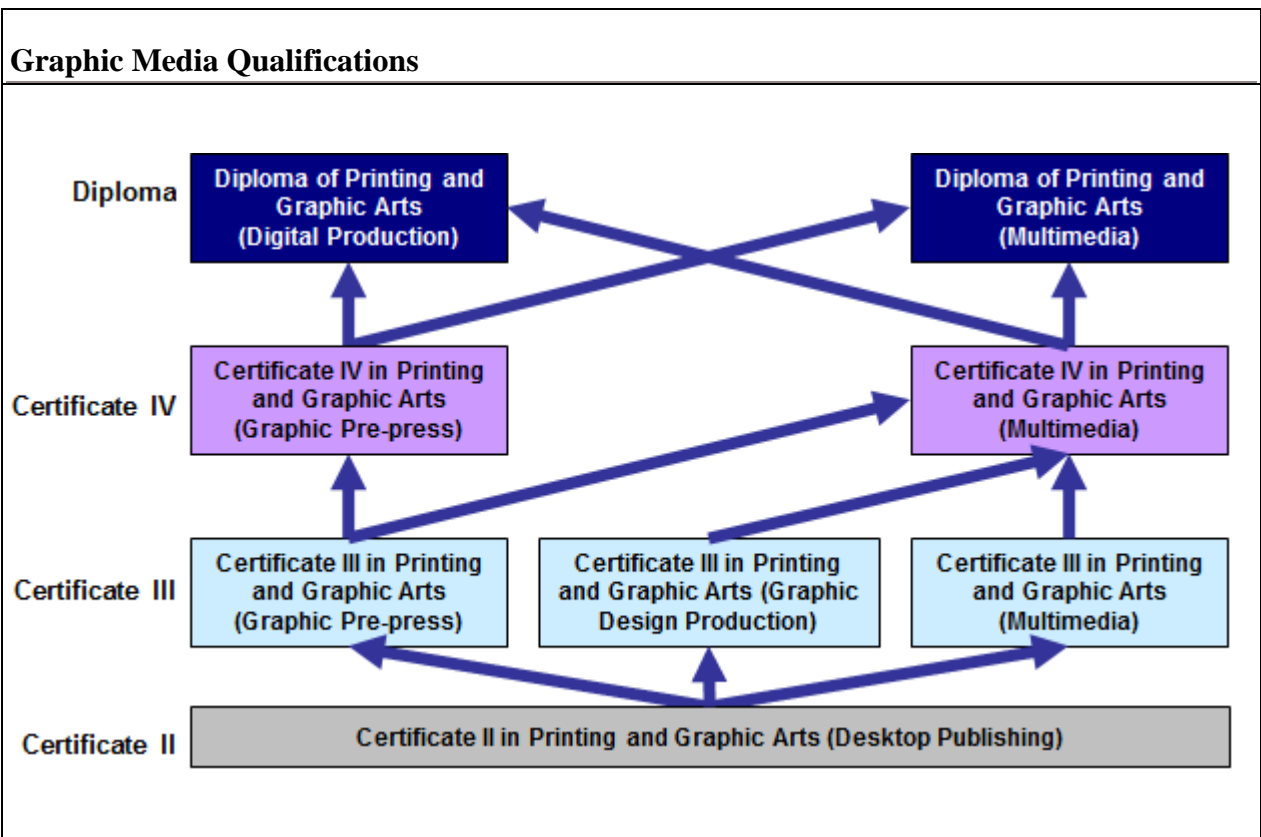

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

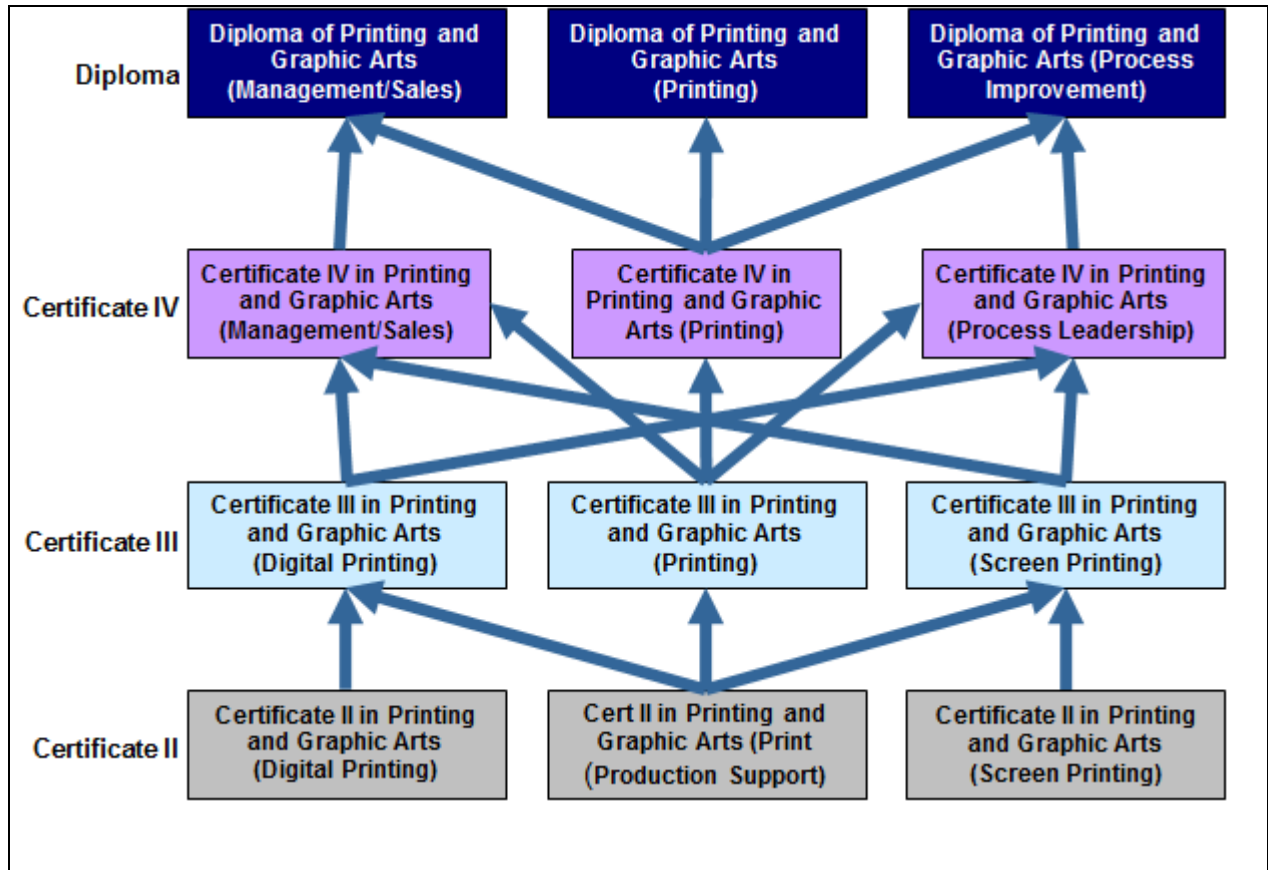

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.

Qualification Pathways

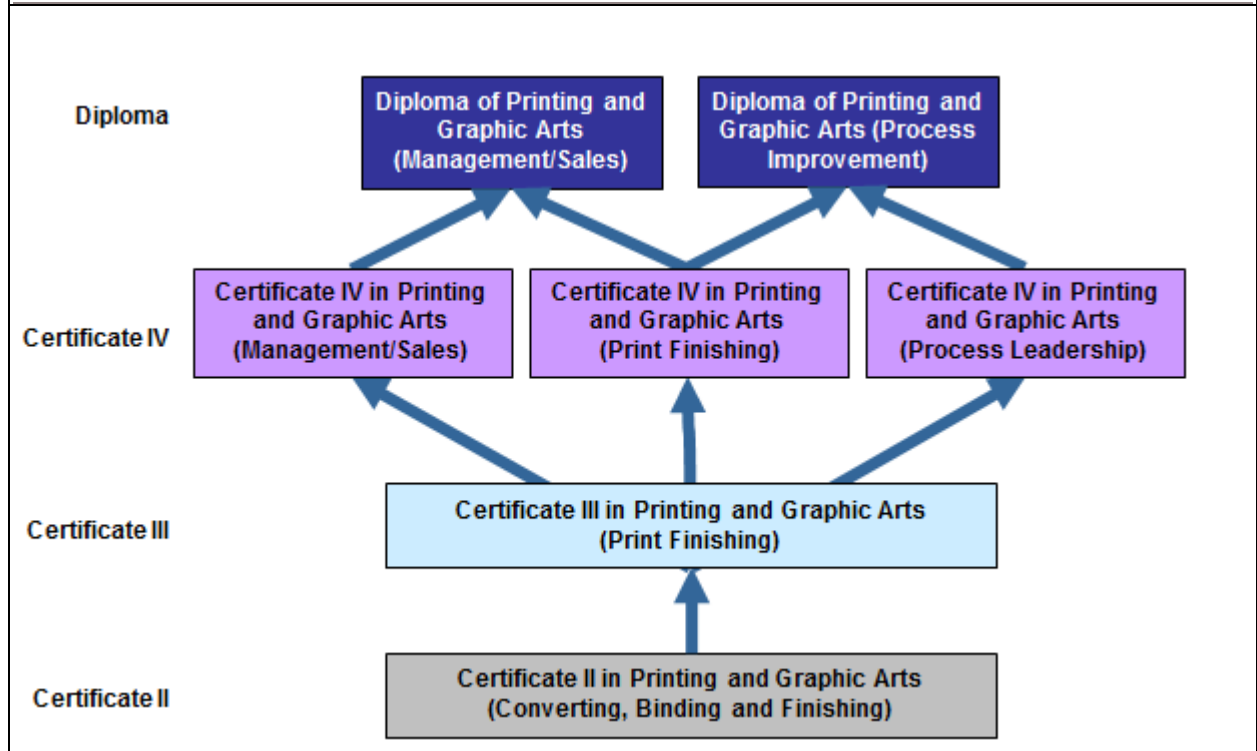

The following pathways charts are provided to show the types of pathways into and from qualifications that are possible with this Training Package. For more information about qualifications and pathways contact Innovation and Business Industry Skills Council (<http://www.ibsa.org.au>).

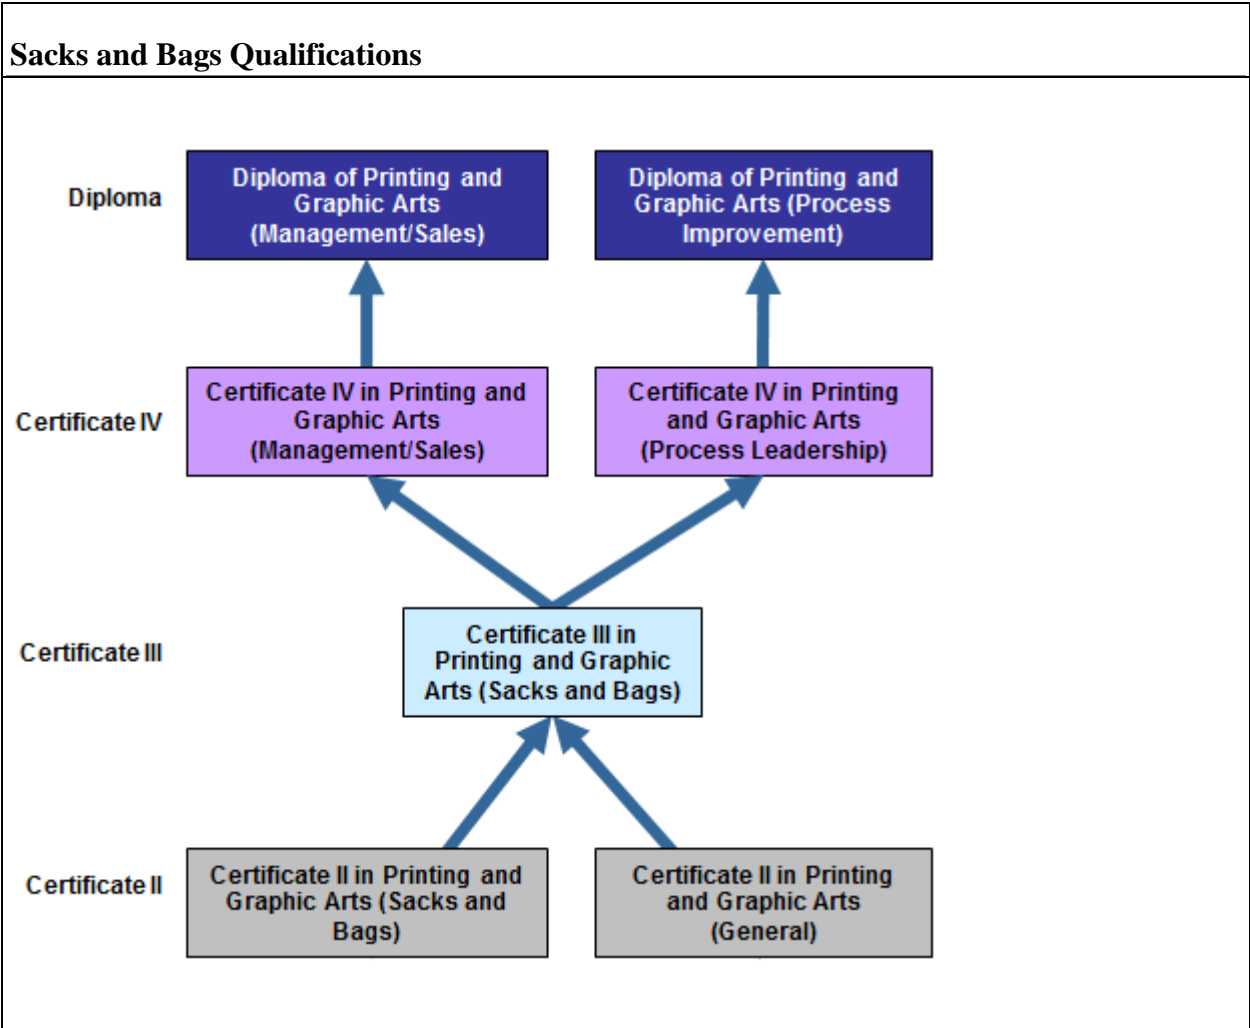

Printing Qualifications

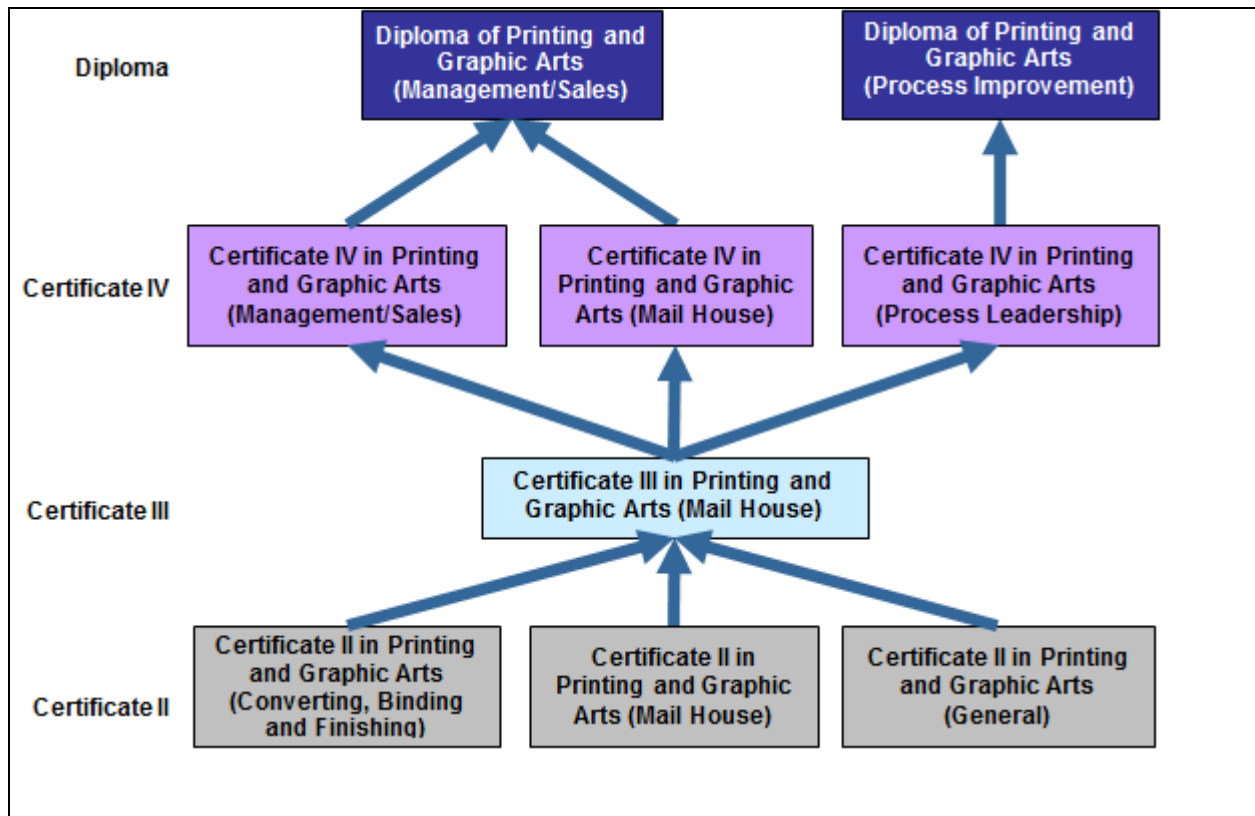

Converting, Binding and Finishing Qualifications

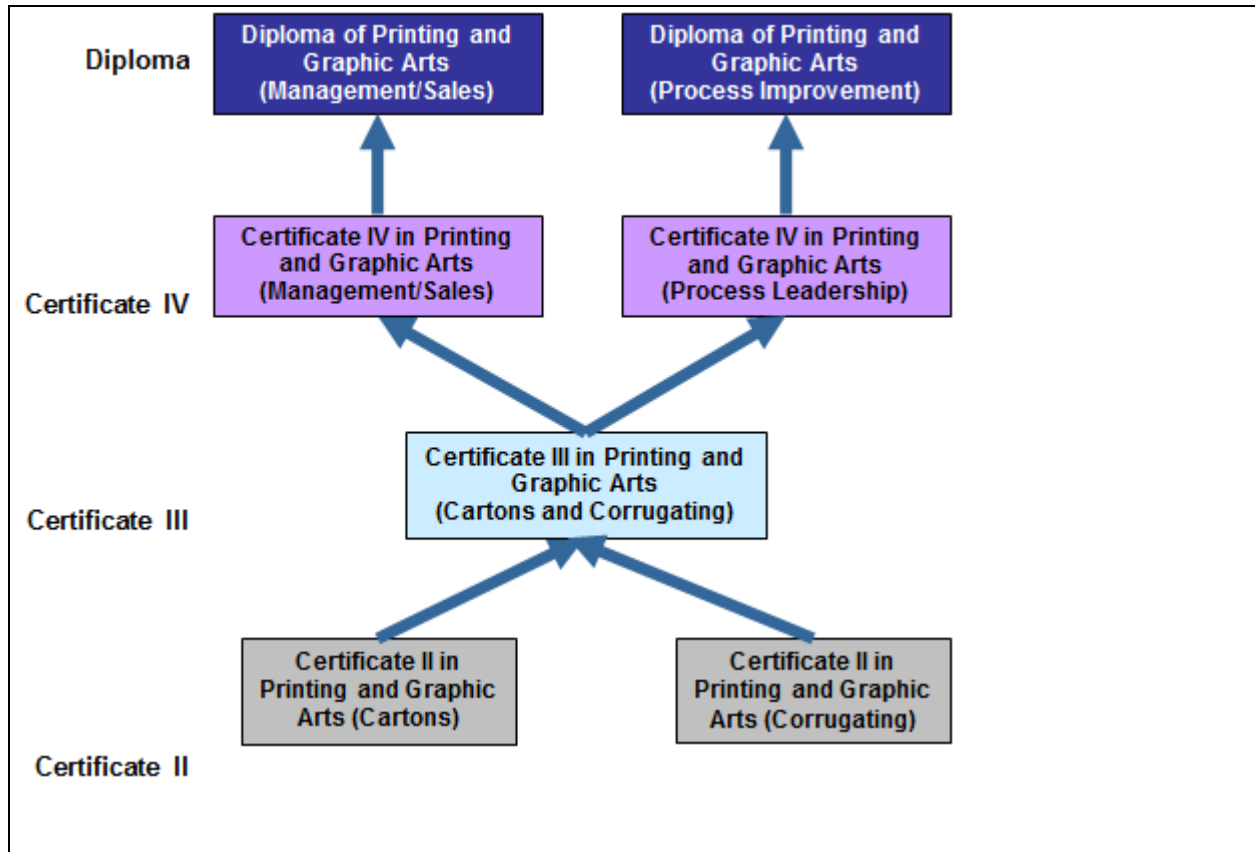

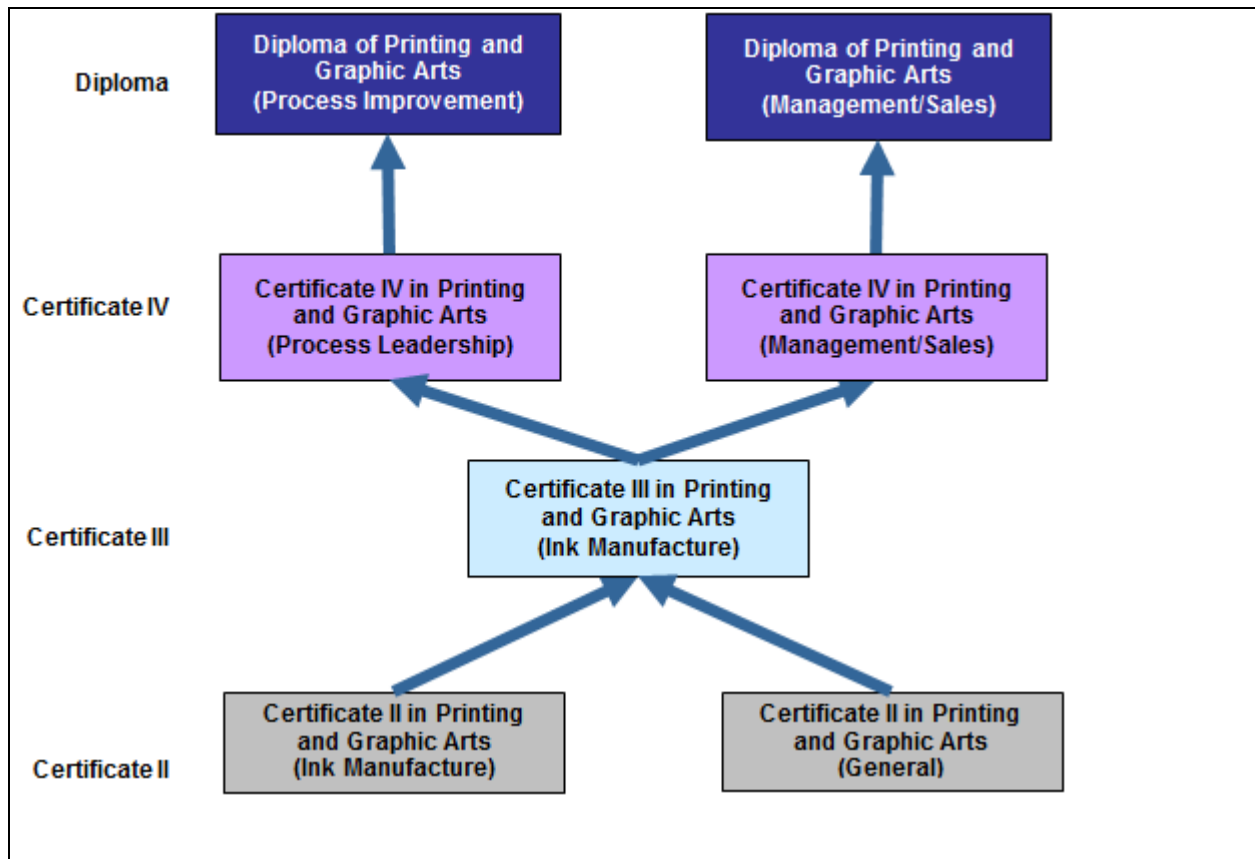

Mail House Qualifications

Cartons and Corrugating Qualifications

Ink Manufacture Qualifications

Skill Sets

Definition

Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

Wording on Statements of Attainment

Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications.

Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording "these competencies meet [insert skill set title or identified industry area] need" on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the 2007 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainment the updated version is expected to be available on the AQFAB website www.aqf.edu.au during September 2007 and in print in October 2007.

Skill Sets in this Training Package

Where this section is blank, nationally recognised skill sets have yet to be identified in this industry.

Employability Skills

Employability Skills replacing Key Competency information from 2006

In May 2005, the approach to incorporate Employability Skills within Training Package qualifications and units of competency was endorsed. As a result, from 2006 Employability Skills will progressively replace Key Competency information in Training Packages.

Background to Employability Skills

Employability Skills are also sometimes referred to as generic skills, capabilities or Key Competencies. The Employability Skills discussed here build on the Mayer Committee's Key Competencies, which were developed in 1992 and attempted to describe generic competencies for effective participation in work.

The Business Council of Australia (BCA) and the Australian Chamber of Commerce and Industry (ACCI), produced the *Employability Skills for the Future* report in 2002 in consultation with other peak employer bodies and with funding provided by the Department of Education, Science and Training (DEST) and the Australian National Training Authority (ANTA). Officially released by Dr Nelson (Minister for Education, Science and Training) on 23 May 2002, copies of the report are available from the DEST website at: http://www.dest.gov.au/archive/ty/publications/employability_skills/index.htm.

The report indicated that business and industry now require a broader range of skills than the Mayer Key Competencies Framework and featured an Employability Skills Framework identifying eight Employability Skills*:

- communication
- teamwork
- problem solving
- initiative and enterprise
- planning and organising
- self-management
- learning
- technology.

The report demonstrated how Employability Skills can be further described for particular occupational and industry contexts by sets of facets. The facets listed in the report are the aspects of the Employability Skills that the sample of employers surveyed identified as being important work skills. These facets were seen by employers as being dependent both in their nature and priority on an enterprise's business activity.

*Personal attributes that contribute to employability were also identified in the report but are not part of the Employability Skills Framework.

Employability Skills Framework

The following table contains the Employability Skills facets identified in the report *Employability Skills for the Future*.

Skill	Facets Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
Communication that contributes to productive	<ul style="list-style-type: none"> • listening and understanding • speaking clearly and directly
and harmonious relations across employees and customers	<ul style="list-style-type: none"> • writing to the needs of the audience • negotiating responsively • reading independently • empathising • using numeracy effectively • understanding the needs of internal and external customers • persuading effectively • establishing and using networks • being assertive • sharing information • speaking and writing in languages other than English
Teamwork that contributes to productive working relationships and outcomes	<ul style="list-style-type: none"> • working across different ages irrespective of gender, race, religion or political persuasion • working as an individual and as a member of a team • knowing how to define a role as part of the team • applying teamwork to a range of situations e.g. futures planning and crisis problem solving • identifying the strengths of team members • coaching and mentoring skills, including giving feedback
Problem solving that contributes to productive outcomes	<ul style="list-style-type: none"> • developing creative, innovative and practical solutions • showing independence and initiative in identifying and solving problems • solving problems in teams • applying a range of strategies to problem solving • using mathematics, including budgeting and financial management to solve problems

	<ul style="list-style-type: none"> • applying problem-solving strategies across a range of areas • testing assumptions, taking into account the context of data and circumstances • resolving customer concerns in relation to complex project issues
Initiative and enterprise that contribute to innovative outcomes	<ul style="list-style-type: none"> • adapting to new situations • developing a strategic, creative and long-term vision • being creative • identifying opportunities not obvious to others • translating ideas into action • generating a range of options • initiating innovative solutions
Planning and organising that contribute to long and short-term strategic planning	<ul style="list-style-type: none"> • managing time and priorities - setting time lines, coordinating tasks for self and with others • being resourceful • taking initiative and making decisions • adapting resource allocations to cope with contingencies • establishing clear project goals and deliverables • allocating people and other resources to tasks • planning the use of resources, including time management • participating in continuous improvement and planning processes • developing a vision and a proactive plan to accompany it • predicting - weighing up risk, evaluating alternatives and applying evaluation criteria • collecting, analysing and organising information • understanding basic business systems and their relationships
Self-management that contributes to employee satisfaction and growth	<ul style="list-style-type: none"> • having a personal vision and goals • evaluating and monitoring own performance • having knowledge and confidence in own ideas and visions • articulating own ideas and visions • taking responsibility

<p>Learning that contributes to ongoing improvement and expansion in employee and company operations and outcomes</p>	<ul style="list-style-type: none"> • managing own learning • contributing to the learning community at the workplace • using a range of mediums to learn - mentoring, peer support and networking, IT and courses • applying learning to technical issues (e.g. learning about products) and people issues (e.g. interpersonal and cultural aspects of work) • having enthusiasm for ongoing learning • being willing to learn in any setting - on and off the job • being open to new ideas and techniques • being prepared to invest time and effort in learning new skills • acknowledging the need to learn in order to accommodate change
<p>Technology that contributes to the effective carrying out of tasks</p>	<ul style="list-style-type: none"> • having a range of basic IT skills • applying IT as a management tool • using IT to organise data • being willing to learn new IT skills • having the OHS knowledge to apply technology • having the appropriate physical capacity

Employability Skills Summary

An Employability Skills Summary exists for each qualification. Summaries provide a lens through which to view Employability Skills at the qualification level and capture the key aspects or facets of the Employability Skills that are important to the job roles covered by the qualification. Summaries are designed to assist trainers and assessors to identify and include important industry application of Employability Skills in learning and assessment strategies.

The following is important information for trainers and assessors about Employability Skills Summaries.

- Employability Skills Summaries provide examples of how each skill is applicable to the job roles covered by the qualification.
- Employability Skills Summaries contain general information about industry context which is further explained as measurable outcomes of performance in the units of competency in each qualification.
- The detail in each Employability Skills Summary will vary depending on the range of job roles covered by the qualification in question.

- Employability Skills Summaries are not exhaustive lists of qualification requirements or checklists of performance (which are separate assessment tools that should be designed by trainers and assessors after analysis at the unit level).
- Employability Skills Summaries contain information that may also assist in building learners' understanding of industry and workplace expectations.

Industry requirements for Employability Skills

ICP10 Printing and Graphic Arts Training Package seeks to ensure that industry-endorsed employability skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability skills are both explicit and embedded within units of competency. This means that employability skills are:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Package users to identify accurately the performance requirements of each unit with regards to employability skills.

Examples from this Training Package of Employability Skills

Examples from this Training Package of Employability Skills embedded within unit components

Unit Component	Example of embedded Employability Skill
Unit Title	Set up and use complex colour management for production (technology)
Unit Descriptor	This unit describes the performance outcomes, skills and knowledge required to create profiles and finger-print presses to obtain the best match across colour devices (technology)
Element	Create and use digital device profiles (initiate and enterprise, technology, planning and organising)
Performance Criteria	Press is optimised to workplace standards in collaboration with the press operator (technology, communication, teamwork)
Range Statement	Software may include: <ul style="list-style-type: none"> • colour management software (e.g. Colorsync) • profile creating software • scanner profiling software (e.g. Colortone Pro, Scan Open) • densitometry and spectrophotometry software (technology)
Required Skills and Knowledge	<ul style="list-style-type: none"> • skills needed to communicate ideas and information by printing a test chart on a press • skills needed in collecting, analysing and organising information to determine printing conditions and colour management requirements • planning and organising skills needed to clarify colour requirements before generating a proof • teamwork skills for maintaining the production process in association with others and working independently with responsibility for others • numeracy skills used in relation to densitometry, spectrophotometry and colour profiles • problem-solving skills used in diagnosing and correcting colour problems • skills needed for utilising software and hardware correctly when creating a profile (technology, communication, teamwork, problem solving, self management, planning and organising)

Unit Component	Example of embedded Employability Skill
Evidence Guide	Evidence of the ability to: <ul style="list-style-type: none"> • create custom device profiles in a digital production workflow to enhance the match across proofs, monitors and final products (planning and organising, technology, problem solving) • find and use information relevant to the task from a variety of information sources (self-management, technology)

Qualifications

The industry coverage in ICP10 includes printing, graphic media, converting binding and finishing, sacks and bags, mail house, cartons and corrugating and ink manufacture. However, all qualifications have been expanded to include environmental sustainability as a core component. The Certificate III in Printing and Graphic Arts (Printing) includes a range of units of competency for digital printing, including wide format, high speed document production, variable data and colour management.

All qualifications must lead to a work outcome. The flexibility of ICP10 Printing and Graphic Arts Training Package qualifications allows RTOs to vary programs to meet:

- the specific needs of learners and industry clients
- the needs of a locality or a particular industry application of skills.

Competency Standards - Industry Contextualisation

A range of units of competency have been imported into the Printing and Graphic Arts Training Package to provide greater flexibility, choice and transferability of skills within the printing and graphic arts industry and across other industries.

RTOs may contextualise units of competency imported from other Training Packages to reflect outcomes relevant to the printing and graphic arts industry.

For example, when using BSBSUS301A Implement and monitor environmentally sustainable work practices, RTOs should include relevant industry specific examples of environmentally sustainable work practices employed in the industry or industry sector. All legislative and occupational health and safety (OHS) guidelines should also be specific to the printing and graphic arts industry.

Assessment Guidelines

Licensing/Registration Requirements

This section provides information on licensing/registration requirements for ICP10 Printing and Graphic Arts Training Package, with the following important disclaimer.

The developers of this Training Package, and DEEWR, consider that no licensing or registration requirements apply to registered training organisations (RTOs), assessors or candidates with respect to this Training Package. Contact the relevant state or territory department(s) to check if there are any licensing or registration requirements with which you must comply. For further information on this topic contact IBSA at www.ibsa.org.au.

Requirements for Assessors

Requirements for Candidates

Requirements for RTOs

Assessment in a simulated environment

Units of competency in the ICP10 Printing and Graphic Arts Training Package may be assessed in the workplace or in a simulated environment.

The overarching principle to be applied to units suitable for simulation is that simulated environments should only be used in cases where:

- the safety of the candidate and other is at high risk
- there is limited opportunity to present evidence of work-based practice and so waiting for such evidence would either be unreasonable, create unfair delay in the assessment process, or risk de-motivating the candidate
- assessment could result in a breach of confidentiality or privacy.

Under normal circumstances, evidence from a simulated environment should not be the primary source of a candidate's competence. Fully institutionalised training with a work

placement component should satisfy the conditions stipulated below.

Evidence must result from simulated activities that have taken place in a realistic work environment which replicates the conditions and circumstances in which the candidate will usually be expected to work and meets the following:

- work conditions should reflect those found in the workplace and include facilities, equipment and materials used in the workplace for the activities being assessed. Most importantly, they should also reflect the relationships, constraints and pressures of the workplace
- the activity which the candidate must demonstrate in order to be assessed as competent must be realistic and reasonable in terms of scale
- any assessment conducted under simulated conditions must take into consideration what would be typical ambient conditions encountered in the normal workplace as well as reflect the typical workflow involved
- information available to the candidate on the nature of the activity must be consistent with workplace policies and practices.

Workplace supervisors

Instructions for workplace supervisors involved in preparing candidates for on-the-job assessment are available on the IBSA website:

<http://www.ibsa.org.au/training-packages/by-industry/printing-and-graphic-arts/assessment-and-rpl-tools-for-icp05.aspx>

Training and assessment issues for schools

Implementation of ICP10 Printing and Graphic Arts Training Package within the school sector, while encouraged, needs to ensure the following:

- currency of skills and knowledge of those charged with training and assessing students
- access to industry-current equipment, facilities and training resources so that students acquire a realistic view of the realities and conditions within the workplace
- comprehensive coverage of underpinning skills and knowledge as delineated within the units of competency
- appropriateness of learning and assessment experiences to ensure that these are current and realistic.

It is recommended that delivery of qualifications in schools should only include Certificates I and II. The following two qualifications are recommended as most suitable for VET in schools programs:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP20210 Certificate II in Printing and Graphic Arts (Desktop Publishing).

For more information on VET in Schools, please refer to Appendix A.

Industry Assessment Contextualisation 1

Training and assessment for people with specific needs

Disability Standards for Education were formed under the Disability Discrimination Act 1992 and were introduced in August 2005. They clarify the obligations of education and training providers to ensure that students who have a disability are able to access and participate in education without experiencing discrimination.

The Department of Education, Employment and Workplace Relations (DEEWR) provides further information in the *Disability Standards for Education 2005 Guidance Notes*, accessible via the DEEWR website (www.deewr.gov.au/Schooling/DisabilityStandardsforEducation/Documents/Disability_Standards_Education_Guidance_Notes_pdf.pdf).

Good vocational training and assessment are often about making adjustments to what we do to meet the learning support needs of individuals. The information provided in this section is aimed at assisting teachers/trainers to meet the reasonable adjustment needs of people who have a disability.

What is a disability?

A disability presents some impairment to everyday activity. Some people with a disability do not have any impairments resulting from their disability. For example, a person who has a hearing impairment which is compensated for by a hearing aid may function without any adjustments. While some people with a disability may have an impairment because of the environment, not the disability itself. For example, hearing loss can be accentuated in a room with loud, competing noise and poor acoustics.

A disability may affect or relate to a range of human functions, including mobility, stamina, lifting ability, memory, vision, hearing, speech, comprehension and mood swings. This may be due to accidents, illnesses or birth.

Health conditions can also be acquired through sporting accidents, repetitive or over-use (through regular or sporting activities), or the daily activities of life.

There are many resources available that provide information on how to adjust training and assessment for someone who has a disability; some of these are listed in the contacts section below.

Adjustments in training and assessment

An open mind, common sense and tailoring to individual circumstances will, as often as not, ensure individuals achieve the standards that employers and training providers expect. Reasonable adjustments need only be that – reasonable. It is about identifying what adjustments might reasonably be made and how they may be put into place.

Training and assessment can be made more appropriate and fairer for a person who has a disability through attitude, preparation and application.

Attitude

The attitude of others is often the greatest barrier for people who have a disability. While most people who have a disability will only ever require minor adjustments to ensure learning is positive, some will require additional support. There are many support agencies that can provide advice, however teachers/trainers may need to take additional time to ensure their teaching/training meets the learning support needs of the individual concerned.

Positive language creates an atmosphere of mutual respect, which is essential to learning. For example, using language that identifies learners as people rather than language that identifies them by one of their characteristics conveys that the person is more important than the characteristic, such as the difference between a ‘person who has an intellectual disability’ and an ‘intellectually disabled person’. A person who has an intellectual disability could also be identified by a range of equally important characteristics – height, age, sporting interests, etc. However, the term ‘intellectually disabled person’ refers to the disability as the major, and often only, defining characteristic.

Preparation

It is important to identify any functional issues arising from the nature and extent of a person's disability. This can usually be done by discussing such issues with the individual. In most cases, this consultation will identify reasonable adjustment needs which can be put into place. There are many simple things that teachers/trainers can do to make reasonable adjustments to enable individuals who have a disability to succeed in training and assessment. In some cases, professional support may be required.

Application

Once reasonable adjustments have been implemented it is important to monitor and evaluate what has been done to ensure the best environment for continuous learning because:

- adjustments may only need to be temporary – i.e. mechanisms may only need to be in place during an induction period or due to a temporary disability, in which case evaluation will ensure appropriateness without the need for ongoing monitoring
- adjustments may need reinforcing – when adjustments need to be ongoing, monitoring may reinforce patterns of behaviour in order for them to become 'natural'
- adjustments may need improving – where adjustments are ongoing or substantial, a commitment to continuous improvement is recommended through monitoring.

In most cases an informal discussion with the person concerned may be all that is necessary. However, should adjustments be substantial, or a learner not be acquiring competence at a reasonable rate, a more formal process may be required. This may include:

- performance indicators – training providers, learners and employers should have agreed indicators of performance which can be measured and monitored
- independent support – a third party, independent of the training and/or assessment environment, may need to be involved
- experimentation – if existing adjustments are not proving satisfactory, creative solutions may be needed
- continuing review – formal monitoring is encouraged if adjustments are changed or if substantial adjustments are necessary.

For further information on training and assessment for people with specific needs, the DEEWR website has information about the National Disability Coordination Officer

Programme, which ‘provides information, coordination and referral services for people with a disability interested in or enrolled in post-school education and training’ (www.deewr.gov.au).

Reasonable adjustment

Below are some of the practical things that can be done as part of providing reasonable adjustment to learners with specific support needs to enable them to undertake training and assessment. Clearly, each case will be different and will need to be discussed with the person and in some cases expert help will be needed, at least in the initial stages.

Industry Assessment Contextualisation 2

Assessment for Indigenous organisations

Aboriginal and Torres Strait Islander people have expressed concern about the importance of developing appropriate assessment processes.

There are four main areas of concern:

- diversity
- cultural appropriateness
- community control
- accreditation.

Diversity

The term diversity is used to emphasise the wide range of opinions, aspirations, community circumstances, cultural practices, geographic locations, and social, economic and political conditions that exist throughout Australia and the need to guard against assumptions that all communities are the same.

One approach is to distinguish between remote, rural and urban settings. These settings suggest differences that may be relevant to Aboriginal and Torres Strait Islander organisations, including:

- culture

- language
- history
- social make-up
- geography
- social and economic infrastructure
- economy
- political structure.

These factors suggest that training and assessment, in order to be relevant to the needs of a particular Aboriginal and Torres Strait Islander organisation, should address each situation as unique.

Cultural appropriateness

The term culture is used in a broad sense, it refers to:

- values, social beliefs and customs, such as Aboriginal and Torres Strait Islander law, land, and family and kinship systems
- protocols of behaviour and interaction e.g. cultural authority, gender and kinship
- ways of thinking, including preferred learning styles
- language, both English and Aboriginal English
- lifestyles
- local history
- location, including region and place.

A particularly important aspect of cultural appropriateness is that of learning styles. There is evidence that Aboriginal and Torres Strait Islander people, both traditional and contemporary, approach learning differently from the Western intellectual tradition, which is relevant to effective training and assessment.

It is understood that Aboriginal and Torres Strait Islander people may:

- learn better in groups than individually
- learn better in the surroundings of their community than in an institutional environment
- prefer oral communications to written forms
- learn on the basis of trial and error in the presence of an experienced person in preference to concept building approaches
- have a highly-developed sense of spatial relations by which they learn; hence stories, maps and pictures would be preferable to oral explanations.

To be effective, it is necessary that training and assessment recognises, adopts and practises appropriate delivery and assessment approaches.

Trainers and assessors who are not Aboriginal or Torres Strait Islanders need information on aspects of Aboriginal and Torres Strait Islander culture. They need to work closely with Aboriginal and Torres Strait Islander people to adopt practices that reflect Aboriginal and Torres Strait Islander approaches. The community should be asked to identify experts to provide information and to assist with assessment of relevant protocols, for example, where required.

There are a number of ways an RTO can establish and maintain culturally appropriate training and assessment practices, including:

- ensuring a high proportion of Aboriginal and Torres Strait Islander participation in all aspects of planning, development, delivery and evaluation
- establishing and maintaining a collaborative relationship with local Aboriginal and Torres Strait Islander communities
- as a mainstream (non-Indigenous) RTO, establishing auspice relationships with Aboriginal and Torres Strait Islander organisations and individuals, including direct and indirect involvement of persons identified as appropriate by the local community
- ensuring ongoing training of non-Aboriginal and Torres Strait Islander staff at all levels of the RTO, delivered by Aboriginal and Torres Strait Islander personnel.

Community control

The term community control is synonymous with such things as self-determination and self-management, and underpins most community aspirations. It is of fundamental concern to people who see themselves as having been dispossessed by colonisation.

The essence of control is control of decision-making. In order to be able to do this, people need all relevant information, relevant competencies, and recognition of their own structures and processes.

Among other things, Aboriginal and Torres Strait Islander people seek control over their training. It is necessary, therefore, that they participate in meaningful ways in all stages of planning, development, delivery and evaluation. One way to achieve this is for communities to have control of the contract for training initiatives.

It is important that training providers and assessors respect and conform to the practice of community control which underpins this field within the ICP10 Printing and Graphic Arts Training Package.

Accreditation

Aboriginal and Torres Strait Islander people have said for a long time that their involvement in training has not been formally recognised and that many of the skills they use in managing their organisations and delivering services to their communities have not been valued.

The first issue may have arisen because much of the training that has been delivered to communities has been customised to particular situations, has not been assessed on an individual basis if at all, and has been delivered by unregistered personnel. Secondly, until this time, recognition of current competencies (RCC) has been under-utilised.

Individuals may demonstrate competence in complete units of competency through formal training, informal training or the recognition of current competencies and skills, resulting in qualifications or statements of attainment being awarded.

In the community group setting, an important feature of likely relevance for assessment is that participants may vary with respect to previous education and training experience, which may result in diverse literacy and numeracy issues. However, literacy and numeracy skills are not a barrier to sophisticated thought, and care must be taken not to use assessment strategies that rely on a person having numeracy and literacy skills that are not intrinsically required by the unit of competency being assessed.

A flexible approach to assessment will be required by RTOs in order to meet the requirements of Aboriginal and Torres Strait Islander organisations and individuals under this domain within the ICP10 Printing and Graphic Arts Training Package.

Assessment in Aboriginal and Torres Strait Islander communities

The guiding principles that underpin assessment include:

- assessment should be transparent, i.e. clearly seen and understood by the candidate and others
- assessment should empower the candidate on the basis of consent, self-assessment and responsibility for the process
- members or prospective members of community management committees should

have opportunities to demonstrate their competencies and skills

- activities undertaken by the candidate in a community management role may be used as the context for assessment where possible (known as on-the-job assessment or workplace assessment); there may also be opportunities to include evidence from other relevant situations
- assessment should involve designated community experts working in collaboration with RTO assessors in order to provide appropriate recognition of cultural and community skills and knowledge
- assessments must provide constructive feedback to candidates and support for further competency development
- assessments must provide a statement of attainment or qualification, listing the units of competency achieved
- records of candidate achievement maintained by the RTO must include the statement of attainment, listing the units of competency or qualifications achieved as required by the AQTF 2007
- a record of demonstrated competencies will assist in role clarification and performance appraisals in the workplace.

Given the importance of the assessment to the candidate and community management committees, the assessor must make every effort to ensure that assessment is conducted with the highest level of professionalism and integrity.

Units of competency with cultural content, including the following of local protocols, will require the assessor to have knowledge of these cultural matters. As these matters are often governed by local rules regarding access to such knowledge, only those people with the knowledge can genuinely assess these aspects of the competency or provide guidance on their assessment.

Discussion must take place with the community and agreement must be reached on how these matters are assessed. For non-Aboriginal and Torres Strait Islander RTOs, this will usually mean the use of auspice arrangements with appropriate people or knowledge experts, identified by the community.

It should be noted that for Aboriginal and Torres Strait Islander people being assessed in aspects of competency, they will almost invariably have been attained through life experience. This must also be taken into account in the assessment procedures relating to cultural matters.

Assessors may exercise limited discretion in response to organisational or individual requirements, but any changes must not alter the meaning of the unit of competency or the elements of competency.

Candidates must be informed of the right to access grievance procedures.

Employability Skills in the industry context

ICP10 Printing and Graphic Arts Training Package seeks to ensure that industry-endorsed employability skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability skills are both explicit and embedded within units of competency. This means that employability skills are:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Package users to identify accurately the performance requirements of each unit with regard to employability skills.

Contacts

This section provides a list of useful contacts and resources to assist trainers and assessors in planning, designing, conducting and reviewing their programs for this Training Package.

General resources

Refer to <http://antapubs.dest.gov.au/publications/search.asp> to locate the following publications.

AQF Implementation Handbook, third edition. Australian Qualifications Framework Advisory Board, 2002, www.aqf.edu.au.

Australian Quality Training Framework 2007 (AQTF 2007) - for information and resources go to www.training.com.au/aqtf2007.

AQTF 2007 Essential Standards for Registration. Training organisations must meet these standards in order to deliver and assess nationally recognised training and issue nationally recognised qualifications. They include three standards, a requirement for registered training organisations to gather information on their performance against three quality indicators, and nine conditions of registration.

AQTF 2007 User's Guide to the Essential Standards for Registration. A Users' Guide

for training organisations who must meet these standards in order to deliver and assess nationally recognised training and issue nationally recognised qualifications.

AQTF 2007 Standards for Accredited Courses. State and territory accrediting bodies are responsible for accrediting courses. This standard provides a national operating framework and template for the accreditation of courses.

TAA04 Training and Assessment Training Package. This is available from Innovation and Business Skills Australia (IBSA), the Innovation and Business Industry Skills Council, and can be viewed and components downloaded, from the National Training Information Service (NTIS).

National Training Information Service, an electronic database providing comprehensive information about RTOs, Training Packages and accredited courses (www.ntis.gov.au).

Training Package Development Handbook (DEST, August 2007). Can be downloaded from www.deewr.gov.au.

Assessment resources

Training Package Assessment Guides – a range of resources to assist RTOs in developing Training Package assessment materials (originally developed by ANTA with funding from the Department of Education, Training and Youth Affairs) and made up of 10 separate titles, as described at the publications page of www.deewr.gov.au. Go to www.resourcegenerator.gov.au.

Printed and/or CD versions of the guides can be purchased from Technical and Vocational Education and Training (TVET) Australia Limited. The resource includes the following guides:

- Training Package Assessment Materials Kit
- Assessing Competencies in Higher Qualifications
- Recognition Resource
- Kit to Support Assessor Training
- Candidates Kit: Guide to Assessment in New Apprenticeships
- Assessment Approaches for Small Workplaces
- Assessment Using Partnership Arrangements
- Strategies for ensuring Consistency in Assessment
- Networking for Assessors

- Quality Assurance Guide for Assessment.

An additional guide 'Delivery and Assessment Strategies' has been developed to complement these resources.

Appendices

Appendices

Appendix A: VET in Schools

What is VET in schools?

Vocational education and training in schools (VETiS) provides for nationally recognised vocational education and training undertaken as part of a senior secondary certificate and based on industry standards.

Successful completion of a VETiS program enables students to gain a nationally-recognised Australian Qualifications Framework (AQF) qualification, usually at the same time as their school-based qualification.

How are VET in schools programs structured?

VETiS programs are packaged and delivered in a variety of ways across Australia. There are three main types of delivery arrangements for VETiS programs:

- schools can be a registered training organisation (RTO) in their own right
- school sectoral bodies (such as Boards of Studies or regional offices) can hold RTO status on behalf of a group of schools
- schools can work together in a partnership with an RTO.

Appropriate qualifications for VET in schools

IBSA encourages links between schools, businesses and the community, and strongly supports young people combining schooling with VET and workplace learning.

It is essential that all VET qualifications gained through a VETiS program are consistent with the outcomes detailed in the Training Package.

The following two qualifications are recommended as most suitable for VETiS programs:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP20210 Certificate II in Printing and Graphic Arts (Desktop Publishing).

The AQTF 2007 Standards for Registered Training Organisations set out minimum competency standards for staff responsible for the delivery of training and the conducting of assessments; and they ensure that VET specialists have skills and competencies consistent with Training Package requirements. All schools using their own teachers for VET delivery must also be aware of the AQTF 2007 requirement for assessors to hold relevant vocational competencies, at least equal to that being delivered and assessed, in addition to teaching and assessment competence.

Schools are encouraged to establish partnerships with industry and effective work placement arrangements to maximise the quality of outcomes for students and industry alike. Recognition of competence gained through voluntary, part-time or vacation work not directly related to the industry focus of the qualification should also be considered.

Work placement

Work placement usually involves students spending an extended period of time in a workplace gaining experience and skills, and undergoing an assessment process related to the attainment of a qualification in a specific occupational field.

An essential feature of school-industry programs is that they involve students spending some time learning in a workplace. In recent years an increasing number of effective structured workplace learning programs have made significant progress towards greater workplace integrity for those industry training programs that are delivered predominantly off-the-job. The implementation of Training Packages means that structured workplace learning must be a consideration for all RTOs, not only schools, in the delivery of training programs.

Principles for quality workplace learning

The Ministerial Council on Education, Employment, Training and Youth Affairs (MCEETYA) endorsed the Principles for Quality Workplace Learning for school students engaged in VET programs throughout Australia. All states and territories apply the principles to their work placement programs, although the nature and extent of work placement programs vary across states and territories.

The broad MCEETYA principles are documented below.

Quality workplace learning is integrated into a program

- it operates within a framework which provides the opportunity for all students to access it, though not all students may choose to do so; and
- it operates within the context of vocational courses, which are recognised by industry, are responsive to industry needs and forms part of a student's exit credential.

Quality workplace learning is structured

- it has a clearly articulated and documented purpose;
- there are clearly identified and documented learning outcomes for students within accredited programs, which are linked to post-school qualifications;
- they are of sufficient duration and depth to enable students to acquire a reasonable understanding of the enterprise/industry to demonstrate competence according to industry standards of at least level 1 of the AQF;
- there is a matching between the students' skills and interests and the work placements; and
- students, teachers and employers are thoroughly prepared beforehand so that the expectations and outcomes of the work placement are clearly understood by all parties.

Quality workplace learning is monitored

- the learning is coordinated by personnel with appropriate expertise and adequate resources; and
- support should be made available to students and employers throughout the course of the work placement.

Quality workplace learning is regulated

There are clearly stated procedures designed to ensure that:

- students are protected from moral and physical danger;
- students work in a non-discriminatory and harassment-free environment;
- students receive appropriate training and instruction in occupational health and safety;
- students are not exploited by being continuously engaged in a production or service capacity or used to substitute for the employment of employees and payment of appropriate wages; and

- students are required to understand the roles and responsibilities of employees in the workplace and are expected to follow the directions of the workplace supervisors and other employees.

Quality workplace learning is assessed

- the assessment, according to industry standards, is of students' competencies achieved in the workplace which contributes to the overall assessment of the program; and
- there are mechanisms for the recording and reporting of students' competencies.

There is a strong correlation between these MCEETYA quality principles and the OECD characteristics of high quality learning programs detailed below.

The major 14-country study entitled **From Initial Education to Working Life: Making Transitions Work** by the OECD identified 10 characteristics of high quality workplace learning programs. These are:

- Work placements that are long enough for real learning to take place
- Systematic analysis of the training capacity of the workplace, to see what it can realistically supply
- A formal training plan, setting out what has to be taught and learned, and clarifying the work-based and school-based parts of a student's program
- Employer involvement in student selection for work placements
- The presence of a trained program coordinator, able to liaise between the school and the firm and troubleshoot when problems occur
- The use of qualified, highly competent workers as workplace trainers or mentors
- Regular face-to-face contact between the coordinators and employers and in-firm supervisors
- Monitoring of the students on the job by the program coordinator
- The evaluation of student performance against the training plan at the end of the placement, with the evaluation carried out by the job supervisor and coordinator jointly
- Deliberate efforts by schools to relate what has been learned at work to students' school-based learning

Effective work placement is characterised by:

- activities that complement off-the-job learning programs
- clearly articulated and documented purpose

- development of appropriate attitudes towards work
- development of competence in designated industry skills and employability skills
- facility for on-the-job practice of skills acquired in a classroom
- flexibility
- learning in a range of behaviours appropriate to the relevant industry
- opportunities for work-based assessment
- regular and frequent use of current technology and equipment
- relevance to the VET qualification being undertaken
- recognition of student readiness
- support of industry partners.

Beyond the above, a number of other provisions are necessary for a successful work placement program. The credibility of work placements and any resultant recognition of competence requires a degree of 'seriousness' if the outcomes are to be valued by individuals and industry clients of the VET system.

It is suggested that stakeholders involved in the planning and management of work placements carefully consider and implement the following general principles:

- That the RTO assume responsibility for finding placements and validating the arrangements
- That the workplace has the appropriate resources, tools and staff to conduct the placement, with compliance with any legislative requirements
- That there be regular validation by the RTO that the student and assessor, where relevant, are operating according to RTO AQTF 2007 standards
- That a student on work placement must be covered by injury insurance
- That there is a formal contract setting out each party's responsibilities and obligations
- That, where possible, the workplace has on site a qualified workplace trainer and assessor in 'direct line' control of the student (to avoid training and assessment by 'proxy')
- That if the placement is for assessment only then there must be clearly documented assessment tasks specifically related to the unit being assessed and evidence retained to support achievement of competence (for both best practice recording purposes and audit/appeal)
- That if the placement also includes training, then any 'academic pass' cannot be bestowed prior to the placement as clearly all of the learning components have not been undertaken nor can they be assessed in advance if they have not been learned
- That the training be directly related to achievement of competence while recognising the likely acquisition of other skills and knowledge
- That where assessment occurs it be clearly related to a unit of competency relevant to the work placement
- That where more than one performance criterion (possibly over more than one unit)

is being assessed there must be a clearly linked and documented relationship between the assessment and the performance criterion

- That the qualifications level be appropriate in context, i.e. if it is advanced programming there must be an advanced programming task observed and assessed
- That the actual variables of the performance criterion be documented for audit purposes and for verification of appropriateness of the range of activities in the work placement

In some state and territory school systems, part-time student work in an appropriate workplace may be used to fulfil work placement requirements and virtual or simulated work placements may also be legitimate.

Appendices

Appendix B: Australian Apprenticeships

All qualifications within ICP10 Printing and Graphic Arts Training Package can be achieved by a variety of pathways and delivery methods – either on-the-job or through a combination of on- and off-the-job training and recognition processes.

Qualifications at AQF levels II to IV particularly facilitate Australian Apprenticeship pathways. Industry recommends that the following qualifications are achieved through contracted training as Apprenticeships:

- ICP30210 Certificate III in Printing and Graphic Arts (Graphic Pre-press)
- ICP30510 Certificate III in Printing and Graphic Arts (Printing)
- ICP30610 Certificate III in Printing and Graphic Arts (Screen Printing)
- ICP30710 Certificate III in Printing and Graphic Arts (Print Finishing).

ICP20110 Certificate II in Printing and Graphic Arts (General)

Modification History

Release	Comments
Release 2	This version released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i> . Imported elective units updated with the most current equivalent.
Release 1	This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i> .

Description

This qualification applies to individuals who perform a range of mainly routine tasks in the printing and graphic arts industry. They work under direct supervision, and use limited practical skills and fundamental operational knowledge in a defined context. It is a preparatory qualification that can be used as a pathway into a range of specialist Certificate III qualifications within the printing and graphic arts industry.

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

At the completion of this qualification candidates could choose to enter:

- ICP30112 Certificate III in Printing and Graphic Arts (Graphic Design Production)
- ICP30212 Certificate III in Printing and Graphic Arts (Graphic Pre-press)
- ICP30312 Certificate III in Printing and Graphic Arts (Multimedia)
- ICP30412 Certificate III in Printing and Graphic Arts (Digital Printing)
- ICP30512 Certificate III in Printing and Graphic Arts (Printing)
- ICP30612 Certificate III in Printing and Graphic Arts (Screen Printing)
- ICP30712 Certificate III in Printing and Graphic Arts (Print Finishing)
- ICP30812 Certificate III in Printing and Graphic Arts (Sacks and Bags)
- ICP30912 Certificate III in Printing and Graphic Arts (Cartons and Corrugating)
- ICP31012 Certificate III in Printing and Graphic Arts (Mail House)

- ICP31112 Certificate III in Printing and Graphic Arts (Ink Manufacture).
-

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • completing production records accurately • reporting problems and machine faults to supervisors
Teamwork	<ul style="list-style-type: none"> • operating production processes with fellow workers and communicating with workers involved in prior and subsequent processes
Problem solving	<ul style="list-style-type: none"> • conducting a sample run of a folding machine, inspecting the product and adjusting the machine to meet production requirements
Initiative and enterprise	<ul style="list-style-type: none"> • anticipating production difficulties and taking preventative action • contributing to occupational health and safety (OHS) management and raising issues with designated personnel
Planning and organising	<ul style="list-style-type: none"> • collating details of job and machine specifications and printing processes to ensure efficient production
Self-management	<ul style="list-style-type: none"> • following procedures and using personal protective equipment correctly
Learning	<ul style="list-style-type: none"> • giving and following simple routine instructions
Technology	<ul style="list-style-type: none"> • operating machines, such as folders and lithographic printers • using computerised control, monitoring and data entry systems • using information technology, such as computer hardware and software to access data from files

Packaging Rules

Total number of units = 15 units

4 core units, plus

11 elective units.

At least **1 elective unit** must be selected from at least 5 of the 6 elective groups.

Up to **3 of the elective units** may be selected from the remaining elective units or from qualifications at the same level or one level higher, in this Training Package or any

other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS201A Participate in environmentally sustainable work practices

ICPSU216C Inspect quality against required standards

ICPSU260C Maintain a safe work environment

ICPSU262C Communicate in the workplace

Elective Units

Group A Elective Units - Converting, Binding and Finishing

ICPCF202C Handline mail

ICPCF203C Collate and insert mail manually

ICPCF204C Operate addressing machine

ICPCF208C Set up and operate a cheque mailer machine

ICPCF209C Set up and operate in-line mail machine

ICPCF220C Produce basic converted or finished product

ICPCF221C Set up and produce basic guillotined product

ICPCF222C Set up and operate in-line cutter

ICPCF223C Set up machine for cutting (trimming)

ICPCF224C Produce cut (trimmed) product

ICPCF225C Set up machine for basic flat-bed die cutting or embossing

ICPCF226C Produce basic flat-bed die cut or embossed product

ICPCF227C Set up machine for basic rotary die cutting or embossing

ICPCF228C Produce basic rotary die cut or embossed product

ICPCF231C Set up machine for basic flat-bed cutting

ICPCF232C Produce basic flat-bed cut product

ICPCF235C Set up machine for basic rotary cutting

ICPCF236C Produce basic rotary cut product

ICPCF241C Set up machine for basic single or continuous folding

ICPCF242C Produce basic single or continuous folded product

ICPCF243C Set up machine for basic collating or inserting (sheet/section)

- ICPCF244C Produce basic collated or inserted (sheet/section) product
- ICPCF245C Set up and produce hand-collated or -inserted product
- ICPCF261C Set up machine for basic adhesive, mechanical or thermal fastening
- ICPCF262C Produce basic adhesive, mechanical or thermal fastened product
- ICPCF263C Set up and produce hand-fastened product
- ICPCF281C Set up machine for basic laminating
- ICPCF282C Produce basic laminated product
- ICPCF294C Set up profile cutting for envelope manufacture
- ICPCF297C Clean sack and bag machines
- ICPCF298C Run and monitor sack and bag machines
- ICPCF2101C Set up and run machine for sewing
- ICPCF2104C Set up single-faced web
- ICPCF2106C Set up double-faced web

Group B Elective Units - Multimedia

- ICPMM263C Access and use the Internet
- ICPMM296C Create and test a CD-ROM/DVD

Group C Elective Units - Pre-press

- ICPPP211C Develop a basic design concept
- ICPPP221C Select and apply type
- ICPPP223C Photograph a line image
- ICPPP224C Produce pages using a page layout application
- ICPPP225C Produce graphics using a graphics application
- ICPPP231C Manually combine spot colour and basic four-colour images
- ICPPP232C Electronically combine and assemble data
- ICPPP252C Output images
- ICPPP260C Proof images
- ICPPP266C Produce relief plates
- ICPPP267C Produce offset lithographic plates
- ICPPP268C Make photopolymer plates (flexographic)
- ICPPP269C Produce photopolymer plates for pad printing
- ICPPP272C Produce gravure cylinders manually
- ICPPP281C Design basic carton
- ICPPP283C Prepare artwork for screen printing

ICPPP284B Produce PDF files for online or screen display

ICPPP286A Scan images for reproduction

Group D Elective Units - Printing

ICPPR211C Mount and proof flexographic plates for basic printing

ICPPR214C Produce basic flexographic printed product

ICPPR222C Produce basic gravure printed product

ICPPR232C Produce basic lithographic printed product

ICPPR242C Produce basic pad printed product

ICPPR261C Set up for foil stamping

ICPPR262C Produce foil stamped product

ICPPR271C Set up for basic coating

ICPPR272C Produce basic coated product

ICPPR288A Produce basic relief printed product

ICPPR384A Set up and produce basic digital print

ICPPR282C Produce and manage basic digital print

Group E Elective Units - Screen Printing

ICPSP211C Reclaim screen automatically

ICPSP215C Prepare screen

ICPSP221C Prepare substrate

ICPSP222C Prepare and cut screen print substrate

ICPSP233C Manually prepare direct emulsion stencil

ICPSP235C Prepare stencil using photographic indirect method

ICPSP270C Manually prepare and produce screen prints

ICPSP271C Manually produce basic screen prints

ICPSP273C Semi-automatically produce basic screen prints

ICPSP275C Automatically produce basic screen prints

ICPSP281C Finish screen print products

ICPSP282A Prepare film for basic screen printing

ICPSP383A Prepare film for complex screen printing

Group F Elective Units - Support

ICPSU201C Prepare, load and unload reels and cores on and off machine

ICPSU202C Prepare, load and unload product on and off machine

ICPSU203C Prepare and maintain the work area

- ICPSU207C Prepare machine for operation (basic)
- ICPSU208C Operate and monitor machines (basic)
- ICPSU211C Prepare ink and additives
- ICPSU212C Prepare coatings and adhesives
- ICPSU221C Pack and dispatch product
- ICPSU222C Pack and dispatch solid waste
- ICPSU224C Perform basic machine maintenance
- ICPSU225C Perform small machine maintenance
- ICPSU235C Lift loads mechanically
- ICPSU236C Shift loads mechanically
- ICPSU241C Undertake warehouse or stores materials processing
- ICPSU243C Reconcile process outputs
- ICPSU261C Follow OHS practices and identify environmental hazards

- ICPSU271C Provide basic instruction for a task
- ICPSU280C Enter data into electronic system
- ICPSU281C Use computer systems

ICP20210 Certificate II in Printing and Graphic Arts (Desktop Publishing)

Modification History

Release	Comments
Release 2	This version released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i> . Imported elective units updated with the most current equivalent.
Release 1	This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i> .

Description

This qualification applies to individuals who assist in the production of professionally designed and presented documents, using desktop publishing software. They will generally work under direct supervision and use limited practical skills and fundamental operational knowledge in a defined context.

Job Roles

Assistant desktop publisher
Pre-press worker

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

At the completion of this qualification candidates could choose to enter:

- ICP30112 Certificate III in Printing and Graphic Arts (Graphic Design Production)
- ICP30212 Certificate III in Printing and Graphic Arts (Graphic Pre-press)
- ICP30312 Certificate III in Printing and Graphic Arts (Multimedia)
- ICP30512 Certificate III in Printing and Graphic Arts (Printing)
- ICP30612 Certificate III in Printing and Graphic Arts (Screen Printing).
-

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Prerequisite Units

Code and title	Prerequisite units required
ICPPP321C Produce a typographic image	ICPPP221C Select and apply type

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • completing production records accurately • providing feedback to colleagues about printing and in-line processes and specifications • reporting problems and machine faults to supervisors
Teamwork	<ul style="list-style-type: none"> • operating production processes with fellow workers and communicating with workers involved in prior and subsequent processes
Problem solving	<ul style="list-style-type: none"> • evaluating and proofing own work
Initiative and enterprise	<ul style="list-style-type: none"> • anticipating production difficulties and taking preventative action • contributing to occupational health and safety (OHS) management and raising issues with designated person
Planning and organising	<ul style="list-style-type: none"> • collating details of job and machine specifications and printing processes to ensure efficient production • setting preferences, document summaries and search index options according to the requirements of the brief
Self-management	<ul style="list-style-type: none"> • completing production records accurately • producing work within deadlines
Learning	<ul style="list-style-type: none"> • identifying lessons learnt from projects to apply to future projects
Technology	<ul style="list-style-type: none"> • using desktop publishing software and equipment, word processing packages, spreadsheets and project management software and tools

Packaging Rules

Total number of units = 15 units

4 core units, plus

5 elective units from Group A, plus

6 elective units from Group B.

Up to **2 elective units** from Group A can be substituted with Group B elective units

listed below.

4 elective units must be selected from the Group B elective units listed below.

Up to **2 Group B elective units** may be selected from the remaining elective units or from qualifications at the same level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS201A Participate in environmentally sustainable work practices

ICPSU216C Inspect quality against required standards

ICPSU260C Maintain a safe work environment

ICPSU262C Communicate in the workplace

Group A Elective Units

ICPMM263C Access and use the Internet

ICPPP211C Develop a basic design concept

ICPPP221C Select and apply type

ICPPP224C Produce pages using a page layout application

ICPPP225C Produce graphics using a graphics application

ICPPP252C Output images

Group B Elective Units

ICAWEB429A Create a markup language document to specification

ICPMM321C Capture a digital image

ICPMM322C Edit a digital image

ICPPP232C Electronically combine and assemble data

ICPPP260C Proof images

ICPPP286A Scan images for reproduction

ICPPP284B Produce PDF files for online or screen display

ICPPP321C Produce a typographic image

ICPPP322C Digitise images for reproduction

ICPPR384A	Set up and produce basic digital print
ICPSU261C	Follow OHS practices and identify environmental hazards
MSACMC210A	Manage the impact of change on own work
MSACMS200A	Apply competitive manufacturing practices
MSACMS201A	Sustain process improvements
MSACMT230A	Apply cost factors to work practices
MSACMT240A	Apply 5S procedures in a manufacturing environment
MSACMT270A	Use sustainable energy practices
MSACMT271A	Use sustainable environmental practices
MSACMT280A	Undertake root cause analysis

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification considerations

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Prerequisite Units

Code and title	Prerequisite units required
ICPCF3100C Run and monitor in-line tube making machine for sack or bag manufacture	ICPCF298C Run and monitor sack and bag machines
ICPCF3101C Run and monitor in-line bottom making machine for sack or bag manufacture	ICPCF298C Run and monitor sack and bag machines

Entry Requirements

Not applicable.

Employability Skills Summary

EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

ICP20710 Certificate II in Printing and Graphic Arts (Sacks and Bags)

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> checking job specifications for details of requirements documenting consumables used when maintaining small machines for reordering purposes labelling packaged goods before shipment
Teamwork	<ul style="list-style-type: none"> operating production processes in association with fellow workers
Problem solving	<ul style="list-style-type: none"> documenting and reporting obvious faults and wear on sack and bag machines taking samples of products, checking the samples against specifications and adjusting machines to bring products into specifications
Initiative and enterprise	<ul style="list-style-type: none"> anticipating production difficulties and taking preventative action recommending improvements to quick changeover procedures
Planning and organising	<ul style="list-style-type: none"> organising tools required to set up and adjust machines for bag manufacture
Self-management	<ul style="list-style-type: none"> following procedures and using personal protective equipment correctly
Learning	<ul style="list-style-type: none"> giving and following simple routine instructions
Technology	<ul style="list-style-type: none"> using computerised control, monitoring and data entry systems using machinery, such as pallet wrapping equipment and sack and bag machines

Up to **2 elective units** from Group A can be substituted with Group B elective units listed below.

4 elective units must be selected from the Group B elective units listed below.

Up to **2 Group B elective units** may be selected from the remaining elective units or from qualifications at the same level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS201A Participate in environmentally sustainable work practices

ICPSU216C Inspect quality against required standards

ICPSU260C Maintain a safe work environment

ICPSU262C Communicate in the workplace

Group A Elective Units

ICPSU201C Prepare, load and unload reels and cores on and off machine* **OR**

ICPSU202C Prepare, load and unload product on and off machine*

ICPSU203C Prepare and maintain the work area

ICPSU207C Prepare machine for operation (basic)

ICPSU208C Operate and monitor machines (basic)

ICPSU224C Perform basic machine maintenance

ICPSU281C Use computer systems

* Both of these units can be selected in this qualification, if the enterprise requires both.

Group B Elective Units

ICPCF220C Produce basic converted or finished product

ICPCF221C Set up and produce basic guillotined product

Packaging Rules

ICPCF231C	Set up machine for basic flat-bed cutting
ICPCF232C	Produce basic flat-bed cut product
ICPCF235C	Set up machine for basic rotary cutting
ICPCF236C	Produce basic rotary cut product
ICPCF241C	Set up machine for basic single or continuous folding
ICPCF242C	Produce basic single or continuous folded product
ICPCF261C	Set up machine for basic adhesive, mechanical or thermal fastening
ICPCF262C	Produce basic adhesive, mechanical or thermal fastened product
ICPCF281C	Set up machine for basic laminating
ICPCF282C	Produce basic laminated product
ICPCF2104C	Set up single-faced web
ICPCF2106C	Set up double-faced web
ICPCF2108C	Produce basic folded and glued cartons
ICPCF3105C	Produce single-faced web
ICPCF3107C	Produce double-faced web
ICPCF311C	Prepare for cutting forme and stripper making
ICPCF312C	Set cutting forme and strippers
ICPPP268C	Make photopolymer plates (flexographic)
ICPPP281C	Design basic carton
ICPPR211C	Mount and proof flexographic plates for basic printing
ICPPR313C	Set up for basic flexographic printing
ICPPR261C	Set up for foil stamping
ICPPR262C	Produce foil stamped product
ICPPR271C	Set up for basic coating
ICPPR272C	Produce basic coated product
ICPSU211C	Prepare ink and additives
ICPSU212C	Prepare coatings, adhesives
ICPSU221C	Pack and dispatch product
ICPSU222C	Pack and dispatch solid waste
ICPSU235C	Lift loads mechanically
ICPSU236C	Shift loads mechanically
ICPSU241C	Undertake warehouse or stores materials processing

Packaging Rules

ICPSU263C	Perform basic industry calculations
ICPSU271C	Provide basic instruction for a task
ICPSU261C	Follow OHS practices and identify environmental hazards
ICPSU323C	Dispose of waste
MSACMC210A	Manage the impact of change on own work
MSACMS200A	Apply competitive manufacturing practices
MSACMS201A	Sustain process improvements
MSACMT230A	Apply cost factors to work practices
MSACMT240A	Apply 5S procedures in a manufacturing environment
MSACMT280A	Undertake root cause analysis

ICP30112 Certificate III in Printing and Graphic Arts (Graphic Design Production)

Modification History

Release	Comments
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Core unit 'BSBSUS301A Implement and monitor environmentally sustainable work practices' replaced with 'BSBSUS201A Participate in environmentally sustainable work practices', and native and imported units updated.</p> <p>Replaces ICP30110 Certificate III in Printing and Graphic Arts (Graphic Design Production).</p>

Description

This qualification applies to an individual working in graphic design in the printing and graphic arts industry. They produce art and layouts of wording for reproduction in print and electronic media, such as magazines, newspapers, books and websites, and for corporate identity programs, exhibitions and advertising. While covering the design essentials this qualification has a focus on the preparation of design where the application is for print production. They may also provide some leadership and guidance to others with some limited responsibility for the output of others.

Job roles

- Desktop publisher
- Assistant graphic artist
-

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However the preferred pathway for candidates entering this qualification is one of the following qualifications:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP20210 Certificate II in Printing and Graphic Arts (Desktop Publishing).

Pathways from the qualification

At the completion of this qualification students could choose to enter a:

- ICP40210 Certificate IV in Printing and Graphic Arts (Multimedia)
- ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPPP311C Develop a detailed design concept	ICPPP211C Develop a basic design concept
ICPPP324C Create pages using a page layout application	ICPPP224C Produce pages using a page layout application
ICPPP452C Output complex images direct to plate or press	ICPPP352C Output complex images
ICPPP352C Output complex images	ICPPP252C Output images

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> identifying and clarifying colour requirements from the brief reading and interpreting job requirements
Teamwork	<ul style="list-style-type: none"> working with clients to develop a brief to meet their requirements
Problem solving	<ul style="list-style-type: none"> monitoring production quality and making minor adjustments to processes trailing typography, designs and colours that may fit the brief and evaluating them against selection criteria
Initiative and enterprise	<ul style="list-style-type: none"> identifying and accessing relevant sources of information about design processes
Planning and organising	<ul style="list-style-type: none"> identifying and collecting resources such as equipment, tools, materials and techniques for the development of graphic designs
Self-management	<ul style="list-style-type: none"> following procedures and using personal protective equipment correctly working within moral, copyright, intellectual property and legislative requirements and policies
Learning	<ul style="list-style-type: none"> giving and following simple routine instructions
Technology	<ul style="list-style-type: none"> using computerised control, monitoring and data entry systems using colour tools to inform choice of colours using information technology, such as computer hardware and software to access data from files

ICP30212 Certificate III in Printing and Graphic Arts (Graphic Pre-press)

Modification History

Release	Comments
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Core unit 'BSBSUS301A Implement and monitor environmentally sustainable work practices' replaced with 'BSBSUS201A Participate in environmentally sustainable work practices', and native and imported units updated.</p> <p>Replaces 0 Certificate III in Printing and Graphic Arts (Graphic Pre-press).</p>

Description

This qualification applies to individuals working as a pre-press tradesperson in the printing and graphic arts industry. Typically they design and prepare layouts and artwork, manipulate images and text to meet production and design requirements and apply solutions to a defined range of problems associated with, and characteristic to, the print medium. They may also provide some leadership and guidance to others with some limited responsibility for the output of others.

Job roles

- Pre-press operator
- Pre-press technician

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is one of the following qualifications:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP20210 Certificate II in Printing and Graphic Arts (Desktop Publishing).

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP40110 Certificate IV in Printing and Graphic Arts (Graphic Pre-press)
- ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPPP321C Produce a typographic image	ICPPP221C Select and apply type
ICPPP324C Create pages using a page layout application	ICPPP224C Produce pages using a page layout application
ICPPP396A Generate high-end PDF files	ICPPP284B Produce PDF files for online or screen display
ICPPR387A Use colour management for production	ICPPR284A Introduction to colour management
ICPPR495A Set up and use complex colour management for production	ICPPR387A Use colour management for production

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> communicating with clients and supervisors to confirm design briefs and gain approval of proofs for production reading and interpreting job requirements
Teamwork	<ul style="list-style-type: none"> operating production processes in association with fellow workers
Problem solving	<ul style="list-style-type: none"> adjusting fit, maximising efficiency of imposition and using colour correction to meet the requirements of the brief monitoring production quality and making minor adjustments to processes resolving specific problems, for example with graphics applications
Initiative and enterprise	<ul style="list-style-type: none"> monitoring and implementing new technology and work processes
Planning and organising	<ul style="list-style-type: none"> accessing data on software capabilities and production requirements and matching them to the job brief gathering client information relevant to producing multiple image plates
Self-management	<ul style="list-style-type: none"> following obligations involved in copyright in work practices following procedures and using personal protective equipment correctly
Learning	<ul style="list-style-type: none"> giving and following simple routine instructions
Technology	<ul style="list-style-type: none"> using computerised control, monitoring and data entry systems using information technology, such as computer hardware and software to access and store data from files

Packaging Rules

Total number of units = 21 units

4 core units *plus*

12 elective units from Group A *plus*

5 elective units from Group B.

Up to **2 elective units** from Group A can be substituted with Group B elective units listed below.

2 elective units must be selected from the Group B elective units listed below.

Up to **3 Group B elective units** may be selected from the remaining elective units or from qualifications at the same qualification level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS201A Participate in environmentally sustainable work practices

ICPSU216C Inspect quality against required standards

ICPSU260C Maintain a safe work environment

ICPSU262C Communicate in the workplace

Group A Elective Units

ICPKN311C Apply knowledge of the graphic pre-press sector

ICPMM263C Access and use the Internet

ICPPP211C Develop a basic design concept

ICPPP221C Select and apply type

ICPPP224C Produce pages using a page layout application

ICPPP225C Produce graphics using a graphics application

ICPPP252C Output images

ICPPP321C Produce a typographic image

ICPPP322C Digitise images for reproduction

ICPPP324C Create pages using a page layout application

ICPPP334C Prepare an imposition format for printing processes

ICPPP386C Undertake digital proofing

ICPPP397A Transfer digital files

Group B Elective Units

CUFANM301A Create 2D digital animation

ICAWEB410A Apply web authoring tool to convert client data for websites

ICAWEB429A Create a markup language document to specification

ICPMM296C Create and test a CD-ROM/DVD
ICPMM321C Capture a digital image
ICPMM322C Edit a digital image
ICPMM344C Manipulate and incorporate audio into multimedia presentations
ICPMM346C Incorporate video into multimedia presentations
ICPPP231C Manually combine spot colour and basic four-colour images
ICPPP266C Produce relief plates
ICPPP267C Produce offset lithographic plates
ICPPP268C Make photopolymer plates (flexographic)
ICPPP269C Produce photopolymer plates for pad printing
ICPPP272C Produce gravure cylinders manually
ICPPP284B Produce PDF files for online or screen display
ICPPP325C Create graphics using a graphics application
ICPPP331C Manually combine complex four-colour images
ICPPP370C Produce multiple image plates
ICPPP372C Produce gravure cylinders electronically
ICPPP385C Operate a database for digital printing
ICPPP396A Generate high-end PDF files
ICPPP430C Manage colour
ICPPR282C Produce and manage basic digital print
ICPPR284A Introduction to colour management
ICPPR383C Prepare for personalised digital printing
ICPPR384A Set up and produce basic digital print
ICPPR387A Use colour management for production
ICPPR388A Preflight and import complex images for digital device
ICPPR389A Manage digital files
ICPPR495A Set up and use complex colour management for production
ICPSU345C Purchase materials and schedule deliveries
MSACMC210A Manage the impact of change on own work
MSACMS200A Apply competitive manufacturing practices
MSACMS201A Sustain process improvements
MSACMT230A Apply cost factors to work practices
MSACMT240A Apply 5S procedures in a manufacturing environment
MSACMT280A Undertake root cause analysis
MSAPMSUP390A Use structured problem solving tools

ICP30512 Certificate III in Printing and Graphic Arts (Printing)

Modification History

Release	Comments
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Core unit 'BSBSUS301A Implement and monitor environmentally sustainable work practices' replaced with 'BSBSUS201A Participate in environmentally sustainable work practices', and native and imported units updated.</p> <p>Replaces ICP30510 Certificate III in Printing and Graphic Arts (Printing).</p>

Description

This qualification applies to individuals working as print machinists in the printing and graphic arts industry. Print machinists typically set up and operate letterpress, lithographic, flexographic, gravure printing presses, digital printers and work on a range of printed products. They prepare material, monitor and run equipment and machinery and apply solutions to a defined range of unpredictable problems. They may also provide leadership and guidance to others with some limited responsibility for the output of others.

Job Roles

- Print machinist

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is one of the following qualifications:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP20210 Certificate II in Printing and Graphic Arts (Desktop Publishing)
- ICP20410 Certificate II in Printing and Graphic Arts (Print Production Support).

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP40310 Certificate IV in Printing and Graphic Arts (Printing)
- ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales)
- ICP40710 Certificate IV in Printing and Graphic Arts (Process Leadership).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPSU311C Prepare ink and additives (advanced)	ICPSU211C Prepare ink and additives
ICPPR494A Apply advanced software applications to digital production	ICPPR385A Apply software applications to digital production

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • negotiating requirements and methods of production with clients • reading and interpreting job requirements • using printing industry terminology and vocabulary correctly and accurately
Teamwork	<ul style="list-style-type: none"> • operating production processes in association with fellow workers • working with clients to decide on the best printing processes and ensure proofs meet their requirements
Problem solving	<ul style="list-style-type: none"> • monitoring production quality and making minor adjustments to processes • conducting a proof run, inspecting and testing the proof for quality and adjusting the printing machinery to ensure the product meets quality criteria
Initiative and enterprise	<ul style="list-style-type: none"> • anticipating and rectifying production problems • monitoring trends in the printing industry to inform personal work practices • recommending improvements to quick changeover procedures
Planning and organising	<ul style="list-style-type: none"> • selecting appropriate print processes and inks and additives • collecting and assessing data about printing processes and machine specifications and how these interact
Self-management	<ul style="list-style-type: none"> • following principles and obligations of copyright in personal work practices • following procedures and using personal protective equipment correctly
Learning	<ul style="list-style-type: none"> • giving and following simple routine instructions • implementing and monitoring new technology and work processes
Technology	<ul style="list-style-type: none"> • selecting and using printing processes based on knowledge of the capabilities and limitations of the processes • using computerised control, monitoring and data entry systems

	<ul style="list-style-type: none">• using information technology, such as computer hardware and software to access data from files

ICPCF244C Produce basic collated (sheet/section) product
ICPCF281C Set up machine for basic laminating
ICPCF282C Produce basic laminated product
ICPCF341C Set up machine for complex sequenced or multiple folding
ICPCF381C Set up machine for complex laminating
ICPCF382C Produce complex laminated product
ICPPP211C Develop a basic design concept
ICPPP252C Output images
ICPPP266C Produce relief plates
ICPPP267C Produce offset lithographic plates
ICPPP268C Make photopolymer plates (flexographic)
ICPPP269C Produce photopolymer plates for pad printing
ICPPP272C Produce gravure cylinders manually
ICPPP352C Output complex images
ICPPP370C Produce multiple image plates
ICPPP372C Produce gravure cylinders electronically
ICPPP397A Transfer digital images
ICPPR211C Mount and proof flexographic plates for basic printing
ICPPR214C Produce basic flexographic printed product
ICPPR222C Produce basic gravure printed product
ICPPR232C Produce basic lithographic printed product
ICPPR242C Produce basic pad printed product
ICPPR261C Set up for foil stamping
ICPPR262C Produce foil stamped product
ICPPR271C Set up for basic coating
ICPPR272C Produce basic coated product
ICPPR282C Produce and manage basic digital print
ICPPR288A Produce basic relief printed product

ICPPR313C Set up for basic flexographic printing
ICPPR314C Produce complex flexographic printed product **OR**
ICPPR321C Set up for basic gravure printing
ICPPR322C Produce complex gravure printed product **OR**
ICPPR331C Set up for basic lithographic printing
ICPPR332C Produce complex lithographic printed product **OR**
ICPPR341C Set up for basic pad printing
ICPPR342C Produce complex pad printed product **OR**
ICPPR382C Produce and manage complex digital print
ICPPR383C Prepare for personalised digital printing
ICPPR384A Set up and produce basic digital print **OR**
ICPPR394A Produce complex relief printed product
ICPPR385A Apply software applications to digital production
ICPPR386A Troubleshoot digital media
ICPPR387A Use colour management for production
ICPPR388A Preflight and import complex images for digital device
ICPPR389A Manage digital files
ICPPR390A Generate a proof for digital production
ICPPR393A Set up for basic relief printing
ICPPR494A Apply advanced software applications to digital production
ICPSP311C Reclaim screen manually
ICPSP215C Prepare screen
ICPSP222C Prepare and cut screen print substrate
ICPSP270C Manually prepare and produce screen prints
ICPSP273C Semi-automatically produce basic screen prints
ICPSP275C Automatically produce basic screen prints
ICPSP351C Prepare machine and drying/curing unit
ICPSP374C Operate a semi-automatic screen printing machine
ICPSP382C Produce computer image for screen printing
ICPSP383A Prepare film for complex screen printing
ICPSU212C Prepare coatings, adhesives
ICPSU221C Pack and dispatch product
ICPSU222C Pack and dispatch solid waste
ICPSU235C Lift loads mechanically
ICPSU236C Shift loads mechanically
ICPSU241C Undertake warehouse or stores materials processing
ICPSU271C Provide basic instruction for a task
ICPSU311C Prepare ink and additives (advanced)
ICPSU342C Undertake inventory procedures
ICPSU351C Undertake basic production scheduling
ICPSU362C Communicate as part of a work team
ICPSU381C Operate and maintain computer resources
MSACMC210A Manage the impact of change on own work
MSACMS200A Apply competitive manufacturing practices
MSACMS201A Sustain process improvements
MSACMT230A Apply cost factors to work practices
MSACMT240A Apply 5S procedures in a manufacturing environment
MSACMT280A Undertake root cause analysis

MSAENV272B Participate in environmentally sustainable work practices
MSAPMSUP390A Use structured problem solving tools

ICP30612 Certificate III in Printing and Graphic Arts (Screen Printing)

Modification History

Release	Comments
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Core unit 'BSBSUS301A Implement and monitor environmentally sustainable work practices' replaced with 'BSBSUS201A Participate in environmentally sustainable work practices', and native and imported units updated.</p> <p>Replaces ICP30610 Certificate III in Printing and Graphic Arts (Screen Printing).</p>

Description

This qualification applies to individuals working as screen printers in the printing and graphic arts industry. They set up and operate power driven or hand-operated, screen printing machines to create visual images. They may also provide leadership and guidance to others with some limited responsibility for the output of others.

Job Roles

- Screen printer and stencil preparer

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is one of the following qualifications:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP20210 Certificate II in Printing and Graphic Arts (Desktop Publishing)
- ICP20410 Certificate II in Printing and Graphic Arts (Print Production Support)
- ICP20510 Certificate II in Printing and Graphic Arts (Screen Printing).

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales)
- ICP40710 Certificate IV in Printing and Graphic Arts (Process Leadership).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPPP311C Develop a detailed design concept	ICPPP211C Develop a basic design concept
ICPPP321C Produce a typographic image	ICPPP221C Select and apply type
ICPSU311C Prepare ink and additives (advanced)	ICPSU211C Prepare ink and additives

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • negotiating requirements and methods of production with clients • reading and interpreting job requirements • using printing industry terminology and vocabulary correctly and accurately
Teamwork	<ul style="list-style-type: none"> • operating production processes in association with fellow workers according to the planned daily schedule • working with clients to decide on the best printing processes
Problem solving	<ul style="list-style-type: none"> • conducting a proof run, inspecting and testing the proof for quality and adjusting the printing machinery to ensure the product meets quality criteria • monitoring production quality and making minor adjustments to processes
Initiative and enterprise	<ul style="list-style-type: none"> • making recommendations on possible solutions when planning printing operations • monitoring trends in the printing industry to inform personal work practices
Planning and organising	<ul style="list-style-type: none"> • accessing data about machine capabilities, production processes and customer needs and using them in the planning process • selecting inks, additives and screens when planning for modified or new printing operations
Self-management	<ul style="list-style-type: none"> • following procedures and using personal protective equipment correctly
Learning	<ul style="list-style-type: none"> • demonstrating knowledge of company services, equipment capabilities, limitations and work flow • giving and following simple routine instructions
Technology	<ul style="list-style-type: none"> • using computerised control, monitoring and data entry systems • using information technology, such as computer hardware and software to access data from files

Packaging Rules

Total number of units = 21 units

4 core units *plus*

11 elective units from Group A *plus*

6 elective units from Group B, Group C or Group D.

Up to **2 elective units** from Group A can be substituted with Group B elective units listed below.

At least **1 elective unit** must be selected from Group B and **1 elective unit** from Group C. The remaining elective units may be selected from Group B, Group C or Group D elective units.

Up to **2 elective units** may be selected from the remaining elective units or from qualifications at the same qualification level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS201A Participate in environmentally sustainable work practices

ICPSU216C Inspect quality against required standards

ICPSU260C Maintain a safe work environment

ICPSU262C Communicate in the workplace

Group A Elective Units

ICPKN314C Apply knowledge and requirements of the screen printing sector

ICPPP382C Produce computer image for screen printing

ICPSP215C Prepare screen

ICPSP233C Manually prepare direct emulsion stencil

ICPSP311C Reclaim screen manually

ICPSU202C Prepare, load and unload product on and off machine

ICPSU203C Prepare and maintain the work area

ICPSU211C Prepare ink and additives

ICPSU263C Perform basic industry calculations

ICPSU281C Use computer systems

ICPSU352C Plan operational processes

ICPSU362C Communicate as part of a work team

Group B Elective Units

ICPSP235C Prepare stencil using photographic indirect method

ICPSP337D Prepare stencil using photographic capillary method

ICPSP282A Prepare film for basic screen printing
ICPSP333C Automatically prepare direct emulsion stencil
ICPSP339C Prepare stencil using direct projection method
ICPSP341C Prepare stencil using direct electronic imaging method

Group C Elective Units

ICPSP371C Manually produce complex screen prints **OR**
ICPSP373C Semi-automatically produce complex screen prints **OR**
ICPSP376C Operate an automatic screen printing machine **OR**
ICPSP374C Operate a semi-automatic screen printing machine

Group D Elective Units

ICPCF220C Produce basic converted or finished product
ICPCF221C Set up and produce basic guillotined product
ICPCF225C Set up machine for basic flat-bed die cutting or embossing
ICPCF231C Set up machine for basic flat-bed cutting
ICPPP211C Develop a basic design concept
ICPPP221C Select and apply type
ICPPP286A Scan images for reproduction
ICPPP223C Photograph a line image
ICPPP224C Produce pages using a page layout application
ICPPP231C Manually combine spot colour and basic four-colour images
ICPPP232C Electronically combine and assemble data
ICPPP252C Output images
ICPPP283C Prepare artwork for screen printing
ICPPP311C Develop a detailed design concept
ICPPP321C Produce a typographic image
ICPPP322C Digitise images for reproduction
ICPPP323C Photograph and produce halftone images
ICPPP334C Prepare an imposition format for printing processes
ICPPP352C Output complex images
ICPPP422C Digitise complex images for reproduction
ICPPP430C Manage colour
ICPPR342C Produce complex pad printed product
ICPPR382C Produce and manage complex digital print
ICPPR441C Set up for complex pad printing
ICPPR496A Set up and produce complex digital print
ICPSP211C Reclaim screen automatically
ICPSP221C Prepare substrate
ICPSP271C Manually produce basic screen prints
ICPSP273C Semi-automatically produce basic screen prints
ICPSP275C Automatically produce basic screen prints
ICPSP281C Finish screen print products
ICPSP351C Prepare machine and drying/curing unit
ICPSP383A Prepare film for complex screen printing
ICPSU241C Undertake warehouse or stores materials processing

ICPSU311C Prepare ink and additives (advanced)
ICPSU321C Pack and dispatch (advanced)
ICPSU323C Dispose of waste
ICPSU351C Undertake basic production scheduling
ICPSU381C Operate and maintain computer resources
ICPSU464C Provide customer service and education
MSACMC210A Manage the impact of change on own work
MSACMS200A Apply competitive manufacturing practices
MSACMS201A Sustain process improvements
MSACMT230A Apply cost factors to work practices
MSACMT240A Apply 5S procedures in a manufacturing environment
MSACMT280A Undertake root cause analysis
MSAPMSUP390A Use structured problem solving tools

ICP30712 Certificate III in Printing and Graphic Arts (Print Finishing)

Modification History

Release	Comments
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Core unit 'BSBSUS301A Implement and monitor environmentally sustainable work practices' replaced with 'BSBSUS201A Participate in environmentally sustainable work practices', and native and imported units updated.</p> <p>Replaces 0 Certificate III in Printing and Graphic Arts (Print Finishing).</p>

Description

This qualification applies to individuals working as a binder and finisher in the printing and graphic arts industry. Binders and finishers assemble, bind and cover books, other publications and printed products by hand or machine. They are responsible for post-press and finishing stages of the print process and apply solutions to a defined range of unpredictable problems and may provide leadership and guidance to others with some limited responsibility for the output of others.

Job Roles

- Binder and finisher

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is one of the following qualifications:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP20410 Certificate II in Printing and Graphic Arts (Print Production Support)
- ICP20610 Certificate II in Printing and Graphic Arts (Converting, Binding and Finishing).

Pathways from the qualification

At the completion of this qualification candidates could choose to enter:

- ICP40410 Certificate IV in Printing and Graphic Arts (Print Finishing)
- ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales)
- ICP40710 Certificate IV in Printing and Graphic Arts (Process Leadership).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • liaising with clients to maintain and adjust production • reading and interpreting job specifications from job documentation or the production control system • using printing industry terminology and vocabulary correctly and accurately
Teamwork	<ul style="list-style-type: none"> • operating and shutting down production processes in association with fellow workers
Problem solving	<ul style="list-style-type: none"> • identifying defects, irregularities and discrepancies and taking action to rectify them • monitoring production quality and making minor adjustments to processes
Initiative and enterprise	<ul style="list-style-type: none"> • anticipating and rectifying production problems • making recommendations on possible solutions when planning finishing operations • monitoring trends in the printing industry to inform personal work practices
Planning and organising	<ul style="list-style-type: none"> • accessing data about machine capabilities, production processes and customer needs and using them in the planning process • checking the availability of job components and planning set-up of machines
Self-management	<ul style="list-style-type: none"> • following procedures and using personal protective equipment correctly
Learning	<ul style="list-style-type: none"> • giving and following simple routine instructions
Technology	<ul style="list-style-type: none"> • using computerised control, monitoring and data entry systems • using information technology, such as computer hardware and software to access data from files

Packaging Rules

Total number of units = 21 units

4 core units *plus*

8 elective units from Group A *plus*

9 elective units from Group B.

Up to **2 elective units** from Group A can be substituted with Group B elective units listed below.

7 elective units must be selected from the Group B elective units listed below.

Up to **2 Group B elective units** may be selected from the remaining elective units or from qualifications at the same qualification level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS201A Participate in environmentally sustainable work practices

ICPSU216C Inspect quality against required standards

ICPSU260C Maintain a safe work environment

ICPSU262C Communicate in the workplace

Group A Elective Units

ICPKN313C Apply knowledge and requirements of the converting, binding and finishing sector

ICPSU202C Prepare, load and unload product on and off machine

ICPSU203C Prepare and maintain the work area

ICPSU207C Prepare machine for operation (basic)

ICPSU208C Operate and monitor machines (basic)

ICPSU224C Perform basic machine maintenance

ICPSU323C Dispose of waste

ICPSU351C Undertake basic production scheduling

ICPSU352C Plan operational processes

Group B Elective Units

ICPCF221C Set up and produce basic guillotine product

ICPCF241C Set up machine for basic single or continuous folding

ICPCF242C Produce basic single or continuous folded product

ICPCF243C Set up machine for basic collating or inserting (sheet/section)

ICPCF244C Produce basic collated (sheet/section) product

ICPCF311C Prepare for cutting forme and stripper making

ICPCF312C Set cutting forme and strippers
ICPCF320C Produce complex converted or finished product
ICPCF321C Set up and produce complex guillotined product
ICPCF326C Undertake pre make-ready for die cutting
ICPCF327C Set up machine for complex rotary die cutting or embossing
ICPCF341C Set up machine for complex sequenced or multiple folding
ICPCF342C Produce complex sequenced or multiple folded product
ICPCF343C Set up machine for complex collating or inserting (sheet/section/reel)
ICPCF344C Produce complex collated or inserted (sheet/section/reel) product
ICPCF361C Set up machine for complex adhesive, mechanical or sewn fastening
ICPCF362C Produce complex adhesive, mechanical or sewn fastened product
ICPCF369C Set up and produce hand-made box
ICPCF371C Decorate paper
ICPCF381C Set up machine for complex laminating
ICPCF382C Produce complex laminated product
ICPCF391C Use electronic monitoring systems (converting and finishing)
ICPCF392C Produce product on window gluer
ICPCF393C Set up machine for envelope manufacture
ICPCF395C Set up and operate folder gluer machine
ICPCF396C Set up in-line scoring, folding and gluing machine for envelope manufacture
ICPCF3103C Run and monitor envelope manufacturing machines
ICPCF3105C Produce single-faced web
ICPCF3107C Produce double-faced web
ICPCF465C Set up and produce hand bound book
ICPPR261C Set up for foil stamping
ICPPR262C Produce foil stamped product
ICPPR271C Set up for basic coating
ICPPR272C Produce basic coated product
ICPPR282C Produce and manage basic digital print
ICPPR382C Produce and manage complex digital print
ICPSU263C Perform basic industry calculations
ICPSU321C Pack and dispatch (advanced)
ICPSU342C Undertake inventory procedures
ICPSU345C Purchase materials and schedule deliveries
ICPSU351C Undertake basic production scheduling
ICPSU357C Apply quick changeover procedures
ICPSU362C Communicate as part of a work team
ICPSU554C Manage teams
MSACMC210A Manage the impact of change on own work
MSACMS200A Apply competitive manufacturing practices
MSACMS201A Sustain process improvements
MSACMT230A Apply cost factors to work practices
MSACMT240A Apply 5S procedures in a manufacturing environment
MSACMT280A Undertake root cause analysis

ICPKN319C Apply knowledge and processes of converting paper-based products

ICPSU201C Prepare, load and unload reels and cores on and off machine* **OR**

ICPSU202C Prepare, load and unload product on and off machine*

ICPSU203C Prepare and maintain the work area

ICPSU224C Perform basic machine maintenance

ICPSU281C Use computer systems

ICPSU323C Dispose of waste

* Both of these units can be selected in this qualification, if the enterprise requires both.

Group B Elective Units

ICPCF341C Set up machine for complex sequenced or multiple folding

ICPCF361C Set up machine for complex adhesive, mechanical or sewn fastening

ICPCF392C Produce product on window gluer

ICPPP322C Digitise images for reproduction

ICPPP481C Design complex carton

ICPPR313C Set up for basic flexographic printing
ICPPR314C Produce basic flexographic printed product
ICPSU342C Undertake inventory procedures
ICPSU345C Purchase materials and schedule deliveries
ICPSU351C Undertake basic production scheduling
ICPSU362C Communicate as part of a work team
ICPSU381C Operate and maintain computer resources
ICPPR493C Set up and monitor in-line printing operations

Group C Elective Units

ICPPP281C Design basic carton
ICPCF321C Set up and produce complex guillotined product **OR**
ICPCF326C Undertake pre make-ready for die cutting **OR**
ICPCF225C Set up machine for complex flat-bed die cutting or embossing
ICPCF426C Produce complex flat-bed die cut or embossed product **OR**
ICPCF327C Set up machine for complex rotary die cutting or embossing
ICPCF328C Produce complex rotary die cut or embossed product **OR**
ICPCF3109C Produce complex folded and glued cartons
ICPCF410C Set up machine for complex carton folding and gluing **OR**
ICPCF320C Produce complex converted or finished product
ICPCF342C Produce complex sequenced or multiple folded product **OR**
ICPCF362C Produce complex adhesive, mechanical or sewn fastened product
MSACMC210A Manage the impact of change on own work
MSACMS200A Apply competitive manufacturing practices
MSACMS201A Sustain process improvements
MSACMT230A Apply cost factors to work practices
MSACMT240A Apply 5S procedures in a manufacturing environment
MSACMT280A Undertake root cause analysis

ICP31012 Certificate III in Printing and Graphic Arts (Mail House)

Modification History

Release	Comments
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Core unit 'BSBSUS301A Implement and monitor environmentally sustainable work practices' replaced with 'BSBSUS201A Participate in environmentally sustainable work practices', and native and imported units updated.</p> <p>Replaces ICP31010 Certificate III in Printing and Graphic Arts (Mail House).</p>

Description

This qualification applies to individuals engaged in mail management services, such as direct marketing and transactional mailing. They are responsible for the preparation, set-up, monitoring and operation of various mailing house machinery and equipment. This qualification is focused on the skills required and applied in the set-up and operation of intelligent collating system used in the bulk mail distribution sector of the print industry. They may provide leadership and guidance to others with some limited responsibility for the output of others.

Job Roles

- Mail processor
- Team leader

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is one of the following qualifications:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP21010 Certificate II in Printing and Graphic Arts (Mail House).

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP40510 Certificate IV in Printing and Graphic Arts (Mail House)
- ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales)
- ICP40710 Certificate IV in Printing and Graphic Arts (Process Leadership).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • consulting with customers about identification of requirements when scheduling deliveries • documenting consumables used when maintaining small machines for reordering purposes • reading and interpreting job requirements
Teamwork	<ul style="list-style-type: none"> • notifying the supervisor if there are discrepancies or if the job does not reconcile • operating production processes in association with fellow workers
Problem solving	<ul style="list-style-type: none"> • identifying, separating and reprocessing mail that is damaged, underpaid or non-conforming • monitoring production quality and making minor adjustments to processes
Initiative and enterprise	<ul style="list-style-type: none"> • identifying improvements to own work plan • negotiating solutions to allow implementation of process improvements
Planning and organising	<ul style="list-style-type: none"> • accurately and efficiently organising mail and parcels into groups • organising appropriate equipment for transferring materials • selecting tools and planning for basic machine maintenance
Self-management	<ul style="list-style-type: none"> • confirming own and team work priorities • following legal requirements and workplace policy and procedures in relation to the security of mail • following procedures and using personal protective equipment correctly
Learning	<ul style="list-style-type: none"> • giving and following simple routine instructions • providing one-to-one instruction about processes and set-up and operation of equipment and machinery
Technology	<ul style="list-style-type: none"> • using information technology, such as computer hardware and software to access data from files • using barcode equipment to reconcile outputs • using computerised control, monitoring and data entry systems

Packaging Rules

Total number of units = 19 units

4 core units *plus*

8 elective units from Group A *plus*

7 elective units from Group B.

Up to **2 elective units** from Group A can be substituted with Group B elective units listed below.

3 elective units must be selected from the Group B elective units listed below.

Up to **4 Group B elective units** may be selected from the remaining elective units or from qualifications at the same qualification level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS201A Participate in environmentally sustainable work practices

ICPSU216C Inspect quality against required standards

ICPSU260C Maintain a safe work environment

ICPSU262C Communicate in the workplace

Group A Elective Units

ICPKN318C Apply knowledge and requirements of mail house operations

ICPSU202C Prepare, load and unload product on and off machine

ICPSU203C Prepare and maintain the work area

ICPSU224C Perform basic machine maintenance

ICPSU225C Perform small machine maintenance **OR**

ICPSU243C Reconcile process outputs

ICPSU351C Undertake basic production scheduling

ICPSU352C Plan operational processes

ICPSU362C Work team communication

TLIA2041A Manually sort mail and parcels

Group B Elective Units

ICAWEB429A Create a markup language document to specification

ICPCF294C Set up profile cutting for envelope manufacture

ICPCF326C Undertake pre make-ready for die cutting

ICPCF327C Set up machine for complex rotary die cutting or embossing

ICPCF341C Set up machine for complex sequenced or multiple folding

ICPCF342C Produce complex sequenced or multiple folded product

ICPCF396C Set up in-line scoring, folding and gluing machine for envelope manufacture
ICPCF3103C Run and monitor envelope manufacturing machines
ICPCF406C Set up and load in-line smart card machine
ICPCF407C Operate a smart card machine and pack product
ICPPP385C Operate a database for digital printing
ICPPR393A Set up for basic relief printing
ICPPR282C Produce and manage basic digital print
ICPPR288A Produce basic relief printed product
ICPPR383C Prepare for personalised digital printing
ICPPR384A Set up and produce basic digital print
ICPPR484C Prepare for variable data printing
ICPSU211C Prepare ink and additives
ICPSU212C Prepare coatings, adhesives
ICPSU235C Lift loads mechanically
ICPSU236C Shift loads mechanically
ICPSU271C Provide basic instruction for a task
ICPSU321C Pack and dispatch (advanced)
ICPSU342C Undertake inventory procedures
ICPSU345C Purchase materials and schedule deliveries
ICPSU381C Operate and maintain computer resources
ICPSU487C Analyse manual handling processes
ICPSU488C Ensure process improvements are sustained
ICPSU554C Manage teams
MSACMC210A Manage the impact of change on own work
MSACMS200A Apply competitive manufacturing practices
MSACMS201A Sustain process improvements
MSACMT230A Apply cost factors to work practices
MSACMT240A Apply 5S procedures in a manufacturing environment
MSACMT280A Undertake root cause analysis
MSAENV272B Participate in environmentally sustainable work practices

ICP31112 Certificate III in Printing and Graphic Arts (Ink Manufacture)

Modification History

Release	Comments
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Core unit 'BSBSUS301A Implement and monitor environmentally sustainable work practices' replaced with 'BSBSUS201A Participate in environmentally sustainable work practices', and native and imported units updated.</p> <p>Replaces ICP31110 Certificate III in Printing and Graphic Arts (Ink Manufacture).</p>

Description

This qualification applies to skilled operators engaged in the ink manufacturing sector of the printing industry. They apply a range of competencies, using some discretion and judgement and relevant theoretical knowledge. They undertake appropriate testing procedures for each stage of product manufacture, evaluate and implement improvements. They may also provide guidance to others with some limited responsibility for the output of others.

Job Roles

- Ink mixer

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is one of the following qualifications:

- ICP20110 Certificate II in Printing and Graphic Arts (General)
- ICP21110 Certificate II in Printing and Graphic Arts (Ink Manufacture).

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales)
- ICP40710 Certificate IV in Printing and Graphic Arts (Process Leadership).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • reading and interpreting job specifications from job documentation or the production control system • using printing industry terminology and vocabulary correctly and accurately
Teamwork	<ul style="list-style-type: none"> • operating production processes in association with fellow workers
Problem solving	<ul style="list-style-type: none"> • monitoring production quality and making minor adjustments to processes • monitoring variation of inks against quality standards and taking corrective action to rectify any problems
Initiative and enterprise	<ul style="list-style-type: none"> • monitoring trends in the printing industry to inform personal work practices
Planning and organising	<ul style="list-style-type: none"> • preparing the production schedule according to production, inventory, procurements, time constraints and supply capacities and requirements • selecting and preparing equipment for manufacture and quality testing of inks
Self-management	<ul style="list-style-type: none"> • following procedures and using personal protective equipment correctly • maintaining security and confidentiality of client and enterprise data and information
Learning	<ul style="list-style-type: none"> • giving and following simple routine instructions
Technology	<ul style="list-style-type: none"> • selecting and using laboratory testing equipment and techniques to test the quality of inks • using computerised control, monitoring and data entry systems • using information technology, such as computer hardware and software to access data from files

ICP40110 Certificate IV in Printing and Graphic Arts (Graphic Pre-press)

Modification History

Release	Comments
Release 2	<p>This version released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Imported elective units updated with the most current equivalent.</p>
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i>.</p>

Description

This qualification applies to individuals working in the graphic pre-press sector of the printing and graphic arts industry. They design layouts and assemble text and graphics into page formats for printing, apply solutions to a defined range of problems associated with the reproduction of images for the print medium and analyse and evaluate information from a variety of sources. They may also take responsibility for production flow and provide leadership and guidance to others with some limited responsibility for the output of others.

Job Roles

- Pre-press technician
- Production controller

Pathways Information

Pathways into the qualification

The completion of all units of competency (core and electives) necessary for the award of ICP30212 Certificate III in Printing and Graphic Arts (Graphic Pre-press), or equivalent vocational competencies.

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP50110 Diploma of Printing and Graphic Arts (Digital Production)
- ICP50410 Diploma of Printing and Graphic Arts (Management/Sales)
- ICP50510 Diploma of Printing and Graphic Arts (Process Improvement).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPMM492D Create an extensible style sheet	ICAWEB429A Create a markup language document to specification
ICPPP411C Undertake a complex design brief	ICPPP311C Develop a detailed design concept.
ICPPP421C Compose and evaluate typography	ICPPP221C Select and apply type
ICPPP485C Develop a digital data template	ICPPP385C Operate a database for digital printing

Entry Requirements

This qualification requires the completion of all units of competency (core and electives) necessary for the award of ICP30212 Certificate III in Printing and Graphic Arts (Graphic Pre-press), or equivalent vocational competencies.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • conveying and handling information • giving and following simple instructions • participating in work teams and consulting with clients about printing specifications
Teamwork	<ul style="list-style-type: none"> • consulting with designers, printers and clients to ensure production and final user requirements have been met
Problem solving	<ul style="list-style-type: none"> • identifying hazards and reporting them • tuning and adjusting machinery to ensure highest quality and yield • selecting production criteria to ensure client needs are met • evaluating and proofing own work
Initiative and enterprise	<ul style="list-style-type: none"> • finding information from a variety of sources • suggesting improvements and experimenting with materials to extend their use and meet efficiency targets • transferring skills to new environments
Planning and organising	<ul style="list-style-type: none"> • determining a plan of action to ensure deadlines are met • organising information clearly, concisely and logically
Self-management	<ul style="list-style-type: none"> • showing leadership in the resolution of problems • using discretion and confidentiality when dealing with clients • using personal protective equipment • using time efficiently to met production schedules and deadlines
Learning	<ul style="list-style-type: none"> • giving instructions that are accurate, clear, concise, comprehensive and consistent with the skills of the receiver • providing technical advice
Technology	<ul style="list-style-type: none"> • selecting and using special purpose tools, equipment and industry software packages • tuning and adjusting machinery

Packaging Rules

Total number of units = 10 units
8 elective units from Group A *plus*
2 elective units from Group B.

Up to **2 elective units** from Group A can be substituted with Group B elective units listed below.

The **2 Group B elective unit** may be selected from the remaining elective units or from qualifications at the same qualification level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Group A Elective Units

AUM4012A Apply quality assurance techniques
ICPPP252C Output images
ICPPP311C Develop a detailed design concept
ICPPP352C Output complex images
ICPPP421C Compose and evaluate typography
ICPPP430C Manage colour
ICPPP435C Generate complex imposition
ICPPP484C Set up and operate automated workflow
ICPPR387A Use colour management for production

Group B Elective Units

BSBCUS401B Coordinate implementation of customer service strategies
BSBMGT402A Implement operational plan
BSBSUS501A Develop workplace policy and procedures for sustainability
BSBWOR402A Promote team effectiveness
ICAWEB409A Develop cascading style sheets
ICPMM321C Capture a digital image
ICPMM322C Edit a digital image
ICPMM492D Create an extensible style sheet
ICPPP221C Select and apply type
ICPPP385C Operate a database for digital printing
ICPPP411C Undertake a complex design brief
ICPPP422C Digitise complex images for reproduction
ICPPP452C Output complex images direct to plate or press
ICPPP485C Develop a digital data template
ICPPR484C Prepare for variable data printing
ICPSU482C Troubleshoot and optimise materials and machinery
MSACMC410A Lead change in a manufacturing environment

MSACMT440A Lead 5S in a manufacturing environment

ICP40310 Certificate IV in Printing and Graphic Arts (Printing)

Modification History

Release	Comments
Release 2	<p>This version released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Imported elective units updated with the most current equivalent.</p>
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i>.</p>

Description

This qualification applies to individuals working as a print machinist in the printing and graphic arts industry. They prepare material, set up, monitor and operate equipment and machinery, apply solutions to a defined range of problems associated with the print medium and analyse and evaluate information from a variety of sources. They may also provide leadership and guidance to others with some limited responsibility for the output of others.

Job Roles

- Print machinist (technician)

Pathways Information

Pathways into the qualification

Candidates may enter the qualification after they have completed all units of competency (core and electives) necessary for the award of ICP30512 Certificate III in Printing and Graphic Arts (Printing), or equivalent vocational competencies.

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP50310 Diploma of Printing and Graphic Arts (Printing)
- ICP50410 Diploma of Printing and Graphic Arts (Management/Sales)
- ICP50510 Diploma of Printing and Graphic Arts (Process Improvement).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPPP311C Develop a detailed design concept	ICPPP211C Develop a basic design concept
ICPPR387A Use colour management for production	ICPPR284A Introduction to colour management
ICPPP452C Output complex image direct to plate or press	ICPPP352C Output complex images
ICPPP485C Develop a digital data template	ICPPP385C Operate a database for digital printing
ICPPR494A Apply advanced software applications to digital production	ICPPR385A Apply software applications to digital production
ICPPR495A Set up and use complex colour management for production	ICPPR387A Use colour management for production

Entry Requirements

This qualification requires the completion of all units of competency (core and electives) necessary for the award of ICP30512 Certificate III in Printing and Graphic Arts (Printing), or equivalent vocational competencies.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • reading and interpreting job requirements from the job documentation or production control system • interpreting job briefs and advising clients about options and limitations
Teamwork	<ul style="list-style-type: none"> • assisting in setting up major in-line printing/converting/binding units • working with team members to ensure efficient production
Problem solving	<ul style="list-style-type: none"> • conducting a proof run and adjusting machinery settings to ensure production speeds are attained • monitoring print quality electronically and visually and making adjustments

Packaging Rules

Total number of units = 10 units

4 core units *plus*

6 elective units.

At least **1 elective unit** must be selected from Group A elective units and at least **1 elective unit** must be selected from Group B elective units. The remaining elective units may be selected from Group A, Group B or Group C elective units.

Up to **2 elective units** may be selected from the remaining elective units, the remaining stream units or from other qualifications, at the same qualification level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

ICPPR491C Use on-press monitoring of print quality

ICPPR492C Use on-press print control devices

ICPPR493C Set up and monitor in-line printing operations

ICPSU482C Troubleshoot and optimise materials and machinery

Group A Elective Units

ICPPR284A Introduction to colour management

ICPPR385A Apply software applications to digital production

ICPPR387A Use colour management for production

ICPPR413C Set up for complex flexographic printing

ICPPR421C Set up for complex gravure printing

ICPPR431C Set up for complex lithographic printing

ICPPR441C Set up for complex pad printing

ICPPR451C Set up for complex relief printing

ICPPR496A Set up and produce complex digital print

Group B Elective Units

ICPPR414C Produce specialist flexographic printed product

ICPPR513C Set up for specialist flexographic printing **OR**

ICPPR422C Produce specialist gravure printed product

ICPPR521C Set up for specialist gravure printing **OR**

ICPPR432C Produce specialist lithographic printed product

ICPPR531C Set up for specialist lithographic printing **OR**

ICPPR442C Produce specialist pad printed product

ICPPR541C Set up for specialist pad printing **OR**

ICPPR452C Produce specialist relief printed product

ICPPR551C Set up for specialist relief printing **OR**
ICPPR484C Prepare for variable data printing
ICPPR494A Apply advanced software applications to digital production
ICPPR495A Set up and use complex colour management for production

Group C Elective Units

BSBCUS401B Coordinate implementation of customer service strategies
BSBMGT402A Implement operational plan
BSBSUS501A Develop workplace policy and procedures for sustainability
BSBWOR402A Promote team effectiveness
ICPPP211C Develop a basic design concept
ICPPP311C Develop a detailed design concept
ICPPP334C Prepare an imposition format for printing processes
ICPPP385C Operate a database for digital printing
ICPPP452C Output complex images direct to plate or press
ICPPP484C Set up and operate automated workflow
ICPPP485C Develop a digital data template
ICPPR411C Mount and proof flexographic plates for complex printing
ICPPR471C Set up for complex coating
ICPPR472C Produce complex coated product
ICPPR484C Prepare variable data for digital printing
ICPSU389C Undertake basic root cause analysis
ICPSU464C Provide customer service and education
ICPSU485C Implement a just-in-time (JIT) system
ICPSU486C Mistake proof a production process
ICPSU487C Analyse manual handling processes
MSACMC410A Lead change in a manufacturing environment
MSACMT440A Lead 5S in a manufacturing environment

ICP40410 Certificate IV in Printing and Graphic Arts (Print Finishing)

Modification History

Release	Comments
Release 2	This version released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i> . Imported elective units updated with the most current equivalent.
Release 1	This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i> .

Description

This qualification applies to individuals working as a binder and finisher in the printing and graphic arts industry. They apply solutions to a defined range of problems, and analyse and evaluate information from a variety of sources. They may provide leadership and guidance to others with some limited responsibility for the output of others.

Job Roles

- Binder and finisher (technician)

Pathways Information

Pathways into the qualification

Candidates may enter this qualification after they have completed all units of competency (core and electives) necessary for the award of ICP30712 Certificate III in Printing and Graphic Arts (Print Finishing), or equivalent vocational competencies.

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP50410 Diploma of Printing and Graphic Arts (Management/Sales)
- ICP50510 Diploma of Printing and Graphic Arts (Process Improvement).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPPR496A Set up and produce complex digital print	ICPPR384A Set up and produce basic digital print
ICPSU458C Monitor production workflow	ICPSU216C Inspect quality against required standards

Entry Requirements

This qualification requires the completion of all units of competency (core and electives) necessary for the award of ICP30712 Certificate III in Printing and Graphic Arts (Print Finishing), or equivalent vocational competencies.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • discussing book restoration treatment options with book owners • interpreting implicit and explicit requirements of the job brief
Teamwork	<ul style="list-style-type: none"> • operating production processes in association with fellow workers
Problem solving	<ul style="list-style-type: none"> • conducting a proof run and adjusting machinery settings to ensure production speeds are attained • evaluating book restoration ethical/rarity/value cost alternatives
Initiative and enterprise	<ul style="list-style-type: none"> • contributing to decision making of the work group • identifying and applying skills and knowledge to a wide variety of printing problems
Planning and organising	<ul style="list-style-type: none"> • assembling materials for binding books • planning for the shutdown of production processes
Self-management	<ul style="list-style-type: none"> • using courteous, effective, responsive and supportive communication in workplace interactions • using time efficiently to meet production schedules and timelines
Learning	<ul style="list-style-type: none"> • giving and following simple routine instructions
Technology	<ul style="list-style-type: none"> • setting up and using printing equipment and electronic monitoring systems

Packaging Rules

Total number of units = 8 units

3 core units *plus*

5 elective units.

3 elective units must be selected from the list below.

Up to **2 elective units** may be selected from the remaining elective units or from other qualifications, at the same qualification level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

ICPCF391C Use electronic monitoring systems (converting and finishing)

ICPSU482C Troubleshoot and optimise materials and machinery

ICPSU487C Analyse manual handling processes

Elective Units

BSBCUS401B Coordinate implementation of customer service strategies

BSBMGT402A Implement operational plan

BSBMGT403A Implement continuous improvement

BSBSUS501A Develop workplace policy and procedures for sustainability

BSBWOR402A Promote team effectiveness

BSBWOR404B Develop work priorities

ICPCF3103C Run and monitor envelope manufacturing machines

ICPCF406C Set up and load in-line smart card machine

ICPCF407C Operate a smart card machine and pack product

ICPCF465C Set up and produce hand-bound book

ICPCF467C Restore books

ICPPP430C Manage colour

ICPPP484C Set up and operate automated workflow

ICPPR384A Set up and produce basic digital print

ICPPR491C Use on-press monitoring of print quality

ICPPR492C Use on-press print control devices

ICPPR493C Set up and monitor in-line printing operations

ICPPR496A Set up and produce complex digital print

ICPSU216C Inspect quality against required standards

ICPSU456C Control production

ICPSU458C Monitor production workflow

ICPSU464C Provide customer service and education

ICPSU485C Implement a just-in-time (JIT) system

ICPSU486C Mistake proof a production process

ICPSU488C Ensure process improvements are sustained
MSACMC410A Lead change in a manufacturing environment
MSACMT440A Lead 5S in a manufacturing environment
MSAENV472B Implement and monitor environmentally sustainable work practices

ICP40510 Certificate IV in Printing and Graphic Arts (Mail House)

Modification History

Release	Comments
Release 2	<p>This version released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i>.</p> <p>Imported elective units updated with the most current equivalent.</p> <p>Group A elective unit ICPKN313C replaced with ICPKN318C.</p>
Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i>.</p>

Description

This qualification applies to individuals engaged in production coordination in the mail house sector of the printing and graphic arts industry. They apply solutions to a defined range of problems, and analyse and evaluate information from a variety of sources. They may provide leadership and guidance to others with some limited responsibility for the output of others.

Job Roles

- Production/process scheduler
- Team/production supervisor

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is:

- ICP31010 Certificate III in Printing and Graphic Arts (Mail House).

Pathways from the qualification

At the completion of this qualification students could choose to enter a:

- ICP50410 Diploma of Printing and Graphic Arts (Management/Sales)
- ICP50510 Diploma of Printing and Graphic Arts (Process Improvement).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPPR496A Set up and produce complex digital print	ICPPR384A Set up and produce basic digital print
ICPSU458C Monitor production workflow	ICPSU216C Inspect quality against required standards

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • reading and interpreting job requirements from the job documentation or production control system
Teamwork	<ul style="list-style-type: none"> • maintaining the production process in association with others
Problem solving	<ul style="list-style-type: none"> • monitoring production work flow, anticipating problems and addressing them early • troubleshooting and optimising materials and machinery
Initiative and enterprise	<ul style="list-style-type: none"> • identifying opportunities for improvement when monitoring production processes
Planning and organising	<ul style="list-style-type: none"> • ensuring materials for envelope manufacture are checked and available • contributing to the development of the operational plan • planning the set-up to minimise time and wastage
Self-management	<ul style="list-style-type: none"> • using courteous, effective, responsive and supportive communication in work place interactions • using discretion and confidentiality when dealing with customers
Learning	<ul style="list-style-type: none"> • obtaining feedback on customer satisfaction on an ongoing basis • providing training through instruction and the demonstration of work skills
Technology	<ul style="list-style-type: none"> • selecting and using special purpose tools, equipment and machinery for the printing industry • using technology to assist with the management of information

Packaging Rules

Total number of units = 25 units
4 core units *plus*
9 elective units from Group A *plus*
12 elective units from Group B or Group C.

Up to **2 elective units** from Group A can be substituted with Group B elective units listed below.

4 elective units must be selected from the Group B elective units and **2 elective units** from Group C elective units.

Up to **4 elective units** may be selected from the remaining elective units or from other qualifications, at the same qualification level or one level higher, in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS301A Implement and monitor environmentally sustainable work practices
ICPSU216C Inspect quality against required standards
ICPSU260C Maintain a safe work environment
ICPSU262C Communicate in the workplace

Group A Elective Units

BSBCUS401B Coordinate implementation of customer service strategies
ICPCF391C Use electronic monitoring systems (converting and finishing)
ICPKN318C Apply knowledge and requirements of mail house operations
ICPSU202C Prepare, load and unload product on and off machine
ICPSU203C Prepare and maintain the work area
ICPSU216C Inspect quality against required standards
ICPSU224C Perform basic machine maintenance
ICPSU225C Perform small machine maintenance
ICPSU243C Reconcile process outputs
ICPSU458C Monitor production workflow
ICPSU482C Troubleshoot and optimise materials and machinery
ICPSU487C Analyse manual handling processes
TLIA2041A Manually sort mail and parcels

Group B Elective Units

BSBMGT402A Implement operational plan
BSBMGT403A Implement continuous improvement

BSBWOR402A Promote team effectiveness
BSBWOR404B Develop work priorities
ICPSU464C Provide customer service and education
ICPSU482C Troubleshoot and optimise materials and machinery
ICPSU485C Implement a just-in-time (JIT) system
TAEASS402B Assess competence
TAEDEL402A Plan, organise and facilitate learning in the workplace

Group C Elective Units

BSBINN301A Promote innovation in a team environment
ICPCF3103C Run and monitor envelope manufacturing machines
ICPCF341C Set up machine for complex sequenced or multiple folding
ICPCF343C Set up machine for complex collating or inserting (sheet/section/reel)
ICPCF391C Use electronic monitoring systems (converting and finishing)
ICPCF392C Produce product on window gluer
ICPCF393C Set up machine for envelope manufacture
ICPCF395C Set up and operate folder gluer machine
ICPCF396C Set up in-line scoring, folding and gluing machine for envelope manufacture
ICPCF406C Set up and load in-line smart card machine
ICPPP385C Operate a database for digital printing
ICPPR382C Produce and manage complex digital print
ICPPR384A Set up and produce basic digital print
ICPPR496A Set up and produce complex digital print
ICPSU342C Undertake inventory procedures
ICPSU351C Undertake basic production scheduling
ICPSU352C Plan operational processes
ICPSU357C Apply quick changeover procedures
ICPSU389C Undertake basic root cause analysis
MSACMC410A Lead change in a manufacturing environment
MSACMT440A Lead 5S in a manufacturing environment
MSAENV472B Implement and monitor environmentally sustainable work practices
MSAPMSUP390A Use structured problem solving tools
TAEDEL402A Plan, organise and facilitate learning in the workplace

ICP40610 Certificate IV in Printing and Graphic Arts (Management/Sales)

Modification History

Release	Comments
Release 2	This version released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i> . Imported elective units updated with the most current equivalent.
Release 1	This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i> .

Description

This qualification applies to individuals who use well developed sales skills in the printing and graphic arts industry. They apply solutions to a defined range of problems, and analyse and evaluate information from a variety of sources. They may provide leadership and guidance to others and have limited responsibility for the output of others, however they typically report to a more senior sales practitioner.

Job Roles

- Supervisor, administration and sales

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is one of the following qualifications:

- ICP30112 Certificate III in Printing and Graphic Arts (Graphic Design Production)
- ICP30212 Certificate III in Printing and Graphic Arts (Graphic Pre-press)
- ICP30412 Certificate III in Printing and Graphic Arts (Digital Printing)
- ICP30512 Certificate III in Printing and Graphic Arts (Printing)
- ICP30612 Certificate III in Printing and Graphic Arts (Screen Printing)
- ICP30712 Certificate III in Printing and Graphic Arts (Print Finishing)
- ICP31012 Certificate III in Printing and Graphic Arts (Mail House)
- ICP31112 Certificate III in Printing and Graphic Arts (Ink Manufacture).

Pathways from the qualification

At the completion of this qualification candidates could choose to enter a:

- ICP50410 Diploma of Printing and Graphic Arts (Management/Sales).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPSU458C Monitor production workflow	ICPSU216C Inspect quality against required standards

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • accurately use correct printing industry terminology and vocabulary • using negotiation skills to encourage positive outcomes from business networks
Teamwork	<ul style="list-style-type: none"> • developing and implementing customer consultation processes with employees • supervising and scheduling the work of team members
Problem solving	<ul style="list-style-type: none"> • adjusting costing based on discrepancies between estimated and actual costing • analysing costs and timelines of promotional activities to evaluate the benefits
Initiative and enterprise	<ul style="list-style-type: none"> • continuously evaluating processes and recommending changes for improvement
Planning and organising	<ul style="list-style-type: none"> • planning and acquiring resources to implement the operational plan • planning and scheduling promotional activities • undertaking business planning
Self-management	<ul style="list-style-type: none"> • adjusting own interpersonal style and methods to suit different situations • treating people with integrity, respect and empathy to develop trust and confidence
Learning	<ul style="list-style-type: none"> • acquiring knowledge of printing industry products from various sources of information • maintaining personal knowledge and skills by participating in business networks
Technology	<ul style="list-style-type: none"> • using technology to assist with the management of information

Packaging Rules

ICP50110 Diploma of Printing and Graphic Arts (Digital Production)

Modification History

Release	Comments
Release 2	This version released with <i>ICP10 Printing and Graphic Arts Training Package version 2.0</i> . Imported elective units updated with the most current equivalent.
Release 1	This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i> .

Description

This qualification applies to individuals who possess a sound theoretical knowledge in and are responsible for digital production workflow. They analyse and evaluate information from a variety of sources and are involved in planning, scheduling and the supervision of labour, machines, and materials for digital production. They provide leadership and guidance to others with responsibility for the output of others.

Job Roles

- Production controller

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is:

- ICP40110 Certificate IV in Printing and Graphic Arts (Graphic Pre-press).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPMM491D Create an extensible document	ICAWEB429A Create a markup language document to specification
ICPMM492D Create an extensible style sheet	ICAWEB429A Create a markup language document to specification
ICPPP396A Generate high-end PDF files	ICPPP284B Produce PDF files for online or screen display
ICPPP452C Output complex image direct to plate or press	ICPPP352C Output complex images
ICPPP485C Develop a digital data template	ICPPP385C Operate a database for digital printing
ICPPR496A Set up and produce complex digital print	ICPPR384A Set up and produce basic digital print
ICPSU458C Monitor production workflow	ICPSU216C Inspect quality against required standards

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

The following table contains a summary of the Employability Skills required for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • consulting with staff and documenting recommendations to increase efficiency • interpreting the design brief and clarifying it with the client
Teamwork	<ul style="list-style-type: none"> • maintaining the production sequence in association with others • obtaining feedback from production workers
Problem solving	<ul style="list-style-type: none"> • adjusting costings based on discrepancies between the estimated and actual costings
Initiative and enterprise	<ul style="list-style-type: none"> • continuously evaluating production processes and recommending changes to make efficiency gains
Planning and organising	<ul style="list-style-type: none"> • ensuring the scan procedure is in the right sequence • matching the constraints of production to the design brief • setting up and operating automated workflow
Self-management	<ul style="list-style-type: none"> • communicating in a logical and easily understood manner • using discretion and confidentiality when dealing with clients
Learning	<ul style="list-style-type: none"> • consulting with staff and documenting recommendations to increase efficiency • interpreting the design brief and clarifying it with the client
Technology	<ul style="list-style-type: none"> • maintaining the production sequence in association with others • obtaining feedback from production workers

Packaging Rules

Total number of units = 21 units

4 core units *plus*

10 elective units from Group A *plus*

7 elective units from Group B.

Up to **2 elective units** from Group A can be substituted with Group B elective units listed below.

4 elective units must be selected from the Group B elective units listed below.

Up to **3 Group B elective units** may be selected from the remaining elective units or from other qualifications at the same qualification level or one level higher in this Training Package or any other endorsed Training Package or accredited course.

Elective units must be relevant to the qualification level, job role, work outcome and industry requirements. Unit selection is by negotiation and mutual agreement between the employee, employer and the RTO and is based on enterprise and individual needs.

Core Units

BSBSUS501A Develop workplace policy and procedures for sustainability

ICPSU216C Inspect quality against required standards

ICPSU260C Maintain a safe work environment

ICPSU262C Communicate in the workplace

Group A Elective Units

BSBCUS501C Manage quality customer service

ICAWEB429A Create a markup language document to specification

ICPKN320C Apply knowledge and requirements of information technology systems in the printing industry **OR**

ICPKN321A Apply knowledge and requirements of digital production

ICPPP322C Digitise images for reproduction

ICPPP352C Output complex images

ICPPP385C Operate a database for digital printing

ICPPR496A Set up and produce complex digital print

ICPPP484C Set up and operate automated workflow

ICPPP485C Develop a digital data template

ICPPR484C Prepare for variable data printing

ICPPR552A Manage digital production workflow

ICPSU351C Undertake basic production scheduling

ICPSU553C Prepare production costing estimates

ICPSU583C Troubleshoot and optimise production processes

MSACMT621A Develop a just-in-time (JIT) system

Group B Elective Units

BSBMGT516C Facilitate continuous improvement
BSBSMB402A Plan small business finances
BSBSMB404A Undertake small business planning
BSBSUS501A Develop workplace policy and procedures for sustainability
ICPCF381C Set up machine for complex laminating
ICPCF382C Produce complex laminated product
ICPCF391C Use electronic monitoring systems (converting and finishing)
ICPMM491D Create an extensible document
ICPMM492D Create an extensible style sheet
ICPPP284B Produce PDF files for online or screen display
ICPPP334C Prepare an imposition format for printing processes
ICPPP370C Make multiple image plates
ICPPP385C Operate a database for digital printing
ICPPP396A Generate high-end PDF files
ICPPP397A Transfer digital files
ICPPP422C Digitise complex images for reproduction
ICPPP430C Manage colour
ICPPP435C Generate complex imposition
ICPPP452C Output complex images direct to plate or press
ICPPP484C Set up and operate automated workflow
ICPPR382C Produce and manage complex digital print
ICPPR383C Prepare for personalised digital printing
ICPPR384A Set up and produce basic digital print
ICPPR471C Set up for complex coating
ICPPR472C Produce complex coated product
ICPPR491C Use on-press monitoring of print quality
ICPPR492C Use on-press print control devices
ICPPR493C Set up and monitor in-line printing operations
ICPSP351C Prepare machine and drying/curing unit
ICPSP374C Operate a semi-automatic screen printing machine
ICPSP382C Produce computer image for screen printing
ICPSU216C Inspect quality against required standards
ICPSU351C Undertake basic production scheduling
ICPSU455C Supervise and schedule work of others
ICPSU458C Monitor production workflow
ICPSU485C Implement a just-in-time (JIT) system
ICPSU488C Ensure process improvements are sustained
ICPSU553C Prepare production costing estimates
ICPSU583C Troubleshoot and optimise the production process
MSACMC410A Lead change in a manufacturing environment
MSACMT440A Lead 5S in a manufacturing environment
MSAENV472B Implement and monitor environmentally sustainable work practices
MSAPMSUP390A Use structured problem solving tools
TAEASS402B Assess competence
TAEDEL402A Plan, organise and facilitate learning in the workplace

ICP50210 Diploma of Printing and Graphic Arts (Multimedia)

Release 1	<p>This Qualification first released with <i>ICP10 Printing and Graphic Arts Training Package version 1.0</i>.</p>

Description

This qualification applies to individuals who possess a sound theoretical knowledge base and use a range of specialised, technical or managerial competencies to plan, design, carry out and evaluate the work of self and/or team in the multimedia sector of the printing and graphic arts industry. They design and author multimedia information, create electronic documents, manipulate databases and information systems.

Job Roles

- Multimedia developer
- Multimedia graphic designer
- Website designer

Pathways Information

Pathways into the qualification

Candidates may enter the qualification with limited or no vocational experience and without a relevant lower level qualification. However, the preferred pathway for candidates entering this qualification is:

- ICP40210 Certificate IV in Printing and Graphic Arts (Multimedia).

Licensing/Regulatory Information

There is no direct link between this qualification and licensing, legislative and/or regulatory requirements. However, where required, a unit of competency will specify relevant licensing, legislative and/or regulatory requirements that impact on the unit.

Units in Qualification with Prerequisites

Code and title	Prerequisite units required
ICPPP485C Develop a digital data template	ICPPP385C Operate a database for digital printing
ICPPP494C Develop document content and structure	ICPPP396A Generate high-end PDF files ICPPP284B Produce PDF files for online or screen display
ICPSU458C Monitor production workflow	ICPSU216C Inspect quality against required standards
ICPMM491D Create an extensible document	ICAWEB429A Create a markup language document to specification
ICPMM492D Create an extensible style sheet	ICAWEB429A Create a markup language document to specification
CUFANM401A Prepare 3D digital models for production	CUFANM303A Create 3D digital models

Entry Requirements

There are no entry requirements for this qualification.

------------------------	---

Application of the Unit

Application of the unit	This unit requires the individual to safely operate and monitor an in-line mail machine. The individual will be required to rectify any production faults but not machinery problems. The individual will off load the completed packages and correctly pack and label them for further distribution.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor operation	1.1. Job is signed off by printers and ready for <i>mailing procedures</i> 1.2. <i>Machine</i> is jogged to ensure correct positioning and hopper feed operation 1.3. All <i>units</i> are monitored to ensure optimum operation 1.4. Envelopes are manipulated and fanned to ensure they move efficiently through the machine 1.5. Folds, inserts and envelopes are continuously monitored for defects and defects are put aside for remake 1.6. <i>Materials</i> are checked and hoppers reloaded as required
2. Check quality	2.1. Mail is monitored to ensure quality standards are met 2.2. Supervisor is contacted when the quality standards are not met 2.3. Sequence is monitored according to job specifications 2.4. The number of spoils are documented according to enterprise procedures
3. Pack envelopes	3.1. Completed envelopes are unloaded and checked for quality 3.2. Completed packages are packed into labelled trays and Australia Post labels are affixed according to job specifications 3.3. Sequence numbers and postcodes are in correct pre-sort order ensuring job continuity 3.4. The job is reconciled and documented and the supervisor is notified if the job does not reconcile

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- basic computer skills
- OHS in relation to operating machinery
- communication skills to read job specifications
- teamwork when notifying the supervisor of problems
- problem solving when reconciling the job
- basic numeracy skills to reconcile mail
- effective communication and teamwork with colleagues and supervisors

Required knowledge

- waste disposal procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • safely operate and monitor production on an in-line mail machine and correctly notify supervisor when problems arise • demonstrate all safety devices on the machine • the individual will complete TWO entire jobs that include multiple inserts • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU243C Reconcile process outputs.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Mailing procedures</i> may include:	<ul style="list-style-type: none"> job could be mailed or returned to client.
<i>Machine</i> may include:	<ul style="list-style-type: none"> intelligent in-line cut sheet form feeder, folder and inserter.
<i>Units</i> may include:	<ul style="list-style-type: none"> hoppers, folders, inserters, folders, accumulator, sealers, exit conveyors.
<i>Materials</i> may include:	<ul style="list-style-type: none"> printed multiple or single inserts and envelopes, water for gluing, glue.
<i>Mail type</i> may include:	<ul style="list-style-type: none"> full rate, National pre-sort, DPID.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collate materials	<p>1.1. All materials required for the job are checked and confirmed against <i>job specifications</i></p> <p>1.2. Materials are <i>changed</i> or adapted according to job specifications</p> <p>1.3. Materials are arranged in a manner that makes manual collation as easy and safe as possible</p> <p>1.4. Collated materials are correct and in sequence and any faulty materials are removed and documented</p> <p>1.5. If required, items are decollated according to job specifications</p> <p>1.6. Manual wrapping of materials is completed if required according to job specifications</p>
2. Match inserts	<p>2.1. Collated data is correctly <i>matched</i> to addressee</p> <p>2.2. Address information is verified as accurate</p> <p>2.3. Random checks are performed to ensure quality is met</p> <p>2.4. Any discrepancies are reported to the supervisor</p> <p>2.5. Envelopes or packs are glued or sealed according to job specifications</p>
3. Reconcile output	<p>3.1. The total number of throughputs matches the job specifications</p> <p>3.2. The destination delivery unit rate matches the job specifications and meets Australia Post standards</p> <p>3.3. An information <i>matching</i> trail is documented</p> <p>3.4. Correct procedures for the <i>control of materials</i> are followed</p> <p>3.5. Any discrepancies are reported to the supervisor</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- basic materials handling and use of technology skills
- OHS in relation to lifting and shifting stock
- literacy skills to read job specifications and document an information matching trail
- basic numeracy skills to reconcile mail
- effective communication with colleagues and supervisors
- teamwork with colleagues and supervisors to maintain the production process
- identifying problems by using random checks to ensure quality is met and reporting discrepancies
- planning and organising to ensure that materials are in the correct order and collated correctly

Required knowledge

- waste disposal procedures

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> manually collate and insert irregular and bulky mail or packages according to job specifications and within the production timeframe demonstrate an ability to find and use information relevant to the task from a variety of information sources the individual will change individual items, collate, pick and pack mail or packages and remove any spoils or faulty work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning/observation combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Matched</i> may include:	<ul style="list-style-type: none"> the process of keeping together a unique insert to the addressee that goes with at least one other unique insert in the same package, or a unique insert to the addressee that goes with the address information located on the outside of the package
<i>Matching</i> may include:	<ul style="list-style-type: none"> labels added censoring stickers to meet: <ul style="list-style-type: none"> particular state and territory legislation meet client preferences
<i>Materials</i> may include:	<ul style="list-style-type: none"> could include magazines, bulky or large paper inserts, samples in show bags, PR or promotional materials
<i>Control of materials</i> may include:	<ul style="list-style-type: none"> includes spoils, depleted stock, oversupplies and undersupplies.

Adjustments are made when the quality standards are not met 3.7. Sequence is monitored according to job specifications 3.8. The number of spoils are documented according to enterprise procedures
4. Identify and rectify problems	4.1. Sequence or inserter errors are identified and bar codes checked and changes entered into console, if required 4.2. Tracks, conveyors and sensors are cleaned and cleared if lags and jams occur

ELEMENT	PERFORMANCE CRITERIA
	4.3. Any <i>machine consumables</i> needing replacement are replaced or adjusted with a minimum of downtime 4.4. Faulty performance of equipment is identified and reported according to enterprise procedures 4.5. Wastage is monitored, kept to a minimum and correctly disposed of according to enterprise quality standards
5. Pack envelopes	5.1. Completed envelopes are unloaded and checked for quality 5.2. Completed packages are packed into labelled trays and Australia Post labels are affixed according to job specifications 5.3. Sequence numbers and postcodes are in correct pre-sort order ensuring job continuity 5.4. The job is reconciled and documented and the supervisor is notified if the job does not reconcile 5.5. The machine is cleared and stock put away

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- using technology such as computers and in-line mail machines
- OHS in relation to operating machinery
- literacy skills to read job specifications and document results of job reconciliation
- basic numeracy skills to reconcile mail
- planning and organising by ensuring that materials are in the correct order and position prior to production
- teamwork by maintaining the production process in association with others
- problem solving by identifying and rectifying faults in the operation of the machine

Required knowledge

- waste disposal procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • safely set up, operate and monitor an in-line mail machine and rectify any faults with productions. This will be done with minimum downtime • demonstrate all safety devices on the machine • the individual will set up and complete a job that includes multiple inserts and rectify any routine production problems that occur, with minimum downtime • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment • access to an in-line cut sheet form feeder, folder and inserter.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning/observation combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU243C Reconcile process outputs.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Mailing procedures</i> may include:	<ul style="list-style-type: none"> • job could be mailed or returned to client.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • printed multiple or single inserts and envelopes, water for gluing.
<i>Mail type</i> may include:	<ul style="list-style-type: none"> • full rate • national pre-sort • DPID.
<i>Machine</i> may include:	<ul style="list-style-type: none"> • intelligent in-line cut sheet form feeder, folder and inserter.
<i>Sections</i> may include:	<ul style="list-style-type: none"> • hoppers • folders • inserters • accumulator • sealers • exit conveyors.
<i>Machinery consumables</i> may include:	<ul style="list-style-type: none"> • stacker wheels, belts, suckers, gripper arms, water brush, OMR readers, bar code readers, adjustments to a double detector.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are determined from job documentation or production control system 1.2. Availability of all job related components is checked
2. Set up sewing machine	2.1. Feeder is set up and adjusted according to job specifications 2.2. Different <i>types of thread</i> are set up according to job specifications and thread tension is correct 2.3. Different types of needles are fitted according to job specifications 2.4. The correct <i>sewing tape</i> is attached to the machine according to job specifications 2.5. Hand rules are set according to job specifications 2.6. Timing of the slitter is adjusted according to job specifications
3. Complete work	3.1. The sewing machine is operated safely according to enterprise procedures 3.2. Job is completed in required time 3.3. Samples are continuously monitored for defects and defects are removed 3.4. The locations of all emergency shutdown buttons and triggers are known 3.5. All processed product is stacked and packed in bundles

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication when checking and confirming all details required for the job against job specifications
- problem solving when selecting and checking a sample from the machine to ensure it conforms to the required quality standards
- planning and organising when preparing the job before setting up the sewing machine; planning the job to meet the required timeframe
- teamwork by maintaining the production process in association with others
- use of technology by setting up and operating fastening equipment

Required knowledge

- OHS areas that must be addressed when setting up these areas of the machine
- effect of sewing being in the wrong position
- the largest/smallest size bag or sack that can be processed on the machine
- adapting the machines to facilitate smaller/larger stock

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • set and efficiently operate a machine for sewn fastening according to job specifications and within the production timeframe • demonstrate all safety devices on the machine • set up and run a machine to produce THREE different sewn products • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment • a machine for sewn fastening.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for set up	1.1. Job specifications are read and interpreted from job documentation or process control system 1.2. Set-up is carried out correctly and in minimum time 1.3. Paper/board quantity requirements are estimated, ordered and checked
2. Set up reel transportation system	2.1. Unwind reel is set up and adjusted according to job specifications 2.2. Webbing procedures are carried out according to machinery requirements 2.3. Web control system is set up and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications
3. Set up machine for single facing	3.1. Steam delivery system is set up and adjusted to suit corrugating process and according to job specifications 3.2. Corrugating rolls and pressure roll are set to correct pressure 3.3. Starch delivery system is set up and adjusted to suit corrugating process and according to job specifications 3.4. Heat delivery system is set up and adjusted to suit corrugating process and according to job specifications
4. Set up in-line units	4.1. Wax units are set up and adjusted to suit corrugating process and according to job specifications 4.2. Coating units are set up and adjusted to suit corrugating process and according to job specifications 4.3. Slitters are set up and adjusted according to job specifications 4.4. Cut-off knife is set up and adjusted according to job specifications
5. Inspect and adjust quality	5.1. Inspection and/or testing of sample is organised 5.2. Sample is visually inspected and/or tested according to enterprise procedures 5.3. Results are interpreted to determine adjustment requirements 5.4. Adjustment changes are carried out according to

ELEMENT	PERFORMANCE CRITERIA
	product and <i>machine</i> specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication by checking and confirming all details required for the job against job specifications
- problem solving by selecting and checking a sample from the machine to ensure it conforms to the required quality standards
- planning and organising by preparing the job before setting up the sewing machine; planning the job to meet the required timeframe
- teamwork by maintaining the production process in association with others
- use of technology by setting roll pressures, adjusting steam delivery system and calibrating the equipment

Required knowledge

- significant risks that are posed to workers in this activity
- measures that are employed to prevent injury and/or illness in the case of the above identified risks
- identifying the different types/categories of rolled paperboard accurately
- end products commonly made from each of the rolled paperboard types
- principal components of a typical, single-face corrugated board adhesive
- determining satisfactory performance of this adhesive
- main tools and/or equipment items necessary for the efficient handling of paperboard rolls in the corrugation in-feed section
- setting up the machine checks
- correct settings
- product factors that are monitored automatically during production
- achieving the monitoring function
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • set up the reel in-feed, splicer, pre-conditioner, pre-heater, single facer, curing, coating and/or waxing sections of a corrugator • set up the reel in-feed, splicer, pre-conditioner, pre-heater, single facer, curing, coating and/or waxing sections of a corrugator for at least TWO different product runs, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of carton blank system	1.1. Feeder is monitored and adjusted to ensure continuous and efficient feeding to <i>machine</i> 1.2. Carton blank pick-up and transport system is monitored and adjusted to ensure accurate and continuous carton blank handling and efficient operation 1.3. Transfer systems are monitored and adjusted to ensure correct and continuous carton blank handling and efficient operation 1.4. Delivery is monitored and adjusted to ensure quality and efficient <i>product</i> delivery
2. Maintain basic gluing and continuous folding process	2.1. Registration and squareness of fold are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 2.2. Registration of gluing is monitored and adjusted to ensure quality of product meets the standard of approved sample 2.3. Adhesion is monitored and adjusted to ensure quality meets the standard of approved sample
3. Maintain production process	3.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 3.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 3.3. Performance is monitored and verified using the process control system according to enterprise procedures 3.4. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 3.5. Process adjustments to eliminate problems are reported according to enterprise procedures 3.6. Faulty performance of equipment is identified and reported according to enterprise procedures 3.7. Waste is sorted according to procedures
4. Identify and rectify minor problems	4.1. Problems in folding operation are identified and reported according to enterprise procedures 4.2. Adjustments or corrections are carried out according to enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Folding is checked to ensure correct operation</p> <p>4.4. Problems in gluing unit are identified and reported according to enterprise requirements</p> <p>4.5. Adjustments or corrections are carried out according to enterprise procedures and consistent with operator's skill level</p> <p>4.6. Gluing unit operation is checked to ensure correct operation</p>
<p>5. Conduct shutdown of production process</p>	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Glue system is washed up ready for next run and liquid waste is disposed of according to regulatory requirements and enterprise procedures</p> <p>5.4. Waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.5. Machine faults requiring repair are identified and reported to designated person, according to enterprise procedures</p> <p>5.6. Repair/adjustment is verified prior to resumption of operations</p> <p>5.7. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication by checking and confirming all details required for the job against job specifications or production control system
- problem solving by interpreting results from gathered information or evidence and making adjustments to equipment
- planning and organising by preparing the job before setting up the sewing machine planning the job to meet the required timeframe
- teamwork by maintaining the production process in association with others
- use of technology by using carton folding and gluing machines

Required knowledge

- OHS factors that must be considered when setting and/or operating machine delivery systems
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- checked to be undertaken when substrate is removed from the machine
- OHS factors that must be considered when using the folder/gluer machine
- areas to continually observe to ensure the smooth trouble-free operation of the machine
- adjusting the glue application
- OHS factors that must be considered when adjusting/correcting the machine
- causes of out-of-square folding and how each may be corrected
- segments of quality assurance that would be inspected at the completion of the sample run
- communication action that should be instigated if the job is out-of-square
- communication action that should be instigated if ink is too wet for production
- communication action that should be instigated if the job does not coincide with the sample
- part(s) of the machine that should be adjusted if carton blanks are creasing
- factors that cause poor glue adhesion on cartons
- OHS factors that must be considered when cleaning the machine
- important that tasks must be performed to correctly shut down the machine
- preparing the finished work for dispatch
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)
- quality aspects that should be considered in a completed folded job
- altering production to meet client requirements

REQUIRED SKILLS AND KNOWLEDGE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel (OR Element 2)	<p>1.1. Reel stand and rewind is monitored and adjusted to ensure efficient continuous operation and to maintain correct tension and to ensure no marks, blemishes or damage to finished product</p> <p>1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation</p> <p>1.3. Substrate is added and removed to and from the process according to job specifications</p> <p>1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery</p>
2. Maintain operation of sheet system (OR Element 1)	<p>2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine</p> <p>2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation</p> <p>2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation</p> <p>2.4. Substrate is added to process according to job specifications</p>
3. Maintain basic cutting or embossing process	<p>3.1. Cutting edge and knife or die condition is monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>3.2. Cutting/embossing pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>3.3. Registration of cutting devices and knives or dies is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>3.4. Packing of cutting/embossing devices is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p>
4. Maintain folding process	<p>4.1. Registration and squareness of fold are monitored and adjusted to ensure the quality of product meets the standard of the approved sample, if relevant</p> <p>4.2. Collating/inserting process is monitored and adjusted to ensure quality of product meets the standard of the approved sample, if relevant</p>

ELEMENT	PERFORMANCE CRITERIA
5. Maintain basic fastening (adhesive/mechanical/thermal) process	<p>5.1.Registration of fastening is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>5.2.Wire straightness, length, cut-off and clinching pressures are monitored and adjusted to ensure quality of product meets the standard of the approved sample OR</p> <p>5.3.Power current and dwell time is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p>
6. Maintain basic laminating process	<p>6.1.Registration of laminating is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>6.2.Pressures are monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>6.3.Adhesion is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>6.4.Basic in-line printing/coating processes are monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p>
7. Maintain production process	<p>7.1.Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>7.2.Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>7.3.Manual and/or automatic control is used according to job specifications</p> <p>7.4.Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>7.5.Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>7.6.Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>7.7.Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>7.8.Waste is sorted according to enterprise procedures</p>
8. Identify and rectify	8.1.Product and substrate are monitored and tested to

ELEMENT	PERFORMANCE CRITERIA
problems or faults	<p>ensure conformance to client requirements</p> <p>8.2. Problems in <i>converting/finishing</i> machine operation are identified and reported according to enterprise procedures</p> <p>8.3. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>8.4. Converting/finishing machine operation is checked to ensure correct operation</p>
9. Conduct shutdown of production process	<p>9.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>9.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>9.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>9.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>9.5. Repair/adjustment is verified prior to resumption of operations</p>
10. Clean converting/finishing machine at end of run	<p>10.1. <i>Cutting units</i> are disengaged and cleaned ready for next run</p> <p>10.2. Cutting devices are sharpened according to OHS procedures</p> <p>10.3. Machine bed is cleaned ready for next run</p> <p>10.4. Cutting devices and knives are cleaned or replaced ready for next run</p> <p>10.5. All units are disengaged and cleaned ready for next run</p> <p>10.6. <i>Adhesive</i> or glue system is washed up ready for next run, and liquid waste is disposed of according to regulatory requirements and enterprise procedures</p> <p>10.7. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run OR</p> <p>10.8. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>10.9. Production records or other documentation</p>

ELEMENT	PERFORMANCE CRITERIA
	are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication by accurately completing production records according to enterprise procedures
- problem solving by identifying and communicating problems with the operations of the converting/finishing machines
- interpreting results from gathered information or evidence and making adjustments to equipment
- planning and organising by cleaning a converting/finishing machine prior to commencement of the next run
- teamwork by maintaining the production process in association with others
- use of technology by monitoring and adjusting cutting edges, knives and or dies

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- checks needed when substrate is removed from the machine
- OHS factors that should be considered in the transport and delivery areas of the machine
- procedures that will ensure smooth transport of sections through the machine
- steps that can be taken to ensure smooth delivery of sections
- important factors to consider when setting the feeder
- the setting of the double/misfeed sheet calliper system
- the different types of sheet/section delivery systems
- the largest and smallest sheet or section size that can be run through this machine
- areas of the machine that should be adjusted to allow for 42 gsm stock
- OHS factors that must be considered when maintaining the cutting process
- indicators that demand the replacement of a knife
- adjusting cutting pressure
- removing the waste (offcut) from the work area
- important points to monitor when maintaining the cutting process which will ensure that the machine can be kept running without interruption?
- OHS factors that must be considered when problem solving on the machine maintaining the cutting process

REQUIRED SKILLS AND KNOWLEDGE

- check needed when packing cutting devices
- procedure for correcting common machine faults
- adjustments if the cover is marked (scuffed) when trimming
- OHS factors that must be considered when using the folding machine
- areas to continuously observe to ensure the smooth trouble-free operation of the machine
- areas of the in-line process that should be monitored to assure the quality of the product
- OHS factors that must be considered when adjusting/correcting the machine
- causes of out-of-square folding and explain how each may be corrected
- segments of quality assurance that would be inspected at the completion of the sample run
- communication action that should be instigated if job is out-of-square
- communication action that should be instigated if the ink is too wet for production
- communication action that should be instigated if the job does not coincide with the sample
- parts of the machine that should be adjusted if the sheet is creasing
- OHS factors that should be considered when operating the machine
- factors that govern the speed at which the machine will operate
- indicators that the machine was in need of lubrication
- OHS factors that should be considered before readjusting the machine
- method of correction that is needed to prevent double sheet feeds
- circumstances the machine would need to be adjusted
- acceptable collating result
- items that must be checked against the client's sample
- OHS factors that must be considered when using hot melt adhesive
- safety clothing that is available for use when operating adhesive binders
- OHS factors that should be considered before readjusting the machines
- areas of the in-line process that should be monitored to assure the quality of the product
- sectors to observe to ensure that the production process is trouble-free and continuous
- the need for the machine to be adjusted
- adhesive binder, adhesive application adjustment
- straightening the wire feed of a wire stitcher
- possible reasons for the welding being unsuccessful for a high frequency welder
- quality aspects that should be considered in a completed adhesive-bound job
- quality aspects that should be considered in a completed high frequency welded job
- quality aspects that should be considered in a completed wire-stitched job
- ways of altered production to meet client requirements
- OHS factors that must be considered when maintaining the laminating and in-line

REQUIRED SKILLS AND KNOWLEDGE

processes

- assuring registration of laminating
- monitoring of the in-line processes to ensure a quality product
- laminating problems that may occur during the operation of the machine
- adjustments or correction procedures that may need to be made to ensure accurate operation of the process
- quality aspects that should be considered in a completed laminated job
- in Ways of altered production to meet client requirements
- OHS factors that must be considered when conducting machine shutdown procedures
- checks that are needed when waste is removed from the machine and surrounding area for disposal or recycling
- checks that are needed during the machine shutdown procedure
- checks that are needed when the cutting devices or knives are cleaned or replaced ready for the next run
- areas of the machine that require cleaning at the end of the run
- materials that need to be cleaned from the machine
- preparing the finished work for dispatch
- keeping the machine clear of surface rust (condensation)
- features that need to be checked on the finished product
- common faults that cause product to be rejected, and how can they be fixed/avoided
- testing procedures that are available and why are they used
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- machine manuals, safety and other documentation that are relevant to this task, where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly maintain substrate operation and complete relevant finishing process according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • competency must be demonstrated on any converting or finishing equipment (whether involving one process or a sequence of processes) • demonstrate all safety devices on the machine • on the chosen equipment TWO different jobs must be demonstrated preferably involving different types, sizes and weights of substrate according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria NOTE: in the case of stand alone minor flat-bed or rotary cutting processes (as in ICPCF231B Set up machine for basic flat-bed cutting and ICPCF235B Set up machine for basic rotary cutting) THREE processes must be demonstrated. • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

EVIDENCE GUIDE	
-----------------------	--

Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example any converting, binding and finishing basic set up units.
--	--

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, corrugated board or metal.
<i>Cutting or embossing process</i> may include:	<ul style="list-style-type: none"> flat-bed/rotary/trimming.
<i>Folding units</i> may include:	<ul style="list-style-type: none"> range of machines with manual, semi-automated, fully automated or computerised process control.
<i>Collating units</i> may include:	<ul style="list-style-type: none"> range of suction and friction feed machines with manual, semi-automated, fully automated or computerised process control.
<i>Fastening units</i> may include:	<ul style="list-style-type: none"> range of machines with manual, semi-automated, fully automated or computerised process control.
<i>Laminating units</i> may include:	<ul style="list-style-type: none"> manual, semi-automated, fully automated and computerised process control.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as numbering, date stamping that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg printing or coating) it should be assessed as such.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> either single process machines or multiple process machines.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet or large or small book or section handling systems.
<i>Converting/finishing processes</i> may include:	<ul style="list-style-type: none"> single or multiple knife, manual or programmable 3- or 5-knife trimmers and spine trimmers flat-bed or rotary die or forme cutting,

RANGE STATEMENT	
	<p>embossing, flat-bed or rotary hole punching, hole drilling, slotting, slitting, sheeting, creasing, scoring, pin perforating, indexing, round cornering</p> <ul style="list-style-type: none"> • single, parallel or continuous folding of sheets, book sections or other products of identical or varied form, weight, shape • collating/inserting of sheets or book sections of identical form, weight, shape • adhesive fastening such as cold and hot melt gluing, taping • mechanical fastening such as riveting, string and wire stitching, and wire binding • thermal fastening such as high frequency and heat welding • moisture, chemical and thermal cured and extrusion laminating processes.
<i>Cutting units</i> may include:	<ul style="list-style-type: none"> • a range of machines with dies or cutting formes or 3-knife trimmers and spine trimmers with manual, semi-automated fully automated or computerised process control.
<i>Laminating adhesives</i> may include:	<ul style="list-style-type: none"> • single or two-component adhesives used in laminating.
<i>Shapes for die cutting</i> may include:	<ul style="list-style-type: none"> • simple or single shapes.
<i>Complexity for fastening</i> may include:	<ul style="list-style-type: none"> • basic refers to simple hand-fed or single-head adhesive and thermal machines, single-head mechanical machines.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare job	<p>1.1. Job specifications are read and interpreted from job documentation or production control system</p> <p>1.2. Set-up is carried out correctly in minimum time with minimum wastage</p> <p>1.3. Availability of all job related components is checked</p> <p>1.4. Grip and lay edges of sheet are identified</p>
2. Check knife sharpness	<p>2.1. Knives are checked for appropriate sharpness</p> <p>2.2. Dull knives are reported and arrangements made for them to be changed</p> <p>2.3. Cutting sticks are replaced when necessary</p>
3. Set up machine for basic guillotining	<p>3.1. Guillotine is manually set up and adjusted according to job specifications</p> <p>3.2. Clamping pressures are set up and adjusted according to job specifications</p>
4. Conduct simple cut process	<p>4.1. Material to be used for sample is organised correctly</p> <p>4.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures</p>
5. Organise sample inspection and/or testing	<p>5.1. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>5.2. Results are interpreted to determine adjustment requirements</p> <p>5.3. Adjustment changes are carried out according to product and machine specifications</p>
6. Maintain basic guillotining process	<p>6.1. Knife and <i>cutting</i> stick condition is monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>6.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>6.3. Registration of knives is monitored and adjusted to ensure quality of product meets the standard of the approved sample of the approved sample</p>
7. Maintain production process	<p>7.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>7.2. Production is maintained according to OHS</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements, manufacturer's specifications and enterprise procedures</p> <p>7.3. Manual and/or automatic control is used according to job specifications</p> <p>7.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>7.5. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>7.6. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>7.7. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>7.8. Waste is sorted according to enterprise procedures</p>
8. Identify and rectify problems and faults	<p>8.1. Problems in guillotining machine operation are identified and reported according to enterprise procedures</p> <p>8.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>8.3. Guillotining machine operation is checked to ensure correct operation</p>
9. Conduct shutdown of production process	<p>9.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>9.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>9.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>9.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>9.5. Repair/adjustment is verified prior to resumption of operations</p>
10. Clean guillotining machine at end of run	<p>10.1. Knives are replaced and cleaned ready for next run</p> <p>10.2. Machine bed is cleaned ready for next run</p> <p>10.3. <i>Cutting units</i> are disengaged and cleaned ready for next run</p>

ELEMENT	PERFORMANCE CRITERIA
	10.4. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication by accurately completing production records according to enterprise procedures
- problem solving by identifying and reporting faults in machine operation according to enterprise procedures
- planning and organising by setting up the machine in minimum time with minimal wastage
- teamwork by maintaining the production process in association with others and organising a sample inspection
- use of technology by setting up a machine for basic cutting

Required knowledge

- information concerning cutting that should be found in the job documentation or production control system
- OHS factors that must be considered when handling knife blades during the knife change operation?
- factors that indicate a new blade is needed
- problems arising from using a dull blade continuously
- identifying a sharp knife from a dull knife
- need to replace a cutting stick
- OHS factors that must be considered when setting up and operating the machine
- factors that should be considered when setting up a guillotine for cutting
- choosing correct clamping pressure for a given job
- OHS factors that must be considered when checking and adjusting the machine
- aspects of the cutting that result should be checked against the sample
- steps that should be taken if the cutting result does not coincide with the sample
- OHS factors that must be considered when maintaining the production process
- reporting procedures that should be followed if the machine malfunctions
- treat/dispose of guillotine waste
- part of the guillotine that should be checked if, after a cut, the top sheets are out-of-square?
- part of the guillotine that should be checked if, after a cut, the top sheets are creasing across the cut line?
- the need for machine lubrication
- information about correct types and methods of lubrication
- OHS factors that must be considered when shutting down or cleaning a machine
- special operations that are essential when shutting down the machine
- quality aspects that should be considered in a completed cutting job

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• machine manuals, safety and other documentation that are relevant to this task and where they are kept• documentation and information that is included in these documents |

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or process control system 1.2. Job is signed off from previous process and ready for mailing procedures 1.3. The <i>materials</i> are checked and in correct order for the job 1.4. Work area is safe and ready for production according to safety requirements
2. Set up job	2.1. Job specifications are entered into console according to job specifications 2.2. Guides and guards and cut depth are correctly set and positioned according to job specifications 2.3. Settings are checked against job specifications before production is commenced 2.4. Settings are tested with a product sample and adjustments are made if necessary
3. Operate in-line cutter	3.1. Product is loaded in correct position according to job specifications 3.2. Quality check is carried out and defective product is removed according to enterprise procedures 3.3. Adjustments are made when the quality standards are not met 3.4. Wastage is monitored, kept to a minimum and correctly disposed of according to enterprise quality standards
4. Pack cut product	4.1. Completed product is unloaded and checked for quality 4.2. Completed product is packed into labelled trays ensuring job/order continuity for transfer to the next process 4.3. Documentation relating to the product is completed correctly 4.4. The machine is cleared and stock put away

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills to read job specifications and to complete workplace documentation
- organising the job by organising materials in the correct order for the job prior to commencement
- working in a team by maintaining the production process in association with others
- using technology such as the computer console to select settings for the job
- problem solving by making adjustments to machine settings to improve the product's quality

Required knowledge

- waste disposal procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • safely operate an in-line cutter. The in-line cutter is set up to meet the job specifications with minimum downtime. The individual will monitor for quality during the process and at the end when packing the product • the individual will finish TWO complete jobs on an in-line cutter including packing the product for the next stage in the process • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment • access to an in-line cutter.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Install and replace cutting knives into machine	2.1. Appropriate knives are selected and secured to the machine 2.2. Dull blades are securely bolted into protective holder
3. Set up section transportation system	3.1. Feeder is set up and adjusted according to job specifications 3.2. Section pick-up and transportation system is set up and adjusted according to job specifications 3.3. Transfer systems are set up and adjusted according to job specifications
4. Set up stacking system	4.1. Delivery is set up and adjusted according to job specifications 4.2. Section transfer and control system is set up and adjusted according to job specifications
5. Set up machine for trimming	5.1. Trimmer knives are set up and adjusted according to job specifications 5.2. Clamping pressures are set up and adjusted according to job specifications 5.3. Stops and lays are set to remove desired trim
6. Conduct sample run	6.1. Material to be used for sample is organised correctly 6.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 6.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 6.4. Results are interpreted to determine adjustment requirements 6.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills to read job specifications and to complete workplace documentation
- organising such as laboratory testing and preparing materials and equipment for production
- working in a team by maintaining the production process in association with others
- using technology setting up the machine for cutting and trimming
- problem solving by setting up and adjusting delivery system according to job specifications

Required knowledge

- information that should be found on a job ticket or production control system
- OHS factors that must be considered when handling knife blades during the knife change operation
- safety devices that must be used when replacing trimmer knives
- knives transportation to and from the machine
- recommended knife angles for the trimming machine
- factors that indicate a new blade is needed
- the effect of continually using a dull blade
- identifying a sharp knife from a dull knife
- the need to replace a cutting stick
- OHS factors that must be considered when setting up transportation systems
- belt timing readjustment
- adjustments to ensure book is fast against book stops
- book transport speed determination
- adjustment if the book is out-of-square
- adjustment if the book is scratching or "scuffing"
- OHS factors that must be considered when setting up three-knife stacking systems
- danger areas that exist at the delivery end of the book trimming machine
- problems that can be expected in the delivery area of the machine
- batching device activation
- OHS factors that must be considered when setting up the trimming unit
- machinery safeguards that are to be considered when setting up the trimmer
- clamp pressure determination for each job
- what evidence indicates that the clamp pressure is insufficient
- the need to replace the knives

REQUIRED SKILLS AND KNOWLEDGE

- important elements that must be considered when moving knives to suit a different size book
- machine adjustments to remove more offcut from the fore edge of the book
- machine adjustment to remove more offcut from the head and tail of the book
- important elements that must be considered when moving knives to suit maximum/minimum size
- correcting the following problems: book out-of-square, book scuffing, wrong sections, incorrect cover creasing, wrong wire stitch positions, wrong sheet/section sequence, wet ink problems, book spines "bursting", waste not transferring from cut line
- machine manuals, safety and other documentation that are relevant to this task, where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up trimming machines according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine <ul style="list-style-type: none"> • Book block trimmer OR single section copy trimmer (3-knife section gather/stitch/trim) OR • Single section copy trimmer (1- or 3-knife multiple flat sheet gather/fold/stitch/trim) • OR • 5-knife trimmer • on TWO occasions using: different grammage or thickness of section or books AND different size alterations (eg A4 to A5) • apply these operations according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE	
assessment	industry sector, workplace and job role is recommended, for example: <ul style="list-style-type: none"> • ICPSU202C Prepare, load and unload product on and off machine • ICPSU207C Prepare machine for operation (basic).

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Cutting process</i> may include:	<ul style="list-style-type: none"> • single or multiple knife, manual or programmable 3- or 5-knife trimmers and spine trimmers.
<i>Cutting units</i> may include:	<ul style="list-style-type: none"> • range of semi-automated, automated or computerised 3- or 5-knife trimmers and spine trimmers.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, pressure sensitive material, board, plastics.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • large or small sheet handling systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of transportation system	1.1. Feeder is monitored and adjusted to ensure continuous and efficient feeding to the machine 1.2. Section pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet/section/book handling and efficient operation 1.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 1.4. Substrate is added to the process according to job specifications
2. Maintain section delivery system	2.1. Delivery is monitored and adjusted to ensure quality and efficient product delivery
3. Maintain cutting (trimming) process	3.1. Knife condition is monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Registration of knife(s) is monitored and adjusted to ensure quality of product meets the standard of the approved sample
4. Maintain production process	4.1. In-line printing/converting/binding/finishing processes are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 4.2. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 4.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 4.4. Manual and/or automatic control is used according to job specifications 4.5. Performance is monitored and verified using the process control system according to enterprise procedures 4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 4.7. Process adjustments to eliminate problems are

ELEMENT	PERFORMANCE CRITERIA
	<p>reported according to enterprise procedures</p> <p>4.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems and faults	<p>5.1. Problems in cutting (trimming) machine operation are identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Cutting (trimming) machine operation is checked to ensure correct operation</p> <p>5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.5. Repair/adjustment is verified prior to resumption of operations</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
7. Clean machine	<p>7.1. Knife(s), cutting sticks and machine bed are cleaned ready for next run</p> <p>7.2. Cutting machine is disengaged and cleaned ready for next run</p> <p>7.3. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.4. Section feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.5. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills to read job specifications and to complete workplace documentation
- planning and organising when shutting down equipment
- teamwork by maintaining operations with fellow workers
- using technology to set up and maintain machinery
- problem solving to identify and rectify problems

Required knowledge

- OHS factors that should be considered in the transport and delivery areas of the machine
- procedures that will ensure smooth transport of sections through the machine
- steps that can be taken to ensure smooth delivery of the sections
- OHS factors that should be considered while the trimming process is operational
- waste (offcut) removal from the work area
- procedures that will ensure that the machine can be kept running without interruption
- adjustments to be made if the cover is marked (scuffed)
- in-line processes associated with the machine.
- OHS factors that must be considered when conducting machine shutdown, maintenance and cleaning procedures
- checks to be made when waste is removed from the machine and surrounding area for disposal or recycling
- checks to be made during the machine shutdown procedure
- machine cleaning at the end of the run
- quality aspects that should be considered in a completed cutting job
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • produce accurately trimmed products within required production schedule timeframes • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • use a three-knife trimming unit to complete THREE jobs of various types, sizes and thicknesses of substrate according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Prepare cutting or embossing devices	2.1. Appropriate cutting devices or dies are selected and secured to machine according to job specifications 2.2. Cutting devices or dies are registered and proofed according to job specifications 2.3. Cutting devices or dies are correctly mounted
3. Set up reel transportation system (OR Element 4)	3.1. Unwind reel is set up and adjusted according to job specifications 3.2. Webbing procedures are carried out according to job specifications 3.3. Web control system is set up and adjusted according to job specifications 3.4. Reels are spliced/joined according to job specifications 3.5. Folder and sheeter are set up and adjusted according to job specifications
4. Set up sheet transportation system (OR Element 3)	4.1. Feeder and delivery systems are set up and adjusted according to job specifications 4.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications 4.3. Transfer systems are set up and adjusted according to job specifications 4.4. Substrate is added to and removed from the process according to job specifications 4.5. Sheet transfer and control system is set up and adjusted according to job specifications
5. Set up machine	5.1. Flat-bed cutting or embossing devices are set up and adjusted according to job specifications 5.2. Cutting/embossing pressures are set up and adjusted according to job specifications 5.3. Machine lays are set to correct position for registration
6. Set up in-line units for basic processes	6.1. Minor in-line printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications

ELEMENT	PERFORMANCE CRITERIA
	6.2. Assistance is given in set up of major in-line printing/converting/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)
7. Conduct sample run	<p>7.1. Material to be used for sample is organised correctly</p> <p>7.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>7.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>7.4. Results are interpreted to determine adjustment requirements</p> <p>7.5. Adjustment changes are carried out according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when reading and interpreting job specifications and completing workplace documentation
- planning by checking availability of all components and organising laboratory testing
- teamwork when giving assistance during the set up of major in-line printing/binding/converting units by maintaining operations with fellow workers
- using technology by adjusting the machine to facilitate accurate sheet pick-up and transportation
- problem solving by interpreting test results and adjusting the machine as required

Required knowledge

- information concerning die cutting or embossing would that you expect to find in the job documentation or production control system?
- checked needed when mounting cutting devices on a flat-bed
- checked needed when registering and proofing the cutting devices
- checked needed when securing the cutting devices to the machine
- criteria that determines the selection of particular cutting devices
- OHS concerns that are there when setting up reel transportation systems
- adjustments to the unwind reel that may be needed to suit various jobs
- important areas to be considered during webbing procedures
- OHS concerns that are there when setting up sheet transportation systems
- important areas to check during the feeder unit set up
- adjustments that can be made to the machine to facilitate accurate sheet pick-up and transportation
- important areas of the reel delivery system that may need to be adjusted according to job specifications
- steps that should be taken to ensure that the delivery system operates effectively
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- areas of the delivery system that should be observed to prevent damage to the finished product
- ways in which the folded sheets can be secured for dispatch
- OHS factors that must be considered when setting up cutting devices
- checked needed when setting up, adjusting and operating flat-bed cutting devices
- machine pressure
- machine cutting depths

REQUIRED SKILLS AND KNOWLEDGE

- adjustments needed to in-line units
- areas that should be checked to ensure the suitability of in-line processes
- details of the completed sample that should be examined to ensure conformance with the client's requirements
- product testing procedures that are available and how often should they be used
- common faults that can occur with the flat-bed cutting process
- factors that indicate a need for the replacement of knives/blades/cutting edges
- cutting edges storing to guard against damage and deterioration
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up a machine for basic flat-bed die cutting or embossing according to job specifications and within the production timeframe • demonstrate all safety devices on the machine • competency must be demonstrated on EITHER flat-bed die cutting OR embossing. For either process set up TWO jobs changing the type and size of substrates and design of finished patterns according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU201C Prepare, load and unload reels and cores on and off machine • ICPSU202C Prepare, load and unload product on and off machine

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel (OR Element 2)	1.1. Reel stand and rewind reel are monitored and adjusted to ensure efficient continuous operation and to maintain correct tension and to ensure no marks, blemishes or damage to finished product 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to and removed from the process according to job specifications 1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain operation of sheet transportation system on sheet-fed machine (OR Element 1)	2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to process according to job specifications
3. Maintain basic flat-bed cutting process	3.1. Cutting edge and knife condition are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Registration of cutting devices and knife(s) is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.4. Packing of cutting devices is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.5. Basic in-line printing/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample
4. Maintain production process	4.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>4.3. Manual and/or automatic control is used according to job specifications</p> <p>4.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.5. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.6. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.7. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.8. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems	<p>5.1. Problems in cutting (<i>flat-bed</i>) machine operation are identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Cutting (flat-bed) machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.5. Repair/adjustment is verified prior to resumption of operations</p>
7. Clean flat-bed cutting machine at end of run	<p>7.1. Cutting devices and knife(s) are cleaned or replaced ready for next run</p> <p>7.2. Cutting devices are sharpened</p> <p>7.3. Machine bed is cleaned ready for next run</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>7.4. Cutting units are disengaged and cleaned ready for next run</p> <p>7.5. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.6. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.7. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.8. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when reading and interpreting job specifications and completing workplace documentation
- planning and organising by correctly organising the materials to be used
- teamwork by maintaining operations with fellow workers
- using technology by adjusting machine devices and transportation systems
- problem solving by interpreting test results and adjusting the machine as required

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- checks needed when substrate is removed from the machine
- OHS factors that must be considered when maintaining the cutting process
- indicators that demand the replacement of a knife
- pressure adjustment
- OHS factors that must be considered when problem solving on the machine maintaining the cutting process
- checks needed when packing cutting devices
- procedure for correcting common machine faults
- OHS factors that must be considered when conducting machine shutdown procedures
- checks needed when waste is removed from the machine and surrounding area for disposal or recycling
- checks needed during machine shutdown procedures?
- checks needed when the cutting devices or knives are cleaned or replaced ready for the next run
- areas of the machine that require cleaning at the end of the run
- production records that need to be kept or written up
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly produce either a flat-bed die cut or embossed product with different types and sizes of substrate and design of finished patterns according to job specifications and within the production timeframe • demonstrate all safety devices on the machine • competency must be demonstrated on EITHER flat-bed die cutting OR embossing. For either process produce TWO jobs with different types and sizes of substrate and design of finished patterns according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU201C Prepare, load and unload reels and cores on and off machine

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• ICPSU202C Prepare, load and unload product on and off machine• ICPSU208C Operate and monitor machines (basic)• ICPCF225C Set up machine for basic flat-bed die cutting or embossing.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • wide or narrow reel or large or small sheet handling systems.
<i>Cutting process</i> may include:	<ul style="list-style-type: none"> • flat-bed die • forme cutting • embossing.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Flat-bed cutting units</i> may include:	<ul style="list-style-type: none"> • a range of machines with dies or cutting and manual, semi-automated fully automated or computerised process control.
<i>Shapes</i> may include:	<ul style="list-style-type: none"> • simple or single shapes.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare job	<p>1.1. Job specifications are read and interpreted from job documentation or production control system</p> <p>1.2. Set-up is carried out correctly in minimum time with minimum wastage</p> <p>1.3. Availability of all job related components is checked</p>
2. Mount rotary cutting or embossing devices	<p>2.1. Appropriate cutting devices or dies are selected and secured to machine according to job specifications</p> <p>2.2. Cutting devices or dies are registered and proofed</p> <p>2.3. Cutting devices or dies are correctly mounted</p>
3. Set up reel system	<p>3.1. Unwind and rewind reels are set up and adjusted according to job specifications</p> <p>3.2. Webbing procedures are carried out according to job specifications</p> <p>3.3. Web control system is set up and adjusted according to job specifications</p> <p>3.4. Reels are spliced/joined according to job specifications</p> <p>3.5. Folder and sheeter are set up and adjusted according to job specifications</p>
4. Set up sheet system	<p>4.1. Feeder and delivery systems are set up and adjusted according to job specifications</p> <p>4.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications</p> <p>4.3. Transfer systems are set up and adjusted according to job specifications</p> <p>4.4. Substrate is removed from process according to job specifications</p>
5. Set up machine for basic rotary cutting	<p>5.1. Rotary cutting devices are set up and adjusted according to job specifications</p> <p>5.2. Cutting pressures are set up and adjusted according to job specifications</p> <p>5.3. Counter knives/anvils are set in correct position</p>
6. Set up in-line units for basic processes	<p>6.1. Minor in-line printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications</p> <p>6.2. Assistance is given in set up of major in-line printing/converting/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)</p>

ELEMENT	PERFORMANCE CRITERIA
7. Conduct sample run	7.1. Material to be used for sample is organised correctly 7.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 7.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 7.4. Results are interpreted to determine adjustment requirements 7.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when reading and interpreting job specifications and completing workplace documentation
- planning and organising to ensure registration alignment of cutting devices or dies by correctly organising the materials to be used
- teamwork by giving assistance with the setting up of in-line units
- using technology by selecting appropriate cutting device or dies.
- problem solving when checking the availability of all job related components

Required knowledge

- information concerning rotary die cutting or embossing that would be expect in the job documentation or production control system
- checks needed when cutting devices are mounted on a cylinder
- checks needed when the cutting devices are attached to the machine
- OHS concerns that are there when setting up reel transportation systems
- adjustments to the unwind reel that may be needed to suit various jobs
- important areas to be considered during webbing procedures
- OHS concerns that are there when setting up sheet transportation systems
- important areas to check with the feeder unit set up
- important areas of the reel delivery system that may need to be adjusted according to job specifications
- steps that should be taken to ensure that the delivery system operates effectively
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- checks needed when substrate is removed from the machine
- ways in which the finished product can be secured for dispatch
- OHS factors that must be considered when setting up cutting devices
- determining machine pressure
- determining machine cutting depths
- the need to adjust in-line units
- details of the completed sample that should be examined to ensure conformance with the client's requirements
- storing the cutting edges, counter knives (anvils) to guard against damage and deterioration
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machines for basic rotary die cutting or embossing according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • competency must be demonstrated on EITHER rotary die cutting OR embossing. For either process set up TWO jobs changing the type and size of substrates and design of finished patterns according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel transportation system (OR Element 2)	1.1. Reel stand and rewind reel are monitored and adjusted to ensure efficient continuous operation and to maintain correct tension and to ensure no marks, blemishes or damage to finished product 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to and removed from the process according to job specifications 1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain operation of sheet transportation system (OR Element 1)	2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to process according to job specifications
3. Maintain basic rotary die cutting or embossing process	3.1. Cutting edge and knife condition are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Registration of cutting devices and knife(s) is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.4. Packing of cutting devices is monitored and adjusted to ensure quality of product meets the standard of the approved sample
4. Maintain production process	4.1. Basic in-line printing/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 4.2. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>4.4. Manual and/or automatic control is used according to job specifications</p> <p>4.5. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems and faults	<p>5.1. Problems in cutting (<i>rotary</i>) machine are identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Cutting (rotary) machine operation is checked to ensure correct operation</p> <p>5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.5. Repair/adjustment is verified prior to resumption of operations</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. <i>Substrate</i> waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
7. Clean rotary cutting machine at end of run	<p>7.1. Cutting devices and knife(s) are cleaned or replaced ready for next run</p> <p>7.2. Cutting devices are sharpened correctly</p> <p>7.3. Machine bed is cleaned ready for next run</p> <p>7.4. Cutting units are disengaged and cleaned ready for</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>next run</p> <p>7.5. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.6. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.7. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.8. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills to read and interpret job specifications and complete workplace documentation
- planning and organising by following the correct shutdown sequence
- teamwork by conducting the shutdown with fellow workers
- using technology by adjusting machinery to improve performance
- problem solving by monitoring and verifying performance using process control system

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- checks needed when substrate is removed from the machine
- OHS factors that must be considered when maintaining the cutting process
- important points to monitor when maintaining the rotary cutting process
- sectors of the basic in-line printing/converting/binding/finishing process that may need to be monitored and adjusted to meet the approved standards
- production difficulties that can be expected during production runs
- OHS factors that must be considered when problem solving on the rotary machine cutting process
- the procedure for correcting common machine faults
- OHS factors that must be considered when conducting machine shutdown procedures
- checks needed when waste is removed from the machine and surrounding area for disposal or recycling
- checks needed when cutting devices or knives are cleaned, stored or replaced ready for the next run
- areas of the machine that require cleaning at the end of the run
- quality aspects that should be considered in a completed rotary cutting job
- production areas that may have to be adjusted to meet client requirements
- machine manuals, safety and other documentation that are relevant to this task and where they are kept

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Mount flat-bed cutting devices	2.1. Cutting devices are correctly mounted 2.2. Cutting devices are registered and proofed 2.3. Appropriate cutting devices are selected and secured to machine according to job specifications
3. Set up reel system (OR Element 4)	3.1. Unwind and rewind reels are set up and adjusted according to job specifications 3.2. Webbing procedures are carried out according to enterprise procedures 3.3. Web control system is set up and adjusted according to job specifications 3.4. Reels are spliced/joined according to job specifications 3.5. Folder and sheeter are set up and adjusted according to job specifications
4. Set up sheet system (OR Element 3)	4.1. Feeder and delivery systems are set up and adjusted according to job specifications 4.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications 4.3. Transfer systems are set up and adjusted according to job specifications 4.4. Substrate is removed from process according to job specifications
5. Set up machine	5.1. Flat-bed cutting devices are set up and adjusted according to job specifications 5.2. Cutting pressures are set up and adjusted according to job specifications 5.3. Machine lays are set to correct position for registration
6. Assist in set up for other in-line processes	6.1. Assistance is given in set up of in-line printing/ converting/binding units. (NOTE: if entire set up is completed, refer to appropriate competency standards) 6.2. Minor in-line printing processes (date stamping, numbering) are set up correctly (if relevant)

ELEMENT	PERFORMANCE CRITERIA
7. Conduct sample run	7.1. Material to be used for sample is organised correctly 7.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 7.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 7.4. Results are interpreted to determine adjustment requirements 7.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills to read and interpret job specifications and to complete workplace documentation
- planning and organising by setting up the machine for basic flat-bed cutting
- teamwork by conducting the shutdown with fellow workers
- using technology by setting up the sheet delivery system
- problem solving by removing substrate from the process according to job specifications

Required knowledge

- information concerning flat-bed hole punching/indexing/creasing and scoring that you would expect to find in the job documentation or production control system
- checks needed when cutting devices are mounted on a cylinder
- checks needed when the cutting devices are attached to the machine
- OHS concerns that are there when setting up reel transportation systems
- adjustments to the unwind reel that may be needed to suit various jobs?
- webbing procedure considerations
- OHS concerns that are there when setting up sheet transportation systems
- important areas to check when the feeder unit is set up
- important areas of the reel delivery system that may need to be adjusted according to job specifications
- steps that should be taken to ensure that the delivery system operates effectively
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- checks needed when substrate is removed from the machine
- ways in which the finished product can be secured for dispatch
- OHS factors that must be considered when setting up cutting devices
- determining machine pressure
- determining machine cutting depths
- the need to adjust in-line units
- details of the completed sample that should be examined to ensure conformance to the client's requirements
- cutting tools and equipment storage to guard against damage and deterioration
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machinery for basic flat bet cutting according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • competency must be demonstrated on any THREE different processes. For each process set up TWO jobs changing the type and size of substrates and design of finished patterns according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU201C Prepare, load and unload reels and cores on and off machine • ICPSU202C Prepare, load and unload product on and off machine

EVIDENCE GUIDE

- ICPSU207C Prepare machine for operation (basic)
- ICPCF220C Produce basic converted or finished product.

Since the component processes often occur as in-line processes they may also be assessed at the same time as virtually any printing, converting, binding and finishing or corrugating set up.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Cutting process</i> may include:	<ul style="list-style-type: none"> perforating, sprocket hole punching, slotting, sheeting, slitting, creasing, scoring.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet handling systems.
<i>Flat-bed cutting units</i> may include:	<ul style="list-style-type: none"> a range of machines with dies or cutting formes and manual, semi-automated, fully automated or computerised process control.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as numbering, date coding. Where a major in-line process is defined as a separate competency (eg folding) it should be assessed as such.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, corrugated board or metal.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain reel transportation system (OR Element 2)	<p>1.1. Reel stand and rewind sections are monitored and adjusted to ensure efficient continuous operation to maintain correct tension and to ensure no marks, blemishes or damage to finished product</p> <p>1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation</p> <p>1.3. Substrate is added to and removed from the process according to job specifications</p> <p>1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery</p>
2. Maintain sheet transportation system (OR Element 1)	<p>2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine</p> <p>2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation</p> <p>2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation</p> <p>2.4. Substrate is added to the process according to job specifications</p>
3. Maintain basic flat-bed cutting process	<p>3.1. Cutting edges and knife condition are monitored and adjusted to ensure the quality of product meets the standard of the approved sample Webbing procedures are carried out according to enterprise procedures</p> <p>3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample Reels are spliced/joined according to job specifications</p> <p>3.3. Registration of cutting devices and knife(s) is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>3.4. Packing of cutting devices is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p>
4. Maintain production process	<p>4.1. Basic in-line printing/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>4.2. Production process is operated in association with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>fellow workers and according to enterprise procedures and planned daily schedule</p> <p>4.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>4.4. Manual and/or automatic control is used according to job specifications</p> <p>4.5. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems and faults	<p>5.1. Problems in <i>flat-bed cutting</i> machine operation are identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Flat-bed cutting machine operation is checked to ensure correct operation</p> <p>5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.5. Repair/adjustment is verified prior to resumption of operations</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
7. Clean flat-bed cutting machine at end of run	<p>7.1. Cutting devices and knife(s) are cleaned or replaced ready for next run</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>7.2. Cutting devices are sharpened</p> <p>7.3. Machine bed is cleaned ready for next run</p> <p>7.4. Cutting units are disengaged and cleaned ready for next run</p> <p>7.5. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.6. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.7. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.8. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills by monitoring and verifying performance using process control systems
- planning and organising by monitoring and adjusting transportation systems
- teamwork by conducting the shutdown with fellow workers
- using technology by adjusting machinery to improve performance
- problem solving by identifying problems and faults and developing solutions

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- checks needed when substrate is removed from the machine
- OHS factors that must be considered when maintaining the cutting process
- indicators that demand the replacement of a knife
- cutting pressure adjustment
- OHS factors that must be considered when problem solving on the machine maintaining the cutting process
- checks needed when packing cutting devices
- the procedure for correcting common machine faults
- OHS factors that must be considered when conducting machine shutdown procedures
- checks needed when waste is removed from the machine and surrounding area for disposal or recycling?
- checks needed during the machine shutdown procedure
- checks needed when the cutting devices or knives are cleaned or replaced ready for the next run
- machine cleaning requirements at the end of the run
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce products involving a range of minor flat-bed cutting processes including: kiss cutting, hole punching, hole drilling, slotting, slitting, sheeting, creasing, scoring, and pin perforating, indexing and round cornering according to job specifications and production timeframes demonstrate an ability to find and use information relevant to the task from a variety of information sources competency must be demonstrated on THREE different processes. For each process produce TWO jobs with different types and sizes of substrate and design of finished patterns, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPSU201C Prepare, load and unload reels and cores on and off machine

EVIDENCE GUIDE

- ICPSU202C Prepare, load and unload product on and off machine
- ICPSU208C Operate and monitor machines (basic).

Since the component processes often occur as in-line processes they may also be assessed at the same time as virtually any printing, converting, binding and finishing or corrugating process.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet handling systems.
<i>Cutting process</i> may include:	<ul style="list-style-type: none"> flat-bed hole punching, hole drilling, slotting, slitting, sheeting, creasing, scoring, pin perforating, indexing, round cornering.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Flat-bed cutting units</i> may include:	<ul style="list-style-type: none"> a range of machines with dies, cutting formes or drills and manual, semi-automated fully automated or computerised process control.
<i>Shapes</i> may include:	<ul style="list-style-type: none"> simple or single shapes.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Mount rotary cutting devices to cylinders	2.1. Cutting devices are correctly mounted 2.2. Cutting devices are registered and proofed 2.3. Appropriate cutting devices are selected and secured to machine according to job specifications
3. Set up reel system (OR Element 4)	3.1. Unwind and rewind reels are set up and adjusted according to job specifications 3.2. Webbing procedures are carried out according to enterprise procedures 3.3. Web control system is set up and adjusted according to job specifications 3.4. Reels are spliced/joined according to job specifications 3.5. Folder and sheeter are set up and adjusted according to job specifications
4. Set up sheet system (OR Element 3)	4.1. Feeder and delivery systems are set up and adjusted according to job specifications 4.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications 4.3. Transfer systems are set up and adjusted according to job specifications 4.4. Substrate is removed from process according to job specifications
5. Set up machine	5.1. Rotary cutting devices are set up and adjusted according to job specifications 5.2. Cutting pressures are set up and adjusted according to job specifications 5.3. Counter knives/anvils are set in correct position
6. Assist in set up for other in-line processes	6.1. Assistance is given in set up of in-line printing/ converting/binding units. (NOTE: if entire set up is completed, refer to appropriate competency standards) 6.2. Minor in-line printing processes (date stamping, numbering) are set up correctly (if relevant)

ELEMENT	PERFORMANCE CRITERIA
7. Conduct sample run	7.1. Material to be used for sample is organised correctly 7.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 7.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 7.4. Results are interpreted to determine adjustment requirements 7.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills by monitoring and verifying performance using process control systems
- planning and organising a sample run
- teamwork by conducting the shutdown with fellow workers
- using technology by setting up the machine for basic rotary cutting
- problem solving by removing substrate from the process according to job specifications

Required knowledge

- information concerning rotary hole punching/indexing/creasing and scoring that you would expect to find in the job documentation or production control system?
- checks needed when cutting devices are mounted on a cylinder
- checks needed when the cutting devices are attached to the machine
- OHS concerns that are there when setting up reel transportation systems
- adjustments to the unwind reel that may be needed to suit various jobs
- the important areas that are to be considered during webbing procedures
- OHS concerns that are there when setting up sheet transportation systems
- important areas to check when the feeder unit is set up
- important areas of the reel delivery system that may need to be adjusted according to job specifications
- steps that should be taken to ensure that the delivery system operates effectively
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- check needed when substrate is removed from the machine
- ways in which the finished product can be secured for dispatch
- OHS factors that must be considered when setting up cutting devices
- determining machine pressure
- determining machine cutting depths
- the need to adjust in-line units
- details of the completed sample that should be examined to ensure conformance to the client's requirements
- cutting tools and equipment storage to guard against damage and deterioration
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Embarrass

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain reel transportation system (OR Element 2)	<p>1.1. Reel stand and rewind section are monitored and adjusted to ensure efficient continuous operation and maintain correct tension and to ensure no marks, blemishes or damage to finished product</p> <p>1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation</p> <p>1.3. Substrate is added to and removed from the process according to job specifications</p> <p>1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery</p>
2. Maintain sheet transportation system (OR Element 1)	<p>2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine</p> <p>2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation</p> <p>2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation</p> <p>2.4. Substrate is added to process according to job specifications</p>
3. Maintain basic rotary cutting process	<p>3.1. Cutting edges and knife condition are monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>3.3. Registration of cutting devices and knife(s) are monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>3.4. Packing of cutting devices is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p>
4. Maintain production process	<p>4.1. Basic in-line printing/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>4.2. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>4.4. Manual and/or automatic control is used according to job specifications</p> <p>4.5. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems and faults	<p>5.1. Problem in <i>rotary cutting</i> machine operation is identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Rotary cutting machine operation is checked to ensure correct operation</p> <p>5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.5. Repair/adjustment is verified prior to resumption of operations</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
7. Clean rotary cutting machine at end of run	<p>7.1. Cutting devices and knife(s) are cleaned or replaced ready for next run</p> <p>7.2. Cutting devices are sharpened</p> <p>7.3. Machine bed is cleaned ready for next run</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>7.4. Cutting units are disengaged and cleaned ready for next run</p> <p>7.5. In-line printing/convertng/binding/finishing units are cleaned ready for next run</p> <p>7.6. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.7. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.8. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills by monitoring and verifying performance using process control systems
- planning and organising when monitoring and adjusting transportation systems
- teamwork by conducting the shutdown with fellow workers
- using technology by adjusting machinery to improve performance
- identifying problems and faults and developing solutions

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- checks needed when substrate is removed from the machine
- OHS factors that must be considered when maintaining the cutting process
- important points to monitor when maintaining the rotary cutting process
- sectors of the basic in-line printing/converting/binding/finishing process that may need to be monitored and adjusted to meet the approved standards
- production difficulties that can be expected during production runs
- OHS factors that must be considered when problem solving on the rotary machine cutting process
- the procedure for correcting common machine faults
- OHS factors that must be considered when conducting machine shutdown procedures
- checks needed when waste is removed from the machine and surrounding area for disposal or recycling
- checks needed when cutting devices or knives are cleaned, stored or replaced ready for the next run
- areas of the machine that require cleaning at the end of the run
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- quality aspects that should be considered in a completed rotary cutting job
- production areas that may have to be adjusted to meet client requirements
- machine manuals, safety and other documentation that are relevant to this task and

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reel system (OR Element 3)	2.1. Unwind and rewind reels are set up and adjusted according to job specifications 2.2. Webbing procedures are carried out according to job specifications 2.3. Web control system is set up and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications
3. Set up sheet (OR Element 2)	3.1. Feeder and delivery systems are set up and adjusted according to job specifications 3.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications 3.3. Transfer systems are set up and adjusted according to job specifications 3.4. Sheet transfer and control system is set up and adjusted according to job specifications
4. Set up machine for basic single or continuous folding	4.1. Folding units are set up and adjusted according to job specifications 4.2. Folding rollers/belts/rails are set up and adjusted according to job specifications
5. Set up in-line units for basic processes	5.1. Minor in-line printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications 5.2. Assistance is given in set up of major in-line printing/converting/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)
6. Conduct sample run	6.1. Material to be used for sample is organised correctly 6.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 6.3. Sample is visually inspected to determine adjustment requirements

ELEMENT	PERFORMANCE CRITERIA
	6.4. Results are interpreted to determine adjustment requirements 6.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when assisting with the set up of in-line units with other people, and reading and interpreting job specifications
- planning and organising when visually assessing the sample to determine adjustment requirements
- teamwork by conducting the shutdown with fellow workers
- using technology by setting up sheet delivery system on sheet-fed machine
- identifying problems and faults and developing solutions

Required knowledge

- information concerning folding requirements that would you expect to find in the job documentation or production control system
- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- OHS factors that must be considered when setting folder transportation and delivery systems
- areas of the sheet-fed transportation system that should be monitored to ensure trouble-free operation
- areas of the delivery system that should be observed to prevent damage to the finished product
- ways that folded sheets can be secured for dispatch
- OHS factors that must be considered when setting up and/or adjusting the folding unit?
- substrate scratching/scuffing during transportation
- the speed of the machine
- problems that can be expected if the machine is running too fast
- checks of roller pressures for correctness
- adjustment if the sheet is out-of-square
- possible reasons for the sheet being out-of-square
- adjustment to ensure that the sheets are not smudging/"scuffing"
- adjustments if the sheet will not leave the folding unit
- OHS factors that must be considered when adjusting machine units
- steps that should be taken to ensure correct alignment of in-line processes/units
- adjustments that are made to keep units correctly positioned
- segments of quality assurance that would be inspected at the completion of the sample run

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• communication action that should be instigated if job is out-of-square• communication action that should be instigated if ink is too wet for production• communication action that should be instigated if the job does not coincide with the sample• machine manuals, safety and other documentation that are relevant to this task and where they are kept• information that is included in these documents |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machines for basic folding according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • set up TWO jobs (if possible using different sizes and weights of substrate) EITHER with a single fold to run continuously OR a single quire fold on a sheet gather/stitch/fold/trim machine OR an automatic web-fed machine to achieve a single fold according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • assessment off the job must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU201C Prepare, load and unload reels and cores on and off machine • ICPSU202C Prepare, load and unload product on and

EVIDENCE GUIDE

off machine

- ICPSU207C Prepare machine for operation (basic)
- ICPCF220C Produce basic converted or finished product.

Depending on the configuration of equipment and types of jobs, the following units may also be assessed at the same time:

- ICPCF231C Set up machine for basic flat-bed cutting
- ICPCF235C Set up machine for basic rotary cutting
- ICPCF261C Set up machine for basic adhesivemechanical or thermal fastening
- ICPCF320C Produce complex converted or finished product
- ICPCF361C Set up machine for complex adhesive, mechanical or sewn fastening.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Folding process</i> may include:	<ul style="list-style-type: none"> single, parallel or continuous folding.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet handling systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain reel transportation system (OR Element 2)	1.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. A Substrate is added to the process according to job specifications
2. Maintain sheet transportation system (OR Element 1)	2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to the process according to job specifications
3. Maintain production process	3.1. Registration and squareness of fold are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Basic <i>in-line</i> printing/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 3.4. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 3.5. Manual and/or automatic control is used according to job specifications 3.6. Performance is monitored and verified using the process control system according to enterprise procedures 3.7. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 3.8. Process adjustments to eliminate problems are reported according to enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
	<p>3.9. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>3.10. Waste is sorted according to enterprise procedures</p>
4. Identify and rectify problems and faults	<p>4.1. Problems in <i>folding</i> (single/continuous) machine operation are identified and reported according to enterprise procedures</p> <p>4.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>4.3. Folding (single/continuous) machine operation is checked to ensure correct operation</p> <p>4.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>4.5. Repair/adjustment is verified prior to resumption of operations</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
6. Clean folding (single/continuous) machine at end of run	<p>6.1. Folding units are disengaged and cleaned ready for next run</p> <p>6.2. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>6.3. Reel feed and transportation systems are disengaged and cleaned ready for next run</p> <p>6.4. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>6.5. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when monitoring and verifying performance using process control systems
- planning and organising when monitoring and adjusting transportation systems
- teamwork when conducting the shutdown with fellow workers
- using technology by adjusting machinery to improve performance
- identifying problems and faults and developing solutions

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- checks needed when substrate is removed from the machine
- OHS factors that must be considered when using the folding machine
- areas to continuously observe to ensure the smooth trouble-free operation of the machine
- areas of the in-line process that should be monitored to assure the quality of the product
- OHS factors that must be considered when adjusting/correcting the machine
- TWO causes of out-of-square folding and explain how each may be corrected
- segments of quality assurance that would be inspected at the completion of the sample run
- communication action that should be instigated if job is out-of-square
- communication action that should be instigated if ink is too wet for production
- communication action that should be instigated if the job does not coincide with the sample
- part(s) of the machine that should be adjusted if the sheet is creasing
- OHS factors that must be considered when cleaning the machine
- important tasks that must be performed to correctly shut down the machine
- finished work preparation for dispatch
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)

REQUIRED SKILLS AND KNOWLEDGE

- | |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up sheet/section system	2.1. Feeder and delivery systems are set up and adjusted according to job specifications 2.2. Double/misfeed detectors are set up according to job specifications 2.3. Sheet/section pick-up, transfer and transportation system is set up and adjusted according to job specifications 2.4. Transfer systems are set up and adjusted according to job specifications
3. Set up machine and conduct sample run	3.1. Collating/inserting system is set up and adjusted according to job specifications 3.2. Material to be used for sample is organised correctly 3.3. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures
4. Organise sample inspection and/or testing	4.1. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 4.2. Results are interpreted to determine adjustment requirements 4.3. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when monitoring and verifying performance using process control systems and reading and interpreting job specifications
- planning and organising when setting up the sheet/section delivery system according to job specifications
- teamwork when conducting the shutdown with fellow workers
- using technology by using the double/misfeed sheet calliper system
- identifying problems and faults and developing solutions, for example interpreting the results of tests and determining adjustment requirements

Required knowledge

- important information concerning collating that will be included in the job documentation or production control system
- OHS factors that need to be considered when setting up sheet/section transportation and delivery systems
- important factors to consider when setting up the feeder
- the setting up of the double/misfeed sheet calliper system
- considerations needed to ensure smooth transportation and delivery of the sheets or sections through the machine
- the names of the different types of sheet/section delivery systems
- the largest and smallest sheet or section size that can be run through this machine
- areas of the machine that should be adjusted to allow for 42 gsm stock
- the major OHS factors to consider when running this machine
- factors that govern the speed at which the machine can operate
- indicator that the machine was in need of lubrication
- OHS factors that need to be considered before readjusting the machine
- an acceptable collating result
- the cause of sheets creasing in the machine delivery
- adjustment that should be made to the machine to alleviate "bruising" of NCR paper
- circumstances that the machine would need to be adjusted
- machine manuals, safety and other documentation that are relevant to this task, where they are kept and information that is included in these documents

Evidence Guide

Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when monitoring and verifying performance using process control systems and reading and interpreting job specifications
- planning and organising when setting up the sheet/section delivery system according to job specifications
- teamwork when conducting the shutdown with fellow workers
- using technology by adjusting machinery to improve performance
- identifying problems and faults and developing solutions

Required knowledge

- OHS factors that should be considered when operating the machine
- factors that govern the speed at which the machine will operate
- OHS factors that should be considered before readjusting the machine
- method of correction that is needed to prevent double sheet feeds
- circumstances that the machine needs to be adjusted
- checks needed when shutting down the machine correctly
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)
- an acceptable collating result
- items that must be checked against client's sample
- machine manuals, safety and other documentation that are relevant to this task, where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Produce a collated product that meets job specifications, production timeframes and quality standards • Demonstrate an ability to find and use information relevant to the task from a variety of information sources • Use a collating machine for basic collating (gathering and/or inserting) for TWO different jobs (if possible ONE sheet and ONE section) involving at LEAST FOUR or FIVE products, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • Demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked 1.4. <i>Collating/inserting</i> system is set up according to job specifications
2. Conduct sample run	2.1. Material to be used for sample is organised correctly 2.2. Collating or inserting system is operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures
3. Organise sample inspection and/or testing	3.1. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 3.2. Results are interpreted to determine adjustment requirements 3.3. Adjustment changes are carried out according to product specifications
4. Maintain production process	4.1. Hand collating process is monitored and adjusted to ensure quality of product meets the standard of the approved sample 4.2. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 4.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 4.4. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 4.5. Process adjustments to eliminate problems are reported according to enterprise procedures
5. Clean work area at end of run	5.1. Collating area is cleaned ready for next run 5.2. Waste is sorted according to enterprise procedures 5.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures 5.4. Production records or other documentation are

ELEMENT	PERFORMANCE CRITERIA
	accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when adjusting production in consultation with clients and reading and interpreting job specifications from job documentation or production control systems
- planning and organising sample inspection and/or testing
- teamwork when maintaining the production process in association with fellow workers
- using technology by readjusting the collating system
- problem solving by anticipating production difficulties through preventive action

Required knowledge

- important information concerning this task that would be found on the production control job ticket
- steps that should be taken to ensure that the important features of the production control system are followed
- production records that need to be kept or written up
- information that should be included in this reporting procedure and why
- ergonomic and OHS factors that should be considered when setting up the job to facilitate ease of operation
- facilities that are available to assist with the picking up of product by hand
- precautions that should be taken when handling NCR paper
- methods that can be used to separate finished sets of product
- assistance to open of sections to be inserted
- adjustment that should be made to the set up to facilitate a two- or three-person operation
- printed images on sections that ensure correct sequencing
- how these images assure the correct sequence of sections
- steps that should be taken to ensure that important features of the production control system are followed
- areas of the finished product that should be inspected
- steps that should be taken if the test sample is incorrect
- processing remaining sheets (overs) at the completion of the job
- manuals, safety and other documentation that are relevant to this task, wherekept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Correctly set up and produce hand collated and inserted product according to job specifications and within the production timeframe • Demonstrate an ability to find and use information relevant to the task from a variety of information sources • Set up and collate TWO different jobs (at least FIVE products, and if possible ONE sheet job and ONE section job) by hand according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • Assessment may take place on the job, off the job or a combination of these • Assessment off the job must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Collating/inserting process</i> may include:	<ul style="list-style-type: none"> • manual collating/inserting of sheets, book sections or other products of identical or varied form, weight, shape.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • large or small sheet/sections.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reel system (OR Element 3)	2.1. Unwind and delivery reels are set up and adjusted according to job specifications 2.2. Webbing procedures are carried out according to job specifications 2.3. Web control system is set up and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications
3. Set up sheet/section system (OR Element 2)	3.1. Feeder and delivery systems are set up and adjusted according to job specifications 3.2. Sheet/section pick-up and transportation system is set up and adjusted according to job specifications 3.3. Transfer systems are set up and adjusted according to job specifications 3.4. Substrate is removed from the process according to job specifications 3.5. Sheet/section transfer and control system is set up and adjusted according to job specifications
4. Set up equipment and in-line units	4.1. Fastening system is set up and adjusted according to job specifications 4.2. Minor in-line printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications 4.3. Assistance is given in set up of major in-line printing/converting/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)
5. Conduct sample run	5.1. Raw material to be used for sample is organised correctly 5.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 5.3. Sample is visually inspected and/or tested or

ELEMENT	PERFORMANCE CRITERIA
	laboratory testing is organised according to enterprise procedures 5.4. Results are interpreted to determine adjustment requirements 5.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when organising a laboratory test if required and reading and interpreting job specifications
- planning and organising when conducting a sample run
- teamwork by giving assistance with setting up in-line units
- using technology by setting up and adjusting the fastening system according to job specifications
- problem-solving by interpreting sample results to determine adjustment requirements

Required knowledge

- information concerning binding requirements that would you expect to find in the job documentation or production control system
- information interpretation to ensure smooth workflow throughout the factory
- elements that must be considered when planning a binding sample
- OHS areas that must be addressed when setting up these areas of the machine
- webbing procedures commonly used in the transportation area
- areas to consider when setting up the web control system
- problem areas likely to be encountered when setting up the sheeter
- OHS factors that must be considered when setting up the delivery systems
- special delivery problems that are associated with adhesive machines
- overcoming these problems
- checks needed when using the delivery systems present on the various machines
- ways in which the completed work can be secured for dispatch
- OHS areas that must be addressed when setting up the machine
- OHS safeguards that are necessary with hot melt adhesives
- correct binding technique for a job
- the methods of adhesive metering present on the machine
- care that should be taken to ensure a neat and clean adhesive binding job
- parts of the wire stitcher that would need to be adjusted to process books of different thicknesses
- positioning of the wire stitches on the book
- the difference between a staple and a wire stitch
- determining the appropriate wire calliper for a particular job
- OHS factors that must be addressed when setting up these areas of the machine
- in-line units that are available for these binding processes

REQUIRED SKILLS AND KNOWLEDGE

- OHS factors that should be considered before readjusting the machine
- circumstances under which the machine would need to be adjusted
- quality aspects that should be considered in the completed binding job
- steps that should be taken to ensure that important features of the production control system are addressed
- machine manuals, safety and other documentation that are relevant to this task, where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Correctly set up machine for basic fastening according to job specifications and within the production timeframe • Demonstrate an ability to find and use information relevant to the task from a variety of information sources • Demonstrate all safety devices on the machine • Set up machine on TWO occasions for adhesive OR mechanical OR thermal fastening, using different weights and sizes of substrate according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • Demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • Assessment may take place on the job, off the job or a combination of these. • Assessment off the job must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain reel transportation system (OR Element 2)	1.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to process according to job specifications
2. Maintain sheet transportation system (OR Element 1)	2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operations 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to process according to job specifications
3. Maintain basic adhesive/mechanical/thermal fastening process	3.1. Registration of fastening is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.2. Wire straightness, length, cut-off and clinching pressures are monitored and adjusted to ensure quality of product meets the standard of the approved sample OR 3.3. Adhesion is monitored and adjusted to ensure quality of product meets the standard of the approved sample OR 3.4. Power current and dwell time is monitored and adjusted to ensure quality of product meets the standard of the approved sample adjusted according to job specifications
4. Maintain production process	4.1. Basic in-line printing/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 4.2. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 4.3. Production is maintained according to OHS requirements, manufacturer's specifications and

ELEMENT	PERFORMANCE CRITERIA
	<p>enterprise procedures</p> <p>4.4. Manual and/or automatic control is used according to job specifications</p> <p>4.5. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.8. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems and faults	<p>5.1. Problems in adhesive/mechanical/thermal fastening machine are identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Adhesive/mechanical/thermal fastening machine operation is checked to ensure correct operation</p> <p>5.4. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>5.5. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.6. Repair/adjustment is verified prior to resumption of operations</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
7. Clean machine at end of run	<p>7.1. Mechanical <i>fastening unit</i> is disengaged and cleaned ready for next run</p> <p>7.2. Thermal fastening unit is disengaged and cleaned ready for next run</p> <p>7.3. Glue system is washed up ready for next run and liquid waste is disposed of according to regulatory</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements and enterprise procedures 7.4. In-line printing/converting/binding/finishing units are cleaned ready for next run 7.5. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run 7.6. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run 7.7. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when monitoring and verifying performance using process controls
- planning and organising when following the correct shutdown sequence
- teamwork when conducting shutdown with fellow workers
- using technology by adjusting machinery to improve performance
- identifying problems and faults and developing solutions

Required knowledge

- OHS factors that must be considered when operating web machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- OHS factors that must be considered when operating sheet-fed transportation and delivery systems
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- areas of the delivery system that should be observed to maintain tension
- areas of the delivery system that should be observed to prevent damage to the finished product
- checks needed when substrate is removed from the machine
- OHS factors that must be considered when using hot melt adhesive
- safety clothing that is available for use when operating adhesive binders
- OHS factors that should be considered before readjusting the machine
- areas of the in-line process that should be monitored to assure the quality of the product
- sectors to observe to ensure that the production process is trouble-free and continuous
- when the machine needs to be adjusted
- adjustment of the adhesive application on the adhesive binder
- straightening the wire in the wire feed on the wire stitcher
- possible reasons for the welding being unsuccessful for a high frequency welder
- OHS factors that must be considered when shutting down and cleaning the machine
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)
- quality aspects that should be considered in a completed adhesive bound job

REQUIRED SKILLS AND KNOWLEDGE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked 1.4. Fastening system is set up and adjusted according to job specifications
2. Conduct sample run	2.1. Raw material to be used for sample is organised correctly 2.2. Equipment is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 2.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 2.4. Results are interpreted to determine adjustment requirements 2.5. Adjustment changes are carried out according to product and equipment specifications
3. Maintain basic fastening (adhesive/mechanical) process (OR Element 4)	3.1. Registration of fastening is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.2. Wire straightness, length, cut-off and clinching pressures are monitored and adjusted to ensure quality of product meets the standard of the approved sample OR 3.3. Adhesion is monitored and adjusted to ensure quality of product meets the standard of the approved sample
4. Maintain hand sewing process (OR Element 3)	4.1. Appropriate sewing supports are selected and spaced according to job specifications 4.2. Consistent thread tension is maintained during sewing 4.3. Sections are aligned at the head 4.4. Swelling is monitored and controlled
5. Maintain production process	5.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 5.2. Production is maintained according to OHS

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements, manufacturer's specifications and enterprise procedures</p> <p>5.3. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>5.4. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>5.5. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>7.5. Repair/adjustment is verified prior to resumption of operations</p> <p>7.6. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when reporting faulty equipment performance and completing production records and other documentation
- planning and organising by selecting and spacing appropriate sewing support
- teamwork when maintaining the production process in association with other workers
- using technology by maintaining the fastening process
- identifying problems and developing solutions when disposing of liquid waste according to regulatory requirements and enterprise procedures

Required knowledge

- information concerning binding that you would expect to find in the job documentation or production control system
- OHS factors that need to be addressed when adjusting machinery
- circumstances a machine would need to be adjusted
- correct binding technique for a job
- safety measures that should be taken when setting up and operating this equipment
- parts of the wire stitcher that would need to be adjusted to process books of different thicknesses
- positioning of the wire stitches on the book
- difference between a staple and a wire stitch
- determining the appropriate wire calliper for a particular job
- care that should be taken to ensure a neat and clean adhesive binding job
- sewing stages positioning on the book
- the term "Kettle stitch"
- common sewing problems likely to be met when sewing a multi-section book
- purpose of sewing frames
- ensuring that hand sewing remains firmly together
- problems that are associated with oiling a wire stitcher
- problems that can occur if equipment is not properly cleaned and maintained
- steps that can be taken to ensure the smooth passage of work through the factory
- occurrence of production problems during processing
- measures that can be used to prevent production interruptions
- acceptable binding result
- expectations if wire stitches are not in the right position
- causes of a book to be "stab" stitched

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Correctly set up and produce hand-fastened products according to job specifications and within the production timeframe • Demonstrate an ability to find and use information relevant to the task from a variety of information sources • Demonstrate all safety devices on the machine • Competency must be demonstrated in TWO areas of: adhesive/thermal (drawn on cover or heated binding tape application), mechanical (wire stitcher or heavy duty stapler including saddle and flat stitching), hand sewing (single and multi-section books) • For each area set up equipment and produce TWO basic hand-fastened products of different thickness and spine length to demonstrate equipment adjustment, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • Assessment may take place on the job, off the job or a combination of these • Assessment off the job must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPCF220C Produce basic converted or finished

EVIDENCE GUIDE

	<p>product.</p> <p>Depending on the configuration of equipment and types of jobs, virtually any other converting, binding and finishing set up unit can be assessed at the same time.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Fastening process</i> may include:	<ul style="list-style-type: none"> • adhesive fastening such as: <ul style="list-style-type: none"> • cold and hot melt gluing • taping • mechanical fastening such as wire stitching, velo, comb and wire binding • hand section sewing.
<i>Fastening units</i> may include:	<ul style="list-style-type: none"> • a range of manually operated equipment.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • manual handling of large or small sheets.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reel system	2.1. Unwind and rewind reels are set up and adjusted according to job specifications 2.2. Webbing procedures are carried out according to job specifications 2.3. Web control system is set up and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications 2.5. Sheeter is set up and adjusted according to job specifications
3. Set up sheet system (IF RELEVANT)	3.1. Feeder is set up and adjusted according to job specifications 3.2. <i>Sheet</i> /section pick-up and transportation system is set up and adjusted according to job specifications, if relevant 3.3. Transfer systems are set up and adjusted according to job specifications, if relevant
4. Set up laminating machine	4.1. Application system cylinder is set up and adjusted according to job specifications 4.2. <i>Adhesive</i> application system is set up and adjusted according to job specifications 4.3. Binding pressures are set and adjusted according to job specifications 4.4. Drying system is set up and adjusted according to job specifications
5. Set up in-line units	5.1. Minor <i>in-line</i> printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications 5.2. Assistance is given in set up of major in-line printing/converting/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)
6. Conduct sample run	6.1. Raw material to be used for sample is organised correctly

ELEMENT	PERFORMANCE CRITERIA
	<p>6.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>6.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>6.4. Results are interpreted to determine adjustment requirements</p> <p>6.5. Adjustment changes are carried out according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when organising laboratory testing of samples and completing production records and other documentation
- planning and organising a sample run
- teamwork when assisting with the set up of major in-line units
- using technology to adjust the sheeter as required by the job specifications
- identifying problems and developing solutions when interpreting test results and determining adjustment requirements

Required knowledge

- information concerning laminating requirements that you would expect to find in the job documentation or production control system
- OHS areas that must be addressed when setting up these areas of the machine
- explain three problem areas likely to be encountered setting up the sheeter
- problems encountered when fitting supply films to mandrels
- factors that determine the setting of the binding pressures
- problems that can be encountered when the machine is in operation
- OHS areas that must be addressed when setting up these areas of the machine
- in-line units are available for the laminating process
- OHS factors to be considered before readjusting the machine
- quality aspects that should be considered in a completed laminating job
- location of machine manuals, safety and other documentation relevant to this task and information included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machines for a range of laminating processes according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • set up laminating machine to complete TWO or more ply laminating jobs on different substrates and of different sizes (if possible including one in-line process) in minimum time, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of practical tasks.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPCF220C Produce basic converted or finished product • ICPSU201C Prepare, load and unload reels and cores on and off machine

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Sheet size</i> may include:	<ul style="list-style-type: none"> • where sheets are being laminated, this unit only applies when sheets are at least A4.
<i>Adhesives</i> may include:	<ul style="list-style-type: none"> • range of single or two-component adhesives used in laminating.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Laminating process</i> may include:	<ul style="list-style-type: none"> • moisture, chemical and thermal cured, and extrusion process.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of absorbent and non-absorbent, transparent and non-transparent substrates within the major categories of paper, board, corrugated board, plastics and metals.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • wide and narrow reel and large and small sheet handling systems.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain reel transportation system	1.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to the process according to job specifications 1.4. Reel rewind section is monitored and adjusted to maintain correct tension and to ensure no marks, blemishes or damage to finished product 1.5. Substrate is removed from process according to job specifications 1.6. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain basic laminating process	2.1. Registration of laminating is monitored and adjusted to ensure quality of product meets the standard of the approved sample 2.2. Pressures are monitored and adjusted to ensure quality of product meets the standard of the approved sample 2.3. Adhesion is monitored and adjusted to ensure quality of product meets the standard of the approved sample
3. Maintain production process	3.1. Basic in-line printing/coating/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 3.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 3.4. Manual and/or automatic control is used according to job specifications 3.5. Performance is monitored and verified using the process control system according to enterprise procedures 3.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention

ELEMENT	PERFORMANCE CRITERIA
	3.7. Waste is sorted according to enterprise procedures
4. Identify and rectify problems and faults	4.1. Problems in laminating machine are identified and reported according to enterprise procedures 4.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level 4.3. Laminating machine operation is checked to ensure correct operation 4.4. Process adjustments to eliminate problems are reported according to enterprise procedures 4.5. Faulty performance of equipment is identified and reported according to enterprise procedures
5. Conduct shutdown of production process	5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures 5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements 5.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures 5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures 5.5. Repair/adjustment is verified prior to resumption of operations
6. Clean laminating machine at end of run	6.1. Laminating machine is disengaged and cleaned ready for next run 6.2. Adhesive system is washed up ready for next run and liquid waste is disposed of according to regulatory requirements and enterprise procedures 6.3. In-line printing/coating/converting/binding/finishing units are cleaned ready for next run 6.4. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run 6.5. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery
- communication skills when monitoring and verifying performance using process control systems
- planning and organising the correct shutdown sequence
- teamwork when conducting shutdown with fellow workers
- using technology to adjusting machinery to improve performance
- identifying problems and developing solutions

Required knowledge

- OHS factors that must be considered when operating web machine transport and delivery systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- checks needed when substrate is removed from the machine
- OHS factors that must be considered when maintaining the laminating and in-line processes
- assuring registration of laminating
- areas of the in-line processes that should be monitored to ensure a quality product
- laminating problems that may occur during the operation of the machine?
- adjustments or correction procedures that may need to be made to ensure accurate operation of the process
- important tasks that must be performed to correctly shut down the machine
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)
- quality aspects that should be considered in a completed laminated job
- alterations needed to production to meet client requirements
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • produce a basic laminated product that meets job specifications, production timeframes and quality standards • demonstrate an ability to find and use information relevant to the task from a variety of information sources • operate laminating machine to complete TWO two-ply jobs on different substrates and of different sizes (if possible including one in-line process) according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up profile cutting	<ul style="list-style-type: none"> 1.1. All details required for the job are checked and confirmed against <i>job specifications</i> 1.2. The correct materials are checked and available for the job 1.3. Adhesives are appropriate for the substrate, the application process and the machine 1.4. Work area is made safe and ready for production according to safety requirements 1.5. Profile cutting unit including profile knives, and where appropriate, fly knives, is set up according to job specifications 1.6. Blades are checked for sharpness and fitted as necessary, with units calibrated according to job specifications 1.7. Settings are checked against job specifications before production is commenced 1.8. Machine is <i>stepped</i> to ensure the profile is in the correct position and paper tension is accurate 1.9. The envelope shape and size conforms to job specifications and cuts are clean and meet quality requirements
2. Confirm the quality	<ul style="list-style-type: none"> 2.1. A sample from the machine is selected and checked to ensure it conforms to quality standards 2.2. Adjustments are made when the standards are not met 2.3. Samples are continuously monitored for defects and defects are removed 2.4. The efficiency, quality and output rate of the production run are monitored for problems and any deficiencies resolved 2.5. Wastage is monitored, kept to a minimum and correctly disposed of according to enterprise quality standards 2.6. The locations of all emergency shutdown buttons and triggers are known

Required Skills and Knowledge

Required skills

- OHS in relation to operating machinery
- communication skills when checking and confirming job specifications
- planning and organising setting up the machine before producing a sample
- teamwork when maintaining the production process by working in association with others
- using technology such as profile cutting units during the manufacture of envelopes
- problem solving when monitoring quality standards and making adjustments to machine settings

Required knowledge

- common faults associated with profile cutting, what causes them and how to correct them
- enterprise documentation procedures
- enterprise quality standards
- enterprise faults procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • set up profile cutting units for manufacturing the following types of envelope: banker, open-sided wallet, open-ended pocket and automatic filling, according to job specifications and within the production timeframe • evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance in setting cutting profiles • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment • access to profile cutting machinery used for cutting envelope profiles.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cleaning	1.1. Machinery is safely switched off before cleaning is started 1.2. The cleaning equipment and <i>materials</i> most suitable for the machine are selected
2. Commence cleaning	2.1. Vacuum systems are checked for wear, opened and cleaned with compressed air and suction cups replaced if necessary 2.2. <i>Rollers</i> and drums are checked for wear and cleaned 2.3. Jaws and grippers are cleaned and checked for wear 2.4. Glue units are checked for wear and cleaned and excess glue and build-up removed from glue nipples 2.5. Glue applicators are cleaned and checked for wear 2.6. Hot melt residues are removed and glue pot is cleaned 2.7. Base and underneath of machine is cleaned of print ink and glue residue 2.8. Entire machine is blown down top to bottom and all grease and oil is removed from components, housings and the floor 2.9. Cleaning methods which are safe, avoid harm to the environment and which follow the manufacturer's instructions are used
3. Complete cleaning	3.1. Used cleaning agents and waste materials are disposed of safely 3.2. The machine is checked to ensure that it is safe to operate, when cleaning is finished, and all machine guarding is replaced or repositioned in safe working order 3.3. Obvious faults and wear are documented and reported

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills by reporting and documenting obvious faults and wear
- planning and organising by selecting cleaning equipment and materials most suitable for the machine
- teamwork when maintaining the production process by working in association with others
- using technology when checking vacuum systems for wear, cleaning them with compressed air and replacing suction cups if necessary
- problem solving when disposing safely of used cleaning agents and waste materials

Required knowledge

- common faults associated with sack or bag manufacturing machines, what causes them and how to correct them
- enterprise documentation procedures
- enterprise quality standards
- enterprise faults procedures
- OHS procedures for using cleaning fluids

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor production process	1.1. All details required for the job are checked and confirmed against <i>job specifications</i> 1.2. The supply of materials throughout the run is maintained 1.3. Paper tension is monitored on an ongoing basis 1.4. Machine is run at optimum speed for maintaining quality outputs
2. Maintain quality	2.1. The locations of all emergency shutdown buttons and triggers are known 2.2. A sample from the machine is selected and checked to ensure it matches the required standards 2.3. Adjustments are made when the standards are not met 2.4. Each in-line process is monitored and minor adjustments are made during production, if required 2.5. Samples are continuously monitored for defects and defects are removed 2.6. The efficiency, quality and output rate of the production run are monitored for problems and any deficiencies resolved 2.7. Wastage is monitored, kept to a minimum and correctly disposed of according to enterprise quality standards
3. Identify problems	3.1. Faults which affect the quality of the sacks or bags are identified and rectified 3.2. Problems that reduce the rate of output are identified and fixed 3.3. Faults that affect the efficient operation of equipment are identified and resolved

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when checking and confirming all details required for the job against job specifications
- planning and organising by monitoring wastage, keeping it to a minimum and correctly disposing of it
- teamwork when maintaining the production process by working in association with others
- using technology by monitoring and running sack and bag machines
- problem solving when selecting and checking a sample from the machine to ensure it conforms to the required quality standards

Required knowledge

- common faults associated with sack or bag manufacturing machines, what causes them and how to correct them
- enterprise documentation procedures
- enterprise quality standards
- enterprise faults procedures

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> maintain the throughput of sack or bag machines consistently over a period of time demonstrate all safety devices on the machine for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment machinery used to produce sacks and bags.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Job specifications</i> may include:	<ul style="list-style-type: none"> job sheets, batch processing orders, job specs.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor throughput	1.1. Machine is <i>stepped</i> to ensure the scores and folds are in the correct position and paper tension is correct 1.2. Guide positions are monitored and adjusted if necessary to ensure adhesive is applied evenly and in the correct position 1.3. Multi-walls adhere correctly and without creasing 1.4. Paper moisture is monitored and correct moisture levels are maintained 1.5. Perforation occurs to the right depth and in the correct place 1.6. Creasing units and folding units work in the correct location 1.7. Folds and guillotine cuts are correctly placed 1.8. Glues dry at correct rates for in-line processes 1.9. All units run at the speed required by enterprise quality standards
2. Confirm quality of output	2.1. A sample from the machine is selected and checked to ensure it conforms to the required quality standards 2.2. Adjustments are made when the standards are not met 2.3. Each in-line process is monitored and minor adjustments are made during production, if required 2.4. Samples are continuously monitored for defects and defects are removed 2.5. The efficiency, quality and output rate of the production run are monitored for problems and any deficiencies resolved 2.6. Wastage is monitored, kept to a minimum and correctly disposed of according to enterprise quality standards
3. Confirm quality of output	3.1. Faults which affect the quality of the sacks or bags are identified and rectified 3.2. Problems that reduce the rate of output are identified and fixed 3.3. Faults that affect the efficient operation of equipment are identified and resolved

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor production process	1.1. All details required for the job are checked and confirmed against <i>job specifications</i> 1.2. The supply of <i>materials</i> throughout the run is maintained 1.3. Paper tension is monitored on an ongoing basis 1.4. Machine is run at optimum speed for maintaining quality outputs 1.5. Machine is adjusted to maintain quality of outputs
2. Monitor production	2.1. Correct perforation alignment is maintained 2.2. Pick-up rollers are working correctly and pressure and timing are maintained 2.3. Glue patch applicator or glue impression roller remains clear and dispenses the required amount of glue 2.4. Doctor blades and hot melt unit are operating correctly 2.5. Timing between all units is maintained or adjusted to avoid production problems 2.6. Overall production is monitored and adjustments are made to avoid production problems or improve production speeds
3. Maintain quality	3.1. Correct procedures for the removal of waste are followed according to enterprise procedures 3.2. Samples are continuously monitored for defects and defects are removed 3.3. The efficiency, quality and output rate of the production run are monitored for problems and any deficiencies resolved 3.4. The locations of all emergency shutdown buttons and triggers are known
4. Identify problems and rectify	4.1. Faults which affect the quality of the sacks or bags are identified and rectified 4.2. Problems that reduce the rate of output are identified and fixed 4.3. Faults that affect the efficient operation of equipment are identified and resolved

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when checking and confirming all details required for the job against job specifications
- planning and organising by maintaining the supply of materials throughout the run
- teamwork when maintaining the production process by working in association with others
- using technology by operating an in-line bottom making machine for the manufacture of sacks or bags
- problem solving by identifying and fixing problems that reduce the rate of output

Required knowledge

- common faults associated with setting up in-line scoring, folding and gluing machines, what causes faults and how to correct them
- enterprise documentation procedures
- enterprise quality standards
- enterprise production standards
- enterprise faults procedures

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and adjust units	<p>1.1. All details required for the job are checked and confirmed against <i>job specifications</i></p> <p>1.2. The <i>correct materials</i> and tools are checked and available for the job</p> <p>1.3. Adhesives are appropriate for the <i>substrate</i>, the application process and the machine</p> <p>1.4. Work area is safe and ready for production according to safety requirements</p> <p>1.5. Blades are sharp and fitted as necessary and units are calibrated according to job specifications</p> <p>1.6. Settings are checked against job specifications before production is commenced</p> <p>1.7. Machine is <i>stepped</i> to ensure the scores and folds are in the correct position and paper tension is corrected/adjusted</p>
2. Monitor throughput	<p>2.1. Once settings are fixed the unit is run at the speed required to produce a quality product</p> <p>2.2. Machine is monitored to ensure the scores and folds are in the correct position and paper tension is correct</p> <p>2.3. Guide positions are monitored to ensure adhesive is applied evenly and in the correct position</p> <p>2.4. Paper moisture is monitored and correct moisture levels are maintained</p> <p>2.5. Folds and guillotine cuts are correctly placed</p> <p>2.6. Glues dry at correct rates for substrate and adequate fibre tears are visible</p>
3. Confirm quality of output	<p>3.1. A sample from the machine is selected and checked to ensure it conforms to the required quality standards</p> <p>3.2. Adjustments are made when the standards are not met</p> <p>3.3. Each in-line process is monitored and minor adjustments are made during production, as necessary</p> <p>3.4. Samples are continuously monitored for defects and defects are removed</p> <p>3.5. The efficiency, quality and output rate of the production run are monitored for problems and any deficiencies resolved</p> <p>3.6. Wastage is monitored, kept to a minimum and correctly disposed of according to enterprise quality</p>

ELEMENT	PERFORMANCE CRITERIA
	standards 3.7. The locations of all emergency shutdown buttons and triggers are known

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when checking and confirming all details required for the job against job specifications
- planning and organising by ensuring that the work area is safe and ready for production according to safety requirements
- teamwork when maintaining the production process by working in association with others
- using technology by using an in-line scoring, folding and gluing machine
- problem solving by stepping the machine to ensure the scores and folds are in the correct position and paper tension is correct

Required knowledge

- common faults associated with in-line scoring, folding and gluing machines, what causes them and how to correct them
- enterprise documentation procedures
- enterprise quality standards
- enterprise faults procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • set up and monitor in-line scoring, folding and gluing machines used in the manufacture of sacks or bags according to job specifications and within the production timeframe • set up and monitor in-line scoring, folding and gluing machines used in the manufacture of sacks or bags • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these • off the job assessment must be undertaken in a closely simulated workplace environment • access to in-line scoring, folding, and gluing machinery used in the manufacture of sacks and bags.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and adjust quality	1.1. Inspection and/or testing of sample is organised 1.2. Sample is visually inspected and/or tested according to enterprise procedures 1.3. Results are interpreted to determine adjustment requirements 1.4. Adjustment changes are carried out according to product and <i>machine</i> specifications
2. Maintain operation of reel transportation system	2.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 2.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web and efficient operation 2.3. <i>Substrate</i> is added to the process according to job specifications
3. Maintain single facing process	3.1. Starch delivery system is monitored and adjusted to suit corrugating process and according to job specifications 3.2. Heat delivery system is monitored and adjusted to suit corrugating process and according to job specifications 3.3. Steam delivery system is monitored and adjusted to suit corrugating process and according to job specifications 3.4. Corrugating roll and pressure rolls are monitored and adjusted to suit corrugating process and according to job specifications 3.5. Speed of machine is optimised according to running conditions 3.6. Appropriate quantity of paper is run with a minimum of wastage
4. Maintain in-line process(es)	4.1. Coating units are monitored and adjusted to suit corrugating process and according to job specifications 4.2. Waxing units are monitored and adjusted to suit corrugating process and according to job specifications 4.3. Slitters are monitored and adjusted according to job specifications 4.4. Cut-off knife is monitored and adjusted according to job specifications

ELEMENT	PERFORMANCE CRITERIA
5. Synchronise machine operation	5.1. Machine down-time is minimised during flute, grade or deckle changes 5.2. Quality of board is maintained according to enterprise procedures or client acceptance standard 5.3. Machine speed is optimised and waste minimised
6. Maintain production process	6.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 6.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 6.3. Manual and/or automatic control is used according to job specifications 6.4. Performance is monitored and verified using the process control system according to enterprise procedures 6.5. Starch performance is monitored and adjusted throughout production run 6.6. Quality checks are carried out on a regular basis and adjustments made as necessary
7. Identify and rectify problems	7.1. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 7.2. Process adjustments to eliminate problems are reported according to enterprise procedures 7.3. Faulty performance of equipment is identified and reported according to enterprise procedures 7.4. Waste is sorted according to enterprise procedures 7.5. Problems in corrugator operation are identified and reported according to enterprise procedures 7.6. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level 7.7. Corrugator operation is checked to ensure correct operation
8. Conduct shutdown of production process	8.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures 8.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements 8.3. Solid and liquid waste is removed from operating

ELEMENT	PERFORMANCE CRITERIA
	<p>area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>8.4. All product is removed from operating area</p> <p>8.5. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>8.6. Repair/adjustment is verified prior to resumption of operations</p>
9. Clean and wash up	<p>9.1. <i>In-line</i> wax and coating units are cleaned ready for next run</p> <p>9.2. Starch delivery system is washed up ready for next run, and liquid waste is disposed of according to regulatory requirements and enterprise procedures</p> <p>9.3. Reel feed and transportation systems are disengaged and cleaned ready for next run</p> <p>9.4. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when checking and confirming all details required for the job against job specifications
- planning and organising by shutting down equipment in the correct sequence
- teamwork when maintaining the production process by working in association with others
- using technology by operating and maintaining equipment
- problem solving by identifying problems and faults and developing solutions

Required knowledge

- significant risks that are posed to workers in this activity
- measures that are employed to prevent injury and/or illness in the case of the above identified risks
- principle support systems on line to the corrugating machine
- effective control and monitoring of the corrugator by the operator
- sections of the single facer that have the higher potential for operational problems during the run
- product faults that are commonly found to arise during production runs and how can they be corrected
- settings monitoring and adjustment made during the run, for the following factors: in-feed, web alignment control, pre-conditioners, adhesive application, corrugation, single facer, steam delivery, heating of web and speed
- product factors that can be monitored visually/manually by staff operating end stages of the corrugator machine
- adjustments made in response to problems found by staff operating end stages of the corrugator machine
- functions that must be attended to for the wash-up and shutdown of the single facer for an idle period of at least two days
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce single-faced web for corrugated board manufacture, inspect the quality, maintain production, identify and rectify problems and correctly shut down machine perform at least TWO runs on the single facer to produce TWO different types/classes of product according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Assessment off the job must be undertaken in a closely simulated workplace environment in-line corrugating equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. This unit may be assessed at the same time as:</p> <ul style="list-style-type: none"> ICPCF2104C Set up single-faced web ICPCF220C Produce basic converted or finished product ICPCF231C Set up machine for basic flat-bed cutting ICPCF235C Set up machine for basic rotary cutting ICPCF281C Set up machine for basic laminating

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up carton blank transportation system	1.1. Feeder is set up and adjusted according to job specifications 1.2. Carton blank pick-up and transportation system is set up and adjusted according to job specifications 1.3. Transfer systems are set up and adjusted according to job specifications
2. Set up carton delivery system	2.1. Delivery is set up and adjusted according to job specifications 2.2. Substrate is removed from process according to job specifications
3. Set up machine for basic folding and gluing (single/continuous)	3.1. Folding units are set up and adjusted according to job specifications 3.2. Folding rollers/belts/rails are set up and adjusted according to job specifications 3.3. Gluing system is set up and adjusted according to job specifications using either glue wheel or one glue head
4. Conduct sample run	4.1. Material to be used for sample is organised correctly 4.2. Machine is set up and operated according to OHS requirements, manufacturer's specifications and enterprise procedures to produce a specified sample Slitters are monitored and adjusted according to job specifications 4.3. Sample is visually inspected and/or tested for accuracy of folds, fibre tear, opening force, fluff and glue placement according to enterprise procedures
5. Readjust settings	5.1. Results are interpreted to determine adjustment requirements 5.2. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when reading and interpreting job requirements from job documentation or production control system
- planning and organising by setting up the carton blank transportation system before setting up for folding and gluing
- teamwork when maintaining the production process by working in association with others
- using technology by using carton folding and gluing machines
- problem solving by interpreting results to determine adjustment requirements

Required knowledge

- information concerning folding requirements that you would expect to find in the job documentation or production control system
- OHS factors that must be considered when setting up folder transportation and delivery systems
- areas of the sheet-fed transportation system that should be monitored to ensure trouble-free operation
- areas of the delivery system that should be observed to prevent damage to the finished product
- ways that folded sheets can be secured for dispatch
- OHS factors that must be considered when setting up and/or adjusting the folding unit
- causes of scratching/scuffing of substrate during transportation
- speed determination of the machine
- problems that can be expected if the machine is running too fast
- roller pressures checks for correctness
- adjustments made if the sheet is out-of-square
- possible reasons for the sheet being out-of-square
- adjustments made to ensure that the sheets are not smudging/"scuffing"
- adjustments made if the sheet will not leave the folding unit
- OHS factors that must be considered when adjusting the inkjet printer
- steps that should be taken to ensure correct alignment of the inkjet printer
- adjustments made to keep units correctly positioned
- OHS areas that must be addressed when setting up these areas of the machine
- OHS safeguards that are necessary with hot melt adhesives
- determining the correct binding technique for a job

REQUIRED SKILLS AND KNOWLEDGE

- methods of adhesive metering present on the machine
- care that should be taken to ensure a neat and clean adhesive binding job
- segments of quality assurance that would be inspected at the completion of the sample run
- communication action that should be instigated if the job is out-of-square
- communication action that should be instigated if ink is too wet for production
- communication action that should be instigated if the job does not conform to QA checking
- machine manuals and safety documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • set up machine to produce a range of simple straight line folded and glued cartons as required in normal production on, for example, a Royal 40, a Bobst Media or a Bobst Domino • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up machine on at least FOUR occasions for basic straight line folding and gluing of cartons with different weights and sizes of carton board according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • for example a Royal 40, a Bobst Media or a Bobst Domino.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect and adjust quality	1.1. Inspection and/or testing of sample is organised 1.2. Sample is visually inspected and/or tested according to enterprise procedures 1.3. Results are interpreted to determine adjustment requirements 1.4. Adjustment changes are carried out according to product and <i>machine</i> specifications
2. Maintain operation of reel transportation system	2.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 2.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web and efficient operation 2.3. <i>Substrate</i> is added to the process according to job specifications
3. Maintain double facing process	3.1. Starch delivery system is monitored and adjusted to suit corrugating process and according to job specifications 3.2. Heat delivery system is monitored and adjusted to suit corrugating process and according to job specifications 3.3. Heat delivery system is monitored and adjusted to suit corrugating process and according to job specifications 3.4. Speed of machine is optimised according to running conditions 3.5. Appropriate quantity of paper is run
4. Maintain in-line process(es)	4.1. Waxing units are monitored and adjusted to suit corrugating process and according to job specifications 4.2. Coating units are monitored and adjusted to suit corrugating process and according to job specifications 4.3. Tape dispensing units are monitored and adjusted to suit corrugating process and according to job specifications 4.4. Slitters are monitored and adjusted according to job specifications 4.5. Cut-off knife is monitored and adjusted according to job specifications
5. Synchronise machine	5.1. Machine down-time is minimised during flute, grade

ELEMENT	PERFORMANCE CRITERIA
operation	or deckle changes 5.2. Quality of board is maintained according to enterprise procedures or client acceptance standard 5.3. Machine speed is optimised and waste minimised
6. Maintain production process	6.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 6.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 6.3. Manual and/or automatic control is used according to job specifications 6.4. Performance is monitored and verified using the process control system according to enterprise procedures 6.5. Starch performance is monitored and adjusted throughout production run 6.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 6.7. Process adjustments to eliminate problems are reported according to enterprise procedures 6.8. Faulty performance of equipment is identified and reported according to enterprise procedures 6.9. Waste is sorted according to enterprise procedures 6.10. Quality checks of product are undertaken on a regular basis and adjustments made as required
7. Identify and rectify problems	7.1. Problems in corrugator operation are identified and reported according to enterprise procedures 7.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level 7.3. Corrugator operation is checked to ensure correct operation
8. Conduct shutdown of production process	8.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures 8.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements 8.3. Solid and liquid waste is removed from operating area and recycled or disposed of, where required,

ELEMENT	PERFORMANCE CRITERIA
	<p>according to regulatory requirements and enterprise procedures</p> <p>8.4. All product is removed from operating area</p> <p>8.5. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>8.6. Repair/adjustment is verified prior to resumption of operations</p>
<p>9. Clean and wash up corrugator at end of run</p>	<p>9.1. <i>In-line</i> wax, coating and tape dispensing units are cleaned ready for next run</p> <p>9.2. Starch delivery system is washed up ready for next run, and liquid waste is disposed of according to regulatory requirements and enterprise procedures</p> <p>9.3. Reel feed and transportation systems are disengaged and cleaned ready for next run</p> <p>9.4. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when reading and interpreting job requirements from job documentation or production control system
- planning and organising by shutting down equipment in the correct sequence
- teamwork when maintaining production processes in association with colleagues
- using technology by producing double-faced web on the corrugator
- problem solving by selecting and checking a sample from the machine to ensure it conforms to the required quality standards

Required knowledge

- significant risks that are posed to workers in this activity
- measures that are employed to prevent injury and/or illness in the case of the above identified risks
- principle support systems on line to the corrugating machine
- effective control and monitoring of the corrugator by the operator
- sections of the double backer that have the higher potential for operational problems during the run
- product faults that are commonly found to arise during production runs and how can they be corrected
- settings monitoring and adjustment made during the run, for the following factors: : in-feed, web alignment control, adhesive application, double backer, steam delivery, heating of web and speed
- product factors that can be monitored visually/manually by staff operating end stages of the corrugator machine
- adjustments made in response to problems found by staff operating end stages of the corrugator machine
- functions that must be attended to for the wash-up and shutdown of the single facer for an idle period of at least two days
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> perform runs on the double backer machine, maintain production, identify and rectify problems and faults, and correctly shut down the machine perform at least TWO runs on the double backer to produce TWO different types/classes of product, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of carton blank system	1.1. Feeder is monitored and adjusted to ensure continuous and efficient feeding to <i>machine</i> 1.2. Carton blank pick-up and transportation system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 1.3. Transfer systems are monitored and adjusted to ensure correct and continuous carton blank handling and efficient operation 1.4. Substrate is added to process according to job specifications 1.5. Delivery is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain complex carton folding and gluing process	2.1. Registration and accuracy of folds are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 2.2. Gluing process is monitored and adjusted to ensure accuracy of <i>glue</i> application and strength of adhesion to conform to quality standards
3. Maintain operation of production process	3.1. Production process is operated in association with fellow workers and according to enterprise specifications and planned daily schedule 3.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 3.3. Performance is monitored and verified using the process control system according to enterprise procedures 3.4. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 3.5. Process adjustments to eliminate problems are reported according to enterprise procedures 3.6. Faulty performance of equipment is identified and reported according to enterprise procedures 3.7. Waste is sorted according to enterprise procedures
4. Identify and rectify problems	4.1. Problems in folding and gluing machine operation are identified and reported according to enterprise requirements 4.2. Adjustments or corrections are carried out according to specified procedures and consistent with operator's

ELEMENT	PERFORMANCE CRITERIA
	<p>skill level</p> <p>4.3. Complex folding/gluing machine operation is checked to ensure correct operation</p>
<p>5. Conduct shutdown of production process</p>	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.4. Transport and delivery systems are cleaned ready for next run</p> <p>6.4. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when reading and interpreting job requirements from job documentation or production control system
- planning and organising by setting up the carton blank transportation system before the carton delivery system
- teamwork when maintaining production processes in association with colleagues
- using technology by using carton folding and gluing machines
- problem solving by interpreting results to determine adjustment requirements

Required knowledge

Carton blank transportation and delivery systems

- OHS factors that must be considered when setting and/or operating folder/gluer transport and delivery systems
- areas of the feeder that should be monitored to ensure trouble-free operation?
- parts of the pick-up system that have to be adjusted to ensure accurate and continuous feeding
- areas of the delivery system that should be observed to prevent damage to the finished pr
- areas to continually observe to ensure the smooth trouble-free operation of the machine
- areas of the gluing unit that should be continuously monitored?
- OHS factors that must be considered when adjusting/correcting the machine
- causes of incorrect folding and how each may be corrected
- segments of quality assurance that would be inspected at the completion of the sample run
- action that should be taken if viscosity of adhesive in gluing unit is too low/high
- adjustment of the of the glue application
- areas of the machine that should be adjusted if carton blank is creasing
- areas of the machine that should be adjusted if carton blanks are not entering the machine
- areas of the machine that should be adjusted if sheets are not neatly entering delivery
- OHS factors that must be considered when cleaning the machine
- checks made when correctly shutting down the machine
- checks made when the finished work is prepared for dispatch

REQUIRED SKILLS AND KNOWLEDGE

- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)
- recommended cleaning agents
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- quality aspects that should be considered in a completed folded carton
- steps that should be taken to ensure that important features of the production control system are followed
- altering production need to be altered to meet client requirements
- items to be checked against the client's sample
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce a range of complex cartons as required in normal production on a Royal 40, a Bobst Media or a Bobst Domino demonstrate an ability to find and use information relevant to the task from a variety of information sources produce THREE crashlock, six-corner and specialty work carton jobs, with different sizes and weights of carton board and including use of multiple gluing units, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Machines</i> may include:	<ul style="list-style-type: none"> royal 40, a Bobst Media or Bobst Domino with a computerised label printing unit.
<i>Glue</i> may include:	<ul style="list-style-type: none"> PVA and hot melt.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for die and stripper making	<p>1.1. Die and stripper making requirements are identified and selected from die drawing or inspection</p> <p>1.2. Availability of all job related components is checked</p> <p>1.3. Materials chosen are appropriate for cutting forme design and the machine cutting forme/stripper is to be used on</p>
2. Prepare materials	<p>2.1. Cutting forme/stripper making materials are assessed and cut to size</p> <p>2.2. Cutting forme/stripper making materials are correct size for production requirements</p> <p>2.3. Stripper backing material is correct size for production requirements</p> <p>2.4. Product design is drawn onto cutting forme blank to match cutting forme design</p> <p>2.5. Drawing is in register on cutting forme blank</p> <p>2.6. Drawing is in register on stripper backing material</p>
3. Prepare lay down sheet and cutting forme tracing	<p>3.1. Lay down sheet and cutting forme tracing are glued correctly onto cutting forme blank</p> <p>3.2. Lay down sheet is in register on cutting forme blank</p> <p>3.3. Cutting forme tracing matches product design</p>
4. Design location of bridges, stripping rule and mounting holes	<p>4.1. Cutting forme maintains required strength</p> <p>4.2. Waste is cut to suit waste extraction system</p> <p>4.3. Mounting holes register with holes in cutting forme blank</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when interpreting the drawings and transferring the design onto the cutting forme blank, and when identifying die and stripper making requirements from the drawing
- planning and organising by identifying resource requirements and choosing materials relevant to the task
- teamwork when preparing cutting formes and strippers in a workplace context
- using technology by gluing the lay down sheet tracing onto cutting forme blank
- problem solving by cutting waste to suit the waste extraction system

Required knowledge

- special requirements that may be identified from planner's drawings
- OHS factors that must be considered when cutting materials
- names of the substrates commonly cut by these cutting formes
- affect of different substrates on forme setting
- determining the size of the stripper backer material
- care that should be taken when drawing design onto blank
- assuring registration when drawing design onto blank
- correct registration achievement when gluing and laying down the cutting forme tracing onto the cutting forme blank
- factors that determine the thickness of the stripping rule
- factors that determine the position and number of the bridges
- factors that determine the position and number of the mounting holes
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • prepare materials for cutting formes according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare materials for TWO cutting formes (ONE large ONE small) to accommodate TWO differing typically used substrates using all of the relevant processes according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPCF312C Set cutting forme and strippers.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Complexity of process</i> may include:	<ul style="list-style-type: none"> varied cutting formes according to manufacturer's differentiations.
<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> initiative and judgment are demonstrated.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
<i>Quality processes</i> and standards may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Cut cutting forme wood	1.1. Bridge holes are accurately drilled 1.2. Saw cuts accurately match line drawing on cutting forme blank 1.3. Holes are reinforced and in register with fixing screws 1.4. Knives and creasers are cut and shaped accurately to suit cutting forme
2. Prepare knives, creasers and cutting forme rubbers	2.1. Knives and creasers are set accurately into place on cutting forme blank 2.2. Rubber is located on cutting forme to eject product and waste as required
3. Set stripping material	3.1. Stripping materials are attached securely and accurately to stripper backing material 3.2. Mounting strips are correctly fixed
4. Proof the cutting forme	4.1. Sample meets production order specifications 4.2. Cutting forme is adjusted or re-cut if required
5. Maintain cutting forme and stripper	5.1. Correct number is allocated to cutting formes/ strippers and recorded 5.2. Cutting forme machine is cleaned according to OHS and <i>enterprise procedures</i> 5.3. Problems are accurately described to supervisor/ maintenance department 5.4. Status of cutting formes/strippers is reported correctly and without delay to production

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills by recording the cutting forme/stripper identification number and reporting problems to supervisors or the maintenance department
- planning and organising by cleaning the cutting forme machine according to OHS and enterprise procedures
- teamwork when setting cutting formes and strippers in a workplace context
- using technology by using cutting formes and strippers
- problem solving by noting cutting forme making machine maintenance problems

Required knowledge

- checks made to correctly position bridge holes
- reinforcing bridge holes
- checks that can be performed to ensure that the saw cuts accurately match the line drawings
- checks made when cutting and shaping the knives and creasers
- OHS concerns that are there when setting knives
- factors that determine the amount of rubber attached to the forme
- factors that determine the positioning of the rubber on the forme
- important items to consider when setting the knives and creasers into position on the forme blank
- checks made when attaching stripping materials to stripper backing materials
- completing the attachment of stripper materials accurately
- purpose of the mounting strips
- areas that must be proofed to ensure that the cutting forme meets the production order specifications
- importance of allocating numbers to each forme
- method of recording the forme allocation numbers that is the accepted formula
- OHS factors that must be considered when cleaning the machine
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)
- recommended cleaning agents
- method of recording and reporting machine maintenance problems
- indicators that show that the machine is in need of oiling/greasing
- conditions to be noted when noting/reporting the status of the cutting forme or

REQUIRED SKILLS AND KNOWLEDGE

stripper

- importance of monitoring the condition of the forme and stripper
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain reel transportation system (OR Element 2)	1.1. Reel stand and rewind section is monitored and adjusted to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. <i>Substrate</i> is added and removed to and from the process according to job specifications 1.4. Delivery is monitored and adjusted to ensure quality and efficient product delivery 1.5. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain sheet transportation system (OR Element 1)	2.1. Feeder is monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added and removed to and from the process according to job specifications
3. Maintain cutting system	3.1. Knife or die condition is monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Registration of cutting devices and knives or dies are monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.4. Packing of cutting devices or dies is monitored and adjusted to ensure quality of product meets the standard of the approved sample
4. Maintain complex process	4.1. Registration and squareness of folds are monitored and adjusted to ensure the quality of product meets the standard of the approved sample, if relevant

ELEMENT	PERFORMANCE CRITERIA
	4.2. <i>Collating</i> /inserting process is monitored and adjusted to ensure quality of product meets the standard of the approved sample, if relevant
5. Maintain operation of complex fastening (adhesive/mechanical/sewing) system (IF RELEVANT)	<p>5.1. Registration of <i>fastening</i> is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>5.2. Wire straightness, length, cut-off and clinching pressures are monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>5.3. Adhesion is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p> <p>5.4. Thread tension and stitch quality are monitored and adjusted to ensure quality of product meets standard of the approved sample</p>
6. Maintain production process	<p>6.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>6.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>6.3. Manual and/or automatic control is used according to job specifications</p> <p>6.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>6.5. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>6.6. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>6.7. Faulty performance of <i>equipment</i> is identified and reported according to enterprise procedures</p> <p>6.8. Waste is sorted according to enterprise procedures</p>
7. Identify and rectify problems or faults	<p>7.1. Product and <i>substrate</i> are monitored and tested to ensure conformance to client requirements</p> <p>7.2. Problems in <i>converting/finishing</i> machine</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>operation are identified and reported according to enterprise procedures</p> <p>7.3. Adjustments or corrections are carried out according to specified procedures and manufacturer's specifications</p> <p>7.4. Converting/finishing machine operation is checked to ensure correct operation</p>
8. Conduct shutdown of production process	<p>8.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>8.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>8.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>8.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>8.5. Repair/adjustment is verified prior to resumption of operations</p>
9. Clean converting/finishing machine at end of run	<p>9.1. Cutting devices and knives or dies are cleaned or replaced ready for next run (IF RELEVANT)</p> <p>9.2. Cutting devices are sharpened according to OHS procedures (IF RELEVANT)</p> <p>9.3. Machine bed is cleaned ready for next run</p> <p>9.4. All units are disengaged and cleaned ready for next run</p> <p>9.5. Glue system is washed up ready for next run and liquid waste is disposed of according to regulatory requirements and enterprise procedures (IF RELEVANT)</p> <p>9.6. Laminating machine is disengaged and cleaned ready for next run (IF RELEVANT)</p> <p>9.7. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run OR</p> <p>9.8. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>9.9. Production records or other documentation are</p>

ELEMENT	PERFORMANCE CRITERIA
	accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills by accurately completing production records and other documentation
- planning and organising by shutting down and cleaning machines at the end of a run
- teamwork following the production process in association with fellow workers
- using technology by correctly following shutdown procedures
- problem solving by monitoring and adjusting the feeder to ensure efficient and continuous feeding to the machine

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- area of the web control system that should be adjusted to maintain correct positioning of the web
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- parts of the sheet or section pick-up system that are to be adjusted to ensure accurate and continuous sheet handling
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- areas of the delivery system that should be observed to maintain tension
- areas of the delivery system that should be observed to prevent damage to the finished product
- checks made when substrate is removed from the machine
- OHS factors that must be considered when maintaining the cutting process
- indicators that demand the replacement of a knife/cutting edge
- checks made when cutting pressure is adjusted
- important points to monitor when maintaining the cutting process?
- check made of the following: cutting pressures, cutting registration, packing of cutting area, condition of cutting edges, the smooth running of the operation
- ways in which a clean and precise result can be guaranteed
- production difficulties that can be expected during production runs

REQUIRED SKILLS AND KNOWLEDGE

- OHS factors that must be considered when problem solving on the machine maintaining the cutting process
- checks made when packing cutting devices
- checks made when correcting dull cutting edges on equipment
- checks made when correcting the depth of embossing
- checks made when correcting out-of-square results
- procedure for correcting THREE common machine faults
- OHS factors that must be considered when using the folding machine
- areas to continuously observe to ensure the smooth trouble-free operation of the machine
- areas of the gluing unit that should be continuously monitored
- terms buckle folding, knife folding, side lay, pharmaceutical folding, deflector, glue line
- OHS factors that must be considered when adjusting/correcting the machine
- SIX causes of out-of-square folding and explain how each may be corrected
- segments of quality assurance that would be inspected at the completion of the sample run
- action that should be taken if the gate fold unit is out of timing
- action that should be taken if the viscosity of adhesive in the gluing unit is too low/high
- action that should be taken if the gluing unit is out of timing
- action that should be taken if right angle fold is out-of-square
- areas of the machine that should be adjusted if the sheet is creasing
- areas of the machine that should be adjusted if the sheet is caught in the fold plate
- areas of the machine that should be adjusted if the sheet is not entering the machine
- areas of the machine that should be adjusted if sheets are not entering delivery neatly
- remedies for the following problems: job is out-of-square, ink too wet for production, job does not coincide with the sample, the sheet is creasing, the sheet is caught in the fold plate, the sheet is not entering the machine, the sheet falls out of the machine after folding
- consideration that should be given to what areas of OHS when the machine is operating
- factors that govern the speed at which the machine will operate
- indicators that the machine was in need of lubrication
- circumstances that the machine would need to be adjusted
- OHS factors that should be considered before readjusting the machine
- areas of the machine that would cause sheets to crease during production
- reasons for sheets to misfeed during production
- creasing of sheets correction
- method of correction that is needed to prevent double sheet feeds
- adjustment that must be made to prevent "bruising" of NCR sheets

REQUIRED SKILLS AND KNOWLEDGE

- areas that are to be checked when sections are failing to open on the chain
- OHS factors that must be considered when maintaining or adjusting the operation of the machines
- OHS factors that must be considered when using hot melt adhesive
- consequence of too much or too little adhesive
- safety clothing that is available for use when operating adhesive binders
- matters that determine the speed of production
- sectors to observe to guarantee that the production process is trouble-free and continuous
- matters that determine that the machine need to be adjusted
- matters that determine that the machine need to be slowed down
- matters that determine when machine speed can be increased
- adjustment of position and quantity of adhesive on an adhesive binder/gluer
- adjustment of adhesive thickness and pressure on an adhesive binder/gluer
- achieving more spine milling on an adhesive binder how can
- adjustment of the wire length on a wire stitcher
- straightening of the wire in the wire feed on a wire stitcher how can
- increasing/decreasing the dwell time on a high frequency welder
- OHS factors that must be considered when cleaning the machine
- checks made when shutting down a given machine
- important reasons for FOUR shutdown operations
- what areas of the machines need regular cleaning
- materials that need to be cleaned from the machine
- recommended cleaning agents
- keeping the machine clear of surface rust (condensation)
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- quality aspects that need to be monitored during production
- quality aspects that need to be checked on finished product
- steps that should be taken to ensure that important features of the production control system are followed
- altering production need to meet client requirements
- items that must be checked against the client's sample
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly produce complex converted or finished product involving complex die cutting, embossing, folding, collating or fastening according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • competency must be demonstrated on any converting or finishing equipment (whether involving one process or a sequence of processes) • demonstrate all safety devices on the machine • On the chosen equipment TWO different complex jobs must be demonstrated preferably involving different types, sizes and weights of substrate according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • wide or narrow reel or large or small sheet or large or small book or section handling systems.
<i>Collating units</i> may include:	<ul style="list-style-type: none"> • a range of machines with manual, semi-automated, fully automated or computerised process control.
<i>Fastening units</i> may include:	<ul style="list-style-type: none"> • a range of machines with manual, semi-automated, fully automated or computerised process control.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • either single process machines or multiple process machines.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, corrugated board or metal.
<i>Converting/finishing processes</i> may include:	<ul style="list-style-type: none"> • flat-bed or rotary die or forme cutting, embossing • sequenced, multiple folding or gusseting • collating/inserting of sheets or book sections, or reels (may include tabs, crimping) of varied form, weight or shape • adhesive fastening (such as cold and hot melt gluing, taping) of substrates of varied form, weight or shape, eg hard case making, casing in, spine lining, multiple head and complex pattern gluing • mechanical fastening (such as wire stitching, loop stitching) of substrates of varied form, weight or shape • section sewing.
<i>Complexity</i> may include:	<ul style="list-style-type: none"> • at least one major process must be complex as defined in this unit or the appropriate set up unit.
<i>Shapes for die cutting/embossing</i>	<ul style="list-style-type: none"> • complex, multiple shapes.

RANGE STATEMENT	
may include:	
<i>Cutting units</i> may include:	<ul style="list-style-type: none"> a range of machines with dies, cutting formes and manual, semi-automated, fully automated or computerised process control.
<i>Folding units</i> may include:	<ul style="list-style-type: none"> a range of machines with manual, semi-automated, fully automated or computerised process control.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as numbering, date stamping and basic converting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg printing or coating) it should be assessed as such.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare job	<p>1.1. Job specifications are read and interpreted from job documentation or production control system</p> <p>1.2. Set-up is planned and carried out correctly in minimum time with minimum wastage</p> <p>1.3. Availability of all job related components is checked</p> <p>1.4. Grip and lay edges of sheet are identified</p>
2. Install and replace cutting knives into machine	<p>2.1. Appropriate knives are selected and safely secured to machine</p> <p>2.2. Dull knives are removed and bolted securely to protective board</p> <p>2.3. Cutting sticks are replaced when necessary</p>
3. Set up machine for guillotining	<p>3.1. Guillotine is set up and adjusted according to job specifications</p> <p>3.2. Clamping pressures are set up and adjusted according to job specifications</p>
4. Conduct sample cut	<p>4.1. Material to be used for sample is organised correctly</p> <p>4.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>4.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>4.4. Results are interpreted to determine adjustment requirements</p> <p>4.5. Adjustment changes are carried out according to product and machine specifications</p>
5. Maintain guillotining process	<p>5.1. Knife and cutting stick condition is monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>5.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample</p> <p>5.3. Registration of knives is monitored and adjusted to ensure quality of product meets the standard of the approved sample</p>
6. Maintain operation of production process	<p>6.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>6.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>6.3. Manual and/or automatic control is used according to job specifications</p> <p>6.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>6.5. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>6.6. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>6.7. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>6.8. Waste is sorted according to enterprise procedures</p>
7. Identify and rectify problems and faults	<p>7.1. Problems in guillotining machine operation are identified and reported according to enterprise procedures</p> <p>7.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>7.3. Guillotining machine operation is checked to ensure correct operation</p>
8. Conduct shutdown of production process	<p>8.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>8.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>8.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>8.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>8.5. Repair/adjustment is verified prior to resumption of operations</p>
9. Clean guillotining machine at end of run	<p>9.1. Knife and machine bed are cleaned ready for next run</p> <p>9.2. <i>Cutting</i> machine is disengaged and cleaned ready for next run</p> <p>9.3. Production records or other documentation are</p>

ELEMENT	PERFORMANCE CRITERIA
	accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills by liaising with clients as required to maintain or adjust production, and reading and interpreting job specifications
- planning and organising by correctly shutting down and cleaning the machine at the end of a run
- teamwork when maintaining the production process in association with fellow workers
- using technology by setting up and adjusting clamping pressures according to job specifications
- problem solving by selecting appropriate knives and securely fixing them to the machine

Required knowledge

- information concerning cutting would that you expect to find in the job documentation or production control system
- interpretation of this information to ensure smooth workflow throughout the factory
- SIX trade terms that may be used in the documentation for complex cutting or guillotine knife change operations
- elements that must be considered when planning a cutting sequence
- OHS factors that must be considered when handling knife blades during the knife change operation
- recommended knife angles for general cutting
- use of a double bevel on a guillotine knife
- factors that indicate that a new blade is needed
- result of a dull blade is used continuously
- difference between sharp knife from a dull knife
- information that must be sent with dull knife when replaced
- necessary time to replace a cutting stick
- forces that are acting on a guillotine knife
- OHS factors that must be considered when setting up and operating the guillotine
- factors that should be considered when setting up a guillotine for a complex cutting job
- choosing the correct clamping pressure for a given job
- result of the clamp pressure not being appropriate for the stock
- clamp pressure adjustment

REQUIRED SKILLS AND KNOWLEDGE

- clamp pressure that is recommended for NCR paper
- clamp pressure that is recommended for 80gsm offset paper
- clamp pressure that is recommended for 2400um strawboard
- expectation if the knife angle is less than 19 degrees
- expectation if the knife angle is more than 24 degrees
- need for a knife with a double angle
- knife angles on a double bevelled knife
- largest and smallest size sheets that can be processed on this machine
- procedures that can be used to complete undersize requirements
- recognising a "work and turn" job
- recognising a "work and twist" job
- recognising a "work and tumble" job
- recognising a "work and back" job
- problems that can occur when activating the automatic knife
- types of job not suitable for automatic cutting
- important operation that is required to trim multi-section books or magazines with bulky spines
- OHS factors that must be considered when checking and adjusting the machine
- the machine adjustment parameters
- checks that should be made after readjustment
- settings that may need to be altered after checks have been made
- items of the cutting result that should be checked against the sample
- steps that are taken if the cutting result does not coincide with the sample
- areas of the machine that should be continuously monitored
- identifying a lay and gripper edge if not marked (FIVE methods)
- OHS factors that must be considered when maintaining the production process
- production factors that must be considered when maintaining the production process
- production difficulties that can possibly affect the smooth production flow
- reporting procedures that are to be followed if the machine should malfunction
- treatment / disposal of waste from the guillotine area
- ways to mark lay and gripper edges on sheets
- result of the lay and grip edges are not recognised
- need to build-up the clamp of a guillotine
- "packing-up" the clamp of a guillotine
- important operation that is required to trim multi-section books or magazines with bulky spines
- reasons why the guillotine knife will not operate when the machine is turned on
- reasons why a book block may be cut out-of-square
- reasons for the program not working after it has been entered into the machine
- parts of the guillotine that should be checked if, after a cut, the top sheets are

REQUIRED SKILLS AND KNOWLEDGE

- longer than the bottom sheets
- parts of the guillotine that should be checked if, after a cut, the top sheets are shorter than the bottom sheets?
- result of no replacing the cutting stick regularly
- part of the guillotine that should be checked if, after a cut, the top sheets are out-of-square?
- part of the guillotine that should be checked if, after a cut, the top sheets are creasing along the cut line?
- checks necessary when the clamp plate is removed
- need for machine lubrication
- information about correct types and methods of lubrication
- OHS factors that must be considered when shutting down and/or cleaning the machine
- special operations that are essential when shutting down the machine
- maintenance procedures that should be used to keep the machine in good condition and order
- methods that are employed to rid the machine of waste
- cleaning agents that are used on the guillotine
- quality aspects that should be considered in a completed cutting job
- steps that should be taken to ensure that important features of the production control system are followed
- altering production need to meet client requirements
- items that must be checked against the client's sample
- steps that should be taken if the test sample is incorrect
- areas of the finished product that should be inspected
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up and produce complex guillotined product according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • set up (including knife change) and produce THREE complex guillotined products (THREE different substrates eg paper, strawboard, plastic, book cloth, and both large and small sheets) using a semi-automated or automated electronic guillotine, and setting a complex cutting program according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Cutting process</i> may include:	<ul style="list-style-type: none"> single knife, programmable guillotines, complex cutting sequence.
<i>Cutting units</i> may include:	<ul style="list-style-type: none"> range of semi-automated, automated or computerised guillotines.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> large or small sheet handling systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions and locate forme	1.1. Job sheets or instructions are interpreted correctly 1.2. Existing formes are located in storage area using filing system and new formes and associated tooling are collected from holding location
2. Check cutting forme	2.1. Cutting forme/tooling is checked against master sample for accuracy of cut and fold 2.2. Centre line is located and checked to ensure accuracy of positioning/registration on Bobst
3. Position and set up counters	3.1. Cutting plate is located and prepared for counters 3.2. Counters are accurately positioned and set up on cutting plate to ensure registration with cutting forme
4. Conduct sample cut	4.1. Material to be used for sample cut is obtained 4.2. Cutting forme and cutting plate are accurately positioned on machine 4.3. Machine is operated to produce sample according to enterprise procedures
5. Check sample	5.1. Sample is accurately cut and registration of tooling is precise 5.2. Forme or tooling is adjusted if necessary according to job specifications 5.3. Sample is confirmed as correct by supervisor if required
6. Set up stripping forme and blank separator	6.1. Pins are positioned on stripping forme to ensure accurate removal of waste board 6.2. Blank separator is set up according to job specifications
7. Undertake filing procedure	7.1. Correct identification number is allocated to cutting formes/tooling and strippers and recorded 7.2. Information is correctly entered into filing system according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills by interpreting job sheets correctly during set up
- planning and organising when setting up machinery and materials
- teamwork when discussing a sample with the supervisor
- using technology by setting up machinery
- problem solving by adjusting forme or tooling for precise cutting

Required knowledge

- checks made to correctly position bridge holes
- bridge holes reinforcement
- checks that can be performed to ensure that the saw cuts accurately match the line drawings
- checks to be made when cutting and shaping the knives and creasers
- OHS concerns that are there when setting knives
- factors that determine the amount of rubber attached to the forme
- factors that determine the positioning of the rubber on the forme
- important items to consider when setting the knives and creasers into position on the forme blank
- checked to be made when attaching stripping materials to stripper backing materials
- attachment of stripper materials accurately
- purpose of the mounting strips
- areas that must be proofed to ensure that the cutting forme meets the production order specifications
- allocation of numbers to each forme
- method of recording the forme allocation numbers that is the accepted formula

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • prepare cutting formes (two large and two small) to accommodate different complexities of cutting with multiple images with extremely tight registration and highly accurate cutting requirements • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare FOUR cutting formes (two large and two small) to accommodate TWO different complexities of cutting. At least ONE must contain multiple images with extremely tight registration and highly accurate cutting requirements • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	<p>1.1. Job specifications are read and interpreted from job documentation or production control system</p> <p>1.2. Set-up is planned and carried out correctly in minimum time with minimum wastage</p> <p>1.3. Availability of all job related components is checked</p>
2. Mount rotary cutting or embossing devices	<p>2.1. Cutting devices or dies are correctly mounted to die cylinders</p> <p>2.2. Cutting devices or dies are registered and proofed on die cylinder</p> <p>2.3. Appropriate cutting devices or dies are selected and secured to machine according to job specifications</p>
3. Set up reel system (OR Element 4)	<p>3.1. Unwind and rewind reels are set up and adjusted according to job specifications</p> <p>3.2. Webbing procedures are carried out according to job specifications</p> <p>3.3. Web control system is set up and adjusted according to job specifications</p> <p>3.4. Reels are spliced/joined according to job specifications</p> <p>3.5. Folder and sheeter are set up and adjusted according to job specifications</p>
4. Set up sheet system (OR Element 3)	<p>4.1. Feeder and delivery systems are set up and adjusted according to job specifications</p> <p>4.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications</p> <p>4.3. Transfer systems are set up and adjusted according to job specifications</p> <p>4.4. Substrate is removed from process according to job specifications</p>
5. Set up machine for basic rotary cutting	<p>5.1. Rotary cutting devices are set up and adjusted according to job specifications</p> <p>5.2. Cutting pressures are set up and adjusted according to job specifications</p> <p>5.3. Counter knives/anvils are set in correct position Set up in-line units</p>
6. Set up in-line units	<p>6.1. Minor in-line printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications</p> <p>6.2. Assistance is given in set up of major in-line</p>

ELEMENT	PERFORMANCE CRITERIA
	printing/convertng/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)
7. Conduct sample run	7.1. Material to be used for sample is organised correctly 7.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 7.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 7.4. Results are interpreted to determine adjustment requirements 7.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills by reading and interpreting job specifications
- planning and organising when installing a rotary cutting or embossing device into the machine
- teamwork when giving assistance with the setting up of in-line units
- using technology when setting up the web control system and adjusting according to job specifications
- problem solving by readjusting settings based on results of the sample run

Required knowledge

- information concerning rotary die cutting or embossing that you would expect to find in the job documentation or production control system
- information be interpreted to ensure smooth workflow throughout the factory
- factors that must be considered when deciding on a cutting system
- checked when cutting devices are mounted on a cylinder
- methods each of registering and proofing the cutting devices
- checked when the cutting devices are attached to the machine
- criteria that determines the selection of particular cutting devices
- OHS concerns when setting up reel transportation systems
- adjustments to the unwind reel to suit various jobs
- important areas to be considered during webbing procedures
- important areas of the reel delivery system to be adjusted according to job specifications
- steps to be taken to ensure that the delivery system operates effectively
- adjustment to the sheeter during production
- adjustment to the folder during production
- adjustment to the rewind wheel during production
- OHS factors that must be considered when setting up and/or operating sheet transport and delivery systems
- important areas or sections of the feeder unit set up
- adjustments that can be made to the machine to facilitate accurate sheet pick-up and transportation
- areas of the delivery system that should be observed to maintain neat delivery of finished work
- areas of the delivery system that should be observed to prevent damage to the finished product

REQUIRED SKILLS AND KNOWLEDGE

- necessary to be checked when substrate is removed from the machine
- ways in which the finished product can be secured for dispatch
- OHS factors that must be considered when setting up rotary cutting devices
- setting up, adjusting and operating rotary cutting machines
- machine pressure
- machine cutting depths
- adjusting lays for registration and what needs to be checked when it is done
- problems if the counter knives/anvils are incorrectly set
- largest/smallest size sheet that can be processed on this machine
- checked to ensure the suitability of in-line process
- details of the completed sample that should be examined to ensure conformance with the client's requirements
- common faults that can occur with the rotary cutting process
- factors that indicate a need for the replacement of knives/blades/cutting edges
- cutting edges and counter knives (anvils) should be stored to guard against damage and deterioration
- items that must be checked against the client's sample
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machine for complex rotary die cutting or embossing according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • competency must be demonstrated on EITHER rotary die cutting OR embossing. For either process set up TWO complex jobs (including in-line processes) with different substrates, sizes and patterns according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPCF320C Produce complex converted or finished product.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Cutting process</i> may include:	<ul style="list-style-type: none"> rotary die and forme cutting, embossing.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, corrugated board or metal.
<i>Rotary cutting units</i> may include:	<ul style="list-style-type: none"> a range of machines with dies or cutting formes and manual, semi-automated, fully automated or computerised process control.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Shapes</i> may include:	<ul style="list-style-type: none"> simple, multiple shapes.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet handling systems.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel system (OR Element 2)	1.1. Reel stand and rewind section are monitored and adjusted to ensure efficient continuous operation to maintain correct tension and to ensure no marks, blemishes or damage to finished product 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to and removed from the process according to job specifications 1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain operation of sheet system (OR Element 1)	2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to the process according to job specifications
3. Maintain operation of complex rotary die cutting or embossing process	3.1. Knife condition is monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Registration of knife(s) is monitored and adjusted to ensure qu Packing of cutting devices is monitored and adjusted to ensure quality of product meets the standard of sample approved 3.4. Packing of cutting devices is monitored and adjusted to ensure quality of product meets the standard of sample approved
4. Maintain production process	4.1. In-line printing/converting/binding/finishing processes are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 4.2. Production process is operated in association with fellow workers and according to enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
	<p>and planned daily schedule</p> <p>4.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>4.4. Manual and/or automatic control is used according to job specifications</p> <p>4.5. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify rotary cutting machine problems and faults	<p>5.1. Problems in <i>rotary cutting</i> machine are identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Cutting rotary machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.5. Repair/adjustment is verified prior to resumption of operations</p>
7. Clean rotary cutting units at end of run	<p>7.1. Knife and machine bed are cleaned ready for next run</p> <p>7.2. Cutting devices are sharpened correctly according to OHS requirements and enterprise procedures</p> <p>7.3. Cutting machine is disengaged and cleaned ready for</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>next run</p> <p>7.4. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.5. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.6. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.7. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills by monitoring and verifying performance using process control systems
- planning and organising when following the correct shutdown sequence
- teamwork when conducting shutdown with fellow workers
- using technology when adjusting machinery to improve performance
- problem solving by identifying problems and faults and developing solutions

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- area of the web control system that should be adjusted to maintain correct positioning of the web
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- parts of the sheet pick-up system that are to be adjusted to ensure accurate and continuous sheet handling
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- areas of the delivery system that should be observed to maintain tension
- areas of the delivery system that should be observed to prevent damage to the finished product
- checks to be made when substrate is removed from the machine
- OHS factors that must be considered when maintaining the cutting process
- items of importance to consider when maintaining rotary cutting operations
- checks made on: cutting pressures, cutting registration, packing of cutting area, condition of cutting edges, the smooth running of the operation
- indicators that demand the replacement of cutting edges
- checks to be made when cutting accuracy is adjusted
- ways in which a clean and precise result can be guaranteed
- production difficulties that can be expected during production runs
- OHS factors that must be considered when problem solving on the rotary machine cutting process

REQUIRED SKILLS AND KNOWLEDGE

- checks to be made when packing cutting devices
- procedure for correcting any machine faults
- OHS factors that must be considered when conducting machine shutdown procedures
- checks to be made when waste is removed from the machine and surrounding area for disposal or recycling
- checks to be made when shutting down the machine
- checks to be made when the cutting devices or knives are cleaned, stored or replaced ready for the next run
- areas of the machine that require cleaning at the end of the run
- cleaning agents that are used in cleaning the machine
- build-ups that need to be cleaned from the machine
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- quality aspects that should be considered in a completed rotary cutting job
- steps that should be taken to ensure that important features of the production control system are followed
- production areas that may have to be adjusted to meet client requirements
- items that must be checked against the client's sample
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • produce complex products that meet job specifications and production timeframes using rotary cutting or embossing equipment • demonstrate an ability to find and use information relevant to the task from a variety of information sources • competency must be demonstrated on EITHER rotary die cutting OR embossing. For either process produce TWO complex jobs (including in-line processes) with different substrates, sizes and patterns according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPCF327C Set up machine for complex rotary die cutting or embossing.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • wide or narrow reel or large or small sheet handling systems.
<i>Cutting process</i> may include:	<ul style="list-style-type: none"> • rotary die and forme cutting, and embossing.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Rotary cutting units</i> may include:	<ul style="list-style-type: none"> • a range of machines with dies or cutting formes and manual, semi-automated, fully automated or computerised process control.
<i>Shapes</i> may include:	<ul style="list-style-type: none"> • complex, multiple shapes.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is planned and carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reel system (OR Element 3)	2.1. Unwind and rewind reels are set up and adjusted according to job specifications 2.2. Webbing procedures are carried out according to job specifications 2.3. Web control system is set up and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications 2.5. Folder and sheeter are set up and adjusted according to job specifications
3. Set up sheet system (OR Element 2)	3.1. Feeder is set up and adjusted according to job specifications 3.2. Double/misfeed detectors are set up according to job specifications 3.3. Sheet pick-up and transportation system is set up and adjusted according to job specifications 3.4. Transfer systems are set up and adjusted according to job specifications 3.5. Material delivery is set up and adjusted according to job specifications
4. Set up machine for complex sequenced or multiple folding	4.1. Buckle/knife folding units are set up and adjusted according to job specifications 4.2. Folding rollers/belts/rails are set up and adjusted according to job specifications
5. Set up in-line units	5.1. Minor in-line printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications 5.2. Assistance is given in set up of major in-line printing/converting/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)
6. Conduct sample run	6.1. Material to be used for sample is organised correctly 6.2. Machine is set up and operated to produce a specified sample according to OHS requirements,

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer's specifications and enterprise procedures</p> <p>6.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>6.4. Results are interpreted to determine adjustment requirements</p> <p>6.5. Adjustment changes are carried out according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when reading and interpreting job specifications
- planning and organising when setting up the machine for complex folding and ensuring the availability of all job related components
- teamwork when assisting with the set up of in-line units
- using technology when setting up the sheet delivery system on a sheet-fed machine
- problem solving by identifying problems and faults and developing solutions

Required knowledge

- information concerning folding requirements that would you expect to find in the job documentation or production control system
- information interpretation to ensure smooth workflow throughout the factory
- factors that must be considered when planning a folding sample
- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- area of the web control system that should be adjusted to maintain correct positioning of the web
- OHS factors that must be considered when setting folder transportation and delivery systems
- areas of the sheet-fed transportation system that should be monitored to ensure trouble-free operation
- parts of the sheet pick-up system that should be adjusted to ensure accurate and continuous sheet handling
- areas of the delivery system that should be observed to maintain neat delivery of finished work
- areas of the delivery system that should be observed to prevent damage to the finished product
- checks to be made when substrate is removed from the machine
- ways in which the folded sheets can be secured for dispatch
- OHS factors that must be considered when setting up and/or adjusting the folding unit
- largest/smallest size sheet that can be processed on this machine
- adapting the machine to facilitate smaller/larger stock

REQUIRED SKILLS AND KNOWLEDGE

- factors that determines the accuracy of sheets entering folding rollers
- causes scratching/scuffing of substrate during transportation
- factors that determines the speed of the machine
- adjustments to be made if the sheet is not reaching the fold unit
- adjustment to be made if the sheet is turned on the transportation unit
- problems that can be expected if the machine is running too fast
- problems that can be expected if the machine rollers are set too loose
- problems that can be expected if there is too much roller pressure
- problems that can be expected if the delivery system is not set correctly
- factors that determines the correct roller pressure for a given job
- roller pressures checks for correctness
- adjustment to be made if the sheet is out-of-square
- reasons for the sheet being out-of-square
- adjustment to be made to ensure that the sheets are not smudging/"scuffing"
- adjustments to be made if the sheet will not leave the folding unit
- OHS factors that must be considered when adjusting machine units
- steps that are taken to ensure correct alignment of in-line processes/units
- checks to be made when operating the electronic gate fold unit
- use of a gate fold unit
- use of a gluing unit on a job
- adhesive that is used in the gluing unit
- adjustments made to the length of the glue line
- causes of out-of-square folding and explain how each may be corrected
- segments of quality assurance that would be inspected at the completion of the sample run
- communication action that should be instigated if job is out-of-square
- communication action that should be instigated if ink is too wet for production
- communication action that should be instigated if job does not coincide with sample
- areas of the machine that should be adjusted if the sheet is creasing
- areas of the machine that should be adjusted if the sheet is caught in the fold plate
- areas of the machine that should be adjusted if the sheet is not entering the machine
- items that must be checked against the client's sample
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machines for complex folding according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • set up THREE multiple sequenced folding jobs (eg letter folds, concertina folds) OR gusseting (envelope adjuster) jobs, using different sizes and weights of substrates (eg 45-110 gsm) and including use of a gluing unit and/or gate fold unit, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example this unit may be assessed at the same time as:</p> <ul style="list-style-type: none"> • ICPCF320C Produce complex converted or finished product.

EVIDENCE GUIDE

Depending on the configuration of equipment and types of jobs, the following units may also be assessed at the same time:

- ICPCF231C Set up machine for basic flat-bed cutting
- ICPCF235C Set up machine for basic rotary cutting
- ICPCF261C Set up machine for basic adhesive, mechanical or thermal fastening
- ICPCF361C Set up machine for complex adhesive, mechanical or sewn fastening.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Folding units</i> may include:	<ul style="list-style-type: none"> a range of machines with manual, semi-automated, fully automated or computerised process control.
<i>Folding process</i> may include:	<ul style="list-style-type: none"> sequenced, multiple folding or gusseting.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet handling systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain reel transportation system (OR Element 2)	1.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. <i>Substrate</i> is added to the process according to job specifications
2. Maintain sheet transportation system (OR Element 1)	2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to the process according to job specifications
3. Maintain production process	3.1. Registration and squareness of fold are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Basic <i>in-line</i> printing/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 3.4. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 3.5. Manual and/or automatic control is used according to job specifications 3.6. Performance is monitored and verified using the process control system according to enterprise procedures 3.7. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 3.8. Process adjustments to eliminate problems are reported according to enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
	<p>3.9. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>3.10. Waste is sorted according to enterprise procedures</p>
4. Identify and rectify problems and faults	<p>4.1. Problems in folding (sequenced/multiple) machine operation are identified and reported according to enterprise procedures</p> <p>4.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>4.3. Folding (sequenced/multiple) machine operation is checked to ensure correct operation</p> <p>4.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>4.5. Repair/adjustment is verified prior to resumption of operations</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
6. Clean folding (single/ continuous) machine at end of run	<p>6.1. Folding units are disengaged and cleaned ready for next run</p> <p>6.2. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>6.3. Reel feed and transportation systems are disengaged and cleaned ready for next run</p> <p>6.4. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when monitoring and verifying performance using process control systems
- planning and organising when following the correct shutdown sequence
- teamwork when conducting the shutdown with fellow workers
- using technology when setting up the sheet delivery system on a sheet-fed machine
- problem solving by identifying problems and faults and developing solutions

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- checks to be made when substrate is removed from the machine
- OHS factors that must be considered when using the folding machine
- areas to continuously observe to ensure the smooth trouble-free operation of the machine?
- areas of the in-line process that should be monitored to assure the quality of the product
- OHS factors that must be considered when adjusting/correcting the machine
- causes of out-of-square folding and explain how each may be corrected
- segments of quality assurance that would be inspected at the completion of the sample run
- communication action that should be instigated if job is out-of-square
- communication action that should be instigated if the ink is too wet for production
- communication action that should be instigated if the job does not coincide with the sample
- part(s) of the machine that should be adjusted if the sheet is creasing
- OHS factors that must be considered when cleaning the machine
- important tasks that must be performed to correctly shut down the machine
- preparation of finished work for dispatch
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• keeping the machine clear of surface rust (condensation)• quality aspects that should be considered in a completed folded job• production areas that may have to be adjusted to meet client requirements• machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents |

Webbing procedures are carried out according to job specifications</p> <p>2.3. Web control system is set up and adjusted according to job specifications</p> <p>2.4. Reels are spliced/joined according to job specifications</p>
3. Set up sheet/section system (OR Element 2)	<p>3.1. Feeder and delivery systems are set up and adjusted according to job specifications</p> <p>3.2. Sheet/section/reel pick-up and transportation system is set up and adjusted according to job specifications Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>3.3. Transfer systems are set up and adjusted according to job specifications</p> <p>3.4. Substrate is removed from the process according to job specifications</p> <p>3.5. Sheet/section/reel transfer and control system is set up and adjusted according to job specifications</p>
4. Set up machine and in-line units	<p>4.1. Collating/inserting system is set up and adjusted according to job specifications</p> <p>4.2. Minor in-line printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications</p> <p>4.3. Assistance is given in set up of major in-line printing/converting/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)</p>
5. Conduct sample run	<p>5.1. Material to be used for sample is organised correctly</p> <p>5.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>5.4. Results are interpreted to determine adjustment requirements</p> <p>5.5. Adjustment changes are carried out according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when organising a laboratory test, and reading and interpreting job specifications
- planning and organising when setting up the sheet/section delivery system according to job specifications
- teamwork when assisting with in-line set up units
- using technology when using the double/misfeed sheet calliper system
- problem solving by interpreting results of tests and determining adjustment requirements

Required knowledge

- important information concerning collating that will be included in the job documentation or production control system
- interpretation of information to ensure smooth workflow throughout the factory
- elements that must be considered when planning a collated sample
- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- area of the web control system that should be adjusted to maintain correct positioning of the web
- important factors to consider when setting up the feeder
- setting up of the double/misfeed sheet calliper system
- considerations to ensure smooth transportation of the sheets or sections to and through the machine
- name of the different types of sheet/section delivery systems
- areas of OHS when the machine is operating
- largest/smallest sheet/section size possible to be run on the machine
- areas of the machine that should be adjusted to allow for 42 gsm stock
- largest/smallest size sheet that can be processed on this machine
- ways that the machine can be adapted to facilitate smaller/larger stock
- factors that govern the speed at which the machine will operate
- indicators that the machine was in need of lubrication
- OHS factors that must be considered when adjusting machine units
- steps that should be taken to ensure correct alignment of in-line processes/units

REQUIRED SKILLS AND KNOWLEDGE

- adjustments that should be made to keep units correctly positioned
- OHS factors that are to be considered before readjusting the machine
- acceptable collating results
- cause of creasing of sheets in the machine delivery
- adjustments to the machine to alleviate "bruising" of NCR paper
- items that must be checked against the client's sample
- circumstances that would the machine need to be adjusted
- machine manuals, safety and other documentation that are relevant to this task, where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machines for complex collating or inserting according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • Set up machines for complex collating (at LEAST four or five products) including in-line processes on FOUR occasions, if possible TWO sheet jobs each using different sizes and weights of substrate and TWO section jobs with and without lip/lap, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example this unit may be assessed at the same time as:</p> <ul style="list-style-type: none"> • ICPSU201C Prepare, load and unload reels and cores on and off machine

EVIDENCE GUIDE

- ICPSU202C Prepare, load and unload product on and off machine
- ICPSU207C Prepare machine for operation (basic)
- ICPCF320C Produce complex converted or finished product.

Depending on the configuration of equipment and types of jobs, the following units may also be assessed at the same time:

- ICPCF223C Set up machine for cutting (trimming)
- ICPCF261C Set up machine for basic adhesive, mechanical or thermal fastening
- ICPCF361C Set up machine for complex adhesive, mechanical or sewn fastening.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet handling systems.
<i>Collating process</i> may include:	<ul style="list-style-type: none"> collating/inserting of sheets or book sections, or reels (may include tabs, crimping) of varied form, weight or shape.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Collating units</i> may include:	<ul style="list-style-type: none"> a range of machines with manual, semi-automated, fully automated or computerised process control.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain reel transportation system (OR Element 2)	1.1. Clean collating or inserting (sheet/section/reel) machine at end of run 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to the process according to job specifications
2. Maintain sheet transportation system (OR Element 1)	2.1. Feeder is monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling end efficient operation 2.4. Substrate is added to the process according to job specifications
3. Maintain production process	3.1. Collating or inserting process is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.2. In-line printing/converting/binding/finishing processes are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 3.4. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 3.5. Manual and/or automatic control is used according to job specifications 3.6. Performance is monitored and verified using the process control system according to enterprise procedures 3.7. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 3.8. Waste is sorted according to enterprise procedures
4. Identify and rectify	4.1. Problems in collating or inserting

ELEMENT	PERFORMANCE CRITERIA
problems and faults	<p>(sheet/section/reel) machine are identified and reported according to enterprise procedures</p> <p>4.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>4.3. Collating or inserting (sheet/section/reel) machine operation is checked to ensure correct operation</p> <p>4.4. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.5. Faulty performance of equipment is identified and reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.5. Repair/adjustment is verified prior to resumption of operations</p>
6. Clean collating or inserting (sheet/section/reel) machine at end of run	<p>6.1. Collating or inserting machine is cleaned ready for next run</p> <p>6.2. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>6.3. Reel feed transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>6.4. Sheet feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>6.5. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when monitoring and verifying performance using process control systems
- planning and organising when following the correct shutdown sequence
- teamwork when conducting shutdown with fellow workers
- using technology when adjusting machinery to improve performance
- problem solving by identifying problems and faults and developing solutions

Required knowledge

- areas of OHS that consideration should be given when the machine is operating
- factors that govern the speed at which the machine will operate
- indicators that the machine was in need of lubrication
- circumstances that the machine would need to be adjusted
- OHS factors that should be considered before readjusting the machine
- areas of the machine that would cause sheets to crease during production
- causes of the sheets misfeeding during production
- correction of the creasing of sheets
- method of correction that is needed to prevent double sheet feeds
- adjustment that must be made to prevent "bruising" of NCR sheets
- areas that are to be checked when sections are failing to open on the chain
- checks to be made when correctly shutting down the machine
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)
- recommended cleaning agents
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- steps that should be taken to ensure that important features of the production control system are followed
- an acceptable collating result
- cause of creasing of sheets in the machine delivery
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce a complex collated product that meets job specifications, production timeframes and quality standards demonstrate an ability to find and use information relevant to the task from a variety of information sources operate machines for complex collating (at LEAST FOUR or FIVE products) including in-line processes on FOUR occasions (if possible TWO sheet jobs using different sizes and weight of substrate and TWO section jobs with and without lip/lap), according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPSU201C Prepare, load and unload reels and cores on and off machine ICPSU202C Prepare, load and unload product on and

EVIDENCE GUIDE

	<p>off machine</p> <ul style="list-style-type: none">• ICPSU208C Operate and monitor machines (basic)• ICPCF342C Produce complex sequenced or multiple folded product• ICPCF361B Set up machine for complex adhesive, mechanical or sewn fastening.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is planned and carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up sheet/section system	2.1. Feeder and delivery systems are set up and adjusted according to job specifications 2.2. Sheet/section pick-up and transportation system is set up and adjusted according to job specifications 2.3. Transfer systems are set up and adjusted according to job specifications 2.4. Substrate is removed from the process according to job specifications 2.5. Sheet/section transfer and control system is set up and adjusted according to job specifications
3. Set up machine and in-line units	3.1. Fastening system is set up and adjusted according to job specifications 3.2. Minor in-line printing/converting/binding units are set up for basic processes and adjusted according to machine requirements and job specifications 3.3. Assistance is given in set up of major in-line printing/converting/binding units (NOTE: if entire set up is completed, refer to appropriate competency standards)
4. Conduct sample run	4.1. Material to be used for sample is organised correctly 4.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 4.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 4.4. Results are interpreted to determine adjustment requirements 4.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when organising a laboratory test and reading and interpreting job specifications
- planning and organising when conducting a sample run
- teamwork when giving assistance with setting up in-line units
- using technology when setting up and adjusting the fastening system according to job specifications
- problem solving when interpreting sample results to determine adjustment requirements

Required knowledge

- information concerning binding requirements that would you expect to find in the job documentation or production control system
- interpretation of information to ensure smooth workflow throughout the factory
- elements that must be considered when planning a collated sample
- OHS concerns that are there when setting up transportation systems
- special delivery problems that are associated with adhesive machines
- overcoming these problems
- different section feeding systems
- monitoring the delivery systems present on the various machines
- ways in which the completed work can be secured for dispatch
- largest/smallest size sheet that can be processed on this machine
- ways that the machine can be adapted to facilitate smaller/larger stock
- OHS areas that must be addressed when setting up fastening equipment on the machine
- a jobs correct binding technique
- OHS safeguards that are necessary with hot melt adhesives
- methods of adhesive metering present on the machine
- care that should be taken to ensure a neat and clean adhesive binding job
- expectations if sewing is not in the right position
- parts of the wire stitcher that would need to be adjusted to process books of different thicknesses
- position of the wire stitches on the book
- difference between a staple and a wire stitch
- appropriate wire calliper for a particular job

REQUIRED SKILLS AND KNOWLEDGE

- largest/smallest size sheet that can be processed on each machine
- machines be adaption to facilitate smaller/larger stock
- OHS areas that must be addressed when setting up these areas of the machine
- in-line units that are available for these binding processes
- OHS factors that should be considered before readjusting the machine
- circumstances that the machine would need to be adjusted
- quality aspects that should be considered in the completed binding job
- steps that should be taken to ensure that important features of the production control system are addressed
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machines for complex adhesive, mechanical or section fastening according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • competency must be demonstrated in any ONE of adhesive, thermal, mechanical or section sewing. For each process set up (including replacing adhesive, thread, wire) TWO complex jobs using different sizes and weights of substrate according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPCF220C Produce basic converted or finished product. <p>Depending on the configuration of equipment and types</p>

EVIDENCE GUIDE	
	of jobs, virtually any other converting and finishing set up unit can be assessed at the same time.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • large or small sheet/section handling systems.
<i>Fastening processes</i> may include:	<ul style="list-style-type: none"> • adhesive fastening such as cold and hot melt gluing, taping of substrates of varied form, weight or shape, eg hard case making, casing in, spine lining, multiple head and complex pattern gluing • mechanical fastening such as wire stitching, loop stitching of substrates of varied form, weight or shape • section sewing.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of sheet/section transportation system	1.1. Feeder is monitored and adjusted to ensure continuous and efficient feeding to machine 1.2. Sheet/section pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 1.3. Sheet/section transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 1.4. Substrate is added to the process according to job specifications
2. Maintain operation of sheet/section delivery system	2.1. Delivery system is monitored and adjusted to ensure quality and efficient product delivery 2.2. Wire straightness, length, cut-off and clinching pressures are monitored and adjusted to ensure quality of product meets the standard of the approved sample 2.3. Adhesion is monitored and adjusted to ensure quality of product meets the standard of the approved sample 2.4. Thread tension and stitch quality are monitored and adjusted to ensure quality of product meets standard of the approved sample
3. Maintain production process	3.1. In-line printing/convertng/binding/finishing processes are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 3.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 3.4. Manual and/or automatic control is used according to job specifications 3.5. Performance is monitored and verified using the process control system according to enterprise procedures 3.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 3.7. Waste is sorted according to enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
4. Identify and rectify problems and faults	<p>4.1. Problems in sewing <i>fastening</i> machine are identified and reported according to enterprise procedures</p> <p>4.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>4.3. Sewing fastening machine operation is checked to ensure correct operation</p> <p>4.4. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.5. Faulty performance of equipment is identified and reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.5. Repair/adjustment is verified prior to resumption of operations</p>
6. Clean adhesive/mechanical/sewing fastening machine at end of run	<p>6.1. Sewing unit is disengaged and cleaned ready for next run</p> <p>6.2. Mechanical <i>fastening unit</i> is disengaged and cleaned ready for next run</p> <p>6.3. Glue system is washed up ready for next run and liquid waste is disposed of according to regulatory requirements and enterprise procedures</p> <p>6.4. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>6.5. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>6.6. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when monitoring and verifying performance using process control systems
- planning and organising when conducting a sample run
- teamwork when following the correct shutdown sequence
- using technology when adjusting machinery to improve performance
- problem solving when identifying problems and faults and developing solutions
- problem solving when interpreting sample results to determine adjustment requirements

Required knowledge

- OHS factors that must be considered when operating sheet-fed transportation and delivery systems
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- parts of the sheet pick-up system that are to be adjusted to ensure accurate and continuous sheet feeding
- areas of the delivery system that should be observed to maintain tension
- areas of the delivery system that should be observed to prevent damage to the finished product
- checks to be made when substrate is removed from the machine
- OHS factors that must be considered when maintaining or adjusting the operation of the machine
- OHS factors that must be considered when using hot melt adhesive
- safety clothing that is available for use when operating adhesive binders
- speed of production
- sectors to observe to guarantee that the production process is trouble-free and continuous
- areas of the in-line process that should be monitored to assure the quality of the product
- circumstances that require the machine to be adjusted
- circumstances that require the machine to be slowed down
- circumstances for machine speed be increased
- adjustment of the adhesive application on an adhesive binder
- achieving more spine milling on an adhesive binder
- adjustment of the wire length on a wire stitcher how

REQUIRED SKILLS AND KNOWLEDGE

- straightening the wire in the wire feed on a wire stitcher
- increasing / decreasing the dwell time on a high frequency welder
- increasing / decreasing the current on a high frequency welder
- OHS factors that must be considered when cleaning hot melt from the machine
- checks to be made when shutting down a given machine
- FOUR important reasons for a thorough shutdown of operations
- areas of the machine that needs regular cleaning
- materials that need to be cleaned from the machine
- recommended cleaning agents
- keeping the machine clear of surface rust (condensation)
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- quality aspects that should be considered in a completed adhesive bound job
- quality aspects that should be considered in a completed high frequency welded job
- quality aspects that should be considered in a completed wire stitched job
- steps that should be taken to ensure that important features of the production control system are followed
- alterations needed to production to meet client requirements
- items that must be checked against the client's sample
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce a complex fastened product that meets job specifications, production timeframes and quality standards demonstrate an ability to find and use information relevant to the task from a variety of information sources competency must be demonstrated in any ONE of adhesive, mechanical or section sewing. For each process produce TWO complex jobs using different sizes and weights of substrate according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • large or small sheet/section handling systems.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Fastening processes</i> may include:	<ul style="list-style-type: none"> • adhesive fastening such as cold and hot melt gluing, taping of substrates of varied form, weight or shape, eg hard case making, casing in, spine lining • mechanical fastening such as wire stitching, loop stitching of substrates of varied form, weight or shape • section sewing.
<i>Fastening units</i> may include:	<ul style="list-style-type: none"> • a range of machines with manual, semi-automated, fully automated or computerised process control.
<i>Complexity</i> may include:	<ul style="list-style-type: none"> • complex refers to use of automatic adhesive and thermal machines, multiple head mechanical machines, section sewers.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine dimensions and style of box	1.1. Options for style and cost are discussed with client 1.2. Dimensions of article to be contained are determined through measurement and/or job specifications 1.3. Final job specifications are determined and confirmed with the client
2. Select materials	2.1. Board weight, covering and lining <i>materials</i> are selected according to job specifications 2.2. Grain direction is determined if relevant
3. Cut board, cover material and lining to size	3.1. Board, cover material and lining are cut to correct size 3.2. Board is scored to appropriate depth if necessary 3.3. Waste is removed if applicable 3.4. Lids are fitted if necessary to allow for the thickness of covering material
4. Fold and score corners (OR Element 5)	4.1. Straight folds are made with corners at correct angles 4.2. Corners are secured with reinforcing material if necessary
5. Glue and butt join (OR Element 4)	5.1. Walls are set at correct angles to base 5.2. Flush joins are made with adequate adhesion
6. Attach covering material and lining	6.1. Corners are cut correctly according to job specifications 6.2. Covering material and lining are fixed with adequate and smooth adhesion 6.3. Material is rubbed smoothly into corners of box
7. Press box if necessary	7.1. Block for pressing is made up as required 7.2. Even pressure is applied to box sections
8. Decorate or furnish box if required	8.1. Appropriate decorating techniques are used where relevant 8.2. Appropriate furnishings (clasps, hinges) are attached if required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to using tools and operating equipment
- communication skills when discussing options and styles with the client
- planning and organising when determining the final job specifications and selecting materials
- teamwork when maintaining the production process in association with others
- using technology when cutting the board, cover material and lining to size
- problem solving when selecting board weight, covering and lining to meet job specifications

Required knowledge

- OHS concerns that are there when making boxes
- necessary board calliper for a box
- maximum calliper for a folded box
- inconspicuous corner reinforcements
- appropriate covering material and style
- style of box that is appropriate
- recommended allowances in a book box
- in slip cases, techniques that can be used to reduce scuffing of a book cover
- reducing corner bulk when using heavyweight board
- techniques that can be used when cutting the turn-ins for a rounded spine
- need to cover the edge of a board before attaching the main covering
- consequence of adhesives that are too thick or too thin
- open time of an adhesive affect on the covering process
- criteria that are used to evaluate a finished box
- ensuring a clean finished job
- manuals, safety and other documentation that are relevant to this task and where they are kept information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> correctly set up and produce a hand-made box according to job specifications and within the production timeframe demonstrate an ability to find and use information relevant to the task from a variety of information sources produce TWO boxes in different styles and materials, at least ONE of which must have a lid, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials may include:	<ul style="list-style-type: none"> range of materials including board, paper, bookcloth, buckram.
Types of boxes may include:	<ul style="list-style-type: none"> range of boxes including loose lid, hinged lid, drop front, clamshell, book box, cruciform box, slip case, solander box.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Surface to be decorated is prepared 1.2. Edges are trimmed, scraped and sanded as appropriate to the technique being used 1.3. Appropriate size, mordant or glair is prepared and applied
2. Carry out marbling	2.1. Bath is prepared with gum or water as appropriate to technique being used 2.2. Equipment is selected and set up according to job specifications 2.3. Colours are mixed to correct consistency for required spread 2.4. Books are tied up if edges are to be marbled 2.5. Bath is prepared according to job specifications 2.6. Substrate is correctly dipped and removed then rinsed and dried
3. Gild edges with leaf	3.1. Book is loaded into laying press 3.2. Red bole or black lead (graphite) is correctly applied and treated 3.3. Gold and glair are correctly applied and burnished
4. Gild edges mechanically	4.1. Substrate is loaded into press 4.2. Substrate is prepared according to technical requirements 4.3. Gilding machine is set up with appropriate pressure, heat and dwell time 4.4. Gilding foil is applied to substrate using the correct technique 4.5. Appropriate additives are used if foil fails to take
5. Carry out gauffering	5.1. Design to be transferred is drawn up using the correct technique 5.2. Tools are selected and prepared 5.3. Book is locked into laying press 5.4. Impressions are made ensuring even result
6. Carry out staining or sprinkling or spraying	6.1. Books or papers are positioned and clamped or weighted 6.2. Covering Colour is prepared according to job specifications 6.3. Colour is applied with sponge, spray gun, roller or sprinkling brush as appropriate ensuring even

ELEMENT	PERFORMANCE CRITERIA
	application and adequate time to dry
7. Apply graphite	7.1. Book is locked into laying press 7.2. Graphite powder is applied using the correct technique 7.3. Edges are burnished to required effect
8. Carry out burnishing	8.1. Book is locked into laying press 8.2. Bloodstone or agate tools are selected as appropriate 8.3. Beeswax is supplied in fine film or worked through waxed paper 8.4. Edges of book are burnished using appropriate pressure
9. Make paste paper	9.1. Paste is prepared to correct consistency and colour 9.2. Required patterns are created using brushes, combs, dies or pulling off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to using tools and operating equipment
- communication skills when confirming job specifications
- planning and organising when preparing the appropriate materials for the chosen technique
- teamwork when maintaining the production process in association with others
- using technology when applying colour with the relevant tools
- problem solving by using additives if foils do not take

Required knowledge

- OHS concerns that are there in the various methods of paper decoration
- size/mordant/glair that is used for a particular process and its appropriate strength
- methods of application and describe where each is used
- examples of surface preparation timing before treatment
- importance that substrate should be free of dust
- different gums that can be used in the bath
- correct consistency of the bath
- techniques used to produce different patterns or effects
- likely causes of blank spots on the substrate
- control of the spread of colour
- temperature affect on the marbling process
- reasons for gold not sticking
- repair of a break in a gilt edge
- methods of picking up gold leaf for edge gilding
- technique that is used for gilding in the round
- difference of antique gilding from a solid gilt edge
- use of red bole or black lead with the gold
- technique that is used to obtain an even impression
- consequence of inappropriate pressure
- ways in which you ensure that you have an even finish
- minimisation of colour absorption in absorbent stocks
- methods that can be used to prevent colour appearing on an adjacent edge
- ways in which correct consistency of graphite/paste mixture is determined
- ways in which an even coating is ensured
- most common fault with burnished edges
- steps can be taken to ensure a smooth result
- ways in which the correct consistency for paste is determined

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is planned and carried out correctly in minimum time with minimum wastage
2. Set up reel transportation system	2.1. Unwind reel is set up and adjusted according to job specifications 2.2. Webbing procedures are carried out 2.3. Web control system is set up and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications 2.5. Rewind reel is set up and adjusted according to job specifications 2.6. Sheeter is set up and adjusted according to job specifications
3. Set up machine for complex laminating	3.1. Application system cylinder is set up and adjusted according to job specifications 3.2. Adhesive application system is set up and adjusted according to job specifications 3.3. Binding pressures are set up and adjusted according to job specifications 3.4. Drying system is set up and adjusted according to job specifications
4. Set up in-line unit(s)	4.1. Minor in-line printing/converting/binding unit(s) are set up for basic process(es) and adjusted according to machine requirements and job specifications 4.2. Assistance is given in set up of major in-line printing/converting/binding unit(s). (NOTE: if entire set up is completed, refer to appropriate competency standards)
5. Conduct sample run	5.1. Raw material to be used for sample is organised correctly 5.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 5.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures Impressions are made ensuring even result

ELEMENT	PERFORMANCE CRITERIA
	5.4. Results are interpreted to determine adjustment requirements 5.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when organising laboratory testing of a sample
- planning and organising when conducting a sample run
- teamwork when assisting with the set up of major in-line units
- using technology when adjusting the sheeter according to the job specifications
- problem solving when interpreting test results and determining adjustment requirements

Required knowledge

- information concerning laminating requirements that you would expect to find in the job documentation or production control system
- interpretation of this information to ensure smooth workflow throughout the factory
- elements that must be considered when planning a laminating sample
- OHS areas that must be addressed when setting up these areas of the machine
- webbing procedures commonly used in the transportation area
- areas to consider when setting up the web control system
- problem areas likely to be encountered setting up the sheeter
- methods of splicing a web on the laminating process
- OHS areas that must be addressed when setting up the laminating machine
- checks to be made when setting up (and adjusting) the application system cylinder
- checks to be made when setting up (and adjusting) the adhesive application system
- factors that determine the setting of the binding pressures
- important matters that are to be examined when setting the drying system
- largest/smallest size sheet that can be processed on this machine
- adapting the machine to facilitate smaller/larger stock
- OHS areas that must be addressed when setting up these areas of the machine
- in-line units that are available for the laminating process
- OHS factors that should be considered before readjusting the machine
- circumstances that the machine would need to be adjusted
- quality aspects that should be considered in a completed laminating job
- steps that should be taken to ensure that important features of the production control system are addressed
- items to be checked against the client's sample
- machine manuals, safety and other documentation that are relevant to this task and

REQUIRED SKILLS AND KNOWLEDGE

where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machines for a range of complex laminating processes within production timeframes. At least one machine used must be fully automated • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • competency must be demonstrated on any TWO of moisture, chemical and extrusion laminating. For each process set up a laminating machine (2 or more ply) to complete TWO jobs on different substrates and of different sizes (large/small formats including one in-line process) while demonstrating splicing techniques in minimum time according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel transportation system on web-fed machine	1.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. <i>Substrate</i> is added to the process according to job specifications
2. Maintain operation of reel delivery system on web-fed machine	2.1. Reel rewind section is monitored and adjusted to maintain correct tension and to ensure no marks, blemishes or damage to finished product 2.2. Substrate is removed from the process according to job specifications 2.3. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
3. Maintain complex laminating process	3.1. Registration of <i>laminating</i> is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.2. Pressures are monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.3. Adhesion is monitored and adjusted to ensure quality of product meets the standard of the approved sample
4. Maintain production processes	4.1. <i>In-line</i> printing/coating/converting/binding/finishing process(es) are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 4.2. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 4.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 4.4. Manual and/or automatic control is used according to job specifications 4.5. Performance is monitored and verified using the process control system according to enterprise procedures 4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 4.7. Process adjustments to eliminate problems are

ELEMENT	PERFORMANCE CRITERIA
	<p>reported according to enterprise procedures</p> <p>4.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify machine operating problem	<p>5.1. Problems in laminating machine are identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Laminating machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.5. Repair/adjustment is verified prior to resumption of operations</p>
7. Clean laminating machine at end of run	<p>7.1. Laminating machine is disengaged and cleaned ready for next run</p> <p>7.2. <i>Adhesive</i> system is washed up ready for next run and liquid waste is disposed of according to regulatory requirements and enterprise procedures</p> <p>7.3. In-line printing/coating/converting/binding/finishing units are cleaned ready for next run</p> <p>7.4. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.5. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills when monitoring and verifying performance using process control systems
- planning and organising when following the correct shutdown sequence
- teamwork when conducting the shutdown with fellow workers
- using technology when adjusting machinery to improve performance and ensuring correct and continuous feeding and delivery of substrate
- problem solving when identifying problems and faults and developing solutions

Required knowledge

- OHS factors that must be considered when operating web machine transport and delivery systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- area of the web control system that should be adjusted to maintain correct positioning of the web
- areas of the delivery system that should be observed to maintain tension
- areas of the delivery system that should be observed to prevent damage to the finished product
- checks to be made when substrate is removed from the machine
- OHS factors that must be considered when maintaining the laminating process
- ways in which registration of laminating s assured
- ways in which adjustment achieved
- ways in which the pressure can be adjusted during production
- areas of production that must be monitored to ensure trouble-free operations
- OHS factors that must be considered when maintaining the complex in-line processes
- areas of the in-line processes that should be monitored to ensure a quality product
- laminating problems that may occur during the operation of the machine
- adjustments or correction procedures that may need to be made to ensure accurate operation of the process
- OHS factors that must be considered when shutting down and cleaning the machine
- checks to be made when correctly shutting down the machine
- areas of the machine that need regular cleaning

REQUIRED SKILLS AND KNOWLEDGE

- materials that need to be cleaned from the machine
- keeping the machine clear of surface rust (condensation)
- recommended cleaning agents
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- quality aspects that should be considered in a completed laminated job
- steps that should be taken to ensure that important features of the production control system are followed
- alterations to production to meet client requirements
- items that must be checked against the client's sample
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • produce complex laminated product that meets job specifications, production timeframes and quality standards. This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to setting up and operating electronic monitoring systems
- communication skills when recording information on production documents
- planning and organising when positioning the monitor according to job type
- teamwork when maintaining the production process in association with other staff
- using technology when setting up the electronic monitoring system
- problem solving when identifying reasons for rejects during production

Required knowledge

- OHS factors that need to be considered when setting up and operating electronic monitoring systems
- importance of the distance between cartons on the machine t for production and for the operation of the electronic monitoring system
- checking the ejector (or marker) for correct operation
- different carton types and substrates and the affect on the amount and position of glue required
- glue is requirements for different carton types
- result of too much or too little glue
- result of an incorrectly positioned glue line
- process for fixing too much and too little glue
- process for adjusting the position of the glue line with respect to the length of the glue flap
- other machine faults that are registered on the EMS
- other parts of the folding/gluing system that will cause monitoring system to reject product
- ways of ensuring that the EMS is ejecting/marking only faulty cartons
- parts of the machine that need to be adjusted if reject cartons are not correctly identified and culled
- faults that are likely to trigger the signature or sheet monitoring system
- cause of common faults and how can they be avoided and corrected
- quality principles behind the use of electronic monitoring
- work procedures that can be implemented to minimise faults
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- steps that should be taken to ensure that important features of the production control system are followed
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly use electronic monitoring systems for glue lines, gatherers and folders according to job specifications and within the production timeframe • set up electronic monitoring systems for TWO different jobs, preferably of different sizes and substrates, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate an ability to retrieve information from the electronic system.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPCF220C Produce basic converted or finished product • ICPCF241C Set up machine for basic single or continuous folding • ICPCF243C Set up machine for basic collating or inserting (sheet/section) • ICPCF261C Set up machine for basic adhesive, mechanical or thermal fastening • ICPCF320C Produce complex converted or finished

EVIDENCE GUIDE

	<p>product</p> <ul style="list-style-type: none">• ICPCF341C Set up machine for complex sequenced or multiple folding• ICPCF343C Set up machine for complex collating or inserting (sheet/section/reel)• ICPCF361C Set up machine for complex adhesive, mechanical or sewn fastening.
--	---

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Machines</i> may include:	<ul style="list-style-type: none"> folder/gluers, gatherers and other relevant converting and finishing machines.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.
<i>Monitoring systems</i> may include:	<ul style="list-style-type: none"> electronic glue line monitoring systems (EMS) and monitoring systems for gatherers and folders that identify incorrect sheets or signatures. Systems may eject or mark faulty product (mainly in carton sector) or shut down production (mainly in binding and finishing).
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> working under limited supervision.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of transportation system	1.1. Feeder is monitored and adjusted to ensure continuous and efficient feeding of cartons to the machine 1.2. Carton pick-up and transport system is monitored and adjusted to ensure accurate continuous carton handling and efficient operation 1.3. Transfer systems are monitored and adjusted to ensure correct and continuous carton handling and efficient operation
2. Maintain operation of processes	2.1. Delivery is monitored and adjusted to ensure quality and efficient carton delivery 2.2. Registration of gluing is monitored and adjusted to ensure quality of product meets the standard of the approved sample 2.3. Adhesion is monitored and adjusted to ensure quality meets the standard of the approved sample
3. Maintain basic rotary cutting process	3.1. Cutting edges and knife condition are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample
4. Maintain production process	4.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 4.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 4.3. Performance is monitored and verified using the process control system according to enterprise procedures 4.4. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention 4.5. Process adjustments to eliminate problems are reported according to enterprise procedures 4.6. Faulty performance of equipment is identified and reported according to enterprise procedures 4.7. Waste is sorted according to procedures
5. Identify and rectify	5.1. Problems in window gluing machine operation are

ELEMENT	PERFORMANCE CRITERIA
problems	<p>identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to enterprise procedures</p> <p>5.3. Problems in film cutting and application operation are identified and rectified according to enterprise procedures</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Glue system is washed up ready for next run and liquid waste is disposed of according to regulatory requirements and enterprise procedures</p> <p>6.4. Cutting devices are checked and sharpened if needed</p> <p>6.5. Waste cartons are removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.7. Repair/adjustment is verified prior to resumption of operations</p> <p>6.8. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to setting up and operating electronic monitoring systems
- communication skills when ensuring the product quality meets the required quality standard
- planning and organising when following the correct sequence to shut down the machine
- teamwork when maintaining the production process in association with other staff
- using technology when monitoring and adjusting equipment for production purposes and adjusting pressures and registration
- problem solving by identifying problems and faults and developing solutions

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine delivery systems
- areas of the feeder should be monitored to ensure trouble-free operation
- OHS factors that must be considered when using the window facer machine
- areas to continuously observe to ensure the smooth trouble-free operation of the machine
- areas of the gluing and film cutting process that should be monitored to assure the quality of the product
- adjustment of the glue application
- OHS factors that must be considered when adjusting/correcting the machine
- segments of quality assurance that would be inspected at the completion of the sample run
- communication action that should be instigated if job does not coincide with sample
- part(s) of the machine that should be adjusted if window film is cut/slit incorrectly
- factors that cause poor glue adhesion on cartons
- OHS factors that must be considered as a job is completed
- important tasks that must be performed to correctly shut down the machine
- ways in which the finished work is prepared for the next process
- areas of the machine that need regular cleaning
- materials that need to be cleaned from the machine
- quality aspects that should be considered in a completed job
- alterations to production to meet client requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce a range of different size jobs on the window gluer according to job specifications and within the production timeframe produce a range of different size jobs on the window gluer including 1, 2 and 3 cycle operate, and dual feed evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Fastening processes</i> may include:	<ul style="list-style-type: none"> spot and line gluing.
<i>Fastening units</i> may include:	<ul style="list-style-type: none"> a range of machines with manual, semi-automated, fully automated or computerised process control.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Calibrate and adjust settings	<p>1.1. All details required for the job are checked and confirmed against <i>job specifications</i></p> <p>1.2. The <i>correct materials</i> are checked and available for the job</p> <p>1.3. Adhesives are selected that are appropriate for the substrate, the application process and the machine</p> <p>1.4. Work area is made safe and prepared for production according to safety requirements</p> <p>1.5. Window cutting and patch unit <i>settings</i> are set according to job specifications</p> <p>1.6. Measurement settings are checked thoroughly against job specifications before production is commenced</p> <p>1.7. Window position and size are set to meet requirements to ensure the machine runs efficiently and safely</p> <p>1.8. Wastage is monitored, kept to a minimum and correctly disposed of according to enterprise quality standards</p> <p>1.9. The process is monitored to maintain quality and identify opportunities for improvement</p>
2. Confirm quality	<p>2.1. A sample is produced and checked for conformance with quality standards, and adjustments made if required</p> <p>2.2. The efficiency, quality and output rate of the production run are monitored for problems and any deficiencies resolved</p> <p>2.3. Any machine faults are reported to appropriate responsible person</p> <p>2.4. The locations of all emergency shutdown buttons and triggers are known</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when making the work area safe and preparing for production according to safety requirements
- communication skills when reporting any machine faults to the appropriate person
- planning and organising when checking the measurement settings against the job specifications before production is commenced
- teamwork when maintaining the production process in association with other staff
- using technology when operating an envelope manufacturing machine
- problem solving when adjusting machine settings in order to maintain quality standards

Required knowledge

- enterprise documentation procedures
- enterprise quality standards
- enterprise faults procedures
- principles of envelope manufacture and setting window cutting and patching units
- common faults associated with window cutting and patching

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • set up the window cutting and patching units and produce a clean window cut with correct gum position, even level of patch size and position according to job specifications and within the production timeframe • demonstrate all safety devices on the machine • for valid and reliable assessment of this unit, evidence should be gathered over a period of time to indicate consistent performance in setting up the manufacturing process • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment • envelope manufacturing equipment with window cutting and patching units.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and adjust units	1.1. All details required for the job are checked and confirmed against <i>job specifications</i> 1.2. The <i>correct materials</i> are checked and available for the job 1.3. Adhesives appropriate for the substrate, the application process and the machine are selected 1.4. Work area is made safe and ready for production according to safety requirements 1.5. Folding guides and pressing plates are set to the required dimensions for the job 1.6. The feeder, folding part, gluer, stacker, belts, vacuums and glue applicators are clean, clear and ready for use 1.7. Settings are checked against job specifications before production is commenced
2. Monitor throughput	2.1. Machine is run at the speed required to produce a quality product 2.2. Machine is <i>jogged</i> to ensure the folds and glue are in the correct position 2.3. Guide positions are monitored to ensure adhesive is applied evenly and in the correct position 2.4. Paper moisture is monitored and correct moisture levels are maintained 2.5. Blank spacing is controlled and product spacing and flow are maintained for efficient operation 2.6. Folds are correctly placed and the product stacks correctly 2.7. Glues dry at correct rates for the substrate
3. Confirm quality of output	3.1. A sample from the machine is selected and checked to ensure it conforms to the required quality standards 3.2. Adjustments are made when the standards are not met 3.3. Each process is monitored and minor adjustments are made during production, if required 3.4. Samples are continuously monitored for defects and defects are removed 3.5. The efficiency, quality and output rate of the production run are monitored for problems and any deficiencies resolved

ELEMENT	PERFORMANCE CRITERIA
	<p>3.6. Wastage is monitored, kept to a minimum and correctly disposed of according to enterprise quality standards</p> <p>3.7. The locations of all emergency shutdown buttons and triggers are known</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when making the work area safe and preparing for production according to safety requirements
- communication skills when checking and confirming job specifications
- basic literacy to read work instructions
- planning and organising when monitoring wastage and correctly disposing of it according to enterprise quality standards
- teamwork when maintaining the production process in association with other staff
- using technology when operating a folder gluer machine
- problem solving when monitoring and correcting paper moisture levels and continuously monitoring samples for defects and removing them as required

Required knowledge

- common faults associated with folder gluer machines, what causes them and how to correct them
- enterprise documentation procedures
- enterprise quality standards
- enterprise faults procedures

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and adjust units	1.1. <i>Job specifications</i> are obtained and read and tools and transfer segments are available for set up 1.2. Draw rollers and nip rollers and transfer segments are positioned correctly and pressures calibrated with timing set 1.3. Gears are changed and correctly set up 1.4. Knife assembly for guillotining and serration measurements are set and accurate timing assigned 1.5. Pre-creaser blades are positioned in relation to one another and angular timing fixed 1.6. Centre grippers are correct in size, pressures and positioning 1.7. Vacuum holes are correctly positioned and opening cylinder is set up and timed 1.8. Bottom forming guides and bottom paste unit are set up 1.9. Bottom closing and patch units are calibrated 1.10. Delivery chute and bag counter are prepared and ready
2. Set up in-line units	2.1. Correct perforation unit or perforation impression roller is set up 2.2. Pick-up rollers are installed and pressure and time are fixed 2.3. Tucking position, timing and depth are correctly set 2.4. Glue patch applicator or glue impression roller is set up according to job specifications 2.5. Press roller is positioned and pressured and timing is programmed 2.6. Doctor blades and hot melt unit are set up 2.7. Timing between all units is checked for conformance with job specifications 2.8. Gears are changed according to job specifications 2.9. The settings and tensions of the raw material unwind and brake assembly are correct according to job specifications
3. Check availability of materials	3.1. Cut tubes are available and stacked ready 3.2. Adhesives are appropriate for the <i>substrate</i> , the application process and the machine 3.3. Correct procedures for the control of <i>materials</i> are

ELEMENT	PERFORMANCE CRITERIA
	followed
4. Check set up	4.1. Work area is safe and ready for production according to safety requirements 4.2. All details required for the job are checked again and confirmed against job specifications 4.3. Settings are checked against specifications before production is commenced 4.4. Machine is <i>stepped</i> to ensure the scores and folds are in the correct position and paper tension is corrected/adjusted

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when making the work area safe and preparing for production according to safety requirements
- communication skills when checking and confirming all details required for the job against the job specifications
- planning and organising when correctly positioning draw rollers, nip rollers and transfer segments, and calibrating pressures with a timing set
- teamwork when maintaining the production process in association with other staff
- using technology when using an in-line bottom making machine for the manufacture of sacks or bags
- problem solving when stepping the machine to ensure the scores and folds are in the correct position and the paper tension is correct

Required knowledge

- common faults associated with folder gluer machines, what causes them and how to correct them
- enterprise documentation procedures
- enterprise quality standards
- enterprise faults procedures

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Set up in-line bottom making machines for the manufacture of sacks or bags with minimum downtime • Evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • Assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment • Access to scoring, folding, and gluing machinery used in the manufacture of sacks and bags
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Job specifications</i> may include:	<ul style="list-style-type: none"> job sheets, batch processing orders, job specs.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films.
<i>Correct materials</i> may include:	<ul style="list-style-type: none"> glues, papers, coated and uncoated, pre-printed.
<i>Stepped</i> may include:	<ul style="list-style-type: none"> inched, jogged, moved slowly through the process.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and adjust units	1.1. <i>Job specifications</i> are obtained and read and tools are available for set up 1.2. Draw rollers are positioned correctly and pressures calibrated 1.3. Gears are changed and correctly set up 1.4. Knife assembly for guillotining and serration measurements are set and accurate timing assigned 1.5. Nip roller position, timing and pressures are set 1.6. Pre-creaser blades are positioned in relation to one another and angular timing fixed 1.7. Centre grippers are correct in size, pressures and positioning 1.8. Vacuum holes are correctly positioned and timed
2. Prepare materials for manufacturing process	2.1. <i>Substrate</i> reels are positioned in correct unwind direction and in the correct order and web position, tension and web aligner are set up 2.2. Reels are loaded according to OHS requirements, manufacturer's specifications and enterprise procedures 2.3. Adhesives are appropriate for the substrate, the application process and the machine 2.4. Correct procedures for the control of <i>materials</i> are followed
3. Check set up	3.1. Work area is safe and ready for production according to safety requirements 3.2. All details required for the job are checked again and confirmed against job specifications 3.3. Settings are checked against specifications before production is commenced 3.4. Machine is <i>stepped</i> to ensure the scores and folds are in the correct position and paper tension is corrected/adjusted

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set and adjust sections of the machine	1.1. All details required for the job are checked and confirmed according to <i>job specifications</i> 1.2. The <i>correct materials</i> are checked and available for the job 1.3. All light sensors and proximity sensors are operating 1.4. Mills are set to the right cavity depth for the chips 1.5. Tape indexer and die are cleaned and the chip registration is correct 1.6. The implanting module is set up and registered and adhesives are available and dispenser is clean and ready 1.7. Machine and in-line components are initialised
2. Confirm computer settings	2.1. Encoder settings are correct and conform to job specifications 2.2. Tester settings are correct and conform to job specifications 2.3. Setting on the computer that controls entire machine is correctly set
3. Set up printer unit	3.1. Print head is set up and adjusted according to job specifications 3.2. Ink and solvent levels are checked and refilled if necessary 3.3. Settings are selected according to job specifications 3.4. Drying is checked as sufficient to key ink to the substrate 3.5. Printer is set up according to OHS guidelines
4. Load machine	4.1. Substrate is prepared according to job specifications 4.2. Substrate is positioned correctly to the machine 4.3. Faulty material is visually identified and removed according to OHS requirements and enterprise procedures 4.4. Cards are loaded according to OHS requirements and manufacturer's specifications and enterprise procedures 4.5. Settings are checked according to job specifications before production is commenced 4.6. Work area is safe and ready for production according to safety requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when ensuring that the work area is safe and ready for production according to safety requirements
- communication skills when recording details of production wastage
- planning and organising when coding and checking chips before operating the printer unit
- teamwork when maintaining the production process in association with other staff
- applying mathematical ideas and techniques when entering job specifications and machine settings through computer consoles
- using technology when setting up a smart card machine
- problem solving by visually identifying faulty material, removing it and identifying details of any cards needing to be remade and entering them into the computer console

Required knowledge

- production quality requirements
- waste disposal procedures
- smart card technology
- correct material handling procedures
- principles of printing and ink usage

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor production process	1.1. All details required for the job are checked and confirmed against <i>job specifications</i> 1.2. The supply of <i>materials</i> throughout the run is maintained 1.3. Machine is run at optimum speed for maintaining quality outputs 1.4. Samples from the machine are selected and checked to ensure they conform to job specifications 1.5. Machines are adjusted to maintain quality of outputs
2. Maintain quality	2.1. Correct procedures for the removal of waste are followed according to enterprise procedures 2.2. Samples are continuously monitored for defects and defects are removed 2.3. The efficiency, quality and output rate of the production run are monitored for problems and any deficiencies resolved 2.4. Milled cavities are checked to ensure the right cavity depth for the chips 2.5. Die cuts are correct and meet quality standards 2.6. The correct amount of glue is applied by the dispensing station 2.7. The chips are correctly inserted into the cavity by the implanting module 2.8. Print quality meets the standards in the job specifications or sample
3. Code and check chips	3.1. Encoder settings are correct and conform to job specifications 3.2. Tester settings are correct and conform to job specifications 3.3. The details of any cards needing to be remade are entered into computer console
4. Monitor printer unit	4.1. Ink and solvent levels are monitored and filled when required and stock levels are recorded according to enterprise procedures 4.2. Quality of inkjet is monitored to ensure it conforms to job specifications 4.3. Chemicals are handled according to OHS requirements 4.4. Drying is checked as sufficient to key ink to the

ELEMENT	PERFORMANCE CRITERIA
	substrate
5. Identify problems	5.1. Faults that affect the quality of the cards are identified and rectified 5.2. Problems that reduce the rate of output are identified and fixed 5.3. Faults that affect the efficient operation of equipment are identified and resolved
6. Unload and pack cards	6.1. Cards are unloaded according to OHS requirements, manufacturer's specifications and enterprise procedures 6.2. Reconciliation and final quality check are documented 6.3. Cards are prepared (stacked, wrapped and labelled) for next process according to manufacturer's specifications and enterprise procedures 6.4. Wastage is recorded and disposed of according to enterprise procedures
7. Shut down machine	7.1. Dispensing needle is moved to the safety position and solvent is checked to ensure coverage of the needle 7.2. Inkjet is cleaned and shutdown according to manufacturer's specifications 7.3. The encoding computer is shut down in the correct manner to ensure no loss of data 7.4. The milling vacuum is emptied and cleaned 7.5. The machine and work area are cleaned according to enterprise procedures 7.6. The air supply is turned off 7.7. Waste chemicals are handled and disposed of according to OHS requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when ensuring that the work area is safe and ready for production according to safety requirements
- communication skills when recording details of production wastage
- planning and organising when coding and checking chips before operating the printer unit
- teamwork when maintaining the production process in association with other staff
- applying mathematical ideas and techniques when monitoring the rate of machine output
- using technology when operating a smart card machine
- problem solving by monitoring the efficiency, quality and output rate of the production run and resolving any problems as they arise

Required knowledge

- operation of the card printing unit
- operation of the card encoding unit
- production quality requirements
- waste disposal procedures
- smart card technology
- correct material handling procedures
- principles of printing and ink usage

Evidence Guide

EVIDENCE GUIDE

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Read and interpret job requirements from job documentation or production control system 1.2. Set-up is planned and carried out correctly in minimum time with minimum wastage
2. Set up carton blank transportation system	2.1. Feeder is set up and adjusted according to job specifications 2.2. Carton blank pick-up and transportation system is set up and adjusted according to job specifications 2.3. Transfer systems are set up and adjusted according to job specifications
3. Set up machine for complex carton folding/gluing	3.1. Folding units are set up and adjusted according to job specifications 3.2. Folding rollers/belts/rails are set up and adjusted according to job specifications 3.3. Gluing system is set up and adjusted according to job specifications using <i>glue</i> wheel and/or multiple glue heads
4. Set up carton delivery system	4.1. Delivery is set up and adjusted according to job specifications 4.2. Substrate is removed from process according to job specifications 4.3. Carton transfer and control system is set up and adjusted according to job specifications
5. Conduct sample run	5.1. Material to be used for sample is organised correctly 5.2. <i>Machine</i> is set up and operated according to OHS requirements, manufacturer's specifications and enterprise procedures to produce a specified sample 5.3. Sample is visually inspected and/or tested for accuracy of folds, fibre tear, opening force, fluff and glue placement according to enterprise procedures
6. Readjust settings	6.1. Results are interpreted to determine adjustment requirements 6.2. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when ensuring that the work area is safe and ready for production according to safety requirements
- communication skills when reading and interpreting job requirements from the job documentation or production control system
- planning and organising when setting up the carton blank transportation system before the carton delivery system
- teamwork when maintaining the production process in association with other staff
- applying mathematical ideas and techniques when interpreting job requirements from job documentation or the production control system
- using technology when using carton folding and gluing machines
- problem solving by interpreting results to determine adjustment requirements

Required knowledge

- information concerning folding requirements that can be expected to be found in the job documentation or production control system
- interpretation of information to ensure smooth workflow throughout the factory
- factors that must be considered when planning a folding sample
- OHS factors that must be considered when setting folder transportation and delivery systems
- areas of the carton blank transportation system that should be monitored to ensure trouble-free operation
- parts of the carton blank pick-up system that should be adjusted to ensure accurate and continuous sheet handling
- areas of the delivery system that should be observed to maintain neat delivery of finished work
- areas of the delivery system that should be observed to prevent damage to the finished product
- checks to be made when substrate is removed from the machine
- OHS factors that must be considered when setting and/or adjusting the folding unit
- largest/smallest size carton blank that can be processed on this machine
- ways that the machine can be adapted to facilitate smaller/larger stock
- accuracy of a carton blank entering folding rollers
- causes of scratching/scuffing of substrate during transportation
- speed of the machine
- problems that can be expected if the machine is running too fast
- problems that can be expected if the machine rollers are set too loose
- problems that can be expected if there is too much roller pressure

REQUIRED SKILLS AND KNOWLEDGE

- problems that can be expected if the delivery system is not set correctly
- correct roller pressure for a given job
- roller pressures checks to be made for correctness
- adjusted to be made if the carton blank is out-of-square
- reasons for the sheet being out-of-square
- adjustment to ensure that the carton blanks are not smudging/"scuffing"
- adjustment to be made if the sheet will not leave the folding unit
- steps necessary to set up the gluing units
- care that should be taken to ensure a neat and clean gluing job
- adhesive that is used in the gluing unit
- adjustment of the length of the glue line
- causes of out-of-square folding and explain how each may be corrected
- segments of quality assurance that would be inspected at the completion of the sample run
- communication action that should be instigated if the job is out-of-square
- communication action that should be instigated if ink is too wet for production
- communication action that should be instigated if the job does not coincide with the sample
- areas of the machine that should be adjusted if carton blank is creasing
- areas of the machine that should be adjusted if carton blank is not entering the machine
- items that must be checked against the client's sample
- machine manuals and safety documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Set up machine to produce complex cartons as required in normal production on, for example, a Royal 40, a Bobst Media or a Bobst Domino • Demonstrate an ability to find and use information relevant to the task from a variety of information sources • Set up at least THREE crash lock, six-corner and specialty work carton jobs, using different sizes and weights of cartons and including use of multiple gluing units, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • Evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these • off the job assessment must be undertaken in a closely simulated workplace environment • access to a Royal 40, Bobst Media or Bobst Domino machine that may include multiple gluing units.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare job	<p>1.1. Job specifications are read and interpreted from job documentation or production control system</p> <p>1.2. Set-up is planned and carried out correctly in minimum time with minimum wastage</p> <p>1.3. Availability of all job related components is checked</p>
2. Prepare flat-bed die cutting or embossing devices	<p>2.1. Appropriate cutting devices or dies are selected and secured to machine according to job specifications</p> <p>2.2. Cutting devices or dies are registered and proofed according to job specifications</p> <p>2.3. Cutting devices or dies are correctly mounted</p>
3. Set up reel system (OR Element 4)	<p>3.1. Unwind and rewind reels are set up and adjusted according to job specifications</p> <p>3.2. Webbing procedures are carried out according to job specifications</p> <p>3.3. Web control system is set up and adjusted according to job specifications</p> <p>3.4. Reels are spliced/joined according to job specifications</p>
4. Set up sheet system (OR Element 3)	<p>4.1. Feeder and delivery systems are set up and adjusted according to job specifications</p> <p>4.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications</p> <p>4.3. Transfer and control systems are set up and adjusted according to job specifications</p> <p>4.4. Folder and sheeter are set up and adjusted according to job specifications</p> <p>4.5. Substrate is removed from process according to job specifications</p>
5. Set up machine for complex flat-bed die cutting or embossing	<p>5.1. Flat-bed cutting devices are set up and adjusted according to job specifications</p> <p>5.2. Cutting pressures are set up and adjusted according to job specifications</p> <p>5.3. Machine lays are set to correct position to register</p>
6. Set up in-line units	<p>6.1. Minor in-line printing/convertng/binding units are set up for basic processes and adjusted according to machine requirements and job specifications</p> <p>6.2. Assistance is given in set up of major in-line printing/convertng/binding units</p>

ELEMENT	PERFORMANCE CRITERIA
7. Conduct sample run	7.1. Material to be used for sample is organised correctly 7.2. Machine is set up and operated to produce a specified sample according to OHS requirements, manufacturer's specifications and enterprise procedures 7.3. Sample is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 7.4. Results are interpreted to determine adjustment requirements 7.5. Adjustment changes are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when ensuring that the work area is safe and ready for production according to safety requirements
- communication skills when reading and interpreting job requirements from the job documentation
- planning and organising when setting up the machine for operation
- teamwork when confirming the sample with the supervisor
- applying mathematical ideas and techniques when positioning the forme and counters
- using technology by using machines
- problem solving by interpreting results to determine adjustment requirements

Required knowledge

- information concerning flat-bed die cutting or embossing
- information to ensure smooth workflow throughout the factory
- factors that must be considered when deciding on a cutting system
- methods for registering and proofing the cutting devices
- checked when the cutting devices are secured to the machine
- criteria for determining the selection of particular cutting devices
- OHS concerns when setting up reel transportation systems
- adjustments to the unwind reel may be needed to suit various jobs
- important areas to be considered during webbing procedures
- adjustments available to the web
- splicing/joining the web
- areas of the reel delivery system that may need to be adjusted according to job specifications
- steps that should be taken to ensure that the delivery system operates effectively
- adjustment to the sheeter during production
- adjustment to the folder during production
- adjustment to the rewind wheel during production
- OHS factors that must be considered when setting up and/or operating sheet transport and delivery systems
- important areas of the feeder unit set up
- accurate sheet pick-up and transportation
- areas of the delivery system that should be observed to maintain neat delivery of finished work
- areas of the delivery system that should be observed to prevent damage to the

REQUIRED SKILLS AND KNOWLEDGE

- finished product
- securing finished product for dispatch
- OHS factors that must be considered when setting up cutting devices
- setting up, adjusting and operating flat-bed cutting devices
- machine pressure
- machine cutting depths
- adjusting in-line units
- suitability of in-line processes
- largest/smallest size sheet that can be processed on this machine
- conformance with the client's requirements
- product testing procedures
- common faults with the flat-bed cutting process
- replacement of knives/blades/cutting edges
- storage of cutting edges to guard against damage and deterioration
- machine manuals, safety and other documentation are relevant to this task and where are they kept and information is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly set up machines for complex flat-bed die cutting or embossing according to job specifications and within the production timeframe • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • competency must be demonstrated on EITHER flat-bed die cutting OR embossing. For either process set up TWO jobs changing the type and size of substrates and design of finished patterns according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Cutting process</i> may include:	<ul style="list-style-type: none"> flat-bed die and forme cutting and embossing.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet handling systems.
<i>Flat-bed cutting units</i> may include:	<ul style="list-style-type: none"> a range of machines with dies or cutting formes and manual, semi-automated, fully automated or computerised process control.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Shapes</i> may include:	<ul style="list-style-type: none"> simple or multiple shapes.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel (OR Element 2)	1.1. Reel stand and reel rewind section are monitored and adjusted to ensure efficient continuous operation and to maintain correct tension and to ensure no marks, blemishes or damage to finished product 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to and removed from the process according to job specifications
2. Maintain operation of sheet transportation system on sheet-fed machine (OR Element 1)	2.1. Feeder and delivery systems are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up, transport system and sheeting section are monitored and adjusted to ensure accurate and continuous sheet handling and an efficient operation and quality product 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to process according to job specifications
3. Maintain complex flat-bed cutting process	3.1. Knife condition is monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.2. Cutting pressures are monitored and adjusted to ensure the quality of product meets the standard of the approved sample 3.3. Registration of knife(s) is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.4. Packing of cutting devices is monitored and adjusted to ensure quality of product meets the standard of the approved sample 3.5. In-line printing/converting/binding/finishing processes are monitored and adjusted to ensure the quality of product meets the standard of the approved sample
4. Maintain operation of production process	4.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 4.2. Production is maintained according to OHS

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements, manufacturer's specifications and enterprise procedures</p> <p>4.3. Manual and/or automatic control is used according to job specifications</p> <p>4.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.5. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.6. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.7. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.8. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems	<p>5.1. Problem in cutting (<i>flat-bed</i>) machine operation is identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level</p> <p>5.3. Cutting (flat-bed) machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Substrate waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.5. Repair/adjustment is verified prior to resumption of operations</p>
7. Clean flat-bed cutting machine at end of run	<p>7.1. Knife and machine bed are cleaned ready for next run</p> <p>7.2. Cutting devices are sharpened correctly according to OHS requirements and enterprise procedures</p> <p>7.3. Cutting machine is disengaged and cleaned ready for next run</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>7.4. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.5. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.6. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.7. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when ensuring that the work area is safe and ready for production according to safety requirements
- communication skills when reading and interpreting job requirements from the job documentation
- planning and organising when setting up the machine for operation
- teamwork when confirming the sample with the supervisor
- applying mathematical ideas and techniques when positioning the forme and counters
- using technology by using machines
- problem solving by interpreting results to determine adjustment requirements

Required knowledge

- OHS factors that must be considered when setting up and/or operating machine transport systems
- areas of the reel stand that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- area of the web control system that should be adjusted to maintain correct positioning of the web
- areas of the sheet-fed feeder that should be monitored to ensure trouble-free operation
- parts of the sheet pick-up system that are to be adjusted to ensure accurate and continuous sheet handling
- OHS factors that must be considered when setting up and/or operating machine delivery systems
- areas of the delivery system that should be observed to maintain tension
- areas of the delivery system that should be observed to prevent damage to the finished product
- checks to be made when substrate is removed from the machine
- OHS factors that must be considered when maintaining the cutting process
- indicators that demand the replacement of a knife
- checks to be made when cutting pressure is adjusted
- ways in which registration can be guaranteed
- production difficulties that can be expected during production runs
- OHS factors that must be considered when problem solving on the machine maintaining the cutting process
- checks to be made when packing cutting devices

REQUIRED SKILLS AND KNOWLEDGE

- checks to be made when correcting dull cutting edges on equipment
- checks to be made when correcting the depth of embossing
- checks to be made when correcting out-of-square results
- OHS factors that must be considered when conducting machine shutdown procedures
- checks to be made when waste is removed from the machine and surrounding area for disposal or recycling
- checks to be made when shutting down the machine
- checks to be made when the cutting devices or knives are cleaned or replaced ready for the next run
- areas of the machine that require cleaning at the end of the run
- production records that need to be kept or written up
- information that should be included in this reporting procedure
- quality aspects that should be considered in a completed cutting job
- steps that should be taken to ensure that important features of the production control system are followed
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce complex flat-bed die cut or embossed product with different substrates, sizes and patterns according to job specifications demonstrate all safety devices on the machine competency must be demonstrated on EITHER flat-bed die cutting OR embossing. For either process produce TWO complex jobs (including in-line processes) with different substrates, sizes and patterns according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria demonstrate use of computerised control, monitoring and data entry systems if available and appropriate evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation 1.2. All necessary materials are assembled according to job specifications
2. Complete adhesive binding/tipping	2.1. Sheets are fanned and masked every 3-4 mm 2.2. A thin even coating is applied on area of sheet designated for tipping 2.3. Correct adhesive is applied to achieve a good bond 2.4. Tipped sheet is accurately positioned
3. Number book	3.1. Sheets are placed in correct sequence and numbered correctly according to job specifications 3.2. Numbering machine is set for appropriate number of copies eg duplicate, triplicate 3.3. Sheets are knocked up squarely without damage
4. Index book	4.1. Index is spaced correctly and evenly 4.2. Durable square, clean and neat cut tabs or cut-outs are constructed 4.3. Headings are constructed legible and permanent
5. Apply adhesive binding/padding by hand	5.1. Product is knocked up squarely to spine and head with boards inserted between pads 5.2. Spine folds are completely removed from sections in guillotine 5.3. Adequate spine margin is preserved 5.4. Appropriate number of saw cuts are made in work 5.5. Edge of spine is roughened sufficiently to improve adhesion 5.6. Thin even application of appropriate adhesive is applied 5.7. Book is fanned before gluing (except for pads) to ensure in Book is assessed after drying with thorough adhesion 5.8. creased surface coverage
6. Sew sections	6.1. Appropriate sewing supports are selected and spaced according to job specifications 6.2. Consistent thread tension is maintained during sewing 6.3. Sections are aligned at the head 6.4. Swelling is monitored and controlled

ELEMENT	PERFORMANCE CRITERIA
7. Forward the book	7.1. Spine is glued, rounded and backed 7.2. Spine lining is attached 7.3. Text block is covered (board attached) 7.4. Text block is cased in
8. Block the book	8.1. Image is blocked into required position according to job specifications
9. Hand finish the book	9.1. Hand finish book according to job specifications 9.2. Typeface size and type are appropriate 9.3. Design is in keeping with the period of publication 9.4. An even impression is applied

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when ensuring that the work area is safe and ready for production according to safety requirements
- communication skills when clarifying job specifications
- planning and organising when assembling all the necessary materials based on the job specifications
- teamwork when maintaining the production process in association with others
- applying mathematical ideas and techniques when numbering sheets in the correct sequence
- using technology when pressing the book
- problem solving when determining the original page securing method

Required knowledge

- OHS concerns that are there when hand binding
- term "viscosity"
- grain direction in relation to the tipping operation
- recommended tipping width for endpapers
- recommended adhesive to be used in tipping
- checks to be made when the numbering machine is set for duplicate/triplicate numbering
- checks to be made when the numbering machine is re-inked
- setting a given number on the machine
- different types of indices
- ways to reinforce an index
- process for the index to be evenly and correctly spaced down the sheet
- adhesives that are not recommended for padding
- unsuitable adhesives for padding
- terms "pH", "viscosity", "open time", "tack", "specific adhesion", "molecular adhesion" and "mechanical adhesion"
- techniques that are available to ensure the permanent adhesion of the padded sheets
- ways in which the padding operation can be accelerated
- methods of hand sewing
- important considerations to be addressed when setting up for sewing
- use of a sewing frame
- "Cord" (calliper) thread that is suitable for sewing 8pp sections
- checks to be made when the sewing thread is joined during the sewing operation
- checks to be made when the sewing operation is finished off

REQUIRED SKILLS AND KNOWLEDGE

- result of the sewing being too loose/too tight
- important result that must be achieved when gluing the spine of the book
- result if the spine glue was too thick/too thin
- recognition of a correct round in a book spine
- problems that may occur if too much round is applied to the spine
- problems that may occur if insufficient round is applied to the spine
- different spine linings
- reasons for spine linings
- special techniques that are applied to 2-on 2-off spine linings
- important considerations to be given to spine linings
- direction that the grain should be directed in spine linings
- result if the grain direction in the spine lining was incorrect
- recognition of good corner
- recommended turn-in
- steps to ensure a clean job
- "Trimming-out" a case
- correct board calliper on a book?
- micron board that is recommended on a book 5 mm thick
- monitoring when casing-in a book
- procedures that ensure a good blocking result
- checks to be made when positioning type on the spine of a book
- checks to be made when positioning type on the front of a book
- term "blind blocking"
- methods of hand finishing a book cover
- criteria that are used to ensure an appropriate typeface is selected
- criteria that are used to ensure the design chosen corresponds with the era of the book
- considerations that should be given to the hand finishing of the book
- result of uneven impressions
- machine manuals and safety documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> correctly set up and produce a hand-bound book according to job specifications and within the production timeframe demonstrate an ability to find and use information relevant to the task from a variety of information sources set up for and produce AT LEAST THREE hand-bound books that between them incorporate each of the listed Elements (pulling down and section sewing to be done on multi-section - minimum ten sections - book) and use a range of substrates, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Types of equipment</i> may include:	<ul style="list-style-type: none"> range of tools, equipment and machines.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess physical condition of book to be rebound/restored	1.1. Physical construction and binding style of the book are identified 1.2. Areas of damage and weakness are identified and recorded
2. Identify and select treatment options	2.1. Paper and cover cleaning options are assessed 2.2. Paper and cover repair options are assessed 2.3. Ethical/rarity/value cost alternatives are evaluated 2.4. Treatment options are discussed with owner
3. Assemble materials for binding	3.1. Materials and <i>equipment</i> are assembled according to job specifications 3.2. Binding equipment set up according to job specifications
4. Dissect/pull down book	4.1. Original page securing method and section structure are determined 4.2. Cover/endpapers, threads and stitches are removed with minimal damage to sections and text 4.3. Sheets and sections are cleaned with minimal damage 4.4. Dog-ears are straightened with old joints flattened 4.5. Book is pressed
5. Treat paper	5.1. Paper is cleaned using dry or wet methods as appropriate 5.2. Paper is de-acidified if necessary by most appropriate method 5.3. Paper is repaired and/or reinforced using appropriate methods 5.4. Paper is resized if required 5.5. New paper is tinted to resemble original if requested 5.6. Wire stitches or sewing threads are removed 5.7. Original adhesive is removed without damaging the book
6. Resew book	6.1. Appropriate sewing supports are selected and spaced according to job specifications 6.2. Consistent thread tension is maintained during sewing 6.3. Sections are aligned at the head 6.4. Swelling is monitored and controlled 6.5. Headbands are re-sewn if necessary

ELEMENT	PERFORMANCE CRITERIA
7. Forward the book by hand	7.1. Old spine and sides and turn-ins are lifted and reattached if rebacking is necessary 7.2. Edges are knocked up into original alignment 7.3. Round and back spine are glued 7.4. Spine lining is attached 7.5. Appropriate corner repairs on coverboards are carried out 7.6. Boards are reattached 7.7. New covering material is tinted to resemble original if requested 7.8. Text blocks are covered or rebacked 7.9. Endpapers are pasted down or hinge realigned 7.10. Book is opened after pressing
8. Finish the book by hand	8.1. Hand finish book according to job specifications 8.2. Typeface size and type are appropriate 8.3. Design is in keeping with the period of publication 8.4. An even impression is applied

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS when ensuring that the work area is safe and ready for production according to safety requirements
- communication skills when discussing treatment options with the owner
- planning and organising when assembling all the necessary materials based on the job specifications
- teamwork when maintaining the production process in association with others
- applying mathematical ideas and techniques when evaluating ethical/rarity/value cost alternatives
- using technology when re-covering a book
- problem solving when identifying and selecting treatment options

Required knowledge

- physical condition of a book to be rebound/restored
- factors that would render a book unsuitable for restoration/rebinding
- suggested options for a book unsuitable for restoration/rebinding
- areas of a book that are most commonly in need of attention
- areas of weakness and damage that are identified and recorded
- identifying and selecting treatment options
- paper and cover cleaning options that are available
- methods of repairing a tear in paper
- replacement of a missing corner on a book page
- need to reback a book
- steps that should be taken when repairing a coverboard corner
- methods of treating aged leather
- assembling materials for binding
- OHS factors that need to be considered when restoring books
- tools used when gold finishing books
- adhesives used in book restoration and repair and describe under what circumstances each would be used
- covering materials and indicate where each would be used
- styles of book edge decoration
- methods of tanning leather
- covering material selection for a given job
- monitoring during the paring leather
- sharpening knives for leather paring
- types of leather commonly used in bookbinding

REQUIRED SKILLS AND KNOWLEDGE

- term "skiver"
- different page securing methods
- method of removing endpapers with minimal damage
- method of cleaning sections without damage
- terms "dog-ears" and "joints"
- special care that should be taken when removing wire stitches/sewing thread
- methods of removing the adhesive from the book spine
- types of adhesive that would you expect to find on book spines
- methods of removing each particular adhesive
- methods of hand sewing
- important considerations to be addressed when setting up for sewing
- use of a sewing frame
- Choosing the thickness of thread to use
- Checks to be made when the sewing thread is joined during the sewing operation
- Checks to be made when the sewing operation is finished off?
- result if the sewing is too loose/too tight
- hand-worked headband styles
- important result that must be achieved when gluing the spine of the book
- result if the spine glue was too thick/too thin
- recognition of a correct spine shape
- problems that may occur if too much round is applied to the spine
- problems that may occur if insufficient round is applied to the spine
- different spine linings and the styles on which they are used
- reasons for spine linings
- special techniques that are applied to 2-on 2-off spine linings
- important considerations to be given to spine linings
- recognition of a good corner
- recommended turn-in
- steps to ensure a clean job
- trimming-out
- correct board calliper on a book
- micron board that is recommended on a book 5 mm thick
- monitoring when casing-in a book
- methods of hand finishing a book cover
- criteria that are used to ensure an appropriate typeface is selected
- criteria that are used to ensure the design chosen corresponds with the era of the book
- result of uneven impressions
- method that could be used to correct an error in finishing the title
- quality aspects that would be found in a competently restored book

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> correctly restore a book according to job specifications and within the production timeframe demonstrate an ability to find and use information relevant to the task from a variety of information sources assess the physical condition of TWO books to be restored/rebound (ONE requiring rebacking and ONE requiring rebinding) and carry out restoration according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Types of equipment</i> may include:	<ul style="list-style-type: none"> range of tools, equipment and machines.
<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> working to defined procedures and in consultation with other relevant persons to ensure production requirements have been met.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and interpret job requirements and locate materials	<p>1.1. Material requirements and quantities are correctly identified from documentation</p> <p>1.2. Materials are located and checked according to enterprise procedures</p> <p>1.3. Required quantities of material are confirmed and shortages and/or defective materials reported/recorded</p>
2. Prepare materials	<p>2.1. Weighing/measuring devices are checked for accuracy and reset if required</p> <p>2.2. Bowls, vats, tanks and pots are selected according to job specifications and checked to ensure they are free from contamination</p> <p>2.3. Quantities of material are weighed/measured</p> <p>2.4. Materials are prepared according to enterprise procedures</p> <p>2.5. Quality checks are undertaken according to enterprise procedures</p> <p>2.6. Materials are adjusted to conform to job specifications</p>
3. Transfer prepared materials to production area	<p>3.1. Prepared materials are correctly stored/transferred/located</p> <p>3.2. Documentation is accurately completed according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communicating ideas and information by completing workplace documentation
- collecting, analysing and organising information by identifying job requirements and relevant materials
- planning and organising activities by preparing materials prior to production
- teamwork when contributing to the production process in association with others
- mathematical ideas and techniques by identifying required materials and recording quantities
- problem-solving skills by checking instruments for accuracy and recalibrating
- use of technology by using equipment to prepare materials

Required knowledge

- potential health hazards that is involved in the selection and preparation of materials for ink production
- pollution and environmental issues that need to be considered when working with the raw materials used in ink production
- enterprise procedures and policies that are in place to deal with OHS and environmental hazards
- safety equipment that is required and what do you need to check when fitting and using it
- details that are required for selection of materials for ink production
- determining whether a material is defective
- procedure if there is a material shortage
- checks to be made when measuring each of the types of materials required for ink production
- range of measuring devices used in the work area, how accuracy checks are conducted and procedures for resetting the devices
- checks to be made when preparing containers for ink production
- checks to be made when preparing materials
- methods for checking and adjusting materials
- responsibility for approving prepared materials prior to commencement of production
- procedures for recording the quantities and formulation
- equipment that is used to transfer materials to the preparation area
- manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and interpret job requirements and locate materials	1.1. Appropriate processes are identified and confirmed The original is assessed to determine scanner settings 1.2. Appropriate chemicals, inks, <i>materials</i> and/or equipment are selected according to job specifications
2. Set up machines/equipment	2.1. Pre-startup checks are completed and documented according to <i>enterprise procedures</i> 2.2. Raw materials/feed lines are checked to ensure availability 2.3. <i>Machine/equipment</i> operation is verified according to enterprise procedures
3. Maintain blending/homogenising process	3.1. Mix is completed according to enterprise procedures and <i>OHS</i> requirements 3.2. Materials are added to the process according to job specifications 3.3. Quality inspection/sampling is carried out according to enterprise procedures 3.4. <i>Adjustments</i> to mix/equipment are made to correct identified quality problems 3.5. Records/log/checklists are completed according to enterprise procedures
4. Shut down	4.1. Correct <i>shutdown</i> sequence is followed according to manufacturer's specifications and enterprise procedures 4.2. Product/materials used in manufacture are removed from operating area where appropriate 4.3. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures
5. Clean up	5.1. Equipment cleaning requirements are identified 5.2. Correct equipment/materials for manual or mechanical cleaning are selected 5.3. Cleaning is undertaken according to enterprise procedures and <i>OHS</i> requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communications ideas and information by completing logs and checklists according to enterprise procedures
- collecting, analysing and organising information by reading and interpreting job requirements from documentation
- planning and organising activities by completing startup checks prior to the blending process
- teamwork when contributing to the production process in association with others
- mathematical ideas and techniques by mixing batches according to job specifications
- problem-solving skills by making adjustments to the mix to maintain quality standards
- use of technology by using blending machines and equipment

Required knowledge

- OHS considerations when cleaning bowls, vats, and pots
- other OHS issues that arise in the blending of chemicals and use of an automated ink dispensing system
- safety equipment that is required and what do you need to check when fitting and using it
- batch coding system used in the work area and the recording procedures used
- procedures for preparing containers and equipment for blending/tinting
- checks to be made when measuring chemicals for blending
- procedures that apply to adding chemicals according to formulae
- purpose and process of homogenisation
- purpose of de-ionising water when it is to be used in the blending process
- procedures that apply to constructing a correct colour according to a formula
- factors that determine the position of the mixing head when blending
- procedures for testing conductivity, viscosity and pH, where in-process testing is conducted
- sampling and testing process
- problems that may occur in the tinting process and how these may be overcome
- recording and labelling procedures that apply
- environmental issues that need to be considered when working with the range of materials used in chemical blending/tinting
- manuals, safety and other documentation that are relevant to this task and where

REQUIRED SKILLS AND KNOWLEDGE

they are kept and information that is included in these documents

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- correctly blend chemicals for ink and varnish manufacture according to job specifications
- demonstrate an ability to find and use information relevant to the task from a variety of information sources
- use either a mixer/disperser OR a bead mill OR an automatic ink dispensing system to blend TWO batches of chemicals OR tint TWO batches of ink intermediates/concentrates according to manufacturer's and job specifications, OHS requirements, enterprise procedures and the listed Performance Criteria.

Context of and specific resources for assessment

Assessment must ensure:

- assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Materials may include:	<ul style="list-style-type: none"> range of raw materials/consumables, and chemicals used in cleaning.
Enterprise procedures may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area as documented in enterprise procedures (SOPs).
Machines/equipment may include:	<ul style="list-style-type: none"> machines/equipment may include high and low speed dispersers, pan washer/scrubbers, pumps, valves, automatic ink dispensing system, homogeniser, de-ioniser, other vessels.
OHS may include:	<ul style="list-style-type: none"> relevant legislation regulations enterprise policies/guidelines.
Adjustments/corrections may include:	<ul style="list-style-type: none"> in the range from normal operating to emergency response.
Shutdown may include:	<ul style="list-style-type: none"> in the range from planned shutdown to emergency response.
Application may include:	<ul style="list-style-type: none"> chemical blending/tinting and associated tasks are typically performed by operators working under supervision to ensure production requirements are met.
Documentation may include:	<ul style="list-style-type: none"> range of work instructions including: <ul style="list-style-type: none"> formulae job docketts work sheets specifications labels material safety data sheets.
Degree of autonomy may include:	<ul style="list-style-type: none"> working under supervision to defined procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and interpret job requirements from documentation	1.1. Product to be filtered is identified from job specifications 1.2. Type/size of packing container is identified from job specifications
2. Set up for filtering and packing	2.1. Filtering requirements are identified from job specifications 2.2. The correct filter is selected and fitted according to <i>enterprise procedures</i> 2.3. Appropriate packaging <i>containers</i> are identified and selected according to job specifications 2.4. Containers are checked to ensure that they are free from contamination
3. Filter and pack product	3.1. Product is filtered according to enterprise procedures and OHS requirements 3.2. Product is sampled and tested according to enterprise procedures 3.3. The correct amount of approved product is tinned off according to enterprise procedures 3.4. Container is correctly labelled according to enterprise procedures 3.5. Packed product is stored/despached according to job specifications
4. Complete documentation	4.1. <i>Documentation</i> is completed according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communicating ideas and information by completing documentation according to enterprise procedures
- collecting, analysing and organising information by sampling and testing product according to quality standards
- planning and organising activities by setting up for filtering according to job specifications
- teamwork when completing the packing in association with fellow workers
- mathematical ideas and techniques by identifying correctly sized containers
- problem-solving skills by selecting the correct filter
- use of technology by using filtering equipment

Required knowledge

- potential health hazards involved in the filtering and packing of products
- pollution and environmental issues that need to be considered when working with ink/chemical products
- enterprise policies and procedures that are in place to deal with OHS and environmental hazards
- safety equipment that is required and what do you need to check when fitting and using it
- details that are required for the correct selection of packaging containers
- details that are required for the correct selection of filter(s)
- factors that determine the selection of filters
- checks to be made when fitting the filter
- contaminants that can be present and how are they eliminated
- maintenance of quality of the product (viscosity, skin forming) throughout the filter/pack process
- sampling/testing procedures
- problems that may occur in extruding the product and how are they overcome
- weighing methods that are used in the work area
- system that is in place for labelling and storage of packed product
- manuals, safety and other documentation that are relevant to this task and where they are kept

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and interpret job requirements from documentation	1.1. Appropriate processes are identified and confirmed 1.2. Appropriate <i>materials</i> and/or equipment are selected according to job specifications
2. Set up machines/equipment	2.1. Pre-startup checks are completed and documented according to <i>enterprise procedures</i> 2.2. Raw materials/feed lines are checked to ensure availability 2.3. Stirrer, mixer, pots and vats are checked to ensure they are free from contamination 2.4. <i>Machine/equipment</i> operation is verified according to enterprise procedures
3. Maintain blending process	3.1. Mix is completed in association with fellow workers according to enterprise procedures and <i>OHS</i> requirements 3.2. Materials are added to the process according to job specifications 3.3. Quality inspection/sampling is carried out according to enterprise procedures 3.4. <i>Adjustments</i> to mix/equipment are made to correct identified quality problems
4. Maintain ink/coating milling process	4.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 4.2. Production is maintained according to OHS requirements and enterprise procedures 4.3. Milling process and equipment are monitored during batch manufacture to ensure operation is maintained 4.4. Machines/equipment are inspected, adjusted as required and readouts recorded and interpreted 4.5. Quality inspections/sampling are undertaken according to enterprise procedures 4.6. Records/log/checklists are completed according to enterprise procedures
5. Maintain operation of equipment/process conditions	5.1. Variations/irregularities of equipment operation or process conditions are identified and reported 5.2. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention according to enterprise

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures</p> <p>5.3. Corrective action is documented and reported according to enterprise procedures</p>
<p>6. Shut down liquid ink/coating blend/milling process</p>	<p>6.1. Pre-shutdown checks are carried out and documented according to enterprise procedures</p> <p>6.2. Correct <i>shutdown</i> sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.3. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.4. Product/materials used in manufacture are removed from operating area where appropriate</p> <p>6.5. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
<p>7. Clean up</p>	<p>7.1. Equipment cleaning requirements are identified</p> <p>7.2. Correct equipment/materials for manual or mechanical cleaning are selected</p> <p>7.3. Cleaning is undertaken according to enterprise procedures and OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communicating ideas and information by completing logs and checklists during manufacturing
- collecting, analysing and organising information by sampling the mix to maintain quality standards
- planning and organising activities by completing startup checks prior to manufacture
- teamwork when completing the mix in association with fellow workers
- mathematical ideas and techniques by correctly measuring materials required for the mix
- problem-solving skills by anticipating production difficulties and taking preventive action
- use of technology by using manufacturing and measuring equipment

Required knowledge

- safety requirements for adding powders during the mixing stage of ink manufacture
- OHS considerations when cleaning bowls, vats, and pots
- other OHS issues that arise in the manufacture of ink or coatings
- safety equipment that is required and what do you need to check when fitting and using it
- batch coding system used in the work area and the recording procedures used
- checks to be made when preparing containers and equipment for ink/coating manufacture
- checks to be made when measuring raw materials for ink production
- factors that determine the position of the mixing head
- purpose of using low speed early in the mixing process
- function of antioxidants in the mixing process
- action taken when the mixture has a skin on it
- particular requirements for coating manufacture
- characteristics of the end product of the mixing phase of ink manufacture
- purpose of milling ink
- ideal conditions for milling ink
- adjusted of the mill for low or high grind values
- procedures for potting off the mill
- system that is in place for labelling containers of ink
- sampling and testing procedures that are used at each stage of the ink or coating

REQUIRED SKILLS AND KNOWLEDGE

manufacture process

- in-process testing and how is the grind of the ink determined
- checks of the ink texture and viscosity that are made during the milling process
- environmental issues that need to be considered when working with the range of materials used in the manufacture of ink/coatings
- manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly manufacture inks and coatings according to job specifications • demonstrate an ability to find and use information relevant to the task from a variety of information sources • use a mixer/disperser and EITHER a bead mill OR a 3-roll mill to manufacture TWO batches of ink/coating according to manufacturer's and job specifications, OHS requirements, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning/observation combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Materials may include:	<ul style="list-style-type: none"> Range of raw materials/consumables, pigment, varnish, inks, chemicals used in cleaning.
Enterprise procedures may include:	<ul style="list-style-type: none"> Range of enterprise procedures within defined work area as documented in enterprise procedures (SOPs).
Machines/equipment may include:	<ul style="list-style-type: none"> Machines/equipment may include high and low speed dispersers, mills, pan washer/scrubbers, pumps, valves, other vessels.
OHS may include:	<ul style="list-style-type: none"> Includes relevant legislation, regulations and enterprise policies/guidelines.
Adjustments/corrections may include:	<ul style="list-style-type: none"> In the range from normal operating to emergency response.
Shutdown may include:	<ul style="list-style-type: none"> In the range from planned shutdown to emergency response.
Application may include:	<ul style="list-style-type: none"> Liquid ink/coating manufacture and associated tasks are typically performed by operators working under limited supervision to ensure production requirements are met.
Documentation may include:	<ul style="list-style-type: none"> Range of work instructions including formulae, job dockets, work sheets, specifications, labels, material safety data sheets.

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read and interpret job requirements from documentation	1.1. Appropriate <i>processes</i> are identified and confirmed 1.2. Appropriate <i>materials</i> and/or equipment are selected according to job specifications
2. Start up machines/equipment	2.1. Pre-startup checks are completed and documented according to <i>enterprise procedures</i> 2.2. Utilities are checked 2.3. Raw materials/feed lines are checked to ensure availability 2.4. Pre-startup conditions are reported according to enterprise procedures 2.5. Startup is conducted according to enterprise procedures 2.6. Machine/equipment operation is verified according to enterprise procedures
3. Maintain varnish/resin production process	3.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule 3.2. Production is maintained according to <i>OHS</i> requirements and enterprise procedures 3.3. Process and equipment are monitored during batch manufacture to ensure operation is maintained 3.4. Records/log/checklists are completed according to enterprise procedures 3.5. <i>Machines/equipment</i> are inspected and readouts recorded and interpreted 3.6. Quality inspections/sampling are undertaken according to enterprise procedures 3.7. Consumables are monitored and added to the process according to job specifications
4. Maintain operation of equipment/process conditions	4.1. Variations/irregularities of equipment operation or process conditions are identified and reported 4.2. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention according to enterprise procedures 4.3. Corrective action is documented and reported according to enterprise procedures
5. Shut down varnish/resin	5.1. Pre-shutdown checks are carried out and documented according to enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
manufacture process	<p>5.2. Correct <i>shutdown</i> sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.3. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.4. Product/materials used in manufacture are removed from operating area where appropriate</p> <p>5.5. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>
6. Clean up	<p>6.1. Equipment cleaning requirements are identified</p> <p>6.2. Correct equipment/materials for manual or mechanical cleaning are selected</p> <p>6.3. Cleaning is undertaken according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communicating ideas and information by completing logs and checklists during manufacturing
- collecting, analysing and organising information by sampling the mix to maintain quality standards
- planning and organising activities by completing startup checks prior to manufacture
- teamwork when completing the mix in association with fellow workers
- mathematical ideas and techniques by correctly measuring materials required for the mix
- problem-solving skills by anticipating production difficulties and taking preventive action
- use of technology by using manufacturing and measuring equipment

Required knowledge

- OHS concerns that are related to the production of varnish/resin
- manual handling issues that arise in the manufacture of varnish/resin
- safety equipment that is required and what do you need to check when fitting and using
- equipment that is required for the manufacture of varnish
- batch coding system used in the work area and the recording procedures used
- checks to be made when measuring materials
- properties that ink gains from the two basic components of varnish, resins and solvents
- characteristics and end use of gelled and non-gelled varnishes
- check to be made when preparing for filtration
- ideal conditions for filtration of varnish/resin product
- pre-startup checks that are required for TWO processes in varnish or resin manufacture
- effect that water contamination has on the manufacture of varnish/resin and what steps should be taken to avoid it
- procedures for adding liquids or solids to a varnish/resin mix
- system that is in place for labelling containers of varnish/resin
- monitoring requirements for energy plant operation
- inspections/monitoring that is carried out during varnish/resin production
- quality checks that are required during the filtration process

REQUIRED SKILLS AND KNOWLEDGE

- methods that are available for testing viscosity of varnish/resin
- manner in which the viscosity of a batch of varnish/resin increased
- procedure if the viscosity is too low
- procedures for recording details about the formulations, and in-process testing where required
- system for the disposal of liquid and solid waste
- environmental issues that need to be considered when working with varnish, resin, and chemicals/additives used in their manufacture
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • In the range from planned shutdown to emergency response • Demonstrate an ability to find and use information relevant to the task from a variety of information sources • Use EITHER fusion cooking OR reaction to manufacture TWO batches of varnish/resin, including in-process testing, according to manufacturer's and job specifications, OHS requirements, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Processes may include:	<ul style="list-style-type: none"> • Fusion cooking or reaction.
Materials may include:	<ul style="list-style-type: none"> • Range of raw materials/consumables, pigment, varnish, inks, chemicals used in cleaning.
Enterprise procedures may include:	<ul style="list-style-type: none"> • Range of enterprise procedures within defined work area as documented in enterprise procedures (SOPs).
OHS may include:	<ul style="list-style-type: none"> • Includes relevant legislation, regulations and enterprise policies/guidelines.
Machines/equipment may include:	<ul style="list-style-type: none"> • Machines/equipment may include gel tanks, reactors, tanks, refrigeration units, air compressor, pan washer/scrubbers, pumps, valves, other vessels.
Shutdown may include:	<ul style="list-style-type: none"> • In the range from planned shutdown to emergency response.
Application may include:	<ul style="list-style-type: none"> • Varnish/resin manufacture and associated tasks are typically performed by operators working under limited supervision to ensure production requirements are met.
Documentation may include:	<ul style="list-style-type: none"> • Range of work instructions including formulae, job dockets, work sheets, specifications, labels, material safety data sheets.
Adjustments/corrections may include:	<ul style="list-style-type: none"> • In the range from normal operating to emergency response.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply knowledge of printing industry	1.1. Printing industry terminology and vocabulary are used correctly and accurately 1.2. New technology and new work processes are monitored and implemented when required 1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices
2. Apply knowledge of government acts and regulations	2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace 2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices
3. Apply detailed knowledge of pre-press processes	3.1. The principles behind the following pre-press functions: image production (typesetting, scanning, graphic arts camera), image combining (manual and electronic), image output (film, plates, direct to press) and digital workflow are understood and applied where possible in the workplace 3.2. Different types of images (line, half-tone), digital and their use are assessed to identify most appropriate image for the given job 3.3. Different output settings eg screen rulings and angles, shapes, are researched and how they affect final product is evaluated 3.4. The different types of output required for different printing processes are researched and evaluated for different jobs 3.5. Different output devices eg film setters, plate setters, analogue proofs, digital proofs, are researched and evaluated for different jobs
4. Apply knowledge of printing processes	4.1. Basic principles of the following printing processes: lithography, relief, flexography, gravure, pad printing, screen printing, digital/electronic printing are appraised to inform decisions made for different jobs 4.2. The types of jobs and products for each process are considered to ensure appropriate choices are made to meet client needs 4.3. The capabilities and limitations of each process are

ELEMENT	PERFORMANCE CRITERIA
	reviewed for different jobs
5. Apply knowledge of converting and finishing processes	<p>5.1. Basic characteristics of the following converting and finishing processes: guillotining, flat-bed and rotary cutting, collating, folding, adhesive, mechanical and thermal fastening, are considered for different jobs</p> <p>5.2. The types of processes are appraised to inform decisions made for different jobs</p>
6. Apply knowledge of substrates and inks	<p>6.1. The range of substrates used for each printing process are researched and evaluated for different jobs</p> <p>6.2. The relationship of different paper sizes is considered for different jobs</p> <p>6.3. Different weights and callipers of substrates and how they affect pre-press operations are researched for different jobs</p> <p>6.4. Paper grain and how it affects pre-press, printing and finishing operations are researched for different jobs</p> <p>6.5. Different properties of ink such as drying properties, fastness, gloss, and how they affect pre-press operations are researched for different jobs</p>
7. Apply detailed knowledge of pre-press requirements for printing and finishing processes	<p>7.1. Designs that are appropriate for different printing processes are explored according to different jobs</p> <p>7.2. Dot gain and trapping requirements for different printing processes, inks and substrates are evaluated for different jobs</p> <p>7.3. Use and positioning of trimming and folding marks and how these are affected by different substrates are evaluated for different jobs</p> <p>7.4. Criteria for evaluating suitability of pre-press outputs for printing processes are explored and implemented</p> <p>7.5. Criteria for producing folding impositions are evaluated for different jobs</p>
8. Apply knowledge of colour theory	<p>8.1. Colour theory of additive colours (light), RGB, is used to inform pre-press and/or design decisions</p> <p>8.2. Colour theory of subtractive colours (pigments), CMYK, is used to inform pre-press and/or design decisions</p> <p>8.3. Relationship between ranges of visual colour RGB and CMYK is used to inform pre-press and/or design decisions</p> <p>8.4. Relationship between hue, greyness and substrate for tone and colour correction is used to inform pre-press</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and/or design decisions</p> <p>8.5. Colour matching conditions and colour matching systems are used to inform pre-press and/or design decisions</p> <p>8.6. Procedures that ensure effective colour management are implemented</p>
<p>9. Apply basic knowledge of costs of production</p>	<p>9.1. The main cost elements (fixed, capital and variable) in pre-press production are considered during different jobs</p> <p>9.2. The information required to accurately cost jobs and the means of collecting it (manual and computerised) are considered and implemented, where required, during different jobs</p> <p>9.3. Ways of minimising use of materials without affecting the quality of output are considered and implemented, where required, during different jobs</p> <p>9.4. Ways of maximising efficiency of capital and human resources are considered and implemented, where required, during different jobs</p>
<p>10. Apply basic knowledge of production management requirements and systems</p>	<p>10.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are identified and implementation strategies developed</p> <p>10.2. Systems (manual and computerised) that can be used to exchange information are considered and implemented, where required, during different jobs</p> <p>10.3. The basic principles of efficient production management are considered and implemented, where required, during different jobs</p> <p>10.4. The principles of effective quality management are considered and implemented, where required, during different jobs</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by accurately using correct printing industry terminology and vocabulary
- collecting, analysing and organising information by using colour theory of subtractive colours to inform pre-press and/or design decisions
- planning and organising activities by considering and implementing, where required, basic principles of efficient production management
- teamwork when implementing procedures that ensure effective colour management
- mathematical ideas and techniques by considering the information required to accurately cost jobs
- problem-solving skills by considering and implementing, where required, ways of maximising efficiency of capital and human resources during different jobs
- use of technology by researching and evaluating different output devices eg film setters, plate setters, analogue proofs and digital proofs, for different jobs

Required knowledge

- unit underpins the Certificate III level and higher pre-press units.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • assessor must be satisfied that sufficient knowledge and understanding of pre-press and related production processes (as outlined in each Element) have been demonstrated so that job procedures, requirements and modifications can be intelligently discussed in some detail with a tradesperson, production manager or client • successful demonstration of groups of pre-press units at Certificate III level or higher⁴ • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example units packaged in a Certificate III or higher qualification.</p>

3. Apply detailed knowledge of pre-press processes	3.1. The principles behind the following pre-press functions: image production (typesetting, scanning, graphic arts camera), image combining (manual and electronic), image output (film, plates, direct to press) and digital workflow are understood and applied where possible in the workplace 3.2. Different types of images (line, half-tone), digital and their use are understood and general strategies developed for printing 3.3. Different output settings eg screen rulings and angles, shapes, and how they affect final product are understood and general strategies developed for printing 3.4. The different types of output required for different printing processes are understood and general processes developed for printing 3.5. Different output devices eg film setters, plate setters, analogue proofs, digital proofs, are understood and general processes developed for printing
4. Apply knowledge of printing processes	4.1. Principles of the following printing processes: lithography, relief, flexography, gravure, pad printing, screen printing, digital/electronic printing are applied when using a selected printing process 4.2. The types of jobs and products for each process are considered to ensure appropriate choices are made to meet client needs 4.3. The capabilities and limitations of each process are

ELEMENT	PERFORMANCE CRITERIA
	considered when using a selected printing process
5. Apply knowledge of converting and finishing processes	<p>5.1. Basic characteristics of the following converting and finishing processes: guillotining, flat-bed and rotary cutting, collating, folding, adhesive, mechanical and thermal fastening are taken into consideration when making print process decisions</p> <p>5.2. The types of jobs and products for each process are considered to ensure appropriate choices are made to meet client needs</p>
6. Apply knowledge of substrates and inks	<p>6.1. The range of substrates used for each printing process are taken into consideration when making print set up decisions</p> <p>6.2. The relationship of different paper sizes is taken into consideration when making print set up decisions</p> <p>6.3. Different weights and callipers of substrates and how they affect printing operations are taken into consideration when making print set up decisions</p> <p>6.4. Paper grain and how it affects pre-press, printing and finishing operations are taken into consideration when making print set up decisions</p> <p>6.5. Different properties of ink such as drying properties, fastness, gloss, and how they affect printing and finishing operations are taken into consideration when making print set up decisions</p> <p>6.6. Inks and coatings that are appropriate and those that are not appropriate for particular finishing processes are taken into consideration when making print set up decisions</p>
7. Apply detailed knowledge of printing requirements for pre-press and finishing processes	<p>7.1. Designs that are appropriate for different printing processes are understood and general strategies developed for printing</p> <p>7.2. Criteria for evaluating suitability of pre-press outputs for printing processes are understood and general strategies developed for printing</p> <p>7.3. Mechanisms and techniques for adjusting image registration and position are understood and general strategies developed for printing</p> <p>7.4. Procedures for determining colour sequence are understood and general strategies developed for printing</p> <p>7.5. Adjustments that can be made so that product matches approved proof are understood and general</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>strategies developed for printing</p> <p>7.6. Criteria for determining impositions and image placements for converting, binding and finishing operations are understood and general strategies developed for printing</p>
<p>8. Apply knowledge of colour theory</p>	<p>8.1. Colour theory of additive colours (light), RGB, is understood and used to inform printing decisions</p> <p>8.2. Colour theory of subtractive colours (pigments), CMYK, is understood and used to inform printing decisions</p> <p>8.3. Relationship between ranges of visual colour RGB and CMYK is understood and used to inform printing decisions</p> <p>8.4. Relationship between hue, greyness and substrate for tone and colour correction is understood and used to inform printing decisions</p> <p>8.5. Colour matching conditions and colour matching systems are understood and used to inform printing decisions</p>
<p>9. Apply basic knowledge of costs of production</p>	<p>9.1. The main cost elements (fixed, capital and variable) in printing production are understood and used to inform printing decisions</p> <p>9.2. The information required to accurately cost jobs and the means of collecting it (manual and computerised) are applied to work practices</p> <p>9.3. Ways of minimising use of materials without affecting the quality of output is understood and used to inform printing processes</p> <p>9.4. Ways of maximising efficiency of capital and human resources are understood and used to inform printing processes</p>
<p>10. Apply basic knowledge of production management requirements and systems</p>	<p>10.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are understood and used to inform personal work practices</p> <p>10.2. Systems (manual and computerised) that can be used to exchange information are understood and used in the workplace</p> <p>10.3. The basic principles of efficient production management are understood and used to inform personal work practices</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Apply knowledge of printing industry</p>	<p>1.1. Printing industry terminology and vocabulary are used correctly and accurately</p> <p>1.2. New technology and new work processes are monitored and implemented when required</p> <p>1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices</p>
<p>2. Apply knowledge of government acts and regulations</p>	<p>2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace</p> <p>2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices</p>
<p>3. Apply detailed knowledge of pre-press processes</p>	<p>3.1. The basic principles behind the following pre-press functions: image production (typesetting, scanning, graphic arts camera), image combining (manual and electronic), image output (film, plates, direct to press) and digital workflow are understood and used in the production process where applicable</p> <p>3.2. Different types of images (line, half-tone), digital and their use are understood and used as required</p> <p>3.3. Different output settings eg screen rulings and angles, shapes, and describe how they affect final printed product are understood and used as required</p> <p>3.4. The different types of output required for different media and printing processes are understood and used in the production process where applicable</p> <p>3.5. Different output devices eg film setters, plate setters, analogue proofs, digital proofs are understood and built into the production process where applicable</p>
<p>4. Apply knowledge of printing processes</p>	<p>4.1. Basic principles of the following printing processes: lithography, relief, flexography, gravure, pad printing, screen printing, digital/electronic printing are understood and are used to inform production processes</p> <p>4.2. The types of jobs and products for which each process is appropriate are understood and are used to inform production decisions</p> <p>4.3. The capabilities and limitations of each process are understood and are used to inform production</p>

ELEMENT	PERFORMANCE CRITERIA
	decisions
5. Apply knowledge of converting and finishing processes	<p>5.1. Basic characteristics of the following converting and finishing processes: guillotining, flat-bed and rotary cutting, collating, folding, adhesive, mechanical and thermal fastening are understood and are used to inform production processes</p> <p>5.2. The types of jobs and products for which each process is appropriate are understood and are used to inform production processes</p>
6. Apply detailed knowledge of substrates	<p>6.1. The relationship of different substrate sizes is understood and is used to inform production processes</p> <p>6.2. Different weights, callipers, bulk, density and opacity of substrates and how they affect pre-press, printing and finishing operations and end uses are understood and are used to inform production processes</p> <p>6.3. Paper grain and how it affects pre-press, printing and finishing operations are understood and are used to inform production processes</p> <p>6.4. Moisture content, porosity and ink absorbency and how they affect pre-press, printing and finishing operations are understood and are used to inform production processes</p> <p>6.5. Gloss, smoothness and surface strength and how they affect pre-press, printing and finishing operations are understood and are used to inform production processes</p> <p>6.6. Permanence, durability and acidity and alkalinity of paper and how they affect pre-press, printing and finishing operations and end uses are understood and are used to inform production processes</p> <p>6.7. Bursting strength, folding endurance, tensile strength and tearing resistance and how they affect printing and finishing operations and end uses are understood and are used to inform production processes</p>
7. Apply knowledge of converting and finishing requirements for pre-press and printing processes	<p>7.1. Use and positioning of trimming and folding marks and how these are affected by different substrates are understood and are used to inform production processes</p> <p>7.2. Quality checking procedures and problems that should be reported to printer or pre-press and those that are the responsibility of converter or finisher are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>understood and are used to inform production processes</p> <p>7.3. Use and positioning of trimming and folding marks and how these are affected by different substrates are understood and are used to inform production processes</p> <p>7.4. Criteria for producing folding impositions are understood and are used to inform production processes</p> <p>7.5. Procedures for determining appropriate packing techniques are understood and are used to inform production processes</p>
<p>8. Apply basic knowledge of costs of production</p>	<p>8.1. The main cost elements (fixed, capital and variable) in printing production are understood and used to inform converting and finishing decisions</p> <p>8.2. The information required to accurately cost jobs and the means of collecting it (manual and computerised) are applied to work practices</p> <p>8.3. Ways of minimising use of materials without affecting the quality of output are understood and used to inform converting and finishing processes</p> <p>8.4. Ways of maximising efficiency of capital and human resources are understood and used to inform converting and finishing processes</p>
<p>9. Apply basic knowledge of production management requirements and systems</p>	<p>9.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are understood and used to inform personal work practices</p> <p>9.2. Systems (manual and computerised) that can be used to exchange information are understood and used in the workplace</p> <p>9.3. The basic principles of efficient production management are understood and used to inform personal work practices</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by accurately using correct printing industry terminology and vocabulary
- collecting, analysing and organising information by using colour theory of subtractive colours to inform pre-press and/or design decisions
- planning and organising activities by considering and implementing, where required, basic principles of efficient production management
- teamwork when implementing procedures that ensure effective colour management
- mathematical ideas and techniques by considering the information required to accurately cost jobs
- problem-solving skills by considering and implementing, where required, ways of maximising efficiency of capital and human resources during different jobs
- use of technology by applying the principles of the selected printing processes

Required knowledge

- unit underpins all of the Certificate III level and higher converting, binding and finishing units of competency.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • assessor must be satisfied that sufficient knowledge and understanding of converting and finishing and related production processes (as outlined in each Element) have been demonstrated so that job requirements and modifications can be intelligently discussed in some detail with a tradesperson, production manager or client • successful assessment of any of the Certificate III level converting, binding and finishing units of competency • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example units packaged in a Certificate III or higher qualification.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Level of knowledge</i> may include:</p>	<ul style="list-style-type: none"> knowledge required to intelligently discuss job procedures, requirements and modifications with a tradesperson, production manager or client

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply knowledge of printing industry	1.1. Printing industry terminology and vocabulary are used correctly and accurately 1.2. New technology and new work processes are monitored and implemented when required 1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices
2. Apply knowledge of government acts and regulations	2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace 2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices
3. Apply knowledge of pre-press processes	3.1. The basic principles behind the following pre-press functions: image production (typesetting, scanning, graphic arts camera), image combining (manual and electronic), image output (film, plates, direct to press) and digital workflow are understood and used in the production process where applicable 3.2. Different types of images (line, half-tone) and their use are understood and general methods developed for printing 3.3. Different output settings eg screen rulings and angles, shapes, and how they affect final product are understood and general methods developed for printing 3.4. The different types of output required for different printing processes are understood and general methods developed for printing 3.5. Different output devices eg film setters, plate setters, analogue proofs, digital proofs are understood and general processes developed for printing
4. Apply knowledge of printing processes	4.1. Basic principles of the following printing processes: lithography, relief, flexography, gravure, pad printing, screen printing, digital/electronic printing are understood 4.2. The types of jobs and products for which each process is appropriate are understood 4.3. The capabilities and limitations of each process are understood and general strategies developed to

ELEMENT	PERFORMANCE CRITERIA
	address client need
5. Apply knowledge of converting and finishing processes	<p>5.1. Basic characteristics of the following converting and finishing processes: guillotining, flat-bed and rotary cutting, collating, folding, adhesive, mechanical and thermal fastening are understood and are used to inform printing decisions</p> <p>5.2. The types of jobs and products for which each process is appropriate are understood and are used to inform printing decisions</p>
6. Apply detailed knowledge of substrates and inks	<p>6.1. The range of substrates used for each printing process is understood and used to inform printing decisions</p> <p>6.2. The relationship of different paper sizes is understood and used to inform printing decisions</p> <p>6.3. Different weights and callipers of substrates and how they affect screen printing operations are understood and used to inform printing decisions</p> <p>6.4. Paper grain and how it affects pre-press, printing and finishing operations are understood and used to inform printing decisions</p> <p>6.5. The differences in printing on different substrates eg paper, plastic, glass are understood and used to inform printing decisions</p> <p>6.6. Different properties of ink: drying properties, fastness, gloss etc and how they affect screen printing operations are understood and used to inform printing decisions</p> <p>6.7. Inks and coatings that are appropriate and those that are not appropriate for particular finishing processes are understood and used to inform printing decisions</p>
7. Apply detailed knowledge of screen printing and stencil preparation techniques and requirements	<p>7.1. Designs that are appropriate for screen printing on particular substrates are understood and used to inform printing decisions</p> <p>7.2. Criteria for selecting mesh count and stencil type are understood and used to inform printing decisions</p> <p>7.3. Dot gain, trapping and minimising moire requirements for different meshes, stencils, inks and substrates are understood and used to inform printing decisions</p> <p>7.4. Use and positioning of trimming and folding marks and how these are affected by different substrates are understood and used to inform printing decisions</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>7.5. Mechanisms and techniques for adjusting image registration and position are understood and used to inform printing decisions</p> <p>7.6. Procedure for determining colour sequence is understood and used to inform printing decisions</p> <p>7.7. Adjustments that can be made so that product matches approved proof are understood and used to inform printing decisions</p>
8. Apply knowledge of colour theory	<p>8.1. Colour theory of additive colours (light), RGB, is understood and used to inform printing decisions</p> <p>8.2. Colour theory of subtractive colours (pigments), CMYK, is understood and used to inform printing decisions</p> <p>8.3. Relationship between ranges of visual colour RGB and CMYK is understood and used to inform printing decisions</p> <p>8.4. Relationship between hue, greyness and substrate for tone and colour correction is understood and used to inform printing decisions</p> <p>8.5. Colour matching conditions and colour matching systems are understood and used to inform printing decisions</p> <p>8.6. Procedures that ensure effective colour management are understood and used to inform printing decisions</p>
9. Apply basic knowledge of costs of production	<p>9.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are understood and used to inform personal work practices</p> <p>9.2. Systems (manual and computerised) that can be used to exchange information are understood and used in the workplace</p> <p>9.3. The basic principles of efficient production management are understood and used to inform personal work practices</p>
10. Apply basic knowledge of production management requirements and systems	<p>10.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are understood and used to inform production decisions</p> <p>10.2. Systems (manual and computerised) that can be used to exchange information are understood and used in the workplace</p> <p>10.3. The basic principles of efficient production</p>

ELEMENT	PERFORMANCE CRITERIA
	management are understood and applied in the workplace

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by accurately using correct printing industry terminology and vocabulary
- collecting, analysing and organising information by using colour theory of subtractive colours to inform pre-press and/or design decisions
- planning and organising activities by considering and implementing, where required, basic principles of efficient production management
- teamwork when implementing procedures that ensure effective colour management
- mathematical ideas and techniques by understanding the different weights and callipers of substrates and how they affect screen printing operations
- problem-solving skills by considering and implementing, where required, ways of maximising efficiency of capital and human resources during different jobs
- use of technology by applying the principles of the selected printing screen printing processes

Required knowledge

- this unit of competency underpins all Certificate III level screen printing units

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply knowledge of multimedia and the printing industry	1.1. Printing industry terminology and vocabulary are used correctly and accurately 1.2. New technology and new work processes are monitored and implemented when required 1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices 1.4. International standards and open source standards are monitored for new developments and understood and applied where appropriate
2. Apply knowledge of government acts and regulations	2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace 2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices
3. Apply knowledge of pre-press processes	3.1. The basic principles behind the following pre-press functions: image production (typesetting, scanning, graphic arts camera), image combining (manual and electronic), image output (film, plates, direct to press) and digital workflow are understood and used in the production process where applicable 3.2. Different types of images (line, half-tone), digital and their use are understood and used as required 3.3. Different output settings eg screen rulings and angles, shapes, and how they affect final printed product are understood and used as required 3.4. The different types of output required for different media and printing processes are understood and used in the production process where applicable 3.5. Different output devices eg film setters, plate, analogue proofs, digital proofs are understood and used in the production process where applicable
4. Apply detailed knowledge of multimedia techniques and requirements	4.1. Designs that are appropriate or inappropriate for multimedia are understood and applied to the development process, where applicable 4.2. Criteria for choosing visual, audio or text delivery for presenting information in both passive and interactive products are understood and applied to the development process, where applicable

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. The differences between various markup languages and their application are understood and applied to a range of suitable development work</p> <p>4.4. The differences between various scripting languages and their application are understood and applied to a range of suitable development work</p> <p>4.5. The criteria for selecting graphic resolution and formats and advantages and limitations of different formats are understood and applied to the development process, where applicable</p> <p>4.6. Criteria for selecting audio formats for multimedia and advantages and limitations of different formats are understood and applied to the development process, where applicable</p> <p>4.7. The criteria for selecting video formats for multimedia and advantages and limitations of different formats are understood and applied to the development process, where applicable</p> <p>4.8. The criteria for selecting animation formats for multimedia and advantages and limitations of different formats are understood and applied to the development process, where applicable</p> <p>4.9. Multimedia platforms and computer systems requirements for different multimedia products are understood and applied to the development process, where applicable</p> <p>4.10. Different software and operating systems for producing multimedia products are evaluated for different jobs</p> <p>4.11. The features of an effective navigation system for both passive and interactive products are understood and applied to the development process, where applicable</p> <p>4.12. The effect of rapidly changing technology and how multimedia production needs to respond to it are understood</p>
5. Apply knowledge of colour theory	<p>5.1. Colour theory of additive colours (light), RGB, is understood and used to inform design decisions</p> <p>5.2. Colour theory of subtractive colours (pigments), CMYK, is understood and used to inform design decisions</p> <p>5.3. The relationship between ranges of visual colour RGB and CMYK is understood and used to inform</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>design decisions</p> <p>5.4. The relationship between hue and greyness for tone and colour correction is understood and used to inform design decisions</p>
<p>6. Apply basic knowledge of costs of production</p>	<p>6.1. The main cost elements (fixed, capital and variable) in multimedia production are understood and used to inform development decisions</p> <p>6.2. The information required to accurately cost jobs and the means of collecting it (manual and computerised) are understood and used to inform development decisions</p> <p>6.3. Ways of minimising use of materials without affecting the quality of output are understood and used to inform development decisions</p> <p>6.4. Ways of maximising efficiency of capital and human resources are understood and used to inform development decisions</p>
<p>7. Demonstrate basic knowledge of production management requirements and systems</p>	<p>7.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are understood and used to inform development decisions</p> <p>7.2. Systems (manual and computerised) that can be used to exchange information are understood and used in the workplace</p> <p>7.3. The basic principles of efficient production management is understood and used to inform development decisions</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by accurately using correct printing industry terminology and vocabulary
- collecting, analysing and organising information by monitoring trends within the multimedia sector on an ongoing basis to inform personal work practices
- planning and organising activities by considering and implementing, where required, basic principles of efficient production management
- teamwork when implementing procedures that ensure effective colour management
- mathematical ideas and techniques by understanding and using as required different output settings eg screen rulings and angles, shapes
- problem-solving skills by considering and implementing, where required, ways of maximising efficiency of capital and human resources during different jobs
- use of technology by understanding and applying to the development process, where applicable, multimedia platforms and computer systems requirements for different multimedia products

Required knowledge

- unit underpins all Certificate III level multimedia units of competency

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • assessor must be satisfied that sufficient knowledge and understanding of multimedia and related production processes (as outlined in each Element) have been demonstrated so that job procedures, requirements and modifications can be intelligently discussed in some detail with a tradesperson, programmer, technician, production manager or client • successful assessment of Certificate III level multimedia units of competency • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Level of knowledge</i> may include:	<ul style="list-style-type: none"> knowledge required to intelligently discuss job procedures, requirements and modifications with a tradesperson, production manager or client.

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply knowledge of printing industry	1.1. Printing industry terminology and vocabulary are used correctly and accurately 1.2. New technology and new work processes are monitored and implemented when required 1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices
2. Apply knowledge of government acts and regulations	2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace 2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices
3. Apply knowledge of pre-press processes	3.1. The basic principles behind the following pre-press functions: image production (typesetting, scanning, graphic arts camera), image combining (manual and electronic), image output (film, plates, direct to press) and digital workflow are understood and used in the production process where applicable 3.2. Different types of images (line, half-tone) and their use are understood 3.3. Different output settings eg screen rulings and angles, shapes, and how they affect final product are understood 3.4. The different types of output required for different printing processes are understood 3.5. Different output devices eg film setters, plate setters, analogue proofs, digital proofs are understood
4. Apply knowledge of printing processes	4.1. Basic principles of the following printing processes: lithography, relief, flexography, gravure, pad printing, screen printing, digital/electronic printing are understood and are used to inform production processes 4.2. The types of jobs and products for which each process is appropriate are understood and used to inform production decisions 4.3. The capabilities and limitations of each process are understood and used to inform production decisions
5. Apply knowledge of	5.1. Basic characteristics of the following converting and

ELEMENT	PERFORMANCE CRITERIA
converting and finishing processes	<p>finishing processes: guillotining, flat-bed and rotary cutting, collating, folding, adhesive, mechanical and thermal fastening are understood and used to inform production processes</p> <p>5.2.The types of jobs and products for which each process is appropriate are understood and used to inform production processes</p>
6. Apply detailed knowledge of paper and printing processes	<p>6.1.The relationship of different paper sizes is understood and used to inform production processes</p> <p>6.2.Different weights, callipers, bulk, density and opacity of paper and how they affect pre-press, printing and finishing operations and end uses are understood and used to inform production processes</p> <p>6.3.Paper grain and how it affects pre-press, printing and finishing operations are understood and used to inform production processes</p> <p>6.4.Moisture content, porosity and ink absorbency and how they affect pre-press, printing and finishing operations are understood and used to inform production processes</p> <p>6.5.Gloss, smoothness and surface strength and how they affect pre-press, printing and finishing operations are understood and used to inform production processes</p> <p>6.6.Permanence, durability and acidity and alkalinity of paper and how they affect pre-press, printing and finishing operations and end uses are understood and used to inform production processes</p> <p>6.7.Bursting strength, folding endurance, tensile strength and tearing resistance and how they affect printing and finishing operations and end uses are understood and used to inform production processes</p>
7. Apply detailed knowledge of paper grades and colours	<p>7.1.Paper types and grades and end uses for each type and grade are understood and used to inform production processes</p> <p>7.2.The differences between wood pulp, rag and recycled papers and appropriate end uses are understood and used to inform production processes</p> <p>7.3.Colour matching processes are understood and used to inform production processes</p> <p>7.4.The effect of different paper colours on printing operations is understood and used to inform production processes</p>
8. Apply detailed	8.1.Ideal storage conditions for different types and

ELEMENT	PERFORMANCE CRITERIA
knowledge of paper handling and storage procedures	<p>grades of paper are understood and used to inform production procedures</p> <p>8.2. The advantages and disadvantages of different packing and delivery systems are understood and used to inform production procedures</p>
9. Apply basic knowledge of costs of production	<p>9.1. The main cost elements (fixed, capital and variable) in production are understood and applied in the workplace</p> <p>9.2. The information required to accurately cost jobs and the means of collecting it (manual and computerised) are understood and applied in the workplace</p> <p>9.3. Ways of minimising use of materials without affecting the quality of output are understood and applied in the workplace</p> <p>9.4. Ways of maximising efficiency of capital and human resources are understood and applied in the workplace</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by accurately using correct printing industry terminology and vocabulary
- collecting, analysing and organising information by understanding and applying basic principles and obligations of OHS in the workplace
- planning and organising activities by considering and implementing, where required, basic principles of efficient production management
- teamwork when implementing procedures that ensure effective colour management
- mathematical ideas and techniques by understanding and applying the information required to accurately cost jobs
- problem-solving skills by considering and implementing, where required, ways of maximising efficiency of capital and human resources during different jobs
- use of technology by understanding and using the basic principles of the selected printing process

Required knowledge

- unit underpins all Certificate III level units of competency related to the paper merchant area

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • assessor must be satisfied that sufficient knowledge and understanding of paper and related production processes (as outlined in each Element) have been demonstrated so that job procedures, requirements and modifications can be intelligently discussed in some detail with a tradesperson, production manager or client • successful assessment of Certificate III level units of competency related to the paper merchants area • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Level of knowledge</i> may include:	<ul style="list-style-type: none"> knowledge required to intelligently discuss job procedures, requirements and modifications with a tradesperson, production manager or client.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply knowledge of printing industry	1.1. Printing industry terminology and vocabulary are used correctly and accurately 1.2. New technology and new work processes are monitored and implemented when required 1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices
2. Apply knowledge of government acts and regulations	2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace 2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices
3. Identify categories of the ink manufacturing sector and enterprise products and services	3.1. The scope of the ink manufacturing sector, its products, services and client/supplier profile can be identified 3.2. Enterprise products and services, their characteristics and their end use, specifically with regard to the printing industry, are identified 3.3. Printing processes and procedures and their implication for ink manufacture are understood and used to inform decisions about ink usage
4. Identify enterprise processes and procedures	4.1. Manufacturing processes and quality control procedures for ink/coating/varnish/resin/chemical production are understood and used to inform decisions about ink usage 4.2. Raw material, intermediate and final product testing and recording procedures within the enterprise are identified and applied in personal work practices 4.3. Product research and development capacity and opportunities are identified and explored for professional development and enterprise purposes
5. Apply knowledge of testing procedures	5.1. Appropriate testing procedures for each stage of product manufacture are described, evaluated, and improvements are applied where required 5.2. Workplace quality assurance procedures are understood and applied in the workplace 5.3. Procedures for developing and testing formulae for new product with reference to end use and capability

ELEMENT	PERFORMANCE CRITERIA
	and suitability of manufacturing processes are described and applied in the workplace

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by accurately using correct printing industry terminology and vocabulary
- collecting, analysing and organising information by understanding and applying basic principles and obligations of OHS in the workplace
- planning and organising activities by identifying and applying raw material, intermediate and final product testing procedures in the workplace
- teamwork when understanding and applying workplace quality assurance procedures in the workplace in association with others
- mathematical ideas and techniques by identifying and applying raw material, intermediate and final product recording procedures in the workplace
- problem-solving skills by describing and evaluating appropriate testing procedures for each stage of product manufacture and applying improvements
- use of technology by monitoring and implementing new technology and new work processes

Required knowledge

- unit underpins all Certificate III level units of competency in ink manufacture

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply knowledge of printing industry	1.1. Printing industry terminology and vocabulary are used correctly and accurately 1.2. New technology and new work processes are monitored and implemented when required 1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices 1.4. Job requirements and alterations are discussed with and understood by tradespersons, supervisors, production managers and clients
2. Apply knowledge of government acts, regulations and codes of practice	2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace 2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices 2.3. Codes of practice and responsibilities regarding both paper and electronic-based products and services and direct marketing are understood and applied in personal work practices 2.4. Legislative requirements regarding the storage of data, addressing, ownership of lists, intellectual copyright, privacy and confidentiality of information are understood and applied in personal work practices 2.5. Mail house responsibilities in regard to the public, clients, suppliers and employees are understood and applied in personal work practices
3. Apply knowledge of postal standards and requirements	3.1. Limitations on size, weight and content of postal items are understood and applied in processing mail and/or parcels 3.2. Australia Post Post Standards and Letter Pre-Sorting Standards are understood and used to inform workflow processes 3.3. Packaging requirements for a range of products are understood and applied
4. Identify enterprise processes and procedures	4.1. The importance of digital printing systems including inkjet, laser and offset technologies in the mail house centre are understood 4.2. Digital data customisation is understood and is used

ELEMENT	PERFORMANCE CRITERIA
	<p>to inform quality checks</p> <p>4.3. Advantages and applications of digital printing within a mail house are understood</p> <p>4.4. In-line processes associated with digital printing systems are understood and used to inform work processes</p> <p>4.5. The process and applications of bar coding as applied to mail house operations and services are understood</p>
<p>5. Apply knowledge of computerised systems and associated software as used in mail house sector</p>	<p>5.1. A variety of computer driven equipment as used in typical mail house operations is understood and used where appropriate</p> <p>5.2. Computer driven bar code, sorting, tagging and reading systems are understood and applied in the workplace where appropriate</p> <p>5.3. Data management and processing systems and software are understood</p> <p>5.4. Computerised document management, design and reading systems and software are understood</p> <p>5.5. Computerised market research and listing services and associated software are understood</p> <p>5.6. Recent developments in electronic mailing and new applications of this technology are understood</p>
<p>6. Apply a knowledge of pre-press, printing, converting and finishing sectors and processes</p>	<p>6.1. The principles and functions of image production (typesetting, scanning, camera), image combining (manual and electronic), image output (film, plates, direct to press) and digital workflow are understood and used to inform production processes where appropriate</p> <p>6.2. Pre-press functions including image classification (type, line, tone), output settings (screen rulings and angles) and output devices (film setter, plate maker, proofer) are understood and used to inform production processes where appropriate</p> <p>6.3. Conventional printing processes are understood and used to inform production processes where appropriate</p> <p>6.4. The most suitable printing process for a variety of jobs and products, taking into account cost, quality and end user requirements is understood and used to inform decisions about printing processes where appropriate</p> <p>6.5. Capabilities and limitations of each printing process</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>are understood and used to inform decisions about printing processes where appropriate</p> <p>6.6. Basic principles and characteristics of a variety of converting and finishing operations including guillotining, collating, folding, inserting and fastening are understood and used to inform production processes where appropriate</p> <p>6.7. Terminology suited to those working in mail house, printing and related industries is understood and applied in the workplace</p>
7. Apply knowledge of substrates, inks, toners and coatings	<p>7.1. Substrates used for each printing process and the properties that make them suitable are understood and used to inform production processes where appropriate</p> <p>7.2. The IPS system, its basis and the relationship of different paper sizes are understood and used to inform production processes where appropriate</p> <p>7.3. Different weights, callipers and finishes of substrates and how they affect mailing and converting and finishing operations are understood and used to inform production processes where appropriate</p> <p>7.4. Paper grain and how it affects pre-press, printing, finishing and mailing operations are understood and used to inform production processes where appropriate</p> <p>7.5. Ink characteristics including drying properties, fastness, gloss, opacity, tack and scuff resistance, and their effect on printing, finishing and end user requirements are understood and used to inform production processes where appropriate</p> <p>7.6. Desirable qualities for inks, toners and coatings to ensure suitability for substrate, finishing operations and end user requirements are understood and used to inform production processes where appropriate</p>
8. Apply knowledge of costs of production	<p>8.1. The main cost elements (fixed, capital and variable) in converting and finishing production are understood and applied in the workplace</p> <p>8.2. The information required to accurately cost jobs and the means of collecting it (manual and computerised) are understood and applied in the workplace</p> <p>8.3. Ways of minimising use of materials without affecting the quality of output are understood and applied in the workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	8.4. Ways of maximising efficiency of capital and human resources are understood and applied in the workplace
9. Apply knowledge of production management requirements and systems	<p>9.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are understood and applied in the workplace</p> <p>9.2. Systems (manual and computerised) that can be used to exchange information are understood and applied in the workplace</p> <p>9.3. The basic principles of efficient production management are understood and applied in the workplace</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by accurately using mail house, postal and printing industry terminology and vocabulary
- collecting, analysing and organising information by understanding and applying computer driven bar code, sorting, tagging and reading systems in the workplace
- planning and organising activities by understanding and applying ways of minimising material use in the workplace without affecting the quality of output
- teamwork when understanding and applying the basic principles of efficient production management in the workplace in association with others
- mathematical ideas and techniques by understanding and applying the information required to accurately cost jobs
- problem-solving skills by adopting the most suitable printing process taking account of cost, quality and client needs
- use of technology by understanding and using pre-press functions to inform production processes

Required knowledge

- unit underpins all Certificate III level mail house units of competency

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply knowledge of printing industry	1.1. Printing industry terminology and vocabulary are used correctly and accurately 1.2. New technology and new work processes are monitored and implemented when required 1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices
2. Apply knowledge of government acts and regulations	2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace 2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices
3. Apply knowledge of pre-press processes	3.1. The principles behind the following pre-press functions: image production (typesetting, scanning, graphic arts camera), image combining (manual and electronic), image output (film, plates, direct to press) and digital workflow are understood and used in the production process where applicable 3.2. Different types of images (line, half-tone) and their use are understood 3.3. The qualities of the main material types of paper, ink, adhesive, wax and plastic films and extrusion are understood and used to inform product development choices 3.4. Different output settings eg screen rulings and angles, shapes, and how they affect final product are understood 3.5. The different types of output required for different printing processes are understood 3.6. Different output devices eg film setters, plate setters, analogue proofs, digital proofs are understood
4. Apply knowledge of printing processes	4.1. Basic principles of the following printing processes: lithography, relief, flexography, gravure, pad printing, screen printing, digital/electronic printing are understood and used to inform production processes 4.2. The types of jobs and products for which each process is appropriate are understood and used to inform production decisions

ELEMENT	PERFORMANCE CRITERIA
	4.3. The capabilities and limitations of each process are understood and used to inform production decisions
5. Apply knowledge of converting and finishing processes	<p>5.1. Basic characteristics of the following converting and finishing processes: guillotining, flat-bed and rotary cutting, collating, folding, adhesive, mechanical and thermal fastening are understood and used to inform production processes</p> <p>5.2. The types of jobs and products for which each process is appropriate are understood and used to inform production processes</p>
6. Apply detailed knowledge of paper and printing processes	<p>6.1. The relationship of different paper sizes is understood and used to inform production processes</p> <p>6.2. Different weights, callipers, bulk, density and opacity of paper and how they affect pre-press, printing and finishing operations and end uses are understood and used to inform production processes</p> <p>6.3. Paper grain and how it affects pre-press, printing and finishing operations are understood and used to inform production processes</p> <p>6.4. Moisture content, porosity and ink absorbency and how they affect pre-press, printing and finishing operations are understood and used to inform production processes</p> <p>6.5. Gloss, smoothness and surface strength and how they affect pre-press, printing and finishing operations are understood and used to inform production processes</p> <p>6.6. Permanence, durability and acidity and alkalinity of paper and how they affect pre-press, printing and finishing operations and end uses are understood and used to inform production processes</p> <p>6.7. Bursting strength, folding endurance, tensile strength and tearing resistance and how they affect printing and finishing operations and end uses are understood and used to inform production processes</p> <p>6.8. Paper behaviour and how it affects different production processes is understood and used to inform production decisions</p> <p>6.9. The effect of combining paper with adhesive, wax and plastic films on the production process is understood and used to inform production decisions</p>
7. Apply detailed knowledge of paper	7.1. Paper types and grades and end uses for each type and grade are understood and used to inform

ELEMENT	PERFORMANCE CRITERIA
grades and colours	<p>production processes The IPS system, its basis and the relationship of different paper sizes are understood and used to inform production processes where appropriate</p> <p>7.2. The differences between wood pulp, rag and recycled papers and appropriate end uses are understood and used to inform production processes</p> <p>7.3. Colour matching processes are understood and used to inform production processes</p> <p>7.4. The effect of different paper colours on printing operations is understood and used to inform production processes</p>
8. Apply detailed knowledge of paper handling and storage procedures	<p>8.1. Ideal storage conditions for different types and grades of paper are understood and used to inform production procedures</p> <p>8.2. The advantages and disadvantages of different packing and delivery systems are understood and used to inform production procedures</p>
9. Apply basic knowledge of costs of production	<p>9.1. The main cost elements (fixed, capital and variable) in production are understood and applied in the workplace</p> <p>9.2. The information required to accurately cost jobs and the means of collecting it (manual and computerised) are understood and applied in the workplace</p> <p>9.3. Ways of minimising use of materials without affecting the quality of output are understood and applied in the workplace</p> <p>9.4. Ways of maximising efficiency of capital and human resources are understood and applied in the workplace</p>
10. Apply knowledge of production management requirements and systems	<p>10.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are understood and applied in the workplace</p> <p>10.2. Systems (manual and computerised) that can be used to exchange information are understood and applied in the workplace</p> <p>10.3. The basic principles of efficient production management are understood and applied in the workplace</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by accurately using printing industry terminology and vocabulary
- collecting, analysing and organising information by monitoring trends within the printing industry on an ongoing basis to inform personal work practices
- planning and organising activities by considering and implementing, where required, basic principles of efficient production management
- teamwork when understanding and applying information systems in the workplace in association with others
- mathematical ideas and techniques by considering the information required to accurately cost jobs
- problem-solving skills by understanding and using the capabilities and limitations of each process when making production decisions
- use of technology by understanding and using basic principles of printing processes to meet client needs

Required knowledge

- unit underpins all Certificate III level units of competency related to the sacks and bags or cartons/corrugating sectors

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • assessor must be satisfied that sufficient knowledge and understanding of paper and related production processes (as outlined in each Element) have been demonstrated so that job procedures, requirements and modifications can be intelligently discussed in some detail with a tradesperson, production manager or client • successful assessment of Certificate III level units of competency related to the sacks and bags or cartons/corrugating sectors for example • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Information technology trends within the printing industry are monitored on an ongoing basis to inform personal work practices</p> <p>1.4. International standards and open source standards are monitored for new developments and understood and applied where appropriate</p> <p>1.5. The issues involved in producing related print products with new technology are understood and reflected in work practice</p> <p>1.6. Issues such security, archiving, backup and storage are understood and used to inform work practice</p>
<p>2. Apply knowledge of government acts and regulations</p>	<p>2.1. Basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are understood in relation to the workplace</p> <p>2.2. The basic principles and obligations involved in copyright, OHS, environmental protection, access and equity and industrial awards are followed in personal work practices</p>
<p>3. Apply knowledge of pre-press information technology systems</p>	<p>3.1. Basic principles and capabilities behind digital workflows and computer networks are understood and used to inform work practices</p> <p>3.2. Database and file management are understood and used as required</p> <p>3.3. Different output settings and how they affect final printed product are understood and used as required</p> <p>3.4. The different types of output required for different media and printing processes are understood and used in the production process where applicable</p> <p>3.5. Server and server administration are understood and used to inform work practices</p>
<p>4. Apply detailed knowledge of information technology in multimedia</p>	<p>4.1. Designs that are appropriate or inappropriate for multimedia are understood and applied to the development process, where applicable</p> <p>4.2. Criteria for choosing visual, audio or text delivery for presenting information in both passive and interactive products are understood and applied to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>the development process, where applicable</p> <p>4.3. The differences between various markup languages and their application are understood and applied to a range of suitable development work</p> <p>4.4. The differences between various scripting languages and their application are understood and applied to a range of suitable development work</p> <p>4.5. The criteria for selecting graphic resolution and formats and advantages and limitations of different formats are understood and applied to the development process, where applicable</p> <p>4.6. Criteria for selecting audio formats for multimedia and advantages and limitations of different formats are understood and applied to the development process, where applicable</p> <p>4.7. The criteria for selecting video formats for multimedia and advantages and limitations of different formats are understood and applied to the development process, where applicable</p> <p>4.8. The criteria for selecting animation formats for multimedia and advantages and limitations of different formats are understood and applied to the development process, where applicable</p> <p>4.9. Multimedia platforms and computer systems requirements for different multimedia products are understood and applied to the development process, where applicable</p> <p>4.10. Different software and operating systems for producing multimedia products are evaluated for different jobs</p> <p>4.11. The features of an effective navigation system for both passive and interactive products are understood and applied to the development process, where applicable</p> <p>4.12. The effect of rapidly changing technology and how multimedia production needs to respond to it are understood</p>
<p>5. Apply knowledge of printing information technology systems</p>	<p>5.1. The types of information technology systems used in the printing sector are understood and used to inform personal work practice</p> <p>5.2. Database and file management are understood and used as required</p> <p>5.3. Automated workflow systems are understood and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>used to inform work practice</p> <p>5.4. Different output systems and technology are understood and used to inform work practice</p>
<p>6. Apply knowledge of converting and finishing information technology systems</p>	<p>6.1. The types of information technology systems used in the converting and finishing sector are understood and used to inform personal work practice</p> <p>6.2. Automated workflow systems are understood and used to inform work practice</p> <p>6.3. Different dispatch and distribution systems are understood and used to inform work practice</p>
<p>7. Demonstrate knowledge of production management systems</p>	<p>7.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are understood and used to inform development decisions</p> <p>7.2. Information technology systems that can be used to exchange information between companies and within companies are understood and used</p> <p>7.3. The basic principles of efficient production management information systems are understood and inform development decisions</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by correctly and accurately using information technology terminology and vocabulary
- collecting, analysing and organising information by understanding and applying basic principles and obligations of OHS in the workplace
- planning and organising activities by understanding and using basic principles and capabilities behind digital workflows and computer networks in work practices
- teamwork when understanding and using issues such as security, archiving, backup and storage in work practices
- mathematical ideas and techniques by understanding and applying the criteria for selecting graphic resolution to the development process
- problem-solving skills by evaluating software and operating systems when producing multimedia for different jobs
- use of technology by understanding and applying to the development process, where applicable, multimedia platforms and computer systems requirements for different multimedia products

Required knowledge

- unit underpins all technical Certificate III level units of competency

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none">• assessor must be satisfied that sufficient knowledge and understanding of information technology systems and related production processes (as outlined in each Element) have been demonstrated so that job procedures, requirements and modifications can be intelligently discussed in some detail with a tradesperson, programmer, technician, production manager or client• demonstrated competency in Certificate III level Information Technology units of competency• evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none">• assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none">• direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Level of knowledge</i> may include:	<ul style="list-style-type: none"> knowledge required to intelligently discuss job procedures, requirements and modifications with a tradesperson, production manager or client.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply knowledge of printing industry	1.1. Printing industry terminology and vocabulary are used correctly and accurately 1.2. New technology and new work processes are monitored and implemented when required 1.3. Trends within the printing industry are monitored on an ongoing basis to inform personal work practices
2. Apply knowledge of Government Acts and regulations	2.1. Basic principles and obligations for copyright, occupational health and safety (OHS), environmental protection, access and equity and industrial awards are researched and evaluated 2.2. Basic principles and obligations for copyright, OHS, environmental protection, access and equity and industrial awards are followed and applied in the workplace
3. Apply knowledge of digital production processes	3.1. The principles behind basic layout production, image manipulation, digital output and workflow are identified and applied where possible in the workplace 3.2. Proofing processes and principles are applied to meet client needs 3.3. Raster image processor (RIP) and front-end processor functions are applied to meet job specifications 3.4. The effective use of software applications for producing digital products is evaluated
4. Apply knowledge of digital printing processes	4.1. Basic principles of toner, inkjet or liquid toner-based, are evaluated to inform decisions made for different jobs 4.2. The types of jobs and products for each process are considered to ensure appropriate choices are made to meet client needs 4.3. The capabilities and limitations of each process are reviewed for different jobs
5. Apply knowledge of substrates and consumables	5.1. The range of <i>substrates</i> used for each printing process are researched and evaluated for different jobs 5.2. Different weights and callipers of substrates and how they affect digital production operations are researched and evaluated for different jobs

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Paper grain and how it affects digital production and finishing operations are researched for different jobs</p> <p>5.4. Different properties of digital consumables, and how they effect digital production operations are researched for different jobs</p>
6. Apply knowledge of colour theory	<p>6.1. Colour theory is used to inform digital production and/or design decisions</p> <p>6.2. Colour matching systems are used to inform digital production and/or design decisions</p> <p>6.3. Procedures that ensure effective colour management are implemented</p>
7. Apply knowledge of converting and finishing processes	<p>7.1. Basic characteristics of converting and finishing processes are identified and considered for different jobs</p> <p>7.2. The types of processes are evaluated and used to inform decisions made for different jobs</p>
8. Demonstrate knowledge of production management systems	<p>8.1. The types of information that need to be exchanged between different stages of production to facilitate production efficiency are identified and used to inform development decisions</p> <p>8.2. Information technology systems that can be used to exchange information between and within companies are identified and used</p> <p>8.3. Efficient production management information systems are established and applied to inform development decisions</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS skills for using correct ergonomics when operating the computer
- communication skills for transferring ideas and information by accurately using correct printing industry terminology and vocabulary
- analysing and organising skills used when applying basic principles of efficient production management
- teamwork skills for maintaining the production process in association with others
- numeracy skills for determining weights and callipers of substrates
- problem-solving skills for checking and adjusting procedures
- technical skills for using relevant hardware and software to produce a layout

Required knowledge

- colour theory
- converting and finishing processes
- digital production processes
- Government Acts and regulations
- production management systems
- substrates and consumables

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • demonstrate knowledge of digital production and related production processes so that job procedures, requirements and modifications have been implemented to job specifications • establish and apply efficient production management information systems and accurately explain these systems to the production manager or client.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • that conditions are typical ambient conditions found in the workplace • access to relevant facilities, equipment and materials used for digital printing • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence • third party workplace reports of on-the-job performance by the candidate • practical demonstration by the candidate when applying production management information systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Substrates</i> may include:	<ul style="list-style-type: none"> • print media and paper: <ul style="list-style-type: none"> • coated • uncoated • card • canvas • vinyl and plastic.
<i>Colour theory</i> may include:	<ul style="list-style-type: none"> • additive and subtractive • colour modes, such as: <ul style="list-style-type: none"> • red, green, blue (RGB) • cyan, magenta, yellow, black (CMYK) • LAB • colour rules, such as: <ul style="list-style-type: none"> • analogous • complementary • triad.
<i>Converting and finishing</i> may include:	<ul style="list-style-type: none"> • guillotining • flat-bed and rotary cutting • collating • folding • adhesives • mechanical and thermal fastening.
<i>Information technology systems</i> may include:	<ul style="list-style-type: none"> • computer networks • databases • internet.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and use local resources	1.1. Installed Internet <i>software applications</i> and their purposes are identified 1.2. Internet software applications are used online and offline 1.3. Extracting (decompressing) software and virus scanners are used on downloaded files 1.4. Identify Internet connection and protocols 1.5. Applications and files are downloaded and installed correctly 1.6. Potential security risks are identified and avoided
2. Identify and use remote resources	2.1. Websites are navigated to locate required information 2.2. Files and documents are accessed using the Internet (world wide web) search engines 2.3. The Internet is browsed to find related sites via links 2.4. Files are retrieved from an FTP repository 2.5. Emails are sent, downloaded, read, responded and saved to 2.6. Files attached to incoming email are retrieved and attached files are sent 2.7. Newsgroups relevant to the industry are accessed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- collecting, analysing and organising information by navigating websites to locate required information
- planning and organising activities by navigating websites to locate required information
- problem-solving skills by extracting files and virus scanning
- use of technology by accessing and using the Internet

Required knowledge

- how to initiate and conclude an Internet connection
- when a connection attempt fails, what could be the cause and what to do
- appropriate uses of different Internet protocols and data types (WWW, email, etc)
- WWW search engines
- what a URL is
- using email to respond to a newsgroup post
- what shareware is
- maintaining (upper/lower) case : URLs, file names, passwords
- ".zip" are files and why are they used
- difference between Java and JavaScript
- ways to you use the Internet to obtain product information and technical support
- time it takes to download one megabyte of data using a fast modem
- privacy and security measures related to on line tasks
- information you would refuse to provide when filling out a form on a web page
- what cookies are
- types of files that can carry viruses
- scanning for viruses before and after extracting the files from a compressed archive
- copyright ownership on the types of data you retrieve
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Access the Internet and retrieve data using WWW and email and newsgroups • Send emails or newsgroup posting with correctly formatted attachments • Perform a search and save the text of a web page to disk • Extract and virus-scan downloaded files • Demonstrate an ability to find and use information relevant to the task from a variety of information sources.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFMEM12A Update web pages.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Software applications may include:

- a wide range of programs, some current examples of which may be Eudora, Netscape.

Relevant terminology used may include:

- ISDN, PPP, TCP/IP, URL, Java, JavaScript, HTML, Download, WWW, cookies, zip files and others.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm data requirements	1.1. All details required for the job are checked and confirmed against the <i>job specifications</i> 1.2. Media content is tested to ensure all <i>interactivity</i> performs according to job specifications 1.3. Media is compressed correctly with images at the right resolution and any text in the correct format 1.4. Media is compressed correctly with images at the right resolution and any text in the correct format
2. Prepare the CD-ROM/DVD structure	2.1. Target audience is identified from job specifications and a welcome page is developed 2.2. The welcome page identifies the navigational structure of the media 2.3. Folders for containing the media are prepared according to interactivity requirements 2.4. DOS-style eight-dot-three-character file names are used for all files
3. Set up auto functions	3.1. Autorun is set up to automatically start up the CD-ROM/DVD media 3.2. ShelExec.exe is incorporated into the autorun script to ensure default programs within the shell are started 3.3. Autorun is linked to a reader in case the target audience do not have one pre-installed 3.4. Where autorun is linked to Adobe Reader, JavaScript is added to the appropriate folder to launch the PDF file
4. Burn CD-ROM/DVD	4.1. The CD-ROM/DVD layout is validated and saved correctly 4.2. The preferred CD-ROM/DVD format is chosen for the job 4.3. A test CD-ROM/DVD is burned to test the auto functions and confirm interactivity across different platforms 4.4. A master disc is produced for mass duplication

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by developing a welcome page that identifies the navigational structure of the media
- collecting, analysing and organising information by correctly compressing media at the right resolution with any text in the correct format
- planning and organising activities by preparing the CD-ROM/DVD structure before setting up auto functions
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by compressing media correctly to ensure images are at the right resolution
- problem-solving skills by testing the auto functions to confirm interactivity across different platforms
- use of technology by using computer hardware and software to create and test a CD-ROM/DVD

Required knowledge

- compression technologies
- media types
- relevant multimedia software
- relevant CD/DVD hardware for burning CDs/DVDs
- multi media navigation
- java script
- different multi media file formats eg PDF, JPEG, TIF

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Create an interactive CD-ROM/DVD that starts automatically and has no errors in any of the interactive functions • Create TWO different interactive CD-ROMs/DVDs which start automatically, have no errors in any of the interactive functions and besides autorun they will link with a reader for computers without a reader installed • Evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • appropriate computer hardware and software.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess digital camera qualities	1.1. Camera software compatibility with hardware system is assessed and the appropriate software is selected for the job 1.2. Pixel resolution of the camera is matched to the required quality and resolution of outcome 1.3. The RAM capacity of the camera is checked to be appropriate to the number of images required to be captured 1.4. Shutter speed, focal lengths and camera feature modes (eg flash, scrollage, icon menu, close-up, wide angle and telephoto capacity) are assessed suitable for the quality and use of photographic images required 1.5. Lithium batteries are handled and stored according to OHS requirements
2. Set up for image capture	2.1. Camera is set up for image composition according to job specifications 2.2. Lighting is arranged according to job specifications 2.3. Light intensity is set for the correct exposure
3. Preview image	3.1. Tone curves are adjusted according to job specifications 3.2. The neutral balance of the image is arranged and adjusted 3.3. Adjustments to image composition and exposure are made
4. Photograph and upload a digital image	4.1. The digital camera is loaded and operated according to manufacturer's specifications appropriate to the quality of image to be photographed 4.2. The computer card interface/disk is uploaded onto the relevant computer and the image saved on hard disk 4.3. Photographic image files are created and stored on the computer according to software procedures 4.4. Photographic images are enhanced, cropped and altered electronically to deliver the required image 4.5. Photographic images are checked for fitness of purpose and conformance to the job brief 4.6. Photographic images are assessed fit for the relevant delivery mode (eg print, CD-ROM) and delivered appropriately

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by consulting with supervisors over the processing of digital images
- collecting, analysing and organising information by assessing the suitability of shutter speed, focal lengths and camera feature modes (eg flash, scrollage, icon menu, close-up, wide angle and telephoto capacity) for the photographic image required
- planning and organising activities by planning and coordinating digital image capture sessions
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by choosing the correct shutter speed and focal length to capture digital images
- problem-solving skills applied by identifying and correcting problems of image quality
- use of technology applied by using digital camera technology

Required knowledge

- digital camera use
- pixel resolution and how this affects the resolution of the image
- relevance of the RAM capacity of a digital camera
- importance of shutter speeds and focal lengths
- safety requirements for handling and storing lithium batteries
- uploading and processing digital images using a computer
- uploaded data to a computer from the computer card interface/disk
- process for filing and creating photographic image files on the computer
- enhancing, crop and altering photographic images electronically
- considerations that need to be made to assess a digital photograph suitable for a newspaper, glossy brochure and CD-ROM
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> photographed image meets the quality and look/ feel requirements of the brief. The digital camera functions are used to capture the required image underlying skills of capturing a digital image using a digital camera should be transferable across the associated sectors of the printing industry demonstrate an ability to find and use information relevant to the task from a variety of information sources assess the capacity of, and operate, a digital camera to upload and process THREE digital images using industry hardware and software to deliver a designated quality of image outcome evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning/observation combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Lighting may include:

- direct (main) fill in lighting/fill reflector

Types of systems may include:

- digital cameras used in the pre-press sector and associated sectors with which a pre-press organisation may be required to work

ICPMM322C Edit a digital image

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to edit and manipulate an image captured digitally and to prepare for export to electronic image assembly.
------------------------	--

Application of the Unit

Application of the unit	This unit requires knowledge of digital image capture, and the integral properties and characteristics of preparation of colour separation for print and digital file handling.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess digital image	1.1. Digital image is opened and resolution parameters assessed against job specifications 1.2. Image is converted from RGB to CMYK colour space 1.3. Image characteristics are evaluated for colour and tone requirements
2. Edit digital image	2.1. Suitable software is engaged to enable print image profiling and/or <i>manipulation</i> to suit print requirement 2.2. Image is retouched to conform to job specifications 2.3. Local colour correction is employed to conform with job specifications 2.4. Tone correction is undertaken to conform with job specifications 2.5. Edited image is saved to conform with job specifications 2.6. Image storage requirements are identified and employed 2.7. Image is saved ready for export

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by communicating ideas and feedback from internal and external clients
- collecting, analysing and organising information by collecting and discussing information between client and work team members
- planning and organising activities by discussing and integrating digital image editing with other work team members as part of the workflow
- teamwork when sharing knowledge and information
- mathematical ideas and techniques by applying mathematical formula to determination of image resolution requirements
- problem-solving skills by identifying problems in quality and workflow and determining and implementing solutions
- use of technology by understanding technology applied in a coordinated manner

Required knowledge

- performing image editing
- circumstances that may require editing or manipulation
- why image profiling is required when preparing for printing
- why image storage is capability relevant
- selection of a JPEG or TIFF file format
- factors that may influence the grey balance and colour in the final result

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • photographed image meets the quality and look/feel requirements of the brief. The digital camera functions are used to capture the required image • understanding of image editing should be transferable across associated sectors of the printing industry • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • appropriate image manipulation software, hardware and file storage capability.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Input</i> may include:	<ul style="list-style-type: none"> digital camera device.
<i>Edit/manipulate</i> may include:	<ul style="list-style-type: none"> appropriate image edit/manipulation software.
<i>Output</i> may include	<ul style="list-style-type: none"> digital image storage capability and appropriate image digital proofing capability.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and describe formats of digital audio	1.1. The distinguishing features and uses of analogue and digital audio are determined 1.2. Terms describing audio characteristics (amplitude, sound waves, frequency, mono and stereo) are used correctly 1.3. Contemporary digital audio formats and their application in achieving defined outcomes are identified 1.4. Data rates for major digital <i>sources</i> and their relevance to defined outcomes are determined 1.5. Appropriate methods for saving and producing digital audio outputs are determined for a range of sources and destinations 1.6. Sampling techniques and sources for digital audio appropriate to defined outcomes are determined 1.7. Uses of MIDI technology are determined
2. Use digital audio software	2.1. Appropriate digital audio <i>software</i> is assessed and selected for the job 2.2. Programs are used to edit and manipulate audio according to the job brief
3. Edit digital audio	3.1. Single and multiple audio tracks are edited to achieve a defined outcome 3.2. Multiple tracks of digital audio are joined according to job specifications 3.3. Digital effects are employed to modify and integrate digital audio tracks according to job specifications 3.4. Time encoding is applied to single and multiple edited digital audio tracks according to job specifications 3.5. An audio track is inserted into a <i>multimedia production</i> sequence according to job specifications
4. Construct a digital audio track	4.1. Techniques for hooking sounds are identified 4.2. Defects on sound recordings are eliminated and/or treated 4.3. Special effects and mixing techniques are used on an audio track according to job specifications 4.4. Sequencers are used to create digital audio tracks according to job specifications 4.5. MIDI and sound cards are used to create digital

ELEMENT	PERFORMANCE CRITERIA
	audio according to job specifications 4.6. An audio track is produced using appropriate track construction software and hardware 4.7. Audio tracks are saved in the appropriate file formats

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- collecting, analysing and organising information by identifying digital audio formats
- mathematical ideas and techniques by identifying digital audio formats
- problem-solving skills by employing digital effects and modifying and integrating audio tracks
- use of technology by incorporating audio into multimedia presentations

Required knowledge

- principles of analogue and digital audio
- distinguishing features of analogue and digital audio
- amplitude, sound waves, frequency, mono and stereo
- contemporary digital audio formats
- data rates that apply to selected digital sources
- sampling, sampling techniques and sources for sampling digital audio
- MIDI technology
- contemporary digital audio formats
- distinguishing the features of selected digital audio software
- methods for saving and producing digital audio outputs
- audio frame
- joining multiple tracks of digital audio
- types of digital effects that are used to modify and integrate digital audio tracks
- purpose of time encoding
- storybook design
- principles of editing audio tracks
- sequencers used to create digital audio tracks
- purpose of sound cards
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • incorporate audio elements into different multimedia sequences, according to job specifications and the Performance Criteria • incorporate audio elements into at least TWO different multimedia sequences, according to job specifications and the Performance Criteria. There should also be evidence of: <ul style="list-style-type: none"> • ability to find and use information relevant to the task from a variety of information sources • ability to use a range of software suitable for incorporating and manipulating sound • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFMEM12A Update web pages.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Software may include:

- sound editing software such as:
 - protocols
 - fairlight.

Multimedia productions may include:

- any aspects or sections of film/video production, educational product, game, promotional product, information product, training product, e-commerce and a range of others.

Equipment used may include:

- digital recorders with/without timecode
- analogue recording devices
- multi track recorder
- stereo recorder
- portable mixers
- microphones including lavalier or neck
- shotgun and directional
- special application
- radio
- stereo
- amplifiers
- microphone stands
- microphone accessories
- microphone windscreens
- speakers
- mixing console/desk
- effects rack
- tape machines
- turntables
- CD (compact disc) player
- sequence sampler
- computer DAT (digital audio tape)
- mini disc
- reel to reel tape recorder
- hard disc recorder

RANGE STATEMENT	
	<ul style="list-style-type: none"> • DVD (digital versatile disc) • sound editing software including: <ul style="list-style-type: none"> • protocols • fairlight • cables and connectors.
<i>Source material</i> may include:	<ul style="list-style-type: none"> • dialogue, additional dialogue/voice overs, FX (effects), music, atmosphere, Foley.
<i>Audio defects</i> may include:	<ul style="list-style-type: none"> • hissing • popping • black holes.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and describe formats of digital video	1.1. The distinguishing features and uses of a range of digital video software are determined 1.2. Current video software appropriate to a range of given outcomes is selected 1.3. Limiting factors of computer hardware on video production for a specified job are determined 1.4. Differences of image quality and image size required to deliver the desired outcome are determined 1.5. Data input, processing and output relevant to video are explained 1.6. The formats employed to create a given computer video sequence for a specified outcome are analysed
2. Design digital video	2.1. Appropriate digital video software for the job is assessed and selected 2.2. Digital video editing software is used to combine video assets 2.3. Variations in video frame rates are controlled as required for the job to be undertaken 2.4. Time stamping techniques are applied to the video frames as required for the job to be undertaken 2.5. Digital video is saved using the appropriate file techniques
3. Edit digital video	3.1. Single and multiple video tracks are edited to achieve a defined outcome 3.2. Multiple tracks of digital video are joined according to job specifications 3.3. Digital effects are employed to modify and integrate digital video tracks according to job specifications 3.4. Time encoding is applied to single and multiple edited digital video tracks according to job specifications 3.5. A video track is inserted into a multimedia production sequence according to job specifications
4. Present a digital video sequence	4.1. Digital video is tested and combined with other <i>digital imaging, sound</i> and/or animation to create a multimedia sequence 4.2. The multimedia sequence including video is saved and presented to the client

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- collecting, analysing and organising information by analysing formats to create a video sequence
- planning and organising activities by determining limiting factors of computer hardware
- mathematical ideas and techniques by determining differences of image quality and image size
- problem-solving skills by determining limiting factors of computer hardware
- use of technology by incorporating video into multimedia presentations

Required knowledge

- digital video formats
- distinguishing features of a selected video software program
- limiting factors of video production on computer
- differences of image quality and image size obtained
- contemporary video software
- combining given video assets
- features and differences between current video software packages.
- principles of video production
- how variations in video frame rates are controlled
- why time stamping techniques are applied to video frames
- digital medium for video
- considerations when combining digital video with other digital imaging, sound and/or animation to create a multimedia sequence
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • design, compile, edit and test multimedia sequences incorporating video, according to job specifications and the Performance Criteria • design, compile, edit and test at least TWO multimedia sequences incorporating video, according to job specifications and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • a range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFMEM06A Design a multimedia product • CUFMEM07A Apply principles of visual design and communication to the development of a multimedia product.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Digital imaging</i> may include:	<ul style="list-style-type: none"> titles/text, graphic images, 2D and 3D animation, 3D modelling, opticals, transitions such as dissolves, fade ins, fade outs, supers, subtitles, special effects.
<i>Sound</i> may include:	<ul style="list-style-type: none"> sound effects, music, atmospheric, dialogue, additional dialogue, eg re-recorded and narration.
<i>Multimedia products or presentations</i> may include:	<ul style="list-style-type: none"> educational game, promotional information, training, e-commerce and a range of others.
<i>Industry standard software</i> may include:	<ul style="list-style-type: none"> a wide range of current programs examples of which are Adobe Premier, QuickTime, Media 100. Note: these programs are constantly being upgraded and replaced and appropriate up-to-date programs should be selected.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> computer-generated manually written, scripts, production schedules, manufacturer's specifications/instructions, contracts, edit decision lists (EDLs), list of sequences with relevant shot numbers, assembly order, marked-up scripts, marked-up transcripts, sound sheets including timecode log sheets for location sound recordings, wild line and sound effects log sheets.
<i>Visual effects</i> may include:	<ul style="list-style-type: none"> keyers to combine, DVEs to move and distort, colour corrections to modify, texture generation to add blur, trackers to follow parts of the picture, production of titles, production of optical effects, graphic images, opticals, transitions such as dissolves, fade ins, fade outs, supers, subtitles, special effects.
<i>Video format</i> may include:	<ul style="list-style-type: none"> VHS SVHS DVC Umatic

RANGE STATEMENT	
	<ul style="list-style-type: none"> • SP • Beta-cam • Digital Beta-cam.
<i>Editing equipment</i> may include:	<ul style="list-style-type: none"> • computer hardware • non-linear digital editing and graphics software programs • monitors • keyboard and mouse • external hard drive • external disk drive • additional computer hardware • source and record machines • computer software programs • graphics computer program • digital video effects system (DVE) • digital disk recorder (DDR) • video transfer recorder (VTR).
<i>Editing consumable materials</i> may include:	<ul style="list-style-type: none"> • computer disks • paper for hardcopy • compact discs.
<i>Memory</i> may include:	<ul style="list-style-type: none"> • disk • hard drive • internal • external.

Co-requisite units

Co-requisite units		

ICPMM491D Create an extensible document

Modification History

Release	Comments
Release 1	<p>This Unit first released with <i>ICP10 Printing and Graphic Arts Training Package</i> version 2.0.</p> <p>Prerequisite unit requirement updated to equivalent current version.</p> <p>Replaces ICPMM491C Create an extensible document.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to create a well-formed syntax error-free extensible mark-up language document.

Application of the Unit

This unit requires the individual to create an extensible markup language (XML/PPML) document for content publishing that is well-formed, free of errors, meets the needs of the business and is extensible to meet future business needs. For this unit the extensible mark-up language document is the data-store and ICPMM492D Create an extensible style sheet transforms the XML/PPML into screen or print output.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit of competency.

Pre-Requisites

ICAWEB429A Create a markup language document to specification

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Define document structure	<p>1.1 All details required for the job are checked and confirmed against the job specifications</p> <p>1.2 The <i>mark-up language</i> version and the character encoding used in the <i>document</i> or declaration statement are defined and/or inserted in the document</p> <p>1.3 An external or internal Document Type Definition (DTD) or mark-up language schema is chosen and correctly wrapped and referenced depending on project requirements</p> <p>1.4 The root element is correctly defined and all elements are accurately nested</p> <p>1.5 Attribute types and default values are declared, where necessary, to provide information about the <i>data</i></p> <p>1.6 Occurrences of elements are stated and elements of mixed content declared</p>
2. Confirm validity	<p>2.1 Start and end tags are included and closed to ensure no element errors</p> <p>2.2 Namespaces are used to resolve name conflicts</p> <p>2.3 The document is well-formed, error-free and conforms to the mark-up language syntax rules</p> <p>2.4 The document conforms to the rules of a Document Type Definition (DTD) or the mark-up language schema</p>
3. Finalise and test document	<p>3.1 Character data (CDATA) sections are added to the document structure</p> <p>3.2 The final document is viewed with a mark-up language parser</p> <p>3.3 The mark-up language document is well-formed, free of errors and meets the needs of the business</p> <p>3.4 The document is linked to an extensible style sheet and template and tested</p> <p>3.5 The document is extensible to meet future business needs</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information applied by detailing attribute types and default values
- collecting, analysing and organising information by forming an error-free document that conforms to the mark-up language syntax rules
- planning and organising activities by defining the document structure prior to confirming validity
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by detailing attribute types and default values
- problem-solving skills by developing a mark-up language document free of errors
- use of technology by using industry software to create a mark-up language document.

Required knowledge

- SGML
- standard Generalised Mark-up Language and why it is important
- how SGML relates to XML and PPML
- difference between SGML, PPML and XML and when you use SGML over XML
- XSL
- how Cascading Style Sheets (CSS) and XSL differ
- purpose of XSL is
- HTML
- when to use an extensible mark-up language over HTML and why
- ways to use both with the one set of data
- metadata
- purpose metadata serves within a mark-up language document
- importance of PRISM for content publishing
- PPML
- how Personalised Print Mark-up Language relates to XML.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • create content that is well-formed, free of errors, meets the needs of the business and is extensible to meet future business needs. The XML/PPML file can be parsed and validates • two different extensible mark-up language documents are created and are well-formed, free of errors, meet the needs of the business and are extensible to meet future business needs. Both the XML/PPML files can be parsed and validate • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • a standalone computer and mark-up language parser.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPMM492D Create an extensible style sheet • ICPPP494C Develop document content and structure • ICPPP485C Create a digital data template.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Mark-up language</i> may include	<ul style="list-style-type: none"> new languages mark-up languages include: <ul style="list-style-type: none"> XML PPML.
<i>Document</i> may include:	<ul style="list-style-type: none"> contains elements, entity references, comments, processing instructions, marked sections and document type definition or mark-up language schema.
<i>Data</i> may include:	<ul style="list-style-type: none"> includes mixed data.
<i>PPML</i> may include:	<ul style="list-style-type: none"> personalised Print Mark-up Language.
<i>Document purpose</i> may include:	<ul style="list-style-type: none"> electronic publishing, e-commerce, web services, interchange of data amongst different applications, software configuration files.
<i>Electronic Publishing</i> may include:	<ul style="list-style-type: none"> electronic publishing in this context does not mean the use of page layout applications but rather the development of content to meet the needs of different audiences and different output devices.

ICPMM492D Create an extensible style sheet

Modification History

Release	Comments
Release 1	<p>This Unit first released with <i>ICP10 Printing and Graphic Arts Training Package</i> version 2.0.</p> <p>Prerequisite unit requirement updated to equivalent current version.</p> <p>Replaces ICPMM492C Create an extensible style sheet.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to create an extensible style sheet.

Application of the Unit

This unit requires the individual to create extensible style sheets for electronic publishing or online documents including computer screens and handheld devices. The individual will incorporate the presentation and transformation requirements in the style sheets and templates.

For this unit the extensible style sheet transforms the XML/PPML into screen or print output while ICPMM491D Create an extensible document is the data-store.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit of competency.

Pre-Requisites

ICAWEB429A Create a markup language document to specification

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare the source document	<p>1.1 The source document is validated as free of errors</p> <p>1.2 The style and transformation requirements of the source document are confirmed</p> <p>1.3 <i>Advanced styling requirements</i> are confirmed as required</p> <p>1.4 The different <i>media, display formats</i> and target audience preferred platforms and abilities are confirmed</p> <p>1.5 The source document is prepared for the <i>style sheet</i></p>
2. Create the style sheet	<p>2.1 Multiple templates are designed and applied to the style sheet</p> <p>2.2 The style sheet is developed using the required presentation styles</p> <p>2.3 Transformation requirements are incorporated into several style sheets</p> <p>2.4 The style sheet is associated/linked with the source document and tested</p>
3. Test the style sheet	<p>3.1 The style sheets are validated to ensure correct presentation and transformation</p> <p>3.2 The style sheet is updated if errors occur and validated again</p> <p>3.3 The style sheet is linked to a data-store and to a digital template and tested</p> <p>3.4 The style sheet is extensible to meet future business needs</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information applied by developing style sheets that use the required presentation styles
- collecting, analysing and organising information by confirming the different media, display formats and preferred target audience platforms and abilities
- planning and organising activities by preparing the source document prior to creating the style sheets
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques applied by confirming the style and transformation requirements of the source document
- problem-solving skills applied by developing an extensible style sheet free of errors
- use of technology applied by using industry software to create an extensible style sheet.

Required knowledge

- document Style Semantics and Specification Language (DSSSL)
- application of DSSSL where it can be used to develop an extensible style sheet
- XSL
- how Cascading Style Sheets (CSS) and XSL differ
- intended purpose of XSL
- HTML
- when to use an extensible mark-up language over HTML and why
- Ways to use both with the one set of data
- PPML
- how Personalised Print Mark-up Language relates to XML
- metadata and PRISM
- providing a work-based example of the application of Metadata and/or PRISM.
- essential differences between these functions.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • create extensible style sheets for electronic publishing or online documents • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • industry standard software and relevant hardware.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPMM491D Create an extensible document • ICPPP494C Develop document content and structure • ICPPP485C Develop a digital data template.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Advanced styling requirements</i> may include:	<ul style="list-style-type: none"> headers, footers, page numbers and page number citations and other pagination semantics for print-oriented rendering for a range of measurements.
<i>Media</i> may include:	<ul style="list-style-type: none"> screen, paper or voice for example.
<i>Display formats</i> may include:	<ul style="list-style-type: none"> HTML, PDF, Braille and typesetting languages.
<i>Style sheets</i> may include:	<ul style="list-style-type: none"> this unit does not cover Cascading Style Sheets (CSS).
<i>Mark-up language</i> may include:	<ul style="list-style-type: none"> new languages markup languages are becoming available regularly and examples include XML and PPML. This unit does not cover HTML which is covered by another unit ICAWEB429A Create a markup language document to specification.
<i>Document purpose</i> may include:	<ul style="list-style-type: none"> electronic publishing, e-commerce, web services, interchange of data amongst different applications, software configuration files.
<i>Electronic Publishing</i> may include:	<ul style="list-style-type: none"> electronic publishing in this context does not mean the use of page layout applications but rather the development of content to meet the needs of different audiences and different output devices.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Design a production cycle for a multimedia product	1.1. Management components of the production cycle are identified and coordinated to achieve a defined outcome 1.2. Concepts for multimedia integration are posited and their sequence planned 1.3. Prototype sequences are designed and tested according to job specifications 1.4. Multimedia production is undertaken that conforms to product specifications 1.5. The final product is tested for conformance to specifications and released to client
2. Define the attributes of interactive multimedia products	2.1. The attributes of hypermedia are defined and incorporated into a given production 2.2. The attributes of hypertext are defined and incorporated into a given production 2.3. Linear and interactive information structures are distinguished and incorporated into a given production
3. Manage research	3.1. Client specifications are researched and checked with client to deliver the desired outcome 3.2. Files, documents, images and footage relevant to project requirements are sourced and their functions documented and sequenced 3.3. Liaison with clients is undertaken, records of interviews kept, and specifications monitored within the management of the project to achieve the required outcomes 3.4. Files, documents, images and footage relevant to specific projects are filed for future reference with regard for client confidentiality
4. Manage the multimedia process	4.1. The order of process procedure is determined and documented to deliver the desired outcome 4.2. Costs are determined, checked with client, and documented to deliver the desired outcome 4.3. Quality outcomes are determined and documented and a quality system is established to monitor the quality of the product 4.4. The product outcome is produced fit for the purpose 4.5. The product is tested against specifications prior to client release

ELEMENT	PERFORMANCE CRITERIA
	4.6. Endorsement of the product by the client is gained to ensure specifications have been fulfilled

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by liaising with clients
- collecting, analysing and organising information by researching client specifications
- planning and organising activities by identifying the production cycle
- teamwork when liaising with clients
- mathematical ideas and techniques by maintaining costs within budget
- problem-solving skills by testing product to ensure it meets specifications
- use of technology by working on a multimedia product

Required knowledge

- multimedia production cycle
- management components of the production cycle
- considerations involved in multimedia integration
- designing and testing prototype sequences
- multimedia product testing
- interactive multimedia product attributes
- attributes of hypermedia
- attributes of hypertext
- difference between linear and interactive information structures
- multimedia production process
- quality considerations of multimedia production
- managing research
- how files, documents, images and footage are relevant to project requirements sourced
- steps necessary to ensure good liaison with clients

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • establish, monitor and evaluate a production cycle including the project management of all technical aspects of the project • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce a portfolio covering a period of THREE months' information on the management of TWO multimedia projects that demonstrates establishing, monitoring and evaluating a production cycle including using attributes of specific multimedia interactivity. The portfolio should include material that covers defined components of a production cycle, concepts for multimedia integration, prototype sequences and attributes, product testing and quality considerations • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Types of systems may include:

- multimedia systems used in the pre-press sector and associated sectors with which a pre-press organisation may be required to work.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop a project plan	1.1. The elements of the project plan are identified according to the principles of project management 1.2. Planning tools are identified for application to the project 1.3. Time and budget factors are identified and incorporated into the plan
2. Manage resources and time	2.1. Hardware resources relevant to specific multimedia tasks are identified, evaluated and incorporated to achieve the required outcome 2.2. Time management is integrated into project planning and monitoring 2.3. Human resources are incorporated and supported within the project framework to achieve the required outcome 2.4. Teamwork elements are identified and developed to achieve the required outcome
3. Identify legal issues	3.1. Copyright principles and conventions relevant to digital data are identified and legal precedents noted 3.2. The copyright issues relating to multimedia authoring, digital imaging and digital sound are explained and strategies are devised to account for relevant contingencies 3.3. Copyright ownership of multimedia authoring, digital imaging and digital sound is established prior to commencing a brief and relevant documentation verified 3.4. Applications of law with reference to multimedia product warranties, software licences, consultants, sponsors and distribution are determined appropriate for the job to be undertaken and relevant to the industry sector
4. Manage research	4.1. Files, documents, images and footage relevant to project requirements are sourced and their functions documented and sequenced 4.2. Liaison with clients is undertaken, records of interviews kept, and specifications monitored within the management of the project to achieve the required outcomes 4.3. Files, documents, images and footage relevant to specific projects are filed for future reference with regard for client confidentiality

ELEMENT	PERFORMANCE CRITERIA
5. Determine and manage multimedia budgets	<p>5.1. Estimation models of costs are identified and applied to a range of multimedia products</p> <p>5.2. Budget plans are established and checked against estimations to deliver accurate costings</p> <p>5.3. Tendering processes and costs are determined and implemented to deliver the required outcome within designated time frames and costs</p> <p>5.4. Project costs are determined, documented and monitored continuously to comply with business commitments and legal obligations</p> <p>5.5. Business transactions are undertaken ethically and according to law</p> <p>5.6. Multimedia project budget estimates and expenditure are contrasted and documented to assist in future business dealings</p>
6. Manage project outcomes	<p>6.1. Multimedia inputs are combined to form a definitive master</p> <p>6.2. The master product is duplicated and distributed according to client specifications</p> <p>6.3. The project outcomes are refined to meet quality standards</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by explaining copyright issues
- collecting, analysing and organising information by identifying legal issues
- planning and organising activities by developing a project plan
- teamwork when liaising with clients and identifying teamwork elements
- mathematical ideas and techniques by determining a budget
- problem-solving skills by ensuring projects meet client specifications
- use of technology by working on multimedia projects

Required knowledge

- developing a project plan
- elements that need to be included in a multimedia project plan
- how time and budget factors are incorporated into a project plan
- managing resources and time
- hardware resources relevant to specific multimedia tasks
- how time management is integrated into project planning and monitoring
- how human resources are incorporated and supported within the project framework
- teamwork elements to be implemented in a project plan
- managing research
- how files, documents, images and footage are relevant to project requirements sourced
- steps that are necessary to ensure good liaison with clients
- managing project outcomes
- how the multimedia master is created
- how the master is duplicated and distributed
- legal issues that apply to multimedia production
- copyright principles and conventions relevant to digital data
- copyright issues relating to multimedia authoring, digital imaging and digital sound
- copyright of multimedia authoring, digital imaging and digital sound
- laws applying to multimedia product warranties, software licences, consultants, sponsors and distribution
- multimedia budgets
- estimation models used in multimedia production
- budget plans
- tendering processes

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess brief requirements	1.1. The printing requirements of the <i>layout brief</i> are determined to align pre-press processes with printing feasibility 1.2. The brief is broken down into stages of production in order to determine a plan of procedure 1.3. A plan of action is determined to meet the time requirements of each stage so that deadlines are identified and adhered to 1.4. Correct design and typographic terms are used to facilitate communication according to industry standards
2. Assemble layout	2.1. Client copy and images are assembled to conform to the brief requirements 2.2. Library files are accessed for relevant data to conform to the brief requirements 2.3. Appropriate equipment and materials to complete the layout are assembled to enable the brief to be undertaken efficiently 2.4. The design area is cleaned and prepared ready for use
3. Render a simple graphic design	3.1. The client requirements are checked to ensure a design concept matches the brief 3.2. Preliminary graphic design ideas are constructed according to the brief 3.3. A simple graphic design concept is rendered electronically to conform to the client brief 3.4. The rendered graphic design is checked for conformance with the requirements of the brief
4. Produce finished artwork	4.1. A layout grid is created to meet the specifications of the client brief 4.2. Type is selected for readability style and fitted into the grid space allocated to conform to brief requirements 4.3. Photographs and illustrations are selected, scaled and cropped appropriately to fit the grid space allocated 4.4. Overlays/colour roughs are created to conform to brief specifications 4.5. The components of the layout are positioned accurately using keylines to conform to the grid framework

ELEMENT	PERFORMANCE CRITERIA
5. Check for suitability	5.1. The layout is checked to eliminate omissions and <i>errors</i> 5.2. The layout design is checked against the requirements of the brief to conform to the critical requirements of the proposed medium 5.3. The layout is rendered ready to present to the client
6. Tidy materials and store data	6.1. Equipment and materials are returned to storage according to <i>enterprise procedures</i> 6.2. Design data and materials are saved and/or filed ready for future retrieval according to enterprise procedures 6.3. The design area is cleaned according to enterprise procedures ready for re-use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by determining exactly what client wants from brief and subsequent discussion
- collecting, analysing and organising information by balancing and matching client demands with requirements for reproduction and costs
- planning and organising activities by coordinating job sequence so that as materials arrive they are processed and can be checked efficiently
- teamwork when ensuring that designers, printers and clients all know what they need to do and when
- mathematical ideas and techniques by calculating costs and enlargement/reduction factors
- problem-solving skills by coping with discrepancies between brief and what is possible
- use of technology by using appropriate software to create design and ensuring files are saved in required format

Required knowledge

- the purpose of this artwork being prepared
- number and the specific colours of the job
- scale that is this artwork to the finished job
- the difference between reflective and transparent originals
- three essential elements to consider when preparing art for printing/publication
- the different requirements for TWO different printing or electronic output processes
- using manual/computer techniques to prepare colour rough
- various types of halftone dot structures and the maximum and minimum tonal ranges that could be used to reproduce this artwork
- OHS concerns that are there when using cameras or computers
- the colour sequence and overlap for transparent/opaque colours
- preparing the finished artwork at this size or scale
- choosing specific type faces
- effect (influence) that the selection of different type faces have on a job
- method used for registration and trim marks
- artwork evaluation for density, definition and resolution, and how can this be corrected
- the characteristics of properly prepared line artwork

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• finished art compliance with job specifications and approved colour rough• manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents |
|--|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the rendered design meets the requirements of the design brief. The design conforms to commercial design standards and meets reproduction final use requirements the underlying skill of designing a basic layout to conform to brief specifications should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competencies be demonstrated with a clear identification of printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources prepare TWO sets of colour roughs and artwork containing line and tone work according to specifications of the client brief and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools, equipment and industry software packages will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Layout brief</i> may include:	<ul style="list-style-type: none"> describes and specifies the work to be completed, identifies all requirements for the job.
<i>Errors</i> may include:	<ul style="list-style-type: none"> spelling, grammatical, style and placement.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
<i>Complexity of process</i> may include:	<ul style="list-style-type: none"> artwork may contain simple line work or a combination of line and tone.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify fonts	<p>1.1. A range of fonts is identified to meet diverse client requirements and final <i>output</i> media</p> <p>1.2. Point sizes and leading of type are identified to meet diverse client requirements and final output media</p>
2. Select, fit and produce type for a basic brief	<p>2.1. Appropriate type is selected to meet the specifications of the <i>brief</i></p> <p>2.2. Type is fitted into the copy space allocated according to the design layout</p> <p>2.3. Type is set and produced using rules and boxes according to the design layout</p>
3. Proof read and correct type	<p>3.1. Type is checked for accuracy, omissions and errors according to job specifications</p> <p>3.2. Proofs are marked up with correct proof reading marks</p> <p>3.3. Type is corrected to accord with job specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job brief to ensure that the job is done appropriately
- collecting, analysing and organising information by matching characteristics of fonts, sizes and layouts with requirements of the job brief
- planning and organising activities by selecting and fitting appropriate type
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating fit and point sizes
- problem-solving skills by fitting type in the allocated copy space
- use of technology by selecting and applying type using software applications

Required knowledge

- different printing processes or electronic media and the affect on type selection and design
- aspects of typography that influence the design of the brief
- limitations with type reproduction in the printing processes
- serif and sans serif categories
- type atmosphere
- elements of a dynamic arrangement
- text and margin proof reader marks
- grammar, punctuation and the apostrophe
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> selecting and fitting appropriate fonts to meet the job specifications. Proofing the type for errors and correcting the underlying skills of selecting and applying type should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competency be demonstrated with a clear identification of printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources use manual or electronic equipment and suitable software to select, set, arrange and modify type in TWO different jobs according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools, equipment and industry software packages will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the camera	<p>1.1. The camera is prepared to ensure the appropriate size and focus for the job</p> <p>1.2. The correct exposure for line reproduction is established according to the manufacturer's specifications</p>
2. Prepare and operate a processor	<p>2.1. The processor is prepared to ensure correct chemical balance, temperature and maintenance</p> <p>2.2. The processor is operated in line with established procedures</p>
3. Operate a camera	<p>3.1. Appropriate photographic material and processing chemical combination is selected for the line image</p> <p>3.2. Line images are photographed using the correct camera settings</p> <p>3.3. The quality of the photographic output is evaluated to ensure suitability for design purpose and final media or reproduction process</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by matching requirements of the job brief with production requirements and constraints
- planning and organising activities by preparing and operating the processor
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating enlargement/reduction factors and exposures
- problem-solving skills by ensuring the correct balance of chemicals and temperature
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- effect of different printing processes on line images
- enlargement factor calculation
- base exposure data
- factors that cause base exposure to change
- correctly processed image
- factors that control the quality of output through the processor
- copy characteristics that require a change to base exposure
- relationship between magnification and exposure
- characteristics of a correctly exposed line negative
- image requirements for the various printing processes
- OHS concerns that are there when operating a processor?
- maintaining consistent output from the processor
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> evaluating the quality of the photographic output to ensure suitability for design purpose and final media or reproduction process the underlying skill of photographic images should be transferable across different camera designs and processing systems. It is important that the substrate for reproduction is identified and that the quality of the photographic image be suitable for the identified printing process demonstrate an ability to find and use information relevant to the task from a variety of information sources prepare, set up and use a graphic arts camera to photograph and process TWO different line originals according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment mechanical and/or electronic equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate. <p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> • should meet client requirements and enterprise and industry standards.
<i>Output</i> may include:	<ul style="list-style-type: none"> • diffusion transfer, rapid access.
<i>Input</i> may include:	<ul style="list-style-type: none"> • a variety of high contrast line artwork.
<i>Capture</i> may include:	<ul style="list-style-type: none"> • a variety of graphic arts cameras.
<i>Manipulation/edit</i> may include:	<ul style="list-style-type: none"> • spotting, mask cutting.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Arrange elements on page	1.1. Client copy and images are assembled to conform to the design brief 1.2. Text is prepared and required fonts and font size are used 1.3. Basic elements are created and arranged on page to conform to the design brief 1.4. Elements are copied and pasted according to the design brief 1.5. The help function is accessed if required and solution to queries found 1.6. Document set up is completed to conform to the design brief
2. Finalise artwork	2.1. Pages and combined elements are composed correctly to suit specified page size 2.2. Margins and borders incorporate a bleed allowance
3. Check quality	3.1. Text is reviewed for possible errors and omissions and errors are discussed with client or supervisor 3.2. Arrangement of the basic elements maintains overall balance of the layout and correct tonal quality 3.3. A hard copy proof is printed and rechecked for errors, omissions and the overall balance of the layout 3.4. Trim marks and margins are correctly placed 3.5. Necessary changes are made and reviewed on screen and reproofed as required 3.6. The job is saved according to enterprise procedures 3.7. A proof or PDF is created to present to client

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by clarifying information with client or supervisor
- collecting, analysing and organising information by arranging elements on a page
- planning and organising activities by identifying basic elements to be used
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by organising basic elements on the page
- problem-solving skills by imposing pages and combined elements to correctly suit specified sheet size
- use of technology by using hardware and software applications

Required knowledge

- consideration given to the printing process during the design phase
- problems that can occur if the printing process isn't considered during the design stage
- substrate size consideration during imposition
- planning for multiple colours and graphics during imposition
- considerations that are given to ensuring your health and safety when using a keyboard
- importance of saving documents in particular areas of a computer or network
- finding a document on a computer or network
- changing and saving templates
- the value of style guides and style sheet

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> producing a page layout that meets the client's design brief and is print ready demonstrate an ability to find and use information relevant to the task from a variety of information sources prepare TWO different sets of page layouts according to the listed Performance Criteria for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment page layout applications such as QuarkXPress, INDesign, PageMaker or others will be required for assessment of this unit of competency. New software applications and new versions of existing products enter the market regularly and therefore this example group will change.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work environment	1.1. Details of the brief are reviewed to identify preference setting requirements 1.2. Monitor is calibrated using an ICC profile to ensure closest possible colour match 1.3. Palettes are arranged to suit job and personal preferences 1.4. View magnification is set for ease of working with the graphics
2. Produce objects	2.1. Ruler units are set and grid is displayed to ensure artwork meets design specifications 2.2. Tools are used to produce <i>objects</i> and required attributes are entered and shapes <i>manipulated</i> , continuing until graphic framework is finalised 2.3. Lines and curves are adjusted and <i>edited</i> to fit design specifications 2.4. Objects are painted, transposed and strokes and <i>effects</i> are scaled according to the design brief 2.5. <i>Colours</i> are created, edited and saved to the colour palette and saturation of colour is adjusted 2.6. Colour and <i>appearance attributes</i> are selected and copied as required 2.7. Gradients fills, mesh and patterns are used to paint and blend as required by the layout and design brief
3. Alter objects	3.1. Objects are grouped or individually selected, moved, scaled or rotated using a variety of methods 3.2. Objects are reflected, sheared and distorted according to the design brief 3.3. Three dimensional objects are formed and edited and gradient colour added to create depth 3.4. The perspective of the objects is adjusted as required 3.5. Transformations are repeated according to the design brief 3.6. Smooth colour blends are created between objects and blends are modified as required to meet the design brief
4. Add type as a graphic element	4.1. Required type is added to type containers and type attributes and <i>formatting</i> are set to reflect the design brief 4.2. Type is wrapped or placed along a path to

ELEMENT	PERFORMANCE CRITERIA
	<p>complement the graphic</p> <p>4.3.Type is converted to type outlines or letterforms and shapes are modified</p>
5. Set appearance attributes and styles	<p>5.1.The <i>properties</i> of the graphic are set and meet the design brief</p> <p>5.2.Effects are added to a graphic and edited to make the appearance more suitable according to the design brief</p> <p>5.3.Appearances required for further use are saved as styles</p>
6. Set up layers	<p>6.1.Objects are organised in layers and stacking order is controlled</p> <p>6.2.Layers are locked and/or nested and grouped according to the design brief</p> <p>6.3.Styles are added or removed from layers when layer consistency is or is not required</p>
7. Finalise document	<p>7.1.The appropriate format for saving the graphic is identified given the various <i>elements</i> in the graphic</p> <p>7.2.The resolution for effects and any filters are set based on image quality</p> <p>7.3.Document is checked to ensure correct layout file and that there are no non-printable elements</p> <p>7.4.PDF or other export options are fixed to the best settings for the final media and the file is then exported and saved</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by producing graphics using a graphics application
- collecting, analysing and organising information by reviewing the brief to identify preference setting arrangements
- planning and organising activities by preparing the work environment before producing objects
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by setting the view magnification to maximise ease of viewing
- problem-solving skills by creating smooth colour blends between objects
- use of technology by fixing export options to suit the final media

Required knowledge

- image formats (SWF, SVG, GIF, JPEG, PNG, Bitmap and others)
- correct application selection
- manipulation of graphics
- colour models
- attributes of appearance
- effects
- filters
- text and formatting
- interpreting a brief

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> developing graphics based on client brief using a high-end application demonstrate an ability to find and use information relevant to the task from a variety of information sources for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment industry standard computer type and current software application should be used.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate images for combining	1.1. Screen rulings are checked according to job specifications and enterprise procedures 1.2. Dot percentages are checked according to job specifications and enterprise procedure 1.3. Image orientation is checked according to job specifications
2. Contact film	2.1. The frame is prepared for contacting according to enterprise procedures 2.2. Film is contacted using a vacuum frame and using predetermined exposures according to job specifications
3. Combine film manually	3.1. A range of basic combining techniques is identified to meet diverse client requirements and film substrates 3.2. Film is combined employing brush skills to achieve opaquing according to job specifications 3.3. Film is combined adding masks according to design specifications 3.4. Film is combined adding tints and stipples according to design specifications
4. Combine paste-up elements manually	4.1. Film is combined adding tints and stipples according to design specifications 4.2. Screen, line and type images are combined on the base sheet according to job specifications 4.3. Masks are produced and positioned on the base sheet for the purpose of adding tints, stipples and colour according to design specifications 4.4. Rules, keylines and cut marks are drawn according to job specifications 4.5. The assembled paste-up is checked for squareness, accuracy in the positioning of elements and cleanliness of work
5. Maintain the register of combined images	5.1. Punch register systems are applied to combine images 5.2. The registration of combined images is accurately placed to ensure alignment of film 5.3. The registration of combined images is accurately secured to ensure the alignment of all components
6. Prepare finished film	6.1. Finished film and artwork are laid-down and spaced

ELEMENT	PERFORMANCE CRITERIA
and artwork for the next production stage	<p>according to specified paper size identified in job specifications</p> <p>6.2. Pages and film are pasted up to suit the given imposition</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting requirements of the brief or layout
- collecting, analysing and organising information by matching requirements for reproduction with the brief or layout
- planning and organising activities by determining sequence of processes and organising necessary materials
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating enlargement/reduction factors, positioning of elements, exposure
- problem-solving skills by resolving issues of positioning and overlap of elements
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- printing processes affect the requirements for combining
- appropriate films used for contacting and for duplicating
- procedure for establishing basic exposure data for contact emulsions
- spreading and choking requirements for the preparation of a mask
- techniques that are used to control the degree of spread and choke
- requirements of an effective pin registration system
- main types of pin register systems and their applications
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare the work	1.1. Computer functions are undertaken to access the required data from electronic files 1.2. Required data is checked to ensure correct format for software application and <i>output</i> 1.3. The system is checked for the required fonts to fulfil job specifications 1.4. The storage capacity of the system is checked for sufficiency
2. Combine data	2.1. Pages are composed according to job specifications 2.2. Elements are placed in the page according to job specifications 2.3. Trapping is applied according to job specifications 2.4. The image output is prepared and appropriate colour profiles are applied according to media output
3. Create multiple images	3.1. Basic step and repeat layout is prepared according to job specifications 3.2. The appropriate software for step and repeat is accessed according to job specifications 3.3. Images are stepped according to job specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the job brief
- collecting, analysing and organising information by accessing data on software capabilities and production requirements and matching them with the job brief
- planning and organising activities by planning the sequence of operations to facilitate smooth processing of the job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating enlargement/reduction factors, fit, spatial relationships between elements and colour profiles
- problem-solving skills by adjusting fit and using colour correction so that output meets requirements of the brief
- use of technology by using software correctly to ensure ease of subsequent processing

Required knowledge

- creating a page layout according to job specifications?
- function of electronic trapping of image elements as applied to image assembly
- trapping and job specification
- step and repeat layout to suit a job specification
- main criteria for evaluating the final output
- requirements of a contract proof as compared to an in-house check proof
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the page layout and overall design meet the job specifications, reproduction requirements and final end use the underlying skill of combining and assembling should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competencies be demonstrated with a clear identification of printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources use a desktop platform (or high-end system) with appropriate layout, design and drafting software to combine and assemble TWO jobs following the job brief and according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools and equipment will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Output</i> may include:	<ul style="list-style-type: none"> • Imagesetter, laser printer, CTP, digital print.
<i>Input</i> may include:	<ul style="list-style-type: none"> • specific elements of type and/or screened images to be supplied either as hard copy or electronic files and along with layout or detailed job brief.
<i>Capture</i> may include:	<ul style="list-style-type: none"> • scanning device and/or electronic file storage.
<i>Manipulation/edit</i> may include:	<ul style="list-style-type: none"> • appropriate software relative to image input.
<i>Complexity</i> may include:	<ul style="list-style-type: none"> • fairly simple layouts with text and colour images.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> • should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the output device	<p>1.1. <i>Output</i> devices are prepared according to manufacturer's and job specifications</p> <p>1.2. All required proofs and checks are completed prior to outputting images</p>
2. Output the image	<p>2.1. The system is activated to initiate the output according to job specifications</p> <p>2.2. Print queues are managed to ensure efficient production</p> <p>2.3. The image output is evaluated to ensure it conforms to the job specifications</p> <p>2.4. The image is prepared for the next stage of the production process according to job specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by matching the specifications of output devices and file formats to ensure output meets the job brief
- planning and organising activities by managing print queues to facilitate workflow
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by adjusting output devices so that output matches data files and the job brief
- problem-solving skills by adjusting output devices so that output matches data files and the job brief
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- the types of output devices used in pre-press
- considerations that would determine the application of these devices
- function of the calibration software
- calibrating at least TWO different output devices to ensure job specifications are achieved
- procedure for downloading a file to the output device
- main considerations to ensure accurate transfer of the file
- correct handling and material loading of the output device
- correctly identifying a processed image
- factors that control image quality through a processor
- criteria for identifying a correctly transferred file
- requirement of the image to meet job specifications
- meeting job specifications
- the criteria for evaluating a final film
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> proofing is free from errors and final output to digital printer/plotter conforms to the job specifications the underlying skills of outputting an image should be transferable across the pre-press sector. It is important that the substrate for reproduction is identified and that the competency be demonstrated with a clear identification of printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources calibrate and use at least TWO devices to output to film, paper or plate, images captured electronically according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools and equipment will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Output</i> may include:	<ul style="list-style-type: none"> commercial digital printers/plotters (not office laser printers), paper image setters, plate setters and all PostScript devices.
<i>Input</i> may include:	<ul style="list-style-type: none"> files from a variety of software sources.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and maintain proofing equipment	<p>1.1. Proofing equipment is set up and maintained according to manufacturer's specifications and enterprise standards</p> <p>1.2. The working environment is cleaned and maintained to ensure the <i>quality</i> of the proof</p> <p>1.3. Proofing materials are used cost efficiently according to job contract costs</p>
2. Expose and process the proof	<p>2.1. The quality control of the proof is maintained according to job specifications</p> <p>2.2. Images are positioned accurately on the proof according to job specifications</p> <p>2.3. OHS requirements are observed to ensure the safe use of equipment</p> <p>2.4. The proof is prepared for presentation ready for the next stage of the process</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by using information on proofing requirements and procedures to facilitate the job
- planning and organising activities by planning the sequence of operations to facilitate efficient processing of the job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by using the densitometer
- problem-solving skills by diagnosing causes of proofing problems
- use of technology by using equipment correctly to ensure accuracy of the product

Required knowledge

- OHS issues in the proofing area
- main considerations for setting up the proofing environment
- correct exposure level for your proofing system
- actinic light requirements
- aids that can be used to control and ensure repeatability in the proofing area
- matching a proof to output requirements
- correct stock for the output device
- incorrect processing of the chemical proof
- corrective action that should be taken if incorrect processing occurs?
- main criteria for evaluation of the proof
- lighting conditions for evaluating proofs
- special requirements for PMS proofs
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Produce plates	<p>1.1. The plate processor is prepared and maintained according to manufacturer's specifications and enterprise standards</p> <p>1.2. Exposure control is established and maintained utilising vacuum frames and plate processors according to job specifications</p> <p>1.3. Plates are produced that conform to job specifications</p>
2. Proof relief plates	<p>2.1. Relief plates are proofed according to job specifications</p> <p>2.2. Relief plates are proofed according to manufacturer's specifications and enterprise standards</p>

Required Skills and Knowledge

Required knowledge

- main factors to be considered when preparing to lay a plate.
- aids that can be used to ensure accuracy and repeatability
- quality control or problem-solving devices that can be included
- essential criteria for evaluating a film to be used in plate production
- testing exposure for plate making
- main considerations with a plate exposure system
- means that can be used to ensure continuity and control with plate exposure
- plate processing operation
- poor processing operation
- main criteria for evaluating a correctly prepared plate
- OHS concerns that are there when processing and proofing printing plates
- main advantages of plate proofing
- criteria for plate proof evaluation
- different requirements for plates for litho printing and relief printing
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare plate	1.1. The job specifications are interpreted to determine the appropriate type and size of <i>plate</i> for the job 1.2. The plate is selected to deliver the <i>quality</i> of output required by the job brief 1.3. Plate is prepared to accommodate printing machine plate positioning requirements
2. Expose the plate	2.1. The work area is tidied and cleaned to ensure quality of output 2.2. Film is correctly positioned on the plate according to job specification 2.3. The correct exposure unit is selected to deliver the required output 2.4. Exposure control is correctly established utilising a quality control step wedge 2.5. Exposure and vacuum frame are maintained according to manufacturer's specifications
3. Process the plate	3.1. The plate processing unit is maintained according to manufacturer's specifications 3.2. The plate is processed according to plate manufacturer's specifications
4. Post-treat the plate	4.1. The plate is checked for quality of outcome and analysed for conformance to job specifications 4.2. Changes to the plate image are carried out correctly to ensure the standard of output required by the job brief 4.3. The plate is chemically treated and/or baked according to job specifications 4.4. The plate is prepared for storage prior to printing according to manufacturer's specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by matching the job brief with production requirements
- planning and organising activities by preparing plates and work area for work
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating exposures and positioning of film
- problem-solving skills by recognising faults in plates and correcting
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- types of lithographic plates
- criteria for selection of plates
- advantages and disadvantages of negative and positive plates
- Plate exposure techniques and control
- images to be centred and square
- colour bars and control strips
- light sources used in plate exposing frames
- plate processing
- OHS concerns when processing printing plates
- baths and solutions used in a plate processing machine
- impact of a change in processor time on the final plate
- Plate finishing and correction
- purpose of gumming a plate
- post-exposure techniques
- criteria used to evaluate the accuracy of the plate
- dot gain issues
- difference between physical and optical dot gain
- steps to overcome dot gain
- plate punching and registration
- care to be taken to ensure accurate punching and registration
- manuals, safety and other documentation are relevant to this task, where are they kept and information is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> the plate is processed according to the plate manufacturer's specifications. Changes to the plate image are carried out correctly to deliver the standard of output required by the job brief the underlying skills of plate making should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the quality of the plate be suitable for the identified printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources prepare, set up and use lithographic plate exposure and plate processing equipment to produce ONE lithographic plate manually and ONE using a machine according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> that conditions are typical ambient conditions found in the workplace access to relevant facilities, equipment, materials and special purpose tools use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning/observation combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select the plate	1.1. Job specifications are interpreted to ensure appropriate <i>plate</i> selection 1.2. The correct plate is selected according to the printing requirements and job specifications
2. Pre-plan the process	2.1. Film negatives are checked for conformance with job specifications 2.2. Extra exposure masking is planned by examining the film 2.3. Appropriate exposure masks are cut 2.4. The appropriate amount of plate material is calculated to ensure economical use
3. Expose the plate	3.1. Exposure is determined by using step wedges and depth gauge to establish the correct front and back exposure time 3.2. The plate is exposed according to job specifications 3.3. The exposure unit and vacuum frame are maintained according to manufacturer's specifications
4. Develop the plate	4.1. The chemistry balance is maintained according to manufacturer's specifications 4.2. The washout unit is maintained according to manufacturer's specifications 4.3. The plate is washed out to pre-determined depth that has been pre-set by front and back exposures
5. Finish the plate	5.1. The plate is dried in a drying oven at a temperature and time according to manufacturer's specifications 5.2. The back of the plate is cleaned 5.3. The plate is post-exposed according to manufacturer's specifications 5.4. The plate is light finished according to manufacturer's specifications 5.5. OHS procedures are observed to ensure a safe working environment when making plates
6. Establish and maintain a chemical register	6.1. A chemical register is established to identify and describe the purpose of each chemical and to ensure finished plates meet set specifications 6.2. All chemicals used in the workplace are identified and registered correctly according to safe working practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS skills in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication skills required to convey ideas and information by interpreting the job brief
- skills needed to collect, analyse and organise information by matching the job brief with production requirements
- planning and organising skills
- teamwork skills required for maintaining the production process in association with others
- numeracy skills required to calculate exposures and positioning of film
- problem-solving skills by needed to recognise and correct faults in plates
- skills required to use technology and equipment correctly to ensure ease of subsequent processing

Required knowledge

- effect flexographic ink has on your selection of plate material
- effect the "shoulder" has on the printing process
- overcoming "orange peel effect"
- effects of chemicals used in detaching
- methods that can be used to counteract image elongation
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select the plate	1.1. Job specifications are interpreted to ensure appropriate <i>plate</i> selection 1.2. The correct plate is selected according to the printing requirements and job specifications
2. Pre-plan the process	2.1. Film positives are flattened to prevent air entrapment 2.2. Any Exposure unit is energised for one cycle to warm up the UV elements where necessary 2.3. The appropriate screen film positive is selected and checked according to the printing requirements
3. Expose the plate	3.1. Exposure is determined by using a <i>quality</i> control step wedge to establish the correct exposure time 3.2. The plate is exposed to standard/established exposure time 3.3. The plate is exposed with screen film positive according to job specifications 3.4. The exposure unit and vacuum frame are maintained according to manufacturer's specifications
4. Develop the plate	4.1. The chemistry balance is maintained according to manufacturer's specifications 4.2. The washout tools are maintained according to manufacturer's specifications 4.3. The plate is washed out for pre-determined time that has been established by manufacturer and in-house tests
5. Finish the plate	5.1. The plate is blown dry by compressed air 5.2. The plate is dried in a drying oven at a temperature and time according to manufacturer's specifications 5.3. The plate is post-exposed according to manufacturer's specifications 5.4. OHS procedures are observed to ensure a safe working environment when making plates
6. Establish and maintain a chemical register	6.1. A chemical register is established to identify and describe the purpose of each chemical and to ensure finished plates meet set specifications 6.2. All chemicals used in the work place are identified and registered correctly according to safe working practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by matching the job brief with production requirements
- planning and organising activities by interpreting the job specifications when preparing for the job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating exposures and positioning of film
- problem-solving skills by recognising faults in plates and correcting
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- effect of print life requirement on your selection of plate material
- effect the screen dot has on the printing process
- OHS requirements that are there for photopolymer plate chemicals
- overcoming undercutting of screens
- methods that can be used to counteract air entrapments between film and plate
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the plate has been correctly prepared to meet the job brief and according to manufacturer's specifications the underlying skills of plate making should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the quality of the plate be suitable for the identified printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources produce TWO photopolymer plates with different characteristics according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools and equipment will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Types of plates</i> may include:	<ul style="list-style-type: none"> may include plates using both water and chemical washout.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

ICPPP272C Produce gravure cylinders manually

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to manually make gravure cylinders.
------------------------	---

Application of the Unit

Application of the unit	This unit requires the individual to manually make gravure cylinders and establish and maintain a chemical register.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select the plate	1.1. The job specifications are interpreted to determine the appropriate type of cylinder base and/or shell for the job 1.2. The cylinder and/or shell is selected to deliver the quality of <i>output</i> required by the job brief
2. Pre-plan the process	2.1. The work area is tidied and cleaned to ensure <i>quality</i> of output and a safe work site 2.2. The exposure and coating equipment is maintained according to manufacturer's specifications and safety requirements 2.3. Exposure is controlled using step wedges and densitometry 2.4. The cylinder is coated according to manufacturer's specifications 2.5. The cylinder is exposed making sure image direction, autotrons and tracker lines are correctly positioned according to job specifications 2.6. OHS requirements are observed when handling chemicals
3. Expose the plate	3.1. The chemical balance is checked and maintained in the developing tank 3.2. The cylinder is developed according to manufacturer's specifications, enterprise procedures and safety requirements
4. Develop the plate	4.1. The etching bath is maintained to the correct activity level according to manufacturer's specifications and enterprise procedures 4.2. The cylinder is etched according to the job specifications (cell depth)
5. Finish the plate	5.1. A chemical register is established to identify and describe the purpose of each chemical and to ensure finished cylinders meet set specifications 5.2. All chemicals used in the workplace are identified and registered correctly according to safe working practices environment when making plates

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by matching the job brief with production requirements
- planning and organising activities by cleaning and preparing the work area
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating exposure and using a densitometer
- problem-solving skills by recognising cylinder faults and correcting
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- chemical names and symbols for three chemicals used in cylinder production
- standard safety procedures used when handling gravure chemicals
- two methods of manual gravure cylinder production
- cylinder balancing and how is it achieved
- preparation processes for both steel and aluminium cylinder bases
- Blue Print and how is it produced
- Direct Transfer method of cylinder production
- cell depth determination
- chemical of the etching solution
- thickness chrome coating on the etched surface
- factors that govern the rate of etch
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the cylinder is correctly and safely processed and etched to ensure a quality print the underlying skills of cylinder making should be transferable across the pre-press sector. It is important that the substrate for reproduction is identified and that the quality of the cylinder be suitable for the identified printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources manually produce TWO gravure cylinders and establish and maintain a chemical register according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools and equipment will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Output</i> may include:	<ul style="list-style-type: none"> a variety of cylinders and shells.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.
<i>Input</i> may include:	<ul style="list-style-type: none"> line and tone images.
<i>Capture</i> may include:	<ul style="list-style-type: none"> carbon tissue and direct transfer methods.
<i>Manipulation/edit</i> may include:	<ul style="list-style-type: none"> chemical processing - conventional and post.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess the requirements of the brief	1.1. All relevant information in the brief is checked, eg carton type, dimensions, material 1.2. All relevant requirements of the brief are assessed in line with enterprise specifications
2. Select and modify template	2.1. Appropriate template is selected on the CAD system 2.2. Height, width and depth and gluing flap dimensions are adjusted according to the client brief 2.3. Requirements for knife setting and stripping in production are checked and position is designed so as to have correct grain direction and to maximise use of material
3. Use plotter to cut sample	3.1. Plotter is set up ready for downloading design 3.2. Cutting and creasing depths are set 3.3. Material is positioned correctly 3.4. Plotter is operated safely according to manufacturer's specifications and enterprise procedures 3.5. Routine machine maintenance is carried out as required
4. Assemble sample	4.1. Sample is cut by hand 4.2. Cut sample is folded and glued by hand ensuring that angles and construction are correct 4.3. Originals and elements are selected, scaled and cropped appropriately to fit the grid space allocate
5. Check and adjust design	5.1. Sample is checked to ensure conformance to the client brief 5.2. Design is adjusted if necessary to meet job specifications
6. Output design	6.1. Design is saved ready for downloading to forme cutter 6.2. Design is outputted as keyline for artwork or as film as required 6.3. Relevant paperwork is completed according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by using information on carton types and templates in conjunction with the job brief
- planning and organising activities by planning the sequence of operations to facilitate processing
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating sizes, allowances, calliper of materials
- problem-solving skills by recognising and fixing sample problems
- use of technology by using equipment correctly to facilitate processing

Required knowledge

- health and safety concerns that are there when using computers and plotters
- CAD programs that are available for carton design
- correct alignment of a cut outpositioned in a design
- types of products that are the following types of cartons used for (sleeves, full flap, auto lock, crash lock, trays)
- design is appropriateness for its end use
- aspects of product sizing and tolerances that should be rechecked
- carton designs that are suitable for machine packing
- carton designs that are suitable for hand packing
- constraints on design and positioning on the forme that are caused by the requirements of knife making and production
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the sample carton accurately meets the job and client specifications demonstrate an ability to find and use information relevant to the task from a variety of information sources produce TWO different carton designs and samples using existing templates to meet job brief according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess the requirements of the brief	1.1. The printing requirements of the layout <i>brief</i> are determined for printing feasibility 1.2. The brief is broken down into stages of production in order to determine a plan of procedure 1.3. A plan of action is determined to meet the time requirements of each stage so that deadlines are identified and adhered to 1.4. Correct design and typographic terms are used to facilitate communication
2. Assemble layout materials	2.1. Client copy and images are assembled to conform to the client brief 2.2. Library files are accessed for relevant data to conform to the brief 2.3. Appropriate equipment and materials to complete the layout are assembled to enable the brief to be undertaken efficiently
3. Construct a simple graphic design	3.1. Client requirements are checked to ensure the design concept matches the brief 3.2. Preliminary graphic design ideas are sketched according to the brief 3.3. A simple graphic design concept is rendered electronically or manually to conform to the brief 3.4. The rendered graphic design is checked for conformance to the brief
4. Produce finished artwork	4.1. A layout grid is ruled up according to the brief 4.2. Type selection, style and size are selected for the theme and readability and are fitted into the grid space allocated to conform to the brief 4.3. <i>Originals</i> and <i>elements</i> are selected, scaled and cropped appropriately to fit the grid space allocated 4.4. The components of the layout are positioned accurately using keylines to conform to the grid framework 4.5. Overlays/colour roughs are created to conform to the brief
5. Check for suitability	5.1. The layout is checked to eliminate omissions and errors 5.2. The layout design is checked for conformance to the brief

ELEMENT	PERFORMANCE CRITERIA
	5.3. <i>Proofs</i> are produced for hard copy checking 5.4. The layout is rendered ready to present to the client
6. Tidy materials and store data	6.1. Equipment and materials are returned to storage according to enterprise procedures 6.2. Design data and materials are filed ready for future retrieval according to enterprise procedures 6.3. The design area is cleaned to enterprise procedures ready for re-use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by using correct terms to facilitate communication according to industry standards
- collecting, analysing and organising information by producing and collecting elements according to the initial conceptual ideas
- planning and organising activities by sequencing stages of the artwork to produce a design flow
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by working within the layout constraints to the specifications of the brief
- problem-solving skills by initiating quality checks against the brief as an ongoing process
- use of technology by using the relevant equipment to produce artwork for screen printing

Required knowledge

- considerations that are given to the layout
- first stage of the production brief
- function that would take up the most time
- what does a thumbnail describe?
- importance that would you place on detail in the first stage of the brief
- type of equipment that may be used for the construction of the layout
- name of the guides used in the design area
- requirements that would be included in the brief
- number of graphic design ideas are sketched or illustrated as preliminary ideas
- additional constraints that can be included in the concept
- purpose of ruling up a layout
- limitations that are there with type selection on the chosen substrates
- considerations that are given to elements to fit a given space
- use of keylines when used as element identification
- importance of identifying all colour(s) on the rough
- techniques that are used to check for mistakes
- checks of a proof that are made to conform to the brief
- condition that materials should be stored
- system of storage that is used for electronic data

REQUIRED SKILLS AND KNOWLEDGE

ICPPP284B Produce PDF files for online or screen display

Modification History

Release	Comments
Release 1	<p>This Unit first released with <i>ICP10 Printing and Graphic Arts Training Package</i> version 2.0.</p> <p>Typographical error corrected in performance criterion 6.3.</p> <p>Replaces ICPPPP284A Produce PDF files for online or screen display.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to produce both passive and interactive PDF files for online or screen display.

Application of the Unit

This unit applies to individuals who produce both passive and interactive PDF files for use online or screen display. Individuals will generally work within defined procedures. Individuals will respond to clearly defined briefs and work under limited supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit of competency.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare file	<p>1.1 Use of <i>document</i> is identified according to specifications of the brief</p> <p>1.2 Purpose and audience are established and cultural, equity or gender requirements determined from the brief or client</p> <p>1.3 Changes required in media size and format are chosen from predefined settings</p> <p>1.4 Relevant fonts for online readability are selected, text is formatted, chunked and article threads added as required for online ease of reading</p> <p>1.5 Navigation plan or display timing is developed and required <i>elements</i> or areas allocated on document</p> <p>1.6 Document is checked to ensure correct layout <i>file</i> and there are no non-printable elements</p> <p>1.7 Unnecessary elements and blank pages are deleted, if not required</p> <p>1.8 Document is proofed for colour, positioning, bleed allowance, gramma and text</p>
2. Create PDF	<p>2.1 The <i>final media</i> of the file is identified and correct Distiller preset job options and colour management settings are chosen</p> <p>2.2 Document is opened and exported to PDF or postscript file for conversion in Distiller</p> <p>2.3 PDF file is exported to correct folder, opened and checked against requirements of the brief</p>
3. Edit file	<p>3.1 Text corrections are made using the text touch-up tool as required</p> <p>3.2 Images are edited using the touch-up object tool as required</p> <p>3.3 Page orientation is changed, pages inserted and deleted as required</p> <p>3.4 Bookmarks are added and named or edited with magnification added as required</p>
4. Perform navigation	<p>4.1 Menus are created for major themes with buttons and graphics consistently placed and easily identifiable to the user</p> <p>4.2 Internal and external links with actions are added according to the requirements of the brief</p> <p>4.3 Navigation is consistent and traceable to ensure maximum</p>

	<p>usability and user confidence</p> <p>4.4 Users are given more than one navigational option for moving through the document</p>
5. Perform file management	<p>5.1 Fonts and graphics are embedded where possible for greater portability</p> <p>5.2 All additional files are saved in the correct folder and in appropriate format</p> <p>5.3 All unused element or pages are removed to reduce size</p>
6. Display settings	<p>6.1 Screen display preferences are set as required to suit brief</p> <p>6.2 Magnification is set for consistency of display</p> <p>6.3 Page transitions are applied as desired to suit brief</p> <p>6.4 Actions and preferences for multimedia elements are applied to suit final media</p>
7. Finalise the document	<p>7.1 Final file is saved to correct folder and opened to check for correct screen display and magnification</p> <p>7.2 All links, bookmarks and actions are tested for correct operation</p> <p>7.3 Navigation is assessed for intuitive usability</p> <p>7.4 Document is tested in a range of environments and platforms for consistency and predictable display</p> <p>7.5 File naming conventions are logical and comparable for cross-platform use</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication and literacy skills for expressing ideas and information, reformatting text and adding article threads as required for final media
- planning, organising and analytical skills for setting preferences, document summaries and search index options according to the requirements of the brief
- teamwork skills for maintaining the production process in association with others
- numeracy skills for settings paper size and format
- problem-solving skills for rotating, deleting and inserting pages as required by the brief
- technical skills for computer operation and producing interactive PDF files.

Required knowledge

- file type and use
- page sizes and formats for online print
- use of different fonts on online document
- reformatting text in an online document
- OHS standards that relate to working for long periods on computers
- various document types.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> produce both passive and interactive online and screen display PDF files locate and use information relevant to the task from a variety of information sources.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> that conditions are typical ambient conditions found in the workplace access to relevant facilities, equipment hardware and software use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate practical demonstration by the candidate when producing a passive and interactive PDF file.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Documents</i> may include:	<ul style="list-style-type: none"> • stand alone document • software e-book reading device • online documents.
<i>Elements</i> may include:	<ul style="list-style-type: none"> • file management • images • tables and other non-text items.
<i>File</i> may include:	<ul style="list-style-type: none"> • tagged image file format (TIFF) • encapsulated postscript (EPS) • joint photographic expert group (JPEG) • rich text format (RTF) • portable network graphics (PNG).
<i>Final media</i> may include:	<ul style="list-style-type: none"> • e-books • websites • hard copy • online documents.
<i>Screen display</i> may include:	<ul style="list-style-type: none"> • passive • interactive.
<i>Actions</i> may include:	<ul style="list-style-type: none"> • movies • sound clips • menu commands.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare line and/or tone original for scanning	1.1. The line or tone image/copy is scaled to conform to production specifications or <i>quality standards</i> 1.2. The quality of the line or tone <i>image input</i> is assessed to determine scanner settings 1.3. The line or tone image is prepared for mounting to <i>scanner</i> ready for scanning
2. Prepare scanner	2.1. The scanner is selected and set correctly for the mono image to be scanned 2.2. Appropriate <i>software</i> is selected for scanning line and/or tone images
3. Scan image	3.1. The original image is scanned for reproduction 3.2. The quality of the scanned image is checked against the job/ design specifications and the printing reproduction requirements 3.3. Appropriate software is applied to scan and process the image 3.4. Image is checked for compliance with design specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for applying correct ergonomics when operating in a computer environment
- analytical skills for interpreting the appropriate scanning parameters for the job specifications
- problem-solving skills for determining scanners and specifications to meet output requirements
- teamwork skills for maintaining the production process in association with others
- technical skills for setting up the scanner to suit various printing processes or electronic media

Required knowledge

- characteristics of a line or tone image
- printing processes and the type of substrates used for printing processes
- OHS issues associated with scanner/computer operations
- scanner resolution
- correct controls for scanner operation
- hardware requirement for line and tone scanning
- computer software requirement for line and tone scanning
- scanners and specifications
- software requirements and specifications to process and output the image
- sources of information and other documentation related to safety and scanner operation
- correct storing of manuals and documentation
- correct use of hardware and software
- reproduction matching requirements to resolution factors and job brief

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- determine the capability of scanner hardware and software to meet reproduction requirements for print media
- scan images to meet requirements and which are transferrable across design, pre-press and print sectors
- use of information relevant to the task from a variety of information sources
- use a flat-bed or drum scanner and reproduce three examples of line and tone reproductions with supporting comments on set-up criteria and job specifications.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical of the ambient conditions found in the prepress workplace
- access to relevant facilities, equipment and materials for the reproduction and production of images to suit the needs of the print media processes
- evidence of scanner system maintenance procedures
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning in relation to the operating specifications of scanners suitable for print media applications
- third party input and workplace reports of candidate performance
- practical demonstration by the candidate when scanning and processing the image.

Guidance information for

Holistic assessment with other units relevant to the

EVIDENCE GUIDE	
assessment	industry sector, workplace and job role is recommended. For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> enterprise and industry standards
<i>Image input</i> may include:	<ul style="list-style-type: none"> a variety of originals or copy with high contrast line or continuous tone characteristics
<i>Scanner</i> may include:	<ul style="list-style-type: none"> flat-bed drum scanner
<i>Software</i> may include:	<ul style="list-style-type: none"> appropriate software relative to image input and quality output device

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare line image for scanning	1.1. The <i>line image</i> for scanning is scaled to conform to production specifications 1.2. The quality of the line image for scanning is assessed to determine <i>scanner</i> settings 1.3. The line image is cleaned and mounted ready for scanning
2. Prepare scanner	2.1. The scanner is set correctly for the line images to be scanned 2.2. Appropriate <i>software</i> is selected for scanning and processing line images 2.3. Adjustments are made to ensure <i>quality</i> of scanned image
3. Scan and check image	3.1. Appropriate software is applied to scan and process line images 3.2. The original line image is scanned for reproduction according to the design specifications 3.3. The quality of the scanned image is checked against the job specifications and the printing or reproduction requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication and literacy skills for expressing ideas and information and interpreting the job brief
- planning, analysing and organising skills for matching reproduction requirements, resolution factors and preparing the line image for scanning
- teamwork skills for maintaining the production process in association with others
- numeracy skills for calculating enlargement/reduction factors and resolution
- problem-solving skills for scaling the line image to conform to production specifications
- technical skills for using appropriate software and hardware correctly to ensure ease of subsequent processing

Required knowledge

- relevant printing processes and electronic media
- scanning requirements
- characteristics of a line original
- factors that determine line scanning resolution
- controls that exist within the software for line scanning
- essential hardware specifications for line scanning
- software requirements for line scanning
- specific software requirements to process and output the image
- manuals, safety and other documentation that are relevant to this task, where they are kept and information included in these documents
- OHS concerns when operating a scanner
- OHS standards that relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine brief specifications	1.1. Communicate with the client to confirm the requirements of the brief as required 1.2. <i>Job details</i> are accurately documented according to <i>enterprise policies and procedures</i>
2. Render a graphic design	2.1. The client's requirements are translated into a design concept that accords with the brief 2.2. Different graphic design ideas/concepts are detailed and the potential of each is assessed according to the brief 2.3. A unique graphic design concept is rendered electronically or manually to conform to the brief 2.4. The rendered graphic design is assessed for printing feasibility according to the requirements of the brief 2.5. A visual is produced showing position and fit of design elements to document the design layout
3. Produce a dummy	3.1. A range of visual interpretations of the brief are made to present options to the client 3.2. Text and <i>images</i> are graphically presented to conform to the grid layout 3.3. Basic imposition is calculated to suit printing and binding <i>processes</i> 3.4. A dummy is produced for marking-up copy and to obtain client feedback about the suitability of design
4. Produce complex finished artwork	4.1. A design concept is structured step by step to conform to the brief and to fit a grid format 4.2. Appropriate type styles are selected to conform to the client brief and the printing substrate 4.3. Line reproduction <i>quality</i> is assessed to effect the standard of print reproduction required by the client brief 4.4. Images are selected to conform to the client brief and the end use 4.5. Colours are selected and combined effectively using overlays to conform to the client brief and the end use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by determining exactly what the client wants from brief and subsequent discussion
- collecting, analysing and organising information by producing and collecting elements according to the initial conceptual ideas
- planning and organising activities by coordinating job sequence so that materials arrive, are processed and can be checked efficiently
- teamwork when ensuring that designers, printers and clients all know what they need to do and when
- mathematical ideas and techniques by calculating costs and enlargement/reduction factors
- problem-solving skills by coping with discrepancies between the brief and what is possible
- use of technology by using appropriate software to create the design and ensuring files are saved in the required format

Required knowledge

- parameters of the job for which this artwork is being prepared
- instruments, materials and computer equipment that will be used in producing this artwork?
- colour used for effect and harmony
- colour composition of white light
- colour wheel elements and the use of the Pantone Matching System
- effect of the selection of a print or electronic output system on the preparation of artwork
- making or revising a layout
- basic design principles that are used in the preparation of layouts
- formatting, size, style and preparation of artwork when using computer equipment for layouts/colour roughs
- a CAD program and its aid in the work of a designer
- OHS concerns that are there when using cameras or computers
- production of bromides using a process camera and contact frame
- describe the diffusion transfer process for producing bromides
- operation of mono laser printers and resolution output
- proportional enlargement and reduction calculations
- process of drawing line, borders and corners using drawing instruments or a

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> client requirements are accurately reflected in the design concept. The final design combines type, lines, tones, colours and images in a manner that meets the design brief and reproduction requirements the underlying skill of designing a detailed layout to conform to brief specifications should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competencies be demonstrated with a clear identification of printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources prepare TWO sets of design, colour roughs and finished artwork which incorporate line and tone work according to specifications of the client brief, enterprise standards and listed performance criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools, equipment and industry software packages will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Job details</i> may include:	<ul style="list-style-type: none"> include the number of colours, the media of the final product, the purpose of the design, materials.
<i>Enterprise policies and procedures</i> may include:	<ul style="list-style-type: none"> tasks must be performed according to enterprise procedures.
<i>Images</i> may include:	<ul style="list-style-type: none"> photographs, illustrations, format graphics, text.
<i>Complexity of process</i> may include:	<ul style="list-style-type: none"> artwork is complex and may involve numerous elements.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and evaluate typography	1.1.Typeface, type-size, letter and word, and line spacing are selected according to the design setting requirements 1.2.Typeface and type-size are evaluated for their suitability to retain the required characteristics through the set of reproduction stages according to the design brief and printing process
2. Position images	2.1.Images are positioned accurately according to the design specifications 2.2.The overall balance and emphasis of composition conform to the brief
3. Produce and proof type	3.1.Type is produced either on the keyboard from copy using the appropriate layout and design and typesetting technology or by transferring information from the electronic medium into the typesetting program 3.2.Typographic <i>quality</i> is checked and adjusted to meet job specifications 3.3.Proof reading is carried out to ensure the typesetting meets job specifications 3.4.Proofs are marked up with correct proof reading marks and corrected
4. Assess text for punctuation and grammar	4.1.Text is read and errors in grammar, punctuation and word-breaks are identified 4.2.Errors and omissions are corrected in consultation with the <i>client</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the brief to ensure that product matches implicit and explicit requirements
- collecting, analysing and organising information by matching information on font sizes and layouts with requirements of the brief
- planning and organising activities by evaluating type suitability for the reproduction stages
- teamwork when correcting errors in consultation with the client
- mathematical ideas and techniques by calculating fit, sizes and enlargement factors and costs
- problem-solving skills by adjusting fit and fonts to ensure a best possible result for client within restraints of production
- use of technology by using appropriate software correctly to ensure ease of subsequent processing

Required knowledge

- choice of typeface selected for this job influenced by the printing process or electronic medium influence on the choice of typeface selected
- type face design suited to the topic of the job
- appropriate number of characters generally accepted in a line of text type
- relationship between point size and column width
- viewing distance of the final product has an effect on point size selection
- kerning use and why
- considerations that must be made when selecting a type face to be used on a particular product
- ten proof reading marks and the meaning of each
- three different ways of writing "there" and their used
- uses of the apostrophe and how are apostrophes often misused
- manuals, safety and other documentation that are relevant to this task and where are they kept
- information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • typeface, size, letter, word and spacing all meet design specifications and substrate, reproduction and end use requirements. Overall composition meets the design brief • the underlying skill of applying typographic principles to setting and proofing copy and design should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competencies be demonstrated with a clear identification of printing processes • demonstrate an ability to find and use information relevant to the task from a variety of information sources • use manual or electronic equipment and suitable software to select, set, arrange, evaluate and modify type in TWO different design briefs according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • it is expected that special purpose tools, equipment and industry software packages for producing typographic images will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Mount original copy	1.1. The <i>original image</i> is scaled and identified according to job specifications 1.2. Work surfaces are cleaned and prepared to ensure the images are dust free 1.3. The original image is mounted according to enterprise procedures 1.4. Occupational health and safety (OHS) issues are identified and correct practices are used if any solvents are applied
2. Set up scanner	2.1. The <i>scanner</i> is set up and calibrated according to specifications 2.2. Data from copy evaluation and aim points to suit the original are entered correctly onto the scanner according to specifications 2.3. The <i>scanner software</i> or plug-in is selected
3. Produce images	3.1. The medium being scanned is selected according to job specifications 3.2. The disk capacity is checked where appropriate to ensure sufficiency for the job 3.3. The processor is set and checked according to job specifications 3.4. Images are scanned as required according to job specifications 3.5. The scanned images are checked for conformance to the technical specifications of the job and scan adjustments made if necessary

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS skills for using correct ergonomics when operating the computer
- communication and literacy skill for interpreting implicit and explicit requirements of the job brief
- planning, analytical and organising skills for matching requirements for reproduction (colour profiles and resolution) with the job brief and ensuring all materials are delivered
- teamwork skills for maintaining the production process in association with others
- numeracy skills for calculating resolution and enlargement/reduction factors
- problem-solving skills for matching needs of the client with constraints of production
- technical skills for using software and hardware correctly to ensure ease of subsequent processing

Required knowledge

- scanner settings for various printing processes or electronic media
- scanner calibration
- primary colours and colour mixing principles
- variables that influence the colour separation requirements
- importance of tone gradation and grey balance
- necessity to apply colour correction
- factors that influence the selection of screen ruling and dot percentage
- impact output resolution has on final screen ruling
- OHS standards as they relate to operating a scanner
- manuals, safety and other documentation that are relevant to the task, where they are kept and the information included in these documents
- availability of other sources of information
- OHS standards that relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- scan images that meet specified quality and technical standards for reproduction and final end use
- find and use information relevant to the task from a variety of information sources
- use a medium to high-end full colour digital device to reproduce one line-art, one greyscale, one colour transparency (positive), one colour reflective, one negative and one re-screen.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for digital printing and image scanning
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate in scanning images that meet the technical specifications of the job.

Guidance information for assessment

Holistic assessment with other digital production units relevant to the workplace and job role is recommended.

For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Original images</i> may include:	<ul style="list-style-type: none"> • line-art • transparencies (positive and negative) • reflection and re-screens for mono • red, blue, green (RGB) • cyan, magenta, yellow, black (CMYK).
<i>Scanners</i> may include:	<ul style="list-style-type: none"> • flat-bed • drum scanners with medium to high-end full colour capabilities.
<i>Scanner software</i> may include:	<ul style="list-style-type: none"> • any proprietary • industry standard software that is bundled with high-end scanners • third party products, such as: <ul style="list-style-type: none"> • SilverFast • VueScan.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate copy	1.1. Copy is scaled and gradation <i>aim points</i> are selected to produce the required <i>output</i> 1.2. Screen rulings, angles, tone gradation, dot percentages, and dot shapes are selected according to job specifications 1.3. Rescreens and mono conversions from colour originals are evaluated for reproduction requirements
2. Prepare for exposure	2.1. The camera is cleaned and prepared and lights are set to deliver an even distribution of light 2.2. Exposure program is set according to stock and print conditions 2.3. Densities are measured on the copy according to evaluation 2.4. Exposure programs for special effects and duotones are calculated to deliver job requirements
3. Process and evaluate image	3.1. The processor is checked and maintained within tolerances 3.2. Film is <i>processed</i> according to job specifications 3.3. The image is checked for size, gradation, cleanliness and dot percentages according to job specifications
4. Solve technical photographic problems	4.1. Technical problems relevant to tone and reproduction of photographic images are resolved by reassessing the elements for photography, camera operations or amendment of the brief in consultation with the client 4.2. Images are photographed with the potential to be reproduced in conformance to specifications of the brief

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the job brief
- collecting, analysing and organising information by matching production requirements and constraints with requirements of the job brief
- planning and organising activities by ensuring all necessary materials are delivered in correct format
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating enlargement/reduction factors, exposures and grey scales
- problem-solving skills by adjusting exposure and grey scales so that output matches requirements of the job brief
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- halftone images varied to suit different printing processes
- main characteristics of a halftone image
- factors that would influence selection of highlight and shadow points (first and last printing tones)
- overcoming the problem associated with the reproduction of screened copy
- method of calibrating the densitometer and copy measurement
- factors that influence basic exposure data
- preparing a basic exposure program
- applying exposure data to selected copy
- factors that could cause a change of exposure
- using a grey scale to assist in exposure control
- criteria for evaluation of the halftone image
- effect a change to processing conditions may have on the final result
- image requirements for the various printing processes
- criteria for evaluation of a duotone
- manuals, safety and other documentation that are relevant to this task and where are they kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> special effects and duotones meet job specifications. The image size, gradation, cleanliness and dot percentages meet technical specifications. Photographed images are suitable for final media reproductions the underlying skill of photographing images should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the quality of the photographed image be suitable for the identified printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources use a graphic arts camera to photograph and process at least THREE continuous tone originals with different contrast characteristics according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment camera and other equipment required to produce a halftone image.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Aim points</i> may include:	<ul style="list-style-type: none"> • highlights • shadows • midtones.
<i>Output</i> may include:	<ul style="list-style-type: none"> • diffusion transfer, rapid access.
<i>Camera process type</i> may include:	<ul style="list-style-type: none"> • vertical • horizontal.
<i>Input</i> may include:	<ul style="list-style-type: none"> • a variety of continuous tone originals.
<i>Capture</i> may include:	<ul style="list-style-type: none"> • a variety of graphic arts cameras.
<i>Manipulation/edit</i> may include:	<ul style="list-style-type: none"> • masking to crop or deep etch, drop highlights out.
<i>Quality standard</i> may include:	<ul style="list-style-type: none"> • must meet client and industry requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm client design brief	1.1. Details of the client design brief are reviewed and clarified with client or supervisor 1.2. The type of document is determined and production requirements are assessed 1.3. Client copy and images are assembled to conform to the design brief 1.4. Library files are accessed for relevant data to conform to the design brief
2. Set up document	2.1. A master page for multiple pages and with multiple columns is set up 2.2. Required text is prepared and formatted and appropriate fonts and size are selected 2.3. Master pages, templates and style sheets, as appropriate, are used consistently to ensure data is the same after exchange or transfer 2.4. Text boxes and columns are correctly linked for text flow and chapter heading hierarchies are selected 2.5. Colour palettes are set up according to the design brief 2.6. Document set up is completed to conform to requirements of the final media and design brief
3. Arrange elements on page	3.1. Imported text or data from other applications is correctly formatted and any cross-application formatting issues are resolved 3.2. Elements are created and arranged on page to conform to the design brief 3.3. Graphics and other elements are imported from other applications and correctly formatted and arranged 3.4. Elements are arranged in layers according to the design brief
4. Finalise artwork	4.1. Pages and combined elements are composed correctly to suit specified sheet size 4.2. Numerical sequence and laydown of the product or mock-up is correctly identified to meet binding and finishing requirements 4.3. A bleed allowance is incorporated in margins and borders
5. Check quality	5.1. Text is reviewed for possible errors and omissions and errors are discussed with the client or supervisor

ELEMENT	PERFORMANCE CRITERIA
	<p>5.2. Overall balance of the <i>layout</i> and correct colour blends and gradients are maintained in the arrangement of the elements</p> <p>5.3. Completed file is sent to be ripped</p> <p>5.4. A proof is created and rechecked for errors, omissions and the overall balance of the layout</p> <p>5.5. Necessary changes are made, reviewed on screen and reproofed as required</p> <p>5.6. The job is saved according to <i>enterprise procedures</i></p> <p>5.7. A digital proof or PDF is created to present to client</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by clarifying information with the client or supervisor
- collecting, analysing and organising information by selecting library files for relevant data to conform to the design brief
- planning and organising activities by developing the numerical sequence and laydown of the product
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by identifying the numerical sequence and laydown of the product
- problem-solving skills by imposing pages and combined elements to correctly suit specified sheet size
- use of technology by using hardware and software applications

Required knowledge

- trapping during the design phase
- colour qualities and behaviour for trapping
- different qualities of TIFF and EPS and the use
- distinguishing unmarked colours
- principles of additive and subtractive colour mixing
- considerations given to the printing process during the design phase
- kinds of problems that can occur if the printing process isn't considered during the design stage
- media size consideration during imposition
- planning for multiple colours and graphics during imposition
- computer type verses print type
- the importance of type to the overall design
- factors that you need to consider to ensure overall readability
- importance of design and layout arranging artwork
- typography use in design
- purposeful design
- market segmentation
- understanding the target audience
- factors that you need to consider when targeting equity groups
- creating and saving templates

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Balance image quality and file size	1.1. Graphics files are opened and design brief requirements are confirmed 1.2. Graphics are repeated efficiently using a symbol or stamp to reduce file size 1.3. Slices are created from <i>objects</i> , layers or groups and updated as required 1.4. Type anti-aliasing is applied selectively to keep small text easy to read 1.5. <i>Tasks</i> are automated wherever possible and where necessary scripts are used for automation
2. Manipulate objects	2.1. Objects and text are <i>manipulated</i> and <i>edited</i> as required 2.2. <i>Elements</i> are defined for repetition, repetition tools are used to create duplicates and then are manipulated as a group 2.3. Complex shapes are created by combining shapes into compounds and if required compounds are edited
3. Import images	3.1. Bitmap images are embedded and/or linked in the file 3.2. Placed Bitmaps are modified and/or duplicated depending on design requirements 3.3. Bitmaps are masked and/or an opacity mask is added 3.4. Layered file is exported to image editing program for editing
4. Develop variable templates	4.1. Based on the design brief, objects are defined within the template as variables 4.2. An automated script or an image server is used to ensure variations, using data stored in any ODBC-compliant source 4.3. The template variables are tested to ensure correct operation
5. Colour separate artwork	5.1. The correct <i>format</i> for the <i>colour separation</i> is determined by the requirements of the pre-press workflow system 5.2. <i>Command preferences</i> are set to correct preferences for print quality and process 5.3. Based on printer feedback the colour separation options are set according to print requirements of the

ELEMENT	PERFORMANCE CRITERIA
	<p>design brief</p> <p>5.4. Process and spot <i>colours</i> are combined if required</p> <p>5.5. A screen frequency value appropriate for the print quality is selected and colour separation preferences are saved</p> <p>5.6. Spreads and chokes traps are created to avoid mis-registration</p> <p>5.7. The overlapping and overprint of objects are defined</p> <p>5.8. A proof is created and the separations checked, any required editing is completed and the file is saved</p>
6. Prepare for final media	<p>6.1. Metadata tags are embedded to catalogue, organise and retrieve artwork</p> <p>6.2. For cross-media publishing purposes web-safe colours are selected</p> <p>6.3. File formats are chosen to best represent artwork styles</p> <p>6.4. Objects are linked to create an image map that meets design requirements</p> <p>6.5. Objects are layered to create animation frames and exported for animation set up</p> <p>6.6. Compression options are selected that keep the image quality high and the file size low</p> <p>6.7. Export options are set to the best settings for the final media and the file is saved and exported</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by embedding metadata tags
- collecting, analysing and organising information by linking objects to create an image map that meets design requirements
- planning and organising activities by automating tasks wherever possible and using scripts for automation
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by selecting a screen frequency value appropriate for the print quality
- problem-solving skills by creating complex shapes and editing them
- use of technology by creating graphics using a graphics application

Required knowledge

- image formats (SWF, SVG, GIF, JPEG, PNG)
- JavaScript, AppleScript or Microsoft Visual Basic
- text and formatting
- drawing shapes
- manipulating images
- design principles
- profiles
- colour management

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • developing graphics incorporating a range of features for cross-media publishing based on a client brief using a high-end application • demonstrate an ability to find and use information relevant to the task from a variety of information sources • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the combining strategy and prepare the work	1.1. Job components are gathered and checked according to job specifications 1.2. Dot shapes and percentages are checked according to job specifications 1.3. The correct masking technique is used to combine the job economically 1.4. Screen rulings and angles are checked according to job specifications 1.5. Spotting techniques are performed accurately to achieve the required combining effect 1.6. Exposures and processing equipment are set up to manufacturer's specifications 1.7. Stipples and vignettes are laid at the correct angles and using the correct percentages
2. Combine film	2.1. Spreads, chokes, reverses, deep etchings and line and tone combinations are created according to job specifications 2.2. Colours are separated correctly according to job specifications
3. Ensure accurate registration	3.1. Register marks, register punch holes, centre lines and trim lines are calculated and aligned accurately according to job specifications 3.2. All elements are registered accurately according to design specifications
4. Apply photographic contacting	4.1. The basic exposures for contact, duplication and spreads and chokes are determined 4.2. The contact frames for contact, duplication and spreads and chokes are used correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the brief or layout
- collecting, analysing and organising information by matching production requirements and constraints with requirements of the brief
- planning and organising activities by determining sequence of processes and organising necessary materials
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating enlargement/reduction factors, register and position
- problem-solving skills by resolving issues of register, fit and overlap
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- choice of printing process and the affect on combining strategy and settings
- steps required to produce the combined image
- image elements unique to this job specification
- criteria that you should apply to colour separated images to ensure they meet job specification/printing process
- masking technique to ensure accuracy and economy
- equipment considerations that are essential to ensure accuracy
- method of producing spreads and chokes (trapping)
- basic exposure data for contacting and duplicating emulsions
- aids that can be used to ensure quality control
- factors that ensure quality of output through a processor
- procedures that could be used to ensure accuracy of registration
- factors that should be observed to ensure screen elements are assembled correctly
- correct percentage tints
- meeting all job specifications
- care that must be taken when matching to PMS colours
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess and combine complex images	1.1. The components of complex images for reproduction are electronically evaluated for combining 1.2. Operations are planned for combining digital information from any electronic source to effect job specifications The correct masking technique is used to combine the job economically 1.3. Combined images are manipulated , retouched and corrected electronically to conform to job specifications
2. Edit complex image	2.1. Images are retouched to conform to job specifications 2.2. Images are contoured to conform to job specifications 2.3. Colour correction is undertaken to conform to job specifications 2.4. Tonal correction is undertaken to conform to job specifications
3. Solve technical combining problems	3.1. Technical problems relevant to combining images are resolved by reassessing the elements for combining or amendment of the design 3.2. Complex images are combined with the potential to be reproduced according to the job brief
4. Prepare information for output devices	4.1. The disk capacity is checked for space before final assembly 4.2. The limitations of the system to achieve the required output are assessed 4.3. Appropriate colour profiles are applied according to job specifications
5. Manage the combining system	5.1. The electronic combining system is managed effectively to facilitate the storage, retrieval and outputting of data 5.2. Combining software and files are maintained to ensure an operative system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the job brief and discussing format and quality of inputs with the client
- collecting, analysing and organising information by accessing data on software capabilities and production requirements and matching them with the job brief
- planning and organising activities by planning the sequence of operations to facilitate smooth processing of the job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating enlargement/reduction factors, fit, spatial relationships between elements and colour profiles
- problem-solving skills by adjusting fit and using colour correction so that output meets requirements of the job brief
- use of technology by using software correctly to ensure efficient processing and ease of subsequent processing

Required knowledge

- settings that need to be varied to suit subsequent printing processes or electronic output
- factors that are used in determining scan resolution
- limitations of a CCD scanner when compared to a Photo Multiplier scanner
- factors that are involved in calibrating the monitor
- converting from an RGB colour model to a CMYK colour model
- meaning of Native format
- characteristics of EPS and TIFF formats
- meaning of Raster Image Processing
- RIP calibration
- two advantages of OPI
- difference between a bitmapped and a vector image
- purpose of the calculation menu [or equivalent] in systems work
- specific limitations that are there with digital cameras
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • complex images are combined with the potential to be reproduced according to job specifications and any image manipulation enhances the image quality • the underlying skill of combining should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competencies be demonstrated with a clear identification of printing processes • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce TWO jobs that combine and manipulate complex elements following the job brief and according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • produce TWO jobs that combine and manipulate complex elements following the job brief and according to the listed Performance Criteria • it is expected that special purpose industry software packages will be used where appropriate.

Co-requisite units

Co-requisite units	

ICPPP334C Prepare an imposition format for printing processes

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to create layouts and impositions.
------------------------	--

Application of the Unit

Application of the unit	This unit requires an individual to manually develop a lay-down sheet and imposition scheme, combine components and meet production and finishing requirements.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Generate a lay-down sheet and imposition scheme	<p>1.1. Printing processes, sheet sizes and binding and finishing instructions are applied to the finished artwork to generate an imposition scheme</p> <p>1.2. A lay-down sheet and imposition scheme are generated according to folding and binding machine requirements and special printing requirements</p>
2. Impose pages and combine components to the final machine sized work sheets	<p>2.1. Pages and combined components are imposed correctly to suit specified sheet size</p> <p>2.2. Numerical sequence and lay-down of the product or mock-up are correctly identified to meet binding and finishing requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the job brief
- collecting, analysing and organising information by accessing data on software capabilities and production requirements and matching them with the job brief
- planning and organising activities by planning the sequence of operations to facilitate smooth processing of the job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating enlargement/reduction factors, fit, spatial relationships between elements, impositions and colour profiles
- problem-solving skills by adjusting fit, maximising efficiency of imposition and using colour correction so that output meets requirements of the brief
- use of technology by preparing work for final production

Required knowledge

- main considerations when preparing a layout for a printing press
- different working methods for sheet fed presses
- image control marks that are important for press operation
- calculations that need to be done to ensure that the size of the layout is correct
- impact of paper considerations on the type of imposition used
- image control marks at the binding finishing stage
- factors that influenced your imposition
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • printing processes, sheet sizes, binding and finishing instructions and numerical sequence and lay-down of the product meet job and binding and finishing requirements • the underlying skill of imposition should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the quality of the photographic image be suitable for the identified printing processes • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare, set up and use the manual or software system to produce TWO layouts according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • it is expected that special purpose cameras, tools, equipment and industry software packages will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Input</i> may include:	<ul style="list-style-type: none"> • variety of four-colour images and page assembly.
<i>Capture</i> may include:	<ul style="list-style-type: none"> • images to be imposed can be hard copy or electronic.
<i>Manipulation/edit</i> may include:	<ul style="list-style-type: none"> • hand or electronic techniques.
<i>Output</i> may include:	<ul style="list-style-type: none"> • manually prepared layout or electronically generated on screen or plotting.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> • should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and maintain the output device	1.1.Devices are set up to manufacturer's specifications and enterprise standards 1.2. Output medium is calibrated by conducting exposure tests using appropriate software and hardware 1.3.Calibration is evaluated and necessary adjustments are made to output device
2. Adjust and manipulate images/files	2.1.Electronic files are evaluated as to suitability for output 2.2.Appropriate output resolution is set 2.3.Appropriate screen angle and dot type are set according to job specifications 2.4.Appropriate colour profiles are applied where necessary 2.5.Availability of high resolution images is assessed for OPI process 2.6.Appropriate fonts are available 2.7.All support files are included with the job
3. Output the image	3.1.The file is prepared for output to imaging device 3.2.Job queuing is managed to ensure efficient production 3.3.Images are outputted to the appropriate medium 3.4.Output is processed according to job specifications
4. Evaluate the result	4.1.Out put is checked for correct dot size, screen angles and film density 4.2.Image elements are checked according to original job specifications 4.3.Technical problems are solved and appropriate corrections are made 4.4.Job is prepared for the next stage of production

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the job brief
- collecting, analysing and organising information by matching information on production requirements and formats with the job brief
- planning and organising activities by planning the sequence of operations to facilitate smooth processing of the job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating screens and dots and colour profiles
- problem-solving skills by using different types of output (dot shape, screens) to best satisfy requirements of the job brief
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- effect the selection of printing process has on the output settings for final films
- methods/procedures that are available for calibrating an output device
- consequences of incorrect calibration
- corrective action when a file does not transfer correctly
- main points to be checked before sending a job to the RIP
- relationship to screen ruling and the selection of image resolution
- conditions that would cause a variation from conventional screen angles
- checks when preparing a job for OPI
- consequences for image quality if OPI files are not placed in their correct folders
- function of the low resolution file in the OPI process
- main factors that influence the processing speed of a job when being RIPped
- increasing the RIPping speed of a job
- setting changes that must be made to the output device when outputting a stochastic screen
- factors that influence the selection of the micron rating of the screen
- main types of file formats and the effects the selection of a format has on the processing of a job
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • final image must meet job specifications and appropriate colour profiles are applied as required • demonstrate an ability to find and use information relevant to the task from a variety of information sources • output TWO complex images.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Output</i> may include:	<ul style="list-style-type: none"> image setters.
<i>Input</i> may include:	<ul style="list-style-type: none"> files from a variety of software sources and platforms.
<i>Complexity</i> may include:	<ul style="list-style-type: none"> complex refers to intricate and detailed design (line and tones) and may include difficult vignettes, tone separations, colour reproductions.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate artwork and separations	1.1. Job is evaluated to identify required process 1.2. Job is evaluated to identify special colours
2. Produce special colour proofs	2.1. Colours are formulated according to job specifications 2.2. Film separations are exposed to appropriate medium 2.3. Colours are checked against the job specifications using densitometers, spectrophotometers or visual matching to supplied sample or PMS book 2.4. Colours are proofed in the correct sequence according to job specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by using information on colour and proofing to facilitate processing
- planning and organising activities by planning the sequence of operations to facilitate efficient processing of the job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by using the densitometer
- problem-solving skills by diagnosing colour matching and other proofing problems and correcting
- use of technology by using equipment correctly to ensure accuracy of output

Required knowledge

- systems that can be used for matching colours
- lighting conditions that should be used when matching colours
- effects that can humidity have on special colour proofing
- factors need to be considered when producing special colour for proofing
- correct colour sequence
- densitometer for proof evaluation
- colour evaluation charts?
- criteria for evaluating a colour proof
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> colours accurately match the job specifications the underlying skills of proofing should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the quality of the image be suitable for the printing process demonstrate an ability to find and use information relevant to the task from a variety of information sources produce TWO sets of special colour proofs that match original artwork and meet client and industry requirements.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools and equipment will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Produce step and repeat layout	1.1. Client information is gathered to enable step and repeat layout 1.2. A layout is produced according to client information 1.3. Data is stored for future retrieval using industry software package 1.4. A register of stock levels is maintained and advice about the depletion of stock is recorded according to enterprise procedures
2. Set up step and repeat machine	2.1. The film is mounted squarely to produce an accurate image 2.2. Accurate masks are cut for image protection/bleeds 2.3. Mounting foils are positioned in a chase to ensure a quality <i>output</i> 2.4. The film or plate is punched, loaded, exposed and processed according to job specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by obtaining client information
- collecting, analysing and organising information by matching the job brief with production requirements
- planning and organising activities by planning the sequence of operations to ensure efficient processing
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating exposures, chemical formulations and positioning of film
- problem-solving skills by identifying plate faults and correcting
- use of technology by using equipment is correctly to ensure ease of subsequent processing

Required knowledge

- relationship between the image of the original and the final substrate
- calculation required to produce the final layout
- correct operation of the step and repeat machine
- steps that are necessary to ensure safe operation
- calculations using x and y coordinates that are needed to be completed to produce the layout rough
- OHS concerns that are there when processing printing plates
- prepare and use a mask to suit the job
- procedures that are employed to ensure correct registration and accuracy/repeatability of exposure
- manuals, safety and other documentation that are relevant to this task and where are they kept
- information that is included in these documents

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select the cylinder	1.1. The job specifications are interpreted to select an appropriate cylinder and/or core 1.2. The base cylinder is selected according to the job specifications
2. Pre-plan for engraving	2.1. Opels are analysed against the job specifications and the technical requirements of the equipment 2.2. Opels are masked manually for any uneven start positioning
3. Engrave cylinder electronically	3.1. A clean work environment is maintained to ensure quality of <i>output</i> 3.2. Equipment is maintained according to manufacturer's specifications 3.3. The cylinder is engraved according to job specifications and enterprise procedures
4. Adjust finished cylinder	4.1. Add and delete to finished cylinder 4.2. Required changes are pre-planned 4.3. Additions and deletions are made to cylinder according to job specifications and enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief
- collecting, analysing and organising information by matching the job brief with production requirements
- planning and organising activities by planning the sequence of operations to facilitate processing
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating screen angles and rulings
- problem-solving skills by recognising cylinder faults and correcting
- use of technology by using equipment and software correctly to ensure ease of subsequent processing

Required knowledge

- OHS concerns that are there when engraving cylinders
- production parameters that should exist on the job ticket
- calculate a change in screen angle
- screen line ratio for fine rulings
- specific features of the laser engraving process
- cutting stylus affect the print quality
- characteristics of the diamond stylus used for colour work
- techniques of deleting errors on the finished cylinder
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the cylinder is correctly etched to ensure quality reproduction and meets print requirements the underlying skills of cylinder making should be transferable across the pre-press sector. It is important that the substrate for reproduction is identified and that the quality of the cylinder be suitable for the identified printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources prepare, set up and use an electronic engraving system to produce BOTH stylus and laser gravure cylinders.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both. --	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for scanning	1.1. The <i>original</i> is scaled to conform to production specifications 1.2. The original is assessed to determine scanner settings 1.3. The original is cleaned and correctly mounted according to production specifications 1.4. The correct settings are selected for the original to be scanned
2. Scan and check the image	2.1. The original is scanned according to quality requirements 2.2. The quality of the scanned image is checked for conformance to <i>job specifications</i> 2.3. The appropriate software is applied for any processing of text if necessary
3. Prepare the combining strategy	3.1. The required data from electronic files is accessed 3.2. The appropriate application is opened to undertake combining tasks 3.3. The required fonts are accessed according to job specifications
4. Combine data	4.1. Page layout size is created according to job specifications 4.2. <i>Elements</i> are placed in the page according to job specifications 4.3. Trapping (spread and chokes) is applied according to job specifications 4.4. Step and repeat function is accessed according to job specifications 4.5. Elements are stepped according to job specifications 4.6. The output menu is configured according to job specifications
5. Access and maintain the output device	5.1. Output devices are set up and maintained according to manufacturer's specifications and enterprise procedures 5.2. Suitable <i>material</i> is identified and loaded into the output device
6. Output the image	6.1. The system is activated to initiate the output according to job specifications 6.2. Quality is monitored according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the client brief
- collecting, analysing and organising information by scanning the image and combining it with data
- planning and organising activities by preparing the correct sequence of operations for the combining tasks
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by working with layout size when combining data
- problem-solving skills by maintaining quality standards during the production process
- use of technology by using relevant hardware and software to produce computer images for screen printing

Required knowledge

- tolerance that is allowed when scaling the original
- common scanner DPI for graphic line images
- original angling used
- resolution that is used for optical character recognition in scanning
- format the scan is saved
- formatting retained when OCR scanning
- external files access
- most appropriate software for this combining task
- page layout size
- type of elements that can be used
- trapping application
- amount of step and repeats in a job
- first step in configuring the output menu
- type of output devices used in screen printing
- range of substrates that is used in output devices
- file location prior to the output device
- checking techniques that are used to maintain quality standards

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correctly scan, electronically combine and output to designated devices according to job specification and client standards • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce TWO separate images on film and /or stencil • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • access to appropriate equipment and materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Original</i> may include:	<ul style="list-style-type: none"> line graphic or text.
<i>Job specifications</i> may include:	<ul style="list-style-type: none"> job sheets, work tickets or processing orders.
<i>Elements</i> may include:	<ul style="list-style-type: none"> text, headings, rules, pictures, graphics, tints, vignettes components and shapes.
<i>Material</i> may include:	<ul style="list-style-type: none"> electronic storage, film, papers, fabric or other substrates.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Enter and retrieve data	1.1. All data required for the job is checked and confirmed against <i>job specifications</i> 1.2. Data is accurately entered and completed to meet job specifications 1.3. <i>Fields</i> are created or modified to effectively meet job specifications whilst maintaining the integrity of existing data 1.4. Data structure is maintained according to job specifications 1.5. Automated facilities for data checking are used effectively 1.6. Data is located and retrieved as required by the job 1.7. The help function is used to find solutions to queries if required 1.8. Files are saved to preserve data integrity and to comply with organisational requirements
2. Set extraction requirements	2.1. The database fields meet the <i>placement requirements</i> for the document format 2.2. Client data requirements are prepared by interrogating the database 2.3. The information extracted to the template is correctly processed and saved according to job specifications 2.4. A <i>composition engine</i> is used to achieve the required data format and page layout requirements for merging variable data and static elements
3. Test data	3.1. Data is checked to ensure it is uncorrupted 3.2. Data is in the correct sequence required for the run 3.3. Required dynamic links operate correctly and settings conform to job specifications 3.4. Any adjustments required are made and retested
4. Output data	4.1. The database is configured to the printer and the printer output parameters are set to meet output requirements 4.2. <i>Quality standards</i> for data output are confirmed according to job specifications 4.3. The run is monitored to identify improvement opportunities and to maintain quality

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by creating or modifying fields to enter data
- collecting, analysing and organising information by locating and retrieving the correct data required of the job
- planning and organising activities by using a composition engine to achieve the required data format and page layout requirements
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by configuring the database with the correct output parameters to meet requirements
- problem-solving skills by ensuring that the database fields meet the placement requirements for the document format
- use of technology by operating a database for digital printing

Required knowledge

- computer specific applications
- job sheets
- fonts
- image parameters
- storage and retrieval of digital information
- production standards

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> entering, retrieving and preparing data for personalised printing. Both text and graphic may be used with fixed placement demonstrate an ability to find and use information relevant to the task from a variety of information sources for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that relevant hardware and software will be used for this unit.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Calibrate proofing device	1.1. The calibration of the machine is checked for conformance to job specifications 1.2. Appropriate ICC profiles are applied to meet colour requirements 1.3. Paper for <i>output</i> is matched to profile
2. Produce proofs from digital data	2.1. The image is retrieved from the database using industry software 2.2. Data file is checked for structural compatibility with capability of RIP 2.3. Special colours are sent to the RIP where appropriate 2.4. Proof is produced according to job specifications and workflow procedures 2.5. Proof is evaluated against job specifications using a densitometer, and checked against changes and original working data 2.6. Proof is prepared for client submission 2.7. Proof is used as a contract proof only if RIP is the same for both proof and film and if client accepts it as such

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by gaining client agreement on contract proof
- collecting, analysing and organising information by checking machine calibration
- planning and organising activities by calibrating the proofing device prior to producing a proof
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by using a densitometer to evaluate the proof
- problem-solving skills by checking the data file for structural compatibility
- use of technology by using relevant hardware and software to produce a digital proof

Required knowledge

- method of producing the colour image
- variations that may occur when utilising different imaging methods
- outputting the image and production of a colour proof, i.e. the transfer of files and the use of specific assembly software
- constraints on file structure that can the RIP impose
- an ICC profile
- differences that can different RIPs have on output
- use of a densitometer for proof evaluation
- calibration software for the output device
- colour evaluation charts
- criteria for evaluating a colour proof
- differences that can there be between preliminary proofs and a contract proof
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the underlying skills of proofing should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the quality of the image be suitable for the printing process demonstrate an ability to find and use information relevant to the task from a variety of information sources for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools, equipment and industry software packages will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Output</i> may include:	<ul style="list-style-type: none"> laser and inkjet proofing systems, using standard copier materials or specially prepared substrate.
<i>Input</i> may include:	<ul style="list-style-type: none"> a variety of electronic image files.
<i>Capture</i> may include:	<ul style="list-style-type: none"> variety of digital colour output devices.
<i>Manipulation/edit</i> may include:	<ul style="list-style-type: none"> software and hardware functions.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check file	1.1. Document is checked to ensure correct layout file and that there are no <i>non-printable elements</i> 1.2. Scanned images are checked for correct resolution and <i>electronic font modification</i> is avoided 1.3. Images requiring cropping and <i>compression</i> are edited in an <i>image editing environment</i> to maintain quality of image 1.4. Tint areas are checked to ensure correct percentage for printing 1.5. Unnecessary elements and blank pages are deleted if not required 1.6. A bleed allowance is incorporated in margins and borders
2. Set PDF Distiller	2.1. Correct paper size is set and fonts are chosen and embedded to meet quality print requirements with regard to copyright regulations 2.2. Appropriate PDF standard is established and selected 2.3. All job options, compression, colour management, colour separation and font options are selected and checked according to requirements of the <i>data recipient</i> 2.4. Process colour separations or spot colour jobs are checked and any problems resolved 2.5. A job ticket is set up according to enterprise procedures, if required 2.6. <i>Advanced job options</i> are selected depending on compatibility and system requirements 2.7. Job options set is named and saved to the correct folder
3. Create PDF	3.1. A printer description file or postscript language file is created and all relevant options are selected or export file settings selected 3.2. Saved postscript file is opened and the job option file is opened through the Distiller as required 3.3. Distiller/PDF export options are checked and set so it does not override the postscript file preferences 3.4. File is distilled and when processing is finished opened to view 3.5. The file is printed to postscript device and quality of

ELEMENT	PERFORMANCE CRITERIA
	<p>all elements are checked</p> <p>3.6.Changes to the file are made in the layout program and pages inserted into multiple page documents</p> <p>3.7.Additional files are converted or exported using the saved job option set</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS)skills for operating machinery, such as safely switching off machinery before cleaning
- communication skills for expressing ideas and information when preparing PDF files
- planning, analytical and organising skills for checking documents to ensure correct file layoutbefore preparing the postscript file
- teamwork skills for maintaining the production process in association with others
- numeracy skills for incorporating a bleed allowance into margins and borders
- problem-solving skills for resolving problems with process colour separations
- technical skills for generating high-end PDF files

Required knowledge

- OHS standards that relate to working for periods of time on computers
- PDF printer driver options
- driver types and preferred application
- suitability of a PDF writer for high-end printing
- true base 13 fonts

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- prepare a high-end PDF file for pre-press
- locate and use information relevant to the task from a variety of information sources.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment required to generate a high-end PDF files
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when generating a high-end PDF file.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role.

For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Non-printable elements</i> may include:	<ul style="list-style-type: none"> • hairlines • elements outside margins.
<i>Electronic font modification</i> may include:	<ul style="list-style-type: none"> • bold • italic • shadowed • contoured • select fonts like: <ul style="list-style-type: none"> • Times-Bold • Times-Italic.
<i>Compression</i> may include:	<ul style="list-style-type: none"> • compression levels • compression types.
<i>Image editing environment</i> may include:	<ul style="list-style-type: none"> • Adobe Photoshop • Adobe PhotoDeluxe • Corel Photo-Paint • Procreate Painter • MGI PhotoSuite • Adobe Illustrator • CorelDRAW • Macromedia Freehand • Creature House Expression.
<i>Data recipient</i> may include:	<ul style="list-style-type: none"> • pre-press house • pre-press technician • printing house.
<i>Advanced job options</i> may include:	<ul style="list-style-type: none"> • converting gradients • ASCII format • postscript to override job options • document structuring conventions options.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Save digital files	1.1. Files are named using enterprise format 1.2. File is checked for use of <i>appropriate formats</i> required for enterprise processing 1.3. <i>Version control</i> is used to ensure the most recent file can be accessed
2. Transfer digital files	2.1. Files to be transferred (sent or received) are selected and the correct method of transfer is chosen 2.2. Locations where the files are to be saved or downloaded are accurately located and navigated 2.3. Files are transferred to required location for processing 2.4. Transferred (sent or received) files are checked to ensure correct transfer has occurred 2.5. Files are documented, moved, renamed, copied, archived and deleted as necessary according to enterprise standards
3. Retrieve and manage digital files	3.1. Required files are retrieved and opened from digital file system 3.2. Computer search functions are used to locate and retrieve files 3.3. File is sent to <i>required location</i>
4. Archive digital files	4.1. <i>Archive system</i> is created according to enterprise protocol 4.2. Consistent, regular backup strategies are undertaken to allow for retrieval of files if there is a data loss event 4.3. Files are retrieved from archive system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication and literacy skills for expressing ideas and completing required enterprise documentation
- planning, analytical and organising skills for selecting files to be transferred, choosing correct mode and file naming protocols for transferred files
- teamwork skills for maintaining the production process in association with others
- numeracy skill to calculate file size, transfer rates, archival and storage requirements and reviewing the settings
- problem-solving skills for locating, downloading, renaming, moving, copying, archiving and deleting files
- technical skills for transferring digital files

Required knowledge

- enterprise file format standards
- storage media:
 - optical
 - flash
 - magnetic
- file transfer protocols:
 - USB
 - Firewire
 - asymmetric digital subscriber line (ADSL) wireless
 - email attachment
 - ethernet
- file compression methods and effect on file type required for enterprise processing
- file formats and sizes, and their effect on RAM requirements, storage, processing and transfer protocols
- OHS standards that relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> manipulating, deleting and transferring digital files by using enterprise determined protocols ability to locate and use information relevant to the task from a variety of information sources.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> that conditions are typical ambient conditions found in the workplace access to relevant facilities, equipment, software and hardware required to transfer digital files use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate practical demonstration by the candidate in manipulating, deleting and transferring digital files.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Appropriate formats</i> may include:	<ul style="list-style-type: none"> • collect for output, package or similar functions in proprietary software • encapsulated postscript (EPS) • PDF • postscript or other file format standards as required by enterprise • XML.
<i>Version control</i> may include:	<ul style="list-style-type: none"> • recording date • time and version numbers for each major amendment distribute • recording distribution destinations of versions • distribution methods recording amendments to each version proof using: <ul style="list-style-type: none"> • digital signatures • file permissions.
<i>Required location</i> may include:	<ul style="list-style-type: none"> • email • networked storage • transfer via intranet • uploading to or downloading from: <ul style="list-style-type: none"> • a destination website • portable storage device - optical, magnetic or flash.
<i>Archive system</i> may include:	<ul style="list-style-type: none"> • networked storage • uploading to, or downloading from: <ul style="list-style-type: none"> • a destination website • portable storage device - optical, magnetic or flash • other devices used in automated and/or scheduled archiving and backup.

ICPPP411C Undertake a complex design brief

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to undertake advanced graphic design from the negotiation of design briefs through to the production of complex finished artwork.
------------------------	---

Application of the Unit

Application of the unit	This unit requires an individual to negotiate a design brief, plan the design process and produce a complex design that meets the design brief and production and quality requirements. The individual will work independently and take responsibility for fulfilment of the brief.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	ICPPP311C Develop a detailed design concept.	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Negotiate a complex design contract	1.1. Communication with the <i>client</i> results in the development of a complex design brief and client agreement is secured 1.2. Job analysis and research are undertaken to source cost-efficient design production procedures 1.3. Possible <i>design options</i> are analysed to meet optional printing processes and substrates 1.4. Individual design stages of the brief are timed and <i>costed</i> to determine accurate parameters of cost 1.5. A quotation is prepared using accurate estimates to communicate to the client the fees required to undertake the brief 1.6. Client approval to proceed is obtained
2. Plan the design process	2.1. The appropriate production processes are planned and scheduled to meet the specifications of the brief for the printing substrate 2.2. Materials are sourced and ordered to conform to the requirements of the brief 2.3. Design team members are briefed and work roles allocated to facilitate the orderliness and timeliness of the design process
3. Render a complex graphic design	3.1. A <i>complex graphic design</i> concept is rendered electronically or manually to conform to the brief 3.2. Adjustments or recommendations are made to enhance the design according to the brief in consultation with the client 3.3. The production processes of the design concept for colour, production run, substrates and costs are assessed according to the requirements of the brief 3.4. The specifications for reproducing the finished artwork are annotated so as to define specified printing processes and substrates
4. Ensure feasibility of production	4.1. Type options are checked to meet specified printing processes and substrates 4.2. The reproduction feasibility of multiple colour vignettes is analysed to meet specified printing processes and substrates 4.3. Line and tone are combined and dot complexity of photography is analysed to meet specified printing processes and substrates

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. The feasibility of complex imposition and folds are calculated to meet specified printing processes and substrates</p> <p>4.5. Foils and embossing are checked to meet specified printing processes and substrates</p>
5. Solve technical problems	<p>5.1. Materials and/or format are reviewed to ensure the most suitable are selected and therefore do not create problems</p> <p>5.2. Technical problems are resolved by re-design or amendment of the brief in consultation with the client to acceptable standards</p>
6. Ensure quality output	<p>6.1. Standards for reproduction are documented to form a reference bank for the design process</p> <p>6.2. Design solutions are filed and stored ready for retrieval according to enterprise procedures</p> <p>6.3. Internal performance standards are evaluated to identify potential reforms for future enterprise procedures</p> <p>6.4. Future actions are determined to incorporate accurate cost and time analyses into future briefs</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by determining exactly what the client wants from the brief and subsequent discussion
- collecting, analysing and organising information by balancing and matching client demands with requirements for reproduction and costs
- planning and organising activities by coordinating job sequence so that materials arrive, are processed and can be checked efficiently
- teamwork when ensuring that designers, printers and clients all know what they need to do and when
- mathematical ideas and techniques by calculating costs and determining enlargement/reduction factors
- problem-solving skills by coping with discrepancies between the brief and what is possible
- use of technology by using appropriate software to create the design and ensuring files are saved in the required format

Required knowledge

- effect of the design brief upon the selection of a printing process
- different design requirements for THREE printing processes, operations or electronic media
- factors that have you considered when selecting appropriate colours for this job
- choice of colours and the affect on the mood of a targeted consumer
- procedures that have you implemented to produce a special effect
- selection of type face design to the intended product
- factors that have you consider when selecting the appropriate printing substrate for this job
- effects different inks and substrates have on design
- problems that may arise when running an image across a double page spread
- steps that would be taken to overcome the problem of finger marks on dark solids
- common technical problems that occur when a design is printed and how can they be resolved
- recognising and rectifying faults on artwork supplied by the client
- effect of colour breakdown and sequence on printing operations and printed jobs
- matching artwork to customer's specifications as outlined on the job sheet
- methods that you use for assessing the quality and suitability of externally produced artwork

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• problems that can be caused by using sub-standard and unsuitable artwork• design factors that affect the cost of a printed job• producing a design within budget• manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents• other sources of information that are available |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> developing an agreed clear design brief and preparing a quotation. Rendering a complex design taking into account the design brief and quotation. Meeting the design reproduction and end user requirements the underlying skill of solving complex technical problems of layout to conform to brief specifications should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competencies be demonstrated with a clear identification of printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources produce finished art from a complex design brief. Provide evidence that each stage from initial negotiations to completion has been carried out satisfactorily.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools, equipment and industry software packages will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE	
assessment	industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Clients</i> may include:	<ul style="list-style-type: none"> internal or external clients.
<i>Design tools</i> may include:	<ul style="list-style-type: none"> a range of manual equipment or hardware and design software applications.
<i>Costed</i> may include:	<ul style="list-style-type: none"> hourly rates, material costs and any other factor contributing to job costs.
<i>Complex graphic design</i> may include:	<ul style="list-style-type: none"> complex refers to intricate and detailed design (line and tones) and may include difficult vignettes, tone separations, colour reproductions and embossing.
<i>Applications</i> may include:	<ul style="list-style-type: none"> design can be specific to publishing, consultancy, advertising or packaging.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Compose type	1.1. Type is composed according to job specifications 1.2. Allowance is made for type run-arounds, stipples, spot colour and complex shapes 1.3. Kerning is applied to type according to job specifications
2. Solve typographic technical problems	2.1. Capabilities of the equipment to produce type are assessed correctly 2.2. Technical problems relevant to the colour and reproduction of type are resolved by re-evaluation of typographic elements or amendment of the brief in consultation with the client
3. Ensure quality of typographic output	3.1. The finished typography is checked for conformance to client specifications, including correct grammar and punctuation and printing requirements 3.2. The quality of typographic reproduction is monitored to ensure the required standards of output
4. Manage the type system	4.1. The electronic type system is managed to facilitate the storage, retrieval and outputting of data 4.2. Type software and fonts have current user licences that allow the type to be used for the job 4.3. Type software and files are stored in appropriate locations for future access

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the brief and discussing format of inputs with the client
- collecting, analysing and organising information by matching information on fonts, typography, colour, production constraints with the brief to ensure best possible outcome
- planning and organising activities by composing type using overlays and tints
- teamwork when resolving technical problems in consultation with the client
- mathematical ideas and techniques by calculating fit, font size, enlargement/reduction factors and costs
- problem-solving skills by solving problems of fit, colour and costs to produce best possible result
- use of technology by using appropriate software correctly to ensure ease of subsequent processing

Required knowledge

- typographic considerations that must be taken into account when making type face selections for the various printing processes or electronic media
- effects that type alignment and justification have on a job
- nature of dynamic design layouts which affect type selection
- difference between text point size and display point size
- basic classifications of text typefaces
- problems that arise when using fine type in reverse print
- typographic principles that must be considered when stippling type
- colour considerations when using text type
- references that you utilised to evaluate if appropriate grammar has been used in this job
- references that you utilised to evaluate if appropriate punctuation has been used in this job
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • composing type using overlays, tints and kerning to meet specifications. Resolving any technical problems. The quality of type reproduction meets the quality standards defined in the job specifications • the underlying skill of solving typographic problems should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competencies be demonstrated with a clear identification of printing processes • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce and evaluate TWO complex typographic jobs according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Mount and prepare original copy	1.1. <i>Copy</i> is mounted and positioned according to scanner/artwork specifications 1.2. Crops are marked to minimise the use of disk space 1.3. Multiple copy units are correctly identified and assigned according to technical specifications
2. Set up and adjust the scanner	2.1. The scanner is calibrated and the program is set according to job specifications 2.2. Colourcast and catchlights are assessed to ensure the image is scanned according to job specifications 2.3. Adjustments are made to tone and colour correction requirements 2.4. End points are set 2.5. Scanner settings are utilised to achieve the required results for varied print processes
3. Produce and evaluate complex images	3.1. Images are scanned using appropriate software commands and scanner controls 3.2. Scanned images are evaluated for colour and grey balance, tone reproduction, cast removal and end point accuracy 3.3. Images are stored on file and displayed on monitor or <i>output</i> device according to job specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting explicit and implicit requirements of the job brief
- collecting, analysing and organising information by matching constraints of production with requirements of the job brief
- planning and organising activities by ensuring scan procedure is in correct sequence
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating enlargement/reduction factors, resolutions, colour profiles and grey balances
- problem-solving skills by adjusting colour and grey balance to ensure best possible outcomes
- use of technology by using software and hardware correctly to ensure ease of subsequent processing

Required knowledge

- examples of why scanner settings need to be varied to suit subsequent printing processes or electronic output
- factors that influence selection of highlight and shadow aim points
- critical qualities of a copy that need evaluation prior to reproduction
- main points to be considered when preparing a copy for scanning
- determining grey balance requirements prior to applying colour correction
- process of determining grey balance requirements
- factors that determine the requirement for colour correction
- applying catchlight controls
- considerations that are necessary to ensure predictability and repeatability at the output stage
- methods of storage and filing of images for retrieval
- criteria used for evaluating scanned images
- selecting the file format (eg TIFF, EPS, PICT) to save the scan
- other file formats are available for saving scans and when they would be used
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> scanned images should have high quality colour, grey balance, tone reproduction and cast removal the underlying skill of scanning images should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the quality of the scanned image be suitable for the identified printing processes demonstrate an ability to find and use information relevant to the task from a variety of information sources use a medium to high-end full colour scanner (with full software capabilities) to reproduce at least TWO colour continuous tone originals with different contrast characteristics and ONE rescreen according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment it is expected that special purpose tools, equipment and industry software packages will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Input/copy</i> may include:	<ul style="list-style-type: none"> transparency (positive and negative) reflection and re-screens for mono, RGB, CMYK evaluation, preparation and mounting.
<i>Output</i> may include:	<ul style="list-style-type: none"> film, disk, proof.
<i>Capture</i> may include:	<ul style="list-style-type: none"> flat-bed or drum scanner with full colour capabilities.
<i>Manipulation/edit</i> may include:	<ul style="list-style-type: none"> software to achieve programming and functional control to suit various printing processes and copy specifications.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare colour options	1.1. <i>Colour requirements</i> of the brief are identified and clarified if necessary 1.2. The effectiveness of different <i>colour schemes</i> used previously by self and others are compared to influence current artwork 1.3. <i>Colour tools</i> are used to inform choice of colours 1.4. Overall colour composition is developed taking into account <i>target audience</i> , <i>balance</i> and relationships
2. Apply colour to artwork	2.1. Colours are applied to the artwork according to specifications of the brief 2.2. Colour and objects are appraised to ensure overall balance and emphasis and adjustments made as required 2.3. Any halftones are matched with similar colours according to specifications of the brief 2.4. Overall artwork is appraised to ensure best possible colour options are used given the brief and other elements of the artwork and changes are made if necessary 2.5. Artwork samples that effectively meet the brief are produced 2.6. Artwork is saved and prepared for presentation to client

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by applying colour effectively to the design brief
- collecting, analysing and organising information by considering previous colour schemes used by self or others
- planning and organising activities by preparing colour options prior to applying colour to artwork
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by appraising overall artwork to ensure best possible colour options are used
- problem-solving skills by identifying the effectiveness of different colour schemes
- use of technology by using the relevant hardware and software to effectively apply colour

Required knowledge

- reducing colour for compression
- market segmentation responses to colour
- colour attributes
- browser safe colours
- colour models

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> producing artwork with a sophisticated use of colour that demonstrates a fundamental understanding of colour theory demonstrate an ability to find and use information relevant to the task from a variety of information sources for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone and/or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment relevant hardware and software.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Colour requirements</i> may include:	<ul style="list-style-type: none"> object colour balance, colour contrast, browser safe colours, RGB Spectrum, process colour, spot colour.
<i>Colour schemes</i> may include:	<ul style="list-style-type: none"> colour grading, colour scales, colour attributes in hue, chroma, value.
<i>Colour tools</i> may include:	<ul style="list-style-type: none"> colour Hex charts, colour wheels, colour swatches, Sixteen Predefined Colours, PANTONE.
<i>Target audience</i> may include:	<ul style="list-style-type: none"> consumer preferences, corporate identity, mood, age group or gender appeal, social connotations of colour.
<i>Balance</i> may include:	<ul style="list-style-type: none"> optical centre, colour relationships, composition balance, colour/object balance.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify colour requirements	1.1. Printing conditions are determined to identify colour management requirements 1.2. Printer's requirements are established to guide the provision and use of ICC colour profiles
2. Fingerprint press if printing in a controlled environment	2.1. Suitable <i>test charts</i> are selected 2.2. Test chart is printed with standard ink densities on a range of stock including non-standard types such as yellow parchment 2.3. Densitometer and/or <i>spectrophotometer</i> is used to examine printed test charts and generate colour profile for that press and that stock
3. Calibrate digital proofing device	3.1. Proofer is linearised for required stock 3.2. Digital test file (eg IT8 chart) is obtained 3.3. Test file is printed on a <i>proofing</i> device and on the type of press that will be used in order to obtain a proof for both film and direct to plate technologies 3.4. Results are measured with a spectrophotometer 3.5. Results are used to generate output profile that allows for dot gain, GCR, UCR, total gradients and black values
4. Create different monitor profiles using colour tuning package	4.1. A densitometer with screen suction device, if available, and/or appropriate <i>software</i> (OR) are used 4.2. Contrast (white level) and brightness are set 4.3. RGB and CMYK ICC profiles are applied 4.4. Jobs on screen are viewed through appropriate profiles
5. Calibrate scanner	5.1. Test chart (eg IT8) is loaded 5.2. Scanner input profiling software is used to calibrate scanner (OR) 5.3. All settings are put to zero (0) 5.4. Test chart is scanned and digital proof is outputted 5.5. Spectrophotometer is used to measure proof and ICC profile as generated ICC profile is loaded into scanning software
6. Calibrate digital camera	6.1. Standard lighting conditions are set up 6.2. ICC target is photographed and digital proof is outputted 6.3. Spectrophotometer is used to measure proof and ICC

ELEMENT	PERFORMANCE CRITERIA
	profile as generated 6.4. ICC profile is loaded into digital camera software
7. Carry out maintenance	7.1. Whole system is checked every two to three months 7.2. Monitor calibrations are checked monthly 7.3. Digital proofing devices are checked at least every time ink or paper stock is changed
8. Use colour profiles	8.1. Appropriate profiles are used to ensure that colour on <i>monitors</i> , proofs and final product match as closely as possible 8.2. In a <i>controlled environment</i> press fingerprint for final output is used, otherwise digital proofer profile is used 8.3. Colour wedges are included in all files and outputs

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by printing a test file on proofer
- collecting, analysing and organising information by determining printing conditions in order to identify colour management requirements
- planning and organising activities by clarifying colour requirements before generating a proof
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by using densitometry, spectrophotometry and colour profiles
- problem-solving skills by diagnosing and correcting colour problems
- use of technology by using software and hardware correctly to ensure consistency of output

Required knowledge

- OHS issues need to be considered when managing colour for pre-press
- measuring light intensity and colour temperature
- standard lighting conditions for matching colour
- effects different lighting conditions have on using a monitor, proofing and printing
- difference between RGB and CMYK colour
- theory behind UCR and the effect it has on an image
- theory behind GCR and the effect it has on an image
- densitometry and spectrophotometry measure
- ICC profiles and why are they used
- ICC profiles and how they affect output
- factors that influence selection of highlight and shadow aim points
- grey balance requirements to be determined prior to applying colour correction
- factors that determine the requirements for colour correction
- use of different ink densities for different stocks
- standard ink densities for different types of job
- effects different stocks have on colour reproduction
- effects different inks have on colour reproduction for proofing and final production
- effects the age and configuration of the press (eg 2-colour vs 4-colour) have on colour reproduction
- type of press and what printing process are being used for final output
- strengths and limitations with respect to colour reproduction of different printing

REQUIRED SKILLS AND KNOWLEDGE

processes

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> managing colour in pre-press operations to ensure that proofs, monitors and final products match demonstrate an ability to find and use information relevant to the task from a variety of information sources a portfolio that demonstrates all criteria have been met. This should include evidence of THREE jobs with final product printed on various stocks and matching digital proofs on simulated stock. Monitors should also be checked to ensure that they have different loaded profiles that match jobs. There should also be evidence of colour management system maintenance procedures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Test charts</i> may include:	<ul style="list-style-type: none"> • 3 and 4-colour neutrals • CMYK colour scales and a range of colour patches.
<i>Spectrophotometers</i> may include:	<ul style="list-style-type: none"> • range of strip reader style devices including <ul style="list-style-type: none"> • Gretag • Macbeth • Xwrite.
<i>Proofing systems</i> may include:	<ul style="list-style-type: none"> • range of digital proofing systems used in the industry.
<i>Software</i> may include:	<ul style="list-style-type: none"> • range of industry colour applications including colour management software (eg Colorsync), profile creating software, scanner profiling software (eg Colortone Pro, Scan Open), densitometry and spectrophotometry software.
<i>Monitors</i> may include:	<ul style="list-style-type: none"> • range of monitors used in the pre-press sector.
<i>Controlled environment</i> may include:	<ul style="list-style-type: none"> • a controlled environment is one in which temperature and humidity are controlled, the press to be used for the job is known as is, preferably, the printer.
<i>Printing processes</i> may include:	<ul style="list-style-type: none"> • all printing processes.

Co-requisite units		

ICPPP435C Generate complex imposition

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to undertake complex electronic imposition
------------------------	--

Application of the Unit

Application of the unit	This unit requires the individual to develop an imposition that best meets the job specifications and substrate size with a minimum delay in workflow.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Impose images electronically	1.1. Industry designated software is applied to the imposition of images according to job specifications 1.2. Imposition options are reviewed to ensure best fit for final substrate size 1.3. Trapping variables are taken into account 1.4. The particularities of the press are considered
2. Solve technical problems of imposition	2.1. Technical problems relevant to imposition are considered in the <i>imposition</i> scheme 2.2. A lay-down sheet is prepared according to cutting and creasing and folding requirements 2.3. Binding and finishing requirements are considered according to job specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the job brief
- collecting, analysing and organising information by accessing data on software capabilities, production requirements and imposition schemes and matching them with the job brief
- planning and organising activities by planning the sequence of operations to facilitate smooth processing of the job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating fit, spatial relationships between elements, impositions and colour profiles
- problem-solving skills by adjusting fit and imposition schemes to production requirements so that output meets the job brief
- use of technology by using software correctly to ensure ease of subsequent processing

Required knowledge

- examples of how subsequent printing processes or electronic output affect imposition
- imposition marks and why are they there
- difference between saddle stitch and perfect binding
- head margins
- difference between sheetwise and work and turn
- trapping requirements that apply for specific jobs
- saving a PostScript file
- imposition set up document
- installing fold and cut marks
- nominating creep settings
- creep and bottling
- availability of a server signature program to the output station
- technique that is used to verify that pictures and fonts are available
- mock-up and why is it used
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • imposition that best meets the job specifications and substrate size • the underlying skill of solving complex technical problems of imposition to conform to brief specifications should be transferable across the design and pre-press sectors. It is important that the substrate for reproduction is identified and that the competencies be demonstrated with a clear identification of printing processes • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce TWO complex impositions according to the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • it is expected that special purpose tools, equipment and industry software packages will be used where appropriate.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Imposition software</i> may include:	<ul style="list-style-type: none"> may include Imposition Publisher, Preps, DynaStrip, Impose-X, FACILIS IM, Panther PageImposer. New software applications and new versions of existing products enter the market regularly and therefore this example group will change imposition plug-ins (eg Quark Express, Impolite) and imposition components of page layout applications where imposition is completely automated are not appropriate for assessing this unit of competency.
<i>Input</i> may include:	<ul style="list-style-type: none"> complex imposition data.
<i>Capture</i> may include:	<ul style="list-style-type: none"> any desktop or proprietary computing system.
<i>Manipulation/edit</i> may include:	<ul style="list-style-type: none"> a suitable imposition application.
<i>Output</i> may include:	<ul style="list-style-type: none"> printers, hard disk, imagesetters, digital proofers or plotters.
<i>Complexity</i> may include:	<ul style="list-style-type: none"> complex refers to intricate and detailed imposition and may include difficult cuts for packaging, design variations, folds and bindings.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up and maintain the output device	1.1. Output device is set up to manufacturer's specifications and enterprise standards 1.2. Output device is calibrated for profiles, stock and ink types through use of calibration pages and densitometry 1.3. Calibration is evaluated regularly and necessary adjustments are made to output device
2. Adjust and manipulate images/files	2.1. Files on electronic media are evaluated as to suitability for output 2.2. Appropriate output resolution and data are set 2.3. Appropriate screen angle and dot type are set according to job specifications 2.4. Colour profiles appropriate to the job specifications are applied as required 2.5. Availability of high resolution images for OPI process is assessed 2.6. Appropriate fonts are available 2.7. All support files are included with the job
3. Output the image	3.1. The file is prepared for output to plate setter or digital printing press using industry designated software 3.2. If outputting to plate, plate material is selected according to requirements of the press and job specifications 3.3. If outputting to plate, plate size is selected according to the requirements of the press 3.4. Image is positioned on plate/press with correct orientation with respect to grip 3.5. Job queuing is managed to ensure efficient production 3.6. Images are outputted to the appropriate medium 3.7. Output is processed according to job specifications
4. Evaluate the result	4.1. Out put is checked for correct dot size and screen angles 4.2. Image elements are checked according to original job specifications 4.3. Technical problems are solved and appropriate corrections are made 4.4. Job is prepared for the next stage of production (eg

ELEMENT	PERFORMANCE CRITERIA
	plates are processed)

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting implicit and explicit requirements of the job brief
- collecting, analysing and organising information by matching information on production requirements and constraints with file formats and the job brief
- planning and organising activities by planning the sequence of operations to facilitate smooth processing of the job
- teamwork when organising delivery of files and materials to facilitate smooth processing
- mathematical ideas and techniques by calibrating equipment to the requirements of file formats, outputs and the job brief
- problem-solving skills by diagnosing technical problems with output and adjusting
- use of technology by using equipment correctly to ensure ease of subsequent processing

Required knowledge

- effect selection of printing process has on the output settings
- methods/procedures that are available for calibrating an output device
- consequences of incorrect calibration
- differences in stock affect on calibration
- calibration check frequency
- systems procedures and file management
- rectifying file that do not transfer correctly
- main points to be checked before sending a job to the RIP
- image manipulation
- screen ruling relationship to the selection of image resolution
- conditions that would cause a variation from conventional screen angles
- checks when preparing a job for OPI
- consequences for image quality if OPI files are not placed in their correct folders
- function of the low resolution file in the OPI process
- main factors that influence the processing speed of a job when being RIPped
- increasing the RIPping speed of a job
- setting changes that must be made to the output device/software when outputting a FM screen
- factors that influence the selection of the micron rating of the screen?
- main types of file formats and the effects the selection of a format has on the

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess the requirements of the brief	1.1. Discuss brief with client to ensure requirements are understood 1.2. Check that all relevant information is in the brief ie end use, dimensions and product characteristics
2. Design carton to suit requirements of the brief	2.1. Determine appropriate carton style, size, material and calliper to meet the client brief 2.2. Use scanners or digitisers to import <i>design material</i> into computer program 2.3. Draw design using computer program 2.4. Set height, width and depth and gluing flap dimensions to meet the requirements of the client brief 2.5. Requirements for knife setting, stripping and gluing in production are checked and position is designed so as to have correct grain direction and to maximise use of material
3. Use plotter to cut sample	3.1. Output device (eg plotter) is set up ready for downloading design 3.2. Cutting and creasing depths are set 3.3. Calliper of material is checked 3.4. Material is positioned correctly 3.5. Output device is operated safely according to manufacturer's specifications and enterprise procedures 3.6. Routine machine maintenance is carried out
4. Assemble sample	4.1. Sample is cut by hand adopting safe practices 4.2. Cut sample is folded and glued by hand ensuring that angles and construction are correct
5. Check and adjust design	5.1. Sample is checked for conformance to the client brief 5.2. Design is adjusted if necessary to meet job specifications
6. Output design	6.1. Design is saved ready for downloading to forme cutter 6.2. Design is outputted as keyline for artwork or as film as required 6.3. Relevant paperwork is completed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and discussing possibilities with the client
- collecting, analysing and organising information by matching the job brief with data on carton types, designs and materials
- planning and organising activities by planning the sequence of operations to facilitate processing
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating sizes, callipers and efficient use of materials
- problem-solving skills by recognising and fixing problems with samples
- use of technology by using equipment correctly to ensure efficient output and accurate designs

Required knowledge

- health and safety concerns when using computers, plotters and scanners?
- affect of board grain on carton design
- affect of board calliper on carton design
- correct use of a micrometer
- appropriate board for a product
- scuff, heat and moisture resistance
- effect inks and sealants have on board characteristics and selection
- computer programs that are available for carton design
- programming a new design on the computer system
- uses and limitations of digitisers and scanners
- using digitisers and scanners
- types of products that cartons are used for
- determining if a design is appropriate for its end use
- effect on design and materials refrigeration has
- aspects of product sizing and tolerances that should be rechecked
- setting tolerances in a design
- stability in a display carton
- determining appropriate strength
- determining appropriate size and placing of glue lines and nips
- carton designs that are suitable for machine packing

REQUIRED SKILLS AND KNOWLEDGE

- carton designs that are suitable for hand packing
- constraints on design and positioning on the forme that are caused by the requirements of knife making and production
- manufacturing requirements with regard to cutting and gluing affect carton design
- appropriate angles and cornering of flaps
- the main features of, and differences between, different graphic design software programs that need to be considered when outputting carton designs
- ensuring that output is appropriate for the graphic design software used by the customer
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the sample carton accurately meets the client brief and substrate characteristics demonstrate an ability to find and use information relevant to the task from a variety of information sources produce TWO different complex carton designs.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check job files and perform pre-flight	1.1. All details required for the job are checked and confirmed against job specifications 1.2. Files are loaded and all file resources are checked to determine if file is ready for production 1.3. File format is identified and best method of submission is chosen 1.4. Missing fonts are, where available, embedded and image data optimised, cropped and/or compressed if necessary 1.5. Hairlines are thickened to a minimum width, if necessary 1.6. Layout images are assigned as high resolution data and down sampled 1.7. Thumbnails are generated for viewing pages
2. Create portable job ticket format processors	2.1. Parameters for individual elements or steps for all phases of the job are defined 2.2. All phases of the job are sequenced according to the workflow and enterprise processes 2.3. If necessary access levels are set for operators 2.4. The workflow definition is reviewed and saved
3. Transform colours	3.1. Assigned colour libraries are checked for consistency and colour names are converted if inconsistency is present 3.2. Spot colours are converted to process colours where necessary 3.3. Output colours are matched to colours input using selected ICC profile 3.4. Colours are set for the final proof output
4. Set trapping parameters	4.1. The portable job ticket format trapping settings are used and additional trapping requirements are added where appropriate 4.2. Traps are viewed and checked in the file 4.3. If necessary traps are edited, removed or replaced 4.4. An appropriate separation-capable proof is viewed to ensure that the separations will output as expected
5. Proof pages	5.1. An imposition plan is assigned to the job 5.2. A form proof from the plotter is printed containing all printer marks and signature marks are viewed for final checking

ELEMENT	PERFORMANCE CRITERIA
	5.3. Pages are outputted on a page proofer and checked 5.4. Any required changes are made and proof is approved by client
6. Prepare for output	6.1. Jobs to be imaged are outputted to film or plate 6.2. CIP3/CIP4 data is captured and dealt with according to enterprise procedures 6.3. Information for the presetting of cutting and folding machines is generated if required and plug-ins are available 6.4. The Print Production Format files are exported to or saved for the print console and outputted for plate or film imaging 6.5. Job data is saved and archived as required 6.6. Documentation is signed off according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by exporting or saving print production format files
- collecting, analysing and organising information by loading files and checking file resources to determine production status
- planning and organising activities by proofing pages prior to preparing for output
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by generating thumbnails for viewing pages
- problem-solving skills by checking assigned colour libraries and converting inconsistent colour names
- use of technology by creating portable job ticket format processors

Required knowledge

- pre-flighting
- hairline effects
- importance of the colour space
- trapping

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • setting up and operating an automated workflow to produce a print ready file • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up and operate an automated workflow to produce TWO different print ready files • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • automated workflow software.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify content requirements	1.1. Data purpose is identified from job requirements and clarified with client 1.2. Data file format and type of database are identified 1.3. Layout is determined from job requirements and confirmed with client 1.4. Static and variable areas are identified according to job specifications 1.5. Accuracy of data is confirmed and signed off as such by client 1.6. The requirement for additional software integration is determined such as postal software
2. Develop the template	2.1. Fields are created and named consistently to reduce errors 2.2. Copy holes and data are marked-up to match the job specifications 2.3. A report for the printer is developed which identifies the relevant data assigned to each copy hole according to job specifications and business rules 2.4. Copy holes are assigned and related information documented for the printer to understand the connection to the data 2.5. The correct number of fields is available for the job 2.6. Template is signed off as suitable by client
3. Finalise and test the template	3.1. Business rules are tested and if possible a soft proof is reviewed 3.2. The final document is viewed with a markup language parser 3.3. Spot colours are converted to process colours where necessary 3.4. The template is well-formed, free of errors and meets the needs of the client 3.5. The template is extensible to meet future client needs 3.6. Template is finalised and made ready to send to the press

Required Skills and Knowledge

Required knowledge

- standard Generalised Markup Language and why it is important
- SGML relationship to XML and PPML
- difference between SGML, PPML and XML and the use of SGML over XML
- difference between Cascading Style Sheets (CSS) and XSL
- intended purpose of XSL
- use an extensible markup language over HTML
- ways that you use both with the one set of data
- purposes of meta data within markup language documents
- PRISM importance for content publishing
- personalised Print Markup Language relationship to XML

Evidence Guide

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to develop the content meaning and document structure for markup for web page or electronic publishing purposes.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit requires the individual to create documents that have structure, content, readability and design appropriate for an online or print audience.</p> <p>Electronic publishing here refers to the creation and delivery of a document/information to the reader as electronic output or for print format.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	ICPPP396A Generate high-end PDF files.	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify document requirements	1.1. Content meaning and information structure are developed based on the document intent, final media and intended audiences 1.2. Information is identified and grouped according to the job brief 1.3. Target audience requirements and expectations are determined according to the brief
2. Plan content structure	2.1. Information is arranged in related topics and a logical sequence 2.2. Content meaning is tested by simulating the generation of new coherent documents based on the original content 2.3. A hierarchy of information is developed with <i>data</i> checked to confirm the hierarchy sequence
3. Develop information architecture	3.1. An information hierarchy is prepared catering for the physical storage of the files 3.2. Search and retrieval mechanisms are prepared for content discovery 3.3. An information hierarchy is designed catering for navigation and access between files or groups of content
4. Develop navigation system	4.1. High level, local and document navigational systems are built based on information architecture 4.2. The design is consistent, intuitive and has a logical labelling system to provide access to various levels and type of content 4.3. Labels and indexes are clear, consistent, coherent and relatively intuitive to enable target audience access
5. Design information layout	5.1. Templates for textual and graphic elements are developed to facilitate consistent and uniform layout and visual design 5.2. An extensible template is linked to the document
6. Test the document	6.1. A suite of prototypes for all document levels is developed 6.2. The rigour of the information architecture at all levels is tested 6.3. Correct functioning and intuitive use of the navigational features are tested for all levels

ELEMENT	PERFORMANCE CRITERIA
	<p>6.4. Visual design and layout are tested at all levels against standard onscreen design principles</p> <p>6.5. Levels of <i>accessibility</i> for people with disabilities are acceptable</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by developing an intuitive, easy to use navigation system that provides different ways of searching for information
- collecting, analysing and organising information by developing a consistent and logical labelling system
- planning and organising activities by planning the content structure before determining the navigation system
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by developing labels and indexes
- problem-solving skills by testing the information structure to identify any gaps or problems with navigation
- use of technology by using relevant software to develop document content structure and navigation system

Required knowledge

- difference between a data store document and a document layout application
- meta languages for multiple audiences
- metadata and in particular PRISM
- personalised Print Markup Language (PPML)
- principles of document navigation
- content conversion and content management
- data mapping and content models

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> developing information structures for markup, web pages or long document assembly. The document is intuitive for target audience navigation demonstrate an ability to find and use information relevant to the task from a variety of information sources TWO different documents are created and successfully tested evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPMM492C Create an extensible style sheet ICPPP485C Develop a digital data template.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Data</i> may include:	<ul style="list-style-type: none"> includes mixed data and dynamic data.
<i>Accessibility</i> may include:	<ul style="list-style-type: none"> includes "content discoverability" as well as content availability with regard to people with disabilities.
<i>Markup language</i> may include:	<ul style="list-style-type: none"> new markup languages are becoming available regularly and examples include XML and PPML. This unit does not cover HTML which is covered by another unit ICAB4135B Create a simple mark-up language document to specification.
<i>Document purpose</i> may include:	<ul style="list-style-type: none"> electronic publishing, e-commerce, web services, interchange of data amongst different applications, software configuration files.
<i>Electronic publishing</i> may include:	<ul style="list-style-type: none"> electronic publishing in this context does not mean the use of page layout applications but rather the development of content to meet the needs of different audiences and different output devices.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm routine job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is carried out correctly in minimum time with minimum wastage 1.3. Prior inspections are completed and signed off
2. Prepare flexographic plates	2.1. Plate height and relief are measured 2.2. Plates are trimmed and prepared according to mounting system requirements 2.3. Mounting adhesive is selected to achieve correct PCD (Pitch Circle Diameter) of specified plate cylinders and gears
3. Prepare plate cylinders	3.1. Plate cylinders/seamless sleeves are selected, cleaned and prepared and correct gears are mounted 3.2. Sleeves and correct gears on mandrels are selected, cleaned, prepared and mounted to meet routine job specifications 3.3. TIR (Total Indicated Runout) is checked to be within specified tolerances on plate cylinders 3.4. Selected mounting adhesive is applied to plate cylinders
4. Mount and/or proof flexographic plates on mounting/proofing machine	4.1. Plates are prepared and mounted on cylinders using pin mount or microdot systems or sleeves according to chart number/print direction OR 4.2. Plate mounting sheet is prepared to meet routine job specifications AND 4.3. Plates are mounted to position on plate mounting sheet or camera targets AND 4.4. Plate mounting sheet is installed and tensioned onto plate cylinder to specified chart number/print direction 4.5. Plates are proofed and each plate cylinder is checked for register 4.6. Flexographic plates are trimmed and taped down according to printing press requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job tickets and requirements
- collecting, analysing and organising information by collecting and assessing data about printing process and machine specifications and characteristics and how these interact
- planning and organising activities by providing input into production scheduling about time requirements for set up to ensure efficient operation
- teamwork when working with other workers to coordinate set up to ensure efficient operation
- mathematical ideas and techniques by calculating plate position
- problem-solving skills by recognising proofing faults and determining adjustments to correct them
- use of technology by using monitoring equipment and interpreting readouts

Required knowledge

- job requirements
- vital information on the job ticket
- checks that were undertaken prior to set up (availability of materials etc.)
- flexographic printing plates and mounting systems
- OHS concerns that are there when mounting and proofing plates
- choosing the correct plates for the job
- the use of cushion type mounting material
- avoiding damage to the plate when mounting plates
- options that are available to seal the edges of plates when mounting
- plate height
- TIR affect on press performance
- the term V-block mounting
- V-block mounting
- proofing and adjustment
- procedures that are followed to have the print approved
- quality control measurements that should be applied to the proof to test against known standards
- checks to be made on the initial print prior to running
- recording the final results for future reference
- minimising registration errors

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain routine operation of reel system (OR Element 2)	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is carried out correctly in minimum time with minimum wastage 1.3. Prior inspections are completed and signed off
2. Maintain routine operation of sheet system (OR Element 1)	2.1. Plate height and relief are measured 2.2. Plates are trimmed and prepared according to mounting system requirements 2.3. Mounting adhesive is selected to achieve correct PCD (Pitch Circle Diameter) of specified plate cylinders and gears
3. Maintain basic flexographic printing process	3.1. Plate cylinders/seamless sleeves are selected, cleaned and prepared and correct gears are mounted 3.2. Sleeves and correct gears on mandrels are selected, cleaned, prepared and mounted to meet <i>routine</i> job specifications 3.3. TIR (Total Indicated Runout) is checked to be within specified tolerances on plate cylinders 3.4. Selected mounting adhesive is applied to plate cylinders
4. Maintain routine production process	4.1. Plates are prepared and mounted on cylinders using pin mount or microdot systems or sleeves according to chart number/print direction OR 4.2. Plate mounting sheet is prepared to meet routine job specifications AND 4.3. Plates are mounted to position on plate mounting sheet or camera targets AND 4.4. Plate mounting sheet is installed and tensioned onto plate cylinder to specified chart number/print direction 4.5. Plates are proofed and each plate cylinder is checked for register 4.6. Flexographic plates are trimmed and taped down according to printing press requirements
5. Identify and rectify faults	5.1. Problem in flexographic <i>machine</i> operation is identified and reported according to enterprise procedures 5.2. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Flexographic machine operation is checked to ensure correct operation</p> <p>5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p>
<p>6. Conduct shutdown of production process</p>	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Reels and cores are removed from press if web-fed</p> <p>6.4. Unused ink is drained back to containers and correctly labelled and stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>6.5. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.6. All product is removed from operating area</p>
<p>7. Clean and wash up printing machine at end of print run</p>	<p>7.1. Cylinders or sleeves, plate and roller surfaces are cleaned ready for next run</p> <p>7.2. Inking rollers and doctor blades or chamber blade systems are cleaned with correct solvents according to OHS guidelines</p> <p>7.3. Ink pumps, tanks and hoses are cleaned correctly</p> <p>7.4. Impression rollers/central impression and press rollers are cleaned</p> <p>7.5. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.6. Reel or sheet-feed transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.7. Press is lubricated and protected according to duration of shutdown</p> <p>7.8. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing, in-line processes and job specifications
- collecting, analysing and organising information by collating details of job and machine specifications and printing processes to ensure efficient production
- planning and organising activities by coordinating sequences for printing and wash-up
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables requirements
- problem-solving skills by identifying print problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- reel transportation and delivery
- OHS concerns that are there when loading and handling heavy reels
- determining the printing side of the substrate
- effect on the print of excessive tension on the unwinding reel
- correct splicing of the web
- sheet transportation and delivery
- OHS factors that need to be considered when operating the sheet transportation and delivery systems
- fanning the sheets before loading into the press
- setting and check to be made to the double sheet detector during the print run
- implications if the web is not spliced correctly
- components that can be adjusted to ensure correct delivery
- effect that excessive suction could have on the slow-down wheels
- flexographic printing operations
- frequency the quality of the product should be assessed
- action that can taken if the print was filling in when printing
- the effect dirt would have under the doctor blade on the print
- doctor blade oscillation
- action that can taken if the ink in the duct is foaming
- signs of wear in the image area of the plate

REQUIRED SKILLS AND KNOWLEDGE

- in-line processes
- OHS concerns for the in-line component of the press
- frequency the in-line components of the job should be examined
- quality control and problem solving
- monitoring to ensure quality
- precautions that should be taken to ensure that the rewound product is of consistent acceptable quality
- identifying printed material that is not of an acceptable standard
- marking of product that is deemed unacceptable by the operator
- consultation if there was a problem with the print that was not able to be fixed by the operator
- location of information concerning the correct operation of the machine
- shut down and wash up the press
- dangers that exist from solvents and solutions used to clean the inking system, plate and the press
- methods that are used to ensure proper storage of the plates following printing
- parts of the machine that should be thoroughly cleaned following the print run
- components that are to be inspected for wear following the print run
- records that are important for following or repeat prints
- machine manuals and safety documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • operate either a reel or sheet-fed flexographic press ensuring an efficient production flow that maintains product quality standards. Any production problems are rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce TWO basic flexographic printing jobs (if possible including at least ONE in-line process) according to job specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • flexographic press.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain routine operation of reel system	<p>1.1. Reel stand and rewind section are is monitored and adjusted to ensure efficient continuous operation and to maintain correct tension and to ensure no marks, blemishes or damage to finished product</p> <p>1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation</p> <p>1.3. Substrate is added to and remove from process according to job instructions</p> <p>1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery</p> <p>1.5. Set-off/marketing prevention system is monitored and adjusted to ensure quality of printed product without set-off or marking meets the standard of approved proof</p>
2. Maintain basic gravure printing process	<p>2.1. Gravure cylinder condition is monitored and adjusted to ensure the quality of printed product meets the standard of the approved proof</p> <p>2.2. Gravure impression roller condition is monitored and maintained to ensure the quality of printed product meets the standard of approved proof</p> <p>2.3. Gravure inking system and doctor blade are monitored and adjusted to ensure quality of printed product meets the standard of approved proof</p> <p>2.4. Drying systems are monitored and adjusted to ensure quality of printed product meets the standard of approved proof</p> <p>2.5. Basic in-line printing/converting/binding/finishing process(es) are monitored and adjusted to ensure quality of product meets the standard of the approved proof</p>
3. Maintain routine production process	<p>3.1. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule</p> <p>3.2. Production is maintained within OHS requirements and company and manufacturer's specifications</p> <p>3.3. Manual and/or automatic control is used as per specification</p> <p>3.4. Performance is monitored and verified using the process control system according to enterprise procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.5. <i>Ink</i> performance, colour, register and position of print are monitored and adjusted throughout production run</p> <p>3.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>3.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>3.8. Waste is sorted according to enterprise procedures</p>
4. Identify and rectify faults	<p>4.1. Problem in gravure <i>machine</i> operation is identified and reported according to enterprise procedures</p> <p>4.2. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>4.3. Gravure machine operation is checked to ensure correct operation</p> <p>4.4. Faulty performance of equipment is identified and reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Unused ink is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>5.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.5. All product is removed from operating area</p> <p>5.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.7. Repair/adjustment is verified prior to resumption of operations</p>
6. Clean and wash up printing machine at end of print run	<p>6.1. Cylinders and roller surfaces are cleaned ready for next run</p> <p>6.2. Inking system is washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements</p> <p>6.3. In-line printing/converting/binding/finishing units are</p>

ELEMENT	PERFORMANCE CRITERIA
	cleaned ready for next run 6.4. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run 6.5. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing and in-line processes and job specifications
- collecting, analysing and organising information by collating details of job and machine specifications and printing processes to ensure efficient production
- planning and organising activities by coordinating sequences for printing and wash-up
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables requirements
- problem-solving skills by identifying print problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- reel transportation and delivery
- OHS concerns that are there when loading and handling heavy reels
- determining the printing side of the substrate
- effect on the print of excessive tension on the unwinding reel
- correct splicing of the web
- gravure printing operations
- frequency the quality of the product should be assessed
- action that can taken if the print was filling in when printing
- effect that dirt under the doctor blade would have on the print and the cylinder
- doctor blade oscillation
- addressing a nick in the doctor blade
- action that can be taken if the ink in the duct is foaming
- signs of wear in the image area of the plate
- level the ink level should be maintained
- in-line processes
- OHS concerns for the in-line component of the press
- frequency in-line components of the job should be examined
- quality control and problem solving
- precautions that should be taken to ensure that the rewound product is of consistent acceptable quality

REQUIRED SKILLS AND KNOWLEDGE

- identifying printed material that is not of an acceptable standard
- monitoring to ensure quality
- the marking of product that is deemed unacceptable by the operator
- consultation if there was a problem with the print that was not able to be fixed by the operator
- location of information concerning the correct operation of the machine
- shut down and wash up the press
- dangers that exist from solvents and solutions used to clean the inking system, plate and the press
- methods that are used to ensure proper storage of the plates following printing
- parts of the machine that should be thoroughly cleaned following the print run
- components that are to be inspected for wear following the print run
- records that are important for following or repeat prints
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operate a gravure press ensuring an efficient routine production flow that maintains product quality standards. Any production problems are rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources produce TWO basic gravure printing jobs (if possible including at least ONE in-line process) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment gravure printing machine with in-line processes.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPSU201C Prepare, load and unload reels and cores

EVIDENCE GUIDE

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • wide or narrow reel handling systems.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> • range of standard inks commonly used in 1-2 colour printing.
<i>Machines</i> may include:	<ul style="list-style-type: none"> • a range of in-line gravure printing machines with manual, semi-automated, fully automated or computerised process control.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> • use of visual colour assessment and densitometry to match basic standard colours under controlled lighting conditions.
<i>Design</i> may include:	<ul style="list-style-type: none"> • 1-2 colours, simple graphics or text, minor variations in registration and position.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, board, plastics and related films, or metal.
<i>Routine</i> may include:	<ul style="list-style-type: none"> • routine within this context relates to the set up and production of print runs. The set up of equipment and production is straightforward and does not involve a significant amount of deviation from using standard equipment settings. In this sense, routine does not refer to a job that an individual might repeat on a regular basis.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain routine operation of reel system (OR Element 2)	1.1. Reel stand and rewind section are is monitored and adjusted to maintain correct tension and to ensure no marks or blemishes to finished product and to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to and removed from process according to job instructions 1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain routine operation of sheet system (OR Element 1)	2.1. Feeder and delivery sections are is monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to and removed from process according to job instructions
3. Maintain basic routine lithographic printing process	3.1. Lithographic plate and plate cylinder condition is monitored and adjusted to ensure the quality of printed product meets the standard of the approved proof 3.2. Lithographic blanket and blanket cylinder condition is monitored and adjusted to ensure the quality of printed product meets the standard of approved proof 3.3. Lithographic impression cylinder condition is monitored and adjusted to ensure quality of printed product meets the standard of approved proof 3.4. Lithographic inking condition is checked and maintained to ensure quality of printed product meets the standard of approved proof 3.5. Lithographic dampening system condition is monitored and adjusted maintained to ensure quality of printed product meets the standard of approved proof
4. Maintain routine production process	4.1. Production process is operated in association with fellow workers and according to company

ELEMENT	PERFORMANCE CRITERIA
	<p>specifications and planned daily schedule</p> <p>4.2. Production is maintained within OHS requirements and company and manufacturer's specifications</p> <p>4.3. Manual and/or automatic control is used as per specification</p> <p>4.4. Performance is monitored and verified according to enterprise procedures</p> <p>4.5. In performance, colour, register and position of print are monitored and adjusted maintained throughout production run</p> <p>4.6. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.7. Waste is sorted according to enterprise procedures</p>
5. Rectify minor lithographic machine faults	<p>5.1. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>5.2. Problems with lithographic machine operation is identified and reported according to enterprise procedures</p> <p>5.3. Lithographic machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Unused <i>ink</i> is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>6.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.5. All product is removed from operating area</p> <p>6.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.7. Repair/adjustment is verified prior to resumption of operations</p>
7. Clean and wash up printing machine at	7.1. Cylinders, plate and roller surfaces are cleaned ready for next run

ELEMENT	PERFORMANCE CRITERIA
end of print run	<p>7.2. Inking system and dampening system are washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements</p> <p>7.3. <i>In-line</i> printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.4. Reef Reel-fed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.5. Sheet feed, transport and delivery system are disengaged and cleaned ready for next run</p> <p>7.6. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing, in-line processes and job specifications
- collecting, analysing and organising information by collating details of job and machine specifications and printing processes to ensure efficient production
- planning and organising activities by coordinating sequences for printing and wash-up
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables requirements
- problem-solving skills by identifying print problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- reel or sheet transportation and delivery
- OHS concerns when loading and handling heavy reels
- sheets are fanned before loading into the press
- double sheet detector be set and checked during the print run
- effect on the print of excessive tension on the rewinding reel
- implications if web is not spliced correctly
- components that can be adjusted to ensure correct delivery
- effect excessive suction on the slow-down wheels has
- lithographic printing operations
- non-image area of the print was scumming when printing
- causes of emulsification while printing on a lithographic printing press
- signs of wear in the image area of the plate
- level the ink level should be maintained at
- in-line processes
- OHS concerns for the in-line components of the press
- frequency the in-line components of the job should be examined
- quality control and problem solving
- precautions that should be taken to ensure that the rewound product is of consistent acceptable quality
- identification of material that is not of an acceptable standard

REQUIRED SKILLS AND KNOWLEDGE

- frequency at which the quality of the product be assessed
- product that is deemed unacceptable by the operator is marked
- finding information concerning the correct operation of the machine
- shutdown and wash-up of the press
- dangers that exist from solvents and solutions used to clean the inking system, plates, cylinders and the press
- effect could excessive gum has on the plate image
- parts of the machine need to be thoroughly cleaned following the print run
- components that are to be inspected for wear following the print run
- records that are important for following or repeat prints
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain routine pad printing process	1.1. Location of objects into fixtures is monitored and adjusted if necessary 1.2. Printing plate condition is monitored to ensure the quality of printed product meets the standard of the approved proof 1.3. Printing pad condition is monitored and maintained to ensure the quality of printed product meets the standard of approved proof 1.4. Spatula and doctor blade are monitored and adjusted to ensure quality of printed product meets the standard of approved proof OR 1.5. Ink cup is monitored and adjusted to ensure quality of printed product meets the standard of approved proof 1.6. Printing ink viscosity is monitored and adjusted to ensure quality of printed product meets the standard of approved proof
2. Maintain manual pre- and post-treatments	2.1. Manual loading is monitored and adjusted to ensure quality of printed product meets the standard of approved proof 2.2. Manual pre-treatment is monitored and adjusted to ensure quality of printed product meets the standard of approved proof 2.3. Drying racks are monitored and adjusted to ensure quality of printed product meets the standard of approved proof
3. Maintain routine production process	3.1. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule 3.2. Production is maintained within OHS requirements and company and manufacturer's specifications 3.3. Manual and/or automatic control is used as per specification 3.4. Performance is monitored and verified using the process control system according to enterprise procedures 3.5. Ink performance, colour, register and position of print are monitored and adjusted throughout production run 3.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely

ELEMENT	PERFORMANCE CRITERIA
	<p>intervention</p> <p>3.7.Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>3.8.Waste is sorted according to enterprise procedures</p>
4. Identify and rectify faults	<p>4.1.Problem in pad printing <i>machine</i> operation is identified and reported according to enterprise procedures</p> <p>4.2.Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>4.3.Pad printing machine operation is checked to ensure correct operation</p> <p>4.4.Faulty performance of equipment is identified and reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1.Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2.Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3.Unused ink is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>5.4.Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.5.All product is removed from operating area</p> <p>5.6.Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.7.Repair/adjustment is verified prior to resumption of operations</p>
6. Clean and wash up printing machine at end of print run	<p>6.1.Plates and pads are cleaned ready for next run</p> <p>6.2.Inking system is washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements</p> <p>6.3.Pre- and post-treatment units are cleaned ready for next run</p> <p>6.4.Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing, in-line processes and job specifications
- collecting, analysing and organising information by collating details of job and machine specifications and printing processes to ensure efficient production
- planning and organising activities by coordinating sequences for printing and wash-up
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables requirements
- problem-solving skills by identifying print problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- major OHS concerns when operating this machine
- where the MSDSs are stored and what information do they contain
- different machine cycle modes
- how the colour density of a light image on a dark substrate can be improved by selection of a different machine cycle mode
- selecting the appropriate machine cycle mode to provide the highest production output for a particular product
- correct ink viscosity
- correcting ink viscosity during production
- causes of unreleased ink remaining on the printing pad and how you identify them
- recognising a damaged pad
- correct method of cleaning a pad during production
- pre- and post-treatment requirements
- simple pre-treatment that is commonly required for injection-moulded objects
- period the ink on the job takes to cure before scratch and adhesion tests can be performed
- print problem identification and correction
- effects that will be visible in the image if the ink viscosity is incorrect
- adjusting the machine to correct a shift in the image position on the product
- in Machine manuals, safety and other documentation are relevant to this task and

REQUIRED SKILLS AND KNOWLEDGE

where are they kept and information that is included in these documents

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up machine	2.1. Die or block is selected and checked against job ticket 2.2. Die or block is locked into chase and checked for correct positioning 2.3. Chase is mounted in press 2.4. Foil transfer or feed system is set up and adjusted according to image size and job specifications 2.5. If required, <i>in-line</i> loading and ejection units are set up for basic processes and adjusted according to machine requirements and job specifications
3. Set up reel system (OR Element 4 OR Element 5)	3.1. Unwind and rewind reels are set up and adjusted according to job specifications 3.2. Webbing procedures are carried out and web-control system is set up and adjusted according to job specifications 3.3. Reels are spliced/joined according to job specifications 3.4. Printed web viewing devices are set up and adjusted according to job specifications 3.5. Folder and sheeter are set up and adjusted suit job specifications 3.6. Set off/marketing prevention devices are set up and adjusted according to job specifications
4. Set up sheet system (OR Element 3 OR Element 5)	4.1. Feeder and delivery is set up and adjusted according to job specifications 4.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications 4.3. Transfer and control systems are set up and adjusted according to job specifications 4.4. Set off/marketing prevention devices are set up and adjusted according to job specifications 4.5. <i>Substrate</i> is added to and removed from process according to job instructions
5. Set up product jigs	5.1. Jigs are selected to suit product to be stamped

ELEMENT	PERFORMANCE CRITERIA
onto machine table (OR Element 3 OR Element 4)	<p>5.2. Jigs are fitted to machine table according to job specifications</p> <p>5.3. Table height is adjusted to suit product</p>
6. Select foils	<p>6.1. Foils are selected according to job specifications and end-user requirements</p> <p>6.2. Quality and suitability of foils are checked and appropriate action is taken</p> <p>6.3. Foils are selected according to suitability of substrate, physical and chemical performance and properties</p> <p>6.4. Foils are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste</p> <p>6.5. Foils are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and prolong shelf life</p>
7. Conduct proof run	<p>7.1. Material to be used for proof is organised correctly</p> <p>7.2. Machine is operated according to manufacturer's and enterprise procedures to produce a specified proof</p> <p>7.3. Proof is visually inspected and/or tested or laboratory testing organised according to enterprise procedures</p> <p>7.4. Production does not commence without client OK or authority where appropriate</p> <p>7.5. Results are interpreted and adjustment changes are carried out according to product and machine specifications to determine adjustment requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job tickets and requirements
- collecting, analysing and organising information by collecting and assessing data about foil stamping process and machine specifications and characteristics and how these interact
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating die position and requirements for foil and substrate
- problem-solving skills by recognising proofing faults and determining adjustments to correct them
- use of technology by using monitoring equipment and interpreting readouts

Required knowledge

- job specifications
- procedures if vital information were missing from the job ticket
- checks that should be undertaken prior to set up (availability of materials etc.)
- web or sheet or product transportation (as relevant)
- major OHS concerns when setting up transportation systems
- printing side of the material
- purpose of nip rollers
- how the sheet position is determined for the job
- why the same side lay is used in both print and foil stamping
- selection of appropriate front lays
- how high the side and front lays are to be set
- register check be carried out
- appropriate product jigs
- correct table height
- foils and substrates
- characteristics that must be considered when selecting foil for foil stamped product
- type of foil that would be required for foiling on plastic films
- products and the appropriate foils
- machine set up

REQUIRED SKILLS AND KNOWLEDGE

- OHS concerns related to the set up
- effect of a soft packing on the foil stamped product
- methods that can be used to create harder packing
- effect a higher dwell time has on the foil stamped product
- what temperature would be the starting point when setting up
- implications if the temperature was set too high
- height that the die should be mounted
- required pressure
- proofing and adjusting
- precautions that should be taken to protect from burns
- not using the first sheet or object printed as a proof during set up
- cause of an uneven print (top to bottom)
- length of time for temperature adjustments to become effective
- signs of a temperature setting that is too high
- how much the foil should draw through the press on each pass
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up a die or block and the reel or sheet systems and jigs for gold blocking or hot foil stamping. The individual will conduct a proof run and adjust settings to ensure production speeds are attained • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • set up for foil stamping on TWO occasions (if possible including at least ONE in-line process if relevant) according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • gold blocking or hot foil stamping machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• ICPSU201C Prepare, load and unload reels and cores on and off machine• ICPSU202C Prepare, load and unload product on and off machine• ICPSU207C Prepare machine for operation (basic)• ICPPR262C Produce foil stamped product.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Machines</i> may include:	<ul style="list-style-type: none"> a range of foil stamping machines, including machines with computerised monitoring and/or control.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide or narrow reel or large or small sheet or 3D object handling systems.
<i>Foils</i> may include:	<ul style="list-style-type: none"> range of foils used in gold blocking and hot foil stamping.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, wood, plastics and related films, metal injection moulded plastics, moulded plastics, lacquered substrate.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of visual colour assessment and matching under controlled lighting conditions.
<i>Design</i> may include:	<ul style="list-style-type: none"> simple graphics and text. Minor variation in registration and position.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel system (OR Element 2 OR Element 3)	1.1. Reel stand and rewind section is monitored and adjusted to maintain correct tension and to ensure no marks, blemishes or damage to finished product and to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web and efficient operation 1.3. Substrate is added to and removed from process according to job instructions 1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery 1.5. Set-off/marketing prevention system is monitored and adjusted to ensure quality of printed product without set-off or marking meets the standard of approved proof
2. Maintain operation of sheet system (OR Element 1 OR Element 3)	2.1. Feeder and delivery is monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to and removed from process according to job instructions 2.5. Set-off/marketing prevention system is monitored and adjusted to ensure quality of printed product without set-off or marking meets the standard of approved proof
3. Maintain in-line loading and ejection (OR Element 4 OR Element 5)	3.1. In-line loading is monitored and adjusted to ensure quality and efficient product delivery 3.2. In-line ejection is monitored and adjusted to ensure quality and efficient product delivery
4. Maintain production process	4.1. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule 4.2. If necessary, the location of objects into fixtures/jigs is monitored and adjusted 4.3. Foil transfer system is monitored and adjusted to ensure quality of printed product meets the standard of

ELEMENT	PERFORMANCE CRITERIA
	<p>approved proof</p> <p>4.4. Basic in-line printing/converting/binding/finishing process(es) are monitored and adjusted to ensure quality of product meets the standard of the approved proof</p> <p>4.5. Production is maintained within OHS requirements and company and manufacturer's specifications</p> <p>4.6. Manual and/or automatic control is used as per specification</p> <p>4.7. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.8. Foil performance and position of print are monitored and adjusted throughout production run</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems	<p>5.1. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>5.2. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>5.3. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>5.4. Problem in foil stamping machine operation is identified and reported according to enterprise procedures</p> <p>5.5. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>5.6. Foil stamping machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Unused foil is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>6.4. Waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.5. All product is removed from operating area</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>6.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.7. Repair/adjustment is verified prior to resumption of operations</p>
<p>7. Clean printing machine at end of print run</p>	<p>7.1. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.2. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run OR</p> <p>7.3. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run OR</p> <p>7.4. Jig and conveyors are disengaged and cleaned ready for next run</p> <p>7.5. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing, in-line processes and job specifications
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables and personnel requirements to meet production schedules
- problem-solving skills by identifying print problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- maintaining in-feed and delivery of reel or sheet or 3D object transportation section
- OHS concerns when operating a transportation system
- why sheets are fanned before loading into the press
- affect the printing of double sheets has on the foil stamped product
- why tracking of the web is important to position and register
- implications if the web is not spliced correctly
- identification that should be used for web splices
- precautions that should be taken to ensure that the rewound product is of consistent acceptable quality
- if sheeted, components that can be adjusted to ensure correct delivery
- how printed material that is not of an acceptable standard is identified
- aspects of loading and ejection that need to be monitored
- maintaining the foil stamping process
- major OHS concerns when foil stamping
- considerations that will contribute to determining the ideal press speed
- interval that the product be checked for consistency
- cause of the non-image areas of the print filling in
- remedial action to be taken if the edges of the print were jagged

REQUIRED SKILLS AND KNOWLEDGE

- use of anti set off spray not recommended when foil stamping
- adjusting the machine to correct a shift in the image position on the object
- shutdown and cleaning of the press
- dangers that exist from solvents and solutions used to clean the press and printing dies
- how dies should be stored following printing
- effect of poorly stored dies
- parts of the machine to be thoroughly cleaned following the print run
- components to be inspected for wear following the print run
- records that are important for following or repeat prints
- machine manuals, safety and other documentation that are relevant to this task

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reel system (OR Element 3)	2.1. Unwind and rewind reels are set up and adjusted according to job specifications 2.2. Webbing procedures are carried out and web-control system is set up and adjusted according to job specifications 2.3. Reels are spliced/joined according to job specifications 2.4. Printed web viewing devices are set up and adjusted according to job specifications 2.5. Set off/marketing prevention devices are set up and adjusted according to job specifications
3. Set up sheet system (OR Element 2)	3.1. Feeder and delivery is set up and adjusted according to job specifications 3.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications 3.3. Transfer and control systems are set up and adjusted according to job specifications 3.4. Substrate is removed from process according to job instructions 3.5. Set off/marketing prevention devices are set up and adjusted according to job specifications
4. Select and prepare coating	4.1. Coating is selected according to job specifications and end-user requirements 4.2. Quality and suitability of coating is checked and appropriate action is taken 4.3. Coatings and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 4.4. Correct weight/volume of coating is prepared to match the requirements of the job specification and the coating process 4.5. Check the viscosity of coating is correct for the job 4.6. Formulation of the coating is appropriately recorded

ELEMENT	PERFORMANCE CRITERIA
5. Set up machine for coating	<p>5.1. Appropriate rollers/cylinders are selected and secured to the <i>machine</i> and set</p> <p>5.2. Application system is set up and adjusted according to job specifications</p> <p>5.3. Coating delivery system is set up with correct flow and return flow determined by air pressure or pump speeds and adjusted according to job specifications</p> <p>5.4. Cut a coating blanket or install a plate for non-image areas</p> <p>5.5. Check that blanket or plate packing is suitable to the job</p> <p>5.6. Check that the coating temperature is suitable for the job</p> <p>5.7. Drying system is set up and adjusted according to job specifications</p>
6. Conduct proof run	<p>6.1. Material to be used for proof is organised correctly</p> <p>6.2. Machine is set up and operated to produce a specified proof according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>6.3. Proof is visually inspected and/or tested or laboratory testing organised according to enterprise procedures</p> <p>6.4. Production does not commence without client OK or authority where appropriate</p> <p>6.5. Results are interpreted and adjustment changes are carried out according to product and machine specifications</p> <p>6.6. Adjustment changes are carried out according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job tickets and requirements
- collecting, analysing and organising information by collecting and assessing data about coating process and machine specifications and characteristics and how these interact
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating plate position and coating viscosity
- problem-solving skills by recognising proofing faults and determining adjustments to correct them
- use of technology by using monitoring equipment and interpreting readouts

Required knowledge

- job specifications
- where on the work ticket is the information listing the type of coating required
- procedures if vital information were missing from the job ticket
- checks that should be undertaken prior to set up (availability of materials etc)
- sheet or reel transportation
- major OHS concerns when setting up the sheet or reel transportation system
- choosing the coating side of the material
- effect of low web tension on the print
- effect of inefficient web splices
- sheet or reel position for the job
- appropriate front lays
- carrying out a register check
- reasons for a two-sheet cut out on most feeders (sheet)
- machine knowing if a sheet is missing or late
- machine knowing if there has been a web break
- sheet or reel delivery
- safety risks associated with the rewind of the machine
- affect of excessive web tension at the rewind of the machine
- effect that too much vacuum on the slow-down wheels will have on the job

REQUIRED SKILLS AND KNOWLEDGE

- determining the position of register or bustle wheels
- excessive jogging
- coating preparation
- OHS concerns are relevant to the use of coatings
- types of coating
- suitability of coating for the job
- ability of the coat to adhere to the product determined
- amount of coating required
- range of viscosities to be run with on aqueous coatings
- effect of incorrect viscosity
- adjusting the viscosity of a coating
- machine set up
- methods for solidifying a coating
- drying UV coating
- printing principles
- aqueous coating
- temperature the drier set at to dry aqueous coating
- image carrier (plate or blanket)
- proofing and adjustments
- position of the coating checked against the print
- effect skeleton wheels could have on the surface of the coating
- measuring the amount of gloss on the surface
- responsibility for the final "OK" on the job
- effect when you don't have enough coating on a sheet
- effect that a UV coating would have on a wet print
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up rollers and the reel or sheet systems for coating a range of aqueous coatings, UV varnishes and machine varnishes. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel system (OR Element 2)	1.1. Reel stand and rewind section is monitored and adjusted to maintain correct tension and to ensure no marks or blemishes to finished product and to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to and removed from process according to job instructions 1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain operation of sheet system (OR Element 1)	2.1. Feeder and delivery is monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to and removed from process according to job instructions
3. Maintain coating process	3.1. Roller condition is monitored and adjusted to ensure the quality of printed product meets the standard of approved proof 3.2. Coating system is monitored and adjusted to ensure quality of product meets the standard of approved proof 3.3. Drying systems are monitored and adjusted to ensure quality of product meets the standard of approved proof 3.4. Quality and viscosity of varnish are monitored and adjusted as necessary to ensure quality of product
4. Maintain production process	4.1. If required, basic or complex in-line printing/converting/binding/finishing processes are monitored and adjusted to ensure quality of product meets the standard of the approved proof 4.2. If required, delivery is monitored and adjusted to ensure quality and efficient product delivery 4.3. Production process is operated in association with fellow workers and according to company

ELEMENT	PERFORMANCE CRITERIA
	<p>specifications and planned daily schedule</p> <p>4.4. Production is maintained within OHS requirements and company and manufacturer's specifications</p> <p>4.5. Manual and/or automatic control is used as per specification</p> <p>4.6. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.7. Coating performance, register and position of coating are monitored and adjusted throughout production run</p> <p>4.8. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.9. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.10. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems	<p>5.1. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>5.2. Problems in coating machine are identified and reported according to enterprise procedures</p> <p>5.3. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>5.4. Coating machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.4. All product is removed from operating area</p> <p>6.5. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.6. Repair/adjustment is verified prior to resumption of operations</p>

ELEMENT	PERFORMANCE CRITERIA
7. Clean and wash up coating machine at end of print run	7.1. Cylinders, plate and roller surfaces are cleaned ready for next run 7.2. Coating delivery system is washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements 7.3. In-line slitting units are cleaned ready for next run 7.4. Reef feed, transportation and delivery systems are disengaged and cleaned ready for next run 7.5. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing, in-line processes and job specifications
- collecting, analysing and organising information by collating details of job and machine specifications and coating processes to ensure efficient production
- planning and organising activities by coordinating sequences for coating and wash-up
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables requirements
- problem-solving skills by identifying coating problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- interpreting job information
- required action if vital information was missing from the job ticket
- checks that should be undertaken prior to set up (availability of materials etc.)
- reel or sheet transportation and delivery
- OHS concerns that are there related to loading and handling heavy reels
- sheets fanned before loading into the press
- important that the double sheet detector be set and checked during the print run
- effect on the print of excessive tension on the rewinding reel
- implications if the web is not spliced correctly
- precautions that should be taken to ensure that the rewound product is of consistent acceptable quality
- if sheeted, components that can be adjusted to ensure correct delivery
- how printed material that is not of an acceptable standard identified
- maintaining coating operations
- major OHS concerns when coating
- action could be taken if the aqueous coating was smudging on the delivery section of the machine
- effects of anti set off spray on the finished job
- level the coating should be maintained in the pan
- effect UV lamp has on the UV coating

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• wash-up and shutdown of machine• dangers that exist from solvents and solutions used to clean the coating system, plates, cylinders and the press• parts of the machine that should be thoroughly cleaned following the coating of the job• components to be inspected for wear following the print run• records that are important for following or repeat prints• machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> produce a basic coated product on either a reel- or sheet-fed machine ensuring an efficient production flow that maintains product quality standards. Any production problems are identified and rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources competency on elements and performance criteria is achieved within the limitations of the process or machinery used produce TWO basic coating jobs (one spot coating and one overall coating and if possible including at least ONE in-line process) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment a print machine or a dedicated coating machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICPSU201C Prepare, load and unload reels and cores on and off machine
- ICPSU202C Prepare, load and unload product on and off machine
- ICPSU208C Operate and monitor machines (basic)
- ICPPR271C Set up for basic coating.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> narrow or wide reel handling, and small and large sheet systems.
<i>Machines</i> may include:	<ul style="list-style-type: none"> a range of printing machines or dedicated coating machines with manual, semi-automated, fully automated or computerised process control.
<i>Coatings</i> may include:	<ul style="list-style-type: none"> a range of aqueous coatings, UV varnishes and machine varnishes.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of visual colour assessment and densitometry to match basic standard tints under controlled lighting conditions.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> paper and paper board and other substrates as appropriate.

Competency field	Printing
------------------	----------

Co-requisite units

Co-requisite units		

ICPPR282C Produce and manage basic digital print

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to produce and manage digital print for a basic print production environment.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit requires the individual to produce and manage digital printing systems to achieve maximum productivity. The individual will perform troubleshooting and conduct maintenance, manage digital print client service operations, construct a range of electronic data files, perform basic colour management techniques, design electronic workflow systems, produce and manage a print run and coordinate finishing and delivery.</p> <p>The competency is best applied in the instant printing and copy shop business environment.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Troubleshoot and maintain operations of a digital print system	<p>1.1. Errors in operation of the hardware and consumable components in the printing module of a digital printing system are identified and rectified</p> <p>1.2. The source of errors related to the <i>electronic data file</i>, digital front end, workstation or industry software or hardware printing systems is located and rectified and/or technical assistance is coordinated according to <i>manufacturer's specifications</i></p> <p>1.3. Preventive maintenance is performed according to manufacturer's specifications to ensure digital print system functions at optimum productivity with minimum downtime and wastage</p> <p>1.4. Incompatibilities between versions of hardware and software used in digital printing are identified and rectified</p>
2. Liaise with clients	<p>2.1. Print service and quality expectations are clearly communicated to a client according to <i>enterprise procedures</i></p> <p>2.2. Advice is provided to clients on how to set up electronic data files for digital printing according to enterprise procedures, manufacturer's specifications and digital print equipment capabilities</p> <p>2.3. Advice is provided to clients on appropriate <i>substrates</i> and document finishing methods for digital printing jobs, according to the client's budget and job specifications</p>
3. Perform basic electronic document impositions	<p>3.1. Electronic file imposition using a range of industry software is completed according to job specifications</p> <p>3.2. Document finishing requirements for an imposed digital print job are finalised with co-workers or external services, if required, according to equipment availability and enterprise procedures</p>
4. Perform basic digital colour management	<p>4.1. RGB, CMYK and PMS colour charts are outputted and differences between computer monitor colour and digitally printed colour are adjusted</p> <p>4.2. Common problems of colour digital printing are rectified and communicated to clients according to job specifications</p>
5. Access and verify electronic data files	<p>5.1. A workstation computer and industry software are used to locate and retrieve electronic data files according to job specifications</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.2. A digital front end processor is used to locate and retrieve electronic data files according to job specifications</p> <p>5.3. Preview or pre-flight check of electronic data files is performed to verify correct job set up according to job specifications</p> <p>5.4. Basic troubleshooting methods are applied to identify unverified data files, file errors and job requirement inconsistencies according to manufacturer's specifications</p>
6. Submit data files to a digital print system	<p>6.1. Job priority is determined according to job specifications and production schedules</p> <p>6.2. Data files are submitted to print and image quality and <i>machine</i> productivity checks are performed</p>
7. Produce digital proof and run print job	<p>7.1. A proof run is conducted to confirm proof conforms to job specifications and/or for client approval, if required</p> <p>7.2. A print run is conducted according to job specifications ensuring that machine productivity and quality are monitored and rectified throughout the duration of the print job</p>
8. Coordinate and/or perform document finishing and client delivery	<p>8.1. The steps required for document finishing if not performed on <i>in-line</i> finishing units are determined on a web or sheet-fed system according to enterprise procedures</p> <p>8.2. Finished print work is packaged in a manner to prevent damage and to conform to delivery requirements according to job specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to internal and external clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when cooperating with other workers and coordinating the production unit to ensure efficient operation
- mathematical ideas and techniques by calculating electronic file memory requirements for print job management and scheduling
- problem-solving skills by defining whether printing or data processing faults minimise machine downtime and wastage
- use of technology by using software to construct electronic files for digital printing

Required knowledge

- troubleshooting and problem solving
- safety devices that need to be in place when working on the machine
- paper misfeed, how to access and clear it
- problems with front to back registration
- problems that can occur if substrate weight and machine specifications do not match
- problems that can occur downloading files from a digital front end and how can they be solved
- distinguishing between a problem with downloading from a digital front end and a problem with the printing module
- action if a digital front end loses communication with the printing module
- quality control
- precautions that can be taken to maintain fit, proportion and position of printed images
- ensuring that the machine has been calibrated to manufacturer's specifications
- what to do if image colour is not consistent
- ensuring that correct dimensions and measurements have been set up in the pre-press stage
- quality issues that can arise if improper substrate handling procedures are not

REQUIRED SKILLS AND KNOWLEDGE

- performed
- information sources
- machine manuals, safety and other documentation that are relevant to machine operation and maintenance and where are they kept
- finding information relating to industry software applications
- incorrect version of software or need an update, locating and acquiring this
- other sources of information can you identify
- job requirements and processing systems
- actions if vital information was missing from the job ticket (manual or electronic)
- checks to be undertaken prior to set up (availability of material, maintenance)
- file does not transfer correctly action should to be taken to correct the problem
- data access and manipulation
- checks to be made to ensure the data is in a format that can be used in digital printing
- benefits of using electronic data rather than scanning hard copy
- ways to submit a PDF file to the digital printer
- communication and client interaction
- measure that can be taken to ensure clients have correct procedures for providing electronic files
- explaining to a client about differences in colour displayed on a computer monitor to printed output
- recommendations to a client who has created an electronic file in an incompatible software application
- estimating a turnaround time for a client with a tight deadline
- steps that would need to be followed for a client approval of the print
- proofing and adjustment
- circumstances where a job would be modified before printing
- why margins would be changed when the job reaches the printer
- what the proof checked against
- final approval for basic jobs
- adjusting colour, toner/ink coverage or density problems
- substrate transportation, delivery, in-line and on-line processes
- actions if the required substrate were unavailable
- maximum and minimum weight of substrate that can be printed on a specific machine
- maximum feeding and delivery quantities for the machine
- possible problems with incorrect feeding and delivery
- OHS procedures to be followed when setting up in-line processes
- in-line options are available on the machine
- on-line finishing options that are available on the machine
- document finishing and client delivery

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• various types of binding• procedures that would be followed if the binding method required by the client was not available at your site• options that could you suggested if the document size was too thick to staple?• packaging of finished print work is important |
|---|

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- produce electronic data files and manage digital workflows in the digital print production environment. Communicate clearly and professionally with clients. Design and implement efficient electronic workflows for a range of electronic file types. Access and verify data. Conduct a digital proof run. Produce and manage a digital print run. Manage and coordinate document finishing and delivery
- demonstrate use of computerised control and monitoring systems if available and appropriate
- demonstrate an ability to find and use information relevant to the task from a variety of information sources
- produce a flowchart that demonstrates FOUR examples of digital print workflows for digital printing (one basic document file, one variable data document file, one colour document file and one electronically imposed document file)
- create and print a document that provides information to clients on digital print services available and outlines correct methods for submitting electronic files to the services available
- electronically construct, digitally print and coordinate finishing for the following set of business stationery that has text and graphic elements:
 - four-colour A4 Letterhead, which includes static text and graphic elements and variable data name and address elements. Minimum variable components - 10
 - 100 four-colour business cards with crop marks. Maximum number of business cards to the maximum sheet size of the printer eg 20 cards on SRA3
 - four-colour 16-page A4 business proposal

EVIDENCE GUIDE	
	<p>document, perfect bound with own choice of binding</p> <ul style="list-style-type: none"> • four-colour 4-page advertising brochure using saddle stitch binding method printed on A4 or A3 substrate size • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • a digital printing machine and digital front end.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU201C Prepare, load and unload reels and cores on and off machine • ICPSU202C Prepare, load and unload product on and off machine • ICPSU208C Operate and monitor machines (basic) • ICPPR281C Set up and produce basic digital print • ICPPR383C Prepare for personalised digital printing.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Electronic data files</i> may include:	<ul style="list-style-type: none"> range of proprietary or non-proprietary data file formats compatible with a range of workstation computers and industry software.
<i>Manufacturer's specifications</i> may include:	<ul style="list-style-type: none"> technical, administrator and user specifications documented by a manufacturer for a range of printing machines.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> may include rules, standards, OHS guidelines, communication protocols and behaviour codes of a range of workplace environments.
<i>Substrates</i> may include:	<ul style="list-style-type: none"> range of print media and paper.
<i>Inking systems</i> may include:	<ul style="list-style-type: none"> range of toners commonly used in 2-colour printing, including special colours.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of non-impact printing machines including inkjet and laser with or without colour manipulation capability, and including machines with computerised monitoring and/or control.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor in-line processes such as perforating, numbering, date coding and imposition that do not constitute another defined unit of competency. Major in-line process is defined as a separate competency eg flat-bed cutting, folding.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of visual colour assessment and matching under controlled lighting conditions.
<i>Design</i> may include:	<ul style="list-style-type: none"> simple graphics and text. Minor variation in registration position.
<i>User replaceable consumables</i> may include:	<ul style="list-style-type: none"> consumables required to be changed by an individual if damaged or reached expiry. Used by a range of printing machines for correct functioning such as ink, toner, developer, waste toner, cleaning web, fuser, substrates.
<i>User control interface</i> may	<ul style="list-style-type: none"> computerised monitoring and data entry

RANGE STATEMENT	
include:	device used to enter machine default settings, job specification settings, monitor machine status and perform machine productivity enhancements.
<i>Registration mechanisms</i> may include:	<ul style="list-style-type: none"> mechanical and/or electronic controls used to adjust substrate position throughout substrate feeding and transport units of a range of printing machines.
<i>Calibration</i> may include:	<ul style="list-style-type: none"> mechanical and/or electronic and/or visual controls used to identify and correct ink coverage and density inconsistencies in a range of printing equipment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and select consumables	<p>1.1. Required <i>consumables</i> are identified in consultation with appropriate personnel and in accordance with manufacture's and/or job specifications</p> <p>1.2. Consumables are selected and confirmed that they correspond with identified needs</p>
2. Use consumables	<p>2.1. Consumables are prepared and loaded according to occupational health and safety (OHS) requirements and manufacturer's and enterprise procedures and specifications</p> <p>2.2. <i>Faulty product</i> is visually identified and removed</p> <p>2.3. Incorrect substrate usage is identified and then rectified</p>
3. Monitor consumables storage and levels	<p>3.1. Stock levels are monitored to enterprise requirements</p> <p>3.2. Consumables are recorded and stored according to manufacturer's specifications</p> <p>3.3. <i>Appropriate personnel</i> are informed of low stock levels and measures taken to increase levels of stock</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to loading consumables safely
- communication skills when reporting low stock levels to appropriate personnel
- planning and organising activities by providing information about time and material requirements for set-up, production and finishing to ensure efficient operation
- teamwork skills when maintaining the production process in association with other workers
- mathematical ideas and techniques by calculating consumables needed for a production run
- use of technology by using digital printing devices
- problem-solving skills by recognising faulty printing and determining whether consumables are the cause

Required knowledge

- OHS factors that need to be addressed when using and loading consumables
- location of material safety data sheets (MSDS)
- location of manuals, safety and other documentation and the information included in these documents that are relevant to digital media consumables
- various consumables used in the digital sector
- types of consumables used for each printing and/or finishing device
- which substrates perform better for a particular printing device
- printing faults that can occur due to using the wrong substrate
- printing faults that can occur due to poor storage of consumables
- various inks and toners used in the digital sector
- advantages and disadvantages of the various ink types

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the need for colour management	<p>1.1. The varied colour representation of <i>devices</i> are identified and recorded</p> <p>1.2. Colour inconsistencies between input, display and output devices and the final printed product are identified and rectified</p> <p>1.3. The <i>components</i> of a colour management system are identified and suggestions made to improve <i>workplace practices</i></p>
2. Use colour modes and libraries	<p>2.1. Varying <i>colour modes and libraries</i> are used according to job specifications</p> <p>2.2. Images are converted between colour modes using a <i>process</i> to ensure the best reproduction according to job specifications</p> <p>2.3. Colour libraries are selected and used within software applications according to job specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) in relation to using correct ergonomics when operating the computer
- communicating ideas and information, having considered all the fundamentals of colour theory
- collecting, analysing and organising skills in relation to the fundamentals of colour theory
- planning and organising skills for identifying and clarifying colour requirements
- teamwork skills for maintaining the production process in association with others
- problem-solving skills for diagnosing and correcting colour problems
- technical skills for using software and hardware correctly to ensure consistency of output

Required knowledge

- components of a colour management system
- terminology associated with colour management
- standard lighting conditions for matching colour
- effects different lighting conditions have on monitors, proofing and printing
- measurement of light intensity and colour temperature
- difference between red, blue, green (RGB), cyan, magenta, yellow, black (CMYK) and LAB colour
- different rendering intents and their application
- under colour removal (UCR) and grey component replacement (GCR) and what effect they have on an image
- different Pantone libraries and their application
- OHS issues needed to be considered when managing colour for digital production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- identify the need and components of a colour management system
- select and convert images to appropriate colour modes
- select colour libraries that comply with specific job specifications
- locate and use information relevant to the task from a variety of information sources.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for colour management production
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when converting images between colour modes.

Guidance information for assessment

Holistic assessment with other digital production units relevant to the workplace and job role is recommended, for example:

- digital production or pre-press units that require the application of colour.

For valid and reliable assessment of this unit, evidence

EVIDENCE GUIDE	
	should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Devices</i> may include:	<ul style="list-style-type: none"> • monitors • proofers • printers • scanners • digital cameras • digital presses • printing presses.
<i>Components</i> may include:	<ul style="list-style-type: none"> • standardised viewing environment • calibrated and profiled output devices, such as printers and presses • calibrated and profiled input devices, such as scanners and cameras • calibrated monitors • software applications that support colour management • colour profiles.
<i>Workplace practices</i> may include	<ul style="list-style-type: none"> • establishment of colour managed workflow • calibration and regular recalibration of devices • adoption of recognised colour standard, such as AS ISO 12647-2.
<i>Colour modes and libraries</i> may include:	<ul style="list-style-type: none"> • RGB • CMYK • LAB • Pantone.
<i>Process</i> may include:	<ul style="list-style-type: none"> • selection of colour mode and rendering intent • converting using profiles.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for digital workflow	1.1. Work instructions and operational details are obtained and confirmed 1.2. Production processes required for the job are identified and recorded 1.3. Equipment to carry out tasks is selected to meet job requirements, checked for serviceability and any faults are rectified or reported prior to commencement 1.4. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use 1.5. Material quantity requirements are calculated according to plans and/or specifications 1.6. Safety requirements are followed according to safety plans and policies
2. Follow digital workflow	2.1. Work plan is determined, modified and performed in a logical and efficient sequence 2.2. Tasks are completed and checked for compliance against work instructions
3. Maintain the workplace	3.1. Work area is cleared and materials disposed of or recycled in accordance with project environmental management plan 3.2. Equipment is cleaned, checked, maintained and stored according to manufacturer's recommendations and standard work practices

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) in relation to using correct ergonomics when operating the computer
- communication of ideas and information by dealing with clients
- collecting, analysing and organising information by successfully storing and retrieving files
- planning and organising activities by completing work tasks efficiently
- teamwork skills when maintaining the digital workflow in association with others
- mathematical ideas and techniques when calculating required materials for a job
- problem-solving skills used when fixing file errors
- self-management and learning skills to evaluate and enhance personal effectiveness
- using technology when utilising computer to produce a job

Required knowledge

- different procedures within a digital workflow
- order in which procedures are undertaken within a digital workflow
- types of equipment used in a digital workflow
- types of software used in a digital workflow
- printing processes that can be used within a digital workflow
- binding and finishing techniques that can be used within a digital workflow

Evidence Guide

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for job	1.1. Job specifications are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related materials is checked and recorded
2. Produce a test copy	2.1. Materials to be used for the job are identified and organised correctly 2.2. Equipment is set up and operated to produce a specified sample according to occupational health and safety (OHS) requirements, manufacturer's specifications and enterprise procedures 2.3. Sample is inspected and/or tested to ensure the job meets job specifications and enterprise standards 2.4. Results are interpreted to determine adjustment requirements 2.5. Adjustments are carried out according to product and equipment specifications
3. Maintain finishing process	3.1. Finishing is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures 3.2. Performance is monitored and verified using the process control system according to enterprise procedures 3.3. Finishing difficulties are anticipated and action is taken to prevent occurrence by timely intervention 3.4. Process adjustments to eliminate problems are reported according to enterprise procedures 3.5. Faulty performance of equipment is identified and reported according to enterprise procedures 3.6. Waste is sorted according to enterprise procedures 3.7. Production records or other documentation are accurately completed where required by enterprise procedures
4. Identify and rectify problems and faults	4.1. Problems with finishing equipment are identified and reported according to enterprise procedures 4.2. Adjustments or corrections are carried out according to specified procedures and are consistent with operator's skill level 4.3. Finishing equipment operation is checked to ensure

ELEMENT	PERFORMANCE CRITERIA
	correct operation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for reporting faulty equipment performance and completing production records and other documentation
- planning and organising skills for providing information about time and materials requirements for set up, production and finishing to ensure efficient operation
- teamwork skills for maintaining the production process in association with other workers
- numeracy skills for calculating production run and completing documentation
- technical skills for using electronic finishing equipment
- problem-solving skills for recognising finishing faults and determining adjustments

Required knowledge

- OHS factors needed to be addressed when adjusting machinery
- safety measures that should be taken when setting up and operating finishing equipment
- information concerning binding that is found in the job documentation or production control system
- circumstances in which a machine needs to be adjusted
- factors that determine the correct binding technique for a job
- advantages and disadvantages of wiro and comb binding
- advantages and disadvantages of saddle and side stitching
- problems that may occur when folding a digitally printed job
- effect heat may have on a digitally printed product
- correct cutting sequence and lay edges when trimming a job
- grain direction in paper and board
- effects of grain direction on finishing processes
- different types of finishing adhesives and their applications
- problems that can occur if equipment is not properly cleaned and maintained
- location of manuals, safety and other documentation relevant to digital product finishing

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- correctly set up and use binding and finishing equipment to produce finished digitally printed products according to job specifications and within the production timeframe
- find and use information relevant to the task from a variety of information sources
- demonstrate all safety devices on the machine
- finish a digital product using two different types of binding and/or finishing
- set up equipment and produce two bound and/or finished digitally printed products (for each type of binding and/or finishing), according to manufacturer's and job specifications and enterprise procedures.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for converting and finishing of digitally printed products, such as trimmers, small guillotines, electronic staple machines and wiro binding units
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when converting and finishing a digitally printed product.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• ICPPR384A Set up and produce basic digital print. <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Materials</i> may include:	<ul style="list-style-type: none"> • paper • card • plastic • staples • wire spirals • comb spirals • glue.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • a range of finishing equipment found in a digital environment, such as: <ul style="list-style-type: none"> • trimmers • wiro • comb binders • folders.
<i>Finishing difficulties</i> may include:	<ul style="list-style-type: none"> • warping • page curl • creasing • cracking.
<i>Problems may include:</i>	<ul style="list-style-type: none"> • blunt or damaged blades • misaligned or jammed staples • adhesive application • sheet separation.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify digital processes	<p>1.1. Various <i>digital processes</i> used within the workplace are identified and documented</p> <p>1.2. Advantages or disadvantages of one process over another for a particular job are identified and a suitable option recommended</p>
2. Assess job requirements	<p>2.1. The printing requirements of the job are determined</p> <p>2.2. The layout design of the job is reviewed to determine possible <i>printing problems</i> that may occur when using a particular process</p> <p>2.3. The end <i>application</i> of the digital product is reviewed to ensure the digital process will meet job specifications and enterprise standards</p>
3. Apply digital process	<p>3.1. A digital process is selected that ensures job specifications are met</p> <p>3.2. The digital process is completed in accordance job specifications and enterprise standards</p> <p>3.3. The job is reviewed to ensure that the appropriate digital process was selected based on job specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for expressing ideas and information, having considered all the fundamentals of each digital process
- collecting, analysing and organising skills in relation to the fundamentals of digital processes
- planning and organising skills for identifying and clarifying job requirements and selecting a digital process
- teamwork when maintaining the production process in association with others
- problem-solving skills by diagnosing and correcting printing problems
- use of technology by using raster image processors (RIPs) or front-end processors to output a job

Required knowledge

- various digital printing processes used within the digital sector
- advantages and disadvantages of each process
- types of substrates that best suit a particular process
- cost differences between each process
- advantages and disadvantages digital processes have compared to traditional printing methods
- different applications digital products may be used for
- effect heat can have on certain processes
- effect light can have of certain processes
- how folding may affect the appearance of a digitally printed job
- what layout design considerations need to be considered when using a particular process
- which colours and combinations are not effective for certain processes
- OHS issues in relation to each digital process
- location of documentation or other information regarding digital processes

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- identify the various digital printing processes
- select the most appropriate digital printing process for a particular job
- find and use information relevant to the task from a variety of information sources.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for colour management production
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when applying digital processes to produce a product to specifications.

Guidance information for assessment

Holistic assessment with other digital production units relevant to the workplace and job role is recommended, such as:

- ICPPR384A Set up and produce basic digital print.

For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Digital processes</i> may include:	<ul style="list-style-type: none"> • commonly used digital processes, such as: <ul style="list-style-type: none"> • tone • inkjet • liquid toner-based.
<i>Printing problems</i> may include:	<ul style="list-style-type: none"> • ghosting • poor conversion of Pantone colours • banding or blending problems • quality of solid blacks • text too small • trapping and knockout problems.
<i>Application</i> may include:	<ul style="list-style-type: none"> • folded products • outdoor banners • letterheads requiring overprinting and/or laminating.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel system	<p>1.1. Reel stand and rewind sections are monitored to ensure efficient continuous operation, correct tension and to ensure no marks or blemishes to finished product</p> <p>1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation</p> <p>1.3. <i>Substrate</i> is added to and removed from process according to job instructions</p> <p>1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery</p> <p>1.5. Set-off/marketing prevention system is monitored and adjusted to ensure the quality of the printed product meets the standard of the approved proof</p>
2. Maintain operation of sheet system	<p>2.1. Feeder and delivery sections are monitored and adjusted to ensure continuous and efficient feeding to machine</p> <p>2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation</p> <p>2.3. Transfer system is monitored and adjusted to ensure correct and continuous sheet handling and efficient operation</p> <p>2.4. Substrate is added to and removed from the process according to job instructions</p> <p>2.5. Set-off/marketing prevention system is monitored and adjusted to ensure the quality of the printed product meets the standard of the approved proof</p>
3. Maintain basic routine relief printing process	<p>3.1. Relief forme or plate cylinder condition is monitored and adjusted to ensure the quality of the printed product meets the standard of the approved proof</p> <p>3.2. Relief impression surface condition is monitored and adjusted to ensure the quality of the printed product meets the standard of the approved proof</p> <p>3.3. Relief inking system is monitored and adjusted to ensure the quality of the printed product meets the standard of the approved proof</p>
4. Maintain routine production process	<p>4.1. Production process is implemented in association with fellow workers and according to company specifications and planned daily schedule</p> <p>4.2. Production is maintained within OHS requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and company and manufacturer's specifications</p> <p>4.3. Manual and/or automatic control is used according to specification</p> <p>4.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.5. Ink performance, colour, register and position already included in line embellishments of print are monitored and adjusted throughout production run</p> <p>4.6. Production difficulties are anticipated and action is taken to prevent occurrence by timely intervention</p> <p>4.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.8. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems	<p>5.1. Problem in relief machine operation is identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures</p> <p>5.3. Relief machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.2. Unused ink is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>6.3. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.4. Embellishment equipment is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>6.5. All product is removed from operating area</p> <p>6.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.7. Repair/adjustment is verified prior to resumption of operations</p>
7. Clean and wash up printing machine at end of print run	<p>7.1. Cylinders, plate and roller surfaces are cleaned ready for next run</p> <p>7.2. Inking system is washed up ready for next run, and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>liquid waste is disposed of according to company and regulatory requirements</p> <p>7.3. <i>In-line</i> printing/convertng/binding/finishing units are cleaned ready for next run</p> <p>7.4. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.5. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.6. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for providing feedback to internal and external clients about printing processes and job specifications
- collecting, analysing and organising skills for collating details of job and machine specifications and printing processes to ensure efficient production
- planning and organising skills for coordinating sequences for printing and washup
- teamwork skills for communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- numeracy skills for calculating consumables requirements
- problem-solving skills for identifying print problems and correcting during print run
- technical skills for using machines and monitoring systems

Required knowledge

- reel or sheet transportation and delivery systems
- OHS concerns when loading and handling heavy reel sheets fanned before loading into the press
- web tracking and importance to position and register
- consequences of not splicing web correctly
- components that need to be adjusted to ensure correct delivery
- effect of excessive suction on the slow-down wheels
- frequency that quality of product should be assessed
- causes of a halo effect on the relief print
- signs of wear in the image area of the plate marking product deemed unacceptable by operator
- monitoring systems
- maintaining ink levels
- in-line processes
- OHS concerns for the in-line components of the press
- frequency of examination of in-line components
- quality control and problem solving techniques
- precautions to be taken to ensure that the rewound product is of consistent acceptable quality
- printed material that is not an acceptable standard
- quality assurance processes
- actions if mild set-off was found on the back of the print

REQUIRED SKILLS AND KNOWLEDGE

- who to consult if there are problems with the print that cannot be fixed by the operator
- location of information concerning the correct operation of the machine
- shutdown and wash procedures
- dangers from solvents and solutions used to clean the inking system, plates, cylinders and the press
- procedures for correctly storing plates following printing
- parts of the machine that should be thoroughly cleaned following the print run
- components that should be inspected for wear following the print run
- important records to be kept for repeat prints
- machine manuals, safety and other documentation relevant to this task, where are they kept and the information included in these documents

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- operate a platen, cylinder or rotary printing machine ensuring an efficient routine production flow that maintains product quality standards
- rectify production problems with minimum downtime
- shut down machine correctly and clean according to OHS guidelines
- use computerised control, monitoring and data entry systems if available and appropriate
- find and use information relevant to the task from a variety of information sources
- manipulate embellishment tools and operations
- produce two basic relief printing jobs (if possible including at least one in-line process) according to manufacturer's and job specifications and enterprise procedures.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities and equipment, including platen, cylinder or rotary printing machines
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when setting up and producing a basic relief printed product.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. Evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity with other units, for example:

- ICPSU201C Prepare, load and unload reels and cores on and off machine
- ICPSU202C Prepare, load and unload product on and off machine
- ICPSU208C Operate and monitor machines (basic)
- ICPPR393A Set up for basic relief printing.

For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Substrate</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of: <ul style="list-style-type: none"> • paper • pressure sensitive material • board • plastics • related films or metal.
<i>Ink</i> may include:	<ul style="list-style-type: none"> • inks commonly used in 1-2 colour printing.
<i>Machine</i> may include:	<ul style="list-style-type: none"> • a range of platen, cylinder and rotary printing machines with: <ul style="list-style-type: none"> • manual • semi-automated • fully automated • computerised process control.
<i>In-line</i> may include:	<ul style="list-style-type: none"> • basic in-line operations, such as: <ul style="list-style-type: none"> • perforating • numbering • date coding • slitting top cutting • one up die cutting • foiling • embossing.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm routine job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked 1.4. Proofed job is checked for conformance with job specifications
2. Set up routine reel system (OR Element 3)	2.1. Reels are checked for treatment levels, coatings, printing side and age of product 2.2. Unwind reels are secured on reel shaft according to job specifications 2.3. Reels are correctly positioned on unwind stand according to job specifications 2.4. Correctly cut cores are positioned and mounted securely on rewind shafts 2.5. Press is webbed for single-sided surface print according to job specifications 2.6. Edge guide is centred and set according to job specifications 2.7. Unwind tension is set to suit <i>substrate</i> according to job specifications 2.8. Rewind tension is set to suit substrate according to job specifications 2.9. Nip rollers are set according to job specifications 2.10. PIV (Positively Infinitely Variable) drive is set for appropriate tensioning of substrate
3. Set up routine sheet system (OR Element 2)	3.1. Feeder is set up and adjusted according to job specifications 3.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications 3.3. Transfer systems are set up and adjusted according to job specifications 3.4. Delivery is set up and adjusted according to job specifications 3.5. <i>Substrate</i> is removed from stacker according to job specifications 3.6. Sheet transfer and control system is set up and adjusted according to job specifications 3.7. Set off/marketing prevention devices are set up and

ELEMENT	PERFORMANCE CRITERIA
	adjusted according to job specifications
4. Select and prepare inks and solvents	<p>4.1. Inks and solvents are selected according to <i>routine</i> job specifications and end-user requirements</p> <p>4.2. Quality and suitability of inks and solvents are checked and appropriate action is taken</p> <p>4.3. Inks and solvents are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste</p> <p>4.4. Correct colour and weight/volume of ink are mixed and viscosities checked and modified according to press requirements and routine job specifications</p> <p>4.5. Ink formula and approved colour draw downs appropriately recorded</p> <p>4.6. Inks and solvents are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions and the relevant hazardous liquids storage regulations</p>
5. Set up machine for basic flexographic printing	<p>5.1. Flexographic plate cylinders are installed and register adjustments centred OR</p> <p>5.2. Sleeves are installed in press and register adjustments made OR</p> <p>5.3. Plate mounting sheets are mounted on cylinders in press and register adjustments made</p> <p>5.4. Plate cylinders are gauged up or pre-set to impression</p> <p>5.5. Inking system is set up and roller nips/blades are set correctly</p> <p>5.6. Ink circulation is maintained at correct level and flow for <i>machine</i> requirements</p> <p>5.7. Viscosities are adjusted according to job specifications</p> <p>5.8. Air volume and drier temperatures or curing systems are selected to suit inks, substrate, solvents and according to job specifications</p> <p>5.9. Air volume is adjusted between colours to maximise drying and minimise air overspill</p>
6. Set up in-line units for basic process(es)	<p>6.1. Minor <i>in-line</i> printing/converting/binding units are set up for basic process(es) and adjusted to suit machine requirements and job specifications</p> <p>6.2. Assistance is given in the set up of major in-line printing/converting/binding units. (Note: if entire set</p>

ELEMENT	PERFORMANCE CRITERIA
	up is done refer to appropriate Set up competency standards.)
7. Conduct proof run	7.1. Material to be used for proof is organised correctly 7.2. Press is set up and operated according to OHS guidelines 7.3. Print impressions are set to minimum kiss impression 7.4. Web tensions are correctly set at unwind, between stations and rewind 7.5. The print is checked for register 7.6. Drying is checked as sufficient to key ink to the substrate 7.7. The viscosities are adjusted to obtain the correct colour at proof speed and checked against <i>colour matching system</i> 7.8. The substrate is checked against job specifications
8. Organise proof inspection and/or testing	8.1. Proof is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures. 8.2. Production does not commence without client approval or authority where appropriate
9. Readjust settings to production speed	9.1. Production speed print results are interpreted and appropriate adjustments are made to press, ink and substrate settings 9.2. Adjustments are made according to product specifications and press performance 9.3. Web is spliced at production speed and further samples are obtained for quality inspections at appropriate intervals 9.4. Press setting is documented and samples are retained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job tickets and requirements
- collecting, analysing and organising information by collecting and assessing data about printing process and machine specifications and characteristics and how these interact
- planning and organising activities by providing input into production scheduling about time requirements for set up to ensure efficient operation
- teamwork when working with other workers to coordinate set up to ensure efficient operation
- mathematical ideas and techniques by calculating substrate requirements
- problem-solving skills by recognising proofing faults and determining adjustments to correct them
- use of technology by using monitoring equipment and interpreting readouts

Required knowledge

- action if vital information was missing from the job ticket
- checks that are undertaken prior to set up (availability of materials etc.)
- flexographic printing plates and cylinders or sleeves or plate mounting sheets
- precautions that should be taken to avoid damaging plates and cylinders
- OHS factors that need to be considered when operating the reel in-feed and delivery system
- choosing the printing side of the material
- effect of low web tension on the print
- types of web splices that could be used appropriately for the job
- sheet in-feed
- OHS factors that need to be considered when operating the sheet in-feed and delivery system
- sheet is normally set up in the middle of the machine
- effect that side lay selection has on the job
- appropriate front lays to be selected
- determining the position of the sheet before it is transported to the printing unit
- registering check be carried out
- two-sheet cut is used on most feeders
- sheet is missing or late
- reel delivery system

REQUIRED SKILLS AND KNOWLEDGE

- effect of excessive web tension at the rewind of the machine
- minimising risks associated with the rewind of the machine
- sheet delivery system
- application of spray powder is sometimes advisable
- effects of too much spray powder
- slowdown devices may be used in the delivery
- effect excessive jogging would have on the stack
- selection and preparation of inks and additives
- major environmental and OHS concerns with regard to inks and additives
- suitability of ink matched to the particular job
- implications if the ink were too viscose
- modifying ink that was slightly light
- methods that are available to check the ink for correct colour
- who passes the colour prior to running the job
- machine set up
- OHS factors that need to be considered when setting up the machine
- how machine specifications are determined, relating to the specific job
- steps that should be taken to ensure that the inking system is adjusted correctly
- why inking system ink level is maintained at a certain level
- precautions that are necessary when handling doctor/chamber blades
- optimum make ready speed for the job
- basic in-line processes
- steps that are taken to incorporate the in-line processes into the make ready
- equipment used in in-line processing is protected against damage during set up
- precautions that should be taken if UV drying is utilised to dry the ink film
- proofing and adjustment
- methods that can be used to minimise waste during make ready
- procedures that are followed to have the print approved
- quality control measurements that should be applied to the proof to test against known standards
- checking the initial print prior to running
- determining settings to be adjusted
- processes to be used to plot the success of the machine adjustment
- final results recorded for future reference
- relevant test procedures
- identifying and describing the tests for scuffing and coefficient of friction
- circumstances in which these tests should be applied
- leaching
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up flexographic printing machines for routine print jobs. The individual will conduct a proof run and adjust settings to ensure production speeds are attained • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate all safety devices on the machine • set up a press on TWO occasions for basic flexographic printing (if possible including at least ONE in-line process), according to manufacturer's specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU201C Prepare, load and unload reels and cores

EVIDENCE GUIDE

	<p>on and off machine</p> <ul style="list-style-type: none">• ICPSU202C Prepare, load and unload product on and off machine• ICPSU207C Prepare machine for operation (basic)• ICPSU211C Prepare ink and additives• ICPPR211C Mount and proof flexographic plates for basic printing• ICPPR214C Produce basic flexographic printed product.
--	--

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • wide or narrow reel and small or large sheet handling systems.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> • range of standard inks commonly used in colour printing.
<i>Routine</i> may include:	<ul style="list-style-type: none"> • routine within this context relates to the set up and production of print runs. The set up of equipment and production are straightforward and do not involve a significant amount of deviation from using standard equipment settings. In this sense, routine does not refer to a job that an individual might repeat on a regular basis.
<i>Machines</i> may include:	<ul style="list-style-type: none"> • a range of stack, in-line and central impression flexographic printing machines with manual, semi-automated, fully automated or computerised process control.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> • use of visual colour assessment and densitometry to match basic standard colours under controlled lighting conditions.
<i>Design</i> may include:	<ul style="list-style-type: none"> • colours, simple graphics and text. Minor variation in registration and position.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain non-routine operation of reel transportation system	1.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. <i>Substrate</i> is added to process according to job instructions
2. Maintain non-routine operation of reel delivery system on web-fed machine	2.1. Reel rewind section is monitored and adjusted to maintain correct tension and to ensure no marks, blemishes or damage to finished product 2.2. Substrate is removed from process according to <i>non-routine</i> job instructions 2.3. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery 2.4. Set-off/marketing prevention system is monitored and adjusted to ensure quality of printed product without set-off or marking meets the standard of approved proof
3. Maintain complex flexographic printing process	3.1. Flexographic plate and plate cylinder or sleeve condition is monitored and adjusted to ensure the quality of printed product meets the standard of the approved proof 3.2. Flexographic impression roller condition is monitored to ensure the quality of printed product meets the standard of approved proof 3.3. Flexographic inking system and doctor blade condition are monitored and adjusted to ensure quality of printed product meets the standard of approved proof 3.4. Drying systems are monitored and adjusted to ensure quality of printed product meets the standard of approved proof 3.5. <i>In-line</i> printing/converting/binding/finishing processes are monitored and adjusted to ensure quality of product meets the standard of the approved proof
4. Maintain non-routine production process	4.1. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule 4.2. Production is maintained within OHS requirements and company and manufacturer's specifications

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Manual and/or automatic control is used as per specification</p> <p>4.4. Manual and/or automatic control is used as per specification</p> <p>4.5. Ink performance, colour, register and position of print are monitored and adjusted throughout production run</p> <p>4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify faults	<p>5.1. Problem in flexographic machine is identified and reported according to enterprise procedures</p> <p>5.2. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>5.3. Flexographic machine operation is checked to ensure correct operation</p> <p>5.4. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Reels and cores are removed from press</p> <p>6.4. Unused ink is drained back to containers and correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>6.5. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.6. All product is removed from operating area</p>
7. Clean and wash up printing machine at	7.1. Cylinders or sleeves, plate and roller surfaces are

ELEMENT	PERFORMANCE CRITERIA
end of print run	<p>cleaned ready for next run</p> <p>7.2. Inking rollers and doctor blades or chamber blade systems are cleaned with correct solvents according to OHS guidelines</p> <p>7.3. Ink pumps, tanks and hoses are cleaned correctly</p> <p>7.4. Impression rollers/central impression and press rollers are cleaned</p> <p>7.5. In-line printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.6. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.7. Press is lubricated and protected according to duration of shutdown</p> <p>7.8. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and making adjustments

Required knowledge

- reel transportation and web control
- causes of the reel to wander
- cause the web to break at the unwind unit
- difference between a "flying paster" and "zero speed" type reel-stand
- print fault that would result from the reel being run out of centre
- possible faults in the unwind section that could cause a web break
- reel delivery for rewinding and sheeting

OHS risks associated with rewinding and sheeting

- hat safety feature in the delivery system if the web jams up
- why the sheet cut-off would wander
- effect of poorly adjusted nip rollers when rewinding and sheeting
- printing and drying units
- result if the plate lifts on the leading edge during a print run
- build-up of ink on the impression cylinder affecting the printed product
- causes of the ink foaming in the ink tray
- effect of too much reducer in the ink
- actions that reduce wear of the doctor blade
- necessary that all solvents be removed from the final ink film
- the link between driers and set off and marking

REQUIRED SKILLS AND KNOWLEDGE

- causes of UV ink to dry
- causes substrate to distort
- effect in the chillers if the drying temperature was too low
- effect of incorrect drying temperature on the finished product
- advisable not to eat or drink near the machine when using UV inks
- necessary to frequently examine the in-line components of the job
- how the consistency of the punching unit IS checked
- result of excessive pressure on the slitters
- maintaining production process
- safety features within the organisation aid in maintaining effective production
- who would be held legally responsible for the removal of machine guards and/or disconnection of micro switches
- effect of inadequate communication within the work team on a flexographic printing machine
- ramifications if machine guards are removed and/or micro switches are disconnected on a machine
- other measurements besides optimum solid ink density can be measured to assess print quality accurate method of checking register during a production run
- necessary to take immediate action when production problems are anticipated
- actions to be taken to eliminate further processing of unacceptable printed product
- the result to the substrate if the relative humidity is increased in the press room
- procedure to care for a newly delivered substrate to the press room
- why should waste be sorted
- advantage of keeping reusable waste
- industry standards that can be applied to enhance effective communication with the client
- necessary procedures that the client should follow to "OK" a printed product
- flexographic machine operating problems
- when it would be necessary to call service personnel to correct a machine problem
- enterprise procedures that are in place to report any machine operating problems
- shutdown procedures
- result if correct shutdown procedures were not followed
- necessary that correct shutdown procedures are conducted with fellow workers
- advantages that result from proper labelling and storage of excess inks and materials
- printed product needs to be clearly labelled prior to removal from the press room
- further operations that are required for printed reels upon removal from the printing machine
- how the printed job should be stored after removal from the printing machine
- cleaning and washing up the printing unit
- OHS concerns should be observed when handling ink

REQUIRED SKILLS AND KNOWLEDGE

- safety precautions should be observed when cleaning the printing cylinders
- necessary to thoroughly clean and wash up the printing unit prior to the next print run
- why the anilox cells should be thoroughly cleaned
- how can plates be stored to minimise damage
- cleaning feed, transportation, delivery and in-line sections
- OHS precautions that should be observed when cleaning these sections of the machine
- necessary to maintain a clean substrate handling section of the machine
- completing production records
- completed records used in the final analysis of the job
- benefits of comprehensive records when considering the production of future jobs
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operate a reel-fed flexographic press ensuring an efficient 3 or more colour production flow that maintains product quality standards. Any production problems are anticipated and rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources monitor production output and make necessary adjustments to maintain print quality on a flexographic machine whilst producing a complex print on TWO occasions (if possible using different substrates and if possible including at least TWO in-line processes) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment flexographic press.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICPPR411C Mount and demount flexographic plates for complex printing
- ICPPR413C Set up for complex flexographic printing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel delivery systems.
<i>Non-routine</i> may include:	<ul style="list-style-type: none"> non-routine within this context relates to the set up and production of print runs. The set up of equipment and production involves a significant amount of deviation from using standard equipment settings. It also involves significant problem solving and the development of new criteria and procedures for performing current practices. It does not refer to a job that an individual does only occasionally.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of inks commonly used in 4 or more colour printing, including standard and special colours.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of stack, in-line and central impression flexographic printing machines with manual, semi-automated, fully automated or computerised process control.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of viscosity controls, densitometers and spectrophotometry.
<i>Design</i> may include:	<ul style="list-style-type: none"> 4 or more colours, complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board,

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm routine job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reels	2.1. Unwind and rewind reels is are set up and adjusted according to job specifications 2.2. Webbing procedures are carried out according to job specifications 2.3. Web-control system is set up and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications 2.5. Printed web viewing devices are set up and adjusted according to job specifications 2.6. The folder and sheeter are set up and adjusted according to job specifications 2.7. Set off/marketing prevention devices are set up and adjusted according to job specifications
3. Select and prepare inks and additives (basic)	3.1. Inks , dyes or additives are selected according to job specifications and end-user requirements 3.2. Quality and suitability of inks, dyes or additives are checked and appropriate action is taken 3.3. Inks, dyes and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 3.4. Correct colour and weight/volume of ink are mixed and prepared to match the requirements of the printing process and job specifications 3.5. Formulation of the ink, colour match and the approved colour are appropriately recorded 3.6. Inks, dyes and additives are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and prolong shelf life
4. Set up machine for basic gravure printing	4.1. Gravure cylinders are selected, installed, set up and adjusted according to job specifications 4.2. Impression roller is set up and adjusted according to job specifications

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Inking system/doctor blade is set up and adjusted according to the gravure process and job specifications</p> <p>4.4. Drying system is set up and adjusted according to job specifications</p>
5. Conduct proof run	<p>5.1. Material to be used for proof is organised correctly</p> <p>5.2. <i>Machine</i> is operated according to manufacturer's and enterprise procedures to produce a specified proof</p> <p>5.3. Proof is visually inspected and/or tested or laboratory testing organised according to enterprise procedures</p> <p>5.4. Production does not commence without client OK or authority where appropriate</p> <p>5.5. If necessary, results are interpreted and adjustments made according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job tickets and requirements
- collecting, analysing and organising information by collecting and assessing data about printing process and machine specifications and characteristics and how these interact
- planning and organising activities by providing input into production scheduling about time requirements for set up to ensure efficient operation
- teamwork when working with other workers to coordinate set up to ensure efficient operation
- mathematical ideas and techniques by calculating cylinder position and substrate requirements for the job
- problem-solving skills by recognising proofing faults and determining adjustments to correct them
- use of technology by using monitoring equipment and interpreting readouts

Required knowledge

- vital information required on job ticket
- checks prior to set up (availability of materials etc.)
- correct cylinders chosen for the job
- important considerations when handling gravure cylinders
- parts of the unit that need to be checked to ensure the cylinder is correctly installed
- OHS factors that need to be considered when operating the reel in-feed and delivery systems
- how the printing side of the material is chosen
- what would be the effect of low web tension on the print
- what other types of web splices could be used appropriately for the job
- risks associated with the rewind of the machine
- what would be the effect of excessive web tension at the rewind of the machine
- what are the environmental and OHS concerns with regard to inks and additives
- how is the suitability of ink matched to the particular job
- what would happen if the ink were too viscose
- how would an ink that was slightly light be modified to meet the needs of the job
- what methods are available to check the ink for correct colour
- who passes the colour prior to running the job
- what precautions are necessary when handling doctor blades

REQUIRED SKILLS AND KNOWLEDGE

- how are the machine specifications determined, relating to the specific job
- what steps should be taken to ensure that the inking system was adjusted correctly
- why is the inking system ink level maintained at a certain level
- what is the optimum make ready speed for the job
- what steps are taken to incorporate the in-line processes into the make ready
- how is the equipment used in in-line processing protected against damage during set up
- what methods can be used to minimise waste during make ready
- what procedures are undertaken to have the print approved
- what quality control measurements should be applied to the proof to test against known standards
- what do you check on the initial print prior to running
- how are the settings to be adjusted determined
- what process is used to plot the success of the machine adjustment
- how are the final results recorded for future reference
- what machine manuals, safety and other documentation are relevant to this task and where are they kept and information included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> correctly set up gravure printing machines for routine print jobs. The individual will conduct a proof run and adjust settings to ensure production speeds are attained demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources demonstrate all safety devices on the machine set up a press on TWO occasions for basic gravure printing (if possible including at least ONE in-line process) according to manufacturer's specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment gravure printing machine with in-line units.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPSU201C Prepare, load and unload reels and cores

EVIDENCE GUIDE	
	<p>on and off machine</p> <ul style="list-style-type: none">• ICPSU207C Prepare machine for operation (basic)• ICPSU211C Prepare ink and additives• ICPPR322C Produce basic gravure printed product.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of standard inks commonly used in 1-2 colour printing
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of visual colour assessment and densitometry to match basic standard colours under controlled lighting conditions..
<i>Machines</i> may include:	<ul style="list-style-type: none"> a range of in-line gravure printing machines with manual, semi-automated, fully automated or computerised process control.
<i>Design</i> may include:	<ul style="list-style-type: none"> 1-2 colours, simple graphics and text. Minor variations in registration and position.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, board, or plastics or metal wide or narrow reel handling systems.
<i>Wide or narrow reel handling systems</i> may include:	<ul style="list-style-type: none"> working to defined procedures under limited supervision.
<i>Routine</i> may include:	<ul style="list-style-type: none"> routine within this context relates to the set up and production of print runs. The set up of equipment and production is straightforward and does not involve a significant amount of deviation from using standard equipment settings. In this sense, routine does not refer to a job that an individual might repeat on a regular basis.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain non-routine operation of reel transportation system	1.1. Reel stand is monitored and adjusted to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. <i>Substrate</i> is added to process according to job instructions
2. Maintain non-routine operation of reel delivery system	2.1. Reel rewind section is monitored and adjusted to maintain correct tension and to ensure no marks, blemishes or damage to finished product 2.2. Substrate is removed from process according to job instructions 2.3. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery 2.4. Set-off/marketing prevention system is monitored and adjusted to ensure quality of printed product without set-off or marking meets the standard of approved proof
3. Maintain complex gravure printing process	3.1. Gravure cylinder condition is monitored and adjusted to ensure the quality of printed product meets the standard of the sample sheet 3.2. Gravure impression roller condition is monitored and maintained to ensure the quality of printed product meets the standard of sample sheet 3.3. Gravure inking system and doctor blade are monitored and adjusted to ensure quality of printed product meets the standard of sample sheet 3.4. Drying systems are monitored and adjusted to ensure quality of printed product meets the standard of approved proof
4. Maintain operation of in-line processes	4.1. <i>In-line</i> printing/converting/binding/finishing processes are monitored 4.2. In-line printing/converting/binding/finishing process are adjusted to ensure quality of product meets the standard of the approved proof
5. Maintain non-routine production process	5.1. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule 5.2. Production is maintained within OHS requirements and company and manufacturer's specifications

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Manual and/or automatic control is used as per specification</p> <p>5.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>5.5. Ink performance, colour, register and position of print are monitored and adjusted throughout production run</p> <p>5.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>5.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>5.8. Waste is sorted according to enterprise procedures</p>
6. Identify and rectify faults	<p>6.1. Problem in gravure machine is identified and reported according to enterprise procedures</p> <p>6.2. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>6.3. Gravure machine operation is checked to ensure correct operation</p> <p>6.4. Faulty performance of equipment is identified and reported according to enterprise procedures</p>
7. Conduct shutdown of production process	<p>7.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>7.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>7.3. Unused ink is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>7.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>7.5. All product is removed from operating area</p> <p>7.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>7.7. Repair/adjustment is verified prior to resumption of operations</p>
8. Clean and wash up	8.1. Cylinders, plate and roller surfaces are cleaned ready

ELEMENT	PERFORMANCE CRITERIA
printing machine at end of print run	for next run 8.2. Inking system is washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements 8.3. In-line printing/converting/binding/finishing units are cleaned ready for next run 8.4. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run 8.5. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run 8.6. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and making adjustments

Required knowledge

- what could cause the reel to wander
- what could cause the web to break at the unwind unit
- what is the difference between a "flying paster" and "zero speed" type reel-stand
- what print fault would result from the reel being run out of centre
- what possible faults in the unwind section could cause a web break
- what are the OHS risks associated with rewinding and sheeting
- what safety feature is in the delivery system if the web jams up
- why would the sheet cut-off wander
- what is the effect of poorly adjusted nip rollers when rewinding and sheeting
- how could a build-up of ink on the impression cylinder affect the printed product
- what could cause the ink to foam in the ink tray
- what is the effect of too much reducer in the ink
- what action reduces wear of the doctor blade
- why is it necessary that all solvents be removed from the final ink film
- what is the link between driers and set off and marking
- what could cause the substrate to distort
- what would be the effect in the chillers if the drying temperature was too low
- what is the effect of incorrect drying temperature on the finished product
- why is it necessary to frequently examine the in-line components of the job

REQUIRED SKILLS AND KNOWLEDGE

- how is the consistency of the punching unit checked
- what would be the result of excessive pressure on the slitters
- what is the benefit of identification numbers on jobs with multiple similar images
- how is the ratio of print to in-line speed controlled
- what is the effect of inadequate communication within the work team on a gravure printing machine
- what safety features within the organisation aid in maintaining effective production
- what are the ramifications if machine guards are removed and/or micro switches are disconnected on a machine
- who would be held legally responsible for the removal of machine guards and/or disconnection of micro switches
- what is the most accurate method of checking register during a production run
- why is it necessary to take immediate action when production problems are anticipated
- what action is taken to eliminate further processing of unacceptable printed product
- what will be the result to the substrate if the relative humidity is increased in the press room
- what is the procedure to care for a newly delivered substrate to the press room
- why should waste be sorted
- what is the advantage of keeping reusable waste
- what industry standards can be applied to enhance effective communication with the client
- what are the necessary procedures that the client should follow to "OK" a printed product
- when would it be necessary to call service personnel to correct a machine problem
- what enterprise procedures are in place to report any machine operating problems
- what would be the result if correct shutdown procedures were not followed
- why is it necessary that correct shutdown procedures are conducted with fellow workers
- what advantages result from proper labelling and storage of excess inks and materials
- why should the printed product be clearly labelled prior to removal from the press room
- what further operations are required for printed reels upon removal from the printing machine
- how should the printed job be stored after removal from the printing machine
- what OHS concerns should be observed when handling ink
- what safety precautions should be observed when cleaning the printing cylinders
- why is it necessary to thoroughly clean and wash up the printing unit prior to the next print run
- why should the doctor blades be thoroughly cleaned
- why should doctor blades be handled with extreme care

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• how can printing cylinders be stored so as to minimise damage• what OHS precautions should be observed when cleaning these sections of the machine• why is it necessary to maintain a clean substrate handling section of the machine• how are completed records used in the final analysis of the job• what are the benefits of comprehensive records when considering the production of future jobs• what machine manuals, safety and other documentation are relevant to this task and where are they kept and information included in these documents |

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operate a gravure press ensuring an efficient non-routine production flow that maintains product quality standards. Any production problems are rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources monitor production output and make necessary adjustments to maintain print quality on a gravure machine whilst producing a complex print on TWO occasions (if possible using different substrates and if possible including at least TWO in-line processes) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment gravure printing machine and in-line units.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICPPR421C Set up for complex gravure printing

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel handling systems.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of inks commonly used in 3 or more colour printing, including standard and special colours.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of stack, in-line and central impression printing machines with manual, semi-automated, fully automated or computerised process control.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of viscosity controls, densitometers and spectrophotometry.
<i>Design</i> may include:	<ul style="list-style-type: none"> 3 or more colours, complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive materials, board, plastics and related films, or metal.
<i>Non-routine</i> may include:	<ul style="list-style-type: none"> non-routine within this context relates to the set up and production of print runs. The set up of equipment and production involves a significant amount of deviation from using standard equipment settings. It also involves significant problem solving and the development of new criteria and procedures for performing current practices. It does not refer to a job that an individual does only

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Standard set up is planned for carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reel system (OR Element 3)	2.1. Unwind and rewind reels is are set up and standard settings adjusted according to job specifications 2.2. Webbing procedures are carried out according to standard operating procedures and OHS 2.3. Web-control system is set up and standard settings adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications 2.5. The folder and sheeter are is set up and standard settings adjusted according to job specifications
3. Set up sheet system (OR Element 2)	3.1. Feeder and delivery sections are is set up and standard settings adjusted according to job specifications 3.2. Registration system is identified and adjusted according to job specifications 3.3. Sheet pick-up, and transportation, control and transfer systems is are set up and standard settings adjusted according to job specifications 3.4. <i>Substrate</i> is removed from process according to job instructions
4. Select and prepare inks and additives (basic)	4.1. <i>Inks</i> , dyes or additives are checked and appropriate action is taken and end-user requirements 4.2. Quality and suitability of inks, dyes or additives are selected according to job specifications and en-user requirements 4.3. Inks, dyes and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 4.4. Correct colour and weight/volume of ink are mixed and prepared to match the requirements of the printing process and job specifications 4.5. Formulation of the ink, <i>colour match</i> and the approved colour are appropriately recorded 4.6. Inks, dyes and additives are appropriately labelled,

ELEMENT	PERFORMANCE CRITERIA
	<p>handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and prolong shelf life</p>
<p>5. Set up machine for basic offset lithographic printing</p>	<p>5.1. Plate cylinder are set up and adjusted and lithographic plates are selected and installed according to job specifications</p> <p>5.2. Blanket and blanket cylinder are set up and adjusted according to job specifications</p> <p>5.3. Impression cylinder is set up and adjusted according to job specifications</p> <p>5.4. Inking system is set up and adjusted according to the lithographic process and job specifications</p> <p>5.5. Dampening system is set up and adjusted according to job specifications</p>
<p>6. Conduct ok print run</p>	<p>6.1. Material to be used for proof ok sheet/section is organised correctly</p> <p>6.2. Machine is operated according to manufacturer's and enterprise procedures to produce a specified proof ok/section</p> <p>6.3. Ok/section is visually inspected and/or tested or laboratory testing organised according to enterprise procedures</p> <p>6.4. Production does not commence without client OK or authority where appropriate</p> <p>6.5. If necessary, results are interpreted and adjustment are carried out according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job tickets and requirements
- collecting, analysing and organising information by collecting and assessing data about printing process and machine specifications and characteristics and how these interact
- planning and organising activities by providing input into production scheduling about time requirements for set up to ensure efficient operation
- teamwork when working with others to coordinate set up to ensure efficient operation
- mathematical ideas and techniques by calculating plate position and substrate requirements for the job
- problem-solving skills by recognising proofing faults and determining adjustments to correct them
- use of technology by using monitoring equipment and interpreting readouts

Required knowledge

- vital information missing from the job ticket
- checks that should be undertaken prior to set up (availability of materials etc)
- problems that can result from the cylinder not being cleaned prior to plate fitting
- how the grip edge of the plate is identified
- effect of over packing the printing plate cylinder
- pitch lines to be used to assist in plate installation
- tools or actions are likely to damage the plate
- plates be consistently tensioned
- OHS precautions that must be observed when webbing up the machine
- determining the printing side of the material
- effect of low web tension on the print
- purpose of nip rollers
- types of web splices appropriate for the job
- OHS factors that need to be considered when setting up the sheet in-feed and transfer systems
- sheet normally set up in the middle of the machine
- effect side lay selection has on the job
- determining the position of the sheet before it is transported to the printing unit
- how a register check would be carried out

REQUIRED SKILLS AND KNOWLEDGE

- two-sheet cut used on most feeders
- sheet is missing or late
- effect of excessive web tension at the rewind of the machine
- risks associated with the rewind of the machine
- application of spray powder is sometimes advisable
- affects of too much spray powder
- slowdown devices to be used in the delivery
- effect excessive jogging would have on the stack
- OHS and environmental concerns of inks and additives
- details that are necessary to check the suitability of an ink for a job
- modifying ink that is slightly light
- methods that are available to check the ink for correct colour
- who passes the colour prior to running the job
- OHS factors that need to be considered when setting up the machine
- how the cylinder (plate, blanket and impression) specifications are determined for the specific job
- effects an incorrectly set dampening system may have on the job
- ink profile varies across the machine
- optimum ink duct sweep
- machine position to engage in-line processing units
- precautions necessary when setting up in-line processing units
- precautions to be taken if UV drying was utilised to dry the ink film
- methods that can be used to minimise waste during make ready
- check on the initial print prior to running
- how the machine is proof tested
- ideal conditions for inspecting the proof
- methods that are available to check and adjust ink colour and consistency
- adjustments that may have caused mis-register
- adjustments that are made to position the image laterally
- adjustments that are made to position the image circumferentially
- who has the final say in the "OK" of the job
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
