2. Maintain non-routine operation of sheet system (OR Element 1)	2.1. Feeder and delivery sections are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to and removed from the process according to job instructions 2.5. Set-off/marketing prevention system is monitored and adjusted to ensure quality of printed product without set-off or marking meets the standard of approved proof
3. Maintain complex lithographic printing process	3.1. Non-routine lithographic plate and plate cylinder condition are monitored and adjusted to ensure the quality of printed product meets the standard of the sample sheet 3.2. Non-routine lithographic blanket and blanket cylinder condition are monitored and adjusted to ensure the quality of printed product meets the standard of sample sheet 3.3. Non-routine lithographic impression cylinder condition is monitored and adjusted to ensure quality of printed product meets the standard of sample sheet

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Non-routine lithographic inking system is checked and maintained to ensure quality of printed product meets the standard of sample sheet</p> <p>3.5. Non-routine lithographic dampening system condition is monitored and adjusted to ensure quality of printed product meets the standard of sample sheet</p> <p>3.6. Set off/marketing prevention and drying system is monitored and adjusted to ensure quality of printed product meets the standard of sample sheet</p> <p>3.7. Drying systems are monitored and adjusted to ensure quality of printed product meets the standard of approved proof</p>
4. Maintain production process	<p>4.1. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule</p> <p>4.2. Production is maintained within OHS requirements and company and manufacturer's specifications</p> <p>4.3. Manual and/or automatic control is used as per specification</p> <p>4.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.5. <i>Ink</i> performance, colour, register and position of print are monitored and adjusted throughout production run</p> <p>4.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and investigate lithographic machine operating problem	<p>5.1. Problem in lithographic machine operation is investigated</p> <p>5.2. Problem in lithographic machine is identified and reported according to enterprise procedures</p>
6. Rectify minor lithographic machine faults	<p>6.1. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>6.2. Lithographic machine operation is checked to ensure</p>

ELEMENT	PERFORMANCE CRITERIA
	correct operation
7. Conduct shutdown of production process	<p>7.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>7.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>7.3. Unused ink is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>7.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>7.5. All product is removed from operating area</p> <p>7.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>7.7. Repair/adjustment is verified prior to resumption of operations</p>
8. Clean and wash up printing machine at end of print run	<p>8.1. Cylinders, plate and roller surfaces are cleaned ready for next run</p> <p>8.2. Inking system and dampening system are washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements</p> <p>8.3. <i>In-line</i> printing/converting/binding/finishing units are cleaned ready for next run</p> <p>8.4. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>8.5. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p>
9. Complete records	9.1. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- reel transportation and web control
- OHS concerns when operating the reel transportation system
- reel wander
- causes of web break at the unwind unit
- difference between a "flying paster" and "zero speed" type reel-stand
- print fault that would result from the reel being run out of centre
- faults in the unwind section that could cause a web break
- sheet transportation and transfer
- OHS concerns that are there when operating the sheet transportation system
- result of worn suckers at the feeder suction head
- type of two sheet detection on this machine
- movement that the sheet should have when being registered by the side lay
- causes of mis-register of the sheet at the feeder
- visible signs of the sheet being registered in the feeder
- gripper malfunction affecting sheet control and transfer
- adjustment of sheet transfer mechanisms
- causes of the feeder stack becoming uneven
- result of the feeder stack not being loaded level
- how unevenness of the feeder stack can be rectified

REQUIRED SKILLS AND KNOWLEDGE

- reel delivery for rewinding and sheeting
- OHS risks associated with rewinding and sheeting
- what safety feature is in the delivery system if the web jams up
- why the sheet cut-off would wander
- effect of poorly adjusted nip rollers when rewinding and sheeting
- further operations that are required for printed reels upon removal from the printing machine
- how the printed job should be stored after removal from the printing machine
- why it is necessary to label each printed reel
- sheet delivery
- effect machine speed will have on sheet delivery
- advantage of spraying moving sheets with anti set off powder in the delivery
- items in the delivery that could cause marking of the printed image
- remedial steps that may be necessary to eliminate marking of the printed image
- function of a sheet decurler fitted to the delivery of some machines
- faults that could result from incorrectly set grippers in the transfer section of a machine
- how the printed job should be stored after removal from the printing machine
- printing unit
- result if the plate develops a crack at the grip edge during a print run
- effect of a sticky blanket surface
- print faults that would result from the blanket not being tensioned correctly
- causes of blanket packing creep during printing
- how a build-up of ink on the impression cylinder could affect the printed product
- cause of the ink to lying back in the duct
- causes of ink stripping on the inking rollers
- print faults that would result from excessive use of fountain solution on the plate
- recommended pH range for fountain solutions
- causes of the conductivity of the fountain solution to change over an eight-hour shift
- problems that can be caused by excessive conductivity of the fountain solutions
- drying unit
- link between driers and set off and marking
- what causes UV ink to dry
- what could cause the substrate to blister
- effect in the chillers if the drying temperature was too low
- effect of incorrect drying temperature on the finished product
- in-line processes
- consistency of the punching unit
- result of excessive pressure on the slitters
- result of a dirty former

REQUIRED SKILLS AND KNOWLEDGE

- result of defective pins in the folder
- result of adjusting the rollers at the base of the former
- causes of the web jamming up in the folder
- maintaining production process
- effect of inadequate communication within the work team on a lithographic printing machine
- safety features within the organisation aid in maintaining effective production
- ramifications if machine guards are removed and/or micro switches are disconnected on a machine
- who would be held legally responsible for the removal of machine guards and/or disconnection of micro switches
- disadvantages of using a closed looped system for automatic control of the printed product
- other measurements besides optimum solid ink density can be measured to assess print quality
- most accurate method of checking register during a production run
- action when production problems are anticipated
- action to eliminate further processing of unacceptable printed product
- effect of relative humidity if increased in the press room
- procedure to care for a newly delivered skid of paper to the press room
- why waste should be sorted
- advantage of keeping reusable waste
- industry standards that can be applied to enhance effective communication with the client
- necessary procedures that the client should follow to "OK" a printed product
- lithographic machine operating problems
- when it is necessary to call service personnel to correct a machine problem
- enterprise procedures that are in place to report any machine operating problems
- correct shutdown procedures
- advantages that result from proper labelling and storage of excess inks and materials
- why the printed product be clearly labelled prior to removal from the press room
- cleaning and washing up the printing unit
- OHS concerns that should be observed when handling ink
- safety precautions that should be observed when cleaning the printing cylinders
- washing procedure for offset rubber blanket
- how plates can be stored so as to minimise damage
- cleaning feed, transportation, delivery and in-line sections
- OHS precautions to be observed when cleaning these sections of the machine
- completing production records
- completed records are used in the final analysis of the job

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• benefits of comprehensive records when considering the production of future jobs• machine manuals, safety and other documentation that are relevant to this task, where kept and information that is included in these documents |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • Operate a lithographic press ensuring an efficient non-routine production flow that maintains product quality standards. Any production problems are anticipated and rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines • Demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • Demonstrate an ability to find and use information relevant to the task from a variety of information sources • Monitor production output and make necessary adjustments to maintain print quality on a lithographic machine whilst producing a complex print on TWO occasions (if possible using different types and sizes of substrates and if possible including at least TWO in-line processes) according to job specifications, enterprise procedures and the Performance Criteria • Evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • lithographic printing machine
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICPPR431C Set up for complex lithographic printing

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel, and large and small sheet handling systems.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of single sheet, stream-fed or reel-fed printing machines with manual, semi-automated, fully automated or computerised process control. Includes machines with digitally imaged plates.
<i>Non-routine</i> may include:	<ul style="list-style-type: none"> non-routine within this context relates to the set up and production of print runs. The set up of equipment and production involves a significant amount of deviation from using standard equipment settings. It also involves significant problem solving and the development of new criteria and procedures for performing current practices. It does not refer to a job that an individual does only occasionally.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> wide range of inks commonly used in printing.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of densitometers and spectrophotometry.
<i>Design</i> may include:	<ul style="list-style-type: none"> complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Install tampons (printing pads) into machine	2.1. Appropriate tampons are selected according to job specifications 2.2. Tampons are secured into <i>machine</i>
3. Set up fixtures onto machine bed	3.1. Appropriate fixtures are selected and secured to xy table 3.2. Height of machine bed is adjusted to suit size of object to be printed 3.3. Xy table of machine bed is adjusted to suit position of image on object
4. Select and prepare inks and additives	4.1. <i>Inks</i> and additives are selected according to job specifications and end-user requirements 4.2. Quality and suitability of inks and additives are checked and appropriate action is taken 4.3. Inks and additives are prepared according to OHS requirements and manufacturer's/supplier's instructions with suitable precautions to minimise waste 4.4. Correct colour and weight/volume of ink are mixed and prepared to match the requirements of the printing process and <i>routine</i> job specifications 4.5. Formulation of the ink, <i>colour match</i> and the approved colour are appropriately recorded 4.6. Inks and additives are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and prolong shelf life
5. Set up machine for basic pad printing	5.1. Plate holder is set up and adjusted according to job specifications 5.2. Appropriate plate and plate holder are selected and plate is secured into plate holder 5.3. Tampons are set up and adjusted according to job specifications 5.4. Spatula and doctor blade are set up and adjusted according to the requirements of the pad printing

ELEMENT	PERFORMANCE CRITERIA
	process and routine job specifications OR 5.5. Ink cup is set up and adjusted according to job specifications
6. Set up manual pre- and post-treatment processes	6.1. Manual loading is set up according to routine object requirements and job specifications 6.2. Manual <i>pre-treatment</i> is set up to suit routine object and according to job specifications 6.3. Drying racks are set up to suit object and according to job specifications
7. Conduct proof run	7.1. Material to be used for proof is organised correctly 7.2. Machine is operated according to manufacturer's requirements and enterprise procedures to produce a specified proof 7.3. Proof is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 7.4. Production does not commence without client approval or authority where appropriate 7.5. Results are interpreted and adjustments are carried out according to product and machine specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job tickets and requirements
- collecting, analysing and organising information by collecting and assessing data about printing process and machine specifications and characteristics and how these interact
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when working with others to coordinate set up to ensure efficient operation
- mathematical ideas and techniques by calculating cliché and tampon position and substrate requirements for the job
- problem-solving skills by recognising proofing faults and determining adjustments to correct them
- use of technology by using monitoring equipment and interpreting readouts

Required knowledge

- substrate identification
- class of substrate
- ink selection
- ink suitability
- correct viscosity
- pot life of a two-component ink
- pad selection
- correct pad shape for applications
- effect pad shape and hardness have on print quality
- ideal storage conditions for pads
- plate selection
- determining correct plate type for applications
- doctor blades
- OHS concerns when setting presses and doctor blades
- adjusting the machine so that doctor blade is operating correctly
- the effect of a damaged doctor blade
- pre- and post-treatment requirements
- OHS concerns when pre- and post-treating substrates
- pre-treating an oily surface to ensure it is ready for printing

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• print problem identification and correction• causes and solutions for common print problems (eg hairlines around image, loss of density in the centre of a solid image, fine lines of ink running through image, distortion of image)• machine manuals, safety and other documentation are relevant to this task and where are they kept and information that is included in these documents |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain non-routine pad printing process	1.1. Location of objects into fixtures is monitored and adjusted if necessary 1.2. Printing plates condition is monitored to ensure the quality of printed product meets the standard of the approved proof 1.3. Printing pads condition is monitored and maintained to ensure the quality of printed product meets the standard of approved proof 1.4. Spatulas and doctor blades are monitored and adjusted to ensure quality of printed product meets the standard of approved proof OR 1.5. Ink cups are monitored and adjusted to ensure quality of printed product meets the standard of approved proof 1.6. Printing ink viscosity is monitored and adjusted to ensure quality of printed product meets the standard of approved proof
2. Maintain in-line systems	2.1. In-line loading is monitored and adjusted to ensure quality of printed product meets the standard of approved proof 2.2. In-line pre-treatment is monitored and adjusted to ensure quality of printed product meets the standard of approved proof 2.3. In-line drying is monitored and adjusted to ensure quality of printed product meets the standard of approved proof 2.4. In-line ejection is monitored and adjusted to ensure quality of printed product meets the standard of approved proof
3. Maintain non-routine production process	3.1. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule 3.2. Production is maintained within OHS requirements and company and manufacturer's specifications 3.3. Manual and/or automatic control is used as per specification 3.4. Performance is monitored and verified using the process control system according to enterprise procedures 3.5. Ink performance, colour, register and position of print are monitored and adjusted throughout

ELEMENT	PERFORMANCE CRITERIA
	<p>production run</p> <p>3.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>3.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>3.8. Waste is sorted according to enterprise procedures</p>
4. Identify and rectify faults	<p>4.1. Problem in pad printing <i>machine</i> operation is identified and reported according to enterprise procedures</p> <p>4.2. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>4.3. Pad printing machine operation is checked to ensure correct operation</p> <p>4.4. Faulty performance of equipment is identified and reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Unused ink is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>5.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.5. All product is removed from operating area</p> <p>5.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.7. Repair/adjustment is verified prior to resumption of operations</p>
6. Clean and wash up printing machine at end of print run	<p>6.1. Plates and pads are cleaned ready for next run</p> <p>6.2. Inking system is washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements</p> <p>6.3. Pre- and post-treatment units are cleaned ready for next run</p>

ELEMENT	PERFORMANCE CRITERIA
	6.4. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- Use of technology by using monitoring equipment and computerised production records

Required knowledge

- major OHS concerns when operating this machine
- where the MSDSs are stored and what information do they contain
- different machine cycle modes
- how the colour density of a light image on a dark substrate can be improved by selection of a different machine cycle mode
- special cycle modes that are available on the machine and their application
- determining if the ink has been mixed to the correct viscosity
- correcting ink viscosity during production
- causes of unreleased ink remaining on the printing pad and how you identify them
- how the addition of a catalyst affects the pot life of ink and what other factors affect pot life
- recognising a damaged pad
- correct method of cleaning a pad during production
- in multicoloured printing effect of different pad shapes for different colours
- pre- and post-treatment requirements
- determining the time the ink should take to cure before scratch and adhesion tests can be performed
- method that can be used to check for correct pre-treatment of polypropylene during production

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• ensuring that drying conditions are correct for the product• print problem identification and correction• effects that will be visible in the image if the ink viscosity is incorrect• identifying the cause of incorrect registration and prevent its recurrence• cause a fine coating of ink over the whole cliché surface• machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operate a pad printing machine ensuring an efficient non-routine production flow that maintains product quality standards. Any production problems are rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources produce TWO complex pad printing jobs (if possible on different substrates) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of standard inks commonly used in multicoloured printing.
<i>Machines</i> may include:	<ul style="list-style-type: none"> a range of pad printing machines with manual, semi-automated, fully automated or computerised operation.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of visual colour assessment to match basic standard colours and/or Pantone shades under controlled lighting conditions.
<i>Design</i> may include:	<ul style="list-style-type: none"> multicoloured, complex graphics and text. Critical tight registration, fit and position pre- and post-treatment processes range of pre- and post-treatment techniques used in pad printing.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, wood, glass (ceramics), plastics, metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> manual handling.
<i>Non-routine</i> may include:	<ul style="list-style-type: none"> non-routine within this context relates to the set up and production of print runs. The set up of equipment and production involves a significant amount of deviation from using standard equipment settings. It also involves significant problem solving and the development of new criteria and procedures for performing current practices. It does not refer to a job that an individual does only occasionally.

ICPPR382C Produce and manage complex digital print

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to produce and manage digital print for a complex print production environment.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit requires the individual to identify the productivity of digital print systems and to communicate these effectively. The individual is required to troubleshoot and rectify production workflow problems for digital printing to maximise productivity. The individual will construct and access complex electronic data, perform digital colour management, manage digital production workflows, and maintain and adjust machine settings to ensure production speeds and print quality are achieved.</p> <p>This competency is best applied in the commercial print, pre-press, bureau, high-end digital print or a combination of any of these business environments.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Troubleshoot and correct production workflows for digital printing	<p>1.1. A productivity analysis on a digital production system is undertaken to determine most productive approach according to job specifications</p> <p>1.2. Workflow procedures for digital printing are developed according to equipment availability and production environment, for a range of job specifications</p> <p>1.3. Possible causes for problems in the workflow procedures are identified and rectified and strategies to improve productivity with minimum waste in resources and according to job specifications are developed</p> <p>1.4. Preventive maintenance on a digital printing system is undertaken according to manufacturer's specifications to ensure maximum productivity, minimum downtime and wastage</p>
2. Liaise with clients	<p>2.1. Print services, quality expectations and print costings for digital printing are communicate to clients according to enterprise procedures</p> <p>2.2. Productivity advantages and disadvantages of different digital print options are communicated according to manufacturer's specifications and enterprise procedures</p> <p>2.3. Turnaround time is calculated and communicated to client according to enterprise procedures</p>
3. Confirm job specifications	<p>3.1. Print job specifications are correctly interpreted from job documentation or production control system</p> <p>3.2. Availability of all job components is checked according to enterprise procedures</p> <p>3.3. Scanning, proofing and finishing requirements of job are checked and internal workflow and/or outsource arrangements are coordinated</p> <p>3.4. Run time of job is determined and completion time correctly estimated</p>
4. Access, verify and submit electronic data files to a digital printer	<p>4.1. A workstation computer and industry software are used to locate and retrieve electronic data files according to job specifications</p> <p>4.2. Preview or pre-flight check is performed on electronic data files to verify correct job set up according to job specifications</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Job priority is determined according to job specifications and production schedules</p> <p>4.4. Data file is submitted to print and image quality and <i>machine</i> productivity checks are performed and adjustments made to correct any problems</p>
<p>5. Perform complex digital colour management</p>	<p>5.1. Appropriate digital colour management solutions are used to minimise variation in colour selection, lighting conditions and surrounding colour, machine <i>calibration</i>, screen angle, machine resolution, conversion algorithms from RGB to CMYK, <i>substrate</i> type and condition</p> <p>5.2. Printed RGB, CMYK and PMS colour charts are used to perform <i>colour matching</i> with client proof</p> <p>5.3. Accurate recommendations on colours to use when producing electronic data files are made according to job specifications</p> <p>5.4. Colour matching of an electronic data file created using the RGB colour model is performed by using machine calibration procedures and by customising an output profile</p>
<p>6. Perform and/or coordinate document proofing</p>	<p>6.1. A digital proof run is conducted for client approval and to confirm proof meets job specifications</p> <p>6.2. Internal or external pre-press proofing systems operators are consulted to conduct the proof run and provide job specifications according to enterprise procedures</p> <p>6.3. Communication between the client and proofing provider occurs to ensure proof conforms to job specifications</p>
<p>7. Run digital print job and/or coordinate press print run</p>	<p>7.1. Production schedules, enterprise procedures and job specifications are observed and liaison with internal and/or external production operators is maintained to determine start and duration time for the print run</p> <p>7.2. A digital print run is conducted according to job specifications ensuring that machine productivity and quality are monitored and adjusted throughout the duration of the print job</p>
<p>8. Perform and/or coordinate document finishing and client delivery</p>	<p>8.1. The finishing method is determined according to job specifications</p> <p>8.2. Steps required for document finishing are identified and if necessary performed on <i>in-line</i> finishing units on a web- or a sheet-fed system according to</p>

ELEMENT	PERFORMANCE CRITERIA
	enterprise procedures 8.3. Packaging and presentation of finished print work is completed with co-workers and/or external source, if necessary, to ensure against damage and to conform to delivery requirements according to job specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing information to client on how to construct digital files to achieve accurate print results
- collecting, analysing and organising information by determining printing conditions to identify colour management requirements
- planning and organising activities by designing production workflows to ensure efficient print processes
- teamwork when maintaining production workflows in association with co-workers
- mathematical ideas and techniques by using calibration techniques to determine dot densities
- problem-solving skills by identifying workflow problems and implementing strategies to improve productivity
- use of technology by using proficiently computer hardware and software to maximise productivity

Required knowledge

- problem-solving strategies that could you use if a key piece of equipment in the production workflow was temporarily unavailable
- actions required if the substrate type you required was unavailable
- workarounds that could be used if you received a data file error when accessing a PDF file
- what to do if you had a busy production schedule with tight deadlines and a power failure occurred for an indefinite period of time
- factors that influence making a decision about using a particular printing solution (run length, substrate type, application)
- cost difference between a specified job printed on a digital system and a specified traditional system (eg digital vs lithographic)
- quality difference between a specified job printed on a digital system and a specified traditional system (eg digital vs lithographic)
- difference in turnaround time of a specified job printed on a digital system and a specified traditional system (eg digital vs lithographic)
- print method that would be the most appropriate option for the specified print job
- main differences between digital printing and traditional printing methods
- recommendations that could be made to a client who has created an electronic file in an incompatible software application
- suggestions that could be made to a client who required a high volume print run but needed a portion of the print job immediately

REQUIRED SKILLS AND KNOWLEDGE

- steps that need to be followed for a client approval of a proof
- actions required if vital information was missing from the job ticket (manual or electronic)
- checks needing to be undertaken prior to set up (availability of material, maintenance)
- file does not transfer correctly what action should be taken to correct the problem
- main points to be checked before submitting file to print
- checks are made to ensure the data is in a format that can be used in digital print
- suggestions that could be made to a client who has an incompatible version of software
- ways to submit a PDF file to the digital printer
- OCR scanning
- scan resolution affecting document size and quality
- action required if a scanned image was too dark
- sort of scanner hardware and software configuration that could be used to digitally scan a hard copy multi-page document with text and images
- difference between colours displayed on a computer monitor and printed colour
- machine calibration affecting colour consistency
- using printed colour charts to perform colour matching to a proof
- what the acronym ICC stands for and what is the significance
- how a simulation profile affects colour output
- circumstances in which a job be modified before printing
- why margins should be changed when the job reaches the printer
- steps that need to be followed for client approval of the print
- what the proof is checked against
- type of proofing system that is available in the traditional pre-press
- recommendations that you could make regarding an appropriate proofing system for a specified print job
- document finishing and client delivery
- various types of binding
- procedures to be followed if the binding method required by the client was not available at your site
- why packaging finished print work is important

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- organisation skills to coordinate pre-press, print run, finishing and delivery production workflows
- produce and access complex electronic data
- conduct a digital proof run
- perform digital colour management
- adjust settings and ensure productivity
- perform preventive maintenance on digital printer
- demonstrate use of computerised control and monitoring systems if available and appropriate
- perform preventive maintenance tasks on a digital printer according to manufacturer's specifications
- prepare a written document that outlines production workflow and give reasons for production methods selected for a print job using the following job specifications within a specified production environment for:
 - 4-colour advertising brochure
 - quantity: 2000
 - substrate: 120gsm coated
 - text: supplied electronically
 - images: continuous tone photographs supplied
 - logos and line art: supplied electronically
 - layout: hand drawn thumbnails supplied
 - finished size: A3 bleed
 - finishing: guillotined, folded and saddle
 - packaging: boxed
- turnaround time: 100 in 48 hours and remainder in 14 days
- produce a digital colour proof of a supplied electronic file
- use a digital colour management system to perform colour matching to a supplied proof
- for valid and reliable assessment of this unit,

EVIDENCE GUIDE	
	<p>evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance</p> <ul style="list-style-type: none"> evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment a digital printing machine and a digital front end.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPPR281C Set up and produce basic digital print ICPPR282C Produce and manage basic digital print ICPPR481C Set up and produce complex digital print.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Workflow</i> may include:	<ul style="list-style-type: none"> task breakdown of the print production cycle for a range of electronic data files, computer systems, digital front ends, industry software, workplace regulations and printing machines.
<i>Manufacturer's specifications</i> may include:	<ul style="list-style-type: none"> technical, administrator and user specifications documented by a manufacturer for a range of printing machines.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> may include rules, standards, OHS guidelines, communication protocols and behaviour codes of a range of workplace environments.
<i>Workstation computer</i> may include:	<ul style="list-style-type: none"> personal computer with either proprietary or non-proprietary operating systems used to create, access and edit electronic data files from a range of manufacturers eg Apple, IBM, UNIX.
<i>Industry software</i> may include:	<ul style="list-style-type: none"> range of software to design, create, access, edit and print electronic data files from a range of manufacturers eg Adobe, Quark Inc., Macromedia, Microsoft.
<i>Electronic data files</i> may include:	<ul style="list-style-type: none"> range of proprietary or non-proprietary data file formats compatible with a range of workstation computers and industry software.
<i>Pre-flight</i> may include:	<ul style="list-style-type: none"> user software designed to check, preview and edit to ensure data file integrity for a range of operating systems and printing machines.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of non-impact printing machines including inkjet and laser with or without colour manipulation capability, and including machines with computerised monitoring and/or control.
<i>Calibration</i> may include:	<ul style="list-style-type: none"> mechanical and/or electronic and/or visual controls used to identify and correct ink coverage and density inconsistencies in a range of printing equipment.

RANGE STATEMENT	
<i>Substrates</i> may include:	<ul style="list-style-type: none"> • range of print media and paper
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> • use of visual colour assessment and matching under controlled lighting conditions.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor in-line processes such as perforating, numbering, date coding, imposition, that do not constitute another defined unit of competency. Major in-line process is defined as a separate competency eg flat-bed cutting, folding.
<i>Inking systems</i> may include:	<ul style="list-style-type: none"> • range of inks, dyes, toners commonly used in 2-colour printing, including special colours.
<i>Design</i> may include:	<ul style="list-style-type: none"> • 1-2 colour, simple graphics and text. Minor variation in registration position.
<i>User replaceable consumables</i> may include:	<ul style="list-style-type: none"> • consumables required to be changed by an individual if damaged or reached expiry. Used by a range of printing machines for correct functioning such as ink, toner, developer, waste toner, cleaning web, fuser, substrates.
<i>User control interface</i> may include:	<ul style="list-style-type: none"> • computerised monitoring and data entry device used to enter machine default settings, job specification settings, monitor machine status and perform machine productivity enhancements.
<i>Performance expectations</i> may include:	<ul style="list-style-type: none"> • manufacturer's documented statement of print machine productivity and quality capabilities and limitations eg substrate feed and speeds, substrate recommendations, substrate weight and size capabilities, productivity and performance issues associated with a variety of print jobs.
<i>Registration mechanisms</i> may include:	<ul style="list-style-type: none"> • mechanical and/or electronic controls used to adjust substrate position throughout substrate feeding and transport units of a range of printing machines.
<i>Digital front-end</i> may include:	<ul style="list-style-type: none"> • proprietary computer processor hardware and software required to interpret electronic data files and convert to print-ready data.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the job specifications	1.1. All details required for the job are checked and confirmed against <i>job specifications</i> 1.2. The <i>correct materials</i> are checked and are available for the job 1.3. Printing equipment is checked that it is operating efficiently and safely 1.4. Post-printing requirements are accurately identified according to job specifications 1.5. The correct data files are accessed and data conforms to the job specifications
2. Set data requirements	2.1. Data files are set up and required dynamic links operate correctly and settings conform to the job specifications 2.2. Data is in the correct sequence required for the run 2.3. Data is checked to ensure it is uncorrupted
3. Set machine quality	3.1. Work area is safe and ready for production 3.2. The digital <i>printing machine</i> is set to run efficiently and safely 3.3. The image is complete, sharp, of the required strength, free from contamination and in register 3.4. Output can be achieved at the required quality standard and at the required speed 3.5. A sample from the machine is produced and checked for conformance to the job specifications 3.6. Adjustments are made when specifications are not met 3.7. If adjustments involve changes to materials, costs or time, supervisor or client are informed and approval secured 3.8. Set up is complete before the deadline for the start of production

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by placing data in the correct sequence required for the run
- collecting, analysing and organising information by identifying the requirements of the job
- planning and organising activities by correctly identifying post-printing requirements
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by checking data, where relevant, to ensure it is uncorrupted
- problem-solving skills by making adjustments to the machine when production standards are not met
- use of technology by setting up a digital printing press for variable data printing

Required knowledge

- job requirements
- information sources
- workflow
- printing machines
- result prediction
- data interpretation
- data interpretation
- data retrieval

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check components and functions of a digital print system	1.1. All areas of user replaceable <i>consumables</i> are checked and replacements made 1.2. <i>Substrate</i> feeding mechanisms and transport units are checked and cleared of any misfeeds 1.3. Correct set-up for data and electrical power is completed 1.4. Shutdown and restart procedures are performed according to manufacturer's specifications 1.5. Print driver and/or job download software are correctly installed and set-up on workstation computer and/or digital front-end processor
2. Maintain digital printing system to maximise productivity and quality	2.1. Routine maintenance tasks are performed according to <i>manufacturer's specifications</i> 2.2. Substrate transport and <i>inking systems</i> are cleaned to ensure optimum productivity and quality 2.3. Temperature and humidity conditions are checked to ensure even flow of substrate 2.4. Substrate registration mechanisms are checked to ensure alignment of printed images 2.5. Ink density <i>calibration</i> is performed on a digital print system to meet job specifications 2.6. Basic maintenance solutions to minimise ink residue, substrate misfeed, paper particle dust, uncalibrated systems and ink coverage are implemented
3. Maintain and perform optimum substrate handling procedures	3.1. A paper handling and storage system for a digital print environment are developed that maintains substrate integrity and digital image quality 3.2. <i>Machine</i> status is checked, print counters and consumable levels are reviewed and time estimated for reordering, servicing and reporting purpose
4. Confirm job specifications	4.1. Print job specifications are read and interpreted from job documentation or production control system 4.2. Availability of all job components is checked according to <i>enterprise procedures</i> 4.3. Finishing requirements of job are checked and internal workflow and/or outsource arrangements are coordinated according to enterprise procedures 4.4. Run time of job is calculated and completion time is estimated, allowing consideration for other

ELEMENT	PERFORMANCE CRITERIA
	production demands
5. Set up reel system	5.1. Unwind reel is adjusted according to job specifications 5.2. Rewind reel is set up and adjusted according to job specifications 5.3. Minor <i>in-line processes</i> are set up and adjusted according to job specifications
6. Set up sheet transportation system on sheet-fed machine	6.1. Substrate is loaded into correct feeding mechanism and all substrate properties are correctly specified in the user control interface 6.2. Adjustments to the delivery unit are identified and made using the user control interface according to job specifications 6.3. On-line finishing unit is adjusted using the user control interface according to job specifications
7. Use RIP or front-end processor to set up job	7.1. Electronic data files are located and retrieved according to job specifications 7.2. <i>RIP or front-end processor</i> parameters are set according to job specifications 7.3. Preview or preflight check of electronic data files is performed to verify correct job set-up according to job specifications 7.4. Basic troubleshooting methods are applied to identify and rectify unverified data files, file errors and job requirement inconsistencies according to manufacturer's specifications
8. Submit data files to a digital print machine	8.1. Job priority is determined according to job specifications and production schedules 8.2. Data file is submitted to print and image quality and machine productivity checks are performed
9. Produce digital proof and run digital print job	9.1. A proof run is conducted to confirm proof conforms to job specifications and/or for client approval if required 9.2. Entire print run is conducted according to job specifications ensuring that machine productivity and quality are monitored and rectified throughout the duration of the print job
10. Coordinate and/or perform document finishing and client delivery	10.1. Steps required for document finishing are identified if not performed on in-line finishing units on a reel or sheet-fed system according to job specifications

ELEMENT	PERFORMANCE CRITERIA
	10.2. Finished print work is packaged in a manner to prevent damage and to conform to delivery requirements according to job specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for interpreting job tickets and requirements
- collecting, analysing and organising skills for collecting and assessing data about coating process and machine specifications and characteristics and how these interact
- planning and organising skills for identifying and providing information about time and materials requirements for set-up, production and finishing to ensure efficient operation
- teamwork skills for maintaining the production process in association with other workers
- numeracy skills for calculating substrate properties and production speeds to determine run length
- problem-solving skills for recognising proofing faults and determining adjustments to correct them
- technical skills for using computerised technology to access and adjust data files

Required knowledge

- workplace job ticket procedures
- pre-printing set-up checks and procedures
- file transfer actions, problems and solutions
- OHS issues relating to ink/toner
- determining the selection of specific ink/toner for varied printed products
- how to ensure the quality of ink/toner
- what to do if the required substrate was unavailable
- maximum weight of a substrate that can be printed on a specific machine
- minimum weight of a substrate that can be printed on a specific machine
- possible faults of printing on lightweight paper
- availability of pre-prepared substrates for specific machine
- maximum delivery quantity for specific machine
- possible problems regarding incorrect feeding and delivery
- data formats that can be used in digital print
- the benefits of using electronic data rather than scanning hard copy
- ways to submit a PDF file to the digital printer
- OHS procedures relating to setting up in-line processes
- in-line options that are available on specific machine
- on-line finishing options that are available on specific machine

REQUIRED SKILLS AND KNOWLEDGE

- setting up in-line/on-line processes
- circumstances when a job would be modified before printing
- the steps involved for a client approval of the print
- proof check procedures
- processes involved for gaining final approval of a basic job
- various types of binding
- procedures followed if the binding method required by the client was not available at the workplace
- alternative options if the document size was too thick to staple
- importance of packing finished print work
- location of machine manuals, safety and other documentation relevant to the set up and production of digitally printed products

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- set up a reel, sheet-fed or wide format digital printer
- access data and conduct a digital proof run
- adjust settings and ensure production speeds are attained
- use a RIP or front-end processor
- find and use information relevant to the task from a variety of information sources
- demonstrate all safety devices on machine
- perform preventive maintenance according to manufacturer's specifications
- set up and print four basic digital printing jobs according to manufacturer's specifications and enterprise procedures.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for digital printing, such as production digital presses or wide format printers
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when setting up and producing a basic digitally printed product.

Guidance information for

Holistic assessment with other digital production units

EVIDENCE GUIDE

assessment

relevant to the workplace and job role is recommended.
For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Consumables</i> may include:	<ul style="list-style-type: none"> • ink • toner • developer • waste toner • cleaning web • fuser • various substrates.
<i>Substrates</i> may include:	<ul style="list-style-type: none"> • range of print media and paper, such as: <ul style="list-style-type: none"> • coated • uncoated • card • canvas • vinyl and plastic.
<i>Manufacturer's specifications</i> may include:	<ul style="list-style-type: none"> • technical, administrator and user specifications documented by a manufacturer for a range of printing machines.
<i>Inking systems</i> may include:	<ul style="list-style-type: none"> • commonly used inking systems in colour printing, such as: <ul style="list-style-type: none"> • toner • inkjet • liquid toner-based.
<i>Calibration</i> may include:	<ul style="list-style-type: none"> • mechanical and/or electronic and/or visual controls used to identify and correct ink coverage and density inconsistencies in a range of printing equipment.
<i>Machines</i> may include:	<ul style="list-style-type: none"> • non-impact printing machines, including: <ul style="list-style-type: none"> • inkjet • laser • wide format with computerised monitoring and/or control.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> • rules • standards

RANGE STATEMENT	
	<ul style="list-style-type: none"> • OHS guidelines • communication protocols and behaviour codes of a range of workplace environments.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • stapling • punching • perforating • cutting • numbering or date coding.
<i>RIP or front-end processor</i> may include:	<ul style="list-style-type: none"> • computerised monitoring and data entry device used to enter: <ul style="list-style-type: none"> • machine settings • job specification settings • monitor machine status • perform machine productivity enhancements.

ICPPR385A Apply software applications to digital production

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to correctly select and use a variety of high-end software applications to efficiently produce a standard job.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to the creation of a basic job, using multiple applications for individuals working in the digital printing sector.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		
	ICPSU281C	Use computer systems

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and assess software	1.1. Printing requirements of the layout brief are determined to align with digital production processes and printing feasibility 1.2. Range of <i>software applications</i> is selected according to job specifications 1.3. Appropriate software applications are used to complete components of the job according to manufacturer's specifications and enterprise standards
2. Arrange elements on page	2.1. Client copy and images are assembled to conform to the design brief 2.2. Text is prepared and required fonts and font size are applied 2.3. <i>Basic elements</i> and images are created and arranged on the page to conform to the design brief 2.4. Image resolution and colour mode are determined according to job specifications, help function is accessed, if required, and solution to queries found 2.5. <i>Document set-up</i> is completed to conform to the design brief and job specifications
3. Check quality	3.1. Text is reviewed for possible errors and omissions, and errors are discussed with client or supervisor 3.2. Arrangement of the basic elements are arranged to adhere with design principles 3.3. Hard copy proof is printed and rechecked for errors, omissions and overall design of the layout 3.4. Necessary changes are made and reviewed and re-proofed as required 3.5. The job is saved according to <i>enterprise procedures</i>
4. Use RIP to output job	4.1. The layout is imported into a <i>raster image processor (RIP) or front-end processor</i> according to workplace procedures 4.2. The layout is printed according to job specifications and enterprise standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for using correct ergonomics when operating the computer
- communication skills for gaining client agreement on design layout
- collecting, analysing and organising skills for storing and retrieving all required electronic files
- planning and organising skills for outputting a proof and gaining approval by the client
- teamwork skills for maintaining the production process in association with others
- numeracy skills for expressing ideas and techniques by determining image resolution
- problem-solving skills for checking and fixing errors when preflighting
- technical skills for selecting relevant hardware and software to produce a layout

Required knowledge

- different printing processes used in digital production
- colour modes and how they affect output
- how image resolution is governed by output resolution and/or viewing distance
- various software applications and their usages in relation to digital production
- how the job specifications determine typeface selection
- effect typefaces have on readability
- design principles, such as hierarchy, emphasis, contrast, alignment, repetition and flow
- how to select and manipulate type within a layout application
- image manipulation techniques including basic colour correction
- how to create basic vector shapes with an application
- different colour modes and their uses
- preflighting procedures
- the various ways to import a job into a RIP
- location of manuals, safety and other documentation that are relevant to high-end software applications for digital production

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use a variety of software applications to first produce a layout, then a printed product according to job specifications • find and use information relevant to the task from a variety of information sources • use at least two software applications to prepare and print two different sets of layouts according to enterprise standards.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • that conditions are typical ambient conditions found in the workplace • access to relevant facilities, equipment and materials used for digital production, such as high-end computers, RIPs, output devices and layout software • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence • third party workplace reports of on-the-job performance by the candidate • practical demonstration by the candidate when applying software applications for digital production.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPPP211C Develop a basic design concept • ICPPP221C Select and apply type.

EVIDENCE GUIDE	
	For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Software applications</i> may include:</p>	<ul style="list-style-type: none"> • Adobe Indesign • Illustrator • Photoshop • QuarkXpress • Corel • RIPs and front-end processors • new software applications and new versions of existing products entering the market regularly.
<p><i>Basic elements</i> may include:</p>	<ul style="list-style-type: none"> • simple filled or unfilled boxes • frames • rules (lines) or bullets used as accents or to divide a page into sections.
<p><i>Document set-up</i> may include:</p>	<ul style="list-style-type: none"> • margins • page size • page orientation • number of pages • arrangement of pages.
<p><i>Enterprise procedures</i> may include:</p>	<ul style="list-style-type: none"> • various filing methods and techniques including: <ul style="list-style-type: none"> • network drives • DVDs and archiving systems.
<p><i>Raster image processor (RIP) or front-end processor</i> may include:</p>	<ul style="list-style-type: none"> • computerised monitoring and data entry device used to enter: <ul style="list-style-type: none"> • machine settings • job specification settings • monitor machine status and perform machine productivity enhancements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify substandard process performance	1.1. Operation of <i>printing device</i> is determined to manufacturer's specifications 1.2. Outputs are identified as consistent with normal operation by comparison to proofs, dummy copies or samples 1.3. Signs of equipment degradation and impending failure are identified and appropriate follow-up action is taken according to <i>workplace procedures</i> 1.4. Equipment outputs are inspected to determine nature of the problem 1.5. Nature of substandard performance is defined and reported
2. Identify causes of substandard performance	2.1. Causes of substandard performance are identified using a <i>process for investigation</i> 2.2. Records are reviewed to ensure that device had been maintained according to manufacturer's specifications 2.3. Calibration records are reviewed to ensure system is within calibration 2.4. Appropriate test procedure, <i>materials</i> and equipment are verified 2.5. Performance tests are conducted as appropriate to investigation 2.6. Equipment and/or testing variables are analysed to develop list of possible causes of substandard performance 2.7. Causes of substandard performance are isolated using the process for investigation
3. Propose corrective action	3.1. Corrective action is proposed and trialled based on investigation 3.2. Trial data is monitored to ensure outputs are consistent with normal operation 3.3. Trial results are reviewed to confirm validity of corrective action 3.4. Workplace records are maintained as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for expressing ideas and information by interpreting job tickets and requirements
- collecting, analysing and organising skills for collecting and assessing data about how machine specifications affect substrate performance
- literacy skills sufficient to prepare reports, briefing notes and complete workplace documentation
- planning and organising skills for testing the performance of different substrates on output devices
- teamwork skills for maintaining the production process in association with other workers
- numeracy skills for using densitometry when calibrating for different substrates
- problem-solving skills for recognising performance faults and determining adjustments to correct them
- technical skills for using a range of printing devices

Required knowledge

- relevance and location of machine manuals, safety and other documentation and the information included in these documents
- location of other sources of information
- output devices expected for printing performance on a particular substrate
- how the same substrate can perform differently on various output devices
- how moisture can affect print quality
- correct storage procedures for substrates
- different printing defects that can be caused by lack of calibration
- problem-solving methodologies, including empirical, Ishikawa and brainstorming
- research techniques
- online forums and networks

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify colour requirements	1.1. Printing conditions are determined to identify colour management requirements 1.2. Printer's requirements are established to guide the provision and use of colour profiles
2. Calibrate digital devices	2.1. All <i>digital devices</i> in the workflow are calibrated to produce accurate colour reproduction 2.2. Device profiles created during calibration are correctly used and stored 2.3. Digital devices are checked regularly to ensure they are still within calibration 2.4. Profiles or equipment parameters are adjusted to bring devices back into calibration, when required 2.5. Records are stored to ensure calibration occurs regularly
3. Use colour profiles	3.1. Source and destination profiles are identified within the workflow 3.2. Profiles are used to ensure that colour on monitors, proofs and final product match as closely as possible 3.3. Images are converted to correct profile if incorrect profile is embedded 3.4. The correct rendering intent is used to ensure accurate conversion of colour
4. Configure software within the workflow	4.1. <i>Software applications</i> in the workflow with colour management features are determined 4.2. Software applications with colour management features are configured to meet output condition 4.3. A range of colour management presets are configured, saved and correctly used for various output conditions
5. Maintain colour management workflow	5.1. The colour management system is checked regularly to ensure consistent colour match 5.2. <i>Monitors</i> are calibrated regularly to ensure accurate reproduction of colour 5.3. Digital devices are re-calibrated regularly or when <i>conditions change</i> from initial calibration

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for using correct ergonomics when operating the computer
- communication skills for expressing ideas and information by printing a test file on proofer
- collecting, analysing and organising skills for determining printing conditions in order to identify colour management requirements
- planning and organising skills for clarifying colour requirements before generating a proof
- teamwork skills for maintaining the production process in association with others
- numeracy skills in relation to densitometry, spectrophotometry and colour profiles
- problem-solving skills used when diagnosing and correcting colour problems
- self-management and learning skills to evaluate and enhance personal effectiveness
- technical skills for utilising software and hardware correctly to ensure consistency of output

Required knowledge

- OHS issues related to managing colour for digital production
- densitometric and spectrophotometric measurement
- International Colour Consortium (ICC) profiles and their use
- device independent colour and profile connection spaces
- colour space conversions and rendering intents
- effects ICC profiles have on output
- factors that influence selection of highlight and shadow aim points
- grey balance requirements in relation to colour correction
- process of determining grey balance requirements
- ink/toner light errors - 'ideal' versus 'actual' inks/toners
- viewing light conditions and metamerism
- factors determining the requirement for colour correction
- how different stocks affect colour
- effects different inks have on colour reproduction for proofing and final production
- how dot gain affects colour
- type of press and what printing process are being used for final output
- solutions to common problems for colour management
- effects of using the wrong profile on output
- sources of information about colour management

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- manage colour in pre-press operations to ensure that proofs, monitors and final products match
- locate and use information relevant to the task from a variety of information sources
- check monitors and software to ensure that they have different loaded profiles that match jobs
- apply colour management system maintenance procedures
- produce three jobs with final product printed on various stocks and matching digital proofs on simulated stock.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for colour management production, such as high-end graphics and layout software, densitometers, high-end colour output devices, proofing systems, scanners and digital cameras
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- a portfolio that demonstrates all criteria have been met
- practical demonstration by the candidate in matching proofs, monitors and the final product.

Guidance information for

Holistic assessment with other units relevant to the

EVIDENCE GUIDE

assessment

industry sector, workplace and job role is recommended, for example:

- ICPPP324C Create pages using a page layout application
- ICPPP325C Create graphics using a graphics application
- ICPPP386C Undertake digital proofing
- ICPPP322C Digitise images for reproduction.

For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Digital devices</i> may include:	<ul style="list-style-type: none"> • monitors • proofers • printers • scanners • digital cameras • digital presses.
<i>Software applications</i> may include:	<ul style="list-style-type: none"> • colour management software, e.g. Colorsync • page layout software, e.g. InDesign and/or QuarkXPress • image editing software, e.g. Photoshop and/or Illustrator • raster image processors (RIPs), e.g. Apogee, Spire and Fiery.
<i>Monitors</i> may include:	<ul style="list-style-type: none"> • range of monitors used in the pre-press sector, including: <ul style="list-style-type: none"> • cathode ray tube (CRT) • liquid crystal display (LCD).
<i>Conditions</i> may include:	<ul style="list-style-type: none"> • change of stock • ink cartridge • lighting.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and preflight electronic files	<p>1.1. Electronic data <i>files</i> are located and retrieved using a workstation computer and <i>industry software</i> according to job specifications</p> <p>1.2. <i>Preflight</i> check of electronic data files is performed to verify correct job set-up according to job specifications and problems associated with file are identified</p> <p>1.3. Troubleshooting methods are applied to identify <i>file errors</i> and job requirement inconsistencies</p> <p>1.4. Solutions are implemented to rectify errors according to job specifications</p> <p>1.5. Preflight presets are configured for various job specifications</p>
2. Import file to RIP or job queue	<p>2.1. Correct output profile is selected according to job specifications</p> <p>2.2. Most productive <i>submission workflow</i> is selected and documented based on data file format, quantity and file size and document finishing</p> <p>2.3. Job priority is determined according to job specifications and production schedules</p> <p>2.4. Print driver and/or job download software is correctly installed and set up on workstation computer and/or digital front-end processor</p> <p>2.5. Manufacturer's installation instructions are located and/or software installation is coordinated according to enterprise procedures</p> <p>2.6. Data file is submitted to <i>output device</i>, image quality and machine productivity checks are performed and adjustments made to correct any problems</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for using correct ergonomics when operating the computer
- communicating ideas and information by interpreting implicit and explicit requirements of the job brief
- collecting, analysing and organising information by matching information on production requirements and formats with the job brief
- planning and organising skills by planning the sequence of operations to facilitate smooth processing of the job
- teamwork skills when maintaining the production process in association with others
- numeracy skills for calculating correct resolution for output device
- problem-solving skills by correcting mistakes in electronic files to conform with job specifications
- technical skills for using equipment correctly to ensure ease of subsequent processing

Required knowledge

- printing processes
- required resolution for various output conditions
- colour modes and how they affect output
- trapping and overprint requirements
- screens - types and angles
- bleed amounts required for various jobs
- impact font types and licensing can have on output
- preflighting tools available in various applications
- different file types and how they can effect output
- factors that influence the processing speed of a job when being ripped
- how the ripping speed of a job can be increased

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Save digital files	<p>1.1. A logical digital <i>file system</i> of folders and sub-folders is created and file is named using enterprise format</p> <p>1.2. File is saved using <i>appropriate format</i> into digital file system</p> <p>1.3. <i>Version control</i> is used to ensure the most recent file can be accessed</p>
2. Retrieve and manage digital files	<p>2.1. Required files are retrieved and opened from digital file system</p> <p>2.2. Computer search functions are used to find incorrectly stored files</p> <p>2.3. File is sent to <i>required location</i> and any naming errors are amended</p>
3. Archive digital files	<p>3.1. <i>Archive system</i> is created according to enterprise protocols</p> <p>3.2. Consistent, regular backup strategies are undertaken to allow for retrieval of files if there is a data loss event</p> <p>3.3. Files are retrieved from archive system</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for using correct ergonomics when operating the computer
- communication skills for creating a digital file system
- collecting, analysing and organising skills for storing and retrieving files
- planning and organising skills for backing up and archiving files regularly
- teamwork skills for maintaining the digital file system in association with others
- numeracy skills for storing files with job numbers
- problem-solving skills used when locating lost files
- self-management and learning skills to evaluate and enhance personal effectiveness
- technical skills for using technology when utilising computer to store files

Required knowledge

- OHS factors that need to be addressed when using a computer
- location of manuals, safety and other documentation relevant to digital file management procedures and the information included in these documents
- elementary computer operating system functions
- file hierarchy
- advantages and disadvantages of different file systems
- file size and how it impacts on hard drive space
- different file types and how this relates to file size
- how to rename a file
- version control procedures
- operating systems search function
- backup processes
- different achieve formats

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> store, retrieve and archive various file types find and use information relevant to the task from a variety of information sources.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> that conditions are typical ambient conditions found in the workplace access to relevant facilities, equipment and materials used for digital file management, such as high-end computers, network hard drives, external hard drives, DVDs and BlueRay discs use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence third party workplace reports of on-the-job performance by the candidate practical demonstration by the candidate storing and retrieving electronic files.
Guidance information for assessment	<p>Holistic assessment with other digital production units relevant to the workplace and job role is recommended, such as:</p> <ul style="list-style-type: none"> ICPPR385A Apply software applications to digital production. <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>File system</i> may include:	<ul style="list-style-type: none"> • disk • database • flash • transactional • network or shared disk file system.
<i>Appropriate format</i> may include:	<ul style="list-style-type: none"> • Adobe InDesign • Adobe Photoshop • Adobe Illustrator • tagged image file format (TIFF) • PDF • postscript (PS) • ZIP • encapsulated postscript (EPS).
<i>Version control</i> include:	<ul style="list-style-type: none"> • automated versioning functions or manual techniques, such as naming conventions or folder structure.
<i>Archive system</i> may include:	<ul style="list-style-type: none"> • large storage hard drives • DVDs • BlueRay or online storage solutions.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Produce proof on printing device	1.1. <i>Printing device</i> is calibrated according to manufacturer's specifications 1.2. Appropriate colour profiles are selected to ensure consistent output of colour 1.3. The same <i>substrate or product</i> is used to generate a proof that will be used for the final production run 1.4. Proof is produced according to job specifications and workflow procedures 1.5. Proof is used to make a <i>mock up</i> to simulate the finishing of the final product according to job specifications
2. Assess proof against specifications	2.1. Proof is checked against job specifications to confirm validity and identify and rectify any <i>defects</i> 2.2. The proofing process is repeated if proof does not meet job specifications and enterprise standards
3. Communicate proof with client	3.1. Proof is labelled with appropriate information according to enterprise standards 3.2. Feedback is gained from client to acquire 'sign off' 3.3. Amendments are made if required and resubmitted to client for 'sign off' 3.4. Proof is stored according to workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for using correct ergonomics when operating the computer
- communication skills for gaining client agreement on a contract proof
- collecting, analysing and organising skills for checking machine calibration
- planning and organising skills for calibrating the proofing device prior to producing a proof
- teamwork skills for maintaining the production process in association with others
- numeracy skills for using a densitometer to evaluate the proof
- problem-solving skills for checking the data file for structural compatibility
- technical skills for using relevant hardware and software to produce a digital proof

Required knowledge

- OHS issues related to digital proofing for digital production
- colour theory, including additive and subtractive colours, RGB and CMYK
- varying colour gamut's between colour modes
- colour management workflow set-up procedures
- use of output profiles in relation to simulation
- how regular calibration will help to ensure consistent colour output
- quality control systems used in proofing
- techniques that can be used to control quality
- how to use standard viewing conditions to assess colour output
- how to use colour evaluation charts
- criteria for evaluating a colour proof
- differences between preliminary proofs and a contract proof
- types of substrates that can be used in proofing
- inks, toners and coatings that can be used in digital printing
- how to handle and store materials to ensure quality
- types of finishing techniques used in digital production
- location of relevant manuals, safety and other documentation that are relevant digital printing and the information included in these documents
- where other sources of information are available

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- calibrate a digital device to ensure consistent colour output
- produce a proof that gains approval from a client and matches the final production run
- find and use information relevant to the task from a variety of information sources.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for colour management production, such as high-end colour output devices and raster image processors (RIP) with colour management features
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when producing a proof to job specifications.

Guidance information for assessment

Holistic assessment with other digital production units relevant to the workplace and job role is recommended.

- ICPPR496A Set up and produce complex digital print
- ICPPR286A Finish a digital product.

For valid and reliable assessment of this unit, evidence

EVIDENCE GUIDE	
	should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Printing device</i> may include:	<ul style="list-style-type: none"> • non-impact colour printing devices, including: <ul style="list-style-type: none"> • inkjet • laser • wide format with computerised monitoring and/or control.
<i>Substrates or products</i> may include:	<ul style="list-style-type: none"> • range of print media and paper, such as: <ul style="list-style-type: none"> • coated • uncoated • card • canvas • vinyl and plastic.
<i>Mock up</i> may include:	<ul style="list-style-type: none"> • a finished product that may be trimmed, bound, stapled or folded • a reduced in size and/or partial print of the final job if proofing for wide format.
<i>Defects</i> may include:	<ul style="list-style-type: none"> • physical defects (scratches and tears) • colour irregularities • poor image resolution • errors in trapping and knockout of colours • incorrect size and orientation of pages or images.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm specialised job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Availability of all job related components is checked and recorded
2. Plan and carry out specialised set-up	2.1. <i>Specialised</i> job specifications are identified and analysed 2.2. Specialised set-up requirements are determined 2.3. Specialised set-up is completed in minimum time and with minimum wastage
3. Set up RIP for specialised digital printing	3.1. <i>RIP</i> functions are analysed to determine appropriate settings according to specialised job requirements 3.2. Experimentation is undertaken with RIP functions to determine settings according to specialised job requirements 3.3. Problems are solved effectively to minimise waste and excess costs 3.4. Documentation and other forms of information are accessed to determine source of any problems 3.5. Most productive way to complete the job is determined
4. Test and select substrate	4.1. <i>Substrate</i> specifications are investigated to determine print feasibility 4.2. Test print run is conducted to confirm substrates appropriateness with job requirements 4.3. Appropriate substrate is selected based on print feasibility and job requirements
5. Conduct specialised proof run	5.1. Material to be used for specialised proof is organised correctly 5.2. Machine is operated according to manufacturer's specifications and enterprise procedures to produce a specialised proof 5.3. Specialised proof is visually inspected to enterprise procedures 5.4. Client approval or authority is sought prior to production run where appropriate 5.5. Results are interpreted and adjustments are carried out according to product and machine specification
6. Refine and document specialised print	6.1. Corrective or preventive action is recommended and implemented where appropriate

ELEMENT	PERFORMANCE CRITERIA
process	6.2.Changes are communicated to relevant personnel in a logical and easily understood manner 6.3.Changes are monitored to confirm improvement to production efficiency 6.4.Ongoing problems are reported according to enterprise procedures and process is documented according to enterprise standards 6.5.Documentation is filed so it can be easily retrieved and used as a reference for future similar jobs

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for interpreting the job brief and providing advice to internal or external clients about options and limitations
- collecting, analysing and organising skills for collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising skills for providing information about time and materials requirements for production scheduling
- teamwork skills for cooperating with other workers and coordinating the production unit to ensure efficient operation
- numeracy skills for calculating substrate requirements and RIP functions
- problem-solving skills for recognising sub-standard print quality and making adjustments to meet job specifications
- technical skills for using RIP or front-end processor to complete job
- documenting solutions and report writing

Required knowledge

- job specifications
- production problems
- with whom to discuss any production problems
- all the functions and settings available on a particular RIP or front-end processor
- advanced RIP settings, such as using dynamic variables to select stock
- where to source information regarding complex RIP usage
- the types of substrates that are suitable for various digital processes
- the theory behind several digital processes and how this has an impact on substrate usage
- problem-solving methodologies, including Empirical, Ishikawa and brainstorming
- online forums and networks
- OHS issues in relation to each digital process
- where documentation or other information can be found regarding specialised digital processes

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- *analyse and problem-solve issues relating to printing a non-standard product*
- *use complex RIP or front-end processor settings*
- set up a RIP and digital printing machine for a specialised job on two occasions according to manufacturer's and job specifications and enterprise procedure.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for digital printing, such as full-colour production digital presses or specialised wide format printers
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when setting up and producing a specialised digitally printed product.

Guidance information for assessment

Holistic assessment with other digital production units relevant to the workplace and job role is recommended.

For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set-up is carried out correctly in minimum time with minimum wastage and availability of all job related components is checked
2. Set up reel system	2.1. Unwind and rewind reels are set up and adjusted according to job specifications 2.2. Webbing procedures are carried out and web-control system is set up and adjusted according to job specifications 2.3. Reels are spliced/joined according to job specifications 2.4. Printed web viewing devices are set up and adjusted according to job specifications 2.5. Folder and sheets are set up and adjusted according to job specifications 2.6. Set off/marketing prevention devices are set up and adjusted according to job specifications
3. Set up sheet transportation system on sheet-fed machine	3.1. Feeder and delivery sections are set up and adjusted according to job specifications 3.2. Sheet pick-up and transportation systems are set up and adjusted according to job specifications 3.3. Transfer and control systems are set up and adjusted according to job specifications 3.4. Set-off/marketing prevention devices are set up and adjusted according to job specifications 3.5. Substrate is added to and removed from process according to job instructions
4. Select and prepare inks and additives	4.1. Quality and suitability of inks , dyes or additives are selected according to job specifications and end-user requirements 4.2. Quality and suitability of inks, dyes or additives are checked and appropriate action is taken 4.3. Inks, dyes and additives are prepared according to occupational health and safety (OHS) requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 4.4. Correct colour and weight/volume of ink are mixed and prepared to match the requirements of the printing process and job specifications

ELEMENT	PERFORMANCE CRITERIA
	<p>4.5. Formulation of the ink, colour match and the approved colour are appropriately recorded</p> <p>4.6. Inks, dyes and additives are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and to prolong shelf life</p>
<p>5. Select and prepare embellishment dyes</p>	<p>5.1. Quality and suitability of dies are selected according to job specifications and end user requirements</p> <p>5.2. Dyes are prepared according to OHS requirements, manufacturer's/supplier's instructions with suitable precautions to minimise waste</p> <p>5.3. Dyes are appropriately labelled, handled and stored according to manufacturer's/suppliers instructions to prevent damage and hazards to personnel and to prolong shelf life</p> <p>5.4. Impression is set up and adjusted according to job specifications (platen and rotary)</p> <p>5.5. Inking system is set up and adjusted according to the relief process and job specifications (platen and rotary)</p> <p>5.6. Drying system is set up and adjusted according to job specifications</p>
<p>6. Set up machine for basic relief printing</p>	<p>6.1. Appropriate relief plates are selected and secured to the <i>machine</i></p> <p>6.2. Relief plates or formes or cylinders are positioned and set up and adjusted according to job specifications (platen and rotary)</p> <p>6.3. Impression is set up and adjusted according to job specifications (platen and rotary)</p> <p>6.4. Inking system is set up and adjusted according to relief process and job specifications (platen and rotary)</p> <p>6.5. Drying system is set up and adjusted according to job specifications</p>
<p>7. Set up machine for basic embellishment</p>	<p>7.1. Appropriate dyes are selected and secured to the machine</p> <p>7.2. Dyes are positioned and set up and adjusted according to job specifications (platen and rotary)</p> <p>7.3. Impression is set up and adjusted according to job specifications (platen and rotary)</p>

ELEMENT	PERFORMANCE CRITERIA
8. Conduct proof run	8.1. Material to be used for proof is organised correctly 8.2. Machine is operated according to manufacturer's and enterprise producers to produce specified proof 8.3. Proof is visually inspected and/or tested or laboratory testing organised according to enterprise procedures 8.4. Client approval or authority is sought prior to production run where appropriate. 8.5. Results are interpreted and adjustment changes are carried out according to product and machine specifications to determine adjustment requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for interpreting job tickets and requirements
- collecting, analysing and organising skills for collecting and assessing data about printing process and machine specifications and characteristics and how these interact
- planning and organising skills for providing input into production scheduling about time requirements for set-up to ensure efficient operation
- teamwork skills for working with others to coordinate set-up to ensure efficient operation
- numeracy skills for calculating plate position and substrate requirements for the job
- problem-solving skills for recognising proofing faults and determining adjustments to correct them
- technical skills for using monitoring equipment and interpreting readouts

Required knowledge

- interpreting job specifications:
 - actions to be taken if vital information was missing from the job ticket
 - checks to be undertaken prior to set-up
- relief plates:
 - effect of plates with poor relief
 - importance of caliper of mounting material
 - positioning the plate on the mount
 - ensuring the edges of the plate do not lift
- reel in-feed:
 - major OHS concerns when setting up the reel in-feed
 - determining the printing side of the material
 - effect of low web tension on the print
 - other types of web splices that could be used appropriately for the job
- sheet in-feed:
 - major OHS concerns when setting up the sheet in-feed
 - how the sheet position is determined for the job
 - the effect that side lay selection has on the job
 - appropriate selection of front lays
 - procedures for a register check

REQUIRED SKILLS AND KNOWLEDGE

- reasons why a two-sheet cut is used on most feeders
- means by which the machine knows if the sheet is missing or late
- reel delivery system:
 - the effect of excessive web tension at the rewind of the machine
 - the major risks associated with the rewind of the machine
- sheet delivery system:
 - why application of spray powder is sometimes advisable
 - effects of too much spray powder
 - use of slowdown devices in the delivery
 - effect of excessive jogging on the stack
- preparation of inks and additives:
 - main environmental and OHS concerns about inks and additives
 - matching ink to a particular job
 - results of ink being too tacky
 - process for changing ink that is too light
 - methods that are available to check the ink for correct colour
 - responsibility for passing the colour prior to running the job
- machine set-up:
 - OHS concerns when setting up the machine
 - determining specifications relating to the specific job
 - effects incorrectly set inking rollers have on the print
 - ways in which the ink profile may vary across the machine
 - optimum ink duct sweep
- basic in-line processes:
 - precautions that should be taken if UV drying is to be utilised to dry the ink film
 - steps to be taken to incorporate the in-line processes into the make ready
 - how can the equipment used in in-line processing be protected against damage during set-up
- proofing and adjustment:
 - methods that can be used to minimise waste during make ready
 - procedures to be adopted to have the print approved
 - quality control measurements applied to the print to test against known standards
 - checks on the initial print prior to running
 - settings to be adjusted are determined
 - process to be used to plot the success of the machine adjustment
 - recording final results for future reference

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- set up reel- or sheet-fed platen, cylinder or rotary printing machines for routine print jobs
- conduct a proof run and adjust settings to ensure production speeds are attained
- use computerised control, monitoring and data entry systems if available and appropriate
- find and use information relevant to the task from a variety of information sources
- demonstrate all safety devices on the machine
- manipulate embellishment tools and operations
- set up for two basic relief printing jobs (if possible including at least one in-line process) according to manufacturer's specifications and enterprise procedures.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities and equipment, including reel or sheet-fed platen, cylinder or rotary printing machine
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate in setting up machinery for routine print jobs.

Guidance information for

Holistic assessment with other units relevant to the

EVIDENCE GUIDE**assessment**

industry sector, workplace and job role is recommended, for example:

- ICPSU201C Prepare, load and unload reels and cores on and off machine
- ICPSU202C Prepare, load and unload product on and off machine
- ICPSU207C Prepare machine for operation (basic)
- ICPSU211C Prepare ink and additives
- ICPPR288A Produce basic relief printed product.

For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Substrates</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of: <ul style="list-style-type: none"> • paper • pressure sensitive material • board • plastics • related films or metal.
<i>Inks</i> may include:	<ul style="list-style-type: none"> • range of standard inks commonly used in 1-2 colour printing.
<i>Colour</i> may include:	<ul style="list-style-type: none"> • use of visual colour assessment and densitometry to match basic standard colours under controlled lighting conditions.
<i>Machines</i> may include:	<ul style="list-style-type: none"> • a range of platen, cylinder and rotary printing machines with manual, semi-automated, fully automated or computerised process control.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain non-routine operation of reel system	1.1. Reel stand and rewind section are monitored and adjusted to maintain correct tension and to ensure no marks, blemishes or damage to finished product and to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to and removed from the process according to job instructions 1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery 1.5. Set-off/marketing prevention system is monitored and adjusted to ensure the quality of the printed product meets the standard of the approved proof
2. Maintain operation of sheet system	2.1. Feeder and delivery are monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to and removed from process according to job instructions
3. Maintain complex relief printing process	3.1. Relief polymer forme or plate cylinder condition is monitored and adjusted to ensure the quality of the printed product meets the standard of the sample sheet 3.2. Relief polymer impression surface condition is monitored and adjusted to ensure the quality of the printed product meets the standard of the sample sheet 3.3. Relief polymer inking system is monitored and adjusted to ensure the quality of the printed product meets the standard of the sample sheet 3.4. Drying systems are monitored and adjusted to ensure the quality of the printed product meets the standard of the approved proof
4. Maintain production process	4.1. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule 4.2. In-line printing/converting/binding/finishing processes are monitored and adjusted to ensure the

ELEMENT	PERFORMANCE CRITERIA
	<p>quality of the product meets the standard of the approved proof</p> <p>4.3. Production is maintained within OHS requirements and company and manufacturer's specifications</p> <p>4.4. Manual and/or automatic control is used according to specification</p> <p>4.5. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.6. <i>Ink</i> performance, colour, register and embellishment of print are monitored and adjusted throughout production run</p> <p>4.7. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.8. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.9. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>4.10. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems	<p>5.1. Problem in relief machine operation is identified and reported according to enterprise procedures</p> <p>5.2. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>5.3. Adjustments or corrections are carried out according to specified procedures</p> <p>5.4. Relief machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Unused ink is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>6.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.5. Machine faults requiring repair are identified and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>reported to designated person according to enterprise procedures</p> <p>6.6. Repair/adjustment is verified prior to resumption of operations</p>
<p>7. Clean and wash up printing machine at end of print run</p>	<p>7.1. Cylinders, plate and roller surfaces are cleaned ready for next run</p> <p>7.2. Inking system is washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements</p> <p>7.3. <i>In-line</i> printing/converting/binding/finishing units are cleaned ready for next run</p> <p>7.4. Reel feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>7.5. Sheet feed, transport and delivery systems are disengaged and cleaned ready for next run</p> <p>7.6. Production records or other documentation are accurately completed where required by enterprise procedures</p> <p>7.7.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for interpreting the job brief and providing advice to clients about options and limitations
- collecting, analysing and organising skills for collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising skills for providing information about time and material requirements for production scheduling
- teamwork skills for maintaining the production process in association with others
- numeracy skills for calculating substrate requirements, plate position and pressures
- problem-solving skills for recognising proofing faults and calculating adjustments necessary to meet job specifications
- technical skills for monitoring equipment and computerised production records

Required knowledge

- reel transportation and web control:
 - major OHS concerns when setting up the reel transportation system
 - causes of reel to wandering
 - causes of the web to break at the unwind unit
 - print faults resulting from the reel being run out of centre
 - possible faults in the unwind section that could cause a web break
- sheet transportation and transfer at the feeder:
 - major OHS concerns when setting up the sheet transportation system
 - result of worn suckers at the feeder suction head
 - type of two-sheet detection on the machine
 - amount of movement the sheet should have when being registered by the side lay
 - causes of mis-register of the sheet feeder
 - visible signs of the sheet being registered in the feeder
 - gripper malfunction of sheet control and transfer
 - sheet transfer mechanisms require adjusting
 - causes of the feeder stack to becoming uneven
 - result of the feeder stack not being loaded level
 - reel delivery for rewinding and sheeting

REQUIRED SKILLS AND KNOWLEDGE

- OHS risks associated with rewinding and sheeting
- safety feature is in the delivery system if the web jams up
- reasons for sheet cut-off wander
- effect of poorly adjusted nip rollers when rewinding and sheeting
- sheet delivery:
 - effect machine speed has on sheet delivery
 - advantage of spraying moving sheets with anti set-off powder in the delivery
 - items in the delivery that could cause marking of the printed image
 - remedial steps necessary to eliminate marking of the printed image
 - faults that could result from incorrectly set grippers in the transfer section of a machine
 - devices that need to be adjusted to maintain sheet control in the delivery
- printing unit:
 - result if the plate lifts at the grip edge during a print run
 - build-up of ink on the impression cylinder affecting the printed product
 - causes of the ink leaking back in the duct
 - problem of paper surface picking being rectified
 - causes of diminished impression during the print run
 - causes of the plate surface prematurely wearing during production
- drying unit:
 - eating or drinking near the machine when using UV inks
 - link between driers and set-off and marking
 - what causes UV ink to dry
 - causes of the substrate blistering
 - effect of incorrect drying temperature on the finished product
- in-line processes:
 - major OHS concerns when operating cutting devices
 - checking the consistency of the cutting and creasing unit
 - result of excessive pressure on the slitters
 - benefit of die cutting using a rotary die
 - advantages of using a perforation wheel to perforate
- maintaining production process:
 - affect of inadequate communication within the work team on a relief printing machine
 - safety features within the organisation and in maintaining effective production
 - ramifications if machine guards are removed and/or micro switches are disconnected on a machine
 - legal responsibility for the removal of machine guards and/or disconnection of micro switches

REQUIRED SKILLS AND KNOWLEDGE

- measurement other than optimum solid ink density that can be measured to assess print quality
- most accurate method of checking register during a production run
- actions to take when production problems are anticipated
- actions to take to eliminate further processing of unacceptable printed product
- affect on a stack of paper if the relative humidity is increased in the press room
- procedure to care for a newly delivered skid of paper to the press room
- reasons for sorting waste
- advantage of keeping reusable waste
- client liaison:
 - industry standards to be applied to enhance effective communication with the client
 - necessary procedures that the client should follow to 'OK' a printed product
- relief printing machine operating problems:
 - when it is necessary to call service personnel to correct a machine problem
 - what enterprise procedures are in place to report any machine operating problems
- shutdown procedures:
 - result if correct shutdown procedures were not followed
 - correct shutdown procedures to be conducted with fellow workers
 - advantages that result from proper labelling and storage of excess inks and materials
 - importance if printed product being clearly labelled prior to removal from the press room
- cleaning and washing up the printing unit:
 - OHS concerns to be observed when handling ink
 - safety precautions to be observed when cleaning the printing cylinders
 - cleaning and washing up techniques for the printing unit prior to the next print run
 - procedures for storing plates so as to minimise damage
- cleaning feed, transportation, delivery and in-line sections:
 - OHS precautions to be observed when cleaning these sections of the machine
 - maintaining a clean substrate handling section of the machine
- completing production records:
 - completed records used in the final analysis of the job
 - benefits of comprehensive records when considering the production of future jobs
- information sources:
 - machine manuals, safety and other documentation relevant to the production of

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • operate a platen, cylinder or rotary printing machine ensuring an efficient non-routine production flow that maintains product quality standards • anticipate and rectify any production problems with minimum downtime • correctly shutdown and clean machine according to OHS guidelines • use computerised control, monitoring and data entry systems if available and appropriate • find and use information relevant to the task from a variety of information sources • manipulate embellishment tools and operations • monitor production output and make necessary adjustments to maintain print quality on a relief printing machine whilst producing a complex print on two occasions (if possible using different substrates and if possible including at least two in-line processes) according to job specifications and enterprise procedures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • access to relevant facilities and equipment, such as platen, cylinder or rotary printing machines • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • third party workplace reports of on-the-job performance by the candidate • practical demonstration by the candidate when producing a complex relief printed product.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPPR451C Set up for complex relief printing. <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Substrate</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of: <ul style="list-style-type: none"> • paper • pressure sensitive material • board • plastics • related films • metal.
<i>Machine</i> may include:	<ul style="list-style-type: none"> • range of platen • cylinder and rotary machines with manual, semi-automated, fully automated or computerised process control.
<i>Handling</i> may include:	<ul style="list-style-type: none"> • wide and narrow reel, and large and small sheet handling systems.
<i>Ink</i> may include:	<ul style="list-style-type: none"> • range of inks commonly used in 3 or more colour printing, including: <ul style="list-style-type: none"> • standard • special colours.
<i>In-line</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations, such as perforating, numbering, date coding, slitting top cutting or one up die cutting, foiling and embossing

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm non-routine job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is planned and carried out correctly in minimum time with minimum wastage 1.3. Prior inspections are completed and signed off
2. Prepare flexographic plates	2.1. Plate height is measured according to non-routine job specifications 2.2. Plates are trimmed and prepared according to mounting system requirements 2.3. Mounting adhesive is selected to achieve correct PCD (Pitch Circle Diameter) of specified plate cylinders and gears
3. Prepare plate cylinder	3.1. Plate cylinders/seamless sleeves are selected, cleaned and prepared and correct gears are mounted OR 3.2. Sleeves and correct gears on mandrels are selected, cleaned, prepared and mounted to meet non-routine job specifications 3.3. TIR (Total Indicated Runout) is checked to be within specified tolerances on plate cylinders 3.4. Selected mounting adhesive is applied to plate cylinders
4. Mount and demount flexographic plates on mounting/proofing machine	4.1. Plates are prepared and mounted on cylinders using pin mounts or microdot systems or sleeves according to chart number/print direction OR 4.2. Plate mounting sheet is prepared to meet non-routine job specifications AND 4.3. Plates are mounted to position on plate mounting sheet or camera targets AND 4.4. Plate mounting sheet is installed and tensioned onto plate cylinder to specified chart number/print direction 4.5. Correct cleaning solution and brush are used to clean plate 4.6. Correct tools are used to demount plate without damaging plate 4.7. Plate is visually checked for damage 4.8. Plate is prepared for storage and then stored correctly according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job brief and advising client (internal or external) about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when cooperating with other workers and coordinating production unit to ensure efficient operation
- mathematical ideas and techniques by calculating plate position and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- the need to ensure that the job specifications are read and properly understood
- production problems that could eventuate by not reading and understanding the job specifications
- the person you would discuss any production problems
- OHS concerns that are there when mounting and demounting plates
- the most common cause of photopolymer plates crazing on the image side
- the importance of the resiliency of the printing plate
- the main advantage of using thin photopolymer plates in process printing
- faults that may be detected on new plates
- type of solvents that should be used on photopolymer plates
- the benefits of optical mounting
- the purpose of binding plates after mounting
- possible print faults that could be eliminated by using cushion mount
- the result of air being trapped under plates
- selecting the correct cushion mount for a particular job
- eliminating low spots
- minimising press bounce in jobs that are mounted more than one across
- some possible causes of print slur
- preventing or minimise plates lifting

REQUIRED SKILLS AND KNOWLEDGE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm non-routine job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is planned and carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked 1.4. Proofed job is checked for conformance with job specifications
2. Set up reel transportation and delivery system on web-fed machine	2.1. Reels are checked for treatment levels, coatings and printing side and age of product 2.2. Unwind reels are secured on reel shaft 2.3. Reels are correctly positioned on unwind stand 2.4. Press is webbed for surface or reverse or perfecting printing according to <i>non-routine</i> job specifications 2.5. Edge guide is centred and set to non-routine job specifications 2.6. Unwind tension is set to suit <i>substrate</i> 2.7. Rewind tension is set to suit substrate 2.8. Rewind tension is set to suit substrate 2.9. PIV (Positively Infinitely Variable) drive is set for appropriate tensioning of substrate
3. Select and prepare inks and solvents	3.1. <i>Inks</i> and solvents are selected according to job specifications and end-user requirements 3.2. Quality and suitability of inks and solvents are checked and appropriate action is taken 3.3. Inks and solvents are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 3.4. Correct colour and weight/volume of ink are mixed and viscosities checked and modified according to the press requirements and non-routine job specifications 3.5. Ink formula and approved colour draw downs are appropriately recorded 3.6. Inks and solvents are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions and the relevant hazardous liquids storage regulations
4. Set up machine for	4.1. Flexographic plate cylinders are installed and

ELEMENT	PERFORMANCE CRITERIA
complex flexographic printing	<p>register adjustments centred OR</p> <p>4.2. Sleeves are installed in press and register adjustments made OR</p> <p>4.3. Plate mounting sheets are mounted on cylinders in press and register adjustments made</p> <p>4.4. Plate cylinders are gauged up or pre-set to impression</p> <p>4.5. Anilox rollers are selected to suit individual colour and plate reproduction requirements for each unit</p> <p>4.6. Appropriate ink metering system is selected for each unit</p> <p>4.7. Inking system is set up and roller nips/blades are set correctly</p> <p>4.8. Ink circulation is maintained at correct level and flow for <i>machine</i></p> <p>4.9. Viscosities are adjusted according to job specifications</p> <p>4.10. Air volume and drier temperatures curing units are selected to suit inks, <i>substrate</i>, solvents and according to job specifications</p> <p>4.11. Air volume is adjusted between colours to maximise drying and minimise air overspill</p>
5. Set up in-line units for basic process(es)	<p>5.1. Minor <i>in-line</i> printing/converting/binding units are set up for basic process(es) and adjusted according to machine requirements and job specifications</p> <p>5.2. Assistance is given in set up of major in-line printing/converting/binding units</p>
6. Conduct proof run	<p>6.1. Material to be used for proof is organised correctly</p> <p>6.2. Press is set up and operated according to OHS guidelines</p> <p>6.3. Print impressions are set to minimum kiss impression</p> <p>6.4. Web tensions are correctly set at unwind, between stations and rewind</p> <p>6.5. Drying is checked as sufficient to key ink to the substrate</p> <p>6.6. The viscosities are adjusted to obtain the correct colour at proof speed and checked against colour matching system</p> <p>6.7. The substrate is checked against job specifications</p>
7. Organise proof	7.1. Proof is visually inspected and/or tested or laboratory

ELEMENT	PERFORMANCE CRITERIA
inspection and/or testing	<p>testing is organised according to enterprise procedures</p> <p>7.2. Production does not commence without client approval or authority where appropriate</p>
8. Readjust settings to production speed	<p>8.1. Production speed print results are interpreted and appropriate adjustments are made to press, ink and substrate settings</p> <p>8.2. Adjustments are made according to product specifications and press performance</p> <p>8.3. Web is spliced at production speed and further samples are obtained for quality inspections at appropriate intervals</p> <p>8.4. Press settings are documented and samples are retained</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and advising the client (internal or external) about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when cooperating with other workers and coordinating the production unit to ensure efficient operation
- mathematical ideas and techniques by calculating substrate requirements and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- interpreting complex job specifications
- production problems that could eventuate by not reading and understanding the job specifications
- mounting and proofing flexographic plates
- OHS factors needing to be considered when mounting and proofing flexographic plates
- most common cause of photopolymer plates crazing on the image side
- resiliency of the printing plate
- main advantage of using thin photopolymer plates in process printing
- faults that may be detected on new plates
- types of solvents that should be used on photopolymer plates
- benefits of optical mounting
- purpose of binding plates after mounting
- possible print faults that could be eliminated by using cushion mount
- installation of printing cylinders or sleeves
- OHS factors that need to be considered when installing printing cylinders or sleeves
- precautions that should be undertaken to ensure that the plates and cylinders or

REQUIRED SKILLS AND KNOWLEDGE

- sleeves are not damaged during installation
- checking to ensure plates and cylinders or sleeves have been installed correctly
- reel transportation system
- OHS precautions to be observed when webbing up the machine
- position of the reel
- how the substrate pulled into the machine
- result of insufficient unwind tension
- result of excessive unwind tens
- function of the "Dancer" roller on a web machine
- function of the PIV unit
- adjustments to the PIV
- function of the lay-on roller
- what will be the effect of excessive lay-on roller pressure
- what can happen if the web is not spliced correctly
- how does the particular web viewing device work
- delivery system
- OHS precautions that must be observed when setting up the delivery
- how web controlled in the rewind unit
- result of incorrect rewind tension
- remedial steps that can be taken if there is a possibility of the ink marking in the rewind
- function the use of air blast plays in the delivery of sheets
- preparing inks and additives
- OHS precautions that must be observed when preparing inks and additives
- necessary checks to test an ink's suitability for the printing process
- special end-use requirements that may be necessary
- main functions of a pigmented extender used in flexographic printing
- purpose of plasticisers added to flexographic inks
- additives used in flexographic inks
- range in seconds for Zahn cup measurements
- effect foaming has in a Zahn cup when measuring the ink viscosity
- recommended pH range when printing with aqueous inks
- precautions to observe to minimise waste when preparing the ink
- shelf life of most inks
- conditions are that relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed ink
- complex machine set up
- OHS factors that need to be considered when setting up the machine
- advantage of centring all machine controls
- checks that should be made on cylinders and gears

REQUIRED SKILLS AND KNOWLEDGE

- checks that should be performed prior to cylinder or sleeve installation
- angle that should the chamber blades be set at
- main advantage of gauging up and dry register prior to printing a job
- cell count of the anilox roller is used when printing solids
- water treatment additives used in a central impression drum and chill roller coolant system
- advantages of laser engraved ceramic anilox rollers
- things relating to the anilox roller that a roller scope will measure
- reasons for anilox wear
- type of job would be printed using a hexagonal cell configuration
- recommended web temperature when printing polypropylene film
- method of drying used when printing on polythene by the flexographic process
- factors affecting the drying rate of liquid inks
- factors affecting the drying of aqueous inks
- operating range of UV lamps
- in-line processes
- OHS precaution to be observed when slitting on the machine
- how is a cold seal formed
- reasons for a printed product to be punched
- setting hole punching in relation to repeat length
- result of excessive pressure on the slitters
- problem solving proofing and adjustment
- why is it necessary to graduate the drying speeds of each progressive colour, so that first-down colours dry faster the subsequent colours
- why is it that in flexographic printing as the press speed increases so does the colour strength
- decrease in web tension
- increasing rewind tension after the roll has been partially rewound
- major cause of a telescopic roll
- print characteristics related to excessive printing pressure
- causes of picking when printing multicoloured work
- print faults from using an over-reduced ink
- problems that can cause lateral streaks showing up in uneven printing
- causes of moire patterns when printing by the flexographic process
- result of air being trapped under mounted plates
- instrument used to identify retained solvent trapped in the print
- purpose of taking Dyne readings
- purpose of the crinkle test when testing an ink
- result if an excessive final drying temperature was used when printing polypropylene film
- property of ink that can be adjusted to reduce dot gain

REQUIRED SKILLS AND KNOWLEDGE

- when checking the viscosity for ink whilst using ink pumps, why should the ink returning from the ink fountain not be used
- problems resulting from the excessive use of slow solvents
- why do laminating inks once printed appear dull and easy to scratch
- result of excessive print area tension
- problems that the printer may associate with cold seals
- machine manuals, safety and other documentation are relevant to this task and where are they kept and information is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up flexographic printing machines for non-routine print jobs. The individual will conduct a proof run and adjust settings to ensure production speeds are attained • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up a flexographic printing machine for a complex job on TWO occasions (if possible using different substrates and if possible including at least TWO in-line processes) according to manufacturer's and job specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • a wide or narrow flexographic press.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Non-routine</i> may include:	<ul style="list-style-type: none"> non-routine within this context relates to the set up and production of print runs. The set up of equipment and production involves a significant amount of deviation from using standard equipment settings. It also involves significant problem solving and the development of new criteria and procedures for performing current practices. It does not refer to a job that an individual does only occasionally.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel delivery systems.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of inks commonly used in 4 or more colour printing, including standard and special colours.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of stack, in-line and central impression flexographic printing machines with manual, semi-automated, fully automated or computerised process control.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Design</i> may include:	<ul style="list-style-type: none"> 4 or more colours, complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain specialised flexographic printing process	<p>1.1. Flexographic plate and plate cylinder or sleeve condition is monitored, evaluated and adjusted to ensure the quality of printed product meets the standard of the approved proof</p> <p>1.2. Flexographic impression roller condition is monitored and evaluated to ensure the quality of printed product meets the standard of approved proof</p> <p>1.3. Flexographic inking system and doctor blade condition is monitored, evaluated and adjusted to ensure quality of <i>specialised</i> printed product meets the standard of approved proof</p> <p>1.4. Drying systems are monitored, evaluated and adjusted to ensure quality of the specialised printed product meets the standard of approved proof</p>
2. Maintain specialised production process	<p>2.1. Production process is maintained in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>2.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>2.3. Manual and/or automatic control is used according to job specifications</p> <p>2.4. Performance is monitored, adjusted and verified using the process control system according to enterprise procedures</p> <p>2.5. <i>Ink</i> performance, colour, register and position of print are monitored, evaluated and adjusted throughout production run</p>
3. Tune and adjust machinery	<p>3.1. Idiosyncrasies of <i>machines</i> are reviewed and adjustments or tuning undertaken to compensate or to exploit the idiosyncrasy, within manufacturer's specifications</p> <p>3.2. Options are assessed to determine most effective/efficient method of production, ensuring highest quality and yield from machinery</p> <p>3.3. A test run confirms correct options and settings or the need for further adjustment or tuning to meet quality standards</p> <p>3.4. Options and recommendations are documented for future reference according to enterprise procedures</p> <p>3.5. Instruction on new practices is provided to machine</p>

ELEMENT	PERFORMANCE CRITERIA
	operator or finisher, if required
4. Troubleshoot machinery and material problems	<p>4.1. Corrective or preventive action is recommended and implemented where appropriate</p> <p>4.2. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>4.3. Changes are monitored to confirm improvement to production efficiency</p> <p>4.4. Ongoing problems are reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Reels and cores are removed from press</p> <p>5.4. Unused ink is drained back to containers and correctly labelled and stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>5.5. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.6. All product is removed from operating area</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients
- collecting, analysing and organising information by identifying and recording specialised production practices
- planning and organising activities by adjusting the production process to achieve specialised printing requirements
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables and personnel requirements to meet production schedules
- problem-solving skills by adjusting machinery settings to determine the required tolerances to meet specialised requirements
- use of technology by using machinery to produce specialised flexographic printed product

Required knowledge

- causes of reel wander
- causes of the web breaking at the unwind unit
- difference between a "flying paster" and "zero speed" type reel-stand
- print fault that would result from the reel being run out of centre
- possible faults in the unwind section could that cause a web break
- OHS risks associated with rewinding and sheeting
- safety feature that is in the delivery system if the web jams up
- causes of sheet cut-off wander
- effect of poorly adjusted nip rollers when rewinding and sheeting
- result if the plate lifts on the leading edged during a print run
- effect on printed product of a build-up of ink on the impression cylinder
- cause of ink foaming in the ink tray
- effect of too much reducer in the ink
- action that reduces wear of the doctor blade
- need for all solvents to be removed from the final ink film
- link between driers and set off and marking
- causes of UV ink drying
- substrate to distortion
- effect in the chillers if the drying temperature was too low

REQUIRED SKILLS AND KNOWLEDGE

- effect of incorrect drying temperature on the finished product
- effect of eating or drinking near the machine when using UV inks?
- need to frequently examine the in-line components of the job
- consistency checks to be made of the punching unit checked
- result of excessive pressure on the slitters
- safety features within the organisation that aid in maintaining effective production
- legally responsibility for the removal of machine guards and/or disconnection of micro switches
- effect of inadequate communication within the work team on a flexographic printing machine
- ramifications if machine guards are removed and/or micro switches are disconnected on a machine
- other measurement besides optimum solid ink density that can be measured to assess print quality
- most accurate method of checking register during a production run
- need to take immediate action when production problems are anticipated
- action that is taken to eliminate further processing of unacceptable printed product
- result to the substrate if the relative humidity is increased in the press room
- procedure to care for a newly delivered substrate to the press room
- waste sorting
- advantage of keeping reusable waste
- industry standards that can be applied to enhance effective communication with the client
- necessary procedures that the client should follow to "OK" a printed product
- need to call service personnel to correct a machine problem
- enterprise procedures that are in place to report any machine operating problems
- result if correct shutdown procedures were not followed
- correct shutdown procedures conducted with fellow workers
- advantages that result from proper labelling and storage of excess inks and materials
- clear labelling of printed product prior to removal from the press room
- further operations that are required for printed reels upon removal from the printing machine
- storing of the printed job after removal from the printing machine
- use of completed records the final analysis of the job
- benefits of comprehensive records when considering the production of future jobs
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operate a reel-fed flexographic press ensuring an efficient 3 or more colour production flow that maintains product quality standards. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm non-routine job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is planned and carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reels	2.1. Unwind and rewind reels are set up and adjusted according to job specifications 2.2. Webbing procedures are carried out according to non-routine job specifications 2.3. Web-control system is set up and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications 2.5. Printed web viewing devices are set up and adjusted according to job specifications 2.6. The folder and sheeter are set up and adjusted according to job specifications 2.7. Set off/marketing prevention devices are set up and adjusted according to job specifications
3. Select and prepare inks and additives	3.1. Inks , dyes or additives are selected according to job specifications and end-user requirements 3.2. Quality and suitability of inks, dyes or additives are checked and appropriate action is taken 3.3. Inks, dyes and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 3.4. Correct colour and weight/volume of ink are mixed and prepared to match the requirements of the printing process and job specifications 3.5. Formulation of the ink, colour match and the approved colour are appropriately recorded 3.6. Inks, dyes and additives are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and prolong shelf life
4. Set up machine for complex gravure printing	4.1. Gravure cylinders are selected, installed, set up and adjusted according to job specifications 4.2. Impression roller is set up and adjusted according to

ELEMENT	PERFORMANCE CRITERIA
	<p>job specifications</p> <p>4.3. Inking system/doctor blade is set up and adjusted according to the gravure process and job specifications</p> <p>4.4. Drying system is set up and adjusted according to job specifications</p>
5. Conduct proof run	<p>5.1. Material to be used for proof is organised correctly</p> <p>5.2. Machine is operated according to manufacturer's and enterprise procedures to produce a specified proof</p> <p>5.3. Machine is operated according to manufacturer's and enterprise procedures to produce a specified proof</p> <p>5.4. Production does not commence without client OK or authority where appropriate</p> <p>5.5. Results are interpreted and adjustments are carried out according to product and machine specifications to determine adjustment requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to internal or external clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when cooperating with other workers and coordinating the production unit to ensure efficient operation
- mathematical ideas and techniques by calculating cylinder position, pressures and substrate requirements
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- need to ensure that the job specifications are read and properly understood
- production problems that could eventuate by not reading and understanding the job specifications
- person / people any production problems should be discussed with
- OHS precaution that must be observed when installing printing cylinders on the machine
- determining the optimum print sequence
- visual aid on the cylinder that identifies the colour of ink to be used
- precautions that are taken to ensure that the cylinders are not damaged during installation
- OHS precautions that must be observed when webbing up the machine
- determining the position of the reel
- effect if the brake tension is not set correctly
- function of the "Dancer" roller on a web machine
- effect if the web is not spliced correctly
- workings of the particular web viewing device
- principle of ESA roller operation on the gravure printing machine
- type of substrate that should be used on the ESA roller

REQUIRED SKILLS AND KNOWLEDGE

- OHS precautions that must be observed when setting up the delivery
- controlling of the web in the rewind unit
- result of incorrect rewind tension
- remedial steps that can be taken if there is a possibility of the ink marking in the rewind
- problems that could be attributed to a blunt knife when sheeting
- use of air blast play in the delivery of sheets
- OHS precautions that must be observed when preparing inks and additives
- details that are necessary to check an ink's suitability for the printing process
- special end-use requirements that may be necessary
- additives used in gravure inks
- range in seconds for Zahn cup measurements
- effect foaming has in a Zahn cup when measuring the ink viscosity
- bringing pigmented ink to operating temperature before correcting the viscosity
- essential checks to be made
- advantage of using automatic viscosity controllers
- precautions that you observe to minimise waste when preparing the ink
- shelf life of most inks
- conditions that are relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed inks
- advantage of using automatic viscosity controllers
- precautions that you observe to minimise waste when preparing the ink
- shelf life of most inks
- conditions that are relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed inks
- OHS factors that need to be considered when setting up the machine
- function of chill rollers on a machine
- main advantage of gauging up and dry register prior to printing a job
- result of excess printing pressure
- determining the pressure to be applied to the doctor blade
- print faults that could be caused by excessive overspill of air from the inter-colour drier
- recommended air ratio for efficient inter-colour drying
- advantages of using high velocity air in the drying system
- OHS precautions that must be observed when slitting on the machine
- pre-heat web temperature required for lamination
- reasons for a printed product to be punched
- considerations when setting hole punching in relation to repeat length
- purpose of the dwell when cutting and creasing in-line
- controlling the ratio of print to in-line speed controlled

REQUIRED SKILLS AND KNOWLEDGE

- result of excessive pressure on the slitters
- cause of the doctor blade to wear on a gravure printing unit
- reducing the wear of the doctor blade
- determining the optimum make ready speed for the job
- communicating the steps involved in make ready to other team members
- need to grade the drying speeds of each progressive colour, so that first-down colours dry faster the subsequent colours
- causes of a decrease in web tension
- result of increasing rewind tension after the roll has been partially rewound
- major cause of a telescopic roll
- testing metallised film to find out which is the correct side on which to print
- measuring the metallised surface for coating thickness
- effect of annealing on aluminium foil
- purpose of using thermal imaging face stocks
- metallising substrates
- client requirements for bar codes
- print characteristics that are related to excessive printing pressure
- causes of picking when printing multicoloured work
- print faults resulting from using an over-reduced ink
- causes of moire patterns when printing by the gravure process
- instrument used to identify retained solvent trapped in the print
- purpose of taking Dyne readings
- purpose of the crinkle test when testing an ink
- print faults resulting from a worn doctor blade
- use of ink returning from the ink fountain when checking the viscosity of ink whilst using ink pumps
- problems that result from the excessive use of slow solvents
- reason why laminating inks once printed appear dull and easy to scratch
- result of excessive print area tension
- problems which the printer may associate with cold seals
- responsibility for the final say in the "OK" of the job
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain specialised gravure printing process	<p>1.1. Gravure cylinder condition is monitored, evaluated and adjusted to ensure the quality of printed product meets the standard of the sample sheet</p> <p>1.2. Gravure impression roller condition is monitored, evaluated and maintained to ensure that the quality of the <i>specialised</i> printed product meets the standard of the sample sheet</p> <p>1.3. Gravure inking system and doctor blade are monitored, evaluated and adjusted to ensure quality of specialised printed product meets the standard of sample sheet</p> <p>1.4. Drying systems are monitored, evaluated and adjusted to ensure quality of specialised printed product meets the standard of approved proof</p> <p>1.5. In-line printing/convertng/binding/finishing processes are monitored, evaluated and adjusted to ensure quality of specialised product meets the standard of the approved proof</p>
2. Maintain specialised production process	<p>2.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>2.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>2.3. Manual and/or automatic control is used according to job specifications</p> <p>2.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>2.5. <i>Ink</i> performance, colour, register and position of print are monitored, evaluated and adjusted throughout production run</p> <p>2.6. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>2.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>2.8. Waste is sorted according to enterprise procedures</p>
3. Tune and adjust machinery	<p>3.1. Idiosyncrasies of <i>machines</i> are reviewed and adjustments or tuning undertaken to compensate or to exploit the idiosyncrasy, within manufacturer's</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>specifications</p> <p>3.2. Idiosyncrasies of machines are reviewed and adjustments or tuning undertaken to compensate or to exploit the idiosyncrasy, within manufacturer's specifications</p> <p>3.3. A test run confirms correct options and settings or the need for further adjustment or tuning to meet quality standards</p> <p>3.4. Options and recommendations are documented for future reference according to enterprise procedures</p> <p>3.5. Instruction on new practices is provided to machine operator or finisher, if required</p>
4. Troubleshoot machinery and material problems	<p>4.1. Corrective or preventive action is recommended and implemented where appropriate</p> <p>4.2. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>4.3. Changes are monitored to confirm improvement to production efficiency</p> <p>4.4. Ongoing problems are reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Unused ink is correctly labelled and stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>5.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.5. All product is removed from operating area</p> <p>5.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.7. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing, in-line processes and job specifications
- collecting, analysing and organising information by collating details of job and machine specifications and printing processes to ensure efficient production
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating consumables and personnel requirements to meet production schedules
- problem-solving skills by identifying print problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- reel to wander causes
- web break causes at the unwind unit
- difference between a "flying paster" and "zero speed" type reel-stand
- a Print fault that would result from the reel being run out of centre
- possible faults in the unwind section that could cause a web break
- OHS risks associated with rewinding and sheeting
- safety feature that is in the delivery system if the web jams up
- sheet cut-off wandering
- effect of poorly adjusted nip rollers when rewinding and sheeting
- effect of a build-up of ink on the impression cylinder on the printed product
- cause of the ink to foam in the ink tray
- effect of too much reducer in the ink
- an action that reduces wear of the doctor blade
- need for all solvents be removed from the final ink film
- link between driers and set off and marking
- cause substrate distortion
- effect in the chillers if the drying temperature was too low
- effect of incorrect drying temperature on the finished product
- effect of inadequate communication within the work team on a gravure printing machine

REQUIRED SKILLS AND KNOWLEDGE

- safety features within the organisation that aid in maintaining effective production
- ramifications if machine guards are removed and/or micro switches are disconnected on a machine
- legally responsibility for the removal of machine guards and/or disconnection of micro switches
- most accurate method of checking register during a production run
- need to take immediate action when production problems are anticipated
- action that is taken to eliminate further processing of unacceptable printed product
- result to the substrate if the relative humidity is increased in the press room
- procedure to care for a newly delivered substrate to the press room
- waste sorting
- advantage of keeping reusable waste
- industry standards that can be applied to enhance effective communication with the client
- necessary procedures that the client should follow to "OK" a printed product
- need to call service personnel to correct a machine problem
- enterprise procedures that are in place to report any machine operating problems
- result if correct shutdown procedures were not followed
- need for correct shutdown procedures to be conducted with fellow workers
- advantages that result from proper labelling and storage of excess inks and materials
- clear labelling of the printed product prior to removal from the press room
- further operations that are required for printed reels upon removal from the printing machine
- storing the printed job after removal from the printing machine
- use of completed records in the final analysis of the job
- benefits of comprehensive records when considering the production of future jobs
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operate a gravure press ensuring an efficient specialised production flow that maintains product quality standards. Any production problems are rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources monitor production output and make necessary adjustments to maintain print quality on a gravure machine whilst producing a complex print on TWO occasions (if possible using different substrates and if possible including at least TWO in-line processes) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment gravure printing machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICPPR421C Set up for complex gravure printing
- ICPPR322C Produce complex gravure printed product.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Specialised</i> may include:	<ul style="list-style-type: none"> specialised within this context relates to the set up and production of print runs that involve new products, or a new mix of substrates and inks that requires a certain amount of problem solving and experimentation with the substrate and press settings. The set up of equipment and production involves the development of new set up and production approaches based on solving technical problems arising from new product or equipment combinations.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of inks commonly used in 3 or more colour printing, including standard and special colours.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of stack, in-line and central impression printing machines with manual, semi-automated, fully automated or computerised process control.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of viscosity controls, densitometers and spectrophotometry.
<i>Design</i> may include:	<ul style="list-style-type: none"> complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive materials, board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel handling systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm complex job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Non-routine set up is planned and carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Set up reel system (OR Element 3)	2.1. Unwind and rewind reels set up options are analysed and set up is completed and adjusted according to job specifications 2.2. Webbing procedures are carried out to meet non-routine job specifications 2.3. Web-control system is set up options are analysed and set up is completed and adjusted according to job specifications 2.4. Reels are spliced/joined according to job specifications 2.5. Printed web viewing devices are set up and adjusted according to job specifications 2.6. The folder and sheeter are set up and adjusted according to job specifications 2.7. Set off/marketing prevention devices are set up and adjusted according to job specifications
3. Set up sheet system (OR Element 2)	3.1. Feeder and delivery sections are set up options are analysed and set up is completed and adjusted to non-routine suit job specifications 3.2. Sheet pick-up, transportation, control and transfer systems are set up and adjusted according to job specifications 3.3. Substrate is removed from process according to job instructions 3.4. Set off/marketing prevention devices are set up and adjusted according to job specifications
4. Select and prepare inks and additives	4.1. Colour sequence for the job is considered and confirmed 4.2. Inks , dyes or additives are selected according to non-routine job specifications and end-user requirements 4.3. Quality and suitability of inks, dyes or additives are checked and appropriate action is taken 4.4. Inks, dyes and additives are prepared according to OHS requirements, and manufacturer's/supplier's

ELEMENT	PERFORMANCE CRITERIA
	<p>instructions with suitable precautions to minimise waste</p> <p>4.5. Correct colour and weight/volume of ink is mixed and prepared to match the requirements of the job specification and the non-routine printing process</p> <p>4.6. Formulation of the ink, <i>colour match</i> and the approved colour are appropriately recorded</p> <p>4.7. Inks, dyes and additives are appropriately labelled, handled and stored according to manufacturer's/ supplier's instructions to prevent damage and hazards to personnel and prolong shelf life</p>
5. Set up machine for complex lithographic printing	<p>5.1. Plate cylinder is set up and adjusted according to job specifications</p> <p>5.2. Plate cylinder is set up and adjusted according to job specifications</p> <p>5.3. Plates are correctly mounted according to specification and in a safe manner</p> <p>5.4. Blanket and blanket cylinder are set up and adjusted according to job specifications</p> <p>5.5. Impression cylinder is set up and adjusted according to job specifications</p> <p>5.6. Inking system is set up and adjusted according to the lithographic process and job specifications</p> <p>5.7. Dampening system is set up and adjusted according to job specifications</p> <p>5.8. Drying system is set up and adjusted according to job specifications</p>
6. Conduct proof run	<p>6.1. Material to be used for proof is organised correctly</p> <p>6.2. <i>Machine</i> is operated according to manufacturer's and enterprise procedures to produce a specified proof</p> <p>6.3. Production does not commence without client OK or authority where appropriate</p> <p>6.4. Results are interpreted and adjustments are carried out according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to internal or external clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when cooperating with other workers and coordinating the production unit to ensure efficient operation
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- need to ensure that the job specifications are read and properly understood
- production problems that could eventuate by not reading and understanding the job specifications
- with whom would you discuss any production problems?
- problem that can result from the plate cylinder not being cleaned prior to plate fitting
- effect or over tensioning of the plate during fitting
- faults that could result from a plate being under tensioned
- need for accurate plate bending necessary on a web-fed machine
- considerations that would have to be made when deciding the colour sequence
- visual aid on the plate that identifies the colour of ink to be used
- OHS precaution that must be observed when webbing up the machine
- determining the position of the reel
- effect if the brake tension is not set correctly
- function of the "Dancer" roller on a web machine
- determining the position of the bustle wheels
- effect if the web is not spliced correctly
- operation of the particular web viewing device

REQUIRED SKILLS AND KNOWLEDGE

- OHS factors that need to be considered when setting up the sheet transportation and delivery systems
- cause of more than one sheet to be picked up in the feeder
- need for accurate feeder set up
- determining the position of the sheet prior to being transferred to the printing unit
- determining which front lays to use
- type of substrate that would require additional front lays to be engaged
- need for additional front lays when printing this type of substrate
- OHS precaution that must be observed when setting up the delivery
- controlling the web in the rewind unit
- function of a slitter on a web machine
- cause of the web to jam up in the folder
- need to disengage the folder if sheeting
- problems that could be attributed to a blunt knife when sheeting
- a safety feature that is in the delivery system if the web jams up
- fold that is always made with the grain of the web
- type of folder that folds the web in half in the direction of the web grain
- remedial steps that can be taken if there is a possibility of the ink marking in the folder
- main reason for having a silicone applicator on a web machine
- OHS precaution that must be observed when removing sheets from the delivery
- cause of sheets being delivered incorrectly
- adjustments that would be necessary if changing from lightweight to heavyweight stocks
- sheet release into the delivery
- problems that result from the excessive use of anti set off spray powder
- cause of printed sheets to set off in the delivery
- possibility of reducing set off in the delivery
- a fault that may be created if there is excess vacuum on the slow-down wheels
- OHS concerns that are related to the preparation of inks and additives
- details that are necessary to check an ink's suitability for the printing process
- special end-use requirements that may be necessary
- need to mix an additive into the ink
- using a spectrophotometer to assess the colour of an ink
- formula for calculating the correct quantity of lithographic ink
- a print fault that will occur if excessive driers are mixed into the ink
- precautions that you observe to minimise waste when preparing the ink
- shelf life of most inks
- conditions that are relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed inks
- OHS factors that need to be considered when setting up the machine

REQUIRED SKILLS AND KNOWLEDGE

- checks that should be made on the plate prior to fitting
- required plate packing
- normal printing pressure that is required between plate and blanket
- determining the correct printing pressure between blanket and stock
- ideal blanket surface condition
- achieving the correct blanket tension when fitting a new blanket
- print faults that can occur if the impression cylinder is not maintained
- ordereccentric or concentric roller adjustments should be made
- width of the contact stripe between two rollers when setting the rollers
- determining the ink duct setting
- ideal ink duct sweep setting
- recommended degrees shore hardness for bare back and conventional dampeners
- conductivity of the fountain solution
- need to constantly check the conductivity of the fountain solution
- changing the amount of fountain solution across the plate surface
- need to adjust the fountain solution laterally
- effect of engaging the perfecting unit on the run
- main reason for blistering on a heatset machine
- substance that the oven evaporate from the ink
- function of chill rollers on a web machine
- OHS precaution that must be observed when slitting on the machine
- operations that can be performed with in-line units
- machine position that you should engage in-line processing units
- precautions that are necessary when setting up in-line processing units
- reasons for a printed product to be punched
- considerations when setting hole punching in relation to repeat length
- result of excessive pressure on the slitters
- operation of the true inch function fitted to some machines
- problems that may cause the machine to keep stopping
- checks that are necessary prior to engaging the impression
- checks that are performed when running the machine
- effect that the position of certain guards have on the operation of the machine
- communication of the steps involved in operating the machine to other team members
- aids that are available for the testing of the machine proof
- taking tests that are necessary for this job
- function of a polarisation filter in a densitometer
- ideal conditions for inspecting the proof
- need to use visual aids on the printed sheets
- acceptable wet trap value range for lithographic inks

REQUIRED SKILLS AND KNOWLEDGE

- an indicator of optimum solid ink density in the absence of a proof
- result of low solid ink density and excessive dot gain
- methods that are available to check and adjust ink colour and consistency
- adjustments that may have caused mis-register
- adjustments that are made to position the image laterally
- adjustments that are made to position the image circumferentially
- adjustments that are made to position the image diagonally
- effect of changing the colour sequence on the wet trap value
- procedure to lengthen the print length on this type of press
- procedure to shorten the print length on this type of press
- difference between mechanical and optical dot gain
- cause excessive mechanical dot gain
- responsibility for the final say in the "OK" of the job
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up either wide or narrow reel or sheet-fed lithographic printing machines for non-routine print jobs. The individual will conduct a proof run and adjust settings to ensure production speeds are attained in minimum time with minimum wastage • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up a lithographic printing machine for a complex job on TWO occasions (if possible using different substrates and sheet sizes if sheet-fed and if possible including at least TWO in-line processes) according to job and manufacturer's specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • lithographic printing machine with in-line units.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE	
	for example: <ul style="list-style-type: none">• ICPPR332C Produce complex lithographic printed product.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel, and large and small sheet handling systems.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> wide range of inks commonly used in printing, including standard and special colours, if required.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of viscosity controls, densitometers and spectrophotometry.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of single sheet, stream-fed or reel-fed printing machines with manual, semi-automated, fully automated or computerised process control. Includes machines with digitally imaged plates.
<i>Design</i> may include:	<ul style="list-style-type: none"> complex graphics and text. Critical "tight" registration, fit and position, registration for quality print requirements.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.
<i>Specialised</i> may include:	<ul style="list-style-type: none"> non-routine within this context relates to the set up and production of print runs. The set up of equipment and production involves a significant amount of deviation from using standard equipment settings. It also involves significant problem solving and the development of new criteria and procedures for performing current practices. It does not refer to a job that an individual does only occasionally.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain specialised lithographic printing process	<p>1.1. Lithographic plate and plate cylinder conditions are monitored, evaluated and adjusted to ensure the quality of the <i>specialised</i> printed product meets the standard of the sample sheet</p> <p>1.2. Lithographic blanket and blanket cylinder conditions are monitored, evaluated and adjusted to ensure the quality of the specialised printed product meets the standard of sample sheet</p> <p>1.3. Lithographic impression cylinder condition is monitored, evaluated and adjusted to ensure quality of the specialised printed product meets the standard of sample sheet</p> <p>1.4. Lithographic inking system is checked and maintained to ensure quality of the specialised printed product meets the standard of sample sheet</p> <p>1.5. Lithographic dampening system condition is monitored, evaluated and adjusted to ensure quality of the specialised printed product meets the standard of sample sheet</p> <p>1.6. Set off/marketing prevention and drying system is monitored, evaluated and adjusted to ensure quality of the specialised printed product meets the standard of sample sheet</p> <p>1.7. Drying systems are monitored, evaluated and adjusted to ensure quality of the specialised printed product meets the standard of approved proof</p>
2. Maintain specialised production process	<p>2.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>2.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>2.3. Manual and/or automatic control is used according to job specifications</p> <p>2.4. Performance is monitored, evaluated and verified using the process control system according to enterprise procedures</p> <p>2.5. <i>Ink</i> performance, colour, register and position of print are monitored, evaluated and adjusted throughout production run</p> <p>2.6. Production difficulties are anticipated and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>preventive action is taken to prevent occurrence by timely intervention</p> <p>2.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>2.8. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>2.9. Waste is sorted according to enterprise procedures</p>
3. Tune and adjust machinery	<p>3.1. Idiosyncrasies of <i>machines</i> are reviewed and adjustments or tuning undertaken to compensate or to exploit the idiosyncrasy, within manufacturer's specifications</p> <p>3.2. Options are assessed to determine most effective/efficient method of production, ensuring highest quality and yield from machinery</p> <p>3.3. A test run confirms correct options and settings or the need for further adjustment or tuning to meet quality standards</p> <p>3.4. Options and recommendations are documented for future reference according to enterprise procedures</p> <p>3.5. Instruction on new practices is provided to machine operator or finisher, if required</p>
4. Troubleshoot machinery and material problems	<p>4.1. Corrective or preventive action is recommended and implemented where appropriate</p> <p>4.2. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>4.3. Changes are monitored to confirm improvement to production efficiency</p> <p>4.4. Ongoing problems are reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Plate cylinder is set up and adjusted according to job specifications</p> <p>5.3. Unused ink is correctly labelled and stored according to manufacturer/supplier specifications and enterprise procedures</p> <p>5.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	5.5. All product is removed from operating area 5.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures 5.7. Repair/adjustment is verified prior to resumption of operations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing processes and job specifications
- collecting, analysing and organising information by collating details of job and machine specifications and printing processes to ensure efficient production
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating consumables and personnel requirements to meet production schedules
- problem-solving skills by identifying print problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- OHS concerns that are there when operating the reel transportation system
- reel wander cause
- cause of the web to break at the unwind unit
- difference between a "flying paster" and "zero speed" type reel-stand
- a print fault that would result from the reel being run out of centre
- possible faults in the unwind section that could cause a web break
- OHS concerns that are there when operating the sheet transportation system
- result of worn suckers at the feeder suction head
- sheet detection types that are on this machine
- amount of movement that the sheet should have when being registered by the side lay
- cause of mis-register of the sheet at the feeder
- visible signs of the sheet being registered in the feeder
- gripper malfunction affect on the sheet control and transfer
- adjustment of the sheet transfer mechanisms
- cause of the feeder stack to become uneven
- result of the feeder stack not being loaded level
- rectifying the unevenness of the feeder stack
- OHS risks that are associated with rewinding and sheeting
- a safety feature that is in the delivery system if the web jams up

REQUIRED SKILLS AND KNOWLEDGE

- sheet cut-off wander
- effect of poorly adjusted nip rollers when rewinding and sheeting
- further operations that are required for printed reels upon removal from the printing machine
- storing the printed job after removal from the printing machine
- need to label each printed reel
- effect that machine speed will have on sheet delivery
- advantage of spraying moving sheets with anti set off powder in the delivery
- items in the delivery that could cause marking of the printed image
- remedial steps that may be necessary to eliminate marking of the printed image
- function of a sheet decurler fitted to the delivery of some machines
- faults that could result from incorrectly set grippers in the transfer section of a machine
- storing the printed job after removal from the printing machine
- result if the plate develops a crack at the grip edge during a print run
- effect of a sticky blanket surface
- print faults that would result from the blanket not being tensioned correctly
- cause of blanket packing creep during printing
- effect of a build-up of ink on the impression cylinder the printed product
- cause of ink to lie back in the duct
- cause of ink stripping on the inking rollers
- print faults that would result from excessive use of fountain solution on the plate
- recommended pH range for fountain solutions
- cause of change in the conductivity of the fountain solution over an eight-hour shift
- problems that can be caused by excessive conductivity of the fountain solutions
- effect of eating or drinking near the machine when using UV inks
- link between driers and set off and marking
- causes of UV ink to dry
- cause of the substrate blistering
- effect in the chillers if the drying temperature was too low
- effect of incorrect drying temperature on the finished product
- effect of inadequate communication within the work team on a lithographic printing machine
- safety features within the organisation that aid in maintaining effective production
- ramifications if machine guards are removed and/or micro switches are disconnected on a machine
- legally responsibility for the removal of machine guards and/or disconnection of micro switches
- disadvantage of using a closed looped system for automatic control of the printed product
- other measurement besides optimum solid ink density that can be measured to

REQUIRED SKILLS AND KNOWLEDGE

assess print quality

- most accurate method of checking register during a production run
- need to take immediate action when production problems are anticipated
- action that is taken to eliminate further processing of unacceptable printed product
- effect on a stack of paper if the relative humidity is increased in the press room
- procedure to care for a newly delivered skid of paper to the press room
- waste sorting
- advantage of keeping reusable waste
- industry standards that can be applied to enhance effective communication with the client
- the necessary procedures that the client should follow to "OK" a printed product
- need to call service personnel to correct a machine problem?
- enterprise procedures that are in place to report any machine operating problems
- result if correct shutdown procedures were not followed
- need for correct shutdown procedures that are conducted with fellow workers
- advantages that result from proper labelling and storage of excess inks and materials
- clear labelling of the printed product prior to removal from the press room
- use of completed records in the final analysis of the job
- benefits of comprehensive records when considering the production of future jobs
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operate a lithographic press ensuring an efficient specialised production flow that maintains product quality standards. Any production problems are anticipated and rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources monitor production output and make necessary adjustments to maintain print quality on a lithographic machine whilst producing a specialised print on TWO occasions (if possible using different types and sizes of substrates) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment lithographic printing machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICPPR332C Produce complex lithographic printed product
- ICPPR431C Set up for complex lithographic printing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Specialised</i> may include:	<ul style="list-style-type: none"> specialised within this context relates to the set up and production of print runs that involve new products, or a new mix of substrates and inks that requires a certain amount of problem solving and experimentation with the substrate and press settings. The set up of equipment and production involves the development of new set up and production approaches based on solving technical problems arising from new product or equipment combinations.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> wide range of inks commonly used in printing.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of single sheet, stream-fed or reel-fed printing machines with manual, semi-automated, fully automated or computerised process control. Includes machines with digitally imaged plates.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of densitometers and/or spectrophotometry.
<i>Design</i> may include:	<ul style="list-style-type: none"> complex graphics and text. Critical "tight" registration, fit and position, registration for quality print requirements.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel, and large and small sheet handling systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm non-routine job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is planned and carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Install tampons (printing pads) into machine	2.1. Appropriate tampons are selected according to non-routine job specifications/requirements 2.2. Tampons are secured into machine
3. Set up fixtures onto machine bed or conveyor	3.1. Appropriate fixtures are selected and secured to xy table or conveyor jig plates 3.2. Adjust height of machine bed to suit size of object to be printed 3.3. Adjust xy table of machine bed to suit position of image on object
4. Select and prepare inks and additives	4.1. Inks , and additives are selected according to non-routine job specifications and end-user requirements 4.2. Quality and suitability of inks and additives are checked and appropriate action is taken 4.3. Inks and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 4.4. Correct colour and weight/volume of ink is mixed and prepared to match the requirements of the non-routine job specification and the printing process 4.5. Formulation of the ink, colour match and the approved colour are appropriately recorded 4.6. Inks and additives are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and prolong shelf life
5. Set up machine for complex pad printing	5.1. Plate holders are set up and adjusted for register according to job specifications 5.2. Appropriate plates and plate holders are selected and plates are secured into plate holders 5.3. Tampons are set up and adjusted according to job specifications 5.4. Spatula and doctor blade are set up and adjusted according to the pad printing process and job

ELEMENT	PERFORMANCE CRITERIA
	specifications OR 5.5. Ink cups are set up and adjusted according to job specifications
6. Set up pre- and post-treatment in-line processes	6.1. In-line loading is set up to suit non-routine object and according to job specifications 6.2. In-line <i>pre-treatment</i> is set up to suit non-routine object and according to job specifications 6.3. In-line drying is set up to suit non-routine object and according to job specifications 6.4. In-line ejection is set up to suit non-routine object and according to job specifications
7. Conduct proof run	7.1. Material to be used for proof is organised correctly 7.2. Machine is operated according to manufacturer's and enterprise procedures to produce a specified proof 7.3. Proof is visually inspected and/or tested or laboratory testing organised according to enterprise procedures 7.4. Production does not commence without client OK or authority where appropriate 7.5. Results are interpreted and adjustments are carried out according to product and machine specifications to determine adjustment requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to internal or external clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when cooperating with other workers and coordinating the production unit to ensure efficient operation
- mathematical ideas and techniques by calculating substrate requirements, cliché and tampon position, and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- different substrate groups and suggest the correct ink type for each group
- plastic subgroups for the purpose of ink selection
- adjustments made to the process colour inks for correct colour balance
- methods of improving opacity of a light coloured ink on a dark substrate
- determining the correct pad shape for (given) applications
- effect that pad shape and hardness have on print quality
- effect that commonly be seen at the contact point of the nipple of a pad in a large solid print, and how can it be avoided
- preparing a new pad for its first printing
- determining the correct plate type for (given) applications
- difference between steel and photopolymer plates for process printing
- reasons for mis-registered images and how can they be corrected
- OHS concerns that are there when setting presses and doctor blades
- adjustments to the machine so that the doctor blade is operating correctly
- effect of a damaged doctor blade
- types of doctor blades and explain their applications
- OHS concerns that are there when pre- and post-treating substrates
- common pre- and post-treatment methods for different substrates and their

REQUIRED SKILLS AND KNOWLEDGE

importance

- | |
|---|
| <ul style="list-style-type: none">• causes and solutions for common print problems (eg hairlines around image, loss of density in the centre of a solid image, fine lines of ink running through image, distortion of image, picking up ink from substrate by subsequent pads, washed out images, loss of fine lines in images, inconsistent colour)• machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain specialised pad printing process	<p>1.1. Location of objects into fixtures is monitored, evaluated and adjusted if necessary</p> <p>1.2. Printing plates condition is monitored and evaluated to ensure the quality of printed product meets the standard of the approved proof</p> <p>1.3. Printing pads condition is monitored, evaluated and maintained to ensure the quality of printed product meets the standard of approved proof</p> <p>1.4. Spatulas and doctor blades are monitored, evaluated and adjusted to ensure quality of printed product meets the standard of approved proof OR</p> <p>1.5. Ink cups are monitored, evaluated and adjusted to ensure quality of printed product meets the standard of approved proof</p> <p>1.6. Printing ink viscosity is monitored, evaluated and adjusted to ensure quality of printed product meets the standard of approved proof</p>
2. Maintain in-line systems	<p>2.1. In-line loading is monitored, evaluated and adjusted to ensure quality of printed product meets the standard of approved proof</p> <p>2.2. In-line pre-treatment is monitored, evaluated and adjusted to ensure quality of printed product meets the standard of approved proof</p> <p>2.3. In-line drying is monitored, evaluated and adjusted to ensure quality of printed product meets the standard of approved proof</p>
3. Maintain production process	<p>3.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>3.2. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>3.3. Manual and/or automatic control is used as required according to job specifications</p> <p>3.4. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>3.5. Ink performance, colour, register and position of print are monitored and adjusted throughout production run</p> <p>3.6. Production difficulties are anticipated and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>preventive action is taken to prevent occurrence by timely intervention</p> <p>3.7. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>3.8. Waste is sorted according to enterprise procedures</p>
4. Tune and adjust machinery	<p>4.1. Idiosyncrasies of <i>machines</i> are reviewed and adjustments or tuning undertaken to compensate or to exploit the idiosyncrasy, within manufacturer's specifications</p> <p>4.2. Options are assessed to determine most effective/efficient method of production, ensuring highest quality and yield from machinery</p> <p>4.3. A test run confirms correct options and settings or the need for further adjustment or tuning to meet quality standards</p> <p>4.4. Options and recommendations are documented for future reference according to enterprise procedures</p> <p>4.5. Instruction on new practices is provided to machine operator or finisher, if required</p>
5. Troubleshoot machinery and material problems	<p>5.1. Corrective or preventive action is recommended and implemented where appropriate</p> <p>5.2. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>5.3. Changes are monitored to confirm improvement to production efficiency</p> <p>5.4. Ongoing problems are reported according to enterprise procedures</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Unused ink is correctly labelled and stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>6.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.5. All product is removed from operating area</p> <p>6.6. Machine faults requiring repair are identified and</p>

ELEMENT	PERFORMANCE CRITERIA
	reported, according to enterprise procedures 6.7.Repair/adjustment is verified prior to resumption of operations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing processes and job specifications
- collecting, analysing and organising information by identifying and recording specialised production practices
- planning and organising activities by adjusting the production process to achieve specialised printing requirements
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables and personnel requirements to meet production schedules
- problem-solving skills by adjusting machinery settings to determine the required tolerances to meet specialised requirements
- use of technology by using machinery to produce specialised pad printed product

Required knowledge

- major OHS concerns when operating this machine
- MSDSs that are stored and the information do they contain
- improvement of the colour density of a light image on a dark substrate by selection of a different machine cycle mode
- selection of the appropriate machine cycle mode to provide the highest production output for a particular product
- special cycle modes that are available on your machine and their application
- determining that the ink has been mixed to the correct viscosity
- correcting ink viscosity during production
- causes of unreleased ink remaining on the printing pad and how do you identify them
- effect of adding a catalyst on the pot life of ink and other factors that affect pot life
- recognising a damaged pad
- correct method of cleaning a pad during production
- effect of different pad shapes for different colours In multicoloured printing
- determining the time the ink should take to cure before scratch and adhesion tests can be performed
- method that can be used to check for correct pre-treatment of polypropylene during production
- ensuring the correct drying conditions for the product

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• effects that will be visible in the image if the ink viscosity is incorrect• identifying the cause of incorrect registration and preventing its recurrence• cause of a fine coating of ink over the whole cliché surface• machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents |
|---|

Production does not commence without client OK or authority where appropriate</p> <p>6.5. Results are interpreted and adjustment changes are carried out according to product and machine specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to internal or external clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when cooperating with other workers and coordinating the production unit to ensure efficient operation
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- job requirements
- production problems that could eventuate by not reading and understanding the job specifications
- with whom would you discuss any production problems
- relief plates
- why hardness of the printing plate is important
- faults that may be detected on new plates
- type of solvents that should be used on photopolymer plates
- V-block mounting
- purpose of binding plates after mounting
- checks that need to be performed prior to cylinder installation
- machine frames and unit slides to be kept cleaned
- OHS precaution must be observed when installing printing cylinders in the machine
- optimum print sequence
- visual aid on the plate that identifies the colour of ink to be used
- precautions to be taken to ensure that the plate/cylinders were not damaged during installation

REQUIRED SKILLS AND KNOWLEDGE

- reel transportation system on a web-fed machine
- OHS precaution that must be observed when webbing up the machine?
- determining the position of the reel
- implications if the brake tension is not set correctly
- function of the "Dancer" roller on a web machine
- function of nip rollers
- web is not spiced correctly
- sheet transportation system on a sheet-fed machine
- major OHS concerns when setting up the sheet transportation system
- what causes more than one sheet to pick up in the feeder
- accurate feeder set up is essential
- determining the position of the sheet prior to being transferred to the printing unit?
- determining which front lays to use
- types of substrate that require additional front lays to be engaged
- why additional front lays would be necessary when printing this type of substrate
- reel delivery system on a web-fed machine
- OHS precautions that must be observed when setting up the delivery
- web controlled in the rewind unit
- function of a slitter on a web machine
- problems that could be attributed to a blunt knife when sheeting
- remedial steps that can be taken if there is a possibility of the ink marking in the rewind
- sheet delivery system on a sheet-fed machine
- OHS precautions that must be observed when removing sheets from the delivery
- what causes sheets to be delivered incorrectly
- what adjustments are necessary if changing from lightweight to heavyweight stocks?
- determining the sheet release into the delivery
- problems resulting from the excessive use of anti set off spray powder
- what causes printed sheets to set off in the delivery
- how the possibility of set off in the delivery can be reduced
- how air blast assists sheet delivery
- inks and additives
- OHS concerns related to the preparation of inks and additives
- details are necessary to check inks suitability for the printing process
- special end-use requirements that may be necessary
- why it might be necessary to mix an additive into the ink
- how a spectrophotometer can be used to assess the colour of ink
- the formula for calculating the correct quantity of ink in relief printing
- print faults that will occur if excessive driers are mixed into the ink

REQUIRED SKILLS AND KNOWLEDGE

- precautions that are observed to minimise waste when preparing the ink
- shelf life of most ink
- conditions that are relevant to the storage of inks and additives
- conventions should be adhered to when labelling mixed inks
- machine set up
- what are the Major OHS concerns when setting up the machine
- packing required in the tympan
- determining the amount of printing pressure
- what is the ideal condition of the tympan
- how the correct top sheet tension is achieved when fitting a new tympan
- print faults can occur if the tympan is not tensioned correctly
- order in which eccentric or concentric roller adjustments be made
- when setting the rollers, the width of the contact stripe between two rollers
- determining the ink duct setting
- ideal ink duct sweep setting
- recommended degrees shore hardness for forme rollers
- main reason for blistering on a heat set machine
- types of ink drying/curing systems
- how the drying unit cures the ink
- in-line processes
- OHS precautions that must be observed when slitting on the machine
- operations that can be performed with in-line units
- what machine position should you engage in-line processing units
- precautions that are necessary when setting up in-line processing units
- reasons for a printed product to be top cut
- benefits of embossing in-line
- result of excessive pressure when top cutting
- result of excessive pressure when cutting and creasing
- effect differing tooth counts have on perforated products
- problem solving proofing and adjustment
- operation of the true inch function fitted to some machines
- problems that may cause the machine to keep stopping
- checks that are necessary prior to engaging the impression
- checks to be performed when running the machine
- effect the position of certain guards have on the operation of the machine
- steps involved in operating the machine communicated to other team members
- aids that are available for the testing of the machine proof
- tests that are necessary for this job
- where the testing should take place
- function of a polarisation filter in a densitometer

REQUIRED SKILLS AND KNOWLEDGE

- ideal conditions for inspecting the proof
- why it is necessary to use visual aids on the printed substrate
- causes of a halo effect on the image
- methods that are available to check and adjust ink colour and consistency
- adjustments that may have caused mis-register
- adjustments that are made to position the image laterally
- adjustments that are made to position the image circumferentially
- how changing the colour sequence can effect the final colour cast
- procedure to lengthen the print length on this type of press
- procedure to shorten the print length on this type of press
- difference between mechanical and optical dot gain
- causes of excessive mechanical dot gain
- who has the final say in the "OK" of the job?Information sources
- machine manuals, safety and other documentation that are relevant to this task and where are they kept
- information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up reel- or sheet-fed platen, cylinder or rotary printing machines for non-routine print jobs. The individual will conduct a proof run and adjust settings to ensure production speeds are attained • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up a relief printing machine for complex printing on TWO occasions (if possible using different substrates and if possible including at least TWO in-line processes) according to manufacturer's and job specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • reel- or sheet-fed platen, cylinder or rotary printing machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE	
	for example: <ul style="list-style-type: none">• ICPPR352C Produce complex relief printed product.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • wide and narrow reel, and large and small sheet handling systems.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> • range of inks commonly used in 3 or more colour printing, including standard and special colours.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> • use of densitometers and spectrophotometry.
<i>Machines</i> may include:	<ul style="list-style-type: none"> • range of platen, cylinder and rotary machines with manual, semi-automated, fully automated or computerised process control.
<i>Design</i> may include:	<ul style="list-style-type: none"> • 3 or more colours, complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> • minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> • range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.
<i>Non-routine</i> may include:	<ul style="list-style-type: none"> • non-routine within this context relates to the set up and production of print runs. The set up of equipment and production involves a significant amount of deviation from using standard equipment settings. It also involves significant problem solving and the development of new criteria and procedures for performing current practices. It does not refer to a job that an individual does only

RANGE STATEMENT

	occasionally.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain specialised relief printing process	<p>1.1. Relief polymer forme or plate cylinder condition is monitored, evaluated and adjusted to ensure the quality of the specialised printed product meets the standard of the sample sheet</p> <p>1.2. Relief polymer impression surface condition is monitored, evaluated and adjusted to ensure the quality of specialised printed product meets the standard of sample sheet</p> <p>1.3. Relief polymer inking system is monitored, evaluated and adjusted to ensure quality of specialised printed product meets the standard of sample sheet</p> <p>1.4. Drying systems are monitored, evaluated and adjusted to ensure quality of specialised printed product meets the standard of approved proof</p>
2. Maintain production process	<p>2.1. Production process is operated in association with fellow workers and according to enterprise procedures and planned daily schedule</p> <p>2.2. If required, <i>in-line</i> printing/converting/binding/finishing processes are monitored and adjusted to ensure quality of product meets the standard of the approved proof</p> <p>2.3. Production is maintained according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>2.4. Manual and/or automatic control is used as required according to job specifications</p> <p>2.5. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>2.6. <i>Ink</i> performance, colour, register and position of print are monitored and adjusted throughout production run</p> <p>2.7. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>2.8. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>2.9. Waste is sorted according to enterprise procedures</p>
3. Tune and adjust machinery	<p>3.1. Idiosyncrasies of <i>machines</i> are reviewed and adjustments or tuning undertaken to compensate or to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>exploit the idiosyncrasy, within manufacturer's specifications</p> <p>3.2. Options are assessed to determine most effective/efficient method of production, ensuring highest quality and yield from machinery</p> <p>3.3. A test run confirms correct options and settings or the need for further adjustment or tuning to meet quality standards</p> <p>3.4. Options and recommendations are documented for future reference according to enterprise procedures</p> <p>3.5. Instruction on new practices is provided to machine operator or finisher, if required</p>
4. Troubleshoot machinery and material problems	<p>4.1. Corrective or preventive action is recommended and implemented where appropriate</p> <p>4.2. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>4.3. Changes are monitored to confirm improvement to production efficiency</p> <p>4.4. Ongoing problems are reported according to enterprise procedures</p>
5. Conduct shutdown of production process	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Unused ink is correctly labelled and stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>5.4. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>5.5. All product is removed from operating area</p> <p>5.6. Machine faults requiring repair are identified and reported, according to enterprise procedures</p> <p>5.7. Repair/adjustment is verified prior to resumption of operations</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing processes and job specifications
- collecting, analysing and organising information by interpreting machine feedback to ensure specialised product requirements are achieved
- planning and organising activities by determining the most effective processes to produce a specialised printed product
- teamwork when working with others to maintain the production process
- mathematical ideas and techniques by calculating consumables and personnel requirements to meet production schedules
- problem-solving skills by identifying print problems and correcting during print run to produce a specialised printed product
- use of technology by using machinery to the full extent of its capacity to produce specialised printed product

Required knowledge

- major OHS concerns when setting up the reel transportation system
- reel wander cause
- cause of the web to break at the unwind unit
- a print fault that would result from the reel being run out of centre
- possible faults in the unwind section that could cause a web break
- OHS concerns that are there when operating the sheet transportation system
- result of worn suckers at the feeder suction head
- sheet detection types that are on this machine
- amount of movement that the sheet should have when being registered by the side lay
- cause of mis-register of the sheet at the feeder
- visible signs of the sheet being registered in the feeder
- gripper malfunction affect on the sheet control and transfer
- adjustment of the sheet transfer mechanisms
- cause of the feeder stack to become uneven
- result of the feeder stack not being loaded level
- rectifying the unevenness of the feeder stack
- OHS risks that are associated with rewinding and sheeting
- a safety feature that is in the delivery system if the web jams up
- sheet cut-off wander

REQUIRED SKILLS AND KNOWLEDGE

- effect of poorly adjusted nip rollers when rewinding and sheeting
- effect that machine speed will have on sheet delivery
- advantage of spraying moving sheets with anti set off powder in the delivery
- items in the delivery that could cause marking of the printed image
- remedial steps that may be necessary to eliminate marking of the printed image
- faults that could result from incorrectly set grippers in the transfer section of a machine
- adjustments that are made to devices to maintain sheet control in the delivery
- result if the plate lifts at the grip edge during a print run
- effect on the printed product of a build-up of ink on the impression cylinder
- cause of the ink to lie back in the duct
- rectifying the problem of paper surface picking
- cause of diminished impression during the print run
- cause of the plate surface to prematurely wear during production
- effect of eating or drinking near the machine when using UV inks
- link between driers and set off and marking
- causes of UV ink to dry
- cause of the substrate blistering
- effect of incorrect drying temperature on the finished product
- effect of inadequate communication within the work team on a lithographic printing machine
- safety features within the organisation that aid in maintaining effective production
- ramifications if machine guards are removed and/or micro switches are disconnected on a machine
- legally responsibility for the removal of machine guards and/or disconnection of micro switches
- other measurement besides optimum solid ink density that can be measured to assess print quality
- most accurate method of checking register during a production run
- need to take immediate action when production problems are anticipated
- action that is taken to eliminate further processing of unacceptable printed product
- effect on a stack of paper if the relative humidity is increased in the press room
- procedure to care for a newly delivered skid of paper to the press room
- waste sorting
- advantage of keeping reusable waste
- industry standards that can be applied to enhance effective communication with the client
- necessary procedures that the client should follow to "OK" a printed product
- need to call service personnel to correct a machine problem?
- enterprise procedures that are in place to report any machine operating problems
- result if correct shutdown procedures were not followed

REQUIRED SKILLS AND KNOWLEDGE

- need for correct shutdown procedures that are conducted with fellow workers
- advantages that result from proper labelling and storage of excess inks and materials
- clear labelling of the printed product prior to removal from the press room
- use of completed records in the final analysis of the job
- benefits of comprehensive records when considering the production of future jobs
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operate a platen, cylinder or rotary printing machine to produce a specialised printed product that maintains product quality standards. Any production problems are anticipated and rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources monitor production output and make necessary adjustments to maintain print quality on a relief printing machine whilst producing a specialised print on TWO occasions (if possible using different substrates and if possible including at least TWO in-line processes) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment platen, cylinder or rotary printing machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICPPR352C Produce complex relief printed product
- ICPPR451C Set up for complex relief printing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of inks commonly used in 3 or more colour printing, including standard and special colours.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of platen, cylinder and rotary machines with manual, semi-automated, fully automated or computerised process control.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of densitometers and spectrophotometry.
<i>Design</i> may include:	<ul style="list-style-type: none"> 3 or more colours, complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel, and large and small sheet handling systems.
<i>Specialised</i> may include:	<ul style="list-style-type: none"> specialised within this context relates to the set up and production of print runs that involve new products, or a new mix of substrates and inks that requires a certain amount of problem solving and experimentation with the substrate and press settings. The set up of equipment and production involves the development of new set up and production approaches based on solving technical problems arising from

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is planned and carried out correctly and in minimum time 1.3. Availability of all job related components is checked
2. Set up reel system (OR Element 3)	2.1. Unwind set up and adjusted according to job specifications 2.2. Webbing procedures are carried out and web-control system is set up and adjusted according to job specifications 2.3. Reels are spliced/joined according to job specifications 2.4. Printed web viewing devices are set up and adjusted according to job specifications 2.5. Set off/marketing prevention devices are set up and adjusted according to job specifications
3. Set up sheet system (OR Element 2)	3.1. Feeder and delivery is set up and adjusted according to job specifications 3.2. Sheet pick-up and transportation system is set up and adjusted according to job specifications 3.3. Transfer and control systems are set up and adjusted according to job specifications 3.4. Substrate is added to and removed from process according to job instructions 3.5. Set off/marketing prevention devices are set up and adjusted according to job specifications
4. Select and prepare coating	4.1. Coating is selected according to job specifications and end-user requirements 4.2. Quality and suitability of coating is checked and appropriate action is taken 4.3. Coatings and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 4.4. Correct weight/volume of coating is prepared to match the requirements of the job specification and the coating process 4.5. Check the viscosity of coating is correct for the job 4.6. Formulation of the coating is appropriately recorded

ELEMENT	PERFORMANCE CRITERIA
5. Set up machine for coating	<p>5.1. Appropriate rollers/cylinders are selected and secured to the <i>machine</i> and set</p> <p>5.2. Application system is set up and adjusted according to job specifications</p> <p>5.3. Choose appropriate anilox roller and ensure it is installed to manufacturer's specifications</p> <p>5.4. Set doctor blades to manufacturer's specifications</p> <p>5.5. Coating delivery system is set up with correct flow and return flow determined by air pressure or pump speeds and adjusted according to job specifications</p> <p>5.6. Cut a coating blanket or install a plate for non-image areas</p> <p>5.7. Check that blanket or plate packing is suitable to the job</p> <p>5.8. Check that the coating temperature is suitable for the job</p> <p>5.9. Drying system is set up and adjusted according to job specifications</p>
6. Conduct proof run	<p>6.1. Material to be used for proof is organised correctly</p> <p>6.2. Machine is set up and operated, and roller and pressure settings are checked, to produce a specified proof according to OHS requirements, manufacturer's specifications and enterprise procedures</p> <p>6.3. Proof is visually inspected and/or tested or laboratory testing organised according to enterprise procedures</p> <p>6.4. Production does not commence without client OK or authority where appropriate</p> <p>6.5. Results are interpreted and adjustment changes are carried out according to product and machine specifications to determine adjustment requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to internal and external clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about coating process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when cooperating with other workers and coordinating the production unit to ensure efficient operation
- mathematical ideas and techniques by calculating substrate requirements, plate or blanket position, and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- information on the work ticket listing the type of coating required
- action taken if vital information were missing from the job ticket
- checks that should be undertaken prior to set up (availability of materials etc)
- major OHS concerns when setting up the sheet or reel transportation system
- choosing the coating side of the material
- effect of low web tension on the print
- effect of inefficient web splices
- determining the sheet or reel position for the job
- effect the side lay selection has on the job
- selecting the appropriate front lays
- carrying out a register check
- use of a two-sheet cut out on most feeders (sheet)
- checking of a sheet is missing or late
- checking of a web break
- safety risks associated with the rewind of the machine
- effect of excessive web tension at the rewind of the machine
- effect that too much vacuum on the slow-down wheels has on the job
- determining the position of register or bustle wheels

REQUIRED SKILLS AND KNOWLEDGE

- effect that excessive jogging would have on the stack
- OHS concerns that are relevant to the use of coatings
- types of coatings and their applications
- suitability of the coating for the job
- ability of the coat to adhere to the product
- amount of coating required
- range of viscosities that should you run with on an aqueous coating
- effect of incorrect viscosity on coating
- adjusting the viscosity of a coating
- methods that the coating use to solidify
- drying UV coating
- printing principle that is being utilised to apply aqueous coating
- importance that gluing tabs are not coated
- temperature the drier is set at to dry aqueous coating
- determining which image carrier (plate or blanket) to use
- position of the coating checked against the print
- effect that skeleton wheels could have on the surface of the coating
- measuring the amount of gloss on the surface
- responsibility for the final "OK" on the job
- effect that you get when you don't have enough coating on a sheet
- effect that a UV coating would have on a wet print
- effect that excessive temperature would have on the sheet
- effect that you would get if the viscosity were too high or too low
- effect that you would get if ink coverage were excessive, ie over 250%
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up rollers and the reel or sheet systems for coating a range of carbon, carbonless, latex, wax, resin and metallic coatings, aqueous and UV varnishes and machine varnishes. The individual will conduct a proof run and adjust settings to ensure production speeds are attained • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up for THREE complex coating operations (one spot coating, one overall coating and one fine detail, using THREE different coatings of which one must be metallic) and if possible including at least ONE in-line process) according to manufacturer's and job specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • dedicated coating machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain operation of reel system (OR Element 2)	1.1. Reel stand and rewind section are is monitored and adjusted to maintain correct tension and to ensure no marks or blemishes to finished product and to ensure efficient continuous operation 1.2. Web control system is monitored and adjusted to ensure correct tension and accurate continuous positioning of the web for efficient operation 1.3. Substrate is added to and removed from process according to job instructions 1.4. Sheeting section is monitored and adjusted to ensure quality and efficient product delivery
2. Maintain operation of sheet system (OR Element 1)	2.1. Feeder and delivery is monitored and adjusted to ensure continuous and efficient feeding to machine 2.2. Sheet pick-up and transport system is monitored and adjusted to ensure accurate and continuous sheet handling and efficient operation 2.3. Transfer and control systems are monitored and adjusted to ensure correct and continuous sheet handling and efficient operation 2.4. Substrate is added to and removed from process according to job instructions
3. Maintain coating process	3.1. Roller condition is monitored and adjusted to ensure the quality of printed product meets the standard of approved proof 3.2. Coating system and doctor blade condition (if appropriate) are monitored and adjusted to ensure quality of product meets the standard of approved proof 3.3. Drying systems are monitored and adjusted to ensure quality of product meets the standard of approved proof 3.4. Quality and viscosity of varnish coatings are monitored and adjusted as necessary to ensure quality of product
4. Maintain production process	4.1. Basic or complex in-line printing/converting/binding/finishing processes are monitored and adjusted to ensure quality of product meets the standard of the approved proof 4.2. Production process is operated in association with fellow workers and according to company specifications and planned daily schedule

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Production is maintained within OHS requirements and company and manufacturer's specifications</p> <p>4.4. Manual and/or automatic control is used as per specification</p> <p>4.5. Performance is monitored and verified using the process control system according to enterprise procedures</p> <p>4.6. Coating performance, register and position of coating are monitored and adjusted throughout production run</p> <p>4.7. Production difficulties are anticipated and preventive action is taken to prevent occurrence by timely intervention</p> <p>4.8. Process adjustments to eliminate problems are reported according to enterprise procedures</p> <p>4.9. Waste is sorted according to enterprise procedures</p>
5. Identify and rectify problems	<p>5.1. Faulty performance of equipment is identified and reported according to enterprise procedures</p> <p>5.2. Problems in coating machine are identified and reported according to enterprise procedures</p> <p>5.3. Adjustments or corrections are carried out according to specified procedures and consistent with operator's skill level</p> <p>5.4. Coating machine operation is checked to ensure correct operation</p>
6. Conduct shutdown of production process	<p>6.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>6.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>6.3. Solid and liquid waste is removed from operating area and recycled or disposed of, where required, according to regulatory requirements and enterprise procedures</p> <p>6.4. All product is removed from operating area</p> <p>6.5. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>6.6. Repair/adjustment is verified prior to resumption of operations</p>
7. Clean and wash up coating machine at	7.1. Cylinders, plate and roller surfaces are cleaned ready for next run

ELEMENT	PERFORMANCE CRITERIA
end of print run	7.2. Coating delivery system is washed up ready for next run, and liquid waste is disposed of according to company and regulatory requirements 7.3. In-line slitting units are cleaned ready for next run 7.4. Reef feed, transportation and delivery systems are disengaged and cleaned ready for next run 7.5. Production records or other documentation are accurately completed where required by enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients about printing, in-line processes and job specifications
- collecting, analysing and organising information by collating details of job and machine specifications and coating processes to ensure efficient production
- planning and organising activities by coordinating sequences for coating and wash-up
- teamwork when communicating with work team members and workers involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating consumables and personnel requirements to meet production schedules
- problem-solving skills by identifying coating problems and correcting during print run
- use of technology by using monitoring systems, understanding their output and feeding into production management systems

Required knowledge

- action if vital information were missing from the job ticket
- checks that should be undertaken prior to set up (availability of materials etc)
- major OHS concerns when setting up the sheet or reel transportation system
- effect of fanning the sheets before loading into the press
- setting and checking the double sheet detector during the print run
- effect on the print of excessive tension on the rewinding reel
- effect if the web is not spliced correctly
- precautions that should be taken to ensure that the rewound product is of consistent acceptable quality
- if sheeted, components that can be adjusted to ensure correct delivery
- identifying printed material that is not of an acceptable standard
- major OHS concerns when coating
- action that could be taken if the aqueous coating was smudging on the delivery section of the machine
- effects anti set off spray could have on the finished job
- level the coating should be maintained in the pan
- effect the UV lamp has on the UV coating
- varying the temperature and volume of hot and cold air knives
- use of IR radiation (including choice of medium or short wave lamps) and its

REQUIRED SKILLS AND KNOWLEDGE

effect when using coatings

- | |
|--|
| <ul style="list-style-type: none">• dangers that exist from solvents and solutions used to clean the coating system, plates, cylinders and the press• parts of the machine that should be thoroughly cleaned following the coating of the job• components that are to be inspected for wear following the print run• records that are important for following or repeat prints• machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents |
|--|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> produce a complex coated product on either a reel- or sheet-fed machine ensuring an efficient production flow that maintains product quality standards. Any production problems are anticipated and rectified with minimum downtime. The machine is correctly shut down and cleaned according to OHS guidelines demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources produce THREE complex coating jobs (one spot coating, one overall coating and one fine detail, using THREE different coatings one of which must be metallic and if possible including at least ONE in-line process) according to job specifications, enterprise procedures and the Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment a print machine or a dedicated coating machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE

assessment

industry sector, workplace and job role is recommended, for example:

- ICPPR471C Set up for complex coating.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> narrow or wide reel handling, and small and large sheet systems.
<i>Machines</i> may include:	<ul style="list-style-type: none"> a range of dedicated coating and printing machines with manual, semi-automated, fully automated or computerised process control.
<i>Coatings</i> may include:	<ul style="list-style-type: none"> a range of carbon, carbonless, latex, wax, resin and metallic coatings, aqueous and UV varnishes and machine varnishes.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> minor processes that are integral to this competency can include basic in-line operations such as perforating, numbering, date coding, slitting that do not in themselves constitute another defined unit of competency. Where a major in-line process is defined as a separate competency (eg flat-bed cutting, folding) it should be assessed as such.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of visual colour assessment and densitometry to match basic standard tints under controlled lighting conditions.
<i>Design</i> may include:	<ul style="list-style-type: none"> spot coating, overall coating and fine detail coating.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> full range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm data requirements	<p>1.1. The <i>job specifications</i> are reviewed to identify document purpose</p> <p>1.2. Materials required for page design, layout and content are identified from job specifications</p> <p>1.3. Source and format of data is determined and confirmed</p> <p>1.4. The page design template is evaluated for printing purposes and static and <i>variable fields</i> are correctly understood and labelled</p> <p>1.5. Responsibility for data accuracy and other tests such as spell checks and postal software is agreed with client</p>
2. Prepare data	<p>2.1. Data required to populate the copy holes in the variable-data template is established</p> <p>2.2. The fields to be populated are confirmed and linked to data required to <i>markup</i> the copy holes in the variable-data template</p> <p>2.3. A <i>composition engine</i> is used to achieve the required data format and page layout requirements for merging variable data and static elements</p> <p>2.4. Business rules are developed to reduce data errors and discrepancies</p> <p>2.5. If possible, a sample of the data is obtained and preliminary checks run, making sure the data and format is correct</p> <p>2.6. A soft proof is performed to ensure the <i>quality</i> of all static and variable elements</p> <p>2.7. If high variability, RIPped data is spooled prior to printing to maintain higher engine speeds</p> <p>2.8. A sample from the machine is produced and checked for conformance to the job specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by determining and confirming source and format of data in consultation with the client
- collecting, analysing and organising information by evaluating the page design template and correctly labelling static and variable fields
- planning and organising activities by confirming data requirements before developing business rules
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by assessing the output rate of the printing equipment
- problem-solving skills by developing a soft proof to ensure the quality of all static and variable elements
- use of technology by using relevant hardware and software to prepare for variable digital printing

Required knowledge

- PPML/VDX, XML
- privacy legislation
- database operation
- knowledge of data mining

Evidence Guide

EVIDENCE GUIDE

2. Maintain print quality throughout the run	2.1.Print is inspected visually to meet specified standards during run 2.2.Data is analysed against the required standards 2.3.Appropriate adjustments are made to maintain consistency throughout run 2.4.At regular intervals <i>monitor</i> and maintain job to ensure <i>quality</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by communicating specifications for colour profiles and pre-press requirements for printing to clients
- collecting, analysing and organising information by collating and integrating information on colour profiles and press performance
- planning and organising activities by establishing sequence of monitoring to ensure quality output
- teamwork when integrating job planning with pre-press
- mathematical ideas and techniques by understanding and applying colour profiles and curves to machine adjustment
- problem-solving skills by monitoring samples and adjusting equipment as necessary
- use of technology by efficiently using monitoring systems to ensure quality output

Required knowledge

- colour theory of additive colours (light), RGB
- colour theory of subtractive colours (pigments), CMYK
- relationship between ranges of visual colour RGB and CMYK
- ICC profiling
- underlying principle of densitometry
- underlying principle of spectrophotometry
- basic underlying principles for determining tolerance in densitometry and spectrophotometry
- an original colour control bar determinates
- determining the accuracy of the elements in a colour bar
- ensuring consistent print quality output
- recognising colour contamination
- setting alarm limits for colour contamination
- accessing data
- determine that data is appropriate
- sample to ensure consistency
- processes that you would put in place if sample varies from standard
- ways quality can vary and how they can be fixed
- computerised functions, common faults and electronic registration systems
- information that you need from pre-press to ensure quality product

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is planned and carried out correctly in minimum time and with minimum wastage 1.3. Availability of all job related components is checked
2. Set up machine for in-line operation	2.1. Substrate transportation system is set up according to job specifications 2.2. Set off/marketing prevention devices are set up and adjusted according to job specifications 2.3. Appropriate image carrier /cutting device is selected and secured to the unit 2.4. Impression is adjusted and set according to job specifications 2.5. Image transfer or inking devices are adjusted and set according to job specifications
3. Conduct proof run	3.1. Material to be used for proof is organised correctly 3.2. Machine is operated according to manufacturer's specifications and enterprise procedures to produce a specific proof 3.3. Proof is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 3.4. Production does not commence without client approval or authority where appropriate 3.5. Results are interpreted and adjustments made according to product and machine specifications
4. Maintain and monitor production process	4.1. Production process is operated and monitored in association with fellow workers and according to enterprise procedures and planned daily schedule 4.2. Product is monitored and minor adjustments are made to ensure quality of output is maintained 4.3. Major adjustments to process are identified and reported to designated personnel according to enterprise procedures 4.4. Faulty performance of equipment is identified and reported to designated person according to enterprise procedures 4.5. Waste is sorted according to enterprise procedures
5. Conduct shutdown of	5.1. Correct shutdown sequence is followed according to

ELEMENT	PERFORMANCE CRITERIA
production process	<p>manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>5.3. Unused ink/coating, if used in process, is correctly labelled and stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>5.4. All product is removed from operating area</p> <p>5.5. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.6. Repair/adjustment is verified prior to resumption of operations</p>
6. Clean and wash up	<p>6.1. Cylinders, image carriers/cutting devices and roller surfaces are cleaned ready for next run</p> <p>6.2. Image carriers/cutting devices are removed and stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>6.3. Inking system and <i>additional units</i> are washed up ready for next run</p> <p>6.4. Liquid waste is disposed of according to enterprise procedures and regulatory requirements</p> <p>6.5. <i>In-line</i> units are cleaned ready for next run</p> <p>6.6. Substrate feed, transportation and delivery systems are disengaged and cleaned ready for next run</p> <p>6.7. Production records or other documentation are accurately completed where required by enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to internal and external clients regarding in-line processes and job specifications
- collecting, analysing and organising information by collecting and assessing data regarding printing operations, machine specifications, their characteristics and how they interact
- planning and organising activities by organising production sequences to maximise efficiency
- teamwork when communicating with work team members involved in prior and subsequent processes to ensure efficient production
- mathematical ideas and techniques by calculating substrate requirements and printing pressures
- problem-solving skills by monitoring product and making minor adjustments to ensure quality of output is maintained
- use of technology by using monitoring equipment and interpreting readouts

Required knowledge

- important information that you would acquire from the job ticket
- action taken if vital information were missing from the job ticket
- devices that are used to control the substrate in the in-line unit
- problems that could develop from an incorrectly set transportation section
- OHS concerns that need to be considered when setting up the in-line unit
- others units of the machine that would need to be set up prior to the in-line unit
- parts of the in-line unit that are responsible for position
- precautions that need to be observed when setting the impression
- checks that you need to perform after a proof run on any in-line operation or process
- notification if there was a problem with any aspect of the job during make ready
- methods that are used to minimise waste during make ready
- signs of wear of the image carrier
- marking printed material by the operator that is not of an acceptable standard
- print faults that would the operator be identifying during the print run
- frequency quality of the product should be assessed
- OHS requirements that should be observed during machine shutdown
- areas of the in-line unit that may require repair
- determining the workflow of the product

REQUIRED SKILLS AND KNOWLEDGE

- responsibility for the repair of the machine
- procedures that need to be observed when storing image carriers or cutting devices
- OHS concerns that should be observed when storing cutting devices
- requirements for the disposal of liquid waste?
- specific components of the in-line that need to be cleaned thoroughly
- effect on machine production if components were not cleaned thoroughly following the print run
- outcome of the operator not completing production information on the job ticket
- records that must be completed in the event of a reprint or repeat print run

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up and monitor in-line printing operations that would tend to be complex in nature and incorporated into other printing processes • set up and monitor one or more in-line processes on TWO occasions according to job specifications, enterprise procedures and the Performance Criteria • evidence for assessment can be gathered from a combination of activities of a number of units of competency.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • reel or sheet-fed machine that incorporates an in-line process or operation described in the Range Statement.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films or metal.
<i>Image carrier</i> may include:	<ul style="list-style-type: none"> a device where the selected areas and surface are prepared in such a way as to transfer ink or image to the substrate.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of stack, in-line configuration and central impression printing machines with manual, semi-automated, fully automated or computerised process control. Machines can incorporate one or more in-line process operations in addition to the conventional printing processes.
<i>Additional units</i> may include:	<ul style="list-style-type: none"> includes any ancillary unit that is used in the production of the printed product eg dampening units, ink pumps, tanks and hoses.
<i>In-line processes</i> may include:	<ul style="list-style-type: none"> processes that are integral to this competency may include in-line operations such as: <ul style="list-style-type: none"> numbering perforating slitting embossing cutting and creasing thermal transfer scoring/top cutting die cutting/stripping gluing sprocket hole punching over printing ink jet.
<i>Design</i> may include:	<ul style="list-style-type: none"> the in-line process or operation forms an integral part of the product being produced and

RANGE STATEMENT	
	would enhance, give a specific shape or provide additional features to the work. The combination of print intricacy and in-line features would be considered to be complex.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> • wide and narrow reel- and sheet-fed systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm client brief and job specifications	1.1. Details of the client design brief and job specifications are reviewed and clarified with client or supervisor 1.2. The type of documents are determined and production requirements are assessed 1.3. Client copy and images are assembled to conform to the design brief 1.4. A number of <i>software applications</i> are selected to produce the job
2. Arrange elements on page	2.1. Guides are set and grid is displayed to ensure artwork meets job specifications 2.2. <i>Elements</i> are created and arranged on page with precise alignment 2.3. Elements are arranged in layers to allow for effective selection and re-arrangement 2.4. Imported text or data from other applications is correctly formatted and any cross-application formatting issues are resolved 2.5. Text is formatted and flowed into document using most <i>productive technique</i> 2.6. Graphics and other elements are imported from other applications and are arranged according to the design brief
3. Produce objects	3.1. <i>Tools</i> are used to produce objects and required attributes are entered and shapes manipulated, continuing until graphic framework is finalised 3.2. Lines and curves are adjusted and edited to fit design specifications 3.3. Objects are painted, transposed and strokes and effects are scaled according to the design brief 3.4. Colours are created, edited and saved to the colour palette and saturation of colour is adjusted 3.5. Colour and appearance attributes are selected and copied as required 3.6. Gradients, fills and patterns are used to paint and blend as required by the layout and design brief
4. Edit images	4.1. Image is retouched to conform with job specifications 4.2. Colour and tone corrections are employed to conform with job specifications

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. An appropriate <i>contouring technique</i> is applied to produce the best result depending on the image</p> <p>4.4. Edited image is saved in <i>appropriate format</i> to allow for import into other applications and to conform with job specifications</p> <p>4.5. Image storage requirements are identified and employed</p>
5. Produce print-ready file	<p>5.1. File is checked for errors in accordance to client brief and job specifications</p> <p>5.2. Correct colour modes and libraries are used according to job specifications</p> <p>5.3. Sufficient image resolution is applied according to output specifications</p> <p>5.4. Bleeds and printer marks are applied</p> <p>5.5. Completed file is sent to be ripped according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for using correct ergonomics when operating the computer
- communication skills for expressing ideas and information by gaining client agreement on design layout
- collecting, analysing and organising skills for storing and retrieving all required electronic files
- planning and organising skills for outputting a proof and gaining approval by the client
- teamwork skills for maintaining the production process in association with others
- numeracy skills for determining image resolution
- problem-solving skills for checking and fixing errors when preflighting
- technical skills for using relevant hardware and software to produce a layout

Required knowledge

- different qualities between file formats
- when to use one file format opposed to another
- type of file format that are not suitable for print-based jobs
- different colour modes and the advantage and disadvantages of each
- colour libraries and how to select them within a software application
- printing processes used in digital production
- importance of considering the printing process during the design phase
- type of problems that can occur if the printing process isn't considered during the design
- different techniques that can be employed to style text productively
- ways text can be flowed throughout a document
- how guides and rulers can be adjusted
- circumstances when images are require to be edited or manipulated
- why using colour profiles is required when preparing an image for printing
- image storage capabilities
- factors that may influence the grey balance of an image

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use a variety of software applications to produce a standard layout • find and use information relevant to the task from a variety of information sources • use at least two software applications to prepare two different sets of layouts according to enterprise standards.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • that conditions are typical ambient conditions found in the workplace • access to relevant facilities, equipment and materials used for digital production, such as high-end computers, output devices and layout software • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • practical demonstration by the candidate when selecting and using a variety of high-end software applications to efficiently produce a standard job.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPPR388A Preflight and import complex images for digital device • ICPPP311C Develop a detailed design concept • ICPPP321C Produce a typographic image. <p>For valid and reliable assessment of this unit, evidence should be</p>

EVIDENCE GUIDE	
	gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Software applications</i> may include:	<ul style="list-style-type: none"> • Adobe Indesign • Illustrator • Photoshop • QuarkXPress and Corel • new software applications and new versions of existing products entering the market regularly.
<i>Elements</i> may include:	<ul style="list-style-type: none"> • text frames • picture boxes • complex shapes • lines or tabs.
<i>Productive techniques</i> may include:	<ul style="list-style-type: none"> • paragraph style • characters style • eyedropper tool and linking of text frames.
<i>Tools</i> may include:	<ul style="list-style-type: none"> • pen • selection • direct selection and shape tools.
<i>Contouring techniques</i> may include:	<ul style="list-style-type: none"> • using paths • layer masks • quick mask or lasso tool.
<i>Appropriate format</i> may include:	<ul style="list-style-type: none"> • file types that support transparency or paths, such as: <ul style="list-style-type: none"> • postshop designers (SD) • tagged image file format (TIFF) • encapsulated postscript (EPS).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Finger-print press	1.1. Suitable <i>test charts</i> are selected or produced 1.2. <i>Press</i> is optimised to <i>workplace standard</i> , in collaboration with the press operator 1.3. Test chart is printed with standard ink densities on any one of a range of stocks
2. Measure press test charts	2.1. <i>Colour measurement devices</i> are calibrated and used to measure printed test charts 2.2. <i>Multiple charts</i> are measured and results recorded 2.3. <i>Software</i> is used to average multiple measurements
3. Create and use custom press profiles	3.1. Appropriate reference file is selected to match the printed chart 3.2. Profiling software is used to create an output press profile from the averaged measurement file and profile is tested and edited if required 3.3. Profile is inserted into the <i>colour workflow</i>
4. Create and use digital device profiles	4.1. Suitable test charts are selected 4.2. The device is calibrated and the test chart is output or digitised 4.3. The test chart is measured using a colour measurement device 4.4. An appropriate reference file is selected to match the test chart 4.5. Software is used to create a profile 4.6. The device profile is inserted into the <i>colour workflow</i>
5. Maintain custom colour management workflow	5.1. Printing conditions are monitored and recorded to ensure adherence to workplace standard 5.2. <i>Digital devices</i> are regularly calibrated

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for using correct ergonomics when operating the computer
- communication skills needed to communicate ideas and information by printing a test chart on a press
- planning, analysing and organising skills to determine printing conditions and colour management requirements before generating a proof
- teamwork skills for maintaining the production process in association with others and working independently with responsibility for others
- numeracy skills used in relation to densitometry, spectrophotometry and colour profiles
- problem-solving skills used in diagnosing and correcting colour problems
- technical skills needed for utilising software and hardware correctly when creating a profile

Required knowledge

- OHS issues to be considered when managing colour for digital production
- importance of bringing a device into a known state
- how often to calibrate devices
- what change of condition would result in the need for re-calibration
- colour measurement devices and usage
- types of proprietary software used for colour measurement
- comparison of test charts, their advantages and disadvantages
- process of determining grey balance and white points
- colour profiles and their use
- effect colour profiles have on output
- difference between input, output and display profiles
- colour management systems
- components of a colour management system
- components of a colour-managed workflow
- red, green blue (RGB) versus cyan, magenta, yellow, black (CMYK) versus mixed colour workflows
- how to implement colour management on a system
- workplace and international printing standards
- effects different substrates have on colour reproduction for proofing and final production
- how dot gain affects colour
- under colour removal (UCR) and grey component replacement (GCR)

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- create custom device profiles in a digital production workflow to enhance the match across proofs, monitors and final products
- find and use information relevant to the task from a variety of information sources
- create three custom device profiles that have been used within a colour workflow
- produce a final printed product from the colour workflow.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for colour management production, such as printing presses, raster image processors (RIPs) with colour management features, profiling software, colour output devices, densitometers and spectrometers
- evidence of colour management system maintenance procedures
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- a portfolio that demonstrates all criteria have been met
- practical demonstration by the candidate in obtaining the best match across colour devices.

Guidance information for assessment

Holistic assessment with other digital production units relevant to the workplace and job role is recommended, for example:

EVIDENCE GUIDE	
	<ul style="list-style-type: none">digital production or pre-press units that require the application of colour. <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Test charts</i> may include:	<ul style="list-style-type: none"> • IT8 • European colour initiative (ECI) • printing test charts (TC) • proprietary or custom made charts.
<i>Press</i> may include:	<ul style="list-style-type: none"> • offset • web • flexography • digital.
<i>Workplace standards</i> may include:	<ul style="list-style-type: none"> • international ISO printing standards or internal workplace standards.
<i>Colour measurement devices</i> may include:	<ul style="list-style-type: none"> • densitometers or spectrophotometers, including strip reader style devices, such as: <ul style="list-style-type: none"> • Gretag • Macbeth • Xwrite.
<i>Software</i> may include:	<ul style="list-style-type: none"> • a range of industry colour applications including: <ul style="list-style-type: none"> • colour management software, e.g. Colorsync • profile creating software • scanner profiling software, e.g. Colortone Pro and Scan Open • densitometry and spectrophotometry software.
<i>Colour workflow</i> may include:	<ul style="list-style-type: none"> • software applications, e.g. InDesign and Photoshop • printer • monitors • proofers • raster image processors (RIPs) • computer to plate CTP systems • scanners • digital cameras • digital presses • wide format printers.

RANGE STATEMENT

Digital devices may include:

- input, output and display devices, such as:
 - monitors
 - printers, proofers and wide format
 - scanners and digital cameras.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Liaise with clients	<p>1.1. A productivity analysis on a digital print system is performed to determine guidelines for most productive print method for a range of print applications</p> <p>1.2. Print services, quality expectations and print costings are communicated to clients according to enterprise procedures</p> <p>1.3. Productivity advantages and disadvantages of different digital print options are presented to clients according to enterprise procedures</p> <p>1.4. Advice is provided to clients on appropriate substrates and document finishing methods for digital print jobs according to client budget and job specifications</p>
2. Confirm job specifications	<p>2.1. Print job specifications are read and correctly interpreted from job documentation or production control system</p> <p>2.2. Availability of all job components is checked according to enterprise procedures</p> <p>2.3. Finishing requirements of job are confirmed and coordination with internal workflow and/or outsource arrangements is maintained</p> <p>2.4. Run time of job is determined and completion time is correctly estimated demonstrating consideration of other production demands</p>
3. Set up and maintain a digital print system	<p>3.1. Substrate is loaded to correct reel or sheet feeding mechanism and all substrate properties are correctly specified in the user control interface</p> <p>3.2. Delivery unit is set up on a machine and adjustments made to minor in-line processes on reel-fed machine or on-line finishing settings on sheet-fed machine</p> <p>3.3. Preventive maintenance is performed on a digital printing system to ensure optimum quality and productivity are achieved</p> <p>3.4. Common factors affecting print quality and productivity of a digital printing machine are identified and solutions implemented to minimise and/or eliminate these</p>
4. Use the complex features of RIP or front-end processor	<p>4.1. Colour adjustments are made to ensure optimum image quality and/or to match sample</p> <p>4.2. Output profiles are selected according to job</p>

ELEMENT	PERFORMANCE CRITERIA
	<p><i>specifications</i></p> <p>4.3. <i>An imposition</i> method is selected to make best use of stock</p> <p>4.4. <i>Screen ruling is adjusted to ensure optimal output of job</i></p> <p>4.5. <i>Overprints and trapping are adjusted to achieve optimum output</i></p> <p>4.6. <i>Finishing options are set up according to job specifications</i></p>
5. Perform and/or coordinate document proofing	<p>5.1. The type of <i>proofing</i> method is determined according to job specifications</p> <p>5.2. A digital proof run is conducted for client approval and conformance of proof to job specifications is confirmed</p> <p>5.3. Internal or external pre-press proofing systems operators are consulted to conduct the proof run and provide job requirement information according to enterprise procedures</p> <p>5.4. Communication between the client and proofing provider is demonstrated to ensure proof meets job specifications</p>
6. Run digital print job and/or coordinate press print run	<p>6.1. Production schedules, job specifications and enterprise procedures are observed and liaison occurs with internal and/or external production operators to determine start and duration time for the print run</p> <p>6.2. Completion time for the print run is estimated and communicated to the client and co-workers according to job specifications and enterprise procedures</p> <p>6.3. An entire digital print run is conducted according to job specifications ensuring that machine productivity and quality are monitored and rectified throughout the duration of the print job</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) in relation to operating machinery, such as safely switching off machinery before cleaning is started
- communicating ideas and information by interpreting client requirements to recommend most productive method of printing
- collecting, analysing and organising information by collecting and assessing data on printing processes to determine time and cost savings to a client
- planning and organising activities by suggesting production sequences to maximise efficiency
- teamwork skills when cooperating with external production providers and giving consideration to their production scheduling requirements
- mathematical ideas and techniques by calculating run length time of two different print solutions to determine most productive method
- problem-solving skills by recognising electronic file errors to determine a file conversion procedure
- use of technology by using RIP or font-end processor to submit files for printing

Required knowledge

- factors that influence making a decision about using a particular printing solution (run length, substrate type and application)
- cost difference between a specified job printed on a digital system and a specified traditional system, e.g. digital vs. lithographic
- quality difference between a specified job printed on a digital system and a specified traditional system, e.g. digital vs. lithographic
- difference in turnaround time of a specified job printed on a digital system and a specified traditional system, e.g. digital vs. lithographic
- print method that would be the most appropriate option for the specified print job
- measures that can be taken to ensure clients have correct procedures for providing electronic files
- main differences between digital printing and traditional printing methods
- recommendations that can be made to clients who have created an electronic file in an incompatible software application
- suggestions that could be made to clients who require a high-volume print run but need a portion of the print job immediately
- steps needed to be followed for client approval of a proof
- circumstances a job would be modified before printing
- steps involved for client approval of the print
- proof check procedures

REQUIRED SKILLS AND KNOWLEDGE

- processes involved for gaining final approval of a basic job
- adjusting colour, toner/ink coverage or density to solve problems
- need for using correct output profiles
- screen ruling shapes and sizes
- various types of binding
- advantages and disadvantages of various binding methods
- procedures followed if the binding method required by the client is not available at the workplace
- alternative options if the document size was too thick to staple
- importance of packing finished print work

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- communicate a range of digital and traditional printing solutions
- coordinate a print run that uses a combination of digital and traditional printing solutions
- conduct a digital proof run, adjust settings and ensure production speeds are attained on a digital printer
- perform preventive maintenance tasks on digital printer to maintain machine productivity
- use advanced RIP or front-end processor features
- find and use information relevant to the task from a variety of information sources
- perform preventive maintenance tasks on a digital printer according to manufacturer's specifications
- set up and print four complex colour digital printing jobs according to manufacturer's specifications and enterprise procedures.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for digital printing, such as full-colour production digital presses or wide format printers
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate when setting

EVIDENCE GUIDE	
	up and producing a complex digitally printed product.
Guidance information for assessment	<p>Holistic assessment with other digital production units relevant to the workplace and job role is recommended.</p> <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Productivity analysis may include:</i>	<ul style="list-style-type: none"> • production speeds for a range of print volumes and substrate types • quality standards • cost of labour • materials • maintenance and servicing.
<i>Finishing</i> may include:	<ul style="list-style-type: none"> • stapling • folding • punching • perforating • cutting • numbering • date coding.
<i>Substrates</i> may include:	<ul style="list-style-type: none"> • range of print media and paper, such as: <ul style="list-style-type: none"> • coated • uncoated • card • canvas • vinyl • plastic.
<i>Colour</i> may include:	<ul style="list-style-type: none"> • cyan, magenta, yellow, black (CMYK) • Pantone simulation.
<i>Proofing</i> may include:	<ul style="list-style-type: none"> • soft (on screen) • hard proof.

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm non-routine job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is planned and carried out correctly in minimum time and with minimum wastage 1.3. Availability of all job related components is checked 1.4. Proofed job is checked for conformance with job specifications
2. Select and prepare inks and solvents for non-routine job	2.1. Inks and solvents are selected according to job specifications and end-user requirements 2.2. Quality and suitability of inks and solvents are checked and appropriate action is taken 2.3. Inks and solvents are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 2.4. Correct colour and weight/volume of ink are mixed and viscosities checked and modified according to the press requirements and non-routine job specifications 2.5. Ink formula and approved colour draw downs are appropriately recorded 2.6. Inks and solvents are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions and the relevant hazardous liquids storage regulations
3. Set up machine for specialised flexographic printing	3.1. Flexographic plate cylinders are installed and register adjustments centred OR 3.2. Sleeves are installed in press and register adjustments made OR 3.3. Plate mounting sheets are mounted on cylinders in press and register adjustments made 3.4. Plate cylinders are gauged up or pre-set to impression 3.5. Anilox rollers are selected to suit individual colour and plate reproduction requirements for each unit 3.6. Appropriate ink metering system is selected for each unit 3.7. Inking system is set up and roller nips/blades are set correctly 3.8. Ink circulation is maintained at correct level

ELEMENT	PERFORMANCE CRITERIA
	<p>3.9. Viscosities are adjusted according to job specifications</p> <p>3.10. Air volume and drier temperatures are selected to suit inks, <i>substrate</i>, solvents and according to job specifications</p> <p>3.11. Air volume is adjusted between colours to maximise drying and minimise air overspill</p>
4. Conduct proof run	<p>4.1. Material to be used for proof is organised correctly</p> <p>4.2. Press is set up and operated according to OHS guidelines</p> <p>4.3. Print impressions are set to minimum kiss impression</p> <p>4.4. Web tensions are correctly set at unwind, between stations and rewind</p> <p>4.5. The print is checked for register</p> <p>4.6. Drying is checked as sufficient to key ink to the substrate</p> <p>4.7. The viscosities are adjusted to obtain the correct colour at proof speed</p> <p>4.8. The viscosities are adjusted to obtain the correct colour at proof speed</p>
5. Organise proof inspection and/or testing	<p>5.1. Proof is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>5.2. Production does not commence without client approval or authority where appropriate</p>
6. Troubleshoot machinery and material problems	<p>6.1. Corrective or preventive action is recommended and implemented where appropriate</p> <p>6.2. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>6.3. Changes are monitored to confirm improvement to production efficiency</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and advising the client (internal or external) about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by evaluating the special job specifications when determining production scheduling
- teamwork when cooperating with other workers to ensure efficient operation
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by evaluating special job specifications and adjusting machinery to produce specialised print job
- use of technology by evaluating the capacity of individual machines to produce the specialised job specifications

Required knowledge

- job specifications
- production problems that could eventuate by not reading and understanding the job specifications
- responsible person to discuss any production problems
- OHS factors that need to be considered when mounting and proofing flexographic plates
- most common cause of photopolymer plates crazing on the image side
- importance of resiliency of the printing plate
- main advantage of using thin photopolymer plates in process printing
- faults that may be detected on new plates
- type of solvents that should be used on photopolymer plates
- meaning of the term V-block mounting
- V-block mounting
- benefits of optical mounting
- purpose of binding plates after mounting
- possible print faults that could be eliminated by using cushion mount
- OHS factors that need to be considered when installing printing cylinders or sleeves
- precautions that should be taken to ensure that the plates and cylinders or sleeves

REQUIRED SKILLS AND KNOWLEDGE

- are not damaged during installation
- checks to be made to ensure plates and cylinders or sleeves have been installed correctly
- OHS precautions that must be observed when webbing up the machine
- positioning of the reel
- pulling the substrate into the machine
- result of insufficient unwind tension
- result of excessive unwind tension
- function of the "Dancer" roller on a web machine
- function of the PIV unit
- result of adjustments to the PIV
- function of the lay-on roller
- effect of excessive lay-on roller pressure
- effect of the web not being spliced correctly
- workings of the particular web viewing device
- OHS precautions that must be observed when setting up the delivery
- control of the web in the rewind unit
- result of incorrect rewind tension
- remedial steps that can be taken if there is a possibility of the ink marking in the rewind
- use of air blast play in the delivery of sheets
- OHS precautions that must be observed when preparing inks and additives
- details that are necessary to check an ink's suitability for the printing process
- special end-use requirements that may be necessary
- main function of a pigmented extender used in flexographic printing
- effect of adding plasticisers to flexographic inks
- other additives use in flexographic inks
- range in seconds for Zahn cup measurements
- effect foaming has in a Zahn cup when measuring the ink viscosity
- recommended pH range when printing with aqueous inks
- precautions that you observe to minimise waste when preparing the ink
- shelf life of most inks
- conditions that are relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed inks
- OHS factors that need to be considered when setting up the machine
- advantage of centring all machine controls
- checks that should be made on cylinders and gears
- checks that should be performed prior to cylinder or sleeve installation
- angle that the chamber blades should be set
- main advantage of gauging up and dry register prior to printing a job

REQUIRED SKILLS AND KNOWLEDGE

- cell count of the anilox roller that is used when printing solids
- use of water treatment additives in a central impression drum and chill roller coolant system
- advantages of laser engraved ceramic anilox rollers
- things relating to the anilox roller that a roller scope will measure
- reasons for anilox wear
- type of job that would be printed using a hexagonal cell configuration
- recommended web temperature when printing polypropylene film
- method of drying that is used when printing on polythene by the flexographic process
- drying rate of liquid inks
- drying of aqueous inks
- operating range of UV lamps
- need to graduate the drying speeds of each progressive colour, so that first-down colours dry faster the subsequent colours
- in flexographic printing, the reason the colour strength increases as the press speed increases
- cause of a decrease in web tension
- result of increasing rewind tension after the roll has been partially rewound
- major cause of a telescopic roll
- print characteristics that are related to excessive printing pressure
- causes of picking when printing multicoloured work
- print faults that result from using an over-reduced ink
- problems that can cause lateral streaks showing up in uneven printing
- causes of moire patterns when printing by the flexographic process
- result of air being trapped under mounted plates
- instrument used to identify retained solvent trapped in the print
- purpose of taking Dyne readings
- purpose of the crinkle test when testing an ink
- result if an excessive final drying temperature was used when printing polypropylene film
- property of ink that can be adjusted to reduce dot gain
- effect of using the ink returning from the ink fountain when checking the viscosity for ink whilst using ink pumps
- problems that result from the excessive use of slow solvents
- effect of the "yield value" of ink on the ink transfer of halftone dots
- reason why laminating inks once printed appear dull and easy to scratch
- result of excessive print area tension
- problems which the printer may associate with cold seals
- machine manuals, safety and other documentation that are relevant to this task, where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up flexographic printing machines for specialised print jobs that require a certain amount of problem solving and experimentation with the substrate and press settings. The individual will conduct a proof run and adjust settings to ensure production speeds are attained • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up a flexographic printing machine for a specialised job on TWO occasions (if possible using different substrates and if possible including at least TWO in-line processes) according to the manufacturer's and job specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • flexographic press.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE

assessment

industry sector, workplace and job role is recommended, for example:

- ICPPR413C Set up for complex flexographic printing
- ICPPR314C Produce complex flexographic printed product.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of inks commonly used in 4 or more colour printing, including standard and special colours.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of viscosity controls, densitometers and spectrophotometry.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of stack, in-line and central impression flexographic printing machines with manual, semi-automated, fully automated or computerised process control.
<i>Design</i> may include:	<ul style="list-style-type: none"> 4 or more colours, complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel delivery systems.
<i>Specialised</i> may include:	<ul style="list-style-type: none"> specialised within this context relates to the set up and production of print runs that involve new products, or a new mix of substrates and inks that requires a certain amount of problem solving and experimentation with the substrate and press settings. The set up of equipment and production involves the development of new set up and production approaches based on solving technical problems arising from new product or equipment combinations.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm specialised job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Set up is planned and carried out correctly in minimum time with minimum wastage 1.3. Availability of all job related components is checked
2. Plan and carry out specialised set up	2.1. <i>Specialised</i> job specifications are identified and analysed 2.2. Special set up requirements are determined 2.3. Specialised set up is completed in minimum time with minimum wastage
3. Set up reels	3.1. Unwind and rewind reels are set up and adjusted according to job specifications 3.2. Webbing procedures are carried out according to job specifications 3.3. Web-control system is set up, evaluated and adjusted according to job specifications 3.4. Reels are spliced/joined according to job specifications 3.5. Printed web viewing devices are set up, evaluated and adjusted according to job specifications 3.6. The folder and sheeter are set up, evaluated and adjusted according to job specifications 3.7. Set off/marketing prevention devices are set up, evaluated and adjusted according to job specifications
4. Select and prepare inks and additives	4.1. <i>Inks</i> , dyes or additives are evaluated with reference to specialised requirements 4.2. Inks, dyes or additives are selected according to job specifications 4.3. Inks, dyes and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste 4.4. Correct colour and weight/volume of ink are mixed and prepared according to job specifications and the printing process 4.5. Formulation of the ink, <i>colour match</i> and the approved colour are appropriately recorded 4.6. Inks, dyes and additives are appropriately labelled, handled and stored according to manufacturer's/

ELEMENT	PERFORMANCE CRITERIA
	supplier's instructions to prevent damage and hazards to personnel and prolong shelf life
5. Set up machine for specialised gravure printing	5.1.Gravure cylinders are selected, installed, set up and adjusted according to job specifications 5.2.Impression roller is set up and adjusted according to job specifications 5.3.Inking system/doctor blade is set up and adjusted according to the gravure process and job specifications 5.4.Drying system is set up and adjusted according to job specifications
6. Conduct specialised proof run	6.1.Material to be used for proof is organised correctly 6.2. Machine is operated according to manufacturer's specifications and enterprise procedures to produce a specified proof 6.3.Proof is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures 6.4.Production does not commence without client approval or authority where appropriate 6.5.Results are interpreted and evaluated with adjustments carried out according to product and machine specifications
7. Troubleshoot machinery and material problems	7.1.Corrective or preventive action is recommended and implemented where appropriate 7.2.Changes are communicated to relevant personnel in a logical and easily understood manner 7.3.Changes are monitored to confirm improvement to production efficiency 7.4.Ongoing problems are reported according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to internal or external clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating cylinder position, pressures and substrate requirements
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- need to ensure that the job specifications are read and properly understood
- production problems that could eventuate by not reading and understanding the job specifications
- responsible person you would discuss any production problems
- OHS precaution that must be observed when installing printing cylinders on the machine
- optimum print sequence
- visual aid on the cylinder that identifies the colour of ink to be used
- precautions that are taken to ensure that the cylinders are not damaged during installation
- OHS precautions that must be observed when webbing up the machine
- determining the position of the reel
- effect if the brake tension is not set correctly
- function of the "Dancer" roller on a web machine
- effect if the web is not spliced correctly
- operation of the particular web viewing device
- principle of ESA roller operation on the gravure printing machine
- type of substrate that should be used on the ESA roller
- OHS precautions that must be observed when setting up the delivery

REQUIRED SKILLS AND KNOWLEDGE

- control of the web in the rewind unit
- result of incorrect rewind tension
- remedial steps that can be taken if there is a possibility of the ink marking in the rewind
- problems that could be attributed to a blunt knife when sheeting
- use of air blast play in the delivery of sheets
- OHS precautions that must be observed when preparing inks and additives
- details that are necessary to check an ink's suitability for the printing process
- special end-use requirements that may be necessary
- additives and their use in gravure inks
- range in seconds for Zahn cup measurements
- effect foaming has in a Zahn cup when measuring the ink viscosity
- reason pigmented ink is brought to operating temperature before correcting the viscosity
- reason for these essential checks
- advantage of using automatic viscosity controllers
- precautions that you observe to minimise waste when preparing the ink
- shelf life of most inks
- conditions that are relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed inks
- OHS factors that need to be considered when setting up the machine
- the function of chill rollers on a machine
- main advantage of gauging up and dry register prior to printing a job
- result of excess printing pressure
- determining the pressure to be applied to the doctor blade
- print faults that could be caused by excessive overspill of air from the inter-colour drier
- recommended air ratio for efficient inter-colour drying
- advantages of using high velocity air in the drying system
- the cause of the doctor blade wearing on a gravure printing unit
- options for reducing the wear of the doctor blade
- determining the optimum make ready speed for the job
- communicating the steps involved in make ready to other team members
- need to grade the drying speeds of each progressive colour, so that first-down colours dry faster the subsequent colours
- cause of a decrease in web tension
- result of increasing rewind tension after the roll has been partially rewound
- major cause of a telescopic roll
- test methods of metallised film to find out which is the correct side on which to print
- measuring the metallised surface for coating thickness

REQUIRED SKILLS AND KNOWLEDGE

- effect of annealing on aluminium foil
- purpose of using thermal imaging face stocks
- metallising substrates
- client requirements for bar codes
- print characteristics that are related to excessive printing pressure
- causes of picking when printing multicoloured work
- print faults that result from using an over-reduced ink
- causes of moire patterns when printing by the gravure process
- instrument used to identify retained solvent trapped in the print
- purpose of taking Dyne readings
- purpose of the crinkle test when testing an ink
- print faults that would result from a worn doctor blade
- effect of using the ink returning from the ink fountain when checking the viscosity for ink whilst using ink pumps
- problems that result from the excessive use of slow solvents
- reason why laminating inks once printed appear dull and easy to scratch
- result of excessive print area tension
- problems which the printer may associate with cold seals
- responsibility for the final say in the "OK" of the job
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm specialised job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Availability of all job related components is checked
2. Plan and carry out specialised set up	2.1. <i>Specialised</i> job specifications are identified and analysed 2.2. Special set up requirements are determined 2.3. Specialised set up is completed in minimum time with minimum wastage
3. Set up reel system (OR Element 4)	3.1. Unwind and rewind reels set up options are analysed and set up is completed and adjusted according to job specifications 3.2. Webbing procedures are carried out according to job specifications 3.3. Web-control system is set up, options are analysed and set up is completed and adjusted according to job specifications 3.4. Reels are spliced/joined according to job specifications 3.5. Printed web viewing devices are set up, evaluated and adjusted according to job specifications 3.6. The folder and sheeter are set up and adjusted according to job specifications 3.7. Set off/marketing prevention devices are set up and adjusted according to job specifications
4. Set up sheet system (OR Element 3)	4.1. Feeder and delivery sections are set up, options are analysed and set up is completed and adjusted according to job specifications 4.2. Sheet pick-up, transportation, control and transfer systems are set up, adjusted and evaluated according to job specifications 4.3. <i>Substrate</i> is removed from process according to job specifications 4.4. Set off/marketing prevention devices are set up, adjusted and evaluated according to job specifications
5. Select and prepare inks and additives	5.1. Colour sequence for the job is considered and confirmed 5.2. <i>Inks</i> , dyes or additives are evaluated with reference to specialised requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Inks, dyes or additives are selected according to job specifications</p> <p>5.4. Inks, dyes and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste</p> <p>5.5. Correct colour and weight/volume of ink are mixed and prepared to match the requirements of the printing process and job specifications</p> <p>5.6. Formulation of the ink, <i>colour match</i> and the approved colour are appropriately recorded</p> <p>5.7. Inks, dyes and additives are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and prolong shelf life</p>
6. Set up machine for specialised lithographic printing	<p>6.1. Plate cylinder is set up, evaluated and adjusted according to job specifications</p> <p>6.2. Lithographic plate is selected and prepared for installation</p> <p>6.3. Plates are correctly mounted according to job specifications and in a safe manner</p> <p>6.4. Blanket and blanket cylinder are set up, evaluated and adjusted according to job specifications</p> <p>6.5. Impression cylinder is set up, evaluated and adjusted according to job specifications</p> <p>6.6. Inking system is set up, evaluated and adjusted according to the lithographic process and job specifications</p> <p>6.7. Dampening system is set up, evaluated and adjusted according to job specifications</p> <p>6.8. Drying system is set up, evaluated and adjusted according to job specifications</p>
7. Conduct specialised proof run	<p>7.1. Material to be used for proof is organised correctly</p> <p>7.2. <i>Machine</i> is operated according to manufacturer's specifications and enterprise procedures to produce a specified proof</p> <p>7.3. Specialised proof is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>7.4. Production does not commence without client approval or authority where appropriate</p> <p>7.5. Results are interpreted and evaluated with</p>

ELEMENT	PERFORMANCE CRITERIA
	adjustments carried out according to product and machine specifications
8. Troubleshoot machinery and material problems	8.1. Corrective or preventive action is recommended and implemented where appropriate 8.2. Changes are communicated to relevant personnel in a logical and easily understood manner 8.3. Changes are monitored to confirm improvement to production efficiency 8.4. Ongoing problems are reported according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by recognising proofing faults and calculating adjustments necessary to meet job specifications
- use of technology by using monitoring equipment and computerised production records

Required knowledge

- need to ensure that the job specifications are read and properly understood
- production problems that could eventuate by not reading and understanding the job specifications
- responsible person you would discuss any production problems
- problem that can result from the plate cylinder not being cleaned prior to plate fitting
- effect if the plate is over tensioned during fitting
- faults that could result from a plate being under tensioned
- need for accurate plate bending on a web-fed machine
- considerations that would have to be made when deciding the colour sequence
- visual aid on the plate that identifies the colour of ink to be used
- OHS precautions that must be observed when webbing up the machine
- determining the position of the reel
- effect if the brake tension is not set correctly
- function of the "Dancer" roller on a web machine
- determining the position of the bustle wheels
- effect if the web is not spliced correctly
- operation of the particular web viewing device
- OHS factors that need to be considered when setting up the sheet transportation

REQUIRED SKILLS AND KNOWLEDGE

and delivery systems

- cause of more than one sheet to be picked up in the feeder
- need for accurate feeder set up
- determining the position of the sheet prior to being transferred to the printing unit
- determining which front lays to use
- type of substrate that would require additional front lays to be engaged
- need for additional front lays when printing this type of substrate
- OHS precaution that must be observed when setting up the delivery
- controlling the web in the rewind unit
- function of a slitter on a web machine
- cause of the web to jam up in the folder
- need to disengage the folder if sheeting
- problems that could be attributed to a blunt knife when sheeting
- safety feature that is in the delivery system if the web jams up
- fold that are always made with the grain of the web
- type of folder that folds the web in half in the direction of the web grain
- remedial steps that can be taken if there is a possibility of the ink marking in the folder
- main reason for having a silicone applicator on a web machine
- OHS precaution that must be observed when removing sheets from the delivery
- cause of sheets to be delivered incorrectly
- adjustments that would be necessary if changing from lightweight to heavyweight stocks
- sheet release into the delivery
- problems resulting from the excessive use of anti set off spray powder
- cause of printed sheets to set off in the delivery
- reduction of the possibility of set off in the delivery
- fault that may be created if there is excess vacuum on the slow-down wheels
- OHS precautions that must be observed when preparing inks and additives
- details that are necessary to check an ink's suitability for the printing process
- special end-use requirements that may be necessary
- additives and their use in gravure inks
- use of a spectrophotometer to assess the colour of an ink
- formula for calculating the correct quantity of lithographic ink
- print fault that will occur if excessive driers are mixed into the ink
- precautions that you observe to minimise waste when preparing the ink
- shelf life of most inks
- conditions that are relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed inks
- OHS factors that need to be considered when setting up the machine

REQUIRED SKILLS AND KNOWLEDGE

- checks that should be made on the plate prior to fitting
- required plate packing
- normal printing pressure required between plate and blanket
- determining the correct printing pressure between blanket and stock
- ideal blanket surface condition
- achieving the correct blanket tension when fitting a new blanket
- print faults that can occur if the impression cylinder is not maintained
- order that eccentric or concentric roller adjustments should be made
- width of the contact stripe between two rollers when setting the rollers
- ink duct setting
- ideal ink duct sweep setting
- recommended degrees shore hardness for bare back and conventional dampeners
- conductivity of the fountain solution
- need to constantly check the conductivity of the fountain solution
- changes to the amount of fountain solution across the plate surface
- need to adjust the fountain solution laterally
- reasons for not engage the perfecting unit
- main reason for blistering on a heatset machine
- effect of the oven on the ink
- function of chill rollers on a web machine
- types of ink drying/curing systems
- operation of the true inch function fitted to some machines
- problems that may cause the machine to keep stopping
- checks that are necessary prior to engaging the impression
- checks that are performed when running the machine
- effect the position of certain guards has on the operation of the machine
- communicating the steps involved in operating the machine to other team members
- aids that are available for the testing of the machine proof
- tests that are necessary for this job
- testing location
- function of a polarisation filter in a densitometer
- ideal conditions for inspecting the proof
- need to use visual aids on the printed sheets
- acceptable wet trap value range for lithographic inks
- an indication of optimum solid ink density in the absence of a proof
- result of low solid ink density and excessive dot gain
- methods that are available to check and adjust ink colour and consistency
- adjustments that may have caused mis-register
- adjustments that are made to position the image laterally
- adjustments that are made to position the image circumferentially

REQUIRED SKILLS AND KNOWLEDGE

- adjustments that are made to position the image diagonally
- effect of changing the colour sequence on the wet trap value
- procedure to lengthen the print length on this type of press
- procedure to shorten the print length on this type of press
- difference between mechanical and optical dot gain
- cause of excessive mechanical dot gain
- responsibility for the final say in the "OK" of the job
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up either wide or narrow reel or sheet-fed lithographic printing machines for specialised print jobs. The individual will conduct a proof run and adjust settings to ensure production speeds are attained in minimum time with minimum wastage • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up a lithographic printing machine for a specialised job on TWO occasions (if possible using different substrates and sheet sizes if sheet-fed and if possible including at least TWO in-line processes) according to manufacturer's and job specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • lithographic printing machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE	
	for example: <ul style="list-style-type: none">• ICPPR332C Produce complex lithographic printed product• ICPPR431C Set up for complex lithographic printing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Specialised</i> may include:	<ul style="list-style-type: none"> specialised within this context relates to the set up and production of print runs that involve new products, or a new mix of substrates and inks that requires a certain amount of problem solving and experimentation with the substrate and press settings. The set up of equipment and production involves the development of new set up and production approaches based on solving technical problems arising from new product or equipment combinations.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> wide range of inks commonly used in printing.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of densitometers and/or spectrophotometry.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of single sheet, stream-fed or reel-fed printing machines with manual, semi-automated, fully automated or computerised process control. Includes machines with digitally imaged plates.
<i>Design</i> may include:	<ul style="list-style-type: none"> complex graphics and text. Critical "tight" registration, fit and position, registration for quality print jobs.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel, and large and small sheet handling systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm specialised job specifications	1.1. Job requirements are read and interpreted from job documentation or production control system 1.2. Availability of all job related components is checked
2. Plan and carry out specialised set up	2.1. <i>Specialised</i> job specifications are identified and analysed 2.2. Specialised set up requirements are determined 2.3. Specialised set up is completed in minimum time with minimum wastage 2.4. Appropriate tampons are selected according to job specifications 2.5. Tampons are secured into <i>machine</i>
3. Conduct specialised set up of fixtures onto machine bed or conveyor	3.1. Appropriate fixtures are selected and secured to xy table or conveyor jig plates 3.2. Height of machine bed is adjusted to suit size of object to be printed 3.3. Xy table of machine bed is adjusted to suit position of image on object
4. Select and prepare inks and additives	4.1. <i>Inks</i> and additives are evaluated according to job specifications 4.2. Inks and additives are selected according to job specifications 4.3. Inks and additives are prepared according to OHS requirements and manufacturer's/supplier's instructions with suitable precautions to minimise waste 4.4. Correct colour and weight/volume of ink are mixed and prepared according to the requirements of the printing process and job specifications 4.5. Formulation of the ink, <i>colour match</i> and the approved colour are appropriately recorded 4.6. Inks and additives are appropriately labelled, handled and stored according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel and prolong shelf life
5. Set up machine for specialised pad printing	5.1. Plate holders are set up and adjusted for register according to job specifications 5.2. Appropriate plates and plate holders are selected and plates are secured into plate holders

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Tampons are set up, evaluated and adjusted according to job specifications</p> <p>5.4. Spatula and doctor blade are set up, evaluated and adjusted according to the requirements of the pad printing process and job specifications OR</p> <p>5.5. Ink cups are set up, evaluated and adjusted according to job specifications</p>
6. Set up pre- and post-treatment processes	<p>6.1. In-line loading is set up according to specialised object requirements and job specifications</p> <p>6.2. In-line drying is set up according to specialised object requirements and job specifications</p> <p>6.3. In-line ejection is set up according to specialised object requirements and job specifications</p>
7. Conduct specialised proof run	<p>7.1. Material to be used for proof is organised correctly</p> <p>7.2. Machine is operated according to manufacturer's specifications and enterprise procedures to produce a specified proof</p> <p>7.3. Proof is visually inspected and/or tested or laboratory testing is organised according to enterprise procedures</p> <p>7.4. Production does not commence without client approval or authority where appropriate</p> <p>7.5. Results are interpreted and evaluated with adjustments carried out according to product and machine specifications</p>
8. Troubleshoot machinery and material problems	<p>8.1. Corrective or preventive action is recommended and implemented where appropriate</p> <p>8.2. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>8.3. Changes are monitored to confirm improvement to production efficiency</p> <p>8.4. Ongoing problems are reported according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for the job
- planning and organising activities by providing information about time and materials requirements for production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating substrate requirements, cliché and tampon position, and pressures
- problem-solving skills by recognising proofing faults and determining adjustments to meet job specifications
- use of technology by using monitoring equipment and making adjustments

Required knowledge

- different substrate groups and suggest the correct ink type for each group
- sub-groups of plastic in relation to ink selection
- adjustment of process colour inks for correct colour balance
- methods of improving opacity of a light coloured ink on a dark substrate
- correct pad shape for these (given) applications
- effect that pad shape and hardness have on print quality
- effect that can commonly be seen at the contact point of the nipple of a pad in a large solid print and how can it be avoided
- preparation of a new pad prepared for its first printing
- correct plate type for these (given) applications
- difference between steel and photopolymer plates for process printing
- reasons for mis-registered images, and how can they be corrected
- OHS concerns that are there when setting presses and doctor blades
- adjustments to the machine so that the doctor blade is operating correctly
- effect of a damaged doctor blade
- types of doctor blades and explain their applications
- OHS concerns that are there when pre- and post-treating substrates
- common pre- and post-treatment methods for different substrates
- importance of these treatments
- causes and solutions for common print problems (eg hairlines around image, loss

REQUIRED SKILLS AND KNOWLEDGE

of density in the centre of a solid image, fine lines of ink running through image, distortion of image, picking up ink from substrate by subsequent pads, washed out images, loss of fine lines in images, inconsistent colour)?

- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

	a logical and easily understood manner 8.3.Changes are monitored to confirm improvement to production efficiency 8.4.Ongoing problems are reported according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job brief and providing advice to clients about options and limitations
- collecting, analysing and organising information by collecting and analysing data about printing process, machine specifications and performance to calculate appropriate adjustments for job
- planning and organising activities by evaluating the special job specifications when determining production scheduling
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating substrate requirements, plate position and pressures
- problem-solving skills by recognising proofing faults and determining adjustments to meet job specifications
- use of technology by using monitoring equipment and making adjustments

Required knowledge

- need to ensure that the job specifications are read and properly understood
- production problems that could eventuate by not reading and understanding the job specifications
- responsible person to discuss any production problems
- importance of the hardness of the printing plate
- faults that may be detected on new plates
- type of solvents that should be used on photopolymer plates
- meaning of the term V-block mounting
- V-block mounting
- the purpose of binding plates after mounting
- checks that are performed prior to cylinder installation
- importance of keeping machine frames and unit slides cleaned
- OHS precaution that must be observed when installing printing cylinders in the machine
- optimum print sequence
- visual aid on the plate that identifies the colour of ink to be used
- precautions that were taken to ensure that the plate/cylinders were not damaged during installation
- OHS precaution that must be observed when webbing up the machine
- determining the position of the reel

REQUIRED SKILLS AND KNOWLEDGE

- effect if the brake tension is not set correctly
- function of the "Dancer" roller on a web machine
- function of nip rollers
- effect if the web is not spiced correctly
- major OHS concerns when setting up the sheet transportation system
- cause of more than one sheet to pick up in the feeder
- essential accurate feeder set up
- position of the sheet prior to being transferred to the printing unit
- determining which front lays to use
- type of substrate that would require additional front lays to be engaged
- need for additional front lays when printing this type of substrate
- OHS precaution that must be observed when setting up the delivery
- control of the in the rewind unit
- function of a slitter on a web machine
- problems that could be attributed to a blunt knife when sheeting
- remedial steps that can be taken if there is a possibility of the ink marking in the rewind
- OHS precaution that must be observed when removing sheets from the delivery
- cause of sheets to be delivered incorrectly
- adjustments that would be necessary if changing from lightweight to heavyweight stocks
- sheet release into the delivery
- problems resulting from the excessive use of anti set off spray powder
- cause of printed sheets to set off in the delivery
- reducing the possibility of set off in the delivery
- air blast assistance to sheet delivery
- OHS precautions that must be observed when preparing inks and additives
- details that are necessary to check an ink's suitability for the printing process
- special end-use requirements that may be necessary
- additives and their use in inks
- use of a spectrophotometer to assess the colour of an ink
- formula for calculating the correct quantity of lithographic ink
- print fault that will occur if excessive driers are mixed into the ink
- precautions that you observe to minimise waste when preparing the ink
- shelf life of most inks
- conditions that are relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed inks
- major OHS concerns when setting up the machine
- level of packing required in the tympan
- amount of printing pressure required

REQUIRED SKILLS AND KNOWLEDGE

- ideal condition of the tympan
- achieving the correct top sheet tension when fitting a new tympan
- print faults that can occur if the tympan is not tensioned correctly
- order eccentric or concentric roller adjustments should be made
- width of the contact stripe between two rollers when setting the rollers
- ink duct setting
- ideal ink duct sweep setting
- recommended degrees shore hardness for forme rollers
- main reason for blistering on a heatset machine
- types of ink drying/curing systems
- curing the ink using the drying unit
- operation of the true inch function fitted to some machines
- problems that may cause the machine to keep stopping
- checks that are necessary prior to engaging the impression
- checks that are performed when running the machine
- the effect the position of certain guards has on the operation of the machine
- communicating the steps involved in operating the machine to other team members
- aids that are available for the testing of the machine proof
- tests that are necessary for this job
- testing location
- function of a polarisation filter in a densitometer
- ideal conditions for inspecting the proof
- need to use visual aids on the printed sheets
- cause of a halo effect on the image
- methods that are available to check and adjust ink colour and consistency
- adjustments that may have caused mis-register
- adjustments that are made to position the image laterally
- adjustments that are made to position the image circumferentially
- effect of changing the colour sequence on the final colour cast
- procedure to lengthen the print length on this type of press
- procedure to shorten the print length on this type of press
- difference between mechanical and optical dot gain
- cause of excessive mechanical dot gain
- responsibility for the final say in the "OK" of the job
- in-line processes that can be used in specialised pad printing
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • set up reel- or sheet-fed platen, cylinder or rotary printing machines for specialised print jobs. The individual will conduct a proof run and adjust settings to ensure production speeds are attained • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate • demonstrate an ability to find and use information relevant to the task from a variety of information sources • set up a relief printing machine for specialised printing on TWO occasions (if possible using different substrates and if possible including at least TWO in-line processes) according to manufacturer's and job specifications, enterprise procedures and the Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • reel- or sheet-fed platen, cylinder or rotary printing machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE	
	for example: <ul style="list-style-type: none">• ICPPR352C Produce complex relief printed product• ICPPR451C Set up for complex relief printing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Specialised</i> may include:	<ul style="list-style-type: none"> specialised within this context relates to the set up and production of print runs that involve new products, or a new mix of substrates and inks that requires a certain amount of problem solving and experimentation with the substrate and press settings. The set up of equipment and production involves the development of new set up and production approaches based on solving technical problems arising from new product or equipment combinations.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel, and large and small sheet handling systems.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of inks commonly used in colour printing, including standard and special colours.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> use of densitometers and spectrophotometry.
<i>Machines</i> may include:	<ul style="list-style-type: none"> range of platen, cylinder and rotary machines with manual, semi-automated, fully automated or computerised process control.
<i>Design</i> may include:	<ul style="list-style-type: none"> 3 or more colours, complex graphics and text. Critical "tight" registration, fit and position, registration should be at least that required for four-colour process work.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, plastics and related films, or metal.

ICPPR552A Manage digital production workflow

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to manage the digital workflow from concept stage to completion and delivery. It focuses on the management of a digital workflow that could include customer service, job generation, printing, finishing and dispatch.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to individuals who are responsible for managing and optimising a digital workflow in the commercial print, pre-press, bureau, high-end digital print or a combination of these business environments.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan a production workflow for a digital print product	1.1. The stages of the <i>production workflow</i> are identified to determine sequencing 1.2. Workflow is sequenced to obtain optimum production efficiency and <i>job quality</i> 1.3. New sequences that are required for non-standard jobs are tested 1.4. Workflow is optimised for continued improvement
2. Manage resources and time	2.1. <i>Resources</i> relevant to digital production are identified, evaluated and incorporated to achieve the required outcome 2.2. Time management is integrated into project planning and monitoring 2.3. Human resources are incorporated and supported within the project framework to achieve the required outcome 2.4. Teamwork elements are identified and developed to achieve the required outcome
3. Determine and manage budgets	3.1. <i>Estimation</i> of costs are identified and applied to a range of digital products 3.2. Budget plans are established and checked against estimations to deliver accurate costing 3.3. Estimating practices and pricing models are determined and implemented to deliver the required outcome within designated timeframes and costs 3.4. Job costs are determined, documented and monitored continuously to comply with business commitments and legal obligations 3.5. Business transactions are undertaken ethically and according to law 3.6. Workplace budget estimates and expenditure are reviewed and documented to assist in future business dealings

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for expressing ideas and information by documenting recommendations to optimise the digital production process
- collecting, analysing and organising skills for reviewing the production schedule and evaluating its effectiveness
- planning and organising skills for determining the most effective production processes
- teamwork skills for working with colleagues over changes to production
- numeracy skills for managing budgets
- problem-solving skills for finding solutions to production problems
- technical skills for evaluating machine operations and making changes to improve the production process

Required knowledge

- job requirements for a specific production processes
- methods used to identify special production requirements and possible problems
- criteria used to determine the availability of machines, materials and labour
- OHS concerns that need to be considered when planning production
- common causes of failure in each production area that need to be monitored
- procedures that can be implemented to minimise the effects of these
- techniques used to monitor production schedules
- criteria used for revising production schedules to take into account customer requirements and job complexity
- information that needs to be monitored so as to maintain standards
- individuals involved in monitoring quality standards
- procedures used to make improvements that affect quality standards
- importance of team participation
- reason for determining the skill level of workers
- how the skill levels of individual workers are determined
- costing/estimating methods
- factors that might be adjusted in estimations if they consistently do not match costs
- importance of keeping accurate production records
- how often to review production records and actual costs
- computerised production monitoring systems used to accurately assess costs

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- manage and continually improve a digital production workflow
- accurately manage a budget.

Context of and specific resources for assessment

Assessment must ensure:

- that conditions are typical ambient conditions found in the workplace
- access to relevant facilities, equipment and materials used for digital printing
- use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence
- third party workplace reports of on-the-job performance by the candidate
- practical demonstration by the candidate managing the digital workflow.

Guidance information for assessment

Holistic assessment with other digital production units relevant to the workplace and job role is recommended, for example:

- business management units that could be applied in the digital production sector.

For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Production workflow</i> may include:	<ul style="list-style-type: none"> • customer service • job generation • printing • finishing • dispatch.
<i>Job quality</i> may include:	<ul style="list-style-type: none"> • client specifications/requirements • enterprise standards • industry standards.
<i>Resources</i> may include:	<ul style="list-style-type: none"> • employees • printing and finishing equipment • digital devices, such as computers, printers, proofers and scanners • high-end layout and graphic software applications • raster image processors (RIPs) and front-end processors.

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare chemicals	1.1. <i>Ink and stencil type</i> are correctly identified and screen is assessed for suitability to be reclaimed 1.2. Screen reclamation <i>chemicals</i> are selected and prepared according to manufacturer's/supplier's specifications 1.3. Appropriate safety gear is selected and worn according to manufacturer's/supplier's specifications and OHS requirements
2. Maintain and adjust automatic cleaning equipment	2.1. Automatic cleaning equipment is inspected and routine user maintenance is carried out according to manufacturer's/supplier's specifications and <i>enterprise procedures</i> 2.2. Automatic cleaning equipment is adjusted to suit ink system, <i>mesh type</i> and frame size
3. Wash screen	3.1. Screens are washed using a pressure gun or automatic <i>machine</i> in a suitably ventilated area with the required extraction system 3.2. Stains and hazes are removed using appropriate chemicals according to manufacturer's/supplier's specifications and OHS requirements 3.3. Screens are checked for damage and any defects are reported and/or rectified according to enterprise procedures
4. Store screen	4.1. Screens are correctly identified and labelled 4.2. Screens are stored in a clean, dry environment according to manufacturer's/supplier's specifications
5. Carry out routine user maintenance	5.1. Cleaning equipment is lubricated, cleaned and adjusted according to manufacturer's/supplier's specifications 5.2. Faults are identified, reported and/or rectified according to manufacturer's/supplier's specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by correctly identifying and labelling screens
- collecting, analysing and organising information by identifying and reporting machine faults
- planning and organising activities by maintaining and adjusting automatic cleaning equipment
- teamwork when maintaining the production process in association with fellow workers
- mathematical ideas and techniques by preparing the reclamation chemicals
- problem-solving skills by identifying and rectifying machine faults
- use of technology by using automatic cleaning equipment

Required knowledge

- stencil types and mesh counts
- types of stencil used
- significance of mesh counts
- handling technique used for frames with various mesh counts
- selection of appropriate safety gear
- personal protective equipment items you use for screen reclamation
- health hazards associated with chemical handling
- ink types
- requirement to treat various ink types differently when reclaiming
- pollution controls that are in operation with regards to environmental issues
- chemical selection and preparation
- major OHS concerns when handling chemicals
- selection of the appropriate chemicals for the ink, stencil and mesh types of each screen
- obtaining information on the application of each chemical
- machine operation adjustment and maintenance
- ventilation and extraction systems that should be in operation
- maintenance procedures that are necessary for this machine
- reclamation techniques
- properties of different reclamation chemicals
- application of chemicals for stencil removal

REQUIRED SKILLS AND KNOWLEDGE

- chemicals that are used to remove stains/haze
- chemical handling and storage
- enterprise policies on handling materials and chemicals
- enterprise policies on management and storage of chemicals
- name of personal protective clothing that has to be worn when handling and storing chemicals
- identifying and storing screens
- method that you use to identify the reclamation status of screens
- method of storing reclaimed screens
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> reclaim screens using automatic cleaning equipment according to job specifications demonstrate an ability to find and use information relevant to the task from a variety of information sources maintain the equipment and reclaim THREE screens, with various grades of meshes and ink types using automatic equipment and according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. --	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select the frame	1.1. Frame is selected according to job specifications 1.2. Quality , type and finish of frame are specified
2. Prepare the frame	2.1. Frame surface is appropriately prepared free of imperfections to receive the mesh 2.2. Tools and equipment used in frame preparation are suitable to achieve the standard indicated in job specifications
3. Select the mesh	3.1. Required mesh type is selected according to job specifications 3.2. Imperfections and flaws are identified and appropriate remedial action is taken 3.3. Mesh is measured and cut from bulk supply to meet screen specifications with minimum wastage
4. Stretch and fix mesh	4.1. Mesh is positioned in tensioning equipment at the correct angle according to job specifications 4.2. Tension is set and applied according to job specifications 4.3. Tension is checked according to manufacturer's/supplier's specifications 4.4. Mesh is pre-stretched prior to fixing and mesh is fixed to frame according to frame construction requirements 4.5. Chemicals are mixed for application according to manufacturer's specifications 4.6. Screen is removed from apparatus after appropriate curing
5. Convert mesh	5.1. Chemicals are selected for the conversion of the mesh according to manufacturer's/supplier's specifications 5.2. Chemicals are applied to effect conversion according to manufacturer's/supplier's specifications and to OHS requirements
6. Store screen	6.1. Screens are identified and labelled 6.2. Screens are stored in a safe, clean and dry environment in subdued light

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by labelling screens
- collecting, analysing and organising information by checking mesh tension for conformance to job specifications
- planning and organising activities by preparing the frame prior to using the mesh
- teamwork when maintaining the production process in association with fellow workers
- mathematical ideas and techniques by measuring and cutting mesh from bulk supplies
- problem-solving skills by identifying flaws in the mesh and taking appropriate remedial action
- use of technology by using the tools required to fix the mesh

Required knowledge

- OHS standards
- personal protective equipment required when preparing frame surface, screen adhesive and chemical conversion and using equipment for the surface preparation
- selecting and preparing the frame
- purpose a frame is used
- tools that you use for preparing the frame surface
- observations in order to achieve a good surface for mesh adhesion
- choosing and stretching the mesh
- mesh types
- frame size and mesh cutting
- flaws or imperfections that may be found in screen mesh
- measuring tension and fixing the mesh
- position that is the mesh placed before tensioning
- methods of pre-stretching the mesh prior to securing it
- tension measurement
- various methods of fixing mesh to frame
- pre-tensioning techniques used
- converting and storing the screen
- methods of converting the screen mesh chemically
- method of converting the screen mesh mechanically
- method that you use to identify the mesh on this screen

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select substrate	1.1. Substrates are selected according to job specifications 1.2. Substrates selected are to be of suitable form and quality according to job specifications and the end use of the product
2. Process substrate	2.1. Processing of substrate is carried out according to job specifications 2.2. Necessary preventive action is taken to avoid wastage and to ensure best yield with respect to grain direction and the type of substrate selected 2.3. User maintenance requirements are identified and implemented according to manufacturer's/supplier's instructions 2.4. Substrate is inspected and print capability assessed, including the need for any special preparation requirements 2.5. Substrate is suitably pre-treated, where required 2.6. Substrate is appropriately labelled according to job specifications
3. Store and handle substrate	3.1. Materials are safely handled according to manufacturer's/supplier's specifications 3.2. Materials and substrate are appropriately handled and stored according to manufacturer's/supplier's specifications to prevent damage and hazards to personnel 3.3. Offcuts of materials are disposed of according to regulatory requirements and enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by implementing user maintenance requirements
- collecting, analysing and organising information by inspecting substrates and assessing their print capacity
- planning and organising activities by selecting substrate to ensure best yield according to job specifications
- teamwork when maintaining the production process in association with fellow workers
- mathematical ideas and techniques by appropriately storing materials and substrate
- problem-solving skills by disposing of waste and offcuts according to enterprise procedures
- use of technology by using basic tools to prepare substrates

Required knowledge

- safe handling of processing equipment and tools
- OHS concerns when preparing substrates
- safe practices for handling substrates and equipment
- identification of chosen substrate
- identity of each of the chosen substrates
- final application of each of the substrates after printing
- choosing the grade/thickness of substrate
- preparation and pre-treatment of substrate before printing
- defects and irregularities of the substrate
- pre-treatment of the surface that is required before printing
- tests that should be undertaken to determine the suitability of the substrate for printing
- ensuring the best yield from substrate sheet/roll to prevent wastage
- substrate cutting to obtain the least wastage
- processing substrate according to job specifications
- equipment/tools you use for preparing substrate
- substrate preparation and the quality of preparation monitoring
- proper stacking and storage of processed substrate
- handling and storage procedures that are there to prevent damage to substrate prior to printing
- substrate preparation according to job specifications

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• proper disposal of offcuts and environmental implications• correct procedures for the disposal of offcuts of substrate• environmental and conservation procedures that should be carried out• manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents |
|---|

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare substrate	<p>1.1. <i>Substrates</i> selected are of suitable quality according to job specifications and the end use of the product</p> <p>1.2. Substrate is inspected and print capability assessed, including the need for any special preparation requirements</p> <p>1.3. Necessary preventive action is taken to avoid wastage and to ensure best yield with respect to grain direction and the type of substrate selected</p> <p>1.4. Substrate is suitably pre-treated, where required</p>
2. Cut substrate	<p>2.1. Set-up is carried out correctly in minimum time with minimum wastage</p> <p>2.2. Grip and lay edges of sheet are identified</p> <p>2.3. Knives are checked for appropriate sharpness</p> <p>2.4. Cutting sticks are replaced when necessary</p> <p>2.5. Guillotine is manually set up and adjusted according to job specifications</p> <p>2.6. Clamping pressures are set up and adjusted according to job specifications</p> <p>2.7. Problems in cutting (guillotining) machine operation are identified and reported according to enterprise procedures</p> <p>2.8. Quality of <i>cuts</i> is checked to ensure quality standards are met</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by ensuring substrate quality standards
- collecting, analysing and organising information by inspecting the substrate and its print capability, including the need for any special preparation requirements
- planning and organising activities by taking necessary preventive action to avoid wastage and to ensure best yield with respect to grain direction and the type of substrate selected
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by setting clamping pressures and adjusting them according to job specifications
- problem-solving skills by checking quality of cuts to ensure quality standards are met
- use of technology by using guillotines and other equipment to prepare and cut screen print substrate

Required knowledge

- information contained in job specifications
- process for checking guillotine knives
- guillotine set up and operation
- safe guillotine handling and operation
- proper stacking and storage of processed substrate

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> inspect and cut substrate according to job specifications for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment guillotine and associated equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Substrates may include:

- range of substrates in categories of paper, paperboard, corrugated board, plastics.

Cut may include:

- single knife, manual guillotines.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work area and equipment	1.1. Work area is made clean and functional prior to the commencement of work 1.2. All equipment is inspected to ensure it is functional and where necessary, appropriate remedial action is taken prior to the commencement of work 1.3. Appropriate <i>coating</i> trough is selected ensuring it is free of nicks and burrs
2. Prepare the screen	2.1. Screen is selected according to job specifications 2.2. Chemicals are applied and removed according to OHS requirements and manufacturer's/supplier's specifications 2.3. Tension of screen mesh is checked for suitability according to job specifications
3. Select emulsion	3.1. Emulsion is selected according to requirements for ink type, print resolution, substrate, mesh type and machine type 3.2. Emulsion is checked for expiry date and appropriate action taken 3.3. Emulsion is prepared according to OHS requirements and manufacturer's/supplier's specifications 3.4. Emulsion is applied and dried according to manufacturer's/supplier's specifications
4. Process coated screen	4.1. Image films are appropriately positioned onto prepared screen and positioned in cleaned/prepared/appropriate exposure device 4.2. Light source is positioned according to manufacturer's/supplier's specifications 4.3. Exposure is calculated and <i>stencil</i> exposed according to manufacturer's/supplier's specifications 4.4. Exposed screen is removed from vacuum frame exposure device 4.5. Exposed screen is washed out after positive removal according to OHS requirements and manufacturer's/supplier's specifications 4.6. Processed stencil/screen is inspected for flaws and scum
5. Dry stencil	5.1. Processed stencil is dried according to manufacturer's/supplier's specifications 5.2. Backing sheet is carefully removed and stencil

ELEMENT	PERFORMANCE CRITERIA
	checked for full adhesion
6. Block out screen	6.1. Backing sheet is carefully removed and stencil checked for full adhesion 6.2. Stencil is inspected for flaws, scum and/or orientation 6.3. Pinholes are spotted out with suitable filler and taped according to ink type and job specifications
7. Store screen	7.1. Prepared screen is labelled according to <i>enterprise</i> specifications 7.2. Prepared screen is stored in a clean, dry environment according to manufacturer's/supplier's specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by labelling the completed screens
- collecting, analysing and organising information by selecting correct emulsion according to job specifications
- planning and organising activities by preparing the work area and equipment prior to coating the screens
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating required exposure time for the screen
- problem-solving skills by inspecting stencil for flaws and spotting out pinholes
- use of technology by processing the screen using photographic equipment

Required knowledge

- preparation of screen for coating
- significance of the mesh count
- effect that screen tension has on emulsion coating
- emulsion suitable for the job
- preparation of work area and equipment
- significance of good housekeeping
- effect that the coating trough edge have on emulsion coating
- selecting the right emulsions for the job
- choice of emulsion
- reasons for checking the expiry date of emulsions
- maximum temperature at which the emulsion can be dried
- coating and exposure techniques
- need to have good vacuum pressure in the vacuum frame
- why have you placed the light source in this position?
- formula use to calculate exposure time
- effects of overexposure and underexposure
- optimum exposure time
- effect on exposure that a white or coloured mesh have
- how do you determine if the screen is washed out properly?
- what characteristics determine a good or bad stencil?
- drying screen and blocking out
- drying the screen before blocking out

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• type of filler used for blocking out• reasons for spotting pinholes and taping the screen• storage and OHS• OHS requirements for UV exposure light• means by which this screen is able to be identified at a later date• manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents |

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work area	1.1. Work area is made clean and functional prior to the commencement of work 1.2. All equipment, tools and materials are inspected to ensure they are functional and where necessary, appropriate remedial action is taken prior to the commencement of work 1.3. Activating chemicals are prepared according to OHS requirements and manufacturer's/supplier's specifications
2. Prepare the screen	2.1. Screen is selected according to job specifications 2.2. Chemicals are applied and removed according to OHS requirements and manufacturer's/supplier's specifications 2.3. Tension of screen mesh is checked for suitability according to job specifications
3. Select indirect stencil material	3.1. Stencil material is selected according to requirements for ink type, print resolution, substrate and machine type 3.2. Stencil material is checked for faults and expiry date and suitable action taken
4. Process material	4.1. Selected material is cut to size according to job specifications with minimisation of waste 4.2. Material is placed in vacuum frame with positive positioned and intimate vacuum achieved according to manufacturer's/supplier's and job specifications 4.3. Exposure is calculated and stencil is exposed according to manufacturer's/supplier's specifications 4.4. Light source is positioned according to manufacturer's/supplier's specifications 4.5. Exposed stencil is removed from vacuum frame and treated with the necessary activator, if required, according to OHS requirements and manufacturer's/supplier's specifications 4.6. Activated stencil is washed according to OHS requirements and manufacturer's/supplier's specifications 4.7. Exposed stencil is inspected for processing flaws
5. Apply stencil to screen	5.1. Prepared screen is re-wet and inspected for cleanliness and dust 5.2. Stencil is positioned and adhered accurately

ELEMENT	PERFORMANCE CRITERIA
	according to manufacturer's/supplier's specifications
6. Dry stencil	<p>6.1.Processed stencil is dried according to manufacturer's/supplier's specifications</p> <p>6.2.Backing sheet is carefully removed and stencil checked for full adhesion</p>
7. Block out screen	<p>7.1.Stencil is inspected for flaws, scum and/orientation</p> <p>7.2.Non-image areas of prepared screen are blocked out with filler suitable for ink type and according to job specifications</p> <p>7.3.Pinholes are spotted out with suitable filler and faulty/damaged images are retouched and are taped according to ink type and job specifications</p>
8. Store screen	<p>8.1.Prepared screen is labelled according to <i>enterprise</i> specifications</p> <p>8.2.Prepared screen is stored in a clean, dry environment according to manufacturer's/supplier's specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by correctly labelling prepared stencils
- collecting, analysing and organising information by checking materials for faults and expiry dates
- planning and organising activities by preparing the screen prior to applying the stencil
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by cutting selected materials to size according to job specifications
- problem-solving skills by retouching and taping damaged images
- use of technology by using the vacuum frame and other equipment to prepare the stencil

Required knowledge

- preparing the screen
- significance of mesh count
- reason the screen must be tensioned correctly
- chemicals that are used for pre-treating and degreasing
- equipment used and preparation of work area
- method of preparing activator to OHS standards
- significance of a dust-free work area when working with indirect stencils
- inspection of necessary equipment to ensure it is functional
- indirect stencil material selection
- characteristics of indirect stencils relative to ink type, print resolution and substrate
- selection of indirect stencil material
- common faults associated with indirect film
- exposing, activating and washing indirect stencils
- vacuum pressure prior to exposing the stencil
- position of light source
- calculation of exposure time for this indirect film
- effects of overexposure and underexposure
- method of activating film
- temperature of the water for washing indirect stencils
- Recognising and rectifying flaws
- applying stencil to screen and drying off

REQUIRED SKILLS AND KNOWLEDGE

- main considerations before applying the stencil to the screen
- method of positioning and adhering stencil to screen
- process of drying the stencil and removing the backing sheet
- blocking out, spotting and storing the screen
- method of rectifying flaws and scum in the stencil
- type of filler used for blocking out and their use
- pinholes spotting and the screen taping
- means by which this screen is able to be identified at a later date
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Material safety data sheets are used to identify safe chemical handling procedures 1.2. Substrate is checked for conformance to job specifications with any irregularities reported and/or rectified 1.3. Ink is checked for conformance to job specifications 1.4. Stencil is checked for conformance to job specifications
2. Prepare machine to print	2.1. Substrate position and stencil registration are adjusted according to job specifications 2.2. Ink is applied to the screen in the quantity required for the screen size 2.3. Equipment is kept clean and spillage is minimised
3. Produce proof print	3.1. Proof print is run off and checked for colour, strength, registration, adhesion, clarity, gloss level, drying/curing , artwork detail and other technical aspects according to job specifications 3.2. Adjustments are made according to product and machine specifications 3.3. Belt speed and energy required are set to achieve desired curing or drying properties 3.4. Appropriate approval to commence production is sought prior to commencement
4. Run job and monitor print quality	4.1. Printing speed production is adjusted to maximise quality and output 4.2. Print quality is continuously evaluated and adjusted as required 4.3. Effects of ink alterations during run are monitored and any discrepancy is notified according to enterprise procedures 4.4. Workplace documentation on job is completed as required 4.5. Curing and drying are constantly monitored and adjusted according to manufacturer's/ supplier's and job specifications
5. Carry out routine user maintenance	5.1. Equipment is cleaned according to enterprise procedures 5.2. Fault conditions are identified and reported according to enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
6. Stack production output	<p>6.1. Output is checked for thorough drying/curing before stacking</p> <p>6.2. Job status and progress are checked for conformance to job specifications and any necessary action is taken</p>
7. Conduct shutdown of the production process	<p>7.1. Material is transferred to correct destination in a safe manner</p> <p>7.2. Excess ink, screens, squeegees and flood coaters are removed and cleaned according to OHS requirements and manufacturer's/supplier's specifications</p> <p>7.3. Waste materials and chemicals are disposed of according to manufacturer's/supplier's specifications, regulatory requirements and enterprise procedures</p> <p>7.4. Equipment and surrounding areas are cleaned according to manufacturer's/supplier's specifications</p> <p>7.5. Tools and equipment are identified, stored and maintained according to manufacturer's specifications to ensure ease of access and operator safety</p> <p>7.6. The correct procedure for dealing with spilt chemicals is demonstrated according to OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by seeking appropriate approval to commence production prior to commencement
- collecting, analysing and organising information by running off and checking the proof for various aspects according to the job specifications
- planning and organising activities by continuously evaluating and adjusting print quality
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by making adjustments according to product and machine specifications
- problem-solving skills by undertaking the correct procedure for dealing with spilt chemicals
- use of technology by using manual screen printing equipment

Required knowledge

- information that can be gained from material data safety sheets
- the need to check the substrate for conformance to the job specifications
- action required if the ink did not comply with the job specifications
- compliance checks that are made with the stencil
- limitations that you have when setting the substrate position
- the result if too much ink were applied to the screen
- the need to keep equipment clean
- OHS concerns that are there when producing a manual print
- checks to be made on the printed sheet when the proof print has been run off
- the drying/curing system to be used for this application
- product and machine specifications
- the result if the belt speed was too high
- the need to obtain final approval before commencing the production run
- aspects of the print that are evaluated during printing
- the need to make ink alterations during the run
- the workplace documentation action when the print run is completed
- OHS concerns that are there in relationship to drying/curing systems?
- maintenance that should be carried out on this machine
- the importance of reporting any faulty equipment
- how do you determine whether a print is dried/cured prior to stacking?

REQUIRED SKILLS AND KNOWLEDGE

- what would be the result of stacking while the ink film is still wet?
- what action may be necessary if problems occur with job progress?
- identifying the job's destination when you have completed the run
- the result of not keeping screens and squeegees clean
- the result of not following correct procedures when disposing of liquid waste
- the result of not keeping equipment and surrounding areas clean
- manuals, safety and other documentation that are relevant to this task and where are they kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • set up screen printing machinery and produce a print that meets job specifications on a range of common substrates, using fundamental manual screening techniques • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.

Equipment and surrounding areas are cleaned according to manufacturer's/supplier's specifications and enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by seeking approval for a production run after a proof is produced
- collecting, analysing and organising information by completing workplace documentation
- planning and organising activities by producing a proof print prior to doing the job run
- teamwork when maintaining the production process in association with colleagues
- mathematical ideas and techniques by applying the correct quantity of ink to the screen
- problem-solving skills by checking proof for conformance to job specifications and making required adjustments
- use of technology by using the various equipment and tools required

Required knowledge

- the procedure for setting up the frame in position relative to the print image and base board in preparation for printing
- check to be made of the ink to determine its suitability for printing on this substrate
- the need to check the substrate for conformance to job specifications
- OHS concerns that are there when producing a manual print
- checks to be made on the printed sheet when the proof print has been run off
- what aspects of the print are evaluated during printing?
- the drying/curing system to be used for this application
- maintenance that should be carried out on this machine
- the correct method of ink removal and cleaning squeegees
- ways of determining whether a print is dried/cured prior to stacking
- manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> manually produce different one- or two-colour print runs according to job specifications demonstrate an ability to find and use information relevant to the task from a variety of information sources manually produce TWO different one- or two-colour print runs according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely replicated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPSU202C Prepare, load and unload product on and off machine ICPSP351C Prepare machine and drying/curing unit.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Drying/curing units</i> may include:	<ul style="list-style-type: none"> • manual drying systems commonly used in specific industry sectors.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> • should meet client requirements and enterprise and industry standards.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> • tasks must be performed according to enterprise procedures.
<i>Types of techniques</i> may include:	<ul style="list-style-type: none"> • basic manual techniques relative to industry sector.
<i>Complexity</i> may include:	<ul style="list-style-type: none"> • one- or two-colour jobs.
<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> • working under supervision to previously defined procedures to ensure production requirements are met.

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Load substrate	1.1.Substrate is checked for conformance to job specifications with any irregularities reported and/or rectified 1.2.Substrate position and stencil registration are adjusted according to job specifications
2. Apply ink to screen	2.1.Ink is applied to the screen in the quantity required for the screen size 2.2.Equipment is kept clean and spillage is minimised 2.3.Colour is mixed and ink is checked for conformance to job specifications
3. Produce proof print	3.1.Proof print is run off and checked for colour, strength, registration, adhesion, clarity, gloss level, drying/curing , artwork detail and other technical aspects according to job specifications 3.2.Adjustments are made as required 3.3.Appropriate approval to commence production is sought prior to commencement 3.4.Belt speed and energy required are set to achieve desired properties and then printing speeds are adjusted to suit
4. Run job and monitor print quality	4.1.Printing speed production is adjusted to maximise quality and output 4.2.Print quality is continuously evaluated and adjusted as required 4.3.Effects of ink alterations during run are monitored and appropriate action taken according to manufacturer's/supplier's and job specifications 4.4.Workplace documentation on job is completed as required 4.5.Curing and drying are constantly monitored and adjusted according to manufacturer's/ supplier's and job specifications
5. Carry out routine user maintenance	5.1.Equipment is cleaned according to manufacturer's/supplier's specifications 5.2.Fault conditions are identified and reported according to enterprise procedures
6. Stack production output	6.1.Output is checked for thorough drying/curing before stacking 6.2.Job status and progress are checked for conformance

ELEMENT	PERFORMANCE CRITERIA
	to job specifications and any necessary action is taken
7. Shut down machine	7.1.Excess ink, screens, squeegees and flood coaters are removed and cleaned according to OHS requirements and manufacturer's/supplier's specifications 7.2.Waste materials are disposed of according to manufacturer's/supplier's specifications, regulatory requirements and enterprise procedures 7.3.Equipment and surrounding areas are cleaned according to manufacturer's/supplier's specifications and enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by obtaining approval to commence a production run
- collecting, analysing and organising information by checking the substrate for conformance to the job specifications
- planning and organising activities by producing a proof print prior to running a job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by setting the belt speed and required energy
- problem-solving skills by continuously evaluating and adjusting print quality
- use of technology by using semi-automatic and computerised machines to produce screen prints

Required knowledge

- the substrate, finished size, length of run and/order of colours
- colour sequence
- the correct placement of image on the sheet
- the significance of substrate guides/lays
- the procedure for setting up the frame position relative to the print image and base in preparation for printing
- the selection of the ink system
- the set parameters of belt speed and head units
- OHS concerns that are there when using a semi-automatic machine
- the type of squeegee/flood coater and squeegee angle used
- the production of a proof print and what needs to be checked on the proof
- continuous monitoring of print quality and drying/curing of ink
- the purpose of workplace documentation
- check that are made of printed sheets for drying/curing before stacking
- the procedure that you take for disposing of unused ink and solvent rags
- checks that are made to determine that prints are dried/cured
- frequency and type of maintenance that should be performed
- machine manuals, safety and other documentation that are relevant to this task and where are they kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly produce screen prints using semi-automatic machines according to job specifications • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce TWO different one- or two-colour print runs using a semi-automatic machine according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • demonstrate use of computerised control, monitoring and data entry systems if available and appropriate.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely replicated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU202C Prepare, load and unload product on and off machine • ICPSU208C Operate and monitor machines (basic) • ICPSP351C Prepare machine and drying/curing unit • any basic set up units.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by gaining approval to commence a production run
- collecting, analysing and organising information by checking job status and progress according to job specifications
- planning and organising activities by following machine shutdown procedures
- teamwork when completing workplace documentation
- mathematical ideas and techniques by adjusting print speed to maximise quality
- problem-solving skills by monitoring and responding to the effect of ink alterations
- use of technology by operating automatic and computerised screen printing machines

Required knowledge

- adjustments that are necessary to the machine prior to setting up
- maintenance that is required on the machine and feeder prior to the commencement of printing
- substrate is to be used on this job
- procedure that you use for checking the screen sequence of colours, ink, substrate and squeegee/flood coater prior to printing
- the system for setting the feed board and loading substrate
- the need to prepare substrate or item when loading the feeder
- adjustment of the stock feed system for this machine
- the correct positioning, registering and locking the screen in position
- need to adjust the off contact/peel-off requirements of the screen
- the OHS requirements when working with infra red/UV curing units
- the relationship between ink deposit, squeegee speed and belt speed/temperature of the drying/curing unit
- the routine maintenance you undertake on this drying/curing unit
- OHS concerns that are there when using an automatic machine
- the effect of humidity on the substrate
- the correct viscosity of the ink prior to printing
- the rectification of the change in the viscosity of the ink during a production run
- evaluation and maintenance of the print quality during the run
- the ideal printing rate for this substrate on this machine
- production output handling to prevent offsetting of the ink

REQUIRED SKILLS AND KNOWLEDGE

- the effect that the ink conditions have on output capacity
- the need to determine the exact count and to record production details on the job sheet
- the health hazards associated with ink/solvents
- the correct procedure for removing the ink without damaging the screen
- the correct method of cleaning squeegees/flood coaters, machine and surrounding area
- maintenance that is required on this machine after printing
- machine manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce a complex print of more than two colours containing line and tone using a semi-automatic machine according to job specifications demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources produce a complex print of more than two colours containing line and tone using a semi-automatic machine according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment access to appropriate equipment and materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive printed product	1.1. Screen print job is collected/received and <i>quality</i> checks made according to job specifications 1.2. Defects or irregularities are identified, reported and/or rectified
2. Carry out final processing	2.1. Final processing requirements of the job are determined from job specifications 2.2. Equipment and materials for final processing are identified and prepared according to manufacturer's/supplier's and job specifications 2.3. Final processes are implemented according to job specifications and industry practice 2.4. Quality of product is monitored and maintained throughout final processing 2.5. Irregularities are identified, reported and/or rectified 2.6. Job status and progress are checked for conformance to job specifications and any necessary action is taken
3. Handle final product	3.1. The final print is processed using appropriate handling, storage and dispatching techniques to ensure minimal wastage and prevent hazards to personnel 3.2. Waste materials are disposed of according to manufacturer's/supplier's specifications, regulatory requirements and <i>enterprise procedures</i> 3.3. Post-production cleaning and user maintenance are carried out according to manufacturer's/supplier's specifications
4. Store, pack and dispatch	4.1. Final quality checks are carried out and appropriate action taken according to job specifications 4.2. Finished job is stored, packed and dispatched according to job specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by reporting defects or irregularities
- collecting, analysing and organising information by determining final processing requirements from job specifications
- planning and organising activities by disposing of waste products according to workplace and community standards
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by preparing equipment and materials according to job specifications
- problem-solving skills by identifying and rectifying faults in screen print jobs
- use of technology by using the various equipment and machinery required to finish screen print products

Required knowledge

- techniques that are used to determine defects and irregularities
- rectifying defects
- the features of a quality screen printed job
- OHS concerns that are there when finishing print jobs
- the equipment, tools and materials you use for final processing
- the final processing requirements for the job
- finishing processes that are being used on this job
- the final processes indicated in the job specifications
- monitoring and maintaining the quality of the finished product throughout final processing
- safety requirements that are there when handling printed product
- the handling techniques that are used to prevent damage to the processed product
- the correct methods for disposing of waste material
- post-production cleaning methods that are used
- the name and type and frequency of maintenance that should be performed on equipment
- the final quality checking methods you are using
- method that you use for maintaining and recording job information
- the final product packaging and storing
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess the production requirements in order to meet the process and job specification	1.1. Requirements of the printing process and job <i>specification</i> are assessed 1.2. Quality of job <i>elements</i> , including resolution/dpi are specified according to client requirements 1.3. Films, dye cartridges, qualities and process requirements are determined 1.4. Stock levels are checked, recorded and maintained according to job specifications 1.5. Copy is checked and assessed according to job specifications
2. Prepare and operate equipment to produce film separations	2.1. <i>Scanner</i> /computer is selected and artwork/copy is placed squarely in the scanner 2.2. Scanner software is selected/opened and correct settings are made according to job requirements 2.3. Previews are made, images selected, finished scan completed, and image adjusted as required 2.4. Image format is determined and saved to a storage device
3. Select and use appropriate imaging software	3.1. Software is selected and scan opened 3.2. Separation is provided on individual layers according to job specifications 3.3. Colours are excluded as required on separation layers 3.4. Separation layers are coloured for specific raster image processor (RIP) software requirements 3.5. Image/layers or separations are manually nested if required in accordance with film output device size 3.6. Image format is determined according to RIP software requirements 3.7. Supplied finished artwork/separation is checked for output suitability
4. Select and operate an appropriate output device producing film separations	4.1. RIP software is selected and opened 4.2. Imagesetter/dye printer is selected and checked, and heads cleaned prior to outputting images 4.3. Nesting is checked to ensure non-wastage of film 4.4. Image is evaluated to ensure it complies with the job specifications and corrected if required 4.5. Film is handled and output device is closed down according to manufacturers' recommendations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication and literacy skills for expressing ideas and information
- planning, analysing and organising skills for preparing the screen prior to processing the materials in accordance with job specifications
- teamwork skills for maintaining the production process in association with others
- problem-solving skills for identifying faults and rectifying the image where required
- technical skills for operating hand/or computer driven cutting tools, handling film before and after separation and measuring the halftone value on film separation

Required knowledge

- image specifications
- resolutions/dpi determination
- scanner settings
- adjusting image brightness/contrast
- correct file format
- imaging software
- software for scanning and creation of vector graphics
- exclusion of colours and bleed for a particular job
- purpose of colouring separation layers (Hexachrome black)
- common file format when using RIP software
- nesting requirements
- output suitability prior to producing separations
- correct output device regular checks and maintenance that must be performed on an imagesetter/dye printer
- RIP software settings that must be checked prior to ripping
- procedures for evaluating output film to ensure it conforms to job specifications
- halftone value

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce films according to job specifications, client and industry standards • prepare film for two different products involving a variety of image effects according to job specifications and manufacturer's specifications • demonstrate the related underpinning knowledge to prepare for screen printing.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • that conditions are typical ambient conditions found in the workplace • access to relevant facilities and equipment • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • practical demonstration by the candidate in preparing film for screen printing • direct questioning of underpinning knowledge required to prepare for screen printing and OHS issues.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Specifications may include:

- screen rulings
- dot percentages
- image thickness/film assessment.

Elements may include:

- text
- headings
- rules
- components and shapes.

Scanner may include:

- flat-bed
- drum scanners.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare chemicals	<p>1.1. <i>Ink and stencil type</i> are correctly identified and screen is assessed for suitability to be reclaimed</p> <p>1.2. Most appropriate reclamation method is chosen for the job</p> <p>1.3. Screen reclamation <i>chemicals</i> are selected and prepared according to manufacturer's/supplier's specifications</p> <p>1.4. Appropriate safety gear is selected and worn according to manufacturer's/supplier's specifications and OHS requirements</p>
2. Wash screen	<p>2.1. Stencil is treated with appropriate chemical to manufacturer's specifications</p> <p>2.2. Screens are washed using a pressure gun in a suitably ventilated area with the required extraction system</p> <p>2.3. Stains and hazards are removed using appropriate chemicals according to manufacturer's/supplier's specifications and OHS requirements</p> <p>2.4. Screens are checked for damage and any defects are reported and/or rectified according to <i>enterprise procedures</i></p>
3. Store screen	<p>3.1. Screens are correctly identified and labelled</p> <p>3.2. Screens are stored in a clean, dry environment according to manufacturer's/supplier's specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by correctly identifying and labelling screens
- collecting, analysing and organising information by correctly identifying ink and stencil type
- planning and organising activities by selecting and preparing chemicals and solvents before washing and storing screens
- teamwork when maintaining the production process in association with fellow workers
- mathematical ideas and techniques by preparing the reclamation chemicals
- problem-solving skills by rectifying damage to screens according to enterprise procedures
- use of technology by using a pressure gun with associated safety equipment

Required knowledge

- significance of mesh count
- treatment of screens with different mesh counts
- mesh and frame faults
- common faults that could occur in meshes and frames
- ink/stencil types
- ink removal procedures for THREE different inks
- stencil removal procedures for TWO stencil types
- chemical selection and preparation
- chemicals available for screen reclamation
- reasons for selecting chemicals and method for screen reclamation
- chemical handling and disposal
- main considerations when handling and disposing of chemicals
- reclamation techniques
- various screen reclamation techniques available in the industry
- reasons for selecting and applying a specific technique for screen reclamation
- OHS constraints
- hazards to be aware of in reclaiming screens
- enterprise material handling policies?
- enterprise policies on management of waste?
- personal protective clothing that should be worn when reclaiming screens

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> reclaim screens, preferably of different mesh and stencil types commonly used in the industry, using manual techniques, according to job specifications demonstrate an ability to find and use information relevant to the task from a variety of information sources reclaim THREE screens, preferably of different mesh and stencil types commonly used in the workplace, using manual techniques, according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria. evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> skills and knowledge are demonstrated in a range of situations and in an environment that realistically reflects the workplace access to a range of relevant tools, equipment, materials, resources and documentation used when reclaiming screens in the printing industry application of the most current workplace procedures, processes and techniques used in the printing industry.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Ink, stencil and frame types</i> may include:	<ul style="list-style-type: none"> ink systems, stencil and frame types in common use in specific industry sectors.
<i>Chemical type</i> may include:	<ul style="list-style-type: none"> chemicals and solvents commonly used for the reclamation of screens.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> tasks must be performed according to enterprise procedures and OHS requirements.
<i>Mesh type</i> may include:	<ul style="list-style-type: none"> all types of mesh material, thread counts, thicknesses, colours and weaves used in specific industry sectors.
<i>Tension measurement techniques</i> may include:	<ul style="list-style-type: none"> various different tension measurement techniques in common use in specific industry sectors.
<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> working under supervision to previously defined procedures to ensure production requirements are met.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work area and equipment	1.1. Work area is made clean and functional prior to the commencement of work 1.2. All equipment is inspected to ensure it is functional and where necessary, appropriate remedial action is taken prior to the commencement of work 1.3. Appropriate <i>coating</i> troughs for automatic coaters are selected ensuring they are free of nicks and burrs 1.4. Automatic coating equipment is inspected and routine user maintenance is carried out according to manufacturer's instructions and <i>enterprise procedures</i> 1.5. Automatic coating equipment is adjusted to suit screen frame and mesh and emulsion
2. Prepare the screen	2.1. Screen is selected according to job specifications 2.2. Chemicals are applied and removed according to OHS requirements and manufacturer's/supplier's specifications 2.3. Tension of screen mesh is checked for suitability according to job specifications
3. Select emulsion	3.1. Emulsion is selected according to requirements for ink type, print resolution, substrate, mesh type and <i>machine type</i> 3.2. Emulsion is checked for expiry date and appropriate action taken 3.3. Emulsion is prepared according to OHS requirements, and manufacturer's/supplier's specifications 3.4. Emulsion is used and dried according to manufacturer's/supplier's specifications
4. Process coated screen	4.1. Coated screen frame is placed in vacuum frame and adequately vacuumed with positive positioned according to manufacturer's/supplier's specifications 4.2. Light source is positioned according to manufacturer's/supplier's specifications 4.3. Exposure is calculated and <i>stencil</i> exposed according to manufacturer's/supplier's specifications 4.4. Exposed screen is removed from vacuum frame 4.5. Exposed screen is washed out after positive removal according to OHS requirements and manufacturer's/supplier's specifications

ELEMENT	PERFORMANCE CRITERIA
	4.6.Processed stencil/screen is inspected for flaws
5. Store screen	5.1.Prepared screen is labelled according to enterprise specifications 5.2.Prepared screen is stored in a clean, dry environment according to manufacturer's/supplier's specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by correctly labelling prepared stencils
- collecting, analysing and organising information by selecting the correct emulsion according to job specifications
- planning and organising activities by ensuring functionality of equipment prior to starting work
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by calculating required exposure time for emulsion
- problem-solving skills by inspecting automatic coating machine and conducting maintenance
- use of technology by using automatic coating machines

Required knowledge

- the influence that the mesh count has on final printed product
- the need to have the correct tension on the screen
- the screen tension that is required on screens of various mesh counts and grades
- degreasing/cleaning techniques that are employed prior to coating the screen
- information that is contained in MSDSs for the emulsion being used
- the OHS requirements for exposure to UV light sources
- pollution and environmental issues that need to be considered when working with emulsions
- maintenance that is required for the automatic coating machine
- TWO emulsions used in screen printing and describe their characteristics, their shelf life and areas of use
- the storage requirements for the emulsion you are using
- the preparation formula for the emulsion you are using
- the need to have the correct illumination in the work area
- the influence that the length of run and ink or dye being used have on the coating technique
- the number of coats of emulsion and the best method of coating the screen
- factors that are taken into consideration in determining the angle at which the coaters coat the screen
- the appropriate position (horizontal or vertical) for drying the screen
- the effect that each of these positions has on the way the emulsion dries
- the effect of heat on the emulsion during the drying process

REQUIRED SKILLS AND KNOWLEDGE

- the function and use of a light integrator
- the procedure for exposing the stencil
- the effect that the position, angle and distance of the light source have on the exposure process
- the need to have perfect contact between positive and screen during exposure
- the effect that temperature, pressure and time taken have on the washing out process
- wash-out completion
- the ideal position of the screen for drying to prevent scum and streaking
- the impact of post-curing on the stencil
- information that you have obtained from the MSDS for this particular blackout
- the bearing of ink to be used and the type of stencil on the type of blackout
- preventive measures that can be taken to minimise pinholes
- the need to tape the edge of the frame and the squeegee edge
- the means used to identify the screen at a later date
- manuals, safety and other documentation that are relevant to this task and where they are kept
- information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly prepare direct emulsion stencils using automatic coating equipment according to job specifications • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare TWO different direct screens using automatic coating equipment, and expose, wash and dry the screen according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely replicated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Coating techniques</i> may include:	<ul style="list-style-type: none"> appropriate automatic coating techniques for various emulsions, mesh types and definition requirements.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> tasks must be performed according to enterprise procedures.
<i>Types of machines</i> may include:	<ul style="list-style-type: none"> automatic coating equipment commonly used in the screen printing sector.
<i>Type of stencil materials</i> may include:	<ul style="list-style-type: none"> direct stencil materials commonly used relative to the industry sector.
<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> work is performed under supervision to defined procedures to ensure production requirements are met.

ICPSP337D Prepare stencil using photographic capillary method

Modification History

Release	Comments
Release 1	<p>This Unit first released with <i>ICP10 Printing and Graphic Arts Training Package</i> version 2.0.</p> <p>Critical aspects of evidence corrected to reflect unit focus (capillary stencils and associated methodology), version identifier changed.</p> <p>Replaces ICPSP337C Prepare stencil using photographic capillary method.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare photographic capillary stencils.

Application of the Unit

This unit requires the individual to prepare photographic capillary stencils.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit of competency.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare the work area	<p>1.1 Work area is made clean and functional prior to the commencement of work</p> <p>1.2 All equipment is inspected to ensure it is functional and where necessary, appropriate remedial action is taken prior to the commencement of work</p> <p>1.3 Chemicals are prepared, if necessary, according to OHS requirements and manufacturer's/supplier's specifications</p>
2. Prepare the screen	<p>2.1 Screen is selected according to job specifications</p> <p>2.2 Chemicals are applied and removed according to OHS requirements and manufacturer's/supplier's specifications</p>
3. Select and process capillary film	<p>3.1 Capillary film is selected according to requirements for ink type, print resolution, substrate and machine type with minimisation of waste</p> <p>3.2 Capillary film is cut to size according to OHS requirements and manufacturer's/supplier's specifications with minimisation of waste</p> <p>3.3 Capillary film is mounted on screen according to manufacturer's/supplier's specifications</p> <p>3.4 Screen is dried according to manufacturer's/supplier's specifications and <i>enterprise procedures</i></p> <p>3.5 Backing sheet is removed according to manufacturer's/supplier's specifications</p>
4. Process material	<p>4.1 Screen is placed in vacuum frame with positive positioned according to manufacturer's/supplier's specifications and job specifications</p> <p>4.2 Exposure is calculated and <i>stencil</i> exposed according to manufacturer's/supplier's specifications</p> <p>4.3 Light source is positioned according to manufacturer's/supplier's specifications</p> <p>4.4 Exposed screen is removed from vacuum frame according to OHS requirements and manufacturer's/supplier's specifications</p> <p>4.5 Exposed screen is washed out according to OHS requirements and manufacturer's/supplier's specifications</p>
5. Dry stencil	<p>5.1 Processed stencil is dried according to manufacturer's/supplier's specifications</p> <p>5.2 Backing sheet is carefully removed and stencil checked for</p>

	full adhesion
6. Block out screen	<p>6.1 Stencil is inspected for flaws, scum and/or orientation</p> <p>6.2 Non-image areas of prepared screen are blocked out with filler suitable for ink type and according to job specifications</p> <p>6.3 Pinholes are spotted out with suitable filler and faulty/damaged images are retouched and taped according to ink type and job specifications</p>
7. Store screen	<p>7.1 Prepared screen is labelled according to enterprise specifications</p> <p>7.2 Prepared screen is stored in a clean, dry environment according to manufacturer's/supplier's specifications</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by labelling prepared screens
- collecting, analysing and organising information by selecting the appropriate capillary fill-in according to job specifications
- planning and organising activities by positioning light source prior to exposing the screen
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by cutting capillary fill-in to size according to job specifications
- problem-solving skills by retouching and taping damaged images
- use of technology by using the vacuum frame and other equipment to prepare the stencil.

Required knowledge

- health hazards and what safe working procedures should be in place when degreasing screens
- significance of mesh count
- need to have the correct tension on the screen
- best screen mesh count for the application of a capillary stencil
- chemicals that are used for degreasing screens
- maintenance procedures that are there in place for equipment in the stencil preparation area
- peculiarities of photographic capillary stencils
- type of capillary film to be used
- pollution and environmental concerns that are addressed when working with capillary films
- wetting agents that are used to facilitate the application of the film to the screen
- problems that are caused by dust on the surface of the mesh
- position of film on the screen
- problems that can occur from poor or incorrect mounting techniques
- rectification of problems associated with mounting capillary film
- OHS concerns that are there when exposing stencils
- correct drying distance and drying time
- effects of incorrect drying temperature
- factors that indicate that drying is complete
- need to dry film under safelight conditions
- removal of the backing sheet removed
- function and use of a light integrator
- effect that the position, angle and distance of the light source has on the exposure process
- effect that temperature, pressure and time taken has on the washing out process
- importance of blotting up excess water from the stencil to prevent scum and streaking
- completion of drying
- bearing the ink used and the type of stencil on the type of blackout

- preventive measures that can be taken to prevent pinholes
- need to tape the edge of the frame
- means that the screen is able to be identified at a later date
- maintenance that should be carried out on exposing, washing and drying equipment
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly prepare photographic capillary stencils according to job specifications • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare TWO different screens by applying a capillary stencil and exposing, washing, drying and blocking out according to manufacturer and job specifications, enterprise procedures and the listed performance criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely replicated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work area	1.1. Work area is made clean and functional prior to the commencement of work 1.2. All equipment is inspected to ensure it is functional and where necessary, appropriate remedial action is taken prior to the commencement of work 1.3. Chemicals are prepared, if necessary, according to OHS requirements and manufacturer's/supplier's specifications 1.4. Appropriate <i>coating</i> trough (or troughs for automatic coaters) is selected ensuring they are free of nicks and burrs
2. Prepare the screen	2.1. Screen is selected according to job specifications 2.2. Chemicals are applied and removed according to OHS requirements and manufacturer's/supplier's specifications
3. Select emulsion	3.1. Emulsion is selected according to requirements for ink type, print resolution, substrate, mesh type and machine type with minimisation of waste 3.2. Emulsion is checked for expiry date and appropriate action taken 3.3. Emulsion is prepared according to OHS requirements, and manufacturer's/supplier's specifications 3.4. Emulsion is used and dried according to manufacturer's/supplier's specifications
4. Process material	4.1. Coated screen is positioned on projection frame holder according to manufacturer's/supplier's specifications 4.2. Projection light source equipment is positioned according to manufacturer's/supplier's specifications 4.3. The positive is positioned into the projection light source which is then set up to desired <i>enlargement</i> according to manufacturer's/supplier's specifications 4.4. Exposed screen is removed from positioning frame according to OHS requirements and manufacturer's/supplier's specifications 4.5. Exposed screen is washed out according to OHS requirements and manufacturer's/supplier's specifications 4.6. Processed <i>stencil</i> /screen is inspected for processing

ELEMENT	PERFORMANCE CRITERIA
	flaws
5. Dry stencil	5.1. Processed stencil is dried according to manufacturer's/supplier's specifications 5.2. Backing sheet is carefully removed and stencil checked for full adhesion
6. Block out screen	6.1. Non-image areas of prepared screen are blocked out with filler suitable for ink type and according to job specifications 6.2. Stencil is inspected for flaws, scum and/or orientation 6.3. Pinholes are spotted out with suitable filler and taped according to ink type and job specifications
7. Store screen	7.1. Prepared screen is labelled according to <i>enterprise specifications</i> 7.2. Prepared screen is stored in a clean, dry environment according to manufacturer's/supplier's specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by labelling prepared screens
- collecting, analysing and organising information by drying and using emulsion according to supplier's instructions
- planning and organising activities by preparing the emulsion prior to processing the material
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by correctly preparing chemicals
- problem-solving skills by blocking out non-image areas of the screen and spotting out pinholes
- use of technology by using various items of equipment to prepare direct projection stencils

Required knowledge

- influence that mesh count has on final printed product
- need to have a correctly tensioned screen
- screen tension that is required on screens of various mesh count or grades
- degreasing/cleaning techniques that are employed prior to coating the screen
- information that is contained in MSDSs for the emulsion
- pollution and environmental issues that need to be considered when working with emulsions
- maintenance that is required on the direct projection camera
- need to work in a safelight area when using the direct projection method
- kinds of high sensitivity emulsion that are available and state their characteristics, lifespans and areas of use
- preparation method for the emulsion you are using
- influence that the length of run and ink being used have on the coating technique
- number of coats of emulsion and the best method of coating the screen
- best position (horizontal or vertical) for drying the screen
- effect of heat on the emulsion during the drying process
- OHS concerns that are there when exposing the screen
- operating features of the direct projection camera
- setting the enlargement factor and take into account registration on the frame for the appropriate printing machine
- exposure techniques that are used and how do you calculate exposure time
- exposure procedures

REQUIRED SKILLS AND KNOWLEDGE

- effect of temperature, pressure and period of washing on the emulsion
- determining when washing out is complete
- ideal position of the screen for drying to prevent scum and streaking
- post-curing effect on the stencil
- information that is obtained from the MSDSs for this particular blackout
- ink to be used and the type of stencil that have a bearing on the type of blackout
- what preventive measures can be taken to minimise pinholes?
- need to tape the edge of the frame
- means by which is this screen able to be identified at a later date
- manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents
-

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly prepare direct projection stencils according to job specifications • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare TWO different screens using the direct projection method according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely replicated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the work area	1.1. Work area is made clean and functional prior to the commencement of work 1.2. All equipment is inspected to ensure it is functional and where necessary, appropriate remedial action is taken prior to the commencement of work 1.3. Chemicals are prepared, if necessary, according to OHS requirements and manufacturer's/supplier's specifications 1.4. Appropriate <i>coating</i> trough (or troughs for automatic coaters) is selected ensuring they are free of nicks and burrs
2. Prepare the screen	2.1. Screen is selected according to job specifications 2.2. Chemicals are applied and removed according to OHS requirements and manufacturer's/supplier's specifications
3. Select direct emulsion	3.1. Emulsion is selected according to requirements for ink type, print resolution, substrate, mesh type and machine type with minimisation of waste 3.2. Emulsion is checked for expiry date and appropriate action taken 3.3. Emulsion is prepared according to OHS requirements, and manufacturer's/supplier's specifications 3.4. Emulsion is used and dried according to manufacturer's/supplier's specifications
4. Process material	4.1. Coated screen is placed in direct imaging equipment according to manufacturer's/supplier's specifications 4.2. Direct imaging equipment is set up according to manufacturer's/supplier's and job specifications 4.3. Direct imaging equipment is operated according to OHS requirements, and manufacturer's/supplier's specifications 4.4. Exposed screen is removed and washed out according to OHS requirements and manufacturer's/supplier's specifications 4.5. Processed <i>stencil</i> /screen is inspected for processing flaws
5. Dry stencil	5.1. Processed stencil is dried according to manufacturer's/supplier's specifications 5.2. Backing sheet is carefully removed and stencil

ELEMENT	PERFORMANCE CRITERIA
	checked for full adhesion
6. Block out screen	6.1. Non-image areas of prepared screen are blocked out with filler suitable for ink type and according to job specifications 6.2. Stencil is inspected for flaws, scum and/or orientation 6.3. Pinholes are spotted out with suitable filler and taped according to ink type and job specifications
7. Store screen	7.1. Prepared screen is labelled according to <i>enterprise specifications</i> 7.2. Prepared screen is stored in a clean, dry environment according to manufacturer's/supplier's specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by labelling prepared screens
- collecting, analysing and organising information by drying and using emulsion according to supplier's instructions
- planning and organising activities by drying the stencil prior to blocking out the screen
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by correctly preparing chemicals
- problem-solving skills by inspecting the stencil for flaws, scum and/or orientation
- use of technology by using relevant equipment to prepare direct electronically imaged stencils

Required knowledge

- influence that mesh count has on final printed product
- need to have a correctly tensioned screen
- screen tension that is required on screens of various mesh count or grades
- degreasing/cleaning techniques that are employed prior to coating the screen
- information that is contained in MSDSs for the emulsion
- pollution and environmental issues that need to be considered when working with emulsions
- maintenance that is required on the direct projection camera
- need to work in a safelight area when using the direct projection method
- kinds of high sensitivity emulsion that are available and state their characteristics, lifespans and areas of use
- preparation method for the emulsion you are using
- influence that the length of run and ink being used have on the coating technique
- number of coats of emulsion and the best method of coating the screen
- best position (horizontal or vertical) for drying the screen
- effect of heat on the emulsion during the drying process
- OHS concerns that are there when exposing the screen
- operating features of the direct projection camera
- best position on the frame and the registration requirements
- scanning speed and the exposure time
- inputting information into the computer, manipulation of the image and output information

REQUIRED SKILLS AND KNOWLEDGE

- effect of temperature, pressure and period of washing on the emulsion
- determining when washing out is complete
- ideal position of the screen for drying to prevent scum and streaking
- post-curing effect on the stencil
- information that is obtained from the MSDSs for this particular blackout
- ink to be used and the type of stencil that have a bearing on the type of blackout
- what preventive measures can be taken to minimise pinholes?
- need to tape the edge of the frame
- means by which is this screen able to be identified at a later date
- manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • correctly prepare direct electronically imaged stencils according to job specifications • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare TWO different screens using direct electronic imaging techniques according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely replicated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Coating techniques</i> may include:	<ul style="list-style-type: none"> appropriate coating techniques for various emulsions, mesh types and edge definition requirements.
<i>Type of stencil materials</i> may include:	<ul style="list-style-type: none"> direct emulsion commonly used in direct projection relative to the industry sector.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> tasks must be performed according to enterprise procedures.
<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> working to defined procedures in consultation with other relevant persons to ensure production procedures are met.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect the screen	1.1. Screen frames are identified to determine colour sequence 1.2. Each screen frame is examined for defects and appropriate action taken 1.3. Each screen is taped as necessary 1.4. Screens are inspected against film positives noting variations in centring, registration and alignment and appropriate action is taken 1.5. Screen frame, mesh and stencil are appropriately handled according to manufacturer's/supplier's specifications to prevent damage and hazards to personnel
2. Maintain and adjust machine	2.1. Machine is inspected and routine user maintenance is carried out according to manufacturer's/supplier's specifications and enterprise procedures 2.2. All necessary periodic adjustments and user maintenance items are made at the correct times according to manufacturer's /supplier's specifications and enterprise procedures
3. Install screen frames and dry run machine	3.1. Laysheet is positioned in grippers and side-lay according to manufacturer's/supplier's specifications 3.2. Image position is established on laysheet 3.3. Screen frame is positioned in screen frame holder 3.4. Registration, alignment and centring are confirmed and screen clamps tightened to ensure no movement of the frame according to manufacturer's/supplier's specifications 3.5. Machine is run through printing cycle at the same time ensuring that substrate registers in lays and appropriate action is taken
4. Prepare and position flood bar and squeegees	4.1. Flood bar (for semi-automatic and automatic machines) and correct squeegee are assembled according to manufacturer's/supplier's specifications ensuring that flood bar is free from nicks and burrs 4.2. Squeegee blade is sharpened according to manufacturer's/supplier's specifications considering the ink system to be used 4.3. Flood bar (for semi-automatic and automatic machines) and squeegee are positioned according to job specifications with squeegee at the correct

ELEMENT	PERFORMANCE CRITERIA
	pre-determined angle 4.4. On/off contact (and peel-off if available) is adjusted to suit ink system and printing speed according to manufacturer's/supplier's specifications 4.5. Squeegee is correctly adjusted and brought into contact with the substrate
5. Set up drying/curing unit	5.1. Belt speed and energy required are set to achieve desired properties and then printing speeds are adjusted to suit 5.2. Stock is properly stacked at the end of the dryer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by taking relevant appropriate actions when screen defects are identified
- collecting, analysing and organising information by identifying screen frames to determine colour sequence
- planning and organising activities by inspecting the screens before installing the frames
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by setting belt speed and energy levels
- problem-solving skills by inspecting machines and performing basic maintenance
- use of technology by maintaining and adjusting the machines

Required knowledge

- colour sequence
- defects that can be found when examining the screen and stencil
- variation between the positive and stencil
- OHS concerns that are there when using drying and curing units
- maintenance that is required on this equipment
- periodic adjustments that are made to the equipment and drying/curing units
- machine capabilities and characteristics
- function of the printing base
- position of the lay sheet on the printing base
- image position on the lay sheet
- type of lay sheet being used
- position of the frame in the frame holder and registering and alignment of the stencil with the image on the lay sheet
- checks that are required so as to maintain register
- characteristics of a good squeegee blade/flood coater
- significance of shore hardness of squeegee material
- length squeegee/flood coater
- positioning, fixing and adjustment of the squeegee/flood coater
- relationship of the squeegee to the flood coater
- adjustment of on/off contact distance and peel-off requirements of the screen frame
- relationship of the machine stroke to off contact/peel-off requirements
- basic maintenance requirements for the drying/curing unit

REQUIRED SKILLS AND KNOWLEDGE

- adjustments that are required to the unit before and during drying/curing
- adjustment to the unit for ink drying/curing
- effects of temperature on the substrate
- machine manuals, safety and other documentation that are relevant to this task and where they are kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Load substrate	1.1.Substrate is checked for conformance to job specifications with any irregularities reported and/or rectified 1.2.Substrate position and stencil registration are adjusted according to job specifications
2. Apply ink to screen	2.1.Ink is applied to the screen in the quantity required for the screen size 2.2.Equipment is kept clean and spillage is minimised 2.3.Colour is mixed and ink is checked for conformance to job specifications
3. Produce proof print	3.1.Proof print is run off and checked for colour, strength, registration, adhesion, clarity, gloss level, drying/curing , artwork detail and other technical aspects according to job specifications 3.2.Adjustments are made as required 3.3. Appropriate approval to commence production is sought prior to commencement 3.4.Belt speed and energy required are set to achieve desired properties
4. Run job and monitor print quality	4.1.Printing speed production is adjusted to maximise quality and output 4.2.Print quality is continuously evaluated and adjusted as required 4.3.Effects of ink alterations during run are monitored and appropriate action taken according to manufacturer's/supplier's and job specifications 4.4.Workplace documentation on job is completed as required 4.5.Curing and drying are constantly monitored and adjusted according to manufacturer's/supplier's and job specifications
5. Carry out routine user maintenance	5.1.Equipment is lubricated, cleaned and adjusted according to manufacturer's/supplier's specifications 5.2.Fault conditions are identified and reported according to enterprise procedures
6. Stack production output	6.1.Output is checked for thorough drying/curing before stacking 6.2.Job status and progress are checked for conformance to job specifications and any necessary action is taken

ELEMENT	PERFORMANCE CRITERIA
7. Finish operation	7.1.Excess ink, screens, squeegees and flood coaters are removed and cleaned according to OHS requirements and manufacturer's/supplier's specifications 7.2.Waste materials are disposed of according to manufacturer's/supplier's specifications, regulatory requirements and enterprise procedures 7.3.Equipment and surrounding areas are cleaned according to manufacturer's/supplier's specifications and enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by completing workplace documentation
- collecting, analysing and organising information by checking substrate for conformance to job specifications
- planning and organising activities by producing a proof print prior to doing the job run
- teamwork when seeking approval prior to commencement of the job run
- mathematical ideas and techniques by setting the belt speed and required energy
- problem-solving skills by continuously evaluating and adjusting print quality
- use of technology by using the various equipment and machinery required to produce prints

Required knowledge

- criteria for selecting the correct substrate for the job
- ink and substrate compatibility
- characteristics of solvents and ink additives and determining compatibility
- adjustments necessary on the equipment prior to setting up
- routine user maintenance that is required for this equipment
- method that is used for checking the screen, ink, substrate and squeegee prior to printing
- maintenance that is required on the printing base
- lay edge on the equipment
- correct position, register and lock of the screen in position
- selection of squeegee to be use
- off contact distance
- selection of drying/curing system to print/cure this job
- speed/temperature of the unit
- routine maintenance that is required on this unit
- OHS concerns that are there when producing a manual print
- need to condition some substrates
- correct viscosity of ink
- rectification of the problem of alteration to ink viscosity during the run
- evaluation and maintenance of print quality during the run
- ideal printing rate on this equipment
- procedure that you have for checking and stacking production output

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• correct procedure for removing ink without damaging the screen• correct method of cleaning squeegees, equipment and the surrounding area• manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents• other sources of information that are available |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by obtaining approval to commence a production run
- collecting, analysing and organising information by checking the substrate for conformance to the job specifications
- planning and organising activities by producing a proof print prior to running a job
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by setting the belt speed and required energy
- problem-solving skills by continuously evaluating and adjusting print quality
- use of technology by using semi-automatic and computerised machines to produce screen prints

Required knowledge

- criteria for selecting the correct substrate for the job
- ink and substrate compatibility
- characteristics of solvents and ink additives and determining compatibility
- adjustments that are necessary to the machine prior to setting up
- maintenance that is required on this machine prior to the commencement of printing
- procedure that you use for checking the screen sequence of colours, ink, substrate and squeegee/flood coater prior to printing
- function of the printing base and maintenance that is required
- determining the lay edge and gripper/take-off edge of the substrate
- correct positioning, registering and locking the screen in position
- selection of the squeegee/shore hardness and flood coater to be used
- need to adjust the off contact/peel-off requirements of the screen
- OHS requirements when working with infra red/UV curing units
- speed/temperature of the unit
- routine maintenance that is required on this unit
- OHS concerns that are there when using a semi-automatic machine
- effect that humidity level has on print procedure
- correct viscosity of the ink prior to printing
- rectification of the change in the viscosity of the ink during a production run
- evaluation and maintenance of the print quality during the run
- ideal printing rate for this substrate on this machine

REQUIRED SKILLS AND KNOWLEDGE

- stacking of production output (ie flat or on-edge)
- effect that environmental conditions have on output capacity
- need to determine the exact count and to record production details on the job sheet
- health hazards associated with inks and solvents
- correct procedure for removing ink without damaging the screen
- correct method of cleaning squeegees/flood coater machine and surrounding area
- maintenance that is required on this machine after printing
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce a complex print of more than two colours containing line and tone using a semi-automatic machine according to job specifications demonstrate use of computerised control, monitoring and data entry systems if available and appropriate demonstrate an ability to find and use information relevant to the task from a variety of information sources produce a complex print of more than two colours containing line and tone using a semi-automatic machine according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely replicated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	<p>1.1. Substrate is checked for conformance to job specifications with any irregularities reported and/or rectified</p> <p>1.2. Ink is checked for conformance to job specifications</p> <p>1.3. Stencil is checked for conformance to job specifications</p>
2. Prepare machine to print	<p>2.1. Substrate position and stencil registration are adjusted according to job specifications</p> <p>2.2. Ink is applied to the screen in the quantity required for the screen size</p> <p>2.3. Equipment is kept clean and spillage is minimised</p>
3. Produce proof print	<p>3.1. A proof print is run off and checked for colour, strength, registration, adhesion, clarity, gloss level, drying/curing, artwork detail and other technical aspects according to job specifications</p> <p>3.2. Adjustments are made according to product and machine specifications</p> <p>3.3. Belt speed and energy required are set to achieve desired curing or drying properties</p> <p>3.4. Appropriate approval to commence production is sought prior to commencement</p>
4. Run job and monitor print quality	<p>4.1. Printing speed production is adjusted to maximise quality and output</p> <p>4.2. Print quality is continuously evaluated and adjusted as required</p> <p>4.3. Effects of ink alterations during run are monitored and any discrepancy is notified according to enterprise procedures</p> <p>4.4. Workplace documentation on job is completed as required</p> <p>4.5. Curing and drying are constantly monitored and adjusted according to manufacturer's/supplier's and job specifications</p>
5. Carry out routine user maintenance	<p>5.1. Equipment is cleaned according to enterprise procedures</p> <p>5.2. Fault conditions are identified and reported according to enterprise procedures</p>
6. Stack production output	<p>6.1. Output is checked for thorough drying/curing before stacking</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>6.2. Job identification is labelled and recorded</p> <p>6.3. Job status and progress are checked for conformance to job specifications and any necessary action is taken</p>
<p>7. Conduct shutdown of the production process</p>	<p>7.1. Material is transferred to correct destination in a safe manner</p> <p>7.2. Excess ink, screens, squeegees and flood coaters are removed and cleaned according to OHS requirements and manufacturer's/supplier's specifications</p> <p>7.3. Waste materials and chemicals are disposed of according to manufacturer's/supplier's specifications, regulatory requirements and enterprise procedures</p> <p>7.4. Equipment and surrounding areas are cleaned according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>7.5. Tools and equipment are stored and maintained according to manufacturer's specifications to ensure ease of access and operator safety</p> <p>7.6. The correct procedure for dealing with spilt chemicals is demonstrated according to OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by completing workplace documentation
- collecting, analysing and organising information by checking technical aspects of the proof print
- planning and organising activities by organising materials and equipment in the correct order for the print run
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by making adjustments according to product and machine specifications
- problem-solving skills by applying procedural checks throughout the print run
- use of technology by using semi-automatic screen printing machines

Required knowledge

- process for recording and reporting any substrate irregularities
- process for checking for ink compatibility
- criteria to be used to check the stencil compatibility
- limitations when setting the substrate position
- precautions when applying ink to the screen
- products and materials that are used to keep the equipment clean
- OHS concerns when producing a semi-automatic print
- quality control devices that are used to check the print standards
- variables/tolerances needing to be aware of when checking the print to the proof
- relationship between ink film thickness and ink density
- maximum and minimum ink densities permissible
- properties that determine belt speed
- properties that determine heat unit setting for curing
- final approval before commencing the production run
- quality inspection during printing
- regularity of inspecting for quality
- monitoring ink during the print run
- purpose of workplace documentation
- OHS concerns in relationship to monitoring drying/curing systems?
- maintenance that should be carried out on this machine
- expected result of not reporting faulty equipment
- result of stacking while the ink film is still wet

REQUIRED SKILLS AND KNOWLEDGE

- advantages of labelling prior to removal
- result of not taking action if problems occur with the progress of the job
- advantages that result from proper labelling and storage of excess inks and materials
- OHS practices that must be adhered to when reclaiming screens
- result of not keeping screens and squeegees clean
- result of not following correct procedures when disposing of liquid waste
- result of not keeping equipment and surrounding areas clean
- storing screens to minimise damage
- documentation dealing with spilt chemicals

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • set up screen printing machinery and produce a print on a range of common substrates using semi-automatic equipment according to job specifications • complete TWO different jobs on a semi- automatic machine according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment • access to appropriate equipment and materials.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICPSU203C Prepare and maintain the work area • ICPSU216C Inspect quality against required standards • ICPSU261C Follow OHS practices and identify environmental hazards • any basic set up unit.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate</i> may include:	<ul style="list-style-type: none"> material or substance that will hold an image.
<i>Job specifications</i> may include:	<ul style="list-style-type: none"> job sheets, work tickets or processing orders.
<i>Drying/curing</i> may include:	<ul style="list-style-type: none"> semi-automatic drying systems commonly used in industry sector.
<i>Appropriate approval</i> may include:	<ul style="list-style-type: none"> enterprise or client approval from supervising personnel.
<i>Workplace documentation</i> may include:	<ul style="list-style-type: none"> enterprise procedural documents.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Load substrate	1.1. Substrate is checked for conformance to job specifications with any irregularities reported and/or rectified 1.2. Substrate position and stencil registration are adjusted according to job specifications
2. Apply ink to screen	2.1. Ink is applied to the screen in the quantity required for the screen size 2.2. Equipment is kept clean and spillage is minimised 2.3. Colour is mixed and ink is checked for conformance to job specifications 2.4. Feeder is set and adjusted to suit substrate
3. Produce proof print	3.1. Proof print is run off and checked for colour, strength, registration, adhesion, clarity, gloss level, drying/curing , artwork detail and other technical aspects according to job specifications 3.2. Adjustments are made according to product and machine specifications 3.3. Appropriate approval to commence production is sought prior to commencement 3.4. Belt speed and energy required are set to achieve desired properties and then printing speeds are adjusted to suit
4. Run job and monitor print quality	4.1. Printing speed production is adjusted to maximise quality and output 4.2. Print quality is continuously evaluated and adjusted as required 4.3. Effects of ink alterations during run are monitored and appropriate action taken according to manufacturer's/supplier's and job specifications 4.4. Workplace documentation on job is completed as required 4.5. Curing and drying are constantly monitored and adjusted according to manufacturer's/supplier's and job specifications
5. Carry out routine user maintenance	5.1. Equipment is lubricated, cleaned and adjusted according to manufacturer's/supplier's specifications 5.2. Fault conditions are identified and reported according to enterprise procedures
6. Handle production	6.1. Output is checked for thorough drying/curing before

ELEMENT	PERFORMANCE CRITERIA
output	stacking 6.2. Job status and progress are checked for conformance to job specifications and any necessary action is taken
7. Shut down machine	7.1. Excess ink, screens, squeegees and flood coaters are removed and cleaned according to OHS requirements and manufacturer's/supplier's specifications 7.2. Waste materials are disposed of according to manufacturer's/supplier's specifications, regulatory requirements and enterprise procedures 7.3. Equipment and surrounding areas are cleaned according to manufacturer's/supplier's specifications and enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by gaining approval to commence a production run
- collecting, analysing and organising information by checking job status and progress according to job specifications
- planning and organising activities by following machine shutdown procedures
- teamwork when completing workplace documentation as required
- mathematical ideas and techniques by adjusting print speed to maximise quality
- problem-solving skills by monitoring and responding to the effect of ink alterations
- use of technology by operating automatic and computerised screen printing machines

Required knowledge

- adjustments that are necessary to the machine prior to setting up
- maintenance that is required on the machine and feeder prior to the commencement of printing
- adjustments that need to be made to the machine/feeder to allow for characteristics of the substrate
- procedure that is in place to confirm the screen sequence of colour, ink, substrate and squeegee/flood coater prior to printing
- system for setting the feed board and loading substrate
- need to prepare substrate or item when loading the feeder
- adjustment of the stock feed system for this machine
- system that is in place to check the substrate is fed into the machine at the required production speed without damage, distortion or variation in position
- criteria for selecting the right substrate for the job
- ink and substrate compatibility
- characteristics of solvents and ink additives and compatibility to this ink system
- correctly positioning, registering and the screen locking into position
- positioning the squeegee/flood coater
- adjustment of the on/off contact/peel-off requirements of the frame
- shore hardness of the squeegee blade and why have you chosen it
- relationship between ink deposit, squeegee speed and belt speed/temperature of the drying/curing unit
- OHS requirements when working with infra-red/UV curing units
- routine maintenance you undertake on this drying/curing unit

REQUIRED SKILLS AND KNOWLEDGE

- ink drying/ink curing characteristics
- OHS concerns that are there when using an automatic machine
- assessment of to colour to ensure it conforms to job specifications
- check made on the initial proof run before continuing
- evaluation of print quality and substrate feeding during the run
- ideal printing speed for this substrate on this machine
- effect of humidity on the substrate
- maintenance of the correct viscosity of ink during the run
- ways to determine if print is dried/cured before handling
- production output handling to prevent offsetting of ink, blocking, sweating or rewetting of ink
- effect that weather conditions could have on output capacity
- need to determine the exact count and to record production details on the job sheet
- health hazards associated with ink/solvents
- correct procedure for removing the ink without damaging the screen
- correct method of cleaning squeegees/flood coaters, machine and surrounding area
- maintenance that is required on this machine after printing is completed
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> produce a complex print of more than two colours containing line and tone using an automatic machine according to job specifications demonstrate an ability to find and use information relevant to the task from a variety of information sources produce a complex print of more than two colours containing line and tone using an automatic machine according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria demonstrate use of computerised control, monitoring and data entry systems if available and appropriate for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely replicated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Drying/curing units</i> may include:	<ul style="list-style-type: none"> drying systems commonly used and relative to the industry sector.
<i>Type of machine</i> may include:	<ul style="list-style-type: none"> automatic and computerised screen printing machines with three or more colours relative to the industry sector.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.
<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> initiative and judgement in working in consultation with other persons to ensure production requirements are met.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> tasks must be performed according to enterprise procedures.

Waste materials are disposed of according to manufacturer's/supplier's specifications, regulatory requirements and enterprise procedures</p> <p>7.4. Equipment and surrounding areas are cleaned according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>7.5. Tools and equipment are stored and maintained according to manufacturer's specifications to ensure ease of access and operator safety</p> <p>7.6. The correct procedure for dealing with spilt chemicals is demonstrated according to OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by seeking appropriate approval to commence production
- collecting, analysing and organising information by checking technical aspects of the proof print
- planning and organising activities by organising materials and equipment in the correct order for the print run
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by making adjustments according to product and machine specifications
- problem-solving skills by monitoring and responding to the effect of ink alterations
- use of technology by operating automatic screen printing machines

Required knowledge

- process of recording and reporting any substrate irregularities
- checks for ink compatibility
- criteria used to check the stencil compatibility
- limitations that you have when setting the substrate position
- precautions that need to be undertaken when applying ink to the screen
- products and materials that are used to keep the equipment clean
- OHS concerns that are there when producing an automated print run
- quality control devices that are used to check the print standards
- variables/tolerances that you need to be aware of when checking the print to the proof
- relationship between ink film thickness and ink density
- maximum and minimum ink densities permissible
- properties that determine belt speed
- properties that determine heat unit setting for curing
- responsibility for the final approval before commencing the production run
- quality inspection that occurs during printing
- frequency of inspections for quality
- ink monitoring during the print run
- purpose of workplace documentations
- OHS concerns that are there in relationship to monitoring drying/curing systems
- maintenance that should be carried out on this machine

REQUIRED SKILLS AND KNOWLEDGE

- expected result of not reporting faulty equipment
- result of stacking while the ink film is still wet
- advantages of labelling prior to removal
- result of not taking action if problems occur with the progress of the job?
- advantages that result from proper labelling and storage of excess inks and materials
- OHS practices that must be adhered to when reclaiming screens
- result of not keeping screens and squeegees clean
- result of not following correct procedures when disposing of liquid waste
- result of not keeping equipment and surrounding areas clean
- storage of screens so as to minimise damage
- location of documentation dealing with spilt chemicals

Evidence Guide

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for scanning	<p>1.1. The original is scaled to conform to job specifications</p> <p>1.2. The original is assessed to determine scanner settings</p> <p>1.3. The original is cleaned and correctly mounted according to job specifications</p> <p>1.4. The correct settings are selected for the original to be scanned</p>
2. Scan and check the image	<p>2.1. The original is scanned according to quality requirements</p> <p>2.2. The quality of the scanned image is checked for conformance to the job specifications</p> <p>2.3. The appropriate software is applied for any processing of text if necessary</p>
3. Prepare the combining strategy	<p>3.1. The required data from electronic files is accessed</p> <p>3.2. The appropriate application is opened to undertake combining tasks</p> <p>3.3. The required fonts are accessed according to job specifications</p>
4. Combine data	<p>4.1. Page layout size is created according to job specifications</p> <p>4.2. Elements are placed in the page according to job specifications</p> <p>4.3. Trapping (spread and chokes) is applied according to job specifications</p> <p>4.4. Step and repeat function is accessed according to job specifications</p> <p>4.5. Elements are stepped according to job specifications</p> <p>4.6. The output menu is configured according to job specifications</p>
5. Access and maintain the output device	<p>5.1. Output devices are set up and maintained according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>5.2. Suitable material is identified and loaded into the output device</p>
6. Output the image	<p>6.1. The system is activated to initiate the output according to job specifications</p> <p>6.2. Quality is monitored according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting the job specifications
- collecting, analysing and organising information by scanning the image and combining it with data
- planning and organising activities by preparing the correct sequence of operations for the combining tasks
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by working with layout size during combining data
- problem-solving skills by maintaining quality standards during the production process
- use of technology by using relevant hardware and software to produce computer images for screen printing

Required knowledge

- tolerance that is allowed when scaling the original
- common scanner DPI for graphic line images
- use of original angling
- resolution that is used for optical character recognition in scanning
- format that the scan is saved in
- retaining format when OCR scanning
- access to external files
- most appropriate software for this combining task
- procedure if required files are not readily accessible
- responsibility for determines the page layout size
- type of elements that can be used
- application of trapping
- amount of step and repeats in a job
- first step in configuring the output menu
- type of output devices used in screen printing
- range of substrates that are used in output devices
- filing the file prior to the output device
- checks made of techniques used to maintain quality standards

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • scan, electronically combine and attribute outputs to designated devices according to job specifications and client standards • produce TWO separate images on film and /or stencil according to manufacturer's and job specifications, enterprise procedures and the listed Performance Criteria • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both of these. Off the job assessment must be undertaken in a closely simulated workplace environment • access to appropriate equipment and materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • directquestioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Original</i> may include:	<ul style="list-style-type: none"> line graphic or text.
<i>Job specifications</i> may include:	<ul style="list-style-type: none"> job sheets, work tickets or processing orders.
<i>Elements</i> may include:	<ul style="list-style-type: none"> text, headings, rules, pictures, graphics, tints, vignettes, components and shapes.
<i>Material</i> may include:	<ul style="list-style-type: none"> electronic storage, film, papers, fabric or other substrates.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. <i>Image specifications</i> are checked according to job specifications and enterprise procedures 1.2. Orientation is checked for conformance to job specifications and adjusted if required 1.3. Resolution/dpi is determined for template creation
2. Prepare and operate equipment	2.1. <i>Scanner</i> /computer is selected, turned on and scanner glass cleaned 2.2. Scanner software is selected/opened and correct settings made according to job requirements 2.3. Previews are made, image is selected, finished scan completed and image adjusted as required 2.4. Image format is determined and saved to a storage device
3. Select Imaging software	3.1. Software is selected, scan is opened and separations are produced on individual layers according to job specifications 3.2. Colours are excluded as required on separation layers 3.3. Stroke is applied for bleed according to printing equipment 3.4. Separation layers are coloured for specific raster image processor (RIP) software 3.5. Image format is determined according to RIP software requirements 3.6. Supplied finished artwork/separation is checked for output capability
4. Select and operate an appropriate output device producing film separations to an industry standard and ready for screen manufacture	4.1. Imagesetter/dye printer is selected, turned on and checked, and heads cleaned prior to outputting images 4.2. RIP software is selected and opened, and software settings checked and set according to output specifications 4.3. Nesting is checked to ensure non-wastage of film 4.4. Image is output and evaluated to ensure it conforms to job specifications and measuring, including checking with a reflection densitometer valve 4.5. Film is handled according to manufacturer's specifications 4.6. Output device is closed down according to manufacturer's recommendations

ELEMENT	PERFORMANCE CRITERIA
5. Access the requirements of particular production exercise in order to meet the process and job specification	5.1. Requirements of the printing process and job specification are assessed 5.2. The quality of job <i>elements</i> , including resolution/dpi is specified according to client requirements 5.3. Films, dye cartridges, their qualities and process requirements are determined 5.4. Stock levels are checked and maintained according to job specifications 5.5. Copy is checked and assessed according to job specifications
6. Prepare and operate equipment able to produce film separations	6.1. Scanner/computer is selected and artwork/copy is placed squarely in the scanner 6.2. Scanner software is selected/opened and correct settings are made according to job requirements 6.3. Previews are made, images selected, finished scan completed and image adjusted as required 6.4. Image format is determined and saved to a storage device
7. Select and use appropriate imaging software	7.1. Software is selected, scan opened and, using layers and software tools as required, separations are provided on individual layers according to job specifications 7.2. Colours are excluded as required on separation layers 7.3. Separate layers are coloured for specific RIP software requirements 7.4. Image/layers or separations are manually nested, if required, in accordance with film output device size 7.5. Image format is determined according to RIP software requirements and saved to storage device 7.6. Supplied finished artwork/separations is checked for output suitability

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- occupational health and safety (OHS) skills for operating machinery, such as safely switching off machinery before cleaning is started
- communication skills for expressing ideas and information and interpreting the brief and job specifications
- planning, collecting, analysing and organising skills for drawing correct design area to include elements according to job specifications
- numeracy skills for calculating the required magnification before operating the equipment
- teamwork skills for maintaining the production process in association with others
- problem-solving skills for implementing required quality controls to ensure job specifications are met
- technical skills for using the equipment necessary to prepare film for screen printing

Required knowledge

- job requirements:
 - image specifications
 - orientation
 - resolutions/dpi
 - substrate and use of product
 - finished size and image location
 - location of printer marks, registration crosses and colour identification
 - image detail, screen ruling related to substrate
 - ink type and equipment available
- preparation and operation of equipment:
 - scanner settings
 - image brightness/contrast
 - file format
 - type of software
 - image/scan and quality adjustment
- output device:
 - checks and maintenance to be performed on an imagesetter/dye printer
 - RIP software settings to be checked prior to ripping
 - output film
 - measuring the halftone value on the film separation

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• techniques for handling film before and after separations• imagesetter/dye printer ability to provide quality separations• RIP software settings• image format• output suitability of artwork• output device• nesting of film separations• techniques for handling film according to manufacturer's specifications |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> produce films according to job specification and client standards prepare film for two different jobs involving a variety of image effects, according to manufacturer's and job specifications and enterprise procedures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> that conditions are typical ambient conditions found in the workplace access to relevant facilities, equipment required to prepare film for screen printing use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> portfolios of evidence and third party workplace reports of on-the-job performance by the candidate practical demonstration by the candidate in preparing film for screen printing ready for production direct questioning of underpinning knowledge required to prepare for screen printing and OHS issues.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector. Evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.</p> <p>For valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Image specifications</i> may include:	<ul style="list-style-type: none"> • screen rulings • dot percentages • image thickness/film assessment.
<i>Scanner</i> may include:	<ul style="list-style-type: none"> • flat-bed • drum scanners with medium to high-end full colour capabilities.
<i>Elements</i> may include:	<ul style="list-style-type: none"> • text • headings • rules • components and shapes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess final product	<p>1.1. Finished job is collected/received and checked against job specifications according to <i>enterprise procedures</i></p> <p>1.2. Defects, irregularities and discrepancies are identified and action taken according to enterprise procedures</p> <p>1.3. Fanning, knock up and splitting of <i>product</i> is performed safely and efficiently to ensure ease of use in next stage</p>
2. Pack product	<p>2.1. Wrapping and <i>packaging</i> materials are prepared according to enterprise procedures</p> <p>2.2. Product is packaged to specification</p> <p>2.3. Packaged goods are checked, weighed and labelled according to delivery instructions and enterprise procedures</p>
3. Prepare stock for next phase	<p>3.1. Product is stacked onto pallets in a predetermined pattern that will stop the product falling or being damaged</p> <p>3.2. If required, the pallet is wrapped and moved safely to another location in predetermined form as appropriate to product size and type</p> <p>3.3. Documentation associated with tasks is accurately completed according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- collecting, analysing and organising information by collecting/receiving and checking finished job against job specifications
- problem-solving skills by identifying defects, irregularities and discrepancies and taking action according to enterprise procedures
- communication of ideas and information by labelling packaged goods according to enterprise procedures
- planning and organising activities by performing safely and efficiently fanning, knock up and splitting of product to ensure ease of use in next stage
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by checking and weighing packaged goods
- use of technology by using pallet wrapping equipment

Required knowledge

- wrapping and packing materials and methods
- OHS regulations on packaged goods
- type of packaging determined
- type of transport or destination have a bearing on the wrapping and packing method
- number of units to be wrapped in each parcel
- details need to be recorded on dispatching labels, and why
- recorded of details when dispatching
- shipping documentation

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare and pack TWO lots of printed or other paper product following correct procedures, job and workplace specifications and the listed Performance Criteria • demonstrate an ability to find and use information relevant to the task from a variety of information sources • product is correctly packed and labelled where necessary with no damage occurring to product due to packing • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • resources and product to pack.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
<i>Product types</i> may include:	<ul style="list-style-type: none"> range of products within the major categories of mail, security mail, paper, pressure sensitive material, board, corrugated board, plastics and related films.
<i>Packaging techniques</i> may include:	<ul style="list-style-type: none"> various methods and equipment used in wrapping and packing of printed and printing related products.
<i>Chemical type</i> may include:	<ul style="list-style-type: none"> chemicals and solvents commonly used for the reclamation of screens.
<i>Type of inspection</i> may include:	<ul style="list-style-type: none"> various types of inspection techniques (i.e. 100%, random, periodic or continuous in-line inspection).
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare reels and cores	<p>1.1. Faulty material is visually identified and removed according to enterprise procedures</p> <p>1.2. <i>Substrate</i> is positioned in correct unwind direction</p> <p>1.3. Substrate is spliced/joined according to job requirements</p> <p>1.4. Reel cores are selected or prepared to meet OHS requirements and job specifications</p>
2. Load reels and cores onto machine	<p>2.1. Reels are loaded according to OHS requirements and manufacturer's and enterprise procedures and specifications</p> <p>2.2. Reel cores are loaded to meet job specifications</p> <p>2.3. Area around machine is cleaned during and on completion of loading</p>
3. Unload reels off machine	<p>3.1. Reels are unloaded according to OHS requirements and manufacturer's and enterprise procedures and specifications</p> <p>3.2. Reels are prepared (stripped, stacked, wrapped, labelled) for next process according to manufacturer's and enterprise procedures and specifications</p> <p>3.3. Reels are stored according to manufacturer's and enterprise procedures and specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by working with the printer to ensure that reels are suitably prepared and brought to the production process
- collecting, analysing and organising information by identifying faulty material
- planning and organising activities by preparing and loading reels
- teamwork when working with printer to ensure that correct reels are loaded when needed to ensure efficient production
- mathematical ideas and techniques by calculating weights of reels to ensure correct and safe handling; and calculating paper use to ensure timely delivery and loading of new reels
- problem-solving skills by preparing reels for the next process
- use of technology by loading and unloading reels and cores on and off the machine according to manufacturer's specifications

Required knowledge

- all nip points, guards and safety devices on the machine
- potential dangers at these points
- characteristics of reels
- information that can be obtained from the reel label
- methods that could be used to identify reel grain direction
- faulty reels and cores
- features that would indicate that a reel is faulty
- techniques that could be used to combat distorted reels
- techniques that could be used to combat distorted cores
- manual handling of reels
- OHS concerns related to the manual handling of reels
- preparing and loading selected reels
- position of the reels on the unwind unit
- techniques that could be used to join reels to the web
- unloading reels off the machine for further processing
- OHS concerns related to the unloading of reels off the machine
- faults that could be created by reels being unloaded incorrectly
- preparations that need to be considered for the next operation
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify all stop and safety controls on the machine • the individual will correctly load and unload reels and cores on and off machines whilst maintaining OHS standards • prepare, load and unload at least TWO wide OR narrow reels and cores demonstrating BOTH manual and EITHER semi-automatic OR automatic splicing, according to job specifications and listed performance criteria. BOTH tapes AND adhesive splicing mechanisms must be demonstrated • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • printing or converting machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • this unit may be assessed at the same time as virtually any printing or converting, binding and finishing or corrugating set up unit.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Range of machines</i> may include:	<ul style="list-style-type: none"> range of printing, converting, binding and finishing, corrugating and laminating machines.
<i>Substrate delivery</i> may include:	<ul style="list-style-type: none"> wide and narrow reel delivery systems.
<i>Splicing medium</i> may include:	<ul style="list-style-type: none"> splicing tapes and adhesives.
<i>Substrate preparation</i> may include:	<ul style="list-style-type: none"> manual, semi-automatic and automatic zero speed or flying splicing mechanisms and a range of splicing patterns.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare product	1.1. Job sheets or equivalent are interpreted correctly 1.2. Product is located and prepared to meet job specifications 1.3. Product is positioned correctly to the machine to meet job specifications 1.4. Faulty product is visually identified and removed according to OHS requirements and enterprise procedures
2. Load product onto machine	2.1. Product is loaded according to OHS requirements and manufacturer's and enterprise procedures and specifications 2.2. Area around machine is cleaned during and on completion of loading
3. Unload product off machine	3.1. Product is unloaded according to OHS requirements and manufacturer's and enterprise procedures and specifications 3.2. Product is prepared (hand-stripped, stacked, wrapped, labelled) for next process according to manufacturer's and enterprise procedures and specifications 3.3. Product is stored according to manufacturer's and enterprise procedures and specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by working with the printer to ensure that reels are suitably prepared and brought to the production process
- collecting, analysing and organising information by preparing product
- planning and organising activities by loading product onto machines
- teamwork when working with printer to ensure that correct substrates are loaded when needed to ensure efficient production
- mathematical ideas and techniques by calculating weights of substrates to ensure correct and safe handling; and calculating substrate use to ensure timely delivery and loading
- problem-solving skills by preparing product for the next stage in the process
- use of technology by using manual and automatic stackers

Required knowledge

- information that can be obtained from the package label
- substrate grain direction
- watermarks identified in substrates
- characteristics of coated and uncoated stocks
- manual handling of the substrate
- OHS concerns related to the manual handling of substrates
- elements of a correctly knocked up stack
- benefits of fanning sheets prior to stacking or loading
- procedures in turning substrates
- preparing and loading selected substrate
- techniques used to ensure that the stack is knocked up correctly
- methods used to ensure correct positioning of watermarked substrates
- unloading sheets off the machine
- OHS concerns related to the unloading of sheets off the machine
- faults created by substrate being unloaded incorrectly
- faulty substrates
- conditions that cause a stack to become uneven
- techniques that can be employed to combat distorted stacks
- machine manuals, safety and other documentation are relevant to this task and where are they kept and what information is included in these documents?

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the individual will correctly prepare, load and unload product on and off machines according to OHS requirements, manufacturer's/supplier's specifications with minimum downtime prepare, load and unload product on and off any ONE appropriate machine incorporating specific enterprise requirements; manual techniques; fanning, turning, jogging (where appropriate) and stacking; to job and workplace specifications according to the listed Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment printing or converting machine.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> this unit may be assessed at the same time as many printing or converting, binding and finishing set up units or screen printing produce print units.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Range of equipment</i> may include:	<ul style="list-style-type: none"> range of printing, converting, binding and finishing, corrugating and laminating machines.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, metal, fabrics or textiles.
<i>Substrate delivery</i> may include:	<ul style="list-style-type: none"> large and small sheet/section delivery systems.
<i>Substrate preparation</i> may include:	<ul style="list-style-type: none"> manual and machine-based fanning, turning and jogging.
<i>Feeding units</i> may include:	<ul style="list-style-type: none"> manual and automatic single sheet and stream-fed pre-feeders and feeders.
<i>Stacking units</i> may include:	<ul style="list-style-type: none"> manual and automatic stackers.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform general cleaning duties	1.1. Requirements for cleaning duties are identified 1.2. Personal safety equipment, where needed, is selected and used according to OHS and <i>enterprise procedures</i> 1.3. Appropriate cleaning equipment and <i>chemicals</i> /detergents for specific tasks are determined, prepared and mixed to manufacturer's specifications and OHS procedures 1.4. Procedures for handling, storage and correct disposal of cleaning liquids are carried out according to enterprise, OHS and EPA specifications 1.5. Cleaning is carried out to OHS and enterprise requirements
2. Maintain supplies of materials	2.1. Requests are received, where relevant, and tasks are confirmed and organised according to specific procedures 2.2. <i>Tools and equipment</i> are identified, stored and maintained according to manufacturer's recommendations to ensure ease of access and operator safety 2.3. Appropriate equipment for transferring material or equipment is identified and organised, where relevant 2.4. Material or equipment is loaded and unloaded using suitable equipment (other than forklift) according to materials handling requirements, safe work practices and correct manual handling techniques 2.5. Material is transferred to correct destination in a safe manner
3. Store and retrieve artwork, information, used plates and film	3.1. Inventory control procedures are followed to ensure correct filing and retrieval of artwork, information, used plates and film 3.2. Artwork and other materials are stored and retrieved according to enterprise procedures to ensure preservation
4. Handle chemicals and liquid waste	4.1. Material safety data sheets are used to identify safe chemical handling procedures 4.2. Chemicals and liquid waste are handled according to manufacturer's specifications and enterprise OHS requirements 4.3. The correct procedure for dealing with spilt chemicals is demonstrated according to OHS

ELEMENT	PERFORMANCE CRITERIA
	requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by supplying materials when needed and conveying information between production workers and stores people
- collecting, analysing and organising information by accessing and using MSDSs; using basic inventory procedures
- planning and organising activities by confirming and organising tasks
- teamwork when working with others to ensure that correct consumables and materials are available when needed
- mathematical ideas and techniques by calculating dilution factors for cleaning materials/chemicals to ensure correct and safe handling; calculating weights of materials to ensure safe handling
- problem-solving skills by applying the correct procedure for dealing with spilt chemicals
- use of technology by using manual handling equipment to move supplies

Required knowledge

- personal safety equipment that may be required to perform cleaning duties
- OHS concerns related to the use of cleaning chemicals
- handling of supplies, parts and finished product
- potential dangers when handling supplies or parts
- safety requirements for transporting finished products
- recording details necessary in the transfer of the finished product
- safety requirements and procedures necessary for the disposal of liquid waste
- operating inventory control systems
- key information that is required for accurate storage and for ensuring retrieval
- filing inventory procedures to be utilised in the work environment
- the nature of various materials and substrates
- OHS considerations are associated with materials and substrates used in the workplace
- main environmental considerations associated with storage of artwork, photographic materials and plates
- safety requirements for the storage and disposal of chemicals
- potential accidents when cleaning or handling supplies
- weight limitations
- correct lifting techniques
- placing loads so as to avoid back injury

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> demonstrate cleaning, delivery of materials, equipment, artwork, information, used plates and film and chemical and liquid waste handling (if relevant to the workplace) according to the listed Performance Criteria evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment a production environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
<i>Chemicals</i> may include:	<ul style="list-style-type: none"> wet and dry chemicals.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> manual, mechanical and electronic equipment used in the production process.
<i>Sector</i> may include:	<ul style="list-style-type: none"> all sectors of pre-press, printing, screen printing, corrugating, converting and finishing.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare or set up substrates (or loads)	1.1. Job sheets or equivalent instructions are interpreted correctly 1.2. Product is located, checked and prepared to meet job specifications according to established enterprise procedures and OHS procedures 1.3. Faulty material is visually identified and removed according to established enterprise procedures and OHS procedures
2. Set up reel systems (OR Element 3)	2.1. Unwind reel is set up and adjusted to suit job requirements 2.2. Webbing procedures are carried out according to enterprise procedures 2.3. Web-control system is set up and adjusted to suit job requirements 2.4. Reels are spliced/joined to suit job requirements 2.5. Rewind reel is set up and adjusted to suit job requirements 2.6. Folder is set up and adjusted to suit job requirements 2.7. Sheeter is set up and adjusted to suit job requirements 2.8. Readiness of transport and delivery systems is reported according to enterprise procedures for final adjustments by designated person
3. Set up sheet or product systems (OR Element 2)	3.1. Feeder is set up and adjusted to suit job requirements 3.2. Sheet/product pick-up and transportation system is set up and adjusted to suit job requirements 3.3. Transfer systems are set up and adjusted to suit job requirements 3.4. Delivery is set up and adjusted to suit job requirements 3.5. Product is removed from process according to job instructions 3.6. Sheet/product transfer and control system is set up and adjusted to suit job requirements 3.7. Readiness of transport and delivery systems is reported according to enterprise procedures for final adjustments by designated person, if required
4. Prepare machine	4.1. Machine is set up according to job instructions 4.2. Inks, glues, liquid and or other materials are loaded as required according to manufacturer's instructions and enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Plates, cutting or other devices are installed as required according to manufacturer's instructions and enterprise procedures</p> <p>4.4. Registration, alignment or centring is confirmed according to machine manufacturer's/supplier's instructions and enterprise procedures</p> <p>4.5. Machine is run through cycle at the same time ensuring that the substrate/product is positioned properly and that the process is being performed according to established workplace and OHS procedures</p> <p>4.6. Readiness of machine is reported according to enterprise procedures for final adjustments and proofing by designated person, if required</p>
<p>5. Conduct shutdown of production process</p>	<p>5.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>5.2. Shutdown is conducted in association with fellow workers, if required, and in compliance with OHS requirements</p> <p>5.3. Unused materials are stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>5.4. Used plates, cutting and other devices are removed and stored according to manufacturer's/supplier's specifications and enterprise procedures</p> <p>5.5. All product is removed from operating area according to enterprise procedures and OHS standards</p> <p>5.6. Machine faults requiring repair are identified and reported to designated person according to enterprise procedures</p> <p>5.7. Repair/adjustment is verified prior to resumption of operations</p>
<p>6. Clean and wash up machine at end of run</p>	<p>6.1. Machine sections, as relevant to process, are cleaned ready for next run</p> <p>6.2. Inking/gluing/coating system, if used in process, is washed up ready for next run, and waste is disposed of according to enterprise and regulatory requirements</p> <p>6.3. In-line printing/converting/binding/finishing/coating units are cleaned ready for next run</p> <p>6.4. Feed, transportation and delivery systems are disengaged and cleaned ready for next run</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by interpreting job tickets
- collecting, analysing and organising information by reading data on substrates, inks and glues to ensure correct usage and handling
- planning and organising activities by deciding on a sequence of set ups and wash-ups to ensure efficient operation
- teamwork when working with others to ensure efficient set up and wash-up
- mathematical ideas and techniques by calculating substrate and other consumable requirements for job
- problem-solving skills by recognising and reporting problems in set up (or wash-up)
- use of technology by using monitoring systems

Required knowledge

- handling of supplies, parts and finished product
- avoiding back strain when lifting heavy objects
- avoiding damaging finished product
- supplies that require special handling
- substrate preparation and machine set up procedures
- OHS considerations when preparing substrates and setting up a machine
- procedures for the disposal of faulty materials
- possible danger areas of the machine
- registration section of the machine
- function of the registration section of the machine
- problems that could interrupt the running cycle of the machine
- shutdown procedures
- areas of the Machine that are modified during shutdown
- areas of the machine that should be checked for possible repair
- details that should be included when labelling unused ink
- cleaning and washing machine
- OHS considerations when washing up a machine
- ineffective wash-up affecting the following production run

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • demonstrate all safety devices on the machine • prepare machines and assist with their operation according to enterprise procedures • prepare and set up to the stage of final adjustment of any ONE machine according to manufacturer's specifications and the listed Performance Criteria OR set up a minor process on a dedicated machine • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • a printing or converting machine in a production environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Product may include:	<ul style="list-style-type: none"> all substrates and paper or plastic converting products.
Enterprise procedures may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
Machines may include:	<ul style="list-style-type: none"> range of printing, converting, binding, corrugating, laminating, coating processes. Also minor processes including in-line auto packers, down stackers, or stackers, pile turners and wrappers on dedicated machines.

Substrate is added to process according to job instructions</p> <p>1.5. Reel rewind section is monitored and minor adjustments made to maintain correct tension and to ensure no marks, blemishes or damage to finished product</p> <p>1.6. Substrate is removed from process according to job instructions</p> <p>1.7. Sheeting section is monitored and minor adjustments made to ensure quality and efficient product delivery</p> <p>1.8. Need for major adjustments to process are identified and reported according to company operating procedure to designated person</p>
<p>2. Operate and monitor sheet or product systems (OR Element 1)</p>	<p>2.1. Job sheets or equivalent instructions are interpreted correctly</p> <p>2.2. Feeder is monitored and minor adjustments made to ensure continuous and efficient feeding to <i>machine</i></p> <p>2.3. Sheet or <i>product</i> pick-up and transport system is monitored and minor adjustments made to ensure accurate and continuous sheet or product handling and efficient operation</p> <p>2.4. Transfer systems are monitored and minor adjustments made to ensure correct and continuous sheet or product handling and efficient operation</p> <p>2.5. Product is added to process according to job instructions</p> <p>2.6. Delivery is monitored and minor adjustments made to ensure quality and efficient product delivery</p> <p>2.7. Need for major adjustments to process are identified and reported according to company operating procedures to designated person</p>
<p>3. Maintain and</p>	<p>3.1. Production process is operated and monitored in</p>

ELEMENT	PERFORMANCE CRITERIA
monitor production process	<p>association with fellow workers and according to company specifications and planned daily schedule</p> <p>3.2. Sheet/product pick-up and transportation system is set up and adjusted to suit job requirements</p> <p>3.3. Product is monitored and minor adjustments are made to ensure quality of output is maintained</p> <p>3.4. Need for major adjustments to process are identified and reported according to operating procedure to other appropriate worker</p> <p>3.5. Faulty performance of equipment is identified and reported according to <i>enterprise procedures</i></p> <p>3.6. Waste is sorted according to enterprise procedures</p>
4. Conduct shutdown of production process	<p>4.1. Correct shutdown sequence is followed according to manufacturer's specifications and enterprise procedures</p> <p>4.2. Shutdown is conducted in association with fellow workers and in compliance with OHS requirements</p> <p>4.3. Unused materials are stored according to manufacturer/supplier specifications and company operating procedures</p> <p>4.4. Used plates, cutting and other devices are removed and stored according to manufacturer/supplier specifications and company operating procedures</p> <p>4.5. All product is removed from operating area according to enterprise procedures and OHS standards</p> <p>4.6. Machine faults requiring repair are identified and reported, according to enterprise procedures to designated person</p> <p>4.7. Repair/adjustment is verified prior to resumption of operations</p>
5. Clean and wash up machine at end of run	<p>5.1. Machine units, as relevant to process, are cleaned ready for next run</p> <p>5.2. Inking/gluing/coating system, if used in process, is washed up ready for next run, and waste is disposed of according to company and regulatory requirements</p> <p>5.3. In-line printing/converting/binding/finishing/coating units are cleaned ready for next run</p> <p>5.4. Feed, transportation and delivery systems are disengaged and cleaned ready for next run</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing useful feedback to supervisors on course of job
- collecting, analysing and organising information by accessing data on substrates and inks and glues to ensure efficient production
- planning and organising activities by identifying sequences for monitoring to ensure efficient production
- teamwork when working with supervisors to ensure efficient production
- mathematical ideas and techniques by calculating the use of consumables and estimated completion times for jobs
- problem-solving skills by recognising and correctly reporting production problems
- use of technology by monitoring systems

Required knowledge

- handling of supplies, parts and finished product
- avoiding back strain when lifting heavy objects
- avoiding damaging finished product
- supplies that require special handling
- reel or sheet transportation and delivery systems
- OHS factors that must be considered when setting and/or operating machine transport and delivery systems
- areas of the transport and delivery systems that should be monitored to ensure trouble-free operation
- area of the web control system that should be adjusted to maintain correct web tension
- check needed when substrate is removed from the machine
- maintaining production processes
- OHS factors that must be considered when operating and monitoring the production process
- basic criteria for assessing finished product
- adjustments that can be made to the machine to correct TWO different production or quality problems
- shutdown procedures
- areas of the machine that are modified during shutdown
- areas of the machine that should be checked for possible repair
- details that should be included when labelling unused ink

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select ink	<p>1.1. Inks, dyes and additives are selected according to job specifications</p> <p>1.2. Quality and suitability of inks, dyes or additives are checked and appropriate action is taken</p> <p>1.3. Inks and dyes are selected according to suitability of substrate, adhesion, physical and chemical resistance, and light fastness, drying method and print process</p>
2. Prepare ink	<p>2.1. Inks, dyes and additives are prepared according to OHS requirements, and manufacturer's/supplier's instructions with suitable precautions to minimise waste</p> <p>2.2. Correct colour and weight/volume of ink are mixed and prepared to match the requirements of the job specifications and the printing press to be used</p> <p>2.3. Formulation of the ink and the approved colour is appropriately recorded</p>
3. Store and handle ink	<p>3.1. Inks, dyes and additives are appropriately stored, handled and labelled according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by correctly labelling inks and additives
- collecting, analysing and organising information by accessing and using MSDSs and data on ink/additive formulation to ensure efficient production
- planning and organising activities by selecting appropriate inks and additives prior to preparation
- teamwork when maintaining the production process in association with other staff
- mathematical ideas and techniques by calculating weights and volumes and dilution factors
- problem-solving skills by identifying problems in formulation and making appropriate adjustments
- use of technology by using manual and electronic measuring equipment

Required knowledge

- selecting inks and additives to match process and job requirements
- suitability of the ink determined for the particular process
- characteristics of the chosen ink matched to the substrate
- ink adhering to the substrate
- physical, chemical and light or colour fastness of the ink
- preparing inks and additives
- OHS concerns related to the preparation of inks and additives
- correct handling procedures
- correct weight/volume required
- methods that are available to check and adjust ink colour and consistency
- quality of the ink or additive is up to the standard required
- matching colour
- OHS concerns related to the matching of inks and additives
- effect that lighting conditions have on colour matching
- compatibility of being mixed
- correct colour for inks
- storage, handling and labelling of inks and additives
- MSDSs for this ink system that is at hand
- environmental conditions that are relevant to the storage of inks and additives
- conventions that should be adhered to when labelling mixed inks
- method of disposal of inks, solvent and solvent rags

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select coatings, adhesives and additives	<p>1.1. <i>Coatings</i>, adhesives and additives are selected according to job specifications</p> <p>1.2. <i>Quality</i> and suitability of coatings, adhesives and additives are checked and appropriate action is taken</p> <p>1.3. Coatings, adhesives and additives are selected according to suitability of <i>substrate</i>, physical and chemical properties and performance</p>
2. Prepare coatings, adhesives and additives	<p>2.1. Coatings, adhesives and additives are prepared according to OHS requirements and manufacturer's/supplier's instructions with suitable precautions to minimise waste</p> <p>2.2. Correct weight/volume of coatings, adhesives and additives are mixed and prepared to match the job specification and the process to be used</p> <p>2.3. Formulation of the coatings, adhesives and additives is appropriately recorded</p>
3. Store and handle coatings, adhesives and additives	<p>3.1. Coatings, adhesives and additives are appropriately stored, handled and labelled according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel</p> <p>3.2. Coatings, adhesives and additives are stored and used in a manner that ensures use before use-by dates</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by labelling coatings, adhesives and additives
- collecting, analysing and organising information by accessing and using MSDSs and other data sources on coatings and adhesives to ensure safe and efficient production
- planning and organising activities by selecting coatings and adhesives required prior to preparation
- teamwork when maintaining the production process in association with other staff
- mathematical ideas and techniques by calculating weights, volumes and formulations
- problem-solving skills by checking quality and suitability of coatings and taking appropriate action if problems arise
- use of technology by using manual and electronic measuring equipment

Required knowledge

- selecting coatings/adhesives to match process and job requirements
- suitability of the coatings/adhesives determined for the particular process
- characteristics of the coatings/adhesives matched to the job/substrate
- adhering coatings/adhesives to the substrate
- preparing coatings/adhesives
- OHS concerns related to the preparation of coatings/adhesives
- correct handling procedures
- details that are required in order to calculate quantities of coatings/adhesives
- details that are required to record the formulation of coatings/adhesives
- storage, handling and labelling of coatings/adhesives
- OHS concerns related to the storage and handling of coatings/adhesives
- environmental conditions that are relevant to the storage of coatings/adhesives
- conventions that should be adhered to when labelling coatings/adhesives
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare coatings and adhesives according to job specifications • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare TWO different coatings or adhesives for specific end-use requirements to meet job and workplace specifications and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • coatings, adhesives and substrates.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Italicised wording in the Performance Criteria is detailed below..	
<i>Coatings</i> may include:	<ul style="list-style-type: none"> range of coatings including wax, varnish, carbon coating, carbonless slurry; pre-mixed starch adhesives, cold and hot melt glue; and appropriate additives used in the printing industry.
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Colour matching systems</i> may include:	<ul style="list-style-type: none"> commonly used matching procedures.
<i>Type of equipment</i> may include:	<ul style="list-style-type: none"> range of manual measuring equipment.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out inspection of quality during job	1.1. Job is collected/received and inspected against job specifications according to enterprise standards and procedures 1.2. Quality specifications and tolerances are understood 1.3. Variation to standards is monitored and corrective action taken to rectify the problem according to enterprise procedures 1.4. Inspection and testing procedures are applied at regular intervals to determine conformity with specifications and to minimise waste 1.5. Unsatisfactory work is identified according to predetermined standards and enterprise procedures
2. Complete documentation	2.1. Documentation is accurately completed to meet required enterprise procedures 2.2. Problems and suggestions for improvement are documented and passed on to appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing feedback to supervisors on quality problems and issues
- collecting, analysing and organising information by accessing information on quality requirements eg tolerances and applying these in the workplace to ensure a quality product
- planning and organising activities by checking quality requirements before commencing the job
- teamwork when participating in quality reporting procedures at all levels
- mathematical ideas and techniques by applying inspection and testing procedures as relevant
- problem-solving skills applied by identifying quality problems and resolving or reporting them
- use of technology by using relevant inspection and testing procedures

Required knowledge

- checking quality requirements before job commencement
- quality standards that have been set by the customer
- enterprise procedures to achieve quality
- necessary quality areas that should be inspected
- quality inspection procedures
- timing of quality inspections be carried out
- results that unnecessary inspection have on production output
- control instruments that are used in quality inspection
- faults identified response
- responsibility for the quality of the product
- documentation procedures
- specifications that are recorded on the job sheet
- necessary information that needs to be documented
- recipient of this information

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correctly inspect the quality of work against job specifications • demonstrate an ability to find and use information relevant to the task from a variety of information sources • evidence should include a record of at least one month during which no reasonable complaints or reports of faulty goods or documentation are received from customers (internal or external) relating to work handled by the candidate • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of both. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
<i>Type of inspections</i> may include:	<ul style="list-style-type: none"> various types of inspection and testing techniques (ie 100%, random, periodic or continuous in-line inspection).
<i>Sector</i> may include:	<ul style="list-style-type: none"> all sectors of pre-press, printing, screen printing, multimedia, converting, binding and finishing, mail house and ink manufacture.

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess final product	<p>1.1. Finished job is collected/received and checked against job specifications according to <i>enterprise procedures</i></p> <p>1.2. Defects, irregularities and discrepancies are identified and action taken according to enterprise procedures</p>
2. Prepare stock for dispatch	<p>2.1. Suitable area for wrapping/<i>packaging</i> is selected and prepared</p> <p>2.2. Wrapping and packaging materials are prepared according to enterprise procedures</p> <p>2.3. <i>Product</i> is wrapped and packaged in pre-determined parcel sizes according to enterprise procedures, job specifications, storage and delivery specifications</p> <p>2.4. Product is packaged in predetermined form as appropriate to product size, type, destination, delivery route and method of transportation; and according to workplace instructions, transportation/shipping regulations and OHS requirements</p> <p>2.5. Packaged goods are checked, weighed and labelled according to delivery instructions, transportation/shipping regulations and enterprise procedures</p>
3. Dispatch product	<p>3.1. Packaged product is stacked on/in appropriate storage/shipping containers prior to <i>dispatch</i></p> <p>3.2. Product is dispatched via appropriate delivery mode according to enterprise procedures, job specifications and OHS requirements</p> <p>3.3. Product shipping/dispatch details are recorded according to enterprise procedures</p> <p>3.4. Documentation associated with tasks, where relevant, is accurately completed according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by labelling packaged goods according to delivery instructions
- collecting, analysing and organising information by accessing information about packing requirements for various products with regard to protecting product and meeting transport needs and fulfilling these requirements
- planning and organising activities by preparing stock prior to dispatch
- teamwork when liaising with printers, transport suppliers and customers to ensure product arrives undamaged and on time
- mathematical ideas and techniques by calculating weights and dividing jobs into separate packages to meet transport needs
- problem-solving skills by checking finished job and taking remedial action
- use of technology by weighing stock and packaging

Required knowledge

- preparing stock for dispatch
- items that will be required in the process of dispatching
- checks that are performed prior to packaging the product
- identifying a defective print or item
- defect rectification
- wrapping and packing materials and methods
- OHS regulations on packaged goods
- type of packaging to be used
- transport or destination's bearing on the wrapping and packing method
- number of units to be wrapped in each parcel
- details that need to be recorded on dispatching labels and why
- dispatching product
- shipping details to be obtained
- weight limitations that are there on dispatched products
- priorities that are used for dispatching the product
- appropriate delivery mode
- completing documentation of dispatched product

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correctly packing and dispatching printed products and accurately completing documentation • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare, pack and dispatch TWO lots of printed or printing related product following correct procedures, job and workplace specifications and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • resources and product to pack and dispatch.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess solid waste	1.1. Reusable waste is sorted from recyclable waste according to <i>enterprise procedures</i> 1.2. Waste is weighed and weight and source of waste recorded
2. Prepare solid waste for removal from site	2.1. Waste is shredded according to enterprise procedures, storage and delivery specifications 2.2. Waste is baled as appropriate for waste destination, delivery method and method of transportation and according to enterprise procedures
3. Dispatch solid waste	3.1. Waste is stacked/ <i>packed</i> on/in appropriate storage/shipping containers prior to <i>dispatch</i> 3.2. Waste is dispatched via appropriate delivery mode according to enterprise procedures and job specification 3.3. Waste is dispatched at pre-determined rate to prevent accumulation of waste around machines 3.4. Documentation associated with tasks is accurately completed according to enterprise procedures
4. Carry out minor routine maintenance and cleaning of waste packaging machines	4.1. Shredder is cleaned, checked and lubricated according to manufacturer's specifications and enterprise standard operating procedures 4.2. Baler is cleaned, checked and lubricated according to manufacturer's specifications and enterprise standard operating procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by completing workplace documentation on the dispatch of solid waste
- collecting, analysing and organising information by recording the source and weight of waste
- planning and organising activities by sequencing waste collection and packaging to ensure efficiency and minimum disruption of production
- teamwork when removing waste from around machines to ensure flow of work
- mathematical ideas and techniques by completing documentation of the packing and dispatch of solid waste
- problem-solving skills by choosing from various options for waste disposal
- use of technology by using and cleaning the bales to package waste

Required knowledge

- sorting solid waste
- difference between reusable and recyclable waste
- example of each of the above
- methods of reusable waste to be stored and used
- weight limitations of each batch of solid waste
- processing solid waste
- OHS regulations on operating the shredding machine
- capabilities of the shredding machine
- appropriate baling method
- dispatch and documentation
- appropriate method for storage of solid waste prior to dispatching
- problems caused by the accumulation of waste around machines
- details that are recorded when dispatching solid waste
- obtaining details for dispatching
- maintaining waste packaging machines
- OHS concerns related to cleaning and maintaining shredding machines
- OHS concerns related to cleaning and maintaining baling machines
- frequency that machines should be cleaned and lubricated
- information sources
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correct packing and dispatching solid waste • assess, prepare and dispatch TWO lots of solid waste and maintain and clean waste packaging machines according to job and workplace specifications and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • solid waste and disposal equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Carry out minor routine maintenance and programmed cleaning of reel handling system</p>	<p>1.1. Unwind unit is cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>1.2. Web control devices are cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>1.3. Rewind unit is cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>1.4. Folding unit is cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>1.5. Sheeting unit is cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>1.6. Basic <i>maintenance</i> is carried out according to OHS requirements</p>
<p>2. Carry out minor routine maintenance and programmed cleaning of sheet or object handling systems</p>	<p>2.1. Feeder is cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>2.2. Lays and transfer gripper system are cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>2.3. Delivery is cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>2.4. Basic maintenance is carried out according to OHS requirements</p>
<p>3. Carry out minor routine maintenance and programmed cleaning of printing units</p>	<p>3.1. Cylinder/screen/plate and roller surfaces, safety devices, gears and bearings are checked, lubricated and maintained according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>3.2. <i>Ink</i> distribution system components are checked, lubricated, maintained and replaced according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>3.3. Various print control devices are checked, lubricated and maintained according to manufacturer's</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>recommendations and enterprise standard operating procedures</p> <p>3.4. Basic maintenance is carried out according to OHS requirements</p>
<p>4. Carry out minor routine maintenance and programmed cleaning of cutting units</p>	<p>4.1. Cutting devices and knives are checked, lubricated, maintained and replaced according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>4.2. Machine bed is checked and maintained according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>4.3. Basic maintenance is carried out according to OHS requirements</p>
<p>5. Carry out minor routine maintenance and programmed cleaning of folding/collating units</p>	<p>5.1. Folding/collating system components are checked, lubricated and maintained according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>5.2. Machine bed is checked and maintained according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>5.3. Basic maintenance is carried out according to OHS requirements</p>
<p>6. Carry out minor routine maintenance and programmed cleaning of fastening units</p>	<p>6.1. Adhesive and mechanical fastening components are checked, lubricated and maintained according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>6.2. Machine bed is checked and maintained according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>6.3. Basic maintenance is carried out according to OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by advising other staff of any problems found on the machines
- collecting, analysing and organising information by accessing machine manuals to determine maintenance and cleaning needs
- planning and organising activities by working to predetermined work schedules
- teamwork when working with the production manager to ensure maintenance and cleaning is done effectively with minimum disruption of production
- mathematical ideas and techniques by checking more complex machines with electronic, hydraulic or pneumatic technology
- problem-solving skills by recognising when maintenance and cleaning are required and responding appropriately (either carrying out maintenance or reporting it to responsible person)
- use of technology by performing routine maintenance on machines

Required knowledge

- reel handling system
- OHS requirements when maintaining and cleaning the reel handling system
- common causes of failure or breakdown
- precautions that must be observed when working with compressed air
- damage caused to electronic sensors during cleaning
- checks that were performed on this area of the machine
- particular chemical used for cleaning purposes
- sheet or object handling systems
- OHS requirements when maintaining and cleaning the sheet or object handling system
- common causes of failure or breakdown
- problems with inefficient cleaning
- parts of this area of the machine that require cleaning
- effect of excessive lubricant in this area of the machine
- need for regular maintenance of this area of the machine.
- printing units
- OHS requirements when maintaining and cleaning the printing units
- common causes of failure or breakdown
- problem that arises due to continual inefficient wash-up of roller surfaces
- necessity to clean the bearers on all cylinders in the printing unit

REQUIRED SKILLS AND KNOWLEDGE

- problems that could result from cylinder bodies not being cleaned correctly
- safety devices that were checked in the printing unit
- action if a safety device is found to be inoperative
- checks that must be carried out when replacing rollers in the inking system
- ancillary units
- OHS requirements when maintaining and cleaning ancillary units
- common causes of failure or breakdown
- checks that were performed on ancillary units
- precautions that should be observed when cleaning ancillary units
- cutting units
- OHS requirements when maintaining and cleaning the cutting units
- common causes of failure or breakdown
- checks that are carried out on cutting devices and knives
- storing of cutting knives after being replaced
- problems that would arise if the machine bed was not maintained
- problems that would arise if blades or knives were not maintained
- folding/collating units
- OHS requirements when maintaining and cleaning the folding/ collating units
- common causes of failure or breakdown
- components that were checked with this equipment
- problems with inefficient cleaning of the folding/collating unit
- parts of this machine that require cleaning
- type of lubricant used on this equipment and why
- fastening units
- OHS requirements when maintaining and cleaning the fastening units
- common causes of failure or breakdown
- chemicals that were used when cleaning this equipment
- disposal of used chemicals
- frequency this equipment should be cleaned
- problems that could be caused by inefficient cleaning
- parts of the equipment that should be cleaned
- the result of excessive lubricant in this part of the machine
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correctly performing basic machine maintenance • carry out routine maintenance on any TWO pieces of equipment or systems, satisfying job, workplace and statutory requirements according to the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • basic production machines.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Maintenance procedures</i> may include:	<ul style="list-style-type: none"> should meet manufacturer's specifications and requirements.
<i>Inks/coatings</i> may include:	<ul style="list-style-type: none"> range of standard and specialty inks and specialty finishes such as wax, embossing, foils.
<i>Supervision</i> may include:	<ul style="list-style-type: none"> the work is carried out under minimal supervision, exercising initiative and judgement with discretion. Occasional supervision of the work of other personnel may be required.
<i>Cutting units</i> may include:	<ul style="list-style-type: none"> range of semi-automatic and automatic folding, collating and inserting units, in-line or off-line operation.
<i>Machines</i> may include:	<ul style="list-style-type: none"> the operation may apply to a complex machine, various types of machines or all the machinery in a work area. Complex machines include those with electronic, pneumatic, hydraulic or robotics technology.
<i>Printing process</i> may include:	<ul style="list-style-type: none"> all printing processes ie lithographic, flexographic, gravure, relief polymer mechanical printing.
<i>Substrate types</i> may include:	<ul style="list-style-type: none"> range of substrates within the major categories of paper, pressure sensitive material, board, corrugated board, plastics and related films, or metal.
<i>Substrate handling</i> may include:	<ul style="list-style-type: none"> wide and narrow reel and large and small sheet handling systems.

ICPSU225C Perform small machine maintenance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to undertake basic routine maintenance of small machines and equipment.
------------------------	---

Application of the Unit

Application of the unit	This unit requires the individual to safely carry out routine maintenance on small machines or equipment with minimum down time.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check and replace machine consumables	<p>1.1. <i>Machine consumables</i> are checked and replaced if worn or damaged</p> <p>1.2. Any consumables used are documented for reordering purposes</p>
2. Carry out regular maintenance	<p>2.1. <i>Units or machine sections</i> are cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>2.2. Feeders and conveyers are cleaned, checked and lubricated according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>2.3. Safety devices, gears and bearings are checked, lubricated and maintained according to manufacturer's recommendations and enterprise standard operating procedures</p> <p>2.4. Basic <i>maintenance</i> is carried out according to OHS requirements</p>
3. Complete maintenance	<p>3.1. Any wear and tear to the machinery is documented and/or referred to appropriate person for action</p> <p>3.2. Used consumables are disposed of correctly according to enterprise procedures and OHS requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by referring any wear and tear to the machinery to the appropriate person for action
- collecting, analysing and organising information by documenting any consumables used for reordering purposes
- planning and organising activities by disposing of used consumables correctly according to enterprise procedures and OHS requirements
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by recording quantities or amounts of consumables used
- problem-solving skills by carrying out any basic maintenance according to OHS requirements
- use of technology by using tools and equipment to perform small machine maintenance

Required knowledge

- reel handling system
- OHS requirements when maintaining and cleaning the reel handling system
- common causes of failure or breakdown
- precautions that must be observed when working with compressed air
- damage caused to electronic sensors during cleaning
- checks that were performed on this area of the machine
- particular chemical used for cleaning purposes
- sheet or object handling systems
- OHS requirements when maintaining and cleaning the sheet or object handling system
- common causes of failure or breakdown
- problems with inefficient cleaning
- parts of this area of the machine that require cleaning
- effect of excessive lubricant in this area of the machine
- need for regular maintenance of this area of the machine.
- printing units
- OHS requirements when maintaining and cleaning the printing units
- common causes of failure or breakdown
- a problem that arises due to continual inefficient wash-up of roller surfaces
- necessity to clean the bearers on all cylinders in the printing unit

REQUIRED SKILLS AND KNOWLEDGE

- problems that could result from cylinder bodies not being cleaned correctly
- safety devices that were checked in the printing unit
- action if a safety device is found to be inoperative
- checks that must be carried out when replacing rollers in the inking system
- ancillary units
- OHS requirements when maintaining and cleaning ancillary units
- common causes of failure or breakdown
- checks that were performed on ancillary units
- precautions that should be observed when cleaning ancillary units
- cutting units
- OHS requirements when maintaining and cleaning the cutting units
- common causes of failure or breakdown
- checks that are carried out on cutting devices and knives
- storing of cutting knives after being replaced
- problems that would arise if the machine bed was not maintained
- problems that would arise if blades or knives were not maintained
- folding/collating units
- OHS requirements when maintaining and cleaning the folding/ collating units
- common causes of failure or breakdown
- components that were checked with this equipment
- problems with inefficient cleaning of the folding/collating unit
- parts of this machine that require cleaning
- type of lubricant that was used on this equipment and why
- fastening units
- OHS requirements when maintaining and cleaning the fastening units
- common causes of failure or breakdown
- chemicals that were used when cleaning this equipment
- disposal of used chemicals
- frequency this equipment should be cleaned
- problems that could be caused by inefficient cleaning
- parts of the equipment that should be cleaned?
- result of excessive lubricant in this part of the machine
- information sources
- machine manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> correctly and safely carrying out routine maintenance on small machines or equipment with minimum down time. demonstrate an ability to find and use information relevant to the task from a variety of information sources. carry out routine maintenance on any TWO pieces of equipment or systems, satisfying job, workplace and statutory requirements according to the listed Performance Criteria. evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment small machines (such as inline cutters, inline mail machines) and machine consumables.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Machine consumables</i> may include:	<ul style="list-style-type: none"> stacker wheels, belts, suckers, gripper arms, water brush, OMR readers, barcode readers, ink cartridges, knives, blades.
<i>Units or machine sections</i> may include:	<ul style="list-style-type: none"> range of semi-automatic and automatic folding, collating and inserting units, cutters, dryers, in-line or off-line operation.
<i>Maintenance procedures</i> may include:	<ul style="list-style-type: none"> should meet manufacturer's specifications and requirements.
<i>Supervision</i> may include:	<ul style="list-style-type: none"> the work is carried out under minimal supervision, exercising initiative and judgement with discretion. Occasional supervision of the work of other personnel may be required.
<i>Machines</i> may include:	<ul style="list-style-type: none"> the operation may apply to small machines such as inline cutters, inline mail machines

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Attach lifting gear to loads	1.1. All work is undertaken safely and to prescribed procedures 1.2. Load is inspected and best lifting method determined for weight and shape 1.3. Appropriate load shifting <i>equipment</i> is selected 1.4. Lifting gear is inspected and damaged or worn items are labelled and rejected 1.5. Where appropriate, safe working loads are calculated to Australian Standards 1.6. Lifting gear is attached to load in a most appropriate and safe manner and to specifications where required
2. Move loads	2.1. Load moving is performed to acceptable safe working practices, Australian Standards, codes of practice and specifications 2.2. Lifting gear is connected to load mover using safe and appropriate techniques 2.3. Appropriate communication and <i>signals</i> methods are used to coordinate the load movement in a safe manner 2.4. Load is grounded or put down in a safe and stable manner according to prescribed procedure 2.5. All lifting gear is detached from load mover and load

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by using appropriate signals to coordinate movement of the load
- collecting, analysing and organising information by accessing safety and procedure manuals for specific equipment
- planning and organising activities by determining the best method for lifting a load before moving it
- teamwork when working with others to ensure lifting is done in a safe manner
- mathematical ideas and techniques by calculating loads and the holding capacity of various equipment
- problem-solving skills by working out the best sequence and procedure for lifting loads of different size, weight and content
- use of technology by using the range of equipment specified

Required knowledge

- attaching lifting gear and selecting appropriate equipment to lift loads
- references that are available to determine safety practices in lifting loads
- important considerations when lifting loads mechanically
- best method to lift the load
- types of mechanical lifting devices
- circumstances lifting devices are be used
- type of damage that can occur to any particular piece of lifting equipment
- problems that could occur if lifting gear is not attached properly
- applying correct practices to move loads
- safe practices that must be observed when moving loads
- observations when connecting the lifting gear to the load mover
- particular communication technique used for moving the load
- safe distance for personnel that are not involved in moving the load
- other technique for communication that could have been used
- the effects of a load not being grounded correctly
- storage of lifting gear after it has been detached
- information sources
- machine manuals, safety and other documentation that are relevant to this task and where are they kept
- information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • safely lifting loads by using basic equipment such as slings, ropes, shackles, eye bolts and spreader beams • lift TWO loads mechanically according to enterprise and statutory requirements and regulations and the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • slings, ropes, shackles, eye bolts, spreader beams and loads.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Attach lifting gear to loads	1.1. Routine pre-use checks are undertaken according to manufacturer's specifications and regulatory safety requirements 1.2. Non-compliance with specifications is reported for repair/replacement
2. Move loads	2.1. Type of material is determined from labels, colour codes, signage 2.2. Material properties are understood 2.3. Load is inspected and best handling method is determined for weight and shape 2.4. All relevant uncertainties and unknowns are clarified with appropriately qualified authority 2.5. All relevant safety and emergency procedures are understood and implemented as required 2.6. All relevant regulations and codes of practices are understood and observed 2.7. Correct and appropriate handling methods are undertaken
3. Shift loads	3.1. Most appropriate load shifting device is selected 3.2. Load shifting device is operated within design specifications and safe working load 3.3. Load is lifted, ensuring balance, vision of operation and protection of load 3.4. Safe and efficient path of movement is selected and used 3.5. Path of movement is checked and monitored for obstacles and hazards and safely maintained
4. Place loads	4.1. Loads are placed ensuring safety, stability, protection of material and avoidance of hazards on site 4.2. Shifting device is removed or secured according to <i>enterprise procedures</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by reporting non-compliance with equipment specifications
- collecting, analysing and organising information by determining type of material by reading labels, signage and colour codes
- planning and organising activities by determining handling methods before shifting the load
- teamwork when working with others to ensure safe and timely moving of materials
- mathematical ideas and techniques by calculating loads and volumes
- problem-solving skills by working out best sequence for shifting loads of different sizes, weight and content
- use of technology by using the range of equipment available for mechanically shifting loads

Required knowledge

- maintenance and safety checks for load shifting equipment
- frequency of routine checks on equipment
- reporting problems with load shifting equipment to a responsible person
- circumstances that would necessitate replacement of such equipment
- determining correct handling methods
- type of material colour codes
- information about correct handling methods
- personal injuries that could occur if incorrect handling methods were undertaken
- implementation of safety procedures and their effect on enterprise operations
- statutory authority that is responsible for and regulates safety procedures
- safety requirements for load shifting operations
- licensing requirements that are needed to operate various load shifting devices
- causes that could cause a load to move and become off balance during shifting
- choice of path when shifting the load
- the position shifting devices should be placed in after completing the shifting of the load
- effect of incorrect placement of loads affect job requirements and enterprise procedures
- information sources
- machine manuals, safety and other documentation that are relevant to this task and where are they kept

REQUIRED SKILLS AND KNOWLEDGE

- information that is included in these documents

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the ability to:

- shifting loads mechanically according to legislative and regulatory requirements
- shift TWO loads mechanically using AT LEAST an electric trolley, according to enterprise and statutory requirements and the listed Performance Criteria
- evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.

Context of and specific resources for assessment

Assessment must ensure:

- assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment
- load shifting equipment - not including forklifts.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Enterprise procedures may include:

- work and organisational methods according to enterprise standard operating procedures and legislative requirements.

Range of equipment may include:

- load shifting equipment includes ride pallet trucks, overhead travellers, load shifting equipment operated within limits of manufacturer's recommended procedures and safe working loads.

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake dispatch/receiving procedures	1.1. Warehouse/store standard operating procedures are understood and followed 1.2. Warehouse/store materials are managed according to enterprise standard operating procedures 1.3. Incoming/outgoing materials are labelled according to enterprise standard operating procedures and legislative requirements 1.4. Warehouse/store materials are labelled and stored according to enterprise standard operating procedures and legislative requirements 1.5. Materials are issued/dispatched according to enterprise standard operating procedures 1.6. Issued/dispatched materials are recorded to enterprise standard operating procedures
2. Determine handling methods	2.1. Type of material is determined from labels, colour codes, signage 2.2. Material properties are understood 2.3. All relevant uncertainties and unknowns are clarified with appropriately qualified authority 2.4. All relevant safety and emergency procedures are understood and implemented as required 2.5. All relevant regulations and codes of practices are understood and observed 2.6. Correct and appropriate handling methods are undertaken
3. Shift loads	3.1. Materials are packaged to meet safety, storage conditions, and site and legislative requirements 3.2. Materials are stored in a safe, orderly and retrievable manner 3.3. Load is lifted, ensuring balance, vision of operation and protection of load 3.4. Materials are labelled/identified and recorded according to site procedures and legislative requirements
4. Store bulk fluids/gases	4.1. Correct storage conditions are determined from instructions/manufacturer's specifications/directions 4.2. Containers are checked for safe and clean use 4.3. Containers are filled/emptied according to enterprise standard operational procedures and legislative

ELEMENT	PERFORMANCE CRITERIA
	requirements 4.4. Containers are handled and moved according to site procedures and legislative requirements 4.5. Containers are correctly labelled and stored according to enterprise standard operational procedures and legislative requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by completing dispatch records
- collecting, analysing and organising information by accessing MSDSs and information on storage and handling requirements of goods and materials to ensure safe and secure storage and handling
- planning and organising activities by planning storage so that perishable materials are used in date sequence
- teamwork when working with other staff to ensure appropriate flow of production
- mathematical ideas and techniques by calculating weights and volumes
- problem-solving skills by working out the most appropriate storage and handling procedures for different goods and materials
- use of technology by using computerised stock systems

Required knowledge

- dispatching and receiving production materials
- procedures that are in place for the receipt of goods
- procedures that are in place for the inspection of goods on arrival
- indicators that goods received have been approved for production and comply with the purchase order
- reasons why goods have to be labelled according to operating procedures
- reasons why goods have to be labelled according to legislative requirements
- procedures that are in place if dispatched goods do not reach their destination
- procedures that are in place if goods are not received as requested
- authorised person to sign for goods received
- handling methods and procedures
- production problems that are caused by inconsistent stock handling
- procedure in reporting and recording damaged materials
- could be the alternatives for using damaged stock or materials
- company insurance for damaged stock and materials
- storing and packaging of warehouse/store materials
- the effect of relative humidity and temperature on substrates
- the effect of UV light on exposed rubber blankets or rollers
- materials storage in relationship to their use-by date or shelf life
- storing of heavy or liquid materials on a shelving system

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correct handling, dispatch and receipt of goods in a warehouse/store • demonstrate an ability to find and use information relevant to the task from a variety of information sources • demonstrate handling and storage techniques and procedures for at least THREE different types of goods/materials according to the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Confirm throughputs</p>	<p>1.1. Field values are verified as corresponding to values identified in job sheet</p> <p>1.2. Where required, mail class is verified as the same as the job sheet</p> <p>1.3. Collated data is correct and in sequence</p> <p>1.4. Collated data is correctly <i>matched</i> to addressee</p> <p>1.5. Address information is verified as accurate</p> <p>1.6. Barcode information confirms correct sequence of addressees to collated information</p> <p>1.7. Any discrepancies are reported to supervisor</p>
<p>2. Reconcile output</p>	<p>2.1. The total number of throughputs is equal to the job specifications</p> <p>2.2. The destination delivery unit rate matches the job specification</p> <p>2.3. An information matching trail is documented</p> <p>2.4. Any discrepancies are reported to supervisor</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by reporting any discrepancies to a supervisor
- collecting, analysing and organising information by verifying field values as corresponding to values identified in job sheet
- planning and organising activities by confirming throughputs before reconciling outputs
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by confirming when the total number of throughputs is equal to the job specifications
- problem-solving skills by reporting any discrepancies to a supervisor
- use of technology by using barcode equipment to confirm throughputs or reconcile outputs

Required knowledge

- basic literacy skills to follow work instructions and read job specifications
- basic numeracy skills to reconcile process outputs
- OHS in relation to working in a safe environment

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Follow workplace safety procedures	<p>1.1. Hazards in the work area are recognised while under direct supervision and reported to appropriate people according to enterprise procedures</p> <p>1.2. Enterprise procedures and work instructions for assessing and controlling risks for own area of responsibility are followed accurately while under direct supervision</p> <p>1.3. Enterprise procedures for dealing with incidents (accidents), fire and other emergencies are followed whenever necessary under direct supervision within the scope of responsibilities and competencies</p>
2. Contribute to OHS in the workplace	<p>2.1. OHS issues are raised with appropriate people according to enterprise procedures and relevant OHS legislation</p> <p>2.2. Contributions to participative arrangements for OHS management in the workplace are made within organisational procedures and the scope of responsibilities and competencies</p> <p>2.3. An information matching trail is documented</p> <p>2.4. Any discrepancies are reported to supervisor</p>
3. Ensure workspace health and safety	<p>3.1. Workspace, furniture and equipment are adjusted to suit the ergonomic requirements of the individual</p> <p>3.2. Lighting is adjusted and glare is reduced to ensure healthy lighting levels</p> <p>3.3. Work organisation meets organisational and OHS requirements for computer operation</p>
4. Ensure safety from environmental discharges/emissions	<p>4.1. Chemicals and solvents are correctly stored and appropriate ventilation is available when using chemicals and solvents</p> <p>4.2. Abnormal or unacceptable emission levels are recognised and reported according to enterprise procedures</p> <p>4.3. Emission levels are monitored and measured according to standard operating procedures where appropriate</p> <p>4.4. Correct safety procedures are followed and personal protective equipment used correctly</p> <p>4.5. Containment procedures are applied according to</p>

ELEMENT	PERFORMANCE CRITERIA
	standard operating procedures where required 4.6. Waste removal from work area complies with enterprise procedures and environmental regulations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by communicating and reporting OHS issues
- collecting, analysing and organising information by identifying safety requirements
- planning and organising activities by organising own activities according to OHS procedures while under direct supervision
- teamwork when contributing to safe workplace practices
- mathematical ideas and techniques by recording workplace safety information
- problem-solving skills by recognising and solving routine problems related to hazards while under direct supervision
- use of technology by accessing relevant workplace safety information

Required knowledge

- relevant legislation from all levels of government which affect business operations, especially in regard to OHS and environmental issues, equal opportunity, industrial relations, anti-discrimination and diversity
- ways in which OHS is managed in the workplace including procedures for fire, emergency, accident and near miss and control of risks
- relevant knowledge of workplace hazards
- relevant knowledge of designated personnel responsible for reporting OHS concerns
- understanding of the meaning of OHS signs and symbols relevant to area of work
- literacy skills to identify work requirements, hazard identification and reporting procedures; follow written instructions and to interpret OHS signs and symbols
- communication skills to identify lines of communication, request advice, effectively question, follow safety instructions, receive feedback and report hazards in the workplace
- problem-solving skills to solve routine problems related to hazards in the workplace, while under direct supervision
- technology skills to use equipment safely while under direction
- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • following workplace safety directions/procedures, recognising and reporting hazards, raising OHS issues and contributing to participative arrangements for OHS management in the workplace • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Hazards identification</i> may include:</p>	<ul style="list-style-type: none"> checking equipment or the workstation and work area before work commences and during work, workplace inspections, on-job housekeeping checks.
<p><i>Appropriate people</i> may include:</p>	<ul style="list-style-type: none"> supervisors, managers, team leaders, designated OHS officers, health and safety representatives.
<p><i>Relevant enterprise procedures</i> may include:</p>	<ul style="list-style-type: none"> hazard reporting procedures, job procedures and safe work instructions and allocation of responsibilities, emergency procedures, accident and near miss reporting and recording procedures, consultation on OHS issues, correct selection, use, storage and maintenance procedures for use of personal protective equipment (PPE), control of risks under direct supervision.
<p><i>Emergencies</i> may include:</p>	<ul style="list-style-type: none"> chemical spills, chemical mixes, fire, accidents, occupational violence.
<p><i>Legislation, codes and national standards</i> may include:</p>	<ul style="list-style-type: none"> award and enterprise agreements and relevant industrial instruments relevant legislation from all levels of government which affect business operation, especially in regard to OHS and environmental issues, equal opportunity, industrial relations, anti-discrimination and diversity relevant industry codes of practice.
<p><i>Contributions</i> may include:</p>	<ul style="list-style-type: none"> behaviour that contributes to a safe working environment, identifying and reporting risks or hazards, using business equipment according to guidelines, listening to the ideas and opinions of others in the team, sharing opinions, views, knowledge and skills.
<p><i>Participative arrangements</i> may</p>	<ul style="list-style-type: none"> formal and informal health and safety meetings, meetings called by health and safety

RANGE STATEMENT	
include:	representatives, suggestions, requests, reports and concerns put forward to management.
<i>Ergonomic requirements</i> may include:	<ul style="list-style-type: none"> workstation height and layout, chair height, seat and back adjustment, footrest, screen position, keyboard and mouse position, document holder, posture, avoiding radiation from computer screens, noise minimisation.
<i>Work organisation</i> may include:	<ul style="list-style-type: none"> mix of repetitive and other activities, rest periods, exercise breaks, VDU eye testing.
<i>Emissions</i> may include:	<ul style="list-style-type: none"> a range of environmental conditions including: noise, light, gas, smoke, odour, vapour, liquids/solids. Particles, fumes.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Follow enterprise procedures for hazard identification and risk control</p>	<p>1.1. Hazards in the work area are recognised and reported to designated personnel according to <i>enterprise procedures</i></p> <p>1.2. Enterprise procedures and work instructions for assessing and controlling risks for own area of responsibility are followed accurately while under direct supervision</p> <p>1.3. Enterprise procedures for dealing with accidents, fire and emergencies are followed whenever necessary within <i>scope</i> of responsibilities and competencies</p>
<p>2. Follow enterprise procedures for the control of environmental discharges/emissions</p>	<p>2.1. Abnormal or unacceptable <i>emission</i> levels are recognised and reported according to enterprise procedures</p> <p>2.2. Waste removal from work area complies with enterprise procedures and environmental regulations</p> <p>2.3. Containment procedures are applied according to standard operating procedures where required</p> <p>2.4. Correct safety procedures are followed and personal protective equipment used correctly</p>
<p>3. Contribute to participative arrangements for the management of OHS</p>	<p>3.1. OHS issues are raised with designated personnel according to enterprise procedures and relevant OHS legislation</p> <p>3.2. Contributions to OHS management in the workplace are made within organisational procedures and scope of responsibilities and competencies</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by reporting unacceptable emission levels
- collecting, analysing and organising information by accessing OHS manuals, MSDSs and applying their content to the workplace
- planning and organising activities by applying containment procedures according to workplace requirements
- teamwork when raising OHS issues with designated staff
- mathematical ideas and techniques by monitoring emission levels
- problem-solving skills by following enterprise procedures to deal with accidents, fire and emergencies
- use of technology by using basic fire equipment as required by enterprise procedures

Required knowledge

- significant hazards in the workplace
- major hazards in this workplace.
- safety devices that are on this machine and what are their functions
- location and use of safety equipment and personnel
- location of fire extinguishers and fire exits
- first aid officer in your section
- location of the first aid kit
- enterprise procedures for dealing with fire and accidents
- responding in case of fire or accident
- report any dangerous situation
- symbols used on OHS signs
- meaning of these symbols (eg hazardous chemicals, goggles, footwear, fire equipment)
- safety data sheets
- location of safety data sheets kept and information they contain
- location of information about safe levels for discharges or emissions
- information sources
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> operating safely in the workplace a record of at least one month of following safe working practices evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. <p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Convey and handle information	1.1. Gather, record and convey simple and routine information in a workplace related <i>context</i> 1.2. Personal interaction is courteous in a workplace related context 1.3. Queries are made clearly and concisely in a workplace related context 1.4. Correct procedures for location and storage of information are employed and the particular workplace practices are adhered to 1.5. Information is organised clearly, concisely and logically and complies with workplace practices 1.6. Workplace documents are completed clearly and accurately within a specified time 1.7. Time is used efficiently in a workplace related context
2. Give and follow simple routine instructions	2.1. Safe work practices are incorporated in the instructions 2.2. Instructions are accurate, clear, concise, comprehensive and are consistent with the skills of the receiver 2.3. Appropriate methods of instruction are selected 2.4. Interaction with others is efficient, effective, responsive, courteous and supportive 2.5. Prescribed sequences are adhered to in a workplace related context 2.6. Routine checking of own and others' performance is exercised 2.7. Task is carried out in a workplace related context
3. Participate in small informal work groups	3.1. Interaction is supportive, efficient, effective and courteous 3.2. Participation in discussions takes place in a workplace related context 3.3. Contributions are constructive in terms of the goal 3.4. Group decisions are understood and confirmed
4. Interact with clients	4.1. Interact with clients within, and external to, an organisation about simple routine matters 4.2. Interaction is consistent with the needs of the organisation and the organisation is presented in a positive and client-centred way

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Correct forms of greeting, identification and address are used according to enterprise practices</p> <p>4.4. The needs of the client are clarified and noted where appropriate</p> <p>4.5. Referral processes are followed to establish contact between client and appropriate personnel</p> <p>4.6. Discretion and confidentiality are exercised where appropriate</p> <p>4.7. Appropriate follow-up steps are taken according to enterprise customer service practices</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by understanding and accurately completing job tickets
- collecting, analysing and organising information by reading and understanding and correctly applying the content of machine manuals
- teamwork when participating in work group discussions and effectively and courteously interacting with others during work

Required knowledge

- grammar and spelling
- correct use of relevant industry terminology
- diction and pronunciation
- understanding job specifications
- comprehension
- summarising

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> communicating clearly and precisely in a manner suitable to the work environment demonstrate an ability to find and use information relevant to the task from a variety of information sources written documents and oral reports and reports from colleagues evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Context may include:

- this unit applies to both the production environment and the office environment.

Range of communication may include:

- range of written and spoken communication within the workplace and with clients including telephone, face to face, electronic media and documents.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Calculate costs and dimensions	1.1. Additions, subtractions, multiplications and divisions of costs and dimensions are correctly calculated 1.2. Material and time costs are correctly calculated for the elements of a brief 1.3. Percentages of cost and time are correctly calculated to fulfil the requirements of a brief 1.4. Results of <i>calculations</i> are correctly recorded
2. Calculate area, density and volume	2.1. The density and/or volume of fluids and colours are correctly calculated and applied 2.2. Percentages of densities and volumes are correctly calculated to fulfil the requirements of a brief
3. Use basic measuring tools and apply results of measurement	3.1. Appropriate <i>measuring tools</i> are selected and used correctly and accurately 3.2. Measurements are correctly interpreted and used in appropriate calculations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by recording the cost of materials and time
- collecting, analysing and organising information by correctly recording the results of calculations
- planning and organising activities by selecting and using appropriate measurement tools as part of the task
- teamwork when working with others as part of the production process
- mathematical ideas and techniques by calculating weights, areas and volumes required by various tasks
- problem-solving skills by correctly calculating enlargements and reductions of shapes
- use of technology by using measuring devices and tools

Required knowledge

- quick approximations of expected answers
- expected answer and why
- use of basic measurement tools
- parallax error and how does it affect measurement
- determining acceptable tolerances in measurement

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • basic measuring tools used in the printing industry, for example micrometers, scales, humidity meters, pH meters, screen angle and screen ruling gauges, dot gain scales and pantone colour matching • demonstrate an ability to find and use information relevant to the task from a variety of information sources • documents detailing calculations • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for training	1.1. Check with individual that <i>training</i> is required and that conditions are suitable for training 1.2. Check that any necessary equipment is available 1.3. Check that sufficient time is available for instructor and trainee
2. Instruct trainee in task	2.1. Instruct trainee in task using appropriate techniques 2.2. Provide individual with details of required knowledge about potential problems and causes of failure 2.3. Provide individual with information about potential hazards 2.4. Allow individual to practise task under supervision 2.5. Encourage individual to ask questions and provide feedback
3. Check that learning has taken place	3.1. Check that individual can perform task to required standard 3.2. Check that the individual is aware of potential problems and causes of failure 3.3. Check that individual is aware of potential hazards and knows how to avoid them
4. Arrange for necessary follow-up training	4.1. Estimate individual's level of skill and their requirements for follow-up training, if required 4.2. Arrange for appropriate follow-up training or supervised practice sessions, if required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by using clear explanations and checking responses to ensure that understanding has taken place
- collecting, analysing and organising information by breaking the task into components for effective training. Theory is matched with practice
- planning and organising activities by effectively sequencing demonstrations, explanations and practice to maximise learning
- teamwork when working with supervisors to ensure that task trained is relevant to job and that trainee has opportunities to use and practise new skills
- problem-solving skills by identifying misunderstandings and inadequate skills and finding remedies for them

Required knowledge

- questioning and active listening for conveying and clarifying information
- basic negotiation skills in relation to other team members
- conveying meaning clearly, concisely and coherently
- basic skills in demonstrating and explaining skills

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use a stand alone computer/terminal correctly	1.1. Correct posture at the keyboard is adopted according to OHS 1.2. Data is correctly accessed to ensure no loss of data 1.3. Data is manipulated correctly to ensure access, retrieval and storage of data 1.4. Keyboarding technique is safe and meets the speed requirements of the job, if necessary
2. Perform computer/terminal functions	2.1. Data is accessed, saved and retrieved for reference and for amendment 2.2. The appropriate program is selected for the job to be undertaken 2.3. Mouse and/or keyboard functions are used correctly to operate the computer <i>system</i> 2.4. Features of <i>applications</i> are used correctly to deliver a specified output 2.5. Data is saved in correct format and file location 2.6. Master pages, templates and style sheets, as appropriate, are used consistently to ensure data is the same after exchange or transfer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by effectively using written materials and correct completion of proformas
- collecting, analysing and organising information by accessing user manuals and applying their contents
- mathematical ideas and techniques by calculating file sizes, margins, image sizes and using spreadsheets
- use of technology by using computer systems

Required knowledge

- starting, operating and shutting down the computer
- circumstances should when power is turn off to the computer and why
- start or stop using the computer
- using and sharing a password
- accessing alternative file storage devices
- basic typing skills
- base finger positions on the keyboard
- implication of type at an even pace instead of typing some letters more quickly than others
- use of applications
- mathematical relationship of byte, kilobyte, megabyte and gigabyte
- producing a compressed file
- using master pages, templates or style sheets
- macros
- file formats that are used in your workplace and why
- three common errors and their consequences
- identifying whether you have made a mistake
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correctly perform basic functions on a stand alone computer/terminal using industry software • demonstrate an ability to find and use information relevant to the task from a variety of information sources • use a stand alone computer/terminal with at least TWO software applications relevant to the printing industry to perform a variety of computing functions, access and save files, according to the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • a stand alone computer or terminal.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select ink for special colour work or other specialised purpose	<p>1.1. <i>Inks</i> and additives are selected according to job specifications</p> <p>1.2. <i>Quality</i> and suitability of inks or additives are checked and appropriate action is taken</p> <p>1.3. Inks are selected according to end use of product, suitability of substrate, adhesion, physical and chemical resistance, and light fastness, drying method and print process</p>
2. Maintain and calibrate equipment	<p>2.1. <i>Equipment</i> is inspected to ensure it is functional and where necessary appropriate remedial action is taken prior to commencement</p> <p>2.2. Equipment is calibrated, cleaned and adjusted according to manufacturer's/supplier's instructions</p>
3. Prepare ink for special colour work or other specialised purpose	<p>3.1. Inks and additives are prepared according to OHS requirements and manufacturer's/supplier's instructions with suitable precautions to minimise waste</p> <p>3.2. Correct colour and weight/volume of ink are calculated, mixed and prepared to <i>match</i> the requirements of the job specification and the printing machine to be used</p> <p>3.3. Formulation of the ink and the approved colour is appropriately recorded</p>
4. Store and handle ink	<p>4.1. Inks and additives are appropriately stored, handled and labelled according to manufacturer's/supplier's instructions to prevent damage and hazards to personnel</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by correctly labelling inks and additives
- collecting, analysing and organising information by accessing and using MSDSs and data on inks and substrates to ensure efficient production
- planning and organising activities by selecting inks and additives prior to preparation
- teamwork when maintaining the production process in association with other staff
- mathematical ideas and techniques by calculating volumes, weights and formulations
- problem-solving skills by identifying and correcting formulation problems
- use of technology by maintaining and calibrating equipment

Required knowledge

- safe working conditions that are in place and what health hazards are considered when using inks, solvents and additives
- pollution and environmental issues that need to be considered when working with inks and additives
- substrate characteristics and the end use of the substrate
- ink colour fastness that is required
- ink adhering to the substrate
- solvents, monomers and additives compatibility with the ink
- formula for calculating correct quantity of ink
- computer-based package that is used for calculation of ink quantity
- details that are required in order to calculate ink quantity
- effect of ink coverage on screen mesh, machine and squeegee
- software program and the required inputs
- ideal conditions for matching colours
- effect white mixed in colour have on finished colour light fastness
- methods that are there for checking and adjusting ink colour and consistency
- machine characteristics and other parameters that affect ink deposit and consequently colour
- effects of viscosity changes in the ink
- procedures that are there for recording the formulation by hand or by computer
- approvals for mixed colour prior to commencing production
- process for recording the recipe for the colour

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• labelling mixed inks systems• environmental conditions that are in place for the storage of inks• keeping manufacturer's specifications and MSDSs• manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents |
|--|

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • should meet client requirements and enterprise and industry standards • demonstrate an ability to find and use information relevant to the task from a variety of information sources • prepare at least TWO different lots of ink and additives that require special colour matching and match colour sample by manual and electronic means to job specification, industry standards and listed performance criteria. Ideally each lot of ink should be a different type for use on a different substrate • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • inks and additives.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess final product	1.1. Finished job is collected/received and checked against job specifications according to <i>enterprise procedures</i> 1.2. Defects, irregularities and discrepancies are identified and action taken according to enterprise procedures
2. Assess wrapping and packaging requirements	2.1. Work instructions are checked to determine any specific customer wrapping and <i>packaging</i> requirements 2.2. Product is assessed to determine wrapping, parcelling and packaging requirements 2.3. Product destination and delivery time are confirmed to determine most appropriate delivery mode 2.4. Transportation/shipping requirements are determined
3. Prepare stock for dispatch	3.1. Suitable area for wrapping/packaging is selected and prepared 3.2. Wrapping and packaging materials are prepared 3.3. Product is wrapped in pre-determined parcel sizes as required 3.4. Product is packaged as appropriate to product size, type, destination, delivery route and method of transportation, according to workplace instructions, transportation/shipping regulations and OHS requirements 3.5. Packaged goods are <i>weighed</i> and labelled according to delivery instructions, transportation/shipping regulations and enterprise procedures
4. Dispatch product	4.1. Packaged product is stacked on/in appropriate storage/shipping containers prior to <i>dispatch</i> 4.2. Product is dispatched via appropriate delivery mode according to workplace instructions, enterprise procedures and OHS requirements 4.3. Product shipping details are recorded according to enterprise procedures 4.4. Delivery schedules are monitored and amended as required according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by communicating with printers, transport suppliers and clients about needs and constraints on packing and dispatch of product
- collecting, analysing and organising information by accessing data about packaging products, requirements for packaging and transport and costs and time frames in order to efficiently deliver product
- planning and organising activities by establishing sequences and timelines for packing and dispatch to ensure timely delivery of product
- teamwork when liaising with printers, transport suppliers and clients to ensure timely delivery of undamaged product
- mathematical ideas and techniques by calculating weights, volumes and delivery times
- problem-solving skills by monitoring and amending delivery schedules
- use of technology by using planning software and on-line booking systems for transport

Required knowledge

- quality checking of printed matter for defects and discrepancies
- determining what is a defective print or item
- rectifying defects
- job against job specifications
- specific customer instructions for wrapping, packing and dispatching
- customer's specific requests for wrapping and packing
- ascertaining the quantities required for each destination
- wrapping and packing materials, methods and equipment used
- OHS concerns that are there when using packaging materials and equipment
- type of shipping container that is to be used
- requirements for wrapping manually
- requirements for mechanical wrapping
- packing requirements for the mode of transport being used
- use of weighing machines, scales and labelling equipment
- critical weight of each parcel for dispatch purposes
- importance of weighing and noting the weight of each parcel
- labelling requirements that are necessary
- use of pallet trucks, forklifts and storing and loading goods

REQUIRED SKILLS AND KNOWLEDGE

- OHS requirements for the use of forklifts
- maximum weight that the pallet truck/forklift can lift
- safety measures in place for the use of forklifts
- restrictions that are there for personnel in the use of forklifts
- checks that are in place to ensure goods are correctly loaded onto transport to prevent damage during transit
- monitoring delivery schedules
- ensuring that the time of delivery at each destination complies with client's requirements
- procedures that are in place if parcels do not reach their destination
- information sources
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
- modes of transport and writing of consignment notes
- factors that affect the choice of mode of transport for a particular consignment
- arrangements that need to be made for the consignment to be picked up by the transport company
- labelling that needs to be placed on the goods to ensure delivery to the right destination
- consignment note/dispatch documentation that needs to be completed
- the need for the signature of the driver necessary on the documentation
- the need for the time of dispatch be noted on documentation

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • supervising effective packing and dispatching of printed products • supervise the wrapping and packing of a variety of printed matter (at least THREE lots) and dispatch goods to at least THREE destinations to job sheet specifications and according to the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • resources and product to pack and dispatch.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare waste	<p>1.1. <i>Waste</i> is stored according to OHS and EPA requirements</p> <p>1.2. Waste treatment system is monitored to ensure correct operation and changes to procedures are recommended if required</p> <p>1.3. Waste is treated, if necessary, to ensure compliance with workplace and EPA standards</p>
2. Dispose of waste	<p>2.1. Appropriate disposal is arranged with regard to waste quality, quantity and EPA and government regulations</p> <p>2.2. Waste is disposed of in an appropriate way to ensure compliance with workplace and EPA standards</p> <p>2.3. Any subcontractors are checked to ensure that they comply with EPA and government regulations</p> <p>2.4. Wastage rates are documented or collated for further review</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by liaising with printers, waste agencies and subcontractors about requirements for waste disposal
- collecting, analysing and organising information by using data on waste from EPA and MSDSs to ensure safe and efficient operations
- planning and organising activities by determining the sequence of operations to ensure safe efficient disposal with minimum disruption to production
- teamwork when cooperating with printers and subcontractors to ensure efficient handling and disposal of waste
- mathematical ideas and techniques by calculating volumes, weights and dilution factors
- problem-solving skills by determining the treatment options for different types of waste
- use of technology by correctly using waste disposal equipment

Required knowledge

- disposal procedures
- consequences of a company having excess waste
- segregating and packaging requirements for correct disposal
- handling procedures
- OHS regulations on the handling of waste
- appropriate handling method
- result of incorrectly handling waste
- appropriate storage method
- documentation and statutory requirements
- checking results obtained against enterprise and statutory details
- details that are recorded when recording results of liquid waste treatment
- maintaining waste testing equipment
- OHS concerns related to cleaning and maintaining testing equipment
- need for the equipment be kept clean and maintained
- information sources
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Use inventory procedures</p>	<p>1.1. <i>Inventory procedures</i> are understood and carried out according to <i>enterprise standard operating procedures</i></p> <p>1.2. Requisition, purchase, shipping and invoice documentation is used as required according to enterprise standard operating procedures</p> <p>1.3. Inward/outward recording/filing system is understood, accessed and maintained according to enterprise standard operating procedures</p> <p>1.4. Customer orders are maintained according to enterprise standard operating procedures</p> <p>1.5. Returned orders are booked back according to enterprise standard operating procedures</p>
<p>2. Requisition goods</p>	<p>2.1. Requisition procedures are understood and carried out according to enterprise standard operating procedures</p> <p>2.2. Goods are requisitioned on time</p> <p>2.3. All recording is completed and filed correctly according to enterprise standard operating procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by communicating with production managers and suppliers about materials
- collecting, analysing and organising information by accessing data on materials, shelf life and suppliers and using these efficiently
- planning and organising activities by establishing procedures to ensure that stores are maintained at appropriate levels
- teamwork when working with other staff to ensure appropriate flow of production
- mathematical ideas and techniques by completing requisition, purchase and shipping documentation
- problem-solving skills by requisitioning goods on time
- use of technology by using inventory and stores software applications

Required knowledge

- standard operating procedures to maintain inventory
- effect that poor inventory control would have on organisational procedures
- difference between requisitioning and purchasing
- type of goods and materials that would be filed under incoming or inward
- type of goods and materials that would be filed under outgoing or outward
- maintaining accurate recording and filing systems for inward/outward goods
- accurately maintaining customer's orders
- reasons for orders be returned
- checks that are made on why the goods are returned
- when goods should be replenished
- routine stocktaking
- system used for stocktaking different types of goods (eg inks, substrates, consumables, perishables)
- responsibility for calculating the value of stock at the date of the stocktake
- records of stock value that are kept
- system that is in place for segregating non-current stock
- requisitioning and recording of goods
- person/people with authority to approve the requisition of goods
- special approval required for the requisition of certain goods or materials
- procedures to indicate that goods received have been approved for production and comply with the purchase order

REQUIRED SKILLS AND KNOWLEDGE

- procedures that are in place for the urgent requisition of goods
- additional information that may need to be recorded prior to filing requisition orders

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the ability to:

- requisitioning goods and correctly applying inventory procedures
- compile a portfolio of inventory paperwork covering ONE month that shows performance criteria have been met
- evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.

Context of and specific resources for assessment

Assessment must ensure:

- assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Inventory control processes may include:

- inventory control based on standard operating procedures utilising manual or electronic systems. Standard operating procedures undertaken include Just-in-Time, Kan Ban.

Enterprise procedures may include:

- work and organisational methods according to enterprise standard operating procedures and legislative requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify material requirements	1.1. Customer/client is consulted as appropriate and customer order specifications detailed 1.2. Supporting production data is examined 1.3. Materials required are identified including type, quality and quantity 1.4. Quantities required are estimated according to predetermined standards 1.5. <i>Purchase</i> order/list is developed according to enterprise standard operating procedures
2. Purchase materials and schedule deliveries	2.1. Delivery requirements are determined from production plan 2.2. Supplier/vendor is informed of requirements and specifications 2.3. Supply/ <i>purchasing schedules</i> are adjusted where required according to enterprise standard operating procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by liaising with production management and suppliers to ensure consumables are available
- collecting, analysing and organising information by gathering and using information about supplies and suppliers, delivery times, usage rates
- planning and organising activities by identifying required materials and organising delivery to support production schedule
- teamwork when liaising with production management and suppliers to ensure consumables are available
- mathematical ideas and techniques by examining production data and determining material requirements
- problem-solving skills by finding alternative suppliers if required and rescheduling deliveries to meet production exigencies
- use of technology by using computerised stock and order systems

Required knowledge

- determining materials and purchasing requirements
- obtaining customer order specifications
- necessity to keep an accurate stock control system
- manual or computer stock control systems that are in place
- replenishing stocks when needed
- purchasing procedures
- preferred suppliers and the products they supply
- raising an order and by whom
- contracts that are listed for purchase orders
- reasons for purchasing contracts
- responsibility for determining the required quantity in the order
- special instructions that could be listed on the order
- maintaining accurate purchasing records
- scheduling materials delivery
- procedures if delivery requirements cannot be met
- possible alternatives if delivery requirements cannot be met
- notification if delivery requirements cannot be met
- adjusting purchasing schedules
- effects that could atmospheric conditions have on materials in storage

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correctly purchasing materials and scheduling their delivery • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce a portfolio of paperwork that shows scheduling and purchasing of material deliveries. This should include a record of at least a month during which there were no major interruptions of production caused by absence of materials and no excess inventory in stock • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Purchasing specifications</i> may include:	<ul style="list-style-type: none"> determined from standard job sheets, written and verbal instruction.
<i>Purchasing schedules</i> may include:	<ul style="list-style-type: none"> on site procedures developed for pre-contracted suppliers/vendors.
<i>Contract preparation</i> may include:	<ul style="list-style-type: none"> manual or electronic systems utilising on site system.
<i>Context</i> may include:	<ul style="list-style-type: none"> working within a production team or a warehouse/store section servicing a number of production teams.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify production requirements and capacities	1.1. <i>Printing</i> , converting and finishing production data is identified 1.2.Inventory capacities and requirements are identified 1.3.Procurement and supply requirements and constraints are identified 1.4.Production capacity for the workgroup is identified 1.5.Production constraints for the workgroup are identified 1.6.Standard times for the workgroup are identified
2. Prepare production schedule for small work unit	2.1. <i>Scheduling</i> is done in conjunction with overall scheduling of other units and processes 2.2.Production schedule is prepared according to production, inventory, procurements, time constraints and supply capacities and requirements 2.3.Schedule is documented according to enterprise procedures 2.4.Schedule is modified as required
3. Monitor production	3.1.Production is monitored 3.2.Any necessary changes in scheduling, and the reasons for this, are reported according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by liaising with production management and customers
- collecting, analysing and organising information by monitoring production and determining changes required in scheduling
- planning and organising activities by sequencing machinery as efficiently as possible
- teamwork when liaising with other production processes and stores to ensure materials are available
- mathematical ideas and techniques by calculating required consumables and run times of jobs
- problem-solving skills by adjusting schedules to minimise machine down time and/or to accommodate rush jobs
- use of technology by using production control software

Required knowledge

- production requirements and capacities
- job requirements that determine the production processes
- identifying special production requirements and possible problems
- criteria that are used to determine availability of machines, materials and labour
- OHS concerns that need to be considered when planning production
- checking stock levels
- checking internal stock levels
- information that you obtain from outside suppliers that will allow you to establish job priorities
- system that you use to select alternative suppliers
- preparation and documentation of the production schedule
- determining production workflow
- system used to work out job priorities
- purpose of documenting production workflow
- communicating schedules to the workforce
- revising schedules
- monitoring and amending production schedules if required
- consideration that is given to revising production schedules to take into account customer requirements and job complexity

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> effectively scheduling production for a small work unit produce a portfolio that shows all appropriate paperwork for one month's scheduling according to the listed Performance Criteria for a single small production unit in pre-press, printing, screen printing, converting or finishing evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Print processes</i> may include:	<ul style="list-style-type: none"> any processes in pre-press, press, finishing, screen printing.
<i>Scope of scheduling</i> may include:	<ul style="list-style-type: none"> applies to the scheduling for a single small production work unit or production cell, or workstation or work unit; or a single production process where there are only a small number of constraints or variables. The scheduling applies to only a part of the overall production process.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify production requirements	1.1. Overall production schedule is examined to identify production requirements 1.2. Material requirements are identified according to production requirements 1.3. Current <i>processes</i> are identified in consultation with other staff
2. Review customer order specifications	2.1. Customer order specifications are obtained and examined 2.2. Supporting production data is examined 2.3. The production process to be used is determined based on information supplied in production plan
3. Determine process operations	3.1. Existing process operations are reviewed in consultation with management 3.2. Existing problems are clarified with team and customers 3.3. Work operations required are identified in consultation with team 3.4. Suitable machinery or equipment is identified in consultation with team 3.5. Cost and duration are estimated against production estimates 3.6. Recommendations on possible solutions are made and documented
4. Determine production sequence	4.1. Steps required for the process are identified 4.2. Material and equipment requirement lists are prepared and documented 4.3. Quality assurance steps and specifications are identified 4.4. Process steps are documented and clearly represented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by liaising with production workers and customers to identify needs and limitations
- collecting, analysing and organising information by accessing data about machine capabilities, production processes and customer needs and using them in the planning process
- planning and organising activities by modelling and trialling different process operations
- teamwork when working with staff to review existing process operations
- mathematical ideas and techniques by completing a cost benefit analysis of the production process and making projections for different options
- problem-solving skills by considering options for modifying operational processes and choosing the most efficient
- use of technology by using planning and project management software

Required knowledge

- necessity to implement change
- changes to existing production areas that will have to be made
- integrating the operation into existing organisational processes
- materials that are required in addition to existing ones
- alternatives to the chosen process
- process choice
- review that was conducted to assess the process to suit customer requirements
- need for new customers to be sought
- seeking customers
- production plan information that will aid in determining the process
- impact that will the process have on existing operations
- integrating training into existing process operations
- process to eliminate existing production problems
- utilising existing machinery or equipment
- space that will the equipment occupy in the production area
- special provisions that will be necessary to accommodate the equipment
- expected production life of this equipment
- technology that could see this equipment outdated
- production factors that were established from tests and trials

REQUIRED SKILLS AND KNOWLEDGE

- estimating cost savings
- estimated total cost savings per annum
- positive conclusions that can be drawn from the tests and trials
- negative conclusions that can be drawn from the tests and trials
- authority to approve the operational process
- identified steps for the process
- process that have any effect on existing quality assurance steps
- new materials that will need to be supplied
- importance of documenting the steps of the process

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • effective planning or modification of production processes • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce a portfolio that includes paperwork showing planning of operational processes in any ONE of pre-press, printing, screen printing, converting, binding and finishing, corrugating or laminating, according to the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Range of processes may include:

- applies to the development of new processes or the modification of existing processes based on known and documented changes to process technology or product. Applies to a part of the overall production process.

Enterprise procedures may include:

- carried out according to established organisational practices and processes and following instructions as to approach. Plan is developed according to accepted organisation practice and procedures
- work for the process element is planned over the specified time frame taking into account resources required and available
- process plan establishes detailed steps required and milestones against which progress can be checked.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for changeover	1.1. Timing of <i>changeover</i> is determined according to production schedule 1.2. All required tools/parts/materials are obtained for changeover 1.3. Process and tools/parts/materials are organised ready for changeover 1.4. Liaison with relevant people is conducted for quick changeover
2. Make quick changeover	2.1. Quick changeover is planned according to quick changeover principles 2.2. Changeover is completed according to enterprise <i>procedures</i> 2.3. Output is checked to meet specifications 2.4. Any steps which cause a problem are noted and changes recommended to problematic steps
3. Improve OHS	3.1. Hazards in all steps/actions are identified 3.2. Risks from each hazard are determined 3.3. Actions which may be performed in a more ergonomic manner are identified 3.4. Changes are recommended to improve OHS

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by liaising with relevant staff to facilitate changeover
- collecting, analysing and organising information by determining when changeover will be required according to production schedule
- planning and organising activities by planning a quick changeover according to quick changeover principles
- teamwork when working with others to affect a quick changeover
- mathematical ideas and techniques by checking output to ensure that it meets specifications
- problem-solving skills by identifying actions which may be performed in a more ergonomic manner
- use of technology by using required tools/parts/materials for changeover

Required knowledge

- principles of quick changeover
- relevant procedures
- purposes/requirements of changeover
- methods of recommending changes
- quality requirements for products
- minimisation of changeover scrap

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • routine positive participation in quick changeover procedures • assessment will need to occur in an organisation using quick changeover or a suitable simulation in say a workshop.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • machinery for changeover.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Changeover may include:

- an exchange of dies/tools (traditional), or a change between batches, or it may be any quantum equipment/process change to produce a different product eg plate changeover, stock change producing only the one product or simultaneous range of products. This is not applicable to a maintenance/PVI shutdown as experienced by continuous process manufacturers.

Procedures may include:

- procedures includes all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, oral, computer-based or in some other form.

SMED may include:

- changeover is sometimes referred to as SMED which is a more extreme form where SMED is an abbreviation for Single Minute Exchange of Die; literally, changing a die on a forming or stamping machine in a minute or less; broadly, the ability to perform any set up activity in a minute or less of machine or process downtime. The key to doing this is frequently the capability to convert internal set up time to external set up time. Variations on SMED include:
 - single-digit set up performing a set up activity in a single-digit number of minutes, ie fewer than ten
 - OTED: One touch exchange of die; literally, changing a die with one physical motion such as pushing a button; broadly, an extremely simple procedure for performing a set up activity.

RANGE STATEMENT*Set up time* may include:

- set up time - work required to change over a machine or process from one item or operation to the next item or operation. It can be divided into two types:
- internal set up work that can be done only when the machine or process is not actively engaged in production; OR
- external set up work that can be done concurrently with the machine or process performing production duties.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Participate in group discussions	<p>1.1. The participant's contribution in a small group discussion to reach agreement on a workplace related issue is clearly evident</p> <p>1.2. Personal views are presented in a way that supports the views of others involved in the discussion</p> <p>1.3. Appropriate meeting procedures are adhered to</p> <p>1.4. Information is conveyed in a logical, clear and concise manner</p> <p>1.5. Specified follow up steps are taken</p>
2. Prepare a presentation	<p>2.1. Planning and preparation of a simple <i>presentation</i> is undertaken cooperatively with <i>team members</i></p> <p>2.2. Agreed tasks are completed to schedule</p> <p>2.3. The participant's purpose in the presentation is clearly evident from the context</p> <p>2.4. Interaction is supportive and constructive</p>
3. Present a job related report to a group	<p>3.1. Views are presented clearly and logically and relate to the aims of the presentation</p> <p>3.2. The stated purpose of the presentation is achieved</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by actively participating in work group (or workplace committee eg OHS) discussions
- collecting, analysing and organising information by preparing a job related report to a group
- planning and organising activities by cooperating with team members to make a presentation to a group
- teamwork when participating in a group discussion on a workplace issue
- mathematical ideas and techniques by conveying information in discussion where relevant
- problem-solving skills by being part of a group discussion that proposes actions as a follow up on a workplace issue
- use of technology by using presentation tools and media

Required knowledge

- listening
- speaking
- note taking
- gathering and organising information
- meeting procedure
- group goal-setting techniques
- handling conflict
- negotiation
- presentation techniques and media

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform routine system maintenance	1.1. Required equipment is checked to be in working order and available for use 1.2. Peripherals are fitted, maintained, cleaned and adjusted as required 1.3. Personal computer furniture and fittings are adjusted according to OHS practices and protection of equipment 1.4. Routine system maintenance and security processes are performed 1.5. Correct functioning of automated processes is monitored 1.6. Monitors are adjusted only when being calibrated and are otherwise left alone 1.7. All abnormalities and system malfunctions are reported 1.8. Off-line maintenance records are kept up to date
2. Perform backups and restorations on a personal computer	2.1. File system backups are performed regularly according to established workplace practices 2.2. Backup media are labelled, stored and rotated according to established workplace practices 2.3. Files are restored from backup as required 2.4. Data is recovered from damaged and corrupted files using small office tools 2.5. Adequate written records of backups are kept
3. Store and supply consumables	3.1. Consumables are stored and disposed of with regard to OHS, care of equipment and system security 3.2. Stock levels and user needs are monitored to ensure required consumables are available
4. Upgrade and configure a personal computer	4.1. Software and peripherals are installed, upgraded and configured according to enterprise policy 4.2. New software, upgrades and adjustments are tested to ensure adequate performance 4.3. Associated a personal computer furniture and fittings are adjusted to meet workplace standards for OHS and care of equipment 4.4. Written records of <i>installations</i> , upgrades and configurations are maintained
5. Access documentation,	5.1. Documentation, including hardware and software manuals and equipment inventory and service

ELEMENT	PERFORMANCE CRITERIA
records and updates	records, is stored and accessed appropriately 5.2. Supplementary product information, updates and technical reference material are accessed using the Internet, journals and other sources
6. Access and deliver data	6.1. Removable storage devices are connected, disconnected and configured as required 6.2. Data is accessed from different types of file <i>systems</i> 6.3. Data is stored and converted to suit a variety of operating systems, environments and applications 6.4. Data is transmitted effectively by the method most appropriate to the task

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by providing clear information about protocols and procedures to other system users
- collecting, analysing and organising information by accessing user manuals and on-line resources and organising them for easy use
- teamwork when liaising with other system users to ensure maintenance program causes minimum disruption to production
- mathematical ideas and techniques by calculating file sizes and memory requirements
- problem-solving skills by troubleshooting application problems and system faults
- use of technology by using computer systems

Required knowledge

- OHS requirements for terminal operators
- positioning the keyboard, mouse and screen to avoid fatigue
- foot rest provision
- computing technology
- relationships between baud rate, bits per second and bandwidth
- MIPPS
- function of the video card
- check performed before commencement of a software installation or upgrade
- security and storage of data
- risks that might exist for the system, the enterprise and the user if the a user proceeds to installs their own software to use during their lunch break. Assuming the software is scanned for viruses
- strengths and weaknesses of backup and restoration procedures currently used
- reasons hand-written records are kept
- alerts to, and response to possible security breach or virus attack
- environmental factors that could cause loss of data from removable media
- file preparation, conversion and encoding including cross-platform considerations
- retaining converted file fonts
- differences in file naming conventions between IBM-PC, Macintosh and Unix
- three encoding methods for Internet email transmission of files and state which platform each is used for
- four common graphics file formats
- choosing formats

REQUIRED SKILLS AND KNOWLEDGE

- correct use of network and telecommunications technologies
- Macintosh communication with another computer without using AppleTalk
- types of cabling and network cards that are installed and what is their effect on data transmission speed
- transmitting data at 38400bps using a V34 modem
- initiating a search for product information on the Internet
- most efficient way to exchange files with clients or other companies
- specific hardware, peripherals and consumables for the pre-press area
- SCSI device and how the system refer to SCSI devices
- configuration of a typical high performance pre-press computer
- form of computer language that is used to drive an image setter
- types of removable media commonly used in the pre-press area
- pieces of hardware that require periodical cleaning
- pre-press software
- limiting factor with most DTP pre-press software
- UNIX use in the pre-press production process
- appropriate software required to:
 - scan for a virus
 - produce a logo
 - manipulate an image
 - set up a printer network
 - create a page of text
- manuals, safety and other documentation that are relevant to this task and where are they kept and information that is included in these documents
- other sources of information that are available

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correctly operating and maintaining computer resources. The underlying skill of system maintenance should be transferable across the design and pre-press sectors • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce log books and written records showing system maintenance and configuration history over a period of THREE months, including all reported abnormalities and how they were addressed, stock records • perform a routine system backup and restore a nominated file from an earlier backup • convert a document from one common file format to another and make available for access on a different platform (eg Macintosh application to MS-Windows application via suitably encoded Internet email attachment) • research and report the availability of upgrades and support for TWO pieces of hardware and TWO pieces of software currently in use • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of

EVIDENCE GUIDE	
	portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Types of installations</i> may include:	<ul style="list-style-type: none"> peripherals and software with pre-configured installation routines.
<i>Types of systems</i> may include:	<ul style="list-style-type: none"> multi-user and or network computer systems used in the printing industry including publishing, consultancy, advertising or packaging.
<i>Data transmission</i> may include:	<ul style="list-style-type: none"> methods may include ISDN, removable devices, the Internet.

-------------------------	---------

Co-requisite units

Co-requisite units		

ICPSU389C Undertake basic root cause analysis

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to contribute to an advanced maintenance strategy; competitive manufacturers rely on the use of root cause analysis (RCA) by all personnel.
------------------------	---

Application of the Unit

Application of the unit	In a typical scenario, the employee works in an organisation which is applying competitive manufacturing strategies. This involves the operator in "owning" their process, taking responsibility for it, undertaking basic root cause analysis of problems and generally contributing to increasing the up time and general overall equipment efficiency (OEE). This competency comes from the Competitive Manufacturing Initiative group of competency standards.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Recognise problems	1.1. Equipment/plant condition is monitored according to enterprise procedures 1.2. Product is monitored against quality standards and job specifications 1.3. Conditions/product characteristics indicative of a problem are identified 1.4. An existing work-based problem and/or practice is recognised
2. Implement quick fix	2.1. The immediate problem is controlled/contained 2.2. A quick fix is recommended/implemented within the scope of competency and authority
3. Determine root cause	3.1. A range of possible causes is identified 3.2. Information is gathered to eliminate/confirm causes 3.3. Assistance is sought as required according to level of responsibility and personal capabilities 3.4. Root cause is identified based on examination of the above
4. Develop permanent solution	4.1. A range of methods of eliminating the root cause/breaking the cause tree is identified 4.2. The most appropriate solution is selected based on machinery capabilities, material requirements and job schedules 4.3. Relevant people are liaised with to confirm decision, if required 4.4. Solution is recommend/implemented within the limits of competency and authority 4.5. Implementation is monitored and improvements are made as required

Required Skills and Knowledge

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by liaising with relevant people to confirm decision
- collecting, analysing and organising information by monitoring implementation and making improvements
- planning and organising activities by monitoring implementation and making improvements
- teamwork when seeking assistance as required according to level of responsibility and personal capabilities
- mathematical ideas and techniques by gathering information to eliminate/confirm causes
- problem-solving skills by selecting the most appropriate solution based on machinery capabilities, material requirements and job schedules
- use of technology by utilising equipment and tools to analyse capabilities

Required knowledge

- analysis
- problem solving
- communication
- documenting
- root cause analysis methodology
- indicators of a problem
- principles of the process sufficient to undertake a RCA and propose solutions
- use of relevant analysis tools (cause/effect diagrams, Pareto Charts, 4W)

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the competent operator will be able to recognise problems in their process and undertake a root cause analysis, either alone or with assistance, and propose permanent solutions. Evidence of root cause analyses undertaken should be available generally a range of RCA activities will be required in order to generate sufficient evidence.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment will need to occur in an organisation implementing root cause analysis or by simulation or project access to an organisation using RCA.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPSU458C Monitor production workflow ICPSU482C Troubleshoot and optimise materials and machinery.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Quick fix</i> may include:	<ul style="list-style-type: none"> not all situations can wait for the root cause analysis and eventual elimination of the root cause as there are serious current impacts. The quick fix will control these immediate impacts, but does not eliminate the root cause. The quick fix is sometimes referred to as the "quick and dirty" solution.
<i>Root cause</i> may include:	<ul style="list-style-type: none"> there are many possible causes of any problem. Eliminating some causes will have no impact, eliminating others will ameliorate the problem. However elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.
<i>Cause tree</i> may include:	<ul style="list-style-type: none"> the series of causes is referred to as the cause tree. Not all root causes are accessible and able to be eliminated. Breaking the cause tree in such a way that the problem cannot recur is an acceptable alternative.
<i>Uptime</i> may include:	<ul style="list-style-type: none"> uptime refers to the overall availability of the plant - it is the inverse of downtime or the unavailability of the plant. Ideal uptime is 100%.
<i>Overall equipment efficiency (OEE)</i> may include:	<ul style="list-style-type: none"> the combination of the main factors causing loss of productive capacity from equipment/plant and where: <ul style="list-style-type: none"> availability takes into account losses due to breakdown, set up and adjustments performance takes into account losses due to minor stoppages, reduced speed and idling quality rate takes into account losses due to rejects, reworks and start up waste.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare laboratory equipment	1.1. Appropriate equipment is selected and prepared 1.2. Equipment is checked for calibration where necessary
2. Test raw materials or finished goods	2.1. Raw material or finished goods specification is identified and test procedure established to determine test parameters 2.2. Raw material or finished goods are tested against specified <i>quality</i> standards using appropriate/prescribed testing procedures and according to OHS requirements
3. Record and report test result	3.1. Recording and reporting of test results are completed according to enterprise requirements 3.2. Problems and issues are documented and reported to appropriate personnel
4. Clean laboratory equipment	4.1. Equipment is cleaned and stored according to enterprise requirements 4.2. Chemicals and waste are disposed of according to enterprise procedures and OHS standards

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by reporting test results according to enterprise requirements
- collecting, analysing and organising information by recording test results
- planning and organising activities by preparing the laboratory equipment prior to conducting tests
- teamwork when maintaining production system in association with other staff
- mathematical ideas and techniques by calibrating and using measuring devices, and calculating dilution factors
- problem-solving skills by recording and reporting test results
- use of technology by using monitoring and diagnostic equipment

Required knowledge

- OHS and other statutory requirements
- OHS concerns that are there in the use of this testing equipment
- statutory requirements that must be met regarding the use of this equipment?
- testing equipment
- necessity to work in a controlled clean environment
- use of this particular equipment
- equipment calibration
- printing processes
- common tests that are required for the various printing operations and products in this company
- common causes of failure in the products that you test
- test that was performed on this product and why
- sampling and quality control techniques
- sampling techniques that are used to select products for testing?
- appropriate size of samples for testing
- record keeping
- records that need to be kept on a particular test product
- purpose of keeping test results
- use of test results in the future
- equipment maintenance
- need to keep this equipment clean
- storing test equipment

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and implement work schedules	1.1. Tasks and/or jobs are identified and prioritised according to the overall production schedule 1.2. Timelines, personnel and equipment are identified for each job and task 1.3. Schedules are communicated logically and in an easily understood manner 1.4. Changes to schedules are implemented through reorganisation of priorities, with reasons being clearly conveyed to the team or individuals 1.5. Priority of tasks is communicated to the team or individuals
2. Monitor performance of tasks	2.1. Required standard is effectively communicated to the team or individuals to ensure understanding of the allotted task 2.2. Instruction or support to achieve required standard is provided as necessary 2.3. Standard of performance is monitored, including quality standards, to ensure achievement of outcomes and is reported according to enterprise procedures 2.4. Completion times of tasks/jobs are monitored and scheduling is adjusted as appropriate
3. Monitor and support development of teams or individuals	3.1. Individual team or worker performance is monitored to determine effectiveness and is reported according to enterprise procedures 3.2. Support is provided to individuals or teams to ensure full participation 3.3. Procedures are provided to assist interaction and feedback on effectiveness between teams and individuals
4. Monitor the application of OHS in the work area	4.1. Implementation of standards, both OHS and environmental, is monitored to determine safety in the work area requirements 4.2. Strategies for prevention or correction of problems are determined from the monitoring process 4.3. Recommendations for prevention or correction are made in order to achieve established standards
5. Communicate with management, work teams and individuals	5.1. All information affecting work is explained logically and in an easily understood manner to team coordinators, teams or individuals where appropriate

ELEMENT	PERFORMANCE CRITERIA
	5.2. Effective and appropriate information provision is carried out with management and/or external personnel 5.3. Written reports are concise and conform to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by effectively communicating with management and/or external personnel
- collecting, analysing and organising information by accessing data about production processes and abilities of workers and customer demands and using these effectively in scheduling
- planning and organising activities by monitoring the performance of tasks and adjusting scheduling
- teamwork when establishing procedures that enable feedback from workers and encouraging suggestions that might enhance production
- mathematical ideas and techniques by calculating job times and manipulating scheduling to make most efficient use of personnel and equipment
- problem-solving skills by adjusting schedules to meet contingencies
- use of technology by using production scheduling and office software

Required knowledge

- OHS standards
- responsible person for OHS standards in the workplace
- reporting procedures that are necessary with OHS matters
- planning and implementing work schedules
- determining priority of jobs
- work scheduling procedures that are used within the organisation
- scheduling changes
- standards monitoring
- information that is reported in performance monitoring
- responsibility for providing instruction to achieve the required standard
- staff and workforce development
- performance monitoring of teams or individuals on performance
- enhancing individual performance
- changes that can be made to enhance team performance
- advantage of providing written reports to management

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • effective scheduling and supervision of a team or individuals • produce a portfolio that demonstrates that each element has been carried out. This can include rosters, schedules, quality related documentation and testimonials from superiors and workers being supervised • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements for efficient production	<p>1.1. Machine operations, staff and production processes are organised to meet production requirements</p> <p>1.2. Recommendations are made related to requirements and according to enterprise procedures, OHS and EPA requirements</p> <p>1.3. Quality standards and safe work practices are checked to ensure compliance with enterprise procedures and legislative requirements</p>
2. Monitor production efficiency	<p>2.1. Compliance to specified requirements (including quality standards, time taken, wastage) is checked to ensure efficiency is maintained</p> <p>2.2. Non-compliance is identified, reported or recorded and investigated to determine causes</p>
3. Implement improvements to production efficiency	<p>3.1. Corrective or preventive action is recommended and implemented where appropriate</p> <p>3.2. Changes are communicated to relevant personnel in a logical and easily understood manner</p> <p>3.3. Changes are monitored to confirm improvement to production efficiency</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by establishing and managing effective oral and written channels with staff and management
- collecting, analysing and organising information by accessing data about machine and personnel capabilities and integrating that with production planning
- planning and organising activities by establishing effective goals for work teams and monitoring performance to implement improvements
- teamwork when working with production staff to maintain production efficiency
- mathematical ideas and techniques by using data from production control systems to adjust planning and scheduling
- problem-solving skills by making changes to production based on non-compliance with quality standards
- use of technology by using production control systems

Required knowledge

- requirements for efficient production standards
- OHS requirements that should be met with production control
- obtaining production process information
- quality standards that were checked to ensure enterprise procedures were met
- quality standards that were checked to ensure EPA requirements were met
- monitoring systems that are available to aid production management
- maintaining production efficiency
- problems that could have caused non-compliance of production efficiency
- reasons for problems arising
- information that is necessary to efficiently plan, schedule and reschedule production
- improving production efficiency
- the authority to implement production changes
- information that needs to be communicated to implement changes to production control

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Input job	<p>1.1. Each new job is assigned a unique identification number</p> <p>1.2. Baselines are set for the production and budget estimation</p> <p>1.3. The number of actions or steps are identified for each job</p> <p>1.4. The <i>nature of the actions</i> are identified</p>
2. Assess job step	<p>2.1. The job step is identified using business workflow tools</p> <p>2.2. The current step is compared against any baselines set for the job</p> <p>2.3. The number of steps and iterations are identified and any corrective action undertaken if necessary</p> <p>2.4. Actions within each step are logical to the step</p> <p>2.5. Resources required for the current and future steps are identified and availability confirmed</p>
3. Evaluate job progress	<p>3.1. Job progress is evaluated and any improvement modifications to the workflow are identified</p> <p>3.2. Parallel activities have been fully utilised to meet baselines and quality standards</p> <p>3.3. Reports are reviewed and possible process improvements identified</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by setting baselines for the production and budget estimation
- collecting, analysing and organising information by reviewing reports and identifying possible process improvements
- planning and organising activities by identifying resources required for the current and future steps and confirming availability
- teamwork when maintaining the production process in association with others
- mathematical ideas and techniques by assigning each new job a unique identification number
- problem-solving skills by evaluating job progress and identifying any improvement modifications to the workflow
- use of technology by using equipment to monitor workflow, assess job steps and evaluate work progress

Required knowledge

- setting baselines
- business/production workflows
- process improvement
- job assessment
- scheduling
- resource allocation

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correctly monitoring the workflow, assessing job steps and evaluating work progress • for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • relevant hardware and software or non-computerised systems.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Nature of the actions may include:

- ordering, coordinating, modifying.

Technical guidance may include:

- the competencies relate to personnel who provide technical guidance and assistance to work teams.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish and maintain a positive relationship with the client	1.1. Rapport with client is built and maintained according to accepted business practices 1.2. Opportunities to provide additional services to client are identified 1.3. Client is advised of input requirements and restraints for relevant <i>processes</i>
2. Manage customer expectations	2.1. Match <i>customer</i> needs and expectations with production process requirements 2.2. Job requirements are clarified with client and compared with quote/estimate 2.3. Information and clarifications are passed between client and technical staff 2.4. Job specifications and job parameters are used to define appropriate production procedures and processes 2.5. Knowledge of company services, equipment capabilities, limitations and workflow is demonstrated 2.6. Project is evaluated and feedback provided to client as agreed or according to enterprise customer service practices 2.7. Preliminary proof and contract proof are distinguished according to enterprise standards and that is communicated to the client 2.8. Client is provided with documentation to review and approves all dummies and proofs at appropriate stages in the production process 2.9. Job information (eg work orders, quotes, job tickets) is documented and compiled
3. Manage project budget and timeline	3.1. Client requested changes are monitored and documented and the impact on budget and timeline is communicated to the client 3.2. The client is advised on alternative production techniques

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by acting as a liaison between customer and printer and accurately transmitting the requirements, possibilities and limitations of each to the other
- collecting, analysing and organising information by using data on equipment capabilities, costs and customer requirements to produce a viable quote
- planning and organising activities by ensuring adequate consultation with the customer during the job
- teamwork when working effectively with both customers and production workers to ensure job satisfaction
- mathematical ideas and techniques by developing different quotes for different production options
- problem-solving skills by effectively translating the customer's idea/requirements into a viable product/job
- use of technology by using software for estimating and understanding cross-platform software issues when quoting jobs

Required knowledge

- requirements of all printing processes
- relationship between pre-press, press and post-press
- costs and characteristics of a range of substrates and inks
- information sources

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> effectively managing customer expectations and making client aware of the stages and scheduling of production. Effective customer service demonstrate an ability to find and use information relevant to the task from a variety of information sources provide a portfolio covering a month that demonstrates all paperwork has been completed correctly, jobs are completed within budgets, customers' expectations are met eg by providing written or oral reports or examining work error reports evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Review material behaviour	1.1. Evaluation of material or product structure is conducted to identify options for production 1.2. <i>Material handling options</i> are chosen to ensure best performance of materials during production 1.3. Options are assessed to determine most effective/efficient method of production, ensuring highest quality and yield from the materials 1.4. A test runs confirms correct options or the need for further adjustment or trialling to meet quality standards 1.5. Options and recommendations are documented for future reference according to enterprise procedures
2. Tune and adjust machinery	2.1. Idiosyncrasies of machines are reviewed and adjustments or tuning undertaken to compensate or to exploit the idiosyncrasy, within the manufacturer's specifications 2.2. Options are assessed to determine most effective/efficient method of production, ensuring highest quality and yield from machinery 2.3. A test runs confirms correct options and settings or the need for further adjustment or tuning to meet quality standards 2.4. Options and recommendations are documented for future reference according to enterprise procedures 2.5. Instruction is provided to machine operator or finisher on new practices, if required
3. Troubleshoot machinery and material problems	3.1. Corrective or preventive action is recommended and implemented where appropriate 3.2. Changes are communicated to relevant personnel in a logical and easily understood manner 3.3. Changes are monitored to confirm improvement to production efficiency 3.4. Ongoing problems are reported according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by communicating changes to relevant personnel in a logical and easily understood manner
- collecting, analysing and organising information by documenting options and recommendations for future reference according to enterprise procedures
- planning and organising activities by assessing options to determine the most effective/efficient method of production
- teamwork when providing instructions to machine operator or finisher on new practices
- mathematical ideas and techniques by conducting test runs to confirm correct options and settings
- problem-solving skills by evaluating material or product structure to identify options for production
- use of technology by working with relevant equipment and machinery

Required knowledge

- need for implementing change
- changes to existing production areas that will have to be made
- integrating the operation into existing organisational processes
- materials that are required in addition to existing ones
- alternatives to the chosen process
- process choice
- review that was conducted to assess the process to suit customer requirements
- different materials used to produce the same results without the production problems
- production plan information that will aid in determining the process
- impact of the process on existing operations
- integrating training into existing process operations
- eliminate existing production problems
- optimising existing machinery or equipment
- special provisions that will be necessary to extend the use of equipment
- expected production life of this equipment and machinery
- technology that could see this equipment outdated
- technology that could improve this equipment or machinery

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • recommend and implement new practices that extend the every day use of materials and machinery and troubleshoot problems material and machinery • produce a portfolio that demonstrates that each element has been carried out. This should include records of standards and monitoring procedures and evidence that they are being effectively carried out • production efficiencies are confirmed through discussions with senior management and review of workplace documentation • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment • machinery and materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Material handling options</i> may include:	<ul style="list-style-type: none"> • fanning • stacking • drying • moisture • quantities • mixers • glues.
<i>Technical guidance</i> may include:	<ul style="list-style-type: none"> • the competencies relate to personnel who provide technical guidance and assistance to work teams.
<i>Data sources</i> may include:	<ul style="list-style-type: none"> • may include manual records or reports or computerised production monitoring systems.
<i>Decision making</i> may include:	<ul style="list-style-type: none"> • decisions may have a significant effect on the results of a production line/unit/department.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor the operation of the JIT system	1.1. Track value of <i>key measures</i> 1.2. Recognise indicators of poor performance 1.3. Take appropriate <i>quick fix</i> action
2. Liaise with relevant stakeholders	2.1. Regularly communicate with team members regarding the operation of the <i>JIT</i> system 2.2. Communicate with relevant personnel up and down the <i>value chain</i> regarding the operation of the JIT system 2.3. Identify issues with stakeholders and take appropriate quick fix action
3. Improve the JIT system	3.1. Identify areas requiring improvement in the JIT system 3.2. Recognise competency gaps in team members and other stakeholders 3.3. Recognise attitudinal issues in team members and other stakeholders 3.4. Develop appropriate improvement solutions 3.5. Liaise with relevant people regarding these solutions 3.6. Implement/assist with the implementation of the solutions

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by regularly communicating with team members regarding the operation of the JIT system
- collecting, analysing and organising information by monitoring the operation of the JIT system
- planning and organising activities by implementing/assisting with the implementation of the solutions
- teamwork when regularly communicating with team members regarding the operation of the JIT system
- mathematical ideas and techniques by monitoring the operation of the JIT system
- problem-solving skills by identifying issues with stakeholders and taking appropriate quick fix action
- use of technology by monitoring the operation of the JIT system

Required knowledge

- reading
- recording
- communicating
- planning
- analysing
- problem solving
- negotiating
- JIT principles relevant to job(s)
- procedures for making/recommending improvements
- reasons for delays/storages/inventories in that section of the value chain under their control and methods of reducing/eliminating them
- competency gap analysis and methods of filling competency gaps
- principles of the manufacturing process relevant to the section/team
- production data generated by the process and its application to JIT

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> The competent team leader will at all times know the state of the JIT system in their area and will take actions to ensure its smooth operation on a day to day basis as well as recommend/undertake actions to improve it long term. Evidence should be available of the team leader's facilitation of the operation of the JIT system and their recommendations for making improvements Evidence should be gathered from an extended period showing routine support for the JIT system and regular improvements made or recommended.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> this unit will need to be assessed in an organisation operating JIT access to an organisation using JIT.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Key measures</i> may include:	<ul style="list-style-type: none"> key measures may include inventory levels, lead time, IFOTIS delivery, productivity/production rate, other measures of pull through the value chain, quality IFOTIS refers to delivery of product In Full, On Time and In Specification.
<i>Quick fix</i> may include:	<ul style="list-style-type: none"> quick fix is action taken to immediately and cheaply control a problem, prevent it getting worse and/or ameliorate its impact, but which does not necessarily solve it long term.
<i>JIT - Just-in-Time</i> may include:	<ul style="list-style-type: none"> JIT - a production scheduling concept that calls for any item needed at a production operation, whether raw material, finished item, or anything in between, to be produced and available precisely when needed, neither a moment earlier nor a moment later.
<i>Value chain</i> may include:	<ul style="list-style-type: none"> competitive manufacturing organisations encompass the entire production system, beginning with the customer, and include the product sales outlet, the final assembler, product design, raw material mining and processing and all tiers of the value chain (sometimes called the supply chain). Any truly "competitive" system is highly dependent on the demands of its customers and the reliability of its suppliers. No implementation of competitive manufacturing can reach its full potential without including the entire "enterprise" in its planning.
<i>Kanban</i> may include:	<ul style="list-style-type: none"> Kanban - a card or sheet used to authorise production or movement of an item; when fully implemented, kanban (the plural is the same as the singular) operates according to the following rules: all production and movement of parts and material take place only as required by a

RANGE STATEMENT	
	<p>downstream operation, ie all manufacturing and procurement are ultimately driven by the requirements of final assembly or the equivalent</p> <ul style="list-style-type: none"> the specific tool which authorises production or movement is called a kanban. The word literally means card or sign, but it can legitimately refer to a container or other authorising device. Kanban have various formats and content as appropriate for their usage; for example, a kanban for a vendor is different than a kanban for an internal machining operation Kanban is typically applied to batch type operation and the production is measured in units produced. In continuous manufacturing organisations, production is measured in terms of production rate (eg kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (eg ticket, order from a supplier) or may be a SCADA signal from a remote facility (eg customer tank) saying that resupply is required or similar.
<i>SCADA</i> may include:	<ul style="list-style-type: none"> SCADA (System Control and Data Acquisition) is a general term applied to a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action.
<i>Pull system</i> may include:	<ul style="list-style-type: none"> a manufacturing planning system based on communication of actual real-time needs from downstream operations ultimately final assembly or the equivalent; as opposed to a push system which schedules upstream operations according to theoretical downstream results based on a plan which may not be current.

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse the process	1.1. Identify sources of variability/non-conformance in the process 1.2. Identify critical control points in the process 1.3. Analyse causes of variability/non-conformance
2. Develop preventive techniques/systems	2.1. Liaise with team members and other people to develop mistake proof method of performing operation 2.2. Test and validate <i>mistake proofing</i>
3. Implement permanent fix	3.1. Liaise with relevant people to have systems/ <i>procedures</i> changed to implement solution 3.2. Liaise with relevant people to implement the solution 3.3. Liaise with relevant people to ensure the workforce has an appropriate skills set 3.4. Follow through to ensure implementation occurs
4. Monitor implementation	4.1. Critically observe the implementation 4.2. Compare the results of the implementation against the expected outcomes 4.3. Modify solution to improve outcomes 4.4. Ensure procedures reflect change 4.5. Ensure training and assessment reflect change 4.6. Audit change at agreed period/cycle 4.7. Take action on any observed deviation
5. Seek improvements	5.1. Observe changes against enterprise expectations for production 5.2. Analyse process against enterprise expectations for production

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by liaising with relevant people to have systems/procedures changed to implement solution
- collecting, analysing and organising information by liaising with team members and other people to develop mistake proof method of performing operation
- planning and organising activities by implementing a permanent fix
- teamwork when liaising with team members and other people to develop mistake proof method of performing operation
- mathematical ideas and techniques by implementing a permanent fix
- problem-solving skills by modifying solution to improve outcomes
- use of technology by seeking improvements

Required knowledge

- communication ability to discuss items with both operators and technical support personnel
- problem solving
- analysis
- teamwork
- design conceptualisation
- understanding of their process
- factors in the process which may cause variability
- methods of controlling the variability in the process
- mistake proofing methods relevant to the process/product

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the competent team leader will be able to analyse their process and implement systems to ensure the process is mistake proof and the operators work in a predictable way with little or no chance of mistake. Evidence of actions taken to mistake proof the process should be available one complex project on standardisation of a process or several simpler projects will be needed to gain sufficient evidence.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment needs to occur in a workplace implementing competitive manufacturing or by using a suitable project access to an organisation using a competitive manufacturing approach.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPSU684C Determine and improve process capability.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Mistake proofing</i> may include:	<ul style="list-style-type: none"> • sometimes known as baka-yoke/poka-yoke - a manufacturing technique of preventing mistakes by designing the manufacturing process, equipment, tools and components/subassemblies so that an operation literally cannot be performed incorrectly; an attempt to perform incorrectly, as well as being prevented, is usually met with a warning signal of some sort.
<i>Procedures</i> may include:	<ul style="list-style-type: none"> • procedures includes all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, oral, computer-based or in some other form • for the purposes of this Training Package, procedures also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess manual handling risks	1.1. Identify <i>manual handling hazards</i> in work area 1.2. Assess risks arising from those hazards
2. Analyse physical effort requirements of job	2.1. Determine basic manual handling requirements of job 2.2. Analyse requirements in terms of components such as lift, move, place, hold 2.3. Analyse items to be handled in terms such as weight, size, shape or other hazards
3. Determine time/effort components of physical effort	3.1. Break required movement pattern down into movement components 3.2. Determine time and effort requirements for movements 3.3. Develop alternative movement patterns 3.4. Determine time and effort requirements for alternative movements 3.5. Determine handling aids required to assist movement 3.6. Determine preferred movement pattern(s)
4. Analyse the ergonomics of physical effort	4.1. Analyse the ergonomics of the preferred movement pattern 4.2. Develop substitute movements for any movement which is not ergonomically sound 4.3. Determine handling aids required to improve ergonomics of required movements
5. Optimise application of physical effort	5.1. Select movement patterns which are ergonomically sound and time and effort efficient 5.2. Train all relevant people to use these methods 5.3. Ensure <i>procedures</i> and practices reflect the optimum methods

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by determining time/effort components of physical effort
- collecting, analysing and organising information by determining time/effort components of physical effort
- planning and organising activities by selecting movement patterns which are ergonomically sound and time and effort efficient
- teamwork when determining time/effort components of physical effort
- mathematical ideas and techniques by optimising application of physical effort
- problem-solving skills by optimising application of physical effort
- use of technology by optimising application of physical effort

Required knowledge

- communication
- analysis
- teamwork
- basic mathematics
- problem solving
- relevant OHS acts and regulations as applied to manual handling
- principles of efficient movement
- principles of efficient job and work method design
- principles of work analysis
- principles of ergonomics/safe movement

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the competent team leader/senior operator will be able to examine any job for its physical components and then determine a better way of doing it. As a side benefit they will become more aware of poor manual handling practice and raise an alert to it. Evidence should be available of the analysis and improvements of the physical/manual handling aspects of jobs in the workplace where evidence is from continuous improvement activities, then a range of such improvements needs to be considered to provide sufficient evidence. Where evidence is coming from one, complex improvement activity then it may provide sufficient evidence.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment should use evidence from the analysis of real jobs or an appropriate simulation access to a workplace which will allow the improvement of physical actions.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Manual handling hazards may include:

- manual handling hazards need to be defined in terms of the relevant OHS acts, regulations, codes of practice, industry standards and best practice.

Procedures may include:

- all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, oral, computer-based or in some other form
- good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.

ICPSU488C Ensure process improvements are sustained

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to ensure that the gains which have been made by using improved methods, processes and equipment are sustained as the new standard for the team's area of work and so prevent regression to former practices or digression to less efficient practices.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to an environment where continuous improvement in a manufacturing enterprise is being undertaken.</p> <p>The team leader or other responsible person facilitates and implements methods of ensuring that these improvements are sustained.</p> <p>Improvement initiatives can be made by any number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known to the team leader.</p> <p>The unit covers ensuring that team members implement the modified processes so that improvements are sustained and opportunities are taken to suggest further improvements. This unit comes from the Competitive Manufacturing Initiative group of competency standards.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Ensure corrective actions are implemented	1.1. Liaise with relevant people 1.2. Negotiate solutions to allow implementation 1.3. Ensure the supply of resources (equipment, modifications, consumables, people) 1.4. Ensure workforce has relevant competency levels 1.5. Monitor implementation of corrective action 1.6. Make required adjustments
2. Analyse physical effort requirements of job	2.1. Ensure <i>procedures</i> reflect <i>improvements</i> 2.2. Ensure training and assessment <i>systems</i> reflect improvements 2.3. Liaise with relevant people to ensure their support of the new modified system(s)
3. Determine time/effort components of physical effort	3.1. Determine an appropriate audit period/cycle 3.2. Agree on relevant measures/indicators for the improvement 3.3. <i>Measure performance</i> at agreed time(s) using agreed measures 3.4. Investigate the cause(s) of underperformance 3.5. Take appropriate corrective action to improve performance 3.6. Re-audit the improvement on an agreed basis

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by negotiating solutions to allow implementation
- collecting, analysing and organising information by auditing the change
- planning and organising activities by measuring performance at agreed time/s using agreed measures
- teamwork when liaising with relevant people to ensure their support of the new modified system
- mathematical ideas and techniques by ensuring procedures reflect process improvements
- problem-solving skills by ensuring procedures reflect process improvements
- use of technology by analysing performance and auditing the change

Required knowledge

- communication skills
- teamwork
- basic mathematics
- planning
- problem solving
- analysing
- existing procedures
- modified procedures
- overall process of manufacturing relative to improvements being made
- appropriate measures of performance
- business performance goals sufficient to determine best measures of improved performance

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the competent team leader will be able to point to improvements which have been made where they have been active in designing and implementing systems for sustaining the improvement. Evidence should be available of having sustained improvements in the workplace and of reviewing these improvements for their real impact evidence should be available from multiple small changes or from a large change which has had multiple facets implemented over a period of some months.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment will need to occur in a workplace where improvements are occurring, or where specific improvement projects are undertaken for the purpose of providing evidence of competency (among other aims) the unit may also be assessed on a project basis in a simulated environment access to a workplace implementing competitive manufacturing strategies, or where improvement project(s) can be conducted and relevant records are required.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Procedures</i> may include:	<ul style="list-style-type: none"> • all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, oral, computer-based or in some other form • good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.
<i>Improvement</i> may include:	<ul style="list-style-type: none"> • improvement procedures in some enterprises are also known by the term baka-yoke which is a manufacturing technique of preventing mistakes by designing the manufacturing process, equipment and tools so that an operation literally cannot be performed incorrectly; an attempt to perform incorrectly, as well as being prevented, is usually met with a warning signal of some sort; the term poka-yoke is sometimes referred to as a system where only a warning is provided • improvements may be sustained by use of technology so that it is impossible to do the job any other way. However, improvements may also be sustained by changes to process or procedures or other changes to the manufacturing system which, if followed, will sustain the change and this unit may be applied to all these situations.
<i>Systems</i> may include:	<ul style="list-style-type: none"> • any/all of the equipment, process, procedures and work practices that are used to produce the product • a term often used in this context is Kaizen - the philosophy of continual improvement, that every process can and should be continually evaluated and improved in terms of time

RANGE STATEMENT	
	required, resources used, resultant quality and other aspects relevant to the process.
<i>Measuring performance</i> may include:	<ul style="list-style-type: none"> measuring performance is not used literally and may mean the personal taking of measurements, or it may mean arranging for measurements to be taken/made by appropriate personnel. The interpretation of the measurements however is to be undertaken personally.

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set quality standards	1.1. Quality of items is determined according to job specifications and enterprise capacity 1.2. Production proofs are prepared for client approval to determine client's requirements 1.3. <i>Quality standards</i> are determined and <i>inspection</i> specifications set for purpose intended
2. Determine inspection specifications	2.1. Inspection variables are determined in consultation with client, or are set to acceptable workplace standards, and are recorded in job specifications 2.2. Type of inspection is determined according to job specifications
3. Carry out inspection	3.1. Criteria for rejection are determined in consultation with machine operator and inspector/racker and recorded in job specifications 3.2. Variation to standards is monitored and action taken to rectify the problem according to <i>enterprise procedures</i> 3.3. Unsatisfactory work is separated according to pre-determined standards
4. Rework job	4.1. Unacceptable items are evaluated and possible methods of reworking are determined according to workplace quality standards 4.2. Reworking is monitored according to enterprise procedures 4.3. Reworked material/substrates is inspected to ensure previously determined requirements are met
5. Evaluate job process	5.1. Production processes are evaluated to determine cause of unacceptable items 5.2. Inspection records are maintained including number of accepted and rejected items, and cause of rejection 5.3. Records are maintained to ensure that faulty processes are identified, recorded and corrected
6. Participate in quality improvement	6.1. Performance is monitored to ensure product or service standards are maintained or improved 6.2. Participation in enterprise quality improvement processes occurs, where applicable

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by ensuring that all workers are aware of quality concepts and procedures and that communication flows easily between production workers and supervisors
- collecting, analysing and organising information by accessing data on production processes and acceptable tolerances for different qualities of work and establishing simple guidelines for quality implementation
- planning and organising activities by establishing procedures for the assessment and maintenance of quality production
- teamwork when ensuring that quality assessing and reporting systems involve all workers
- mathematical ideas and techniques by calculating acceptable tolerances and establishing valid sampling procedures
- problem-solving skills by identifying production problems and establishing procedures to minimise their impact
- use of technology by use of monitoring and diagnostic equipment, and establishment and use of production control systems

Required knowledge

- quality standards
- setting criteria for inspection of print quality set
- quality of artwork/film bearing on the quality of the printed product
- quality standards that have been set by the customer
- inspection specifications against customer standards
- inspection variables
- quality specifications that have been set to make the product acceptable for the purpose for which it was intended
- responsibility for inspection specifications
- specifications that are recorded on the job sheet
- specific inspection standards that have been set for printing and finishing
- causes of failure
- common causes of failure in each production area that need to be monitored
- procedures that have you implemented to minimise the effect of these
- inspection procedures
- criteria for operator inspection (100%, random, periodic or continuous in-line)
- result of unnecessary inspection on production output

REQUIRED SKILLS AND KNOWLEDGE

- minimum number of inspections required to avoid rejects
- information that has been conveyed for the operator to rectify the problem
- responsibility for evaluating the re-work of unacceptable items
- method of re-work that has been determined
- criteria that have been set to monitor the re-work
- requirements that have been established for the inspection of re-working material to customer's specifications
- cause of unacceptable items
- records that are kept of acceptable and rejected items
- records that are kept for the reason for the rejection
- cause for the rejection
- problem rectification
- quality improvements
- information that needs to be monitored so as to maintain standards
- monitoring quality standards
- enterprise improvements on the affect of quality standards

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • correct procedures are implemented within an enterprise or large section/ department to ensure that quality standards are achieved • demonstrate an ability to find and use information relevant to the task from a variety of information sources • produce a portfolio that demonstrates that each element has been carried out. This should include records of standards, and monitoring procedures and evidence that they are being effectively carried out • TWO jobs are inspected during production according to the listed Performance Criteria • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Quality standards</i> may include:	<ul style="list-style-type: none"> should meet client requirements and enterprise and industry standards.
<i>Type of inspections</i> may include:	<ul style="list-style-type: none"> various types of inspection techniques (ie 100%, random, periodic or continuous in-line inspection).
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> range of enterprise procedures within defined work area.
<i>Application</i> may include:	<ul style="list-style-type: none"> this unit applies to managers/supervisors responsible for quality in an enterprise or large production section.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify costing estimate requirements	1.1. Labour hours, times and other statistics required are identified and applied in calculations 1.2. Available machine hours are identified and applied in calculations 1.3. Economic batch sizes are identified 1.4. Material requirements are identified and applied in calculations
2. Prepare costing estimates	2.1. <i>Costing</i> estimates are calculated using material, labour and machine costs 2.2. Cost estimate details are calculated
3. Compare estimates with actual costs	3.1. Actual costs are compared with estimates 3.2. Costing basis is adjusted as appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by consulting with customers and staff to identify problems and issues
- collecting, analysing and organising information by accessing data about customer needs, machine and worker capabilities, capital cost bases; use of data from production control systems
- planning and organising activities by determining required cost estimate details prior to printing estimates
- teamwork when obtaining feedback from production workers to verify estimates against actual costs
- mathematical ideas and techniques by developing of costing models that take all relevant factors into consideration
- problem-solving skills by adjusting the basis for costing as determined by the discrepancy between estimated and actual costing
- use of technology by using tools to assist with calculations

Required knowledge

- OHS and other statutory requirements
- legal requirements that affect the costing of your operations
- printing processes and operations
- information that you require from a client before costing/estimating can be done
- minimising production costs on any given job
- relationships between the processes you are involved in and prior and subsequent operations done to the job
- set up and changeover times determined for your processes
- printing materials
- materials that need to be included in the costing/estimating process
- alternative materials that may determined suitable for a client
- alternative materials or processes suggested to a client
- references and resources about materials and suppliers that do you need to help in costing/estimating
- different costing/estimating methodologies
- particular costing/estimating method choice
- other methods that are there, and when might you use them
- factors that you might adjust in your estimations if they consistently do not match costs

REQUIRED SKILLS AND KNOWLEDGE

- sampling and quality control techniques
- quality checks that are necessary on outsourced materials or other inputs
- effects that quality control have on costing
- production records
- accurate production records keeping
- review production records and actual costs
- computerised production monitoring systems that can be used to accurately assess costs

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> accurately estimating and costing production for valid and reliable assessment of this unit, evidence should be gathered over a period of time through a range of methods for assessment to indicate consistent performance evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lead planning	1.1. A range of questioning and prompting techniques is applied to promote participative team or individual planning 1.2. Proposals are accurately recorded to reflect the outcomes of the planning 1.3. Plans take into account the timelines, responsibilities and production requirements which affect the team or individual 1.4. Tasks are selected to suit skill levels of individuals or team members
2. Lead problem solving	2.1. Problem is clearly defined by the team or individuals involved, and criteria for selecting a solution are identified 2.2. Data or evidence is collected and analysed 2.3. Group or individual is encouraged to contribute to determine solutions 2.4. Alternatives are identified and solution selected 2.5. Implementation is planned and carried out 2.6. Implementation of solution is evaluated to determine effectiveness of decisions
3. Develop individual or team participation	3.1. Support is provided to individuals or team members to ensure full participation 3.2. Procedures are implemented to enable the team or individual to assess effectiveness
4. Check OHS standards in the work area	4.1. Applicable OHS and environmental standards are identified, interpreted and implemented 4.2. Implementation of standards is monitored to determine safety in the work area 4.3. Improvements are recommended in order to achieve established standards
5. Monitor process standards	5.1. Quality and performance standards are identified, interpreted and implemented 5.2. Implementation of standards is monitored to determine effectiveness of process 5.3. Improvements are recommended in order to achieve established quality control standards
6. Communicate with work team, individuals and	6.1. Information affecting work area, including OHS, is given logically and in an easily understood manner to other workers

ELEMENT	PERFORMANCE CRITERIA
management	6.2. Feedback from team members and individuals is sought to assist in the participation process 6.3. Communication and reporting are carried out, where required, with management and/or external personnel in a manner which ensures effective and appropriate information exchange

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by giving clear instructions to workers
- collecting, analysing and organising information by using information about machine and worker capabilities to make best use of resources
- planning and organising activities by planning job sequences and workloads to ensure maximum productivity
- teamwork when leading planning and problem-solving to develop team effectiveness
- mathematical ideas and techniques by accounting for timelines in planning the work of others
- problem-solving skills by leading problem solving with the team
- use of technology by using basic communications and information management tools

Required knowledge

- responsibility for determining the OHS standards
- parties that monitor the OHS standards in the workplace
- power of individuals in the workplace in relation to OHS standards
- need to determine the skill level of workers
- methods of determining skill levels of individual workers
- types of problems that may be determined
- strategies that are in place for the implementation of problem-solving techniques
- methods to encourage team members to participate
- need to assess the effectiveness of implementation procedures
- improving quality and performance standards
- checks that are made to quality standards
- responsibility to implement improvements to process standards
- ramifications of standards not being improved
- effective communication with individuals in the workplace
- feedback implementation
- the importance of gaining feedback

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> effectively supervising and managing the work of others produce a portfolio that demonstrates that each element has been carried out. This can include rosters, schedules, quality related documentation and testimonials from superiors and workers being supervised evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Degree of autonomy</i> may include:	<ul style="list-style-type: none"> the competencies apply to personnel who supervise employees and schedule, under limited supervision, approved work in a team environment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide information about the organisation's OHS	<p>1.1. Relevant provisions of OHS legislation and codes of practice are accurately and clearly explained to the work group</p> <p>1.2. Information on the organisation's OHS policies, procedures and programs is provided in a readily accessible manner and is accurately and clearly explained to the work group</p> <p>1.3. Information about identified <i>hazards</i> and the outcomes of risk identification and control procedures is regularly provided and is accurately and clearly explained to the work group</p>
2. Implement and monitor OHS	<p>2.1. Organisational procedures for consultation over OHS issues are implemented and monitored to ensure that all members of the work group have the opportunity to contribute</p> <p>2.2. Issues raised through consultation are dealt with and resolved promptly or referred to the appropriate personnel for resolution according to enterprise procedures for issue resolution</p> <p>2.3. The outcomes of consultation over OHS issues are made known promptly to the work group</p> <p>2.4. Existing and potential hazards in the work area are identified and reported so that risk assessment and control procedures can be applied</p>
3. Implement and monitor risk control procedures	<p>3.1. Existing risk control measures are monitored and results reported regularly according to enterprise procedures</p> <p>3.2. Inadequacies in existing risk control measures are identified according to the hierarchy of control and reported to designated personnel</p> <p>3.3. Inadequacies in resource allocation for implementation of risk control measures are identified and reported to designated personnel</p> <p>3.4. Work procedures to control risks are implemented and adherence to them by the work group is monitored according to enterprise procedures</p>
4. Implement hazardous events procedures	<p>4.1. Enterprise procedures for dealing with hazardous events are implemented whenever necessary to ensure that prompt control action is taken</p> <p>4.2. Hazardous events are investigated to identify their cause according to investigation procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3. Control measures to prevent recurrence and minimise risks of hazardous events are implemented based on the hierarchy of control if within <i>scope</i> of responsibilities and competencies or alternatively referred to designated personnel for implementation
5. Implement and monitor OHS training	<p>5.1. OHS training needs are identified accurately specifying gaps between OHS competencies required and those held by work group members</p> <p>5.2. Arrangements are made for fulfilling identified OHS training needs in both on and off-the-job training programs in consultation with relevant parties</p>
6. Implement and monitor OHS recordkeeping procedures	<p>6.1. OHS records for work area are accurately and legibly completed according to workplace requirements for OHS records and legal requirements for the maintenance of records of occupational injury and disease</p> <p>6.2. Aggregate information from the area's OHS records is used to identify hazards and monitor risk control procedures within work area according to organisational procedures and within scope of responsibilities</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by using clear oral communication and written materials to raise awareness of OHS and responding to concerns raised by workers
- collecting, analysing and organising information by using aggregate OHS data from records to monitor procedures
- planning and organising activities by establishing OHS committees or working groups to manage risks
- teamwork when ensuring that all staff observe workplace OHS standards
- mathematical ideas and techniques by documenting hazardous events
- problem-solving skills by identifying potentially hazardous situations and resolving them and revising procedures
- use of technology by using a database application

Required knowledge

- all applicable OHS legislation and codes of practice
- hierarchy of control (the preferred order of risk control measures: elimination, engineering controls, administrative controls, personal protective equipment)
- potential hazards of ALL equipment and materials used in the workplace
- significance of EEO principles and practices for OHS
- the importance of other management systems for OHS
- levels of literacy and communication levels of workforce
- teamwork, supervision and training
- information sources

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> effectively implementing and monitoring OHS systems within an organisation produce a portfolio that shows that all performance criteria have been met. This should include procedures, information distributed to workers, records of monitoring and checking procedures and equipment evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Types of hazards may include:

- hazardous events include accidents, fire and emergencies such as chemical spills or bomb scares. Procedures for dealing with them include evacuation, chemical containment and first aid procedures.

Scope may include:

- to be exhibited in the work area of responsibility according to all relevant OHS legislation, particularly general duty of care, requirements for the maintenance and confidentiality of records of occupational injury and disease, provision of information and training, regulations and codes of practice relating to hazards present in work area, health and safety representatives and OHS committees, and issue resolution.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate production for efficiency purposes	1.1. Machine operations, staff and <i>production process</i> organisation are evaluated on an ongoing basis to make production efficiency gains 1.2. <i>Production schedule</i> is analysed according to production output, inventory, procurements, time constraints, supply capacities and requirements 1.3. Quality standards and safe work practices are examined to ensure compliance 1.4. Changeover/make ready <i>processes</i> are reviewed for production efficiency gains 1.5. Recommendations covering the above areas are developed and documented
2. Optimise production efficiency	2.1. Compliance to specified requirements is checked to ensure efficiency is maintained 2.2. Non-compliance is identified and investigated to determine causes 2.3. Production standards or machines are set and/or changed according to enterprise procedures 2.4. Changeover/ make ready times and processes are monitored to ensure times are maintained or improved 2.5. Production schedule is monitored and adjusted according to production output, inventory, procurements, time constraints and supply capacities and requirements to ensure efficiency is maintained
3. Troubleshoot production efficiency problems	3.1. Corrective or preventive action is implemented where appropriate 3.2. Changes are communicated to relevant personnel in a logical and easily understood manner 3.3. Changes are monitored and adjusted to confirm improvement to production efficiency
4. Troubleshoot material and machining problems	4.1. Evaluation of material or product structure is conducted to identify options for production and required tuning and adjustments are completed 4.2. Idiosyncrasies of machines are reviewed and adjustments or tuning undertaken to compensate or to exploit the idiosyncrasy within the manufacturer's specifications 4.3. Options are assessed to determine most effective/efficient method of production, ensuring

ELEMENT	PERFORMANCE CRITERIA
	highest quality and yield from materials and ease of production 4.4. Options and recommendations are documented for future reference according to enterprise procedures
5. Document changes and remedies	5.1. Changes to the production process are documented according to enterprise procedures 5.2. Adjustments to machines are recorded according to enterprise procedures 5.3. Documentation is circulated according to enterprise procedures, if required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- OHS in relation to operating machinery such as safely switching off machinery before cleaning is started
- communication of ideas and information by documenting recommendations to optimise the production process
- collecting, analysing and organising information by reviewing the production schedule and evaluating its effectiveness
- planning and organising activities by determining the most effective production processes
- teamwork when communicating with colleagues over changes to production
- mathematical ideas and techniques by determining optimised yield for machinery
- problem-solving skills by compensating or optimising machine idiosyncrasies
- use of technology by evaluating machine operations and making changes to improve the production process

Required knowledge

- setting quality standards
- setting the criteria for inspection of print quality set
- the quality of artwork/film bearing on the quality of the printed product
- quality standards that have been set by the customer
- inspection specifications determined by standards
- identifying production requirements and capacities
- job requirements that determine the production processes
- identifying special production requirements and possible problems
- criteria that are used to determine the availability of machines, materials and labour
- OHS concerns that need to be considered when planning production
- causes of failure
- common causes of failure in each production area that need to be monitored
- procedures that have you implemented to minimise the effect of these
- revising schedules
- monitoring and amending production schedules if required
- consideration that is given to revising production schedules to take into account customer requirements and job complexity
- evaluating re-work methods
- responsibility for evaluating the re-work of unacceptable items
- method of re-work that has been determined
- criteria that have been set to monitor the re-work

REQUIRED SKILLS AND KNOWLEDGE

- requirements that have been established for the inspection of re-working material to customer's specifications
- determining unacceptable items and evaluating production procedures
- determining the cause of unacceptable items
- records that are kept of acceptable and rejected items
- records that are kept for the reason for the rejection
- determining the cause for the rejection and how have you rectified the problem
- quality improvements
- information that needs to be monitored so as to maintain standards
- monitoring quality standards
- enterprise improvements affect on quality standards

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • recommend and implement new, more efficient production processes and troubleshoot problems within the production process that effect efficiency gains • produce a portfolio that demonstrates that each element has been carried out. This should include records of standards and monitoring procedures and evidence that they are being effectively carried out • production efficiencies are confirmed through discussions with senior management and review of workplace documentation • evidence for assessment may be gathered from assessment of the unit of competency alone or through an integrated assessment activity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • assessment may take place on the job, off the job or a combination of these. Off the job assessment must be undertaken in a closely simulated workplace environment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBFLM509A Promote continuous improvement.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Production context</i> may include:	<ul style="list-style-type: none"> production processes and associated machines/equipment include those generally operating in the various sectors of the printing and graphic arts industry.
<i>Production schedules</i> may include:	<ul style="list-style-type: none"> production schedules may apply to daily or production runs, including repetitive production runs, short runs and quick changes.
<i>Range of processes</i> may include:	<ul style="list-style-type: none"> applies to the development of complex new processes or the modification of existing complex processes based on significant judgement. Applies to the overall production process.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain data for process capability study	1.1. Identify the process requiring capability analysis 1.2. Obtain process capability data
2. Analyse data	2.1. Identify causes of systematic variation in liaison with relevant personnel 2.2. Develop solutions to eliminate/minimise systematic variation in liaison with relevant people
3. Take action to improve process capability	3.1. Develop plans to implement solutions 3.2. Liaise with relevant people to implement solutions 3.3. Gain necessary approvals as required 3.4. Monitor implementation and make adjustments as required 3.5. Determine new/revised process capability 3.6. Implement revised process capability regime

Required Skills and Knowledge

Required knowledge

- mathematical
- statistical methods
- communication
- negotiation
- planning
- analysis
- problem solving
- teamwork
- computer operation
- data collection methods
- data processing techniques
- variability and normal distribution
- three sigma or six sigma processes as relevant
- random and non-random results - recognition of assignable causes
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> the manager should be able to implement and review a process capability system and make improvements to the process using process capability as a tool. Evidence should be available of the conducting of process capability studies, the improvement to process capability as a result of these studies and the implementation of a revised process capability regime one complex project or several simpler projects will be needed to gain sufficient evidence.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> assessment needs to occur in an organisation using process capability as a tool for process monitoring and improvement. It may also be assessed using a suitable project access to an organisation using process capability.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICPSU583C Troubleshoot and optimise the production process.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Six sigma may include:

- a vision of quality which equates to only 3.4 defects per million opportunities for each product or service transaction
- six sigma is a statistical tool for recording defects and determining capability. Six sigma is also used as a general term covering a competitive manufacturing approach.

Three sigma may include:

- traditional statistical process control uses three sigma limits which equates to 3 defects per thousand opportunities for each product or service transaction.

Procedures may include:

- procedures includes all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, oral, computer-based or in some other form.
- for the purposes of this Training Package, procedures also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and apply quality standards	1.1. Applicable <i>organisation requirements</i> relevant to <i>applying quality assurance techniques</i> are verified and complied with throughout the work activity 1.2. <i>Instructions</i> and plans are read and interpreted to identify processes and materials to complete work tasks 1.3. Quality standards are interpreted and applied to individual and team work 1.4. Process improvement tools are used either individually or in a team to identify and solve design, development and production quality problems
2. Monitor and report on quality	2.1. Quality of all received, in-work and finished materials and products is checked and appropriate action taken in accordance with quality management strategies 2.2. Change in quality of performance is monitored using quality improvement tools and feedback data 2.3. Further action to improve quality is recommended, where required, using standard operating procedures either individually or in a team
3. Implement quality improvement	3.1. Analytical tools are used to evaluate principal causes of process variation and the success of project improvement strategies 3.2. Outcomes of the evaluation of principal causes of process variation are used in a continuous cycle of quality improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- speak clearly and directly in order to recommend actions to further improve quality
- apply teamwork to a range of situations, including in the utilisation of process improvement tools to identify and solve quality problems
- solve problems particularly in teams in order to meet performance indicators
- show initiative in adapting to changing work conditions or contexts particularly when working across a variety of work areas
- access, interpret and apply information on relevant organisation policies, procedures and instructions, particularly to ensure quality standards to be applied throughout the organisation are correctly interpreted
- manage time when planning, preparing and organising work priorities
- take responsibility for organising own work priorities.

Required knowledge

- relevant Occupational Health and Safety and Environmental legislation, regulations, standards and codes of practice and organisation policies and procedures needed to carry out work in a manner which ensures the safety of people, equipment and the environment.
- methods for interpreting performance results
- operation of systems and components
- organisational supply/replenishment systems and processes for materials, equipment and tools
- types of tools and equipment and procedures for their safe use, operation and maintenance
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- methods for interpreting and applying quality standards
- methods for implementing quality improvement
- procedures for the recording, reporting and maintenance of workplace records and information.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • compliance with relevant legislation, regulations, standards, codes of practice and established safe practices and organisation policies and procedures for the application of quality assurance techniques • working and communicating effectively and positively with others involved in the work • applying, within authority, the requirements of the job or work role in relation to: <ul style="list-style-type: none"> • applying continuous improvement • preparing reports of results • achieving work quality goals • completing work area housekeeping requirements including the documentation of project activity and process outcomes.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • assessment of the competency should take place in a safe working environment in a passenger motor vehicle manufacturing plant or simulated environment using tools/equipment/machinery required for the production process without undue disruption to the production process • assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • assessment methods must confirm consistency and accuracy of performance (over time and in a range of organisation relevant contexts) together with application of underpinning knowledge • assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• assessment may be applied under project related conditions (real or simulated) and require evidence of process• assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> • access and equity principles and practices • environmental management (waste disposal, recycling and re-use guidelines) • emergency and evacuation procedures • equipment use procedures • ethical standards • legal obligations • maintenance and storage procedures • OHS requirements • organisational and site guidelines • policies and procedures relating to own role and responsibility • procedural manuals • quality assurance guidelines • quality and continuous improvement processes and standards • recording and reporting guidelines.
<p><i>Applying quality assurance techniques</i> may include:</p>	<ul style="list-style-type: none"> • the application of quality management techniques including continuous improvement in the design, development and production of motor vehicles.
<p><i>Instructions</i> may include:</p>	<ul style="list-style-type: none"> • workplace procedures relating to the use and operation of tools and equipment • departmental requirements • workplace instructions, including job sheets, plans, specifications, drawings and designs • workplace procedures relating to reporting and communications • manufacturers' instructions for the use of equipment and materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for customer contact	1.1. Obtain and study product or service details relating to <i>customer contact</i> 1.2. Study prepared <i>call/contact guides or scripts</i> 1.3. Locate <i>sources of information</i> that may be required to develop product or service expertise 1.4. Develop a clear understanding of <i>enterprise policies and procedures</i> 1.5. Develop proficiency with <i>equipment and systems</i> to effectively and efficiently manage contact 1.6. Clarify any unclear details with relevant manager 1.7. Identify and use safe working methods
2. Provide responsive and quality service in response to customer queries	2.1. Greet customer in accordance with enterprise protocol 2.2. Respond in a manner to effectively encompass cultural diversity 2.3. Effectively establish and clarify customer needs 2.4. Satisfy customer needs promptly, efficiently and effectively to maximise customer satisfaction, and to minimise delays and the need to refer customer elsewhere 2.5. Respond to customer concerns in a positive manner and in line with enterprise policy for complaint resolution 2.6. Treat customer with respect and courtesy, and enhance and develop customer loyalty 2.7. Complete follow-up action effectively in accordance with the timeframes, business rules and practices, and in line with customer expectations
3. Arrange provision of a product or service	3.1. <i>Respond appropriately</i> to customer requirements and identify relevant options 3.2. Select appropriate product or service in consultation with customer 3.3. Agree actions or orders with customer giving consideration to maximising value and service delivery to customer 3.4. Consider any <i>customer retention options</i> that can be applied to the contact 3.5. Use clear, simple and easy to understand language and ensure responses are comprehensive

ELEMENT	PERFORMANCE CRITERIA
4. Manage customer contact	4.1. Record details of contact in accordance with policy 4.2. Record and report any difficulties not escalated but that may present an opportunity for continuous improvement 4.3. Adapt to the requirements and expectations of various customers when working in an <i>outsourced environment</i> and dealing with multiple customer bases 4.4. Escalate inquiries or orders that cannot be satisfied immediately 4.5. Supply follow-up information to customer as required and in a timely manner 4.6. Observe <i>relevant legislation, codes, regulations and standards</i> throughout transaction

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills to deliver required level and quality of customer service
- communication skills to relate to people from diverse backgrounds and people with diverse abilities
- interpersonal skills to establish rapport and to build relationships with customers
- listening and questioning skills to understand and clarify the needs of customers
- literacy skills to communicate and articulate effectively over the required channels
- numeracy skills to analyse, calculate and validate data accurately as required
- organisational skills to manage own tasks and to meet timeframes
- stress and time management skills to handle difficult customers and peak periods of activity in a positive and enthusiastic manner.

Required knowledge

- enterprise communications channels
- enterprise performance and customer service expectations
- enterprise policies, procedures, protocols and guidelines
- financial delegations policy
- operational environment - customer base, company products and services
- principles of customer service
- stress and time management techniques
- technology and systems.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • accurate recording of data • knowledge of enterprise products and services • knowledge of compliance requirements • meeting of agreed standards of contact • understanding of performance targets • use of technology (may be modified for use by people with a disability).
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to IT equipment • access to workplace information and data • access to performance management records and data • access to quality assurance guidelines and call/contact guides.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation during contact (may be done by doublejacking on telephone system) • review of documentation of performance against target • review of quality assurance feedback • review of accuracy of data and record entry • oral and/or written questioning to assess knowledge of the enterprise, legislative and regulatory requirements, and products and services • observation of practical demonstration of sourcing required information.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare a presentation	1.1. Plan and document presentation approach and intended outcomes 1.2. Choose <i>presentation strategies, format and delivery methods</i> that match the <i>characteristics</i> of the target audience, location, resources and personnel needed 1.3. Select <i>presentation aids, materials and techniques</i> that suit the format and purpose of the presentation, and will enhance audience understanding of key concepts and central ideas 1.4. Brief others involved in the presentation on their roles/responsibilities within the presentation 1.5. Select <i>techniques to evaluate presentation effectiveness</i>
2. Deliver a presentation	2.1. Explain and discuss desired outcomes of the presentation with the target audience 2.2. Use presentation aids, materials and examples to support target audience understanding of key concepts and central ideas 2.3. Monitor non-verbal and verbal communication of participants to promote attainment of presentation outcomes 2.4. Use persuasive communication techniques to secure audience interest 2.5. Provide opportunities for participants to seek clarification on central ideas and concepts, and adjust the presentation to meet participant needs and preferences 2.6. Summarise key concepts and ideas at strategic points to facilitate participant understanding
3. Review the presentation	3.1. Implement <i>techniques to review the effectiveness</i> of the presentation 3.2. Seek and discuss reactions to the presentation from participants or from key personnel involved in the presentation 3.3. Utilise feedback from the audience or from key personnel involved in the presentation to make changes to central ideas presented

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- facilitation and presentation skills to communicate central ideas of a message in an informative and engaging manner, and to utilise verbal and non-verbal techniques to sustain participant engagement
- literacy skills to prepare presentation information and to write in a range of styles for different target audiences.

Required knowledge

- data collection methods that will support review of presentations
- industry, product/service
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety
- principles of effective communication
- range of presentation aids and materials available to support presentations.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • preparation, delivery and evaluation of the effectiveness of at least two presentations related to the candidate's occupation or area of interest • knowledge of the principles of effective communication.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment, documentation and resources.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • demonstration of preparation, delivery and evaluation of a presentation • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of presentations • review of selected presentation aids, materials and techniques • review of briefing provided for others involved in the presentation • evaluation of techniques implemented to review the effectiveness of the presentation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other general administration units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Presentation strategies</i> may involve:</p>	<ul style="list-style-type: none"> • case studies • demonstration • discussion • group and/or pair work • oral presentations • questioning • simulations and role-play
<p><i>Presentation format and delivery methods</i> may include:</p>	<ul style="list-style-type: none"> • advertising copy • audio • direct marketing copy • individual presentation • public relations copy • scripts • storyboards • team presentation • verbal presentation • video • visuals
<p><i>Characteristics</i> may include:</p>	<ul style="list-style-type: none"> • age • cultural and language background • educational background or general knowledge • gender • language, literacy and numeracy needs • physical ability • previous experience with the topic
<p><i>Presentation aids and materials</i> may include:</p>	<ul style="list-style-type: none"> • computer simulations and presentations • diagrams, charts and posters • models • overhead projector • paper-based materials • video and audio recordings • whiteboard

RANGE STATEMENT	
<i>Presentation techniques</i> may include:	<ul style="list-style-type: none"> • animation • comparative advertising • live action • music • signature elements such as: <ul style="list-style-type: none"> • slogans • logotypes • packaging • sound effects • use of a guest speaker • use of black and white • use of colour • use of humour
<i>Techniques to evaluate presentation effectiveness</i> may include:	<ul style="list-style-type: none"> • action research • critical friends • focus group interviews • one-on-one interviews with participants and other personnel involved in the presentation • written feedback provided by participants

BSBCUS301B Deliver and monitor a service to customers

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i></p> <p>Revised unit. Performance criteria amended so that the learner is not required to 'incorporate evidence of customer satisfaction in decision to modify products or services'. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p> <p>Replaces BSBCUS301A Deliver and monitor a service to customers</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify customer needs and monitor service provided to customers. Operators may exercise discretion and judgement using appropriate theoretical knowledge of customer service to provide technical advice and support to customers over either a short or long term interaction.

Application of the Unit

This unit applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Identify customer needs	<p>1.1 Use <i>appropriate interpersonal skills</i> to accurately identify and clarify <i>customer needs and expectations</i></p> <p>1.2 Assess customer needs for urgency to determine priorities for service delivery according to <i>organisational requirements</i></p> <p>1.3 Use <i>effective communication</i> to inform customers about available choices for meeting their needs and assist in the selection of preferred options</p> <p>1.4 Identify limitations in addressing customer needs and seek appropriate assistance from <i>designated individuals</i></p>
2. Deliver a service to customers	<p>2.1 Provide prompt service to customers to meet identified needs in accordance with organisational requirements</p> <p>2.2 Establish and maintain appropriate rapport with customers to ensure completion of quality service delivery</p> <p>2.3 Sensitively and courteously handle <i>customer complaints</i> in accordance with organisational requirements</p> <p>2.4 Provide assistance or respond to customers with <i>specific needs</i> according to organisational requirements</p> <p>2.5 Identify and use available <i>opportunities</i> to promote and enhance services and products to customers</p>
3. Monitor and report on service delivery	<p>3.1 Regularly review customer satisfaction with service delivery using <i>verifiable evidence</i> according to organisational requirements</p> <p>3.2 Identify opportunities to enhance the quality of service and products, and pursue within organisational requirements</p> <p>3.3 Monitor procedural aspects of service delivery for effectiveness and suitability to customer requirements</p> <p>3.4 Regularly seek customer feedback and use to improve the provision of products and services</p> <p>3.5 Ensure reports are clear, detailed and contain recommendations focused on critical aspects of service delivery</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to monitor and advise on customer service strategies
- literacy skills to:
 - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
 - prepare general information and papers according to target audience
 - read and understand a variety of texts
- problem-solving skills to deal with customer enquiries or complaints
- technology skills to select and use technology appropriate to a task
- self-management skills to:
 - comply with policies and procedures
 - consistently evaluate and monitor own performance
 - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - financial legislation
 - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identifying needs and priorities of customers • distinguishing between different levels of customer satisfaction • treating customers with courtesy and respect • responding to and reporting on, customer feedback • knowledge of organisational policy and procedures for customer service.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of customer complaints • examples of documents relating to customer service standards and policies.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of reports on customer service delivery • analysis of responses to case studies and scenarios • demonstration of techniques • oral or written questioning to assess knowledge of customer service strategies.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Appropriate interpersonal skills</i> may include:</p>	<ul style="list-style-type: none"> • listening actively to what the customer is communicating • providing an opportunity for the customer to confirm their request • questioning to clarify and confirm customer needs • seeking feedback from the customer to confirm understanding of needs • summarising and paraphrasing to check understanding of customer message • using appropriate body language.
<p><i>Customers</i> may include:</p>	<ul style="list-style-type: none"> • corporate customers • individual members of the organisation • individual members of the public • internal or external • other agencies.
<p><i>Customer needs and expectations</i> may include:</p>	<ul style="list-style-type: none"> • accuracy of information • advice or general information • complaints • fairness/politeness • further information • making an appointment • prices/value • purchasing organisation's products and services • returning organisation's products and services • specific information.
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> • access and equity principles and practice • anti-discrimination and related policy • defined resource parameters • goals, objectives, plans, systems and processes • legal and organisational policies, guidelines and requirements • OHS policies, procedures and programs • payment and delivery options • pricing and discount policies • quality and continuous improvement processes and

	<p>standards</p> <ul style="list-style-type: none"> • quality assurance and/or procedures manuals • replacement and refund policy and procedures • who is responsible for products or services.
<i>Effective communication</i> may include:	<ul style="list-style-type: none"> • giving customers full attention • maintaining eye contact, except where eye contact may be culturally inappropriate • speaking clearly and concisely • using active listening techniques • using appropriate language and tone of voice • using clear written information/communication • using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions) • using open and/or closed questions.
<i>Designated individuals</i> may include:	<ul style="list-style-type: none"> • colleagues • customers • line management • supervisor.
<i>Customer complaints</i> may include:	<ul style="list-style-type: none"> • administrative errors such as incorrect invoices or prices • customer satisfaction with service quality • damaged goods or goods not delivered • delivery errors • product not delivered on time • service errors • warehouse or store room errors such as incorrect product delivered.

BSBCUS501C Manage quality customer service

Modification History

Release	Comments
Release 1	<p>New release of this Qualification released with <i>version 6 of BSB07 Business Services Training Package</i>.</p> <p>Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop strategies to manage organisational systems that ensure products and services are delivered and maintained to standards agreed by the organisation.

Operators may have staff involved in delivering customer service and are responsible for the quality of their work. In many instances the work will occur within the organisation's policies and procedures framework. At this level, the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies, will be required.

Application of the Unit

Many managers are involved in ensuring that products and services are delivered and maintained to standards agreed by the organisation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Plan to meet internal and external customer requirements	<p>1.1 Investigate, identify, assess, and include the needs of customers in planning processes</p> <p>1.2 Ensure plans achieve the quality, time and cost specifications agreed with customers</p>
2. Ensure delivery of quality products and services	<p>2.1 Deliver products and services to customer specifications within organisation's business plan</p> <p>2.2 Monitor team performance to consistently meet the organisation's quality and delivery standards</p> <p>2.3 Assist colleagues to overcome difficulty in meeting customer service standards</p>
3. Monitor, adjust and review customer service	<p>3.1 Develop and use strategies to monitor progress in achieving product and/or service targets and standards</p> <p>3.2 Develop and use strategies to obtain customer feedback to improve the provision of products and services</p> <p>3.3. Develop, procure and use resources effectively to provide quality products and services to customers</p> <p>3.4 Make decisions to overcome problems and to adapt customer services, products and service delivery in consultation with appropriate individuals and groups</p> <p>3.5 Manage records, reports and recommendations within the organisation's systems and processes</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to:
 - coach and mentor staff and colleagues
 - monitor and advise on customer service strategies
- literacy skills to:
 - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
 - prepare general information and papers according to target audience
 - read and understand a variety of texts
- problem-solving skills to:
 - deal with customer enquiries or complaints
 - deal with complex and non-routine difficulties
- technology skills to select and use technology appropriate to a task
- self-management skills to:
 - comply with policies and procedures
 - consistently evaluate and monitor own performance
 - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - Australian consumer law
 - ethical principles
 - codes of practice
 - privacy laws
 - financial legislation
 - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs
- techniques for solving complaints including the principles and techniques involved in the management and organisation of:
 - customer behaviour
 - customer needs research
 - customer relations
 - ongoing product and/or service quality
 - problem identification and resolution

- quality customer service delivery
- record keeping and management methods
- strategies for monitoring, managing and introducing ways to improve customer service relationships
- strategies to obtain customer feedback.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • plans, policies or procedures for delivering quality customer service • demonstrated techniques in solving complex customer complaints and system problems that lead to poor customer service • knowledge of techniques for solving complaints.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • assessment of written reports • demonstration of techniques • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of performance in role plays • evaluation of leadership, supervision, coaching and mentoring used to assist colleagues to overcome difficulty in meeting customer service standards • review of strategies developed and used to monitor progress in achieving product and/or service targets and standards • review of records, reports and recommendations about managing customer service.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customers may be:	<ul style="list-style-type: none"> • Board members • clients, purchasers of services • co-workers, peers and fellow frontline managers • members of the general public who make contact with the organisation, such as prospective purchasers of services • potential funding bodies • supervisors • suppliers of goods and services and contractors providing goods and services.
Quality may refer to:	<ul style="list-style-type: none"> • characteristics of a product, system, service or process that meet the requirements of customers and interested parties.
Products and services may include:	<ul style="list-style-type: none"> • either products or services • goods • ideas • infrastructure • private or public sets of benefits.
Strategies may refer to:	<ul style="list-style-type: none"> • databases and other controls to record and compare data over time • electronic feedback mechanisms using intranet, internet and email • feedback forms and other devices to enable communication from customers • long-term or short-term plans for monitoring achievement and evaluating effectiveness • policies and procedures • questionnaires, survey and interviews • training and development activities.
Resources may include:	<ul style="list-style-type: none"> • buildings/facilities • equipment • finance • information • people • power/energy

	<ul style="list-style-type: none">• technology• time.

BSBDES302A Explore and apply the creative design process to 2D forms

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to explore and creatively apply the design process to the development of 2 dimensional (2D) forms.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to individuals who apply the creative design process to the development of 2-dimensional forms. The unit underpins many other specialised design units.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Source information on 2-dimensional design	1.1. Identify and access relevant <i>sources of information</i> on 2-dimensional design 1.2. Evaluate and collate information to build a knowledge of 2-dimensional design
2. Explore the creative design process for 2-dimensional forms	2.1. Use <i>creative thinking techniques</i> to generate a range of ideas and options 2.2. Use <i>experimentation</i> to explore and challenge a range of different ideas 2.3. Challenge assumptions, reflect on ideas and refine approaches 2.4. Consciously change perspective, and evaluate ideas and situations in new ways
3. Communicate concepts or ideas through application of design processes to 2-dimensional forms	3.1. Investigate and reflect on how a particular <i>concept or idea</i> might be communicated in a 2-dimensional form 3.2. Select <i>materials, tools and equipment</i> relevant to the realisation of the concept or idea 3.3. Apply a creative design process to produce a range of 2-dimensional concept realisations 3.4. Reflect on own application of design process and success in communicating the concept or idea 3.5. Seek and obtain feedback from others about the 2-dimensional form and its success in communicating the concept or idea 3.6. Present and store <i>concept realisations or samples</i> in a format which takes account of the need for professional presentation and potential value for future work

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain ideas and to have discussions about design concepts with others
- literacy skills to read and interpret information about 2-dimensional design
- visual literacy skills to make judgements about the application of the design process to 2-dimensional forms.

Required knowledge

- copyright, moral rights, intellectual property issues and legislation, and their impact on aspects of design
- creative thinking techniques that can be used as part of the design process
- elements and principles of design as applied to 2-dimensional forms
- materials, tools and equipment required for the design of 2-dimensional forms in the relevant work context
- notion of individual interpretation and choice within the design process
- particular challenges and issues in the design of 2-dimensional forms.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • production of a range of samples or concept realisations which show the creative application of processes to 2-dimensional forms • knowledge of the design process as it applies to 2-dimensional work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to the materials resources and equipment needed to apply design processes to 2-dimensional forms.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of samples or concept realisations produced by the candidate and interrogation of the creative process used • oral or written questioning to assess knowledge of 2-dimensional design.
Guidance information for assessment	The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sources of information may include:

- anecdotal sources, personal observation
- art and design work
- books and magazines
- natural and manufactured forms, objects and/or structures
- optics, including single and multiple vanishing points
- scientific texts
- web-based resources

Creative thinking techniques may include:

- brainstorming:
 - bulletin board
 - buzz session
 - computer-aided
 - sequencing
 - stop and go
- daydreaming and mental wandering
- Edward de Bono's six thinking hats
- ego alter or heroes
- graphic organisers:
 - concept fans
 - visual maps
 - webbing
- lateral thinking games
- making associations
- mind mapping
- morphological analysis
- storytelling
- sub-culture surfing
- trigger words
- use of metaphors and analogies
- vision circles
- visualisation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • wishful thinking • word salads
<i>Experimentation</i> may involve consideration of:	<ul style="list-style-type: none"> • contrast • direction • exploring tonal range to produce illusion of 3-dimensionality • harmony • linear perspective • mark making • modelling volume through marks and tone • pattern • positive and negative shape • proportion • rhythm • shape • size • texture • tone
<i>Concept or idea</i> to be communicated may relate to a range of activities such as:	<ul style="list-style-type: none"> • advertising and promotion • artistic works • exhibitions or events • fashion designs • interactive digital media products • interior designs • sign making
<i>Materials, tools and equipment</i> may include:	<ul style="list-style-type: none"> • cardboard • air brushes • cutting blades • digital equipment • found materials • glue • inks and washes • markers • measuring tools • pencils • pens and nibs • range of brushes • range of papers • receptacles • relevant and current software

RANGE STATEMENT	
	<ul style="list-style-type: none"> • rulers • scissors • spatulas • sponges • spray guns
<i>Concept realisations or samples</i> may be:	<ul style="list-style-type: none"> • digital output • drawn, painted, printed, collaged • photographs

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan realisation of the design	1.1. Collect, analyse and maintain <i>relevant information on the design</i> 1.2. Discuss and agree on <i>standards of work and monitoring requirements</i> with <i>appropriate stakeholders</i> 1.3. Develop clear plan and schedule for design realisation, including key roles and responsibilities linked to time lines and budget
2. Implement and monitor realisation of the design	2.1. Organise and/or allocate <i>resources</i> to achieve the realisation of design within required standards, timeframes and budget 2.2. Liaise with others involved in design realisation to ensure obligations and quality standards are met within time, budget and technical resources 2.3. Maintain accurate, relevant and complete <i>documentation</i> in accordance with agreed standards 2.4. Monitor process to ensure integrity of design is maintained at all times, including through the process of challenging and interrogating own design work 2.5. Promptly identify <i>difficulties or problems</i> that arise in relation to realisation of the design and take action to rectify the situation
3. Liaise and negotiate with stakeholders	3.1. Establish and maintain appropriate <i>communication channels</i> with relevant stakeholders 3.2. Pro-actively seek and provide information to facilitate effective design realisation 3.3. Adhere to agreed terms and conditions or negotiate appropriate changes in light of changed circumstances 3.4. Negotiate and agree on revisions with relevant parties in a professional manner, to enhance quality of outcome
4. Complete design process	4.1. Finalise design outcomes in accordance with terms and conditions 4.2. Seek feedback from key stakeholders on finished design and make final adjustments as agreed 4.3. Evaluate completed design in relation to own work and overall process, to inform future practice

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and negotiation skills to lead and participate in effective client/principal, stakeholder and project team liaison during design realisation
- creative thinking skills to generate new or adapted ideas in response to realisation challenges
- literacy skills to research and evaluate a wide range of source materials on design and to complete relevant design documentation
- numeracy skills to manage budgets
- planning and organisational skills to coordinate and lead potentially complex processes involving a range of interrelated factors and challenges
- problem-solving and decision making skills to develop and implement solutions to unpredictable problems.

Required knowledge

- copyright, moral rights, intellectual property issues and legislation that impact on design work in the relevant industry context at a managerial level
- occupational health and safety requirements relevant to the particular work context/design discipline
- production/realisation processes as they apply to designs in a particular industry context or design discipline including materials, tools, equipment and processes
- quality assurance for design concept realisation applicable to the specific industry context/design discipline.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • planning and implementation of design realisation so that finished product or service meets the requirements of design brief • effective communication and negotiation skills in relation to working with others for design realisation • knowledge of the design process in the specific industry context/design discipline.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to resources, tools, materials and equipment for realisation of a design in specific context • access to a design concept that the candidate can take to realisation stage • interaction with and involvement of others to reflect the collaborative nature of the unit and the communication and negotiation skills required.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • evaluation of finished products or services where the candidate has managed the realisation process • evaluation of progress reports or completion reports prepared by the candidate • evaluation of candidate reports on the realisation process highlighting different management techniques used, challenges in the process and how these were addressed.
Guidance information for assessment	<p>The design process does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to continuous improvement systems and processes	<p>1.1. Actively encourage and support team members to participate in decision making processes and to assume responsibility and exercise initiative</p> <p>1.2. <i>Communicate</i> the organisation's <i>continuous improvement processes</i> to individuals and teams</p> <p>1.3. Effectively utilise <i>mentoring and coaching</i> to ensure that individuals/teams are able to support the organisation's continuous improvement processes</p>
2. Monitor and report on specified outcomes	<p>2.1. Utilise the organisation's <i>systems</i> and <i>technology</i> to monitor team progress and to identify ways in which planning and operations could be improved</p> <p>2.2. Apply continuous improvement techniques and processes to improve <i>customer service</i></p>
3. Support opportunities for further improvement	<p>3.1. Communicate <i>agreed recommendations</i> for improvements in achieving the business plan to team members</p> <p>3.2. Document and use work performance to identify opportunities for further improvement</p> <p>3.3. Maintain records, reports and recommendations for improvement within the organisation's systems and processes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- functional literacy skills to access and use workplace information
- research, analysis, interpretation and reporting skills
- monitoring and evaluation skills
- communication skills to:
 - gain the commitment of individuals and teams to continuous improvement
 - deal with people openly and fairly
 - use consultation skills effectively
- skills to consolidate opportunities for improvement
- coaching and mentoring skills to provide support to colleagues

Required knowledge

- legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- principles and techniques of:
 - continuous improvement systems and processes
 - benchmarking
 - best practice
- benefits of continuous improvement
- quality approaches which the organisation may implement
- methods that can be used in continuous improvement
- barriers to continuous improvement
- recording, reporting and recommendation processes to facilitate continuous improvement applied within the organisation

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • examples of actions taken by the candidate to support continuous improvement including: • use of work performance to identify improvement • adjusted plans to reflect changes • effective communication to all stakeholders • use of technology to monitor operational progress • application of suitable recordkeeping processes.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access by the learner and trainer to appropriate documentation and resources normally used in the workplace • that this unit is assessed in the workplace or in a closely simulated work environment.
Method of assessment	<p>A range of assessment methods should be used to assess skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • Direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • Review of records supporting the organisation's continuous improvement systems and processes, such as: <ul style="list-style-type: none"> • contributions to organisational policies and procedures • contributions to procedures and policies for dealing with continuous improvement processes, and related codes of conduct • actions taken to address information collection, retrieval and use in the workplace • actions taken to address issues and problems within work team • actions taken to address methods of reporting

EVIDENCE GUIDE

	<p>information</p> <ul style="list-style-type: none"> • learning and development plans for team members • materials developed for coaching, mentoring and training • induction programs developed and/or delivered • actions taken to address internal and external information management issues • reviews of people management • advice and input into management decisions related to continuous improvement • records of people management lessons learned.
Guidance information for assessment	<p>This unit should be assessed with other frontline management units taken as part of this qualification, as applicable to the candidate's leadership role in a work team, and as part of a holistic assessment activity.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislation, codes and national standards relevant to the workplace may include:	<ul style="list-style-type: none"> • award and enterprise agreements and relevant industrial instruments • relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety (OHS) and environmental issues, equal opportunity, industrial relations and anti-discrimination • relevant industry codes of practice.
<i>OHS considerations</i> may include:	<ul style="list-style-type: none"> • provision of information about OHS legislative requirements and guidelines, and the organisation's OHS policies, procedures and programs • participation in the regular update of OHS systems and procedures • implementation of the continuous improvement processes of the OHS management system • changes to work practices, procedures and the working environment which impact on OHS • organisation's responsibilities to customers and suppliers.
Methods used to <i>communicate</i> with individuals and team may include:	<ul style="list-style-type: none"> • verbal, written or electronic communications • on-the-job mentoring and coaching.
<i>Continuous improvement processes</i> may include:	<ul style="list-style-type: none"> • policies and procedures which allow an organisation to systematically review and improve the quality of its products, services and procedures • cyclical audits and reviews of workplace, team and individual performance • seeking and considering feedback from a range of stakeholders • modifications and improvements to systems,

RANGE STATEMENT	
	<p>processes, services and products</p> <ul style="list-style-type: none"> • evaluations and monitoring of effectiveness.
<i>Mentoring and coaching</i> may refer to:	<ul style="list-style-type: none"> • teaching another member of the team, usually focusing on a specific work task or skill • providing feedback, support and encouragement on a range of matters • providing assistance with problem solving.
<i>Systems</i> may include:	<ul style="list-style-type: none"> • organisation policies and procedures • web based communication devices • attendance at forums, meetings • newsletters and reports.
<i>Technology</i> may include:	<ul style="list-style-type: none"> • computerised systems and software such as databases, project management and word-processing • telecommunications devices • any other technology used to carry out work roles and responsibilities.
<i>Customer service</i> may be:	<ul style="list-style-type: none"> • internal or external, to existing or new clients • identifying needs and priorities in delivering a service to customers • understanding of different levels of customer satisfaction.
<i>Agreed recommendations</i> may be:	<ul style="list-style-type: none"> • identified improvements arising from the continuous improvement process • determined in accordance with organisational policies and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify opportunities to do things better	1.1. Be aware of <i>own role</i> in workplace innovation 1.2. Pro-actively identify <i>opportunities for improvement</i> in own area of work 1.3. Gather and review <i>information which may be relevant to ideas</i> and which might assist in gaining support for ideas
2. Discuss and develop ideas with others	2.1. Identify <i>people who could provide input</i> into ideas for improvements 2.2. Select the <i>best way of approaching people</i> to begin sharing ideas 2.3. Seek <i>feedback</i> on improvement of ideas, and discuss and develop <i>options and possible variations</i> 2.4. Review and select ideas for follow-up based on feedback and further review
3. Address the practicalities of change	3.1. Take action to implement <i>routine changes</i> in consultation with others and within scope of own responsibility 3.2. Identify and articulate <i>issues and practical processes</i> for implementing proposed ideas 3.3. Present ideas and practical suggestions to the appropriate people about how improvements could be made

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with other team members, to discuss a range of ideas and to be open to different opinions
- comprehension skills to review and interpret information from a wide range of sources
- organisational skills to articulate practical processes and actions for change
- problem-solving skills to identify and anticipate problems at a practical operational level and to develop possible solutions.

Required knowledge

- role and impact of innovation in the workplace at a practical operational level and the 'bigger picture' for innovation in the relevant work or community context
- role of individuals in suggesting and making improvements and the importance of pro-active involvement
- positive impacts and the challenges of change and innovation
- types of changes that can occur as a result of effective individual participation
- typical reasons why suggested improvements or innovations may not be implemented, including operational and management constraints
- ways in which improvements and change can be suggested to maximise likelihood of support.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • generation of practical ideas in response to a specific workplace situation • effective and open interaction with others to discuss and develop ideas • knowledge and understanding of the role of individuals in contributing to workplace innovation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • interaction with others to reflect the collaborative nature of the improvement/innovation process.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of the candidate participating in brainstorming, discussions and other collaborative activities to develop ideas • evaluation of candidate's ability to generate ideas to address a range of practical operational situations • evaluation of feedback from other people involved in the collaborative process about the candidate's communication approaches and abilities • oral or written questioning to assess knowledge of the role of innovation, the role of individuals in the innovation process and the types of techniques that can be used.
Guidance information for assessment	Innovation does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Own role</i> may relate to:</p>	<ul style="list-style-type: none"> • current organisational practice in relation to new ideas • knowledge of ways to suggest new ideas • scope of individual discretion and freedom in relation to new ideas • who needs to be involved in the process
<p><i>Opportunities for improvement</i> may relate to:</p>	<ul style="list-style-type: none"> • changes in the physical work environment • different storage or maintenance procedures • different ways of communicating within the team • introduction of new technology • job role changes • new customer base • new work practices or services • staffing changes • work processes and procedures
<p><i>Information which may be relevant to ideas</i> may include:</p>	<ul style="list-style-type: none"> • examples of similar approaches in other contexts or organisations • media articles about similar ideas • notes about how the idea could improve efficiency or service levels • pricing information
<p><i>People who could provide input</i> may include those who might:</p>	<ul style="list-style-type: none"> • challenge and test the ideas • have supervisory or management responsibility • promote the ideas to others • provide technical knowledge • resource the ideas going forward • review any budgetary implications • work in the same area
<p><i>Best way of approaching people</i> may be influenced by:</p>	<ul style="list-style-type: none"> • degree of formality required • location of people (e.g. may not be on-site) • need for any supporting documentation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • time pressures and priorities
<i>Feedback</i> could be gained in a range of ways and may include:	<ul style="list-style-type: none"> • asking questions • talking to colleagues or supervisors • using brainstorming techniques • using 'what if' scenarios
<i>Options and possible variations</i> development may occur by:	<ul style="list-style-type: none"> • considering resources needed • considering time required • taking on board ideas from other people • thinking through all aspects of the ideas • whole new concepts that come out of discussions
<i>Routine changes</i> may include:	<ul style="list-style-type: none"> • adjustments to work practices with minimal impact on others or within a small team • changes that do not require management approvals • changes that have the support of management and for which authority is given for immediate action to be taken
<i>Issues and practical processes</i> may relate to:	<ul style="list-style-type: none"> • any approvals required • cost of implementation • internal politics • need for a planned communication approach (internal or external) • personalities and philosophies of others in the workplace • relationship of the idea to organisation priorities

Co-requisite units

Co-requisite units		

BSBINN301A Promote innovation in a team environment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to be an effective and pro active member of an innovative team.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies individuals who play a pro active role in demonstrating, encouraging or supporting innovation in a team environment. The individual may be a team participant or a team leader.</p> <p>The team may 'make itself' or be constructed by others. It may have core members and members who participate at certain times or for particular purposes. It may be permanent or temporary, or come together at different times to work on specific projects.</p> <p>The team could consist of a team of contractors/freelancers, permanent staff, clients and service providers, or any combination of these groups. It may operate within an organisation or across several organisations - or simply across a group of individuals.</p> <p>The key focus of the unit is on what makes for an innovative team, what keeps it working well, how the structure of work can make a difference and what skills and knowledge are needed to maximise opportunities for innovation. Where a greater focus on team leadership is required this unit should be combined with units such as BSBLED401A Develop teams and individuals.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Create opportunities to maximise innovation within the team	1.1. Evaluate and reflect on <i>what the team needs and wants to achieve</i> 1.2. Check out <i>information about current or potential team members' work</i> in the context of developing a more innovative team 1.3. Bring people into the team or make suggestions for team members based on what needs to be achieved and the potential for cross-fertilising ideas 1.4. Acknowledge, respect and discuss the <i>different ways that different people may contribute</i> to building or enhancing the team
2. Organise and agree effective ways of working	2.1. Jointly establish <i>ground rules</i> for how the team will operate 2.2. Agree and communicate responsibilities in ways that encourage and reinforce <i>team-based innovation</i> 2.3. Agree and share tasks and activities to ensure the best use of skills and abilities within the team 2.4. Plan and schedule activities to allow time for thinking, challenging and collaboration 2.5. Establish personal reward and stimulation as an integral part of the team's way of working
3. Support and guide colleagues	3.1. Model <i>behaviour that supports innovation</i> 3.2. Seek <i>external stimuli and ideas</i> to feed into team activities 3.3. Pro-actively share information, knowledge and experiences with other team members 3.4. Challenge and test ideas within the team in a positive and collaborative way 3.5. Pro-actively discuss and explore ideas with other team members on an ongoing basis
4. Reflect on how the team is working	4.1. De-brief and reflect on activities and on opportunities for improvement and innovation 4.2. Gather and use feedback from within and outside the team to generate discussion and debate 4.3. Discuss the <i>challenges of being innovative</i> in a constructive and open way 4.4. Take ideas for improvement, build them into future activities and communicate key issues to relevant colleagues 4.5. Identify, promote and celebrate successes and

ELEMENT	PERFORMANCE CRITERIA
	examples of successful innovation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to work collaboratively as part of a team, to provide guidance and support to others, and to participate in open and constructive discussions
- creative thinking skills to generate, explore, test and challenge ideas
- learning skills to stretch boundaries of own knowledge and skills
- literacy skills to analyse a wide range of information from varied sources
- planning and organisational skills to participate in the effective allocation of work in a team context
- problem-solving skills to work constructively to overcome issues and challenges of both a practical and conceptual nature and to make ideas become realities
- self-management skills to take a pro-active team role and to reflect on own performance in modelling and encouraging behaviour that supports innovation.

Required knowledge

- barriers to innovation that can occur within a team and broader barriers that sometimes hinder innovation
- broad concepts of innovation including what innovation is, different types of innovation and the benefits of innovation
- characteristics of teams that are more likely to be innovative and characteristics of broader environments that support and encourage innovation
- different roles that people may play within a team, how this impacts on the way a team works and what it might achieve
- group dynamics in a team.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • active participation in a team where the team takes a pro-active and considered approach to innovation and innovative practice • collaborative and open communication within the team • knowledge and understanding of the internal and external factors that contribute to a team becoming and remaining innovative.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • demonstration of skills as part of a team.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • direct observation of team interactions • evaluation of reports by the candidate or the team (could be oral or written) discussing the ideas, challenges and opportunities associated with teams, and how they can be more innovative • evaluation of feedback from other people in the team about the candidate's communication approaches and abilities • oral or written questioning to assess knowledge of the characteristics of innovative teams, innovation concepts more broadly and the ways in which innovation can be encouraged • review of jointly established 'groundrules' for how the team will operate.
Guidance information for assessment	<p>Innovation does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>What the team needs and wants to achieve</i> may relate to:</p>	<ul style="list-style-type: none"> • addressing particular customer feedback • conceiving and implementing a particular project • developing new services or products • generating ongoing ideas within the work unit • improving budgetary performance • improving or changing work conditions • new ideas that impact beyond the workplace (e.g. that have a broader social or community impact)
<p><i>Information about current or potential team members' work</i> may relate to:</p>	<ul style="list-style-type: none"> • interests • lifestyle preferences • past jobs • technical strengths • work preferences • working styles
<p><i>Different ways that different people may contribute</i> may relate to individual strengths around:</p>	<ul style="list-style-type: none"> • creating positive energy within the team • fundamental literacy strengths (e.g. particularly strong in visual literacy, written or spoken communication) • generating ideas • networks or spheres of influence • particular ways of thinking • powers of persuasion • problem-solving capacities • specific technical skills or knowledge
<p><i>Ground rules</i> may relate to:</p>	<ul style="list-style-type: none"> • boundaries or lack of boundaries for team activities and ideas • confidentiality • copyright, moral rights or intellectual property • regularity of communication • key roles and responsibilities • time lines

RANGE STATEMENT	
	<ul style="list-style-type: none"> ways of communicating
<i>Team-based innovation</i> may be encouraged through:	<ul style="list-style-type: none"> accessing training and learning opportunities enough but not too much guidance and structure equitable sharing of workload follow-through with ideas supportive communication
<i>Behaviour that supports innovation</i> may include being:	<ul style="list-style-type: none"> collaborative equitable fair fun hardworking reflective responsible sympathetic
<i>External stimuli and ideas</i> might be from:	<ul style="list-style-type: none"> Australia or overseas colleagues outside of the team family and friends internet journals networks or technical experts other organisations
<i>Challenges of being innovative</i> may relate to:	<ul style="list-style-type: none"> budgetary or other resource constraints competing priorities organisational culture problems with breaking old patterns of behaviour or thinking time pressures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate approaches to the management of intellectual property	1.1. Analyse strategic and operational plans to determine intellectual property requirements 1.2. Identify sources of information and advice regarding approaches to the best practice management of intellectual property 1.3. Determine the implications and potential strategic advantage from protection of intellectual property 1.4. Determine the implications and potential strategic advantage from adopting a collaborative approach to intellectual property 1.5. Determine the implications and potential strategic advantage from adopting an open source approach to intellectual property
2. Establish a strategy for managing intellectual property	2.1. Develop an intellectual property strategy for management and use of own and others' intellectual property in line with the organisation's strategic goals or plans 2.2. Examine requirements and options for commercialisation or effective use of intellectual property 2.3. Establish required documentation for the management of the intellectual property strategy 2.4. Develop strategies for addressing intellectual property infringement 2.5. Ensure intellectual property strategy complies with legislative requirements and organisational policies 2.6. Communicate intellectual property strategy to key stakeholders within the organisation and externally
3. Evaluate proposed intellectual property strategy	3.1. Obtain legal and other professional advice regarding the proposed intellectual property management strategy 3.2. Identify and evaluate the benefits from the proposed intellectual property management strategy 3.3. Identify and evaluate the disadvantages, costs and risks of the proposed intellectual property management strategy 3.4. Adjust strategy according to legal advice and evaluation 3.5. Establish, document and present the business case for adopting the proposed intellectual property management strategy to senior management,

ELEMENT	PERFORMANCE CRITERIA
	directors and other key stakeholders
4. Implement and monitor the intellectual property management strategy	<p>4.1. Work with others to ensure the <i>implementation</i> of the strategy</p> <p>4.2. <i>Monitor</i> and evaluate the strategy and its implementation and report to senior management, directors and other key stakeholders</p> <p>4.3. Make changes to strategy and its implementation as required</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to question, clarify and report on proposed strategy and develop any required documentation, such as licence agreements
- financial and analytical skills to prepare a business case for the proposed strategy
- information technology and research skills to find and interpret relevant information about intellectual property
- conceptual skills to design an organisational strategy
- demonstration of characteristics of responsible business practice and ethical behaviour

Required knowledge

- types of intellectual property as they relate to the organisation
- alternative strategies for the organisation's intellectual property
- relevant legislation and regulations relating to the organisation's intellectual property rights
- potential sources of information and advice about intellectual property

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identification of intellectual property rights appropriate to the types of intellectual property within the organisation and the relevant legislation • establishment of strategies for the management of intellectual property • feasibility study outlining alternative strategies, with risk analysis and cost-benefit analysis of each alternative • recommendations for and implementation of commercialisation of intellectual property
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant legislation and regulations as they relate to intellectual property • access to appropriate computer resources for online search and report preparation • access to sources of information and advice
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of intellectual property strategy alternatives • direct questioning combined with review of portfolio of evidence and third party workplace reports of on-the-job performance by the candidate, to demonstrate the establishment of strategies to manage an organisation's intellectual property • presentation to appropriate personnel on the commercialisation of a range of intellectual property within the organisation, or the chosen intellectual property strategy • oral or written questioning about relevant legislation as it relates to the organisation's intellectual property strategy
Guidance information for	Holistic assessment with other units relevant to the

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare resources	1.1. Select and use appropriate <i>technology</i> and <i>software</i> applications to produce required <i>business documents</i> 1.2. Select layout and style of publication according to information and <i>organisational requirements</i> 1.3. Ensure document design is consistent with company and/or client requirements, using basic design principles 1.4. Discuss and clarify format and style with person requesting document/publication
2. Design document	2.1. Identify, open and generate files and records according to task and organisational requirements 2.2. Design document to ensure efficient entry of information and to maximise the presentation and appearance of information 2.3. Use a range of <i>functions</i> to ensure consistency of design and layout 2.4. Operate <i>input devices</i> within designated requirements
3. Produce document	3.1. Complete document production within designated time lines according to organisational requirements 3.2. Check document produced to ensure it meets task requirements for style and layout 3.3. Store document appropriately and save document to avoid loss of data 3.4. Use manuals, training booklets and/or help-desks to overcome basic difficulties with document design and production
4. Finalise document	4.1. Proofread document for readability, accuracy and consistency in language, style and layout prior to final output 4.2. Make any modifications to document to meet requirements 4.3. <i>Name</i> and <i>store</i> document in accordance with organisational requirements and exit the application without data/loss damage 4.4. Print and present document according to requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- keyboarding and computer skills to complete a range of formatting and layout tasks
- literacy skills to read and understand a variety of texts; to prepare general information and papers according to target audience; and to edit and proofread documents to ensure clarity of meaning and conformity to organisational requirements
- numeracy skills to access and retrieve data
- problem-solving skills to determine document design and production processes.

Required knowledge

- appropriate technology for production requirements
- functions and features of contemporary computer applications
- organisational policies, plans and procedures
- organisational requirements for document design e.g. style guide.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> designing and producing a minimum of 3 completed business documents, using at least 2 software applications in the production of each document using appropriate data storage options knowledge of the functions and features of contemporary computer applications.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to an actual workplace or simulated environment access to office equipment and resources access to examples of style guides and organisational procedures.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate review of final printed documents demonstration of techniques observation of presentations oral or written questioning to assess knowledge of software applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> general administration units other IT use units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Technology</i> may include:	<ul style="list-style-type: none"> • computers • photocopiers • printers • scanners
<i>Software</i> may include:	<ul style="list-style-type: none"> • accounting packages • database packages • presentation packages • spreadsheet packages • word processing packages
<i>Business documents</i> may include:	<ul style="list-style-type: none"> • accounts statements • client databases • newsletters • project reviews • proposals • reports • web pages
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • budgets • correctly identifying and opening files • legal and organisational policies, guidelines and requirements • locating data • log-on procedures • manufacturers' guidelines • occupational health and safety policies, procedures and programs • quality assurance and/or procedures manuals • saving and closing files • security • storing data
<i>Functions</i> may include:	<ul style="list-style-type: none"> • alternating headers and footers • editing • merging documents

RANGE STATEMENT	
	<ul style="list-style-type: none"> • spell checking • table formatting • using columns • using styles
<i>Input devices</i> may include:	<ul style="list-style-type: none"> • keyboard • mouse • numerical key pad • scanner
<i>Naming</i> documents may include:	<ul style="list-style-type: none"> • appropriate file type • authorised access • file names according to organisational procedure e.g. numbers rather than names • file names which are easily identifiable in relation to the content • file/directory names which identify the operator, author, section, date etc. • filing locations • organisational policy for backing up files • organisational policy for filing hard copies of documents • security
<i>Storing</i> documents may include:	<ul style="list-style-type: none"> • storage in directories and sub-directories • storage on CD-ROMs, disk drives or back-up systems • storing/filing hard copies of computer generated documents • storing/filing hard copies of incoming and outgoing facsimiles • storing/filing incoming and outgoing correspondence

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement operational plan	<p>1.1. Collate, analyse and organise details of resource requirements in consultation with relevant personnel, colleagues and specialist resource managers</p> <p>1.2. Implement operational plans to contribute to the achievement of organisation's performance/business plan</p> <p>1.3. Identify and use key performance indicators (KPIs) to monitor operational performance</p> <p>1.4. Undertake contingency planning and consultation processes</p> <p>1.5. Provide assistance in the development and presentation of proposals for resource requirements in line with operational planning processes</p>
2. Implement resource acquisition	<p>2.1. Recruit and induct employees within organisation's policies, practices and procedures</p> <p>2.2. Implement plans for acquisition of physical resources and services within organisation's policies, practices and procedures and in consultation with relevant personnel</p>
3. Monitor operational performance	<p>3.1. Monitor performance systems and processes to assess progress in achieving profit/productivity plans and targets</p> <p>3.2. Analyse and use budget and actual financial information to monitor profit/productivity performance</p> <p>3.3. Identify unsatisfactory performance and take prompt action to rectify the situation according to organisational policies</p> <p>3.4. Provide mentoring, coaching and supervision to support individuals and teams to use resources effectively, economically and safely</p> <p>3.5. Present recommendations for variation to operational plans to the designated persons/groups and gain approval</p> <p>3.6. Implement systems, procedures and records associated with performance in accordance with organisation's requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- coaching and mentoring skills to provide support to colleagues
- literacy skills to access and use workplace information, and to prepare reports
- planning and organising skills to monitor performance and to sequence work of self and others to achieve planned outcomes.

Required knowledge

- principles and techniques associated with:
 - contingency planning
 - methods for monitoring and reporting on performance
 - monitoring and implementing operations and procedures
 - problem identification and methods of resolution
 - relevant budgeting and financial analysis, interpretation and reporting requirements
 - resource management systems at the tactical implementation level
 - resource planning and acquisition
 - tactical risk analysis including identification and reporting requirements.

Evidence Guide

EVIDENCE GUIDE

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Resource requirements</i> may refer to:</p>	<ul style="list-style-type: none"> • goods and services to be purchased and ordered • human, physical and financial resources - both current and projected • stock requirements and requisitions
<p><i>Relevant personnel, colleagues and specialist resource managers</i> may include:</p>	<ul style="list-style-type: none"> • colleagues and specialist resource managers • managers • occupational health and safety committees and other people with specialist responsibilities • other employees • people from a wide range of social, cultural and ethnic backgrounds, and people with a range of physical and mental abilities • supervisors
<p><i>Operational plans</i> may refer to:</p>	<ul style="list-style-type: none"> • organisational plans • tactical plans developed by the department or section to detail product and service performance
<p><i>Key performance indicators</i> may refer to:</p>	<ul style="list-style-type: none"> • measures for monitoring or evaluating the efficiency or effectiveness of a system, and which may be used to demonstrate accountability and to identify areas for improvements
<p><i>Contingency planning</i> may refer to:</p>	<ul style="list-style-type: none"> • contracting out or outsourcing human resources and other functions or tasks • diversification of outcomes • finding cheaper or lower quality raw materials and consumables • increasing sales or production • recycling and re-use • rental, hire purchase or alternative means of procurement of required materials, equipment and stock • restructuring of organisation to reduce labour

RANGE STATEMENT	
	<ul style="list-style-type: none"> costs • risk identification, assessment and management processes • seeking further funding • strategies for reducing costs, wastage, stock or consumables • succession planning
<i>Consultation processes</i> may refer to:	<ul style="list-style-type: none"> • mechanisms used to provide feedback to the work team in relation to outcomes of consultation • meetings, interviews, brainstorming sessions, email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual operational plans
<i>Organisation's policies, practices and procedures</i> may include:	<ul style="list-style-type: none"> • organisational culture • Standard Operating Procedures • organisational guidelines which govern and prescribe operational functions, such as the acquisition and management of human and physical resources • undocumented practices in line with organisational operations
<i>Performance systems and processes</i> may refer to:	<ul style="list-style-type: none"> • informal systems used by frontline managers for the work team in the place of existing organisation-wide systems • formal processes within the organisation to measure performance, such as: <ul style="list-style-type: none"> • feedback arrangements • individual and teamwork plans • KPIs • specified work outcomes
<i>Designated persons/groups</i> may include:	<ul style="list-style-type: none"> • other affected work groups or teams and groups designated in workplace policies and procedures • those who have the authority to make decisions and/or recommendations about operations such as workplace supervisors, other managers
<i>Systems, procedures and records</i>	<ul style="list-style-type: none"> • databases and other recording mechanisms for ensuring records are kept in accordance with

RANGE STATEMENT	
may include:	organisational requirements <ul style="list-style-type: none"> • individual and team performance plans • organisational policies and procedures relative to performance

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement continuous improvement systems and processes	1.1. Implement <i>systems</i> to ensure that individuals and teams are actively encouraged and supported to <i>participate in decision making processes</i> , assume responsibility and exercise initiative 1.2. Communicate the organisation's <i>continuous improvement processes</i> to individuals and teams, and obtain feedback 1.3. Ensure effective <i>mentoring and coaching</i> allows individuals and teams to implement the organisation's continuous improvement processes
2. Monitor and review performance	2.1. Use the organisation's systems and <i>technology</i> to monitor and review progress and to identify ways in which planning and operations could be improved 2.2. Improve <i>customer service</i> through continuous improvement techniques and processes 2.3. Formulate and communicate recommendations for adjustments to those who have a role in their development and implementation
3. Provide opportunities for further improvement	3.1. Implement <i>processes to ensure that team members are informed of savings and productivity/service improvements</i> in achieving the business plan 3.2. Document work performance to aid the identification of further opportunities for improvement 3.3. Manage records, reports and recommendations for improvement within the organisation's systems and processes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - coach and mentor team members
 - gain the commitment of individuals and teams to continuously improve
- innovation skills to design better ways of performing work.

Required knowledge

- principles and techniques associated with:
 - benchmarking
 - best practice
 - change management
 - continuous improvement systems and processes
 - quality systems.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • taking active steps to implement, monitor and adjust plans, processes and procedures to improve performance • supporting others to implement the continuous improvement system/processes, and to identify and report opportunities for further improvement • knowledge of principles and techniques associated with continuous improvement systems and processes.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • assessment of written reports • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of presentations • oral or written questioning to assess knowledge of principles and techniques associated with change management • review of how the organisation's continuous improvement processes was communicated to individuals and teams • review of documentation of work performance.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other units from the Certificate IV in Frontline Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Systems</i> may refer to:	<ul style="list-style-type: none"> • forums, meetings • newsletters and reports • organisational policies and procedures • web-based communication devices
<i>Participation in decision making processes</i> may include:	<ul style="list-style-type: none"> • feedback in relation to outcomes of the consultative process • processes which ensures all employees have the opportunity to contribute to organisational issues
<i>Continuous improvement processes</i> may include:	<ul style="list-style-type: none"> • cyclical audits and reviews of workplace, team and individual performance • evaluations and monitoring of effectiveness • implementation of quality systems, such as International Standardization for Organization (ISO) • modifications and improvements to systems, processes, services and products • policies and procedures which allow the organisation to systematically review and improve the quality of its products, services and procedures • seeking and considering feedback from a range of stakeholders
<i>Mentoring and coaching</i> may refer to:	<ul style="list-style-type: none"> • providing assistance with problem-solving • providing feedback, support and encouragement • teaching another member of the team, usually focusing on a specific work task or skill
<i>Technology</i> may include:	<ul style="list-style-type: none"> • computerised systems and software such as databases, project management and word processing • telecommunications devices • any other technology used to carry out work roles and responsibilities

RANGE STATEMENT	
<i>Customer service</i> may be:	<ul style="list-style-type: none"> • internal or external • to existing, new or potential clients
<i>Processes to ensure that team members are informed of savings and productivity/service improvements</i> may refer to:	<ul style="list-style-type: none"> • email/intranet, newsletters or other communication devices • newsletters and bulletins • staff reward mechanisms • team meetings

BSBMGT515A Manage operational plan

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to develop and monitor implementation of the operational plan to provide efficient and effective workplace practices within the organisation's productivity and profitability plans.</p> <p>Management at a strategic level requires systems and procedures to be developed and implemented to facilitate the organisation's operational plan.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to people who manage the work of others and operate within the parameters of a broader strategic and/or business plan. The task of the manager at this level is to develop and implement an operational plan to ensure that the objectives and strategies outlined in the strategic and/or business plan are met by work teams. However in some larger organisations operational plans may be developed by a strategic planning unit.</p> <p>At this level work will normally be carried out within complex and diverse methods and procedures, which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies.</p>

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop operational plan	<p>1.1. Research, analyse and document resource requirements and develop an operational plan in consultation with relevant personnel, colleagues and specialist resource managers</p> <p>1.2. Develop and/or implement consultation processes as an integral part of the operational planning process</p> <p>1.3. Ensure details of the operational plan include the development of key performance indicators to measure organisational performance</p> <p>1.4. Develop and implement contingency plans at appropriate stages of operational planning</p> <p>1.5. Ensure the development and presentation of proposals for resource requirements is supported by a variety of information sources and seek specialist advice as required</p> <p>1.6. Obtain approval for plan from relevant parties and ensure understanding among work teams involved</p>
2. Plan and manage resource acquisition	<p>2.1. Develop and implement strategies to ensure that employees are recruited and/or inducted within the organisation's human resources management policies and practices</p> <p>2.2. Develop and implement strategies to ensure that physical resources and services are acquired in accordance with the organisation's policies, practices and procedures</p>
3. Monitor and review operational performance	<p>3.1. Develop, monitor and review performance systems and processes to assess progress in achieving profit and productivity plans and targets</p> <p>3.2. Analyse and interpret budget and actual financial information to monitor and review profit and productivity performance</p> <p>3.3. Identify areas of under performance, recommend solutions, and take prompt action to rectify the situation</p> <p>3.4. Plan and implement systems to ensure that mentoring and coaching are provided to support individuals and teams to effectively, economically and safely use resources</p> <p>3.5. Negotiate recommendations for variations to operational plans and gain approval from designated persons/groups</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Develop and implement systems to ensure that procedures and records associated with documenting performance are managed in accordance with organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to access and use workplace information and to write a succinct and practical plan
- technology skills to use software to produce and monitor the plan against performance indicators
- planning and organisational skills
- coaching skills to work with people with poor performance
- numeracy skills to allocate and manage financial resources.

Required knowledge

- models and methods for operational plans
- budgeting processes
- alternative approaches to improving resource usage and eliminating resource inefficiencies and waste.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lead continuous improvement systems and processes	<p>1.1. Develop <i>strategies</i> to ensure that team members are actively encouraged and supported to participate in decision-making processes, assume responsibility and exercise initiative as appropriate</p> <p>1.2. Establish <i>systems</i> to ensure that the organisation's <i>continuous improvement processes</i> are communicated to <i>stakeholders</i></p> <p>1.3. Ensure that change and improvement processes meet <i>sustainability requirements</i></p> <p>1.4. Develop effective mentoring and coaching processes to ensure that individuals and teams are able to implement and support the organisation's continuous improvement processes</p> <p>1.5. Ensure that insights and experiences from business activities are captured and accessible through <i>knowledge management systems</i></p>
2. Monitor and adjust performance strategies	<p>2.1. Develop strategies to ensure that systems and processes are used to monitor <i>operational progress</i> and to identify ways in which planning and operations could be improved</p> <p>2.2. Adjust and communicate strategies to stakeholders according to organisational procedures</p>
3. Manage opportunities for further improvement	<p>3.1. Establish processes to ensure that team members are informed of outcomes of continuous improvement efforts</p> <p>3.2. Ensure processes include <i>recording of work team performance</i> to assist in identifying further opportunities for improvement</p> <p>3.3. Consider areas identified for further improvement when undertaking future planning</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to communicate opportunities for improvement
- learning skills to coach and mentor staff, using a range of methods to cater for different learning styles
- innovation and lateral thinking skills to design better ways for achieving work outcomes
- planning skills to establish and monitor systems and process for continuous improvement
- teamwork and leadership skills to gain the confidence and trust of others

Required knowledge

- continuous improvement models
- knowledge management systems
- quality systems
- sustainability principles

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development and use of a range of strategies and approaches that improve work outcomes or organisational functioning, using continuous improvement models • monitoring performance and customer service.
Context of and specific resources for assessment	Assessment must ensure access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • assessment of reports • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • observation of presentations • oral or written questioning to assess knowledge of quality systems • review of strategies developed to ensure that team members are actively encouraged and supported to participate in decision-making processes, assume responsibility and exercise initiative • evaluation of how customer-service strategies were communicated to stakeholders • review of documentation outlining work team performance.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Strategies</i> may refer to:</p>	<ul style="list-style-type: none"> • clarification of roles and expectations • communication devices and processes, such as intranet and email communication systems, to facilitate input into workplace decisions • long-term or short-term plans that factor in opportunities for team input • mentoring and 'buddy' systems to support team members to participate in decision making • performance plans • reward and recognition programs for high performing staff • training and development activities.
<p><i>Systems</i> may refer to:</p>	<ul style="list-style-type: none"> • forums and meetings • newsletters and reports • policies and procedures • electronic communication devices.
<p><i>Continuous improvement processes</i> may include:</p>	<ul style="list-style-type: none"> • cyclical audits and reviews of workplace, team and individual performance • evaluations and monitoring of effectiveness • modifications and improvements to systems, processes, services and products • policies and procedures that allow an organisation to systematically review and improve the quality of its products, services and procedures • seeking and considering feedback from a range of stakeholders.
<p><i>Stakeholders</i> may include:</p>	<ul style="list-style-type: none"> • business or government contacts • funding bodies • individuals within the work team • internal and external contacts • organisation's clients and customers • professional associations • senior management and board members

RANGE STATEMENT	
	<ul style="list-style-type: none"> • unions and employee groups.
<p><i>Sustainability requirements</i> may include:</p>	<ul style="list-style-type: none"> • addressing environmental and resource sustainability initiatives, such as environmental management systems, action plans, green office programs, surveys and audits • applying the waste management hierarchy in the workplace • complying with regulations and corporate social responsibility considerations for sustainability to enhance the organisation's standing in business and community environments • determining organisation's most appropriate waste treatment, including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment • implementing ecological footprinting • implementing environmental management systems, e.g. ISO 14001:1996 Environmental management systems life cycle analyses • implementing government initiatives, e.g. Australian government's Greenhouse Challenge Plus • improving resource and energy efficiency • initiating and maintaining appropriate organisational procedures for operational energy consumption • introducing a green office program (a cultural change program) • introducing green purchasing • introducing national and international reporting initiatives, e.g. Global Reporting Initiative • introducing product stewardship • reducing emissions of greenhouse gases • reducing use of non-renewable resources • referencing standards, guidelines and approaches, such as sustainability covenants and compacts or triple bottom line reporting • supporting sustainable supply chain.
<p><i>Knowledge management systems</i> may include:</p>	<ul style="list-style-type: none"> • best practice transfer • communities of practice • cross-project learning • expert directories • knowledge brokers' knowledge mapping • knowledge repositories • measuring and reporting intellectual capital • mentoring

RANGE STATEMENT	
	<ul style="list-style-type: none"> • performance management • post-project reviews • proximity and architecture • social software • storytelling.
<i>Operational progress</i> may refer to:	<ul style="list-style-type: none"> • customer service indicators • OHS indicators • productivity gains • success in meeting agreed goals and performance indicators.
<i>Recording of work team performance</i> may include:	<ul style="list-style-type: none"> • annotated performance plans • quantitative data, such as production figures • recommendations for improvement • records and reports.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Review programs, systems and processes</p>	<p>1.1. Establish strategies to monitor and evaluate performance and <i>sustainability</i> of key systems and processes</p> <p>1.2. Undertake detailed analyses of <i>supply chains</i>, and operational, product and service delivery systems</p> <p>1.3. Identify performance measures, and assessment tools and techniques, and evaluate their effectiveness</p> <p>1.4. Analyse <i>performance reports</i> and variance from plans for key result areas of the organisation</p> <p>1.5. Identify and analyse changing trends and opportunities relevant to the organisation</p> <p>1.6. Seek advice from specialists, where appropriate, to identify technology and electronic commerce opportunities</p>
<p>2. Develop options for continuous improvement</p>	<p>2.1. Brief groups on performance improvement strategies and innovation as an essential element of competition</p> <p>2.2. Foster creative climate and organisational learning by promoting interaction within and between work groups</p> <p>2.3. Encourage, test and recognise new ideas and entrepreneurial behaviour where successful</p> <p>2.4. Accept failure of an idea during trialling, and recognise, celebrate and embed success into systems</p> <p>2.5. Undertake risk management and cost-benefit analysis for each option or idea approved for trial</p> <p>2.6. Approve innovations through agreed organisational processes</p>
<p>3. Implement innovative processes</p>	<p>3.1. Promote continuous improvement and sustainability as essential to doing business</p> <p>3.2. Address impact of change and consequences for people, and implement transition plans</p> <p>3.3. Ensure objectives, timeframes, measures and communication plans are in place to manage implementation</p> <p>3.4. Implement contingency plans in the event of non-performance</p> <p>3.5. Follow up failure by prompt investigation and analysis of causes and manage emerging challenges and opportunities effectively</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6. Ensure that learnings from activities are captured and managed to inform future work 3.7. Regularly evaluate continuous improvement systems and processes 3.8. Communicate costs and benefits of innovations and improvements to relevant groups and individuals

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify improvement opportunities in relation to:
 - concepts and ideas developed
 - services or products delivered
- flexibility and creativity skills to think laterally
- learning skills to develop options for continuous improvement
- teamwork and leadership skills to foster a commitment to quality and an openness to innovation

Required knowledge

- cost-benefit analysis methods
- creativity and innovation theories and concepts
- organisational learning principles
- quality management and continuous improvement theories
- risk management
- sustainability practices

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • demonstration of consultation processes to introduce or evaluate an existing continuous improvement process or system, including suggested actions or an action plan • generation of an idea or concept that exhibits creative thinking and offers the possibility of benefiting the organisation • demonstration of how the concept or idea was introduced, tested and evaluated, which does not have to have been shown to work or to be adopted by the business • application of knowledge of quality management and continuous improvement theories.
Context of and specific resources for assessment	Assessment must ensure access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • assessment of reports • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • observation of presentations • oral or written questioning to assess knowledge of creativity and innovation theories and concepts • evaluation of strategies established to monitor and evaluate performance of key systems and processes • review of briefing of groups on performance improvement strategies and innovation • review of documentation communicating costs and benefits of innovations and improvements to relevant groups and individuals.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Sustainability may include:

- addressing environmental and resource sustainability initiatives, such as environmental management systems, action plans, green office programs, surveys and audits
- applying the waste management hierarchy in the workplace
- complying with regulations and corporate social responsibility considerations for sustainability to enhance the organisation's standing in business and community environments
- determining organisation's most appropriate waste treatment, including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment
- implementing ecological footprint
- implementing environmental management systems, e.g. ISO 14001:1996 Environmental management systems life cycle analyses
- implementing government initiatives, e.g. Australian government's Greenhouse Challenge Plus
- improving resource and energy efficiency
- initiating and maintaining appropriate organisational procedures for operational energy consumption
- introducing a green office program - a cultural change program
- introducing green purchasing
- introducing national and international reporting initiatives, e.g. Global Reporting Initiative
- introducing product stewardship
- reducing emissions of greenhouse gases
- reducing use of non-renewable resources
- referencing standards, guidelines and approaches, such as sustainability covenants and compacts or triple bottom line reporting
- supporting sustainable supply chain.

Supply chains include:

- network of facilities that procures raw materials, transforms them into intermediate products or services

RANGE STATEMENT	
	<p>and then finished goods or service, and delivers them through a distribution system</p> <ul style="list-style-type: none"> • procurement, production and distribution, viewed as interlinked not as discrete elements.
<p><i>Performance reports</i> may include:</p>	<ul style="list-style-type: none"> • budget or cost variance • customer service • environmental • financial • OHS • quality • other operating parameters.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Segment the market	1.1. Identify <i>criteria</i> for use in segmenting the market in accordance with the marketing plan 1.2. Identify and access <i>sources of information for segmenting and profiling markets</i> in accordance with the marketing plan 1.3. Segment the market in accordance with identified criteria 1.4. Review market segments for their usefulness in terms of factors such as their <i>size, potential, distinctive needs, easy identification of members</i> or <i>distinctive media use patterns</i> 1.5. Select <i>market segments</i> to meet marketing objectives, and choose and apply new segmentation criteria if required
2. Identify the target market	2.1. Evaluate <i>approaches</i> to determining and describing the total market for a product or service 2.2. Define the target market in terms of the consumers to be included as <i>prospective users</i> of a product or service, and the selected market segments 2.3. Use <i>segment descriptors</i> to describe the target market 2.4. Identify available <i>strategic marketing options</i> and select <i>targeting strategies</i> that best meet the requirements of the marketing plan
3. Profile the target audience	3.1. Describe the total market and selected market segments in the form of a consumer profile 3.2. Identify consumer characteristics in <i>standard statistical terms</i> and/or the descriptive terms used in media selection in the consumer profile 3.3. Use <i>demographic</i> and/or <i>psychographic descriptions</i> in the consumer profile in accordance with the requirements of the marketing plan 3.4. Describe consumer attitudes to products or services being offered 3.5. Ensure profile meets organisational requirements in terms of language, format, content and level of detail
4. Develop a positioning strategy	4.1. Identify available <i>positioning strategies</i> and choose a strategy to meet <i>marketing requirements</i> and consumer profile 4.2. Write a positioning implementation plan containing

ELEMENT	PERFORMANCE CRITERIA
	several options, in accordance with organisational requirements 4.3. Submit plan to supervisor within specified time lines and make appropriate adjustments based on feedback

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- creativity and innovation skills to select targeting and positioning strategies that meet organisation's requirements
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- key provisions of relevant legislation from all forms of government, codes of practice and national standards that may affect aspects of business operations such as:
 - Australian Direct Marketing Association (ADMA) Direct Marketing Code of Practice
 - Free TV Australia Commercial Television Industry Code of Practice
 - privacy laws
 - sweepstakes regulations
 - Trade Practices Act
- literacy skills to prepare reports and to interpret internal and external marketing information
- research skills to identify and analyse market segments and target markets.

Required knowledge

- Australian Marketing Institute Code of Professional Conduct
- data collection and analysis techniques
- industry knowledge including:
 - components of the marketing mix
 - elements of marketing planning
- marketing communications concepts and processes
- organisational structures, roles, responsibilities, business and marketing plans
- product and service standards and best practice models
- relevant legislation from all forms of government that may affect aspects of business operation in addition to those listed above, especially in relation to occupational health and safety, environmental issues, equal opportunity, industrial relations and anti-discrimination
- statistical terms used by the Australian Bureau of Statistics.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> developing a market positioning strategy that documents market segmentation, consumer profiling, targeting and strategies relevant to a product or service being offered to the marketplace.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to appropriate documentation and resources normally used in the workplace access to information on past profiling, segmentation and targeting performed for a product or service.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> assessment of positioning implementation plan direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate observation of the application of criteria to segment markets, selection of targeting strategies oral or written questioning to assess knowledge and understanding presentation of marketing profiling activities review of authenticated documents from the workplace or training environment review of testimony from team members, colleagues, supervisors or managers.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> BSBMKG402B Analyse consumer behaviour for specific markets BSBMKG507A Interpret market trends and developments.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Criteria may include:

- attitude
- average order value in units and dollars
- desired benefits
- business characteristics
- consumer needs
- demographics
- geography
- lifestyle
- lifetime value in units, dollars and number of transactions
- product or service usage
- psychographics
- recency and frequency of response to direct marketing activities
- social and cultural factors

Sources of information for segmenting and profiling markets may include:

- advertising sales representatives
- existing research data
- industry sources
- media representatives
- original a priori research (where the market segments are assumed at the beginning and research is used to confirm them)
- original response based research
- owners or brokers of mail, email and phone lists
- sales representatives
- website operators

Usefulness in terms of ***size*** may include:

- segments which are large enough to justify the expense of creating distinctive offers and creative executions
- small segments which are viable if telephone and email are used as communication media rather than other types of media

RANGE STATEMENT	
<i>Potential</i> may include:	<ul style="list-style-type: none"> • high response of market segment members to test campaigns • high response to previous campaigns by members of market segments
<i>Distinctive needs</i> may include:	<ul style="list-style-type: none"> • specific price points • specific products or services • specific response vehicles such as: <ul style="list-style-type: none"> • store visiting only • website only response • specific timing of communications such as: <ul style="list-style-type: none"> • day of week • seasonality • time of day
<i>Easy identification of members</i> may include:	<ul style="list-style-type: none"> • flags such as: <ul style="list-style-type: none"> • postcode • date of last purchase • geographical location of segment members, such as: <ul style="list-style-type: none"> • city • metropolitan region • regional centre • rural region • state or territory • spending habits such as: <ul style="list-style-type: none"> • one-off purchasers • subscribers
<i>Distinctive media use patterns</i> may include:	<ul style="list-style-type: none"> • age • email use • ethnic language television, newspapers and radio • gender • internet use • mobile phone use • special interests
Selection of <i>market segments</i> may be contingent upon:	<ul style="list-style-type: none"> • expected frequency of purchase • expected lifetime as customers • expected volume of purchase • how efficiently segment members can be reached with targeted communications

RANGE STATEMENT	
	<ul style="list-style-type: none"> • one or more segments
<i>Approaches</i> may include:	<ul style="list-style-type: none"> • describing total market in dollar or unit terms as gross sales of all other products or services similar to those offered by the organisation • describing total market in prospect terms as those most similar to current customers • identifying consumers with relevant needs • identifying current users of a product or service • identifying people with related characteristics
<i>Prospective users</i> may include:	<ul style="list-style-type: none"> • market segment users most similar to current customers
<i>Segment descriptors</i> may include:	<ul style="list-style-type: none"> • demographic descriptions • geographic descriptions • historic descriptions such as: <ul style="list-style-type: none"> • volume of purchase • frequency of purchase • psychographic descriptions
<i>Strategic marketing options</i> may include:	<ul style="list-style-type: none"> • advertising strategies such as: <ul style="list-style-type: none"> • most cost effective creative executions • most cost effective media or media vehicle for each segment • most cost-effective media or media vehicle • distribution strategies such as: <ul style="list-style-type: none"> • one-step • multi-step • innovative strategies
<i>Targeting strategies</i> may include:	<ul style="list-style-type: none"> • anniversary of first purchase • concentrated, differentiated and mass strategies • de-duping prospect lists against customer lists • differentiation and segmentation • ease of entry • frequency of purchase • gender • geography of home or workplace • growth considerations • innovation • market share • media usage • niche markets

RANGE STATEMENT	
	<ul style="list-style-type: none"> • price sensitivity • purchasing power • recency of purchase • sales volume
<i>Standard statistical terms</i> may include:	<ul style="list-style-type: none"> • categories used by the Australian Bureau of Statistics in collecting and reporting census data • media selection terms such as: <ul style="list-style-type: none"> • behaviouristics • demographics • geo-demographic analysis of census data available from proprietary research suppliers • geographic selections and segmentations
<i>Demographic descriptions</i> may include:	<ul style="list-style-type: none"> • age • date and place of birth • disability • education • first language • gender • household income • indigenous Australian • languages spoken at home • marital status • nationality • number and age of children • occupation
<i>Psychographic descriptions</i> may include:	<ul style="list-style-type: none"> • activities • affiliations • attitudes • interests • lifestyle • opinions • political views • values
<i>Positioning strategies</i> may include:	<ul style="list-style-type: none"> • competitive positioning • conspicuous positioning • convenience of use • convenience to buy • image perceptions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • market follower positions • market leader positions • Me-Too positioning • prestige and exclusive positioning • pricing • quality • repositioning • service positioning • uniqueness • value positioning
<i>Marketing requirements</i> may include:	<ul style="list-style-type: none"> • business-to-business marketing • direct marketing • ideas marketing • marketing of goods • public sector marketing • services marketing • telemarketing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan promotional activities	1.1. Identify and assess <i>promotional activities</i> to ensure compatibility with <i>organisational requirements</i> 1.2. Plan and schedule promotional activities according to the marketing needs of the organisation 1.3. Determine overall promotional objectives in consultation with <i>designated individuals and groups</i> 1.4. Ensure that time lines and costs for promotion of activities are realistic and consistent with budget resources 1.5. Develop action plans to provide details of products and services being promoted
2. Coordinate promotional activities	2.1. Ensure <i>personnel and resources</i> to support promotional activities are identified and prepared to facilitate the achievement of promotional goals 2.2. Identify and agree <i>roles and responsibilities</i> for delivery of promotional services and allocate to relevant personnel 2.3. Establish and conduct relationships with targeted groups in a manner which enhances the positive image of the organisation 2.4. Use <i>networks</i> to assist in the implementation of promotional activities
3. Review and report on promotional activities	3.1. Analyse audience feedback and data to determine the impact of the promotional activity on the delivery of products and services 3.2. Assess effectiveness of planning processes to identify possible improvements in future activities 3.3. Collect <i>feedback</i> and provide to personnel and agencies involved in promotional activity 3.4. Analyse costs and time lines to evaluate the benefits accruing from the promotional activities 3.5. Prepare conclusions and recommendations from verifiable evidence and provide constructive advice on future directions of promotional activities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read a variety of texts; to prepare general information and papers; and to write formal and informal letters according to target audience
- technology skills to select and use technology appropriate to a task
- problem-solving skills to manage contingencies in promotional activities
- numeracy skills to analyse data and to compare time lines and promotional costs against budgets.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety (OHS)
- planning processes for organising promotional activities
- organisational marketing plan and associated budgets.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify marketing opportunities	1.1. Analyse <i>information on market and business needs</i> to identify <i>marketing</i> opportunities 1.2. Research potential <i>new markets</i> and assess opportunities to enter, shape or influence the market in terms of likely <i>contribution to the business</i> 1.3. Explore entrepreneurial, innovative approaches and creative ideas for their potential business application, and develop into potential marketing opportunities
2. Investigate marketing opportunities	2.1. Identify and analyse opportunities in terms of their likely fit with organisational goals and capabilities 2.2. <i>Evaluate</i> each opportunity to determine its impact on current business and customer base 2.3. Use an assessment of <i>external factors</i> , costs, benefits, risks and opportunities to determine the financial viability of each marketing opportunity 2.4. Determine probable return on investment and potential competitors 2.5. Describe and rank marketing opportunities in terms of their viability and likely contribution to the business
3. Evaluate required changes to current operations	3.1. Identify and document changes needed to current operations to take advantage of viable marketing opportunities 3.2. Ensure organisational changes to service an increased or different customer base include provision for continued quality of service to existing customers 3.3. Estimate <i>resource requirements</i> for changed operations 3.4. Determine and communicate viability of making changes to current operations to <i>key stakeholders</i> 3.5. Document newly identified marketing opportunities and required changes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- literacy skills to identify and interpret market information, to write in a range of styles for different audiences and to document outcomes and requirements
- numeracy skills to calculate and evaluate financial information on new marketing options
- research and evaluation skills to gain information on and interpret market trends to identify marketing opportunities.

Required knowledge

- key provisions of relevant legislation from all forms of government, codes of practice and national standards that may affect aspects of business operations such as:
 - anti-discrimination legislation and the principles of equal opportunity, equity and diversity
 - ethical principles
 - marketing codes of practice and conduct such as the Australian Direct Marketing Association (ADMA) Direct Marketing Code of Practice; Free TV Australia Commercial Television Industry Code of Practice; and the Australian E-commerce Best Practice Model
 - privacy laws
 - Trade Practices Act
- organisational marketing plan, structure, products and services
- principles of marketing and the marketing mix
- statistical methods and techniques to evaluate marketing opportunities, including forecasting techniques.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to scope definition	<p>1.1. Contribute to the identification of <i>project deliverables</i></p> <p>1.2. Contribute to the identification of measurable outcomes to enable evaluation of project performance</p> <p>1.3. Contribute to the development of the <i>scope management plan</i></p>
2. Apply project scope controls	<p>2.1. Undertake work in accordance with agreed project management plan and by using established <i>change control procedures</i> and <i>performance measurement procedures</i></p> <p>2.2. Monitor and control aspects of project scope and communicate instances of non-compliance with overall scope to the project manager and other team members</p> <p>2.3. Measure progress to determine potential, perceived and actual scope changes</p> <p>2.4. Appropriately report scope changes</p> <p>2.5. Provide assistance in the review of project outcomes to determine the effectiveness of initial and subsequent scope management approaches</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills sufficient to interpret potentially complex project plans and documentation
- planning and organisational skills to monitor and respond to compliance issues and to measure progress against agreed objectives
- teamwork and communication skills to liaise with other members of the project team on a range of project scope management issues and challenges.

Required knowledge

- elements which make up a project scope management plan
- methods for measuring work outcomes and progress against plans
- factors likely to impact on project scope
- methods for segmenting and documenting the work of a project.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • knowledge of project scope management methodologies • participation in the definition and management of scope in relation to multiple complex projects.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to project documentation which includes information about project scope and project team involvement.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • analysis of responses addressing different project scope management scenarios • oral or written questioning to assess knowledge of strategies for managing project scope and their application to different situations • assessment of contribution to the development of the scope management plan • evaluation of progress measured to determine potential, perceived and actual scope changes.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other units from the Certificate IV in Project Management.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Project deliverables</i> may include:	<ul style="list-style-type: none"> • products, outputs and services defined within the project scope
<i>Scope management plan</i> may include:	<ul style="list-style-type: none"> • constraints, assumptions and exclusions • deliverables, activities and tasks • project benefits and outcomes • project objectives • work organisation and/or product breakdown structures
<i>Change control procedures</i> may include:	<ul style="list-style-type: none"> • adjusting designated project documentation, for example plans, schedules, directives, guidelines and instructions which include change instructions, change request procedures and nominated change authorities • identifying designated elements of the project liable to change, for example finance and duration of tasks
<i>Performance measurement procedures</i> may include:	<ul style="list-style-type: none"> • using tools and techniques to manage and measure project progress in terms of time and resources

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Acquire knowledge of products in a specified area	1.1. Identify <i>information sources</i> about <i>products</i> in a specified area and evaluate them for reliability and validity 1.2. Identify product purpose/s and use/s 1.3. Identify key <i>features</i> of the product/s 1.4. Identify product strengths and weaknesses 1.5. Articulate guarantees and warranties and identify service support details
2. Convert product knowledge into benefits	2.1. Identify features of the product which have potential buyer appeal 2.2. Present features of the product which have buyer appeal as benefits to the buyer 2.3. Present product benefits within the context of <i>organisational requirements</i> and legislation
3. Evaluate competitors' products	3.1. Use a range of information sources to identify competitors' products 3.2. Compare features, benefits, strengths and weaknesses of competitors' products with own products 3.3. Establish relative standing of the organisation's product with the competitors' product/s and communicate differences to the buyer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- information management skills to summarise information verbally and non-verbally
- literacy and numeracy skills to interpret sales data and to summarise information obtained from a variety of verbal and non-verbal sources.

Required knowledge

- features, benefits, strengths and weaknesses of own organisation's and competitors' products
- industry competitors, trends and developments
- organisational structure/s, roles and responsibilities, policies, procedures, product labelling and descriptions
- potential buyer markets
- processes used when buying and selling products and services
- identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:
 - anti-discrimination
 - consumer protection
 - contract law legislation
- ethical principles
 - privacy laws
 - Trade Practices Act.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop and maintain business networks	1.1. Use appropriate <i>network strategies</i> to establish and maintain relationships that promote the development of business opportunities 1.2. Identify and pursue network opportunities to maximise a range of contacts 1.3. Communicate information regarding new networks to inform individuals, colleagues and clients of potential benefits 1.4. Participate in <i>professional networks and associations</i> to obtain and maintain personal knowledge and skills
2. Establish and maintain business relationships	2.1. Develop and maintain relationships to promote benefits consistent with <i>organisational/client requirements</i> 2.2. Gain and maintain trust and confidence of contacts through demonstration of high standards of business practices 2.3. Use a high level of <i>negotiation skills</i> to encourage positive outcomes 2.4. Identify difficult situations and negotiate solutions using collaborative problem-solving techniques 2.5. Seek specialist advice in the development of contacts where appropriate
3. Promote the relationship	3.1. Develop strategies to represent and promote the interests and requirements of the relationship 3.2. Use appropriate presentation skills to communicate the goals and objectives of the relationship 3.3. Effectively communicate issues, policies and practices of the relationship to a range of audiences, in writing and verbally 3.4. Obtain <i>feedback</i> to identify and develop ways to improve promotional activities within available opportunities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to receive and report on feedback, to maintain effective relationships and to manage conflict
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- leadership skills to gain trust and confidence of clients and colleagues
- negotiation skills to achieve mutually acceptable outcomes
- technology skills to support effective communication and presentation.

Required knowledge

- client or organisational policies, plans and procedures
- related organisations, agencies and networks
- trends and forecasts for relevant industries, services and products.

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Employ prospecting methods	1.1 Identify a range of prospecting methods
	1.2 Consider and evaluate the strengths and limitations of primary and secondary prospecting methods
	1.3 Select prospecting methods to match the market to which the product is targeted
	1.4 Target present, previous and new clients through chosen prospecting methods
2 Qualify prospects	2.1 Research and establish criteria for qualifying leads
	2.2 Ensure criteria are established according to buyer accessibility, buyer motives , product affordability, purchase authority, legal compliance and return for the seller
	2.3 Ensure the established criteria represent a standard against which the buying potential of individuals and groups is gauged
3 Manage prospect information	3.1 Develop a system to record prospect information
	3.2 Implement the system for recording prospect information
	3.3 Monitor the system for recording prospect information for effectiveness

- 3.4 Evaluate the system for recording prospect information
- 3.5 Refine the system for recording prospect information based on evaluation of system

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

literacy skills to interpret legal requirements, company policies and procedures

research and data analysis skills to determine prospect requirements

technology skills to design and record formats to facilitate information storage and retrieval.

Required knowledge

principles of buyer motives

identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:

anti-discrimination

ethical principles

consumer protection

contract law

privacy laws

Trade Practices Act

benefits and key features of own organisation's and competitors' products

information management strategies used to manage prospect data

prospecting methods used in the sales process.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstration of the use and management of different prospecting methods targeting a present, previous and new client
- research and establishment of criteria used in qualifying leads identified through prospecting methods
- recording, storage and retrieval of prospect information.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to organisational sales prospect information, databases and records.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of criteria developed to qualify sales leads
- demonstration of prospecting methods
- direct questioning combined with portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of use of prospecting methods
- oral or written questioning to assess knowledge of principles of buyer motives
- review of research undertaken to establish criteria for qualifying leads
- evaluation of the system developed to record prospect information.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

customer service units

other sales units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Prospecting methods may include:

- brokers
- cold canvassing
- databases
- direct mail
- internet
- intra organisational leads
- journals
- magazines
- media advertising
- networking
- newspapers
- personal observation
- public records
- referrals
- spotters
- telemarketing

Products may include:

- goods
- ideas
- services

Clients may include:

- consumers
- customers
- members
- patients
- members of other business units within an organisation
- other work teams within an organisation
- person or organisation who receives or has the potential to receive products, services or ideas supplied by the organisation

Buyer motives may include:

browsing
buying for unqualified prospect e.g.
dependant
gift
housekeeping
replacement item
self reward
self-gratification

1 Respond to buying signals	1.1 Identify verbal and non-verbal buying signals
	1.2 Assess verbal and non-verbal buying signals
	1.3 Make a decision as to whether to respond to a buying signal by initiating close of sale
	1.4 Utilise trial closes to assist the buyer to make decisions on minor points related to the product
	1.5 Use trial closes strategically during different stages of the sales process
2 Negotiate the sale	2.1 Initiate a formal close to the sales process following one or more trial closes
	2.2 Negotiate conditions of the agreement
	2.3 Assess a range of different strategies to close the sale
	2.4 Select a strategy to close the sale
	2.5 Utilise supportive and confirming language to support the closure of the sales process
	2.6 Describe and demonstrate options for simple sales transactions to match specified situations
	2.7 Respond to the prospect's decision to purchase in

an assertive manner

- 3 Finalise the agreement
 - 3.1 Outline a summary of the agreement to the buyer
 - 3.2 Confirm the buyer's decision
 - 3.3 Ensure process and completion of the sales transaction comply with organisational requirements
 - 3.4 Prepare and complete sales documents
 - 3.5 Ensure advice on financing arrangements is accurate, matches the buyer's financial situation, and complies with organisational requirements
 - 3.6 Identify and present cross selling opportunities to the buyer
 - 3.7 Express a desire to continue the sales relationship and conduct future sales transactions

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

conflict resolution skills to manage client dissatisfaction and criticism

customer service skills to determine client needs and preferences

interpersonal skills to develop rapport and build relationships with clients

literacy and numeracy skills to prepare sales documentation, process sales transactions and calculate financing arrangements.

Required knowledge

detailed product knowledge, including product:

advantages and disadvantages

features

service benefits

identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:

anti-discrimination

ethical principles

consumer protection

contract law

privacy laws

Trade Practices Act

principles of sales closure techniques.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- sales situations where the candidate clearly identifies and appropriately responds to buying signals before trialling closes, negotiating sale conditions and securing the sale
- knowledge of principles of sales closure techniques.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- observations of interactions with prospects when securing commitment
- direct questioning combined with portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of verbal and non-verbal buying signals, trial closes, proposed sales solutions and ways to overcome buyer resistance
- observation of strategies used to secure a sale
- review of cross selling opportunities presented to the buyer
- review of completed sales documents
- assessment of advice provided on financing arrangements.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

BSBPRO401A Develop product knowledge

BSBSLS403A Present a sales solution

BSBSLS406A Self-manage sales performance.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Verbal buying signals may include:	confirmations questions statement of requirement by prospect
Non-verbal buying signals may include:	close examination of the product by the prospect moving closer to where a product is to be installed smiling and nodding
Trial closes may include:	question or paraphrase that focuses the interaction on a minor point related to sale of the product that might lead to closing the sale
Products may include:	goods ideas services
Formal close may include:	inducement narrative close request by the salesperson to the prospect to agree to purchase the product/service offering alternative choices summary of product benefits
Conditions may include:	client loyalty delivery length of contract payment options price

Elements and Performance Criteria

Elements and Performance Criteria

Element	Performance Criteria
1 Process order	<p>1.1 Record client order details in accordance with organisational policies and procedures</p> <p>1.2 Forward order for product to the relevant section of the organisation</p> <p>1.3 Monitor the processing of the order</p>
2 Deliver support to agreed expectations	<p>2.1 Provide technical assistance and/or advice in relation to the product purchased</p> <p>2.2 Handle defective returns in accordance with organisational requirements</p> <p>2.3 Provide information to facilitate product repair, support or servicing</p> <p>2.4 Provide liaison services to assist clients to access appropriate after-sales support</p>
3 Handle client feedback	<p>3.1 Clarify and confirm feedback with clients</p> <p>3.2 Determine client's needs and requirements</p> <p>3.3 Identify and evaluate possible responses to client feedback</p> <p>3.4 Respond to client needs and requirements in accordance with organisational policies and procedures</p>

- 3.5 Make contact with client to ensure the response is satisfactory
- 4 Strengthen client relationships
 - 4.1 Ensure contact is made with the buyer post-sale to ensure agreed expectations have been met
 - 4.2 Use **feedback solicitation methods** on the sales process and product satisfaction
 - 4.3 Identify, address and resolve service problems and difficulties identified through feedback
- 5 Offer additional benefits to clients
 - 5.1 Develop and implement **client loyalty strategies** to secure buyer loyalty and to facilitate ongoing contact
 - 5.2 Contact buyer regularly post-sale at an appropriate level to maintain relationship and to identify new sales and cross-selling opportunities
 - 5.3 Offer additional sales solutions and benefits to clients when opportunities arise

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

communication skills to determine client needs and preferences

data management skills to keep client sales records

interpersonal skills to establish effective working relationships with business units within an organisation

literacy skills to write sales reports

negotiation and conflict resolution skills to address client concerns and to handle client dissatisfaction

organisational and time management skills to schedule follow-up contacts

problem-solving skills to address and resolve service difficulties.

Required knowledge

detailed product knowledge which enables ongoing advice and support to clients

organisational policies and procedures relating to orders and client services

identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:

anti-discrimination

ethical principles

consumer protection

contract law

privacy laws

Trade Practices Act

strategies to manage client accounts, to build client goodwill and to develop client loyalty.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
examples of the candidate contacting a buyer post-sale to collect feedback and resolve any problems or difficulties arising if appropriate organisational policies and procedures relating to orders and client services.

Context of and specific resources for assessment

Assessment must ensure:
access to an actual workplace or simulated environment
access to appropriate sales records and documentation.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

analysis of responses to case studies and scenarios

direct questioning combined with portfolios of evidence and third party workplace reports of on-the-job performance by the candidate

observations of interactions with clients when conducting post-sales activities

oral or written questioning to assess knowledge of methods used to obtain client feedback, loyalty strategies used, how defective returns were handled and alternative responses to feedback received

review of sales records

evaluation of handling of defective returns

assessment of identifying and responding to client feedback.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

BSBSLS406A Self-manage sales

other business development units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Clients may include:

- customers
- consumers
- fellow work colleagues from other business units or work teams
- members
- patients
- person or organisation who receives products, services or ideas supplied by an organisation
- person or organisation who has the potential to receive products, services or ideas supplied by an organisation

Feedback solicitation methods may include:

- email dialogue
- focus groups
- one-on-one interviews
- surveys
- telephone interviews

Client loyalty strategies may include:

- client clubs
- client reward schemes
- credit or discount facilities
- formal letter of thanks
- handwritten note thanking the client
- offering promotional items
- phone call thanking the client for the business

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify organisational strategic direction	1.1. Obtain and analyse assessment of market needs and <i>strategic planning documents</i> 1.2. <i>Review previous sales performance</i> and successful approaches to identify factors affecting performance 1.3. Analyse information on market needs, new opportunities, customer profiles and requirements as a basis for decision making
2. Establish performance targets	2.1. Determine practical and achievable sales targets 2.2. Establish realistic time lines for achieving targets 2.3. Determine <i>measures to allow for monitoring</i> of performance 2.4. Ensure objectives of the sales plan and style of the campaign are consistent with organisational strategic objectives and corporate image
3. Develop a sales plan for a product	3.1. Describe approaches to be used to meet sales objectives 3.2. Identify <i>additional expertise</i> requirements and allocate budgetary resources accordingly 3.3. Identify risks and develop risk controls 3.4. Develop advertising and promotional strategy for <i>product</i> 3.5. Identify appropriate <i>distribution channels</i> for product 3.6. Prepare a budget for the sales plan 3.7. Present documented sales plan to appropriate personnel for approval
4. Identify support requirements	4.1. Identify and acquire staff resources to implement sales plan 4.2. Develop an appropriate <i>selling approach</i> 4.3. Train staff in the selling approach selected 4.4. Develop and assess staff knowledge of product to be sold
5. Monitor and review sales plan	5.1. Monitor implementation of the sales plan 5.2. Record data measuring performance versus sales targets 5.3. Make adjustments to sales plan as required to ensure required results are obtained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and negotiation skills to determine sales needs, and to refine and modify sales plans in consultation with relevant organisational personnel
- creativity and innovation skills to develop and evaluate new sales approaches
- research and data collection skills to gather information to develop a sales plan.

Required knowledge

- identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:
 - anti-discrimination
 - ethical principles
 - consumer protection
 - contract law
 - privacy laws
 - Trade Practices Act
- industry, organisation, product
- methods for monitoring sales outcomes
- organisational strategic direction and objectives
- principles and techniques for selling
- statistical techniques for analysing sales and market trends.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop marketing strategies	1.1. Analyse the business and its key products or services to determine the focus of marketing activities, in accordance with the objectives of the business plan 1.2. Evaluate the customer base and target market for the small business as a basis for the marketing objectives and strategies 1.3. Determine marketing objectives and strategies that are ethically and culturally appropriate, in consultation with relevant people and in accordance with the business plan
2. Determine a marketing mix for the business	2.1. Balance product mix, volumes and pricing to optimise sales and profit 2.2. Evaluate the costs and benefits of using different distribution channels and/or providing different levels of customer service and consider the results in determining the marketing mix 2.3. Determine promotional activities to suit the target market 2.4. Consider customer needs and preferences in determining the marketing mix 2.5. Determine the marketing mix according to market and business needs
3. Implement marketing strategies	3.1. Brief persons involved in the marketing effort on their roles and responsibilities, to ensure the success of marketing strategies 3.2. Plan and implement promotional activities , in accordance with marketing objectives and budgetary requirements
4. Monitor and improve marketing performance	4.1. Monitor marketing activities and evaluate business performance according to the objectives and targets of the business plan 4.2. Analyse performance gaps and take corrective action or set new targets 4.3. Encourage all relevant people to propose ways to improve marketing performance 4.4. Seek and analyse customer reaction to all aspects of the marketing mix, using culturally appropriate processes, to improve targeting and outcomes 4.5. Conduct ongoing research of customer requirements to identify opportunities for change and

ELEMENT	PERFORMANCE CRITERIA
	improvement 4.6. Monitor and investigate changes in the market for new opportunities to aid business development

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to question, clarify and report
- literacy and numeracy skills to research information, to analyse data and to interpret market data.

Required knowledge

- industry market trends
- methods of analysing costs and benefits of marketing strategies
- methods of developing marketing objectives and marketing mix
- methods of monitoring customer satisfaction
- relevant market analysis and research
- relevant marketing concepts and methods.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • developing a marketing strategy and choosing a marketing mix for the small business that are culturally appropriate and that complement the business plan • implementing and monitoring the marketing strategy/plan to optimise the chances of small business success • knowledge of relevant marketing concepts and methods.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant documentation • candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • portfolio of evidence including marketing strategy and monitoring of marketing performance • oral or written questioning to assess knowledge of industry market trends • review of analysis of performance gaps and corrective action taken or new targets set • review of promotional activities implemented.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBSMB404A Undertake small business planning.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Marketing objectives and strategies</i> may include:</p>	<ul style="list-style-type: none"> • achieving lower costs of production and distribution than competitors • creating a very different product line or service so that the business becomes a class leader in the industry • distribution • pricing, presentation and display of products/services • product design and packaging • product range and mix • promotion and advertising • pursuing cost leadership and/or product differentiation within a specialist market segment
<p><i>Relevant people</i> may include:</p>	<ul style="list-style-type: none"> • accountant or other specialist services • family members, work team members, sub-contractors, community members • franchise agency • financial backers, clients • owner/operator, partners, directors, shareholders • regulatory bodies • trade or industry associations
<p><i>Distribution channels</i> may include:</p>	<ul style="list-style-type: none"> • dealer, re-seller, franchisee • distributor, delivery service, mail order, telesales • self-access, wholesale, retail
<p><i>Levels of customer service</i> may include:</p>	<ul style="list-style-type: none"> • after sales service • one-on-one personal service • sales assistance for problems/queries only
<p><i>Marketing mix</i> may include:</p>	<ul style="list-style-type: none"> • distribution • level of service • pricing

RANGE STATEMENT	
	<ul style="list-style-type: none"> • promotion • quality, range • safety features • technical features, design
<i>Promotional activities</i> may include:	<ul style="list-style-type: none"> • advertising in national, suburban or local newspapers • advertising on radio or television • canvassing • development of networks and strategic alliances • display posters • exhibitions, in-store promotions • involvement in community projects • mail drops • professional/industry journals • sponsorship • staff development programs to enhance customer service orientation • website • word of mouth, referral, testimonials
<i>Performance gaps</i> may include:	<ul style="list-style-type: none"> • over achievement of performance targets • under achievement of performance targets
<i>Customer reaction</i> may be determined through:	<ul style="list-style-type: none"> • customer meetings, focus groups • identification of new business opportunities • informal discussion • sales to contact ratio • survey/other feedback mechanisms • trend analysis

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify elements of the business plan	1.1. Identify purpose of the <i>business plan</i> 1.2. Identify and review the essential components of the business plan 1.3. Identify and document <i>business goals and objectives</i> as a basis for measuring business performance
2. Develop a business plan	2.1. Research resources, legal and compliance requirements, specifically in relation to <i>occupational health and safety (OHS)</i> , in accordance with business goals and objectives 2.2. Research market needs, and market size and potential 2.3. Identify sources and costs of finance, from the <i>financial plan</i> , to provide required liquidity and profitability for the business 2.4. Identify methods, from the <i>marketing strategies</i> , to promote the market exposure of the business 2.5. Identify methods/means of production/operation from the <i>production/operations plan</i> to conform with business goals and objectives 2.6. Identify <i>staffing requirements</i> to effectively produce/deliver products/services 2.7. Identify <i>specialist services</i> and sources of advice, where required, and cost in accordance with resources available
3. Develop strategies for minimising risks	3.1. Identify specific interests and objectives of <i>relevant people</i> and seek and confirm their support of the planned business direction 3.2. Identify and develop <i>risk management strategies</i> according to business goals and objectives, and relevant legal requirements 3.3. Develop <i>contingency plan</i> to address possible areas of non-conformance with the plan

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to assess business performance
- literacy skills to enable interpretation of business information
- numeracy skills to analyse data.

Required knowledge

- commonwealth, state/territory and local government legislative requirements relating to business operation, especially in regard to OHS and environmental issues, equal employment opportunity, industrial relations and anti-discrimination
- methods of evaluation
- OHS responsibilities and procedures for identifying hazards relevant to the business
- planning processes
- preparation of a business plan
- principles of risk management relevant to business planning
- reasons for and benefits of, business planning
- relevant industry codes of practice
- setting goals and objectives
- types of business planning - feasibility studies; strategic, operational, financial and marketing planning.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development of a business plan which provides for finance, marketing and provision of products/services to facilitate the business goals and objectives • identification of and planning for, OHS and duty of care responsibilities • development of risk management strategies • knowledge of relevant legislation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant documentation • candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • portfolio of evidence including a business plan and risk management strategies • oral or written questioning to assess knowledge of OHS responsibilities and procedures for identifying hazards relevant to the business • demonstration of practical skills • review of documented business goals and objectives • review of contingency plans developed to address possible areas of non-conformance with the business plan.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBSMB401A Establish legal and risk management requirements of small business • BSBSMB402A Plan small business finances • BSBSMB403A Market the small business.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Business plan</i> may include:</p>	<ul style="list-style-type: none"> • business opportunities, which may be influenced by: <ul style="list-style-type: none"> • amount and types of finance available • expected financial viability • skills of operator • details of ownership/management • finance, expenditure statement, balance sheet and cash flow forecast, projections for the initial years of operation assumptions underlying the business plan, expected level of inflation and taxation, expected trend of interest rate, capital expenditure and its timing, stock turnover, debtors collection period, creditor payment period, return on investment • level of risk involved, risk assessment and management • market focus of the business • marketing requirements • need to raise finance and requirements of lenders • organisation/operational arrangements • proposed size and scale of the business • recognition of any seasonal or cyclical (time-based) elements which are crucial to the success of the business • resources required and available • sources of funding • specialist services and sources of advice that may be required • staffing • stages in the business development
<p><i>Business goals and objectives</i> may include:</p>	<ul style="list-style-type: none"> • customer needs/marketing projections • family or community benefits

RANGE STATEMENT	
	<ul style="list-style-type: none"> • financial projections • goals, objectives, plans, systems and processes • lifestyle issues • market focus of the business • proposed size and scale of the business • short-, medium- or long-term goals • social responsibility
<i>Occupational health and safety issues</i> must include:	<ul style="list-style-type: none"> • identification of specific hazard issues such as occupational violence, security, manual handling, equipment and hazardous substances • management of the organisation and operation of OHS as part of the business plan • procedures for managing hazards in the workplace (identify, assess and control) • provisions for ensuring safety of members of the public and contractors visiting the premises/worksite
<i>Financial plan</i> may include:	<ul style="list-style-type: none"> • analysis of sales by product/service, identifying where they were sold and to whom • cash flow estimates for each forward period • current financial state of the enterprise (or owner/operator) • estimates of profit and loss projections for each forward period • financial performance to date (if applicable) • likely return on investment • monthly, quarterly or annual returns • non-recurrent assets calculations • profit, turnover, capital and equity targets • projected profit targets, pricing strategies, margins • projections of likely financial results (budgeting) • projections, which may vary depending on the importance of such information and the stage in the life of the business • resources required to implement the proposed marketing and production strategies (staff, materials, plant and equipment) • review of financial inputs required (sources

RANGE STATEMENT	
	<p>and forms of finance)</p> <ul style="list-style-type: none"> • risks and measures to manage or minimise risks • working, fixed, debt and equity capital
<i>Marketing strategies</i> may include:	<ul style="list-style-type: none"> • achieving lower costs of production and distribution than competitors • creating a very different product line or service so that the business becomes a class leader in the industry • distribution • pricing, presentation and display of products/services • product design and packaging • product range and mix • promotion and advertising • pursuing cost leadership and/or product differentiation within a specialist market segment
<i>Production/operations plan</i> may include:	<ul style="list-style-type: none"> • customer requirements, market expectations, budgetary constraints • industrial relations climate and quality assurance considerations • means of supply and distribution • operational targets and action plan, which may include short-, medium- or long-term goals • options for production, delivery, technical and customer service and support
<i>Staffing requirements</i> may include:	<ul style="list-style-type: none"> • full-time, part-time staff, permanent, temporary or casual staff • owner/operator • sub-contractors or external advisers/consultants
<i>Specialist services</i> may include:	<ul style="list-style-type: none"> • accountants • business advisors and consultants • business brokers • contractors • government agencies • industry/trade associations • lawyers and providers of legal advice • mentors

RANGE STATEMENT	
	<ul style="list-style-type: none"> • online gateways
<i>Relevant people</i> may include:	<ul style="list-style-type: none"> • clients • family members • franchise agency • owner/operator, partners, financial backers • regulatory bodies • suppliers • trade or industry associations
<i>Risk management strategies</i> may include:	<ul style="list-style-type: none"> • breach of contract, product liability • knowledge management • measures to manage risk including professional indemnity, securing appropriate insurance to cover loss of earnings through sickness/accidents, drought, flood, fire, theft • security systems to provide physical security of premises, plant, equipment, goods and services • security of intellectual property
<i>Risk management strategies</i> must include:	<ul style="list-style-type: none"> • OHS requirements
<i>Contingency plan</i> may include:	<ul style="list-style-type: none"> • disturbances to cash flow, supply and/or distribution • sickness or personal considerations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify current resource use	1.1. Identify workplace <i>environmental and resource efficiency issues</i> 1.2. Identify resources used in own work role 1.3. Document and measure current usage of resources using <i>appropriate techniques</i> 1.4. Record and file documentation measuring current usage, using technology (such as software systems) where applicable 1.5. Identify and report workplace environmental hazards to appropriate personnel
2. Comply with environmental regulations	2.1. Follow workplace procedures to ensure <i>compliance</i> 2.2. Report breaches or potential breaches to appropriate personnel
3. Seek opportunities to improve resource efficiency	3.1. Follow <i>organisational plans</i> to improve environmental practices and resource efficiency 3.2. Work as part of a team, where relevant, to identify possible areas for improvements to work practices in own work area 3.3. Make <i>suggestions</i> for improvements to workplace practices in own work area

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to comply with all relevant legislation associated with job specifications and procedures
- communication and problem-solving skills to question, seek clarification and make suggestions relating to work requirements and efficiency
- communication and teamwork skills to recognise procedures; to follow instructions; to respond to change, such as current workplace environmental/sustainability frameworks; and to support team work and participation in a sustainable organisation
- literacy, numeracy and technology skills to interpret workplace information in relation to work role, and to document and measure resource use
- technology skills to select and use technology appropriate for a task.

Required knowledge

- environmental and resource hazards/risks
- environmental or sustainability legislation, regulations and codes of practice applicable to own work role
- OHS issues and requirements
- organisational structure, and reporting channels and procedures
- relevant environmental and resource efficiency systems and procedures
- sustainability in the workplace
- terms and conditions of employment including policies and procedures, such as daily tasks, employee and employer rights, equal opportunity.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> accessing, interpreting and complying with a range of environment/sustainability legislation and procedural requirements relevant to daily responsibilities accurately following organisational information to participate in and support an improved resource efficiency process and reporting as required developing and/or using tools such as inspection checklists, to collect and measure relevant information on organisation resource consumption, within work role identifying organisational improvements by applying efficient resource use to daily activities knowledge of environmental and resource hazards/risks.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to an actual workplace or simulated environment evidence is relevant to the particular workplace role, including work area, equipment, systems, and documentation review of current work area directly relating to own work, to assess measurement of resources used, hazards and compliance individual or team discussion about potential for increased resource efficiency within current work area access to workplace documents, information and resources (such as compliance obligations, enterprise plans, work responsibilities).
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace

EVIDENCE GUIDE	
	<p>reports of on-the-job performance by the candidate</p> <ul style="list-style-type: none"> • observation of demonstrated techniques over time and in a range of situations • analysis of responses to case studies and scenarios • review of documentation measuring current resource usage • evaluation of techniques used to document and measure current usage of resources • review of identified and reported workplace environmental hazards • evidence of active participation in organisational plans to improve environmental practices and resource efficiency.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBINN201A Contribute to workplace innovation • BSBSMB301A Investigate micro business opportunities • BSBWOR202A Organise and complete daily work activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Environmental and resource efficiency issues</i> may include:</p>	<ul style="list-style-type: none"> • maximising opportunities to improve business environmental performance • minimising environmental risks • promoting more efficient production and consumption of natural resources, for example minimising waste by participating in or using a waste management system • using resources efficiently such as material usage, energy usage (seeking alternative sources of energy or energy conservation) or efficient water usage
<p><i>Appropriate techniques</i> may include:</p>	<ul style="list-style-type: none"> • examining and documenting resources in work area • examining invoices from suppliers • examining relevant information and data • measuring resource usage under different conditions • reports from other parties involved in the process of identifying and implementing improvements
<p><i>Compliance</i> may include:</p>	<ul style="list-style-type: none"> • meeting relevant laws, by-laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act): <ul style="list-style-type: none"> • international • commonwealth • state/territory • local government • industry • organisation
<p><i>Organisational plans</i> may</p>	<ul style="list-style-type: none"> • documented policies and procedures • work plans to minimise waste or to increase

RANGE STATEMENT	
include:	efficiency of resources such as a green office program, supply chain program for purchasing sustainable products or an environmental management framework
<i>Suggestions</i> may include ideas that help to:	<ul style="list-style-type: none"> • improve energy efficiency • increase use of renewable, recyclable, reusable and recoverable resources • maximise opportunities such as use of solar power or other alternative forms of energy, where appropriate • prevent and minimise risks • reduce emissions of greenhouse gases • reduce use of non-renewable resources

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate current practices in relation to resource usage	1.1. Identify environmental regulations applying to the enterprise 1.2. Analyse procedures for assessing <i>compliance</i> with environmental/sustainability regulations 1.3. Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate 1.4. Collect, analyse and organise information from a range of <i>sources</i> to provide information/advice and tools/resources for improvement opportunities 1.5. Measure and document current resource usage of members of the work group 1.6. Analyse and document current <i>purchasing strategies</i> 1.7. Analyse current work processes to access information and data to assist in identifying areas for improvement
2. Set targets for improvements	2.1. Seek input from <i>stakeholders, key personnel and specialists</i> 2.2. Access external sources of information and data as required 2.3. Evaluate alternative solutions to workplace environmental issues 2.4. Set efficiency targets
3. Implement performance improvement strategies	3.1. Source and use appropriate <i>techniques and tools</i> to assist in achieving efficiency targets 3.2. Apply continuous improvement strategies to own work area of responsibility, including ideas and possible solutions to communicate to the work group and management 3.3. Implement and integrate <i>environmental and resource efficiency improvement plans</i> for own work group with other operational activities 3.4. Supervise and support team members to identify possible areas for improved practices and resource efficiency in work area 3.5. Seek <i>suggestions</i> and ideas about environmental and resource efficiency management from stakeholders and act upon where appropriate 3.6. Implement costing strategies to fully value

ELEMENT	PERFORMANCE CRITERIA
	environmental assets
4. Monitor performance	4.1. Use and/or develop evaluation and monitoring, tools and technology 4.2. Document and communicate outcomes to report on efficiency targets to key personnel and stakeholders 4.3. Evaluate strategies and improvement plans 4.4. Set new efficiency targets, and investigate and apply new tools and strategies 4.5. Promote successful strategies and reward participants where possible

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse problems, to devise solutions and to reflect on approaches taken
- change management skills
- communication skills to answer questions, clarify and acknowledge suggestions relating to work requirements and efficiency
- communication/consultation skills to support information flow from stakeholders to the work group
- innovation skills to identify improvements, to apply knowledge about resource use to organisational activities and to develop tools
- literacy skills to comprehend documentation, to interpret environmental and energy efficiency requirements, to create tools to measure and monitor improvements and to report outcomes
- numeracy skills to analyse data on organisational resource consumption and waste product volumes
- planning and organising skills to implement environmental and energy efficiency management policies and procedures relevant to own work area
- problem-solving skills to devise approaches to improved environmental sustainability and to develop alternative approaches as required
- technology skills to operate and shut down equipment; where relevant, to use software systems for recording and filing documentation to measure current usage; and to use word processing and other basic software for interpreting charts, flowcharts, graphs and other visual data and information
- supervisory skills to work effectively with a team

Required knowledge

- best practice approaches relevant to own area of responsibility and industry
- compliance requirements within work area for all relevant environmental/sustainability legislation, regulations and codes of practice including resource hazards/risks associated with work area, job specifications and procedures
- environmental and energy efficiency issues, systems and procedures specific to industry practice
- external benchmarks and support for particular benchmarks to be used within organisation, including approaches to improving resource use for work area and expected outcomes
- OHS issues and requirements
- organisational structure and reporting channels and procedures
- quality assurance systems relevant to own work area
- strategies to maximise opportunities and to minimise impact relevant to own work

REQUIRED SKILLS AND KNOWLEDGE

area

- supply chain procedures
- terms and conditions of employment including policies and procedures, such as daily tasks, work area responsibilities, employee, supervisor and employer rights, equal opportunity

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • knowledge of relevant compliance requirements within work area • developing plans to make improvements • planning and organising work group activities in relation to measuring current use and devising strategies to improve usage • monitoring resource use and improvements for environmental performance relative to work area and supervision • ensuring appropriate action is taken within work area in relation to environmental/sustainability compliance and potential hazards • implementing new approaches to work area in an effort to resolve and improve environmental and resource efficiency issues and reporting as required.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to a range of environment/sustainability legislation, standards, guidelines and procedural requirements relevant to specific work area, daily responsibilities and supervision • access to a range of information, workplace documentation and resources such as compliance obligations, organisation plans, work supervision and responsibilities • access to reports from other parties involved in the process of identifying and implementing improvements • evidence is relevant to the particular workplace role, including work area, staff, stakeholders, equipment, systems and documentation.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples

EVIDENCE GUIDE	
	<p>are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • response to case studies • review of reports of activities of work group in relation to measuring resource use and developing improvement strategies • review of work plans outlining approaches to improved practices with documented benchmarks • analysis of the way in which advice is sought and suggestions are made about improvements • observation over time and in a range of situations in relation to review of overall work area and staff, to assess and measure resource use, hazards and compliance • review of checklists to identify and assess resource usage at the beginning and end of the unit; reports on meetings around procedures and improvement processes and monitoring within the workplace; lists of environmental hazards/risks or inefficiencies or opportunities for improvements identified in the workplace • analysis of implementation of programs such as a green office program, supply chain program for purchasing sustainable products, or an environmental management framework • oral or written questioning to assess knowledge of environmental and energy efficiency issues, systems and procedures specific to industry practice.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBATSIC411C Communicate with the community • BSBINN301A Promote innovation in a team environment • BSBLED401A Develop teams and individuals • BSBMGT402A Implement operational plan • BSBMGT403A Implement continuous improvement • BSBRSK401A Identify risk and apply risk management processes.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Compliance</i> may include:</p>	<ul style="list-style-type: none"> • meeting relevant laws, by-laws and regulations or best practice or codes of practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act): <ul style="list-style-type: none"> • international • commonwealth • state/territory • industry • organisation.
<p><i>Sources</i> may include:</p>	<ul style="list-style-type: none"> • organisation specifications • regulatory sources • relevant stakeholders • resource use.
<p><i>Purchasing strategies</i> may include:</p>	<ul style="list-style-type: none"> • influencing suppliers to take up environmental sustainability approaches • researching and participating in programs such as a supply chain program to purchase sustainable products.
<p><i>Stakeholders, key personnel and specialists</i> may include:</p>	<ul style="list-style-type: none"> • individuals and groups both inside and outside the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, including: <ul style="list-style-type: none"> • customers • employees at all levels of the organisation • government • investors • local community • other organisations • suppliers • key personnel within the organisation, and specialists outside the organisation who may

RANGE STATEMENT	
	have particular technical expertise.
<i>Techniques and tools</i> may include:	<ul style="list-style-type: none"> • examination of invoices from suppliers • examination of relevant information and data • measurements made under different conditions • others as appropriate to the specific industry context.
<i>Environmental and resource efficiency improvement plans</i> may include:	<ul style="list-style-type: none"> • addressing environmental and resource sustainability initiatives such as environmental management systems, action plans, green office programs, surveys and audits • applying the waste management hierarchy in the workplace • determining organisation's most appropriate waste treatment including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment • initiating and/or maintaining appropriate organisational procedures for operational energy consumption, including stationary energy and non-stationary (transport) • preventing and minimising risks, and maximising opportunities such as: <ul style="list-style-type: none"> • improving resource/energy efficiency • reducing emissions of greenhouse gases • reducing use of non-renewable resources • referencing standards, guidelines and approaches such as: <ul style="list-style-type: none"> • ecological footprinting • Energy Efficiency Opportunities Bill 2005 • Global Reporting Initiative • green office program - a cultural change program • green purchasing • Greenhouse Challenge Plus (Australian government initiative) • ISO 14001:1996 Environmental management systems life cycle analyses • product stewardship • supply chain management • sustainability covenants/compacts • triple bottom line reporting.

RANGE STATEMENT

Suggestions may include ideas that help to:

- prevent and minimise risks and maximise opportunities such as:
 - usage of solar or renewable energies where appropriate
 - reducing emissions of greenhouse gases
 - reducing use of non-renewable resources
 - making more efficient use of resources, energy and water
- maximising opportunities to re-use, recycle and reclaim materials
- identifying strategies to offset or mitigate environmental impacts:
 - purchasing carbon credits
 - energy conservation
 - reducing chemical use
 - reducing material consumption
- expressing purchasing power through the selection of suppliers with improved environmental performance e.g. purchasing renewable energy
- eliminating the use of hazardous and toxic materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop workplace sustainability policy	1.1. Define <i>scope</i> of sustainability policy 1.2. Gather information from a range of <i>sources</i> to plan and develop policy 1.3. Identify and consult <i>stakeholders</i> as a key component of the policy development process 1.4. Include appropriate <i>strategies</i> in policy at all stages of work for minimising resource use, reducing toxic material and hazardous chemical use, and employing life cycle management approaches 1.5. Make recommendations for policy options based on likely effectiveness, timeframes and cost 1.6. Develop policy that reflects the organisation's commitment to sustainability as an integral part of business planning and as a business opportunity 1.7. Agree to appropriate methods of implementation
2. Communicate workplace sustainability policy	2.1. Promote workplace sustainability policy, including its expected outcome to key stakeholders 2.2. Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned
3. Implement workplace sustainability policy	3.1. Develop and communicate procedures to help implement workplace sustainability policy 3.2. Implement strategies for continuous improvement in resource efficiency 3.3. Establish and assign responsibility to use recording systems for tracking continuous improvements in sustainability approaches
4. Review workplace sustainability policy implementation	4.1. Document outcomes and provide feedback to key personnel and stakeholders 4.2. Investigate successes or otherwise of policy 4.3. Monitor records to identify trends that may require remedial action and use to promote continuous improvement of performance 4.4. Modify policy and or procedures as required to ensure improvements are made

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to adjust communication to suit different audiences; to respond effectively to diversity; to work as a member of a team to consult on and validate policy
- literacy skills to read and evaluate complex and formal documents such as policy and legislation
- problem skills to effectively manage different points of view and dissenting stakeholders
- research, analytical and writing skills to research, analyse and present information; to prepare written reports requiring precision of expression and language and structures suited to the intended audience

Required knowledge

- best practice approaches relevant to own work area
- environmental or sustainability legislation, regulations and codes of practice applicable to industry and organisation
- equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy being developed
- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the particular industry context
- quality assurance systems relevant to own organisation
- relevant industry competency
- relevant organisational policies, procedures and protocols
- relevant systems and procedures to aid in the achievement of workplace sustainability

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- candidate's involvement as a key person in planning, developing and implementing organisational policy and that the developed policy complies with legislative requirements
- implementation strategy, as part of the policy, that has been devised, implemented and reviewed showing a measurable improvement utilising the chosen benchmark indicators
- communicating with stakeholders to discuss possible approaches to policy development and implementation, and contributing to the resolution of disputes among stakeholders
- developing and monitoring policies for analysing data on enterprise resource consumption
- using software systems for recording and filing documentation for measurement of current usage and using word processing and other basic software for interpreting charts, flowcharts, graphs and other visual data and information
- reviewing and improving policies by identifying improvements and benchmarking against industry best practice and attempting new approaches continuously over time.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to relevant legislation/standards/guidelines
- access to a range of workplace documentation and personnel, information and resources (such as compliance obligations, organisational plans, work responsibilities)
- access to reports from other parties involved in the development and implementation of policy
- evidence is collected over time, involving both

EVIDENCE GUIDE	
	<p>formative and summative assessment</p> <ul style="list-style-type: none"> evidence is relevant to the particular workplace role, including work area, equipment, systems, and documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on the job performance by the candidate response to case studies review of policy developed and procedural documentation outlining the approach taken review of implementation strategy, plans and work plans analysis of methods used to involve stakeholders in policy development, implementation and review analysis of inefficiencies or opportunities for improvements identified in the workplace evaluation of participation in sustainability work practices and programs such as an environmental management framework observation over time in relation to review of work area relating to policy and procedures being developed to assess measurement of resources used, hazards and compliance.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> BSBATSIM419A Contribute to the development and implementation of organisational policies BSBHRM506A Manage recruitment, selection and induction processes BSBHRM602B Manage human resources strategic planning BSBINN502A Build and sustain an innovative work environment BSBMGT515A Manage operational plan BSBMGT516C Facilitate continuous improvement BSBMGT608C Manage innovation and continuous improvement BSBMGT616A Develop and implement strategic

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of workplace sustainability policy may include:

- addressing sustainability initiatives through reference to standards, guidelines and approaches such as:
 - ecological foot printing
 - Energy Efficiency Opportunities Bill 20051
 - Global Reporting Initiative
 - green office program
 - green purchasing
 - Greenhouse Challenge Plus (Australian government initiative)
 - ISO 14001:1996 Environmental management systems life cycle analyses
 - life cycle analyses
 - product stewardship
 - supply chain management
 - sustainability covenants/compacts
 - triple bottom line reporting
- integrated approach to sustainability which includes environmental, economic and social aspects, or a specific approach that focuses on each aspect individually
- investigating particular business and market context of the industry/organisation
- meeting relevant laws, by laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act):
 - international
 - commonwealth
 - state/territory
 - industry

RANGE STATEMENT	
	<ul style="list-style-type: none"> • organisation • parts of the organisation to which it is to apply, including whether it is for the whole organisation, one site, one work area or a combination of these.
<i>Sources</i> may include:	<ul style="list-style-type: none"> • regulatory sources • relevant personnel • organisational specifications.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • individuals and groups both inside and outside the organisation who have some direct interest in the organisation's conduct, actions, products and services, including: <ul style="list-style-type: none"> • customers • employees at all levels of the organisation • government • investors • local community • other organisations • regulators • suppliers • key personnel within the organisation and specialists outside the organisation who may have particular technical expertise.

BSBWOR301B Organise personal work priorities and development

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i></p> <p>Revised unit. Performance criteria and required skills updated to focus on learning and development practices, KPIs and compliance with policy and procedures.</p> <p>Replaces BSBWOR301A Organise personal work priorities and development</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to organise own work schedules, to monitor and obtain feedback on work performance, and to maintain required levels of competence. Operators may exercise discretion and judgement using appropriate theoretical knowledge of work scheduling and performance improvement to provide technical advice and support to a team.

Application of the Unit

This unit applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Organise and complete own work schedule</p>	<p>1.1 Ensure that <i>work goals, objectives</i> or <i>KPIs</i> are understood, negotiated and agreed in accordance with <i>organisational requirements</i></p> <p>1.2 Assess and prioritise workload to ensure tasks are completed within identified timeframes</p> <p>1.3 Identify <i>factors affecting the achievement of work objectives</i> and incorporate contingencies into work plans</p> <p>1.4 Use <i>business technology</i> efficiently and effectively to manage and monitor scheduling and completion of tasks</p>
<p>2. Monitor own work performance</p>	<p>2.1 Accurately monitor and adjust personal work performance through self-assessment to ensure achievement of tasks and compliance with legislation and work processes or KPIs</p> <p>2.2 Ensure that <i>feedback on performance</i> is actively sought and evaluated from colleagues and clients in the context of individual and group requirements</p> <p>2.3 Routinely identify and report on variations in the quality of and <i>products and services</i> according to organisational requirements</p> <p>2.4 Identify <i>signs of stress</i> and effects on <i>personal wellbeing</i></p> <p>2.5 Identify <i>sources of stress</i> and access appropriate <i>supports and resolution strategies</i></p>
<p>3. Coordinate personal skill development and learning</p>	<p>3.1 Identify personal learning and professional development needs and skill gaps using self-assessment and advice from colleagues and clients in relation to role and organisational requirements</p> <p>3.2 Identify, prioritise and plan opportunities for undertaking personal skill development activities in liaison with work groups and relevant personnel</p> <p>3.3 Access, complete and record <i>professional development opportunities</i> to facilitate continuous learning and career development</p> <p>3.4 Incorporate formal and informal feedback into review of further learning needs</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to give and receive constructive feedback relating to development needs
- literacy skills to read and understand the organisation's procedures
- planning skills to organise work priorities according to work goals and objectives
- problem-solving skills to solve routine problems
- self-management skills to:
 - comply with policies and procedures
 - consistently evaluate and monitor own performance
 - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- organisational policies, plans and procedures
- methods to elicit, analyse and interpret feedback
- principles and techniques of goal setting, measuring performance, time management and personal assessment
- competency standards and how to interpret them in relation to self
- methods to identify and prioritise personal learning needs.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • preparing work plans • scheduling and prioritising work objectives and tasks • knowledge of the principles and techniques of goal setting, measuring performance, time management and personal assessment.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of work schedules and performance improvement plans.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of self-assessment documentation outlining learning and development needs • analysis of responses to case studies and scenarios • demonstration of techniques • oral or written questioning to assess knowledge of methods to identify and prioritise personal learning needs • evaluation of planning for personal skill development activities and professional development opportunities.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Work goals and objectives</i> may include:</p>	<ul style="list-style-type: none"> • budgetary targets • production targets • reporting deadlines • sales targets • team and individual learning goals • team participation.
<p><i>KPIs</i> may include:</p>	<ul style="list-style-type: none"> • key performance indicators on customer satisfaction • key performance indicators on customer effort • monitoring time taken to answer calls • operating within reporting protocols • score tools such as net promoter • understanding metrics.
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> • access and equity principles and practice • business and performance plans • defined resource parameters • ethical standards • goals, objectives, plans, systems and processes • legal and organisational policies, guidelines and requirements • OHS policies, procedures and programs • quality and continuous improvement processes and standards • quality assurance and/or procedures manuals.
<p><i>Factors affecting the achievement of work objectives</i> may include:</p>	<ul style="list-style-type: none"> • budget constraints • competing work demands • environmental factors such as time, weather • resource and materials availability • technology/equipment breakdowns • unforeseen incidents • workplace hazards, risks and controls.
<p><i>Business technology</i> may include:</p>	<ul style="list-style-type: none"> • computer applications • computers • email • facsimile machines

	<ul style="list-style-type: none"> • internet/extranet/intranet • modems • personal schedulers • photocopiers • printers • scanners.
Feedback on performance may include:	<ul style="list-style-type: none"> • formal/informal performance appraisals • obtaining feedback from clients • obtaining feedback from supervisors and colleagues • personal, reflective behaviour strategies • routine organisational methods for monitoring service delivery.
Products and services may include:	<ul style="list-style-type: none"> • either products or services • goods • ideas • infrastructure • private or public sets of benefits.
Signs of stress may include:	<ul style="list-style-type: none"> • absence from work • alcohol or other substance abuse • conflict • poor work performance.
Personal wellbeing may include:	<ul style="list-style-type: none"> • cultural • emotional • social • spiritual.
Sources of stress may include:	<ul style="list-style-type: none"> • complex tasks • cultural issues • work and family conflict • workloads.
Supports and resolution strategies may include:	<ul style="list-style-type: none"> • awareness raising • counselling • employee assistance programs (EAP) • family support • group activities • job design • mediation • sharing load • time off • training.
Professional development opportunities may include:	<ul style="list-style-type: none"> • career planning/development • coaching, mentoring and/or supervision

	<ul style="list-style-type: none">• formal/informal learning programs• internal/external training provision• performance appraisals• personal study• quality assurance assessments and recommendations• recognition of current competence/skills recognition• work experience/exchange/opportunities• workplace skills assessment.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to achieve team outcomes	1.1. Identify, establish and document team purpose, roles, responsibilities, goals, plans and objectives in consultation with team members 1.2. Support team members in meeting expected outcomes
2. Develop team cohesion	2.1. Provide opportunities for input of team members into planning, decision making and operational aspects of work team 2.2. Encourage and support team members to take responsibility for own work and to assist each other in undertaking required roles and responsibilities 2.3. Provide feedback to team members to encourage, value and reward individual and team efforts and contributions 2.4. Recognise and address issues, concerns and problems identified by team members or refer to relevant persons as required
3. Participate in and facilitate work team	3.1. Actively encourage team members to participate in and take responsibility for team activities and communication processes 3.2. Give the team support to identify and resolve problems which impede its performance 3.3. Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers
4. Liaise with management	4.1. Maintain open communication with line manager/management at all times 4.2. Communicate information from line manager/management to the team 4.3. Communicate unresolved issues, concerns and problems raised by the team/team members to line manager/management and ensure follow-up action is taken 4.4. Communicate unresolved issues, concerns and problems related to the team/team members raised by line managers/management to the team and ensure follow-up to action is taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - boost team morale
 - deal with team conflict
 - deliver messages from management
 - facilitate discussion
 - mentor and coach
- leadership skills
- planning and organising skills.

Required knowledge

- organisational goals, objectives and plans
- organisational policy and procedures framework
- organisational structure, including organisational chart
- principles and techniques associated with:
 - delegation and work allocation
 - goal setting
 - group dynamics and processes
 - individual behaviour and difference
 - leadership
 - motivation
 - negotiation
 - planning.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and complete own work schedule	1.1. Prepare Workgroup plans which reflect consideration of resources, client needs and workgroup targets 1.2. Analyse and incorporate Work objectives and priorities into personal schedules and responsibilities 1.3. Identify Factors affecting the achievement of work objectives and establish contingencies and incorporate them into work plans 1.4. Efficiently and effectively use Business technology to manage and monitor planning completion and scheduling of tasks
2. Monitor own work performance	2.1. Identify and analysed personal performance through self-assessment and feedback from others on the achievement of work objectives 2.2. Seek and evaluate Feedback on performance from colleagues and clients in the context of individual and group requirements 2.3. Routinely identify and report on variations in the quality of service and performance in accordance with organisational requirements
3. Coordinate professional development	3.1. Assess personal knowledge and skills against organisational benchmarks to determine development needs and priorities 3.2. Research and identify sources and plan for opportunities for improvement in consultation with colleagues 3.3. Use Feedback to identify and develop ways to improve competence within available opportunities 3.4. Identify, access and complete professional development activities to assist career development 3.5. Store and maintain records and documents relating to achievements and assessments in accordance with organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to recognise and develop new and necessary skills and knowledge
- literacy skills to understand the organisation's policies, procedures and communications, to write personal work plans and professional development plans, and to request and receive feedback about performance
- organising skills to prioritise, manage time and meet deadlines
- problem solving skills to develop contingency plans

Required knowledge

- knowledge of relevant business technology applications to schedule tasks and plan work
- knowledge of techniques to prepare personal plans and establish priorities
- methods to identify and prioritise personal learning needs
- understanding of a range of professional development options
- understanding of methods to elicit, analyse and interpret feedback
- understanding of methods to evaluate own performance

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • preparing and communicating own work plan • scheduling work objectives and tasks to support the achievement of goals • seeking and acting on feedback from clients and colleagues • reviewing own work performance against achievements through self-assessment • accessing learning opportunities to extend own personal work competencies • using business technology to monitor self development.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • the learner and trainer should have access to appropriate documentation and resources normally used in the workplace
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of performance in role plays • observation of presentations • review of work and professional development plans.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • Other units from the Certificate IV in Frontline Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Workgroup plans</i> may include:	<ul style="list-style-type: none"> • budgetary plans • production plans • reporting plans • sales plans • team and individual learning goals • team participation • work schedules
<i>Work objectives</i> may include:	<ul style="list-style-type: none"> • budgetary targets • production targets • reporting deadlines • sales targets • team and individual learning goals • team participation
<i>Factors affecting the achievement of work objectives</i> may include:	<ul style="list-style-type: none"> • budget constraints • competing work demands • environmental factors such as time, weather, etc • personnel • resource and materials availability • technology/equipment breakdowns • unforeseen incidents
<i>Business technology</i> may include:	<ul style="list-style-type: none"> • computer applications • computers • email and internet/intranet/extranet • facsimile machines • modems • personal schedules • photocopiers • printers • scanners
<i>Feedback on performance</i> may include:	<ul style="list-style-type: none"> • formal/informal performance appraisals • obtaining comments from clients • obtaining comments from supervisors and

RANGE STATEMENT	
	colleagues <ul style="list-style-type: none"> • personal, reflective behaviour strategies • routine organisational methods for monitoring service delivery
<i>Professional development activities</i> may include:	<ul style="list-style-type: none"> • career planning/development • coaching, mentoring and/or supervision • formal/informal learning programs • internal/external training provision • performance appraisals • personal study • Recognition of Prior Learning • work experience/exchange/opportunities • workplace skills assessment

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to manage own performance and professional development. Particular emphasis is on setting and meeting priorities, analysing information and using a range of strategies to develop further competence.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to managers and focuses on the need for managers to be organised, focussed and skilled, in order to effectively manage the work of others. As such it is an important unit for most managers, particularly as managers serve as role models and have a significant influence on the work culture and patterns of behaviour.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish personal work goals	1.1. Serve as a positive role model in the workplace through personal work planning and organisation 1.2. Ensure personal work goals, plans and activities reflect the organisation's plans, and <i>own responsibilities and accountabilities</i> 1.3. Measure and maintain personal performance in varying work conditions, work contexts and contingencies
2. Set and meet own work priorities	2.1. Take initiative to prioritise and facilitate competing demands to achieve personal, team and organisational goals and objectives 2.2. Use <i>technology</i> efficiently and effectively to manage work priorities and commitments 2.3. Maintain appropriate work-life balance, and ensure stress is effectively managed and health is attended to
3. Develop and maintain professional competence	3.1. Assess personal knowledge and skills against <i>competency standards</i> to determine development needs, priorities and plans 3.2. Seek feedback from employees, <i>clients and colleagues</i> and use this feedback to identify and develop ways to improve competence 3.3. Identify, evaluate, select and use <i>development opportunities</i> suitable to personal learning style/s to develop competence 3.4. Undertake participation in networks to enhance personal knowledge, skills and work relationships 3.5. Identify and develop new skills to achieve and maintain a competitive edge

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to receive, analyse and report on feedback
- literacy skills to interpret written and verbal information about workplace requirements
- organisational skills to set and achieve priorities.

Required knowledge

- principles and techniques involved in the management and organisation of:
 - performance measurement
 - personal behaviour, self-awareness and personality traits identification
 - personal development plan
 - personal goal setting
 - time management
- management development opportunities and options for self
- organisation's policies, plans and procedures
- types of learning style/s and how they relate to the individual
- types of work methods and practices that can improve personal performance.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • systems and processes (electronic or paper-based) used to organise and prioritise tasks, which show how work is managed • personal development plan, with career objectives and an action plan
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of presentations • oral or written questioning to assess knowledge of work methods and practices that can improve personal performance • review of personal work goals, plans and activities • evaluation of work-life balance • review of documentation assessing personal knowledge and skills against competency standards.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other units from the Diploma of Management.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Own responsibilities and accountabilities</i> may include:</p>	<ul style="list-style-type: none"> • expectations of workplace performance as expressed in a performance plan • outputs as expressed in position descriptions or duty statements • statement of conduct outlining an individual's responsibilities/actions/performance
<p><i>Technology</i> may include:</p>	<ul style="list-style-type: none"> • computerised systems and software, databases, project management and word processing • electronic diary • personal digital assistant (PDA)
<p><i>Competency standards</i> may include:</p>	<ul style="list-style-type: none"> • enterprise-specific units of competency consistent with work requirements • nationally endorsed units of competency consistent with work requirements
<p><i>Clients and colleagues</i> may be:</p>	<ul style="list-style-type: none"> • colleagues at the same level and more senior managers • internal or external customers • people from a wide range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities • team members
<p><i>Development opportunities</i> may include:</p>	<ul style="list-style-type: none"> • action learning • coaching • exchange/rotation • induction • mentoring • shadowing • structured training programs

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish team performance plan	1.1. Consult team members to establish a common understanding of team purpose, roles, responsibilities and accountabilities in accordance with organisational goals, plans and objectives 1.2. Develop performance plans to establish expected outcomes, outputs, key performance indicators and goals for work team 1.3. Support team members in meeting expected performance outcomes
2. Develop and facilitate team cohesion	2.1. Develop strategies to ensure team members have input into planning, decision making and operational aspects of work team 2.2. Develop policies and procedures to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities 2.3. Provide feedback to team members to encourage, value and reward individual and team efforts and contributions 2.4. Develop processes to ensure that issues, concerns and problems identified by team members are recognised and addressed
3. Facilitate teamwork	3.1. Encourage team members and individuals to participate in and to take responsibility for team activities, including communication processes 3.2. Support the team in identifying and resolving work performance problems 3.3. Ensure own contribution to work team serves as a role model for others and enhances the organisation's image for all stakeholders
4. Liaise with stakeholders	4.1. Establish and maintain open communication processes with all stakeholders 4.2. Communicate information from line manager/management to the team 4.3. Communicate unresolved issues, concerns and problems raised by team members and follow-up with line manager/management and other relevant stakeholders 4.4. Evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain team goals, to address team conflict and to build an environment of trust
- planning and organisational skills to keep team on track and focussed on work outcomes.

Required knowledge

- group behaviour
- strategies for mentoring and coaching to informally guide and instruct team members
- issue resolution
- strategies for gaining consensus.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • range of techniques that can be used to build work teams, strengthen communications in the team and resolve issues • methods for engaging with stakeholders and obtaining advice from outside the work team, to ensure team is focussed and on track • knowledge of group behaviour.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • assessment of written reports • demonstration of team building techniques • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of performance in role plays • review of performance plans developed for work team • review of policies and procedures developed to ensure team members take responsibility for own work.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other units from the Diploma of Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Consultation may refer to:	<ul style="list-style-type: none"> • conducting meetings, interviews, brainstorming sessions, email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual performance plans • mechanisms used to provide feedback to the work team in relation to outcomes of consultation
Accountabilities may refer to:	<ul style="list-style-type: none"> • responsibilities as defined in position descriptions, codes of conduct/behaviour, duty statements or similar • statement of conduct outlining responsibilities/actions/performance
Performance plans may refer to:	<ul style="list-style-type: none"> • individual performance plans linked to team goals • team plans based on work assignments and responsibilities
Outcomes, outputs, key performance indicators may refer to agreed:	<ul style="list-style-type: none"> • changes in work roles and responsibilities • improved individual and team, performance and participation • improvements to systems, operations • measures for monitoring and evaluating the efficiency or effectiveness of systems or services • quality standards and expectations • targets for productivity improvements such as reduced downtime, higher production levels, decreases in absenteeism • targets for training and development
Support may include:	<ul style="list-style-type: none"> • Coaching • Mentoring • Training and development opportunities • Clarification of roles and expectations

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Long term or short term plans • Meetings
<i>Strategies</i> may refer to:	<ul style="list-style-type: none"> • clarification of roles and expectations • electronic communication devices and processes, such as intranet and email communication systems, to facilitate input • long-term or short-term plans factoring in opportunities for team input • mentoring and 'buddy' systems to support team members in providing input • newsletters and briefings • training and development activities
<i>Policies and procedures</i> may refer to:	<ul style="list-style-type: none"> • organisational guidelines and systems that govern operational functions • procedures that detail the activities that must be carried out for the completion of actions and tasks • Standard Operating Procedures
<i>Processes</i> may refer to:	<ul style="list-style-type: none"> • brainstorming options with the team for addressing concerns • creating a matrix of issues and concerns and distributing for comment • discussions with individuals regarding their concerns • distributing drafts for comment with a range of options for resolution of concerns • training and development sessions
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • Board members • business or government contacts • funding bodies • union/employee groups and representatives • work team
<i>Line manager/management</i> may refer to:	<ul style="list-style-type: none"> • chief executive officer • direct superior • other management representatives

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Identify animation requirements	<ol style="list-style-type: none"> 1. Clarify 2D animation requirements, including design specifications and storyboard in consultation with relevant personnel 2. Clarify target users/audience and requirements with regard to output formats and delivery platforms
Generate and assess ideas	<ol style="list-style-type: none"> 3. Review animations, artworks and other creative sources that may inspire design ideas 4. Obtain other relevant information that may influence design ideas 5. Generate a range of animation ideas that are technically feasible, respond to specifications and provide creative solutions to all design issues 6. Present animation ideas to relevant personnel using appropriate design techniques
Plan approach	<ol style="list-style-type: none"> 7. Assess the range of industry-current 2D animation software available to determine compatibility with design specifications 8. In consultation with relevant personnel, select the most appropriate 2D animation software for a given purpose 9. Evaluate initial design ideas and specifications against findings and discuss with relevant personnel to select final design concept
Produce animations	<ol style="list-style-type: none"> 10. Apply basic screen principles, visual design principles, communication principles, animation techniques and animation principles to produce animated sequences 11. Source and import, or generate sufficient quantity of key drawings to establish required actions 12. Combine animated objects to produce single sequences according to creative requirements and specifications 13. Integrate audio assets where necessary 14. Save and store animations using appropriate output file formats and standard naming conventions
Finalise animations	<ol style="list-style-type: none"> 15. Review animations to assess creative solutions to design specifications, appropriateness to users/audience and technical feasibility 16. Discuss and confirm with relevant personnel additional requirements or modifications to overall designs or animations and undertake necessary amendments

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions
 - interpret information in software user manuals and help features
 - work as a member of a project team, both independently on assignment and under direction
 - respond constructively to feedback received from other team members
- initiative and enterprise in the context of:
 - generating a range of feasible ideas for 2D animated sequences
 - visualising creative concepts
- technical skills sufficient to:
 - use appropriate software to develop 2D animations
 - produce hand-drawn sketches
 - apply the basic principles of screen, visual design and communication to produce 2D animations
 - create 2D animations in appropriate formats for a range of delivery platforms
 - manage files and directories using standard naming conventions and version control protocols
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance when problems arise

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members
 - basic understanding of the relationship between the technical and creative aspects and requirements of media projects
- basic animation techniques and principles
- basic screen principles
- principles of visual design and communication
- copyright clearance procedures
- OHS standards as they apply to use of computer and keyboard for periods of time

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • creation of a range of 2D digital animations that: <ul style="list-style-type: none"> • meet specifications • demonstrate the basic principles of screen, visual design and communication • meet the technical requirements of at least two delivery platforms listed in the range statement • satisfy client requirements • collaborative approach to work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to a selection of resources, equipment and current industry-current software as listed in the range statement • where sound is integrated in the animated sequence, access to a range of suitable software to support the integration of sound and visual elements • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of a range of 2D digital animations created by the candidate in response to specifications • written or oral questioning to test knowledge of visual design principles, communication principles, animation techniques and responsibilities of different members of a project team.

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- CUFANM302A Create 3D digital animations
- CUFDIG301A Prepare video assets
- CUFDIG304A Create visual design components.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>2D animations</i> may include:</p>	<ul style="list-style-type: none"> • basic games • buttons • characters • illustrations • logos • morphs • objects • puzzles • simulated sequences • text • titles and credits.
<p><i>Design specifications</i> may include:</p>	<ul style="list-style-type: none"> • characters and objects • key frames • objects • references • samples • script • storyboard • technical specifications, including: <ul style="list-style-type: none"> • output file format • output file size • operating system • hardware specifications, including memory size, RAM • delivery platform • bandwidth • media form.
<p><i>Relevant personnel</i> may include:</p>	<ul style="list-style-type: none"> • art director • audio asset creator • designer • director • graphic artist

RANGE STATEMENT	
	<ul style="list-style-type: none"> • instructional designer • navigation designer • producer • project manager • system support personnel • other technical and specialist personnel.
<i>Output formats</i> may include:	<ul style="list-style-type: none"> • DIR/DCR • FLA/SWF • GIF • HTML.
<i>Delivery platforms</i> may include:	<ul style="list-style-type: none"> • CD • DVD • film • games console • internet • kiosk • mobile phone • PDA (personal digital assistant) • video • other mobile devices.
<i>Design techniques</i> may include:	<ul style="list-style-type: none"> • digital illustrations of objects and characters • freehand sketches • storyboards • story trees.
<i>Animation software</i> may include:	<ul style="list-style-type: none"> • Director • Flash • Toon Boon Studio.
<i>Screen principles</i> may include:	<ul style="list-style-type: none"> • editing, including basic transitions • framing • lighting • montage • narrative • story-telling • style/genre.
<i>Visual design principles</i> may include:	<ul style="list-style-type: none"> • balance • composition • emphasis • focal point • movement

RANGE STATEMENT	
	<ul style="list-style-type: none"> • perspective • proportion • scale • unity.
<i>Communication principles</i> may include:	<ul style="list-style-type: none"> • communicating the message • conveying meaning • meeting audience requirements • using functional components.
<i>Animation techniques</i> may include:	<ul style="list-style-type: none"> • acceleration/deceleration • audio integration • hinges and pivots • key frames and tweens • looping backgrounds • morphing/object exaggeration • motion paths • registration points • rotation • speed/motion blur.
<i>Animation principles</i> may include:	<ul style="list-style-type: none"> • key frames • motion • pacing/timing • point of view.
<i>Audio assets</i> may include:	<ul style="list-style-type: none"> • music • narration • sound effects.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Clarify animation requirements	<ol style="list-style-type: none"> 1. With reference to <i>production documentation</i>, clarify <i>3D animation</i> requirements and <i>design specifications</i> in consultation with <i>relevant personnel</i> 2. Examine the models to be animated to determine the most appropriate <i>animation techniques</i> 3. Identify the <i>file format</i> and <i>delivery platform</i> for animated sequences 4. Identify <i>factors</i> that may influence animation design approach 5. In consultation with relevant personnel, clarify work flow sequences to ensure that production schedule deadlines are met
Plan approach	<ol style="list-style-type: none"> 6. Research animations, artworks and other creative sources that may inspire visual design ideas 7. Generate a range of animation ideas that are technically feasible, respond to briefs and provide creative solutions to all design issues 8. Present animation ideas to relevant personnel using appropriate <i>design techniques</i>. 9. Adjust approach to incorporate feedback and agree on final design concepts 10. Discuss and select <i>3D animation software</i> with relevant personnel to ensure that animated sequences meet specified outcomes 11. Analyse <i>audio assets</i> supplied for animations as required
Produce animated sequences for review	<ol style="list-style-type: none"> 12. Create 3D animations using animation techniques to suit design requirements 13. Apply basic <i>animation principles</i>, <i>screen principles</i>, <i>visual design principles</i> and <i>communication principles</i> 14. Apply real world camera techniques to virtual cameras used in 3D animation 15. Render completed animated sequences 16. Save and store animated sequences using appropriate output file formats, standard naming conventions and version control protocols 17. Present 3D animated sequences to relevant personnel for evaluation by agreed deadlines
Finalise animated	<ol style="list-style-type: none"> 18. Review animated sequences to assess creative solutions to design briefs, appropriateness to users/audience and

ELEMENT	PERFORMANCE CRITERIA
sequences	technical feasibility 19. Discuss and confirm with relevant personnel additional requirements or modifications and complete changes as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions
 - work as a member of a production team, both independently on assignment and under direction
 - respond constructively to feedback received from other team members
 - complete workplace documentation
- conceptual and creative skills in the context of:
 - generating feasible ideas for animated sequences
 - having a feel for movement and timing in order to produce convincing animations
 - maintaining design integrity
- technical skills sufficient to:
 - use industry-current animation software to develop digitally animated sequences
 - apply the principles of basic screen, visual design and communication to produce 3D animated sequences
 - output 3D animated sequences in appropriate file formats for a range of delivery platforms
 - manage files and directories using standard naming conventions and version control protocols
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance when problems arise

Required knowledge

- roles and responsibilities of project team members in the relevant industry sector
- basic understanding of the stages in the production process from initial design through to finished product
- issues and challenges that arise in the context of creating 3D digital animations
- basic 3D digital animation techniques
- basic screen principles
- principles of animation
- principles of visual design and communication
- features of a range of delivery platforms

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • creation of 3D digital animated sequences that: <ul style="list-style-type: none"> • demonstrate the principles of basic screen, visual design and communication • meet the technical requirements of specific platforms • satisfy the design brief and client requirements • collaborative approach to work • attention to detail • ability to meet production deadlines.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to a range of resources, equipment and current industry-current software as listed in the range statement • where sound is integrated in animated sequences, access to a range of suitable software to support the integration of sound and visual elements • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence, authenticated show reels and third-party workplace reports of on-the-job performance • critical analysis of a range of 3D digital animated sequences created by the candidate to determine ability to meet design requirements • written or verbal questioning to test knowledge as listed in the required skills and knowledge section of

Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">CUFANM303A Create 3D digital modelsCUFDIG303A Produce and prepare photo imagesCUFDIG304A Create visual design componentsCUFSOU301A Prepare audio assets.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Production documentation</i> may include	<ul style="list-style-type: none"> • animatics • brief • storyboard • technical specifications.
<i>3D animations</i> may include:	<ul style="list-style-type: none"> • 3D elements • 3D panoramas • basic games • buttons • characters • illustrations • logos • models • morphs/blend shapes • puzzles • simulated sequences • text • titles and credits.
<i>Design specifications</i> may include:	<ul style="list-style-type: none"> • characters and objects • key frames • objects • references • samples • script • storyboard • technical specifications, including: <ul style="list-style-type: none"> • output file format • version control protocols • output file size • operating system • hardware specifications, including memory size, RAM • delivery platform

RANGE STATEMENT	
	<ul style="list-style-type: none"> • media form.
<i>Relevant personnel</i> may include:	<ul style="list-style-type: none"> • 3D modeller • 3D producer • animation director • audio asset creator • director • graphic artist/designer • instructional designer • lead animator • matte painter • system support personnel • other technical and specialist personnel.
<i>Animation techniques</i> may include:	<ul style="list-style-type: none"> • acceleration/deceleration • audio integration • dynamic simulation • hierarchies • hinges and pivot points • hybrid method • key frames • layered animation • looping backgrounds • morphing/object exaggeration • motion capture • motion paths • pose to pose animation • registration points • rotation • scripted animation • speed/motion blur • straight-ahead animation.
<i>File formats</i> may include:	<ul style="list-style-type: none"> • AAS • ACT • ANI • ANM • ANS • AVI • AWA • AWM • CEL • CFT

RANGE STATEMENT	
	<ul style="list-style-type: none"> • CMV • DIR/DCR • FLA/SWF • FLC • FLI • FLX • GIF • HTML • IFF • JPEG • LWOB • M3D • MMM • MOV • MPEG • MWF • PNG • QTVR • SEC • TIFF • VAN • VUE.
<i>Delivery platforms</i> may include:	<ul style="list-style-type: none"> • CD • DVD • film • games console • internet • kiosk • mobile phone or device • PDA (personal digital assistant) • video.
<i>Factors</i> may include:	<ul style="list-style-type: none"> • budget • purpose of animation • resources • target audience • timelines.
<i>Design techniques</i> may include:	<ul style="list-style-type: none"> • digitally generated illustrations of objects and/or characters • freehand sketches • fully rendered hand-drawn illustrations

RANGE STATEMENT	
	<ul style="list-style-type: none"> • story trees • storyboards.
<i>Animation software</i> may include:	<ul style="list-style-type: none"> • 3D Studio Max • Cinema 4D • Houdini • Lightwave • Maya • Motionbuilder • Soft Image - XSI.
<i>Audio assets</i> may include:	<ul style="list-style-type: none"> • music • narration • sound effects.
<i>Animation principles</i> may include:	<ul style="list-style-type: none"> • anticipation • asymmetry in body and facial poses • balanced poses • exaggeration • movement in arcs • overlapping actions and follow-through • pacing/timing • secondary actions • singularity of message • squash and stretch • staging • strong silhouette in poses • weight.
<i>Screen principles</i> may include:	<ul style="list-style-type: none"> • camera techniques • editing, including basic transitions • framing • lighting • montage • narrative • story-telling • style/genre.
<i>Visual design principles</i> may include:	<ul style="list-style-type: none"> • balance • composition • emphasis • movement • perspective • proportion

RANGE STATEMENT	
	<ul style="list-style-type: none"> • scale • unity.
<i>Communication principles</i> may include:	<ul style="list-style-type: none"> • communicating the message • conveying meaning • meeting audience requirements • using functional components.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to create 3D digital models.</p> <p>This unit is a prerequisite for:</p> <ul style="list-style-type: none">• CUFANM401A Prepare 3D digital models for production. <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>3D modellers working on relatively simple projects apply the skills and knowledge described in this unit. From reference material and established designs, they create 3D models using whatever software is applicable to the production.</p> <p>3D models need to meet technical and design specifications, as well as being efficient, reliable, to scale, and easy to rig and animate.</p> <p>Modellers need to appreciate what will be required of their models in later stages of production because this can affect the work they produce. Close liaison with other team members is, therefore, important. Even though a senior modeller or technical director supervises the creation of models, people at this level are expected to work autonomously within clear guidelines.</p> <p>More complex skills associated with 3D digital modelling are covered in:</p> <ul style="list-style-type: none"> • CUFANM401A Prepare 3D digital models for production.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Clarify work requirements	<ol style="list-style-type: none"> 1. With reference to <i>production documentation</i>, clarify <i>requirements</i> and <i>purpose</i> for 3D digital models 2. In consultation with <i>relevant personnel</i>, clarify work flow sequences to ensure that <i>production</i> schedule deadlines are met 3. Select <i>software</i> that best suits the type of production and <i>delivery platform</i> for which 3D digital models are being created 4. Gather and analyse <i>reference materials</i> to help with visualisation of 3D models
Create 3D digital models	<ol style="list-style-type: none"> 5. Use software features to block out models to determine correct proportions in relation to reference materials 6. Manipulate software features to apply basic lighting and shaders as required 7. Ensure that models' topology allows appropriate deformation, as required 8. <i>Progressively refine</i> and check <i>integrity</i> of models until they meet design requirements 9. Submit models to relevant personnel for comment on whether production requirements have been met and make final adjustments as required 10. Render and output models in required <i>format</i> and submit to relevant personnel by agreed deadlines 11. Make back-up copies of files and complete workplace documentation according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions
 - work as a member of a production team, both independently on assignment and under direction
 - respond constructively to feedback received from other team members
 - complete workplace documentation
- technical skills sufficient to:
 - use industry-current software applications to create 3D models to specifications
 - manage files and directories using standard naming conventions and version control protocols
 - make back-up copies of files and store appropriately
- initiative and creativity in the context of visualising and accurately creating 3D digital models of a range of animate and inanimate objects
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance when problems arise

Required knowledge

- roles and responsibilities of project team members in the relevant industry sector
- basic understanding of the stages in the production process from initial design through to finished product
- issues and challenges that arise in the context of creating 3D digital models
- 3D digital modelling techniques
- strong sense of scale, form, weight and volume
- geometry as it applies to the creation of realistic 3D digital models
- features of a range of delivery platforms
- OHS standards as they relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to prepare 3D digital models for a range of contexts. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.
------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>This unit requires the application of 3D digital modelling skills to prepare 3D models (including character models) to a high level of finish so they are ready for use in animations, high-end games, virtual worlds or specialist digital resource materials in areas such as medicine, architecture, engineering and aeronautics.</p> <p>On small-scale productions, modellers also rig, build textures and create lighting. On larger projects, they may be required to liaise with riggers, texture and lighting artists. Even though work at this level is undertaken with minimum supervision, modellers are members of a production team and close collaboration with other team members is essential, as is an ability to deliver on schedule and to work under pressure.</p> <p>As they develop their skills and interests, modellers may concentrate on different areas, such as characters, objects, environments and special effects. Aspects of these skills are covered in:</p> <ul style="list-style-type: none"> • CUFANM402A Create digital visual effects • CUFANM501A Create 3D digital character animation • CUFANM502A Create 3D digital environments.

Review process of constructing 3D digital models and note areas for future improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions
 - work collaboratively with other team members
 - respond constructively to feedback received from other team members
 - complete workplace documentation
- technical skills sufficient to:
 - use the full range of features of industry-current software applications to prepare 3D digital models to specifications
 - follow design reference accurately and work in a range of styles
 - manage files and directories using standard naming conventions and version control protocols
 - make back-up copies of files on a continuous basis and store appropriately
- initiative and creativity in the context of:
 - visualising and modelling 3D characters, props and environments to a high level of finish
 - analysing and solving problems as they arise during the modelling process
- self-management, learning and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - continuously improve skills and knowledge by keeping up to date with industry developments and new software features
 - seek expert assistance as required

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members in the relevant industry sector
 - sound understanding of the relationship between the technical and creative aspects and requirements of productions in which 3D digital models are used
 - issues and challenges that arise in the context of preparing 3D digital models
- well-developed drawing skills, including use of light and shadow
- good understanding of anatomy
- modelling techniques with polygons and NURBS
- strong sense of scale, form, weight and volume
- strong understanding of light, colour, composition and mood

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Clarify work requirements	<ol style="list-style-type: none"> 1. With reference to <i>production documentation</i>, clarify requirements for screen <i>titles</i> 2. In consultation with <i>relevant personnel</i>, clarify work flow sequences to ensure that production schedule deadlines are met 3. Identify the available budget for the production of titles as required
Identify items to be included in titles	<ol style="list-style-type: none"> 4. Produce and maintain a schedule of <i>items</i> to be included in titles 5. Determine if graphic items need to be imported from other sources and source these items as required 6. Obtain copyright clearances to use imported items as required 7. Select appropriate fonts and/or create fonts as required
Generate and assess ideas	<ol style="list-style-type: none"> 8. Generate a range of ideas for the design of screen titles that respond sympathetically to briefs and provide creative solutions to all design issues 9. Discuss ideas and collaborate, as required, with relevant personnel to ensure contribution of ideas to initial concepts 10. Continuously reflect on and appraise ideas for implications on cost, technical feasibility and suitability to meet specifications
Create titles	<ol style="list-style-type: none"> 11. Incorporate and manipulate moving or static graphic items to be included in titles 12. Modify titles and source items to ensure that the required visual effect is achieved 13. Trial various techniques and styles and produce initial compilation of titles ensuring that style, content and creative intentions are met 14. Decide upon the appropriate <i>parameters of display</i> to meet with creative requirements and technical specifications 15. Review initial titles to ensure that they meet <i>technical and creative requirements</i> 16. Ensure that the <i>movement</i> of titles and other graphic items maximises the visual impact required for <i>productions</i> 17. Ensure that titles incorporate captions with required images and sound, and are correctly synchronised with

ELEMENT	PERFORMANCE CRITERIA
	<p>sound</p> <p>18. Ensure that titles are legible and appropriately spaced</p> <p>19. Record and store titles and other graphic images according to enterprise procedures</p>
Finalise titles	<p>20. Present initial title compilations to relevant personnel for feedback</p> <p>21. Participate in initial and ongoing evaluation of titles</p> <p>22. Confirm accuracy of text, spelling, punctuation and content</p> <p>23. Negotiate and agree to additional requirements and modify titles as required</p> <p>24. Ensure that agreement is reached with, and approval granted by, relevant personnel before proceeding with the final production of titles</p> <p>25. Review process of creating titles and note areas for future improvement</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions
 - collect and interpret creative information, scripts and images
 - use correct grammar and spelling in screen titles
 - work collaboratively in a team environment, both independently and under direction
 - respond constructively to feedback received from other team members
 - complete workplace documentation
- technical skills sufficient to:
 - use common features of industry-current visual effects software to create screen titles
 - produce screen titles for a range of output formats
 - manage files and directories using standard naming conventions and version control protocols
- initiative and creativity in the context of:
 - visualising and interpreting creative concepts
 - maintaining design integrity
 - creatively integrating media assets to achieve the required digital visual effects
 - troubleshooting and solving problems as they arise during the process of creating titles for screen productions
- self-management, learning and planning skills sufficient to:
 - prioritise work tasks
 - continuously improve skills and knowledge by keeping up to date with industry developments and new software features
 - meet deadlines
 - seek expert assistance as required

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members in the relevant industry sector
 - sound understanding of the technical and creative elements of productions in which screen titles are used
 - issues and challenges that arise in the context of creating titles for screen productions

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• principles of typographic design• the effects of caption movement in one plane• the effects of caption movement in multiple planes and axes• copyright requirements with regard to importing items into screen titles• OHS standards as they relate to working for periods of time on computers |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • creation of a range of screen titles that: <ul style="list-style-type: none"> • meet the requirements of a brief • demonstrate attention to detail and an ability to achieve the required creative effect • collaborative approach to work • ability to meet deadlines.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to industry-current software used to create screen titles • access to simulated or real production situations that require the creation of screen titles • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of a range of digital screen titles created by the candidate to determine ability to create different types of titles • written or verbal questioning to test knowledge as listed in the required skills and knowledge section of this unit.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBCRT402A Collaborate in a creative process

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• CUFANM402A Create digital visual effects• CUFDIG304A Create visual design components.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Production documentation</i> may include:	<ul style="list-style-type: none"> • animatics • brief • script • shot list • storyboard • technical specifications.
<i>Titles</i> may be:	<ul style="list-style-type: none"> • animated • crawling • dissolved • effect • faded • layered • reveal • rolling • static • zip.
<i>Relevant personnel</i> may include:	<ul style="list-style-type: none"> • designers • director • director of photography • editor • head of department • post-production manager • producer • SFX (sound effects) supervisor • sound personnel • storyboard artist • supervisor • technical director • other technical/specialist personnel.
<i>Items</i> to be included in the titles may include:	<ul style="list-style-type: none"> • background • captured frames • fonts

RANGE STATEMENT	
	<ul style="list-style-type: none"> • images, e.g.: <ul style="list-style-type: none"> • static • moving • graphic • photographic • cinematographic • logos • objects • text.
<i>Parameters of display</i> may include:	<ul style="list-style-type: none"> • colour • duration • punctuation • shading • spacing • spelling • style • thickness • typeface.
<i>Technical and creative requirements</i> include:	<ul style="list-style-type: none"> • choreography of movement • colour frequency • focus • signal requirements • speed • type.
<i>Movement</i> of titles and other graphic images may include:	<ul style="list-style-type: none"> • bounce • compression • expansion • rotation.
<i>Productions</i> may include:	<ul style="list-style-type: none"> • animated productions • commercials • documentaries • feature films • filmed events or performances • interactive digital media products, e.g.: <ul style="list-style-type: none"> • e-learning resources • games • promotional/informational products • music videos • short films

RANGE STATEMENT

	<ul style="list-style-type: none"> • television productions • training or promotional videos/DVDs.

Competency field

Competency field	Visual communication - animation and digital effects
-------------------------	--

Co-requisite units

Co-requisite units		

CUFANM503A Design animation and digital visual effects

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the skills and knowledge required to design animation and digital visual effects for screen productions. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.
------------------------	--

Application of the Unit

Application of the unit	<p>Designers who specialise in animation or visual effects apply the skills and knowledge described in this unit. They work closely with people such as directors or producers to prepare design specifications for animation or visual effects for projects, which range in scope from television commercials to aspects of feature films, an entire animated film or interactive games.</p> <p>A high level of creative conceptualisation is required, along with an ability to undertake background research.</p> <p>Even though designers operate at a senior level with a high degree of autonomy, the process of generating concepts and ideas is collaborative. An ability to work in a team environment and with clients is therefore essential.</p> <p>Skills associated with implementing designs are covered in:</p> <ul style="list-style-type: none"> • BSBDES601A Manage design realisation.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Clarify design requirements	<ol style="list-style-type: none"> 1. With reference to <i>production documentation</i> identify the scope of <i>design projects</i> 2. Identify <i>factors</i> that may have an impact on the design process 3. Participate in preliminary concept meetings to clarify understanding of design requirements 4. With reference to production documentation, itemise elements that need to be addressed during the design phase
Generate and assess ideas	<ol style="list-style-type: none"> 5. Generate a range of design ideas that respond sympathetically to the brief and provide creative solutions to design issues 6. Assess ideas and collaborate, as required, with <i>relevant personnel</i> to maximise contribution of ideas to initial concepts 7. Continuously reflect on and appraise ideas for implications on cost, technical feasibility, and creative requirements
Conduct research and experimentation	<ol style="list-style-type: none"> 8. <i>Research</i> aspects of <i>content</i> and <i>target audience characteristics</i> that might influence production styles and techniques 9. Trial various <i>techniques</i> to test the suitability of their use in given design projects 10. Organise research and experimentation material for ease of access by relevant personnel during the design development process 11. Analyse and document research and experimentation findings for use during the design phase
Produce draft design specifications	<ol style="list-style-type: none"> 12. In consultation with relevant personnel, evaluate initial concept ideas in light of research and experimentation findings and select the most appropriate approach 13. Ensure that agreement is reached with relevant personnel on a consistent interpretation of design and visual details 14. Create storyboards as required 15. Prepare or supervise the preparation of sample material to be included in <i>design specifications</i> as required 16. Write draft design specifications to include relevant advice to design and development teams 17. Discuss draft design specifications with relevant

ELEMENT	PERFORMANCE CRITERIA
	personnel to ensure that all requirements have been addressed
Finalise design specifications	18. Present draft design specifications to relevant personnel for review 19. Participate in the initial and ongoing evaluation of design specifications 20. Negotiate and agree to additions or modifications and amend design specifications as required 21. Clarify the ongoing role of the designer during the production phase and in the evaluation of the final animations or digital visual effects 22. Review process of designing animation and digital visual effects and note areas for future improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret creative concepts and briefs
 - prepare design specifications
 - present design ideas for discussion and feedback from team members
 - clearly and concisely document specifications for the design of animation and digital visual effects
 - work collaboratively with other members of a production team
 - negotiate amendments and additions to design specifications
- initiative, enterprise and creativity in the context of:
 - developing original, innovative and creative approaches to designing animation and visual effects
 - experimenting with techniques to achieve desired visual effects
 - extending creative boundaries for self and audience
 - thinking laterally when developing concepts
 - undertaking background research to inform design projects
 - maintaining design integrity
 - finding ways to minimise the effect of technical constraints
 - finding creative solutions to problems identified during the process of designing animation and visual effects
 - locating and using resources to broaden own creative experience
- technical skills sufficient to use standard word processing, spreadsheet and presentation software in the context of preparing design and technical specifications
- learning in the context of improving performance/product through self-reflection and reworking after feedback.
- self-management skills sufficient to:
 - meet deadlines
 - provide appropriate and timely documentation

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members in the relevant industry sector
 - sound understanding of the relationship between the technical and creative aspects and requirements of productions for which animation and digital visual

REQUIRED SKILLS AND KNOWLEDGE

- effects are being designed
 - issues and challenges that arise in the context of designing animation and digital visual effects
- principles and techniques of animation, layout and composition
- screen principles
- principles of visual design and communication
- colour theory, line, dimension, depth and their application on the screen
- drawing techniques, including drawing to scale
- formats and techniques for documenting the design of animation and digital visual effects
- OHS standards as they relate to working for periods of time on computers
- intellectual property rights and copyright clearance procedures

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • design specifications for animation and digital visual effects that: <ul style="list-style-type: none"> • are well documented and clearly presented • supported by appropriate research • meet production requirements • ability to work effectively as a member of a production team • effective verbal presentation skills.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • practical demonstration of skills through the design of animation and digital visual effects for at least two projects • access to project briefs on which designs can be based • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of designs for animation and visual effects documented by the candidate and their effectiveness in terms of meeting production requirements • observation of a candidate presenting their designs to team members and explaining how it meets requirements.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE

assessment

industry sector, workplace and job role is recommended, for example:

- BSBDES601A Manage design realisation
- BSBCRT501A Originate and develop concepts.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Production documentation</i> may include:</p>	<ul style="list-style-type: none"> • animatics • brief • script • shot list • storyboard • technical specifications.
<p><i>Design projects</i> may include</p>	<ul style="list-style-type: none"> • animation and/or digital visual effects for: <ul style="list-style-type: none"> • films • television productions • commercials/advertisements • games • e-learning resources • websites • mobile phones • promotional/informational videos/DVDs • digital simulations • virtual worlds.
<p><i>Factors</i> may include:</p>	<ul style="list-style-type: none"> • audience/user • availability of personnel • availability of resources • available budget • complexity of project • expectations of producers and/or directors • intellectual property • need to attract finance • production schedule • production values • technical parameters, including: <ul style="list-style-type: none"> • technology constraints • console • platform

RANGE STATEMENT	
	<ul style="list-style-type: none"> • bandwidth • memory/RAM • HDTV • timelines.
Relevant personnel may include:	<ul style="list-style-type: none"> • animators • clients. • composers • designers • director • director of photography • head of department • producer • supervisor • technical director • writers • other technical/specialist personnel.
Research may include:	<ul style="list-style-type: none"> • contacting historical or other special interest associations • reading newspapers books and other reference material • reading software manuals • searching the internet • talking and listening to experts • watching documentary material.
Aspects of content may include:	<ul style="list-style-type: none"> • cultural considerations • historical period • style of production: <ul style="list-style-type: none"> • comic • dramatic • fantasy • educational/instructive • informational • promotional.
Target audience characteristics may include:	<ul style="list-style-type: none"> • computer literacy • demographics, e.g.: <ul style="list-style-type: none"> • age • gender • education • occupation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • location • cultural background • hobbies • interests • internet literacy • language, literacy and numeracy • personas • specific needs - physical or psychological.
<i>Techniques</i> may include:	<ul style="list-style-type: none"> • 2D animation • 2D graphics and paint • 3D models and animation • compositing.
<i>Design specifications</i> may include:	<ul style="list-style-type: none"> • content inventory • diagrams • flow charts • illustrations • maps • models • plans • resource issues • sample animation elements • sketches • storyboards • technical drawings • technical specifications • video clips • wire frames.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Source information on copyright	<ol style="list-style-type: none"> 1. Identify <i>sources of information</i> on copyright 2. Determine what is and is not protected by copyright 3. Identify and determine role of <i>copyright collection societies</i> 4. Check copyright legislation with <i>appropriate person</i> 5.
Obtain permission to use copyright material	<ol style="list-style-type: none"> 6. Identify copyright owner's <i>exclusive rights</i> 7. Determine need for copyright clearance and identify potential for <i>fair use</i> of copyright material 8. Discuss and confirm copyright clearance issues 9. Determine if <i>moral rights</i> or <i>performer's rights</i> need to be credited 10. Obtain and accurately record copyright clearance
Protect material from unauthorised use	<ol style="list-style-type: none"> 11. Confirm <i>original work</i> as being the result of individual/collaborative skill and effort 12. Discuss and formally record copyright ownership/proportional ownership 13. Identify and confirm individual/collaborative copyright responsibilities 14. Identify potential infringements to copyright and activities that will not infringe copyright 15. Apply <i>copyright notices</i> on creative works in a correct manner 16. Prepare, date and store <i>documentation</i> to track copyright requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- numeracy skills sufficient to determine the duration of copyright arrangements
- literacy skills sufficient to read copyright information and to complete copyright documentation
- learning skills sufficient to maintain knowledge of copyright issues
- teamwork skills sufficient to work with collaborators when discussing copyright ownership
- problem solving skills sufficient to recognise problems that arise from copyright ownership discussions and to seek expert advice on solving them
- technology skills sufficient to use documentation systems for tracking copyright requirements and for accessing/downloading copyright material

Required knowledge

- basic understanding of copyright principles/legislation relevant to implementing copyright arrangements
- recognised procedures to determine copyright ownership
- function of the Australian Copyright Council as it relates to own work context

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> ability to source information and seek appropriate assistance as required to organise copyright arrangements, and ability to apply this information to day-to-day work activities knowledge of copyright principles/legislation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to a range of relevant and current industry information materials, such as the Copyright Act 1968, Copyright Amendment (Digital Agenda) Act 2000 and Australian Copyright Council information sheets access to an environment where copyright information can be applied and copyright ownership discussed access to appropriate personnel to check copyright legislation access to appropriate technology to source copyright information and prepare copyright documentation access to appropriate learning and assessment support when required use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate obtaining permission to use copyright material case studies to assess ability to identify sources of information on copyright written and verbal questioning or interview to test knowledge of the sources of information and the role of copyright collection societies problem solving activities to assess ability to

EVIDENCE GUIDE	
	<p>recognise problems that arise from copyright ownership discussions</p> <ul style="list-style-type: none"> • review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFIND201A Develop and apply creative arts industry knowledge • CUFIND301A Work effectively in the screen and media industries.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Sources of information</i> may include:</p>	<ul style="list-style-type: none"> • Australian Copyright Council • copyright collection societies • copyright legislation • industry associations • industry information sheets and journals • internet • libraries • union publications (newsletters, magazines, bulletins and letters).
<p><i>Copyright collection societies</i> may include:</p>	<ul style="list-style-type: none"> • Australasian Mechanical Copyright Owners Society Ltd (AMCOS) • Australasian Performing Right Association (APRA) • Christian Copyright Licensing International • Copyright Agency Ltd (CAL) • International copyright collection societies • Mediacom/LicenSing • Phonographic Performance Company of Australia (PPCA) • Screenrights • VISCOPY • Word of Life International.
<p><i>Appropriate person</i> may include:</p>	<ul style="list-style-type: none"> • agents/artists' managers/industry managers • Australian Copyright Council representatives • copyright collection society representatives • employee association/union representatives • industry/industry association representatives • legal representatives • licensers/publishers.
<p><i>Exclusive rights</i> may include:</p>	<ul style="list-style-type: none"> • communicating the work to the public • importing the work into Australia • licensing and assigning the work • making an adaptation of the work

RANGE STATEMENT	
	<ul style="list-style-type: none"> • making the work public for the first time • performing/showing/transmitting the work in public • reproducing the work.
<i>Fair use</i> of copyright material may include:	<ul style="list-style-type: none"> • new exceptions for consumers and new flexible dealing exception • professional advice by a lawyer, patent attorney or trade mark attorney • reporting news • research, study, criticism or review.
<i>Moral rights</i> may include the right of the creator:	<ul style="list-style-type: none"> • not to have their work falsely attributed • not to have their work treated in a derogatory way • to be attributed (or credited) for their work.
<i>Performer's rights</i> may include:	<ul style="list-style-type: none"> • the moral rights in performances • the ownership of copyright in sound recordings • the rights to control recording and communication of their performances.
<i>Original work</i> may include:	<ul style="list-style-type: none"> • artistic works, e.g. paintings, drawings, cartoons, sculpture, craft work, architectural plans, buildings, photographs, photographic imagery, maps, plans, special effects make-up • broadcasts, e.g. television, radio • cinematograph films, e.g. film, video, DVD • compilations, e.g. anthologies, directories, databases • computer programs • dramatic works, e.g. choreography, screenplays, plays, mime pieces, performances • musical works/performances • published editions • sound recordings • textual material, e.g. journal articles, novels, screenplays, poems, song lyrics, reports.
<i>Copyright notices</i> may include:	<ul style="list-style-type: none"> • for sound recordings, the letter P (for phonogram) in a circle or in brackets is used • the symbol ©, followed by the name of the copyright owner and the year of first publication.
<i>Documentation</i> may include dated copies of:	<ul style="list-style-type: none"> • artwork • digital media products • footage

RANGE STATEMENT

	<ul style="list-style-type: none"> • letters or other communications with people who have access to the original work • manuscripts • music (presented in any media or format) • negatives/photographs/photographic imagery • recordings • scores (music/film).

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Check website information for relevance and currency	<ol style="list-style-type: none"> 1. Confirm with <i>relevant personnel</i> frequency of upgrades 2. Obtain revised and additional <i>electronic content</i> and ensure correct versions 3. Confirm with relevant personnel the age limit of links that should be retained or deleted 4. Confirm with relevant personnel other revisions as required
Check links and navigation	<ol style="list-style-type: none"> 5. Select appropriate <i>link-checking software</i>, run software to test links and check currency of existing links 6. Save report document according to technical and organisational requirements 7. Check broken or failed links to determine site closures or new site addresses
Update information	<ol style="list-style-type: none"> 8. Access <i>content management system</i> and load appropriate files 9. Delete closed links and re-establish new site links if available 10. Check internal page links and rectify or delete as required 11. Import and/or change content material as required and specify appropriate <i>metadata</i> if required 12. Make heading, typographical and image revisions applying appropriate style sheets and alt tags if required 13. Insert additional pages or screens as required, applying appropriate templates or themes 14. Upload edited files to server using file transfer protocols (FTP). 15. Advise relevant personnel if new buttons, interface or navigation design are required to incorporate additional materials
Test and confirm changes	<ol style="list-style-type: none"> 16. Check all links are valid 17. Confirm with relevant personnel that all changes have been made

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions
 - interpret and apply information in user manuals for software applications
- ability to work as a member of a production team - both independently on assignment and under direction
- technical skills sufficient to:
 - proficiently use a content management system
 - use link-checking software
 - manage files using standard naming conventions
 - apply appropriate metadata to describe documents
 - apply style sheets, templates and themes
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance when problems arise

Required knowledge

- W3C Accessibility standards relevant to text and images
- internet protocols and data types
- OHS standards as they relate to working on computers for periods of time

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • accurate creation of interactive media information and links • proficient use of content management systems • attention to detail.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to industry-standard authoring software, the internet and an FTP client for uploading content • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of websites where content has been updated by the candidate on a regular basis • written or oral questioning to test knowledge of internet protocols, data types and W3C Accessibility standards relevant to text and images.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFIND201A Develop and apply creative arts industry knowledge • CUFRES201A Collect and organise content for broadcast or publication.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Relevant personnel</i> may include:	<ul style="list-style-type: none"> • client • programmer and technical support people • supervisor • web manager • other specialist creative and administrative staff as appropriate.
<i>Electronic content</i> may include:	<ul style="list-style-type: none"> • audio • HTML • images (photographs and illustrations) • PDF documents • text • video • Word documents.
<i>Link-checking software</i> may include:	<ul style="list-style-type: none"> • Xenu • Linkbot • software internal to content management systems.
<i>Content management systems</i> may include:	<ul style="list-style-type: none"> • authoring tools, such as: <ul style="list-style-type: none"> • Dreamweaver • Contribute • learning management systems, such as: <ul style="list-style-type: none"> • WebCT • Blackboard • Janeson • Moodle • Sharepoint • open source database systems • other proprietary database systems.
<i>Metadata</i> may include:	<ul style="list-style-type: none"> • author • copyright • date • description

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Plan use of authoring tool	<ol style="list-style-type: none"> 1. Identify a range of appropriate <i>authoring software</i> 2. Discuss with <i>relevant personnel</i> the range of authoring software and their application to various <i>delivery platforms</i> 3. Discuss with relevant personnel <i>design specifications</i> of the <i>project</i> 4. Discuss with relevant personnel technical requirements of the project in order to select authoring software
Prepare to use authoring tool	<ol style="list-style-type: none"> 5. Load selected authoring software 6. Create a new file for the specified task and name file using standard naming conventions 7. Display and use tools and features of authoring software relevant to the authoring process
Produce interactive sequences	<ol style="list-style-type: none"> 8. Produce screens and layout according to design specifications applying basic <i>visual design principles</i> 9. Create <i>interactive media components</i> as required 10. Source text content and apply style sheets to format text 11. Source relevant <i>media assets</i>, optimise if required and integrate using appropriate <i>file formats</i> 12. Produce and link all components according to storyboard and apply templates or themes 13. Manipulate markup code where errors are occurring or to finetune functionality 14. Save in appropriate file format to directory
Check functionality of interactive sequence	<ol style="list-style-type: none"> 15. Check that interactive elements function with minimal error on a variety of systems 16. Present sequence to relevant personnel 17. Incorporate changes as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions and design specifications
 - interpret and apply information in user manuals for software applications
- ability to work as a member of a production team - both independently on assignment and under direction
- technical skills sufficient to:
 - use appropriate authoring software to proficiently author the sequences applying style sheets, templates or themes
 - integrate media assets for specific bandwidths
 - manage files and create appropriate directories
 - efficiently use a computer, including keyboard shortcuts
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance when problems arise

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - basic understanding of the relationship between technical and creative aspects and requirements of interactive media projects
 - basic knowledge of the features of a range of delivery platforms
 - file formats of digital media assets and basic optimisation techniques
 - HTML
 - W3C Accessibility standards relevant to text and images
- basic visual design principles as listed in the range statement
- OHS standards as they relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development of several discrete interactive media sequences that function as planned and demonstrate an understanding of basic visual design principles • accuracy and attention to detail in the process of developing interactive media sequences.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to a range of resources, equipment and current industry-standard software, as listed in the range statement • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of interactive sequences authored by the candidate • written or oral questioning to test knowledge of file formats and delivery platforms.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFDIG304A Create visual design components.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Authoring software</i> may include:	<ul style="list-style-type: none"> • Director • Dreamweaver • Flash • FrontPage • PageMill.
<i>Relevant personnel</i> may include:	<ul style="list-style-type: none"> • designer • graphic designer • information architect • interaction designer • programmer • supervisor • trainer • user interface designer • other specialist staff.
<i>Delivery platforms</i> may include:	<ul style="list-style-type: none"> • CD • DVD • internet • kiosk • mobile phone • personal digital assistant (PDA) • other wireless/mobile devices.
<i>Design specifications</i> may include:	<ul style="list-style-type: none"> • content inventory • interactive script • personas • storyboard • target audience • technical requirements, such as: <ul style="list-style-type: none"> • delivery platform • screen resolution and size • templates, style sheets and themes • bandwidth information • user interface design.

RANGE STATEMENT	
<i>Projects</i> may include:	<ul style="list-style-type: none"> • production of interactive sequences to be incorporated in a: <ul style="list-style-type: none"> • game • educational product • promotional product • information product • training product • e-commerce.
<i>Visual design principles</i> may include:	<ul style="list-style-type: none"> • balance • emphasis • focal point • movement • perspective • proportion • scale • unity.
<i>Interactive media components</i> may include:	<ul style="list-style-type: none"> • backgrounds • banners • icons • interactive buttons • interactive controls • logos • text • titles • user interfaces.
<i>Media assets</i> may include:	<ul style="list-style-type: none"> • animation • audio • documents, such as PDF, Word, PowerPoint and Excel • graphics • photo images • text • video.
<i>File formats</i> may include:	<ul style="list-style-type: none"> • DIR/DCR • FLA/SWF • GIF • HTML • JPEG • MOV

RANGE STATEMENT

	<ul style="list-style-type: none"> • MPEG • PDF • PICT • RTF • TIFF • WMV.

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Clarify work requirements	<ol style="list-style-type: none"> 1. Clarify type of visual design <i>components</i> required, in consultation with <i>relevant personnel</i> 2. In discussion with relevant personnel, identify factors that may determine or affect visual design concepts, including <i>design techniques</i> 3. Clarify in discussion with relevant personnel the target user and audience, and determine <i>format</i> and <i>delivery platform</i>
Generate and assess ideas	<ol style="list-style-type: none"> 4. Review media products, designs, images, artwork and other creative sources that may inspire visual design ideas 5. Obtain other <i>relevant information</i> that may influence design ideas 6. Generate a range of visual design ideas that are technically feasible, respond to specifications and provide creative solutions to all design issues 7. Present visual design ideas to relevant personnel using design techniques
Plan approach	<ol style="list-style-type: none"> 8. Experiment with traditional and digital imaging techniques to create required visual design components 9. Explore range of <i>typographical</i> and <i>visual design elements</i> to create the components 10. Evaluate initial design ideas and specifications against findings and discuss with relevant personnel to select final design concept 11. Select design technique and discuss with relevant personnel to ensure appropriate output format meets delivery platform requirements
Produce visual design components	<ol style="list-style-type: none"> 12. Develop structure for components based on the final design concept using selected design techniques 13. Apply <i>visual design principles</i> and <i>communication principles</i> to produce components 14. Save visual design in an appropriate format that satisfies the technical parameters determined in consultation with relevant personnel
Finalise visual design components	<ol style="list-style-type: none"> 15. Review visual design components to assess whether creative solutions meet design and technical specifications 16. Discuss and confirm with relevant personnel additional requirements or modifications and undertake any

ELEMENT	PERFORMANCE CRITERIA
	necessary amendments

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written and verbal instructions
 - work as a member of a production team - both independently on assignment and under direction
 - respond constructively to feedback received from other team members
- initiative and enterprise in the context of generating a range of feasible ideas for visual designs
- technical skills sufficient to:
 - use a range of design techniques for creating visual designs, including industry-standard graphics software
 - apply visual design and communication principles to produce visual designs
 - create visual design components in appropriate formats for a range of delivery platforms
 - manage files and directories using standard naming conventions
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance when problems arise

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members
 - basic understanding of the relationship between technical and creative aspects and requirements of media projects
- basic design principles of layout and composition
- characteristics of digital and traditional imaging
- visual design and communication principles
- typography
- copyright clearance procedures
- OHS standards as they apply to the use of computer and keyboard for periods of time

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • creation of visual design components that respond effectively to specifications and demonstrate the application of visual design and communication principles • ability to apply a selection of the design techniques listed in the range statement • ability to work collaboratively in a team environment.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to a range of resources, equipment and current industry-standard software as listed in the range statement • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of a range of visual design components created by the candidate • written or oral questioning to test knowledge of visual design principles, communication principles and responsibilities of different members of a project team.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFDIG303A Produce and prepare photo images

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Identify multimedia elements	<ol style="list-style-type: none"> 1. Obtain <i>design specifications</i> 2. Locate content required for <i>productions</i> 3. Discuss issues of integration and formats of <i>media assets</i> with <i>relevant personnel</i> 4. Determine with relevant personnel an interactive sequence to become the prototype
Identify scope of authoring software	<ol style="list-style-type: none"> 5. Identify range of industry-standard <i>authoring software</i> 6. Assess the authoring software in relation to specified <i>delivery platform</i> 7. Discuss selection of authoring software with relevant personnel to ensure selection will meet specified outcomes 8. Select authoring software best suited to job requirements
Use authoring software	<ol style="list-style-type: none"> 9. Load authoring software 10. Create a new file for the specified task and name using standard naming conventions 11. Display and use tools and features of authoring software relevant to the authoring process
Create interactive sequence	<ol style="list-style-type: none"> 12. Slice and reassemble the user interface appropriate to the authoring software 13. Import and assemble components in appropriate sequence according to creative requirements 14. Create interactive features according to creative and technical requirements, sourcing and writing appropriate <i>markup and scripting languages</i> as required 15. Check that interactive sequence conforms to navigation design 16. Integrate media assets to ensure highest levels of technical performance 17. Check that interactive sequence conforms to loading specifications 18. Test for interoperability, eliminate all bugs and validate scripting 19. Present interactive sequence as a prototype ensuring that sequence meets creative, production and technical requirements 20. Save <i>output file formats</i> and identify for specified purpose
Evaluate interactive	<ol style="list-style-type: none"> 21. Present prototype to relevant personnel

ELEMENT	PERFORMANCE CRITERIA
prototype	22. Evaluate prototype against design specifications, including achievement of a creative and user-centred product 23. Discuss and agree on required changes 24. Assist in user trials as required 25. Evaluate feedback from user trials 26. Seek confirmation from relevant personnel to transform prototype into final product
Seek confirmation from relevant personnel to transform prototype into final product	27. Make necessary changes as indicated by user trials 28. Replicate prototype functionality to complete the interactive product 29. Make final checks to ensure sequences conform to design specifications 30. Test for interoperability, eliminate bugs and validate scripting 31. Save to specified storage system accessible to production team 32. Assist in loading product to specified platform as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and literacy skills sufficient to interpret and clarify written or verbal instructions
- ability to work as a member of a production team - both independently on assignment and under direction
- technical skills sufficient to:
 - correctly interpret design briefs, and design and technical specifications
 - proficiently use appropriate authoring and graphics software
 - seamlessly integrate and optimise a range of media assets to highest levels of technical performance
 - create and apply style sheets, templates or themes to conform with W3CAccessibility standards as they apply to client-side technology
 - manage files and directories using standard naming conventions and version control protocols
- initiative and flexibility in the context of troubleshooting and solving problems as they arise during the authoring process
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance as required

Required knowledge

- scope and applicability of industry-standard authoring software
- technical requirements for integrating digital content for use on a range of delivery platforms, including:
 - animation
 - graphics
 - text
 - video
 - audio
- user-centred design principles
- design principles of layout and composition
- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - sound understanding of the relationship between technical and creative aspects and requirements of interactive media projects

REQUIRED SKILLS AND KNOWLEDGE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Clarify project requirements	<ol style="list-style-type: none"> 1. Use <i>design specifications</i> in consultation with <i>relevant personnel</i> to clarify the target user, audience and <i>purpose of interactive media products</i> 2. Obtain samples of text content and <i>media assets</i> to be integrated into user interfaces 3. Determine file <i>output format</i> for <i>delivery platform</i> of interactive media products
Generate ideas	<ol style="list-style-type: none"> 4. Research interactive media product user interfaces, designs, images, artwork and other creative sources that may inspire design ideas 5. Obtain other <i>relevant information</i> that may influence or be incorporated into design ideas 6. Determine need for copyright clearance and identify potential for fair use of copyright material 7. Obtain and record copyright clearance if required 8. Use sketches and concepts in specifications as the basis for generating range of design ideas that are technically feasible and provide creative solutions to all design issues 9. Present interface design ideas to relevant personnel for discussion and feedback
Plan approach	<ol style="list-style-type: none"> 10. Select final design, incorporating feedback from relevant personnel as required 11. Identify range of appropriate industry-standard <i>graphics software</i> 12. Discuss and select graphics software with relevant personnel to ensure selection meets specified outcomes 13. Explore range of <i>typographical</i> and <i>visual design elements</i> that could be used in development of interface designs
Produce user interfaces	<ol style="list-style-type: none"> 14. Use graphics software to develop structure for user interfaces based on final design concepts 15. Source or create and integrate all graphic <i>interactive components</i> 16. Apply <i>visual design</i> and <i>communication principles</i> to the development of user interfaces 17. Ensure that user interfaces meet the <i>principles of user-centred design</i> and relevant <i>standards</i> 18. Ensure that user interfaces enhance the display of digital content

ELEMENT	PERFORMANCE CRITERIA
	19. Document styles for text and presentation for use in style sheets and templates or themes 20. Save user interfaces in an appropriate output format that satisfies technical parameters in consultation with relevant personnel
Evaluate user interfaces	21. Review user interfaces to assess effectiveness of creative solutions, appropriateness to the user and audience, and technical feasibility 22. Discuss and confirm with relevant personnel additional requirements or modifications to the overall design and undertake any necessary amendments

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions
 - interpret design specifications
 - work collaboratively in a team environment - both independently on assignment and under direction
 - present a range of user interface designs to team members for discussion and feedback
 - respond constructively to feedback received from other team members
 - complete workplace documentation
- creative skills sufficient to:
 - generate feasible ideas for user interface designs that meet specifications
 - apply visual design and communication principles to produce user interface designs
- technical skills sufficient to:
 - proficiently use graphics software to produce user interface designs
 - create user interface designs to meet standards and platform parameters
 - manage files and directories using standard naming conventions
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance when problems arise

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - sound understanding of the relationship between technical and creative aspects and requirements of interactive media projects
 - issues and challenges that arise in creating user interfaces
 - standards as they apply to user interfaces, including W3C Accessibility, interoperability, usability and readability
- visual design and communication principles, including user-centred design principles
- design elements
- typography

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • creation of user interfaces that: <ul style="list-style-type: none"> • visually communicate to target user and audience • meet required standards and technical parameters of the specified platform • ability to work effectively as a member of a production team.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to design specifications typically used in industry • access to current industry-standard software as listed in the range statement • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of a range of user interfaces created by the candidate in response to design specifications • written or oral questioning to test knowledge as listed in the required skills and knowledge section of this unit.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFDIG304A Create visual design components • CUFDIG402A Design user interfaces.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Design specifications</i> may include:</p>	<ul style="list-style-type: none"> • creative requirements • manufacturing specifications • navigation design • priority levels of W3C Accessibility standards • storyboards • technical specifications, including: <ul style="list-style-type: none"> • disk space • bandwidth • delivery platform • file format for final product • user interface design.
<p><i>Relevant personnel</i> may include:</p>	<ul style="list-style-type: none"> • graphic designer • information architect • instructional designer • navigation designer • product designer • programmer • project manager • other specialist staff.
<p><i>Purpose</i> may include:</p>	<ul style="list-style-type: none"> • business and corporate • community • education • entertainment • personal • promotion • training.
<p><i>Interactive media products</i> may include:</p>	<ul style="list-style-type: none"> • e-commerce • educational product • game • information product • interactive application • promotional product

RANGE STATEMENT	
	<ul style="list-style-type: none"> • social network • training product • website.
<i>Media assets</i> may include:	<ul style="list-style-type: none"> • animation • audio • graphics • images • text • video.
<i>Output formats</i> may include:	<ul style="list-style-type: none"> • bitmap image • digital formats, such as: <ul style="list-style-type: none"> • GIF • JPEG • PDF • TIFF • PICT • PNG • HTML • PSD • vector image.
<i>Delivery platform</i> may include:	<ul style="list-style-type: none"> • CD/DVD • games console • internet • kiosk • mobile phone • personal digital assistant (PDA) • other wireless/mobile devices.
<i>Relevant information</i> may include:	<ul style="list-style-type: none"> • brands • logos • previous versions of interfaces • printed materials • promotion materials • style guides • trademarks.
<i>Graphics software</i> may include:	<ul style="list-style-type: none"> • Fireworks • Illustrator • Photoshop • Photoshop Elements.

RANGE STATEMENT	
<i>Typographical</i> elements may include:	<ul style="list-style-type: none"> • alignment • fonts and typefaces • kerning • leading • point and size • serif or sans serif • tracking.
<i>Visual design elements</i> may include:	<ul style="list-style-type: none"> • colour • form • line • shape • texture • tone.
<i>Interactive components</i> may include:	<ul style="list-style-type: none"> • backgrounds • banners • icons • interactive buttons • interactive controls • logos • menus • search boxes.
<i>Visual design principles</i> may include:	<ul style="list-style-type: none"> • balance • emphasis • focal point • movement • perspective • proportion • scale • unity.
<i>Communication principles</i> may include:	<ul style="list-style-type: none"> • communicates message • conveys meaning • meets audience requirements • uses functional components.
<i>Principles of user-centred design</i> may include:	<ul style="list-style-type: none"> • clear feedback and instructions • consistent behaviour and design for: <ul style="list-style-type: none"> • common interface elements • menu systems • search boxes • layout

RANGE STATEMENT	
	<ul style="list-style-type: none"> • iconography • typography • colour • easy exit if wrong path selected • plain English for text and instructions • simplicity • support for work tasks.
<i>Standards</i> may include:	<ul style="list-style-type: none"> • interoperability • readability • usability • W3C Accessibility.

Co-requisite units

Co-requisite units	

CUFDIG404A Apply scripting language in authoring

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to write and apply scripting language in authoring interactive media.</p> <p>An interactive media author is often required to integrate and develop basic scripting routines that are either external or internal to authoring software. This may be necessary to enhance levels of interaction or to remedy errors in the functionality of an interactive media product developed using authoring software.</p> <p>This unit outlines the skills and knowledge required by interactive media authors to write and customise their own code. These routines are relevant to client-side technology only.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>In all interactive media development, authors are working with a team, including primarily a user interface designer, asset creators and programmers.</p> <p>Markup languages such as HTML and XML are covered in:</p> <ul style="list-style-type: none"> • CUFDIG302A Author interactive sequences • CUFDIG401A Author interactive media.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Investigate scripting options	<ol style="list-style-type: none"> 1. Obtain <i>design specifications</i> 2. Identify areas where <i>scripting languages</i> may be required 3. Locate script libraries for pre-written scripts 4. Identify areas where customised or new scripts may be necessary 5. Present and discuss scripting options with <i>relevant personnel</i> to ensure compliance with design specifications
Write scripts	<ol style="list-style-type: none"> 6. Scope control structures and algorithms using pseudo-code and flow charts 7. Ensure objects and assets are in place and identified by appropriate labels 8. Identify and recommend event handlers 9. Write code using correct syntax to meet functional requirements 10. Write comments to document coding where necessary 11. Use <i>authoring environment</i> where appropriate to check code and syntax 12. Save code
Integrate scripting language	<ol style="list-style-type: none"> 13. Source and integrate scripts into authoring environment 14. Ensure <i>scripted elements</i> comply with all navigation and graphic design interface considerations 15. Eliminate or merge redundant code
Test scripting language	<ol style="list-style-type: none"> 16. Test routines to verify script fulfils requirements 17. Conduct tests to ensure that scripted elements conform to required technical specifications 18. Test for faults and document findings 19. Use standard techniques to remove faults
Evaluate scripting language	<ol style="list-style-type: none"> 20. Liaise with relevant personnel to evaluate process and record decisions 21. Archive suitable and relevant scripts for future use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication and literacy skills sufficient to:
 - interpret and clarify written or verbal instructions and design specifications
 - interpret and apply information in user manuals for software applications
- ability to work as a member of a production team - both independently on assignment and under direction
- initiative and flexibility in troubleshooting and solving problems as they arise during the authoring process
- technical skills sufficient to:
 - write and apply scripting language in authoring a range of interactive media and behaviours
 - efficiently use a computer, including keyboard shortcuts
- self-management and planning skills sufficient to:
 - prioritise work tasks
 - meet deadlines
 - seek expert assistance as required

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - sound understanding of the relationship between technical and creative aspects and requirements of interactive media projects
 - sound knowledge of the features of a range of delivery platforms
 - issues and challenges that arise in developing interactive media products
 - file formats of digital media assets and basic optimisation techniques
 - Document Object Model (DOM) and Object Oriented Programming (OOP)
- OHS standards as they relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • ability to write code to meet functional requirements • correct and appropriate integration of scripting language into the process of authoring interactive media products.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to a range of resources, equipment and current industry-standard software as listed in the range statement • appropriate authoring environments • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of at least two interactive products for which the candidate has written and integrated code • written or oral questioning to test knowledge as listed in the required skills and knowledge section of this unit.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFDIG401A Author interactive media.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Design specifications</i> may include:</p>	<ul style="list-style-type: none"> • delivery platforms, such as: <ul style="list-style-type: none"> • internet • CD • mobile devices • interface design • navigation design • storyboards and flow charts. • technical specifications, such as: <ul style="list-style-type: none"> • memory/RAM • bandwidth • file formats • computer operating systems • browsers • user requirements.
<p><i>Scripting languages</i> may include:</p>	<ul style="list-style-type: none"> • ActionScript • Javascript • Lingo • MEL • Perl • VBScript • other proprietary scripting languages.
<p><i>Relevant personnel</i> may include:</p>	<ul style="list-style-type: none"> • designers • interactive authors • IT support • programmers • other specialist technical staff.
<p><i>Authoring environment</i> may include:</p>	<ul style="list-style-type: none"> • authoring software, such as: <ul style="list-style-type: none"> • Flash • Director • browser • text editor.

RANGE STATEMENT*Scripted elements* may include:

- calculations
- changes to browser windows, such as pop-up and colour
- cursor changes
- forms that include elements, such as:
 - radio buttons
 - text fields
 - check boxes
 - list menu
- hot spot interactions
- pop-up windows/messages
- preloaded images
- rollover buttons
- other behaviours.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Determine the criteria for testing	<ol style="list-style-type: none"> 1. Define <i>testing criteria</i> that ensure products meet technical and quality requirements 2. Identify with <i>relevant personnel</i> the <i>production points</i> at which development will be measured 3. Document and communicate testing criteria to relevant personnel
Plan an approach for product testing	<ol style="list-style-type: none"> 4. Identify the various <i>testing methods</i> relevant for <i>interactive media products</i> 5. Determine characteristics and appropriateness of testing methods to be used during development and on completion 6. Consider testing methods in relation to appropriate <i>testing strategy</i> 7. Develop a plan for testing products at specified points during development and on completion 8. Establish <i>records system</i> to document testing results, including problems and faults
Test interactive media at specified production points	<ol style="list-style-type: none"> 9. Determine progress towards completion of identified production points 10. Coordinate testing of products at identified production points 11. Apply testing methods to ensure that products meet creative, production and technical requirements 12. Record problems and faults detected by testing and remedial steps taken in records system 13. Resolve problems and faults detected during testing in accordance with agreed project or industry practice 14. Evaluate final products against the previously determined criteria 15. Document the testing process 16. Convey summarised evaluation report to relevant production personnel
Evaluate the testing process	<ol style="list-style-type: none"> 17. Identify testing methods that were successful and those that led to difficulties 18. Evaluate the testing process and records system 19. Document findings to inform subsequent projects

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify project specifications
 - interpret and analyse information and statistics, and write summary reports
 - convey information to others in the production team
 - work as a member of a production team, including providing leadership in relation to product testing
- organisational skills sufficient to:
 - plan testing processes
 - coordinate testing staff
 - establish records systems
- ability to address and solve problems and challenges in a timely and collaborative manner
- self-management skills sufficient to:
 - prioritise work tasks
 - work under pressure and meet deadlines
 - seek expert assistance as required

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - sound understanding of the relationship between technical and creative aspects and requirements of interactive media projects
 - issues and challenges that arise in testing interactive media products
 - testing criteria
 - range of methods for testing interactive media products
- OHS standards as they apply to computers and environments in which testing may be conducted

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • documented plans for testing interactive media products • ability to identify appropriate testing methods for specific interactive media products • analysis of test results • summary reports containing test results • effective coordination of the testing process, including ability to work collaboratively with team members.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • development of more than one test plan to ensure that skills can be adapted to different circumstances • development of a test plan within commercially-realistic time constraints • involvement of and interaction with others to reflect the collaborative nature of the testing process • access to interactive media products under development • access to equipment used for testing • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of at least two test plans developed by the candidate • evaluation of at least two test reports written by the

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Determine project requirements	<ol style="list-style-type: none"> 1. Analyse project brief to identify <i>purpose</i> of, and target audience for, web environments 2. Consult with clients to clarify <i>project requirements</i> 3. Identify target <i>audience characteristics</i> and determine how these influence all aspects of design 4. Identify content to be incorporated and generated and how this content is to be accessed, searched or delivered
Research and select web environments	<ol style="list-style-type: none"> 5. Research <i>web environments</i> and analyse their potential 6. Analyse how these web environments meet audience and content requirements 7. Identify issues relating to <i>delivery platform</i> and <i>standards</i>, and determine how these may affect web environment options 8. Consult <i>relevant personnel</i> to ensure that all possible web environment options are considered 9. Select web environments that will meet creative, production and technical requirements
Draft design specifications	<ol style="list-style-type: none"> 10. Design the architecture of web environments to show interrelationship between environment components 11. Identify each web environment and specify its individual interactive features, functionality and navigation and its relationship to design as a whole 12. Identify content components and specify how these will be logically structured and integrated into and/or generated by web environments 13. Specify levels of access permissions to web environments as required 14. Specify <i>media assets</i> as required 15. Specify user interfaces of web environments 16. Specify <i>production requirements</i>, including appropriate <i>testing strategies</i> 17. Write draft <i>design specifications</i> to include all relevant advice to design and development teams 18. Discuss draft design specifications with client to ensure designs are consistent with project briefs
Review and confirm design specifications	<ol style="list-style-type: none"> 19. Review designs against required project outcomes, as well as client and audience needs 20. Review designs to ensure they meet creative and technical requirements

ELEMENT	PERFORMANCE CRITERIA
	21. Adjust designs as necessary after discussions with relevant personnel 22. Clarify <i>legislative or ownership issues</i> to comply with production and organisational requirements 23. Confirm with client acceptance of design specifications, including deliverables, milestones and timelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written proposals and creative briefs
 - work collaboratively in a team environment
 - present ideas for the design of web environments for discussion and feedback from team members
 - clearly and concisely document specifications for the design of web environments
- initiative, enterprise and creativity in the context of:
 - generating ideas for the design of web environments
 - thinking laterally when developing concepts
 - undertaking background research into web environments
 - maintaining design integrity
 - finding solutions to problems encountered when designing web environments
 - finding ways to minimise the effect of technical constraints
 - ensuring there is an intuitive and logical flow to the navigation of web environments
- technical skills sufficient to create storyboards, maps and other diagrams to specify the architecture and navigation of web environments
- self-management skills sufficient to:
 - meet deadlines
 - provide appropriate and timely documentation

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - sequence and interrelationship of stages in the process of developing web environments
 - broad range of web applications and technologies
 - web design and its relationship to web optimisation strategies
 - web standards, including SCORM, usability, W3C Accessibility and interoperability
 - issues and challenges that arise in designing and developing web environments
- typical formats and techniques for documenting the design of web environments
- OHS standards as they relate to working for periods of time on computers

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • design specifications for web environments that: <ul style="list-style-type: none"> • are well documented and clearly presented • meet client and audience requirements • are technically feasible • ability to work effectively as a member of a production team.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • practical demonstration of skills through the design of web environments for at least two projects • access to project briefs on which designs can be based • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of designs for web environments documented by the candidate and of their effectiveness in terms of meeting project requirements • observation of a candidate presenting his/her design for web environments to team members and explaining how it meets requirements • written or oral questioning to test knowledge as listed in the required skills and knowledge section of this unit.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- CUFDIG505A Design information architecture
- CUFPPM404A Create storyboards.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Purpose</i> may include:</p>	<ul style="list-style-type: none"> • business and corporate • community • education • entertainment • government • information and news • knowledge management • personal • promotion • training.
<p><i>Project requirements</i> may include:</p>	<ul style="list-style-type: none"> • access to facilities and resources • budget • deliverables • milestones • personnel, including: <ul style="list-style-type: none"> • number • availability • expertise prototyping • technical issues, including: <ul style="list-style-type: none"> • delivery platform • disk space • bandwidth • testing plan • timelines.
<p><i>Audience characteristics</i> may include:</p>	<ul style="list-style-type: none"> • computer literacy • demographics, such as: <ul style="list-style-type: none"> • age • gender • education • occupation • location

RANGE STATEMENT	
	<ul style="list-style-type: none"> • cultural background • hobbies • interests • internet literacy • language, literacy and numeracy • personas • specific needs - physical or psychological.
<i>Web environments</i> may include one or combinations of:	<ul style="list-style-type: none"> • audio streaming • blog • chat • conferencing tool • content learning management system (CLMS) • content management system (CMS) • database repository • discussion forum • dynamic website • electronic newsletter • interactive calendar • interactive form • learning management system (LMS) • podcast • RSS feed • static website • TiVo • video streaming • other online collaboration and social network tools.
<i>Delivery platform</i> may include:	<ul style="list-style-type: none"> • digital television set • internet • mobile phone • other wireless/mobile devices • personal digital assistant (PDA).
<i>Standards</i> may include:	<ul style="list-style-type: none"> • interoperability • SCORM • usability • W3C Accessibility.
<i>Relevant personnel</i> may include:	<ul style="list-style-type: none"> • art director • client • educator • graphic designer

RANGE STATEMENT	
	<ul style="list-style-type: none"> • head of department • information architect • instructional designer • programmer • technical director • technical staff • other specialist creative and administrative staff.
<i>Media assets</i> may include:	<ul style="list-style-type: none"> • animation • audio • audio/visual files, such as PowerPoint • graphics • images • text • text documents, such as PDF and Word • video.
<i>Production requirements</i> may include:	<ul style="list-style-type: none"> • levels of expertise • production deadlines • production schedules • production team • production values • testing strategies.
<i>Testing strategies</i> may include:	<ul style="list-style-type: none"> • alpha • beta • completion • continuous • milestone • prototype • staged.
<i>Design specifications</i> may include:	<ul style="list-style-type: none"> • content inventory • diagrams • flow charts • maps • navigation charts • plans • storyboards • technical specifications • user interface mock-ups • wire frames.

RANGE STATEMENT

Legislative or ownership issues may be:

- access and equity
- clearances
- confidentiality
- copyright
- intellectual property rights
- non-disclosure agreements
- open source licensing
- ownership of assets
- product licensing.

Co-requisite units	

CUFDIG503A Design e-learning resources

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to design an e-learning resource. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.
------------------------	---

Application of the Unit

Application of the unit	<p>The skills and knowledge outlined in this unit are applied by people working in education or training organisations, or in media production companies that specialise in the development of e-learning resources.</p> <p>The focus of this unit is different to that of the two units in the Training and Assessment Training Package that deal with e-learning resources. Namely:</p> <ul style="list-style-type: none"> • TAADES503B Research and design e-learning resources • TAADES504B Develop and evaluate e-learning resources. <p>These two units are written from the perspective of people in training organisations who are responsible for developing and delivering learning materials to be included in e-learning resources.</p> <p>CUFDIG503A is written from the perspective of a department or company responsible for developing the design of broad ranging e-learning resources in consultation with clients. However, there are synergies between the units and it may be appropriate to combine them in learning programs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Identify project requirements	<ol style="list-style-type: none"> 1. With reference to project briefs, identify <i>target learner characteristics</i> and their impact on the way resources are designed 2. Identify <i>content</i> to be incorporated or generated and how this content is to be accessed or delivered 3. Identify <i>delivery platforms</i> and implications that these will have on selection of <i>media assets</i> 4. Consult with clients to clarify <i>project requirements</i>
Research and select instructional design model	<ol style="list-style-type: none"> 5. Analyse content to clearly establish learning outcomes and assessment strategies 6. Research a range of <i>instructional design models</i>, considering their characteristics, differences and ability to meet briefs 7. Identify <i>standards</i> that may apply for a range of delivery platforms 8. Identify <i>learning styles</i> of target learners and consider how these may impact on the design 9. Consider a range of <i>learning activities</i> that best meet learning objectives and needs of target learners 10. Consult with <i>relevant personnel</i> to ensure that a full range of instructional design models has been identified and sourced 11. Select the instructional design model that best meets learning needs and project requirements
Draft design specifications	<ol style="list-style-type: none"> 12. Use selected instructional design model to design the overall architecture of an e-learning resource 13. Design sequences and interactivity based on content and project requirements 14. Develop content templates for content experts if required 15. Specify media assets as required 16. Specify <i>communication and collaborative tools</i> as required 17. Specify user interface of the e-learning resource 18. Specify <i>production requirements</i>, including appropriate <i>testing strategies</i> 19. Write draft <i>design specifications</i> to include relevant advice to design and development teams 20. Discuss draft design specifications with clients to ensure

ELEMENT	PERFORMANCE CRITERIA
	designs are consistent with project briefs
Finalise design specifications	21. Review designs against required project outcomes and target learner needs 22. Review designs to ensure they meet creative and technical requirements 23. Adjust designs as necessary after discussions with relevant personnel 24. Clarify <i>legislative or ownership issues</i> to comply with production and organisational requirements 25. Confirm with clients acceptance of design specifications, including deliverables, milestones and timelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify project briefs
 - establish rapport with clients
 - work collaboratively in a team environment to find the best design solutions
 - clearly and concisely document specifications for the design of e-learning resources
- initiative and enterprise in the context of:
 - generating ideas for the design of e-learning resources that meet the needs of target learners
 - thinking laterally when developing ideas
 - selecting the most appropriate instructional design model
 - maintaining design integrity
- technical skills sufficient to:
 - create storyboards, maps and other diagrams to specify the architecture and navigation of e-learning resources
 - construct material in a logical order, one sequence flowing on from another
 - develop techniques for holding learner's attention
- self-management skills sufficient to:
 - meet deadlines
 - provide appropriate and timely documentation

Required knowledge

- typical formats and techniques for documenting the design of e-learning resources
- OHS standards as they relate to working for periods of time on computers
- range of learning models
- way in which various learning styles impact on learning models
- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - sequence and interrelationship of stages in the process of developing e-learning resources
 - web standards, including usability, W3C Accessibility and interoperability
 - web applications and technologies that are relevant to e-learning
 - issues and challenges that arise in designing and developing e-learning resources

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • design specifications for e-learning resources that: <ul style="list-style-type: none"> • are well documented and clearly presented • meet learner requirements • are technically feasible • ability to work effectively as a member of a production team.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • practical demonstration of skills through the design of at least two e-learning resources for delivery on different platforms • access to project briefs on which designs can be based • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of designs for e-learning resources documented by the candidate and of their effectiveness in terms of meeting project requirements • role-play involving a candidate presenting his/her design for an e-learning resource to a client and explaining how it meets requirements • written or oral questioning to test knowledge as listed in the required skills and knowledge section of this unit.

EVIDENCE GUIDE	
-----------------------	--

Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: <ul style="list-style-type: none">• CUFPPM404A Create storyboards.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Target learner characteristics may include:

- computer literacy
- demographics, such as:
 - age
 - gender
 - education
 - occupation
 - location
 - cultural background
- hobbies
- interests
- internet literacy
- language, literacy and numeracy levels
- learning environment, such as:
 - workplace
 - classroom
 - home
 - community
 - mobile
- personas
- preferred learning styles
- skills level
- specific needs - physical or psychological.

Content may include:

- audio/visual materials
- curriculum documents, such as:
 - Training Packages and their units of competency
 - modules
- guides
- manuals
- PowerPoint presentations
- pre-existing learning materials
- printed materials

RANGE STATEMENT	
	<ul style="list-style-type: none"> • reference texts • training handouts.
<i>Delivery platform</i> may include:	<ul style="list-style-type: none"> • CD/DVD • digital television set • internet, including: <ul style="list-style-type: none"> • websites • blogs • wikis • database repositories • learning management systems, such as: <ul style="list-style-type: none"> • Blackboard • WebCT • Janeson • Moodle <ul style="list-style-type: none"> • virtual classrooms • conferencing • discussion forums • flash-based • chat • podcasting • video streaming • audio streaming • other online collaboration tools • mobile phone • personal digital assistant (PDA) • other wireless/mobile devices.
<i>Media assets</i> may include:	<ul style="list-style-type: none"> • animations • audio • audio/visual files, such as PowerPoint • graphics • images • text documents, such as PDF and Word • video.
<i>Project requirements</i> may include:	<ul style="list-style-type: none"> • access to facilities and resources • assessment strategies • budget • deliverables • learner characteristics • milestones

RANGE STATEMENT	
	<ul style="list-style-type: none"> • personnel, including: <ul style="list-style-type: none"> • number • availability • expertise • prototyping • technical issues, including: <ul style="list-style-type: none"> • delivery platform • disk space • bandwidth • testing plan • timelines.
<i>Instructional design models</i> include:	<ul style="list-style-type: none"> • exploration • game • instructional • lock step • mentoring • problem-solving • puzzle • simulation • story-telling.
<i>Standards</i> may include:	<ul style="list-style-type: none"> • AQTF • interoperability • SCORM • usability • W3C Accessibility.
<i>Learning styles</i> may include:	<ul style="list-style-type: none"> • activist • learning preferences, including auditory, visual or sensory • pragmatist • reflective • theorist
<i>Learning activities</i> may include:	<ul style="list-style-type: none"> • blogs • case studies • checklists • discussions and debates • games • interviews • media presentations • problems

RANGE STATEMENT	
	<ul style="list-style-type: none"> • projects • quizzes • research reports • role-plays • simulations • tasks • work-based practical activities.
<i>Relevant personnel</i> may include:	<ul style="list-style-type: none"> • art director • client • content expert • educator • graphic designer • head of department • information architect • language, literacy and numeracy specialist • programmer • reference group member • technical director • technical staff • other specialist creative and administrative staff.
<i>Communication and collaborative tools</i> may include:	<ul style="list-style-type: none"> • blogs • chat • discussion forums • messaging • TiVo • wikis • other social software tools.
<i>Production requirements</i> may include:	<ul style="list-style-type: none"> • levels of expertise • production deadlines • production schedules • production team • testing strategies.
<i>Testing strategies</i> may include:	<ul style="list-style-type: none"> • alpha • beta • completion • continuous • milestone • prototype • staged.

RANGE STATEMENT	
<i>Design specifications</i> may include:	<ul style="list-style-type: none"> • content inventory • diagrams • flow charts • maps • navigation charts • plans • storyboards • technical specifications • user interface mock-ups • wire frames
<i>Legislative or ownership issues</i> may be:	<ul style="list-style-type: none"> • access and equity • clearances • confidentiality • copyright • intellectual property rights • non-disclosure agreements • open source licensing • ownership of assets • product licensing.

Co-requisite units	

Co-requisite units		

CUFDIG504A Design games

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to design games and document the process for developing them.</p> <p>Game design requires a high degree of collaboration between script writers, programmers and graphic designers.</p> <p>Low-end games can be constructed using interactive authoring tools, but for video game productions, designers need to work with high level programmers to ensure that designs are technically feasible.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.</p>
------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>A lead designer typically applies the skills and knowledge described in this unit, which relate to generating and then working on a game idea until the mechanics and design of the game are fully documented. A lead designer communicates the vision for a game to the rest of the team, takes ideas submitted during design meetings and analyses them to ensure they fit the game's intended objectives. This vision is captured in the game design document.</p> <p>Depending on the size of an enterprise, a lead designer may supervise assistant or level designers and would typically report to a design or creative director.</p> <p>Skills associated with story-telling are covered in:</p> <ul style="list-style-type: none"> • CUFWRT402A Write extended stories.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Identify project requirements	<ol style="list-style-type: none"> 1. Confirm the objective and desired outcomes of a game proposal or brief in consultation with relevant personnel 2. Identify factors that may have an impact on how a game is designed 3. Clarify target audience to determine format and delivery platform of the game through discussion with relevant personnel
Research games and generate ideas	<ol style="list-style-type: none"> 4. Select state of the art games from different genres to play as a source of inspiration 5. Search game literature for each game and identify the games' objectives 6. Generate range of ideas for game designs that are technically feasible, respond to the proposal or brief, and provide creative solutions to design issues 7. Discuss ideas and collaborate, as required, with relevant personnel to ensure contribution of a range of ideas and creative solutions to initial concepts
Select a game genre	<ol style="list-style-type: none"> 8. Identify and present a range of game genres to relevant personnel for consideration in terms of their characteristics, differences and ability to meet requirements of proposal or brief 9. Consult with relevant personnel to ensure that a full range of genres has been identified and sourced 10. Select the game genre that best meets the creative, technical and production requirements of proposal or brief
Draft game design document	<ol style="list-style-type: none"> 11. Establish the game strategy outcomes 12. Use design techniques to develop the structure of a game ensuring that all elements, including style and game mechanics, are fully documented 13. Use a range of criteria to determine the scope of a prototype to be used in the development phase 14. Ensure that the prototype selected is capable of testing the effectiveness of the proposed game 15. Include a register of game assets in consultation with relevant personnel 16. Present draft game design document for discussion with and feedback from other team members
Finalise game design	<ol style="list-style-type: none"> 17. Re-evaluate game design objectives on the basis of feedback on the prototype and draft game design

ELEMENT	PERFORMANCE CRITERIA
document	document 18. Discuss and confirm additional requirements or modifications to the game design with relevant personnel 19. Specify the game <i>production specifications</i> , including appropriate <i>testing strategies</i> 20. Write final game design document to reflect all additional requirements or modifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written proposals and creative briefs
 - work collaboratively in a team environment
 - present game design ideas for discussion and feedback from team members
 - document game design specifications clearly and concisely
- initiative, enterprise and creativity in the context of:
 - generating innovative ideas for game designs
 - thinking laterally when developing concepts
 - undertaking background research into game ideas
 - maintaining design integrity
- technical skills sufficient to create complex designs using storyboards, maps and other diagrams to specify the architecture and navigation of game mechanics
- self-management skills sufficient to:
 - meet deadlines
 - provide appropriate and timely documentation

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - sound understanding of game theory, including traditional games
 - broad range of game genres and styles
 - technical parameters of various games platforms
 - issues and challenges that arise in designing games
- research methods for staying abreast of the latest changes and design enhancements
- requirements of game play design documents
- typical formats and techniques for documenting game designs
- intellectual property rights and copyright clearance procedures
- OHS standards as they relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • development of original and innovative concepts for games • design of game play methods that are compelling for the user and technically feasible • production of clear and well-presented game design documentation • ability to work effectively as a member of a design team.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • practical demonstration of skills through the design of a variety of games for at least two platforms • access to game proposals or briefs on which designs can be based • access to a range of games for viewing • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of game designs documented by the candidate and of their quality in terms of meeting creative briefs • written or oral questioning to test knowledge as listed in the required skills and knowledge section of this unit • case studies to assess ability to develop designs for different types of games.

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- CUFPPM404A Create storyboards
- BSBCRT501A Originate and develop concepts.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant personnel may include:

- art director
- client
- designers
- director
- graphic artist
- head of department
- producer
- programmer
- publisher
- script writer
- software engineer
- other technical and creative staff.

Factors may include:

- availability of personnel
- availability of resources
- available budget
- complexity of proposed game
- intellectual property
- need to attract finance
- production schedule
- production values
- technical parameters, including:
 - technology constraints
 - console
 - platform
 - bandwidth
 - memory/RAM
- timelines
- user and audience.

Delivery platforms may include:

- CD/DVD
- digital television set
- games console
- internet

RANGE STATEMENT	
	<ul style="list-style-type: none"> • mobile phone • personal digital assistant (PDA) • other wireless/mobile devices.
<i>State of the art games</i> may include:	<ul style="list-style-type: none"> • best selling games • games that show unique and innovative approaches.
<i>Game literature</i> may include:	<ul style="list-style-type: none"> • game design books • game post-mortems • magazine, newspaper and journal articles • previews and reviews • strategy guides • user manuals • walkthroughs • other online game resources.
<i>Game genres</i> may include:	<ul style="list-style-type: none"> • adventure • arcade • first person shooter • massively multiplayer online • mazes • platforms • puzzles • racing • rhythm • role playing • simulation • sport • strategy • third person shooter.
<i>Design techniques</i> may include:	<ul style="list-style-type: none"> • drawing • flow chart • scanning • storyboard • using image and background generating tools.
<i>Game mechanics</i> may include:	<ul style="list-style-type: none"> • environment and object interactions • environment dynamics • game objects • game play elements that may include: <ul style="list-style-type: none"> • skill levels • judgements

RANGE STATEMENT	
	<ul style="list-style-type: none"> • choices • decisions • codes • rules • levels of progression • goals • actions • events • levels of difficulty • scoring • calculation of scoring • user control • user interaction • options for single player or multiplayer • customisation • key systems • object actions • object to object interactions.
<i>Criteria</i> may include whether the prototype:	<ul style="list-style-type: none"> • can be demonstrated to a specialist target group • can be used for promotional purposes • can demonstrate the full potential of the game • can sell a concept to potential investors • is appropriate for the chosen genre and style.
<i>Testing the effectiveness</i> of the prototype may include:	<ul style="list-style-type: none"> • comparing game design with original objectives • group discussion techniques • identifying any logical inconsistencies in: <ul style="list-style-type: none"> • design • game timing • story-lines • measuring the levels of user satisfaction • paper and pencil techniques (dry running).
<i>Game assets</i> may include:	<ul style="list-style-type: none"> • animations • audio, including: <ul style="list-style-type: none"> • sound effects • dialogue • narration • music

RANGE STATEMENT	
	<ul style="list-style-type: none"> • cut scenes • titles • video sequences.
<i>Game design document</i> may include:	<ul style="list-style-type: none"> • agent architectures • artificial intelligence • asset register • background story • comprehensive designs for each mission and level • decision-making systems • game mechanics • game tools • graphics • inventories • overview • production specifications • scripts • spatial design • storyboard and flow chart • synopsis • title • user interface • walkthroughs.
<i>Production specifications</i> may include:	<ul style="list-style-type: none"> • budget • intellectual property • levels of staff expertise • production schedule • production values • size and composition of the development team • technology constraints • testing strategies • timelines.
<i>Testing strategies</i> may include:	<ul style="list-style-type: none"> • alpha • beta • completion • continuous • milestone • prototype • staged.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Identify project requirements	<ol style="list-style-type: none"> 1. Discuss concepts with <i>relevant personnel</i> to ensure that design briefs are fully understood 2. Identify technical parameters of interactive media products, including <i>delivery platform</i> 3. Identify target <i>audience characteristics</i> 4. Identify <i>content</i> to be integrated into or generated by interactive media products
Classify and organise content	<ol style="list-style-type: none"> 5. Research and select appropriate thesaurus and <i>metadata standards</i> if relevant 6. <i>Organise content</i> and construct a content inventory detailing levels of hierarchy using <i>classification techniques</i> 7. Assign labels to content that are appropriate and meaningful for target audiences 8. Identify content <i>search requirements</i> 9. Discuss proposed content classification with relevant personnel to ensure that it meets <i>project requirements</i>
Draft information architecture design specifications	<ol style="list-style-type: none"> 10. Sketch overall architecture showing the relationship between interactive content 11. Design forms that detail content input process if required 12. Specify search functionality and search return displays 13. Construct <i>wire frame</i> of the content architecture and navigation pathways 14. Write draft <i>design specifications</i> to include all relevant advice to development teams 15. Present draft design specifications for discussion with and feedback from other team members 16. Amend draft design specifications to accommodate feedback as required 17. Discuss final draft design specifications with clients to ensure designs are consistent with project requirements
Finalise information architecture designs	<ol style="list-style-type: none"> 18. Conduct usability test using appropriate <i>testing techniques</i> 19. Incorporate design changes to information architecture in design specifications 20. Obtain final agreement from relevant personnel for finished design

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, teamwork and literacy skills sufficient to:
 - interpret and clarify written proposals and creative briefs
 - work collaboratively in a team environment
 - present information architecture designs for discussion and feedback from team members and clients
 - document clearly and concisely the information architecture design for an interactive media product
- initiative and flexibility in the context of:
 - analysing, processing and classifying content
 - finding solutions to content classification problems
 - finding ways to minimise the effect of technical constraints
 - ensuring there is an intuitive and logical flow to the navigation of an interactive media product
- technical skills sufficient to:
 - create complex designs using storyboards, maps and other diagrams to specify the architecture and navigation of interactive media products
 - construct wire frames
- self-management skills sufficient to:
 - meet deadlines
 - provide appropriate and timely documentation

Required knowledge

- industry knowledge, including:
 - roles and responsibilities of project team members, e.g. designers, content creators, information architects, programmers and coders
 - content classification techniques of taxonomy and folksonomy
 - metadata standards as they apply to specific products
 - technical parameters of various platforms and how these impact on information architecture
 - issues and challenges that arise in designing games
- understanding the way users scan and read or view interactive content
- typical formats and techniques for documenting information architecture designs
- OHS standards as they relate to working for periods of time on computers

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • clearly documented and user-tested design specifications for the information architecture of an interactive media product • ability to work effectively as a member of a design team • high level of attention to detail.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • practical demonstration of skills through the design of information architecture for at least two interactive media products • access to interactive media proposals or briefs on which designs can be based • that information architecture designs can be tested • access to appropriate learning and assessment support when required • use of culturally appropriate processes and techniques appropriate to the language and literacy capacity of learners and the work being performed.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance • evaluation of information architecture designs documented by the candidate and of their effectiveness in terms of meeting requirements • observation of a candidate presenting his/her information architecture design to team members and explaining how it meets requirements • written or oral questioning to test knowledge as listed in the required skills and knowledge section of this unit

EVIDENCE GUIDE	
	<ul style="list-style-type: none">• case studies to assess ability to develop information architecture designs for a range of interactive media products.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• CUFDIG501A Coordinate the testing of interactive media products• CUFDIG502A Design web environments• CUFDIG503A Design e-learning resources• CUFDIG504A Design games• CUFDIG506A Design interaction.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Relevant personnel</i> may include:</p>	<ul style="list-style-type: none"> • art director • client • educator • graphic designer • head of department • instructional designer • programmer • technical director • technical staff • user interface designer • other specialist creative and administrative staff.
<p><i>Delivery platform</i> may include:</p>	<ul style="list-style-type: none"> • CD/DVD • games console • internet • kiosk • mobile phone • personal digital assistant (PDA) • other wireless/mobile devices.
<p><i>Audience characteristics</i> may include:</p>	<ul style="list-style-type: none"> • computer literacy • demographics, such as: <ul style="list-style-type: none"> • age • gender • education • occupation • location • cultural background • hobbies • interests • internet literacy • language, literacy and numeracy • personas

RANGE STATEMENT	
	<ul style="list-style-type: none"> • specific needs - physical or psychological.
<i>Content</i> may include:	<ul style="list-style-type: none"> • animation • audio/visual files, such as PowerPoint • graphics • images • text • text documents, such as PDF and Word.
<i>Metadata standards</i> may include:	<ul style="list-style-type: none"> • Australian Government Locator Service (AGLS) • CIDOC Conceptual Reference Model (CRM) • Dublin Core • EdNa metadata standards • other standards as appropriate.
<i>Organising content</i> may include:	<ul style="list-style-type: none"> • categorisation, based on: <ul style="list-style-type: none"> • alphabet • numbers • location • time • continuum • subject category • random • chunking • graphical • message • metadata • metaphor.
<i>Classification techniques</i> may include:	<ul style="list-style-type: none"> • folksonomy • taxonomy.
<i>Search requirements</i> may include:	<ul style="list-style-type: none"> • advanced search • browse via menu systems • browse via quick search • metadata search • search site by text box.
<i>Project requirements</i> may include:	<ul style="list-style-type: none"> • access to facilities and resources • budget • deliverables • milestones • personnel, including:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • number • availability • expertise • prototyping • technical issues, including: <ul style="list-style-type: none"> • delivery platform • disk space • bandwidth • testing plan • timelines.
<i>Wire frames</i> may include:	<ul style="list-style-type: none"> • digital software, such as: <ul style="list-style-type: none"> • PowerPoint • Dreamweaver • paper-based.
<i>Design specifications</i> may include:	<ul style="list-style-type: none"> • content inventory • diagrams • flow charts • maps • navigation charts • plans • search functions and search display • storyboards • technical specifications • wire frames.
<i>Testing techniques</i> may include:	<ul style="list-style-type: none"> • card sorting • focus group • heuristic analysis • inspection • user trial.

Co-requisite units		

CUVACD101A Use basic drawing techniques

Modification History

Version	Comments
CUVACD101A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to create a basic visual representation of objects or ideas. It does not relate to drawing as an art form.

Application of the Unit

This unit is introductory in nature and applies to any context where a basic sketch or drawing of objects, ideas or layouts is required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<p><i>Elements describe the essential outcomes of a unit of competency.</i></p>	<p><i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i></p>

Elements and Performance Criteria

<p>1. Prepare for drawing</p>	<p>1.1 Clarify purpose of drawings with <i>appropriate people</i> 1.2 Identify tools and materials required for basic drawing <i>techniques</i> 1.3 Select appropriate <i>tools and materials</i> for basic drawing techniques</p>
<p>2. Produce basic drawings</p>	<p>2.1 Apply a limited range of techniques to represent <i>objects or ideas</i> 2.2 Handle tools and materials safely 2.3 Seek feedback on drawings from relevant people and refine drawings as required</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - clarify purpose of drawings
 - seek feedback to refine drawings
- learning skills to respond to feedback from others to improve own drawing skills
- literacy skills to read basic safety information
- numeracy skills to deal with basic scaling and layout issues

Required knowledge

- materials and tools commonly used for drawing
- different types of drawing
- ways of minimising waste in drawing projects
- OHS issues associated with tools and materials used in drawing work

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce more than one drawing that represents an object or idea • apply a range of basic drawing techniques.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • materials and tools used in drawing work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of work in progress • review of drawings produced by the candidate • oral or written questioning to assess knowledge of drawing techniques and materials • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Appropriate people</i> may include:	<ul style="list-style-type: none"> • colleagues • mentors • supervisors • teachers.
<i>Techniques</i> may include:	<ul style="list-style-type: none"> • application of pigment • linear marks of differing character • linear marks to produce illusion of form in space • simple linear perspective • tonal ranges to produce illusion of form in space.
<i>Tools and materials</i> may include:	<ul style="list-style-type: none"> • board • charcoal • coloured pencils • drafting equipment • graphite pencils • measuring tools • natural ochres • pastels and chalks • pigments • rags • range of papers • sticks • wood or bark.
<i>Objects or ideas</i> may include:	<ul style="list-style-type: none"> • artwork of any type, 2-D or 3-D • costume or wearable object • design solution • movement sequences • props • room layout • sets • stage setup • story or narrative • technical solution.

Visual communication – art, craft and design

CUVACD201A Develop drawing skills to communicate ideas

Modification History

Version	Comments
CUVACD201A	This version first released with <i>CUV11 Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop simple drawing techniques for representing and communicating ideas. It does not relate to drawing as an art form. In a work or learning context this unit may relate to visually communicating ideas about objects, as well as the use of space, narratives or the steps in a process.

Application of the Unit

People working in many industries apply the skills and knowledge in this unit. At this level, a limited range of techniques would be expected, and work would normally be completed under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare to use a range of drawing techniques	1.1 Clarify purpose of drawings with <i>appropriate people</i> 1.2 Identify suitable techniques to represent <i>ideas</i> 1.3 Select <i>tools</i> and <i>materials</i> required for selected techniques 1.4 Take <i>presentation context</i> into account when selecting techniques, tools and materials
2. Produce simple drawings	2.1 Explore ways of representing ideas through application of different techniques 2.2 Seek feedback from others on different drawing techniques 2.3 Select techniques best suited to represent ideas 2.4 Draw ideas using selected techniques 2.5 Respond positively to feedback from others on own work and take action to improve own skills as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to confirm and discuss purpose of drawings
- learning skills to:
 - improve techniques for producing drawings through practice
 - respond appropriately to feedback on own work
- literacy skills to read product labels and instructions
- numeracy skills to deal with basic scaling and layout issues
- planning and organising skills to organise resources for simple drawing projects.

Required knowledge

- physical properties and capabilities of tools and materials commonly used for drawing
- different approaches to drawing and how other practitioners use drawing to represent ideas
- elements and principles of design
- intellectual property issues and legislation in relation to drawing
- ways of minimising waste in drawing projects
- OHS issues associated with tools and materials used for drawing.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce multiple drawings that: <ul style="list-style-type: none"> • demonstrate a basic command of nominated techniques • communicate ideas • are appropriate for the presentation context.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • equipment and materials used to produce drawings.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. Visual communication – art, craft and design

CUVACD401A Integrate colour theory and design processes

Modification History

Version	Comments
CUVACD401A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to explore and integrate colour theory and design processes into two-dimensional or three-dimensional work.

Application of the Unit

Any person working with the design process in a visual communication context applies the skills and knowledge in this unit.

At this level, work would be undertaken independently, with supervision and guidance as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Research information on colour theory and design processes	1.1 Identify and access relevant <i>sources of information</i> on colour theory and design processes 1.2 Research historical and contemporary approaches to colour and design in the context of the work project 1.2 Evaluate information with consideration of how colour and design issues may be integrated into the design process
2. Communicate ideas through the application of colour and design theory	2.1 Select, combine and explore <i>materials, tools and equipment</i> to determine ways in which colour theory and design processes may be integrated 2.2 Explore and develop new ideas through a process of experimentation 2.3 Achieve solutions by working with the fundamental <i>elements and principles of design</i> and different <i>aspects of colour</i>
3. Evaluate design work	3.1 Reflect on own application of design process and success in communicating concepts and ideas 3.2 Identify areas for future improvement, especially in terms of own skill development 3.3 Communicate about completed work with others and respond positively to feedback

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to present and discuss ideas about design
- critical thinking and analytical skills to evaluate information from a wide range of sources in order to develop design ideas
- initiative and enterprise skills to consider new and different ways of achieving required design outcomes
- literacy skills to interpret information about design and colour from a range of sources
- problem-solving skills to identify and resolve technical and conceptual design issues
- numeracy skills to use numerical aspects of software programs
- self-management skills to plan and coordinate own work
- technology skills to use the internet as a research tool.

Required knowledge

- awareness of the notion of individual interpretation and choice within the design process, including the potential limitations of sticking too closely to theory
- ways in which colour theory and design processes can be explored and combined to meet the needs of a brief
- materials, tools and equipment required for the production of samples that integrate colour theory and design processes
- how other artists and designers have applied colour theory and design processes
- intellectual property issues and legislation and their impact on aspects of design
- role and nature of a brief within the design process, including different types of briefs and how designers use them
- sustainability considerations for the design process in the relevant context
- OHS procedures relevant to design context.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • solve design challenges through the application of colour theory and design processes • apply knowledge of the ways in which colour theory and design processes may be used in the production of design or artwork.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • tools, materials and equipment used in the design process in the relevant context.
Method of assessment	<p>Assessment may incorporate a range of methods to assess performance and the application of essential underpinning knowledge, and might include:</p> <ul style="list-style-type: none"> • evaluation of processes used by the candidate to solve design challenges • evaluation of a candidate’s visual diary or other forms of documentation showing the development of the designs • questioning and discussion about candidate’s intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities, and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Sources of information</i> may include:</p>	<ul style="list-style-type: none"> • art and design work • books and magazines • manufactured structures • natural and architectural forms • optics • personal observation • scientific texts • software programs.
<p><i>Materials</i> may include:</p>	<ul style="list-style-type: none"> • clays and plaster • drawing media and implements • hard materials, such as: <ul style="list-style-type: none"> • metal • stone • wood • fabrics and textiles • fixing agents and mechanisms • paints and inks • papers and cardboard
<p><i>Tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • air guns and brushes • clamps • cutting blades • digital equipment • hand tools • light sources • pens and nibs • receptacles • rulers • scissors • spatulas • sponges.
<p><i>Elements and principles of design</i> relate to:</p>	<ul style="list-style-type: none"> • alignment • balance • coherence

	<ul style="list-style-type: none"> • colour • composition • contrast • direction • dominance • emphasis • form • line • movement • negative and positive space • pattern • proportion • proximity • repetition • rhythm • shape • simplicity and complexity • subordination • texture • unity.
<p><i>Aspects of colour</i> may relate to:</p>	<ul style="list-style-type: none"> • addition and subtraction • chroma • colour mix • complementary colours • desaturation • high key • intensity • low key • saturation • temperature • transparency • value.

CUVGRD302A Use typography techniques

Modification History

Version	Comments
CUVGRD302A	This version first released with <i>CUVII Visual Arts, Craft and Design Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use typography techniques in design work. It includes a general knowledge of typography and its application to different design briefs.

Application of the Unit

People working in many industries apply the skills and knowledge outlined in this unit. They may work as individuals providing administrative support within an enterprise, or they may work in specialist design and printing companies where print jobs vary from brochures and corporate stationery to the artwork for billboards, display banners and textile products. At this level, work would be undertaken independently but within established parameters. Supervision or guidance is available as required.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to undertake typographic work</p>	<p>1.1 With reference to <i>briefing documentation</i>, clarify design requirements for <i>typographic work</i> in consultation with <i>relevant personnel</i></p> <p>1.2 Source <i>reference material</i> on typography pertinent to the brief</p> <p>1.3 Confirm <i>equipment, materials</i> and <i>work space</i> requirements</p> <p>1.4 Take account of the requirements for different publication <i>processes</i> when planning work</p> <p>1.5 Set up work space and equipment with due regard to safety considerations and organisational procedures</p>
<p>2. Test and explore a range of typographical techniques</p>	<p>2.1 Identify possible approaches to typography design and establish <i>criteria</i> for the selection of a final approach</p> <p>2.2 Select appropriate materials, tools and equipment for the testing of approaches and <i>techniques</i></p> <p>2.3 Trial typography techniques that may meet the requirements of the brief</p> <p>2.4 Evaluate trialling against criteria and select the preferred design approach</p>
<p>3. Complete typographic work</p>	<p>3.1 Develop the typographic work ensuring consistency with the selected approach and the brief</p> <p>3.2 Review work in progress against project objectives and specifications</p> <p>3.3 Seek and use feedback on work in progress to make adjustments to typographic work as required</p>
<p>4. Ensure quality of typographic output</p>	<p>4.1 Check that typography meets the requirements of the brief, including grammar and technical production and/or printing requirements</p> <p>4.2 Finalise operations in line with <i>organisational procedures</i></p> <p>4.3 Present completed work within agreed time and quality parameters</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - clarify written and verbal instructions
 - complete routine workplace documentation
- initiative and enterprise skills to experiment with typographical elements and techniques that best respond to design specifications
- learning skills to improve own skills in using typography based on feedback and experimentation
- literacy skills to:
 - interpret specifications and briefs for typographic work
 - apply a knowledge of spelling and grammar to proofreading text
- numeracy skills to calculate layout requirements, font sizes and enlargement factors
- planning and organising skills to:
 - plan work tasks in a logical sequence
 - organise resources
- problem-solving skills to adjust fit and fonts to ensure best possible results
- self-management skills to prioritise work tasks and complete work within time and quality parameters
- technology skills to use a broad range of typographical features of industry-standard software.

Required knowledge

- evolution and history of type at an overview level
- characteristics of, and uses for, a range of typefaces
- work space requirements for typographic work, including selection and set-up of work space
- physical properties and capabilities of a range of materials, tools and equipment used for typographic work
- typographic output devices and processes
- elements and principles of design and how they may be used in the development of ideas for typographic work
- intellectual property issues and legislation associated with typographic work
- sustainability issues associated with the materials, tools and equipment used in typographic work
- OHS requirements relevant to typographic work.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply typography in line with design concepts and briefs • produce typography that can be reproduced and transferred across design and pre-press sectors.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • a range of products that require the application of typographic techniques • computers and industry-standard software.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of typography work produced by the candidate in response to particular brief • questioning and discussion about candidate's intentions and the work outcome • review of portfolios of evidence • review of third-party reports from experienced practitioners. <p>Assessment methods should closely reflect workplace demands (e.g. literacy) and the needs of particular groups (e.g. people with disabilities and people who may have literacy or numeracy difficulties, such as speakers of languages other than English, remote communities and those with interrupted schooling).</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • CUFDIG304A Create visual design components • CUVGRD301A Prepare files for publication.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Briefing documentation</i> may contain information, such as:</p>	<ul style="list-style-type: none"> • aesthetic considerations • background information about clients • clients’ needs • constraints: <ul style="list-style-type: none"> • budget • end use for typographical work • timeframe • availability of support services • copy • creative and design objectives • details of type fonts required • legal, contractual, ethical and copyright considerations • equipment • materials • medium • personnel involved in the project • purpose of or audience for final product • relevant statutory requirements • scope for making adjustments • technical objectives • technology • timeframe.
<p><i>Typographic work</i> may be generated by manual or electronic means and can be targeted towards:</p>	<ul style="list-style-type: none"> • advertising or promotion for large or small scale projects, such as: <ul style="list-style-type: none"> • banners • billboards • brochures • identity and branding • labelling • packaging • publishing • websites.
<p><i>Relevant personnel</i></p>	<ul style="list-style-type: none"> • art department

<p>may include:</p>	<ul style="list-style-type: none"> • client • creative director • designer • director • manager • mentor • other technical or specialist personnel • producer • production manager • project manager • representative of organisation commissioning the work • supervisor • technical director.
<p>Reference material may include:</p>	<ul style="list-style-type: none"> • functions, practice and use of typeface in historical and contemporary contexts • information on the main typefaces • legal, ethical contractual and copyright considerations • market analysis and strategies • moral issues • new technology • role of text (copy) in visual communication.
<p>Equipment may include:</p>	<ul style="list-style-type: none"> • brushes • calligraphy pens • CDs • computer • discs • DVDs • printer • scanner • software.
<p>Materials may include:</p>	<ul style="list-style-type: none"> • a range of: <ul style="list-style-type: none"> • papers • board • plastics • textiles • drawing materials, such as: <ul style="list-style-type: none"> • pencils • pens • inks.
<p>Work space requirements may</p>	<ul style="list-style-type: none"> • consideration of OHS issues, including: <ul style="list-style-type: none"> • ergonomics

<p>include:</p>	<ul style="list-style-type: none"> • lighting • ventilation • process space specific needs, such as: <ul style="list-style-type: none"> • equipment • materials • tools • wet and dry areas.
<p>Publication processes may include:</p>	<ul style="list-style-type: none"> • any hard copy printing process • electronic platforms, such as: <ul style="list-style-type: none"> • CD • DVD • games console • internet • kiosk • mobile phone • other video playback devices • personal digital assistant (PDA) • video players (iPods).
<p>Criteria may include:</p>	<ul style="list-style-type: none"> • access to materials, tools and equipment required for typographic work • choice of typography that is consistent with specifications in the brief • ease of production or outputting • personal affinity with materials, tools and equipment.
<p>Techniques may include:</p>	<ul style="list-style-type: none"> • applying colour for specific effects • applying variations to the display of typeface, such as: <ul style="list-style-type: none"> • bold • captions • headlines • scale • titles • applying variations to the properties of a given typeface • composing type with overlays and tints • kerning • positioning typeface and images • serif or sans serif • size • slope • techniques that accentuate the message, such as: <ul style="list-style-type: none"> • font size and position

	<ul style="list-style-type: none"> • font type • use of images • use of white space • weight • use of typesetting technology.
<p><i>Organisational procedures</i> may relate to:</p>	<ul style="list-style-type: none"> • completing routine workplace documentation • cost control • making backup copies of files • managing typographic work to facilitate effective storage, retrieval and output by manual or digital means • process-specific procedures • recycling • removing debris • replacing protective covers and lids • reporting • safety • use of materials • washing and drying tools.

ICADBS504A Integrate database with a website

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure database is integrated with a website.

Application of the Unit

This unit applies to web developers who are responsible for creating data-driven web applications.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Connect to database	1.1 Identify site data needs from technical requirements 1.2 Connect to database from web application using a web development language
2. Retrieve data from database and display on web pages	2.1 Retrieve data using structured query language (SQL) 2.2 Display data in the most appropriate control 2.3 Format data so that it is displayed in the most effective way
3. Update database data from user input	3.1 Update existing data stored in the database with user-supplied input 3.2 Insert data in the database with user-supplied input 3.3 Delete data stored in the database 3.4 Include error checking and validation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - determine functional requirements
 - identify database access points
- communication skills to liaise with clients
- initiative and enterprise skills to provide feedback and recommend the most appropriate technology solutions
- literacy skills to:
 - follow documented instruction from a supplied guide
 - interpret workplace instructions and other technical documents
- planning and organisational skills to organise the most appropriate solution
- problem-solving skills to:
 - identify and rectify website functional problems
 - identify and resolve bugs in the created code
 - select the most efficient and effective algorithms
- research skills to:
 - find solutions to encountered problems
 - keep up-to-date with industry trends
- technical skills to:
 - apply hypertext transfer protocol (HTTP)
 - apply web programming concepts
 - create hypertext markup language (HTML) or eXtensible hypertext markup language (XHTML) pages
 - create software in a web development language
 - create SQL statements
 - create aesthetically pleasing web pages.

Required knowledge

- detailed knowledge of:
 - database structure
 - internet technology as it relates to the use of databases
 - programming control structures, object-oriented programming
 - SQL
- web programming concepts, including:
 - authentication and web security
 - HTTP
 - session management
 - stateless programming.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • create a web application which accesses a database, displaying and modifying the database data provided by user input.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • requirements documentation • web server • database • web development environment • browsers • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of a web application created to access, display and update data stored in a database • verbal or written questioning to ensure knowledge of the impact of data-driven web applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Database</i> may include:	<ul style="list-style-type: none"> • Access • DB2 • Informix • Ingres • Microsoft SQL (MS SQL) server • Mini SQL (mSQL) • MySQL • Oracle • Sybase.
<i>Language</i> may include:	<ul style="list-style-type: none"> • ASP • ASP.NET • Coldfusion • Perlscript • PHP.
<i>User</i> may include:	<ul style="list-style-type: none"> • client • external departments • individuals • internal departments.

Unit Sector(s)

Database

ICANWK414A Create a common gateway interface script

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to define and produce common gateway interface (CGI) script and install that script on a server.

Application of the Unit

This unit applies to individuals in the network or web development area who are required to use CGI scripting as a common means of interacting with websites, providing security access to directories and databases.

Internet access to server CGI scripts provides a powerful means to control a wide variety of operations on the server.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Define specification for CGI script	1.1 Determine the functionality of the CGI <i>form</i> 1.2 Define the functionality of the CGI script 1.3 Choose the appropriate <i>language</i> in which to write the CGI script 1.4 Determine <i>server requirements</i>
2. Create CGI form and write script	2.1 Produce a hypertext markup language (HTML) web document that uses the form elements required by the <i>CGI script specification</i> and includes the uniform resource locator (URL) for the CGI script 2.2 Write the CGI script to function as required by the CGI script specification
3. Test CGI script	3.1 Configure the <i>server</i> , if required, that will host the CGI script 3.2 Upload the CGI script to the server 3.3 Run the CGI form and assess its output 3.4 Reiterate until the specification for the CGI script is met

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business-related matters
- literacy skills to write network documentation in required formats and maintain records
- numeracy skills to interpret technical data
- planning and organisational skills to plan, prioritise and monitor own work
- research skills to gain and maintain current industry technical knowledge
- technical skills to:
 - interpret and write HTML
 - use basic operating system commands
 - use file transfer protocol (FTP) clients.

Required knowledge

- detailed knowledge of:
 - a scripting language
 - CGI 1.1/1.2 specifications
 - security issues surrounding CGI
 - web servers
- overview knowledge of:
 - Copyleft and Free Software Foundation
 - special features relating to copyright and intellectual property.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • review the requirements • produce CGI forms and scripts to meet the requirements • upload scripts to a server • test the script, and rework until requirements is met.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • web servers • ebusiness website • FTP or file transfer client software • server access • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> • scripting language • security issues surrounding CGI • evaluation of candidate's CGI form • review of candidate's CGI script.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ICAWEB409A Develop cascading style sheets

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop cascading style sheets (CSS) that are attached to a markup language document in order to externally define and control styles to enhance and achieve commonality between web documents.

Application of the Unit

This unit applies to web designers and web developers who are involved in the layout and appearance of web pages.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Format, style and lay out the elements on a web page	1.1 Obtain user requirements 1.2 Style elements of a web page using a CSS 1.3 Apply CSS style sheets to multiple pages in a website 1.4 Position document elements using CSS
2. Test and validate web pages	2.1 Test website in various <i>browsers</i> 2.2 Validate the CSS against <i>industry standards</i> 2.3 Report result of tests to <i>appropriate person</i>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify appropriate CSS rules to be applied to obtain desired result
- communication skills to liaise with end users
- initiative and enterprise skills to recommend design features
- literacy skills to:
 - follow documented instruction from a supplied guide
 - interpret workplace instructions and other technical documents
- numeracy skills to work with:
 - document element dimensions
 - relative and absolute measurements
- planning and organisational skills to:
 - create the CSS in allocated timeframe
 - plan the layout of the web page
- problem-solving skills to:
 - create web pages that function in a variety of screen resolutions
 - resolve browser incompatibilities
- research and literacy skills to keep up-to-date with latest industry guidelines
- technical skills to:
 - produce valid accessible web pages
 - use CSS in the most efficient and effective way.

Required knowledge

- overview knowledge of standard web and CSS design principles
- detailed knowledge of:
 - hypertext transfer protocol (HTTP)
 - markup language (HTML, XHTML)
 - web standards.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop a website styled and formatted using CSS to user requirements • lay out page elements using CSS • test web pages in a variety of browsers • validate the CSS against industry standards.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • a computer • aesthetic presentation brief • variety of browsers • HTML documents to have CSS applied to them • internet access to validate the CSS against the World Wide Web Consortium (W3C) • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of CSS rules and how they affect the document styling and layout • evaluation of candidate's created and modified web pages styled using CSS.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.

ICAWEB410A Apply web authoring tool to convert client data for websites

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use web development software to create website content. The unit is designed to use a web authoring tool to convert text and images to appropriate web protocols.

Application of the Unit

This unit applies web developers who are responsible for developing websites using client data.

Using web authoring to convert data is an appropriate method for rapid data translation and prevents the need for a rewrite.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Create files	<p>1.1 Create files and save in correct location and directory</p> <p>1.2 Insert and format text content according to <i>business requirements</i></p> <p>1.3 Insert and optimise <i>images</i> as required</p>
2. Create formatting templates	<p>2.1 Create basic external cascading style sheets (CSS)</p> <p>2.2 Define styles for the required tags according to business requirements</p> <p>2.3 Link CSS to the files and display formatting</p>
3. Define library items	<p>3.1 Identify items that recur on several pages and include in library</p> <p>3.2 Format selected items according to CSS definition</p> <p>3.3 Check tags of selected items</p> <p>3.4 Create and clearly name selected library items</p> <p>3.5 Update items contained in library according to business requirements</p>
4. Develop templates	<p>4.1 Create and save file as template and link with CSS</p> <p>4.2 Format template and create and name editable regions</p> <p>4.3 Place generic image icons in page as required by business image</p> <p>4.4 Save and modify templates</p>
5. Identify authoring requirements	<p>5.1 Select preferred web authoring tool, according to business requirements</p> <p>5.2 Set preferences for web authoring tool, including site <i>file transfer protocol (FTP) client</i></p> <p>5.3 Customise and navigate the web author tool environment or workspace to meet individual <i>requirements</i></p> <p>5.4 Select buttons and tools, both opened and closed, to access full range of features</p> <p>5.5 Define and name site and root folder</p>
6. Create simple forms	<p>6.1 Add form elements to page</p> <p>6.2 Set form element properties for each form element</p> <p>6.3 Insert additional fields as required for processing form</p> <p>6.4 Identify availability and location of common gateway</p>

	<p>interface (CGI) script</p> <p>6.5 Connect form to a script in a <i>server</i> CGI bin</p> <p>6.6 Test form to ensure no errors</p>
7. Create simple navigation	<p>7.1 Create site map to plan navigation</p> <p>7.2 Create links between pages to reflect content structure using both text and images</p> <p>7.3 Check links in multiple <i>browsers</i> for errors</p> <p>7.4 Check website content across a number of different browsers and browser versions to ensure consistency of presentation, performance and accessibility</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse business requirements
- communication skills to:
 - communicate with clients
 - convey and clarify complex information
 - seek assistance and expert advice
- literacy skills to interpret technical documentation, equipment manuals and authoring specifications
- planning and organisational skills to prioritise and monitor own work
- problem-solving skills to solve operational problems as they arise
- safety awareness skills to work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - analyse and interpret technical aspects of implementation
 - design simple forms
 - operate software applications
 - select appropriate authoring tools to meet required specifications
 - write and maintain HTML.

Required knowledge

- Australian Computer Society Code of Ethics
- Authoring Tool Accessibility Guidelines
- standard generalised markup language (SGML) and the associated standards
- standard web and CSS design principles
- website design methods and standard website structures.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop web content using authoring tools to meet specifications • use authoring tools to create cross-browser web documents • create forms • create navigation tools.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • site where web content may be developed using a web authoring tool • site authoring software and tools currently used in industry • business expectations brief • appropriate standards and current legislation • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of web authoring tools • direct observation of candidate using authoring tool to convert client data for website • review of website developed by candidate following business requirements.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.

ICAWEB418A Use development software and IT tools to build a basic website

Modification History

Version	Comments
ICAWEB418A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build a basic website that is consistent with design and technical requirements, and business expectations.

Application of the Unit

This unit applies to web developers responsible for building websites.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Select and analyse website structure and development tools</p>	<p>1.1 Analyse business <i>specification</i> and select appropriate <i>software</i></p> <p>1.2 Identify technical needs for the website and select appropriate <i>software tools</i></p> <p>1.3 Identify site structure and navigation flow and demonstrate understanding of functionality</p> <p>1.4 Review design <i>documentation</i> and integrate design work with site structure and navigation, according to <i>web development standards</i></p>
<p>2. Begin site construction</p>	<p>2.1 Take action to ensure <i>user</i> input during website construction</p> <p>2.2 Validate existing information and basic content when incorporating data on website</p> <p>2.3 Apply consistent design specifications to all aspects of the website</p> <p>2.4 Gather feedback from user on web design, content, accessibility and structure, using appropriate feedback mechanism</p>
<p>3. Complete and validate website construction and content</p>	<p>3.1 Undertake an evaluation of the website against technical requirements and design specification</p> <p>3.2 Test each function and process of the website</p> <p>3.3 Conduct navigation tests and hypertext markup language (HTML) compliance with website standards</p> <p>3.4 Stress test the website to meet design criteria and user load</p> <p>3.5 Record testing results to ensure website meets user requirements</p> <p>3.6 Obtain sign-off and approval of user</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse business specification and select appropriate software
 - debug and handle errors
 - troubleshoot basic web links and HTML code errors
- communication skills to liaise with user
- literacy skills to review design documentation and record testing results
- technical skills to:
 - debug and handle errors
 - develop code in HTML
 - identify technical needs and site structure for the website
 - read design specifications and guidelines
 - use appropriate development software and tools.

Required knowledge

- basic knowledge of:
 - design principles
 - issues around accessibility and equity principles when building for diverse users
- detailed knowledge of:
 - appropriate software and tools that meet required technical specifications
 - standard generalised markup language (SGML) and the associated standards
 - website design
 - web-specific technical attributes.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • build a basic website to website specifications • undertake and audit against the business requirements and design needs prior to task completion and sign-off.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • basic website specifications and guidelines • website development software and tools • internet server • organisational and industry standards • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of website design and web-specific technical attributes • evaluation of candidate's: <ul style="list-style-type: none"> • code generation and the code results • completed website • direct observation of candidate creating website • review of candidate's created website and its fulfilment of requirements.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.

ICAWEB419A Develop guidelines for uploading information to a website

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to support the effective operation of a website by establishing content upload guidelines and procedures in the context of site policies.

Application of the Unit

This unit applies to individuals working in the web area who are required to ensure that a website remains operational.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Develop site policies	<p>1.1 Develop and disseminate policies on acceptable usage, security, privacy and copyright issues based on technical security and privacy <i>requirements</i></p> <p>1.2 Develop and disseminate roles and responsibilities for updating and loading <i>content</i> and removing redundant information</p> <p>1.3 Document and disseminate information about the nature of content able to be updated and loaded</p> <p>1.4 Establish upload <i>documentation</i> and disseminate the processes and procedures for update, loading or removal of content on the site</p> <p>1.5 Implement automatic and routine updating and archiving procedures</p>
2. Establish updating and loading procedures	<p>2.1 Allocate and make available to contributors directory space to update and load new site content</p> <p>2.2 Identify and make available for use authoring guides and resources based on cascading style sheets (CSS) and business style guides</p> <p>2.3 Develop and make available new content templates to be applied by authors for use based on CSS parameters</p> <p>2.4 Allocate and monitor <i>server</i> permissions</p> <p>2.5 Identify preferred <i>file transfer protocol (FTP) client</i> based on best fit with technical environment and make available for use</p> <p>2.6 Customise FTP client to meet requirements</p> <p>2.7 Identify and develop authoring support tools, such as help files and links</p> <p>2.8 Disseminate authoring support tools, such as help files and links as necessary</p>
3. Document guidelines	<p>3.1 Develop documentation for loading information, taking into consideration security and privacy</p> <p>3.2 Document and make available links to recommended support tools</p> <p>3.3 Automate <i>details</i> of recent updates and loading of information, and document on the site</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise and negotiate with colleagues and clients
- literacy skills to:
 - create procedures
 - interpret legislative and standards requirements
 - interpret organisational policy and requirements
- planning and organisational skills to:
 - allocate roles and responsibilities
 - develop guidelines for uploading website content
 - meet organisational and other requirements for uploading site content
- research skills to locate and evaluate available products and services
- technical skills to:
 - analyse websites
 - archive information
 - locate and use authoring guides
 - maintain and administer a website
 - publish on a website
 - transfer files
 - undertake directory maintenance
 - use CSS and content templates
 - use FTP to move data or other files, such as help files or links
 - use website design software
 - write policy.

Required knowledge

- copyright and intellectual property issues
- information architecture
- internet protocols
- procedures for disseminating and documenting technical specifications
- website architecture and business process design and how ebusiness sites fit into corporate strategy.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop procedures for uploading and removing website content that: <ul style="list-style-type: none"> • reflects the strategic intent of the site while maintaining site security and privacy standards • adheres to quality standards for the updating process and data • carries out updates in a secure and convenient manner • research and recommend current industry products and services.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • servers • ebusiness website • FTP software • organisational documentation, requirements and guidelines • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate identifying, analysing and evaluating procedures and tools from a variety of sources, such as authoring tools and updating procedures • verbal or written questioning to assess candidate's knowledge of major elements of website design • review of guidelines developed by candidate for uploading content.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Requirements may include:</p>	<ul style="list-style-type: none"> • application • business • network • people in the organisation • system • advising users of old data being archived and new content that has been posted when updating, loading and removing redundant content.
<p>Content may include information and interactive features, such as:</p>	<ul style="list-style-type: none"> • background articles • company information • copyright and disclaimer notices • customer only information • customer-specific information • error messages • feedback mechanisms • forms • frequently asked questions • hyperlink titles • instructions • product information • ratings, rankings, testimonials and quotes from reviews • reference pages • site map • what's new.
<p>Documentation may follow:</p>	<ul style="list-style-type: none"> • audit trails • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards • naming standards • project-management templates • report writing principles • version control.
<p>Server may include:</p>	<ul style="list-style-type: none"> • application and web servers • BEA Weblogic servers

	<ul style="list-style-type: none"> • email servers • file and print servers • firewall servers • FTP servers • IBM VisualAge and WebSphere • Novell Directory Services (NDS) servers • proxy or cache servers.
<i>File transfer protocol client</i> may include:	<ul style="list-style-type: none"> • AxY FTP for Windows, Linux and Unix • cftp for Unix • Curl for Unix supports FTP, HTTP, and Telnet • gFTP with GUI for Unix supports FTP, HTTP and SSH • lftp command line FTP for Solaris, IRIX, HP-UX, digital Unix and Linux • Lukemftp command-line FTP supports FTP and HTTP URLs • NcFTP client command-line FTP and HTTP URLs for Solaris, FreeBSD, AIX, Linux.
<i>Details</i> may include:	<ul style="list-style-type: none"> • author • location and title of new files • time of update.

Web

ICAWEB421A Ensure website content meets technical protocols and standards

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare a range of content for a website in accordance with customer specifications while ensuring that content is compatible with appropriate technical and infrastructure protocols.

Application of the Unit

This unit applies to those working in the web development area who are required to populate websites according to standards and protocols.

Website design is important for a range contexts, including security, accessibility and legal, moral and ethical issues.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Confirm that content meets required standards</p>	<p>1.1 Take action to ensure that text-based <i>content</i> meets client needs and required style <i>standards</i></p> <p>1.2 Confirm multimedia-based content meets the business design standards or overall look of the website</p> <p>1.3 Check that the mix between multimedia and text-based content provides the required level of interaction identified in the project brief</p> <p>1.4 Test that content conforms to <i>client</i> expectations and technology</p>
<p>2. Confirm that technology supports content</p>	<p>2.1 Take action to ensure that the protocols required for multimedia content are available</p> <p>2.2 Check and confirm that the bandwidth required to support the content is available</p> <p>2.3 Check and confirm that <i>servers</i> support the content and levels of interaction</p> <p>2.4 Check and confirm that plug-ins required to support content are made available</p> <p>2.5 Test and confirm that compression techniques support delivery of content</p>
<p>3. Test content</p>	<p>3.1 Test and confirm that content displays as intended and according to business <i>requirements</i> in target <i>browsers</i></p> <p>3.2 Test with beta <i>users</i> that content encourages interaction and content interaction performs as intended and record results</p> <p>3.3 Test and confirm that plug-ins download with a minimum of steps, complication and time</p> <p>3.4 Test that interactive tools are available and provide the expected results</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with users on technical and content matters
- literacy skills to ensure text-based content meets client needs
- technical skills to:
 - act on protocols required for multimedia content
 - manage file transfer protocols
 - undertake site testing.

Required knowledge

- applicability of copyright, privacy and intellectual property to website development
- common software compression algorithms and associated technologies
- file transfer protocol (FTP) software protocols
- internet protocols
- server access security principles and procedures
- server operating systems
- streaming technologies.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare and integrate a mix of content for a website • use correct streaming and compression techniques.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • documents detailing organisational style guide or policies • PC where software installation may be performed • compression and streaming software • internet connection • live network • network components, hardware and software • networked computers • server and workstation hardware and software • style guides and design brief • technical documentation and installation manuals • use of software currently used in industry • vendor hardware and software components • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of the technologies and associated protocols associated with website design • direct observation of candidate managing FTPs and site testing • review of the candidate's active website.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Content</i> may include:	<ul style="list-style-type: none"> • animation • multimedia content, such as audio and video streaming • sound files • static graphics • text-based documents.
<i>Standards</i> may include:	<ul style="list-style-type: none"> • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) • organisational standards • project standards, found on Standards Australia website.
<i>Client</i> may include:	<ul style="list-style-type: none"> • clubs • external organisations • individuals • internal departments • internal employees.
<i>Servers</i> may include:	<ul style="list-style-type: none"> • application and web servers • building environmental assessment (BEA) Weblogic servers • email servers • file and print servers • firewall servers • FTP servers • IBM VisualAge and WebSphere • Novell Directory Services (NDS) servers • proxy or cache servers.
<i>Requirements</i> may relate to:	<ul style="list-style-type: none"> • application • business • network • people in the organisation • system.

<i>Browsers</i> may include:	<ul style="list-style-type: none">• Galleon• Internet Explorer• Konqueror• Lynx• Mozilla• Netscape Navigator• Opera• Phoenix.
<i>Users</i> may include:	<ul style="list-style-type: none">• department within the organisation• person within a department• third party.

ICAWEB429A Create a markup language document to specification

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, create and save a markup language document to a given specification using a text editor rather than an authoring tool.

Application of the Unit

This unit applies to web designers and developers responsible for the creation of web pages using a markup language.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Analyse specifications and requirements	1.1 Determine uses and audience of the document 1.2 Determine appropriate markup language based on document uses and audience and current industry best practice 1.3 Determine document structure
2. Create document structure	2.1 Create and assign basic elements of the document, taking into account accessibility 2.2 Mark up sections of the document to describe the structure
3. Incorporate web page components	3.1 Identify web page components 3.2 Evaluate suitable web page components 3.3 Include required web page components
4. Validate documents	4.1 Validate markup language document against specifications and record outcomes 4.2 Validate markup language document in different browsers for compatibility and record outcomes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to determine uses, audience and document structure
- communication skills to liaise with end users
- initiative and enterprise skills to recommend design features
- literacy skills to:
 - follow documented instruction from a supplied guide
 - interpret workplace instructions and other technical documents
 - keep up-to-date with latest industry guidelines
- problem-solving skills to use markup language and troubleshoot problems
- technical skills to use a markup language to create the required web page.

Required knowledge

- markup language and associated standards
- range of available browsers' web accessibility.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • design, create and save a markup language document using a markup language without the automated generation of code.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • organisational style guide or policy • user requirements • text editor • range of browsers • internet to validate markup • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation web pages prepared by candidate using a text editor • evaluation of candidate's validated markup code results in commonly used browsers • validation of candidate's markup correctness against standards set by the World Wide Web Consortium (W3C).
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.
--	------------

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Markup language may include:	<ul style="list-style-type: none"> • dynamic hypertext markup language (DHTML) • hypertext markup language (HTML) • standard generalised markup language (SGML) • virtual reality modelling language (VRML) • eXtensible hypertext markup language (XHTML) • eXtensible markup language (XML).
Accessibility may be related to:	<ul style="list-style-type: none"> • browser software, user agent and versions • cultural awareness • ethnicity • physical impairments • remote locations.
Structure may include elements such as:	<ul style="list-style-type: none"> • headings • lists • paragraphs.
Web page components may include:	<ul style="list-style-type: none"> • flash movies • images • links • lists • tables.
Browsers may include:	<ul style="list-style-type: none"> • Firefox • Google chrome • Internet Explorer • Konqueror • Lynx • Mozilla • Opera • Safari.

Unit Sector(s)

Web

ICAWEB502A Create dynamic web pages

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build active or dynamic web pages.

Application of the Unit

This unit applies to web developers responsible for creating dynamic pages to provide interaction between the user and the website.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Identify client and server-side dynamic content	1.1 Review technical requirements 1.2 Identify sections of the website requiring client-side dynamic content 1.3 Identify sections of the website requiring server-side dynamic content 1.4 Select appropriate <i>languages</i> and technology to meet the requirements
2. Create dynamic content	2.1 Create pages using appropriate languages 2.2 Ensure code conforms to current industry best practice and standards
3. Test dynamic pages	3.1 Test website in a variety of <i>browsers</i> 3.2 Ensure required dynamic content functions according to specified requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - determine functional requirements
 - identify dynamic client and server-side requirements
- communication skills to liaise with the client
- initiative and enterprise skills to provide feedback and recommend the most appropriate technology solutions
- literacy skills to:
 - follow documented instructions
 - interpret workplace instructions and other technical documents
 - keep up-to-date with latest industry guidelines
- problem-solving skills to:
 - identify and rectify website functional problems
 - identify and resolve bugs in the created code
 - select the most efficient and effective algorithms
- research skills to:
 - find solutions to encountered problems
 - keep up-to-date with industry trends
- technical skills to:
 - apply basic hypertext transfer protocol (HTTP)
 - apply web programming concepts
 - create hypertext markup language (HTML) and eXtensible hypertext markup language (XHTML) pages
 - create software in a variety of languages, including client and server-side languages
 - create aesthetically pleasing web pages.

Required knowledge

- web-programming concepts, including:
 - authentication and web security
 - HTTP
 - session management
 - stateless programming
- detailed knowledge of:
 - internet technology
 - programming control structures
 - object-oriented programming.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce dynamic web pages that include both client and server-side dynamic content • create efficient and effective code to meet technical requirements.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • appropriate learning and assessment support when required • modified equipment for people with special needs • development environment • server access • database server • browsers.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of dynamic web applications that include both client and server-side coding • written or verbal questioning to assess knowledge and skills of internet technology.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Languages may include:	<ul style="list-style-type: none"> • active server pages (ASP) • active server pages .net (ASP.NET) • Coldfusion • JavaScript • Perl • Perl hypertext preprocessor (PHP) • VBScript.
Browsers may include:	<ul style="list-style-type: none"> • Firefox • Google Chrome • Internet Explorer • Konqueror • Lynx • Mozilla • Netscape Navigator • Opera • Safari.

ICAWEB510A Analyse information and assign meta-tags

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse material and assign meta-tags to ensure the accurate and consistent retrieval of information by users.

Application of the Unit

This unit applies to individuals in a range of information and communications technology (ICT) areas who are required to allocate appropriate meta-tags to information.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Identify requirements for meta-tags	<p>1.1 Identify scope and uses of material from previous and existing business and <i>stakeholder</i> requirements process</p> <p>1.2 Determine appropriate type and structure of meta-tags, taking into account identified <i>client</i> needs, requirements and expectations</p> <p>1.3 Identify and incorporate new or contemporary client requirements and expectations</p>
2. Analyse material	<p>2.1 Use analysis and description tools, standards, precedents and techniques that are appropriate, given the nature of the material</p> <p>2.2 Ensure analysis of subject content of the material reflects expected client usage requirements</p> <p>2.3 Clearly distinguish significant information from minor information</p> <p>2.4 Ensure concepts derived from analysis of material are appropriate to the business requirements and intended use</p>
3. Create meta-tags	<p>3.1 Develop meta-tags using appropriate <i>software</i></p> <p>3.2 Ensure meta-tags represent concepts appropriately, depending on the overall purpose and intended use of the material</p> <p>3.3 Ensure meta-tags conform to general conventions and business rules</p> <p>3.4 Develop reference structure of descriptors, where required to display relationships to assist clients</p> <p>3.5 Enhance meta-tags to meet identified client needs</p>
4. Test and monitor meta-tagging practices and procedures	<p>4.1 Test meta-tagging of material and make changes, if necessary</p> <p>4.2 Regularly review meta-tagging practices and procedures to ensure that client needs are being met</p> <p>4.3 Regularly review industry developments in meta-tagging and take appropriate action to improve practices</p> <p>4.4 Check meta-tags regularly for internal consistency and compliance with established structure, rules and authorities</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse materials for subject content
 - interpret client requirements
- communication skills to liaise with clients and staff
- planning and organisational skills to:
 - evaluate business requirements
 - improve meta-tagging practices over time in line with industry developments
- technical skills to:
 - conduct modelling of data processes
 - use analysis and description tools
 - use meta-tagging tools
 - write hypertext markup language (HTML).

Required knowledge

- business operating systems
- client business domain
- data modelling
- database management system (DBMS) fundamentals
- decision support systems
- document indexing and search engines
- functions and features of databases
- meta-standards, including Dublin core and simple HTML ontology extensions
- OHS principles and responsibilities.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use appropriate techniques to analyse materials for meta-tagging • use software to create meta-tags • enhance and update meta-tags in line with client needs and industry developments.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • information and materials • business requirements • metadata software • project-related documentation • OHS information • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate creating meta-tags, and testing them • verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> • general conventions and business rules for meta-tagging • how reference structure of descriptors can assist clients • review of meta-tags.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Stakeholder</i> may include:	<ul style="list-style-type: none"> • development team • project team • sponsor • user.
<i>Client</i> may include:	<ul style="list-style-type: none"> • external organisation • individual • internal department • internal employee.
<i>Software</i> may include:	<ul style="list-style-type: none"> • Meta Builder 2 • Tag master.

MSACMC210A Manage the impact of change on own work

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills needed by an employee in a competitive manufacturing organisation which requires the employee to participate in and manage the impact of the implementation of competitive manufacturing initiatives on their own work life.
------------------------	--

Application of the Unit

Application of the unit	<p>In a typical scenario, an employee in a competitive manufacturing organisation is required to positively participate in ongoing and continuous change in order for them to be implemented successfully. The employee will be expected to deal with these changes as part of a team and to give feedback from their own perspective.</p> <p>This unit requires the application of skills associated with problem solving, planning and organising and self management for assessing and managing the impact of change on own work. This unit also requires the ability to seek information and feedback from team members on the impact of changes and suggested improvements.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Examine the impact of change on own work practices	1.1. Examine changes to work flow 1.2. Examine changes to equipment/process/physical environment 1.3. Examine changes to work relationship with team members and other teams 1.4. Examine changes to data collection needs 1.5. Examine changed work for impacts on health, safety and environment 1.6. Examine changes to quality requirements 1.7. Identify any additional individual skill needs 1.8. Identify other areas requiring assistance 1.9.
2. Implement change	2.1. Review changes which may have adverse impact with team leader 2.2. Adopt changes to individual work practice 2.3. Seek assistance in gathering/processing data as required 2.4. Implement the data collection/processing and take actions on resulting information in accordance with <i>procedures</i> 2.5. Seek assistance/training to meet needs caused by change
3. Implement continuous improvement	3.1. Critically examine all changes 3.2. Identify impacts of changes both up and down the immediate <i>value chain</i> 3.3. Identify areas for improvement 3.4. Make recommendations for improvement in accordance with procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis
- communication
- problem solving
- reading and interpreting
- teamwork

Required knowledge

- current process and principles of operation
- sources of data on the process/plant and possible applications to information
- methods of determining own skill needs and developing skills required
- health, safety and environment (HSE) principles as relevant to own job
- basic continuous improvement principles

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the training package.	
Overview of assessment requirements	The employee will respond readily to each initiative, making its implementation easier and recommending improvements.
What critical aspects of evidence are required to demonstrate competency in this unit?	Evidence of commitment to a range of initiatives should be available.
What are the specific resource requirements for this unit?	Access to an organisation using competitive manufacturing.
In what context should assessment occur?	Assessment will need to occur in a workplace following competitive manufacturing.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	This unit may be assessed concurrently with any other relevant unit which relates to making a change in the workplace.
What method of assessment should apply?	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.</p>

EVIDENCE GUIDE	
-----------------------	--

What evidence is required for demonstration of consistent performance?	If evidence is provided from an initial move to competitive manufacturing, then sufficient evidence may come from this initial adjustment. Where evidence is provided from a series of improvements, then it will need to be gathered from a range of initiatives to provide sufficient evidence.
---	---

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Managing impact of change

All Elements may be undertaken individually or as part of a team and may require assistance from the team leader for areas outside the employee's range of responsibility and authority.

Competitive manufacturing

Competitive manufacturing is used to describe the range of systemic manufacturing practice concepts and approaches. It covers but is not limited to:

- lean manufacturing
- agile manufacturing
- preventative and predictive maintenance approaches
- monitoring and data gathering systems such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Manufacturing Resource Planning (MRP), and proprietary systems such as SAP
- statistical process control systems including six sigma and three sigma
- Just In Time (JIT), kanban and other pull related manufacturing control systems
- supply, value, and demand chain monitoring and analysis
- other continuous improvement systems.

Competitive manufacturing should be interpreted so as to take into account the stage of implementation of competitive manufacturing approaches, the enterprise's size and work organisation, culture, regulatory environment and manufacturing sector.

Procedures

Procedures include all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, verbal, computer based or in some other form.

For the purposes of this Training Package, 'procedures'

RANGE STATEMENT	
	also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.
Continuous improvement	Continuous improvement (also called kaizen) - the philosophy of continual improvement, that every process can and should be continually evaluated and improved in terms of time required, resources used, resultant quality, and other aspects relevant to the process.
Value chain	Competitive manufacturing organisations encompass the entire production system, beginning with the customer, and includes the product sales outlet, the final assembler, product design, raw material mining and processing and all tiers of the value chain (sometimes called the supply chain). Any truly 'competitive' system is highly dependent on the demands of its customers and the reliability of its suppliers. No implementation of competitive manufacturing can reach its full potential without including the entire 'enterprise' in its planning.

MSACMC410A Lead change in a manufacturing environment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the knowledge and skills needed by people who are given the responsibility of leading change processes in a manufacturing organisation. The change may be occurring in manufacturing or in the support functions of maintenance, office, warehousing etc.
------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>In a typical scenario, change from continuous improvement is a constant in a <i>competitive manufacturing</i> organisation. Change can however be more significant, for example, when the move to competitive manufacturing improvement processes are made, or at other times when significant changes such as the introduction of new products, processes or equipment are made. In these circumstances one or more individuals may have a particular role of leading the change and facilitating its implementation.</p> <p>This unit assumes that consultation between management and workers and other relevant personnel has already occurred and the nature and extent of the change has been agreed. This unit does not cover the negotiation of change in a formal industrial relations sense but does cover the skill needed to identify real or potential change implementation issues including those that may need to be referred to formal consultation and/or dispute settlement procedures.</p> <p>This unit requires the application of skills associated with communication, teamwork, problem solving, initiative, enterprise, planning, organising and self management in order to provide leadership in a change environment. This unit has a strong emphasis on planning and change management, but also requires an ability to learn from experience and feed new information back into strategies to improve performance.</p>
---------------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define nature and impact of change	1.1. Identify enterprise aims and objectives of the change 1.2. Identify opportunities for implementation of change within team and production environment 1.3. Determine impacts of change within team and production environment 1.4. Develop a description of the change, including its potential benefits and impacts on own work and work of team members 1.5.
2. Identify Key Performance Indicators (KPIs)	2.1. Undertake liaison with managers, engineers and other staff responsible for designing and/or implementing change 2.2. Identify Key Performance Indicators (KPIs) for own and team's area of responsibility 2.3. Communicate Key Performance Indicators (KPIs) to all relevant stakeholders 2.4. Check that data collection and processing are appropriate for Key Performance Indicators (KPIs) 2.5. Raise and resolve issues related to Key Performance Indicators (KPIs) with relevant personnel 2.6.
3. Liaise with key stakeholders	3.1. Identify key stakeholders impacted by the change 3.2. Communicate with key stakeholders within scope of authority 3.3. Identify and address <i>issues and concerns</i> of each stakeholder if within scope of authority 3.4. Develop and/or locate information required to address key concerns 3.5. Refer issues and concerns outside of scope of authority to appropriate personnel 3.6.
4. Develop a strategy to help work teams implement change	4.1. Develop a <i>work plan</i> including timetable, key performance indicators, training needs, occupational health and safety (OHS) implications, contingency plans, and responsibilities with team members and senior

ELEMENT	PERFORMANCE CRITERIA
	<p>managers, engineers and other staff responsible for designing and/or implementing change</p> <p>4.2. Make information required to support change available to team members</p> <p>4.3. Communicate/circulate draft work plan to team members, supervisors, technical experts and other appropriate personnel for comment</p> <p>4.4. Assess suggested changes and incorporated into work plan where appropriate</p> <p>4.5.</p>
5. Implement change	<p>5.1. Obtain authorisation to commence change implementation in accordance with enterprise procedures</p> <p>5.2. Implement change in accordance with work plan and enterprise OHS and consultation procedures</p> <p>5.3.</p>
6. Monitor implementation of change	<p>6.1. Maintain open communication channels with all stakeholders during implementation</p> <p>6.2. Monitor Key Performance Indicators (KPIs) during implementation</p> <p>6.3. Encourage and facilitate improvement suggestions of team members</p> <p>6.4. Identify areas requiring improvement in change implementation</p> <p>6.5. Make improvements to implementation according to enterprise procedures</p> <p>6.6.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills:

- communication techniques
- negotiation skills
- information finding and analysing/using skills
- teamwork.

Required knowledge:

- sufficient understanding of the process to contextualise the communication and understand the data requirements to produce the Key Performance Indicators (KPIs)
- project management
- motivational techniques.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

<p>Overview of assessment requirements</p>	<p>The competent person would be able to facilitate the implementation of change by effective communication with all relevant people and by facilitating improvements to the change.</p>
<p>What critical aspects of evidence are required to demonstrate competency in this unit?</p>	<p>Evidence of changes facilitated would be required.</p>
<p>In what context should assessment occur?</p>	<p>Assessment needs to occur in an organisation implementing a significant change either to, or in a competitive manufacturing environment or by a project.</p>
<p>Are there any other units which could or should be assessed with this unit or which relate directly to this unit?</p>	<p>This unit could be assessed concurrently with other team leader units dealing with change/improvement in the organisation.</p>
<p>What method of assessment should apply?</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.</p>

EVIDENCE GUIDE	
What evidence is required for demonstration of consistent performance?	Evidence from one significant change may be sufficient. For less significant changes, a range of changes will be needed to generate sufficient evidence.
What are the specific resource requirements for this unit?	Access to an organisation implementing a significant change to or in competitive manufacturing.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive manufacturing</p>	<p>Competitive manufacturing is used to describe the range of systemic manufacturing practice concepts and approaches. It covers but is not limited to:</p> <ul style="list-style-type: none"> • lean manufacturing • agile manufacturing • preventative and predictive maintenance approaches • monitoring and data gathering systems such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Manufacturing Resource Planning (MRP), and proprietary systems such as SAP etc. • statistical process control systems including six sigma and three sigma • Just in Time (JIT), kanban and other pull related manufacturing control systems • supply, value, and demand chain monitoring and analysis • other continuous improvement systems. <p>Competitive manufacturing should be interpreted so as to take into account the stage of implementation of competitive manufacturing approaches, the enterprise's size and work organisation, culture, regulatory environment and manufacturing sector.</p>
<p>Team</p>	<p>Team may include work teams from all sections of the organisation including production, maintenance, technical, administration/finance, sales/marketing.</p>
<p>Change</p>	<p>The philosophy of continual improvement is that every process can and should be continually evaluated and improved in terms of time required, resources used, resultant quality, and other aspects relevant to the process.</p> <p>Superimposed on this is the concept of breakthrough change when a large change/improvement is made</p>

RANGE STATEMENT	
	which can shift the direction or operation of the organisation. Once such breakthrough change is the introduction of competitive manufacturing.
Issues and concerns	Issues and concerns may be communicated formally and informally and can include individual and group concerns as well as those expressed by and through industrial processes.
Work plan	A work plan can be written or informal but must include consideration of timetable, key performance indicators, training needs, OHS implications, contingency plans and responsibilities. The work plan must be capable of being coherently communicated to others.

MSACMS200A Apply competitive manufacturing practices

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills needed to implement basic improvement practices within a competitive manufacturing organisation. The unit focuses on bringing together the basic concepts and the holistic application of these basic concepts and processes to manufacturing. It would typically be carried out working as part of a team.
------------------------	---

Application of the Unit

Application of the unit	<p>In a typical scenario, an organisation has embarked on the competitive manufacturing path. This requires certain critical skills and principles to be practised in order for competitive manufacturing to succeed. These skills are to be used within the scope of the individual's job and authority.</p> <p>This unit requires the application of skills associated with planning and organising own role within a competitive manufacturing framework. Initiative and enterprise and problem solving is also required to identify the contributions of self and others in the value chain and identify opportunities for improvement.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Focus on the basic competitive manufacturing concepts	1.1. Identify <i>customers</i> and their needs/requirements 1.2. Identify <i>suppliers</i> 1.3. Identify value contributions along the chain 1.4. Identify and recommend methods of increasing own contribution to the value chain
2. Improve the product/process value	2.1. Identify customer features/benefits in the product 2.2. Identify items which contribute to those features/benefits 2.3. Identify things which do not contribute to customer benefits/features 2.4. Recommend methods of increasing features/benefits
3. Use competitive manufacturing tools	3.1. Select appropriate tools for the job/process 3.2. Apply the tool to the job/process 3.3. Monitor the job/process and make adjustments to improve it in accordance with <i>procedures</i> 3.4. Identify own skill requirements and seek skill development if required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis
- communication
- planning
- teamwork
- problem solving

Required knowledge

- the customers and the benefits they derive from the products
- the suppliers and their capabilities
- product waste
- relevant tools for their job and how to apply them
- factors impacting on the product, process and waste, particularly those wholly or partially under their control (and how to control them)

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.</p>	
Overview of assessment requirements	The person will work effectively in a competitive manufacturing environment, making continual positive contributions to the improvement of the business within the scope of their job.
What are the specific resource requirements for this unit?	Access is required to an organisation implementing competitive manufacturing.
What critical aspects of evidence are required to demonstrate competency in this unit?	There should be evidence of the individual's contribution to the value chain and willing application of competitive manufacturing to their job.
In what context should assessment occur?	Assessment should occur in an organisation implementing competitive manufacturing.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	<p>This unit is related to all other units at this level in that it is the general implementation of competitive manufacturing. It could be assessed concurrently with any unit dealing with the <i>tools</i> of competitive manufacturing.</p> <p>This unit is related to:</p> <ul style="list-style-type: none"> • <i>MSACMS400A Implement a competitive manufacturing system</i> which covers the intermediate skill levels in CM.
What method of assessment should apply?	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p>

EVIDENCE GUIDE	
	The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.
What evidence is required for demonstration of consistent performance?	This should be a routine part of the operator's job and there should be evidence that these skills are practised routinely.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Competitive manufacturing</p>	<p>Competitive manufacturing is used to describe the range of systemic manufacturing practice concepts and approaches. It covers but is not limited to:</p> <ul style="list-style-type: none"> • lean manufacturing • agile manufacturing • preventative and predictive maintenance approaches • monitoring and data gathering systems such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Manufacturing Resource Planning (MRP), and proprietary systems such as SAP • statistical process control systems including six sigma and three sigma • Just In Time (JIT), kanban and other pull related manufacturing control systems • supply, value, and demand chain monitoring and analysis • other continuous improvement systems. <p>Competitive manufacturing should be interpreted so as to take into account the stage of implementation of competitive manufacturing approaches, the size of the enterprise, the work organisation, culture, regulatory environment and manufacturing sector.</p>
<p>Customer</p>	<p>Customer may be interpreted to be an internal customer, but typically the benefits to the final customer should be used as the basis for the identification of waste. The operator does not need to interface directly with the external customer, but should be provided with sufficient information to enable them to identify customer benefits and features.</p> <p>Supplier may be interpreted to be an internal supplier, but typically the external supplier and their abilities should be known. The operator does not need to interface directly with the external supplier, but should</p>

RANGE STATEMENT	
	be provided with sufficient information to enable them to identify supplier abilities.
Tools	Tools are used in this unit to mean the tools of competitive manufacturing such as 5S, 6 s , continuous improvement, cause effect diagrams
Procedures	<p>Procedures include all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, verbal, computer based or in some other form.</p> <p>For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.</p>

Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement corrective actions	1.1. Identify impact of process improvements on systems in own work area 1.2. Examine process improvements to equipment, processes or products 1.3. Clarify changes to process improvements as required 1.4. Identify any additional, personal skill gaps and seek skill development 1.5. Adopt improved process
2. Check changes	2.1. Identify claimed <i>improvements</i> 2.2. Identify methods of observing claimed improvements 2.3. Check if claimed improvements are occurring and report problems in accordance with procedures
3. Check for further improvements	3.1. Look for areas of possible further improvement 3.2. Discuss further improvements with peers and supervisors 3.3. Take action to make improvements in accordance with procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> technical competence to perform job problem solving teamwork communication
Required knowledge
<ul style="list-style-type: none"> existing procedures modified procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

<p>Overview of assessment requirements</p>	<p>The person will be able to demonstrate their willing adoption of new equipment, processes, procedures and practices as well as their expertise at implementing them and making critical reviews of their performance in line with their level of competence and authority.</p>
<p>What critical aspects of evidence are required to demonstrate competency in this unit?</p>	<p>Evidence of having sustained improvements in their own job and of assessing these improvements for their real impact.</p>
<p>What are the specific resource requirements for this unit?</p>	<p>Access to a workplace implementing competitive manufacturing strategies or appropriate simulated environment is required. No other specific resources are required.</p>
<p>In what context should assessment occur?</p>	<p>Assessment will need to occur in a workplace where improvements are occurring which impact on the operator's job and they are required to implement changes which sustain these improvements.</p> <p>The unit may also be assessed on a project basis in a simulated environment.</p>
<p>Are there any other units which could or should be assessed with this unit or which relate directly to this unit?</p>	<p>This unit may be assessed concurrently with appropriate units on continuous improvement/kaizen.</p> <p>This unit relates to improvements in a person's own area of responsibility. <i>MSACMS401A Ensure process improvements are sustained</i> is an intermediate skill level unit in the CM.</p>
<p>What method of assessment should apply?</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p>

EVIDENCE GUIDE	
	<p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.</p>
What evidence is required for demonstration of consistent performance?	Evidence should be available from multiple small changes, or from a large change which has had multiple facets implemented over a period of some months.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Performance	<p>Performance may be thought of as the rate of output of the plant compared to the rate required to meet demand.</p> <p>Performance might also be thought of in terms of takt where takt time is the allowable time to produce one product at the rate customers are demanding it. This is NOT the same as cycle time, which is the normal time to complete an operation on a product (which should be less than or equal to takt time).</p>
Procedures	<p>All work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, verbal, computer based or in some other form.</p> <p>For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.</p>
Improvements	<p>Improvement procedures in some enterprises is also known by baka-yoke which is a manufacturing technique of preventing mistakes by designing the manufacturing process, equipment and tools so that an operation literally cannot be performed incorrectly. An attempt to perform incorrectly, as well as being prevented, is usually met with a warning signal of some sort; the term poka-yoke is sometimes referred to as a system where only a warning is provided.</p>

MSACMT230A Apply cost factors to work practices

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the knowledge and skills needed for an individual to identify cost components and to be able to determine in general terms the cost impacts of alternative actions.
------------------------	--

Application of the Unit

Application of the unit	<p>In a typical scenario, a person is required to contribute to and be involved in the assessment of cost factors in their work. This may be done individually or in a team environment.</p> <p>The person is able to assess the relative costs of the alternatives and use this as one of the key factors in making decisions. Decisions are made within the scope of the employee's authority and according to procedures. Typical decisions include those that contribute to the efficient organisation of own work and the improvement of production time and cycle times.</p> <p>This unit requires the application of skills associated with problem solving to identify cost factors and cost implications of own work and self management to apply cost effective practices.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify in own work area major cost components of product or process	1.1. Identify <i>cost components</i> in the product or <i>process</i> in own work area 1.2. Recognise the impact of current or alternative actions on costs
2. Identify constraints to cost efficiency	2.1. Identify required production/process rate and major costs 2.2. Identify costs factors under the control of the individual or team 2.3. Relate identified costs factors to impact on <i>overall cost</i> of production/process 2.4. Identify cost factors that are a constraint to cost efficiency in own work area
3. Apply cost efficient work practices	3.1. Express the implications of possible actions/changes to improve cost efficiency in simple financial terms 3.2. Identify non-financial implications of proposed changes in discussion with relevant people 3.3. Select actions which minimise overall costs 3.4. Monitor actions to ensure cost efficiency in own work area is maintained

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- basic numeracy
- problem solving
- communication

Required knowledge

- cost components of products made
- costs concepts such as expense and income
- major cost contributors to product (eg energy)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

<p>Overview of assessment requirements</p>	<p>The person will as part of their routine decision making aim to minimise costs. There should be evidence of their doing so.</p>
<p>What are the specific resource requirements for this unit?</p>	<p>Access to a workplace implementing competitive manufacturing strategies. No other specific resources are required.</p>
<p>What critical aspects of evidence are required to demonstrate competency in this unit?</p>	<p>Evidence of being able to identify costs factors relevant to an individual's job.</p> <p>Evidence of having made appropriate decisions to minimise overall costs.</p>
<p>In what context should assessment occur?</p>	<p>Assessment will need to occur in a workplace or by use of a work based case study.</p>
<p>Are there any other units which could or should be assessed with this unit or which relate directly to this unit?</p>	<p>This unit may be assessed concurrently with appropriate units on continuous improvement.</p>
<p>What method of assessment should apply?</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed with the assessee prior to the commencement</p>

EVIDENCE GUIDE	
	of the assessment.
What evidence is required for demonstration of consistent performance?	Evidence should be available over a period of time or from more than one process or product.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Cost components	Cost components include fixed and variable costs such as power/energy, materials, plant and equipment, production or process time including impact on salary and wages, office expenses such as telephone and government taxes and charges.
Process	Process may include a production, maintenance, logistics or office process in a manufacturing environment.
Overall cost	Overall cost may include the assessment of negative and positive financial implications. It also includes negative long term issues, such as Occupational Health and Safety (OHS), environmental and regulatory issues.

MSACMT240A Apply 5S procedures in a manufacturing environment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the knowledge and skills needed for an employee to apply 5S procedures (a structured approach to housekeeping) to their own job and work area.
------------------------	---

Application of the Unit

Application of the unit	<p>In a typical scenario, an organisation has decided to embark on a competitive manufacturing strategy and as part of this has adopted the philosophy of 5S as one of the tools to move down this path. The employee needs to apply 5S to their job and work area and maintain the housekeeping and other standards set by 5S.</p> <p>This unit requires the application of skills associated with planning and organising, problem solving and self management, in order to identify and implement 5S housekeeping practices.</p>

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Sort needed from un-needed	1.1. Identify all <i>items</i> in the work area 1.2. Distinguish between essential and non-essential items 1.3. Place any non-essential item in a appropriate place, not in the work area 1.4. Regularly check that only essential items are in the work area
2. Set the workplace in order	2.1. Identify the best location for each essential item 2.2. Place each essential item in its assigned location 2.3. After use immediately return each essential item to its assigned location 2.4. Regularly check that each essential item is in its assigned location
3. Shine the work area	3.1. Keep the work area clean and tidy at all times 3.2. Conduct regular housekeeping activities during shift 3.3. Ensure the work area is neat, clean and tidy at both beginning and end of shift
4. Standardise activities	4.1. Follow <i>procedures</i> 4.2. Follow checklists for activities where available 4.3. Keep the work area to specified standard
5. Sustain the 5S system	5.1. Clean up after completion of job and before commencing next job or end of shift 5.2. Identify situations where compliance to standards is unlikely and take actions specified in procedures 5.3. Inspect work area regularly for compliance to specified standard 5.4. Recommend improvements to lift the level of compliance in the workplace

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication
- planning
- organising
- prioritising
- reading and interpretation
- recording
- problem solving

Required knowledge

- meaning and application of 5S to their job
- principles of efficient workplace organisation
- purposes of 5S
- procedures relevant to job
- methods of making/recommending improvements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.	
Overview of assessment requirements	There should be evidence that the employee is routinely applying 5S principles in their routine work and that they are aware of why 5S is important.
What are the specific resource requirements for this unit?	Access to a plant implementing/practising 5S. No other specific resources re required.
What critical aspects of evidence is required to demonstrate competency in this unit?	Evidence of routine practice of 5S as part of their job.
In what context should assessment occur?	This unit needs to be assessed in a workplace practising, or beginning to implement, 5S.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	<p>This unit could be assessed concurrently with a unit on continuous improvement, or in conjunction with a technical unit related to the process.</p> <p>This unit differs from <i>MSACMT440A Lead 5S in a manufacturing environment</i> which applies to those who also need to help others apply 5S.</p>
What method of assessment should apply?	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed with</p>

EVIDENCE GUIDE	
	the assessee prior to the commencement of the assessment.
What evidence is required for demonstration of consistent performance?	There needs to be evidence that this is a consistent part of their routine work life, and as such, evidence is needed over an extended period.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

5S	<p>5S is a system of work organisation originally developed in Japan based around housekeeping principles.</p> <p>A close translation of the five stages in the housekeeping approach is:</p> <ul style="list-style-type: none"> • sort • set in order • shine • standardise • sustain
Sort	Sort involves keeping only what is absolutely necessary for the production process on the production floor. As a first step, clear the work area of all non-essential equipment and materials. Remove anything either not required to produce the product or adjust the machine during the process. This helps to get rid of a 'just in case' mentality.
Items in work area	Items in work area include tools, jigs/fixtures, materials/components, plant and equipment, manuals, personal items (such as bags, lunch boxes, posters), safety equipment and personal protective equipment, and any other item which happens to be in the work area.
Set in order	After removing unnecessary materials, the remaining materials must be those that are required immediately for either the machine or the job at hand. All of these materials/change/parts etc must have an assigned location on the production floor. Locations should be clearly marked and labelled to show what belongs where.
Shine	The work area should be kept clean at all times. Cleaning must be carried out to a regular daily schedule against allowed time and, on most occasions, at the end

RANGE STATEMENT	
	of a job.
Standardise	Once 5S is established, standardising activities help maintain the order and the housekeeping standards. Standardising may use procedures and checklists developed from a procedure.
Sustain	<p>Sustain means making sure that daily activities are completed every day regardless of circumstance. A job should always be cleaned up once finished regardless of the urgency of the next job. Informal inspections should be done often, at least weekly.</p> <p>Formal inspections of each area should be carried out at least monthly. Specific actions should be followed up. This will generate continuous improvement.</p>
Procedures	<p>Procedures include all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the operation of the plant. They may be written, verbal, computer based or in some other form.</p> <p>For the purposes of CM, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify energy use	1.1. Identify energy consuming processes in relation to own work 1.2. Recognise the type/source of <i>energy</i> consumed
2. Follow energy conservation plans	2.1. Check energy use in accordance with conservation plans 2.2. Identify most efficient or appropriate equipment or procedures to comply with conservation plans 2.3. Identify any uses which do not comply with conservation plans 2.4. Take action in accordance with procedures to bring energy use back in line with conservation plans
3. Improve energy use	3.1. Note any waste of energy use 3.2. Recommend improvements to energy use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis
- basic mathematics
- communication
- problem solving

Required knowledge

- types and sources of energy relevant to the process
- basic principles of energy efficiency
- process needs for energy

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.</p>	
Overview of assessment requirements	The team member will be able to identify the energy use of any/all parts of the process and recommend better ways of using it.
What are the specific resource requirements for this unit?	Access to an organisation seeking to improve its energy usage.
What critical aspects of evidence are required to demonstrate competency in this unit?	Evidence of conformance to energy usage plans and suggestions for improvement should be available.
In what context should assessment occur?	Assessment needs to be conducted in an organisation where energy is a significant cost component or by use of a project, simulation or case study.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	<p>This unit is related to:</p> <ul style="list-style-type: none"> • <i>MSACMT271A Use sustainable environmental practices</i> - which covers general environmental practices, and • <i>MSACMT670A Develop and manage sustainable energy practices</i> - which covers higher level aspects.
What method of assessment should apply?	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed with the assessee prior to the commencement of the</p>

EVIDENCE GUIDE	
	assessment.
What evidence is required for demonstration of consistent performance?	Evidence should be available from the daily routine of the job to show that there is consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Waste</p>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within manufacturing, categories of waste include:</p> <ul style="list-style-type: none"> • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items. <p>Waste for this unit may include activities which do not yield any benefit to the organisation or any benefit to the organisations customers.</p>
<p>Energy</p>	<p>Energy is used to mean all sources of energy used by the process be it electricity, gas or mobile transport fuel. The uses of the energy will also be potentially wide and include heating and cooling, lighting, moving materials (including pumps and conveyors), modifying materials (including cutting, forming, weaving, knitting, reacting, moulding, extruding, mixing), generating pressure/vacuum or providing motive power for equipment and transport.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify resource use	1.1. Identify resources used by processes in area of responsibility 1.2. Recognise the type/source of resource used 1.3. Identify sources of information to expand knowledge and understanding of resources used
2. Comply with environmental obligations	2.1. Follow procedures to ensure there is no breach of environmental regulations/licence conditions 2.2. Identify situations related to job which may lead to a breach of regulations/licence conditions
3. Follow resource conservation plans	3.1. Identify resource conservation plan/section of plan relevant to area of responsibility 3.2. Identify most efficient or appropriate equipment or processes to comply with conservation plans 3.3. Check resource use is in accordance with plan 3.4. Sort/recycle waste according to procedures 3.5. Note any uses which do not comply with plan 3.6. Take appropriate action specified in plan to bring resource use back in line with plans 3.7. Apply energy conservation plans to the use of equipment and tools
4. Improve resource use	4.1. Identify waste of resource use 4.2. Recommend improvements to resource use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis
- basic mathematics
- communication
- problem solving

Required knowledge

- the '3 Rs' - reduce, re-use, recycle
- regulatory/licensing requirements relevant to the process/plant
- types and sources of resource
- basic principles of resource efficiency
- process needs for resource

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.	
Overview of assessment requirements	The competent team member will be able to identify the resource use of any/all part/s of the process and recommend better ways of using it.
What are the specific resource requirements for this unit?	Access to an organisation seeking to improve its resource usage.
What critical aspects of evidence are required to demonstrate competency in this unit?	Evidence of conformance to resource usage plans and suggestions for improvement should be available.
In what context should assessment occur?	Assessment needs to be conducted in an organisation where resource is a significant cost component or by project, simulation or case study.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	This unit is related to: <ul style="list-style-type: none"> • <i>MSACMT270A Use sustainable energy practices - which covers energy specifically, and</i> • <i>MSACMT671A Develop and manage sustainable environmental practices - which covers the higher skill levels.</i>
What method of assessment should apply?	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed</p>

EVIDENCE GUIDE	
	with the assessee prior to the commencement of the assessment.
What evidence is required for demonstration of consistent performance?	Evidence should be available from the daily routine of the job to show that there is consistent performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Waste</p>	<p>Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product.</p> <p>Within manufacturing, categories of waste include:</p> <ul style="list-style-type: none"> • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items. <p>Waste for this unit may include activities which do not yield any benefit to the organisation or any benefit to the organisations customers.</p>
<p>Necessary waste</p>	<p>Necessary waste is any activity or cost which does not contribute directly to customer benefit/feature in the product, and which cannot be avoided (for example regulatory compliance and fixed costs). Necessary waste cannot be eliminated but should be managed.</p>
<p>Unnecessary waste</p>	<p>Unnecessary waste is any activity or cost which does not contribute directly to customer benefit/features in the product and can be avoided. Unnecessary waste should be eliminated as quickly as practical.</p>
<p>Resource</p>	<p>Resource is used to mean resources used by the process be it raw materials, components, process water, cooling water, cleaning water and so on.</p>
<p>Recognise</p>	<p>Recognition of type of resource is at an appropriate level for the person and the area and includes things like recognising steam/electric heating, cooling water/refrigerated cooling, raw materials waste</p>

MSACMT280A Undertake root cause analysis

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	<p>This unit covers the knowledge and skills needed to undertake root cause analysis (RCA) by any person. This will often be done by people working in a team. This unit also covers the competencies needed by operators to contribute to an advanced maintenance strategy using RCA coupled with diagrams and charts.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>In a typical scenario, the employee works in an organisation which is applying competitive manufacturing strategies. This involves the operator 'owning' their process, taking responsibility for it, undertaking root cause analysis of problems and generally contributing to increasing the <i>uptime</i> and general <i>Overall Equipment Efficiency (OEE)</i>.</p> <p>This unit requires an ability to seek and apply information from a variety of sources in order to inform problem solving analyses. Initiative and enterprise is also required to identify quick fix and permanent solutions to problems.</p>
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	
---------------------------	--

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Recognise problems	1.1. Identify equipment/plant characteristics indicative of a problem 1.2. Identify process conditions/product characteristics indicative of a problem 1.3. Use appropriate techniques/charts to define the problem
2. Implement quick fix	2.1. Recommend/implement a quick fix within the scope of competency and authority 2.2. Use technology or processes relevant to the problem to implement quick fix
3. Determine root cause	3.1. Identify a range of possible causes 3.2. Gather information to eliminate/confirm causes 3.3. Construct a cause and effect diagram from available data 3.4. Seek assistance as required 3.5. Identify root cause
4. Develop permanent solution	4.1. Identify a range of methods of eliminating the root cause/ breaking the <i>cause tree</i> 4.2. Select the most appropriate solution 4.3. Liaise with relevant people 4.4. Recommend or implement solution within the limits of competency and authority 4.5. Monitor impact of solution and make further recommendations as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis
- problem solving
- communication
- documenting

Required knowledge

- root cause analysis methodology
- indicators of a problem
- principles of the process sufficient to undertake a RCA and propose solutions
- use of relevant analysis tools (eg cause/effect diagrams, Pareto charts, 4W)

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide describes the underpinning knowledge and skills that must be demonstrated to prove competence. It is essential for assessment and must be read in conjunction with the performance criteria, the range statement and the assessment guidelines of the relevant training package

Overview of assessment requirements	The competent operator will be able to recognise problems in their process and undertake a root cause analysis, either alone or with assistance and propose permanent solutions.
What are the specific resource requirements for this unit?	Access to an organisation using root cause analysis.
What critical aspects of evidence are required to demonstrate competency in this unit?	Evidence of root cause analyses undertaken should be available.
In what context should assessment occur?	Assessment will need to occur in an organisation implementing root cause analysis or by simulation or project.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	<p>This unit could be assessed concurrently with other units dealing with the improvement of the process.</p> <p>This unit could be co-assessed (and delivered) with:</p> <ul style="list-style-type: none"> • <i>MSAPMSUP390A Use structured problem solving tools</i> • <i>MEM15001B Perform basic statistical quality control.</i> <p>This unit is related to <i>MSACMT281A Implement a predictive maintenance strategy</i> as root cause analysis is one tool used in predictive maintenance.</p>
What method of assessment should apply?	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include</p>

EVIDENCE GUIDE	
	<p>direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.</p>
What evidence is required for demonstration of consistent performance?	Generally a range of root cause analysis activities will be required in order to generate sufficient evidence.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Root cause	<p>There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem.</p>
Cause tree	<p>The series of causes is referred to as the cause tree. Not all root causes are accessible and able to be eliminated. Breaking the cause tree in such a way that the problem cannot recur is an acceptable alternative.</p> <p>Not all situations can wait for the <i>root cause analysis</i> and eventual elimination of the root cause as there are serious current impacts. The <i>quick fix</i> will control these immediate impacts, but does not eliminate the root cause.</p>
Uptime	<p>Uptime refers to the overall availability of the plant - it is the inverse of downtime - or the unavailability of the plant. Ideal uptime is 100%.</p>
Appropriate techniques/charts	<p>Appropriate techniques/charts may include the following:</p> <ul style="list-style-type: none"> • control charts • Pareto charts • run charts • flow charts • cause and effect diagrams • tree diagrams • 4W analysis.
Overall Equipment Efficiency (OEE)	<p>Overall Equipment Efficiency (OEE) is the combination of the main factors causing loss of productive capacity from equipment/plant and is:</p>

RANGE STATEMENT

	<p><i>OEE = availability x performance x quality rate</i></p> <p>where:</p> <ul style="list-style-type: none"> • availability takes into account losses due to breakdown, set up and adjustments • performance takes into account losses due to minor stoppages, reduced speed and idling • quality rate takes into account t losses due to rejects, re-works and start up waste.

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Facilitate the set up of 5S	1.1. Assist team members to determine what are necessary and unnecessary items in the work area 1.2. Assist team members to determine optimum assigned location for all necessary items 1.3. Liaise with relevant production and occupational health and safety (OHS) personnel in determining optimum locations 1.4. Assist team members to determine optimum location for unnecessary items 1.5. Assist team members to determine 5S schedule 1.6. Ensure <i>procedures</i> reflect 5S practices 1.7. Assist team members to achieve the required level of skill
2. Monitor 5S	2.1. Check work area for 5S implementation as part of normal routine 2.2. Identify non-conformances 2.3. Negotiate solutions to non-conformances
3. Improve the 5S	3.1. Work with team members to find areas for improvement 3.2. Assist team members to develop improvement solutions 3.3. Facilitate the availability of resources required for the improvement solution 3.4. Facilitate the implementation of the improvement solution

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills:

- communication
- planning
- organising
- prioritising
- reading and interpretation
- recording
- problem solving
- teamwork.

Required knowledge:

- meaning and application of 5S to their job
- principles of efficient workplace organisation
- purposes of 5S
- procedures relevant to job
- identification of skill gaps
- methods of addressing skill gaps
- ways of encouraging team members to find and suggest areas for improvement
- methods of making/recommending improvements
- methods of accessing required resources
- OHS

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.	
Overview of assessment requirements	There should be evidence of successful application of 5S in the person's work group and their positive interaction with it.
What critical aspects of evidence are required to demonstrate competency in this unit?	There should be evidence of the person's assisting team members to implement 5S and/or to implement improvements to 5S. There should be evidence of continuous improvement.
In what context should assessment occur?	Assessment needs to occur in a workplace practising or implementing 5S.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	<p>This unit could be assessed concurrently with other units relating to the team leader's interactions with their team.</p> <p>This unit differs from <i>MSACMT240A Apply 5S procedures in a manufacturing environment</i> which covers the application of 5S to the person's own work.</p>
What method of assessment should apply?	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace.</p> <p>The method of assessment should be discussed and agreed with the assessee prior to the commencement</p>

EVIDENCE GUIDE	
	of the assessment.
What evidence is required for demonstration of consistent performance?	5S needs to be a routine, natural part of everyone's job. As such there should be evidence of consistent application of 5S over an extended period.
What are the specific resource requirements for this unit?	Access to a workplace implementing or practising 5S. No other specific resources are required.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures

Procedures include all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, verbal, computer based or in some other form.

For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (e.g. Good Manufacturing Practice (GMP), Responsible Care) and government regulations.

5S

5S is a system of work organisation originally developed in Japan based around: A close translation of the five stages in the housekeeping approach is:

- sort
- set in order
- shine
- standardise
- sustain

Functional area

Functional Area	
------------------------	--

MSACMT621A Develop a Just in Time (JIT) system

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills needed to plan and implement a Just in Time (JIT) production system in manufacturing. It covers both the initial JIT implementation and also the ongoing improvement and implementation of the improved system.
------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>In a typical scenario, an organisation decides to adopt JIT and so needs to plan and develop their JIT system. This unit covers the skills needed to both plan the implementation of JIT and also consult with employees, suppliers and customers regarding the change. This may require identification of training and other employee support as well as identifying possible logistical support.</p> <p>It includes <i>kanban</i> based JIT systems but uses JIT principles so that it is applicable to process manufacturing and other sectors and systems that are not suitable for a kanban type JIT implementation.</p> <p>This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to determine an effective JIT system for the enterprise. This unit also requires aspects of self management and learning to ensure feedback and new learning is integrated into the JIT design.</p> <p>This unit could be assessed concurrently with:</p> <ul style="list-style-type: none"> • <i>MSACMS601A Analyse and map a value chain, and/or</i> • <i>MSACMT650A Determine and improve process capability.</i> <p>This unit is related to:</p> <ul style="list-style-type: none"> • <i>MSACMT221A Apply Just in Time(JIT) procedures, and</i> • <i>MSACMT421A Facilitate a Just in Time (JIT) system</i> <p>which cover the lowest and intermediate skill levels in CM respectively.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Design the JIT system/system improvements	1.1. Identify <i>value chain</i> members 1.2. Consult with internal and external value chain members 1.3. Identify current storage/inventory in value chain 1.4. Determine flow authorisation indicators 1.5. Determine minimum and maximum production rate capability 1.6. Determine production lead time for products subject to JIT 1.7. Determine number of <i>cards/bins</i> and number of units per card/bin 1.8. Draft workable procedures to implement JIT
2. Implement the JIT system/improvements	2.1. Consult with key internal stakeholders to develop solutions to JIT issues 2.2. Ensure all stakeholders have required JIT related skills and related issues have been resolved 2.3. Liaise with key external members of the value chain to develop solutions to JIT issues 2.4. Develop implementation plan for JIT 2.5. Determine <i>key measures</i> of JIT
3. Monitor the JIT system	3.1. Monitor key measures of JIT 3.2. Regularly liaise with key stakeholders seeking areas for improvement 3.3. Identify areas in need of improvement

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- reading
- recording
- communicating
- planning
- analysing
- problem solving
- negotiating

Required knowledge

- needs of value chain members
- principles of JIT
- reasons for delays/storages/inventories in the value chain and methods of reducing/eliminating them
- methods of identifying skill gaps and methods of filling skill gaps
- key business objectives associated with implementing JIT
- principles of the manufacturing process relevant to the section/team
- production data generated by the process and its application to JIT

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.</p>	
Overview of assessment requirements	The person will be able to plan the initial introduction of JIT to an organisation or a process, or plan improvements to an existing JIT system.
What are the specific resource requirements for this unit?	Access to an organisation using JIT.
What critical aspects of evidence are required to demonstrate competency in this unit?	Evidence of the design, implementation and monitoring of a JIT system and the effective operation of the JIT system are required.
In what context should assessment occur?	Assessment needs to occur in an organisation using JIT or by use of a suitable project or case study.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	<p>This unit could be assessed concurrently with:</p> <ul style="list-style-type: none"> • <i>MSACMS601A Analyse and map a value chain, and/or</i> • <i>MSACMT650A Determine and improve process capability.</i> <p>This unit is related to:</p> <ul style="list-style-type: none"> • <i>MSACMT221A Apply Just in Time(JIT) procedures, and</i> • <i>MSACMT421A Facilitate a Just in Time (JIT) system</i> <p>which cover the lowest and intermediate skill levels in CM respectively.</p>
What method of assessment should apply?	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment.</p> <p>Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.</p> <p>The assessee will have access to all techniques, procedures, information, resources and aids which would normally be</p>

EVIDENCE GUIDE	
	<p>available in the workplace.</p> <p>The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.</p>
What evidence is required for demonstration of consistent performance?	<p>Where evidence is gathered from the initial introduction of JIT to an organisation or a process, then this single project may generate sufficient evidence. Where evidence is gathered from continuous improvements to an existing JIT system, then it will be required from a range of improvements to generate sufficient evidence.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Just In Time (JIT)	Just In Time (JIT) is a production scheduling concept that calls for any item needed at a production operation, whether raw material, finished item, or anything in between, to be produced and available precisely when needed, neither a moment earlier nor a moment later.
Kanban	<p>Kanban - a card or sheet used to authorise production or movement of an item; when fully implemented, kanban (the plural is the same as the singular) operates according to the following rules:</p> <ul style="list-style-type: none"> • all production and movement of parts and material take place only as required by a downstream operation, i.e. all manufacturing and procurement are ultimately driven by the requirements of final assembly or the equivalent • the specific tool which authorises production or movement is called a kanban. The word literally means card or sign, but it can legitimately refer to a container or other authorizing device. Kanban have various formats and content as appropriate for their usage (eg a kanban for a vendor is different than a kanban for an internal machining operation). <p>Kanban is typically applied to batch type operation and the production is measured in units produced. In continuous manufacturing organisations, production is measured in terms of production rate (eg kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (eg ticket, order from a supplier) or may be a SCADA signal from a remote facility (eg customer tank) saying that resupply is required or similar.</p>
SCADA	System Control and Data Acquisition (SCADA) is a general term applied to a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then

RANGE STATEMENT	
	make control decisions and/or give required information personnel for action.
Value chain	Competitive manufacturing organisations encompass the entire production system, beginning with the customer, and includes the product sales outlet, the final assembler, product design, raw material mining and processing and all tiers of the value chain (sometimes called the supply chain). Any truly 'competitive' system is highly dependent on the demands of its customers and the reliability of its suppliers. No implementation of competitive manufacturing can reach its full potential without including the entire 'enterprise' in its planning.
Flow authorisation indicator	Flow authorisation indicator may be kanban bin, ticket or similar, or may be some other indicator of demand pull.
Pull system	Pull system - a manufacturing planning system which makes to demand, rather than for stock or to a forecast.
Cards/bins	The indicators used for production authorisation and may be physical cards or bins or some other suitable indicator.
Procedures	Procedures include all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, verbal, computer based or in some other form. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.
Key measures	Key measures may include inventory levels, lead time, IFOTIS delivery, productivity/production rate, other measures of pull through the value chain, quality. IFOTIS refers to delivery of product In Full, On Time and In Specification.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify current resource use and environmental issues.	1.1. Identify workplace <i>environmental and resource efficiency issues</i> . 1.2. Identify resources used in own work role. 1.3. <i>Measure</i> and record current usage of resources using <i>appropriate techniques</i> . 1.4. Identify and report workplace environmental hazards to appropriate personnel.
2. Comply with environmental regulations.	2.1. Follow <i>procedures</i> to ensure <i>compliance</i> . 2.2. Report environmental incidents to appropriate personnel.
3. Seek opportunities to improve environmental practices and resource efficiency.	3.1. Follow <i>enterprise plans</i> to improve environmental practices and resource efficiency. 3.2. Make <i>suggestions</i> for improvements to workplace practices in own work area.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include the ability to:

- report as required by procedures
- follow procedures and instructions and respond to change
- ask questions and seek clarifications relating to work requirements

Reading and writing is required in order to interpret required procedures and complete required workplace forms/reports.

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Competency includes sufficient knowledge to:

- have a basic understanding of sustainability
- know the environmental hazards/risks, resource use and inefficiencies associated with own workplace (at an appropriate level)
- know the relevant environmental and resource efficiency systems and procedures for own work area
- know the impact of laws and regulations to a level relevant to the work context

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competence in this unit must be able to provide evidence of the ability to follow workplace procedures according to instructions given and to participate in the improvement of environmental and resource efficient work practices at own level of responsibility. Evidence must be strictly relevant to the particular workplace role.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify and measure resources used in their job
- identify situations likely to lead to an environmental incident
- follow procedures related to environmental performance.

Consistent performance should be demonstrated. For example, look to see that:

- work is routinely to procedures
- the minimum of resources is used consistent with the job requirements, good practice and the procedures.

Context of and specific resources for assessment

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Depending on the selected methods of assessment access may be required to:

- workplace procedures and plans
- documentation in relation to production, waste, overheads, hazard control/management
- reports from supervisors/managers
- case study/scenarios

Method of assessment

A holistic approach should be taken to the assessment.

Competence in this unit may be assessed:

- by demonstration in the workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • using targeted questioning for appropriate portions • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Procedures</p>	<p>All operations are performed in accordance with procedures including all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.</p>
<p>Environmental and resource efficiency issues</p>	<p>Environmental and resource efficiency issues include minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient production and consumption of natural resources, for example by:</p> <ul style="list-style-type: none"> • minimisation of waste, through implementation of the waste management hierarchy • efficient and effective use of energy and other resources • seeking alternative sources of energy • efficient use of materials and appropriate disposal of waste • use of controls to minimise the risk of environmental damage from hazardous substances • efficient water use • reducing emissions • life cycle analysis applied to issues such as energy supply, materials, transport, production
<p>Measure</p>	<p>Measure should be interpreted in a manner consistent with the scope of the job and may include things like:</p> <ul style="list-style-type: none"> • counting the number of items entering/leaving a work area • reading indicators in the work area • obtaining relevant information from support

RANGE STATEMENT	
	<p>personnel</p> <ul style="list-style-type: none"> • other simple means
Appropriate techniques	<p>Appropriate techniques include:</p> <ul style="list-style-type: none"> • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data.
Compliance	<p>Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and mandated codes of practice. It also includes any codes and standards that the enterprise applies voluntarily.</p>
Incidents	<p>Incidents include:</p> <ul style="list-style-type: none"> • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance.
Enterprise plans	<p>Enterprise plans include:</p> <ul style="list-style-type: none"> • documented policies and procedures • work plans to minimise waste, increase efficiency of water/energy use, minimise environmental hazards
Suggestions	<p>Suggestions include ideas that help to:</p> <ul style="list-style-type: none"> • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • improve energy efficiency • increase use of renewable, recyclable, reusable and recoverable resources • reduce waste • increasing the reusability/recyclability of wastes/products • reduce water usage and/or water wastage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate current practices in relation to resource usage.	1.1 Identify environmental regulations applying to the enterprise. 1.2 Assess procedures for assessing <i>compliance</i> with environmental regulations. 1.3 Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate. 1.4 Measure and record current resource usage by members of the work group. 1.5 Analyse and record current purchasing strategies. 1.6 Analyse current work processes to access information and data and assist in identifying areas for improvement.
2. Set targets for improvements.	2.1 Seek input from stakeholders, key personnel and specialists. 2.2 Access external sources of information and data as required. 2.3 Evaluate alternative solutions to workplace environmental issues. 2.4 Set efficiency targets.
3. Implement performance improvement strategies.	3.1 Source <i>techniques/tools</i> to assist in achieving targets. 3.2 Apply continuous improvement strategies to own work area of responsibility and communicate ideas and possible solutions to the work group and management. 3.3 Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them. 3.4 Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate. 3.5 Implement costing strategies to fully value environmental assets.
4. Monitor performance.	4.1 Document outcomes and communicate reports on targets to key personnel and stakeholders. 4.2 Evaluate strategies. 4.3 Set new targets and investigate and apply new tools and strategies. 4.4 Promote successful strategies and reward participants where possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using relevant environmental and resource efficiency systems, tools and procedures
- applying quality assurance systems relevant to own work area
- applying relevant supply chain procedures
- measurement and calculation techniques
- communication/consultation skills to ensure information is supplied to the work group

Reading and writing is required to comprehend documentation and interpret environmental and energy efficiency requirements and to document and maintain records

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Required knowledge includes:

- how to access and use relevant environmental and resource efficiency systems, tools and procedures
- understanding of best practice approaches relevant to own area of responsibility
- strategies to maximise opportunities and minimise impacts relevant to own work area
- relevant environmental and resource efficiency issues specific to industry practices
- methods for measuring and calculating resource usage

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competence in this unit must be able to provide evidence of the ability to implement and monitor integrated environmental and resource efficiency management policies and procedures within an organisation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- monitor and investigate current resource usage
- develop plans to improve sustainability
- implement environmental improvements.

Consistent performance should be demonstrated. For example, look to see that:

- environmental performance is routinely monitored and investigated
- areas for improvements are followed through and the implemented changes are in turn monitored and investigated.

Context of and specific resources for assessment

This section should be read in conjunction with the range of variables for this unit of competency. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation.

A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified

EVIDENCE GUIDE	
	for people with disabilities.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	<p>Assessors need to be aware of any cultural issues that may affect responses to questions.</p> <p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Environmental and resource efficiency issues

Environmental and resource efficiency issues include:

- addressing environmental and resource sustainability initiatives such as Environmental Management Systems, action plans, surveys and audits
- reference to standards, guidelines and approaches such as:
 - ISO 14001 Environmental Management Systems
 - Life Cycle Analyses
 - Cradle to cradle
 - Global Reporting Initiative
 - Ecological footprinting
 - Triple Bottom Line reporting
 - Product Stewardship
- determining enterprise's most appropriate waste treatment including waste to landfill, recycling, re-use and wastewater treatment
- applying the waste management hierarchy in the workplace
- initiating and/or maintaining appropriate enterprise procedures for operational energy consumption, including stationary energy and

RANGE STATEMENT	
	<p>non stationary (transport)</p> <ul style="list-style-type: none"> • efficient use of water • minimising greenhouse gas emissions • use of controls to minimise the risk of environmental damage from hazardous substances
Measure	<p>Measuring techniques include:</p> <ul style="list-style-type: none"> • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data • others as appropriate to the specific industry contexts.

Competency field

Competency field	Competitive manufacturing tools
-------------------------	---------------------------------

Co-requisite units

Co-requisite units		

MSAPMSUP390A Use structured problem solving tools

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the solving of process and other problems, beyond those associated directly with the process unit/equipment, using structured process improvement tools to identify improvements and/or solve problems.

Application of the Unit

Application of this unit

The competency is typically performed by an experienced operator, team leader or supervisor. Generally the person would be part of a team during the solving of complex or systemic problems and would be expected to perform all parts of this unit and at all times would be liaising and cooperating with other members of the team. This includes:

- using a range of formal problem solving techniques
- identifying and clarifying the nature of the problem
- devising the best solution
- evaluating the solution
- developing an implementation plan to rectify the problem.

This unit does not cover the solving of problems undertaken as part of the operator's normal role which is covered in the relevant operation competency unit.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify the problem.	1.1 Identify variances from normal operating parameters and product quality. 1.2 Define the extent, cause and nature of the problem by observation and investigation. 1.3 State and specify the problem clearly.
2. Determine fundamental cause of problem.	2.1 Identify possible causes based on experience and the use of problem solving tools/analytical techniques. 2.2 Develop possible cause statements. 2.3 Identify fundamental cause.
3. Determine corrective action.	3.1 Consider all possible options for resolution of the problem. 3.2 Consider strengths and weaknesses of possible options. 3.3 Determine corrective action to remove the problem and possible future causes. 3.4 Develop implementation plans identifying measurable objectives, resource needs and timelines in accordance with safety and operating procedures. 3.5 Develop recommendations for ongoing monitoring and testing.
4. Communicate recommendations.	4.1 Prepare report on recommendations. 4.2 Present recommendations to appropriate personnel. 4.3 Follow up recommendations if required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes a thorough knowledge and understanding of the process, normal operating parameters, and product quality to recognise non-standard situations.

This unit of competency includes use of analytical techniques in problem solving such as:

- brainstorming
- fishbone diagrams/cause and effect diagrams
- process logic/process requirements
- logic tree
- similarity/difference analysis
- Pareto analysis
- force field/SWOT analysis
- flow charts
- control charts, runcharts and graphs
- scattergrams.

Action plans to solve problems are prepared including:

- priority requirements
- measurable objectives
- resource requirements
- methods for reaching objectives
- timelines
- coordination and feedback requirements
- safety requirements
- risk assessment
- environmental requirements.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of report writing and completing workplace forms.

Basic numeracy is also required, eg to interpret quality data and graphs.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to apply and explain:

- relevant equipment and operational processes
- enterprise policies and procedures
- enterprise goals, targets and measures
- enterprise quality, OHS and environmental requirements
- principles of decision-making strategies and techniques
- enterprise information systems and data collation
- industry codes and standards.

Consistent performance should be demonstrated. For example, look to see that:

- problems are recognised and clarified
- possible causes are identified, based on experience and use of analytical techniques in solving the problem, including:
 - identifying variations
 - identifying cause and effect
 - separating single problems from multiple problems
 - recognising recurring problems.
- fundamental cause of process or equipment faults is determined
- corrective/preventative implementation plans are developed to avoid recurrence of the problem
- implementation plan is presented to relevant personnel.

Assessment method and context

Assessment will occur on the job or in a simulated workplace.

Competence in this unit may be assessed:

- in a situation allowing the generation of evidence of the ability to recognise and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

The competency unit applies to a wide range of processes and equipment. The process manufacturing technical units of competency include a problem solving element where problems specific to that competency unit are to be resolved. This competency unit is where structured problem solving techniques are to be applied more broadly, or with greater depth/rigour than is implied by the problem solving element of the technical units. In large plants or manufacturing organisations with multiple processes, it may apply to more than one process if those processes interact with each other. It applies to all operators across all functions.

Procedures

All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards include leaks, spillages and equipment hazards that can occur during the walk-through of a plant.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- non- routine process and quality problems
- equipment selection, availability and failure
- teamwork and work allocation problems
- safety and emergency situations and incidents.
-

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clean work preparation areas	1.1. Clean preparation areas using appropriate cleaning agents and equipment according to enterprise procedures 1.2. Remove spillages, if they occur, using appropriate agents, personal protective equipment and enterprise procedures 1.3. Collect and segregate wastes in accordance with enterprise procedures, relevant codes and regulations
2. Clean and store equipment	2.1. Collect used equipment, inspect for faults and, where necessary, remove from service 2.2. Use appropriate agents, apparatus and techniques to clean equipment 2.3. Store clean equipment in the designated locations and manner
3. Monitor stocks of materials and equipment	3.1. Perform stock checks and maintain records of usage as directed 3.2. Store labelled stocks for safe and efficient retrieval 3.3. Inform appropriate personnel of impending stock shortages to maintain continuity of supply
4. Maintain a safe work environment	4.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other personnel 4.2. Report potential hazards and/or maintenance issues in own work area to designated personnel 4.3. Minimise the generation of wastes and environmental impacts 4.4. Dispose of wastes in accordance with enterprise procedures, relevant codes and regulations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- safely cleaning work preparation areas and equipment using appropriate cleaning agents, equipment and techniques
- safely removing spillages and disposing of wastes
- minimising the exposure to hazards of self, others and the laboratory
- safely storing equipment and materials using enterprise procedures, relevant codes and guidelines
- monitoring and reporting stock levels and the condition of laboratory materials and equipment
- keeping accurate, up-to-date records
- reporting potential hazards and maintenance issues using enterprise procedures

Required knowledge

Required knowledge includes:

- enterprise procedures for the cleaning of work preparation areas, materials and equipment
- storage requirements for specific materials and equipment
- enterprise procedures for minimisation and disposal of waste
- enterprise procedures for monitoring of laboratory stocks
- information contained in material safety data sheets (MSDS) for materials handled regularly during the performance of maintenance tasks
- relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> • follow enterprise procedures, relevant codes and guidelines when maintaining the laboratory/field workplace • work safely and minimise exposure of hazards to self, others and the laboratory • keep accurate up-to-date records and report potential hazards and maintenance issues.
Context of and specific resources for assessment	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> • <i>MSL943002A Participate in laboratory/field workplace safety.</i> <p>Resources may include:</p> <ul style="list-style-type: none"> • access to work preparation areas, stocks, materials and equipment • cleaning, decontamination and/or disinfection agents and equipment • personal protective equipment • stock order forms, labels and records/forms.
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • observation of the candidate's techniques for cleaning and/or removal of spillages and waste disposal • review of stock records completed by the candidate • feedback from supervisors and peers • questioning to assess underpinning knowledge of regulations and procedures where direct observation is difficult (such as dealing with hazards) and choice of materials and equipment. <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess</p>

EVIDENCE GUIDE	
	<p>directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
This competency in practice	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p>Manufacturing</p> <p>On receipt of a bulk container of cleaning or sanitising agent, a laboratory assistant always attached to the container a description of its method of use. The assistant also attached a list of the surfaces, apparatus, utensils and machines that could be safely treated with that chemical agent as outlined in the company's quality manual. This practice reduced the likelihood of misuse of the chemical, wastage, damage to equipment and inadequate cleaning and sanitation.</p> <p>Biomedical and environmental</p> <p>Laboratory assistants and technical officers routinely examine fluids for micro-organisms using a microscope. They examine fluids, such as urine, seawater, chlorinated pool water, water from catchment areas and bottled water. To maintain microscopes in working order, they thoroughly clean the stage, oculars and each objective after use and sometimes between samples. The 100X objective requires particular care since this is the oil immersion objective. The oil is slightly acidic and will slowly corrode the objective if it is not cleaned thoroughly and regularly. After using the 100X objective they also take care not to drag the other objectives through the oil.</p> <p>Food processing</p> <p>A laboratory assistant regularly uses standard pH</p>

EVIDENCE GUIDE

solutions to calibrate the laboratory's pH meters. The assistant is aware from the label that the shelf life of these solutions after opening is two months and records the opening and disposal dates on the container. The assistant is also aware that the shelf life of unopened buffer solutions is twelve months from the date of manufacture and monitors this by noting the production date on the bottle. Requests for stock replacement take into account the normal rate of use of these buffer solutions so that unopened bottles have not reached their expiry date before use.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards such as:
 - AS 1678 Emergency procedure guide - Transport
 - AS 1940-2004 Storage and handling of flammable and combustible liquids
 - AS 2252 Biological safety cabinets
 - AS 3780-2008 The storage and handling of corrosive substances
 - AS 4332-2004 The storage and handling of gases in cylinders
 - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
 - AS/NZS 1269 Set:2005 Occupational noise management set
 - AS/NZS 1337 Eye protection
 - AS/NZS 2161 Set:2008 Occupational protective gloves set
 - AS/NZS 2210:1994 Occupational protective footwear
 - AS/NZS 2243 Set:2006 Safety in laboratories set
 - AS/NZS 2243.8:2006 Safety in laboratories - Fume cupboards
 - AS/NZS 2865 Set:2005 Safe working in a confined space set
 - AS/NZS 2982.1:1997 Laboratory design and construction - General requirements

RANGE STATEMENT

- AS/NZS 4187:2003 Cleaning, disinfecting and sterilising reusable medical and surgical instruments and equipment, and maintenance of associated environments in health care facilities
- AS/NZS 4452:1997 The storage and handling of toxic substances
- AS/NZS 4501 Set:2008 Occupational clothing set
- AS/NZS ISO 14000 Set:2005 Environmental management standards set
- animal welfare legislation and codes of practice
- Australian code of good manufacturing practice for medicinal products (GMP)
- Australian Dangerous Goods Code
- Australian Quarantine and Inspection Service (AQIS) Export Control (Orders) Regulations 1982
- Australian Quarantine and Inspection Service (AQIS) Import Guidelines
- Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Codes of Practice
- enterprise or standard operating procedures (SOPs)
- equipment manuals and warranties, supplier catalogues and handbooks
- gene technology regulations
- guide to physical containment levels and facility types
- HB 9-1994 Occupational personal protection
- material safety data sheets (MSDS)
- National Code of Practice for the labelling of workplace substances (NOHSC:2012 (1994))
- national environment protection measures
- National Health and Medical Research Council (NHMRC) Guidelines
- national measurement regulations and guidelines
- occupational health and safety (OHS) national standards and codes of practice
- principles of good laboratory practice (GLP)
- Therapeutic Goods Regulations 1009

RANGE STATEMENT**Equipment, material procedures and facilities**

Equipment, material procedures and facilities may include:

- animal cages
- autoclaves
- balances
- blenders, centrifuges and separating equipment
- brushes
- cell counters and staining machines
- colorimeters/spectrometers and polarimeters
- compaction rammers and soil classification equipment
- conductivity meters and pH meters
- dishwashers, refrigerators, freezers, ovens, microwave ovens, incubators and water baths
- disintegration apparatus, thermometers and incubators
- fume hoods, biohazard containers and biological safety cabinets
- gas cylinders
- glassware, plastic ware; glass, plastic and quartz cuvettes
- hotplates, mantles, burners and muffle furnaces
- instrument chart recorders, penetrometers, force measuring equipment and tensiometers
- light and fluorescence microscopes
- melting point apparatus, viscometers and hardness testing equipment
- microtomes and tissue processors
- mixing and separating equipment such as centrifuges, riffers and splitters and mixers
- noise meters and blasting meters
- optical microscopes
- pipettes, burettes and volumetric glassware
- shovels, scoops, plates, rods, cylinder moulds and buckets
- steel ruler/tapes and spirit levels
- thermometers, thermohygrographs, instrument chart recorders, hydrometers, pH meters and ion-selective electrodes
- ultrasonic cleaners
- vehicles

RANGE STATEMENT	
Typical materials	<p>Typical materials may include:</p> <ul style="list-style-type: none"> • consumable items, such as syringes, pipette tips, weigh boats • disposable clothing and personal protective equipment • distilled water, reagents, chemicals, disinfectants, detergents, agar media and plates • equipment spares, such as fuses, bulbs and batteries • oils/lubricants, fuels, industrial gases and cryogenics, such as dry ice and liquid nitrogen • paper and stationery • reference samples and standards
Maintenance	<p>Maintenance may include:</p> <ul style="list-style-type: none"> • checking serviceability before storage • cleaning • prevention of contamination • storing
Cleaning requirements	<p>Cleaning requirements may include:</p> <ul style="list-style-type: none"> • decontamination and/or disinfection • hygiene monitoring • minimising environmental impacts • operation of automatic cleaning apparatus, such as pipette washer, ultrasonic cleaners and dishwashers • sterilisation and disposal of wastes using boiling, high pressure air or steam, microwaves, chemicals, gas, filtration, ultraviolet radiation and autoclaving • use of specialised techniques, such as chromic acid baths and soaking in hypochlorite
Preparation areas	<p>Preparation areas may include:</p> <ul style="list-style-type: none"> • benches • fume cupboards • sheds • sinks
Agents for cleaning	<p>Agents for cleaning may include:</p> <ul style="list-style-type: none"> • cleaning solutions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • decontaminants • organic solvents
Spillages	<p>Spillages may include:</p> <ul style="list-style-type: none"> • chemicals • radioactive materials • biologically active materials
Wastes	<p>Wastes may include:</p> <ul style="list-style-type: none"> • broken glass • batteries • disposable personal protective equipment • excess test samples • micro-organisms • plastic and metals • sharps • solvents • spent reagents • spent samples and test pieces • used containers, boxes, bags and palettes
Stock records	<p>Stock records may include:</p> <ul style="list-style-type: none"> • calibration and maintenance history • data sheets • handbooks, warranty documents, catalogues, manuals and MSDS • records of usage, loans and breakages
Communication	<p>Communication could involve other people, such as:</p> <ul style="list-style-type: none"> • laboratory, production, administration and cleaning staff • internal/external contractors • emergency personnel
Maintenance issues	<p>Maintenance issues could involve:</p> <ul style="list-style-type: none"> • checking materials and equipment are fit for purpose • equipment malfunction • hygiene issues • potential hazards, incidents and emergencies • recycling and waste disposal

RANGE STATEMENT	
	<ul style="list-style-type: none"> • spillages, leakages, breakages and contamination • stock requirements and shortages
Hazards	<p>Hazards may include:</p> <ul style="list-style-type: none"> • aerosols from broken centrifuge tubes and pipetting • chemicals, such as acids, heavy metals, pesticides and hydrocarbons • crushing, entanglement and cuts associated with moving machinery or falling objects • cryogenics, such as dry ice and liquid nitrogen • electric shock • fluids under pressure, such as steam and industrial gas cylinders • manual handling, working at heights and working in confined spaces • microbiological organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids • occupational overuse syndrome, slips, trips and falls • pedestrian and vehicular traffic • sharps, broken glassware and hand tools • solar radiation, dust and noise • sources of ignition, flammable liquids and gases
Established safe work practices	<p>Established safe work practices may include:</p> <ul style="list-style-type: none"> • applying containment procedures through the use of appropriate equipment, such as biohazard containers, laminar flow cabinets, Class I, II and III biohazard cabinets and Class PCII, PCIII, and PCIV physical containment facilities • ensuring access to service shut-off points • following established manual handling procedures for tasks involving manual handling • handling and storage of all hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions • identifying and reporting operating problems or equipment malfunctions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • labelling of samples, reagents, aliquoted samples and hazardous materials • recognising and observing hazard warnings and safety signs • reporting to appropriate personnel of abnormal emissions, discharges and airborne contaminants, such as noise, light, solids, liquids, water/waste water, gases, smoke, vapour, fumes, odour and particulates • use of MSDS • use of personal protective equipment, such as hard hats, hearing protection, gloves, safety glasses, goggles, face guards, coveralls, gown, body suits, respirators and safety boots
Occupational health and safety (OHS) and environmental management requirements	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sampling	<ul style="list-style-type: none"> 1.1. Confirm the sampling location, number and type of samples, and timing and frequency of sampling from enterprise or client's sampling plan 1.2. Liaise with relevant personnel to arrange site access and, if appropriate, all necessary clearances and/or permits 1.3. Select sampling equipment and conditions to achieve representative samples and preserve sample integrity during collection, storage and transit 1.4. Check that all procedures are in accordance with client or enterprise requirements, relevant standards and codes 1.5. Identify site and sampling hazards and review enterprise safety procedures 1.6. Assemble and check all sampling equipment, materials, containers and safety equipment 1.7. Arrange suitable transport to, from and around site as required
2. Conduct sampling and log samples	<ul style="list-style-type: none"> 2.1. Locate sampling sites and, if required, services at the site 2.2. Conduct representative sampling in accordance with sampling plan and defined procedures 2.3. Record all information and label samples in accordance with traceability requirements 2.4. Record environment or production conditions and any atypical observations made during sampling that may impact on sample representativeness or integrity 2.5. Transport all samples back to base according to standard operating procedures (SOPs) and relevant codes
3. Prepare samples for testing	<ul style="list-style-type: none"> 3.1. Prepare sub-samples and back-up sub-samples that are representative of the source 3.2. Label all sub-samples to ensure traceability and store in accordance with SOPs 3.3. Follow defined preparation and safety procedures to limit hazard or contamination to samples, self, work area and environment 3.4. Distribute sub-samples to defined work stations maintaining sample integrity and traceability requirements

ELEMENT	PERFORMANCE CRITERIA
4. Address client issues	4.1. Enter approved information into laboratory information management system (LIMS) 4.2. Report all relevant aspects of the sampling and preparation phases in accordance with enterprise procedures 4.3. Ensure that information provided to client is accurate, relevant and authorised for release 4.4. Maintain security and confidentiality of all client/enterprise data and information
5. Maintain a safe work environment	5.1. Clean all equipment, containers, work area and vehicles according to enterprise procedures 5.2. Check serviceability of all equipment before storage 5.3. Use defined safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 5.4. Minimise the generation of wastes and environment impacts 5.5. Ensure the safe collection of all hazardous wastes for appropriate disposal

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- collecting representative samples in accordance with a sampling plan
- techniques to preserve the integrity of samples
- identifying atypical materials and samples and taking appropriate action
- maintaining sampling equipment
- completing sampling records
- working safely
- following requirements for the disposal of waste and the preservation of the environment

Required knowledge

Required knowledge includes:

- principles of representative samples
- principles and procedures for random, systematic and stratified sampling, consistency of sampling procedures
- preservation of the integrity of samples
- maintaining identification of samples relative to their source
- enterprise and/or legal traceability requirements
- cost effectiveness of sampling
- characteristics of product/material to be sampled and likely contaminants
- links between quality control, quality assurance, quality management systems and sampling procedures
- enterprise procedures dealing with legislative requirements for the handling, labelling and transport of hazardous goods
- links between correct occupational health and safety (OHS) procedures and personal and environmental safety particularly at high risk sites

Specific industry

Additional knowledge requirements may apply for different industry sectors. For example: Biomedical and environmental services:

- specific legislation on biohazards
- documentation procedures for the chain of custody for samples to be used as evidence or for blood transfusion

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors should ensure that candidates can:

- collect the specified quantity of sample to enable all processing and testing to occur and back-up samples to be stored
- obtain a sample that is representative of the bulk material
- preserve the integrity of samples by closely adhering to procedures
- label samples and sub-samples to satisfy enterprise/legal traceability requirements
- identify atypical materials and samples and take appropriate action
- maintain sampling equipment in appropriate condition
- complete sampling records using enterprise procedures
- follow safety regulations and enterprise OHS procedures during sampling, transport and storage
- follow relevant legislative requirements for the disposal of waste and the preservation of the environment.

Context of and specific resources for assessment

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:

- *MSL924001A Process and interpret data*
- *MSL943002A Participate in laboratory/field workplace safety*
- *relevant MSAL974000 series units of competency*
- *relevant MSAL975000 series units of competency relevant to the sampling.*

Resources may include:

- variety of sample types
- sampling plans
- a selection of sampling containers and sampling

EVIDENCE GUIDE	
	equipment.
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • inspection of samples collected by the candidate • review of sampling documentation completed by the candidate • feedback from peers, customers and supervisors that sampling plans were followed • questioning to assess underpinning knowledge of representative sampling procedures • observation of the candidate taking a range of samples. <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
This competency in practice	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p>Manufacturing</p> <p>A metallurgical laboratory technician is very familiar with preparing representative samples for a range of final products in a steelmaking plant. One day, he/she is asked to sample a 50 tonne small-particle coal delivery which is believed to have a higher than acceptable sulphur content. Having never prepared representative samples for such a large quantity of material, the technician consulted their supervisor and developed an appropriate sampling plan. The technician arranged for the operator of a small front-end loader to take buckets of coal from five equally spaced points around the pile. The resulting</p>

EVIDENCE GUIDE

material was then combined and mixed in one heap. The technician coned and quartered the heap enough times to obtain a representative sample of about 5kg. He/she arranged for the unwanted material to be returned to the stockpile. On return to the laboratory, the technician crushed the sample and repeatedly coned and quartered the material to obtain an analytical portion.

Environmental

A field technician trained in sampling natural water systems is asked to sample a bright yellow industrial wastewater discharge into a small creek. The relevant sampling plan specifies that the samples should be collected where the waste water is well mixed near the centre of the creek and at the mid-depth point. The technician also notes that the samples must be collected where turbulence is at a maximum so that the settling of solids is minimal. On arrival at the site, the technician locates where the wastewater is entering the creek. He/she moves downstream to where the waste water and creek water is well mixed and there is little apparent loss of the yellow suspended solids. The technician dons the required personal protective equipment and uses a convenient bridge to collect a set of six samples and duplicates over a half-hour period using the equipment and procedures specified in the sampling plan. Using a field notebook, the technician records all information specified in the laboratory's chain of custody requirements and safety plan for handling potentially hazardous industrial waste.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
 - AS 1199 Sampling procedures and tables for inspection by attributes
 - AS 1678 Emergency procedure guide -Transport
 - AS 1940-2004 Storage and handling of flammable and combustible liquids
 - AS 3780-2008 The storage and handling of corrosive substances
 - AS 4433.2-1997 Guide to the sampling of particulate materials - Preparation of samples
 - AS/NZS 4452:1997 The storage and handling of toxic substances
- American Association of Cereal Chemists (AACC) Approved Methods of Analysis
- Australian Dangerous Goods Code
- enterprise and/or client sampling schemes and sampling plans
- enterprise recording and reporting procedures
- gene technology regulations
- material safety data sheets (MSDS)
- methods and procedures which may be written to meet enterprise, client and/or regulatory/certifying body requirements
- National Code of Practice for the labelling of workplace substances [NOHSC:2012 (1994)]
- site plans, maps and specifications

RANGE STATEMENT	
Basic principles of sampling	<p>Basic principles of sampling include:</p> <ul style="list-style-type: none"> • representative samples • preservation of integrity of samples • maintaining identification of samples relative to their source, enterprise and legal traceability • cost-effectiveness of sampling • consistency of sampling procedures • sampling principles, including random, systematic and stratified sampling
Materials sampled	<p>Materials sampled may include:</p> <ul style="list-style-type: none"> • gas or air samples • liquid samples, such as water, groundwater, waste water, stormwater, sludges and sewage • solid samples, such as soil, sediments, rocks, concrete, quarry and mining material • solid wastes • raw materials, start, middle, end of production run samples, final products and materials used in production processes, such as flocculants • plants • animals • microbiological samples
Types of samples	<p>Types of samples may include:</p> <ul style="list-style-type: none"> • grab samples • composite samples • quality control samples • research or one-off samples • environmental or survey samples
Sampling tools and equipment	<p>Sampling tools and equipment may include:</p> <ul style="list-style-type: none"> • shovels, augers and chain saws • sampling frames, sampling tubes, dip tubes, spears, flexible bladders and syringes • front-end loader, backhoe, excavator and drill rig • sample bottles or containers, plastic containers and disposable buckets • access valves • sample thief • auto samplers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • pumps and stainless steel bailers • traps and cages • sterile containers, pipettes, inoculating loops and disposable spoons
Maintenance of integrity of samples	<p>Maintenance of integrity of samples may include:</p> <ul style="list-style-type: none"> • use of compatible container, such as glass, plastic, amber and opaque bottles • use of appropriate preservatives, such as sodium azide, toluene or antibiotics • decontamination of sampling tools between collection of consecutive samples • wrapping container in foil • purging of sample lines and boxes • handling and transport to avoid disturbance or damage • temperature control which may involve insulation of sample without direct contact with the coolant • wrapping in wet newspaper, cloth, sand or sawdust • transfer of sterile sample into sterile container • monitoring of storage conditions
Site and sampling hazards	<p>Site and sampling hazards may include:</p> <ul style="list-style-type: none"> • solar radiation, dust and noise • wildlife, such as snakes, spiders and domestic animals • biohazards, such as micro-organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids • chemicals, such as acids and hydrocarbons • aerosols • sharps and broken glassware • manual handling of heavy sample bags and containers • crushing, entanglement and cuts associated with moving machinery and hand tools • vehicular and pedestrian traffic
Safety procedures	<p>Safety procedures may include:</p> <ul style="list-style-type: none"> • use of MSDS

RANGE STATEMENT	
	<ul style="list-style-type: none"> • use of personal protective equipment, such as hard hats, hearing protection, gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits, respirators and safety boots • use of biohazard containers and laminar flow cabinets • correct labelling of reagents and hazardous materials • handling, and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations • regular cleaning and/or decontaminating equipment and work areas • machinery guards • signage, barriers, service isolation tags, traffic control and flashing lights • lockout and tag-out procedures
Occupational health and safety (OHS) and environmental management requirements	<p>OHS and environmental management requirements:</p> <ul style="list-style-type: none"> • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret test requirements	1.1. Review test request to identify samples to be tested, test method and equipment involved 1.2. Identify hazards and enterprise controls associated with the sample, preparation methods, reagents and/or equipment
2. Prepare sample	2.1. Record sample description, compare with specification, record and report discrepancies 2.2. Prepare sample in accordance with appropriate standard methods
3. Check equipment before use	3.1. Set up test equipment in accordance with test method 3.2. Perform pre-use and safety checks in accordance with enterprise procedures and manufacturer's instructions 3.3. Identify faulty or unsafe equipment and report to appropriate personnel 3.4. Check calibration status of equipment and report any out of calibration items to appropriate personnel
4. Perform tests on samples	4.1. Identify, prepare and weigh or measure sample and standards to be tested 4.2. Conduct tests in accordance with enterprise procedures 4.3. Record data in accordance with enterprise procedures 4.4. Perform calculations on data as required 4.5. Identify and report out of specification or atypical results promptly to appropriate personnel 4.6. Shut down equipment in accordance with operating procedures
5. Maintain a safe work environment	5.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 5.2. Minimise the generation of wastes and environmental impacts 5.3. Ensure safe disposal of laboratory and hazardous wastes 5.4. Clean, care for and store equipment and reagents as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting enterprise procedure or standard methods accurately
- using safety information, such as material safety data sheets (MSDS) and performing procedures safely
- checking test equipment before use
- completing all tests within required timeline without sacrificing safety, accuracy or quality
- calculating, recording and presenting results accurately and legibly
- maintaining security, integrity and traceability of all samples, data/results and documentation
- cleaning and maintaining equipment

Required knowledge

Required knowledge includes:

- concepts of metrology
- the international system of units (SI)
- purpose of test
- principles of the standard method
- pre-use equipment checks
- relevant standards/specifications and their interpretation
- sources of uncertainty in measurement and methods for control
- enterprise and/or legal traceability requirements
- interpretation and recording of test result, including simple calculations
- procedures for recognition/reporting of unexpected or unusual results
- relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> • accurately interpret enterprise procedures or standard methods • complete all tests within the required timeline without sacrificing safety, accuracy or quality • demonstrate close attention to the accuracy and precision of measurements and the data obtained • maintain the security, integrity and traceability of all samples, data/results and documentation.
Context of and specific resources for assessment	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> • <i>MSL922001A Record and present data.</i> <p>Resources may include:</p> <ul style="list-style-type: none"> • standard laboratory equipped with appropriate equipment standards and materials • enterprise procedures and standard methods, and equipment manuals • MSDS.
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • review of the quality of test data/results achieved by the candidate over time • inspection of records and workplace documentation completed by the candidate • feedback from peers and supervisors • observation of the candidate performing a range of basic tests • oral or written questioning to check underpinning knowledge of test procedures. <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess</p>

EVIDENCE GUIDE

	<p>directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
This competency in practice	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p>Manufacturing</p> <p>Standard testing methods may be viewed as legal requirements that must be followed to ensure that a product manufactured in a chemical plant meets the specification by which it is sold to the customer. Technical assistants perform tests in a quality control laboratory to ensure that material meets legal requirements and the material is safe and effective in use. Peroxides may be present in ether as a result of light-catalysed air oxidation. Peroxides are toxic and can give rise to mixtures which are explosive when distilled. Technical assistants test ether to ensure that the level of peroxide is within acceptable limits. The test is done by shaking ether with a solution of potassium iodide. After standing for 30 minutes in the dark the yellow colour of the aqueous phase, due to the liberation of iodine, must not be more intense than a prepared standard solution. These tests ensure the quality and safety of the ether.</p> <p>Food processing</p> <p>A snack food company produces a range of high quality, impulse purchase snack foods. Some of these products are moisture and/or oxygen sensitive and are therefore packaged in multi-layer flexible packaging to provide optimum shelflife. The packaging must also be able to withstand the rigours of the production and distribution process. While the packaging is purchased to meet the shelflife and distribution specifications, the quality</p>

EVIDENCE GUIDE

assurance program requires the periodic evaluation of the packaging materials against these specifications. A laboratory assistant uses standard methods to test the tearing resistance, bursting strength, impact resistance and permeability and/or leakage of the snack food packaging. Tests are also conducted on aspects of the manufacturing process that can affect shelflife. These tests involve the measuring of the heat-seam strength and the sealing performance of the closure process. The test results are recorded by the laboratory assistant to verify the conformance of the materials to the supplier specifications and of the process to the manufacturing specifications. The assistant reports any anomalies or non-conformances to the appropriate personnel.

Construction materials testing

A technician performs an Aggregate Stripping Test (AS 1141.50) and enters the results in the laboratory's information management system (LIMS). The resulting 20-30% stripped values (i.e. 70-80% adhering) indicate a 'fail' result. The technician notes that he has repeated the test and obtained the same 'fail' result. The laboratory manager reviews the results and asks the technician to explain how he performed the test. He describes how he prepared 3-4 mm thick plates of bitumen and binding agent in the mould and then placed 50 small clean pieces of aggregate on top. After treatment in an oven for 24 hours and a 50°C water bath in accordance with the test method, the technician had then carefully pulled out the pieces of aggregate and avoiding any twisting motion. He then estimated the % of bitumen adhering to each of the stones with the expectation that the stripped value would be about 5% (i.e. 95% adhering). The manager is satisfied that the technician has performed the test in accordance with the method and suggested that he now re-run the test with a known aggregate as a control. This test gives a stripped value of 5-7% (i.e. 93-95% adhering). The manager is now sufficiently confident of the laboratory's results to sign and issue the test report and explain the aggregate's 'test failure' to the client.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
 - AS ISO 1000-1998 The international system of units (SI) and its application
 - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
 - AS/NZS 2243 Set:2006 Safety in laboratories set
- Australian code of good manufacturing practice for medicinal products (GMP)
- calibration and maintenance schedules
- enterprise recording and reporting procedures
- equipment manuals
- equipment startup, operation and shutdown procedures
- MSDS and safety procedures
- material, production and product specifications
- national measurement regulations and guidelines
- principles of good laboratory practice (GLP)
- production and laboratory schedules
- quality manuals
- standard operating procedures (SOPs)

Concepts of metrology

Concepts of metrology may include:

- that all measurements are estimates
- measurements belong to a population of measurements of the measured parameters

RANGE STATEMENT	
	<ul style="list-style-type: none"> • repeatability • precision • accuracy • significant figures • sources of error • uncertainty • traceability
Preparation of samples	<p>Preparation of samples may include:</p> <ul style="list-style-type: none"> • sub-sampling or splitting using procedures, such as riffing, coning and quartering, manual and mechanical splitters • diluting samples • physical treatments, such as ashing, dissolving, filtration, sieving, centrifugation and comminution • moulding, casting or cutting specimens
Typical tests carried out by laboratory/field assistants	<p>Typical tests carried out by laboratory/field assistants may include:</p> <ul style="list-style-type: none"> • visual/optical tests of appearance, colour, texture, identity, turbidity, refractive index (alcohol content and Baume/Brix) • physical tests: <ul style="list-style-type: none"> • density, specific gravity and compacted density • moisture content and water activity • particle size, particle shape and size distribution • chemical tests: <ul style="list-style-type: none"> • gravimetric • colorimetric • electrical conductivity (EC) and pH • specific ions using dipsticks and kits • nutrients (e.g. nitrates and orthophosphates) using basic kits • ashes, including sulphated ashes • biological/environmental tests: <ul style="list-style-type: none"> • pH, oxygen reduction potential (ORP), dissolved oxygen (DO) and (EC) • E coli using test kits

RANGE STATEMENT	
	<ul style="list-style-type: none"> • surface hygiene/presence of microbes • packaging tests: <ul style="list-style-type: none"> • tearing resistance, bursting strength and impact resistance • permeability and/or leakage • mechanical tests: <ul style="list-style-type: none"> • Emerson class • concrete slump
Measurements	<p>Measurements may include:</p> <ul style="list-style-type: none"> • simple ground surveys • meteorological parameters, such as wind direction/strength, rainfall, maximum/minimum temperature, humidity and solar radiation • simple background radiation survey • production/process parameters, such as temperature, flow and pressure • gas levels in a confined space
Common measuring equipment	<p>Common measuring equipment may include:</p> <ul style="list-style-type: none"> • dimension apparatus • DO and EC • analogue and digital meters and charts/recorders • basic chemical and biological test kits • dipsticks and site test kits (e.g. HACK) • timing devices • temperature measuring devices, such as thermometers and thermocouples
Hazards	<p>Hazards may include:</p> <ul style="list-style-type: none"> • electric shock • biohazards, such as microbiological organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids • solar radiation, dust and noise • chemicals, such as sulphuric acid, fluorides and hydrocarbons • aerosols • sharps, broken glassware and hand tools

RANGE STATEMENT	
	<ul style="list-style-type: none"> • flammable liquids • dry ice and liquid nitrogen • fluids under pressure • sources of ignition • occupational overuse syndrome, slips, trips and falls • manual handling, working at heights and working in confined spaces • crushing, entanglement and cuts associated with moving machinery or falling objects
Enterprise controls to address hazards	<p>Enterprise controls to address hazards may include:</p> <ul style="list-style-type: none"> • use of MSDS • use of signage, barriers and service isolation tags • use of personal protective equipment, such as hard hats, hearing protection, sunscreen lotion, gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits, respirators and safety boots • use of appropriate equipment, such as biohazard containers and cabinets and laminar flow cabinets • recognising and observing hazard warnings and safety signs • labelling of samples, reagents, aliquoted samples and hazardous materials • handling and storage of all hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions, and enterprise procedures and regulations • cleaning and decontaminating equipment and work areas regularly using recommended procedures • following established manual handling procedures for tasks involving manual handling
Minimising environmental impacts	<p>Minimising environmental impacts may involve:</p> <ul style="list-style-type: none"> • recycling of non-hazardous waste, such as chemicals, batteries, plastic, metals and glass • appropriate disposal of hazardous waste • correct disposal of excess sample/test material • correct storage and handling of hazardous

RANGE STATEMENT	
	chemicals

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Safely use laboratory chemicals, glassware and equipment	1.1. Apply appropriate safety precautions for use of laboratory equipment and hazardous chemical materials 1.2. Use appropriate laboratory glassware and measuring equipment 1.3. Clean and store glassware and equipment in accordance with enterprise procedures
2. Make up working solutions	2.1. Identify the relevant standard methods for solution preparation 2.2. Assemble specified laboratory equipment 2.3. Select and prepare materials and solvent of specified purity 2.4. Measure appropriate quantities of reagents for solution preparation and record data 2.5. Prepare labels and log solution details in laboratory register 2.6. Transfer solutions to appropriately labelled containers
3. Check existing stock of solutions	3.1. Monitor shelf life of working solutions according to laboratory procedures 3.2. Replace out-of-date or reject solutions according to laboratory procedures 3.3. Conduct routine titrimetric analyses, if appropriate, to determine if solutions are fit for purpose

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using appropriate materials, equipment and procedures to prepare solutions
- following appropriate occupational health and safety (OHS), and hygiene procedures, if appropriate
- using all equipment safely and efficiently
- using enterprise procedures to calculate concentrations
- identifying solutions not fit for use
- using titrations to determine the concentration of solutions
- labelling, storing and disposing of solutions appropriately
- recording and presenting data appropriately

Required knowledge

Required knowledge includes:

- relevant biological, chemical, food and laboratory terminology
- principles of metrology
- the international system of units (SI)
- concentration terms, such as % w/w, % w/v, % v/v, ppm (mg/L) and molarity
- basic theory of acids, bases, salts, buffers and neutralisation
- enterprise procedures for preparing solutions
- calculations required to prepare specified amounts of solutions of specified concentration
- appropriate OHS procedure for preparing, handling and disposal of solutions
- use of material safety data sheets (MSDS)
- relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> • prepare working solutions in compliance with relevant standards, appropriate procedures and/or enterprise requirements • follow OHS procedures to safely use laboratory chemicals glassware and equipment • make up working solutions according enterprise procedures • check existing stocks of solutions as being fit for purpose.
Context of and specific resources for assessment	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> • <i>MSL922001A Record and present data</i> • <i>MSL943002A Participate in laboratory/field workplace safety.</i> <p>Resources may include:</p> <ul style="list-style-type: none"> • standard laboratory equipped with appropriate equipment and reagents • SOPs and testing methods • access to appropriate containers and storage facilities.
Method of assessment	<p>The following assessment methods are suggested:</p> <ul style="list-style-type: none"> • inspection of solutions prepared, labelled and stored by the candidate • review of solution records and workplace documentation completed by the candidate • feedback from peers and supervisors • observation of the candidate preparing working solutions • oral or written questioning. <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess</p>

EVIDENCE GUIDE

	<p>directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
This competency in practice	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</p> <p>Manufacturing</p> <p>When starting materials used for the manufacture of common household materials are in transit from the supplier to the manufacturer, they may degrade if subjected to conditions, such as heat, moisture, light and oxygen. Even when the supplier ships quality materials to the manufacturing plant, the materials may be sub-standard when they arrive. Quality control tests are designed to test starting materials to ensure they are within specification. For example, aspirin forms salicylic acid when stored under adverse conditions. Laboratory assistants prepare and monitor the quality of solutions, such as ferric chloride solution, which gives an intense violet colour when added to salicylic acid but gives no colour with aspirin. Absence of the violet colouration indicates that breakdown of the aspirin hasn't occurred.</p> <p>Biomedical</p> <p>A laboratory assistant made up 1 litre of buffer solution using buffer tablets and a 1 litre volumetric flask as specified in the method. To ensure the solution was suitable for use the assistant measured the pH and found it was within acceptable range. The assistant then appropriately labelled a storage vessel and stored the buffer according to requirements. By following enterprise procedures the shelf life of the buffer was maximised.</p>

EVIDENCE GUIDE**Environmental**

An environmental laboratory is contracted to determine the acidity of water samples taken from local lakes and streams. A laboratory assistant is required to make up small batches of 0.01M sodium hydroxide and to determine its concentration by titrating it against a standard solution of potassium acid phthalate using phenolphthalein indicator. This procedure is carried out monthly to ensure that the concentration of the sodium hydroxide solution is accurately known. Alternatively, the laboratory assistant may be required to prepare and standardise a fresh batch of sodium hydroxide on a monthly basis. In this case, he/she must understand the underpinning knowledge of basic acid/base theory, potential problems of interferences (such as slow absorption of carbon dioxide by sodium hydroxide solution) so as to ensure that the concentrations of workup solutions are accurately known. He/she must also be skilled in calculating and performing dilution when required to prepare such low concentrations (0.01M) of working solutions.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
 - AS 2163-2000 Laboratory glassware - Measuring cylinders
 - AS 2165-1996 Laboratory glassware - Burettes AS 2162.1-1996 Verification and use of volumetric apparatus - General - Volumetric glassware
 - AS ISO 1000-1998 The international system of units (SI) and its application
 - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
 - AS/NZS 2243 Set:2006 Safety in laboratories set
- Australian code of good manufacturing practice for medicinal products (GMP)
- calibration and maintenance schedules
- enterprise recording and reporting procedures
- equipment manuals
- equipment startup, operation and shutdown procedures
- MSDS and safety procedures
- material, production and product specifications
- national measurement regulations and guidelines
- principles of good laboratory practice (GLP)
- production and laboratory schedules
- quality manuals

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare solutions	1.1. Select appropriate procedure for solution preparation 1.2. Select equipment, materials and solvent of specified purity 1.3. Measure appropriate quantities of reagents for solution preparation and record data. 1.4. Select and assemble specified laboratory equipment and appropriate grade of glassware 1.5. Perform specified dilutions 1.6. Prepare solutions to achieve homogeneous mix of the specified concentration 1.7. Label and store solutions to maintain identity and stability
2. Standardise and use volumetric solutions	2.1. Assemble appropriate laboratory equipment 2.2. Perform serial dilutions as required 2.3. Standardise the solution to the required specified range and precision 2.4. Label and store solutions to maintain identity and stability 2.5. Use standard volumetric solutions to determine concentration of unknown solutions
3. Calculate and record data	3.1. Calculate specified concentrations 3.2. Use authorised procedure if data is to be modified 3.3. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required 3.4. Record all relevant details according to laboratory procedures and report results 3.5. Report concentration with appropriate units
4. Monitor the quality of laboratory solutions	4.1. Check solutions for visual deterioration and expiry date 4.2. Restandardise or dispose of dated or deteriorated solutions 4.3. Record details and label solutions according to laboratory procedures
5. Maintain a safe work environment	5.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 5.2. Clean up spills using appropriate techniques to protect personnel, work area and environment 5.3. Minimise generation of waste and environmental

ELEMENT	PERFORMANCE CRITERIA
	impacts 5.4.Ensure the safe collection of laboratory and hazardous waste for subsequent disposal 5.5.Store equipment and reagents as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting and following enterprise standard operating procedures (SOPs)
- determining equivalence points using indicators and graphical methods
- using calculation methods, including appropriate units, uncertainties, balancing equations, the concentration of the solution given the chemical reaction for the titration
- using apparatus and reagents to prepare standard solutions such as balances and volumetric glassware
- selecting and using primary and secondary standards and indicators
- performing quality assurance checks for solution performance
- performing titrations
- recognising control results that are not within acceptable range
- interpreting and using safety information, such as that provided by material safety data sheets (MSDS) and follow relevant safety procedures

Required knowledge

Required knowledge includes:

- solution terminology, chemistry of acids, bases, buffers, redox reactions and complexometric reactions
- concepts of metrology
- grades of glassware, reagents and their use
- reactions used for standardisation and desirable characteristics
- enterprise communication and reporting procedures
- occupational health and safety (OHS) procedures, including those for using corrosive materials
- relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors should ensure that candidates can:</p> <ul style="list-style-type: none"> • use balances and volumetric glassware • select and use primary and secondary standards • select and use indicators • perform quality assurance checks for solution performance • perform titrations using laboratory procedures with required accuracy and precision and within required timelines • calculate the concentration of the solution given the chemical reaction for the titration • recognise control results that are not within acceptable range • record results to enterprise standards • label and store solutions in accordance with enterprise procedures • interpret and follow enterprise SOPs • interpret and use safety information, such as that provided by MSDS and follow relevant safety procedures.
Context of and specific resources for assessment	<p>This unit of competency is to be assessed in the workplace or simulated workplace environment.</p> <p>This unit of competency may be assessed with:</p> <ul style="list-style-type: none"> • <i>relevant MSAL974000 series units of competency, and</i> • <i>relevant MSAL975000 series units of competency dealing with sampling, tests and measurements.</i> <p>Resources may include:</p> <ul style="list-style-type: none"> • standard laboratory equipped with appropriate volumetric equipment • laboratory reagents and equipment • SOPs and testing methods.
Method of assessment	<p>The following assessment methods are suggested:</p>

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • inspection and/or testing of solutions prepared by the candidate • review of records and workplace documentation completed by candidate • review of work outputs by the candidate over time to ensure accuracy, consistency and timeliness • feedback from peers and supervisors • observation of the candidate preparing, standardising and using a range of solutions • oral or written questioning. <p>In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Access must be provided to appropriate learning and/or assessment support when required.</p> <p>The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.</p>
This competency in practice	<p>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.</p> <p>Manufacturing</p> <p>A standard solution is used to determine the concentration of unknown solutions. The quality of these analyses is critically related to the accuracy with which the concentration of the standard solution is known. Therefore, laboratory technicians spend considerable effort to ensure that the materials and methods used for the preparation and standardisation will lead to a solution of accurately known concentration. For example, anhydrous sodium carbonate is often used to prepare solutions to determine the concentrations of acids. The sodium carbonate is heated at a suitable temperature to remove any trace of moisture and cooled in a dessicator. An appropriate quantity is dissolved in distilled water</p>

EVIDENCE GUIDE

and made up to volume in a volumetric flask. This solution of known concentration is then titrated with acids of unknown concentration and the concentration of the acids determined.

Environmental

A laboratory technician was required to determine the total acidity of a water sample as part of a quality control program. The total acidity was measured by titrating the water sample with sodium hydroxide of known concentration using an appropriate indicator. The concentration of the sodium hydroxide was determined via a volumetric titration against a primary standard of potassium hydrogen phthalate.

The value of the total acidity was determined by multiplying the volume of sodium hydroxide used with a numerical 'factor' which had been determined by the laboratory supervisor in order to save time. The value of the 'factor' was displayed on the titration equipment. However, a new technical assistant did the full calculation and found that his/her result differed slightly from that obtained using the 'factor'. After discussion with the laboratory supervisor it was agreed that the error was in the 'factor' and the assumption that each new batch of sodium hydroxide prepared was exactly the same concentration as all previous batches. This was incorrect as the concentration of each batch differed slightly and its actual concentration was determined accurate, using the primary standard. The procedure was changed so that the full calculation was required for all tests.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Codes of practice

Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, codes, procedures and/or enterprise requirements

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
 - AS 2163-2000 Laboratory glassware - Measuring cylinders
 - AS 2165-1996 Laboratory glassware - Burettes AS 2162.1-1996 Verification and use of volumetric apparatus - General - Volumetric glassware
 - AS ISO 1000-1998 The international system of units (SI) and its application
 - AS/NZS ISO 9000 Set:2008 Quality management systems set
 - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
 - AS/NZS 2243 Set:2006 Safety in laboratories set
- Australian code of good manufacturing practice for medicinal products (GMP)
- calibration and maintenance schedules
- enterprise recording and reporting procedures
- equipment manuals
- equipment startup, operation and shutdown procedures
- MSDS and safety procedures
- material, production and product specifications
- national measurement regulations and guidelines
- principles of good laboratory practice (GLP)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • production and laboratory schedules • quality manuals • SOPs • waste minimisation and safe disposal procedures
Solutions	<p>Solutions may include but are not limited to:</p> <ul style="list-style-type: none"> • solutions of strong/weak acids and bases • oxidising/reducing agents • solutions used for complexometric or precipitation titrations • stains for cells and tissues, enzymes, buffers and antibodies • diluents for maintaining isotonicity • organic solutions and histological fixatives
Apparatus and reagents to prepare standard solutions	<p>Apparatus and reagents to prepare standard solutions may include:</p> <ul style="list-style-type: none"> • balances • pipettes, burettes, volumetric glassware and weighing bottles • dessicators and filtering media • ovens and muffle furnaces • solutions, indicators and primary and secondary standards • auto titrators, pH meters and other related meters and electrodes for determining equivalence points, top pan and analytical balances • magnetic stirrers and heaters, and water baths
Checking useability of solutions	<p>Checking useability of solutions may include:</p> <ul style="list-style-type: none"> • examining stained samples for correct staining reactions • performing pH checks • confirming enzyme activity • checking red cell suspensions for haemolysis • ferric chloride for phenolic solutions • isotonicity for saline
Hazards	<p>Hazards may include:</p> <ul style="list-style-type: none"> • chemicals, such as strong acids and bases, and stains

RANGE STATEMENT	
	<ul style="list-style-type: none"> • sharps and broken glassware • burners, hot plates, ovens and furnaces
Safe work practices	<p>Safe work practices may include:</p> <ul style="list-style-type: none"> • use of MSDS • use of personal protective equipment, such as gloves, safety glasses, goggles, faceguards, coveralls and gowns • use of biohazard containers, laminar flow cabinets and fume hoods • correct labelling of reagents and hazardous materials • handling and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations • regular cleaning and/or decontaminating of equipment and work areas
Occupational health and safety (OHS) and environmental management requirements	<p>OHS and environmental management requirements</p> <ul style="list-style-type: none"> • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Co-requisite units

Co-requisite units		

SIRXCCS005A Manage business customers

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit describes the performance outcomes, skills and knowledge required to manage contracts, reinforce trading terms and negotiate deals with business customers.

Application of the Unit

Application of the unit This unit reinforces ways to negotiate and finalise legally binding contractual agreements with a range of business customers, according to company policy and legislative requirements, to meet business targets and strategic outcomes. Senior sales personnel perform this function.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Negotiate deals.	<p>1.1 Establish special deals according to <i>business policy and procedures</i>.</p> <p>1.2 Negotiate and complete deals according to business policy and procedures.</p> <p>1.3 Determine supporting <i>promotional and merchandising activities</i>.</p> <p>1.4 Negotiate optimal <i>sales and distribution arrangements</i> with customer prior to completion of deals.</p> <p>1.5 Approve special deals falling outside company policy and procedures according to business guidelines.</p> <p>1.6 Confirm <i>supply arrangements</i> for goods of services under special deals prior to completion of deals.</p> <p>1.7 Ensure deals conform to business performance and marketing objectives.</p> <p>1.8 Ensure deals are legally valid and binding.</p>

ELEMENT	PERFORMANCE CRITERIA
2 Verify trading terms.	2.1 Set trading terms for product and services. 2.2 Set trading terms for customers and accounts. 2.3 Establish procedures and policies to approve new or amended trading terms. 2.4 Communicate trading terms to internal and external personnel according to legislative and business procedures. 2.5 Confirm procedures and policies for processing breaches to trading terms and communicate to <i>relevant staff</i> . 2.6 Establish processes for reviewing trading terms. 2.7 Establish policy and procedures for managing trading terms to achieve business and customer service objectives.
3 Manage business contracts.	3.1 <i>Negotiate</i> and confirm contractual obligations and terms with <i>business customers</i> . 3.2 Apply terms and conditions of <i>contractual arrangements</i> with business account customers. 3.3 Complete requirements for amendment or variation to existing contract with a business according to business procedures and legal requirements. 3.4 Monitor performance of contract against agreed business objectives and standards. 3.5 Investigate and resolve contract variations according to contractual and business outcomes. 3.6 Resolve disputes over contracts to obtain business and customer outcomes. 3.7 Regularly complete contract reviews with customers, stakeholders and contract holders.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- interpersonal communication skills, including:
 - consultation
 - building relationships with business customers
 - presentation
 - negotiation
 - dispute resolution
- analytical and research skills
- project and contract management skills
- determine appropriate support for promotional and merchandising activities
- create guidelines for approving and implementing special deals
- time management
- literacy and numerical skills in regard to:
 - documenting plans and decisions
 - reading and interpreting information
 - financial and budget planning
 - establishing, confirming and reviewing trading terms
 - developing and amending contracts according to business procedures and legal requirements.

The following knowledge must be assessed as part of this unit:

- use and maintenance of standard business technology
- configuration of management systems
- public and private sector purchasing and procurement guidelines and rules
- relevant commercial law and legislation, including:
 - law of contract
 - trade practice law
- business policy and procedures in relation to:
 - sale and supply of products and services
 - quality assurance and control
 - approval processes
 - negotiating contracts and trading terms
 - dealing with internal and external groups and teams

REQUIRED SKILLS AND KNOWLEDGE

- principles and techniques in negotiation
- features and advantages of a contractual relationship
- elements that make a successful business partnership or relationship
- internal and external management systems
- competitor activities
- information sources on product and supply arrangements for customers
- OHS aspects of job.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- actively negotiates and finalises legally binding contractual agreements with a range of business customers according to company policy
- identifies and understands business targets and strategic goals
- manages business contacts and trading terms to achieve agreed business targets and strategic outcomes
- demonstrates a high level of ethical and personal integrity in conduct of negotiations and management of contractual relationships.

Context of and specific resources for assessment

Assessment must ensure access to:

- a workplace sales environment
- relevant documentation, such as:
 - business policy and procedures
 - information on the internal and external operating environment
- a range of business customers with different requirements.

EVIDENCE GUIDE

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback
- review of portfolio of evidence
- written or verbal questioning to assess knowledge and understanding.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Assessing employability skills

Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Business policy and procedures
in relation to:

- sale and supply of products and services
- quality assurance and control
- interaction with clients and customers
- approval processes
- negotiating contracts and trading terms.

RANGE STATEMENT

Promotional and merchandising activities may vary to accommodate variations in:

- demographics
- economics
- competition
- social and cultural factors
- political influences
- legal factors
- natural factors
- technology.

Sales and distribution arrangements may include:

- delivery of products
- provision of services
- maintenance and support agreements
- leasing agreements and consultancies
- research and development.

Supply arrangements may relate to:

- quality
- quantity
- coverage and content
- time schedules
- cost.

Relevant staff may include:

- internal or external contacts
- employees
- supervisors
- relevant managers.

Negotiation issues may include:

- contract variations, including ability to vary or modify targets, processes and clauses
- innovations
- modification and amendment rights
- scope.

RANGE STATEMENT

Business customers may include:

- commercial enterprises
- public agencies or organisations
- governments
- community and not-for-profit organisations
- internal business units and divisions.

Contractual arrangements may include:

- letters of appointment or intent
- external contracts
- trade partners
- verbal and written orders
- purchase order
- petty cash
- memorandums of understanding or memorandums of agreement
- in-house service level agreements
- contracts
- common-use arrangements or standing offers
- contracts as detailed under the Trade Practices Act
- non-compliance
- consequences.

Unit Sector(s)

Sector Cross-Sector

Competency field

Competency field Client and Customer Service

SIRXCCS006A Maintain business to business relationships

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit describes the performance outcomes, skills and knowledge required to develop and maintain enduring relationships with business customers, focusing on identification of customer needs.

Application of the Unit

Application of the unit This unit requires sales team members to identify key customer contacts, and service-specific customer needs and confirm trading terms with customer contacts to build and maintain sustainable relationships with business customers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop techniques to maintain close contact with business customers.	1.1 Confirm <i>relevant contact personnel</i> at each business or account customer.
	1.2 Participate and contribute to <i>team</i> efforts to service business customers.
	1.3 Build external relationships to improve supply chain efficiency, including product or service supply, account management, product management, supply arrangements, distribution systems, information and communication.
	1.4 Maintain business customer contact consistent with <i>business policy and procedures</i> .
2 Identify business customer needs.	2.1 Confirm means to <i>identify</i> business customer needs.
	2.2 Consult relevant customer contacts to review business needs.
	2.3 Analyse current business and <i>promotional activities</i> and

ELEMENT

PERFORMANCE CRITERIA

determine future directions.

2.4 Outline and confirm *trading terms* for specific customers.

2.5 Confirm pricing policy and procedures.

2.6 Process business reviews using latest forecasts of current and future trends.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- identify and maintain key contact personnel at customer businesses
- contribute to team service to specific customers
- confirm trading terms, pricing policies and other relevant procedures to customers
- process business forecasts for implementation
- interpersonal skills
- review business needs and basic forecasts
- collect and organise information
- effective use of technology
- literacy skills to read, analyse and interpret a range of business policy and procedures documents and research information
- flexibility when communicating within teams, and responding to customers.

The following knowledge must be assessed as part of this unit:

- prioritising work schedule
- business policy and procedures for building relationships with business customers
- pricing policies
- trading terms
- information sources on product and supply arrangements for customers
- OHS aspects of job
- relevant consumer law, commercial law and legislation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- builds sustainable relationships with business customers that deliver agreed business outcomes
- identifies key contact personnel for businesses with a given territory or customer account
- describes and utilises a range of means to accurately identify specific needs of business customers
- confirms trading terms for customers according to business policy and procedures

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail or wholesale work environment
- relevant sources of product information
- relevant documentation, such as policy and procedures manuals
- forecasts for current and future market trends
- a range of business customers with different requirements
- an appropriate range of products or services
- customer information.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of performance in the workplace
- third-party reports from a supervisor
- customer feedback
- written or verbal questioning to assess knowledge and understanding.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

EVIDENCE GUIDE

Assessing employability skills Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Relevant contact personnel may include:

- new or repeat contacts
- internal and external contacts
- people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.

Team members may include:

- full-time, part-time, casual or contract staff
- people with varying degrees of language and literacy
- people from a range of cultural, social and ethnic backgrounds
- people with a range of responsibilities and job descriptions.

RANGE STATEMENT

Business policy and procedures in relation to:

- sale and distribution of products and services
- interaction with customers
- client relationship management
- pricing arrangements
- trading terms.

Methods to ***identify*** business customer needs may include:

- verbal or non-verbal communication with:
 - customer contacts
 - staff
 - supervisors and management
 - suppliers
- observation
- appropriate questioning and active listening
- review of sales records.

Promotional activities may include:

- internal and external activities
- corporate or locally based activities
- dealing with advertising agencies and consultants
- advertising
- catalogues
- newspapers
- posters
- radio or TV
- suppliers
- internet
- website.

Trading terms may be influenced by:

- due diligence requirements
- value for money
- risk sharing
- market position
- planning cycles and timing
- terms and conditions agreed
- intellectual property and technology rights
- continuous improvement
- supply chain management
- infrastructural and capital outlay requirements
- organisational systems integration and compatibility.

Unit Sector(s)

Sector Cross-Sector

Competency field

Competency field Client and Customer Service

SIRXSL001A Sell products and services

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit describes the performance outcomes, skills and knowledge required to sell products and services in a retail environment. It involves the use of sales techniques and encompasses the key selling skills from approaching the customer to closing the sale. It requires a basic level of product knowledge.

Application of the Unit

Application of the unit This competency applies to frontline sales personnel. It requires the recognition and demonstration of verbal and non-verbal communication skills to determine customer requirements, sell the benefits of products and services, overcome objections and close sales. Personal evaluation is utilised to maximise sales in accordance with industry codes of practice, relevant legislation and store policy.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Apply product knowledge.	<p>1.1 Demonstrate knowledge of the use and application of relevant products and services according to <i>store policy</i> and <i>legislative requirements</i>.</p> <p>1.2 Develop <i>product knowledge</i> by accessing <i>relevant sources of information</i>.</p>
2 Approach customer.	<p>2.1 Determine and apply timing of <i>customer</i> approach.</p> <p>2.2 Identify and apply effective <i>sales</i> approach.</p> <p>2.3 Convey a positive impression to arouse customer interest.</p> <p>2.4 Demonstrate knowledge of customer buying behaviour.</p>

ELEMENT	PERFORMANCE CRITERIA
3 Gather information.	<ul style="list-style-type: none">3.1 Apply questioning techniques to determine customer buying motives.3.2 Use listening skills to determine customer requirements.3.3 Interpret and clarify non-verbal communication cues.3.4 Identify customers by name where possible.3.5 Direct customer to specific merchandise.
4 Sell benefits.	<ul style="list-style-type: none">4.1 Match customer needs to appropriate products and services.4.2 Communicate knowledge of products features and benefits clearly to customers.4.3 Describe product use and safety requirements to customers.4.4 Refer customers to appropriate product specialist as required.4.5 Answer <i>routine customer questions</i> about merchandise accurately and honestly or refer to senior sales staff.
5 Overcome objections.	<ul style="list-style-type: none">5.1 Identify and accept customer objections.5.2 Categorise objections into price, time and merchandise characteristics.5.3 Offer solutions according to store policy.5.4 Apply <i>problem solving</i> to overcome customer objections.
6 Close sale.	<ul style="list-style-type: none">6.1 Monitor, identify and respond appropriately to customer buying signals.6.2 Encourage customer to make purchase decisions.6.3 Select and apply appropriate method of closing sale.

ELEMENT

PERFORMANCE CRITERIA

7 Maximise sales opportunities.

7.1 Recognise and apply opportunities for making additional sales.

7.2 Advise customer of complementary products or services according to customer's identified need.

7.3 Review personal sales outcomes to maximise future sales.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- selling techniques, including:
 - opening techniques
 - recognising buying signals
 - strategies to focus customer on specific merchandise
 - add-ons and complementary sales
 - overcoming customer objections
 - closing techniques
 - verbal and non-verbal communication skills
 - handling difficult customers
 - negotiation skills
 - sales performance appreciation
 - questioning, listening and observation
 - literacy skills in regard to:
 - reading and understanding product information
 - reading and understanding store policies and procedures
 - recording information
 - numeracy skills in regard to:
 - handling payment for goods
 - weighing and measuring goods.

The following knowledge must be assessed as part of this unit:

- store policies and procedures, in regard to:
 - selling products and services
 - allocated duties and responsibilities
 - store merchandise and service range
 - specific product knowledge for area or section
 - relevant legislation and statutory requirements
 - relevant industry codes of practice
 - customer types and needs, including:
 - customer buying motives
 - customer behaviour and cues

REQUIRED SKILLS AND KNOWLEDGE

- individual and cultural differences
- demographics, lifestyle and income
- types of customer needs, e.g. functional, psychological.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- applies product knowledge and uses appropriate sales approach to sell the benefits of products and services, overcome objections and close sales
- uses questioning, listening and observation skills to determine customer requirements
- consistently applies store policies and procedures in regard to selling products and services
- maximises sales opportunities according to store policies and procedures
- consistently applies industry codes of practice, relevant legislation and statutory requirements in regard to selling products and services
- evaluates personal sales performance to maximise future sales.

EVIDENCE GUIDE

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant documentation, such as policy and procedures manuals
- a range of customers with different requirements
- a range of merchandise and products appropriate to the retail workplace
- product labels and sources of product information.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the candidate in the workplace
- third-party reports from a supervisor
- customer feedback
- answers to questions about specific skills and knowledge
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Assessing employability skills

Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Store policy and procedures in regard to:

- interaction with customers
- selling products and services.

Legislative requirements may include:

- Trade Practices and Fair Trading Acts
- tobacco laws
- liquor laws
- lottery legislation
- industry codes of practice
- OHS
- sale of second-hand goods
- sale of X and R rated products
- trading hours
- transport, storage and handling of goods.

Product knowledge may include:

- warranties
- features and benefits
- use-by dates
- handling and storage requirements
- stock availability
- safety features
- price.

RANGE STATEMENT

Relevant sources of information may include:

- internet
- staff members
- store or supplier product manuals
- product profiles
- videos
- demonstrations
- labels
- store tours.

Customers may include:

- new or repeat contacts
- external and internal contacts
- customers with routine or special requests
- people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.

Sales transactions may be completed:

- face to face
- over the telephone
- online.

Routine customer questions may relate to:

- price and price reductions
- quality
- availability
- features and benefits.

Problem solving may be affected by:

- store policies and procedures
- resource implications.

Unit Descriptor

Unit descriptor It describes the performance outcomes, skills and knowledge required to apply a depth of specialist or general product knowledge and a need for experience and skill in offering advice to customers.

Application of the Unit

Application of the unit This unit requires the team member to develop, maintain and convey detailed and specialised product knowledge to customers and other staff in accordance with store policy and relevant legislation. Specialist sales personnel undertake this function.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Develop product and service knowledge.	1.1 Develop and maintain <i>product knowledge</i> according to <i>store policy</i> and <i>legislative requirements</i> . 1.2 Convey product knowledge to other <i>staff</i> as required. 1.3 Research and apply comparisons between products and services. 1.4 Demonstrate knowledge of competitors' product and service range and <i>pricing structure</i> .
2 Recommend specialised products or services.	2.1 Evaluate merchandise according to <i>customer requirements</i> . 2.2 Demonstrate features and benefits of products and services to <i>customer</i> to create a buying environment. 2.3 Apply detailed specialised knowledge of product to provide accurate advice to customers.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- interpersonal communication skills to:
 - convey product knowledge to staff
 - apply knowledge to provide advice to customers
 - handle difficult customers through clear and direct communication
 - ask questions to identify and confirm requirements
 - share information
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - using a range of communication and electronic equipment
 - accessing relevant product and service information
 - literacy skills in regard to:
 - reading and understanding product information
 - reading and understanding store policies and procedures
 - recording information
 - numerical skills in regard to:
 - estimating and calculating costs relevant to pricing products.

The following knowledge must be assessed as part of this unit:

- specialised product knowledge, including:
 - warranties
 - benefits and features
 - shelf life and use-by date
 - storage requirements
 - ingredients or materials contained in product
 - product and ingredient origins
 - care and handling of products
 - corresponding or complementary products and services
 - stock availability
 - store and industry manuals and documentation
 - stock and merchandise range
 - service range

REQUIRED SKILLS AND KNOWLEDGE

- procedures for taking orders
- pricing procedures, including GST requirements
- other relevant policies and procedures
- relevant legislation and statutory requirements
- relevant industry codes of practice.

Evidence Guide

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

RANGE STATEMENT

Product knowledge may include:

- brand options
- product features and benefits
- warranties
- safety features
- use-by dates
- handling and storage requirements
- stock availability
- price.

Product knowledge may be developed and maintained by:

- accessing the internet
- attending product launches
- attending product seminars
- discussions with staff
- accessing product information booklets and pamphlets.

Store policy and procedures in regard to:

- interaction with customers
- selling products and services.

Legislative requirements may include:

- Trade Practices and Fair Trading Acts
- tobacco laws
- liquor laws
- lottery legislation
- industry codes of practice
- OHS
- sale of second-hand goods
- sale of X and R rated products
- trading hours
- transport, storage and handling of goods.

RANGE STATEMENT

Staff may include:

- full-time, part-time or casual
- under contract
- people with varying degrees of language and literacy
- people from a range of cultural, social and ethnic backgrounds
- people with a range of responsibilities and job descriptions.

Customer requirements may include:

- specific brand
- sizing
- quality
- quantity
- price range
- usage.

Customers may include:

- new or repeat contacts
- external and internal contacts
- customers with routine or special requests
- people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.

Pricing structure may include:

- sales reductions
- pricing procedures, including GST requirements
- mark-downs.

SIRXSL005A Manage sales and service delivery

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit describes the performance outcomes, skills and knowledge required to monitor, maintain and improve sales and service delivery. It involves market research, developing new markets and marketing products and services within the culture of the overall store policy.

Application of the Unit

Application of the unit

This unit requires the team member to develop and maintain excellence in sales and service delivery by ensuring the provision of a well-resourced working environment for fellow staff. The team member is required to proactively pursue the continuous improvement of operations by seeking, evaluating and reporting feedback from customers and colleagues on sales and service delivery and working conditions; and locating and negotiating adequate supply of stock and other necessary resources in accordance with store policy. Those with managerial responsibility undertake this role.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit is packaged will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Monitor, maintain and improve sales and service delivery.	1.1	Implement, communicate and review <i>policies and procedures for sales and service delivery</i> on a regular basis.
		1.2	Maintain adequate <i>resource</i> allocation for client service provision in line with <i>store policy and procedures</i> .
		1.3	Resolve <i>customer</i> complaints that have been referred by <i>staff</i> , according to store policy.
		1.4	Ensure sales and service targets and plans are consistent with quality and functional <i>specifications</i> .

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Monitor sales and service targets and plans to ensure that customer requirements are met, and take appropriate remedial action if required.</p> <p>1.6 Communicate sales and service targets and plans to <i>relevant personnel</i> according to implementation schedules.</p> <p>1.7 Provide <i>feedback</i> to staff on operations and outcomes.</p> <p>1.8 Encourage staff to take responsibility for meeting customer requirements.</p> <p>1.9 Seek and use feedback from customers to improve future operations.</p> <p>1.10 Take corrective measures to minimise <i>factors that may cause disruption to operations</i>.</p> <p>1.11 Monitor and evaluate effectiveness of corrective actions for future operational planning.</p> <p>1.12 Ensure current and accurate <i>records</i> on sales are available to authorised personnel.</p> <p>1.13 Interpret and act on relevant reports as required.</p>
2 Negotiate supply of goods.	<p>2.1 <i>Negotiate</i> and implement <i>arrangements with suppliers</i> according to store policies and procedures and communicate to relevant personnel.</p> <p>2.2 Authorise and communicate special pricing arrangements and customer payment agreements to relevant staff and management personnel according to store policy.</p> <p>2.3 Monitor records of suppliers and stock for accuracy and legibility and take appropriate action where necessary.</p> <p>2.4 Identify and communicate to relevant personnel market factors affecting <i>supply</i>.</p> <p>2.5 Convey complete and accurate records of negotiations and agreements to appropriate personnel within designated time limits.</p> <p>2.6 Take immediate corrective action where potential or actual <i>problems with supply</i> are indicated.</p> <p>2.7 Identify and develop new suppliers to maintain and improve sales and service delivery.</p>

ELEMENT	PERFORMANCE CRITERIA
3 Establish customer requirements.	3.1 Plan and develop strategies to enhance provision of customer service according to store policy. 3.2 Research and accurately <i>analyse customer needs</i> in regard to local geographic and cultural issues.
4 Provide productive work environment.	4.1 Establish and maintain a sufficient supply of resources of the necessary quantity and quality to meet customer requirements. 4.2 Regulate and monitor access to and use of resources for maximum efficiency. 4.3 Maintain staff working conditions that meet requirements of <i>relevant legislation</i> and store policy. 4.4 Ensure that maintenance frequency and use of equipment conform to recommended schedules and procedures. 4.5 Replace, repair or adapt resources that do not meet requirements as soon as practicable and with minimum disruption to work activity. 4.6 <i>Communicate recommendations</i> for improving conditions to relevant personnel within designated timeframe. 4.7 Maintain complete, accurate records and make them available to authorised personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- interpersonal communication skills to:
 - communicate with staff through clear and direct communication
 - ask questions to identify and confirm requirements
 - share information
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - negotiating with suppliers and customers
 - presentation skills
 - using new technology
 - literacy skills in regard to:
- researching, analysing and interpreting a broad range of written material
- preparing reports
- documenting results
 - numeracy skills in regard to:
- interpreting and maintaining data
- estimating volume
- calculating costs and pricing arrangements.

The following knowledge must be assessed as part of this unit:

- store policies and procedures in regard to:
 - sales and service delivery
 - supply specifications
 - quality assurance and control
 - stock maintenance and control
- pricing procedures, including GST requirements
 - store merchandise and service range
 - store merchandising plan
 - range and availability of new products and services
 - customer demand and market trends
 - product quality standards
 - relevant legislation and statutory requirements

REQUIRED SKILLS AND KNOWLEDGE

- relevant industry codes of practice
- principles and techniques in:
 - purchasing and supply specifications
 - stock control
 - interpersonal communication.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- consistently maintains, monitors and evaluates sales and service delivery
- communicates sales and service targets and plans and provides feedback on operations and outcomes to relevant personnel in accordance with store policy
- proactively improves sales and service delivery operations
- accurately interprets and maintains data on sales and services delivery
- negotiates and arranges supply of goods according to store policy and procedures
- consistently authorises pricing and payment agreements according to store policy and procedures
- consistently maintains, monitors and evaluates supply of stock.

EVIDENCE GUIDE

Context of and specific resources for assessment

Assessment must ensure access to:

- a retail work environment
- relevant documentation, such as:
 - policy and procedures manuals
 - sales and service delivery targets and plans
 - records of sales and service
 - legislation and statutory requirements
 - industry codes of practice
 - OHS legislation and codes of practice
 - suppliers
 - a team.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the candidate in the workplace
- third-party reports from a supervisor
- customer feedback
- research report
- written or verbal questioning to assess knowledge and understanding
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Assessing employability skills

Employability skills are integral to effective performance in the workplace and are broadly consistent across industry sectors. How these skills are applied varies between occupations and qualifications due to the different work functions and contexts.

Employability skills embedded in this unit should be assessed holistically in the context of the job role and with other relevant units that make up the skill set or qualification.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

Policies and procedures for sales and service delivery may involve:

- service standards
- staff presentation
- customer complaints
- staff induction
- customer service and sales training.

Resources may include:

- people
- materials
- equipment and technology
- finances
- time.

Store policy and procedures in regard to:

- the acquisition and sale of products and services
- quality assurance and control
- interaction with customers
- interaction with other team members
- OHS.

Customers may include:

- new or repeat contacts
- external and internal contacts
- customers with routine or special requests
- people from a range of social, cultural and ethnic backgrounds and with varying physical and mental abilities.

RANGE STATEMENT

Staff may include:

- full-time, part-time, casual or contract staff
- people from a range of social, cultural and ethnic backgrounds
- people with varying degrees of language and literacy levels.

Specifications may include:

- customer agreements
- operational means for meeting agreements
- specific functional duties within the organisation.

Relevant personnel may include:

- managers
- supervisors
- members of own or other work teams.

Feedback may be sought and given:

- verbally
- in writing
- in groups
- individually.

Factors that may cause disruption to operations may include:

- supply
- operational resources
- quality of materials.

Records may be:

- hard copy
- electronic.

Techniques used to *negotiate* with suppliers may include:

- face to face contact
- correspondence
- meetings
- telephone
- email.

RANGE STATEMENT

Arrangements with suppliers may relate to:

- pricing
- delivery
- partnerships and exclusivity
- credit levels.

Sources of *supply* may include:

- people
- external organisations
- internal departments and teams.

Problems with supply may involve:

- quality
- quantity
- coverage or content
- time schedules or scales
- cost.

Methods used to *analyse customer needs* may be:

- quantitative
- qualitative.

Relevant legislation may include:

- federal, state and local legislation
- OHS
- equal employment opportunity and anti-discrimination laws.

Recommendations may be communicated to:

- higher-level managers
- subordinates
- colleagues, specialists, staff from other departments
- external organisations with a health, safety or environmental responsibility
- government bodies.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

The following skills must be assessed as part of this unit:

- analysing, implementing and evaluating sales strategies
- interpersonal communication skills to:
 - present reports and present to groups and consult through clear and direct communication
 - ask questions to identify and confirm requirements
 - share information
 - give instructions
 - use language and concepts appropriate to cultural differences
 - use and interpret non-verbal communication
 - literacy skills in regard to:
 - documenting strategic plans
 - accessing, reading and interpreting information
 - numeracy skills in regard to:
 - interpreting and maintaining data
- setting territory sales targets that link to sales, marketing and strategic plans.

The following knowledge must be assessed as part of this unit:

- business policy and procedures in regard to:
- strategic planning
- sales and service delivery
 - principles and techniques in interpersonal communication
 - business merchandise and service range
 - existing sales plans
 - joint promotional programs
 - business and direct customer requirements
 - information sources and their reliability and accuracy
 - marketing and promotional planning targets
 - OHS aspects of job
 - relevant commercial law and legislation.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- accesses, analyses and integrates information regarding current company sales strategies
- develops realistic sales strategy targets that relate to strategic and business planning targets
- develops a successful sales strategy for a product or service in consultation with relevant personnel
- establishes procedures and mechanisms to collect and report on sales strategy during the development stage
- presents concise implementation procedures and review mechanisms for a sales strategy.

Context of and specific resources for assessment

Assessment must ensure access to:

- a sales-oriented work environment
- relevant documentation, such as:
 - strategic plans
 - information on the internal and external operating environment
 - a team.

EVIDENCE GUIDE

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the candidate in the workplace
- third-party reports from a supervisor

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the performance criteria is detailed below.

RANGE STATEMENT

Key elements of a *sales strategy* may include:

- promotional activities
- sales techniques
- territory management
- rapport building
- product knowledge
- administration procedures and requirements
- time management
- negotiation skills.

Products and services may be grouped by:

- brand
- merchandise classification
- category
- range
- customer.

Sales strategy may vary according to:

- product or service
- merchandising and sales strategy
- discount periods, e.g. annual sale
- promotional strategies and their duration, cycle, territory coverage and product or service focus.

Joint business sales strategies will vary based on:

- product, range, line, or category performance requirements
- objectives such as those for price, profit, brand share, market share.

Relevant information may include:

- current performance data
- sales and contracts
- forecasted trends and opportunities
- available resource commitments and capacity.

RANGE STATEMENT

Planning and analysis activities for a specific market may include consideration of:

- location
- product and service mix
- packaging or presentation
- quality factors (time, cost, variations)
- access
- continuity.

Relevant people may include:

- internal or external consultants
- employees
- supervisors
- relevant managers.

Business goals and outcomes may include:

- key performance indicators
- strategic objectives
- price
- market and sales indicators
- brand value
- quality standards and criteria
- performance benchmarks
- milestones.

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
---------	----------------------

<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>
--	---

Elements and Performance Criteria

1. Prepare for assessment	<p>1.1 Interpret <i>assessment plan</i> and confirm organisational, legal and ethical requirements for conducting assessment with relevant people</p> <p>1.2 Access and interpret relevant <i>benchmarks for assessment</i> and nominated <i>assessment tools</i> to confirm the requirements for evidence to be collected</p> <p>1.3 Arrange identified material and physical resource requirements according to assessment system policies and procedures</p> <p>1.4 Organise <i>specialist support</i> required for assessment</p> <p>1.5 Explain, discuss and agree details of the assessment plan with candidate</p>
2. Gather quality evidence	<p>2.1 Use agreed <i>assessment methods</i> and instruments to gather, organise and document evidence in a format suitable for determining competence</p> <p>2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence</p> <p>2.3 Determine opportunities for evidence gathering in actual or simulated activities through consultation with the candidate and relevant personnel</p> <p>2.4 Determine opportunities for integrated assessment activities and document any changes to assessment instruments where required</p>
3. Support the candidate	<p>3.1 Guide candidates in gathering their own evidence to support recognition of prior learning (RPL)</p> <p>3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to <i>individual differences</i> and enables two-way <i>feedback</i></p> <p>3.3 Make decisions on reasonable adjustments with the candidate, based on candidate's needs and characteristics</p> <p>3.4 Access required specialist support in accordance with the assessment plan</p> <p>3.5 Address any OHS risk to person or equipment immediately</p>
4. Make the assessment decision	<p>4.1 Examine collected evidence and evaluate it to ensure that it reflects the evidence required to demonstrate competence</p> <p>4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence</p> <p>4.3 Make assessment decision in line with agreed assessment procedures and according to agreed assessment plan</p> <p>4.4 Provide clear and constructive feedback to candidate regarding</p>

	the assessment decision and develop any follow-up action plan required
5. Record and report the assessment decision	5.1 Record assessment outcomes promptly and accurately 5.2 Complete and process an assessment report according to agreed assessment procedures 5.3 Inform other relevant parties of the assessment decision according to confidentiality conventions
6. Review the assessment process	6.1 Review the assessment process in <i>consultation</i> with relevant people to improve own future practice 6.2 Document and record the review according to relevant assessment system policies and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
 - break down competency standards
 - interpret assessment tools and other assessment information, including those used in RPL
 - identify candidate needs
 - make judgements based on assessment of available evidence
- observation skills to:
 - recognise candidate's prior learning
 - determine candidate's performance
 - identify when candidate may need assistance during the assessment processes
- research and evaluation skills to:
 - access required human and material resources for assessment
 - access assessment system policies and procedures
 - access RPL policies and procedures
 - evaluate evidence
 - evaluate assessment process
- cognitive skills to:
 - weigh up the evidence and make a judgement
 - consider and recommend reasonable adjustments
- decision-making skills to:
 - recognise a candidate's prior learning
 - make a decision on a candidate's competence
- literacy skills to:
 - read and interpret relevant information to conduct assessment
 - prepare required documentation and records or reports of assessment outcomes in required format
- communication and interpersonal skills to:
 - explain the assessment, including RPL process
 - give clear and precise instructions
 - ask effective questions
 - provide clarification
 - discuss process with other relevant people
 - give appropriate feedback
 - discuss assessment outcome
 - use language appropriate to candidate and assessment environment
 - establish a working relationship with candidate.

Required knowledge

- competency-based assessment, including:
 - vocational education and training as a competency-based system
 - criterion-referenced assessment as distinct from norm-referenced assessment
 - competency standards as the basis of qualifications
 - structure and application of competency standards
 - principles of assessment and how they are applied
 - rules of evidence and how they are applied
 - range of assessment purposes and assessment contexts, including RPL
 - different assessment methods, including suitability for gathering various types of evidence, suitability for content of units, and resource requirements and associated costs
 - reasonable adjustments and when they are applicable
 - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
 - potential barriers and processes relating to assessment tools and methods
 - assessment system, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the vocational education and training sector, such as:
 - copyright and privacy laws in terms of electronic technology
 - security of information
 - plagiarism
 - training packages and competency standards
 - licensing requirements
 - industry and workplace requirements
 - duty of care under common law
 - recording information and confidentiality requirements
 - anti-discrimination, including equal employment opportunity, racial vilification and disability discrimination
 - workplace relations
 - industrial awards and enterprise agreements
- OHS responsibilities associated with assessing competence, such as:
 - requirements for reporting hazards and incidents
 - emergency procedures
 - procedures for use of relevant personal protective equipment
 - safe use and maintenance of relevant equipment

- sources of OHS information.
-

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assess competence of a number of candidates within the vocational education and training context against different units of competency or accredited curricula, following the relevant assessment plan • assess at least one candidate for RPL • consider reasonable adjustment and the reasons for decisions in at least one assessment • cover an entire unit of competency and show: <ul style="list-style-type: none"> • the application of different assessment methods and instruments involving a range of assessment activities and events • two-way communication and feedback • how judgement was exercised in making the assessment decision • how and when assessment outcomes were recorded and reported • assessment records and reports completed in accordance with assessment system and organisational, legal and ethical requirements • how the assessment process was reviewed.
Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Assessment plan</i> may include:</p>	<ul style="list-style-type: none"> • overall planning, describing: <ul style="list-style-type: none"> • what is to be assessed • when assessment is to take place • where assessment is to take place • how assessment is to take place.
<p><i>Benchmarks for assessment:</i></p>	<ul style="list-style-type: none"> • refer to a criterion against which the candidate is assessed • may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications.
<p><i>Assessment tools</i> include:</p>	<ul style="list-style-type: none"> • the learning or competency unit(s) to be assessed • the target group, context and conditions for the assessment • the tasks to be administered to the candidate • an outline of the evidence to be gathered from the candidate • the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) • the administration, recording and reporting requirements • the evidence of how validity and reliability have been tested and built into the design and use of the tool.
<p><i>Specialist support</i> may include:</p>	<ul style="list-style-type: none"> • assistance by third party, such as carer or interpreter • support from specialist educator • provision of developed online assessment activities • support for remote or isolated candidates and assessors • support from subject matter or safety experts • advice from regulatory authorities • assessment teams and panels • support from lead assessors • advice from policy development experts.
<p><i>Assessment methods</i> include:</p>	<ul style="list-style-type: none"> • particular techniques used to gather different types of evidence, such as: <ul style="list-style-type: none"> • direct observation

	<ul style="list-style-type: none"> • structured activities • oral or written questioning • portfolios of evidence • review of products • third-party feedback.
Individual differences may include:	<ul style="list-style-type: none"> • English language, literacy and numeracy barriers • physical impairment or disability • intellectual impairment or disability • medical condition that may impact on assessment, such as arthritis, epilepsy, diabetes and asthma • learning difficulties • mental or psychological disability • religious and spiritual observances • cultural images and perceptions • age • gender.
Feedback may include:	<ul style="list-style-type: none"> • ensuring assessment/RPL process is understood • ensuring candidate concerns are addressed • enabling questions and answers • confirming outcomes • identifying further evidence to be provided • discussing action plans • confirming gap training needed • providing information regarding available appeal processes • suggesting improvements in evidence gathering and presentation.
Consultation may involve:	<ul style="list-style-type: none"> • moderation with other assessors, or training and assessment coordinators • discussions with client, team leaders, managers, RPL coordinators, supervisors, coaches and mentors • technical and subject experts • English language, literacy and numeracy experts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish effective work environment for learning	1.1. Establish and agree upon objectives and scope of the work-based learning 1.2. Analyse work practices and routines to determine their effectiveness in meeting established learning objectives 1.3. Identify and address <i>OHS implications</i> of using work as the basis for learning
2. Develop a work-based learning pathway	2.1. Address <i>contractual requirements</i> and responsibilities for learning at work 2.2. Arrange for integration and monitoring of external learning activities with the <i>work-based learning pathway</i> 2.3. Obtain agreement from relevant personnel to implement the work-based learning pathway
3. Establish the learning-facilitation relationship	3.1. Identify context for learning and individual's learning style 3.2. Select appropriate technique or process to facilitate learning and explain the basis of the technique to learner 3.3. Develop, document and discuss <i>individualised learning plan</i> with learner 3.4. Access, read and interpret documentation outlining the OHS responsibilities of the various parties in the learning environment 3.5. Monitor supervisory arrangements appropriate to learner's levels of knowledge, skill and experience to provide support and encouragement and ensure learner's health and safety
4. Implement work-based learning pathway	4.1. Sequence introduction of workplace tasks, activities and processes to reflect the agreed work-based learning pathway 4.2. Explain objectives of work-based learning and the processes involved to learner 4.3. Encourage learner to take responsibility for learning and to self-reflect 4.4. Develop techniques that facilitate learner's transfer of skills and knowledge
5. Maintain and develop the learning/facilitation	5.1. Prepare for each session 5.2. Structure learning activities to support and reinforce new learning, build on strengths, and identify areas

ELEMENT	PERFORMANCE CRITERIA
relationship	<p>for further development</p> <p>5.3. Observe learner cues and change approaches where necessary to maintain momentum</p> <p>5.4. Practise <i>ethical behaviour</i> at all times</p> <p>5.5. Monitor effectiveness of the learning/facilitation relationship through regular meetings between the parties</p>
6. Close and evaluate the learning/facilitation relationship	<p>6.1. Carry out the closure smoothly, using appropriate interpersonal and communication skills</p> <p>6.2. Seek feedback from learner on the outcomes achieved and value of the relationship</p> <p>6.3. Evaluate and document process, including <i>impact, self evaluation and reflection</i>, and file according to legal and organisational requirements</p>
7. Monitor and review the effectiveness of the work-based learning pathway	<p>7.1. Document work performance and learning achievement and keep records according to organisational requirements</p> <p>7.2. Evaluate effectiveness of the work-based pathway against the objectives, processes and techniques used</p> <p>7.3. Recommend improvements to work-based practice in light of the review process</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- oral communication and language skills to:
 - motivate the learner
 - transfer skills and knowledge
- interpersonal skills to maintain appropriate relationships
- observation skills to monitor individual progress
- literacy skills to:
 - read and interpret organisational documents, legal documents and contracts
 - complete and maintain documentation
- organisational skills to provide guidance and feedback to individuals
- communication skills, including:
 - using effective verbal and non-verbal language
 - using critical listening and questioning techniques
 - giving constructive and supportive feedback
 - assisting learners to paraphrase advice or instructions back to the trainer/facilitator
 - providing clear and concrete options and advice
 - using appropriate industry/profession terminology and language
 - ensuring language, literacy and numeracy used is appropriate to learners

Required knowledge

- systems, processes and practices within the organisation where work-based learning is taking place
- operational demands of the work and impact of changes on work roles
- organisational work culture, including industrial relations environment
- systems for identifying skill needs
- introductory knowledge of different learning styles and how to encourage learning in each, for example:
 - visual learners
 - audio learners
 - kinaesthetic learners
 - theoretical learners
- relevant policy, legislation, codes of practice and national standards that may affect training and assessment in the vocational education and training sector
- OHS relating to the work role, including:
 - hazards relating to the industry and specific workplace

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• reporting requirements for hazards and incidents• specific procedures for work tasks• safe use and maintenance of relevant equipment• emergency procedures• sources of OHS information |
|--|

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. Arrange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare and facilitate work-based learning • provide evidence of a minimum of two examples of developing work-based learning pathways, that include: <ul style="list-style-type: none"> • identifying needs for learning • analysing work practices, work environment and work activities • organising and allocating work in a way that reflects learning needs and provides effective learning opportunities through work processes • provide a minimum of two examples of a learning facilitation relationship being conducted: <ul style="list-style-type: none"> • with different individuals • demonstrating communication skills and flexibility • demonstrating one or more of the processes or techniques identified.
Context of and specific resources for assessment	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p> <p>Assessment must ensure access to information about work activities.</p>
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>OHS implications</i> may include:</p>	<ul style="list-style-type: none"> • OHS obligations • workplace OHS policies and procedures • ensuring work practices, routines and proposed changes do not pose a risk to learners and others.
<p><i>Contractual requirements</i> may include:</p>	<ul style="list-style-type: none"> • training plans under apprenticeships/traineeships • requirements of government-funded training programs, such as Workplace English Language and Literacy (WELL).
<p><i>Work-based learning pathway</i> may include:</p>	<ul style="list-style-type: none"> • identifying specific goals for work-based learning • identifying job tasks or activities to be included in learning process • appropriate sequencing of job tasks/activities to reflect learner incremental development • direct guidance and modelling from experienced co-workers and experts • opportunities for practice.
<p><i>Individualised learning plan</i> may include:</p>	<ul style="list-style-type: none"> • information about individual's learning style, learner characteristics, and the context for learning • clear boundaries and expectations of the learning/facilitation relationship • documented equity or additional support needs for the learner • performance benchmarks to be achieved • activities and processes which together will achieve the benchmarks.
<p><i>Ethical behaviour</i> includes:</p>	<ul style="list-style-type: none"> • trust • integrity • privacy and confidentiality of the session • following organisational policies • knowing own limitations • having a range of other intervention referrals ready when needed • honesty

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fairness to others.
Impact may be:	<ul style="list-style-type: none"> • successful achievement, rate of achievement, or lack of achievement of identified goals • achievement of other outcomes as a result of the relationship • development of new goals • new or increased motivation to learn • greater capacity to learn • increase in learner's self-confidence.
Self-evaluation and reflection may include:	<ul style="list-style-type: none"> • asking critical questions about: <ul style="list-style-type: none"> • own ability • what worked or didn't work • how the relationship building process could be improved • reviewing records and journals on sessions and critically evaluating own performance • reviewing feedback from learner and identifying critical aspects and areas for improvement.

Co-requisite units

Co-requisite units		

TLIA2043A Consolidate mail

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to consolidate mail in accordance with workplace requirements, including carrying out required preparations, consolidating mail, and completing the consolidation operations. The process includes the initial identification and separation of mail prior to movement to the despatch dock. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to consolidation of mail as part of work activities in the postal and allied industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for consolidation of mail	1.1 Individual and work team priorities and responsibilities are identified and confirmed 1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied 1.3 Mail to be consolidated is identified and accessed
2 Consolidate mail	2.1 Internal operating procedures and standards are applied to the consolidation of mail 2.2 Mail is consolidated accurately and correctly in compliance with workplace requirements 2.3 Mail is handled safely to minimise risk of injury to people and damage to mail 2.4 Mail to be consolidated is placed into mail containers for movement to next process point
3 Complete consolidation of mail	3.1 Mail containers are sealed and labelled accurately and correctly in accordance with workplace procedures 3.2 Information required to complete records of mail processed is provided and recorded 3.3 Mail containers are transferred to designated storage area to await movement to next processing point using appropriate shifting equipment 3.4 Excess equipment is removed from work area and stored appropriately

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the consolidation of mail
- Focus of operation of work systems, equipment, management and site operating systems for the consolidation of mail
- Problems that may occur when consolidating mail and appropriate action that can be taken to resolve or avoid the problems

REQUIRED KNOWLEDGE AND SKILLS

- Requirements of mail consolidation systems, operations and relevant equipment
- Safety and security hazards that may occur during the consolidation of mail and ways of controlling the risks involved
- Relevant personal protective equipment and procedures for its use
- Site layout

Required skills:

- Communicate effectively with others when consolidating mail
- Read and interpret instructions, procedures and labels relevant to the consolidation of mail
- Complete documentation related to the consolidation of mail
- Work collaboratively with others when consolidating mail
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when consolidating mail in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unplanned events that may occur when consolidating mail
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Apply safety and security precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to mail or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify, select and use relevant equipment, processes and procedures when consolidating mail

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment

EVIDENCE GUIDE

guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

RANGE STATEMENT

- Work may be conducted:
- in a range of work environments
 - by day or night
- Workplaces may comprise:
- large, medium or small worksites
- Facilities may be:
- within an airport environment
- Customers may be:
- external (including international) or internal
- Hazards may include:
- vehicular traffic and pedestrians
 - dust and vapours
 - hazardous or dangerous materials
 - humidity, air temperature
 - lighting conditions
 - machinery/equipment moving parts
 - noise
 - insects
- Weighing devices may be:
- mechanical
 - automated
 - weighbridge
- Work priorities may be communicated through:
- briefings
 - noticeboards
 - announcements
- Equipment may include:
- forklift
 - BT lifting equipment
 - kingfishers
 - plastic and cardboard trays
 - bags
 - flute trays
 - bins
 - pallet jacks
 - stillages
 - unit load device (ULD)
 - wheeled unit load device (WULD)
 - strapping machine
 - TMS (Tray Management System)
 - scanners
 - label printers
- Personal protective equipment may include:
- gloves
 - safety headwear and footwear
 - safety glasses
 - two-way radios

RANGE STATEMENT

- protective clothing
 - high visibility clothing
- Communication in the work area may include:
- phone
 - fax
 - email
 - electronic data transfer (EDI)
 - RF systems
 - radio
 - oral, aural or signed communications
- Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
 - enterprise procedures
 - organisational procedures
 - established procedures
- Information/documents may include:
- workplace policies, operating procedures and practices
 - Management Operating System (MOS)
 - Management Information System (MIS)
 - manifests, consignment notes, bar codes, mail and container identification
 - mail identification numbers, codes and labels
 - machine/equipment operations manuals
 - air and surface movement schedules
 - international aviation codes (IATA)
 - quality assurance procedures
 - induction documentation
 - competency standards and training materials
 - job specifications and procedures
 - award, enterprise bargaining agreement or other industrial arrangements
 - manufacturers specifications
 - codes of practice, including national standards for manual handling and the industry safety code
 - supplier and or/client instructions
 - HAZCHEM chart/material safety data sheets
 - safety observation feedback program
 - emergency procedures
- Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to mail operations
 - Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
 - relevant state/territory OH&S and environmental

RANGE STATEMENT

- protection legislation
- workplace relations regulations
 - workers compensation regulations
 - equal opportunity, equal employment opportunity and affirmative action legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field A - Handling Cargo/Stock

TLIA2041A Manually sort mail and parcels

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to manually sort mail and parcels in accordance with workplace requirements, including carrying out required preparations of the work area, manually sorting mail and parcels, and finalising the required sorting processes. The sorting processes include accurately and efficiently organising mail and parcels into groups for further processing or distribution and containerising processed mail and parcels ready for transfer to the next processing or distribution point. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is normally performed under general supervision, usually in a team or outstation environment. It involves the application of workplace procedures and regulatory requirements to the manual sorting of mail and parcels as part of work activities in the postal and allied industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to sort mail and parcels manually	1.1 Individual and work team priorities and responsibilities are identified and confirmed 1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied 1.3 The availability of mail and parcels to be processed is identified and confirmed 1.4 Mail and parcels to be processed are transferred to processing point 1.5 Labels for identifying the destination of mail are created and affixed to trays
2 Sort mail and parcels manually	2.1 Internal operating procedures and standards are applied to the manual processing of parcels and mail 2.2 Mail and parcels are inspected to ensure that all criteria have been met 2.3 Mail and parcels are sorted accurately and correctly in compliance with priority for processing and manual sorting procedures 2.4 Mail and parcels are handled safely to minimise risk of injury to people and damage to mail and parcels 2.5 Mail and parcels that are damaged, underpaid, incorrectly classified, or are non-conforming items are identified, separated and re-processed in accordance with workplace procedures 2.6 Legal requirements and workplace policies and procedures in relation to the security of mail and parcels are followed
3 Complete process for manually sorting mail and parcels	3.1 Mail and parcel sorting frames/bag racks are cleared down, and mail and parcel containers/bags are sealed and labelled in accordance with workplace procedures 3.2 Mail and parcels are transferred to next processing or distribution point using appropriate shifting equipment and labels scanned as required 3.3 Information required to complete records of mail and parcels processed is provided and recorded 3.4 Excess equipment is removed and work area is prepared for next activity/shift

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the manual sorting of mail and parcels
- Focus of operation of work systems, equipment, management and site operating systems for the manual sorting of mail and parcels
- Problems that may occur when manually sorting mail and parcels and appropriate action that can be taken to resolve/avoid the problems
- Requirements of mail sorting systems, operations and relevant equipment
- Hazards that may occur during the manual sorting of mail and parcels and ways of controlling the risks involved
- Site layout
- Relevant personal protective equipment and procedures for its use

Required skills:

- Communicate effectively with others when manually sorting mail and parcels
- Read and interpret instructions, procedures and labels relevant to the manual sorting of mail and parcels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the manual sorting of mail and parcels
- Work collaboratively with others when manually sorting mail and parcels
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise during the manual sorting of mail and parcels in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may arise during the manual sorting of mail and parcels
- Plan own work including predicting consequences and identifying improvements
- Apply security and safety precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment and systems in accordance with standard

Required skills:

- operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify, select and use relevant equipment, processes and procedures when manually sorting mail and parcels

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

EVIDENCE GUIDE

- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to stream mail in readiness for the next stage of processing in accordance with workplace requirements, including preparing to stream mail, streaming mail in accordance with workplace procedures, and finalising all required streaming operations. The process may include opening, facing up and traying mail. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the regulations and workplace requirements pertaining to the streaming of mail and parcels.

Work is normally performed under general supervision, usually within a team environment. It involves the application of workplace procedures and regulatory requirements to the streaming of mail as part of work activities in the postal and allied industries.

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to stream mail	<p>1.1 Individual and work team priorities and responsibilities are identified and confirmed</p> <p>1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied</p> <p>1.3 Mail to be streamed is identified, accessed and prepared</p>
2 Stream mail	<p>2.1 Internal operating procedures and standards are applied to the streaming of mail</p> <p>2.2 Mail is categorised and streamed accurately and correctly in compliance with priority for streaming</p> <p>2.3 Mail is handled safely to minimise risk of injury to people and damage to mail</p>
3 Complete streaming of mail	<p>3.1 Mail containers are loaded onto appropriate mail movement device and labelled</p> <p>3.2 Information required to complete records of mail processed is provided and recorded</p> <p>3.3 Mail containers are transferred to next processing point using appropriate shifting equipment</p> <p>3.4 Excess equipment is removed and work area is prepared for next activity shift</p>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the streaming of mail
- Focus of operation of work systems, equipment, management and site operating systems for the streaming of mail
- Problems that may occur when streaming mail and appropriate action that can be taken to resolve avoid the problems
- Requirements of mail streaming systems, operations and relevant equipment
- Hazards that may occur during the streaming of mail and ways of controlling the risks

REQUIRED KNOWLEDGE AND SKILLS

involved

- Relevant personal protective equipment and procedures for its use
- Site layout

Required skills:

- Communicate effectively with others when streaming mail
- Read and interpret instructions, procedures and labels relevant to the streaming of mail
- Complete documentation related to the streaming of mail
- Work collaboratively with others when streaming mail
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when streaming mail in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events when streaming mail
- Plan own work including predicting consequences and identifying improvements
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Apply safety and security precautions and required action to minimise, control or eliminate hazards that may exist when streaming mail
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify, select and use relevant equipment, processes and procedures when streaming mail
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
 - the underpinning knowledge and skills
 - relevant legislation and workplace procedures
 - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
 - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
 - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
 - relevant and appropriate materials and equipment, and
 - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
 - through activities in an appropriately simulated environment at the registered training organisation, and/or
 - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in a range of work environments

RANGE STATEMENT

- Workplaces may comprise:
 - by day or night
 - large, medium or small worksites
- Facilities may be:
 - within an airport environment
- Customers may be:
 - internal or external
- Hazards may include:
 - vehicular traffic and pedestrians
 - dust and vapours
 - hazardous or dangerous materials
 - humidity, air temperature
 - lighting conditions
 - machinery/equipment moving parts
 - noise
 - insects
- Weighing devices may be:
 - mechanical
 - automated
 - weighbridge
- Work priorities may be communicated through:
 - briefings
 - noticeboards
 - announcements
- Equipment may include:
 - streaming indicators
 - kingfishers
 - plastic and cardboard mail trays tubs receptacles
 - BT lifting equipment
 - label printer
 - opening knife
 - belts
 - trolleys
 - bins
 - unit load device (ULD)
 - wheeled unit load device (WULD)
 - stillages
 - forklifts
 - pallet jack
- Personal protective equipment may include:
 - gloves
 - safety headwear and footwear
 - safety glasses
 - two-way radios
 - protective clothing
 - high visibility clothing

RANGE STATEMENT

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- sorting system information including:
 - postcode book, national sort plan and state sort plan
 - postal guide
 - international postcode directory
 - label charts
- manifests, consignment notes, bar codes, mail and container identification
- mail identification numbers, codes and labels
- machine equipment operations manuals
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and or/client instructions
- HAZCHEM chart/material safety data sheets
- safety observation feedback program
- emergency procedures
- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods

Applicable regulations and legislation may include:

RANGE STATEMENT

- and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge to operate computerised mail and parcels sorting equipment in accordance with workplace requirements including setting up mail and parcels sorting equipment for operation, operating the equipment in accordance with workplace procedures, and completing the sorting process for mail and parcels as required. The process includes containerising processed mail and parcels for transfer to the next processing or distribution point. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is normally performed under general supervision, usually in a team or out-station environment.

Work involves the application of workplace procedures and regulatory requirements to the operation of computerised mail and parcels sorting equipment as part of work activities in the postal and allied industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Set up mail and parcels sorting equipment for operation	1.1 Individual and work team priorities and responsibilities are identified and confirmed 1.2 All OH&S and environment protection procedures and requirements for the relevant mail and parcels sorting equipment are identified, accessed and applied 1.3 The availability of mail and parcels to be sorted is identified and confirmed 1.4 The appropriate equipment configuration and sort plan is identified, accessed and applied 1.5 Mail and parcels to be sorted are transferred to sorting point 1.6 Labels for identifying the destination of mail are created and affixed to trays
2 Operate mail and parcels sorting equipment	2.1 Internal operating procedures and equipment operating procedures are applied 2.2 Mail and parcels are sorted accurately and correctly in compliance with priority for sorting 2.3 Mail and parcels are handled safely to minimise risk of injury to people and damage to mail and parcels and processing equipment 2.4 Mail and parcels that are incorrectly classified and non-conforming items are identified, separated and re-processed 2.5 Mail and parcels that have been sorted to their correct destination are placed in appropriate mail container for distribution
3 Complete sorting process for mail and parcels	3.1 Mail and parcels stackers/containers/bags are cleared down, sealed and labelled in accordance with workplace procedures 3.2 Mail and parcels are transferred to next sorting point using appropriate shifting equipment, and labels are scanned as required 3.3 Information required to complete records of mail and parcels processed is provided and recorded 3.4 Excess equipment is removed and work area is prepared for next activity/shift

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the operation of computerised mail and parcels sorting equipment
- Focus of operation of work systems, equipment, management and site operating systems for the operation of computerised mail and parcels sorting equipment
- Problems that may occur when operating computerised mail and parcels sorting equipment and appropriate action that can be taken to resolve/avoid the problems
- Requirements of automated mail processing systems, operations and relevant equipment
- Hazards that may occur during the operation of computerised mail and parcels sorting equipment and ways of controlling the risks involved
- Site layout
- Relevant personal protective equipment and procedures for its use

Required skills:

- Communicate effectively with others when operating computerised mail and parcels sorting equipment
- Read and interpret instructions, procedures, information and labels relevant to the operation of computerised mail and parcels sorting equipment
- Interpret and follow operational instructions and prioritise work when operating computerised mail and parcels sorting equipment
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Complete documentation related to the operation of computerised mail and parcels sorting equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating computerised mail and parcels sorting equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur operating computerised mail and parcels sorting equipment in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and

Required skills:

environments

- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Identify, select and use relevant equipment, processes and procedures when operating computerised mail and parcels sorting equipment

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
