Assessment Requirements for ICTNWK304 Administer network peripherals

Release: 1

Assessment Requirements for ICTNWK304 Administer network peripherals

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- plan and install peripherals
- connect and test peripherals to network
- manage the use of peripheral services with workstations
- maintain networked peripherals according to a maintenance schedule
- rectify faulty peripheral services or devices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe common network peripherals and their configuration
- identify and summarise current industry standards for network peripherals
- outline the general construction and operation of peripheral devices to facilitate troubleshooting.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry and include access to:

- a range of peripherals
- network administration tools
- a live network with a representative range of networked client server environments and operating systems
- technical records, organisational policies and documentation.

Assessors must satisfy NVR/AQTF assessor requirements.
