ICTNWK433 Install backbone technologies in a local area network

Release: 1

ICTNWK433 Install backbone technologies in a local area network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install core layer (backbone) connectivity in a local area network (LAN) for applications between floors in a multi-storey and separate buildings.

It applies to individuals who apply specialised technical knowledge and a systematic approach to installing Information and Communications Technology (ICT) technologies and backbone connectivity in a LAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Design and prepare to install network requirements	1.1 Identify network requirements according to technical and organisational requirements 1.2 Design network structure according to organisational requirements 1.3 Design network addressing system with subnet and host identities (IP addressing) and virtual LANs (VLANs) 1.4 Identify and document resource requirements according to organisational policies, procedures and task requirements
2. Install and configure network backbone	2.1 Install and configure networking switches and routers according to task requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Install network protocol suites according to task requirements 2.3 Configure host and workstation network access according to task requirements
3. Test and validate network	3.1 Test network connectivity and ensure hosts on segments and VLANs operation parameters are met 3.2 Implement adjustments to systems structure according to task requirements 3.3 Document and validate network performance according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical information to calculate and interpret network connectivity
Oral communication	<ul style="list-style-type: none"> Uses active listening, observational and questioning techniques to confirm information and using technical language appropriate to audience and environment
Reading	<ul style="list-style-type: none"> Gathers, interprets and analyses current network design specifications and identifies relevant and key information
Writing	<ul style="list-style-type: none"> Prepares required documentation detailing network performance using cohesive and relevant language for intended audience
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to prioritise tasks and contingency arrangements
Problem solving	<ul style="list-style-type: none"> Demonstrates an understanding of purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks
Self-management	<ul style="list-style-type: none"> Initiates standard procedures when responding to familiar problems within immediate context
Technology	<ul style="list-style-type: none"> Uses mobile communication tools and specialised software to ensure that geographically distributed team members remain connected in virtual environments

Unit Mapping Information

Supersedes and is equivalent to ICTNWK418 Implement backbone technologies in a local area network.
