| 3. Protect rights of stakeholders | 3.1 Identify and document the relevance of legislation and standards to organisational outcomes<br>3.2 Investigate and review organisational privacy policy and procedures<br>3.3 Investigate and review organisational code of ethics<br>3.4 Determine the integrity, confidentiality, security and availability of information as required by organisational policy<br>3.5 Maintain confidentiality and proprietary rights of stakeholder interests |
| 4. Contribute to privacy policy | 4.1 Contribute to the creation or updating of the organisational privacy policy and procedures to align with privacy legislation<br>4.2 Distribute new or revised policy and procedures to stakeholders<br>4.3 Implement new work procedures and collect feedback from stakeholders<br>4.4 Ensure the integrity, confidentiality, security and availability of information as required by organisational policy |
| 5. Maintain privacy policy | 5.1 Review work practices to ensure application of privacy policy and procedures<br>5.2 Maintain the integrity, confidentiality, and availability of information as required by organisational privacy policy<br>5.3 Review work practices to ensure system security according to organisational privacy policy |
| 6. Contribute to creation of ethics code | 6.1 Assist in developing or updating a code of ethics to align with legislation and standards for the organisation<br>6.2 Distribute the new ethics code to stakeholders and collect feedback<br>6.3 Implement new ethical work procedures and collect feedback<br>6.4 Review ethical work practices and feedback to ensure application of the code |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 7. Maintain ethics code | 7.1 Perform regular checks to ensure stakeholders understand and are continuing to apply the code of ethics in the workplace<br>7.2 Establish a review and grievance procedure to enable confidential reporting of any ethical issues<br>7.3 Interview and regularly follow up with stakeholders to ensure they are receiving consistent and appropriate service in dealing with the code of ethics |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 3.1-3.4, 4.3, 5.1, 6.1, 6.3, 6.4 | • Identifies, analyses and evaluates complex text to determine legislative and organisational standards, applies the information to determine the effectiveness of current organisational policies and processes |
| Writing | 2.1, 3.1, 4.1, 6.1, 7.2 | • Integrates information and ideas from a range of sources, utilising appropriate support materials and specialised and cohesive language in a format and style appropriate to the audience and organisation |
| Oral Communication | 2.1, 4.1, 4.3, 6.1-6.3, 7.1, 7.3 | • Articulates ideas and requirements clearly, based on techniques appropriate to audience and environment<br>• Participates in a verbal exchange of ideas and elicits the view and opinions of others by listening and questioning |
| Navigate the world of work | 1.1-1.3, 2.1, 3.1-3.4, 5.2, 5.3, 6.1 | • Keeps up to date on changes to legislation or regulations relevant to own rights and responsibilities, and considers implications of these when negotiating, planning and undertaking work |
| Interact with others | 2.2, 4.2, 6.2 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 3.5, 4.3, 4.4, 5.1-5.3, 6.3, 6.4, 7.1, 7.2 | • Uses digital technologies and systems safely, legally and ethically when gathering, storing, accessing and sharing information, with a growing awareness of the permanence and transparency of all activities<br>• Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Uses each experience to reflect on the ways in which variables impact on decision outcomes and to gain insights into what constitutes effective decision making in different contexts |

# Assessment Requirements for ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse legislation and standards relating to professional conduct and privacy in the information and communications technology (ICT) industry
- contribute to the development of a code of ethics and monitor the workplace to ensure code of ethics is being applied and is appropriate
- contribute to the development of a privacy policy and monitor the workplace to ensure the policy is being applied and is appropriate.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss codes of ethics pertinent to computing industry
- discuss federal and state or territory legislation and policy relevant to an ICT environment and relating to:
  - access and equity
  - copyright and intellectual property
  - workplace health and safety (WHS)
  - privacy
- outline organisational communication processes and procedures
- outline organisational requirements for customer service
- discuss the security features of server operating systems
- explain system security procedures.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- relevant organisational policies, legislation and standards documentation
- industry codes of practice.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT419 Work effectively in the digital media industry

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to work effectively as an individual or in a team environment in the digital media industries.

It applies to individuals who use digital media technologies to work in the information and communications technology (ICT) industry as digital media designers, developers, programmers, contractors or digital media authoring specialists.

No licensing, legislative or certification requirements apply to this unit at the time of publication

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Communicate effectively with others | 1.1 Research and analyse information sources and data related to the digital media industry<br>1.2 Engage with key players in the organisation using a range of communication tools and media<br>1.3 Plan and develop a communication strategy for an enterprise or workplace and clients<br>1.4 Prepare reports in a variety of formats and media |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Perform own work effectively | 2.1 Develop a work plan and schedule<br>2.2 Respond to requests and resolve client queries and issues as they arise<br>2.3 Apply legislative and regulatory requirements<br>2.4 Apply industry codes of practice and guidelines |
| 3. Review own communication and work effectiveness, and make improvements | 3.1 Seek and respond positively to comments and feedback from peers and clients using evaluation techniques<br>3.2 Review own communication strategies and practices, and make continuous improvements<br>3.3 Review own work plan and schedule against milestones or key performance indicators (KPIs), and make improvements<br>3.4 Undertake training and professional development activities<br>3.5 Participate in discussions and forums, and generate ideas for improvement |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 3.2-3.5 | • Builds on prior knowledge by analysing own performance, ascertaining areas of need and investigating and participating in a range of learning programs |
| Reading | 1.1, 3.2-3.4 | • Analyses and compares a range of textual and diagrammatic information related to the digital media industry in order to develop a communications solution<br>• Recognises and interprets a large range of computer generated text, icons and images |
| Writing | 1.2-1.4, 2.1, 3.2, 3.3 | • Uses correct spelling and grammar, plain English and terminology specific to the digital media industry to produce documents, plans, schedules and reports, and liaise with key stakeholders |
| Oral | 1.1, 1.2, 2.2, 3.1, | • Elicits and evaluates information using project |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | 3.4, 3.5 | related terminology and effective listening and questioning techniques<br>• Uses plain English and, where necessary, project related terminology to liaise with clients, present information and obtain feedback |
| Navigate the world of work | 2.3, 2.4 | • Keeps up to date on changes to legislation or regulations relevant to own rights and responsibilities, and considers implications of these when negotiating, planning and undertaking work |
| Interact with others | 1.2 | • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and taking a leadership role on occasion |
| Get the work done | 1.1, 1.3, 1.4, 2.1, 2.2, 3.2, 3.3 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• In familiar contexts, responds intuitively to problems requiring immediate attention, quickly drawing on past experience to devise solutions<br>• Uses a range of digitally based technology and applications to access and filter data, extract, organise, integrate and share relevant information in increasingly effective ways<br>• Uses each experience to reflect on the ways in which variables impact on outcomes and to gain insights into what constitute effective strategies and practices for future work |

# Assessment Requirements for ICTICT419 Work effectively in the digital media industry

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research and analyse information and communicate effectively using a range of media and formats
- perform according to work plan and organisational requirements and values
- follow and apply requirements of legislation and regulations
- review and implement improvements to own work and communication
- review own communication strategies and practices and identify areas for improvement
- review work plan and schedule key milestones
- carry out professional development activities related to a work plan
- seek and respond to client queries and feedback.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list current industry accepted hardware and software digital media products and discuss their features and capabilities
- discuss the work health and safety (WHS) standards that apply to working in the digital media industries
- outline the operational environment, including customer base, company products and services
- explain the importance of communication and work plans in a team environment
- outline organisational:
  - code of conduct and values that are consistent with the organisational mission
  - policy and procedures

© Commonwealth of Australia, 2025 Future Skills Organisation

  - systems, management structure and governance arrangements
- discuss the principles of equal employment opportunity (EEO) and anti-discrimination
- outline the role and positioning of digital media within the overall business objectives of the organisation
- recognise and define digital media terminology
- describe the roles and responsibilities of personnel in a digital media industry
- identify and outline current federal and state legislative and regulatory requirements, codes of practice and policy relating to work in a digital environment.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a range of current industry information
- appropriate ICT equipment and technology to research and analyse industry information.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT420 Develop client user interface

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design and document a client user interface that integrates with front-end applications.

It applies to individuals who work in small-to-medium enterprises (SMEs) as software designers and developers and have achieved a degree of autonomy.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare design for interface | 1.1 Review requirements and other documentation to determine user needs<br>1.2 Investigate system environment to determine the impact of user interface design<br>1.3 Review organisational goals to ensure consistency with organisational styles<br>1.4 Define data query and report formats for the user interface design where appropriate |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Document needs and findings, and obtain approval for the proposed interface from the appropriate person |
| 2. Design and document user interface | 2.1 Design menu structures according to requirements and acceptance criteria, and following design principles<br>2.2 Design screen dialogues according to requirements and acceptance criteria, and following design principles<br>2.3 Design batch procedures where appropriate to technical specifications and acceptance criteria<br>2.4 Design online help and tutorials for the prototype, and following design principles<br>2.5 Document prototype according to organisational goals<br>2.6 Submit prototype to appropriate person for sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.4 | • Identifies and interprets a variety of hard copy and online technical and design information to identify system environment, organisational requirements and clarify user requirements |
| Writing | 1.4, 1.5, 2.1-2.5 | • Uses correct spelling and grammar, plain English and specific terminology to produce documents and tutorials to organisational guidelines and user requirements<br>• Uses the appropriate programming syntax and conventions to perform the job role<br>• Uses concise plain English and identifies and applies organisational designs, styles and interface, writing principles consistently on titles, text links, buttons, error messages and other interface objects |
| Oral Communication | 1.1-1.5, 2.6 | • Elicits and evaluates information using effective listening and questioning techniques<br>• Uses simple and relevant language to confirm understanding of requirements, liaise with the client and obtain feedback |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.3, 2.5 | • Considers the implications of organisational policies and procedures when planning and undertaking work |
| Interact with others | 2.6 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1, 1.2, 1.4, 2.1-2.3 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Uses a range of digitally based technology and applications to access and filter data, extract, organise, integrate and share relevant information in increasingly effective ways |

# Assessment Requirements for ICTICT420 Develop client user interface

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine impact of user interface design in the system environment and identify appropriate data query and report formats
- design menu structures according to design principles
- design screen dialogues in line with requirements and acceptance criteria
- design batch procedures
- develop online help and tutorials for prototype.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify client business area
- discuss current industry design principles
- identify the general features and capabilities of current industry accepted hardware and software products
- identify general features and capabilities of current industry accepted user interfaces
- identify front-end systems
- discuss GUI and web design principles.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- design specifications
- organisational standards for documentation and version control
- project management process and hierarchy
- a usability test plan
- agreed usability metrics.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT421 Connect, maintain and configure hardware components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install, configure and maintain personal computer devices, including mobile devices according to client and user requirements.

It applies to individuals who utilise a range of technical skills to plan and implement activities to connect system components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify hardware components | 1.1 Identify different types of personal computer devices<br>1.2 Identify and categorise the different personal computer components, including mobile personal computer components<br>1.3 Define the purpose and characteristics of the different personal computer component categories<br>1.4 Distinguish between the different types of devices within |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | each personal computer component category |
| 2. Identify types of peripheral hardware components | 2.1 Identify and categorise the different peripheral hardware components<br>2.2 Define the purpose and characteristics of the different peripheral hardware components<br>2.3 Distinguish between the different types of devices within each peripheral hardware component category |
| 3. Install and configure personal computer components | 3.1 Install and configure personal computer components<br>3.2 Install and configure mobile personal computer components<br>3.3 Develop plans, with prioritised tasks and contingency arrangements, for the installation and configuration of selected components with minimum disruption to clients<br>3.4 Liaise with appropriate person to obtain approval for the plans<br>3.5 Install and configure components according to plan, installation procedures and organisational requirements<br>3.6 Use appropriate testing tools to test components for error-free performance<br>3.7 Identify and solve identified problems<br>3.8 Test and enhance system performance, using knowledge of the system, to meet organisational benchmarks<br>3.9 Document the installation and configuration process according to organisation guidelines<br>3.10 Develop and document a maintenance plan and schedule based on vendor specifications for the installed components |
| 4. Install and configure print devices | 4.1 Install and configure print devices<br>4.2 Detect and identify common printer issues<br>4.3 Undertake printer issue resolution to meet client requirements |
| 5. Evaluate modified system | 5.1 Collect client or user feedback and analyse against client requirements<br>5.2 Correct identified shortcomings in the system and record actions |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 2.1, 2.3, 3.5, 3.6, 5.1 | • Identifies, interprets and analyses online and hard copy documentation containing complex information and communications technology (ICT) related terminology, acronyms and concepts |
| Writing | 3.3, 3.9, 3.10, 5.2 | • Uses correct spelling, grammar and plain English, together with the ICT specific terminology, diagrams, and syntax to convey explicit recommendations, requirements and information |
| Oral Communication | 1.3, 2.2, 3.4, 5.1 | • Converts highly technical language and terminology to plain English to communicate ideas and plans, and gather feedback from clients |
| Numeracy | 1.4, 2.3 | • Recognises and interprets numerical data associated with device and component specifications |
| Navigate the world of work | 3.5, 3.8, 3.9 | • Keeps up to date with organisational standards and procedures relevant to own rights and responsibilities, and considers implications of these when negotiating, planning and undertaking work |
| Get the work done | 1.1-1.4, 2.1, 2.3, 3.1-3.3, 3.6- 3.8, 3.10, 4.1-4.3, 5.1, 5.2 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• In familiar contexts, responds intuitively to problems requiring immediate attention, quickly drawing on past experience to devise solutions<br>• Considers purpose, needs and limitations when selecting devices and applications for different tasks<br>• Uses each experience to reflect on the ways in which variables impact on outcomes and to gain insights into what constitute effective strategies and practices for future work |

# Assessment Requirements for ICTICT421 Connect, maintain and configure hardware components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- install components across a variety of situations and account for unexpected contingencies
- modify system's hardware, internal hardware and peripheral hardware components to meet client requirements
- identify and plan the modification and connection of hardware, internal hardware and peripheral hardware components according to vendor and technical specifications
- test components and rectify identified problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and categorise the different types of personal computer devices, hardware, internal hardware and peripheral hardware components
- outline environmental considerations in e-waste disposal
- discuss systems diagnostic software
- identify areas of the operating system (OS) related to configuration and testing
- identify current industry accepted hardware and software products
- outline organisational guidelines
- outline organisational requirements
- identify system's current functionality
- identify vendor specifications and requirements for component installation.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- personal computer devices, hardware, internal hardware and peripheral hardware components for installation and configuration
- current industry standard performance testing software
- documents detailing organisational guidelines and requirements
- technical manuals, tools and test equipment.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT422 Participate in ICT services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to apply the principles of service management when working in an information and communications technology (ICT) service desk environment.

It applies to individuals who work in ICT service roles and are responsible for providing ICT service desk support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to work on a service desk | 1.1 Identify policy and procedures of service desk quality<br>1.2 Apply concepts and terminology associated with a service desk environment<br>1.3 Use appropriate service principles |
| 2. Support a service desk | 2.1 Use service desk systems to open a new service call<br>2.2 Inform customer of the progress of the call using service |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | principles<br>2.3 Escalate a service desk call following service principles<br>2.4 Implement service desk closure principles<br>2.5 Seek user feedback following closure of a service desk call |
| 3. Apply continuous improvement to service desk | 3.1 Review service desk records<br>3.2 Plan methods of improving performance<br>3.3 Document proposed improvements and submit to appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1 | • Identifies and interprets textual and organisational documentation containing ICT specific terminology to service desk quality, and review records |
| Writing | 2.5, 3.3 | • Uses clear, concise language, correct spelling and grammar, and relevant ICT terminology to obtain feedback and document proposed improvements |
| Oral Communication | 1.2, 1.3, 2.1-2.5 | • Employs a courteous manner, appropriate tone, detailed and clear language, specific ICT terminology, and effective listening and questioning techniques together with reflective responses to elicit customer information and give and receive feedback |
| Interact with others | 3.3 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1, 1.2, 2.1, 2.4, 3.2 | • Takes responsibility for defining key aspects of own workload, balancing own needs and priorities with customers' needs<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new |

# Assessment Requirements for ICTICT422 Participate in ICT services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- provide service desk support
- plan and document strategies to improve service desk performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline:
  - enterprise escalation policy and procedures
  - industry best practice in information and communications technology (ICT) service desk support
- identify and describe:
  - basic technical service management terminology
  - legislation, codes of practice and other formal agreements that directly impact on resolution processes
  - quality assurance of processes and procedures relating to service desk
  - service management relating to service desk.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- an ICT service desk environment

© Commonwealth of Australia, 2025 Future Skills Organisation

- current service logs and procedures
- service desk software
- customer contact technologies currently used in industry.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT423 Select cloud storage strategies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to analyse business requirements, and to select the best strategies for providing a cloud storage solution.

It applies to those engaged in developing a cloud storage strategy for an enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan for the implementation of a cloud storage solution | 1.1 Review the business requirements and identify the enterprise standards<br>1.2 Review the major characteristics relating to cloud storage, and identify the advantages and disadvantages of its use<br>1.3 Review the suitability of "Big Data" in the cloud storage solution |
| 2. Select strategies for implementing cloud storage solutions | 2.1 Research, and review, the major cloud storage applications to determine possible cloud storage business needs<br>2.2 Identify the most relevant business functions for cloud |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | storage deployment<br>2.3 Evaluate possible providers of cloud storage solutions<br>2.4 Review service level agreements (SLAs) and identify any hidden costs<br>2.5 Develop a cloud storage strategy, according to the identified business data deliverables |
| 3. Evaluate the effectiveness of cloud storage | 3.1 Review and evaluate, cloud storage technologies for performance, usability and benefit to the enterprise<br>3.2 Document and action the required improvements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 2.4, 3.1 | • Draws on a broad range of strategies to build and maintain understanding throughout complex texts<br>• Organises, evaluates and critiques ideas, and information, from a wide range of complex texts |
| Writing | 1.1-1.3, 2.5, 3.2 | • Generates complex written texts, demonstrating control over a broad range of writing styles and purposes |
| Numeracy | 2.4 | • Analyses and synthesises highly-embedded mathematical information, in a broad range of tasks and texts |
| Navigate the world of work | 1.1, 2.5, 3.1 | • Develops, and implements, strategies that ensure that the organisational policies, procedures, and regulatory requirements are met<br>• Monitors and reviews the organisation’s policies, procedures, and adherence to legislative requirements, in order to implement and manage change |
| Get the work done | 1.2, 2.5, 3.2 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands<br>• Gathers and analyses data, and seeks feedback, to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | improve plans and processes<br>• Makes high-impact decisions in a complex and diverse environment, using input from a range of sources<br>• Explores and incubates, new and innovative ideas through unconstrained analysis and critical thinking, to develop and improve the organisation's goals |

# Assessment Requirements for ICTICT423 Select cloud storage strategies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review the benefits and challenges associated with implementing a cloud storage solution
- determine and document the most appropriate cloud storage solutions for the enterprise, and effective strategies for their implementation
- review the implementation of a cloud storage strategy, and identify any areas for improvement.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the business types that may have cloud storage requirements
- define the current trends and directions in information and communications technology (ICT), and the major industry technology standards used in cloud storage services
- analyse the advantages and disadvantages of cloud storage
- define "Big Data" and its application within the corporate environment
- identify and specify, the vendor product directions in cloud storage services
- identify and describe, current industry hardware and software products, and their general features, capabilities and application, especially where applied to cloud storage technologies
- define the characteristics of cloud storage that must be included in service level agreements
- describe the additional costs that impact on a cloud storage strategy.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a site where cloud storage technologies may be used
- the cloud storage technologies currently used in industry
- service level agreements (SLA) documentation relevant to cloud storage scenarios
- documentation detailing work health and safety (WHS) standards, environmental guidelines, and enterprise requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT501 Research and review hardware technology options for organisations

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to research and evaluate existing and emerging technologies and hardware solutions to support organisational strategic goals.

It applies to individuals in senior roles who administer and manage information and communications technology (ICT) support in small-to-medium enterprises (SMEs) using a wide range of general ICT technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine organisational needs | 1.1 Establish organisational needs and selection criteria for new technology<br>1.2 Review strategic goals and determine future requirements<br>1.3 Assess physical infrastructure and financial parameters against strategic goals |
| 2. Research vendors, | 2.1 Determine suitable suppliers and vendors |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| suppliers and ICT industry specialists | 2.2 Source information from suppliers and vendors<br>2.3 Assess vendor information against industry standards<br>2.4 Review emerging standards and applications for compatibility with supplier and vendor information |
| 3. Evaluate and report on hardware technology options | 3.1 Review and test hardware to identify suitability for organisational requirements<br>3.2 Identify possible project risks associated with identified hardware<br>3.3 Document findings in a report and present to appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 2.1-2.4 | • Investigates, evaluates and applies information from a range of complex and technical texts to expand own knowledge in order to identify hardware technology that will support strategic goals |
| Reading | 1.1-1.3, 2.1-2.4, 3.1- | • Identifies, interprets and evaluates technical online and hard copy documentation containing complex terminology and diagrams to identify hardware technology that will benefit the organisation |
| Writing | 3.3 | • Uses correct spelling and grammar, and specialised, cohesive language in a format and style appropriate to the specific audience to present an evaluation of hardware technology |
| Oral Communication | 1.1-1.3, 2.1, 2.2, 2.4, 3,1, 3.2 | • Uses effective listening and questioning techniques, and clear, easy-to-understand language, and translates technical terminology into plain English when clarifying strategic goals and assessing project risks<br>• Uses large range of technical terminology when eliciting information about new and emerging hardware technologies |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.3, 3.2 | • Interprets financial information and applies mathematical calculations relating to time constraints and budgetary information |
| Navigate the world of work | 2.3, 2.4 | • Considers the implications of organisational policies and procedures when planning and undertaking work |
| Interact with others | 3.5 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1-1.3, 2.1, 3.1, 3.2 | • Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps and reflecting some awareness of resource constraints<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology |

# Assessment Requirements for ICTICT501 Research and review hardware technology options for organisations

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse and plan approaches to technical problems or management requirements
- access and convey conceptual information regarding emerging technology in relation to organisational needs
- evaluate information, using it to forecast for planning or research purposes
- recommend technology options
- document findings in a report.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe and explain the business planning process relevant to researching technology
- outline and explain client business needs that can be satisfied by the provision of information and communications technology (ICT) products and services
- describe and outline current business practices in preparing reports
- identify and outline current industry and technology information sources
- outline general features and capabilities of current industry accepted hardware, cabling and software products, and identify emerging trends and product design
- discuss equipment performance benchmarking
- identify industry networks, key individuals and organisations within the ICT industry
- identify information gathering techniques
- outline quality assurance practices to promote reliable investigation processes
- identify vendor product directions:
  - access and security products

© Commonwealth of Australia, 2025 Future Skills Organisation

- next generation networks
- self-configuring asymmetric digital subscriber line (ADSL) or cable modem-router-switch for the small office/home office (SOHO) market
- wireless standards.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- network or computer layout documentation and premises plans
- network components
- equipment specifications
- organisational guidelines
- business plan or model
- journals of industry and professional associations
- relevant standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT502 Develop detailed component specifications from project specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to analyse requirements of the project specifications in order to produce a set of high-level component specifications.

It applies to systems designers who are required to produce component specifications for programmers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop components | 1.1 Document behaviour scenarios according to documentation standards<br>1.2 Identify or develop components according to project specifications<br>1.3 Prepare diagrams according to standards |
| 2. Prepare schema | 2.1 Analyse and document component connectivity |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Identify and incorporate data flow iteration<br>2.3 Prepare component action diagrams according to standards |
| 3. Prepare component model | 3.1 Describe roles and responsibilities<br>3.2 Review and update functional requirements<br>3.3 Specify interface components and component relationships<br>3.4 Prepare interaction diagrams according to standards |
| 4. Iterate and review model | 4.1 Conduct walk-through of current model and review functionality<br>4.2 Identify relationships to ensure integration of model<br>4.3 Review class service requirements<br>4.4 Prepare initial test criteria<br>4.5 Implement process for incremental testing |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2, 3.2, 4.1-4.3 | • Interprets and analyses text with complex terminology, diagrams, code, syntax, icons and symbols to evaluate current system functionality and technical requirements, and develop diagrams using industry specific software |
| Writing | 1.1-1.3, 2.1-2.3, 3.1-3.4, 4.4, 4.5 | • Uses the correct spelling and grammar, clear plain English, task related terminology, and a formal document structure, format and style appropriate to the audience and organisation<br>• Selects suitable vocabulary, terminology, labelling and naming conventions to develop diagrams using industry specific design tools |
| Numeracy | 1.2 | • Interprets numerical information and applies basic mathematical calculations relating to time durations and budgetary information |
| Navigate the | 1.1, 1.3, 2.3, 3.4 | • Recognises and follows explicit and implicit protocols, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| world of work | | and meets expectations associated with own role |
| Get the work done | 1.2, 2.1, 2.2, 3.2, 3.3, 4.1- 4.5 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for efficiency<br>• In familiar contexts, responds intuitively to problems requiring immediate attention<br>• Considers purpose, needs and limitations when selecting devices and applications for different tasks |

# Assessment Requirements for ICTICT502 Develop detailed component specifications from project specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify and document high level component specifications relevant to the project specifications
- analyse and document component connectivity and relationships
- document and review component modelling.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline appropriate design tools and their use
- discuss and explain configuration management
- outline the key features of a cost-benefit analysis
- identify and apply current industry accepted design methodologies and hardware and software products, including broad knowledge of general features and capabilities
- explain data modelling techniques
- describe program development methodologies
- describe quality assurance practices for preparing component models
- outline relevant standards and organisational policies
- specify current system functionality for analysing components.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- technical specifications
- organisational and process goals
- standards for model development
- computer aided software engineering (CASE) tools
- project deliverables
- test plan
- project budget
- outcomes of the business analysis process
- appropriate software and hardware.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT503 Validate quality and completeness of system design specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to check the system design specifications against outcomes and quality standards.

It applies to individuals working as system designers who are required to validate system design specifications to ensure that they meet the required organisational audit standards.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine audit criteria | 1.1 Investigate the system or product for which the quality audit is being performed to understand its functionality<br>1.2 Determine the objectives to be achieved by the quality audit<br>1.3 Determine the scope of the quality audit<br>1.4 Develop a list of audit criteria and quality benchmarks<br>1.5 Develop a metric to classify the audit criteria<br>1.6 Determine the audit technique or methodology to be |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | followed<br>1.7 Examine and detail the resources available to carry out the audit<br>1.8 Document the objectives, scope, criteria, technique and resources in an audit plan |
| 2. Audit aspects of the final system | 2.1 Use the audit criteria to collect evidence about the functionality and quality of the final system, including documentation<br>2.2 Use a checklist to monitor audit progress<br>2.3 Document audit outcomes as the audit progresses |
| 3. Review and confirm contract and specifications | 3.1 Review system contract against audit outcomes<br>3.2 Compare system functionality against audit outcomes and system contract<br>3.3 Identify items of non-compliance where audit outcomes do not meet performance targets or fall short of contract requirements<br>3.4 Review system procedures for corrective action<br>3.5 Document items of non-compliance and proposed corrective action |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 1.7, 3.1-3.3 | • Interprets, analyses and evaluates text with complex terminology, diagrams, code, syntax, icons and symbols to: evaluate current system functionality, determine audit objectives, scope and criteria, and review audit findings |
| Writing | 1.4, 1.5, 1.7, 1.8, 2.2, 2.3, 3.5 | • Uses plain English, appropriate grammatical structures and terminology, diagrams and flow charts, numerical information, and formatting and document structure relevant to the job role and organisation to develop an audit plan and document |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | audit results |
| Oral Communication | 1.1-1.3, 1.7, 2.1, 3.1, 3.4 | • Uses effective listening and open questioning techniques to obtain information and elicit the view and opinions of others<br>• Uses appropriate questioning strategies, avoiding loaded or leading questions, when collecting evidence<br>• Uses specific and complex system/product terminology when applicable, translating complex terms into plain English as required by the audience |
| Numeracy | 1.2-1.5, 3.1-3.4 | • Interprets and analyses numerical and financial information, and applies mathematical calculations and financial functions related to performance and financial metrics developed |
| Navigate the world of work | 1.4 | • Recognises and follows explicit and implicit protocols, and meets expectations associated with own role |
| Get the work done | 1.1-1.7, 3.2-3.4 | • Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps and reflecting some awareness of resource constraints<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot<br>• Uses analytical processes in a variety of situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria |

# Assessment Requirements for ICTICT503 Validate quality and completeness of system design specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine audit criteria
- conduct an audit
- review system procedures for non-compliance
- propose corrective actions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline acceptance criteria
- translate detailed design principles and specification standards
- discuss fault tolerance technologies
- describe the process of quality audits
- discuss quality levels, both generally and as required by the organisation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- audit tools
- documentation guidelines
- relevant standards and benchmarks

© Commonwealth of Australia, 2025 Future Skills Organisation

- service level agreement (SLA)
- archive policies
- acceptance criteria
- ICT security specifications
- live system, including database, system files and designed interface
- technical specifications of system.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT504 Confirm transition strategy for a new system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to confirm a transition strategy to a new system, based on the revised system design and newly developed change management plan.

It applies to individuals who work as part of a team in a range of information and communications technology (ICT) positions, and are required to plan for a transition to new system websites, networks or software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm delivery and acceptance plan | 1.1 Confirm phased delivery with the client and project team<br>1.2 Confirm method of acceptance and acceptance criteria<br>1.3 Confirm that acceptance test plan is in place and agreed |
| 2. Confirm data take-up plan | 2.1 Identify the data source for each database<br>2.2 Analyse possible integrity constraints<br>2.3 Design the data conversion workflow, taking into |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | consideration data validation, data clean-up and data loading<br>2.4 Identify interface requirements, data take-up method, complexity and effort required<br>2.5 Develop required data conversion contingencies and confirm with appropriate person |
| 3. Confirm cutover plan | 3.1 Agree on the conversion window in operational timescale with appropriate person<br>3.2 Plan and confirm parallel running with appropriate person<br>3.3 Confirm approval of dependencies with appropriate person<br>3.4 Confirm approval of fall-back options with appropriate person<br>3.5 Confirm approval of checkpoints, tests and responsibilities with appropriate person<br>3.6 Confirm approval of resources, tasks and timescales with appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 2.1, 2.2, 2.4 | • Identifies and analyses complex electronic and hard copy documentation, information and data containing specific terminology, diagrams and numerical information to organise conversion and identify data convention contingencies |
| Writing | 1.1-1.3, 2.3, 2.5, 3.1-3.6 | • Uses clear language and plain English with task specific technical terminology to confirm approval for each stage of the conversion<br>• Applies the formal labels, logos, formatting and document structure relevant to the organisation to ensure approval/signoff obtained is valid |
| Oral Communication | 1.1-1.3,<br>2.1, 2.4, 2.5,<br>3.1-3.6 | • Elicits information by using effective listening and open questioning techniques<br>• Articulates strategies clearly and distinctively, based on techniques and language appropriate to audience |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | and environment, and uses probing, clarifying questions to ensure strategies are understood |
| Numeracy | 1.2, 1.3 | • Interprets and analyses numerical and financial information, and applies mathematical calculations and financial functions related to timeframe, logistics and budgets |
| Get the work done | 2.1- 2.5. 3.2 | • Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps and reflecting some awareness of resource constraints<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot<br>• Uses analytical processes in a variety of situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria |

# Assessment Requirements for ICTICT504 Confirm transition strategy for a new system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- confirm acceptance plan
- develop a data take-up plan
- confirm cut-over plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss and apply conversion strategies
- outline current business practices related to transition strategies
- discuss cut-over strategies
- discuss post-converging strategies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- ICT specifications
- change management plan
- acceptance test plan
- ICT security assurance specifications.

# ICTICT505 Determine acceptable developers for projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to ensure that development projects are contracted to developers who are able to accomplish the task within the mutually agreed parameters of the project.

It applies to individuals who manage a range of information and communications technology (ICT) projects, including software development, hardware procurement and implementation, network analysis and deployment, and web and/or system development.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Specify development requirements | 1.1 Prepare and document clear specifications for the project<br>1.2 Submit specifications to appropriate person for sign-off and authority to contract developers<br>1.3 Prepare request for tender document if appropriate, using specifications<br>1.4 Prepare and document agreed selection guidelines |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Identify potential developers | 2.1 Investigate potential developers in line with organisational guidelines<br>2.2 Request development quotes from potential developers<br>2.3 Assess submitted quotes against selection guidelines and make a shortlist of potential developers, where appropriate |
| 3. Select a potential developer | 3.1 Assess the capability of developers to do the project work<br>3.2 Confirm that potential developers understand the scope of the work to be undertaken<br>3.3 Conduct a due diligence check where appropriate and assess the quality of developers<br>3.4 Select appropriate developers using selection criteria<br>3.5 Inform developers of their selection according to organisational guidelines |
| 4. Sign off the selection process | 4.1 Prepare contract for signing according to enterprise procedures<br>4.2 Sign contract and prepare developers to commence work according to contract |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 2.3, 3.1, 3.3 | • Interprets and evaluates a range of documentation containing ICT specific terminology and budgetary information to obtain information relating to project requirements and to identify and select developers |
| Writing | 1.1, 1.3, 1.4, 2.3, 3.5, 4.1 | • Uses correct spelling and grammar, clear plain English, task related terminology, and a formal document structure, format and style appropriate to the audience and organisation |
| Oral Communication | 1.2, 2.1, 2.2, 3.1-3.3, 3.5, 4.2 | • Assumes a formal manner and uses effective listening and questioning techniques to clarify project requirements and elicit information about |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | the capacity, capability and qualifications of developers |
| Numeracy | 1.1, 2.3, 4.1 | • Interprets and analyses numerical and budgetary information, and applies mathematical calculations to manage timelines and budgets |
| Navigate the world of work | 2.1, 3.5, 4.1 | • Keeps up to date on changes to legislation or regulations relevant to own rights and responsibilities, and considers implications of these when negotiating, planning and undertaking work<br>• Understands how own role meshes with others and contributes to broader work goals |
| Interact with others | 1.2 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1, 1.3, 1.4, 2.1, 2.3, 3.1, 3.3, 3.4, 4.1 | • Uses a combination of formal logical planning processes and an increasingly intuitive understanding of context to identify relevant information and risks<br>• Uses systematic, analytical processes in complex situations, gathering relevant information and identifying and evaluating options against a pre-determined set of criteria<br>• Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks |

# Assessment Requirements for ICTICT505 Determine acceptable developers for projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- specify requirements for a project
- prepare information for tender document and document selection criteria
- seek suitable developer candidates
- select suitable developers
- prepare and implement contracts procedure.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the processes and procedures relating to business liaison
- summarise business negotiation and interview techniques
- outline the process for tendering and writing tenders
- outline the principles and features for preparing contracts
- identify and describe the state and federal legislative requirements and industry standards that relate to:
  - due diligence
  - codes of practice
  - ethics
  - industry and e-commerce standards
  - contracts.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a business plan
- procurement policies
- selection policies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT506 Implement process re-engineering strategies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to consider a variety of potential process re-engineering strategies and to make appropriate selections for implementation in an organisation.

It applies to individuals who are senior information and communications technology (ICT) staff required to implement system redesign, and administer and manage ICT support in small-to-medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop process re-engineering strategies | 1.1 Research and determine target process for re-engineering action<br>1.2 Develop process re-engineering plan<br>1.3 Determine and document strategic importance of process<br>1.4 Establish and document performance standards and benchmarks for new process |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Seek feedback and suggestions from client on proposed process re-engineering |
| 2. Implement process re-engineering strategies | 2.1 Compare suggestions with process re-engineering plan to determine suitability for business requirements<br>2.2 Incorporate suggestions where appropriate<br>2.3 Implement new process into business structure and leave sufficient scope for changing capacity or upgrades |
| 3. Monitor organisational context | 3.1 Monitor new process to measure performance levels<br>3.2 Determine and document benefits of the new process to the business<br>3.3 Identify and document training needs for staff<br>3.4 Analyse cultural and political impact of the new process<br>3.5 Document new process and disseminate information to appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2-1.4, 2.1, 3.2, 3.4 | • Identifies, analyses and evaluates complex online and hard copy documentation containing specific terminology, diagrams and numerical information to develop process re-engineering strategies and determine the benefits and impact of the process on the business |
| Writing | 1.2-1.5, 2.2, 3.2, 3.3, 3.5 | • Uses plain English, appropriate grammatical structures and terminology, diagrams and flow charts, numerical information, and formatting and document structure relevant to the job role and organisation |
| Oral Communication | 1.1, 1.5, 2.3, 3.1, 3.3, 3.5 | • Articulates implementation requirements and strategies clearly, using appropriate tone, style, body language and reflective responses<br>• Uses effective listening and questioning techniques to elicit feedback and to ensure understanding of the implementation process has occurred |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.4, 3.1 | • Interprets and analyses numerical and budgetary information, and applies mathematical calculations to evaluate the benefits of the process re-engineering on the business |
| Navigate the world of work | 1.4, 2.1, 3.5 | • Contributes to roles and responsibilities of self and others<br>• Modifies or develops organisational policies and procedures to comply with legislative requirements and organisation goals |
| Interact with others | 1.5, 3.3-3.5 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts<br>• Elicits feedback and provides feedback to others in order to improve self or workgroup behaviours |
| Get the work done | 1.1-1.4, 2.1-2.3, 3.1-3.5 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities<br>• Applies systematic and analytical decision making processes for complex and non-routine situations<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation and formal and analytical thinking<br>• Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others in a secure and stable digital environment |

# Assessment Requirements for ICTICT506 Implement process re-engineering strategies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop and document a re-engineering process that supports organisational objectives
- take into consideration the complex interdependencies between organisational and external drivers
- implement a re-engineering process
- monitor and analyse the impact of the process in the organisation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss business case preparation process and how it can be applied to developing organisational strategies
- identify and summarise relevant laws and standards as they apply to process re-engineering strategies, including:
  - benchmarks
  - copyright
  - intellectual property
  - ethics
  - cultural and political diversity
- outline the impact that new processes may have on an organisation
- outline procedures relating to consulting internally and externally.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a process re-engineering plan
- analysis software
- e-business models
- modelling software
- an organisational strategy
- an organisational structure and culture
- a personal computer (PC)
- stakeholder analysis.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT507 Select new technology models for business

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify opportunities for using new technology to support and enable efficient models of business.

It applies to individuals who work as senior information and communications technology (ICT) staff in a range of areas and who are required to research innovative approaches to meeting business requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify processes to be improved by the application of a new business model | 1.1 Map existing process flow against relevant performance standards in order to identify areas that may need improvement<br>1.2 Outline emerging models and processes<br>1.3 Identify changes in the technological, client and supply chain environment<br>1.4 Document changes identified and submit to appropriate person for review |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Appraise existing models | 2.1 Analyse existing business models<br>2.2 Investigate business models in use in other similar businesses<br>2.3 Identify and determine relevance of business models in use and under development in other industry sectors<br>2.4 Map existing models in other parts of business supply chain |
| 3. Research new business models | 3.1 Investigate new business models to establish opportunities for improvement<br>3.2 Evaluate opportunities against business requirements<br>3.3 Prioritise and document identified opportunities |
| 4. Select the appropriate model | 4.1 Select a business model that improves the business processes<br>4.2 Develop performance benchmarks to measure the effectiveness of the chosen business model<br>4.3 Model new business process or model and collaborate with other businesses<br>4.4 Document the proposed business model according to business procedures<br>4.5 Forward appropriate document to relevant person for sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.1-2.3, 3.1, 3.2 | • Identifies, analyses and evaluates complex text, diagrams, business models and statistical and financial information |
| Writing | 1.1, 1.2, 1.4, 2.4, 3.3, 4.2-4.4 | • Integrates information and ideas from a number of sources, utilising appropriate information ICT modelling tools, and specialised and cohesive language and document structures |
| Oral | 1.1, 1.3, 2.1-2.3, | • Elicits and evaluates information using effective |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | 3.1, 3.2, 4.3, 4.5 | listening and questioning techniques.<br>• Uses simple and relevant language to obtain information, confirm understanding, liaise with the client and appropriate person, and obtain feedback |
| Numeracy | 1.1, 1.4, 2.1, 2.2, 2.4, 3.2, 3.3, 4.2, 4.3 | • Interprets and analyses a range of statistical and financial data relating to business models to analyse the current model, identify current and future needs, and develop new technology models |
| Navigate the world of work | 1.1, 3.2, 4.4 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts |
| Interact with others | 1.4, 4.5 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience, and monitoring impact |
| Get the work done | 1.1, 1.3, 2.1-2.4, 3.1-3.3, 4.1-4.3 | • Uses systematic analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against organisational requirements<br>• Uses and investigates new digital technologies and applications to manage and manipulate data, and communicate effectively with others in a secure and stable digital environment |

# Assessment Requirements for ICTICT507 Select new technology models for business

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify new approaches to using technology or new technology to enable efficient models of business
- determine the appropriate focus of the selected business model in order to achieve the desired performance improvement
- document a new business model.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify benchmark selection and development
- discuss business process design and include:
  - case diagrams
  - business process model and notation
  - activity diagrams
- discuss business-to-business and business-to-customer interface and liaison
- identify relevant copyright and intellectual property issues
- discuss the current technical environment
- outline methods for the determination of the impact of technological change
- summarise the principles of an electronic commerce modelling language (ECML)
- interpret environmental scanning
- interpret design specifications
- outline modelling methodology
- discuss value and supply chain management

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline website architecture.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- business systems
- analysis software
- modelling software
- business requirements
- current industry news, forums, lists and chat rooms
- user analysis
- supply and value chain analysis.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT508 Evaluate vendor products and equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to evaluate and test a range of vendor products and equipment against a client's business requirements.

It applies to individuals in a range of information and communications technology (ICT) areas who are required to assess hardware and software products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish business requirements | 1.1 Identify and prioritise business requirements<br>1.2 Identify conflicting or overlapping business requirements<br>1.3 Specify budget and available resources<br>1.4 Validate business requirements, budget and resource needs with client |
| 2. Identify vendor products and equipment | 2.1 Investigate a representative range of vendor products and equipment |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Identify and document interdependencies<br>2.3 Specify and document technical alternatives available to the business<br>2.4 Determine and document availability of products and equipment<br>2.5 Ensure vendor products and equipment meet Australian or other standards |
| 3. Test vendor products and services | 3.1 Develop valid and reliable test regime with appropriate measurements<br>3.2 Establish test environment, including calibrated measuring equipment<br>3.3 Undertake testing of products or equipment and document results<br>3.4 Undertake revised testing where initial tests are inconclusive or where alternative product configuration may meet business requirements |
| 4. Evaluate vendor products, services and equipment | 4.1 Rate vendor products for quality, performance and support<br>4.2 Rate vendor products for fit with client needs<br>4.3 Establish product limitations, performance, integration capabilities and costs, and compare with established business requirements<br>4.4 Prepare cost-benefit analysis |
| 5. Prepare evaluation report | 5.1 Document product information in order of preference<br>5.2 Recommend preferred product, including the reasoning behind recommendations<br>5.3 Prepare a report containing solution details<br>5.4 Submit report to client for approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1-1.3, 2.1, 2.2, 2.4, 2.5, 4.1, 4.2 | • Identifies, analyses and evaluates highly technical documents, diagrams, business strategies and statistical and financial information |
| Writing | 1.3, 1.4, 2.2-2.4, 5.1, 5.3 | • Integrates information and ideas from a number of sources using specialised and cohesive language and formal document structures |
| Oral Communication | 1.1, 1.2, 1.4, 2.1-2.4, 5.4 | • Elicits and evaluates information using effective listening and open questioning techniques<br>• Uses simple and relevant language to obtain information, confirm understanding, liaise with the client and obtain feedback |
| Numeracy | 1.1, 1.3, 1.4, 4.3, 4.4, 5.2, 5.3 | • Interprets and analyses a range of statistical and financial data relating to products, equipment and integration costs<br>• Uses a range of software tools to apply statistical and financial functions, and prepare a cost-benefit analysis |
| Navigate the world of work | 2.5 | • Appreciates the legal and regulatory responsibilities related to own work and recognises some legal principles across work contexts |
| Interact with others | 5.4 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1-1.3, 2.1- 2.4, 3.1-3.4, 4.1-4.3 | • Develops plans to manage relatively complex non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Uses systematic, analytical processes in complex non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria<br>• Actively identifies systems, devices and applications with potential to meet current and/or future needs |

# Assessment Requirements for ICTICT508 Evaluate vendor products and equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- establish business requirements
- evaluate a range of vendor products and equipment against requirements
- test and select the most appropriate products
- document the selected items and selection rationale.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the relevance and application of the following for evaluating and selecting products:
  - code of ethics
  - international standards
  - vendor products
  - client business domain
  - copyright and intellectual property
  - general features and capabilities of current industry accepted hardware and software products
- discuss current and future technical systems considerations required by business
- discuss the features and function of relevant hardware components and software products, and the interaction between them.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- client functional requirements
- hardware and software specifications from vendors
- test procedures and activities.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT509 Gather data to identify business requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify, analyse and document business requirements.

It applies to individuals working as systems analyst developers and project team leaders, and managers responsible for gathering data to identify business requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify key information sources | 1.1 Identify information repositories across the business<br>1.2 Review current organisational documentation<br>1.3 Develop critical questions to elicit information from key stakeholders using a mixture of open and closed questions |
| 2. Gather data | 2.1 Use a wide range of information gathering techniques<br>2.2 Review reports and other data sources for business information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Confirm with stakeholders business critical factors relating to current and future directions of the organisation |
| 3. Prepare data analysis for review | 3.1 Analyse group and individual responses to clearly define business priorities<br>3.2 Document data analysis for review according to organisational standards |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1-2.3, 3.1 | • Identifies, analyses, evaluates and applies complex online and hard copy documentation containing specific terminology, diagrams and numerical information to identify business requirements |
| Writing | 1.3, 2.1, 3.2 | • Uses plain English and appropriate questioning strategies, avoiding loaded or leading questions, when developing information gathering documentation<br>• Uses vocabulary, grammatical structures, terminology, diagrams, numerical information, formatting and structure relevant to the job role and organisation to document the analysis |
| Oral Communication | 1.1, 2.1-2.3 | • Articulates research and resource requirements clearly and directs discussions to elicit the views and opinions of others by using effective listening and open questioning techniques<br>• Uses a range of verbal responses and makes comparisons that show an understanding of topics and concepts |
| Numeracy | 1.2, 2.2, 2.3, 3.1 | • Interprets numerical information and applies mathematical calculations and financial functions to analyse financial information |
| Navigate the world of work | 1.2, 3.2 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts and appreciates the importance of identifying and responding to protocols in new situations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1, 2.1- 2.3, 3.1 | • Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues |

# Unit Mapping Information

# Assessment Requirements for ICTICT509 Gather data to identify business requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify sources and gather information pertinent to the business requirements
- review and analyse business requirements based on business strategy and current and future directions
- confirm the business critical factors with stakeholders
- prepare data for review
- document data analyse for review according to organisational standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- define the client business domain, so that the business needs are understood by project team and client
- describe the current industry accepted hardware and software products, general features and capabilities suited to the project
- outline the role of stakeholders and the degree of involvement in the process
- specify quality assurance practices required when determining the requirements
- examine the system's current hardware, software and communication functionality.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to a project brief and business documentation.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT510 Determine appropriate ICT strategies and solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to analyse the information and communications technology (ICT) goals, objectives and future requirements for an organisation and determine the best ICT systems solution.

It applies to individuals who administer and manage ICT support and participate in the development of strategic initiatives in small-to-medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate ICT needs of the organisation | 1.1 Conduct an analysis process that determines the organisation's current needs and projected ICT requirements<br>1.2 Review the organisational environment and relevant industry changes and trends<br>1.3 Determine ICT goals, objectives and future requirements<br>1.4 Prepare information for appropriate person to determine scope with top-level management |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Contribute to the development of the project goals and objectives | 2.1 Determine project scope according to agreed brief<br>2.2 Align project goals with the ICT goals of the organisation<br>2.3 Determine impact that system or changes will have on the organisation<br>2.4 Document project, goals and impact of changes according to requirements |
| 3. Determine best ICT systems solution | 3.1 Evaluate a range of ICT systems solutions according to project goals<br>3.2 Define high-level hardware, software and communications environment necessary for the proposed systems solution<br>3.3 Develop a feasibility study and a cost-benefit analysis of the proposed solution<br>3.4 Ensure that the proposed solution aligns with the organisation's strategic plan<br>3.5 Forward feasibility study and cost-benefit analysis document to appropriate person for approval and sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1-2.3, 3.1, 3.4 | • Identifies, interprets and evaluates a wide range of organisational documentation, financial and statistical data, and technical documentation containing complex terminology and diagrams |
| Writing | 1.4, 2.4, 3.2, 3.3 | • Uses correct spelling, vocabulary, grammatical structures, ICT specific terminology and document structure relevant to the type of documentation being produced |
| Oral Communication | 1.1-1.3, 2.1- 2.3, 3.1, 3.3, 3.4 | • Elicits the views and opinions of others and obtains information by using effective listening and probing, open questioning techniques<br>• Participates in a verbal exchange of ideas/solutions and uses detailed and clear language to clarify and present information according to requirements and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | audience |
| Numeracy | 1.2-1.4, 2.1-2.4, 3.3 | • Interprets and analyses a range of statistical and financial data relating to products, equipment and integration costs<br>• Uses a range of software tools to apply statistical and financial functions, and prepare a cost-benefit analysis |
| Navigate the world of work | 3.4 | • With reference to the organisation's strategic plan, understands how own role meshes with others and contributes to broader work goals |
| Interact with others | 3.5 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1-3.3 | • Uses a combination of formal and logical planning processes and an increasingly intuitive understanding of context to evaluate cost benefits and appropriate solutions<br>• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints<br>• Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks |

# Assessment Requirements for ICTICT510 Determine appropriate ICT strategies and solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse the organisation's current needs and projected information and communications technology (ICT) requirements
- determine the impact of system changes on the organisation
- evaluate and recommend ICT strategies and systems solutions to meet business objectives
- develop a feasibility study and cost-benefit analysis of proposed solution.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline two or more current industry systems development methodologies
- summarise the business planning process relevant to the development of an ICT business solution
- outline current business practices for:
  - preparing business reports
  - facilitation of group interviews
- identify and describe quality assurance practices for ICT solutions
- discuss general features and capabilities of current industry accepted hardware and software products
- describe feasibility studies and cost-benefit analyses in relation to ICT strategies and solutions
- identify information sources for a cost-benefit analysis
- summarise the role and degree of stakeholder involvement in development of the ICT strategy

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe specific client business requirements in relation to proposed ICT solutions.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a site where ICT strategies and solutions may be developed
- detailed information relating to current needs and project requirements of the business
- outcomes of the business analysis process
- client expectations brief
- business risks and objectives
- a range of ICT business solutions.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT511 Match ICT needs with the strategic direction of the enterprise

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to ensure information and communications technology (ICT) services meet current and future internal operational enterprise requirements.

It applies to individuals whose responsibilities may include maintaining and supporting critical infrastructure for objectives in small-to-medium sized organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate current business strategy | 1.1 Analyse current strategic plan of the organisation to understand the industry environment and current organisational goals<br>1.2 Compare information related to current operational practices and the strategic plan to determine possible ICT gaps and improvement opportunities<br>1.3 Report information regarding the effect of ICT |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | developments to an appropriate person |
| 2. Evaluate effect of changes | 2.1 Review information on current ICT systems supported by the organisation<br>2.2 Compare and document advantages and disadvantages of current and proposed ICT systems<br>2.3 Determine the objectives and implications of introducing changes<br>2.4 Document findings and forward to appropriate person for feedback |
| 3. Develop action plans | 3.1 Develop plans to implement proposed changes according to organisational policy and procedures<br>3.2 Document action plans, ensuring that standards, targets and implementation methods are detailed<br>3.3 Forward documentation to appropriate person for feedback and approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2 | • Reviews, analyses and evaluates complex online and hard copy documentation containing ICT specific terminology, diagrams and numerical information to determine ICT gaps and improvement opportunities |
| Writing | 1.3, 2.2, 2.4, 3.1, 3.2 | • Uses plain English, together with vocabulary, grammatical structures, terminology, diagrams, numerical information, formatting and structure relevant to the job role and organisation |
| Oral Communication | 1.3, 2.3, 3.1 | • Uses plain English, translating technical terminology when necessary, to communicate with a range of personnel and determine objectives, articulate ideas and requirements, and develop plans<br>• Elicits information using effective listening and questioning techniques |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.1, 1.2, 2.2, 2.3, 3.1 | • Interprets numerical data and applies mathematical calculations to assess the financial implications of introducing changes |
| Navigate the world of work | 1.1, 3.1 | • Takes full responsibility for following policies, procedures and legislative requirements, and identifies organisational implications of new legislation or regulation<br>• Seeks to improve policies and procedures to better meet organisational goals |
| Interact with others | 1.3, 2.4, 3.3 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts<br>• Collaborates with others sharing information to build strong work groups and avoid behaviours that are not conducive to a productive environment |
| Get the work done | 1.1-1.3, 2.2, 2.3, 3.1 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Applies systematic and analytical decision making processes for complex and non-routine situations<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation and formal and analytical thinking<br>• Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others in a secure and stable digital environment |

# Assessment Requirements for ICTICT511 Match ICT needs with the strategic direction of the enterprise

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- access and analyse relevant information on changes to technology and resources
- analyse strategic plans to determine future technology needs
- monitor resource use and cost-efficiency and effectiveness of technology
- develop and document action plan detailing standards, targets, timelines and implementation methods.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify methods of analysis and planning approaches to technical problems and management requirements
- assess and document the hardware platform used by the organisation and network, and the subsequent security guidelines required
- explain current system functionality to forecast for planning
- identify and specify operating systems supported by the organisation to forecast for planning
- compare competing and complementary internal and external operating environments
- identify and assess technology and product directions for evaluating and forecasting vendor and technology trends.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a site where ICT needs and strategic directions of the enterprise may be coordinated
- detailed information relating to abusiness strategic plan
- information on a range of ICT business solutions.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT512 Plan process re-engineering strategies for business

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to select a process to be re-engineered, to plan for its re-engineering, and to understand the strategic, organisational and change context in which it is to be re-engineered.

It applies to individuals working in senior positions in the knowledge management or systems development field who are required to evaluate existing organisational workflows and processes with a view to redesigning them to achieve a defined business outcome.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Select the process to be re-engineered | 1.1 Identify major processes that require re-engineering<br>1.2 Identify boundaries, stakeholders and strategic importance of each process<br>1.3 Prioritise each process according to its level of performance<br>1.4 Select a process to re-engineer and document the decision making process |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Identify the strategic context | 2.1 Determine purpose of the selected process and where it fits into the business strategy<br>2.2 Evaluate the scope of the process, including stakeholder and strategic impact<br>2.3 Identify potential risks<br>2.4 Define broad objectives of the new process<br>2.5 Model the new process, taking into account client expectations, cooperation across boundaries and process flow<br>2.6 Analyse changes to organisational structures, technical requirements, training needs, cultural and political impact and communication channels<br>2.7 Document new process and impact of changes |
| 3. Design the new process | 3.1 Develop key performance indicators and implementation responsibilities for the new process<br>3.2 Communicate information to appropriate person<br>3.3 Prepare a process re-engineering plan to document stages<br>3.4 Submit process re-engineering plan to appropriate person for sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1-2.3, 2.6 | • Identifies, analyses and evaluates complex online and hard copy documentation containing specific terminology, diagrams and numerical information |
| Writing | 1.4, 2.5, 2.7, 3.3 | • Uses plain English, appropriate grammatical structures and terminology, diagrams and flow charts; numerical information; and formatting and document structure relevant to the job role and organisation |
| Oral Communication | 1.1, 1.2, 1.4, 2.1, 2.3, 2.5, 3.2, 3.4 | • Articulates research and resource requirements clearly and directs discussions to elicit information and the views and opinions of others by using |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | effective listening and open questioning techniques<br>• Uses a range of verbal responses and makes comparisons that show an understanding of topics and concepts |
| Numeracy | 1.3, 1.4, 2.2, 2.3, 2.5-2.7 | • Interprets numerical information and applies mathematical calculations and financial functions to analyse financial information |
| Interact with others | 3.2, 3.4 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1-1.4, 2.1-2.6, 3.1 | • Uses a combination of formal and logical planning processes and an increasingly intuitive understanding of context to determine appropriate solutions<br>• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints<br>• Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks |

# Assessment Requirements for ICTICT512 Plan process re-engineering strategies for business

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- document the re-engineering selection and decision making process
- prepare an analysis, documenting the impact of changes to the organisation
- plan the re-engineering of the process in a manner that supports the strategic, organisational and change context of the process to be re-engineered
- design the new process, including key performance indicators and implementation responsibilities
- prepare a process re-engineering plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and summarise copyright and intellectual property implications
- discuss and explore e-commerce and industry standards pertinent to business strategies
- describe the process required for organisational development and structure
- summarise the organisational strategy development process
- describe the stakeholder liaison and negotiation process.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- an organisational structure and culture

© Commonwealth of Australia, 2025 Future Skills Organisation

- an organisational strategy
- stakeholder analysis
- e-business models
- a personal computer (PC)
- analysis software and modelling software currently used in industry.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT514 Identify and manage the implementation of current industry specific technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to demonstrate and constantly review work processes that ensure that the quality of the business process is maintained for the implementation of specific industry technologies at an identified industry standard.

It applies to individuals engaged in ongoing review and research in order to identify, manage and evaluate the implementation of industry technologies or techniques to improve aspects of the organisation's activities.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse and plan the implementation of industry specific technologies | 1.1 Identify technologies specific to an industry sector<br>1.2 Acquire industry specific technologies and analyse their relevance to organisational requirements<br>1.3 Plan the implementation of industry specific technologies |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | where appropriate for the benefit of the organisation |
| 2. Manage the application of industry specific technology to assist in solving specific organisational problems | 2.1 Manage the testing of industry specific technology<br>2.2 Manage the implementation of specific features and functions of industry specific technology to provide a suitable solution to an identified problem<br>2.3 Demonstrate depth of knowledge of enabling technologies to an accepted industry standard<br>2.4 Access and use sources of information relating to the industry specific technology |
| 3. Review, analyse and evaluate industry specific technology performance | 3.1 Analyse implementation of the industry specific technology for performance and usability<br>3.2 Review and evaluate the benefits to the organisation<br>3.3 Determine environmental considerations involved with using the technology<br>3.4 Seek feedback from users where appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.4, 3.2-3.4 | • Identifies and interprets technical online and hard copy documentation containing complex terminology and diagrams to identify industry specific technologies that will benefit the organisation |
| Writing | 1.3, 3.1, 3.4 | • Uses vocabulary, grammatical structures and terminology and document structure relevant to the job role and organisation<br>• Uses plain English and appropriate questioning strategies, avoiding loaded or leading questions, when developing feedback gathering documentation |
| Oral Communication | 1.1-1.3, 2.1, 2.2, 2.4, 3.1-3.4 | • Uses clear, easy-to-understand language, translating industry specific terminology into plain English, together with effective listening and open, probing questioning techniques |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 3.3 | • Keeps up to date on changes to legislation or regulations relevant to own rights and responsibilities, and considers implications of these when planning work |
| Get the work done | 1.1-1.3, 2.1-2.4, 3.1, 3.2 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology<br>• Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria<br>• Actively identifies systems, devices and applications with potential to meet current and future needs |

# Assessment Requirements for ICTICT514 Identify and manage the implementation of current industry specific technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse and critically evaluate features and functions of identified industry specific technologies to an industry standard
- manage the implementation of new and emerging industry specific technologies
- review the performance of the industry specific technologies for the organisation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the trends and applications of current vendor products and technologies
- outline the various techniques for gathering information
- discuss the current directions of information and communications technology (ICT) and specifically of the major industry technology standards used in the specified area
- summarise the general features, capabilities and application of current industry hardware and software products.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a site where industry specific technologies may be used
- industry specific technologies currently used in industry
- documents detailing work health and safety (WHS) standards, environmental guidelines and organisational requirements.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTICT515 Verify client business requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- establish business relationship through investigation of the organisation and interviews with client and staff
- determine and document business expectations and needs, including critical business requirements
- work with clients and staff to gather, analyse and confirm information contributions
- review and gain approval for system specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the process of communicating with the client in order to gather and report data
- provide an overview of the client business to enable informed information and communications technology (ICT) product selection
- describe the process used to identify products related to the business
- outline the role of stakeholders and the degree of stakeholder involvement.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- current business needs
- client expectations brief
- business objectives

# ICTICT601 Develop ICT strategic and action plans

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create strategic and action plans in alignment with organisational information and communications technology (ICT) goals and strategies.

It applies to individuals who work as senior ICT staff and who are required to develop strategies and action plans for implementation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop and communicate mission and vision statement | 1.1 Develop a mission statement for the organisation that states the purpose, values and business activities<br>1.2 Develop a vision statement for the organisation that describes its future operation and success<br>1.3 Develop the mission and vision statements in active consultation with team members and management<br>1.4 Document mission and vision statements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Communicate mission and vision statement to stakeholders and other authorities in the organisation |
| 2. Examine organisational environment | 2.1 Assess the current internal situation of the organisation, taking into account its strengths and weaknesses<br>2.2 Assess the external environment of the organisation, taking into account opportunities and threats<br>2.3 Determine trends and developments impacting on the strategic direction of the organisation<br>2.4 Determine critical issues facing the organisation<br>2.5 Document strengths, weaknesses, opportunities, threats (SWOT) and critical issues facing the organisation in the strategic plan |
| 3. Set objectives and targets | 3.1 Use critical issues to develop objectives and targets for the organisation after active consultation with team members and management<br>3.2 Develop strategies that meet organisational objectives and reflect overall organisational mission and values<br>3.3 Ensure strategies are obtainable, realistic and able to meet basic mission critical parameters<br>3.4 Determine constraints associated with the strategies and objectives developed<br>3.5 Include strategies, objectives and constraints in strategic plan documentation |
| 4. Develop action plans | 4.1 Develop action plans for the strategies and objectives in consultation with team members and management<br>4.2 Check that action plans have clear, comprehensive and concise details<br>4.3 Check that action plans are adhered to<br>4.4 Include action plans in strategic plan documentation |
| 5. Review and implement strategic plan | 5.1 Review strategic plan with stakeholders and management<br>5.2 Incorporate changes and improvements as recommended<br>5.3 Implement action plans as set out in the strategic plan<br>5.4 Review and evaluate success of strategic plan after action plans have been implemented |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1-2.4, 3.4, 4.2, 5.1, 5.4 | • Identifies, analyses and evaluates complex text, diagrams, business models, industry trends, statistical information and financial information |
| Writing | 1.1-1.4, 2.5, 3.1, 3.2, 3.5, 4.1, 4.4, 5.2 | • Integrates information and ideas from a number of sources, utilising appropriate strategic planning tools, specialised and cohesive language and formal document structures |
| Oral Communication | 1.1-1.3, 1.5, 2.1-2.4, 3.1, 3.2, 3.4, 4.1, 4.3, 5.1, 5.3, 5.4 | • Elicits the view and opinions of others and obtains information by using effective listening and probing, open questioning techniques<br>• Participates in a verbal exchange of ideas/solutions and uses detailed and clear language to clarify and present information according to requirements and audience<br>• Articulates requirements and strategies clearly, using appropriate tone, style, body language and reflective responses |
| Numeracy | 2.1--2.5, 3.2-3.4, 4.1, 5.3 | • Uses a range of statistical, mathematical and financial calculations and functions to interpret numerical data relating to SWOT analysis and time and financial constraints |
| Navigate the world of work | 2.5, 3.2, 5.3 | • Takes a lead role in the development of organisational goals, roles and responsibilities<br>• Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are being met |
| Get the work done | 1.1-1.3, 2.1- 2.5, 3.1-3.4, 4.1, 4.3, 5.3, 5.4 | • Recognises the critical importance of clarifying, focusing and aligning goals and expectations, and may use the process to build ownership of and broad commitment to achieving outcomes<br>• Identifies a range of factors that impact on a decision, including own values and principles, the needs, power, values, beliefs and assumptions of stakeholders<br>• May intuitively hone in on problem areas and identify a small set of possible and appropriate solutions<br>• Applies systematic thinking techniques as an |

# Assessment Requirements for ICTICT601 Develop ICT strategic and action plans

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop mission and vision statements in consultation with team members and management
- conduct a strengths, weakness, opportunities and threats (SWOT) analysis
- develop strategic directions and action plans determined by the strategic alignment of information and communications technology (ICT) directions with organisational goals
- review strategic plan and incorporate changes and improvements
- implement action plans
- evaluate strategic plans following implementation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss analysis and planning approaches to technical problems and management requirements relating to network ICT security guidelines of the organisation
- explain how to conduct a SWOT analysis
- outline the organisation's approach to:
  - developing action plans
  - monitoring strategic directions
  - setting objectives and targets
  - selecting hardware platform
- outline technology and product directions
- discuss evaluation methods used when forecasting for planning:
  - current system functionality, particularly with regard to ICT trends and developments

© Commonwealth of Australia, 2025 Future Skills Organisation

- internal and external operating environments
- operating systems supported by the organisation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- the organisation's strategic plan
- budget and time constraints
- business objectives
- business risks
- information on a range of ICT business solutions
- outcomes of the business analysis process.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT602 Develop contracts and manage contracted performance

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to negotiate and document contractual arrangements between clients and vendors, and to monitor and manage performance against agreed contractual obligations.

It applies to individuals who work in senior information and communications technology (ICT) management roles who are required to contract both staff and suppliers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish contract | 1.1 Determine boundaries of the contract<br>1.2 Document contract details and provide a copy to the client and vendor for review<br>1.3 Obtain client and vendor feedback to clarify problems and misunderstandings<br>1.4 Facilitate negotiations to resolve problems and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | misunderstandings<br>1.5 Seek agreement from stakeholders |
| 2. Monitor contract | 2.1 Monitor performance against contractual obligations to ensure desired level of quality is maintained<br>2.2 Ascertain client satisfaction with contractual performance<br>2.3 Identify and take action to address unsatisfactory performance<br>2.4 Provide recommendations for contractual variations, if required<br>2.5 Forward recommendations to appropriate person for approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.3 | • Identifies and analyses a variety of organisational documentation, vendor and client information, technical specifications and financial data |
| Writing | 1.2, 2.4 | • Integrates information and requirements from a number of sources using correct spelling and grammar, specialised and cohesive language, and formal contract documentation structures |
| Oral Communication | 1.1, 1.3-1.5, 2.1-2.5 | • Uses effective listening and probing, and open questioning techniques to elicit the views and opinions of others and obtain information and feedback<br>• Articulates requirements clearly in plain English and uses appropriate tone, style, body language and reflective responses to interact effectively, remedy issues and disagreements, and negotiate outcomes |
| Numeracy | 1.1-1.3, 2.1, 2.3, 2.4 | • Uses a range of mathematical and financial calculations to determine and monitor contractual milestones, costs and budgetary constraints |
| Interact with others | 1.2, 2.5 | • Actively identifies the requirements of important communication exchanges, selecting appropriate |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1, 1.4, 2.1, 2.3 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Uses systematic analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria<br>• Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focussing attention on critical issues and variables and filtering out peripheral issues<br>• Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks |

# Assessment Requirements for ICTICT602 Develop contracts and manage contracted performance

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- negotiate and formulate contracts
- access and analyse relevant information on resources and budgets
- analyse current and future contract requirements
- monitor resource use, cost efficiency and effectiveness against contractual obligations
- review objectives and performance measures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the analysis and planning approaches to technical problems or management requirements, taking into account:
  - organisational values
  - purpose in the context of formulating contracts
- outline methods for evaluating and forecasting vendor and technology trends
- discuss contracting requirements related to information and communications technology (ICT)
- describe methods of purchasing ICT equipment and services, such as negotiating extensive client support contracts
- outline industry standards in relation to service and product agreements.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- detailed information relating to business strategic plan
- budget constraints
- timeframe for the strategic plan
- business objectives
- information on a range of ICT business solutions
- outcomes of a business analysis process.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT603 Manage the use of appropriate development methodologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to nominate the most appropriate traditional or non-traditional systems development methodologies for use by a team.

It applies to individuals who work in senior information and communications technology (ICT) management roles and are required to manage development teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine and select appropriate development methodology for a given activity | 1.1 Determine and define subject activity<br>1.2 Define criteria for selection of development methodology<br>1.3 Review and evaluate with project leader a range of traditional and non-traditional system development methodologies<br>1.4 Select appropriate system development methodology to suit the activity |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Brief project team on selected methodology |
| 2. Direct the use of the selected development methodology | 2.1 Review the initial project plan to guide developmental processes<br>2.2 Review the identification of appropriate task types according to development methodology<br>2.3 Review the description and articulation of task types<br>2.4 Review the definition of appropriate control structures that need to be created during task type execution<br>2.5 Review the identification of resources to support methodology selection<br>2.6 Monitor the application of appropriate methodology to solve tasks<br>2.7 Monitor the project flow and effectiveness of use of methodology against project plan<br>2.8 Review the documented opportunities for improvement, lessons learned and recommendations for future projects |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1-2.5, 2.8 | • Identifies, analyses and evaluates a range of online and hard copy organisational documentation and technical information containing complex, systems development specific terminology, syntax and diagrams and applies the information to the task |
| Writing | 1.1-1.3, 2.1-2.5 | • Uses correct spelling, grammar and plain English together with a range of systems development specific terminology and computer generated diagrams |
| Oral Communication | 1.1, 1.3-1.5, 2.1-2.8 | • Elicits and evaluates information using project related terminology and effective listening and questioning techniques<br>• Uses specific and complex systems development terminology to liaise with project leader, review methodology and monitor the project |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Interact with others | 1.3 | • Identifies relevant information and ideas from a range of messages and oral and written exchanges, paying some attention to the meanings attached to the choice of form, channel and wording |
| Get the work done | 1.1, 1.2, 1.4, 2.1-2.7 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Uses systematic analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria |

# Assessment Requirements for ICTICT604 Identify and implement business innovation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- define the organisation's strategic directions
- develop innovations to assist the business
- produce a cost-benefit analysis of suggested innovations
- develop an implementation plan for the innovations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the culture of the business versus traditional business models
- identify internal and external sources of information
- outline legal, ethical and security issues relating to business strategies
- outline records management principles
- identify relevant legislation from levels of government that effect business operation, especially regarding workplace health and safety (WHS) and environmental issues, equal opportunity, industrial relations and anti-discrimination
- outline the structure of the business.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a range of business documents covering vision, mission statements and strategic directions

© Commonwealth of Australia, 2025 Future Skills Organisation

- a site where business opportunities for innovation may be implemented.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTICT605 Implement a knowledge management strategy

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- recognise the need for a knowledge management system in a contemporary organisation
- develop and implement a knowledge management system
- manage culture change in the management of knowledge
- review and improve systems and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the importance of knowledge management in a contemporary organisation
- discuss the difference between the business culture and the business model
- outline database design concepts for management knowledge
- identify and quantify internal and external sources of information
- discuss legal, ethical and security issues relating to knowledge management
- describe records management principles
- determine relevant legislation from levels of government that effect business operation, including:
  - workplace health and safety (WHS)
  - environmental issues
  - equal opportunity
  - industrial relations
  - anti-discrimination
- outline the structure of the business and its relationship to knowledge management.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- sample organisations and their structure, goals and knowledge requirements
- organisational business plans
- existing knowledge management strategies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT606 Develop communities of practice

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify areas that would benefit from communities of practice (CoPs), and to develop such communities.

It applies to individuals who work in senior information and communications technology (ICT) management roles and are responsible for teams and their production.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify requirement for community of practice | 1.1 Map organisational knowledge<br>1.2 Identify existing informal communities of practice (CoPs)<br>1.3 Identify situations where staff will benefit from closer cooperation across organisational boundaries<br>1.4 Identify those in disparate areas that share work goals |
| 2. Devise spaces for involvement | 2.1 Enable electronic meeting spaces<br>2.2 Enable shared storage areas, both public and private |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Enable group mailing capability<br>2.4 Enable other appropriate technical facilitators |
| 3. Invite participation | 3.1 Publicise collaborative tools<br>3.2 Invite staff in areas identified above to group events, such as training and conferences<br>3.3 Allow new groups to coalesce spontaneously<br>3.4 Accept different levels of participation |
| 4. Assist evolution of community | 4.1 Facilitate regular contact within CoPs<br>4.2 Enable evolution of CoPs, including the disbanding of a CoP where its purpose has been achieved |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.4 | • Identifies and reviews a wide variety of text sourced from organisational documentation, electronic meeting places and the organisational knowledge bank to determine relevant and key information |
| Writing | 1.1, 3.1, 3.2, 4.1, 4.2 | • Uses persuasive writing, correct spelling, appropriate grammatical structures and a broad range of vocabulary, including idioms, colloquialisms and technical terminology, and applies document structures suitable to the document type |
| Oral Communication | 1.1-1.4, 3.1, 3.2, 4.1, 4.2 | • Elicits the view and opinions of others and obtains information by using effective listening and probing open questioning techniques<br>• Uses the appropriate pitch and tone of voice, encouraging body language, reflective responses, plain English and a courteous manner when encouraging participation and facilitating CoPs |
| Interact with others | 3.2-3.4, 4.1 | • Fosters a collaborative culture within own sphere of influence, facilitating a sense of commitment and cohesion, and highlighting and using the strengths of those involved |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1-1.4, 2.1-2.4, 4.2 | • Takes responsibility for defining key aspects of own workload, balancing own needs and priorities with those of the work group<br>• Actively identifies, creates and utilises linkages to enhance knowledge sharing, idea creation, individual and collective engagement and work outcomes<br>• Actively identifies systems, devices and applications with potential to meet current and future needs |

# Assessment Requirements for ICTICT606 Develop communities of practice

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify and map appropriate areas for communities of practice (CoPs) for an organisation
- identify and manage the provision of enabling methodologies
- foster and encourage participation in CoP
- facilitate the development of CoP.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- define ‘communities of practice’ and describe their purpose in an organisation
- outline organisational structures, goals and knowledge, and how they apply to CoPs
- identify and compare communications enabling technologies
- discuss group dynamics and its impact on building CoPs
- describe techniques to promote, market and engage with CoPs and the enabling technologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- an organisational structure, goals and knowledge
- a site where CoP may be developed.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT608 Interact with clients on a business level

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to interact with clients at a management level.

It applies to individuals working as management personnel in a range of information and communications technology (ICT) areas who are responsible for maintaining client relationships.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Review client's business domain | 1.1 Research organisational service standards, values and culture to understand the organisational environment<br>1.2 Investigate and document the goods and services provided by the organisation<br>1.3 Review current service level agreements (SLAs) if appropriate |
| 2. Develop new business | 2.1 Research client service needs and preferred level of service |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| with client | 2.2 Research opportunities for new business with client<br>2.3 Develop draft proposals to cover these new initiatives |
| 3. Negotiate new business initiatives | 3.1 Conduct a session with the client to present the new opportunities<br>3.2 Present proposals to the client in a clear, concise and comprehensive manner<br>3.3 Present proposed cost and timeframes to the client<br>3.4 Negotiate terms with the client and record alterations if required<br>3.5 Clarify areas of uncertainty or disagreement<br>3.6 Document agreement negotiated with the client |
| 4. Monitor, adjust and implement procedures to maintain client focus | 4.1 Assess progress in achieving new client initiatives<br>4.2 Gather client feedback to improve the proposals<br>4.3 Adjust service provided to the client based on client feedback and in line with organisational guidelines<br>4.4 Document changes to new provisions |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1, 2.2, 4.1, 4.2 | • Identifies, analyses and evaluates a range of complex information to identify relevant and key information |
| Writing | 2.3, 3.6, 4.4 | • Uses plain English, appropriate grammatical structures and specialised terminology, diagrams and flow charts, logical document structures and formatting relevant to the job role and organisation to record document proposals and agreements |
| Oral Communication | 1.1-1.3, 2.1, 2.2, 3.1-3.5, 4.1, 4.2 | • Uses open questioning and effective listening techniques to elicit information, clarify requirements and conduct effective negotiations<br>• Uses appropriate vocabulary, grammatical structure, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | voice tone, body language and reflective responses to build business relationships and present proposals |
| Numeracy | 1.2, 1.3, 2.3, 3.3-3.5, 4.3, 4.4 | • Interprets numerical information and applies mathematical calculations and financial functions relating to time durations and projected costs |
| Navigate the world of work | 1.3, 4.3 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts and appreciates the importance of identifying and responding to organisational procedures |
| Interact with others | 3.1, 3.2, 3.4 | • Invests considerable time and energy in building and maintaining effective working relationships within and beyond immediate work context, recognising and intuitively responding to the subtle and complex mix of factors at play in every interaction |
| Get the work done | 1.1, 1.2, 2.1-2.3, 4.1 | • Takes responsibility for defining key aspects of own workload, balancing own needs and priorities with new opportunities<br>• Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables, consider possible implications of different courses of action and determine the best course of action<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• Demonstrates a sophisticated understanding of expectations, social protocols and online etiquette, intuitively selecting the appropriate channel, content and tone for diverse purposes and audiences |

# Assessment Requirements for ICTICT608 Interact with clients on a business level

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- assemble a proposal for a new business initiative
- develop a strong awareness of the clients business
- present and negotiate a proposal with the client
- formulate and implement new business
- monitor and maintain client relationship and requirements of service.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss business practices relevant to understanding client needs, including:
  - change management
  - information gathering techniques
  - planning process, including development of information and communications technology (ICT) business solutions
  - preparation of reports
- identify current industry accepted hardware and software products relevant to client services and support, including:
  - general features and capabilities
  - vendor product directions
- identify and interpret legal principles of commercial contracts and service level agreements (SLAs)
- interpret organisational policies, plans and procedures, including contracting
- summarise the concepts of negotiation and the process for building business relationships.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- organisational policies, procedures and SLAs for the ICT industry
- contexts for negotiating agreements and contracts
- current ICT hardware and software products.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT609 Lead the evaluation and implementation of current industry specific technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to lead the identification, management and implementation of specific industry technologies to meet identified industry standards.

It applies to individuals who work in senior information and communications technology (ICT) leadership roles and are engaged in ongoing review and research to improve aspects of the organisation's activities.

Check the Implementation Guide Companion Volume for details about licensing, legislative or certification requirements.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Lead the implementation of industry specific technologies | 1.1 Identify technologies specific to an industry sector<br>1.2 Determine relevance of industry specific technologies to organisational requirements<br>1.3 Plan implementation of industry specific technologies where appropriate, for the benefit of the organisation |
| 2. Direct the application | 2.1 Lead management of testing of industry specific technology |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| of industry specific technologies to assist in solving specific organisational problems | 2.2 Direct implementation of specific features and functions of industry specific technologies to provide a suitable solution to an identified problem<br>2.3 Demonstrate depth of knowledge of enabling technologies to an accepted industry standard<br>2.4 Access and use sources of information relating to industry specific technologies |
| 3. Lead the review, analysis and evaluation of the industry specific technology performance | 3.1 Lead analysis of the implementation of the industry specific technologies for performance and usability<br>3.2 Analyse, review and evaluate the benefits to the organisation<br>3.3 Determine environmental considerations involved with using the technology<br>3.4 Seek feedback from users where appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.3, 2.4, 3.1-3.4 | • Identifies and interprets technical online and hard copy documentation that will enable the organisation |
| Writing | 1.3, 3.2, 3.4 | • Uses vocabulary, grammatical structures, specific terminology and document structure relevant to the job role and organisation<br>• Uses plain English and appropriate questioning strategies, avoiding loaded or leading questions, when developing feedback gathering documentation |
| Oral Communication | 1.1-1.3, 2.1-2.4, 3.1-3.4 | • Uses clear, easy-to-understand language together with effective listening and open questioning techniques to elicit information |
| Navigate the world of work | 3.3 | • Appreciates the implications of legal and regulatory responsibilities related to own work, with specific reference to environmental considerations |
| Get the work | 1.1-1.3, 2.1- | • Develops plans to manage relatively complex non-routine tasks with an awareness of how they may |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| done | 2.3, 3.1, 3.2 | contribute to longer term strategic goals<br>• Understands key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology and when seeking to understand the potential of new technology<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account |

# Assessment Requirements for ICTICT609 Lead the evaluation and implementation of current industry specific technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine new and emerging technologies suitable for organisational requirements
- lead the implementation of new and emerging industry specific technologies
- analyse, and critically evaluate the industry specific technology and its application to the organisation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- analyse and appraise current technology trends and directions in the information and communications technology (ICT) sector
- specify the major industry standards used for the new technologies
- evaluate vendor products and the direction in which they are trending
- summarise information gathering techniques
- appraise the general features, capabilities and application of current industry hardware and software products.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a site where industry specific technologies may be used
- industry specific technologies currently used in industry

© Commonwealth of Australia, 2025 Future Skills Organisation

- documents detailing workplace health and safety (WHS) standards, environmental guidelines and organisational requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT610 Manage copyright, ethics and privacy in an ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage the issues of copyright and professional and ethical conduct in a team, as well as to ensure that personal information of stakeholders is handled in a confidential and professional manner.

It applies to individuals who operate at a senior level with a high degree of autonomy in managing policies and system security.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Manage adherence to copyright regulations | 1.1 Review current Australian copyright law, and in particular its relationship to information and communications technology (ICT)<br>1.2 Ensure that team members are aware of Australian copyright law and how it affects their work<br>1.3 Institute measures to ensure that copyright is not breached |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Institute regular reviews to ensure organisational copyright requirements are up to date and team members are adhering to these requirements<br>1.5 Distribute updated versions if required |
| 2. Manage ethical behaviour | 2.1 Review appropriate code of ethics, both organisational and ICT specific<br>2.2 Acquaint team members with ethical requirements<br>2.3 Institute regular reviews of team members' ethical work practices and feedback to ensure correct application of the code<br>2.4 Ensure that stakeholders are aware of ethics code, and adjust appropriately following stakeholder feedback<br>2.5 Institute regular reviews of stakeholder understanding and application of code of ethics<br>2.6 Establish a review and grievance procedure to enable confidential reporting of ethical issues<br>2.7 Institute regular reviews of code of ethics, updating and distributing as required |
| 3. Manage privacy | 3.1 Institute a regular review of the relevance of legislation and standards to organisational outcomes, the organisation's privacy policy and procedures, and the work practices of team members with regard to these requirements<br>3.2 Determine and ensure the integrity, confidentiality, security and availability of information as required by the organisational policy<br>3.3 Ensure continued confidentiality and proprietary rights of stakeholders' interests<br>3.4 Contribute to the creation or updating of the organisation's privacy policy and procedures to align with privacy legislation<br>3.5 Distribute new or revised policy and procedures to stakeholders<br>3.6 Implement new work procedures and collect feedback from stakeholders |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 3.1, 3.2 | • Identifies, analyses and evaluates complex text to determine legislative requirements and organisational standards, and applies the information |
| Writing | 1.2-1.4, 2.3- 2.7, 3.1, 3.4 | • Integrates information and ideas from a number of sources, utilising appropriate support materials, specialised and cohesive language and a range of writing styles and document structures |
| Oral Communication | 1.2-1.4, 2.2-2.7, 3.1-3.4 | • Articulates ideas and requirements clearly, based on techniques appropriate to audience and environment<br>• Participates in a verbal exchange of ideas and elicits the view and opinions of others by using effective listening and open questioning techniques |
| Navigate the world of work | 1.1, 1.3, 1.4, 2.1, 2.6, 3.1, 3.2, 3.4 | • Takes full responsibility for identifying and considering relevant legal and regulatory obligations when managing copyright, ethics and privacy in an ICT environment<br>• Takes a lead role in the development of organisational goals, roles and responsibilities<br>• Monitors and reviews the organisation's policies, procedures and adherence to legislative requirements in order to implement and manage change |
| Interact with others | 1.5, 3.5 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience, and monitoring impact |
| Get the work done | 1.1, 1.4, 3.1-3.3 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands<br>• Reflects on the application of key principles in a particular context, the appropriateness and effectiveness of different sources of information and planning processes for that context, and the potential implications for future situations<br>• Recognises broader positive and negative implications of new technologies, and acknowledges the vital importance of system security and storage management |

# Assessment Requirements for ICTICT610 Manage copyright, ethics and privacy in an ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse legislation and standards related to copyright, professional conduct and privacy in the information and communications technology (ICT) industry
- contribute to the review and development of code of ethics, and monitor the workplace to ensure code of ethics is appropriate and being applied
- contribute to the review and development of a privacy policy, and monitor the workplace to ensure the policy is appropriate and being applied
- ensure the adherence to copyright, ethics and privacy in a team.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the Australian Computer Society Code of Ethics
- identify and explain federal and state or territory legislation and policy relevant to an ICT environment relating to:
  - access and equity
  - copyright and intellectual property
  - workplace health and safety (WHS)
  - privacy
- describe the processes and procedures by which an organisation communicates its policies and procedures
- outline organisational requirements for customer service
- summarise typical ICT system security systems and procedures.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry and include access to:

- relevant organisational policies
- legislation and standards documentation
- industry codes of practice.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT801 Lead research into identifying new marketplace opportunities

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to lead the research, evaluation and recommendation of new organisational initiatives, based on perceived marketplace opportunities.

It applies to individuals who work as strategic business analysts in medium to large organisations in senior roles, who lead new business initiatives and transformation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Direct the research into the organisation's business domain | 1.1 Research the sectors in the relevant industry for trends that may yield viable business opportunities<br>1.2 Research business initiatives undertaken by competitor organisations, to address the same or similar opportunities, and analyse the resources required to undertake such initiatives or project opportunities<br>1.3 Identify the strategies for realising identified business |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | initiatives, including sub-contracting of suitable elements, where applicable<br>1.4 Research the legal, environmental and social implications of the identified initiatives |
| 2. Evaluate the new business initiatives | 2.1 Initiate, and oversee, the market research for potentially viable, identified business opportunities<br>2.2 Gauge the likely impacts of candidate initiatives on the business enterprise, including specific legal, financial and transformational implications<br>2.3 Critically evaluate the delivery strategies for anticipated products, or services, stemming from candidate initiatives |
| 3. Explore the feasibility of the new initiatives | 3.1 Formulate the selection criteria, based on the strategic business objectives<br>3.2 Facilitate a feasibility study, including a cost benefit analysis<br>3.3 Select the most feasible option against the selection criteria<br>3.4 Recommend the preferred initiative |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 2.1, 3.3 | • Identifies, analyses, and critically evaluates complex textual information, to identify industry trends and business initiatives |
| Writing | 2.1, 3.1, 3.4 | • Integrates information and ideas from a number of sources, utilising the appropriate analysis tools, diagrams, specialised and cohesive language, and formal document structures, to develop criteria and reports |
| Oral Communication | 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 3.2, 3.4 | • Elicits the view and opinions of others, and obtains information, by using effective listening and open questioning techniques<br>• Participates in a verbal exchange of ideas/solutions, and uses detailed and clear |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | language, to clarify and present information, and to facilitate a feasibility study<br>• Uses the appropriate tone, style, body language and reflective responses, when clarifying information to present recommendations |
| Numeracy | 1.2, 1.3, 2.1, 2.2, 3.1, 3.2, 3.3 | • Uses a range of statistical and financial calculations and functions, the appropriate software tools, and correct document structure, to analyse market research results and to conduct a feasibility study, and a cost benefit analysis |
| Navigate the world of work | 1.4, 2.2 | • Understands own legal rights and responsibilities, and extends the understanding of legal implications across work contexts |
| Get the work done | 1.1, 1.2, 1.3, 2.1, 2.3, 3.1, 3.2, 3.3 | • Recognises the critical importance of clarifying, focusing and aligning goals, and expectations, and uses the process to build ownership of, and broad commitment to, achieving outcomes<br>• Takes responsibility for high-impact decisions in complex situations, involving many variables and constraints<br>• Keeps abreast of new ideas and possibilities beyond own context, borrowing, adapting, combining, and redesigning ideas, for own purposes, or using as a provocation to rethink current approaches |

# Assessment Requirements for ICTICT801 Lead research into identifying new marketplace opportunities

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- conduct research into the trends for a specified industry sector, and identify potential business opportunities
- undertake market research and analysis, and report on the viability and related implications, of a selected business opportunity
- develop and present a feasibility report, including a cost benefit analysis that justifies the recommendations for a proposed new business initiative.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- formulate various analysis methods and tools, including:
  - affinity diagrams
  - competition matrix
  - decision trees
  - mind maps
  - risk assessment
  - strengths, weaknesses, opportunities and threats (SWOT) analysis
  - value chain
- review and outline, contract and procurement methods
- summarise possible social implications, both internal and external, to the organisation as a result of the introduction of new market opportunities
- research government and non-government governing bodies in the relevant industry

© Commonwealth of Australia, 2025 Future Skills Organisation

- review legal, ethical, and security issues relating to the research of competitive business opportunities, including the laws related to patents and copyright
- outline the organisational structure, policies and procedures
- review the relevant government legislation that affects business operation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- appropriate resources, to allow research to be conducted into industry trends (this may include access to commercial research house libraries via a memorandum of understanding or other arrangements)
- the opportunity to conduct meaningful market research on potential business opportunities
- simulated, or real, executive-level management teams for the presentation of proposals and feedback.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT802 Direct ICT services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to direct the strategic planning, risk management, and security of emerging, and converging, information and communications technology (ICT) services, internal and external, of medium to large organisations.

It applies to individuals in senior management roles who lead the management of business process to support organisational strategic goals of organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Direct the strategic planning for ICT resources | 1.1 Critically analyse the organisational environment<br>1.2 Ensure compliance with legislative and social requirements<br>1.3 Establish priorities, based on organisational needs<br>1.4 Establish the ICT infrastructure<br>1.5 Lead the development and implementation of a strategic plan for ICT resourcing |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Lead the risk management of ICT resources and processes | 2.1 Lead the development of a strategy for risk assessment<br>2.2 Ensure that the risk assessment complies with organisational policy<br>2.3 Ensure that risk mitigation is based on identified risks |
| 3. Direct the quality assurance processes for ICT services | 3.1 Lead the development of a quality assurance strategic plan<br>3.2 Monitor the quality processes<br>3.3 Oversee the implementation of quality assurance strategies<br>3.4 Ensure that continuous improvement is undertaken |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 1.5, 2.2, 3.2 | • Identifies, analyses and evaluates complex information from a range of sources, to obtain the information relevant to ICT strategic planning<br>• Interprets complex ideas, concepts and unfamiliar information |
| Writing | 1.3, 1.4, 1.5, 2.1, 3.1 | • Integrates information and ideas from a number of sources, utilising the appropriate modelling tools, specialised and cohesive language, and formal document structures, to meet the requirements of the audience and the task |
| Oral Communication | 1.1-1.5, 2.1-2.3, 3.1-3.4 | • Uses effective listening and probing, open questioning techniques to elicit the views and opinions of others, and to obtain information<br>• Participates in a verbal exchange of ideas and solutions, and uses detailed and clear language to clarify and present information, according to the requirements and the audience<br>• Articulates requirements and strategies clearly, using the appropriate pitch, tone, body language and reflective responses |
| Numeracy | 1.1, 1.5, 2.1, 2.2, | • Uses a range of statistical, mathematical and financial calculations and functions, and relevant |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 2.3, 3.1, 3.2, 3.3 | software tools, to interpret data relating to the development of the strategic plan, and to develop cost benefit analyses, and operational budgets |
| Navigate the world of work | 1.2, 2.2 | • Monitors adherence to legal and regulatory rights, and responsibilities, in order to direct strategic planning<br>• Recognises that workplace protocols that must be respected, and maintained, during risk management |
| Get the work done | 1.1, 1.3, 1.4, 1.5, 2.1, 2.3, 3.1 | • Develops plans for complex, high-impact activities with strategic implications<br>• May use formal decision-making processes as scaffolding for thinking, moving iteratively between phases as required<br>• May use formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions<br>• Explores, and incubates, ideas that have the potential to lead to radical departures from the current situation<br>• Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot, and understand, the uses of potential and new technology |

# Assessment Requirements for ICTICT802 Direct ICT services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- lead the development of a strategy to align information and communications technology (ICT) services, with organisational goals
- lead and monitor a risk analysis, including security for ICT assets
- implement procedures that identify where risk occurs, and what measures need to be taken
- produce contingency plans for business continuity
- establish warning systems, and an ongoing process, that includes regular or programmed reviews of the risk profile
- lead the development of a strategy and the implementation of a quality assurance process.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the security products, and organisational security policies, that affect ICT services
- research and then outline, the standards that relate to risk management principles and guidelines
- discuss business continuity issues for the organisation
- examine the organisation’s industry and current functionality, including the existing data and information systems
- review and describe, the organisation’s internal and external dependencies and interdependencies
- describe the organisational policies and procedures, including the risk-management strategy
- review and analyse, past and current internal, external and industry disruptions

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the relevant legislation and regulations that impact on business continuity including:
  - workplace health and safety (WHS)
  - environment
  - duty of care
  - contracts
  - business and company law
  - freedom of information
  - industrial relations
  - privacy and confidentiality
  - due diligence
  - records management.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- relevant strategic level enterprise documentation, including:
  - planning
  - financial
  - ICT infrastructure
- codes of practice, legislation and regulations
- organisational policies and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT803 Endorse business plan components for a new initiative

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to endorse a business plan for a new initiative, including the marketing, operations, organisational and financial plans within a medium to large organisation.

It applies to individuals who work in high-level management positions and lead the analysis, implementation and management of emerging, and converging, information and communications technology (ICT), as they are integrated into the business process to support the organisational strategic goals of medium to large organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Endorse a marketing plan for ICT business | 1.1 Ensure that internal and external environmental issues are addressed<br>1.2 Critically review the feasibility of target market projections<br>1.3 Endorse the selection of advertising and promotional |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | strategies |
| 2. Endorse the operation plan | 2.1 Review and verify, the scope of the business operation plan<br>2.2 Ensure that the business plan complies with business needs<br>2.3 Endorse the criteria for quality processes against the organisational standards |
| 3. Endorse the organisational plan | 3.1 Critically analyse and review the organisation's structure<br>3.2 Ensure that the organisational structure meets the organisation's strategic plans and directions |
| 4. Endorse the financial plan | 4.1 Endorse the financial strategy for the new initiative<br>4.2 Evaluate the expected cash-flow projections<br>4.3 Critically analyse and evaluate the effects of financial decisions on the ability of the organisation to meet planned outcomes<br>4.4 Ensure financial risk-management procedures are followed according to organisational requirements<br>4.5 Ensure early detection and remedial action plans, for deviations in budget objectives and projections |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 3.1, 3.2, 4.1, 4.2, 4.3, 4.4 | • Identifies, critically analyses and evaluates complex textual information, to evaluate the effectiveness of business plans |
| Writing | 1.3, 2.3, 3.2, 4.1, 4.3, 4.4, 4.5 | • Selects the document structure, language, grammar and terminology, to suit the specific subject matter and audience when evaluating, providing feedback, and endorsing business plans |
| Oral Communication | 1.1-1.3, 2.1-2.3, 3.1-3.2, 4.1-4.5 | • Obtains information by using effective listening and probing, open questioning techniques<br>• Uses grammatical structures, specialised language, and the appropriate tone, pitch and |

# Assessment Requirements for ICTICT803 Endorse business plan components for a new initiative

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- verify the strategy aligning information and communications technology (ICT) services with organisational goals
- direct a critical risk analysis, including security, for ICT assets
- verify that the risk assessment procedures are implemented
- verify that the contingency plans for business continuity are established
- evaluate the warning systems, and direct an ongoing process that includes regular or programmed reviews of the risk profile
- verify that security products are being utilised
- verify organisational security policy is being implemented
- direct the development of a strategy to ensure that quality expectations are being met
- endorse the main components of the business plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- research and summarise, risk management principles and guidelines
- review business continuity issues for the organisation
- explore the organisation’s industry and current functionality, including the existing data and information systems
- describe the organisation's internal and external dependencies, and interdependencies
- review and summarise the organisational policies and procedures, including the risk-management strategy
- discuss past and current internal, external and industry disruptions

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the relevant legislation and regulations that impact on business continuity, including:
  - workplace health and safety (WHS)
  - environment
  - duty of care
  - contracts
  - business and company law
  - freedom of information

# ICTICT804 Direct ICT in a supply chain

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to direct the effective use of information and communications technology (ICT), in support of critical supply chain processes.

It applies to individuals who work in high-level management positions and lead the analysis, implementation and management of emerging, and converging, ICTs as they are integrated into the business process to support the organisational strategic goals of medium to large organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the current or proposed supply chain infrastructure | 1.1 Critically evaluate the key principles of supply chain management<br>1.2 Identify the supply chain processes in the organisation, from operational and business perspectives<br>1.3 Identify and review, management and operational links to external organisations<br>1.4 Identify current supply chains, network processes, service |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | and performance objectives |
| 2. Direct ICT strategy to support supply chain processes | 2.1 Develop a strategy to align ICT technical resources with the identified supply chain processes<br>2.2 Build a communication model to improve the integration, and sharing of, critical business information between decision-makers and the operations and technical divisions<br>2.3 Identify the key performance indicators that will track progress against the strategic company objectives |
| 3. Lead the risk management of supply chain ICT support services | 3.1 Lead the development of a strategy for the risk assessment of internal, and external, supply chain processes<br>3.2 Assess the risk assessment strategy, to ensure that it complies with organisational policy<br>3.3 Mitigate identified risks |
| 4. Direct the quality assurance processes for supply chain ICT support services | 4.1 Implement strategies to monitor the performance levels of supply chain ICT support services<br>4.2 Ensure the continuous improvement of supply chain ICT support services |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 2.3, 3.2 | • Identifies, analyses and evaluates complex textual information relevant to the job role |
| Writing | 2.1, 2.2, 2.3, 3.1, 4.1, 4.2 | • Selects the document structure, language, grammar and terminology to suit the specific subject matter, and audience, when developing strategic plans, a supply chain model, and a communication model |
| Oral Communication | 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 4.1, 4.2 | • Obtains information by using effective listening and probing, and open questioning technique<br>• Uses grammatical structures, specialised language, and the appropriate tone, pitch and body language to achieve precise meaning, when articulating requirements and providing feedback |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 2.1, 2.3, 3.1, 3.2, 4.1, 4.2 | • Uses a range of statistical, mathematical and financial calculations, formulae and functions, together with appropriate software tools, to interpret numerical data relating to performance objectives, key performance indicators, risk assessment and continuous improvement |
| Navigate the world of work | 3.2 | • Recognises and responds to organisational policies and protocols within the workplace |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 3.3, 4.2 | • Considers the strategic and operational potential of digital technology to achieve work goals, enhance work processes, create opportunities, and reduce risks<br>• Draws on a broad understanding of the context, and uses a combination of analysis and intuition to decide whether an idea is worth developing, and implementing<br>• Uses a nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention on critical issues and variables, and filtering out any peripheral issues<br>• Develops plans for complex high-impact activities with strategic implications |

# Assessment Requirements for ICTICT804 Direct ICT in a supply chain

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop strategic directions for supply chain management in alignment with the organisational goals
- develop a strategy and key performance indicators for supply chain processes
- lead the development of a risk analysis strategy for a supply chain
- ensure that procedures identifying where risk occurs, and the measures needed to mitigate such risk, are developed and implemented
- ensure that a continuous improvement plan, for the information and communications technology (ICT) support of supply chain processes, is developed and implemented.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the typical supply chain models, and describe their management and business process integration
- discuss business continuity issues for the organisation
- describe the impact on the supply chain of the organisation’s industry and current functionality, including the existing data and information systems
- summarise the organisation's internal and external dependencies, and interdependencies
- review and outline the organisational policies and procedures, including the risk-management strategy
- describe past and current, internal, external and industry disruptions that may impact on the supply chain
- outline the relevant legislation and regulations that impact on business continuity including:

© Commonwealth of Australia, 2025 Future Skills Organisation

- workplace health and safety (WHS)
- environment
- duty of care
- contracts
- business and company law
- freedom of information
- industrial relations
- privacy and confidentiality
- due diligence
- records management.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- relevant strategic-level enterprise, including:
  - planning
  - financial
  - ICT infrastructure
- codes of practice, legislation and regulations
- organisational policies and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTICT805 Direct ICT procurement

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- lead the development of a strategy to align information and communications technology (ICT) procurement, with organisational goals and objectives
- critically evaluate the procurement process and establish priorities for the organisation
- direct the risk analysis of ICT procurement activities
- lead the development of a strategy for risk assessment, and ensure that the measures required to mitigate the risk are applied
- ensure that warning systems, and an ongoing process that reviews the risk profile, are established
- lead the development of a strategy for the implementation of appropriate processes and procedures, that ensure that quality expectations are met.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- research and specify risk management principles and guidelines
- review business continuity issues for the organisation
- summarise the organisation’s industry and current functionality, including the existing data and information systems
- review the organisation's internal and external dependencies, and interdependencies
- identify and review the organisational policies and procedures, including the risk management strategy
- review and analyse past and current, internal, external and industry disruptions
- outline the relevant legislation and regulations that impact on business continuity including:

© Commonwealth of Australia, 2025 Future Skills Organisation

  - workplace health and safety (WHS)
  - environment
  - duty of care
  - contracts
  - business and company law
  - freedom of information
  - industrial relations
  - privacy and confidentiality
  - due diligence
  - records management
- summarise the key principles of procurement.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- relevant strategic-level enterprise, including:
  - planning
  - financial
  - ICT infrastructure
- codes of practice, legislation and regulations
- organisational policies and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT806 Direct outsourced ICT services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop strategic plans, and change-management strategies, for outsourced information and communications technology (ICT) services. It includes developing, tracking and managing service level agreements (SLAs), and ensuring continuous improvement.

It applies to individuals who work in high-level management positions and lead the analysis, implementation and management of emerging, and converging, ICTs as they are integrated into the business process to support the organisational strategic goals of medium to large organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Direct the strategic planning for outsourced ICT services | 1.1 Identify the ICT services to be outsourced<br>1.2 Establish the criteria for the outsourcing model<br>1.3 Critically analyse the impact on the current organisational environment<br>1.4 Select an appropriate business model for outsourcing, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | against the identified criteria<br>1.5 Research the appropriate ICT service providers (vendor evaluation), against the identified criteria<br>1.6 Develop the strategic plan for outsourced ICT services |
| 2. Lead the risk management of outsourced ICT services | 2.1 Specify the relevant security requirements<br>2.2 Lead the development of the change management strategy<br>2.3 Negotiate the performance, and a security strategy, with the ICT service provider<br>2.4 Ensure that the risk assessment process for outsourced services complies with organisational policy<br>2.5 Ensure that risk mitigation addresses the identified risks |
| 3. Monitor the performance levels of the outsourced ICT service performance agreement | 3.1 Develop external ICT service provider SLAs<br>3.2 Ensure that the external ICT service provider agreed performance levels are maintained<br>3.3 Monitor the setting, tracking and management of SLAs, as an important part of outsourcing relationship management (ORM)<br>3.4 Ensure the continuous improvement of outsourced ICT services |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 1.5, 2.4, 2.5, 3.4 | • Identifies, analyses and evaluates complex textual information relevant to the job role |
| Writing | 1.1, 1.6, 2.1, 2.2, 2.4, 2.5, 3.1 | • Selects the document structure, language, grammar and terminology to suit the specific subject matter and audience, when developing strategies, SLAs, and continuous improvement processes |
| Oral | 1.1-1.6, 2.1-2.5, | • Uses effective listening and probing, open questioning techniques to elicit the view and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | 3.1-3.4 | opinions of others, and to obtain information<br>• Participates in a verbal exchange of ideas and solutions, and uses detailed and clear language to clarify and present information, according to the requirements and the audience<br>• Uses negotiation technique, the appropriate pitch, tone and body language, reflective responses, and revises own speaking to enhance meaning and effectiveness, when negotiating with service providers |
| Numeracy | 1.2, 1.3, 1.4, 1.5, 1.6, 2.2, 2.3, 2.4, 2.5, 3.1, 3.2, 3.3 | • Uses a range of statistical, mathematical and financial calculations, formulae and functions, together with the appropriate software tools, to interpret numerical and financial data relating to cost benefit analyses, SLAs, and risk assessment, and continuous improvement processes |
| Navigate the world of work | 2.4 | • Recognises protocols and policies that must be respected and maintained in the workplace, to reach explicit goals |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 2.2, 2.5, 3.1, 3.2, 3.3, 3.4 | • Considers the strategic and operational potential of digital technology in order to achieve work goals, enhance work processes, create opportunities and reduce risks<br>• Draws on a broad understanding of the context, and uses a combination of analysis and intuition, to decide whether an idea is worth developing and implementing<br>• Develops plans for complex high-impact activities with strategic implications<br>• Recognises and addresses complex problems involving multiple variables |

# Assessment Requirements for ICTICT806 Direct outsourced ICT services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop strategic directions for outsourcing of information and communications technology (ICT) resources, in alignment with organisational goals
- lead the development of a risk analysis strategy on outsourced ICT services
- ensure that procedures identifying risk and, measures to mitigate risk, are developed and implemented
- ensure warning systems, and an ongoing process of reviews of the risk profile of outsourced ICT services, are established
- review and monitor, the performance of service level agreements (SLAs) with external service providers.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- research and summarise, risk management principles and guidelines
- research and summarise the outsourcing strategies for ICT services
- outline business continuity issues for the organisation
- review the organisation's current functionality, including the existing data and information systems
- review the organisation's internal and external dependencies, and interdependencies
- review the organisational policies and procedures, including the risk management strategy
- review past and current, internal, external and industry disruptions
- outline the relevant legislation and regulations that impact on business continuity including:
  - workplace health and safety (WHS)

# ICTICT807 Direct research and business response to new ICT technology

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to direct the research, evaluation, vendor evaluation, feasibility, proof of concept (POC) evaluation of, and future business response to, new information and communications technology (ICT) that supports business strategies.

It applies to individuals who work in high-level management positions and direct the investigation and future business direction of new ICT technology in their organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Direct the initial research into new ICT | 1.1 Establish and implement, procedures to identify new ICT that may support business innovation<br>1.2 Confirm the research purpose for the evaluation of new ICT, as it relates to possible business opportunities<br>1.3 Ensure that a structured research plan is prepared in line |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | with the defined research purpose<br>1.4 Monitor the implementation of the structured research plan, to ensure that its outcomes meets the identified research purpose<br>1.5 Formulate a business case relating to the new ICT, including consideration of the organisational environment<br>1.6 Present a business case to the business stakeholders, so that the future business direction is established and agreed |
| 2. Direct the evaluation of new ICT | 2.1 Establish the evaluation criteria and methods of measurement<br>2.2 Ensure that suitable suppliers and vendors are appropriately evaluated, in order to provide credibility, quality and support for implementation<br>2.3 Oversee the preparation of a feasibility study report into the new ICT, ensuring that critical risks are identified<br>2.4 Ensure that the feasibility study of the new ICT is accurately presented to business stakeholders, so that the future business direction is established and agreed |
| 3. Direct the proof of concept evaluation of new ICT | 3.1 Ensure that the vendor's new ICT is legally acquired for a proof of concept evaluation of the new technology<br>3.2 Establish the project’s requirements, including deliverables, for a proof of concept (POC) evaluation of the new ICT<br>3.3 Endorse the project plan for POC evaluation<br>3.4 Monitor the implementation of the POC evaluation project, to ensure that project deliverables are met |
| 4. Determine future business response to new ICT technology | 4.1 Oversee the preparation of the evaluation report on the new ICT including the consequences of not implementing it<br>4.2 Ensure that the results of the new ICT evaluation are accurately presented to stakeholders, so that the future business response is established and agreed |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 1.4, 1.5, 2.1, 2.2, 2.3, 2.4, 3.1, 3.3, 3.4, 4.1, 4.2 | • Identifies, analyses and evaluates, complex textual information relevant to the job role |
| Writing | 1.1, 1.3, 1.5, 2.1, 2.3, 3.2, 3.3, 4.1 | • Selects the document structure, language, grammar and terminology to suit the specific subject matter and audience, in order to develop a wide variety of documentation |
| Oral Communication | 1.1-1.6, 2.1-2.4, 3.1-3.4, 4.1-4.2 | • Uses effective listening and probing, open questioning techniques, to elicit the view and opinions of others, and to obtain information<br>• Employs plain English to convey complex and abstract concepts, and information<br>• Uses negotiation techniques, the appropriate pitch, tone and body language, reflective responses, and revises own speaking, to enhance meaning and effectiveness, when presenting information to stakeholders |
| Numeracy | 1.5, 1.6, 2.1, 2.2, 2.3, 2.4, 3.2, 3.3, 3.4, 4.1, 4.2 | • Uses a range of statistical, mathematical and financial calculations, formulae and functions, together with appropriate software tools, to interpret numerical and financial data |
| Navigate the world of work | 1.5, 3.1 | • Takes full responsibility for identifying and considering, the organisational policies, legislation and regulations affecting new ICT technology |
| Get the work done | 1.1, 1.2, 1.4, 1.5, 2.1, 2.3, 3.2, 3.4 | • Develops flexible plans for complex, high-impact activities with strategic implications<br>• Takes responsibility for high-impact decisions in complex situations, involving many variables and constraints<br>• Keeps abreast of innovations and good practice beyond own context, borrowing, adapting, combining and redesigning for own purposes, or using as a provocation to rethink current approaches<br>• Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot, and understands the uses and potential of new technology<br>• Recognises broader positive, and negative implications, of new technologies and factors all |

# Assessment Requirements for ICTICT807 Direct research and business response to new ICT technology

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- direct the research and evaluation of new information and communications technology (ICT) for an organisation, including the production of a:
  - research plan
  - business case
  - feasibility study
  - project plan
- monitor, evaluate and report on a POC evaluation project
- access and convey the conceptual information regarding new ICT technology in relation to organisational needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- research and summarise, the stakeholder business domain, business function, processes and organisation
- state and outline, the components of the business planning process relevant to the investigation of the particular new ICT technology
- review the current business practices related to conducting an investigation into new ICT technology
- summarise client business needs, with a view to expanding into new possibilities, as presented by new ICT technology
- outline customer and business liaison techniques
- identify and apply, information gathering and presentation techniques

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise the quality assurance practices, to promote reliable investigation processes
- outline the vendor product directions
- interpret the general features, and capabilities, of current and emerging ICT industry-accepted technologies, and trends
- specify current industry and technology information sources
- specify and evaluate, the industry networks, key individuals and organisations within the ICT industry
- discuss the methods for evaluating new ICT technology.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- the relevant feasibility studies
- ICT technologies, suppliers and manuals
- research facilities
- codes of practice, standards, legislations and regulations
- organisational policies and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT808 Direct the development of a knowledge management strategy for a business

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to evaluate existing knowledge management processes, identify barriers to capturing knowledge, and to develop new strategies.

It applies to individuals who work in senior management positions and lead the analysis, implementation and management of emerging, and converging, information and communications technology (ICT), as they are integrated into the business process to support the organisational strategic goals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Critically analyse existing knowledge management systems | 1.1 Critically evaluate the existing arrangements ,for the capture and use of business knowledge, from internal and external sources<br>1.2 Differentiate between knowledge management and information management systems within the organisation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Ensure that the effectiveness of existing procedures and systems is evaluated in terms of meeting the needs of clients, organisational aims, objectives and standards<br>1.4 Identify the need for improvements in the organisation's strategic use of knowledge |
| 2. Evaluate the knowledge management options | 2.1 Investigate the barriers to capturing knowledge within the organisation<br>2.2 Review evaluations and recommendations regarding the knowledge management software, with respect to its usefulness and likeliness to benefit the organisation<br>2.3 Review the investigations into incentives and reward systems to support knowledge management<br>2.4 Ensure that the required processes for maintaining an integrated knowledge management system are considered<br>2.5 Facilitate the development of a business case to determine the viability of selected options, and recommend a way forward for the organisation |
| 3. Develop a knowledge-management strategy | 3.1 Develop the knowledge management business strategy, in consultation with senior staff, for the capture and use of organisational knowledge<br>3.2 Ensure that business processes are designed to support knowledge management, according to the organisational needs and budget<br>3.3 Ensure that the technology requirements for the implementation of the strategy, are costed and included in the organisational budget cycle<br>3.4 Ensure that processes for the periodic review of knowledge management metrics within the business are in place, to maintain ongoing effectiveness and continuous improvement<br>3.5 Ensure that the knowledge management strategy meets the organisational requirements identified in the overall business plan, and business strategy |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 3.1, 3.3, 3.4, 3.5 | • Identifies and reviews a wide variety of complex textual information, sourced from organisational documentation, electronic meeting places, communities of practice, the organisational knowledge bank and ICT vendors |
| Writing | 2.5, 3.1 | • Selects a formal document structure, organisational style and format, and subject-specific language, grammar and terminology, to develop organisational documentation |
| Oral Communication | 1.1-1.4, 2.1-2.5, 3.1-3.5 | • Uses effective listening and open questioning techniques, to elicit the view and opinions of others, and to obtain information<br>• Participates in a verbal exchange of ideas and solutions, and uses detailed and clear language to clarify and present information, according to the audience<br>• Uses the correct grammatical structures, specialised language, appropriate tone, pitch and body language, to achieve precise meaning when articulating requirements |
| Numeracy | 1.1, 1.3, 2.1, 2.5, 3.1, 3.2, 3.3, 3.4, 3.5 | • Uses a range of mathematical and financial calculations and functions, together with the appropriate software tools, to interpret and develop numerical and financial reports, relating to costing and budgets |
| Navigate the world of work | 1.3, 3.5 | • Monitors adherence to organisational policies and procedures, and considers own role in terms of a contribution to the broader goals of the work environment |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 2.4, 2.5, 3.3, 3.4, 3.5 | • Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues, and contingencies<br>• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints<br>• May use formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions<br>• Plays with possibilities as an integral part of work, identifying principles, concepts and |

# Assessment Requirements for ICTICT808 Direct the development of a knowledge management strategy for a business

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- critically analyse and document, the effectiveness of existing knowledge management systems
- research the knowledge management options in the marketplace
- recommend an approach that meets the organisational needs
- develop a knowledge management strategy.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise management concepts, processes and trends
- review and interpret relevant organisational policies, and legislation, that affect business operations
- research and summarise, both internal and external sources of information
- recognise the legal, ethical and security issues relating to knowledge management
- explain organisational change-management theory and methods
- discuss records management and database-management principles as they relate to knowledge management, particularly metadata.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology industry (ICT), and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a workplace of sufficient complexity, to enable the required level of analysis to be carried out in relation to:
  - current business processes
  - existing knowledge management systems
  - the organisational culture
- relevant enterprise strategic documentation, including:
  - strategic planning
  - financial
  - ICT infrastructure
- organisational objectives and policies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT809 Facilitate business analysis

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to direct internal and external information and communications technology (ICT) services within a medium to large organisation.

It applies to individuals who work in high-level management positions in medium to large organisations and direct the strategic planning, risk management, and security of the internal and external ICT infrastructure of their organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Facilitate the elicitation of stakeholder business requirements for enhancements | 1.1 Review the business requirements documentation, and ensure that it is complete and according to enterprise standards<br>1.2 Ensure that the proposed project benefits align with strategic directions<br>1.3 Determine the scope, complexity, deliverables, and time lines of the business process enhancements to be undertaken |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Prioritise the enhancements that add value to business operations | 2.1 Research the business operations necessary to analyse the business domain<br>2.2 Negotiate the requirements definition with stakeholders<br>2.3 Develop a process for addressing change requests in a dynamic environment |
| 3. Provide the interface between technical and business stakeholders | 3.1 Facilitate the selection of a modelling tool for a business system<br>3.2 Facilitate the selection of information-gathering tools<br>3.3 Ensure that the requirements-analysis content addresses the project objectives<br>3.4 Participate in the development of a technical specification |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 3.1, 3.2, 3.3, 3.4 | • Identifies, analyses and evaluates complex textual information, to obtain information relevant to enterprise resource planning and management |
| Writing | 2.3, 3.4 | • Integrates information and ideas from a number of sources, utilising appropriate ICT modelling tools, specialised and cohesive language, and document structures, to meet the varied requirements of the enterprise and stakeholders |
| Oral Communication | 1.1, 1.2, 1.3, 2.1, 2.2, 3.1, 3.2, 3.3, 3.4 | • Elicits the view and opinions of others, and obtains information by listening and questioning<br>• Participates in a verbal exchange of ideas/solutions, and uses detailed and clear language, to clarify and present information, according to the requirements and audience<br>• Articulates requirements and strategies clearly, using the appropriate tone, style, body language, and reflective responses, to build business relationships |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.1, 1.2, 1.3, 3.4 | • Uses a range of statistical and financial calculations and functions, to interpret and compile data relating to market analysis and budgetary requirements |
| Navigate the world of work | 1.2 | • Takes full responsibility for considering own role in terms of a contribution to the broader goals of the work environment |
| Get the work done | 1.1, 1.2, 1.3, 2.1, 2.3, 3.1, 3.2, 3.4 | • Develops flexible plans for complex, high-impact activities with strategic implications<br>• Takes responsibility for high-impact decisions in complex situations, involving many variables and constraints<br>• Keeps abreast of innovations and good practice beyond own context, borrowing, adapting, combining and redesigning for own purposes, or using as a provocation, to rethink current approaches<br>• Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot, and understands the uses and potential of new technologies |

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- facilitate a strategy to align information and communications technology (ICT) services, with the organisational goals
- lead the development of a strategy for risk assessment, including security for ICT assets, and ensure that the measures required to mitigate risk are applied
- produce contingency plans for business continuity
- ensure warning systems, and an ongoing process that includes regular or programmed reviews of the risk profile
- lead the development of a strategy for the implementation of the appropriate processes and procedures, to ensure that quality expectations are met.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise AS/NZS ISO 31000:2009 "risk management requirements"
- explain application of security products
- review business continuity issues for the organisation
- review the organisation’s industry and current functionality, including the existing data and information systems
- review the organisation's internal and external dependencies, and interdependencies
- outline the organisational policies and procedures, including the risk management strategy
- review and outline documented industry disruptions.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- relevant strategic level enterprise documentation, including:
  - planning
  - financial
  - ICT infrastructure
- standards, codes of practice, legislation and regulations.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT810 Synchronise ICT projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to ensure that internal, and external, information and communications technology (ICT) projects fit within the strategic and economic constraints of the organisation, and deliver the expected financial benefits.

It applies to individuals who work in high-level management positions, plan and manage the implementation of sustainability strategies, and lead the analysis, implementation and management of emerging, and converging, ICT as they are integrated into the business process, to support organisational strategic goals and meet sustainability targets.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate project opportunities | 1.1 Critically evaluate the project proposals in a strategic context<br>1.2 Review financial criteria to determine economic feasibility of projects<br>1.3 Prioritise projects to leverage financial resources |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Monitor the project performance | 2.1 Direct the project schedule and budget development<br>2.2 Direct the integration of the project activities<br>2.3 Critically evaluate project performance, using earned value techniques<br>2.4 Proactively manage strategic projects' risks and issues<br>2.5 Identify and take action to address unsatisfactory performance |
| 3. Manage project completion activities | 3.1 Direct financial completion<br>3.2 Establish the benefits realisation plans<br>3.3 Apply project lessons learned strategically |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.3, 2.5 | • Identifies, critically analyses and evaluates a wide range of complex organisational documentation, relevant to the projects under consideration |
| Writing | 1.3, 2.1, 2.2, 3.2, 3.3 | • Selects a formal document structure and uses technical terminology, the correct spelling and grammar, and a high degree of accuracy, to develop project schedules, plans and financial reports |
| Oral Communication | 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 3.2, 3.3 | • Uses effective listening and probing, open questioning techniques to elicit information<br>• Articulates requirements and strategies clearly, in a courteous manner, using appropriate pitch, tone, body language and reflective responses |
| Numeracy | 1.1, 1.2, 1.3, 2.1, 2.2, 3.3, 2.5, 3.1, 3.2 | • Uses a range of statistical, mathematical and financial calculations, formulae and functions, together with the appropriate software tools, to determine the economic feasibility, earned value, and the benefit realisation plan, of projects |
| Get the work done | 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 2.4, 2.5, | • Develops plans for complex high-impact activities with strategic implications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 3.2, 3.3 | • Takes responsibility for high-impact decisions in complex situations, involving many variables and constraints<br>• Reflects on the application of key principles in a particular context, the appropriateness and effectiveness of different sources of information, and problem-solving processes, for that context and the implications for future situations<br>• Explores ideas that have the potential to lead to radical departures from the current situation<br>• Considers the strategic and operational potential of digital trends, to achieve work goals, enhance work processes, create opportunities, pose threats, and enhance or reduce risks |

# Assessment Requirements for ICTICT810 Synchronise ICT projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- select the project opportunities that align with the organisational strategic and financial goals
- review and validate, high priority projects to be undertaken based on the trade-offs between benefits, risks and scarce financial resources
- develop the schedule and budget for selected projects, to enable ongoing earned value performance measurement
- review project performance and initiate appropriate corrective actions and audit activity, where necessary
- establish and monitor, an agreed project benefits realisation plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline appropriate cost management and estimating methodologies, techniques and tools, their capabilities and limitations, applicability and outcomes
- discuss business and commercial issues
- discuss cost schedule control systems
- outline the processes of delegation and the management of responsibilities for cost management
- discuss the differences in work content, risk, processes, tools and techniques that apply in the various phases of recurring project life cycles, within a volatile program environment
- explain the direction of project development and the management of program budgets
- outline human resource management policies
- discuss how to apply the principles and techniques relating to:

© Commonwealth of Australia, 2025 Future Skills Organisation

  - negotiation
  - risk management, including risk sharing and transfer
- outline the organisational guidance and attitudes to cost management
- outline organisational procurement guidelines
- outline organisational policies, including project governance policies
- discuss the principles of program project-cost management and its application
- discuss project management systems, tools and techniques
- outline the project specifications and objectives
- outline the public relations policies and strategies
- discuss the relationship of cost, time and resources, to the project management framework
- describe the political climate and the organisation's culture
- discuss the use of the budget as a control mechanism.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- relevant strategic level enterprise documentation, including:
  - planning
  - financial
  - ICT infrastructure
- organisational policies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT811 Manage an information architecture project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge to develop and test an information architecture prototype that meets organisational requirements.

It applies to individuals who work in high-level management positions and lead the analysis, implementation and management of emerging, and converging, information and communications technology (ICT) as they are integrated into the business process to support organisational strategic goals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Define the content needs | 1.1 Research the strategic intent of the website, or system, from the business requirements and client expectations<br>1.2 Provide direction in order to develop the information requirements, based on the business and client requirements<br>1.3 Synthesise the required information, and group it into business schemes related to the business structure<br>1.4 Direct the determination of content requirements for each |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | process |
| 2. Contribute to the description of the system and transmission media | 2.1 Consult with network and system specialists<br>2.2 Critically analyse the features of the physical environment, to interface with the information system architecture<br>2.3 Estimate the traffic content and volumes, based on the business requirements |
| 3. Supervise the development of content structure and navigation plan | 3.1 Organise the information into related topics<br>3.2 Ensure that the information hierarchy is in a valid sequence<br>3.3 Provide direction for clear, valid and intuitive labelling<br>3.4 Review and commit to the feasibility of architecture design<br>3.5 Develop the acceptance criteria |
| 4. Implement the navigation system development | 4.1 Coordinate the fit of navigational systems with the business requirements<br>4.2 Supervise the development of navigational search subsystems<br>4.3 Lead the development of consistent, and logical, labelling systems |
| 5. Finalise the testing and accept the information architecture model | 5.1 Lead the construction of an information architecture prototype<br>5.2 Ensure that a broad sample of business clients are engaged<br>5.3 Ensure that the site content meets the business needs<br>5.4 Lead the testing of the information architecture prototype, to test that it operates on the chosen system, and transmission media<br>5.5 Supervise the user-acceptance test |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 1.3, 1.4, 2.2, 2.3, 3.1, 3.2, 3.4, 4.1, 5.3, 5.4 | • Organises, evaluates and critiques ideas, and information, from a wide range of complex texts<br>• Draws on a broad range of strategies, to build and maintain understanding throughout complex texts |
| Writing | 1.2, 1.3, 2.3, 3.2, 3.3, 3.5 | • Selects the structure, language, grammar and terminology to suit the specific subject matter and audience, in order to develop a wide variety of documentation and directions, including direction for the content requirements, information hierarchy, navigational search subsystems, labelling systems and user-acceptance test |
| Oral Communication | 1.1-1.4, 2.1, 3.3, 3.4, 4.1, 4.2, 4.3, 5.1, 5.4, 5.5 | • Uses effective listening and probing, open questioning techniques to elicit the view and opinions of others, and to obtain information<br>• Employs plain English to convey complex and abstract concepts, and information<br>• Articulates requirements and strategies clearly, in a courteous manner, using the appropriate pitch, tone, body language and reflective responses |
| Navigate the world of work | 1.1, 1.2, 1.3, 2.3, 3.3 | • Takes a lead role in the development of organisational goals, roles and responsibilities |
| Get the work done | 1.1, 1.3, 1.4, 2.2, 3.1, 3.2, 3.4, 4.1, 4.2, 4.3, 5.1, 5.4 | • Develops flexible plans for complex, high-impact activities with strategic implications<br>• Takes responsibility for high-impact decisions in complex situations, involving many variables and constraints<br>• Keeps abreast of innovations and good practice beyond own context, borrowing, adapting, combining and redesigning for own purposes, or using as a provocation to rethink current approaches<br>• Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot, and understands the uses and potential of new technologies |

# Assessment Requirements for ICTICT811 Manage an information architecture project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify the strategic and business intent of the website or system
- conduct business meetings, applying effective communication techniques
- research and determine the essential requirements of a product, applying quality management principles
- describe the features of the website or system
- develop the navigation system
- construct an information architecture prototype
- test the prototype with the operating system and the transition media
- supervise the user acceptance test.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- examine the equity and diversity principles relevant to information architecture projects
- research and critique organisational policies and procedures, as they apply to the project
- determine and outline the public sector legislation, codes of practice and other formal agreements, that directly impact on the business operations
- evaluate the components of telecommunications networks
- research and synthesise the workplace, and industry environment, as it applies to information architecture.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- the computer system and a web-host workplace

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT812 Develop a business intelligence framework

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge to evaluate the business intelligence (BI) requirements of an organisation, and to select the correct methodologies to develop a BI solution.

It applies to individuals who work in high-level management positions and lead the analysis, implementation and management of emerging, and converging, information and communications technology (ICT) as they are integrated into the business process, to support the organisational strategic goals of medium to large organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Elicit the business intelligence requirements | 1.1 Articulate the benefits of business intelligence<br>1.2 Select the appropriate system development methodology, through the analysis of a range of options<br>1.3 Critically evaluate the impact of business intelligence on the enterprise |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Select the appropriate business model for a data repository<br>1.5 Adopt a metadata standard for the enterprise<br>1.6 Establish the appropriate data analysis techniques |
| 2. Direct the business intelligence data manipulation | 2.1 Identify the data sources and scope<br>2.2 Evaluate and endorse the selected data-manipulation methods<br>2.3 Critically review, and commit to, the feasibility of the architecture design<br>2.4 Develop the acceptance criteria<br>2.5 Endorse the selected data-modelling techniques and processes<br>2.6 Endorse a load balancing algorithm for optimum processing<br>2.7 Sign off the design specifications |
| 3. Endorse the business intelligence solution architecture | 3.1 Ensure that the data-warehousing management techniques and processes are according to the specifications<br>3.2 Lead the scoping of logical data models<br>3.3 Supervise the selection of middleware tools<br>3.4 Critically review, and commit to, a searchable data repository solution |
| 4. Finalise the testing and accept the framework | 4.1 Finalise the physical data model<br>4.2 Complete testing of the overall model<br>4.3 Test the security<br>4.4 Test the integrity<br>4.5 Perform a user-acceptance test |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 1.6, 2.1, 2.3, | • Organises, evaluates and critiques ideas, and information, from a wide range of complex |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 2.5, 2.6, 2.7, 3.1, 3.2, 3.3, 3.4, 4.1 | texts<br>• Draws on a broad range of strategies to build and maintain understanding throughout complex texts |
| Writing | 1.1, 1.3, 1.6, 2.4, 2.7, 4.1, 4.5 | • Integrates information and ideas from a number of sources, utilising the appropriate BI software tools, specialised and cohesive language, and appropriate document structures, to meet the varied requirements of the organisation and the task |
| Oral Communication | 1.1, 2.1, 2.2, 2.3, 2.5, 2.6, 3.2, 3.3, 3.4, 4.5 | • Elicits information and ideas using plain English, translating BI specific terminology when necessary, and using effective listening and questioning techniques<br>• Uses specific and complex BI terminology, to liaise with team members, review and endorse methodology and monitor the project<br>• Articulates the requirements and methodologies clearly, using the appropriate tone, style, body language and reflective responses |
| Numeracy | 1.1, 1.3, 1.4, 1.6, 2.3, 2.4, 2.5, 2.6, 2.7, 3.2, 3.4, 4.1, 4.2, 4.5 | • Uses a range of complex statistical, mathematical and financial calculations, formulae and functions together with the appropriate BI software tools, in the development of a BI framework |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 3.2, 3.3, 4.2, 4.3, 4.5 | • Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world, and uses these to develop a BI framework<br>• Recognises the critical importance of clarifying, focusing and aligning goals, and expectations, using the process to build ownership of, and broad commitment to, achieving outcomes<br>• Takes responsibility for high-impact decision in complex situations, involving many variables and constraints |

# Assessment Requirements for ICTICT812 Develop a business intelligence framework

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research and critically analyse the business intelligence requirements
- review, analyse and direct, business intelligence data manipulation
- review, critically analyse and endorse, the proposed business intelligence solution architecture
- initiate and contrast the tests required for the intelligence framework, for final acceptance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- evaluate the application of system development methodologies and other technical considerations including:
  - managing and using metadata
  - data modelling
  - data warehousing/back-end software alternatives
  - business analytics
  - business intelligence tools
- analyse the organisational policies and procedures, as they apply to the business intelligence frameworks
- discuss behaviour theories as they apply to business intelligence, including:
  - responsibility and achievement
  - affiliation management
  - motivation
- appraise and evaluate, the business intelligence (BI) procedures

© Commonwealth of Australia, 2025 Future Skills Organisation

- interpret the workplace and industry environmental conditions, as they apply to business intelligence.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a business intelligence focus
- relevant enterprise documentation, including human resource (HR) and quality management policies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT813 Manage ICT services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to apply the principles of service quality management and to develop a code of practice for information and communications technology (ICT) service management.

It applies to individuals who work in senior management positions and manage a wide range of ICT projects, and lead the analysis, implementation and management of emerging, and converging, ICTs as they are integrated into the business process to support organisational strategic goals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to manage ICT services | 1.1 Identify the quality requirement principles to provide ICT service provision, according to the business needs and expectations<br>1.2 Research and critically analyse, the appropriate service processes<br>1.3 Analyse continual improvement processes, to align and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | realign, the ICT services to business needs |
| 2. Develop the quality requirements for ICT service management | 2.1 Identify the specific quality requirements to improve the service management processes<br>2.2 Align ICT services with the business, applying service management concepts<br>2.3 Develop the strategies for the control, delivery and support of ICT services |
| 3. Develop a code of practice for ICT service management | 3.1 Research and critically analyse, best practice processes<br>3.2 Document best practice processes for ICT service management<br>3.3 Implement the identified best practice processes<br>3.4 Evaluate, monitor and improve ICT service management |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 2.1, 3.1, 3.4 | • Identifies, analyses and critically evaluates, complex online and hard copy documentation containing service-management and technology-specific terminology, in order to research, develop, monitor and improve, a quality service management process |
| Writing | 2.2, 2.3, 3.2, 3.4 | • Uses plain English, the appropriate grammatical structures and terminology, diagrams and flow charts, and the formatting, and document structure, relevant to the subject matter and audience, to develop strategies and best practice processes |
| Oral Communication | 1.1-1.3, 2.1-2.3, 3.1, 3.3, 3.4 | • Expresses research and resource requirements clearly, and directs discussions to elicit information, and the views and opinions of others, by using effective listening and open, questioning techniques<br>• Articulates requirements and methodologies clearly, using the appropriate tone, style, body language and reflective responses |
| Get the work | 1.1-1.3, 2.1-2.3, | • Considers the strategic and operational potential of |

# Assessment Requirements for ICTICT813 Manage ICT services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research and critically analyse the provision of quality information and communications technology (ICT) services
- review, then develop and implement, procedures and processes to improve the quality of ICT service management
- critically review, evaluate, monitor and improve the ICT service management.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- review and appraise ICT service management concepts and processes
- research and critically review, the quality assurance procedures in ICT services
- discriminate and summarise, industry best practice processes in ICT services
- summarise and contrast, the technical terminology relevant to service management.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a current service organisational chart
- current service logs and procedures
- an organisational mission statement.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT814 Develop cloud computing strategies for a business

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop a cloud computing strategy for establishing cloud computing services as a key business enabler.

It applies to senior management, including strategic business analysts and chief information officers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse the existing business ICT system assets | 1.1 Review the business assets and identify the most appropriate for possible cloud deployment<br>1.2 Evaluate each asset's risk tolerance to the business, for possible cloud deployment |
| 2. Select the most suitable deployment and/or delivery model for each asset | 2.1 Map each asset to potential cloud deployment models<br>2.2 Review and select the most relevant delivery model for each asset<br>2.3 Document the security risks to the business as a result of |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | using the identified deployment and delivery models |
| 3. Develop a cloud implementation strategy | 3.1 Develop a cloud implementation plan, incorporating the most appropriate deployment and delivery models, in line with the enterprise requirements<br>3.2 Develop a costing for the technology requirements of the implementation proposal<br>3.3 Develop processes for the periodic review of the cloud service metrics, associated with the implementation proposal |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.2 | • Organises, evaluates and critiques ideas and information from a range of complex texts |
| Writing | 2.1, 2.3, 3.1 | • Prepares documentation expressing ideas, explores complex issues and is constructed logically, succinctly and accurately |
| Numeracy | 3.2 | • Analyses and synthesises highly embedded mathematical information in a broad range of tasks and texts |
| Navigate the world of work | 3.1 | • Develops and implements strategies that ensures that the organisational policies, procedures and regulatory requirements are being met |
| Get the work done | 3.1, 3.3 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands<br>• Identifies the key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies, where appropriate<br>• Uses digital technologies to manage business operations and actively investigates new technologies, for strategic and operational purposes |

# Assessment Requirements for ICTICT814 Develop cloud computing strategies for a business

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse and document, the effectiveness of existing cloud computing deployment and delivery models
- research the cloud computing options in the marketplace
- develop a cloud computing implementation strategy that meets the enterprise needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- research and synthesise information to determine and document current business processes, and cloud service sources
- define and employ coaching, mentoring and teamwork skills to ensure the support of cloud computing strategies as an ongoing initiative
- investigate and analyse cloud computing concepts, processes and trends
- synthesise the relevant enterprise policies and legislation that affect business operations, specifically privacy legislation
- discriminate between the legal, ethical and security issues relating to cloud computing
- evaluate organisational change-management theory and methods
- determine the risk tolerance issues, as they relate to the development of cloud computing strategies
- investigate and critically analyse, the methods of deploying cloud technology strategies
- investigate and critically analyse, the security issues relevant to a business.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a workplace of sufficient complexity, to enable the required level of analysis to be carried out in relation to current business processes, and possible future cloud computing solutions
- relevant enterprise strategic documentation, including:
  - strategic planning
  - financial
  - ICT infrastructure
- enterprise objectives and policies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT815 Manage automated ICT system applications using enterprise wide operating system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the performance outcomes, skills and knowledge required to apply the enterprise wide operating system to system automation in a distributed computing environment as used in telecommunications applications.

It applies to telecommunication engineers who manage automated systems within a telecommunications network including databases, files systems and user administration.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| **Elements**<br>*Elements describe the essential outcomes.* | **Performance Criteria**<br>*Performance criteria describe the performance needed to demonstrate achievement of the element.* |
|---|---|
| 1. Operate an enterprise wide operating system | 1.1 Modify boot options by operating an enterprise wide operating system<br>1.2 Shutdown a networked operating system using system commands with qualifiers<br>1.3 Manage files using file management commands and wildcards and creating disk partitions and other media file systems |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Mount and unmount file systems using system commands<br>1.5 Verify the integrity of file systems using system utilities<br>1.6 Configure telecommunication applications by using system commands with special permission modes<br>1.7 Critically analyse, evaluate and apply the enterprise wide operating system features to a given telecommunications multi-user application using distributed computing |
| 2. Apply system functions | 2.1 Use the command line interface to interact with shells and commands to the telecommunications application on distributed computing<br>2.2 Manage files by applying regular expressions with system functions<br>2.3 Send text files and output streams through text utilities using commands<br>2.4 Evaluate and apply enterprise wide operating system functions to a telecommunications application on distributed computing to create menu options |
| 3. Manage user login environment and customisation | 3.1 Manage user and group accounts to the telecommunications application on distributed computing<br>3.2 Change user and group profiles to allowed security access level using commands<br>3.3 Scan log files for activity using commands<br>3.4 Configure the user environment for setting user and global profiles<br>3.5 Record the configuration settings |
| 4. Manage system level functions | 4.1 Automate scheduling using the system ‘cron’ command<br>4.2 Critically analyse the need for backup strategy in a telecommunications network application<br>4.3 Plan a backup strategy to maintain redundancy of the system<br>4.4 Configure the system to perform scheduled backing up the file system to various media<br>4.5 Verify integrity of backup operations by restoring system using backup files<br>4.6 Configure system log files for administration and security needs<br>4.7 Manage a print server and print files to provide customer service |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 4.8 Document the configuration backup schedules and system logs |
| 5. Complete evaluation and configuration documentation | 5.1 Produce a project evaluation report on the application of Unix features to a given telecommunications multi-user application using distributed computing with recommendations on improvements to the system<br>5.2 Produce a report on the management and configuration of user applications and system level functions |

# Foundation Skills

*This section describes language, literacy and numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.7, 2.4, 3.3, 4.2 | • Evaluates and critiques ideas and information from a range of complex texts |
| Writing | 2.4, 3.5, 4.2, 4.8, 5.1, 5.2 | • Generates complex written texts demonstrating sophisticated writing skills |
| Oral Communication | 4.2, 5.1, 5.2 | • Presents complex and effective spoken communication in a broad range of contexts |
| Numeracy | 1.6, 3.4, 3.5, 4.2, 4.4, 4.6 | • Applies a wide range of highly developed mathematical and problem solving strategies and techniques to a wide range of contexts |
| Get the work done | 1.1-1.7, 2.1-2.4, 3.1-3.4, 4.1-4.7, 5.2 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands<br>• Makes high impact decisions in a complex and diverse environment, using input from a range of sources<br>• Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision making strategies where appropriate<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisations goals<br>• Uses digital technologies to manage business operations and actively investigates new |

# Assessment Requirements for ICTICT815 Manage automated ICT system applications using enterprise wide operating system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- manage ICT system functions using a enterprise wide operating system
- analyse system functions based on data
- produce a report on the evaluation of the system
- document recommendations for improvement

## Knowledge Evidence

Evidence of the ability to:

- analyse an automated systems
- critique communication and multi user telecommunications systems
- appraise distributed computing
- appraise encoding and programming techniques
- analyse and report on network security
- describe networking infrastructure
- describe realisation of software simulation
- apply enterprise wide operating system commands.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications -Information Technology field of work and include access to:

- a telecommunications operations site
- unix based system to manage automated functions
- special purpose tools, equipment, materials
- industry software packages.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT516 Test telecommunications network using virtual instruments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to apply simulation testing techniques to telecommunication systems.

It applies to technical staff who work with optical communication systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – IT Use

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan simulation of hardware instruments | 1.1 Arrange access to site according to required procedure<br>1.2 Determine specific applications for virtual instruments in telecommunication systems<br>1.3 Determine features of virtual instruments applicable to telecommunication systems, including limitations of virtual instruments<br>1.4 Select a range of simple and complex virtual instruments applicable to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | telecommunication systems |
| 2. Perform simulation techniques | 2.1 Perform measurements on telecommunication systems using simple virtual instruments<br>2.2 Simulate and display properties of a modulated signal with software generated instruments following enterprise work health and safety (WHS) processes and procedures<br>2.3 Simulate and display a data signal transmitted through a band-limited channel<br>2.4 Control virtual instruments using data bus operation |
| 3. Analyse simulation measurements | 3.1 Determine conversion processes used in virtual instruments<br>3.2 Document potential effect of a simulation algorithm on readings taken<br>3.3 Analyse measurements in context of conversion process and simulation algorithm |
| 4. Report measurement results | 4.1 Prepare report on measurement results<br>4.2 Submit report to supervisor |

# Foundation Skills

*This section describes language, literacy and numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 3.3 | • Draws on a range of strategies to research and understand complex texts<br>• Analyses and consolidates test results and data from a range of sources, against defined criteria and requirements |
| Writing | 1.1, 3.2, 4.1, 4.2 | • Demonstrates sophisticated writing skills by selecting appropriate conventions and stylistic devices to express precise meaning |
| Oral Communication | 1.1, 4.2 | • Establishes effective spoken communication in a range of contexts |
| Numeracy | 1.3, 2.1-2.4, 3.1-3.3, 4.1 | • Selects and applies a wide range of mathematical and problem solving techniques in a broad range of contexts<br>• Uses a wide range of formal mathematical language and representation to communicate mathematically |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.1, 2.2 | • Takes full responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation or regulation |
| Get the work done | 1.1-1.4, 2.1-2.4, 3.1, 3.3 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, taking into account capabilities, efficiencies and effectiveness<br>• Applies systematic and analytical decision-making processes for complex and non-routine situations<br>• Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause<br>• Uses and investigates new digital technologies and applications for testing, managing and manipulating data and communications effectively, in a secure and stable digital environment |

# Assessment Requirements for ICTICT516 Test telecommunications network using virtual instruments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- interpret and use equipment and system manuals and specifications
- use latest virtual instrument test equipment
- simulate signals and systems using complex virtual instruments
- analyse and report on results of simulation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the applications of virtual instruments
- explain current and emerging developments in relation to virtual instruments
- describe instrumentation principles and practices
- identify internet support services
- outline modulation methods, AM, FM and digital formats
- name sampling and data conversion processes
- explain virtual instrument features and benefits.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Information Technology use field of work and include access to:

- internet sites

© Commonwealth of Australia, 2025 Future Skills Organisation

- electronic workbench or similar software
- virtual instrument applications and media
- a workplace conducting operations involving virtual instruments, with support from a competent supervisor or mentor
- telecommunications equipment suitable for integrating projects
- industry software packages (where applicable).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL401 Apply business acumen to network planning

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to consider business drivers in a decision-making process for network planning and investment. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse forecasts using customer demand | 1.1 Gather and organise information concerning customer service and usage data to determine customer demand<br>1.2 Determine trends in customer demands in specific customer operating environments and markets<br>1.3 Assess key measures of capacity and customer demand for forecast |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| 2. Build models to develop business cases | 2.1 Construct a model to represent key options to formulate strategic proposals in network planning<br>2.2 Determine rights of carriers and service providers in installing facilities under Commonwealth legislation<br>2.3 Produce a strategic network plan using key variables, and communicate them to intended audience<br>2.4 Apply business case methodology to determine key economic measures and risks to business success<br>2.5 Evaluate business value and options to recommend appropriate planning strategy |
| 3. Apply financial analysis | 3.1 Use a financial investment tool relevant to the business environment to determine financial viability of the planning project<br>3.2 Apply key economic measures in an analysis process and develop business strategy<br>3.3 Determine relevant level of financial analysis required to optimise network planning |
| 4. Analyse demographic trends for strategy development | 4.1 Gather demographic data and determine impact of demographic diversity on planning strategies<br>4.2 Analyse data and produce demographic trends for use in strategy developments in network planning |
| 5. Assess technology implementation | 5.1 Determine unit costs associated with technologies and products by using lifecycle of technologies<br>5.2 Research what different technology bases can deliver and circumstances and locations in which they should be successfully deployed |
| 6. Evaluate network deployment architecture | 6.1 Evaluate network deployment architecture using network deployment rules and reasoning behind architecture rules<br>6.2 Produce a business model of network planning, applying commercial considerations and exemption process |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 2.2, 2.5, 4.1, 5.2, 6.1 | • Identifies and evaluates text to determine key information and specific requirements and responsibilities |
| Writing | 1.2, 2.1, 2.3, 2.4, 3.1, 3.2, 6.2 | • Develops material for a specific audience using clear and detailed language<br>• Uses expected forms and conventions to present required information |
| Oral Communication | 2.3 | • Articulates specific information using an appropriate tone and vocabulary for intended audience |
| Numeracy | 1.1-1.3, 2.1, 2.4, 3.1-3.3, 4.1, 4.2, 5.1, 6.1, 6.2 | • Interprets numerical information and applies mathematical calculations relating to time durations and financial consequences<br>• Applies different financial models to the planning process and highlights benefits and drawbacks of different strategies |
| Navigate the world of work | 2.2 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements |
| Interact with others | 2.3 | • Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers<br>• Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts |
| Get the work done | 1.1-1.3, 2.1, 2.2, 2.4, 2.5, 3.1-3.3, 4.1, 4.2, 5.2, 6.1, 6.2 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Addresses less predictable problems and initiates standard procedures in response, applying problem-solving processes in determining a solution |

# Assessment Requirements for ICTNPL401 Apply business acumen to network planning

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- analyse forecasts using customer demand
- build accurate models to develop business cases, applying financial analysis
- analyse demographic trends for strategy development
- assess technology implementation
- communicate with customers
- evaluate network deployment architecture.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain different forms of business modelling
- identify commercial considerations, including:
  - capital expenditure (CAPEX)
  - operational expenditure (OPEX)
  - product revenue and demand versus network cost
  - return on investment (RoI)
  - time to market
- identify role of demographics in the planning process
- outline emerging technologies of telecommunications
- identify financial investment tools:
  - cost-benefit analysis
  - investment management system

© Commonwealth of Australia, 2025 Future Skills Organisation

  - net present value (NPV)
- identify financial models
- explain forecasting of trends
- identify and explain relevant legislation as it applies to:
  - Australian competition and consumer affairs
  - telecommunications industry regulatory accounting
  - universal services obligations
- describe network planning processes.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- network planning data
- relevant databases
- business and financial models
- systems and deployment rules and relevant legislation
- planning processes and regulatory frameworks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL402 Plan the deployment of access network architectures

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to plan deployment of network architecture when conducting access network telecommunications work.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Scope the project | 1.1 Prepare for work according to site specific safety requirements and enterprise work health and safety (WHS) processes and procedures<br>1.2 Determine type of access network by accessing and using network information sources<br>1.3 Produce a brief on how access network architecture components relate to the larger network and their impact on the work |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Evaluate equipment type and technologies to be considered, to determine availability and compatibility with existing network equipment<br>1.5 Obtain resources and equipment needed for the work according to enterprise procedures and check for correct operation and safety<br>1.6 Assess capacity limitations of various platforms in the context of the work to ensure maximum network performance<br>1.7 Determine product capability and calculate allowable capacity of the access network to allow for network growth |
| 2. Produce deployment plan for an Access Network | 2.1 Conduct planning work using current equipment components and complying with access network deployment rules and exemption process criteria<br>2.2 Produce a preliminary plan on deployment of the network that maintains integrity of the access network<br>2.3 Discuss unexpected situations with appropriate personnel, with consideration to job specifications, safety and enterprise procedures to establish a solution<br>2.4 Review plan to ensure it complies with all standards and codes required when working on network access, and where appropriate make adjustments |
| 3. Complete work and report its impact on network access | 3.1 Produce final deployment plan including recommendations agreed with customer<br>3.2 Provide a report on network monitoring techniques used to manage the network to ensure it is performing at optimum level |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.2, 1.4-1.7, 2.1, 2.4 | • Identifies and evaluates written and visual text in specialised workplace documentation to determine key information and specific requirements |
| Writing | 1.3, 2.2, 3.2 | • Develops material for a specific audience using clear and detailed language and expected forms and conventions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral Communication | 1.6, 1.7, 2.3, 3.1, 3.2 | • Articulates specific information using an appropriate tone and vocabulary for the intended audience |
| Numeracy | 1.6, 1.7, 3.1, 3.2 | • Employs mathematical calculations to determine features and limitations of different networks |
| Navigate the world of work | 1.1, 1.5, 2.1, 2.3, 2.4 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements<br>• Identifies and acts on issues that contravene relevant policies, procedures and legal requirements |
| Interact with others | 2.3 | • Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts<br>• Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers |
| Get the work done | 1.1-1.7, 2.1, 3.1 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Addresses less predictable problems and initiates standard procedures in response, applying problem-solving processes in determining a solution |

# Assessment Requirements for ICTNPL402 Plan the deployment of access network architectures

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- gather data appropriately within information sources and evaluate how the data relates to the access architecture
- source current major equipment and technologies used in an access network and detail their compatibilities
- accurately plan deployment of an access network architecture, including deployment rules, capacity and capability management and monitoring techniques
- complete work within a timeframe typically expected of the discipline, work function and industrial environment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the features of an access network, including:
  - architectures and geographical categorisation
  - information sources
  - technology and equipment
- define capacity and capability management
- identify capacity limitation of various platforms
- describe commercial considerations of access network deployment
- identify compatibility issues of technology and equipment
- explain currency of technology and equipment use
- summarise enterprise deployment rules and rationale

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify exemption process criteria
- identify major equipment components of a modern access architecture
- describe monitoring techniques to manage the access network
- outline network topologies
- identify product capability and availability allowable within an access network
- outline telecommunications access networks issues and challenges.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- network design documentation and other site-related documentation
- equipment specifications
- live network or training facilities
- organisational guidelines
- networked computers
- networked telecommunications components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL403 Evaluate the capability of access networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to gather information on the types of access networks and evaluate their capability to meet present and future demands, including evaluation and comparison of competing access network technologies.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Scope the project | 1.1 Prepare for given work according to site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures<br>1.2 Determine types of access networks currently deployed by accessing |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | and using network information sources<br>1.3 Determine nature, quantity, architecture and condition of existing network equipment and their attributes<br>1.4 Produce a brief on deployment scope of current access networks, including geographical limitations and their contribution to the larger network |
| 2. Assess capability and technologies of current and future access networks | 2.1 Produce layout of the topology of identified types of access networks with network elements clearly indicated<br>2.2 Evaluate equipment type and technologies of the access network to determine compatibility with existing network equipment and interoperability with other networks<br>2.3 Assess current and future capability and limitations of the network to ensure potential growth of the network<br>2.4 Determine future offerings of product and services outlining product offerings allowable over each network |
| 3. Document capability evaluation | 3.1 Assess capability of current access networks to deliver products and services to customers<br>3.2 Recommend preferred solutions for network growth with future capabilities |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1-1.4, 2.2-2.4, 3.1 | • Identifies and evaluates written and visual text in specialised workplace documentation to determine key information and specific requirements |
| Writing | 1.4, 2.1, 3.2 | • Develops material for a specific audience using clear and detailed language and expected forms and conventions |
| Oral Communication | 1.3, 1.4, 3.2 | • Articulates technical information using an appropriate tone and vocabulary for intended audience |
| Numeracy | 1.4, 2.1, 2.2 | • Employs mathematical calculations to determine features and limitations of different networks and equipment |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.1 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements |
| Interact with others | 3.2 | • Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts |
| Get the work done | 1.1-1.3, 2.2-2.4, 3.1, 3.2 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Addresses less predictable problems and initiates standard procedures in response, applying problem-solving processes in determining a solution |

# Assessment Requirements for ICTNPL403 Evaluate the capability of access networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- evaluate capability and limitations of the various access network technologies for present and future needs
- determine and source equipment that will be used across the spectrum of access network technologies
- outline product offerings allowable across all competing access network technologies.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify access networks from information sources
- explain access networks in terms of:
  - common attributes and features
  - typical access network technologies and topologies
- explain how to assess capability and limitations of a network including:
  - its contribution to the boarder network; and,
  - its capacity to deliver customer products and services
- outline typical problems and challenges that arise from working with access network technologies
- explain the basis on which various network technologies are selected.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- network design documentation and other site related documentation
- equipment specifications
- live network or training facilities
- organisational guidelines
- networked computers
- networked telecommunications components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL404 Evaluate the planning requirements for provisioning a telecommunications building facility

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to evaluate building service capability to meet present and future demands for a building facility housing telecommunications equipment, including gathering information and evaluating allowable types of building services, power systems, air conditioning, fire safety services, energy use and alarm systems within each technology.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Scope the | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards including work health and safety (WHS) processes |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| project | and procedures<br>1.2 Obtain building plans and specifications from planning section<br>1.3 Determine type of facility and building services required to house telecommunications network equipment and plant to efficiently support the network<br>1.4 Determine the purpose of the main areas or rooms in the network building and note special requirements to support safe operation of the facility<br>1.5 Verify who is responsible for planning, provisioning, maintaining and operation of a facility |
| 2. Evaluate power requirements | 2.1 Assess how functions of the main power and building services support network equipment and the impact if building services are not provided correctly or fail<br>2.2 Produce a schematic diagram of the relationship of electrical components in an end-to-end power and building services system<br>2.3 Assess different types of power sources likely to supply network equipment and determine benefits or deficiencies<br>2.4 Determine how resiliency is built into provisioning of a reliable power supply and how different levels of reliability can be achieved<br>2.5 Evaluate the impact of energy use and energy loads in the facility and determine how energy use can be minimised |
| 3. Evaluate requirements of air conditioning services | 3.1 Assess the main types of air conditioning components or plant available and their suitability to building requirements, and draw a schematic diagram of proposed layout<br>3.2 Determine how different equipment rack heat dissipation and size of a load can affect cooling needs<br>3.3 Evaluate how deployment of network equipment and other supporting infrastructure can affect performance and loading of the installed air conditioner |
| 4. Evaluate requirements of fire safety services | 4.1 Assess type, functions and components of fire service protection systems for fire and smoke required in a network facility for the safety and protection of people and assets<br>4.2 Use the building plan to locate fire systems to be deployed to comply with fire regulations<br>4.3 Evaluate effect equipment deployments may have on fire services and its ability to protect the site and maintain regulatory obligations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| 5. Evaluate requirements of alarm systems | 5.1 Determine alarm requirements from the building plan and specifications<br>5.2 Assess if basic monitoring is to be used with system or plant interrogation capabilities to produce an integrated alarm system for the facility<br>5.3 Determine where alarm systems are monitored and actioned and the personnel responsible<br>5.4 Evaluate what systems are used to connect power and building services output alarms, and the software requirements needed to allow interrogation |
| 6. Produce evaluation document | 6.1 Assess requirements for each building service needed to support the facility, allowing for projection of future network growth and building expansion<br>6.2 Produce an evaluation document on planning requirements for proposed provisioning including identified services to support the building facility |

# Foundation Skills

*This section describes the Foundation Skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.3, 2.4, 4.1, 4.2, 5.1-5.3, 6.1 | • Identifies and evaluates complex written and visual text in specialised workplace documentation to determine key information and specific requirements |
| Writing | 1.2, 1.5, 2.2, 3.1, 5.3, 6.1, 6.2 | • Develops material for a specific audience using clear and detailed language and visuals employing expected forms and conventions |
| Oral Communication | 1.2, 1.5, 5.3 | • Articulates technical information using an appropriate tone and vocabulary for the intended audience |
| Numeracy | 2.2-2.5, 3.1-3.3, 4.3, 5.1, 5.4, 6.1, 6.2 | • Employs mathematical calculations to determine capabilities and limitations of different systems |
| Navigate the world of work | 1.1 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements |
| Get the work done | 1.1-1.5, 2.1, 2.3-2.5, 3.1-3.3, 4.1, 4.3, 5.2-5.4, 6.1 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Addresses less predictable problems and initiates standard procedures in response, applying problem-solving processes in determining a solution |

# Assessment Requirements for ICTNPL404 Evaluate the planning requirements for provisioning a telecommunications building facility

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- evaluate facilities used for housing network equipment and how they may be used for provisioning
- produce documentation that correctly associates responsibilities to planning, provisioning, maintenance and operation of a building facility
- evaluate planning requirements for telecommunications building facilities
- determine equipment for air conditioning systems and power supplies into building facilities
- determine requirements for energy use, alarm and fire safety services.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline these aspects of network planning:
  - alarm monitoring and hierarchy of responsibility
  - capacity of air conditioning system on a given load
  - different building services supported at a network site
- describe basic monitoring and plant interrogation capabilities
- outline complexities of various levels of alarm as applied to building facilities
- identify general types of facilities within building housing network equipment
- outline services and equipment, including:
  - types of air conditioning

© Commonwealth of Australia, 2025 Future Skills Organisation

  - types of fire safety services
  - types of power sources
  - equipment deployments on fire safety services
  - main energy loads associated in a facility
- identify regulatory obligations in relation to fire safety services
- identify software systems needed to allow alarm interrogation (outputs).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- building facilities where planning requirements for provisioning may be conducted
- relevant regulatory and organisational procedures
- documentation that impacts work.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# Assessment Requirements for ICTNPL405 Develop provisioning of telecommunications building works project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- assess capacity and suitability of available power and building services for telecommunications building works
- develop a process to implement a power and building services upgrade
- develop short- and long-term works projects for equipment and infrastructure deployments
- produce accurate cost estimates for provisioning.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the process to assess capacity and suitability of available power and building services
- outline the following features of a building works project:
  - correlation between building service systems to network equipment requirements
  - different levels of reliability performance standards, applicable to specific equipment deployment needs
  - information required to assess effect on floor loading, power and heat load from equipment deployments
  - main regulatory standards
  - role of power and building services, capacity and standards
- establish the source of budget cost estimates
- define the specific short and long term works programs

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify typical issues and challenges that occur in telecommunications building service systems and how these may be addressed
- outline the process for power and building services upgrades.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- building facilities where a telecommunications network project may be conducted
- relevant regulatory, organisational procedures
- documentation impacting work.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL406 Evaluate core network architectures

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to assess roles and evaluate benefits of competing core network architectures. Core networks use convergent internet protocol (IP) based technologies with conventional technologies.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider, and prepares them for entry level planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate basic IP network architecture | 1.1 Produce a layout of the topology of an IP network showing network elements and application of the 7-layer open system interconnect (OSI) model<br>1.2 Determine purpose of routers and switches and use of routing protocols |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Determine different types of generic resiliency and redundancy that can be applied in network architectures and when they should be applied<br>1.4 Evaluate benefits of IP networks compared to circuit-based networks and the impact on modern telecommunications networks |
| 2. Evaluate synchronous digital hierarchy (SDH) transport architectures | 2.1 Produce a layout of the topology of SDH transport networks showing structure and role of rings in the networks<br>2.2 Determine purpose of SDH switching and its function within the transport architecture<br>2.3 Assess key capacity and distance limitations in SDH networks<br>2.4 Assess resiliency and redundancy techniques that can be used within SDH transport networks<br>2.5 Evaluate compatibility of SDH transport architectures with other transport architectures |
| 3. Evaluate broadband architectures | 3.1 Produce a layout of the topology structure of the asymmetrical digital subscriber line (ADSL) edge network and the hybrid fibre coaxial (HFC) cable edge network in providing broadband access to customer<br>3.2 Determine purpose of point-to-point protocol (PPP) and function of the digital subscriber line access multiplexer (DSLAM), broadband remote access server (BRAS) and layer2 network protocol network server (LNS) in the ADSL network<br>3.3 Assess arrangement of carrier channels connecting the HFC cable customer<br>3.4 Determine the function of the CMTS and the purpose of DOCSIS, and key capabilities of its different versions in the HFC network<br>3.5 Assess resiliency considerations for ADSL and HFC cable network architectures<br>3.6 Evaluate benefits of providing cable broadband access to wireless broadband from a network security aspect |
| 4. Evaluate data architectures | 4.1 Produce a layout of the topology of key structures of a data network showing the IP network and multiprotocol label switching (MPLS) structures<br>4.2 Determine the purpose of internal and external routing protocols in an IP network outlining reasons for the creation of a virtual private network (VPN)<br>4.3 Determine the purpose of label distribution protocol (LDP) in an MPLS network<br>4.4 Assess resiliency and redundancy techniques that can be used |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | within data networks<br>4.5 Evaluate compatibility of IP and MPLS networking |
| 5. Evaluate metropolitan ethernet architectures | 5.1 Produce a layout of the topology structure of a metropolitan ethernet network showing optimum siting of the ethernet switch<br>5.2 Determine types and limitations of the varieties of ethernet transmission<br>5.3 Assess scaling limitations of ethernet networks<br>5.4 Assess resiliency and redundancy techniques that can be used within metropolitan ethernet networks<br>5.5 Evaluate the need for creation of virtual local area networks (VLAN) in metropolitan ethernet architecture for improved performance |
| 6. Evaluate voice architectures | 6.1 Produce a layout of the topology of a voice over internet protocol (VoIP) network and a wireless voice network showing the network elements<br>6.2 Determine the function of local exchange and transit exchange switches in the public switched telephone network (PSTN)<br>6.3 Determine the function of a secure broadband connection (SBC) and the purpose of session initiation protocol (SIP) in wireless networking<br>6.4 Assess resiliency and redundancy techniques that can be applied in design of voice networks<br>6.5 Evaluate benefits of VoIP networks compared to circuit based networks and the impact on modern telecommunications networks |
| 7. Evaluate media and content architectures | 7.1 Determine structure, elements and purpose of hosting networks in data centres and a content distribution network<br>7.2 Evaluate the impact of high speed broadband for wide deployment of media and content architectures |
| 8. Prepare evaluation report | 8.1 Assess compatibility and interoperability of competing core network architectures<br>8.2 Prepare an evaluation report outlining core network solutions using emerging technologies |

# Assessment Requirements for ICTNPL406 Evaluate core network architectures

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- determine first three layers of the open system interconnect (OSI) model
- determine the role of switches and routers in the core network and different types of routing protocols
- evaluate synchronous digital hierarchy (SDH) switching and transmission and its ability to create resiliency in the network through various redundant configurations
- evaluate benefits, purpose and structure of ADSL networks and other broadband products
- determine and compare data networks with specific reference to internet protocol (IP) and multiprotocol label switching (MPLS)
- evaluate the most important routing protocols of internal and external MPLS and the resilience built into them
- evaluate limitations of an ethernet network and how VLAN can be incorporated in them
- compare various voice protocols
- determine the purpose of various hosting in data centres and media and distribution platforms.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the following features of core network architectures:
  - client business domain, business function and organisation
  - networking technologies
  - theoretical concepts of three or more current industry network development and design methodologies

© Commonwealth of Australia, 2025 Future Skills Organisation

  - transmission technologies and protocols
- outline MPLS and IP architectures across a core network environment
- outline current industry-accepted hardware and software products
- identify and describe relevant protocols, such as routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP), open shortest path first (OSPF), and border gateway protocol (BGP) operations
- identify VLANs and VPN tunnels and describe how they may be implemented in an ethernet/MPLS environment.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- network design documentation
- site-related documentation
- equipment specifications
- live network or training facilities
- organisational guidelines
- networked computers
- networked telecommunications components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL407 Plan the deployment of core network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to plan deployment of core network for a telecommunications service provider, including use and consideration of core network deployment data, technology, equipment, capacity management and network management information sources. Core networks use convergent internet protocol (IP) based technologies with conventional technologies.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Scope the project | 1.1 Prepare for work according to site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures<br>1.2 Determine the type of core network by accessing and using network |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | information sources<br>1.3 Produce a brief showing how core network architecture components relate to the larger network and their impact on the work<br>1.4 Evaluate equipment type and technologies to be considered to determine availability and compatibility with existing network equipment<br>1.5 Obtain resources and equipment needed for the work according to enterprise procedures and check for correct operation and safety<br>1.6 Assess capacity limitation of platforms in context of the work to ensure maximum network performance<br>1.7 Determine product capability and calculate allowable capacity of the core network to allow for network growth |
| 2. Produce deployment plan for a core network | 2.1 Assess demand for the core network using key geographic, demographic, forecast and bandwidth data<br>2.2 Identify key parameters of the core network to be measured for capacity management<br>2.3 Produce a preliminary deployment plan for the core network using architectural principles and assessed demand to maintain integrity of the core network<br>2.4 Assess additional planning requirements for voice over internet protocol (VoIP) and wireless voice networks from voice networks, and for hosting and content distribution networks from media and content networks<br>2.5 Create a financial business case for deployment of the core network based on assessed demand to justify a return on investment (RoI) and operational costs<br>2.6 Discuss unexpected situations with appropriate personnel, with consideration to job specifications, safety and enterprise procedures to establish a solution |
| 3. Complete work and report its impact on network performance | 3.1 Produce final deployment plan including recommendations agreed with customer<br>3.2 Provide a report on network monitoring techniques used to manage the network to ensure the network is performing at optimum level |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | **Criteria** | |
|---|---|---|
| Reading | 1.1-1.3, 1.5, 2.1-2.4 | • Analyses and evaluates complex written and visual text in specialised workplace documentation to determine key information and specific requirements |
| Writing | 1.3, 2.6, 3.1, 3.2 | • Develops material for a specific audience using clear and detailed language and visuals employing expected forms and conventions |
| Oral Communication | 2.6, 3.1, 3.2 | • Articulates technical information using an appropriate tone and vocabulary for the intended audience<br>• Listens and responds to different viewpoints and elicits opinions of others through considered questioning |
| Numeracy | 1.6, 1.7, 2.1, 2.3, 2.4 | • Employs mathematical calculations to interpret capabilities and limitations of different systems and future configurations |
| Navigate the world of work | 1.1, 1.5, 2.6 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements |
| Interact with others | 2.6 | • Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers<br>• Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts |
| Get the work done | 1.1, 1.3-1.7, 2.1, 2.2, 2.4, 2.5 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Addresses less predictable problems and initiates standard procedures in response, applying problem solving processes in determining a solution |

# Assessment Requirements for ICTNPL407 Plan the deployment of core network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- gather data from information sources efficiently and evaluate how the data relates to the core network
- source major equipment and technologies accurately to be used in a core network and detail their compatibilities
- prepare a business case for deployment of a core network
- produce a deployment plan for a core network including monitoring techniques and recommendations for the customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify multiprotocol label switching (MPLS) and internet protocol (IP) architectures across a core network environment
- outline different protocols such as routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP), open shortest path first (OSPF), and border gateway protocol (BGP) operations
- identify virtual local area networks (VLAN) and virtual private network (VPN) tunnels and explain how they are implemented in an ethernet and MPLS environment
- outline the following features of core network architectures:
  - client business domain, business function and organisation
  - current industry-accepted hardware and software products
  - networking technologies incorporating substantial depth in some areas
  - transmission technologies and protocols

© Commonwealth of Australia, 2025 Future Skills Organisation

- theoretical concepts of three or more current industry network development and design methodologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- network design documentation
- other site-related documentation
- equipment specifications
- live network or training facilities
- organisational guidelines
- networked computers
- networked telecommunications components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL408 Produce planning specifications for end-to-end service delivery

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to gather information on the types of end-to-end services and product delivery and evaluate their capability to meet present and future demands.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Scope the project | 1.1 Prepare for given work according to site specific safety requirements and enterprise work health and safety (WHS) processes and procedures<br>1.2 Determine types of currently deployed end-to-end service |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | delivery networks by accessing and using network information sources<br>1.3 Produce a brief on how end-to-end service delivery network elements relate to the larger network and their impact on the work |
| 2. Assess capacity and capability of a specific project | 2.1 Determine the nature, quantity, architecture and condition of existing end-to-end service delivery network elements and attributes that contribute to determining planning specifications<br>2.2 Assess capacity and capability limitations of an existing end-to-end service delivery network project by accessing network information sources and conducting site visits<br>2.3 Assess capacity and capability limitations of a building facility project that contribute to determining planning specifications |
| 3. Assess capacity and capability of product and service delivery | 3.1 Determine types of currently deployed products and services by accessing sales and marketing information databases<br>3.2 Produce a brief evaluating capability and technology of current product and services to meet demands and their relationship to the larger network<br>3.3 Evaluate emerging technologies that contribute to determining planning specifications for demands of future products and services |
| 4. Produce planning briefs | 4.1 Produce a brief on the planning specifications of an end-to-end service delivery network and a building facility project for the planning department to determine current and future network demands<br>4.2 Produce a brief on products and services planning requirements for sales and marketing to determine provisioning of future demands |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2, 2.3, 3.3 | • Analyses and evaluates complex written and visual text in specialised workplace documentation to determine key information and specific requirements |

# Assessment Requirements for ICTNPL408 Produce planning specifications for end-to-end service delivery

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- access relevant network information databases to determine the types of end-to-end services and products
- conduct site evaluation assessment accurately
- evaluate capacity and capability of end-to-end services to meet current and future demands
- assess limitations of current end-to-end services and produce specifications to meet future demands
- assess limitations of current building facility and services and produce specifications to meet future demands
- summarise and produce planning briefs to network, sales and marketing planning sections.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify emerging technologies, trends and products available overseas that will be in demand in the Australian market
- describe information required to prepare and review limits of:
  - broadband networks
  - data networks
  - facilities and environmental issues
  - fixed access transmission network
  - media and content

© Commonwealth of Australia, 2025 Future Skills Organisation

  - regional and metropolitan network
  - voice networks
  - wireless network
- outline the following aspects of network planning:
  - basic network design including routing and redundancy
  - levels of reliability performance standards applicable to specific equipment deployment needs
  - standards and regulations
- describe the distribution structure of networks including:
  - access
  - backbone
  - edge
- outline current equipment and product types to meet future service obligations.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- a network planning area with systems and deployment rules and standards
- end-to-end services and products databases
- relevant workplace procedures
- product and manufacturing specifications
- codes of practice and standards
- manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to assess the impact of deregulation, competition, economic conditions, regulations and legislation on enterprise-specific policies and procedures and its subsequent incorporation into the planning process.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate economic and political influences | 1.1 Research the impact of deregulation and competition in the telecommunications industry on planning priorities of competing service providers in Australia due to the different federal government policies |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.2 Assess the influence of local and international economic conditions on the growth of the industry that would impact on the planning justification for a new network<br><br>1.3 Evaluate and produce a report on the economic and political influences on public and commercial enterprises providing services in a competitive telecommunications market of fast changing technologies |
| 2. Evaluate impact of key regulations and legislation | 2.1 Access all legislation governing carriers in Australia to determine the rights of carriers and service providers in installing facilities under Commonwealth legislation<br><br>2.2 Use the Telecommunications Industry Regulatory Accounting Framework (RAF) to determine the method used by the Australian Competition and Consumer Commission (ACCC) in enforcing competitive provisions between service providers<br><br>2.3 Evaluate the impact on planning of services by the obligation placed by Universal Service Obligation (USO) on service providers to ensure services are reasonably accessible to all people in Australia on an equitable basis<br><br>2.4 Produce a summary report evaluating the impact of the legislation on the planning process of access networks and plan strategies to facilitate network planning |
| 3. Apply internal financial compliance | 3.1 Use an enterprise-specific investment management system (IMS) to create on the spot reports for performance measurement of an existing planning project against the business plan<br><br>3.2 Produce a report of planning work activities incorporating enterprise-specific policies and procedures underpinned by regulatory and compliance obligations |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.2-1.3, 2.1-2.4, 3.1, 3.2 | • Analyses and evaluates complex written and visual text in specialised workplace documentation to determine key information and specific requirements<br>• Evaluates complex text to determine legislative, regulatory and project requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- produce a comprehensive evaluation report on economic and political influences on the telecommunications industry in Australia
- produce a comprehensive evaluation report on the impact of key regulation and legislation on the telecommunications industry
- produce an accurate summary report evaluating the impact of the legislation on the planning process of access networks.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the impact of deregulation on the telecommunications industry
- outline the investment management system
- identify and describe the purpose and implementation of relevant telecommunications legislation
- identify and describe the impact of market forces on telecommunications
- outline procedures for developing plans for telecommunications systems
- outline the telecommunications industry, framework and networks.

# ICTNPL410 Plan the telecommunications access network for an estate

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to plan access networks delivering voice, data and video services to customers, and involves the collation and evaluation of data relating to network shortfalls and projected usage, leading to the development of solutions and ultimately network plans for an estate.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Gather data on network usage | 1.1 Determine the type of access network by accessing and using |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| for planning activity | network information sources<br>1.2 Collect planning data using network information sources to determine network trends<br>1.3 Evaluate new and emerging technologies to determine availability and compatibility with existing network equipment<br>1.4 Access relevant legislation and associated regulatory and operational codes |
| 2. Evaluate need for network growth | 2.1 Evaluate capacity of the existing network to absorb planned growth<br>2.2 Identify need and likely timing of necessary network increments<br>2.3 Assess new or alternate technologies to rectify network shortfall<br>2.4 Identify barriers relating to planned network extensions impacting planning the network realisation<br>2.5 Assess the impact of not meeting network shortfall needs and long term ramifications on the business |
| 3. Develop solution and network plan to address network shortfall | 3.1 Review overall planning parameters prior to commencement of the planning process to produce forecasts for specific network area and cost-benefit analysis<br>3.2 Establish the optimum solution to address network shortfall with justification for the proposal<br>3.3 Determine project details and ascertain preliminary costing and resource requirements<br>3.4 Determine availability of required technology or technology features within the specified timeframe<br>3.5 Produce a specific network plan with solution and recommendations for anticipated projects for approval according to enterprise procedures |

# Assessment Requirements for ICTNPL410 Plan the telecommunications access network for an estate

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- implement planning processes including associated monitoring and control mechanisms
- develop effective solutions to address access network shortfalls that satisfy customer and enterprise needs
- develop network plans with consideration of appropriate technological developments and product implementation
- produce accurate forecasts for a specific network including cost-benefit analysis.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and summarise legislation affecting the telecommunications industry
- outline the features of an access network and the influence on:
  - cost estimates and operating budgets according to enterprise policy
  - telecommunications industry in Australia
- describe the theory of project management and associated databases and project management software programs
- describe the process and features of planning for an access network on an estate
- determine the economic and political influences on public and commercial enterprises
- describe the financial authorities and delegations associated with an access network plan
- define the influence of the local and international economic conditions on the telecommunications industry
- describe the typical challenges and limits facing technology today and the consideration of future needs

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the process of collating and writing project briefs, reports and project charters.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- a network planning area systems and deployment
- rules and standards
- relevant databases
- licensing requirements and other site related procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL411 Apply compliance requirements to telecommunications work

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to satisfy the regulatory environment in the planning, design and installation of telecommunications equipment and infrastructure.

It applies to individuals with the organisational, economic and regulation skills to enable them to plan and design the access network infrastructure of private and/or carrier service providers. These individuals may be responsible for small projects or parts of larger projects and for the operation and engineering of the enterprise and telecommunications network in general.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate design for activities subject to standards, regulations, codes of practice and | 1.1 Research the range of activities subject to regulations, standards, legislation and codes of practice for their design<br>1.2 Examine organisational procedures developed to deal with these requirements. |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| legislation | 1.3 Examine construction requirements for each activity and determine any applicable regulations, codes or practices,<br>1.4 Access knowledge bases, authorities and records for areas and activities covered by these requirements,<br>1.5 Examine public records for planning restrictions that may impact the design and construction of a telecommunications network |
| 2. Evaluate design for activities that require approval to enter land or premises | 2.1 Determine the rights of entry and notifications necessary to enter property for the purpose of designing telecommunications facilities<br>2.2 Examine what courses of action are available in case of dispute<br>2.3 Access legislation governing carriers and service providers in Australia to determine the rights of carriers and service providers in installing facilities under Commonwealth legislation<br>2.4 Determine activities that must be undertaken during survey and construction to meet the various requirements |
| 3. Examine processes necessary to facilitate completion of a design to meet the relevant regulatory environments | 3.1 Discuss with governing authorities, consultants and other industry experts the steps necessary to meet the legislative requirements of a designer and constructor of the network infrastructure design<br>3.2 Initiate studies and information gathering activities to develop a design which is compliant to the requirements<br>3.3 Produce a report of work activities incorporating enterprise-specific policies and procedures underpinned by regulatory and compliance obligations<br>3.4 Compare the newly developed solutions to meet regulatory environments with financial plans to meet budgetary requirements for the design project |
| 4. Complete legally binding agreements and document all procedures | 4.1 Gather all reports and studies to support the design and construction activities and incorporate with final design<br>4.2 Diarise all activities for evidence of compliance with requirements in case of future actions<br>4.3 Ask relevant parties to sign legally binding documentation to fulfil obligations to access land or premises as required<br>4.4 Examine what alternative courses of action are available in case of dispute prior to or after an agreement is signed by all parties |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1-1.5, 2.1, 2.3, 3.2, 4.1, 4.4 | • Selects, synthesises and critically evaluates complex and often technically complex texts, and integrates prior knowledge to improve understanding |
| Writing | 1.1, 3.2, 3.3, 4.1, 4.2 | • Integrates information and ideas from a range of sources, and documents these in a form appropriate to audience and context |
| Oral Communication | 3.1, 3.2, 4.3 | • Articulates clearly using specific and relevant language suitable to audience to convey requirements and listening and questioning techniques to confirm understanding |
| Numeracy | 1.1, 1.3, 1.4, 3.1, 3.2, 3.4, 4.1, 4.2 | • Collects, organises, interprets and communicates mathematical concepts embedded in data and information |
| Navigate the world of work | 1.1-1.5, 2.1, 2.3, | • Recognises and responds appropriately within a complex regulatory environment and identifies issues that may have legal implications<br>• Independently accesses a range of resources to acquire knowledge |
| Interact with others | 2.2, 3.1, 4.3, 4.4 | • Actively seeks a range of perspectives as part of work role<br>• Anticipates possible sources of conflict, develops conflict resolution strategies and reflects on effectiveness of dispute resolution processes and actions. |
| Get the work done | 1.1-1.5, 2.1-2.4, 3.1-3.4, 4.1-4.4 | • Researches, plans, and manages complex tasks taking into account current and new technology, facilities and features when developing options<br>• Analyses the impact of financial, regulatory, policy, procedures and other factors in planning, and utilises sophisticated problem-solving skills to assess conditions |

# Assessment Requirements for ICTNPL411 Apply compliance requirements to telecommunications work

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- produce a detailed report from a design, identifying acts and codes of practice for each aspect of a project
- produce a report detailing common construction practices to mitigate the environmental impact of the project
- produce a summary report detailing a designer's and constructor's obligations regarding land access under the telecommunications act and code of practice.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise regulations, standards, legislation and codes of practice relevant to the telecommunications industry
- describe the impact of the following on telecommunications systems and installations:
  - Environmental Protection Authority and legislation
  - waterways and their responsibilities
  - national, state and council regulations
  - National Parks and Wildlife acts
  - ports authority
  - rail authority and their requirements
  - power distribution authority and requirements
  - roads authority
  - footpath allocations

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe technical compliance requirements for the following:
  - separations and depth of cover
  - earth potential rise (EPR)
  - low frequency induction (LFI)
- describe the framework for the telecommunications industry including its various networks

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- relevant legislation
- planning processes and telecommunications industry Regulatory Accounting Framework (RAF)
- planning tools
- enterprise-specific investment management system (IMS)
- relevant databases
- licensing requirements
- relevant procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL501 Develop planning strategies for core network design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to develop specifications for core networks to be used by network designers.

It applies to technical officers or engineers from private and public organisations working in a network planning team, who combine technical skills with broader organisational skills to plan the various core network technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate core network requirements and infrastructure capability | 1.1 Estimate likely growth in core network use by analysing forecasting market intelligence data on customer demand<br>1.2 Analyse current traffic and growth trends in edge and backbone networks to forecast traffic growth and capacity demand for the core network<br>1.3 Compare available capacity, capability and parameters of current core |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | infrastructure deployment against researched demand data to identify infrastructure shortfalls<br>1.4 Quantify network requirements for any upgrades or network augmentation<br>1.5 Determine relevant standards and regulatory requirements to be considered in core network planning<br>1.6 Formulate justification to proceed by analysing business requirements and benefits to the business |
| 2. Prepare strategic plan and scoping document | 2.1 Determine appropriate technologies and network elements for core network deployment, including new or alternative solutions to meet business requirements<br>2.2 Select commercially viable technology compatible with the existing network to deploy with existing and future network<br>2.3 Prepare a planning document, and supporting documentation with recommendations, that complies with deployment standards and regulatory requirements<br>2.4 Provide estimated costs and schedule for a planning solution |
| 3. Produce project brief | 3.1 Evaluate and summarise project scope into required briefing format with supporting documentation, that complies with core network deployment rules<br>3.2 Plan project delivery to suit business requirements and practical limitations<br>3.3 Produce core networks specifications with approvals and present to the design section to produce detailed design specifications |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1-1.3, 1.5, 1.6, 2.1-2.3 | • Analyses and evaluates complex written and visual text in specialised workplace documentation to determine key information and specific requirements<br>• Evaluates complex text to determine legislative, regulatory and project requirements |
| Writing | 1.1-1.3, 1.6, 2.3, 2.4, 3.1-3.3 | • Develops complex material for a specific |

# Assessment Requirements for ICTNPL501 Develop planning strategies for core network design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- use data to accurately interpret growth patterns and develop options for core network designs which satisfy customer and enterprise financial goals
- develop a network plan which is current with emerging technologies
- produce specifications and costing
- document a project brief with accompanying project implementation documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the capability and limitations of the various core network technologies for present and future needs
- outline the following specific features of core network design:
  - elements and architecture of core networks
  - limits of a core network
  - typical core network technologies
- identify and describe elements and architectures of the various core technologies
- explain key technologies that make up the core network
- outline the following general features of core network design:
  - distribution structure of networks including backbone, core and edge
  - levels of reliability performance standards applicable to specific equipment deployment needs
  - network design including routing and redundancy

© Commonwealth of Australia, 2025 Future Skills Organisation

- standards and regulations.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- computer aided design (CAD)
- computer networks
- data for network planning
- network equipment deployment plans
- planning models
- relevant standards and regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL502 Develop planning strategies for access network design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to develop specifications for access networks to be used by network designers, and involves gathering information on anticipated demand and business requirements for the access network to determine design criteria to meet current and future needs.

It applies to individuals with a high level of specialist technical skills and knowledge in telecommunications and IT networks using internet protocol (IP) systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate access network requirements and infrastructure capability | 1.1 Estimate likely growth in access network use by analysing forecasting market intelligence data on customer demand<br>1.2 Compare available capacity and capability of current access infrastructure deployment against researched demand data to identify infrastructure and product shortfalls |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |

# Assessment Requirements for ICTNPL502 Develop planning strategies for access network design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- interpret growth patterns using available data
- develop options for access network design which satisfy customer and enterprise financial goals
- develop a clearly documented network plan, within specifications and including merging technological development and product implementation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain capability and limitations of the various access network technologies
- identify current equipment to meet future service obligations
- outline the role of the following specific features of network planning:
  - broadband networks
  - data networks
  - elements and architecture of the various access networks and their technologies
  - facilities and environmental issues
  - limits of a fixed access transmission network
  - media and content
  - regional and metropolitan network
  - typical access network technologies
  - voice networks
  - wireless network

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain distribution structure of networks, including backbone, access and edge
- identify key technologies that make up the access network
- outline the following general features of network planning:
  - levels of reliability performance standards, applicable to specific equipment deployment needs
  - network design including routing and redundancy
  - standards and regulations
- describe typical problems and challenges with the capability and limitations of the various access networks.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- computer aided design (CAD)
- computer networks
- data for network planning

# ICTNPL503 Apply service measures and demand forecasting to products and services planning

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to analyse customer bases and market demands, and use forecasting tools to predict customer demands for new products and services.

It applies to technical staff moving into planning and management positions with a high level of specialist technical skills and knowledge in telecommunications and IT networks using internet protocol (IP) systems for small projects, or parts of larger projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse customer base | 1.1 Establish reasons for forecasting in network planning, and factors that influence forecasting<br>1.2 Collate data from appropriate organisations involved in planning initiatives for planning delivery of products and services |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Establish market segmentation to improve marketing effectiveness on new technology adoption<br>1.4 Analyse market segments of customers, based on geography and demographics, for a new service or product and predict adoption rates |
| 2. Evaluate current utilisation | 2.1 Evaluate current service usage of the network and determine current traffic load<br>2.2 Evaluate current network occupancy and determine any spare capacity |
| 3. Predict future customer base | 3.1 Evaluate expected customer growth and segment mix in a defined geographical area, and assess impact on network planning<br>3.2 Use a forecasting model and predict customer demand for new technology products and services |
| 4. Use property market and development data to produce plans | 4.1 Develop strategic plans on infrastructure planning using planning authority data for development and redevelopments<br>4.2 Produce a plan for future development projects using property market data |
| 5. Predict future service requirements | 5.1 Create a customer service plan to maintain valuable customer relationships and strengthen business<br>5.2 Measure customer service results using key factors that provide an indicator for customer service quality<br>5.3 Use forecasting tools to predict future service demand and requirements for emerging technology services of Next Generation Networks (NGN) |
| 6. Produce network forecast and documentation | 6.1 Produce geographically-based network growth forecasts utilising change in customer base, changes to property market and future service predications<br>6.2 Produce and present documentation |

# Foundation Skills

# Assessment Requirements for ICTNPL503 Apply service measures and demand forecasting to products and services planning

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- interpret accurately the growth patterns and development options which satisfy customer and enterprise financial goals
- predict future customer base and service requirements
- produce comprehensive network growth forecasts, utilising changes to customer base, property market and future service predictions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain different levels of reliability performance standards applicable to specific equipment deployment needs
- identify and explain emerging technologies that affect this industry
- identify factors that can affect forecasting demand
- identify and apply forecasting models and forecasting tools
- explain market segmentations
- explain network designs and new products and services
- explain next generation network (NGN) services
- identify planning authorities
- describe planning initiatives
- describe the process to prepare and review customer bases
- identify different service measures.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- data from organisations involved in planning initiatives
- a range of software currently used in industry
- relevant regulations
- specifications that impact service measures and forecasting activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL504 Develop planning strategies for building environment design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to develop planning strategies for the design phase to meet present and future demands, and involves gathering information on network capability, anticipated network deployment demand and scoping design requirements to produce building planning specifications.

It applies to individuals with a high level of specialist technical skills and knowledge in telecommunications and IT networks using internet protocol (IP) systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate building environment requirements | 1.1 Utilise network equipment deployment plans to convert network equipment specifications into building requirements data<br>1.2 Determine planned and forecast network equipment deployment locations and quantities to prioritise tasks<br>1.3 Formulate justification to proceed by analysing business |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | requirements and benefits to the business<br>1.4 Analyse current building capacities or capabilities against planned deployment data to determine building environment shortfalls or additional needs<br>1.5 Determine minimum needs required to address identified building services shortfalls, upgrades or changes<br>1.6 Identify relevant standards, business and regulatory requirements that are essential for building plan compliance |
| 2. Scope building design requirements | 2.1 Quantify building requirements from known needs to determine if any standard deliverables can be used<br>2.2 Assess if requirements can be met using new or alternative solutions<br>2.3 Provide estimated costs and schedule to determine a planning solution<br>2.4 Prepare a scoping document and supporting documentation with recommendations that complies with deployment standards and regulatory requirements |
| 3. Produce project brief | 3.1 Prepare a project scope in required briefing format to present to the design section<br>3.2 Plan project delivery to meet any business timing and funding constraints<br>3.3 Produce building planning specifications with approvals and present to the building design section to be used for detailed design or construction specifications |

# Foundation Skills

# Assessment Requirements for ICTNPL504 Develop planning strategies for building environment design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- assess building environment requirements to provide network capability for current and forecast demand including consideration of merging technological development and product implementation
- prepare and present a detailed scoping document with solutions, costing and project scheduling recommendations
- meet forecast network capability needs and regulatory requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and discuss capability and limitations of the various network technologies to meet present and future needs
- describe different costing and funding models
- outline the process to review limits of a building's facilities and services
- identify network equipment requirements and use to derive building's specifications
- identify network building design
- identify and apply relevant regulations and standards
- discuss typical problems and challenges that describe the limitations of the various building projects work
- identify ways to remain abreast of current building requirements to meet future service obligations.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- computer aided design (CAD)
- computer networks
- data for network planning
- network equipment deployment plans
- planning models
- relevant standards and regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNPL601 Plan the development and growth of the telecommunications network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to analyse and evaluate forecast data to plan development and growth of the telecommunications network.

It applies to individuals with a high level of specialist technical skills and knowledge in optical telecommunications and IT networks using internet protocol (IP) systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Gather data related to existing and projected network usage | 1.1 Access market intelligence for information on customer demand on the network and likely growth in network use<br>1.2 Obtain demand data to plan for potential network traffic quantity and flow<br>1.3 Access information relating to new and emerging technologies, facilities and features, and their specific applications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Access relevant legislation and associated operational codes and analyse impact on planning processes |
| 2. Assess need for network growth | 2.1 Evaluate capacity of existing network to absorb planned growth using network capacity usage and traffic measurements<br>2.2 Plan likely timing of necessary network increments to minimise impact on the network<br>2.3 Assess use of new or alternate technologies to meet forecast growth |
| 3. Develop network plans | 3.1 Assess overall planning parameters including approved business plan prior to commencement of planning process<br>3.2 Analyse gathered information and produce a project plan with specifications to meet network growth<br>3.3 Conduct appropriate investment study including cost benefit analysis, where required, with consideration of barriers that may affect project plan<br>3.4 Produce a network plan with detailed specifications and seek approval according to enterprise procedures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1-1.4, 2.3, 3.1, 3.3 | • Analyses and evaluates complex written and visual text in specialised workplace documentation to determine key information and specific requirements<br>• Evaluates complex text to determine legislative, regulatory and project requirements, and their potential impact on the project |
| Writing | 3.1, 3.2, 3.4 | • Develops complex material for a specific audience using clear and detailed language and visuals while employing expected forms and conventions<br>• Prepares reports which incorporate evaluation of information and specialised and cohesive language |
| Oral | 1.1, 1.3 | • Clearly articulates requirements using language appropriate to audience and environment, and |

# Assessment Requirements for ICTNPL601 Plan the development and growth of the telecommunications network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- gather comprehensive data related to existing and projected network usage
- accurately assess need for network growth
- develop detailed network plans.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the following general processes of network growth:
  - cost estimates and operating budgets according to enterprise policy
  - project management theory, associated databases and project management software programs
  - telecommunications industry in Australia
- outline economic and political influences on public and commercial enterprises
- outline economic and political influences on public and commercial enterprises
- identify relevant financial authorities and delegations
- outline the influence of local and international economic conditions on the telecommunications industry
- describe typical challenges and limits facing technology today and consideration of future needs
- identify relevant legislation
- explain the process for collating and writing project briefs, reports and project charters.

# ICTNPL602 Forecast service demand

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to develop forecasts for demand for telecommunications services and includes assessing activities that may change service demand and capacity requirements.

It applies to individuals with a high level of specialist technical skills and knowledge in optical telecommunications and IT networks using internet protocol (IP) systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network Planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Gather forecast intelligence | 1.1. Access market intelligence for information on customer demand on the network and likely growth in network use<br>1.2 Obtain demand data to assess potential network traffic quantity and flow<br>1.3 Access information relating to new and emerging technologies, facilities and features, and their specific applications to evaluate market trends in new technology implementation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Obtain data from network analysis to determine the state of the existing network using customer complaint reports and network fault incidence rate |
| 2. Produce forecast service demand information | 2.1 Analyse and process all collated data and prepare to the format required for forecasting activity<br>2.2 Select and configure a suitable software forecasting tool to process collated data<br>2.3 Evaluate collated data to generate forecasts of service demand using information in reference to new developments<br>2.4 Compile forecast figures and report according to enterprise policy |
| 3. Review forecasts and update systems records | 3.1 Review forecasts according to enterprise policy<br>3.2 Ensure forecasts consider new developments in the area and technological changes where appropriate<br>3.3 Maintain updated systems records with information received from each installation amendment activity |

# Foundation Skills

# Assessment Requirements for ICTNPL602 Forecast service demand

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- collect accurate data vital to development of traffic and service variation
- generate relevant forecasts in relation to traffic and service variation using appropriate forecasting techniques
- accurately review forecasts relevant to specific planning periods.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe common telecommunications measurement quantities
- identify network and transmission equipment and describe their capabilities
- outline network topologies and common access and transmission hierarchies
- explain the configuration and use of software forecasting tools
- outline different forecasting techniques and sources of data to aid forecasting
- describe sources of market intelligence
- identify and describe new and emerging technologies
- outline typical customer applications and usage levels.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

# ICTNPL603 Undertake network performance analysis

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to undertake and manage monitoring, analysis and improvement of network performance, and involves analysing problems and organising repairs as well as coordinating software and hardware upgrades.

It applies to individuals with a high level of specialist technical skills and knowledge in optical telecommunications and IT networks using internet protocol (IP) systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Network planning

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse network performance to determine service levels | 1.1 Establish network type and quality of service (QoS) standard levels required, in conjunction with equipment suppliers and customer opinion, to determine the benchmark for network performance standards<br>1.2 Analyse trend analysis data and statistical data to assess level and type of network degradation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Conduct performance tests according to established performance checklist to systematically evaluate QoS levels using appropriate performance analysis tools<br>1.4 Analyse test results and determine QoS levels and network problems<br>1.5 Establish restoration times in the event of service breakdown<br>1.6 Determine, organise and allocate resources necessary to monitor service levels |
| 2. Monitor integrity of the network | 2.1 Monitor alarm panels and verify message retrieval system on an ongoing basis to maintain network integrity<br>2.2 Undertake real time analysis of data from all sources to determine network health |
| 3. Manage delivery of quality service | 3.1 Conduct monitoring activities to maintain QoS levels and network integrity<br>3.2 Analyse trouble reports and performance data including customer feedback on a regular basis as an indicator of network performance<br>3.3 Analyse drive test data as an input to performance and optimise the network to improve network level of service |
| 4. Analyse problems and organise repair | 4.1 Analyse performance results regularly and initiate investigations when performance levels are below specified standards and recommend network changes<br>4.2 Analyse causes of problems by testing specific network components<br>4.3 Isolate problems where possible and escalate repair according to enterprise policy<br>4.4 Undertake evaluation testing after repair to ensure the problem has been rectified |
| 5. Coordinate upgrade of software and hardware | 5.1 Develop strategies to affect changes according to recommendations and produce a plan to coordinate activities<br>5.2 Produce a cost estimate of proposed change and submit a cost-benefit study for approval<br>5.3 Confirm shortcomings in hardware and software and negotiate with planners for network modifications<br>5.4 Evaluate modifications to ensure network compatibility and use of appropriate protocols providing QoS in the network<br>5.5 Produce a plan for software and hardware changes to be initiated with minimum network downtime and customer impact<br>5.6 Undertake tests following upgrade to ensure the level of performance planned as a result of the upgrade has been achieved<br>5.7 Produce documentation including configuration details and tests results and submit to network planner |

# Assessment Requirements for ICTNPL603 Undertake network performance analysis

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- interpret current network performance data accurately
- monitor integrity of the network
- manage delivery of quality service efficiently
- conduct accurate performance tests using appropriate performance analysis tools
- analyse problems and organise repair applying escalation procedures, if required, within service assurance guidelines
- coordinate upgrade of software and hardware efficiently.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the process for cost estimation
- outline the following aspects of customer interaction:
  - customer policies
  - expectancies
  - service level agreements
- explain the following features of the network:
  - alarms
  - compatibility and interoperability
  - operations
  - performance analysis methodologies
  - performance analysis tools

© Commonwealth of Australia, 2025 Future Skills Organisation

  - performance tests
  - planning and design principles
- explain protocols providing QoS
- describe QoS standard levels
- describe software and hardware upgrades
- outline the following technologies and architectures:
  - switching network
  - transmission network
- describe technologies for the customer network.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- a site where network performance analysis may be conducted
- data from organisations involved in planning initiatives
- a range of current software
- relevant regulations
- specifications that impact service measures
- forecasting activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNWK301 Provide network systems administration

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to technically manage the elements of a network, including contributing to a disaster recovery plan.

It applies to individuals working as frontline technical support personnel responsible for administering a network.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Provide client access and security | 1.1 Provide logons, passwords and applications file access to users, and prepare the documentation in line with organisational requirements<br>1.2 Examine the records of user accounts, to determine access privileges and usage<br>1.3 Take the necessary action to ensure the maintenance of system integrity and security |
| 2. Provide the input into | 2.1 Provide input into the organisation's disaster recovery plan |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| and disseminate the disaster recovery plan | 2.2 Disseminate the disaster recovery plan to users, as required |
| 3. Monitor the network performance | 3.1 Perform the diagnostic tests associated with administering the network or system<br>3.2 Analyse and respond to diagnostic information<br>3.3 Monitor software usage, including any inappropriate or illegal use<br>3.4 Delete any illegal software from the system<br>3.5 Monitor the hardware response time, and other performance indicators<br>3.6 Determine and action, methods for improving the network and systems efficiency, according to the organisational guidelines |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 3.6 | • Recognises and interprets textual information from organisational guidelines to establish the job requirements |
| Writing | 1.1 | • Uses specific and relevant language to complete workplace documentation |
| Oral Communication | 1.1, 2.1 | • Articulates information clearly, using specific and relevant language suitable to the audience, to convey requirements, and listening and questioning techniques, to confirm understanding |
| Numeracy | 3.2 | • Interprets numerical data to monitor network operations |
| Interact with others | 2.2 | • Selects the appropriate form, channel and mode of communication for a specific purpose, relevant to own role |
| Get the work done | 1.3, 3.1, 3.2, 3.3, 3.6 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | considering how to link with the work of others<br>• Understands the purposes, specific functions and key features of common digital systems, and tools, and operates them effectively to complete routine tasks<br>• Responds to highly obvious routine problems, using step by step instruction and procedures, or by a trial and error process, for non-critical situations |

# Assessment Requirements for ICTNWK301 Provide network systems administration

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- sustain the operation of the network through the maintenance of network integrity, and by performing diagnostic tests
- contribute to the formulation of a disaster recovery plan, and provide the client with an optimised network that complies with the organisational guidelines
- implement network and systems efficiency, according to organisational guidelines
- provide the appropriate access to the network for users
- maintain, limit or enhance user access, according to authorised requests.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the network's operating system
- outline the different approaches to backing-up, and restoring, computer data
- describe the key elements contained in a disaster recovery policy
- describe the features of network file and folder permissions
- outline the vendor service-level agreement
- summarise operating systems supported by the organisation, their functions and basic features
- outline the organisation's access and security procedures
- identify and describe the organisational and technical systems
- describe the organisational procedures for protection against, and elimination, of computer viruses
- describe the policies and procedures for deleting, restoring and archiving files

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the procedures for creating logons
- outline the security, and network, guidelines and procedures
- state the responsibilities for software copyright.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a live network
- systems administration tools currently used in the industry
- the organisational policy and procedures

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK302 Determine and action network problems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to document network related problems, determine solutions, or escalate problems to a new support level.

It applies to individuals, working as frontline technical support personnel, who maintain network continuity by isolating and rectifying network problems as they arise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine client requirements and identify if problem exists | 1.1 Log calls from help-desk support staff<br>1.2 Determine and document problem based on client requirements |
| 2. Determine whether problem is covered by policy | 2.1 Verify the scope and coverage of maintenance and technical support agreements relative to the problem and client requirements<br>2.2 Provide assistance according to organisational guidelines |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Carry out maintenance support on identified problem | 3.1 Conduct diagnostic tests around identified problem<br>3.2 Complete maintenance according to organisational guidelines<br>3.3 Obtain new components as part of the resolution, where necessary<br>3.4 Store or dispose of components according to organisational and environmental guidelines |
| 4. Prepare maintenance report and confirm solution | 4.1 Prepare maintenance report according to organisational guidelines and support agreements<br>4.2 Refer unresolved maintenance requirements to appropriate higher level service area<br>4.3 Follow up with the client to determine solution success and close the report |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 2.2, 3.2, 3.4, 4.1 | • Recognises and interprets textual information from organisational guidelines and support agreements to establish the job requirements |
| Writing | 1.1, 1.2, 4.1 | • Uses industry-specific language to document problems and prepare maintenance reports in line with organisational guidelines and support agreements |
| Oral Communication | 4.2, 4.3 | • Provides clear explanations using language suitable to audience to discuss unresolved challenges<br>• Uses listening and questioning techniques to confirm understanding |
| Navigate the world of work | 2.2, 3.4 | • Complies with explicit organisational policies and procedures |
| Get the work done | 1.2, 2.1, 2.2, 3.1-3.4, 4.3 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and |

# Assessment Requirements for ICTNWK302 Determine and action network problems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- document network related problems and determine the required resources
- solve client problems or escalate the problem according to organisational guidelines
- maintain the network with minimal disruption to clients.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain environmentally sound recycling and disposal procedures
- identify and summarise common networking procedures for:
  - call logging
  - contracting and maintenance requirements
  - problem escalation procedures
- outline inventory processes
- describe technical features and functions of network hardware and software systems
- describe common network problems relating to organisational information
- describe agreements used for technical support.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a network

© Commonwealth of Australia, 2025 Future Skills Organisation

- hardware
- diagnostic tools, components and software
- records and reports
- organisational guidelines and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK303 Configure and administer a network operating system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit defines the skills and knowledge required to create the network configuration required by a client and to set up and use administrative tools to manage the network.

It applies to individuals working as frontline technical support personnel who are required to maintain network continuity through changing requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Assess network features | 1.1 Determine organisational policies and administration arrangements used to administer the network<br>1.2 Determine the type of network operating system (NOS) and interfaces used by the existing network and potential compatibility issues caused by integration of other networks<br>1.3 Identify the risks associated with administration of a network to minimise the loss of data or service during |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | operations<br>1.4 Determine network administration tools that can be used with the NOS to manage network performance and enforce organisational policies |
| 2. Administer and support the system using administration interfaces | 2.1 Use interfaces to format hard drives, set up security restrictions and establish user log-in information to administer a basic network<br>2.2 Use administration tools to develop a map of system interaction to determine the data required by particular users and how often the data is accessed<br>2.3 Examine existing applications and software, and plan required upgrades or reconfigurations to new system or applications<br>2.4 Test reconfiguration for successful interface with existing system to ensure compatibility |
| 3. Set up and manage the network file system | 3.1 Create a required file and folder structure using appropriate administration and system tools<br>3.2 Set the security, access and sharing of file system to meet user requirements<br>3.3 Identify and implement the virus protection requirements for the network in line with organisational procedures<br>3.4 Test and document the file system to ensure that appropriate access is available to the user groups according to organisational standards |
| 4. Administer user services and user accounts | 4.1 Determine the user services required, and implement using the appropriate administration and system tools<br>4.2 Create users and groups as required to facilitate user security and network access according to user authorisation<br>4.3 Verify successful access by users to authorised network data and resources, and record outcomes<br>4.4 Set or modify user settings to ensure compliance with security and access policies<br>4.5 Review procedures and take action to ensure that users who are no longer part of the organisation have their accounts disabled, deleted or modified |
| 5. Provide and support backup security | 5.1 Scan and clean the network of viruses before performing backup of the network |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 5.2 Determine security risks to which data is exposed and provide appropriate prevention methods and recovery processes<br>5.3 Report identified security risks to appropriate person<br>5.4 Implement systems to provide backup and service restoration capability in the event of a disaster, according to organisational policies<br>5.5 Document and disseminate the disaster recovery procedures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 3.2-3.4, 4.4, 4.5, 5.4 | • Recognises and interprets information from organisational policies and procedures to establish the job requirements |
| Writing | 3.4, 4.3, 5.5 | • Uses specific and relevant language to document new file systems, user access and disaster recovery procedures |
| Oral Communication | 5.3 | • Articulates information clearly using specific and relevant language suitable to audience to convey requirements, and uses listening and questioning techniques to confirm understanding |
| Navigate the world of work | 1.1, 3.3, 5.4 | • Complies with explicit organisational policies and procedures |
| Interact with others | 5.3, 5.5 | • Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role |
| Get the work done | 1.1-1.4, 2.1-2.4, 3.1-3.4, 4.2-4.5, 5.1, 5.2, 5.4 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and considering how to link with the work of others<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTNWK303 Configure and administer a network operating system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use network administrative tools to carry out system administration tasks
- manage the network file system
- create the network configuration required by the client
- provide user services and user accounts
- provide backup and service restoration capability.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe antivirus software, its operation, installation and update procedures
- summarise current industry standard network operating system (NOS)
- outline the facilities available in the operating environment
- describe the features and capabilities of networking technologies
- explain the implementation of network security in a local area network (LAN) including:
  - file and folder permissions
  - users and group settings
- provide a summary of monitoring aspects of network performance or traffic including:
  - system administration tools
  - third-party tools.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- user network requirements
- antivirus software
- network administration tools
- a live network with a representative range of networked environments and operating systems
- a server
- technical records, organisational policies, access policy and documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK304 Administer network peripherals

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage an environment of networked peripheral devices, in order to provide services to client users.

It applies to individuals working as frontline technical support personnel responsible for connecting, maintaining and administering peripheral devices attached to networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Install peripherals to a network | 1.1 Plan the location of peripherals to provide appropriate services to users and to take work health and safety (WHS) standards into consideration<br>1.2 Connect peripherals to network, using vendor approved method and technology<br>1.3 Connect peripherals to computers in the network using parallel, serial or other direct connection methods<br>1.4 Add peripheral accessories or upgrades to printer, such as |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | memory or high-volume paper trays<br>1.5 Test peripherals for correct operation |
| 2. Configure peripheral services to manage peripherals | 2.1 Install software required to manage local and network connected peripherals<br>2.2 Use meaningful names for peripherals and control queues<br>2.3 Configure security and access to allow appropriate users to make use of peripherals<br>2.4 Configure workstation for peripherals to allow applications to work with peripherals |
| 3. Administer and support peripheral services | 3.1 Assign priority to control queues<br>3.2 Use peripheral management software supplied as part of the network operating system (NOS) or by third parties<br>3.3 Create templates for use on the network<br>3.4 Configure settings on the network to create maintenance schedules, usage logs, and cost centre usage statistics<br>3.5 Demonstrate to the user the methods for using peripheral services from their application or workstation |
| 4. Maintain peripherals and fix common problems | 4.1 Establish and follow a regular maintenance schedule as recommended by peripheral manufacturer<br>4.2 Replace consumables and components when required<br>4.3 Fix peripheral mishaps and malfunctions<br>4.4 Monitor peripheral usage and traffic and recommend additional peripherals if needed<br>4.5 Determine failures of peripheral services or devices and rectify as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 4.1 | • Recognises and interprets textual information from manufacturers guidelines to establish and follow a |

# Assessment Requirements for ICTNWK304 Administer network peripherals

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and install peripherals
- connect and test peripherals to network
- manage the use of peripheral services with workstations
- maintain networked peripherals according to a maintenance schedule
- rectify faulty peripheral services or devices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe common network peripherals and their configuration
- identify and summarise current industry standards for network peripherals
- outline the general construction and operation of peripheral devices to facilitate troubleshooting.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry and include access to:

- a range of peripherals
- network administration tools
- a live network with a representative range of networked client server environments and operating systems

© Commonwealth of Australia, 2025 Future Skills Organisation

- technical records, organisational policies and documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK305 Install and manage network protocols

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install and manage network protocols in a networking environment.

It applies to individuals with competent information and communications technology (ICT) skills, working as network administrators who are required to ensure that appropriate protocols have been installed in networks to allow user functionality and maintenance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Install and manage network protocols | 1.1 Select, test and validate appropriate network protocol services<br>1.2 Design a network addressing system, with subnet and host IDs, including appropriate devices<br>1.3 Configure hosts and workstations to use IP addresses either manually or through automatic allocation of addresses, such as found with dynamic host configuration protocol (DHCP) |
| 2. Identify network | 2.1 Review a range of well-known network protocol applications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| protocol applications | 2.2 Evaluate client user requirement and recommend network protocol services<br>2.3 Apply internet protocol (IP) addressing scheme according to approved policy and procedures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.2, 2.3 | • Recognises and interprets textual information, including technical manuals, to establish the job requirements |
| Writing | 2.2 | • Uses specific and relevant language to document new file systems, user access and disaster recovery procedures |
| Oral Communications | 2.2 | • Articulates clearly using specific and relevant language suitable to audience to convey requirements<br>• Uses listening and questioning techniques to confirm understanding |
| Navigate the world of work | 2.3 | • Complies with explicit organisational policies and procedures<br>• Ensures knowledge of legislative requirements and products is kept up to date |
| Get the work done | 1.1-1.3, 2.1 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and considering how to link with the work of others<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Initiates standard procedures when developing and refining configuration protocols |

# Assessment Requirements for ICTNWK305 Install and manage network protocols

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- configure, test and validate network protocols in order to facilitate interconnectivity
- install and manage network protocols in a network, and troubleshoot problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business domain, including client organisation structure and business functionality
- list current communications technologies and their associated protocols
- outline current industry accepted hardware and software products, and general features and capabilities
- summarise network protocols currently in use in the organisation and industry, including:
  - transmission control protocol
  - internet protocol (TCP/IP)
  - OSI models
- clarify the vendor product range and development directions
- describe how network protocols transcend organisational size and network complexity.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a live network
- application software and operating system
- appropriate learning and assessment support when required
- networked computers
- organisational guidelines
- technical documentation and installation manuals
- vendor software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK306 Evaluate characteristics of cloud computing solutions and services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to recognise cloud computing characteristics in order to evaluate them. It involves a basic review and analysis of cloud computing delivery, and deployment models, and an evaluation of the benefits and challenges of implementing cloud computing solutions and services.

This unit applies to those engaged in the basic review of a cloud computing solution for an enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to review cloud technology solutions and services | 1.1 Identify the common terminology, characteristics, major industry technology standards and concepts of cloud computing solutions and services<br>1.2 Identify the major organisational roles affected by cloud computing solutions and services<br>1.3 Identify the key business requirements most suitable for |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | transferring to cloud computing solutions and services |
| 2. Identify the differences between cloud delivery models | 2.1 Identify the characteristics associated with different cloud delivery models<br>2.2 Identify any other emerging cloud delivery models<br>2.3 Evaluate the advantages, and disadvantages, of combining different cloud delivery models |
| 3. Review the performance of different types of cloud deployment models | 3.1 Identify the characteristics associated with different cloud deployment models<br>3.2 Identify any other emerging cloud deployment models<br>3.3 Evaluate the advantages and disadvantages, of combining different deployment models |
| 4. Evaluate the benefits and challenges of using cloud computing solutions and services | 4.1 Identify the possible benefits of adopting cloud solutions and services<br>4.2 Identify the possible challenges of adopting cloud solutions and services<br>4.3 Review and document, the impact of implementing a cloud delivery model<br>4.4 Provide feedback to the appropriate personnel |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1-2.2, 3.1-3.3, 4.1-4.3 | • Analyse and consolidates information, and data, from a range of sources against the defined criteria and requirements, and checks for accuracy and completeness |
| Writing | 4.3, 4.4 | • Accurately records information and prepares correspondence and documentation, using clear language and organisational formats, and protocols |
| Oral Communications | 4.4 | • Selects and uses the appropriate strategies to establish and maintain spoken communication, in familiar, and some unfamiliar, contexts |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Derives meaning from a range of oral texts in familiar, and some unfamiliar, contexts |
| Get the work done | All | • Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities<br>• Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates the effectiveness of the outcome<br>• Identifies ideas for other applications and considers them in current contexts |

# Assessment Requirements for ICTNWK306 Evaluate characteristics of cloud computing solutions and services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- collate the information on the organisation’s need for cloud technology
- identify the key differences, and the performance, in cloud technology models
- determine the most appropriate cloud computing solution for the business
- provide feedback on the most appropriate cloud computing solution and service.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the current technology trends, and directions, in information and communications technology (ICT)
- identify the major industry technology standards used in cloud computing solutions and services
- recognise the vendor product directions in cloud computing solutions and services
- describe the current industry hardware and software products, and their general features, capabilities and application
- describe the principles of cloud computing solutions and technologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- information on the cloud computing solution technologies currently used in the industry
- the business requirements

© Commonwealth of Australia, 2025 Future Skills Organisation

- documents detailing work health and safety (WHS) standards, environmental guidelines, and enterprise requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK401 Install and manage a server

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install and manage a server. Server management includes initial configuration and testing, ongoing administration, software distribution and updates, profiling and monitoring servers, and troubleshooting.

It applies to individuals with competent information and communications technology (ICT) skills, employed in network management or server administration roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install a server | 1.1 Prepare for work, according to site specific safety requirements and enterprise workplace health and safety (WHS) processes and procedures<br>1.2 Obtain server applications and features from appropriate person<br>1.3 Choose most suitable operating system features and network services with reference to required server solution and technical requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Review required installation options<br>1.5 Analyse data migration requirements<br>1.6 Back up local data in preparation for installation<br>1.7 Arrange access to site and advise client of deployment and potential down time |
| 2. Install server as required by the specification | 2.1 Create disk partitioning scheme<br>2.2 Create file systems and virtual memory<br>2.3 Install network operating system<br>2.4 Install and configure server applications and network services<br>2.5 Reconnect and reconfigure connectivity devices<br>2.6 Patch the operating system and applications to ensure maximum security and reliability<br>2.7 Restore local data to new server |
| 3. Configure and administer the server | 3.1 Configure network directory service<br>3.2 Create and manage accounts to facilitate security and network access<br>3.3 Configure user environment using operating system policies and scripts<br>3.4 Create directory structure and quotas to meet client requirements<br>3.5 Configure and manage print services<br>3.6 Set the security, access and sharing of system resources to meet client requirements<br>3.7 Implement security policy to prevent unauthorised access to the system<br>3.8 Implement backup and recovery methods to enable restoration capability in the event of a disaster<br>3.9 Configure update services to provide automatic updates for operating system and applications |
| 4. Monitor and test the server | 4.1 Test server for benchmarking against client specification and requirements according to test plan, and record outcomes<br>4.2 Analyse the error report and make changes as required<br>4.3 Use troubleshooting tools and techniques to diagnose and correct server problems |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 4.4 Test required changes or additions<br>4.5 Validate changes or additions against specifications |
| 5. Complete documentation and clean up worksite | 5.1 Make and document server configuration and operational changes<br>5.2 Complete client report and notification of server status<br>5.3 Clean up and restore worksite to client's satisfaction<br>5.4 Secure sign-off from appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 3.3, 4.2 | • Recognises and interprets technical documentation to determine job requirements |
| Writing | 4.1, 4.2, 5.1, 5.2 | • Uses clear, specific and industry related terminology to produce and update workplace documentation |
| Oral Communication | 1.2, 1.7 | • Articulates information clearly using specific and relevant language suitable to audience to convey information<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 1.5, 4.2 | • Uses mathematical formulae to take test measurements, interpret results and evaluate performance and interoperability of the network |
| Navigate the world of work | 1.1, 5.3 | • Takes personal responsibility for adherence to legal/regulatory responsibilities relevant to own work context<br>• Understands nature and purpose of own role and associated responsibilities, and how it contributes to the work of others in the immediate work context |
| Interact with others | 5.4 | • Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.3, 1.4, 1.6, 1.7, 2.1-2.7, 3.1-3.9, 4.1, 4.3, 4.4, 4.5, 5.1 | • Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks<br>• Implements actions according to a predetermined plan, making slight adjustments if necessary<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account<br>• Initiates standard procedures when adapting configuration procedures, depending on differing operational contingencies, risk situations and environments<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks, adapting some functions to improve personal efficiency |

# Assessment Requirements for ICTNWK401 Install and manage a server

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- install and configure server
- configure network connectivity
- manage the server operating system, including user accounts, file, network directory and print services
- perform backup and recovery
- update operating system and software
- monitor and test server
- troubleshoot server and network failures.

Candidates should demonstrate competency in at least TWO different network operating systems.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe current network hardware and software systems and their requirements, including:
  - network operating systems (NOS)
  - server applications including compatibility issues and resolution procedures
  - desktop applications and operating systems
- recognise and describe basic server installation and maintenance processes and procedures, including:
  - documentation skills for networks
  - error logging and reporting
  - high availability options for file systems, including redundant array of independent disks (RAID) and replication

© Commonwealth of Australia, 2025 Future Skills Organisation

  - network directory services and network service configuration
  - options for performance tuning
  - user authentication
- specify and describe processes and procedures required to support and manage a server, including:
  - best practice for implementing backup and recovery procedures
  - boot process
  - operating system help and support utilities
  - operating system installation methods, including installation from CD or DVD, universal serial bus (USB) boot disk, network and script (automated install)
  - printer management
  - process and task management, including process termination
  - task scheduling utilities
  - troubleshooting tools and techniques, including network diagnostic utilities
  - user account and password management.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where server installation may be conducted
- relevant server specifications including:
  - cabling
  - local area networked (LAN) computers
  - server diagnostic software
  - switch
  - client requirements
- wide area network (WAN) service point of presence
- workstations
- relevant regulatory documentation that affects installation activities.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK402 Install and configure virtual machines for sustainable ICT

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop and implement virtualisation technologies with the goal of providing a more sustainable information and communications technology (ICT) environment.

It applies to individuals who work in the network area of organisations and are responsible for the use of virtual machines to increase sustainability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify virtualisation benefits and features | 1.1 Research and determine government and industry guidelines and policies for use of desktop and server virtualisation<br>1.2 Identify benefits of virtualisation of desktop and server environments<br>1.3 Identify available features of current virtualisation software<br>1.4 Select virtualisation solution based on current and future |

# Assessment Requirements for ICTNWK402 Install and configure virtual machines for sustainable ICT

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- apply sustainability practices related to current information and communications technology (ICT) network design
- research, identify and develop a virtual machine environment
- implement and maintain a virtual machine environment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the current government and industry policies and guidelines related to developing sustainable ICT environments
- identify and describe current technologies and processes designed to produce a sustainable ICT environment
- state the available tools and software applications required to manage virtual machines
- define the structure, function and business organisation of client
- outline the configuration of software applications required to manage virtual machines
- describe the configuration requirements required to integrate virtual machines into an existing network design.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site or prototype where virtual machine environments may be implemented

© Commonwealth of Australia, 2025 Future Skills Organisation

- network technical requirements
- software tools to support implementation of virtual machines.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTBWN301 Perform tests on optical communication system and components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to test optical communication systems and components in the field using portable test instruments

It applies to individuals who are installation contractors, technical staff and field officers from telecommunications service providers or other private and public organisations or regulatory authorities. They combine technical skills with organisational and administrative skills when working on broadband passive optical networks (PON), fibre to the x (FTTx) networks, hybrid fibre coaxial (HFC) networks and dense wavelength division multiplexing (DWDM) systems during installation, maintenance, commissioning and troubleshooting phases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – broadband and wireless networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to use optical measuring instruments | 1.1 Obtain relevant legislation, codes, regulations and standards and prepare for given work<br>1.2 Notify client for site access, security arrangements and location |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | details of optical system and test purpose<br>1.3 Identify site hazards and notify appropriate personnel to make site safe<br>1.4 Devise and implement risk control and safety measures when using high power laser test instruments and optical time-domain reflectometer (OTDR) associated with<br>launch fibres, patch cords or enclosure adaptors<br>1.5 Prepare testing plan indicating type of measurement at nominated wavelength, based on equipment specifications and in<br>consultation with client<br>1.6 Select appropriate tools and test instruments according to required measurement and enterprise practice |
| 2. Conduct optical measurements | 2.1 Set up test instrument according to manufacturer's instructions, and according to work health and safety (WHS) and environmental requirements<br>2.2 Perform measurement using knowledge of appropriate testing techniques in safe manner to assess performance of optical system or component<br>2.3 Record test results and compare with standard test specifications from manufacturer and enterprise guidelines<br>2.4 Evaluate test results and report on functionality of optical component or equipment and performance of optical system |
| 3. Document measurement results | 3.1 Document test results for future reference and make recommendations on optimising component and system performance<br>3.2 Clean work site and make safe according to enterprise requirements and to client satisfaction<br>3.3 Notify appropriate personnel of job completion for sign off and present test documentation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.6, 2.1, 2.3, 3.2 | • Interprets information from relevant sources to plan and identify all job requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.2-1.5, 2.3, 2.4, 3.1, 3.3 | • Accurately completes relevant reports and documentation using clear and technically specific language |
| Oral Communication | 1.2-1.5, 2.4, 3.3 | • Uses listening and questioning skills to confirm understanding of requirements, and participates in a verbal exchange of ideas and solutions<br>• Uses appropriate, detailed and clear language to address key personnel and clients |
| Numeracy | 1.5, 1.6, 2.2-2.4 | • Performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | 1.3, 1.4, 1.6, 2.1, 2.3, 3.2 | • Complies with explicit policies and procedures, and explores and implements where identified the implicit expectations of policies and procedures<br>• Understands roles and responsibilities for task and makes basic decisions on work completion parameters |
| Interact with others | 1.2, 1.4, 1.5, 2.4, 3.3 | • Uses a limited range of accepted practices for communicating in a work environment<br>• Recognises common cultural and other differences of people in the work context and makes adjustments in addressing the differences |
| Get the work done | 1.1, 1.3, 1.4, 1.6, 2.1, 2.2, 3.1, 3.2 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions and evaluates the effectiveness of the outcome |

# Range of Conditions

*This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) should be included.*

| | |
|---|---|
| Instruments/devices to be used must include: | • laser light source including visual laser light source<br>• laser power meter<br>• passive optical network (PON) meter<br>• optical time domain reflectometer (OTDR) |
| Optical measurements to be taken and recorded must | • optical power levels<br>• insertion loss of a passive device<br>• end-to-end fibre loss (bi-directional) |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| include: | • splice loss<br>• distance to fault, event, end of fibre using an (OTDR) |

# Assessment Requirements for ICTBWN301 Perform tests on optical communication system and components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- carry out work according to job specifications and work health and safety (WHS) regulations
- determine and plan optical tests and measurements
- use optical measuring instruments and devices
- perform and record optical measurements
- assess and make recommendations from the test results
- document and present test outcomes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the consequences of mating contaminated optical connectors
- summarise downstream and upstream signals
- discuss dense wavelength division multiplexing (DWDM) metro and long haul system architecture
- outline hybrid fibre coaxial (HFC) architecture (optical section)
- explain logarithmic power levels (decibels and dBm)
- discuss optical connector types
- summarise optical fibre and laser safety, practices, handling and application
- identify optical spectrum limits, wavelengths used in various applications and International Telecommunications Union (ITU) grid
- explain the role of optical transmitters and receivers

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain passive optical network (PON) architecture
- discuss transmission system line rates:
  - optical ethernet
  - synchronous digital hierarchy (SDH)
- summarise wavelength division multiplexing (WDM), coarse wavelength division multiplexing (CWDM) and DWDM principles, and optical multiplexers.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – broadband and wireless networks field of work and include access to:

- a site where installation of supporting infrastructure may be conducted
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTNWK403 Manage network and data integrity

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to lead the development of asset protection processes, determining threats and implementing controls to mitigate risk.

It applies to individuals working as middle managers including information security managers, network engineers and network technicians who are responsible for implementing and managing the organisational disaster recovery and asset protection policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Ensure compliance with company network and security policies | 1.1 Review company security policies<br>1.2 Audit and record security access<br>1.3 Ensure user accounts are controlled<br>1.4 Ensure secure file and resource access |
| 2. Conduct audit on system assets | 2.1 Use appropriate tools and techniques to conduct audit on system hardware and software assets |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Develop a system to record assets<br>2.3 Use system to develop reports on assets for management |
| 3. Implement an antivirus solution | 3.1 Research appropriate antivirus and anti-malware solutions<br>3.2 Implement antivirus or anti-malware solution<br>3.3 Test antivirus and anti-malware solution functionality |
| 4. Implement systems to protect assets from threats | 4.1 Determine environmental threats to data<br>4.2 Document systems to protect from environmental threat<br>4.3 Implement system to protect data from environmental threat |
| 5. Develop a backup solution | 5.1 Determine appropriate backup type to meet systems needs<br>5.2 Investigate current backup media options<br>5.3 Implement a backup solution<br>5.4 Demonstrate functionality of backup solution<br>5.5 Demonstrate restore of data from backup media<br>5.6 Implement a real time backup and data sync solution |
| 6. Monitor network performance | 6.1 Determine available network performance monitoring tools<br>6.2 Implement network performance monitoring tools to monitor network<br>6.3 Produce report on network performance |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1 | • Interprets textual information from relevant sources to identify software solutions and adherence to company security policies |
| Writing | 1.2, 2.2, 2.3, 4.2, 6.3 | • Develops material for a specific audience, using clear and detailed language in order to convey explicit information, requirements and recommendations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.1 | • Complies with explicit organisational policies and procedures |
| Get the work done | 1.2, 1.3, 2.1-2.3, 3.2, 3.3, 4.1, 4.3, 5.1-5.6, 6.1, 6.2 | • Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account<br>• Initiates standard procedures when applying solutions in networks, including systems management processes, and deploys rapid solutions to problems involving management of network assets<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Understands the importance of secure information and privacy, and takes personal responsibility for identifying and managing risk factors |

# Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

# Assessment Requirements for ICTNWK403 Manage network and data integrity

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify user access control issues
- use appropriate tools to conduct audit on system assets
- implement and test antivirus solution
- employ systems to negate environmental threats
- demonstrate features of data backup, restore and system roll back
- perform network monitoring using a variety of current standard tools
- add network controls according to network and data integrity policies.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the broad principles of data integrity on a network, including:
  - auditing and control of user access
  - asset tracking and auditing
  - current antivirus solutions and techniques
- describe backup, restore and rollback procedures
- identify and describe system and network monitoring tools and their related functions
- recognise and overview the client organisation structure and business functionality as they relate to data integrity
- select and describe the tools and applications required to manage network and data integrity, including the disaster recovery processes.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site or prototype where network and data integrity strategies may be implemented and managed
- use of network support tools currently used in industry
- the organisation's security policies, manufacturer recommendations and network and data integrity protection standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK404 Install, operate and troubleshoot a small enterprise branch network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to utilise networking fundamentals, including wide area network (WAN) technologies, basic security, routing and switching fundamentals, and to configure simple networks.

It applies to individuals working in a network support position. They would use the appropriate tools, equipment, software and protocols to install, operate, and troubleshoot, a small enterprise branch network.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Specify the operation of a data network | 1.1 Identify the various network elements<br>1.2 Use the open system interconnections (OSI) and transmission control protocol, or internet protocol (TCP/IP), models to explain how data flows in a network<br>1.3 Define the purpose, and basic operation, of the protocols in |

# Assessment Requirements for ICTNWK404 Install, operate and troubleshoot a small enterprise branch network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- specify the network elements
- implement a small switched network
- select and implement the suitable network addressing protocols
- select and install a router
- identify and verify, wide area network (WAN) links
- test and resolve the problems for a small enterprise branch network.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the design of an internet protocol (IP) addressing scheme
- describe how to install, configure and test the network elements, in order to ensure interoperability within the network
- explain how to apply network topologies, protocols and security solutions and troubleshoot defined network problems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where the network installation may be conducted
- small enterprise routers and switches

© Commonwealth of Australia, 2025 Future Skills Organisation

- the network's design documentation
- the equipment specifications
- hardware and software
- the organisational guidelines
- computers.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK405 Build a small wireless local area network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to build and arrange connectivity to a single zone wireless local area network (WLAN).

It applies to individuals with competent information and communications technology (ICT) skills using one wireless access point or wireless router in a small-to-medium enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm client and equipment requirements | 1.1 Identify, clarify and organise client requirements according to network needs and organisational requirements<br>1.2 Ensure an appropriate person has given the authority for wireless network access<br>1.3 Evaluate requirements along with business needs, and translate into technical requirements<br>1.4 Identify components to be installed in order to meet the technical requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Select position for access point, based on user requirements and environmental conditions<br>1.6 Arrange for preliminary work to be carried out to meet cabling and power requirements |
| 2. Select, install and configure wireless access point | 2.1 Select access point device based on current and future client needs<br>2.2 Install and configure access point to provide wireless access to network<br>2.3 Configure services<br>2.4 Test access point and verify wireless connection and security arrangements<br>2.5 Select, install and configure appropriate wireless card where necessary for legacy equipment |
| 3. Configure network | 3.1 Configure security and other key parameters consistent with commercial and business requirements<br>3.2 Test security and firewall arrangements with appropriate test equipment<br>3.3 Test the network with user equipment for general compatibility and access |
| 4. Train users | 4.1 Determine devices to be connected to the network<br>4.2 Demonstrate how pairing and log-on arrangements are established to user<br>4.3 Inform users of wireless network etiquette and traffic capacity issues<br>4.4 Develop user documentation |
| 5. Monitor and administer wireless network | 5.1 Monitor wireless network performance using diagnostic tools<br>5.2 Debug networking issues to maintain trouble-free wireless connection<br>5.3 Document current settings and store securely |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 1.5 | • Recognises and interprets textual information to determine business requirements and all environmental requisites |
| Writing | 4.4, 5.3 | • Develops material for a specific audience, using clear and detailed language in order to convey explicit information, and keeps a record of relevant setting information |
| Oral Communication | 1.1, 1.2, 4.2, 4.3 | • Uses listening and questioning skills to clarify job requirements<br>• Uses appropriate, detailed and clear language to address key personnel and to disseminate information |
| Navigate the world of work | 1.1 | • Complies with explicit organisational policies and procedures |
| Get the work done | 1.1, 1.3-1.6, 2.1-2.5, 3.1-3.3,4.1, 5.1-5.3 | • Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Recognises and responds to predictable routine problems related to role in the immediate work context, including connectivity and security issues |

# Assessment Requirements for ICTNWK405 Build a small wireless local area network

## Modification History

| Release | Comments |
|---|---|
| Release 2 | Reinstatement of element 'Monitor and administer wireless network' to Elements and Performance Criteria.<br>This version released in ICT Information and Technology Training Package version 3.1 |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop, implement and maintain wireless networks
- install, configure and test wireless access points
- test security and network to business specifications
- develop user training material
- monitor and resolve wireless network issues.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline features of security threats
- summarise the basic principles of network security, including:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - authentication methods
  - network protocols and operating systems
  - security protocols, standards and data encryption
- describe the factors that impact on a small wireless network, including:
  - bandwidth and quality of service

© Commonwealth of Australia, 2025 Future Skills Organisation

  - factors affecting signal quality
  - layer 2 and layer 3 design issues
  - features of a small office or home office (SOHO) network
  - wireless security strategies
  - wireless topologies
  - wireless local area network (WLAN) solutions
- outline the protocols and their application for wireless networks, including:
  - transmission control protocol (TCP)
  - internet protocol (IP).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- network technical requirements
- network infrastructure, including wireless hardware and software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK406 Install, configure and test network security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install, configure and test network security in an information and communications technology (ICT) network.

It applies to individuals working as ICT professionals who install, configure and test secure networks of any size.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Assess network security threats and vulnerabilities to identify risk | 1.1 Assess and report on current system security, according to required asset security level<br>1.2 Determine additional network, software, hardware and system security threats and vulnerabilities<br>1.3 Use identified threats and vulnerability information to identify security risks<br>1.4 Make recommendations to management to address security deficiencies, according to current and future commercial and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | business requirements |
| 2. Implement countermeasures for identified vulnerabilities and threats | 2.1 Implement required level of perimeter security based on current and future business needs<br>2.2 Assess and implement best practice server and network hardening techniques and measures<br>2.3 Implement secure authentication and user account controls<br>2.4 Secure data integrity and transmission |
| 3. Test and verify functionality and performance of security system implemented | 3.1 Design test items to verify key function and performance measures against criteria<br>3.2 Conduct function and performance tests recording results<br>3.3 Modify and debug security system as necessary<br>3.4 Develop documentation on current system settings and file for future reference |
| 4. Provide systems for monitoring and maintaining security | 4.1 Monitor current network security, including physical aspects, using appropriate third party testing software where applicable<br>4.2 Review logs and audit reports to identify and record security incidents, intrusions or attempts<br>4.3 Carry out spot checks and audits to ensure that procedures are not being bypassed<br>4.4 Document newly discovered security threats, vulnerabilities and risks in a report for presentation to appropriate person to gain approval for changes to be made |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 4.2 | • Recognises and interprets textual information to determine specific information about security incidents |
| Writing | 1.1, 1.4, 3.2, 3.4, | • Accurately records test results and develops material for a specific audience, using clear and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 4.4 | detailed language in order to convey explicit information |
| Oral Communication | 1.1, 1.4, 4.4 | • Articulates information clearly, using specific and relevant language suitable to audience to convey recommendations and provide verbal reports<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 1.4 | • Extracts and evaluates the mathematical information embedded in a range of tasks and texts |
| Get the work done | 1.1-1.4, 2.1, 2.3, 2.4, 3.1-3.3, 4.1, 4.3 | • Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Recognises and responds to predictable routine problems related to own role in the immediate work context, including detecting intrusion and debugging the system when required<br>• Automatically implements standard procedures for routine decisions |

# Assessment Requirements for ICTNWK406 Install, configure and test network security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- assess and identify security threats, vulnerabilities and risks
- determine appropriate countermeasure for threat, vulnerability or risk
- implement countermeasure per threat or risk
- install, configure and test network elements to ensure perimeter security
- test and verify function and performance of selected security measures
- monitor network for suspicious activity and take appropriate action where necessary
- document newly discovered threats, vulnerabilities and risks, including change recommendations for approval.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline authentication issues
- summarise the security requirements of the client business domain, including:
  - organisation structure and business functionality
  - features and capabilities of networking technologies
  - privacy issues and privacy legislation
  - security information sources
  - risk analysis
- outline common virtual private network (VPN) issues, including bandwidth and dynamic security environment
- explain how to configure routers and switches

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise current industry accepted hardware and software security products, including general features and capabilities
- outline the function and operation of VPN concepts, including encryption, firewalls, packet tunnelling and authentication
- outline network protocols and operating systems
- summarise organisational issues surrounding security
- outline security perimeters and their functions
- describe security protocols, standards and data encryption
- summarise security threats, including eavesdropping, data interception, data corruption and data falsification
- outline types of VPNs, including site-to-site and user-to-site internet traffic and extranets
- summarise the systems and procedures related to:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - cryptography
  - local area network (LAN), wireless local area network (WLAN) and wide area network (WAN)
  - screened subnets
  - transmission control protocols or internet protocols (TCPs/IPs) and applications
  - use of virus detection software.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where secure network installation may be conducted
- network security documentation
- equipment specifications
- network components
- hardware and software
- firewalls (hardware and software)
- a live network
- organisational guidelines
- networked (LAN) computers
- WAN service point of presence.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK407 Install and configure client-server applications and services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install, configure, maintain and support server-side applications as well as client applications on network workstations, in both Windows based and Linux based networks.

It applies to individuals working as network administrators and network support staff who implement the installation and configuration of client-server based software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine client -server software requirements | 1.1 Select a client-server solution that best fits the desired outcome for a given scenario<br>1.2 Select hardware required to implement the client-server solution for the desired outcome<br>1.3 Select an appropriate host operating system for the client's server software |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Obtain and configure server application software according to industry best practice | 2.1 Investigate the range of client-server products available for the desired outcome, including commercial and open source<br>2.2 Identify hardware requirements<br>2.3 Identify available operating system platforms to host the client-server software |
| 3. Install, configure, and manage services to meet business requirements | 3.1 Install client-server software to both server and client hardware according to business guidelines<br>3.2 Configure the client-server software according to vendor guidelines<br>3.3 Monitor client-server performance to ensure performance, according to business requirements<br>3.4 Manage the installation of upgrades and patches to the client-server software environment<br>3.5 Backup and maintain client-server software |
| 4. Assess configuration effect on overall network design | 4.1 Identify appropriate utilities to monitor and determine network performance<br>4.2 Create network performance benchmarks prior to and on completion of client-server software installation<br>4.3 Compare benchmarks to assess performance effect on network after installation of client-server software |
| 5. Test and sign off | 5.1 Test operation of the client-server software to ensure client requirements are met<br>5.2 Obtain sign-off from appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1, 3.2 | • Recognises and interprets technical and vendor-specific information to determine business requirements |
| Writing | 4.2 | • Develops material for a specific audience, using clear and detailed language in order to convey explicit |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | information |
| Numeracy | 4.2, 4.3 | • Interprets numerical information to analyse memory, hard disk and performance requirements |
| Navigate the world of work | 3.1, 3.2 | • Recognises and follows explicit and implicit protocols, and meets expectations associated with own role |
| Interact with others | 5.2 | • Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role |
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1-3.5, 4.1, 5.1 | • Uses logical planning processes and an increasingly intuitive understanding of context to identify relevant information to plan business operating system requirements<br>• Reflects on the ways in which digital systems and tools are used, or could be used, to achieve work goals, and begins to recognise strategic and operational applications<br>• Uses familiar digital systems and tools to access, organise, analyse and display relevant information<br>• Troubleshoots configuration and operational requirements by recognising and anticipating an increasing range of familiar problems, their symptoms and causes |

# Assessment Requirements for ICTNWK407 Install and configure client-server applications and services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- install and configure server based client-server software
- install and configure client software to communicate with appropriate server software
- test operation of client-server software
- identify and implement required updates for client-server software
- monitor performance of client-server software
- backup and maintain client-server software.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the requirements for client-server applications and services, including:
  - computer hardware and software required
  - internet protocol (IP) addressing
  - networking fundamentals
  - operating systems
- identify and describe the operating system help and support utilities required, including:
  - procedures for implementing backup and recovery
  - software installation and configuration
  - user account and password management
  - troubleshooting tools and techniques
  - network diagnostic utilities.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a client-server based network
- appropriate client-server software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK408 Configure a desktop environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install, configure and support a desktop or workstation operating system in a networked environment.

It applies to individuals with competent technical skills employed in information and communications technology (ICT) support roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install a desktop operating system | 1.1 Prepare for work according to site specific safety requirements and enterprise work health and safety (WHS) processes and procedures<br>1.2 Obtain desktop applications and features from appropriate person<br>1.3 Review required installation options and file systems<br>1.4 Determine and apply knowledge of licensing, hardware and system requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Analyse data migration requirements<br>1.6 Backup local data in preparation for installation<br>1.7 Arrange access to site and advise client of deployment and potential down times |
| 2. Install desktop operating system | 2.1 Install or upgrade desktop operating system using appropriate installation or update method<br>2.2 Install desktop applications according to identified requirements<br>2.3 Configure network settings to connect workstation to network<br>2.4 Patch the operating system and applications to ensure maximum security and reliability<br>2.5 Restore local data to new workstation |
| 3. Configure desktop environment | 3.1 Configure hardware devices<br>3.2 Administer user environment<br>3.3 Create file and directory structure using appropriate administration and system tools<br>3.4 Configure access to external data<br>3.5 Configure desktop applications according to business requirements |
| 4. Operate command line interface | 4.1 Open a command line interface<br>4.2 Run commands and scripts from the command line interface<br>4.3 Manipulate files using the command line |
| 5. Configure desktop security | 5.1 Modify default user settings to ensure that they match organisational security policies<br>5.2 Modify file and directory ownership and permissions to ensure data security requirements are met<br>5.3 Ensure password security<br>5.4 Check appropriate legal notices are displayed at logon<br>5.5 Implement security options for network protocols<br>5.6 Configure security settings for desktop applications according to business requirements |
| 6. Monitor and test the desktop | 6.1 Test desktop environment to ensure that client, functionality and performance requirements have been met |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 6.2 Analyse and respond to diagnostic information<br>6.3 Use troubleshooting tools and techniques to diagnose and correct desktop problems<br>6.4 Document the desktop environment, according to organisational policy |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 3.5, 5.1, 5.4, 5.6, 6.4 | • Recognises and interprets technical material, organisational policy and regulatory information to determine job requirements |
| Writing | 6.4 | • Prepares written reports and workplace documentation that communicate information clearly and effectively |
| Oral Communication | 1.2, 1.7 | • Articulates clearly using specific and relevant language suitable to audience to convey important information<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 1.5, 6.2 | • Analyses numerical test measurements to evaluate workstation performance |
| Navigate the world of work | 1.1 | • Appreciates the implications of legal and regulatory responsibilities related to own work |
| Get the work done | 1.1, 1.3-1.6, 2.1- 2.5, 3.1-3.5, 4.1-4.3, 5.1-5.3, 5.5, 5.6, 6.1-6.3 | • Uses logical planning processes and an increasingly intuitive understanding of context to identify relevant information to plan business operating system requirements<br>• Reflects on the ways in which digital systems and tools are used, or could be used, to achieve work goals, and begins to recognise strategic and operational applications<br>• Uses familiar digital systems and tools to access organise, analyse and display relevant information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Recognises and takes responsibility for addressing predictable and some less predictable problems in familiar work contexts |

# Assessment Requirements for ICTNWK408 Configure a desktop environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- install and configure a desktop operating system
- attach the desktop to the network
- configure the desktop operating system, including user accounts, file and print services, and security
- perform backup and recovery
- update operating system and software
- monitor and troubleshoot the desktop environment.

Candidates should demonstrate competency in at least TWO different desktop operating systems.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the features of current desktop operating systems, applications, compatibility issues and the resolution procedures
- summarise the configuration requirements of a desktop environment, including:
  - command line interface and scripts
  - controlling the boot process
  - error logging and reporting
  - file naming conventions related to selected operating system
  - network protocols and transmission control protocol or internet protocol (TCP/IP) network connectivity
  - operating systems and their functions, including file system, memory management and process scheduling
  - printer driver and queue management

© Commonwealth of Australia, 2025 Future Skills Organisation

    - process or task management, including process termination
    - tools available for remote assistance and administration
    - troubleshooting tools and techniques, including network diagnostic utilities
    - user account, group and password administration and guidelines for selecting a secure password
- explain file system navigation and manipulation utilities, including:
    - edit, copy, move and search
    - operating system help and support utilities
- summarise relevant work health and safety (WHS) and regulatory requirements for desktop operators.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where server installation may be conducted
- relevant server specifications, including:
    - cabling
    - local area network (LAN)
    - diagnostic software
    - switch
    - client requirements
    - wide area network (WAN) service point of presence
    - desktop workstations
- relevant regulatory documentation that affects installation activities.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK409 Create scripts for networking

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to undertake scripted programming tasks for networking related activities.

It applies to individuals with competent technical skills employed in network or systems administration roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop algorithms to represent solutions to a given problem | 1.1 Consult with client and key stakeholders to identify the problem and associated script requirements<br>1.2 Employ abbreviated software development cycle to script creation<br>1.3 Develop an algorithm to solve the problem and meet client requirements<br>1.4 Develop an algorithm which takes account of expected possible situations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Develop an algorithm which is guaranteed to end<br>1.6 Use structure, sequence, selection and iteration |
| 2. Create code | 2.1 Select appropriate scripting language<br>2.2 Demonstrate understanding and application of basic language syntax rules and best practices<br>2.3 Select and use language data types, operators and expressions to create clear and concise code<br>2.4 Use techniques of selection, iteration and sequence to control script execution flow<br>2.5 Use techniques for sequential file input and output to retrieve and store information<br>2.6 Obtain and use user input to affect the operation of the script<br>2.7 Apply internal document principles to created code<br>2.8 Follow organisational guidelines for developing maintainable code when creating scripts<br>2.9 Adhere to coding standards when creating scripts |
| 3. Use operating system tools | 3.1 Use searching and sorting tools to select information from the logging output of operating system (OS)<br>3.2 Implement controls to ensure that where significant events occur, script creates and maintains a log of operations via operating system logging mechanism<br>3.3 Register and run scripts with OS scheduling facility |
| 4. Test and debug code | 4.1 Engineer, document and conduct simple tests to confirm code meets design specification<br>4.2 Identify areas that are not covered or are covered incorrectly in the script<br>4.3 Take action to ensure that code complies with security policy<br>4.4 Take action to ensure that code operates with proper permissions<br>4.5 Use script debugging techniques suitable for use with scripting language to detect and resolve errors of syntactical, logical and design origin |
| 5. Document script | 5.1 Create technical-level documentation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 5.2 Create user-level documentation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.8, 2.9, 4.3 | • Recognises and interprets technical material, organisational policy and regulatory information to determine job requirements |
| Writing | 2.7, 3.2, 4.1, 5.1, 5.2 | • Prepares user, peer and technical documentation that communicates complex information clearly and effectively |
| Oral Communication | 1.1, 2.6 | • Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas/solutions and uses appropriate, detailed and clear language to address key personnel and to disseminate information |
| Navigate the world of work | 2.8, 2.9, 4.3 | • Recognises and follows explicit protocols and meets expectations associated with own role |
| Numeracy | 1.3-1.5, 2.3 | • Creates complex algorithms to calculate and process data for code creation |
| Get the work done | 1.2, 2.1-2.5, 2.8, 3.1-3.3, 4.1, 4.2, 4.4, 4.5 | • Uses logical planning processes and an increasingly intuitive understanding of context to identify relevant information to plan business requirements<br>• Reflects on the ways in which digital systems and tools are used, or could be used, to achieve work goals and begins to recognise strategic and operational applications<br>• Understands the key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology<br>• Seeks advice and feedback from client when making decisions<br>• Applies formal problem solving processes when tackling an unfamiliar problem, breaking complex |

# Assessment Requirements for ICTNWK409 Create scripts for networking

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop an algorithmic statement of a solution for a set process
- design, document, construct and test a small single purpose operating system (OS) utility application in response to a problem description
- create scripted programs that access information stored in files on the system and use system utility programs to sort or find information within these files
- validate and record script results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the principles of algorithm design
- identify and describe operating system components and processes, including:
  - command line interface
  - log files
  - program scheduling utilities
  - development methodologies
  - tools and utilities
  - testing methods
- explain debugging for a variety of scripting scenarios
- outline programming structured control constructs: sequence, selection and iteration
- summarise scripting techniques and language syntax.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- technical requirements
- software development environment
- software testing environment.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK410 Install hardware to a network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan, manage and install new hardware components in a network.

It applies to individuals employed in technical information and communications technology (ICT) support roles, such as network administrators, who support network hardware in a peer-to-peer or client-server networked environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine network hardware requirements | 1.1 Assess client network hardware and cabling requirements, considering compatibility with existing application software and operating system<br>1.2 Analyse requirements against local area network (LAN), wide area network (WAN), wireless networks, and mobile equipment access design limitations and organisational guidelines<br>1.3 Evaluate client requirements according to organisational guidelines, corporate purchasing procedures, licensing |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | arrangements and budget |
| 2. Obtain network hardware | 2.1 Contact vendors and obtain technical specifications<br>2.2 Evaluate or test hardware according to client requirements and organisational guidelines<br>2.3 Document recommendations and provide copies to appropriate person<br>2.4 Determine and document licensing requirements and security issues<br>2.5 Acquire hardware according to recommendations and organisational procedures<br>2.6 Organise cabling infrastructure where required |
| 3. Install network hardware | 3.1 Conduct installation with minimal disruption to clients<br>3.2 Install hardware according to appropriate installation procedures<br>3.3 Configure and test the installation to ensure that it meets client needs |
| 4. Provide instruction and support for installed products | 4.1 Determine and document client instructions and needs<br>4.2 Provide one-to-one or group instruction to client and users as required<br>4.3 Obtain client evaluation and feedback to ensure that client requirements have been met |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 2.2, 2.5 | • Recognises and interprets licensing and security issues, technical information and organisational procedures to determine job requirements |
| Writing | 2.4, 4.1 | • Prepares information which incorporates evaluation of information and specialised and cohesive language in a format and style appropriate to a specific audience |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral Communication | 2.1, 2.3, 4.1-4.3 | • Uses listening and questioning skills to confirm understanding for requirements<br>• Participates in regular verbal exchanges and uses appropriate, detailed and clear language to address key personnel and to disseminate information |
| Numeracy | 1.3 | • Uses mathematical formulas and calculations to estimate and plan costs according to business budgets |
| Navigate the world of work | 1.2, 1.3, 2.4, 2.5 | • Appreciates the implications of legal and regulatory responsibilities related to own work |
| Get the work done | 1.1-1.3, 2.2, 2.5, 2.6, 3.1- 3.3 | • Determines job priorities, resources and equipment, and works logically and systematically to maintain the continuity of network operations and business functions during network installation tasks<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Recognises and responds to predictable routine problems related to own role in the immediate work context<br>• Automatically implements standard procedures for routine decisions |

# Assessment Requirements for ICTNWK410 Install hardware to a network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- evaluate client user requirements and hardware installation
- install a range of network hardware by planning, managing and supporting the installation of new components in a network, according to organisational policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise current industry, data and voice networking, security products, devices and procedures, including:
  - current industry accepted network protocols
  - organisational contracting procedures and responsibilities
  - system diagnostic software
- outline current industry accepted network hardware and software products
- explain hardware and software installation procedures
- describe local area network (LAN) capabilities and characteristics, such as network type, internet protocol (IP) addressing, switch or hub operation
- describe various features of network connections, including types of cables, cabling distance limitations and wireless connections
- outline operating systems sufficient to enable basic installation
- summarise set-up and configuration procedures
- describe software packages supported by the organisation.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- vendor hardware and software components
- application software and operating system
- hardware maintenance tools
- a live network
- networked computers
- organisational guidelines
- technical documentation and installation manuals.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK412 Create network documentation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to determine network requirements, and produce and evaluate appropriate network documentation.

It applies to individuals with good task management and competent information and communications technology (ICT) skills, who are working as network administrators, technicians and support personnel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine network documentation requirements | 1.1 Consult with appropriate personnel<br>1.2 Identify network documentation standards<br>1.3 Define network configuration<br>1.4 Develop naming standards and labelling schemes<br>1.5 Develop network addressing scheme and verify, using calculations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Design network diagrams and checklists | 2.1 Identify network software mapping tools<br>2.2 Use network software mapping tools to design network diagrams<br>2.3 Develop plans and checklists<br>2.4 Develop manuals |
| 3. Produce network documentation | 3.1 Validate documentation structure with appropriate personnel<br>3.2 Produce network diagrams<br>3.3 Produce network plans and checklists<br>3.4 Produce procedure and policy manuals<br>3.5 Prepare documentation for publication |
| 4. Complete network documentation | 4.1 Check network documentation with appropriate personnel<br>4.2 Select appropriate media<br>4.3 Publish network documentation<br>4.4 Record and store essential network documentation<br>4.5 Notify appropriate personnel of the completed network documentation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2 | • Gathers, interprets and analyses current industry information from a range of sources and identifies relevant and key information |
| Writing | 1.4, 2.3, 2.4, 3.2-3.5, 4.4, 4.5 | • Prepares workplace documentation which incorporates an evaluation of information and specialised and cohesive language in a format and style appropriate to a specific audience |
| Oral Communication | 1.1, 3.1, 4.1, 4.5 | • Articulates requirements and strategies clearly and distinctively, using technical language appropriate to audience and environment |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.5 | • Recognises, compares and interprets technical data when developing network addressing scheme |
| Get the work done | 1.2, 1.3, 1.5, 2.1, 2.2, 4.2- 4.4 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing, prioritising and monitoring own work<br>• Uses familiar digital systems and tools to access, organise, analyse and display information relevant to role<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Makes a range of important decisions in relatively complex situations, taking a range of constraints into account |

# Assessment Requirements for ICTNWK412 Create network documentation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine client requirements
- design network documentation according to standards
- produce network documentation according to design specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain open systems interconnect (OSI) layered communication model
- summarise network requirements related to:
  - applications
  - life cycles
  - manageability
  - quality of service
- explain network design concepts related to:
  - financial constraints
  - network topologies
  - organisation requirements
  - physical constraints
  - security issues.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- relevant network documentation
- legislation and standards documentation
- industry codes of practice.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK414 Create a common gateway interface script

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to define and produce common gateway interface (CGI) script and install that script on a server.

It applies to individuals working in the network or web development area who are required to use CGI scripting as a common means of interacting with websites, providing security access to directories and databases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Define specification for CGI script | 1.1 Determine the functionality of the CGI form<br>1.2 Define the functionality of the CGI script<br>1.3 Choose appropriate language in which to write the CGI script<br>1.4 Determine server requirements |
| 2. Create CGI form and write script | 2.1 Produce a hypertext markup language (HTML) web document that uses the form elements required by the CGI |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | script specification and includes the uniform resource locator (URL) for the CGI script<br>2.2 Write the CGI script to function as required by the CGI script specification |
| 3. Test CGI script | 3.1 Configure the server, if required, that will host the CGI script<br>3.2 Upload the CGI script to the server<br>3.3 Run the CGI form and assess its output<br>3.4 Reiterate until the specification for the CGI script is met |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Writing | 1.2, 2.1, 2.2 | • Prepares workplace documentation that incorporates an evaluation of technical information and specialised and cohesive language in a format and style appropriate to a specific audience |
| Numeracy | 2.1, 3.3, 3.4 | • Analyses numerical data to determine functionality of script |
| Get the work done | 1.1, 1.3, 1.4, 2.1, 3.1-3.4 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing, prioritising and monitoring own work<br>• Uses familiar digital systems and tools to access, organise, analyse and display information relevant to role<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Makes a range of important decisions in relatively complex situations, taking a range of constraints into account<br>• When dealing with complex issues, may use intuition to identify the general problem area, switching to analytical processes to clarify goals |

# Assessment Requirements for ICTNWK414 Create a common gateway interface script

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review the requirements
- produce common gateway interface (CGI) forms and scripts to meet the requirements
- upload scripts to a server
- test the script and rework until requirements are met.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe a scripting language suitable for CGI
- describe CGI 1.1/1.2 specifications and their functionality
- describe the security issues surrounding CGI
- outline common web servers
- outline the principles behind copyleft and Free Software Foundation
- describe copyright and intellectual property issues relating to programming.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- web servers
- an e-business website
- file transfer protocol (FTP) or file transfer client software

© Commonwealth of Australia, 2025 Future Skills Organisation

- server access.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK416 Build security into virtual private networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to build security into a virtual private network (VPN).

It applies to individuals with competent information and communications technology (ICT) skills and who are working in the network area and are required to ensure that VPNs contain required security.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Configure router to provide for network security monitoring and management | 1.1 Create and apply audit rules consistent with policies, standards, protocols and management systems<br>1.2 Configure router to provide appropriate level of asset security and monitoring of security consistent with commercial and business requirements<br>1.3 Monitor and manage system to assess the level of security and attempts to breach security of framework components<br>1.4 Employ appropriate hardware and software to monitor and |

# Assessment Requirements for ICTNWK416 Build security into virtual private networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- configure a router to provide the required security
- implement and maintain security functionality for a virtual private network (VPN), including:
  - site to site VPN
  - remote access VPN
- produce security documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the characteristics of a VPN system, including:
  - site to site
  - remote access systems
  - network protocols and operating systems relevant to VPN, including its features, issues and functions
- describe the security requirements for a VPN, including:
  - auditing and penetration testing techniques
  - configuration of routers and switches
  - security protocols, standards and data encryption
  - processes and techniques related to security perimeters and their functions
  - security threats, including eavesdropping, data interception, data corruption and data falsification

© Commonwealth of Australia, 2025 Future Skills Organisation

    - transmission control protocol or internet protocol (TCP/IP) protocols and applications audit and intrusion detection systems
    - authentication issues
- recognise and describe the differences between common networks, including:
    - local area network (LAN)
    - wireless local area network (WLAN)
    - wide area networks (WAN)
- identify and describe organisational issues surrounding:
    - security cryptography
    - screened subnets
    - virus detection software.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- network technical requirements
- network infrastructure, including servers and security hardware and software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK417 Build an enterprise wireless network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to build an enterprise, community or mesh wireless network within and outside buildings.

It applies to individuals with excellent task management, interpersonal and information and communications technology (ICT) skills working in senior design roles in the networking area, who are required to develop complex wireless networks for organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm client requirements and network equipment required | 1.1 Identify and clarify organisational requirements of the client<br>1.2 Evaluate client requirements along with business needs in order to translate into technical requirements<br>1.3 Review existing network design documentation to ensure it is authorised, current and complete<br>1.4 Identify network topology<br>1.5 Identify the components required to be installed to meet the |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | technical requirements<br>1.6 Contact vendors and service suppliers to obtain specifications and availability of identified components<br>1.7 Ensure preliminary work is completed within the required timeframe |
| 2. Prepare for installation | 2.1 Ensure client and users are aware of date and time of installation<br>2.2 Gather, prepare and check installation and safety equipment<br>2.3 Assess on-site safety arrangements for installers and users |
| 3. Select, install and configure access points and other wireless devices | 3.1 Select appropriate hardware based on identified components<br>3.2 Install and configure hardware to provide wireless access to network<br>3.3 Ensure connections are secured against intrusion or data access by unauthorised persons, are safe for users, and are protected from the environment<br>3.4 Configure security, monitoring, logging and quality of service features consistent with standards and protocols<br>3.5 Ensure test equipment is calibrated<br>3.6 Test wireless network systems performance and verify that it meets enterprise requirements and is consistent with standards and protocols |
| 4. Select, install and configure antennas | 4.1 Select appropriate antennas based on design plan<br>4.2 Safely install and configure antennas to provide wireless access to network<br>4.3 Measure and assess signal strength within and outside building<br>4.4 Resolve and report radio frequency interference issues |
| 5. Select, install and configure antennas | 5.1 Identify possible security threats to assets<br>5.2 Configure client server and helper security devices<br>5.3 Configure associations and filters |
| 6. Train users | 6.1 Provide training for users to establish and manage network connections<br>6.2 Resolve pairing and log-on difficulties for users<br>6.3 Inform users of wireless network etiquette and traffic |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | capacity issues<br>6.4 Advise users of help desk contact details |
| 7. Monitor and administer wireless network | 7.1 Monitor wireless network performance using diagnostic tools, including appropriate software<br>7.2 Debug networking issues to maintain trouble-free wireless connection<br>7.3 Document current settings and store securely, consistent with commercial and business requirements |
| 8. Finalise build process | 8.1 Review network for performance issues, planned maintenance or upgrade requirements<br>8.2 Report to client with network documentation and recommendations for performance issues<br>8.3 File documentation according to organisational guidelines |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 1.5, 3.4, 3.6, 4.1, 8.3 | • Gathers, interprets and analyses information from a range of sources and identifies relevant and key information |
| Writing | 4.4, 7.3 | • Prepares workplace documentation that incorporates an evaluation of information and specialised language in a format and style appropriate to a specific audience |
| Oral Communication | 1.1, 1.2, 1.6, 2.1, 4.4, 6.1, 6.3, 6.4, 8.2 | • Uses active listening and observational and questioning techniques to identify information and confirm, clarify or revise understanding<br>• Articulates requirements and strategies clearly and distinctively, using technical language appropriate to audience and environment |
| Numeracy | 3.5, 4.3 | • Interprets numerical information to calibrate equipment and measure and assess signal strength |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 8.3 | • Complies with explicit organisational policies and procedures |
| Interact with others | 6.1, 6.3, 6.4, 8.2 | • Recognises and applies the protocols governing what to communicate, with whom and how in a range of different contexts |
| Get the work done | 1.4, 1.5, 1.7, 2.2, 2.3, 3.1-3.6, 4.1, 4.2, 4.4, 5.1-5.3, 6.2, 7.1-7.3, 8.1, 8.3 | • Uses a combination of formal, logical planning processes to ensure work is completed according to time constraints and an increasingly intuitive understanding of context to identify relevant information and risks<br>• Understands the importance of secure information in relation to own work and takes personal responsibility for identifying and managing risk<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Initiates standard procedures when solving a broad range of ICT problems<br>• Uses familiar digital systems and tools to access, organise, analyse and store information |

# Assessment Requirements for ICTNWK417 Build an enterprise wireless network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- confirm client organisational and business requirements
- determine hardware and software requirements
- prepare for safe installation
- select, install and configure required wireless hardware
- train users
- test, monitor, and administer the installation
- finalise installation and prepare required documents documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- Identify and describe current wireless local area network (WLAN) and wireless area network (WAN) solutions, including:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - bandwidth and quality of service
  - factors affecting signal quality
  - layer 2 and layer 3 design issues
  - suitability for small office home office (SOHO) and enterprise local area networks (LANs)
  - transmission control protocols or internet protocols (TCPs/IPs) and applications
  - wireless topologies

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the common features of security threats and how to develop a security strategy, including:
  - security protocols
  - standards
  - data encryption
- identify and describe common network protocols and operating systems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- technical requirements
- network infrastructure, including wireless hardware and software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK418 Implement backbone technologies in a local area network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to implement core layer (backbone) connectivity in a local area network (LAN) for applications between floors in a multi-storey building or between separate buildings.

This unit focuses on configuring high-speed (high-bandwidth) channels between high-end switches.

It applies to individuals who are required to enable backbone connectivity in a LAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Define network | 1.1 Identify current and future network requirements based on the organisation's business and technical requirements<br>1.2 Design an appropriate structure to meet client requirements, such as video, audio or data application services |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Design a network addressing system with subnet and host identities (IP addressing) and virtual LANs (VLANs)<br>1.4 Identify and document resource requirements according to network design |
| 2. Install and configure network backbone | 2.1 Install and configure switches and routers according to network requirements and resources<br>2.2 Install network protocol suites using configurations on switch uplink ports as required by network design specifications<br>2.3 Configure hosts and workstations for network access |
| 3. Test and validate network | 3.1 Test network connectivity to ensure operation parameters are met between hosts on segments or VLANs<br>3.2 Make adjustments as required<br>3.3 Validate and document network performance |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.2 | • Gathers, interprets and analyses current network design specifications and identifies relevant and key information |
| Writing | 1.4, 3.3 | • Prepares technical documentation that incorporates an evaluation of information and specialised and cohesive language in a format and style appropriate to a specific audience |
| Get the work done | 1.1-1.4, 2.1-2.3, 3.1-3.3 | • Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to prioritise tasks and contingency arrangements<br>• Uses mobile communication tools and specialised software to ensure that geographically distributed team members remain connected in virtual environments<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Initiates standard procedures when responding to familiar problems within the immediate context |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTNWK418 Implement backbone technologies in a local area network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- define, design and document the structure of the network and subnets required for the network
- build and test an asynchronous transfer mode (ATM) local area network (LAN) that provides the required services at the required communication standards
- document resource requirements and network performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline current and emerging industry practice associated with:
  - bandwidth limitations, measuring and testing
  - LAN and wide area network (WAN) network topologies (three-layer LAN hierarchy: core distribution and access)
  - MAC addresses, network layer protocols
  - open systems interconnect (OSI) layer modelling
  - routers
  - virtual LANs
- identify and describe network interface cards (NICs) and switches, including:
  - fast Ethernet
  - gigabit
  - 10-gigabit Ethernet
  - store-and-forward
  - fast-forward

© Commonwealth of Australia, 2025 Future Skills Organisation

  - fragment-free
- identify and describe internetworking protocol suites, including:
  - TCP/IP
  - IPX
  - DECnet
  - AppleTalk
  - IPv6.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- local area network infrastructure
- switches with various interfaces.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK419 Identify and use current virtualisation technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use virtualisation technology, according to the industry standards for reviewing and demonstrating work processes, skills and techniques to ensure that the quality of the entire business process is maintained at the highest level possible through the appropriate application of virtualisation technology.

This unit applies to individuals engaged in ongoing review and research who review, and maintain, business processes at the highest level possible.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to use virtualisation technologies | 1.1 Identify the enterprise requirements, and determine the need for desktop virtualisation software<br>1.2 Identify the virtualisation vendors and the different types of virtualisation technology that they offer<br>1.3 Identify, review and select the desktop virtualisation software, where appropriate |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Select suitable desktop virtualisation software |
| 2. Use desktop virtualisation software to assist in solving organisational problems | 2.1 Test the desktop virtualisation software<br>2.2 Use the features and functions of desktop virtualisation software in an organisational context, in line with environmental factors<br>2.3 Demonstrate an in-depth of knowledge of desktop virtualisation technologies, to an accepted industry standard<br>2.4 Access and use, the sources of information relating to desktop virtualisation technology |
| 3. Evaluate the desktop virtualisation software performance | 3.1 Review the effect of desktop virtualisation software on benefits to the enterprise<br>3.2 Seek feedback from users, where appropriate, and update the desktop |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 2.4, 3.1 | • Critically analyses documentation from a variety of sources and records, and consolidates information, to determine requirements |
| Writing | 3.2 | • Writes, edits and proofreads documents to ensure clarity of meaning, and the accuracy and consistency of information |
| Oral Communication | 3.2 | • Uses specific and relevant language to clearly describe and explain, a range of technical, operational and business-related matters, with internal and external personnel |
| Navigate the world of work | 1.1, 2.2 | • Identifies, and acts on, issues that contravene relevant policies, procedures and legal requirements<br>• Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements |
| Interact with | 3.2 | • Selects and uses, the appropriate conventions and protocols when communicating with clients and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| others | | co-workers, in a range of work contexts |
| Get the work done | 1.1-1.4, 2.1, 2.2, 2.3, 3.1 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload, for efficiency and effective outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes, for more complex and non-routine situations<br>• Contributes to the continuous improvement of current work practices, by applying basic principles of analytical and lateral thinking |

# Assessment Requirements for ICTNWK419 Identify and use current virtualisation technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify current new, and emerging, virtualisation technology
- identify and use, the features and functions of industry-specific virtualisation technologies
- review and evaluate the virtualisation software.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe current technology trends, and directions, in information and communications technology (ICT), specifically in the major industry technology standards used in virtualisation technology
- recognise the vendor product directions relating to virtualisation technology
- outline current industry hardware and software products, and their general features, capabilities and application
- recognise information-gathering techniques
- describe the environmental and sustainability policies of the workplace
- identify the features of virtualisation technology
- recognise how to test, and evaluate, virtualisation technology
- locate the appropriate sources of information regarding virtualisation technology.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a site where industry-specific technologies may be used
- industry-specific technologies currently used in the industry
- documents detailing work health and safety (WHS) standards, environmental guidelines, and enterprise requirements
- the virtualisation software.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTNWK501 Plan, implement and test enterprise communication solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and implement an enterprise mail system
- plan and implement an enterprise web portal or content management system
- design and implement business collaboration tools
- configure network, servers and application software to provide optimal performance, meet security requirements and avoid known conflicts
- configure applications to meet customisation requirements
- monitor and test the performance of aspects of the solution.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe the features of a mail server application
- describe business collaboration tools
- explain the purpose and use of web portal or content management software
- outline the importance of administering database servers to support portal applications
- describe the key principles of data protection, including:
  - backup and restoration
  - firewall configuration
  - security and authentication practices
- describe the important features of administering a network, including:
  - load balancing for applications
  - server or directory administration
  - infrastructure

© Commonwealth of Australia, 2025 Future Skills Organisation

- web server administration.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- site where server applications can be installed
- networked servers
- workstations
- switch
- wide area network (WAN) service point of presence.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK502 Implement secure encryption technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to ensure secure file encryption is selected, implemented and monitored on a computer network or local environment.

It applies to individuals working as information and communications technology (ICT) professionals who may select, implement and monitor a secure encryption environment in any size enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine encryption methods | 1.1 Analyse enterprise data security requirements<br>1.2 Create a new or review an existing security plan to determine appropriate encryption methods<br>1.3 Review a range of encryption technologies and rank the most appropriate options<br>1.4 Assess the costs associated with each encryption option<br>1.5 Document encryption options and costs, and forward to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | appropriate person for decision |
| 2. Implement encryption | 2.1 Apply encryption technologies to the enterprise system<br>2.2 Analyse effect of encryption technologies on user roles and responsibilities<br>2.3 Inform user of new encryption technologies and the effect it has on their responsibilities |
| 3. Monitor encryption | 3.1 Analyse implementation of the encryption technologies, confirming function and performance<br>3.2 Review help desk records for problems concerning implementation and take appropriate action<br>3.3 Review system logs for encryption issues and compromises<br>3.4 Document encryption issues and compromises, and notify appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.2 | • Gathers, interprets and analyses technical data to determine security requirements and help desk records to interpret technical compromises |
| Writing | 1.1, 1.3, 1.5, 3.4 | • Prepares workplace documentation that incorporates an evaluation of technical information and specialised and cohesive language in a format and style appropriate to a specific audience |
| Oral Communication | 2.3, 3.4 | • Articulates requirements and responsibilities clearly and distinctively, using technical language appropriate to audience and environment |
| Numeracy | 1.4 | • Uses mathematical formulas and calculations to undertake a cost-benefit analysis |
| Navigate the world of work | 1.1 | • Recognises and follows explicit and implicit protocols, and meets expectations associated with own role |
| Interact with | 1.5 | • Selects the appropriate form, channel and mode of |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| others | | communication for a specific purpose relevant to own role |
| Get the work done | 1.3, 2.1, 2.2, 3.1-3.3 | • Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to determine data security threats, risks and countermeasures<br>• Manages and maintains data securely and actively monitors technology, notifying others if security becomes compromised<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Initiates standard procedures when responding to familiar problems to troubleshoot, debug and correct connectivity and security issues |

# Assessment Requirements for ICTNWK502 Implement secure encryption technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse enterprise data security requirements
- create or review existing security plan to determine the appropriate encryption methods
- rank and document appropriate encryption methods
- implement encryption systems and inform users of any impacts
- monitor and document encryption issues and compromises, and notify appropriate person.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain certificate related infrastructure (certificate authorities, registration authorities, repository services)
- summarise common asymmetric key algorithms and their usage
- explain common symmetric key algorithms and their usage, such as:
  - advanced encryption standard (AES)
  - data encryption standard (DES)
  - triple data encryption algorithm (triple DES)
  - Blowfish
- explain encryption strength
- summarise various encryption types, including public key, secret key, hash key
- summarise the functions and features of:
  - access control permissions
  - digital signatures
  - symmetric encryption, asymmetric encryption and one-way encryption

© Commonwealth of Australia, 2025 Future Skills Organisation

  - timestamps
- explain one-way message digests, such as message digest algorithm 5 (MD5) and secure hash algorithm (SHA)
- explain public key infrastructure (PKI), pretty good privacy (PGP) and GNU Privacy Guard (GnuPG)
- outline replay security
- outline possible sources of security threats, including eavesdropping, data interception, data corruption, data falsification and authentication issues
- explain transmission control protocol or internet protocol (TCP/IP) protocols and applications
- summarise security problems and challenges that arise from organisational issues
- outline wired equivalent privacy (WEP), Wi-Fi protected access (WPA) and Wi-Fi protected access 2 (WPA2).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where encryption installation may be conducted
- a live network
- servers
- encryption software
- encryption tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK503 Install and maintain valid authentication processes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, develop, install and maintain authentication processes to reduce the vulnerability of the system.

It applies to individuals working as middle managers such as information security managers, network engineers or security analysts, who are responsible for implementing and monitoring the organisational security management system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine authentication requirements | 1.1 Determine user and enterprise security requirements with reference to enterprise security plan<br>1.2 Identify and analyse authentication options according to user and enterprise requirements<br>1.3 Select the most appropriate authentication and authorisation processes |
| 2. Configure | 2.1 Create an authentication realm and reuse as required to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| authentication software or tools | protect different areas of server<br>2.2 Add users and authorisation rules to new realm according to business needs<br>2.3 Describe user attributes and user attribute set-up<br>2.4 Set up an authentication filter and authorisation parameters on the appropriate server according to business requirements |
| 3. Apply authentication methods | 3.1 Develop or obtain authentication protocols as required<br>3.2 Develop and distribute related methods to users according to business need<br>3.3 Brief user on authentication system and their responsibilities according to enterprise security plan<br>3.4 Apply authentication system to network and user according to system product requirements<br>3.5 Record and store permission and configuration information in a secure central location |
| 4. Monitor authentication system | 4.1 Review the authentication system according to user and enterprise security and quality of service requirements<br>4.2 Ensure ongoing security monitoring, using incident management and reporting processes, according to enterprise security plan<br>4.3 Adjust authentication system if required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 3.3, 4.2 | • Gathers, interprets and analyses technical data to determine requirements according to user and enterprise plans |
| Writing | 2.3, 3.1, 3.2, 3.5 | • Prepares workplace documentation that incorporates an evaluation of technical information and specialised and cohesive language in a format and style appropriate for a specific audience |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral Communication | 1.2, 3.1-3.3, 4.2 | • Uses active listening, observational and questioning techniques in order to identify information and confirm, clarify or revise understanding<br>• Initiates and contributes to a range of formal and informal conversations relevant to role, responding, clarifying, explaining and expanding on information as required |
| Navigate the world of work | 1.1, 3.3 | • Recognises and follows explicit and implicit protocols, and meets expectations associated with own role |
| Get the work done | 1.1, 1.3, 2.1, 2.2, 2.4, 3.4, 3.5, 4.1-4.3 | • Reflects on the ways in which digital systems and tools are used or could be used to achieve work goals and begins to recognise strategic and operational applications<br>• Uses digital technologies and systems safely and securely when implementing and monitoring a system with a growing awareness of the permanence and transparency of all activities<br>• Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to plan control methods and systems processes<br>• When dealing with complex issues such as authentication failure and security incidents may use intuition to identify the general problem area, switching to analytical processes to clarify goals and key issues and using lateral thinking processes to generate possible solutions<br>• Makes decisions in relatively complex situations, taking a range of factors into consideration |

# Assessment Requirements for ICTNWK503 Install and maintain valid authentication processes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design and deploy authentications solutions to the business technology environment and business needs
- configure authentication software or tools
- monitor and test authentication process after implementation
- ensure authentication solutions are current.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the problems and challenges dealing with organisational authentication issues, including resource accounting through authentication
- discuss common virtual private network (VPN) issues, including:
  - quality of service (QoS) considerations
  - bandwidth
  - dynamic security environment
  - function and operation of VPN concepts
- outline authentication adaptors
- summarise biometric authentication adaptors
- summarise digital certificates, such as VeriSign, X.509, and SSL
- explain the function and operation of authentication controls including:
  - passwords
  - personal identification numbers (PINs)
  - smart cards

© Commonwealth of Australia, 2025 Future Skills Organisation

  - biometric devices
  - other authentication protocols
- outline network authentication services, such as Kerberos and NT LAN Manager (NTLM)
- summarise the features of common password protocols, such as:
  - challenge handshake authentication protocol (CHAP)
  - challenge phrases
  - password authentication protocol (PAP)
  - remote authentication dial-in user service (RADIUS) authentication
- describe the principles of security tokens.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site or prototype where network authentication may be implemented and managed
- network support tools currently used in industry
- organisational security policies related to authentication
- manufacturers recommendations
- current authentication standards, including biometric authentication adaptors.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK504 Design and implement an integrated server solution

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design and implement a network authentication model that allows users to log in using the same user credentials between multiple operating system platforms to provide a secure method of sharing files on the same network.

It applies to individuals employed in network or systems engineering roles where they are required to support multiple operating systems in a complex computing environment of medium-to-large organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for the design and installation of an integrated server solution | 1.1 Consult with client and key stakeholders to identify server integration requirements<br>1.2 Prepare for work, according to site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures<br>1.3 Arrange access to site and advise client of deployment and |

# Assessment Requirements for ICTNWK504 Design and implement an integrated server solution

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce design documents to integrate multiple server operating systems for authentication, file sharing and security
- install and configure the integrated solution according to the produced design
- monitor and test the solution
- troubleshoot integration problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain authentication methods and protocols, such as lightweight directory access protocol (LDAP) and Kerberos
- summarise compatibility issues and resolution procedures
- outline current network operating systems (NOS)
- describe current server applications, compatibility issues and resolution procedures
- list documentation required for networks
- outline error and event logging and reporting
- summarise file and print management
- explain file system security
- outline high availability options for servers
- summarise network file systems and shares
- outline network service configuration and security
- summarise operating system help and support utilities
- list and describe performance monitoring tools and tuning options

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the process of managing a project, including:
  - process or task management
  - task scheduling utilities
- explain troubleshooting tools and techniques, including network diagnostic utilities
- describe user authentication and directory services.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where server installation may be conducted
- relevant server specifications such as:
  - multiple operating system platforms
  - cabling
- networked (LAN) computers
- server diagnostic software
- switching equipment
- client requirements
- workstations
- relevant regulatory documentation that affects installation activities.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTNWK505 Design, build and test a network server

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce a design report for a server (or servers) with complex user and network service requirements
- install and configure the server according to the produced design
- monitor and test the server
- troubleshoot server and network failures
- configure a wide range of server network and security services, including:
  - domain name system (DNS)
  - dynamic host configuration protocol (DHCP)
  - web and proxy mail
  - file transfer protocol (FTP)
  - firewall.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the key features of current network operating systems (NOS)
- identify and describe current server applications compatibility issues and resolution procedures
- discuss network service configuration, including:
  - domain name system (DNS)
  - dynamic host configuration protocol (DHCP)
  - file transfer protocol (FTP)
  - mail

© Commonwealth of Australia, 2025 Future Skills Organisation

    - network time protocol (NTP)
    - proxy
    - server messages block (SMB)
    - web
- describe common network service management, including:
    - start
    - stop
    - restart
    - start on boot
- identify and describe network service security features, including server firewall configuration
- identify and summarise troubleshooting tools and techniques, including network diagnostic utilities
- describe common operating system installation and operation issues, including:
    - installation media:
        - CD
        - DVD
        - universal serial bus (USB)
        - boot disk
        - network and script (automated install)
        - deployment services
    - boot process and diagnosing boot failures
    - operating system rescue environment
    - operating system help and support utilities
    - performance monitoring tools and tuning options
    - compatibility issues and resolution procedures
    - high availability options for servers
    - file and print management
- describe data security and storage measures required on a networked server, including:
    - user authentication and directory services
    - best practice procedures for implementing backup and recovery
    - error and event logging and reporting
    - storage options, including file systems and disk partitioning schemes
- describe the process of managing a project, including:
    - documentation skills required for networks
    - process or task management
    - task scheduling utilities.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where server installation may be conducted
- relevant server specifications
- cabling
- networked (LAN) computers
- server diagnostic software
- switching equipment
- client requirements
- wide area network (WAN) service point of presence
- workstations
- relevant regulatory documentation that affects installation activities.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK506 Configure, verify and troubleshoot WAN links and IP services in a medium enterprise network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use appropriate tools, equipment, software and protocols to install, operate, and troubleshoot medium enterprise switches.

It applies to individuals with excellent communication skills who are working as help desk technicians and network support technicians.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install medium enterprise WAN links | 1.1 Prepare for given work according to legislation, work health and safety (WHS) codes, regulations and standards<br>1.2 Arrange access to the site according to required procedure<br>1.3 Review existing network design documentation to ensure it is current and complete<br>1.4 Select network elements required to be installed to meet technical requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Contact vendors and service suppliers to obtain specifications and availability of identified components<br>1.6 Develop plans, with prioritised tasks and contingency arrangements, for installation of components with minimum disruption to client<br>1.7 Liaise with appropriate person to obtain approval for the plans, including security clearance and timing |
| 2. Configure WAN links | 2.1 Determine different methods for connecting to a wide area network (WAN)<br>2.2 Configure and verify a basic serial WAN configuration<br>2.3 Configure and verify at least two WAN protocols<br>2.4 Determine virtual private network (VPN) technology<br>2.5 Configure and verify a site-to-site VPN<br>2.6 Determine asymmetric digital subscriber line (ADSL) technology<br>2.7 Configure and verify an ADSL connection |
| 3. Configure and verify IP services on a router | 3.1 Determine the operation and benefits of using dynamic host configuration protocol (DHCP)<br>3.2 Configure and verify DHCP operation on a router<br>3.3 Implement static and dynamic addressing services for hosts in a local area network (LAN) environment<br>3.4 Determine the basic operation of network address translation (NAT)<br>3.5 Configure NAT for given network requirements<br>3.6 Implement and verify NAT in a medium sized enterprise branch office network<br>3.7 Describe the basic operation and configuration of internet protocol version 6 (IPv6) |
| 4. Secure a network using router services | 4.1 Determine the purpose and types of access control lists (ACLs)<br>4.2 Configure and apply ACLs based on network filtering requirements<br>4.3 Configure and apply ACLs to provide secure access to the router |
| 5. Troubleshoot medium | 5.1 Troubleshoot WAN implementation issues |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| enterprise WAN links | 5.2 Rectify WAN problems<br>5.3 Document solutions |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3 | • Gathers, interprets and analyses technical information to determine requirements according to client needs |
| Writing | 1.5, 1.6, 2.1, 4.1, 5.3 | • Prepares workplace documentation which incorporates an evaluation of technical information and specialised and cohesive language in a format and style appropriate for a specific audience |
| Oral Communication | 1.5, 1.7, 2.1, 2.4, 2.6, 3.1, 3.4, 3.7, 4.1 | • Uses specific and relevant language to clearly describe and explain a range of technical, operational and business related matters with internal and external personnel<br>• Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas/solutions and uses appropriate, detailed and clear language to address key personnel and to disseminate information |
| Numeracy | 2.2, 2.3, 2.5, 2.7, 3.2, 3.5, 4.2, 4.3 | • Analyses numerical information to take measurements, interpret results and evaluate performance and interoperability of network |
| Navigate the world of work | 1.1 | • Appreciates the implications of legal and regulatory responsibilities related to own work |
| Get the work done | 1.1, 1.2, 1.4, 1.6, 2.2, 2.3, 2.5, 2.7, 3.2, 3.3, 3.5, 3.6, 4.2, 4.3, 5.1, 5.2 | • Reflects on the ways in which digital systems and tools are used or could be used to achieve work goals, and begins to recognise strategic and operational applications<br>• Uses digital technologies and systems safely and securely when implementing and monitoring a system, with a growing |

# Assessment Requirements for ICTNWK506 Configure, verify and troubleshoot WAN links and IP services in a medium enterprise network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and prepare for the wide area network (WAN) link installation task
- install and configure WAN links
- configure and troubleshoot the following internet protocol (IP) services:
  - network address translation (NAT)
  - dynamic host configuration protocol (DHCP)
  - access control lists (ACLs)
  - configure and troubleshoot ADSL links
  - configure and troubleshoot VPNs
- document solutions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the basic operation and configuration of internet protocol version 6 (IPv6)
- identify and describe typical router setup and operations, including:
  - ACLs
  - router calling line identification (CLI) configuration
  - router debug commands
- explain typical problems and solutions with WAN link installations.

© Commonwealth of Australia, 2025
Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- WAN service point of presence.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTNWK507 Install, operate and troubleshoot medium enterprise routers

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and prepare for the installation of an enterprise router
- design a classless internet protocol (IP) addressing scheme, to suit requirements
- install, configure and test the network elements, to ensure interoperability within the network
- apply network topologies, routing and security protocols
- apply solutions, and troubleshoot any defined network problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the basic routing concepts for small enterprise network switches and routers
- outline classless routing protocols, including:
  - enhanced interior gateway routing protocol (EIGRP)
  - open shortest path first (OSPF)
  - routing information protocol (RIPv2)
- summarise debug commands
- explain internet protocol version 4 (IPv4)
- summarise the purpose, and basic operation, of protocols in the open system interconnection (OSI) and transmission control protocol, or internet protocol (TCP/IP), models
- explain the router calling line identification (CLI) configuration.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where network installation may be conducted
- enterprise routers and operating systems
- hardware and software
- the organisational guidelines
- computers.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK509 Design and implement a security perimeter for ICT networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to build a high performance, high security, failure resistant security perimeter, for an enterprise information and communications technology (ICT) network.

It applies to individuals with excellent ICT expertise who are working as middle managers, including information security managers, network engineers, network technicians and security analysts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan and design firewall solution | 1.1 Determine level and nature of security needed to meet enterprise requirements<br>1.2 Identify security threats<br>1.3 Research available perimeter security options<br>1.4 Design security perimeter to meet identified enterprise |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | requirements |
| 2. Configure perimeter to secure network | 2.1 Deploy perimeter devices according to design<br>2.2 Configure perimeter topology<br>2.3 Configure basic functionality of devices to allow access<br>2.4 Configure advanced functions |
| 3. Plan, design and configure network devices to provide secure fallover and redundancy | 3.1 Back up device configuration<br>3.2 Design and configure perimeter to enable continuity of service during upgrade of devices<br>3.3 Design and configure perimeter to enable continuity of service in the event of device failure |
| 4. Plan, design and configure a VPN solution | 4.1 Configure perimeter for site-to-site virtual private networks (VPNs)<br>4.2 Configure perimeter as a remote access VPN server<br>4.3 Configure perimeter to allow VPN tunnel forwarding<br>4.4 Diagnose and resolve VPN connectivity issues |
| 5. Test and verify design performance | 5.1 Test functionality of basic features<br>5.2 Test functionality of advanced features<br>5.3 Perform penetration testing to verify that the perimeter meets security requirements<br>5.4 Monitor perimeter device performance<br>5.5 Monitor security breaches<br>5.6 Document test results and report to appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

# Assessment Requirements for ICTNWK509 Design and implement a security perimeter for ICT networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify threats to perimeter security
- develop design for a secure perimeter
- deploy perimeter to meet security requirements
- design and configure advanced features of perimeter devices to provide additional services
- design and configure an integrated VPN solution
- conduct exhaustive testing of perimeter.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe emerging security issues and the need for security policies
- describe the security perimeter issues related to networks, including:
  - auditing and penetration testing techniques
  - capabilities of software and hardware perimeter solutions
  - logging analysis techniques
  - organisational network infrastructure
  - security technologies according to perimeter design
  - weaknesses of installed perimeter design.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- site or prototype where perimeter security may be implemented and managed
- perimeter devices
- organisational security requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop, implement and evaluate information security in an information and communications technology (ICT) system or application during the system development life cycle (SDLC), prior to the operations and maintenance phase.

It applies to individuals with excellent information and communications technology (ICT) expertise who are working as network managers and are required to handle system and application security from the development phase through implementation to evaluation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop system and application security | 1.1 Identify enterprise ICT system or application security policies<br>1.2 Identify security requirements for the ICT system or application<br>1.3 Write an ICT system or application security plan according |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 3.6 Collect lessons learned from integration of information security into the SDLC and use to identify improvement actions<br>3.7 Collect, analyse and report performance measures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 3.6 | • Builds on prior knowledge and experience to clarify, extend understanding and contribute to ongoing organisational improvement |
| Reading | 1.1-1.4, 1.7, 2.2, 3.4, 3.7 | • Gathers, interprets and analyses technical and regulatory information to determine requirements according to client needs |
| Writing | 1.3, 2.8, 3.7 | • Uses factual information and industry related terminology to produce workplace documents |
| Oral Communication | 3.7 | • Conveys information about performance measures clearly, using specific and relevant language suitable to audience<br>• Uses listening and questioning techniques to confirm understanding |
| Navigate the world of work | 1.1, 1.3, 1.7 | • Takes full responsibility for identifying and considering relevant policies and legislative requirements in the development of system security processes |
| Get the work done | 1.5-1.7, 2.1, 2.3-2.7, 2.9, 3.1-3.5 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and reduce risks<br>• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a combination of formal and logical planning processes and an increasingly intuitive |

# Assessment Requirements for ICTNWK510 Develop, implement and evaluate system and application security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- create an information and communications technology (ICT) system or application security plan
- implement system and application security
- apply and verify compliance with the identified standards
- practise secure coding practices
- assess and evaluate system compliance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise a range of programming languages, including those used by the organisation
- summarise best practice in application of language syntax rules
- explain data structures
- outline graphical user interfaces (GUIs)
- summarise small-size application development
- identify and summarise the legislation, regulations and codes of practice that impact on network security
- describe the risk assessment process required in evaluating system vulnerabilities, including:
  - risk mitigation
  - security control selection
  - implementation and evaluation process
  - software security standards compliance.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- ICT business specifications
- information on the security environment, including laws and legislation, existing organisational security policies, organisational expertise and knowledge
- possible security environment, which also includes the threats to security that are, or are held to be, present in the environment
- risk analysis tools and methodologies
- ICT security assurance specifications
- application and system scenarios.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK511 Manage network security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to implement and manage security functions throughout a network.

It applies to individuals with excellent information and communications technology (ICT) expertise who lead the development of strategic reviews of security and provide technical advice, guidance and leadership in resolution of specified problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Define a process for designing security | 1.1 Define planning phase for network security design<br>1.2 Define building phase for network security design<br>1.3 Define managing phase for network security design |
| 2. Identify threats to network security | 2.1 Determine why attacks occur<br>2.2 Determine who the attack may come from<br>2.3 Analyse common types of network vulnerabilities |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.4 Determine how attacks occur<br>2.5 Design a threat model to categorise treats |
| 3. Analyse security risks | 3.1 Determine elements of risk management<br>3.2 Determine assets that require protection<br>3.3 Categorise assets and calculate their value to the organisation<br>3.4 Create a risk management plan |
| 4. Create a security design | 4.1 Determine attacker scenarios and threats<br>4.2 Design security measures for network components<br>4.3 Obtain feedback and adjust if required<br>4.4 Develop security policies |
| 5. Design and implement responses to security incidents | 5.1 Design auditing and incident response procedure<br>5.2 Document security incidents<br>5.3 Implement configurations aligned with incident response procedure design<br>5.4 Test and sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Writing | 2.5, 3.4, 4.2, 4.4, 5.1, 5.2, 5.4 | • Uses factual information and industry related terminology to develop organisational plans, security policies and document security breaches |
| Oral Communication | 4.3 | • Uses active listening, observational and questioning techniques in order to identify different perspectives and confirm and clarify understanding |
| Numeracy | 3.3 | • Calculates equipment costs in order to assess their business related value |
| Get the work | 1.1-1.3, 2.1-2.4, 3.1-3.3, 4.1, 4.2, | • Demonstrates a sophisticated understanding of principles, concepts, language and practices |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| done | 5.3, 5.4 | associated with the digital world and uses these to troubleshoot and reduce risks<br>• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a combination of formal and logical planning processes and an increasingly intuitive understanding of context to plan control methods for managing system security<br>• Makes a range of critical decisions in relatively complex situations, taking a range of constraints into account<br>• Recognises and addresses complex problems, including systems processes and rapid deployment of solutions to problems involving failure and security incidents |

# Assessment Requirements for ICTNWK511 Manage network security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify threats to security
- develop risk management plan
- design network security policies
- analyse and plan solutions to compromised networks and design incident response
- evaluate security information and use it to plan suitable control methods and countermeasures
- add network controls, according to system security policies, procedures and risk management plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- recognise and describe common ICT networks and their configuration
- identify and describe network attacks, vulnerabilities and related weaknesses of installed infrastructure, including:
  - security technologies
  - emerging security issues
- identify and describe network security measures, including:
  - auditing and penetration testing techniques
  - logging analysis techniques
  - organisational network infrastructure
  - capabilities of software and hardware solutions
  - general features of emerging security policies, with depth in security procedures

© Commonwealth of Australia, 2025 Future Skills Organisation

  - network management and security process controls
- explain network security implementation risk management plans and procedures, including:
  - network security planning
  - implementation
  - cost analysis and budgeting.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site or prototype where network security may be implemented and managed
- network support tools currently used in industry
- organisational security policies, manufacturer recommendations and security standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK513 Manage system security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to implement and manage security on an operational system.

It applies to individuals working in middle management in technical advice, guidance and leadership roles such as security managers and security analysts responsible for implementing and managing the organisations security management system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse threats to system | 1.1 Evaluate the organisation’s system and verify that it meets enterprise guidelines and policies<br>1.2 Conduct risk analysis on system and document outcomes<br>1.3 Evaluate threats to the system and document findings<br>1.4 Compile and document human interactions with system |
| 2. Determine risk category | 2.1 Conduct a risk assessment on the system and categorise |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | risks<br>2.2 Conduct a risk assessment on human operations and interactions with the system and categorise risks<br>2.3 Match risk plans to risk categories<br>2.4 Determine and plan resources by risk categories |
| 3. Identify appropriate controls | 3.1 Devise and put in place effective controls to manage risk<br>3.2 Design policies and procedures to cover user access of the system<br>3.3 Conduct training in the use of system-related policies and procedures<br>3.4 Monitor high-risk categories at specified periods<br>3.5 Categorise and record system breakdowns |
| 4. Include controls in the system | 4.1 Develop security plan and procedures to include in management system<br>4.2 Develop security recovery plan<br>4.3 Implement system controls to reduce risks in human interaction with the system |
| 5. Monitor system tools and procedures | 5.1 Review and monitor risks and controls, using a management review process<br>5.2 Review risk analysis process based on security benchmarks from vendors, security specialists and organisational reviews<br>5.3 Plan to re-evaluate system and identify new threats and risks |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 5.1, 5.2 | • Gathers, interprets and analyses technical and enterprise information to determine requirements according to client needs |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.2-1.4, 2.1, 2.2, 3.2, 3.5, 4.1, 4.2 | • Prepares information that incorporates a synthesis of knowledge, using information and communications technology (ICT) terminology and cohesive language in a format and style appropriate to a specific audience |
| Navigate the world of work | 1.1 | • Takes full responsibility for identifying and considering relevant policies and procedures when managing a security system |
| Interact with others | 3.3 | • Demonstrates an increasing capacity to manipulate oral, visual and or written formats to achieve a specific purpose with full command of vocabulary relevant to context |
| Get the work done | 1.1-1.3, 2.1-2.4, 3.1, 3.4, 4.3, 5.3 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and reduce risks<br>• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a combination of formal and logical planning processes and an increasingly intuitive understanding of context to develop a security plan and a security recovery plan<br>• Makes a range of critical decisions in relatively complex situations, taking a range of constraints into account<br>• Recognises and addresses complex problems involving participation in group solutions and analysis, and resolving issues for a mixed mode environment of people and systems processes |

# Assessment Requirements for ICTNWK513 Manage system security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- implement and manage security functions on a system
- conduct risk assessment
- set up effective controls to manage risk
- develop security plan and security recovery plan
- monitor risks and controls
- review risk analysis process.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the general features of specific security technologies
- describe risk analysis techniques, with a focus on their general features, and depth in security procedures
- describe the common security requirements of a client's organisation, including:
  - threats
  - security techniques and technologies
- outline systems management and process control in relation to security
- explain systems technologies, including a broad summary of their general features and capabilities.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where system security may be implemented and managed
- use of utility tools currently used in industry
- organisational security policies
- manufacturer recommendations
- security standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK514 Model preferred system solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to fit a physical model into the design phase of the methodology.

It applies to individuals working as system designers who are required to model proposed solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Review and confirm information requirements and existing models | 1.1 Review information requirements and clarify areas that are not understood<br>1.2 Identify organisational standards for developing models, and check the model development method for consistency with organisational goals<br>1.3 Identify assumptions and incorporate into modelling process<br>1.4 Identify goals and resolve into tasks required to be performed to obtain goals |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Define internal tasks needed to perform identified goals |
| 2. Resolve conflicts and inconsistencies | 2.1 Identify missed opportunities arising from previous and current model development<br>2.2 Identify bottlenecks, overlooked functionalities and other issues, and resolve with client input as required |
| 3. Build and test model | 3.1 Develop model based on existing architecture<br>3.2 Document details of model, according to agreed project or organisational standards<br>3.3 Develop model according to project deliverables and acceptance criteria within determined timeframe and project constraints<br>3.4 Test model against the test plan<br>3.5 Document test data to ensure that test procedures validate performance of the model |
| 4. Ensure that the model represents a workable solution | 4.1 Ensure a consensus view of key information and communications technology (ICT) stakeholders is represented in model<br>4.2 Ensure model is checked by key ICT stakeholders to confirm common knowledge of the model and the proposed solution<br>4.3 Submit model to appropriate person for sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 3.2, 3.4, 3.5 | • Recognises and interprets technical material and organisational standards to determine job requirements |
| Writing | 3.2, 3.5 | • Develops material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Oral | 1.1, 2.2 | • Clearly articulates requirements, using relevant language suitable to diverse audiences, and employs |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | | listening and questioning techniques to confirm understanding |
| Navigate the world of work | 1.2 | • Takes full responsibility for identifying and considering relevant policies and requirements in the development of preferred system solutions |
| Interact with others | 4.2, 4.3 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.3-1.5, 2.1, 2.2, 3.1-3.4, 4.1 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a combination of formal and logical planning processes and an increasingly intuitive understanding of context to set benchmarks and identify project scope when developing a model<br>• Makes a range of critical decisions in relatively complex situations, taking a range of constraints into account<br>• Recognises and addresses complex problems in systems models and may seek advice from relevant experts |

# Assessment Requirements for ICTNWK514 Model preferred system solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use two or more development tools
- develop specific areas of a system for further information or to confirm a software or hardware direction
- identify opportunities for expansion of the model
- test the model to a test plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the client business domain in relation to the organisational structure
- summarise current industry-accepted hardware and software products and standards
- explain modelling techniques and methodologies
- outline a range of development and test tools
- explain systems development methodologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry and include access to:

- acceptance criteria
- client requirements
- future organisational business processes

© Commonwealth of Australia, 2025 Future Skills Organisation

- organisational and process goals
- project budget
- project deliverables
- standards for model development
- technical specifications
- a test plan.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK515 Develop configuration management protocols

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop administrative and technical procedures throughout the life cycle of a system, network, software and documentation project.

It applies to individuals working in a variety of information and communications technology (ICT) areas who develop and manage tasks that facilitate the development of a system, such as version control and naming standards.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish configuration management requirements | 1.1 Establish identification standards for naming and version control of system, network, software and documentation to align with organisational needs<br>1.2 Establish tools and procedures for the required level of integration into the programming, system or network environment<br>1.3 Determine responsibilities for configuration management |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | within the project and for ongoing support, including approval of changes<br>1.4 Determine the appropriate points for configuration of particular items |
| 2. Establish control mechanisms | 2.1 Establish methods for identification and recording of change requests in line with organisational guidelines<br>2.2 Establish acceptance criteria, test and acceptance processes and processes for approval of change requests in line with organisational guidelines<br>2.3 Establish security, access and management control criteria and quality benchmarks<br>2.4 Determine necessary audit trails and alerts for variations or non-conformance |
| 3. Establish monitoring mechanisms | 3.1 Establish mechanisms to identify software status throughout the software life cycle, or the status of the system or network during upgrading or reconfiguration<br>3.2 Determine management of records and status reports, including the history of baselines and their links to backups<br>3.3 Define target audiences and determine the level of detail required in the status reports<br>3.4 Integrate configuration management into general project management processes for monitoring and control purposes<br>3.5 Document control and monitoring mechanisms |
| 4. Manage the release of the product to clients | 4.1 Determine physical and functional completeness of items prior to release<br>4.2 Determine requirements for formal control of software products and documentation<br>4.3 Determine policies for retention of baseline and master copies in line with safety, security and legislative requirements and organisational guidelines |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.2, 4.3 | • Recognises and interprets legislative, organisational and technical material to determine job requirements |
| Writing | 1.1, 1.2, 2.1-2.3, 3.5, 4.2 | • Develops a broad range of materials, such as administrative procedures, for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations |
| Navigate the world of work | 4.3 | • Understands own legal rights and responsibilities, and is extending understanding of general legal principles applicable across work contexts |
| Interact with others | 1.3 | • Collaborates with others to achieve joint outcomes, playing a lead role in facilitating consensus |
| Get the work done | 1.2-1.4, 2.1-2.4, 3.1- 3.4, 4.1, 4.2 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Uses formal and informal processes to monitor implementation of solutions<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information, and reflects on outcomes |

# Assessment Requirements for ICTNWK515 Develop configuration management protocols

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop technical and administrative procedures for use during the software life cycle, system or network reconfiguration or the upgrade process, including:
  - quality processes
  - audit trials
  - version control
  - configuration management procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain benchmarking methodologies
- outline configuration management
- summarise control mechanisms, such as acceptance criteria, test and acceptance processes, and security, access and management control criteria
- explain monitoring mechanisms
- identify and describe standards, benchmarks and organisational guidelines that impact on management protocols
- outline project planning methodologies and tools
- summarise quality assurance and quality processes
- clarify safety, security and legislative requirements
- explain software development methodologies.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- Computer aided software engineering (CASE) tools
- future organisational business processes
- organisational standards for documentation and version control
- project budget and timeframe
- project management process and hierarchy
- legislation and organisational guidelines
- technical specifications
- test plans.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK516 Determine best-fit topology for a local network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to determine the most appropriate way of networking computers to meet user needs and business requirements.

It applies to individuals in senior networking roles who are required to plan the most appropriate topology for a proposed network.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine user needs | 1.1 Identify the different segments of the proposed network based on business requirements<br>1.2 Determine segment needs, using network functional analysis<br>1.3 Estimate traffic content and volumes based on business requirements<br>1.4 Develop a prioritised organisational network functional matrix |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Develop local area network specification | 2.1 Determine the resource requirements for each network segment on the basis of functional analysis<br>2.2 Analyse features of the physical environment for the effect on network design<br>2.3 Conduct a costing process for possible topology options<br>2.4 Consider topology options with reference to available resources and network functional matrix<br>2.5 Select and document appropriate network topology based on business requirements and functional analysis |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.5 | • Interprets textual information obtained from a range of sources and determines how content may be applied to organisational requirements |
| Writing | 2.5 | • Develops material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Numeracy | 1.3, 2.1, 2.3, 2.4 | • Interprets numerical information and applies mathematical calculations to determine resource expenditure within predetermined constraints<br>• Interprets numerical data to estimate traffic needs |
| Get the work done | 1.1, 1.2, 1.4, 2.1, 2.2, 2.4, 2.5 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues |

# Assessment Requirements for ICTNWK516 Determine best-fit topology for a local network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse business or organisational needs
- identify the most appropriate local area network (LAN), virtual private network (VPN) or wireless local area network (WLAN) topology
- document recommendations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the typical network topologies for the following:
  - large and small LANs
  - wide area networks (WANs)
  - VPNs
  - virtual local area networks (VLANs)
  - WLANs
- identify and describe the typical components of a local network, including:
  - adaptor cards
  - bridges
  - Ethernet hardware
  - gateways
  - hubs
  - routers
- describe the software and programming requirements of a local network, including:

© Commonwealth of Australia, 2025 Future Skills Organisation

  - security protocols
  - transmission control protocol or internet protocol (TCP/IP)
- describe the business consideration for establishing a local network including:
  - growth projections and capacity planning
  - costs and queuing constraints
  - high and low speed links
  - redundancy paths
  - response time and reliability requirements
  - scope of operation
  - traffic flow patterns
  - traffic load
  - application requirements of users
- outline of installation requirements for local area networks:
  - cabling, particularly unshielded twisted pair (UTP), shielded twisted pair (STP) or optic fibre
  - characteristics and relative strengths and weaknesses of LAN network topologies
  - features and capabilities of current industry accepted hardware and software products
  - features of line sharing protocols.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- business requirements
- equipment specifications
- organisational and industry costing.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK517 Determine best-fit topology for a wide area network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify the best way computers and local area networks (LANs) can be connected to make a wide area network (WAN).

It applies to individuals with excellent planning and information and communications technology (ICT) skills in networking areas who are required to research and recommend the most appropriate topology for a WAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify WAN needs | 1.1 Identify the different LAN, wireless local area network (WLAN) or virtual private network (VPN) segments of the proposed WAN<br>1.2 Determine segment needs using functional analysis<br>1.3 Estimate traffic content and volumes according to expected organisational usage, by examining telecommunications infrastructure |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Develop an organisational WAN functional matrix |
| 2. Create WAN specification | 2.1 Determine resource requirements for each LAN, WLAN or VPN segment on the basis of functional analysis<br>2.2 Consider and report how features of the physical environment affect WAN design<br>2.3 Choose a WAN service appropriate to the amount and type of traffic expected to access the WAN<br>2.4 Include redundant links in the proposed WAN connectivity for link backup purposes, in case the main link is disrupted<br>2.5 Document appropriate WAN service |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Writing | 2.2, 2.5 | • Develops material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Numeracy | 1.3, 1.4 | • Undertakes complex functional calculus to develop a WAN functional matrix<br>• Interprets numerical data to estimate traffic needs and calculate business expenses |
| Get the work done | 1.1-1.3, 2.1-2.4 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues with reference to resource constraints |

# Assessment Requirements for ICTNWK517 Determine best-fit topology for a wide area network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- consider budget constraints and business needs
- identify the configuration for connecting a local area network (LAN), wireless local area network (WLAN) or virtual private network (VPN) into a wide area network (WAN)
- document the configuration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the typical network topologies for the following networks:
  - large and small LANs
  - WANs
  - VPNs
  - virtual local area networks (VLANs)
  - WLANs
- identify and describe the typical components and technologies required for a WAN, including:
  - concepts and types of modems
  - internet protocol (IP) addressing
  - packet switching
  - routed or routable protocols, including IP, IPX and AppleTalk
  - router operations, including double data rate (DDR)
  - routing protocols, including routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP) and open shortest path first (OSPF)

© Commonwealth of Australia, 2025 Future Skills Organisation

  - transmission control protocols or internet protocols (TCPs/IPs)
  - relationship of asynchronous and synchronous communication
  - use of microwave and satellite communication in networking
- describe the business consideration for establishing a WAN, including:
  - constraints and costs
  - features of telecommunications infrastructure, including the difference between digital and analogue networks
  - growth projections and capacity planning
  - high or low speed links
  - protocols
  - redundancy paths
  - response time and reliability requirements
  - scope of operation
  - security
  - traffic flow patterns
  - traffic load
  - users and the applications expected.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- design documents relating to LANs to be incorporated into the WAN
- equipment specifications
- vendor product catalogues and costs.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK518 Design an enterprise wireless local area network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to conduct an internal and outdoor site survey, and design a complex wireless local area network (WLAN).

It applies to individuals working in the networking area who are required to evaluate client requirements and design an appropriate WLAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Document current network configuration | 1.1 Obtain details of current network layout and parameters<br>1.2 Hold consultations with key stakeholders<br>1.3 Document the current network configuration, network topology and links to carrier |
| 2. Research client needs | 2.1 Identify the client's current needs<br>2.2 Determine future needs<br>2.3 Document current and future needs according to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | organisational requirements |
| 3. Implement site survey | 3.1 Select the appropriate diagnostic tools and measurement processes<br>3.2 Select test equipment and ensure calibration<br>3.3 Undertake site survey with minimum disruption to client and ensure safe working environment for users and survey personnel<br>3.4 Record physical infrastructure, building use, aesthetics and other issues that will impact on future network performance and acceptance by the client<br>3.5 Record radio frequency interference issues, sources and possible resolution<br>3.6 Document results of site survey |
| 4. Develop specifications for upgrade of wireless network | 4.1 Document the current network performance equipment and capacity for the expanded network<br>4.2 Assess interference issues relating to existing radio frequency, topographic barriers, climate, obstacles, transmission distances and construction materials<br>4.3 Assess optimum location and position of access points, repeaters, routers and other equipment<br>4.4 Develop cabling plans and repeater links, including power requirements<br>4.5 Determine frequency to be used based on client and user requirements |
| 5. Model network | 5.1 Determine appropriate test and modelling routines<br>5.2 Determine estimated network traffic and planned growth<br>5.3 Test planned network using modelling tools and techniques<br>5.4 Document outcome of tests and revise design where required |
| 6. Determine components for network | 6.1 Select and test vendor products and equipment where appropriate<br>6.2 Consult others, including emerging industry bodies, for sustainable compatibility, economic running costs and user connectivity access<br>6.3 Finalise components list for suitability and vendor claims |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 6.4 Prepare implementation plans |
| 7. Present design to client | 7.1 Present the design in a clear and logical fashion<br>7.2 Provide advice to client on reasons for design choice<br>7.3 Inform the client of design limitations, performance expectations and possible unanticipated outcomes, including security threats<br>7.4 Obtain feedback from client<br>7.5 Undertake modifications to design if required<br>7.6 Complete final design documentation and seek client endorsement |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.3, 3.2, 7.4 | • Recognises and interprets legislative, organisational and technical material to determine job requirements |
| Writing | 1.3, 2.3, 3.4-3.6, 4.1, 4.4, 5.4, 6.3, 7.5, 7.6 | • Develops a broad range of technical material and creates records for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Oral Communication | 1.2, 6.2, 7.2-7.4, 7.6 | • Uses listening and questioning skills to confirm understanding for requirements and participates in a verbal exchange of ideas/solutions<br>• Uses appropriate, detailed and clear language to address stakeholders, users and industry bodies to disseminate information |
| Numeracy | 3.2, 5.2, 6.2 | • Interprets numerical data to estimate and project traffic needs, undertake a cost benefit analysis and accurately calibrate equipment |
| Navigate the world of work | 3.3 | • Understands own legal rights and responsibilities and is extending understanding of general legal principles applicable across |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | work contexts |
| Interact with others | 7.1 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1, 2.1, 2.2, 3.1-3.3, 3.5, 4.2-4.5, 5.1, 5.3, 6.1, 6.4 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues<br>• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints<br>• Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focussing attention on critical issues and variables |

# Assessment Requirements for ICTNWK518 Design an enterprise wireless local area network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- assess wireless network performance requirements for the client
- measure and diagnose wireless working environment
- produce wireless models and network specifications appropriate to client requirements
- produce wireless network designs and component lists
- document the design and obtain client approval.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe wireless network survey techniques, including:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - bandwidth and quality of service
  - factors affecting signal quality
- outline the key technical considerations for designing a wireless network, including:
  - features of antenna design
  - layer 2 and layer 3 design issues
  - impact of radio frequency
  - problems associated with topography and obstacles in radio transmission path
  - wireless topologies
  - wireless local area networks (WLAN) and wireless metropolitan access network (WMAN) solutions

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the key client organisation considerations when designing a wireless network, including:
  - small office home office (SOHO) and enterprise local area networks (LANs)
  - transmission control protocols or internet protocols (TCP/IP) and applications
  - wireless security strategies
  - security threats
- outline the software consideration when designing a wireless network, including:
  - network protocols and operating systems
  - security protocols, standards and data encryption.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- network infrastructure, including wireless hardware and software
- network technical requirements
- real or simulated wireless networks
- appropriate diagnostic equipment and standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTNWK519 Design an ICT security framework

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research and assess security framework requirements with consideration of statutory and commercial requirements
- determine the security risks and develop controls and contingencies
- identify costs associated
- document the security framework and obtain approval
- develop security policies and operating procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the design criteria for a security framework, including:
  - the client business domain
  - legislation relating to information and communications technology (ICT) security
  - current industry accepted hardware
  - current industry software products
  - security features and capabilities
  - operating systems
  - risk relating to ICT security
- identify and outline relevant privacy legislation
- identify and outline common security considerations for businesses, including:
  - typical environments
  - threats

© Commonwealth of Australia, 2025 Future Skills Organisation

- policies and strategies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- information on the security environment
- laws or legislation
- existing organisational security policies
- organisational expertise
- ICT business specifications
- ICT security assurance specifications
- security environment, which also includes the threats to security that are, or are held to be, present in the environment
- risk analysis tools or methodologies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK520 Design ICT system security controls

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design the security controls that ensure an information and communications technology (ICT) system is both physically and legally secure.

It applies to individuals in a range of ICT areas who are required to guarantee the security of ICT systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Review organisational security policy and procedures | 1.1 Review business environment to identify existing requirements<br>1.2 Determine organisational goals for legal and security requirements<br>1.3 Verify security needs in a policy document<br>1.4 Determine legislative impact on business domain<br>1.5 Gather and document objective evidence on current security |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | threats<br>1.6 Identify options for using internal and external expertise<br>1.7 Establish and document a standard methodology for performing security tests |
| 2. Develop security plan | 2.1 Investigate theoretical attacks and threats on the business<br>2.2 Evaluate risks and threats associated with the investigation<br>2.3 Prioritise assessment results and write security policy<br>2.4 Document information related to attacks, threats, risks and controls in a security plan<br>2.5 Review the security strategy with security approved key stakeholders<br>2.6 Integrate approved changes into business plan and ensure compliance with statutory requirements |
| 3. Design controls to be incorporated into system | 3.1 Implement controls in a procedurally organised manner to ensure minimum risk of security breach in line with organisational guidelines<br>3.2 Monitor each phase of the implementation to determine the impact on the business<br>3.3 Take corrective action on system implementation breakdown<br>3.4 Record implementation process<br>3.5 Evaluate corrective actions for risk<br>3.6 Plan risk assessment review process<br>3.7 Take action to ensure confidentiality throughout all phases of design |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.5, 3.1 | • Recognises and interprets legislative, organisational and technical material to determine |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | job requirements |
| Writing | 1.3, 1.5, 1.7, 2.3, 2.4, 2.6, 3.4 | • Develops a broad range of business reports for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Oral Communication | 2.5 | • Uses appropriate, detailed and clear language to address personnel and disseminate information in a group environment<br>• Uses listening and questioning skills to confirm understanding for requirements, and participates in a verbal exchange of ideas/solutions |
| Navigate the world of work | 1.2, 1.4, 2.6 | • Keeps abreast of legislative or regulatory requirements relevant to own role and considers implications of any changes when planning and undertaking work |
| Get the work done | 1.5, 1.6, 2.1-2.3, 3.1-3.3, 3.5-3.7 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues<br>• Monitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles that may be adaptable in the future |

# Assessment Requirements for ICTNWK520 Design ICT system security controls

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review organisational security policies and procedures
- establish realistic security procedures
- design security plan and controls for a system
- develop a security control strategy
- oversee the implementation and evaluation of the strategy.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe communications security, including human organisational interactions
- describe how to conduct an information security risk assessment
- identify and summarise internet security technologies and processes, including:
  - firewalls
  - physical security
  - security testing methods for performing security tests
  - wireless security
  - security threats
  - the impact of security policies, plans and strategies
  - general features of specific security technology
  - risk assessment
- describe current industry accepted security processes, including general features and capabilities of software and hardware solutions

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the legal and ethical standards expected when considering security controls, including:
  - ethics in information and communications technology (ICT)
  - privacy issues
  - legislation
- summarise the need for developing organisational guidelines, processes, policies and procedures.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- ICT security assurance specifications
- probability, frequency and severity of direct and indirect harm, loss or misuse of the ICT system
- risk analysis tools and methodologies
- an ICT environment in which there are security risks
- legislation, regulations and standards relating to security
- existing organisational security policies
- organisational expertise.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK521 Install, configure and test a payment gateway

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install, configure and test a payment gateway that enables translation of electronic payment information provided online into a form accessible to a merchant processor.

It applies to individuals in the network or web development area who are required to build e-commerce facilities into websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare server and e-business software for payment site | 1.1 Analyse client requirements and regulatory requirements<br>1.2 Evaluate payment software and select appropriate software to meet specifications, including security and privacy benchmarks<br>1.3 Review and compare online merchant options<br>1.4 Choose payment method with reference to business requirements and client expectations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Test payment software and evaluate to ensure suitability and compatibility with current system and to meet client needs |
| 2. Install payment gateway | 2.1 Install selected payment software<br>2.2 Establish online merchant account<br>2.3 Configure web pages and back-end solutions to handle requests and integrate with the database for each transaction<br>2.4 Obtain merchant account information from the financial institution<br>2.5 Implement appropriate security systems to protect the payment infrastructure<br>2.6 Configure payment gateway to accept the appropriate payment methods and transaction types according to business requirements |
| 3. Test payment gateway | 3.1 Check transaction server for functionality against expected performance benchmarks<br>3.2 Test gateway using transaction types<br>3.3 Verify transactions by using the administrative functions of chosen payment software<br>3.4 Document payment gateway |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.4, 3.3 | • Recognises and interprets organisational and technical material to determine job requirements |
| Writing | 2.4, 2.6, 3.4 | • Develops a range of reports for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Numeracy | 1.2, 1.5, 3.1 | • Interprets numerical data to check payment transactions against expectations and requirements |
| Get the work done | 1.2-1.5, 2.1-2.6, 3.1-3.3 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues<br>• Monitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles that may be adaptable in the future<br>• Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focussing attention and remedying problems as they arise |

# Assessment Requirements for ICTNWK521 Install, configure and test a payment gateway

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review client requirements and determine payment software
- install and configure the payment gateway
- test and verify transactions and functionality
- document completed payment gateway.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe online commerce systems and processes and their respective advantages/disadvantages, including:
  - batching verification
  - payment software products
  - public key infrastructure (PKI)
  - globally unique ID (GUID)
- describe the processes and techniques associated with implementing client-side shopping carts through active server pages (ASP) and interfacing with databases with ActiveX Data Objects (ADO)
- describe the relative advantages and disadvantages of credit card, digital cash and online cheque systems
- describe the relevance of Copyleft and Free Software Foundation
- outline electronic commerce modelling language (ECML)
- summarise encryption options for national and international business
- identify legislation, regulations and standards that influence online commerce, including:

© Commonwealth of Australia, 2025 Future Skills Organisation

- copyright
- intellectual property
- privacy.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- appropriate servers and software
- payment software
- a simulated merchant account
- a website.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK522 Build decks using wireless markup language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create wireless markup language (WML) decks.

It applies to individuals who create specialised language intended for devices that implement the Wireless Application Protocol (WAP) specification, such as mobile phones. It provides navigational support, data input, hyperlinks, text and image presentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Design WML deck | 1.1 Analyse existing hypertext markup language (HTML) page design and identify information to be accessible via hand-held device<br>1.2 Design deck logical structure, ensuring that deck size is kept within acceptable boundaries<br>1.3 Determine structure of content based on business needs and user requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Identify links between sets of cards<br>1.5 Design cards for user input or for the selection of more than one item |
| 2. Create deck | 2.1 Code each card in the deck, ensuring each card has an ID and a title<br>2.2 Create cards using language and practices compliant with the international WML standard<br>2.3 Use best practice coding standards in creating the deck<br>2.4 Avoid device specific features in creating the deck |
| 3. Test deck | 3.1 Test deck on multiple devices to ensure compatibility with as many hand-held devices as possible<br>3.2 Validate WML files by typing and submitting the uniform resource locator of the WML file or the WML validator<br>3.3 Ensure the <go> and <prev> tasks select the correct card in the deck<br>3.4 Ensure the tested WML files meet the needs of the business client |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.1, 2.2, 3.4 | • Recognises and interprets technical material to determine and confirm job requirements |
| Writing | 2.1, 2.2, 3.2 | • Demonstrates sophisticated writing skills using specialised language, stylistic devices and appropriate conventions to express precise meaning |
| Oral Communication | 1.3 | • Uses listening and questioning skills to confirm understanding for requirements, and participates in a verbal exchange of ideas/solutions |
| Navigate the world of work | 2.2, 2.3 | • Recognises and responds to explicit and implicit protocols within familiar work contexts |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.2, 1.4, 1.5, 2.4, 3.1-3.4 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues<br>• Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future<br>• Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focussing attention and remedying problems as they arise |

# Assessment Requirements for ICTNWK522 Build decks using wireless markup language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse existing parameters
- design wireless markup language (WML) files that meet the business client's need
- create the code using appropriate language and standards
- test and validate compatibility and performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the internet standards and transmission control protocols and internet protocols (TCPs/IPs) relevant to WML
- define five layer protocol stack of TCP/IP and explain its function in applications development
- outline wireless application protocol (WAP)
- outline application communication protocols
- identify and apply WML code, including:
  - WMLScript
  - WMLScript specification
  - extensible markup language (XML) 1.0 standard
  - XML applications
- explain the following features of wireless:
  - application environment
  - datagram protocol
  - session protocol

© Commonwealth of Australia, 2025 Future Skills Organisation

  - transaction protocol
  - transport layer security
- identify and summarise the computer code of ethics as it applies to programming.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in networking, and include access to:

- XML parser
- WML valuator.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK524 Install and configure network access storage devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to select, install and test a network access storage (NAS) device in a local area network (LAN).

It applies to individuals who install, configure and test a NAS device.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine specifications for NAS | 1.1 Determine and document the topology of the local area network (LAN)<br>1.2 Investigate and determine current and future storage requirements according to current and future business needs<br>1.3 Determine the number and type of NAS devices required, and refer to current and future network requirements<br>1.4 Determine the requirements for network management, backup, security and redundancy according to organisational policy |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Select appropriate hardware and software | 2.1 Select the hardware and operating system software version with the appropriate features according to required specifications<br>2.2 Choose storage applications to determine access and response times |
| 3. Install hardware and software | 3.1 Install required level of RAID hardware or software<br>3.2 Install hard disks as specified by manufacturer instructions<br>3.3 Install operating system software according to manufacturer instructions<br>3.4 Connect to network media using media that meets required standard<br>3.5 Connect power, power it up and check operation |
| 4. Configure NAS | 4.1 Configure a network address and hostname<br>4.2 Establish and test a valid network connection with other LAN devices<br>4.3 Configure hard disks according to RAID requirements and format with appropriate file system<br>4.4 Configure access and security according to application and organisational requirements |
| 5. Test and troubleshoot NAS | 5.1 Test NAS according to manufacturer requirements and organisational guidelines<br>5.2 Ensure access and response times are acceptable to required applications, users and organisational policy<br>5.3 Make adjustments to the configuration, depending on test and troubleshooting results |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.4, 2.1, 3.2, 3.3, 4.4, 5.1, 5.2 | • Recognises and interprets technical, manufacturer and organisational documentation to determine and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | confirm job requirements |
| Writing | 1.1, 4.1 | • Develops a range of workplace documentation for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Numeracy | 1.2, 1.3, 5.2 | • Uses mathematical formulae to calculate required equipment, undertake measurements and determine response times |
| Navigate the world of work | 1.4, 3.4, 5.1, 5.2 | • Takes full responsibility for identifying and considering relevant organisational protocols and requirements |
| Get the work done | 1.1-3, 2.1, 2.2, 3.1-3.5, 4.1-4.4, 5.2, 5.3 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues<br>• Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future<br>• Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focussing attention and remedying problems as they arise |

# Assessment Requirements for ICTNWK524 Install and configure network access storage devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine the specifications for a network access storage (NAS)
- select the appropriate hardware and software requirements
- install a network access storage (NAS) device without interruption to other local area network (LAN) services
- configure LAN services accessing the NAS to allow user-less intervention for normal operation
- test and resolve configuration problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the advantages and disadvantages of NAS versus direct attached storage (DAS) devices
- identify and summarise the legislative, regulatory, standards and codes of practice related to NAS
- Identify and describe common hard drive types and connectors
- identify and describe common network cable types and connectors
- outline the common network topologies
- describe the implementation and configuration of networks
- recognise and describe redundant array of independent disks (RAID) configurations and state their application in data storage.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a NAS device or basic components to build a NAS, such as personal computer, operating system, hard disk, and network connection
- network devices, such as switches and routers
- workstations and servers
- cabling access points and a wireless access point.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK525 Configure an enterprise virtual computing environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop and implement virtualisation technologies, with the goal of providing a more sustainable information and communications technology (ICT) environment.

It applies to individuals working as senior networking staff responsible for increasing the sustainability of an organisation, by using virtualisation technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to configure the virtual environment | 1.1 Obtain the technical specifications and system requirements from virtualisation software vendors<br>1.2 Review the environmental requirements for installing the virtualisation software |
| 2. Install and configure the support services | 2.1 Install and configure the required services and ports, according to virtualisation software vendors |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Install and configure virtualisation client and server management software, according to the enterprise requirements<br>2.3 Install, configure and manage environmental requirements to ensure that virtual machines function<br>2.4 Configure virtual machines, using remote client management software |
| 3. Design and configure the virtual network | 3.1 Plan and design the virtual network, according to client needs<br>3.2 Install and configure the virtual networks<br>3.3 Verify the functionality of virtualisation network, according to the enterprise requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 3.1, 3.3 | • Recognises and interprets technical, manufacturer and organisational documentation, to determine and confirm job requirements |
| Writing | 1.1, 1.2, 3.1 | • Prepares documentation expressing ideas, explores complex issues, and is constructed logically, succinctly and accurately<br>• Writes and edits computer code, and technical data, ensuring the correct syntax and accuracy |
| Navigate the world of work | 1.2, 2.2 | • Takes full responsibility for identifying and considering the relevant organisational protocols and policies for designing, configuring and managing virtual networks in a virtual environment |
| Interact with Others | 1.1, 3.1, 3.3 | • Collaborates with others, sharing information to build strong work groups<br>• Elicits feedback and provides feedback to others |
| Get the work done | 1.1, 1.2, 1.3, 2.1-2.4 | • Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | and performance during implementation, identifying and addressing any issues<br>• Actively identifies systems, devices and applications with the potential to meet current and/or future needs<br>• Responds intuitively to problems requiring immediate resolution, using understanding of the context to recognise anomalies and deviations from normal expectations, in a virtualised machine environment |

# Assessment Requirements for ICTNWK525 Configure an enterprise virtual computing environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- obtain the visualisation specifications from vendors, and compare them with the environmental requirements
- install, configure and test, virtual machines
- manage the environmental requirements
- install and use software tools.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and summarise, current government and industry policies, and guidelines, related to the development of sustainable information and communication technology (ICT) environments
- describe the current technologies, and processes, designed to produce a sustainable ICT environment
- outline the available tools and software applications required to manage virtual machines
- explain the configuration of software applications required to manage virtual machines
- explain the configuration required to integrate virtual machines into the existing network design
- outline the structure, function and business organisation of the client.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in networking, and include access to:

- a site or prototype where virtual machine environments may be implemented
- the network's technical requirements
- industry relevant virtualisation software.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTNWK527 Manage an enterprise virtual computing environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- monitor and provide resources to a virtual environment
- create and deploy virtual machines
- implement changes to virtual machines
- back up and recover a virtual machine.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe, current government and industry policies, and guidelines, in relation to the development of sustainable information and communications technology (ICT) environments
- describe the current technologies, and processes, designed to produce a sustainable ICT environment
- define the structure, functions, and business organisation of the client
- summarise the application and deployment of virtual machine management tools
- outline virtual machine configuration and integration options.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site or prototype, where virtual machine environments may be implemented
- the network's technical requirements
- the appropriate software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK529 Install and manage complex ICT networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install and manage enterprise-wide information and communications technology (ICT) networks.

It applies to individuals with excellent ICT skills who are working as senior networking staff responsible for the sustainability of an organisation by using virtualisation technologies in complex computing environments of medium- to-large companies to provide network services and resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan and design a complex network to meet business requirements | 1.1 Review network design, business requirements and latest vendor technical specifications for network components<br>1.2 Research options available for providing the network functionality required<br>1.3 Plan network implementation to provide network services and resources to meet business requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Design and implement a security strategy | 2.1 Analyse requirements for internal and external security<br>2.2 Design security strategy to meet requirements<br>2.3 Implement security strategy<br>2.4 Undertake ongoing monitoring of the viability and reliability of network security, through testing and use of technical tools<br>2.5 Continually monitor internal and external network access for security breaches |
| 3. Install and configure a complex network to meet business requirements | 3.1 Check and install cabling and associated components according to industry standards<br>3.2 Install and configure servers, routers, switches or other devices to provide internet protocol (IP) addressing and routing<br>3.3 Install and configure servers, routers, switches or other devices to provide name resolution<br>3.4 Install and configure servers, routers, switches or other devices to provide network services<br>3.5 Install and configure remote access services<br>3.6 Install and configure devices to provide data management services |
| 4. Provide integrated network services across a complex network | 4.1 Integrate multiple network services across network<br>4.2 Analyse and resolve interoperability issues<br>4.3 Optimise performance<br>4.4 Rectify security conflicts arising from integrating services |
| 5. Plan, design and implement voice and video business communications system | 5.1 Install software and configure and test voice over internet protocol (VoIP) and videoconferencing services<br>5.2 Incorporate the use of a communications server to provide real-time multimedia communications<br>5.3 Select common voice and videoconferencing codecs according to standards and practices |
| 6. Manage and support a complex network | 6.1 Identify and evaluate appropriate network management tools to assist in the administration of the complex network<br>6.2 Select and install network management tools according to industry and organisational standards<br>6.3 Set and monitor alerts and logs |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 6.4 Capture and analyse network performance data<br>6.5 Implement automated server updates<br>6.6 Implement desktop management policies<br>6.7 Implement automated virus checking<br>6.8 Use remote management tools |
| 7. Test network functionality and obtain sign-off | 7.1 Test network functionality and record results<br>7.2 Record results of network functionality test<br>7.3 Complete network documentation according to organisational standards |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 6.6 | • Recognises and interprets technical and organisational documentation to determine and confirm job requirements |
| Writing | 2.2, 7.1-7.3 | • Develops a broad range of material, including recording test results for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations |
| Oral Communication | 2.1 | • Uses listening and questioning skills to confirm understanding for requirements, and participates in a verbal exchange of ideas/solutions |
| Numeracy | 6.4 | • Interprets numerical data when taking measurements and evaluating the performance and interoperability of network services |
| Navigate the world of work | 3.1, 5.3, 6.2, 7.3 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts and appreciates the importance of identifying and responding to protocols in new situations |
| Get the work done | 1.1, 1.3, 2.3-2.5, 3.1-3.6, 4.1-4.4, | • Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 5.1-5.3, 6.1-6.8, 7.1 | enhance or reduce risks<br>• Actively identifies, creates and utilises linkages to enhance knowledge sharing, idea creation, individual and collective engagement, and work outcomes<br>• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues<br>• Uses nuanced understanding of context to recognise anomalies in a network environment and subtle deviations to normal expectations, focussing attention and remedying problems as they arise |

# Assessment Requirements for ICTNWK529 Install and manage complex ICT networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design and implement a complex network that involves integrating multiple network services to meet business requirements
- design and implement an appropriate security strategy for a complex network
- monitor and test the performance of aspects of the solution
- provide ongoing management and support of the network.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe firewall configurations and their application
- summarise internet protocol (IP) addressing and network configuration
- summarise and apply the following aspects of a network:
  - infrastructure
  - load balancing for applications
  - security
  - server operating systems
  - service configuration, including:
    - domain name system (DNS)
    - dynamic host configuration protocol (DHCP)
    - file transfer protocol (FTP)
    - network time protocol (NTP)
    - server messages block (SMB)

© Commonwealth of Australia, 2025 Future Skills Organisation

  - mail
  - proxy
  - web
  - service management
- identify and describe troubleshooting tools and techniques, including network diagnostic utilities
- outline the purpose of user authentication and directory services
- describe voice over internet protocol (VoIP)
- describe virtual private network (VPN).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- network design and business requirements documents
- a complex network or hardware and software required to build a network involving multiple servers, multiple physical locations (or simulation of) and a combination of network services.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK531 Configure an internet gateway

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to connect network hardware devices, mainly personal computers (PCs), to an internet gateway.

It applies to individuals who are middle managers, network engineers, technical specialists or security analysts with excellent information communications and technology (ICT) skills who plan and implement networks, determine security threats and are involved in business budgeting.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm client requirements and network equipment | 1.1 Confirm and validate client requirements<br>1.2 Determine scope of internet services with reference to client requirements<br>1.3 Identify and install both hardware and software components<br>1.4 Verify equipment specifications and availability of components |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Review security issues | 2.1 Assess security features of internet gateways with reference to architecture and security plan<br>2.2 Review security measures with the internet service provider (ISP) with reference to firewalls and other measures as required<br>2.3 Brief users on the security plan with reference to internet use and hazard possibilities |
| 3. Install and configure gateway products and equipment | 3.1 Identify and select installation and configuration options<br>3.2 Install and configure gateway products and equipment as required by technical guidelines<br>3.3 Plan and execute tests with reference to client requirements and network impact<br>3.4 Analyse error reports and make changes as required |
| 4. Configure and test node | 4.1 Assign node to specific gateway as required by network architecture and client requirements<br>4.2 Determine connection type and configure with reference to network architecture and client requirements<br>4.3 Ensure node software and hardware are configured as required according to vendor specifications and client requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.4, 2.1, 3.2-3.4, 4.1-4.3 | • Recognises and interprets technical documentation, equipment manuals and specifications to determine and confirm job requirements |
| Oral Communication | 1.1, 1.2, 2.2, 2.3, 3.3, 4.1-4.3 | • Uses highly developed listening, observational and questioning skills to understand others' perspectives and clarify, explore and extend meaning<br>• Establishes and maintains complex and effective spoken communication to convey and clarify a range of complex information to relevant personnel |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 2.3, 3.2 | • Monitors adherence to legal and regulatory rights and responsibilities for self and possibly others |
| Get the work done | 1.2-1.4, 2.1, 2.2, 3.1-3.3, 4.1-4.3 | • Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks<br>• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues<br>• Uses nuanced understanding of context to recognise anomalies in a network environment and subtle deviations to normal expectations, focussing attention and solving problems as they arise |

# Assessment Requirements for ICTNWK531 Configure an internet gateway

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine client requirements and network specifications
- determine security measures and brief users
- connect network hardware devices to an internet gateway
- configure and test gateway products
- configure and test node according to vendor specifications and client requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe current browser software
- explain domain name server (DNS) resolution
- outline the features and functions of:
  - network architecture
  - bridges as required
  - desktop operating systems
  - hubs
  - network gateways
  - network operating systems:
  - routers
  - switches
- describe the security issues that may impact on an internet gateway
- describe common security solutions and strategies

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify and describe the principle function of current gateway software.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a network and internet where gateway products may be installed and configured
- use of hardware and software currently used in industry
- client requirements documentation
- vendor specifications.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK532 Identify and resolve network problems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to troubleshoot local area network (LAN), wide area network (WAN) and wireless network problems.

It applies to individuals such as network managers, network engineers and technical specialists who generally work independently with limited supervision. Staff at this level perform a broad range of problem-solving activities, including troubleshooting, evaluating and analysing networks, and planning and developing new systems and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Implement regular network monitoring | 1.1 Set up appropriate logs to monitor network activity and to produce a management information base (MIB)<br>1.2 Use network tools to benchmark the network and to establish a reference point for network performance<br>1.3 Identify critical activity levels and network capacity<br>1.4 Regularly review documents and logs to facilitate network |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | tuning<br>1.5 Make recommendations to management for additional network resources to improve performance or to proactively avoid problems |
| 2. Troubleshoot network problems | 2.1 Communicate with help desk and other support services to quickly identify network problems<br>2.2 Use various tools and knowledge of network topology and protocols to identify network problems<br>2.3 Consult with vendor or service suppliers for assistance where appropriate |
| 3. Diagnose network faults | 3.1 Establish likely fault hierarchy using data from previous resolution attempts<br>3.2 Progressively isolate fault with concurrent testing of fault presence<br>3.3 Document steps taken to resolve fault<br>3.4 Refer fault to a higher level if not resolved within organisational limits |
| 4. Rectify faults | 4.1 Isolate and repair, replace and reconfigure equipment or software<br>4.2 Test network to ensure fault rectification<br>4.3 Advise users and clients of progress and solutions in a timely manner<br>4.4 Complete support documentation |
| 5. Finalise fault rectification process | 5.1 Review resolution of fault for possible reoccurrence, planned maintenance or upgrade requirements<br>5.2 Report to client with fault resolution and recommendations<br>5.3 Obtain sign-off from the appropriate person for work and billing outside of warranty or service level agreements<br>5.4 Forward necessary documentation to the appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

# Assessment Requirements for ICTNWK532 Identify and resolve network problems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce a management information base
- benchmark the network performance
- troubleshoot and rectify network problems
- provide constant monitoring and tuning of the network
- review fault resolution and make recommendations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain current industry accepted hardware, cabling and software products, including general features and capabilities
- summarise organisational maintenance response-level escalation procedures
- outline the client business domain, including client organisation structure and business functionality
- summarise network management tools, including the general features and capabilities, with substantial depth in troubleshooting areas
- outline network topologies
- summarise networking technologies, their features and capabilities, including those relating to:
  - protocol stacks of transmission control protocol or internet protocol (TCP/IP)
  - open system interconnection (OSI)
- identify and summarise the importance of the key organisations that oversee internet protocols

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify and describe network protocols.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a live system and sites with a representative range of network environments and operating systems
- technical records and documentation
- management information base of accumulated fault resolution information
- network support tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTNWK533 Configure and manage advanced virtual computing environments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and design a virtual network, using the available advanced technologies
- configure the virtual network's security and storage requirements
- manage and administer the virtual network at an advanced level.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- define current government and industry policies, and guidelines, relating to the development of efficient and reliable, information and communications technology (ICT) environments
- determine the current technologies, and processes, designed to produce an efficient and reliable ICT environment
- describe the structure, functions, and business organisation of the client
- identify the benefits and costs of virtualisation
- summarise the procedures and processes for planning, designing and securing virtual environments
- specify the design, and configuration, of the available tools and software applications required to manage virtual machines
- specify the configuration required to integrate virtual machines into the existing network design
- describe the configuration and management of the storage infrastructure.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site or prototype, where virtual machine environments may be implemented
- the network's technical requirements
- a range of suitable software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK534 Monitor and troubleshoot virtual computing environments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to monitor and troubleshoot, virtualisation technologies to provide a more efficient and reliable information and communications technology (ICT) environment.

It applies to senior networking staff responsible for increasing the sustainability of an enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan the strategies to monitor and troubleshoot the performance of the enterprise's virtual computing environment | 1.1 Develop a plan to monitor the virtual environment to ensure its availability and optimal performance, according to the enterprise requirements<br>1.2 Identify the virtual environment's critical activity level, and assign resources as needed<br>1.3 Review the system's logs and alerts, in order to facilitate |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | virtual environment tuning |
| 2. Manage virtual environment performance to ensure full resource optimisation | 2.1 Monitor and diagnose the memory central processing unit (CPU) and distributed power management performance<br>2.2 Review the storage and cluster performance, in order to maximise operational efficiency<br>2.3 Monitor tasks, events and alarms, and network activity, and make relevant adjustments to ensure optimal operation |
| 3. Analyse and troubleshoot the virtual environments | 3.1 Review virtual machine capacity, application, storage, input and output (I/O) performance, to identify and resolve any performance issues<br>3.2 Test, analyse and troubleshoot, identified virtual network problems<br>3.3 Analyse and troubleshoot, high availability to ensure that the virtual machines are running at optimal performance levels<br>3.4 Consult with the virtualisation software vendors to provide solutions, where required |
| 4. Diagnose virtual environment faults and provide solutions | 4.1 Use virtualisation client and server management software tools, to help diagnose any virtual environment problems<br>4.2 Install and configure external virtualisation management tools, to help diagnose any virtual environment problems<br>4.3 Use system logs and alerts to collect and analyse errors<br>4.4 Evaluate problems using log files and alerts |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 2.2, 3.1, 3.3, 4.3, 4.4 | • Critically analyses documentation from a variety of sources and records, and consolidates information, to determine requirements |
| Writing | 1.1 | • Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy, and the consistency of information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral Communication | 3.4 | • Presents complex information in formal situations, using clear and convincing language, and the tone and pace appropriate for the audience and purpose |
| Get the work done | 1.2, 1.3, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 4.1, 4.2, 4.3 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, taking into account capabilities, efficiencies and effectiveness<br>• Monitors the progress of plans and schedules, and reviews and changes them, to meet new demands and priorities<br>• Applies systematic and analytical decision-making processes for complex and non-routine situations<br>• Investigates new and innovative ideas, as a means by which to continuously improve work practices and processes, through consultation, formal and analytical thinking |

# Assessment Requirements for ICTNWK534 Monitor and troubleshoot virtual computing environments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- monitor the enterprise's virtual computing environment, using the correct management tools
- configure the enterprise's virtual computing environment to operate at an optimal performance level
- troubleshoot problems in the virtual computing environment, using the relevant management tools.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and review, current government and industry policies, and guidelines, relating to the development of efficient and reliable, information and communications technology (ICT) environments
- define the current technologies, and processes, designed to produce an efficient and reliable ICT environment
- specify the structure, functions and business organisation of the client
- identify and apply, the available tools and software applications required to manage virtual machines
- specify the configuration of software applications required to manage virtual machines
- specify the configuration required to integrate virtual machines, into an existing network design.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site or prototype, where virtual machine environments may be implemented
- the network's technical requirements
- a range of suitable software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK535 Install an enterprise virtual computing environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop and implement, virtualisation technologies to provide a more efficient and reliable information and communications technology (ICT) environment.

It applies to senior networking staff responsible for increasing the sustainability of an enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse client needs | 1.1 Assess the client requirements<br>1.2 Assess the existing client or server systems that may be suitable to be virtualised |
| 2. Analyse the virtualisation host software | 2.1 Assess and compare suitable virtualisation host software, according to the enterprise requirements<br>2.2 Document the recommendations and provide these to the appropriate person |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Evaluate the system requirements | 3.1 Obtain and document the technical specifications, licensing and system requirements from the virtualisation software vendors<br>3.2 Evaluate, and compare, the system requirements needed to implement virtualisation<br>3.3 Document the recommendations and provide to the appropriate person |
| 4. Plan and install the virtualisation host software | 4.1 Plan and prepare, for the host software installation<br>4.2 Obtain and install the virtualisation host platform<br>4.3 Test and validate the functionality of the virtualisation host platform, according to the enterprise requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 3.1, 3.2 | • Critically analyses documentation from a variety of sources and records, and consolidates information, in order to determine requirements |
| Writing | 2.2, 3.1, 3.3 | • Prepares and produces dynamic material for a specific audience, using clear and detailed language in order to convey explicit information, requirements and recommendations |
| Oral Communication | 1.1, 2.2, 3.1, 3.3 | • Uses collaborative and inclusive techniques, including active listening and questioning, and the reading of verbal and non-verbal signals to convey and clarify information, and to confirm understanding |
| Navigate the world of work | 2.1, 4.3 | • Takes full responsibility for following policies, procedures and legislative requirements, and identifies the organisational implications of new legislation or regulation<br>• Identifies and resolves key business issues, processes, and practices that may have legal implications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Interact with others | 1.1, 2.2, 3.1, 3.3 | • Elicits feedback and provides feedback to others, in order to improve self or workgroup behaviours<br>• Recognises the diversity in people, and manages this diversity to improve workplace relations and practices |
| Get the work done | 1.1, 1.2, 3.2, 4.1, 4.2, 4.3 | • Monitors the progress of plans and schedules, and reviews and changes them, to meet new demands and priorities<br>• Makes critical decisions quickly and intuitively in complex situations, taking into consideration a range of variables, including the outcomes of previous decisions<br>• Applies systematic and analytical decision- making processes for complex and non-routine situations<br>• Investigates new and innovative ideas, as a means by which to continuously improve, work practices and processes through consultation, formal and analytical thinking |

# Assessment Requirements for ICTNWK535 Install an enterprise virtual computing environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify and apply, the suitable tools and software applications required to manage virtual machines
- configure the software applications to manage virtual machines
- integrate the virtual machines into the existing network design
- test and validate the virtualisation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- determine current government and industry policies, and guidelines, relating to the development of efficient and reliable, information and communications technology (ICT) environments
- analyse the current technologies, and processes, designed to produce an efficient and reliable ICT environment
- research the current recommendations on sustainability options in ICT design
- discuss the benefits of virtualisation
- identify and apply, the processes and procedures for installing and configuring virtualisation software and virtual machines
- identify and apply, the processes and procedures for configuring virtual machines into network design
- determine the structure, functions and business organisation of the client
- identify and apply, the available tools and software applications required to manage virtual machines
- research the configuration of software applications required to manage virtual machines

© Commonwealth of Australia, 2025 Future Skills Organisation

- research the configuration required to integrate virtual machines into existing network design.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- site or prototype, where virtual machine environments may be implemented
- the network's technical requirements
- industry relevant virtualisation software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK601 Design and implement a security system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use software tools, equipment and protocols to implement a security system.

It applies to individuals who plan and implement networks, are involved in business budgeting, and determine and resolve network security threats.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Assess the security threats facing network Infrastructure | 1.1 Evaluate mitigation methods for network attacks and different types of malware<br>1.2 Propose a methodical concept of defending network architecture |
| 2. Secure edge devices (routers) | 2.1 Secure network routers using software tools<br>2.2 Secure administration access to routers using the router operating system (OS) |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Secure router OS and its configuration file(s) |
| 3. Implement authentication, authorisation and accounting (AAA) and secure access control system (ACS) | 3.1 Evaluate and implement the functions and importance of authentication, authorisation and accounting<br>3.2 Configure the router using AAA<br>3.3 Analyse and compare the features of Terminal Access Controller Access-Control System Plus(TACACS+) and Remote Authentication Dial In User Service (RADIUS) AAA protocols for securing the network |
| 4. Mitigate threats to routers and networks using access control lists (ACLs) | 4.1 Assess the functionality of access control lists and document the caveats to be considered when building them<br>4.2 Configure and verify IP ACLs to mitigate threats and to prevent internet protocol (IP) address spoofing using tools |
| 5. Implement secure network management and reporting | 5.1 Configure secure shell (SSH) on routers to enable secure management<br>5.2 Configure routers to send log messages to a log server with tools |
| 6. Mitigate common layer 2 attacks | 6.1 Document how to prevent layer 2 attacks by configuring basic switch security and features<br>6.2 Configure switch to prevent layer 2 attacks |
| 7. Implement the router OS firewall-feature set | 7.1 Evaluate and compare the operational strategies and weaknesses of the different firewall technologies<br>7.2 Implement zone-based firewall to strategically secure group of interfaces |
| 8. Implement the intrusion detection and prevention system (IDPS) feature set in the router OS using secure device manager (SDM) | 8.1 Evaluate and compare network based versus host based IDPS to identify malicious activity, log information, attempt to block/stop activity, and report activity<br>8.2 Determine IDPS technologies, attack responses and monitoring options<br>8.3 Configure the router OS IDPS operations using secure device manager to monitor network and system activities for malicious activity |
| 9. Implement site-to-site virtual private networks (VPNs) using SDM | 9.1 Assess the different methods used in cryptography<br>9.2 Evaluate internet key exchange (IKE) protocol functionality and phases to support authentication and define the binding blocks of IPSec and the security functions it provides |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 9.3 Configure and verify an IPSec site-to-site VPN with pre-shared key (PSK) authentication to provide a secure channel between the two parties |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Recognises and interprets technical documentation to determine and confirm job requirements |
| Writing | 1.2, 4.1, 6.1, 8.1, 8.2, | • Develops a broad range of materials, such as reports, for a specific audience using clear and detailed language to convey explicit information |
| Oral Communication | 8.2 | • Establishes and maintains complex and effective spoken communication to convey and clarify a range of complex information |
| Numeracy | 9.2 | • Interprets numerical data when taking test measurements, interpreting results and evaluating performance and interoperability of the network |
| Interact with others | 1.2, 8.1 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience, and monitors impact |
| Get the work done | 1.1, 2.1-2.3, 3.1-3.3, 4.1, 4.2, 5.1, 5.2, 6.2, 7.1, 7.2, 8.1, 8.3, 9.1-9.3 | • Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks<br>• Actively identifies, creates and utilises linkages to enhance knowledge sharing, idea creation, individual and collective engagement and work outcomes<br>• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | be interpreted and used<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues<br>• Monitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles that may be adaptable to future situations<br>• Responds intuitively to problems requiring immediate resolution, using understanding of context to recognise anomalies and deviations from normal expectation in a network environment |

# Assessment Requirements for ICTNWK601 Design and implement a security system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- evaluate network security system threats and requirements
- mitigate attacks and configure firewalls
- design and implement network security systems
- implement a virtual private network (VPN) using security device management tool.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise access control lists, configuration and troubleshooting
- outline authentication protocols
- explain encryption techniques
- explain intrusion detection system (IDS) and intrusion prevention system (IPS)
- clarify internet protocol (IP) and networking models
- explain current wireless regulations, standards and certifications
- describe local area network (LAN) or wide area network (WAN) implementations
- summarise malicious attacks and prevention techniques
- outline network management tools
- explain network security prevention methods
- explain procedures to configure, verify and troubleshoot:
  - switch with virtual local area networks (VLANs) and inter-switching communications

© Commonwealth of Australia, 2025 Future Skills Organisation

  - router
- outline procedures to set up virtual private networks (VPNs)
- explain routing protocols
- explain threat and attack mitigation techniques
- outline the use of command line interface to configure and test network elements
- describe the common features of Terminal Access Controller Access-Control System Plus(TACACS+) and Remote Authentication Dial In User Service (RADIUS) authentication, authorisation and accounting (AAA) protocols.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where network security may be evaluated and tightened
- hardware and software
- organisational guidelines, procedures and policies
- computers
- LAN or WLAN internet work technologies (hardware and software)
- security technologies (hardware and software).

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK602 Plan, configure and test advanced server-based security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to implement advanced server security using secure authentication and network services on a network server.

It applies to individuals working as information and communications technology (ICT) network specialists, ICT network engineers, network security specialists, network security planners and network security designers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan advanced network server security according to business needs | 1.1 Consult with client and key stakeholders to identify security requirements in an advanced network server environment<br>1.2 Analyse and review existing client security documentation and predict network service vulnerabilities<br>1.3 Research network authentication and network service configuration options and implications to produce network |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | security solutions<br>1.4 Ensure features and capabilities of network service security options meet the business needs<br>1.5 Produce or update server security design documentation to include new solutions<br>1.6 Obtain sign-off for the security design from the appropriate person |
| 2. Prepare for<br>Network server security implementation | 2.1 Prepare for work in line with site-specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures<br>2.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel<br>2.3 Consult appropriate person to ensure the task is coordinated effectively with others involved at the worksite<br>2.4 Back up server before implementing configuration changes |
| 3. Configure the advanced network server security according to design | 3.1 Configure update services to provide automatic updates to ensure maximum security and reliability<br>3.2 Configure network authentication, authorisation and accounting services to log and prevent unauthorised access to the server<br>3.3 Configure basic service security and access control lists to limit access to authorised users, groups or networks<br>3.4 Implement encryption as required by the design<br>3.5 Configure advanced network service security options for services and remote access<br>3.6 Configure the operating system or third-party firewall to filter traffic in line with security requirements<br>3.7 Ensure security of server logs and log servers are appropriately implemented for system integrity<br>3.8 Implement backup and recovery methods to enable restoration capability in the event of a disaster |
| 4. Monitor and test network server security | 4.1 Test server to assess the effectiveness of network service security according to agreed design plan<br>4.2 Monitor server logs, network traffic and open ports to detect possible intrusions<br>4.3 Monitor important files to detect unauthorised modifications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 4.4 Investigate and verify alleged violations of server or data security and privacy breaches<br>4.5 Recover from, report and document security breaches according to security policies and procedures<br>4.6 Evaluate monitored results and reports to implement and test improvement actions required to maintain the required level of network service security |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 3.6, 4.1, 4.3, 4.5, 4.6 | • Recognises and interprets technical enterprise security procedures, policies, specifications, and vendor notifications to determine and confirm job requirements |
| Writing | 1.5, 4.5 | • Develops a broad range of material including security reports for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Oral Communication | 1.1, 2.2, 2.3, 4.5 | • Uses listening and questioning skills to confirm understanding for requirements<br>• Articulates clearly, using specific and relevant language suitable to audience, and participates in verbal exchanges of ideas and solutions |
| Interact with others | 1.6 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Navigate the world of work | 2.1 | • Keeps up to date on changes to legislation or regulations relevant to own rights and responsibilities, and considers implications of these when planning, negotiating and undertaking work |
| Get the work done | 1.2, 1.4, 2.2, 2.4, 3.1-3.8, 4.1, 4.2, 4.4-4.6 | • Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance |

# Assessment Requirements for ICTNWK602 Plan, configure and test advanced server-based security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify network service security vulnerabilities and appropriate controls
- plan, design and configure a secure network authentication service
- secure a wide range of network services to ensure server and data security, including:
  - dynamic name system (DNS)
  - web and proxy
  - mail
  - file transfer protocol (FTP)
  - firewall
- implement cryptographic techniques
- monitor the server for security breaches.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain auditing and penetration testing techniques
- summarise best practice procedures for implementing backup and restore
- outline cryptographic techniques
- clarify the procedures for error and event logging and reporting
- explain intrusion detection and recovery procedures
- outline network service configuration, including:
  - DNS
  - dynamic host configuration protocol (DHCP)

© Commonwealth of Australia, 2025 Future Skills Organisation

  - web
  - mail
  - FTP
  - server messages block (SMB)
  - network time protocol (NTP)
  - proxy
- summarise network service security features, options and limitations
- outline network service vulnerabilities
- summarise operating system help and support utilities
- describe planning, configuration, monitoring and troubleshooting techniques
- outline security protection mechanisms
- summarise security threats and risks
- explain server firewall configuration
- explain server monitoring and troubleshooting tools and techniques, including network monitoring and diagnostic utilities
- summarise user authentication and directory services.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site where server installation may be conducted
- relevant server specifications
- cabling
- networked (LAN) computers
- server diagnostic software
- switch
- client requirements
- WAN service point of presence
- workstations
- relevant regulatory documentation that impacts on installation activities.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK603 Plan, configure and test advanced internetwork routing solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge necessary to plan, configure and support advanced internet protocol (IP) addressing and routing when implementing scalable and secure routers connected to local area networks (LANs) and wide area networks (WANs). The unit also covers configuration of secure routing solutions to support branch offices and mobile workers.

It applies to individuals with advanced information and communications technology (ICT) skills who are working in a variety of roles, including network specialists, network engineers, network infrastructure engineers, senior network administrators, network and systems managers, ICT security specialists, security engineers, communications engineers and communications managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan, configure and test a complex network-routing protocol | 1.1 Determine network resources required for implementing a complex distance-vector routing protocol solution, a multi-area link-state routing protocol solution and an exterior routing |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| solution | protocol solution on a network<br>1.2 Produce separate protocol implementation plans and verification plans for each routing solution<br>1.3 Configure and test the routing protocol solution<br>1.4 Document results of the routing protocol solution implementation and verification plans for each solution |
| 2. Plan, configure and test an internet protocol version 6- (IPv6) based network solution | 2.1 Determine network resources needed for implementing IPv6 on a network<br>2.2 Produce an implementation plan and a verification plan for an IPv6-based network solution<br>2.3 Configure IPv6 routing and IPv6 interoperation with IPv4<br>2.4 Verify and test the IPv6 solution and make amendments if necessary<br>2.5 Document results of IPv6 implementation and verification plans |
| 3. Plan, configure and test an IPv4 or IPv6-based network redistribution solution | 3.1 Produce an IPv4 or IPv6 redistribution implementation plan and verification plan, based on the outcomes of a network redistribution analysis<br>3.2 Configure and verify the redistribution solution for the network<br>3.3 Document results of redistribution, implementation and verification plans<br>3.4 Analyse the differences between implementing an IPv4 and an IPv6 redistribution solution |
| 4. Plan, configure and test a layer 3 path control solution | 4.1 Produce a layer 3 path control implementation plan and a verification plan based on the outcomes of a network redistribution analysis<br>4.2 Configure and verify layer 3 path control for the network<br>4.3 Implement basic teleworker and branch services<br>4.4 Evaluate and compare broadband technologies and VPN technologies in terms of access and data transfer rate as solutions for secure broadband network |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Recognises and interprets complex technical information to determine and confirm job requirements |
| Writing | 1.2, 1.4, 2.2, 2.5, 3.1, 3.3, 4.1 | • Develops a broad range of material including operational, technical and project management documentation for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Get the work done | 1.1, 1.3, 2.1, 2.3, 2.4, 3.1, 3.2, 3.4, 4.1-4.4 | • Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks<br>• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• May operate from a broad conceptual plan to identify functional, performance and management features associated with the operation of complex networks<br>• Uses nuanced understanding of context to solve problems in complex and dynamic environments with demanding service levels |

# Assessment Requirements for ICTNWK603 Plan, configure and test advanced internetwork routing solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan, configure and support advanced routed network infrastructure
- use network tools
- plan and analyse redistribution solutions
- produce and configure layer 3 path control implementation plan
- provide solutions to static and dynamic routing issues together with optimisation strategies.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain broadband technologies relevant to advanced internetworking routing solutions
- summarise business justifications for having integrated and unified enterprise networks
- outline emerging viable business and social technologies
- clarify external developments or factors that affect network design
- summarise IPv4 and IPv6 technologies and solutions
- outline maintenance and management tools and practices suitable for complex networks to achieve availability and resilience
- summarise network topologies
- explain regulations, standards and certifications relevant to advanced internetworking routing solutions
- explain risk management strategies and practices suitable for a complex network environment
- outline routing tables, protocols and operational processes

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise routing technologies for an enterprise environment
- summarise security for enterprise networks
- explain security standards and technologies for network environments
- outline the benefits of formal or structured approaches to network management
- summarise virtual private network (VPN) technologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site where network installation may be conducted
- router hardware and software
- organisational guidelines
- computers
- local area network (LAN) and wide area network (WAN) systems.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK604 Plan and configure advanced internetwork switching solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan, configure and support advanced enterprise switching. The unit also covers secure integration of virtual local area networks (VLANs), wireless local area networks (WLANs), voice and video into campus networks.

It applies to individuals with advanced information and communications technology (ICT) skills who are working in a variety of roles, including network specialists, network engineers, network infrastructure engineers, senior network administrators, network and systems managers, ICT security specialists, security engineers, communications engineers and communications managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan, configure and test a VLAN-based solution | 1.1 Determine network resources required for implementing a VLAN-based solution for a given network design and requirements<br>1.2 Produce an implementation plan and a verification plan for |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | the VLAN-based network solution<br>1.3 Configure and verify switch-to-switch connectivity, loop prevention and access ports for the VLAN-based solution using network tools<br>1.4 Document results of the VLAN implementation and verification plans |
| 2. Plan, configure and test a secure layer 2 network solution and a switch-based layer 3 services solution | 2.1 Determine network resources required for implementing a secure layer 2 network solution and a switch-based layer 3 solution against vulnerabilities with organisational security policies<br>2.2 Produce an implementation plan and a verification plan for each of the layer 2 and layer 3 network solution<br>2.3 Configure and verify a private VLAN and features for port security and general switch security for the layer 2 network solution, using network tools<br>2.4 Configure and verify routing interfaces and layer 3 security for the switch-based layer 3 network solution, using network tools<br>2.5 Document results of security implementation and verification plans for each of the layer 2 and the layer 3 network solution |
| 3. Prepare infrastructure to support advanced services | 3.1 Implement a wireless extension of a layer 2 solution<br>3.2 Implement a support solution for a voice over internet protocol (VoIP) and a video application |
| 4. Plan, configure and test high-availability networks using multilayer switches solution | 4.1 Determine network resources needed for implementing high-availability solution for a given network design and requirements<br>4.2 Produce an implementation plan and a verification plan for the high-availability network, using multilayer switches<br>4.3 Configure, verify and manage first hop redundancy protocols (FHRP)<br>4.4 Implement switch supervisor redundancy and use network tools to verify the high-availability solution<br>4.5 Document results of high-availability implementation and verification plans |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 4.1 | • Recognises and interprets complex technical design information to determine and confirm job requirements |
| Writing | 1.2, 1.4, 2.2, 2.5, 4.1, 4.2, 4.5 | • Develops a broad range of material, including operational, technical, procedural and project management documentation for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Navigate the world of work | 2.1 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts and appreciates the importance of identifying and responding to protocols in new situations |
| Interact with others | 1.1, 2.1, 4.1 | • Collaborates with others, sharing information<br>• Elicits feedback and provides feedback to others in order to improve |
| Get the work done | 1.1, 1.3, 2.1, 2.3, 2.4, 3.1, 3.2, 4.1, 4.3, 4.4 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology<br>• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• May operate from a broad conceptual plan to identify functional, performance and management features associated with the operation of complex switched networks<br>• Uses nuanced understanding of context to solve problems in complex and dynamic environments with demanding service levels |

# Assessment Requirements for ICTNWK604 Plan and configure advanced internetwork switching solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design, configure and support advanced switched network infrastructure
- implement wireless extension solution with multi-layered (layer 3) switches
- prepare infrastructure to support advanced services
- use network tools.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the benefits of formal or structured approach to network management
- summarise business justifications for having integrated and unified enterprise networks
- outline current wireless regulations, standards and certifications
- clarify emerging viable business and social technologies
- explain external developments or factors that affect switched network design
- summarise maintenance and management tools and practices suitable for complex networks to achieve availability and resilience
- outline network topologies
- explain organisational policies for internetworking
- summarise risk management strategies and practices suitable for a complex switched network environment
- outline security for an enterprise-switched environment
- explain security standards and technologies for switched network environments
- summarise switching and routing technologies for an enterprise-switched environment.

# ICTNWK605 Design and configure secure integrated wireless systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use appropriate tools, equipment, software and protocols to produce a verified radio frequency (RF) design plan for a wireless local area network (WLAN) and to design, configure and troubleshoot secure integrated wireless systems.

It applies to individuals with advanced information and communications technology (ICT) skills who are working as wireless network installers, wireless network support specialists and wireless network engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan and conduct a site survey for setting up a wireless network | 1.1 Assess client requirements to plan for selecting appropriate WLAN technology and network elements<br>1.2 Evaluate existing network infrastructure and produce a wireless network topology to determine upgrade or new installation requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Prepare basic RF deployment considerations related to site survey design of data or voice over WLAN applications<br>1.4 Produce a survey model, including deployment characteristics to meet client requirements<br>1.5 Produce a spectral analysis predictive layer 1 site survey verified by a physical site survey<br>1.6 Analyse the survey results produced with an RF network design for a secure wireless network<br>1.7 Conduct an RF field trial for final evaluation of network topology and network element placements |
| 2. Prepare design specifications and plan for secure enterprise WLANs | 2.1 Prepare for work according to relevant legislation, workplace health and safety (WHS), codes, regulations and standards<br>2.2 Produce design specifications and layout for wireless network, using spread spectrum technology for enhanced network security<br>2.3 Review design plans to ensure sound WLAN RF principles and compliance with wireless regulatory bodies, standards and certifications |
| 3. Configure and test a controller-based WLAN | 3.1 Produce a controller-based wireless architecture from a possible range of industry-based wireless network architectures<br>3.2 Configure and test a WLAN controller and access points, using controller-based AP discovery and association to enable roaming facilities<br>3.3 Configure the basics of a stand-alone access point<br>3.4 Configure and test client operating system WLAN configuration and install vendor specific software and utilities where applicable |
| 4. Configure and test WLAN security | 4.1 Review the general framework of wireless security and security components for securing the WLAN<br>4.2 Configure and test identification assignments to network elements<br>4.3 Configure and test authentication methods, using different sources of authentication<br>4.4 Configure and test encryption methods to comply with network security policies |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 5. Conduct WLAN maintenance and troubleshooting | 5.1 Evaluate WLAN troubleshooting methods for controllers, access points and client methodologies<br>5.2 Use networking tools to maintain and troubleshoot network<br>5.3 Transfer device configurations and operating system (OS), using maintenance tools and commands |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.6, 2.3, 4.4 | • Recognises and interprets complex technical documentation to determine and confirm job requirements |
| Writing | 1.1, 1.4, 1.5, 2.2 | • Develops a broad range of materials, including design and technical specifications, for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Numeracy | 3.2, 3.4, 4.2-4.4 | • Interprets numerical data and undertakes measurements to evaluate performance and interoperability of network |
| Navigate the world of work | 2.1, 2.3, 4.4 | • Monitors adherence to legal and regulatory rights and responsibilities for self and possibly others |
| Interact with others | 1.1, 1.4 | • Identifies and uses appropriate communication conventions and protocols when liaising with internal and external stakeholders on technical, operational and business-related matters |
| Get the work done | 1.1-1.3, 1.5-1.7, 2.2, 3.1-3.4, 4.1-4.4, 5.1- 5.3 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology<br>• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• May operate from a broad conceptual plan, coordinating the process with others to identify functional, performance and management features associated with the operation of complex switched networks<br>• Uses understanding of context to troubleshoot and debug WAN issues, adapt configuration procedures to network requirements and reconfigure, depending on differing operational contingencies, risk situations and environments |

# Assessment Requirements for ICTNWK605 Design and configure secure integrated wireless systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and conduct a wireless local area network (WLAN) site survey
- produce design specifications and layout of wireless network
- configure and test a controller-based WLAN
- test wireless security configurations
- maintain a WLAN.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain authentication and encryption methods
- summarise configuration, verification and troubleshooting procedures regarding:
  - router-operation
  - routing virtual local area network (VLAN) switching
  - inter-switching communications
- outline configuration of WLAN securities
- clarify current wireless regulations, standards and certifications
- summarise internetwork operating system (IOS) and internet protocol (IP) networking models
- explain radio frequency (RF) and WLAN technology and network design
- outline RF propagation and implementation issues
- explain spread spectrum technologies
- summarise wireless network topologies and elements
- outline wireless networking protocols

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe WLAN devices, their specification and use
- summarise WLAN radio frequencies characteristics and their measuring techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site where network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- stand-alone and lightweight WLAN controllers and access point (AP)
- hardware and software WLAN site survey tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK606 Implement voice applications over secure wireless networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use network tools, equipment, software and protocols to design and integrate voice over wireless local area network (VoWLAN) services into the wireless local area network (WLAN), and to implement into the wireless network quality of service (QoS), multi-protocol label switching (MPLS), and high bandwidth applications.

It applies to individuals with excellent information communications and technology (ICT) skills who are working as wireless help desk technicians, wireless network support specialists and wireless network engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Specify requirements for voice over wireless architecture | 1.1 Analyse voice requirements for use over a wireless network<br>1.2 Specify wireless requirements for voice applications for design considerations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Verify network for voice readiness and suitability |
| 2. Design the implementation of secure VoWLAN | 2.1 Configure wireless client devices<br>2.2 Design and configure the WLAN for VoWLAN with security configurations<br>2.3 Design and configure infrastructure devices<br>2.4 Devise structured troubleshooting methodology for VoWLAN implementation |
| 3. Design and implement QoS for wireless applications | 3.1 Plan general design considerations for wired QoS<br>3.2 Design wireless QoS deployment schemes<br>3.3 Configure WLAN equipment for QoS |
| 4. Design, implement and test multicast over wireless environment | 4.1 Evaluate general multicast concepts<br>4.2 Analyse the implications for multicast in 802.11<br>4.3 Configure multicast requirements for a wireless network<br>4.4 Devise structured troubleshooting methodology for multicast in a WLAN environment |
| 5. Plan and scope the wireless network for video and high-bandwidth applications | 5.1 Design and implement QoS for latency-sensitive applications<br>5.2 Analyse the requirement for video applications over 802.11n WLAN<br>5.3 Calculate and predict bandwidth requirements for video applications over the wireless network<br>5.4 Analyse the impact of the WLAN interconnectivity for devices on QoS for devices or the wired side |

# Assessment Requirements for ICTNWK606 Implement voice applications over secure wireless networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse and specify voice over wireless architecture requirements
- design and implement voice applications over wireless local area network (WLAN)
- implement a quality of service (QoS) for wireless applications
- use network tools to configure and test wireless infrastructure and applications
- plan and scope the wireless network bandwidth.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the configuration, verification and troubleshoot procedures required to undertake:
  - router operation and routing
  - virtual local area network (VLAN) switching and inter-switching communications
- summarise iDevice operating system (iOS) and internet protocol (IP) networking models
- outline video and high-bandwidth applications and requirements
- explain voice applications and protocols
- clarify voice over wireless local area network (VoWLAN) technologies
- describe the following aspects of wireless networks:
  - current regulations, standards and certifications
  - deployment schemes
  - network security technology
  - network topologies and elements
  - networking protocols

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise WLAN devices and their specification and use.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site where network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- stand-alone and lightweight WLAN controllers and AP
- hardware and software LAN/WLAN voice technologies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK607 Design and implement wireless network security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to mitigate security threats to a wireless local area network (WLAN) by implementing security standards and policies.

It applies to individuals with advanced information and communications technology (ICT) skills who are working as wireless help desk support technicians, wireless network support specialists and wireless network engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan to implement wireless network security | 1.1 Research and evaluate organisational and regulatory security policies that have been used to benchmark acceptable network security standards<br>1.2 Assess customer requirements and needs against regulatory security compliance and work health and safety (WHS) considerations<br>1.3 Produce a plan with security solution documentation for future growth and security needs |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Design, implement and test guest access services | 2.1 Analyse and select the appropriate architecture for guest access services<br>2.2 Produce a map and set up guest access accounts<br>2.3 Configure WLAN controller authorisation<br>2.4 Configure the anchor and internal controllers<br>2.5 Troubleshoot guest access issues |
| 3. Design, implement and test the security of wireless client devices | 3.1 Design and configure authentication of clients and management frame protection on clients and controllers<br>3.2 Configure access control servers for integration with wireless network<br>3.3 Configure client- and server-side digital certificate services<br>3.4 Troubleshoot secure wireless connectivity services |
| 4. Design, implement and test the integration of wireless network with organisational network admission control systems | 4.1 Analyse network admission control architectures to assess the feasibility of network integration<br>4.2 Analyse the high-level authentication process flow to ensure compatible integration<br>4.3 Configure and test the wireless controller for admission control<br>4.4 Troubleshoot integration issues of network with access control |
| 5. Evaluate and plan secure wireless connectivity services | 5.1 Configure the intrusion detection system (IDS) to monitor the network activities for malicious activities or policy violations<br>5.2 Analyse the report produced by the IDS to review threat-mitigation strategies<br>5.3 Update security solution plan to mitigate wireless vulnerabilities to ensure network integrity |
| 6. Manage the requirements to integrate the WLAN with advanced security platforms | 6.1 Evaluate end-to-end security solutions and assess how they integrate with the planned wireless solutions<br>6.2 Analyse the firewall configuration requirements of WLANs to ensure compliance with organisational policies<br>6.3 Configure and test the WLAN controllers for wired and wireless intrusion prevention and detection system (IPDS) security protection |

# Assessment Requirements for ICTNWK607 Design and implement wireless network security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- conduct research and produce a security solutions plan
- evaluate, design and implement a wireless local area network (WLAN) site security plan
- evaluate end-to-end security solutions and assess their integration with the planned wireless solutions
- use network tools to test wireless controllers and intrusion prevention and detection system (IPDS) solutions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain configuration, verification and troubleshooting procedures to undertake:
  - router operation and routing
  - virtual local area network (VLAN) switching and inter-switching communications
- outline iDevice Operating System (iOS) and internet protocol (IP) networking models
- explain intrusion prevention system (IPS) and intrusion detection system (IDS) security protection
- outline threat mitigation strategies
- summarise the following aspects of wireless, including:
  - current regulations, standards and certifications
  - deployment schemes

© Commonwealth of Australia, 2025 Future Skills Organisation

  - network security technology
  - network topologies, architectures and elements
  - networking protocols
- summarise WLAN with reference to:
  - advanced security platforms
  - devices, their specification and use
  - radio frequency characteristics and their measuring techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site or prototype where network installation may be conducted
- hardware and software
- organisational guidelines
- live network
- stand-alone and lightweight WLAN controllers and access points (AP)
- hardware and software WLAN site survey tools
- hardware and software IDS and IPS.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK608 Configure network devices for a secure network infrastructure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use software tools, equipment and protocols to configure network devices in the design of the infrastructure of a secure network.

It applies to individuals with advanced information and communications technology (ICT) skills who adapt router and switch operating system capabilities to mitigate attacks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Implement layer 2 security | 1.1 Configure using router operating system (OS) commands to mitigate layer 2 attacks<br>1.2 Implement identity-based networking services (IBNS) on switches to provide layer 2 security<br>1.3 Implement identity management using access control system (ACS) as the authentication server |
| 2. Configure router OS | 2.1 Evaluate the advanced capabilities of router OS-IPS firewall |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| intrusion prevention system (OS-IPS) to mitigate threats to network resources | feature set to include event action processing (EAP) for threats to network resources<br>2.2 Configure and verify IPS features to identify threats and dynamically block them from entering the network<br>2.3 Maintain, update and tune the IPS signatures<br>2.4 Configure and verify context-based access control (CBAC) and network address translation (NAT) to dynamically mitigate identified threats to the network<br>2.5 Configure and verify zone-based firewall (ZFW) to include advanced application inspections and uniform resource locator (URL) filtering for improved network security |
| 3. Configure virtual private networks (VPNs) to provide secure connectivity for site-to-site and remote access communications | 3.1 Analyse and evaluate internet protocol security (IPSec) and generic routing encapsulation (IPSec/GRE) features and functionality<br>3.2 Configure secure connectivity for site-to-site VPN using certificate authorities<br>3.3 Analyse dynamic multipoint VPN (DMVPN) features and capabilities<br>3.4 Configure and verify secure connectivity for site-to-site VPN operations<br>3.5 Provide highly secure network access with secure socket layer (SSL) VPN to deliver remote access connectivity features and benefits<br>3.6 Evaluate EasyVPN benefits and configure EasyVPN server with dynamic virtual tunnel interface (DVTI) to create a virtual access interface on the virtual tunnel interface<br>3.7 Configure and verify EasyVPN remote to establish a site-to-site connection using both router and VPN software clients<br>3.8 Implement group-encrypted transport (GET) VPN features to simplify the provisioning and management of VPN |
| 4. Implement network foundation protection (NFP) | 4.1 Evaluate NFP features and functionality to provide infrastructure protection<br>4.2 Secure the management plane, the data plane and the control plane using OS features of the router |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 2.2, 3.1, 3.3, 3.6, 4.1 | • Organises, evaluates and critiques ideas and information from a range of complex texts<br>• Draws on a broad range of strategies to build and maintain understanding throughout complex texts |
| Writing | 1.1-1.3, 2.2-2.5, 3.2, 3.4, 3.6, 3.7 | • Generates complex written texts, demonstrating control over a broad range of writing styles and purposes<br>• Writes and edits computer code and technical data ensuring correct syntax and accuracy |
| Numeracy | 2.2, 2.4, 2.5, 3.4, 3.7 | • Selects from, and flexibly applies, a wide range of highly developed mathematical and problem solving strategies and techniques in a broad range of contexts |
| Get the work done | 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.8, 4.1, 4.2 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology<br>• Uses a broad range of strategies to store, access and organise virtual information recognising that design choices will influence what information is retrieved and how it may be interpreted and used<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking |

# Assessment Requirements for ICTNWK608 Configure network devices for a secure network infrastructure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- evaluate network security system requirements
- design, implement and verify network security systems using layer 2 and layer 3 devices
- mitigate threats to network security
- configure virtual private networks (VPNs) for secure connectivity
- evaluate and implement network foundation protection (NFP).

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain configuration, verification and troubleshooting procedures to undertake:
  - virtual local area network (VLAN) switching
  - inter-switching communications
- outline the key features of deployment schemes
- summarise setting up and securing firewalls
- explain iDevice operating system (iOS) and internet protocol (IP) networking models
- outline local area network (LAN) and wide area network (WAN) implementations
- explain network address translation (NAT) concepts and configuration
- outline network topologies, architectures and elements
- explain networking standards and protocols

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline procedures for configuring, verifying and troubleshooting router operations and routing
- summarise secure connectivity and remote access communications
- explain security protocols, such as secure socket layer (SSL)
- clarify threat mitigation strategies
- outline tunnelling protocols
- summarise VPN technologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site or prototype where network security may be evaluated and tightened
- hardware and software
- organisational guidelines, procedures and policies
- computers
- hardware and software LAN and WLAN internetwork technologies
- hardware and software security technologies.

Assessors must satisfy NVR/AQTF assessor requirements

# ICTNWK609 Configure and manage intrusion prevention system on network sensors

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use appropriate tools, equipment and software to implement an intrusion prevention system (IPS) on IPS sensors to mitigate network attacks.

It applies to individuals with advanced information and communications technology (ICT) skills who are working as certified IPS specialists, network security specialists and network security managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate the ways IPS sensors are used to mitigate network attacks | 1.1 Evaluate system requirements of the network according to industry standards for inline operations<br>1.2 Compare inline to promiscuous mode sensor operations and evaluate how IPS protects network devices from attacks<br>1.3 Evaluate the evasive techniques used by hackers and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | determine ways IPS can defeat those techniques in the network<br>1.4 Evaluate the considerations necessary for selection, placement, and deployment of a network IPS, including using features of IPS signature |
| 2. Select and install IPS sensors and configure essential system parameters | 2.1 Install and initialise the sensor for configuration of sensor interfaces, interface pairs, virtual local area network (VLAN) pairs and VLAN groups<br>2.2 Configure management access to the sensor appliance and create user accounts to comply with different user roles<br>2.3 Set up sensor communications with external management and monitoring systems<br>2.4 Manage and monitor sensor operation using built-in tools<br>2.5 Upgrade and maintain IPS sensor parameters and licensing requirements to maintain network integrity<br>2.6 Plan the mitigation of specific network vulnerabilities and exploits |
| 3. Tune IPS sensor advanced system parameters to optimise attack mitigation performance | 3.1 Tune sensor signatures to provide optimal protection of the network<br>3.2 Create custom signatures and a meta signature to meet mitigation performance configurations for given test scenarios while disabling alert production for the component signatures<br>3.3 Configure gateway for passive operating system (OS) fingerprinting<br>3.4 Configure the external product interface to receive and process information from external security and management products to automatically enhance the sensor configuration information<br>3.5 Configure a virtual sensor and anomaly detection<br>3.6 Monitor the IPS advanced features for optimal performance |
| 4. Manage security and response of the IPS to network attacks | 4.1 Monitor IPS events using network tools to determine appropriate response to network attacks<br>4.2 Use network management tools to assess and manage IPS effectiveness against security intrusion |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.4 | • Recognises and interprets complex technical and regulatory information to determine and confirm job requirements |
| Writing | 2.2, 2.5, 3.3-3.5 | • Demonstrates sophisticated writing skills by selecting appropriate conventions and stylistic devices to express precise meaning<br>• Writes and edits complex computer code and technical data, ensuring correct syntax and accuracy |
| Numeracy | 2.2-2.4, 3.6, 4.1 | • Selects from, and flexibly applies, a wide range of highly developed mathematical and problem solving strategies and techniques in a broad range of contexts |
| Navigate the world of work | 1.1, 2.5 | • Understands own legal rights and responsibilities, and considers implications of these when planning and undertaking work |
| Interact with others | 2.2, 2.3, 3.4, | • Develops and implements communications strategies with internal and external persons<br>• Shares knowledge, information and experience openly as an integral part of the working relationship |
| Get the work done | 1.1-1.4, 2.1-2.6, 3.1-3.6, 4.1, 4.2 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology<br>• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies<br>• Recognises that identified ‘problems’ can be surface indicators of deeper issues and routinely reframes problem definitions as part of the process of identifying |

# Assessment Requirements for ICTNWK609 Configure and manage intrusion prevention system on network sensors

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- evaluate intrusion prevention system (IPS) requirements and configure IPS sensors
- tune up IPS sensors to optimise attack mitigation
- use network tools and network management tools to monitor and manage security sensor events
- upgrade and maintain IPS sensors.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain configuration, verification and troubleshooting procedures to undertake a switch and router operation and routing protocol
- outline deployment schemes
- summarise setting up and securing firewalls
- summarise internetwork operating system (IOS) and internet protocol (IP) networking models
- explain IP addressing and detailed understanding of the transmission control protocol (TCP) or IP stack
- outline IPS and intrusion detection system (IDS) strategies
- explain IPS sensor technologies and licensing requirements
- outline local area network or wide area network (LAN/WAN) implementations and design
- summarise network topologies, architectures and elements
- outline networking standards and protocols
- explain signatures and meta signatures

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain threat mitigation strategies
- explain virtual local area network (VLAN) concepts and functionality
- outline virtual private network (VPN) technologies
- identify and describe legislation, regulations, standards and codes of practice relevant to network security.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site or prototype where network installation may be conducted
- relevant hardware and software
- organisational guidelines
- live network
- an IPS system and its sensors.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK610 Design and build integrated VoIP networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use appropriate tools, equipment, software and protocols to design and build an internet protocol (IP) based integrated voice network for small-to-medium enterprises.

It applies to individuals with advanced information and communications technology (ICT) skills who are working as voice over internet protocol (VoIP) network support specialists, VoIP network engineers and VoIP systems installers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan design concepts of a voice network for specified voice quality | 1.1 Determine the design requirements of an IP-based voice network, including the choice of network elements<br>1.2 Evaluate the various applications of real-time protocols and of signalling protocols for an appropriate gateway<br>1.3 Design a site numbering plan, including digit manipulation and path selection process |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Plan and assign calling privileges as required<br>1.5 Predict VoIP call flow and potential impact on voice quality considerations and network performance |
| 2. Design, configure implement and test voice protocols and interoperation of VoIP communications network | 2.1 Produce the design layout of the voice network according to the design requirements<br>2.2 Design and configure a gateway and a gatekeeper to using H.323 protocol suite for dial plan resolution and call admission control for the network<br>2.3 Configure and test the use of real-time protocols, call management protocols and gateway signalling protocol in the network design<br>2.4 Analyse the function and interoperation of gatekeepers within an IP communications network |
| 3. Design, configure and test a VoIP IP-to-IP call system | 3.1 Analyse the IP-to-IP gateway features and functionality requirements for a given network design requirement<br>3.2 Configure the gatekeeper to support an IP-to-IP gateway<br>3.3 Configure and test the IP-to-IP gateway to provide address hiding, protocol and media interworking, and call admission control implementations<br>3.4 Produce test results and evaluate against design requirements |

# Assessment Requirements for ICTNWK610 Design and build integrated VoIP networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine requirements and produce a concepts design of a voice over internet protocol (VoIP) network
- produce a design layout
- configure and test voice gateways
- design site numbering plan, dial plans and priorities
- use networking and network management tools
- configure and test real-time protocols, call management protocols and gateway signalling protocol in the network elements
- implement voice systems and applications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain codecs and their protocols for use
- summarise configuration, verification and troubleshooting procedures to undertake basic router operation and routing switch with VLANs and inter-switching communications
- outline design considerations and deployment schemes
- explain gateway technologies
- summarise internetwork operating system (IOS) and internet protocol (IP) networking models
- outline procedures and techniques for implementing local area network/wide area network (LAN/WAN) topologies
- explain network topologies, architectures and elements
- identify and describe networking standards and protocols

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline voice applications and protocols
- explain VoIP technologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site where network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- stand-alone and lightweight wireless local area network (WLAN) controllers and access point (AP)
- hardware and software local area network LAN/WLAN voice technologies.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTNWK611 Configure call processing network elements for secure VoIP networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce design plan and requirements of call processing network elements
- configure and test voice gateways and local area network (LAN) switches
- evaluate voice call manager server requirements and design voice call systems and applications
- implement voice systems and applications on voice call manager
- manage security of voice network.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise call processing network element technology
- outline codecs and their protocols for use
- explain configuration, verification and troubleshoot procedures to undertake:
  - basic router operation and routing
  - switch with virtual local area network (VLANs) and inter-switching communications
- summarise design considerations and deployment schemes
- explain interoperability of legacy private branch exchange (PBX) to internet protocol (IP) voice communications
- outline internetwork operating system (IOS) and IP networking and network support models
- summarise LAN and wide area network (WAN) implementations
- outline network topologies, architectures and elements
- summarise network, signalling and call management protocols

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline networking standards and protocols
- summarise security deployment scenarios
- explain voice applications and protocols
- outline voice over internet protocol (VoIP) technologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- site where network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- stand-alone and lightweight WLAN controllers and access points (AP)
- hardware and software LAN/WLAN voice technologies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan, manage and implement troubleshooting and monitoring strategies to ensure reliability and performance on advanced integrated internet protocol (IP) networks.

It applies to individuals with advanced information and communications technology (ICT) skills who are working as advanced support engineers, network support specialists and ICT network engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan the strategies for troubleshooting and monitoring the performance of advanced integrated IP networks | 1.1 Develop a plan to monitor and manage the IP network to optimise its performance and reliability<br>1.2 Plan the isolation of network segments for troubleshooting procedures<br>1.3 Plan the testing sequences and scenarios of network |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | infrastructure<br>1.4 Select appropriate network testing and monitoring tools, and software application to suit the specific network troubleshooting and monitoring sequence |
| 2. Manage and monitor troubleshooting strategies for complex enterprise networks | 2.1 Manage and monitor strategies for network monitoring structure<br>2.2 Produce a routine internetwork operating system (IOS) device maintenance plan to include monitoring of routing protocols and router configurations<br>2.3 Isolate sub-optimal internetwork operations at the appropriate open systems interconnection (OSI) model layer<br>2.4 Produce a plan for troubleshooting and monitoring security issues related to IOS services for mission critical applications<br>2.5 Produce a plan for troubleshooting and monitoring internet protocol version 6 (IPv6) and version 4 (IPv4) interoperability |
| 3. Implement test plans for advanced network solutions | 3.1 Test switch-to-switch connectivity, access ports and loop prevention for the virtual local area network (VLAN) based solution<br>3.2 Test private VLANs<br>3.3 Test switch virtual interfaces (SVI)<br>3.4 Test switch support of advanced services<br>3.5 Troubleshoot switch configuration |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2-1.4, 2.2, 2.4, 2.5 | • Organises, evaluates and critiques ideas and information from a range of complex texts |
| Writing | 1.1, 2.2, 2.4, 2.5 | • Develops a broad range of material, including troubleshooting plans for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 3.1-3.4 | • Interprets numerical data when testing plans for advanced network solutions, including taking measurements to evaluate performance and interoperability of network |
| Get the work done | 1.2-1.4, 2.1-2.5, 3.1-3.4 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies<br>• When dealing with complex issues, may use intuition to identify the general problem area, switching to analytical processes to generate possible solutions depending on differing operational contingencies, risk situations and environments |

# Assessment Requirements for ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and monitor internet protocol (IP) networks for performance and reliability
- evaluate, design and implement a troubleshooting structured plan
- use network testing and monitoring tools
- produce a maintenance plan for monitoring routing protocols and configurations
- implement tests of advanced network solutions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise advanced network solutions
- explain configuration, verification and troubleshoot procedures to undertake:
  - router operation and routing
  - virtual local area networks (VLANs) switching and inter-switching communications
- outline deployment schemes
- explain iDevice operating system (iOS) and IP networking models
- explain IOS services
- explain IP network topologies, architectures and elements
- identify and describe network testing and monitoring tools
- outline networking standards and protocols
- summarise threat mitigation strategies
- outline VLAN technologies.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site where complex network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- local area network (LAN) and wide area network (WAN) systems, including voice and video hardware and software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK613 Develop plans to manage structured troubleshooting process of enterprise networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage the maintenance of a complex integrated enterprise network to ensure availability and performance standard.

It applies to individuals with advanced information and communications technology (ICT) skills who are working in a wide range of roles including network specialists, network engineers, network infrastructure engineers, senior network administrators, network and systems managers, ICT security specialists, security engineers, communications engineers and communications managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan the strategies for structured troubleshooting and monitoring of enterprise networks | 1.1 Develop strategies to monitor and manage an enterprise network to ensure availability and performance standard<br>1.2 Conduct equipment and skills audits as required<br>1.3 Evaluate the business value of service level agreements (SLAs), formal maintenance plans and monitoring procedures |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | against best practices for maintenance and fault procedures<br>1.4 Assign functional responsibilities to stakeholders according to the maintenance plan<br>1.5 Select and use appropriate network fault management tools and monitor and improve network performance |
| 2. Manage and monitor structured troubleshooting strategies for complex enterprise networks | 2.1 Implement structured network maintenance management processes and procedures in line with enterprise design plans and policies for ensuring high network reliability<br>2.2 Undertake risk assessment evaluation and rank threats for minimal impact<br>2.3 Develop and implement disaster recovery strategies for reliable contingencies and business continuity in a complex routing environment<br>2.4 Measure and analyse performance against an agreed baseline |
| 3. Conduct structured network<br>troubleshooting strategies | 3.1 Analyse and troubleshoot layer 2 and 3 switch configuration to ensure the availability and resilience of a switched environment<br>3.2 Implement effective control of broadcast and multicast traffic in a switched environment<br>3.3 Analyse and troubleshoot scalable network layer connectivity with routing data structures and routing functions<br>3.4 Analyse and troubleshoot enterprise intra and internetwork routing protocols, architectures and processes<br>3.5 Analyse and troubleshoot route redistribution operations in inter-autonomous system routing architectures and processes<br>3.6 Test and manage internet protocol version 6 (IPv6) and version 4 (IPv4) addressing schema and verify internal and external internet protocol (IP) address translation standards<br>3.7 Analyse and troubleshoot communication filtering techniques, automated address allocation systems and IPv6 operational issues in the context of enterprise routing protocols<br>3.8 Analyse and troubleshoot wireless network configuration issues<br>3.9 Analyse and resolve network performance issues in an integrated voice or video network |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 1.4, 2.1 | • Identifies, analyses and evaluates complex text to determine all technical, regulatory and business requirements |
| Writing | 1.1, 2.2, 2.3 | • Develops a broad range of operational material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Oral Communication | 1.4 | • Initiates and contributes to a range of complex conversations about technical concepts and issues relevant to personnel, responding, clarifying, explaining and expanding on information as required |
| Numeracy | 1.2, 1.3, 2.4 | • Interprets numerical data when testing plans for advanced network solutions, including taking measurements to evaluate performance and interoperability of network |
| Navigate the world of work | 2.1 | • Recognises protocols and policies that must be respected and maintained |
| Get the work done | 1.1, 1.3-1.5, 2.1-2.4, 3.1-3.9 | • Recognises the critical importance of clarifying, focussing and aligning goals and expectations, and may use the process to build ownership of and broad commitment to achieving outcomes<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• When dealing with complex issues, may use intuition to identify the general problem area, switching to analytical processes to generate possible solutions, depending on differing operational contingencies, risk situations and environments |

# Assessment Requirements for ICTNWK613 Develop plans to manage structured troubleshooting process of enterprise networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse, document and troubleshoot a given complex network using industry methodologies and resources
- develop monitoring and management plans
- use networking and network fault management tools
- evaluate risk assessments and minimise threats on enterprise networks.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline benefits of a formal or structured approach to network management
- explain disaster recovery strategies
- summarise emerging viable business and social technologies
- outline enterprise network technologies, design plans and policies
- summarise enterprise network topologies, architectures and elements
- outline external developments or factors that affect network design
- explain internet protocol version 4 (IPv4) and internet protocol version 6 (IPv6) addressing configurations
- outline maintenance and fault procedures
- explain maintenance and management tools and practices suitable for complex networks
- outline networking standards and protocols
- summarise risk management strategies and practices suitable for a complex network environment
- clarify routing and routed protocols

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline routing and switching technologies for an enterprise environment
- summarise security for enterprise networks
- outline security standards and technologies for network environments
- explain service level agreements (SLAs)
- describe the value and process of conducting a skills audit
- explain troubleshooting and threat mitigation strategies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a location where the network configuration can be implemented
- routers and switches with appropriate operating systems
- computers
- suitable testing and analysis tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK614 Manage ICT security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage data security, enterprise continuity, incidents, networks and telecommunications security, and system and application security.

It applies to individuals with managerial responsibility and advanced information and communications technology (ICT) skills who are working as experienced security technical specialists, security analysts and security consultants.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Manage enterprise security parameters | 1.1 Determine and evaluate parameters that affect enterprise security to establish benchmark<br>1.2 Review security classification and data management policies and procedures for relevance, and update if required<br>1.3 Plan and coordinate an effective enterprise continuity of operations (COOP) program and organisational structure for critical business continuity |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Develop a plan to address factors to manage the risks of the enterprise<br>1.5 Integrate and evaluate risk management concepts into operational activities with related contingency planning activities, using an enterprise COOP performance measurement program<br>1.6 Evaluate and assess security incidents to establish an effective incident management program for the enterprise<br>1.7 Manage the coordination between related security teams for effective incident management processes and procedures |
| 2. Manage networks and telecommunications security | 2.1 Develop a network security and telecommunications program in line with enterprise policy and security goals<br>2.2 Manage the necessary resources to integrate network security and telecommunications program activities with technical support, security administration and incident response activities in a secure network<br>2.3 Establish effective communications protocols between the network security and telecommunications team and related security teams to manage the risks<br>2.4 Establish a performance measurement program to evaluate the security effectiveness of the integrated network security and telecommunications network<br>2.5 Ensure enterprise compliance with applicable network-based documents, and that network-based audits and management reviews are conducted to implement process improvement |
| 3. Implement and document enhancements | 3.1 Implement appropriate changes and improvement actions as required, and evaluate effectiveness of enhancements<br>3.2 Produce and table documentation for audit tracking |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 1.2, 1.5, 1.6, 2.1, 2.5 | • Identifies, analyses and evaluates complex text to determine regulatory and business requirements |
| Writing | 1.2, 1.4, 1.6, 2.1, 2.3, 2.4, 3.2 | • Develops a broad range of operational material, including recommendations and reports for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations |
| Numeracy | 2.2 | • Uses mathematical formulas and calculations to estimate and plan project costs |
| Navigate the world of work | 1.2, 2.3-2.5 | • Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are being met<br>• Monitors and reviews the organisation's policies, procedures and adherence to legislative requirements in order to implement and manage change |
| Interact with others | 1.7, 2.2-2.5, 3.1 | • Selects, implements and manipulates communications systems, processes and practices for maximum impact<br>• Influences and fosters a collaborative culture, facilitating a sense of commitment and workplace cohesion<br>• Understands diversity and seeks to integrate diversity into the work context, for managing change, making decisions and achieving shared outcomes |
| Get the work done | 1.3-1.6, 2.1- 2.5, 3.1 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies<br>• When dealing with complex issues, may use intuition to identify the general problem area, switching to analytical processes to generate possible solutions, depending on differing operational contingencies, risk situations and environments<br>• Monitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles that may be adaptable to future situations |

# Assessment Requirements for ICTNWK614 Manage ICT security

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- direct contingency planning, operations and programs to manage risk
- establish the information and communications technology (ICT) system and application security engineering program
- manage the necessary resources to establish and maintain an effective network security and telecommunications program
- specify policy and coordinate review.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain business and commercial issues related to the management of ICT security
- explain continuity of operations (COOP)
- clarify critical analysis in a management context
- outline management specifications and objectives
- describe different management styles and systems
- explain systems development life cycle (SDLC).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- ICT business specifications
- ICT security assurance specifications
- management related scenarios

© Commonwealth of Australia, 2025 Future Skills Organisation

- a security environment, including the threats to security that are, or are held to be, present in the environment
- information on the security environment, including:
  - laws or legislation
  - existing organisational security policies
  - organisational expertise
  - use of risk analysis tools and methodologies currently used in industry.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK615 Design and configure desktop virtualisation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, and configure, the desktop virtualisation technologies needed to support an enterprise virtualisation business solution.

It applies to senior networking staff responsible for increasing the sustainability of an enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare the design specifications and plan to implement enterprise desktop environments | 1.1 Research the available desktop virtualisation software vendors<br>1.2 Evaluate the desktop virtualisation environment<br>1.3 Analyse and compare, the features and components of desktop virtualisation environment<br>1.4 Identify the desktop-specific design objectives, requirements and limitations<br>1.5 Document the design infrastructure, according to the |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | enterprise requirements<br>1.6 Plan implementation and deployment, using the recommended design |
| 2. Implement and configure the desktop virtualisation infrastructure and services | 2.1 Assess the desktop virtualisation software and analyse its relevance to the enterprise requirements<br>2.2 Install and configure the desktop virtualisation environment<br>2.3 Implement specific features and functions, in order to provide suitable solutions to identified problems<br>2.4 Implement and manage the testing process<br>2.5 Apply desktop virtualisation technologies, to an accepted industry standard |
| 3. Implement the application virtualisation | 3.1 Plan the implementation and deployment of the application virtualisation software<br>3.2 Configure and test the application virtualisation system's components<br>3.3 Maintain, update and tune, the system's components |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.1 | • Organises, evaluates and critiques ideas, and information, from a wide range of complex texts |
| Writing | 1.5, 3.1 | • Demonstrates sophisticated writing skills by selecting the appropriate conventions and stylistic devices, to express the precise meaning |
| Navigate the world of work | 1.5, 2.1, 2.5 | • Works autonomously, making high-level decisions to achieve, and improve, organisational goals<br>• Develops and implements strategies that ensure that organisational policies, procedures and regulatory requirements are being met |
| Get the work done | 1.2-1.4, 1.6, 2.2-2.5, 3.2, 3.3 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Makes high-impact decisions in a complex and diverse environment, using input from a range of sources<br>• Identifies the key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision- making strategies, where appropriate<br>• Uses digital technologies to manage business operations, and actively investigates new technologies for strategic and operational purposes |

# Assessment Requirements for ICTNWK615 Design and configure desktop virtualisation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design, configure and manage the implementation of the virtualised enterprise desktop environment
- analyse and critically evaluate, the features and functions of the virtualised enterprise desktop environment
- plan, configure and maintain, the application virtualisation software.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- research current government and industry policies, and guidelines, relating to the development of efficient and reliable, information and communications technology (ICT) environments
- research the current technologies and processes designed to produce an efficient and reliable ICT environment
- determine the structure, functions and business organisation of the client
- identify and apply, the available tools and software applications required to manage the virtual desktop environment
- formulate the configuration of software applications required to manage the virtual desktop environment
- formulate the configuration required to integrate virtual machines into the existing network design.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where industry-specific technologies may be used
- industry-specific technologies currently used in the industry
- documents detailing workplace health and safety (WHS) standards, environmental guidelines and enterprise requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTNWK616 Manage security, privacy and compliance of cloud service deployment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage cloud security controls, and privacy and legal compliance, when implementing cloud services for an enterprise.

It applies to those with managerial responsibility, such as experienced security technical specialists, security analysts and security consultants.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Manage enterprise cloud security controls | 1.1 Identify the cloud security issues faced by different delivery and deployment models relevant to the enterprise<br>1.2 Determine the specific enterprise areas of security responsibility<br>1.3 Implement the most relevant security controls and measures, to protect identified areas of responsibility |
| 2. Manage enterprise | 2.1 Identify the relevant compliance regulations relating to data |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| cloud privacy and compliance | storage<br>2.2 Determine the most relevant business continuity and data recovery plans<br>2.3 Identify, secure and maintain, the relevant logs and audit trails<br>2.4 Investigate and review legal, privacy and contractual issues to ensure that they meet the enterprise policy |
| 3. Review, implement and document cloud security, privacy and compliance enhancements | 3.1 Implement the appropriate changes, and integrate them into the current enterprise's continuity of operation program (COOP)<br>3.2 Establish a performance measurement program, to evaluate the security effectiveness of implemented security controls<br>3.3 Provide relevant documentation as part of COOP, for audit tracking purposes |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.3, 2.4 | • Organises, evaluates and critiques ideas, and information, from a wide range of complex texts |
| Writing | 2.3, 3.3 | • Demonstrates sophisticated writing skills by selecting the appropriate conventions and stylistic devices, to express precise meaning |
| Navigate the world of work | 1.1 | • Works autonomously making high-level decisions to achieve, and improve, organisational goals<br>• Develops and implements strategies, that ensure that organisational policies, procedures and regulatory requirements are being met |
| Get the work done | 1.2, 1.3, 2.1-2.4, 3.1-3.3 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment, exposed to competing demands<br>• Gathers and analyses data, and seeks feedback to improve plans and processes<br>• Makes high-impact decisions in a complex and diverse |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | environment, using input from a range of sources<br>• Identifies the key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision- making strategies, where appropriate<br>• Explores and incubates, new and innovative ideas, through unconstrained analysis and critical thinking, to develop and improve the organisation's goals |

# Assessment Requirements for ICTNWK616 Manage security, privacy and compliance of cloud service deployment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify, manage and implement cloud security controls, according to legal and privacy requirements
- integrate the cloud security plans into the enterprise's existing security plans
- develop an ongoing performance measurement and evaluation review process.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- review the business and commercial issues relating to the management of cloud security
- research the legislation, organisational and jurisdictional policy and procedures that may impact on management areas including:
  - cloud-related privacy issues
  - codes of ethics and conduct
  - equal employment opportunity, equity and diversity principles
  - financial management requirements
  - governance requirements
- determine management specifications and objectives
- identify the management tools and techniques suited to a range of complex project activities
- describe the organisational and political context
- evaluate the systems development life cycle (SDLC)
- determine the techniques for critical analysis in a management context.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- the cloud information and communications technology (ICT) business specifications
- the cloud ICT security assurance specifications
- management-related scenarios
- a cloud-focused security environment, including threats to security that are, or are held to be, present in the environment
- information on the security environment, including:
  - laws or legislation
  - existing enterprise security policies
  - enterprise expertise
- risk analysis tools and methodologies currently used in industry.

Assessors must satisfy NVR/AQTF assessor requirements.

| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit addresses the knowledge, processes and techniques necessary to configure and manage a Storage Area Network (SAN) which are widely used in the enterprise datacenter space and when coupled with server virtualisation technology, form the basis for highly available datacentres.

It applies to specialist technicians and storage engineers who manage and maintain highly available data storage in a networked environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Networking

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine specifications for a Storage Area Network | 1.1 Analyse and document client requirements.<br>1.2 Analyse and document the required topology to support a storage area network.<br>1.3 Analyse and determine the required storage capacity according to current and future business requirements.<br>1.4 Determine the storage protocols to be used to meet |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 3.1, 3.2, 3.3, 3.4, 3.5, 4.1, 4.2 | • Recognises and interprets technical and organisational documentation to determine and confirm job requirements. |
| Writing | 1.1, 2.2, 3.1, 3.3 | • Develops a range of workplace documentation for a specific audience using clear and detailed language in order to convey explicit information, requirements and recommendations. |
| Oral Communication | 1.1, 3.1 | • Uses listening and questioning skills to confirm understanding for requirements<br>• Establishes and maintains complex and effective spoken communication in a broad range of contexts |
| Navigate the world of work | 1.4, 1.5 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts and appreciates the importance of identifying and responding to protocols in new situations |
| Get the work done | 1.2, 2.1, 2.2, 2.4, 2.5, 3.1, 3.2, 3.3, 3.4, 3.5, 4.1, 4.2, 5.1,5.2, 6.1, 6.2 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• May operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, identifying and addressing issues<br>• Actively identifies systems, devices and applications with potential to meet current and/or future needs<br>• Uses nuanced understanding of context to recognise anomalies in a virtualised machine environment and subtle deviations to normal expectations, focussing attention and remedying problems promptly |

# Assessment Requirements for ICTNWK617 Configure and manage a storage area network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine and document the specifications for a Storage Area network (SAN) solution
- select the appropriate SAN solution to meet the client requirements
- document and design a SAN solution that includes backup, security and redundancy
- install and configure a storage cluster, either physically or in a simulated/virtualised environment
- configure network settings to facilitate management of a SAN
- verify and troubleshoot network connectivity
- configure network protocols to facilitate storage access via a client/server environment
- provision shared storage using suitable protocols
- configure and use advanced SAN features if available
- monitor and report on capacity utilization
- resize existing storage to increase the size of existing datastores
- create new datastores utilising capacity on a storage system.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the function and applications of the following network protocols:
  - common internet file system CIFS
  - sever message block (SMB)
  - network file system (NFS)
  - internet small computer system interface (iSCSI)
  - fibre channel (FC)

© Commonwealth of Australia, 2025 Future Skills Organisation

    - fibre channel over Ethernet (FCOE)
- describe the advanced SAN features including:
    - snapshots
    - data deduplication
    - flexible volumes
    - replication
    - backup and restore
- describe the advantages and disadvantages of storage area networks (SAN) versus direct attached storage (DAS) devices
- identify and describe common hard drive types including:
    - serial attached SCSI (small computer system interface) -SAS
    - serial ATA (SATA)
    - solid state disk (SSD)
- identify and describe common network cable types and connectors
- outline the common network topologies
- describe the implementation and configuration of SANs
- recognise and describe redundant array of independent disks (RAID) configurations and state their application in data storage
- describe which features of advanced storage systems can be applied in server and/or virtualized environments
- describe the functional and interconnection relationship between storage systems and servers in server and/or virtualized environments
- describe how storage systems can protect against data storage failures and the functional process for recovering data.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking field of work and include access to:

- site or prototype where a storage area network may be implemented
- storage area network appliance or simulated appliance
- network technical requirements
- appropriate software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN401 Install and test a dense wavelength division multiplexing system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install dense wavelength division multiplexing (DWDM) equipment in optical networks.

It applies to individuals who interpret installation manuals and use technical skills to prepare for and conduct system tests and commissioning.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install DWDM units | 1.1 Determine number of racks and DWDM units at each site by referring to installation documents<br>1.2 Determine DWDM unit and equipment positions within the individual racks<br>1.3 Assemble equipment racks according to safe industry practice and manufacturer’s instructions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Select tools and equipment<br>1.5 Prepare patch panels with connectors according to installation plan |
| 2. Install DWDM units and associated cabling | 2.1 Install DWDM unit in the designated rack position to maintain the planned link budget margin<br>2.2 Install patch panels and ancillary equipment and connections into equipment rack in preparation for commissioning procedures<br>2.3 Insert circuit cards into specified slot locations in readiness for commissioning procedures, but do not seat cards into backplane nor lock into position at this stage<br>2.4 Connect optical fibre cables between circuit cards, optical multiplexers, adjoining DWDM units and patch panels according to manufacturer's specifications |
| 3. Test power connections and complete installation report | 3.1 Measure main and redundant power supplies to verify correct polarity of ground and power connections<br>3.2 Rectify any identified power wiring fault if applicable<br>3.3 Confirm cooling fans, panel lights, indicator lights and alarms behave according to manufacturer's prescribed specifications when power is applied<br>3.4 Complete installation report and reinstate site |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance*.

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.3, 1.5, 2.4, 3.3 | • Interprets textual information from relevant sources to identify and adhere to procedures and standards |
| Writing | 3.4 | • Uses clear, specific and industry related terminology to complete and update workplace documentation |
| Numeracy | 1.1, 2.1, 3.1 | • Uses mathematical formulae to calculate measurements and determine equipment requirements |
| Navigate the world of work | 1.3, 3.4 | • Recognises and follows explicit and implicit protocols and meets expectations associated with own role |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context with specific reference to workplace safety |
| Get the work done | 1.1, 1.2, 1.4, 1.5, 2.1-2.4, 3.1-3.4 | • Implements actions according to a pre-determined plan, making slight adjustments if necessary and addressing some unexpected issues<br>• Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account<br>• Initiates standard procedures when responding to familiar problems within immediate context<br>• Reflects on the ways digital systems and tools are used, or could be used to achieve work goals and begins to recognise strategic and operational applications |

# Assessment Requirements for ICTOPN401 Install and test a dense wavelength division multiplexing system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- determine the dense wavelength division multiplexing (DWDM) requirements for a site
- install a DWDM system and associated cabling according to plans and specifications
- test installation for operation, power and ground connections
- analyse test results and rectify faults
- complete and submit an installation report.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain DWDM principles of operation
- outline managing risk of electrostatic discharge
- outline optical fibre connector types and characteristics
- summarise optical fibre types and characteristics
- outline specific workplace health and safety requirements that impact the safe measurement and inspection of optical connectors and optical power from laser transmission systems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- tools and equipment requirement for installation
- a range of optical fibres to suit the installation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN402 Use advanced optical test equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to test optical communication systems and components using advanced optical test equipment. It involves using the optical time domain reflectometer (OTDR), optical spectrum analyser (OSA) and optical return loss (ORL) test set for performance testing and link budget calculation.

It applies to individuals who combine technical skills with organisational and administrative skills. They may be installation contractors, technical staff and field officers from telecommunications carriers or other private and public organisations or regulatory authorities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to use advanced optical measuring instruments | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Notify customer for site access, security arrangements and location |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | details of optical system and test purpose<br>1.3 Identify site hazards and notify appropriate personnel to make site safe<br>1.4 Devise and implement risk control measures of hazards with handling of optical fibres and lasers in consultation with appropriate personnel<br>1.5 Prepare a testing plan indicating the type of measurement, procedures and nominated wavelength, and seek approval from customer<br>1.6 Select appropriate tools and test instruments according to required measurement and enterprise practice |
| 2. Evaluate optical performance and link budget using advanced optical test equipment | 2.1 Set up test instrument according to manufacturer's instructions and work health and safety (WHS) and environmental requirements<br>2.2 Perform measurement using knowledge of appropriate testing techniques and advanced test equipment in a safe manner to evaluate performance of optical system and component<br>2.3 Record test results and compare with standard test specifications from manufacturer's and enterprise guidelines<br>2.4 Perform end-to-end measurements on an optical link to a customer and record test results and test points<br>2.5 Calculate optical losses for a link budget figure of an optical link to determine if within operational margins as specified in manufacturer's manual<br>2.6 Evaluate test results and report on functionality of the optical component or equipment and performance of the optical link |
| 3. Document measurement results | 3.1 Document test results for future reference and make recommendations on optimising component and system performance<br>3.2 Clean worksite and make safe according to enterprise requirements and to customer satisfaction<br>3.3 Notify appropriate personnel of job completion for sign off and present test documentations |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 1.6, 2.1, 2.3, 2.5, 2.6 | • Interprets textual information from relevant sources to plan, identify all job requirements and adhere to procedures and standards |
| Writing | 1.2-1.5, 2.3, 2.6, 3.1, 3.3 | • Accurately completes relevant reports and documentation using clear and technically specific language and numerical data |
| Oral Communication | 1.2-1.5, 2.6, 3.3 | • Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas and solutions, and uses appropriate, detailed and clear language to address key personnel and customers |
| Numeracy | 1.5, 1.6, 2.2, 2.4, 2.5 | • Uses mathematical formulae to gather and record technical measurements |
| Navigate the world of | 1.1, 1.3, 1.4, 2.1, 2.2, 3.2 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context with specific reference to workplace safety<br>• Understands main tasks, responsibilities and boundaries of own work |
| Interact with others | 3.3 | • Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1, 1.3, 1.5, 1.6, 2.2, 2.6 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency<br>• Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account<br>• Considers purpose, needs and limitations when selecting devices and applications for different tasks |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) should be included.

| | |
|---|---|
| Test equipment that must be used includes: | • optical time domain reflectometer (OTDR)<br>• optical spectrum analyser (OSA)<br>• optical return loss (ORL) |
| Measurements that must be performed include: | • optical power level<br>• insertion loss of optical network<br>• end-to-end fibre loss (bi-directional) |

# Assessment Requirements for ICTOPN402 Use advanced optical test equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- obtain operation documentation for advanced optical test instruments
- plan and prepare a schedule of tests to be performed
- conduct optical tests
- record measurements for a range of parameters
- test, calculate and document optical link budget
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe an optical system and its main components
- identify hazards and risks for health and safety associated with optical systems
- identify and describe common tests, measurements and testing plans used for optical systems
- identify common wavelengths involved with optical systems
- list and describe use of tools and test equipment for optical systems
- explain consequences of mating contaminated optical connectors
- perform calculations using decibels, dBm
- discuss downstream and upstream signals
- outline dense wavelength division multiplexing (DWDM) metro and long haul system architecture
- summarise measurement of DWDM signals

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain measurement of gain and gain flatness of optical amplifier
- discuss measurement of laser spectral stability, drift and unexpected variation in spectral transmission characteristics
- explain non-linear effects, four-wave mixing
- identify optical connector types
- outline optical signal to noise ratio (OSNR)
- summarise optical spectrum limits, wavelengths used in various applications and International Telecommunications Union (ITU) grid
- identify optical transmitters and receivers
- describe optical return loss (ORL)
- discuss OTDR dead zones, dynamic range and launch cable reflectance
- outline safe handling procedures with optical fibres
- describe transmission system line rates:
  - optical ethernet
  - optical transport network (OTN)
  - synchronous digital hierarchy (SDH)
- explain wavelength division multiplexing (WDM), coarse wavelength division multiplexing (CWDM) and DWDM principles and optical multiplexers
- identify and explain influence of legislation, regulations, standards and codes of practice relevant to advanced optical work.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- tools and equipment required for measurements
- manufacturer’s documentation for test instruments and equipment under test.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare the activity plans and specifications required by field technical staff to deploy a fibre to the x (FTTx) installation for optical access networks.

It applies to individuals who work in a supervisory capacity within a team environment. They are technically skilled and integral to the delivery of a very high speed broadband through the access network for the National Broadband Network (NBN) initiative.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for FTTx planning tasks | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Scope work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Notify appropriate personnel of identified safety hazards at the worksite<br>1.4 Obtain tools and safety equipment and material to perform tasks safely and efficiently<br>1.5 Select and use required protective equipment and make site safe and secure for installation work<br>1.6 Identify and select plant and machinery for installation work activities |
| 2. Plan FTTx activities and develop specifications | 2.1 Follow work health and safety (WHS) and environmental requirements for given work and identify and avoid other services<br>2.2 Inspect proposed cable route visually according to cable plan and identify barriers to the cable installation<br>2.3 Modify cable plan, if required, and notify appropriate personnel<br>2.4 Prepare installation activities for FTTx provisioning according to project plan<br>2.5 Prepare installation specifications according to safe work practices and manufacturer's instructions to include optical fibre cable size, distribution area (DA), distribution joint including lead-in multiport serving area (DLMSA), enclosures, location of optical network terminations (ONT), location and type of fibre distribution hub (FDH) and optical splitter provisioning<br>2.6 Verify cable length from customer access network fibre centre to end-user ONT is within 20 km operating limit<br>2.7 Consult with appropriate personnel to confirm project scope, installation requirements and installation specifications according to project plan |
| 3. Complete documentation and obtain sign-off | 3.1 Complete and present updated planning activities documentation to authorised personnel<br>3.2 Complete and provide updated specification documentation to vendors for supply of material and resources<br>3.3 Submit documentation to appropriate person for approval and sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 2.2, 2.5, 2.7 | • Interprets textual information from relevant sources to plan, identify all job requirements and adhere to procedures and standards |
| Writing | 1.2, 1.3, 2.3, 2.7, 3.1, 3.2 | • Accurately completes relevant reports and documentation using clear and technically specific language and numerical data |
| Oral Communication | 1.2, 1.3, 2.3, 2.6, 2.7, 3.1 | • Uses listening and questioning skills to confirm understanding of requirements, participates in a verbal exchange of ideas and solutions and uses appropriate, detailed and clear language to address key personnel and customers |
| Numeracy | 2.6 | • Uses simple mathematical equations to determine equipment and installation requirements |
| Navigate the world of work | 1.1, 1.3-1.5, 2.1, 2.5 | • Understands nature and purpose of own role and associated responsibilities and how it contributes to the work of others in the immediate work context<br>• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context with specific reference to workplace safety |
| Interact with others | 3.1-3.3 | • Selects appropriate form, channel and mode of communication for a specific purpose relevant to own role |
| Get the work done | 1.2, 1.4-1.6, 2.2, 2.4, 2.6, 2.7 | • Takes responsibility for own workload, negotiating some key aspects with others<br>• Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Makes decisions in relatively complex situations, taking a range of constraints into account<br>• Recognises and takes responsibility for addressing predictable and some less predictable problems in familiar work contexts<br>• Reflects on ways digital systems and tools are used, or could be used to achieve work goals and begins to recognise strategic as well as operational applications |

# Assessment Requirements for ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- determine the scope of the installation
- visually inspect proposed cable route
- prepare installation activities for fibre to x (FTTx) provisioning
- prepare and document FTTx designs and specifications and submit for approvals
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline properties of passive optical devices, including splitters and couplers
- identify FTTx installation equipment, including tools and safety equipment
- explain FTTx specifications
- outline legislative privacy, safety and environmental requirements including:
  - WHS requirements relating to handling of optical fibre and using laser optical sources
  - other personal safety issues
  - plant and equipment safety to be used in installation plans
  - discussion of manufacturer’s requirements for safe operation of equipment
- summarise operation of optical transmitters and receivers
- identify organisational policy and procedures relevant to this work
- discuss propagation of light in optical communication systems
- summarise the role of optical transmitters and receivers in optical communication systems
- explain the concept of wavelength division multiplexing (WDM)

© Commonwealth of Australia, 2025 Future Skills Organisation

- discuss the importance of a knowledge of site engineering
- describe typical issues and challenges in preparing an activity plan for a site
- demonstrate a knowledge of the workplace and industry environment and their relationship to this work.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications \-– Optical Networks field of work and include access to:

- vendor product information and installation guides
- relevant regulatory and equipment documentation impacting installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN501 Plan and configure dense wavelength division multiplexing systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare activity plans and specifications required to deploy a dense wavelength division multiplexing (DWDM) optical network suitable for a metropolitan area network (MAN) or long haul applications.

It applies to individuals who work as members of a team and use high-level communication and technical skills to provide services in Next Generation Networks (NGN) using emerging technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for DWDM planning activities | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Scope the work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.3, 2.7, 3.2 | • Interprets textual information from relevant sources to identify and plan for all job requirements and to adhere to procedures and standards |
| Writing | 1.2, 1.3, 2.6, 3.1, 4.1, 4.2, 5.1, 5.2 | • Accurately completes relevant reports and documentation using clear and technically specific language, numerical data and diagrammatic information |
| Oral Communication | 1.2, 1.3, 2.6, 5.1 | • Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas and solutions and uses appropriate, detailed and clear language to address key personnel, contractors, vendors and clients |
| Numeracy | 2.7, 4.1, 4.2, 5.1 | • Uses mathematical equations to evaluate technical data to calculate required settings and make adjustments |
| Navigate the world of work | 1.1, 2.1, 2.7 | • Understands how own role meshes with others and contributes to broader work goals<br>• Monitors adherence to legal and regulatory rights and responsibilities with specific reference to safe industry practices |
| Interact with others | 5.3 | • Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience and monitoring impact |
| Get the work done | 1.1, 1.2, 2.2-2.5, 2.8, 3.2, 3.3, 4.1, 4.2 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world |

# Assessment Requirements for ICTOPN501 Plan and configure dense wavelength division multiplexing systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- plan and develop all required dense wavelength division multiplexing (DWDM) installation activities according to all work health and safety (WHS) and job specifications
- prepare all DWDM shelf configurations and specifications
- plan preliminary optical tests
- complete project and acceptance documentations and submit for approval.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain configuration of DWDM shelf
- summarise principles of DWDM operations
- manage risk of electrostatic discharge
- summarise features and operating requirements of the following test equipment:
  - hand-held optical power meter
  - optical spectrum analyser
  - optical time domain reflectometer (OTDR)
  - transmission test set
- describe functions of an optical add drop multiplexer
- explain the role of the following in planning and configuration of DWDM systems internet protocol (IP) addressing:
  - subnet mask
  - dynamic host configuration protocol (DHCP)

© Commonwealth of Australia, 2025 Future Skills Organisation

  - default gateway
- explain International Telecommunications Union (ITU) wavelength grid for DWDM
- identify optical fibre connector types and discuss their characteristics
- identify optical fibre types and discuss their characteristics
- explain path protection and protection switching
- summarise physical optical loopbacks and software loopbacks used to assist with testing DWDM systems
- identify protocols used on optical DWDM systems
- discuss the use of ring topologies and linear network topologies in DWDM system cable routes
- explain specific work health and safety (WHS) requirements that impact safe inspection of optical connectors and safe measurement of optical power from laser transmission systems.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- test equipment currently used in industry
- manufacturer’s technical documentation
- relevant regulations and specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN502 Perform acceptance and commissioning tests on optical network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to conduct acceptance tests and commissioning tests on optical networks, including the optical portion of broadband hybrid fibre coaxial (HFC) networks, fibre to the x (FTTx) passive optical networks (PONs) and metropolitan and long haul dense wavelength division multiplexing (DWDM) networks.

It applies to individuals who work as members of a team and use high-level communication and technical skills to provide services in Next Generation Networks (NGN) using emerging technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to conduct | 1.1 Obtain installation and commissioning documents and planning specifications from appropriate personnel to ensure installed optical |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| acceptance tests | network is as planned and specified<br>1.2 Conduct visual inspection of new installation and verify system compliance against relevant legislation, codes, regulations and standards, and accepted industry practice<br>1.3 Select and obtain required test equipment for suitability of acceptance testing<br>1.4 Prepare acceptance schedule and test criteria in consultation with appropriate personnel |
| 2. Conduct acceptance testing | 2.1 Conduct and evaluate performance tests to ensure measurements meet with predetermined specifications and approved operating margins<br>2.2 Verify performance levels to be within tolerance specifications set in manufacturer's instructions<br>2.3 Test protection mechanisms to ensure performance criteria meets specified standard<br>2.4 Test alarms for satisfactory operation and refer identified problems to appropriate personnel for remedial action<br>2.5 Record all acceptance test procedures and results |
| 3. Complete administrative tasks | 3.1 Complete acceptance documentation including recommendations<br>3.2 Notify appropriate personnel and obtain sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.2, 2.2, 2.3 | • Interprets textual information from relevant sources, including equipment readings to identify and plan for all job requirements and adhere to procedures and standards |
| Writing | 1.1, 1.4, 2.5, 3.1, 3.2 | • Accurately completes relevant reports and documentation using clear and technically specific language and numerical data |
| Oral Communication | 1.1, 1.4, 3.2 | • Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas and solutions, and uses appropriate, detailed and clear language to address |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | key personnel |
| Numeracy | 2.1 | • Uses mathematical equations to evaluate technical data to determine measurements and any required calibration changes |
| Navigate the world of work | 1.1, 1.2 | • Understands how own role meshes with others and contributes to broader work goals<br>• Monitors adherence to legal and regulatory rights and responsibilities |
| Interact with others | 3.2 | • Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience and monitoring impact |
| Get the work done | 1.1, 1.3, 1.4, 2.3, 2.4 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world<br>• Recognises and addresses some unfamiliar problems of increasing complexity within own scope, recognising when to seek the expertise of others |

# Assessment Requirements for ICTOPN502 Perform acceptance and commissioning tests on optical network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- verify ‘as built’ installation against installation plans
- undertake acceptance and commissioning tests and analysis against specified installation and commissioning documents
- complete and submit all acceptance documentation incorporating test procedures, results and recommendations
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify cabling, terminations and supporting structures that may be encountered in the system under inspection
- outline common performance levels and standards
- describe electrical and optical properties to be measured
- explain health and safety issues appropriate to the work environment under inspection
- summarise typical network topologies, switching, routing and transmission techniques
- discuss transmission type and signals that may be encountered
- identify various test equipment types suitable for tests to be made.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- testing equipment currently used in industry
- relevant regulatory and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN503 Plan for an optical system upgrade and cut over

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to plan the activities of a major upgrade of optical systems from specifications provided by the planning and design section or its equivalent. Major upgrades in enterprise networks or a telecommunications service provider's network involve cut over activities to integrate additional work into the existing network.

It applies to individuals who work as members of a team and use high-level communication and technical skills to provide services in Next Generation Networks (NGN) using emerging technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Gather information to prepare upgrade activity plan | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Obtain design specifications from the planning and design section to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | determine scope and nature of the upgrade<br>1.3 Analyse the design specification and design plan, and determine accuracy of the design plan to site installation and requirements with customer<br>1.4 Determine network equipment types and obtain installation details from manufacturer<br>1.5 Prepare an equipment and component list and source vendors for procurement |
| 2. Prepare upgrade activity plans | 2.1 Prepare a detailed installation plan of the upgrade for the installer<br>2.2 Prepare a detailed installation procedure to carry out the upgrade to minimise impact to customer<br>2.3 Prepare pre-installation optical tests on existing equipment to determine benchmarks and performance levels prior to the upgrade<br>2.4 Prepare post-installation optical tests on upgrade to ensure upgraded system is achieving desired results<br>2.5 Prepare monitoring schedule to progressively assess upgrade progress<br>2.6 Prepare contingency plan for backing out if upgrade is not progressing according to schedule and disruptions to customer are excessive<br>2.7 Prepare cut over procedures |
| 3. Complete documentation | 3.1 Update documentation<br>3.2 Submit planning activity document for approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

# Assessment Requirements for ICTOPN503 Plan for an optical system upgrade and cut over

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- prepare upgrade plan incorporating the following:
  - a detailed installation plan and installation procedures
  - pre-installation and post-installation test methods and results
  - a monitoring schedule to assess progress of the upgrade
  - a contingency plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain alarms and backup systems that apply to optical networks
- describe escalation and outage procedures
- explain network management systems
- outline fundamentals of telecommunications networks and equipment
- summarise telecommunications monitoring tools
- outline telecommunications test equipment and test setups
- evaluate telecommunications wiring practices
- explain upgrade and post-upgrade routines.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- a site where upgrade and cut over may be planned
- equipment, software, test and monitoring equipment currently used in industry
- relevant regulatory, equipment, enterprise and vendor documentation that impacts work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN504 Test and commission a dense wavelength division multiplexing transmission system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to test and commission optical transmission systems using dense wavelength division multiplexing (DWDM) technology.

It applies to individuals who work with telecommunications carriers, service providers, public utilities and broadcasting companies. They combine technical optical communications skills with broader organisational and administrative skills in a range of commercial contexts and environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to commission DWDM transmission | 1.1 Implement hazard risk control measures<br>1.2 Review system specifications and technical data by identifying system operating parameters |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| system | 1.3 Obtain and check tools and test equipment needed for the work<br>1.4 Verify all necessary equipment is installed, and circuit cards and filler cards are correctly located and seated<br>1.5 Check interconnecting fibres to optical multiplexers and shelves are intact and correctly routed<br>1.6 Establish communication between computer and DWDM shelf<br>1.7 Upload latest software release to each DWDM shelf in the network |
| 2. Commission DWDM transmission system | 2.1 Connect an optical test set and a physical optical loopback to the system, and select protocol compatible with DWDM hardware<br>2.2 Check connection status and that test set data is passing correctly<br>2.3 Monitor quality of received signal by setting performance monitoring (PM) features and retrieve PM counts<br>2.4 Verify no errors are counted by the test set during a long term stability test while customer input signal is set to the worst case (minimum) power level<br>2.5 Verify no alarms are generated during long term stability test period<br>2.6 Dispose of antistatic packaging to minimise environmental impact |
| 3. Complete test and commissioning documentation | 3.1 Finalise documentation on commissioning test results<br>3.2 Present results to appropriate person according to established procedures |

# Assessment Requirements for ICTOPN504 Test and commission a dense wavelength division multiplexing transmission system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- plan and coordinate commissioning
- test and commission dense wavelength division multiplexing (DWDM) transmission system
- complete commissioning documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain possible causes of alarms in long term stability test
- summarise principles of operation of DWDM
- explain standard electrostatic discharge precautions
- outline features and operating requirements of test equipment including:
  - a hand-held optical power meter
  - a transmission test set
  - an optical spectrum analyser
- describe functions of an optical add drop multiplexer
- explain how to set up the following:
  - internet protocol (IP) addressing
  - subnet mask
  - dynamic host configuration protocol (DHCP)
  - default gateway

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise the International Telecommunications Union (ITU) wavelength grid for DWDM
- identify optical fibre connector types and characteristics
- identify optical fibre types and characteristics
- explain path protection and protection switching
- summarise physical optical loopbacks and software loopbacks
- describe protocols used on optical DWDM systems
- summarise ring topologies and linear network topologies
- outline specific health and safety requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- test equipment currently used in industry
- manufacturer's technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN505 Test the performance of specialised optical devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to use specialised equipment for integration into existing optical networks or part of an upgrade for higher bandwidths required by services and applications of Next Generation Networks (NGN).

It applies to individuals who design and plan networks using emerging technologies and who work with telecommunications carriers, service providers, public utilities and broadcasting companies. They combine technical optical communications skills with broader organisational and administrative skills in a range of commercial contexts and environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to test specialised optical devices | 1.1 Obtain relevant legislation, codes, regulations and standards and follow work health and safety (WHS) and environmental requirements for the given work<br>1.2 Work safely according to relevant safety legislation and company work |

# Assessment Requirements for ICTOPN505 Test the performance of specialised optical devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- plan and coordinate test activities and equipment
- test specialised optical devices and determine suitability for integration into a network
- analyse test results
- report and make recommendations on suitability for integration
- comply with all work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain what an amplified spontaneous emission (ASE) source test shows
- summarise attenuation characteristics of optical fibres
- outline the principles of operation for dense wavelength division multiplexing (DWDM)
- identify features and operating requirements of test equipment including:
  - a hand-held optical power meter
  - an optical spectrum analyser
  - a transmission test set
- outline dispersion characteristics of various fibres
- describe dispersion compensation devices
- explain standard electrostatic discharge precautions
- outline functions of an optical add-drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
- explain gain equalisation

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise the International Telecommunications Union (ITU) wavelength grid for DWDM
- describe the measurement of dispersion
- explain optical amplifier operation
- name optical fibre connector types and describe their characteristics
- list optical fibre types and describe their characteristics
- explain ‘optical return loss’ (ORL)
- clarify path protection and protection switching
- explain polarisation dependent loss (PDL)
- identify protocols used on optical DWDM systems
- explain reflectance in optical systems
- summarise ring topologies and linear network topologies
- explain specific work health and safety (WHS) requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems
- discuss tuneable laser sources and their characteristics.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- test equipment currently used in industry
- manufacturer’s technical documentation, legislation, codes and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN506 Analyse and integrate specialised optical devices in the network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to analyse and integrate specialised optical devices into existing optical networks to support higher bandwidths associated with Next Generation Networks (NGN).

It applies to individuals who work for telecommunications carriers, service providers or other private and public organisations, who have experience in optical transmission. They combine technical expertise with a range of analytical, research and planning skills to develop integration solutions for particular business needs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse specialised optical device and prepare for integration in the | 1.1 Obtain relevant legislation, codes, regulations and standards and follow work health and safety (WHS) and environmental requirements for the project work<br>1.2 Work safely according to relevant safety legislation and company |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| network | work practices, identifying hazards and using personal protective equipment<br>1.3 Obtain plans and drawings of existing optical network from appropriate person and review potential locations for suitability of integrating additional hardware<br>1.4 Analyse and evaluate a range of integration options using device specifications which satisfy the customer's network requirements<br>1.5 Prepare and submit the business case for adopting recommended integration solution<br>1.6 Prepare design plan with interconnection details to existing system and installation options and seek approval to proceed from customer<br>1.7 Undertake an impact risk assessment of the hardware integration with the network operations centre (NOC) and prepare for contingencies using contingency plan |
| 2. Integrate specialised optical device in the network | 2.1 Install and integrate specialised optical devices into existing network according to design plan<br>2.2 Test the network and evaluate results to verify optical network performance with integrated specialised optical devices in operation |
| 3. Document integration of the specialised optical device in dense wavelength division multiplexing (DWDM) network | 3.1 Produce an updated design plan and submit to customer with copies filed for later reference according to organisation's policies<br>3.2 Prepare an evaluation report on network performance with specialised optical devices with recommendations for future enhancements<br>3.3 Notify NOC of job completion and obtain sign-off from appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 1.7, 2.1, 3.1 | • Interprets textual information from relevant sources to identify and plan for all job requirements and adhere to procedures and standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.5, 1.6, 3.1, 3.2, 3.3 | • Accurately completes standard reports and documentation using clear and technically specific language and numerical data |
| Oral Communication | 1.5, 1.6, 3.3 | • Uses listening and questioning skills to confirm understanding for technical requirements<br>• Participates in a verbal exchange of ideas and solutions and uses appropriate, detailed and clear language to address key personnel and clients |
| Numeracy | 2.2 | • Uses mathematical formulae to evaluate technical data and interpret results |
| Navigate the world of work | 1.1, 1.2, 3.1 | • Works independently within workplace parameters with a strong sense of responsibility and ownership of goals, plans, decisions and outcomes<br>• Monitors adherence to legal and regulatory rights and responsibilities with specific reference to safe industry practices |
| Interact with others | 3.3 | • Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience and monitoring impact |
| Get the work done | 1.1, 1.3-1.7, 2.1, 2.2 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others taking into account capabilities, efficiencies and effectiveness<br>• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints<br>• Actively identifies systems, devices and applications with potential to meet current and/or future needs<br>• When dealing with complex issues, may use intuition to identify the general problem area, switching to analytical processes to clarify goals and key issues and using lateral thinking processes to generate possible solutions |

# ICTOPN601 Manage optical ethernet transmission

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to manage an ethernet optical transmission system. It includes analysis of fault conditions that may occur.

It applies to individuals who work as members of a team with carrier telecommunications networks using optical technologies. Individuals in these roles are excellent communicators and skilled technicians.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan to test optical ethernet link | 1.1 Make worksite safe by identifying existing and potential site hazards<br>1.2 Determine the technical environment and network components<br>1.3 Report on infrastructure to ensure link is designed to meet performance requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| 2. Specify architecture requirements | 2.1 Follow site specific safety requirements and enterprise work health and safety (WHS) procedures<br>2.2 Determine architecture components<br>2.3 Determine functions and framework for the system to operate across network boundaries, taking into account performance criteria |
| 3. Manage optical ethernet link | 3.1 Conduct work in context of appropriate tests<br>3.2 Analyse test results<br>3.3 Provide a report on test results and compare with expected outcomes<br>3.4 Document test results and refer to appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|

# Assessment Requirements for ICTOPN601 Manage optical ethernet transmission

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- identify test performance parameters
- plan the test from performance requirements
- select and perform a testing regime on ethernet optical transmissions
- analyse and document test results
- comply with all work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe intricacies of optical ethernet systems including:
  - application in optical systems
  - system architecture
  - function and framework within a telecommunications environment
  - organisational policies and procedures
  - appropriate testing techniques and analysis
- explain specific work health and safety (WHS) requirements relating to:
  - handling of optical fibre
  - personal safety issues
  - use of laser light sources.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- test equipment currently used in industry
- manufacturer's technical documentation, legislation, codes and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN602 Manage dense wavelength division multiplexing transmission system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to manage a dense wavelength division multiplexing (DWDM) transmission system using graphical user interface (GUI) management software.

It applies to individuals who use high-level technical skills and network management software to manage network operations. It is often carried out at a central Network Operations Centre (NOC).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to manage transmission system | 1.1 Determine networking issues and requirements from appropriate person<br>1.2 Install network management software according to vendor instructions, including access, security and administration |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Create a customised representation of the enterprise's network topology<br>1.4 Set and configure thresholds for performance monitoring<br>1.5 Prepare a plan to integrate the DWDM management system into a broader network management system where applicable |
| 2. Manage transmission system | 2.1 Manage network using appropriate communications links<br>2.2 Monitor network for faults and performance and produce a fault and performance report |
| 3. Use network management to report on the overall state of transmission system | 3.1 Analyse performance monitoring data and alarm data<br>3.2 Prepare report and make recommendations based on analysis<br>3.3 Report on network degradation over a period of time |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

# Assessment Requirements for ICTOPN602 Manage dense wavelength division multiplexing transmission system

## Modification History

| **Release** | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- determine network parameters and set up performance monitoring
- manage network using appropriate software and tools
- monitor network for faults and performance
- produce fault and performance report
- analyse performance monitoring and alarm data
- prepare report with recommendations based on analysis.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss workplace and industry environment relevant to dense wavelength division multiplexing (DWDM)
- outline optical communications principles
- explain DWDM technology, its operation and testing principles
- summarise simple network management protocol (SNMP)
- explain organisational policies and procedures relevant to the DWDM
- determine appropriate report formats and communications tools required to make recommendations on performance and network degradation.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- DWDM system and test equipment currently used in industry
- relevant equipment manuals, software manuals and other procedural documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN603 Design a dense wavelength division multiplexing system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to design a high-capacity dense wavelength division multiplexing (DWDM) optical network suitable for a metropolitan area network (MAN) or long haul applications.

It applies to individuals who are skilled technicians and excellent communicators who use optical technologies for the deployment of high capacity networks. The work involves link budget design and providing specification details for configuration and commissioning teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to produce a DWDM system design | 1.1 Obtain the planning document from appropriate person and determine site details<br>1.2 Obtain the service type and number of channels required between customer traffic sources and destinations and the type of protection |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | required<br>1.3 Obtain specifications of optical fibre between sites<br>1.4 Determine fibre loss between sites |
| 2. Calculate link budget for each wavelength path | 2.1 Use vendor's engineering design rules, specifications and data to calculate link budget and link margin for each DWDM wavelength and path<br>2.2 Evaluate link budget and assess calculated margin and make recommendations for improvement if warranted<br>2.3 Analyse specifications of installed optical fibre and determine if dispersion will limit the maximum traffic data rate<br>2.4 Generate options for system design that are realistic for the enterprise and network<br>2.5 Evaluate and select preferred option based on enterprise business strategy outcomes, service policy and compliance with relevant legislation<br>2.6 Discuss and confirm selected option with customer |
| 3. Prepare detailed configuration documents for the DWDM system | 3.1 Outline detailed requirements of the DWDM system for configuration document<br>3.2 Prepare a configuration document according to customer's traffic needs<br>3.3 Prepare an internet protocol (IP) address allocation for all DWDM shelves and associated routers and gateways<br>3.4 Submit documentation to appropriate person for approval and sign off |
| 4. Investigate upgrade options using emerging technologies | 4.1 Investigate option of using a reconfigurable optical add-drop multiplexer (ROADM) and make recommendations outlining benefits<br>4.2 Investigate feasibility of a future upgrade up to 100 Gbps system using optical transport network (OTN) - DWDM technology |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 2.1, 2.3, 2.5 | • Interprets textual information from relevant sources to identify and plan for all job requirements and adhere to procedures and standards |
| Writing | 1.1, 2.2, 2.4, 3.1, 3.2, 3.4, 4.1 | • Accurately prepares project briefs, technical documentation and reports using clear and technically specific language, numerical data and diagrammatic information |
| Oral Communication | 1.1, 2.2, 2.6, 4.1 | • Uses listening and questioning skills to confirm technical and operational requirements and participates in a verbal exchange of ideas and solutions and uses appropriate, detailed and clear language to address installation personnel, vendors, customers and contractors |
| Numeracy | 1.4, 2.1, 2.2, 2.3 | • Uses mathematical equations to evaluate all relevant technical data |
| Navigate the world of work | 2.5 | • Monitors adherence to legal and regulatory rights and responsibilities |
| Interact with others | 3.4 | • Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience and monitoring impact |
| Get the work done | 1.1-1.4, 2.2, 2.4, 2.5, 3.3, 4.1, 4.2 | • Understands key principles and concepts underpinning the design and operation of digital systems and tools and applies these when seeking to understand the potential of new technology<br>• Takes responsibility for defining key aspects of workload, balancing own needs and priorities with job requirements<br>• Takes responsibility for high-impact decision in complex situations involving many variables and constraints<br>• Recognises and addresses complex problems involving multiple variables |

# Assessment Requirements for ICTOPN603 Design a dense wavelength division multiplexing system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- determine fibre loss between sites
- calculate link budget and link margin
- prepare dense wavelength division multiplexing (DWDM) shelf configuration and specifications
- produce configuration documentation
- investigate an emerging DWDM technology.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the configuration of DWDM shelf
- outline operation principles of DWDM
- clarify electrostatic discharge
- identify features and operating requirements of test equipment including:
  - an optical time domain reflectometer (OTDR)
  - a hand-held optical power meter
  - a transmission test set
  - an optical spectrum analyser
- describe functions of an optical add-drop multiplexer (OADM)
- summarise functions of reconfigurable optical add-drop multiplexer (ROADM)
- explain internet protocol (IP) addressing, subnet mask, dynamic host configuration protocol (DHCP) and default gateway

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise International Telecommunications Union (ITU) wavelength grid for DWDM
- explain laser stability
- identify dispersion compensation devices
- describe the importance of a link budget and calculate a link margins
- identify optical fibre connector types and characteristics
- identify optical fibre types and characteristics
- discuss path protection and protection switching
- explain physical optical loopbacks and software loopbacks
- summarise traditional protocols and emerging Optical Transport Network (OTN) technologies used on optical DWDM systems
- describe ring topologies and linear network topologies
- explain specific work health and safety (WHS) requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- manufacturer’s technical documentation
- relevant regulations
- system specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTOPN604 Analyse optical transmission systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to verify the characteristics of Next Generation Networks (NGN) to ensure they will support the new modulation requirements of the equipment.

It applies to individuals who are experienced technicians from telecommunications carriers, service providers, or other private and public organisations, who have experience in the optical transmission area.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Optical Networks

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to conduct characterisation tests on existing optical network | 1.1 Obtain relevant legislation, codes, regulations and standards and follow work health and safety (WHS) and environmental requirements for the given work<br>1.2 Identify hazards and work safely according to relevant safety legislation and company work practices using personal protective equipment |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Construct test procedures for each test to be conducted<br>1.4 Notify customer and arrange for site access |
| 2. Conduct link characterisation tests and analyse existing optical network | 2.1 Perform optical tests to characterise existing fibre link<br>2.2 Analyse results of optical tests, and determine extent and nature of future upgrades based on the tests |
| 3. Document analysis of optical network with recommendations | 3.1 Produce final drawings and plans of proposed upgrade requirements for optical transmission and submit to project manager according to enterprise policy<br>3.2 Prepare report on measured performance of the network and recommendations on future upgrades |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 3.1 | • Interprets textual information from relevant sources to identify and plan for all job requirements and adhere to procedures and standards |
| Writing | 1.2, 1.4, 3.1, 3.2 | • Accurately prepares standard documentation using clear and technically specific language, numerical data, drawings and plans |
| Oral Communication | 1.4 | • Uses listening and questioning skills to confirm technical and operational requirements and participates in a verbal exchange of ideas and solutions and uses appropriate, detailed and clear language to address team members, supervisors and customers |
| Numeracy | 2.2 | • Uses mathematical equations to evaluate all relevant technical data |
| Navigate the world of work | 1.1, 1.2, 3.1 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, with specific reference to workplace safety<br>• Understands main tasks, responsibilities |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | and boundaries of own work |
| Get the work done | 1.3, 2.1, 2.2 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account<br>• Recognises and addresses complex problems involving multiple variables<br>• Actively identifies systems, devices and applications with potential to meet current and/or future needs |

# Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) should be included.

| | |
|---|---|
| Measurements that must be conducted include: | • optical time-domain reflectometer (OTDR) testing from both ends<br>• optical loss test set (OLTS)<br>• optical return loss (ORL)<br>• chromatic dispersion (CD)<br>• polarisation mode dispersion (PMD)<br>• non-linearity (four wave mixing)<br>• optical signal-to-noise ratio (OSNR) |

# Assessment Requirements for ICTOPN604 Analyse optical transmission systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- conduct optical transmission measurements
- analyse complex optical measurement results
- liaise with the customer as required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list and describe legislative and regulatory frameworks that govern optical transmission systems
- list and describe work health and safety (WHS) and environmental issues associated with optical transmission systems
- describe attenuation characteristics of optical fibres
- summarise the chromatic dispersion (CD) test
- explain principles of operation of dense wavelength division multiplexing (DWDM)
- discuss dispersion and outline dispersion characteristics of various fibres and devices used for compensation
- discuss precautions required to minimise electrostatic discharge
- identify features and operating requirements of test equipment including:
  - a hand-held optical power meter
  - an optical spectrum analyser
  - a transmission test set

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify functions of an optical add-drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
- explain gain equalisation
- describe the insertion loss test
- summarise the International Telecommunications Union (ITU) wavelength grid for DWDM
- discuss measurement of dispersion
- summarise methods to reduce dispersion
- discuss optical amplifier operation
- identify optical fibre connector types and characteristics
- identify optical fibre types and characteristics
- summarise the optical return loss (ORL) test
- outline the optical signal-to-noise ratio (OSNR) test
- discuss the optical time domain reflectometer (OTDR) test
- clarify path protection and protection switching
- explain performance qualification of 40 Gbit/s and 100 Gbit/s transceivers
- summarise the polarisation mode dispersion (PMD) test
- outline protocols used on optical DWDM systems
- explain reflectance in fibre optic systems
- discuss ring topologies and linear network topologies
- explain specific work health and safety (WHS) requirements and environmental constraints that impact safe inspection of optical connectors and safe measurement of optical power from laser transmission systems.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Optical Networks field of work and include access to:

- test equipment currently used in industry
- test equipment and manufacturer’s technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG201 Prepare site for support installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare a site for support installation for aerial or underground cable, or for erection of radio towers or above ground or underground equipment enclosures.

It applies to individuals who can apply a broad range of competencies in a varied work context from installation to operation of telecommunications equipment and products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for installation | 1.1 Confirm location of proposed installation is according to installation plan and relevant legislation, codes, regulations and standards<br>1.2 Recognise and report hazards<br>1.3 Obtain approvals and authorisations for work, and carry at all times during works |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Inform landowner or tenant of imminent works<br>1.5 Locate adjoining services according to enterprise guidelines and work health and safety (WHS) practices<br>1.6 Clear site of vegetation and debris according to work specifications and any relevant approvals |
| 2. Excavate site | 2.1 Place pegs for proposed installation according to enterprise guidelines and site plans<br>2.2 Excavate using appropriate equipment for size of excavation and location of works, according to enterprise guidelines<br>2.3 Conduct levelling of site within tolerance specified in installation plan<br>2.4 Employ WHS practices and personal protective equipment, where appropriate, in manner intended by manufacturer |
| 3. Complete administration | 3.1 Note approved alterations on original plan and design using appropriate symbols, and return plan to originator<br>3.2 Complete and sign reports according to enterprise policy where required<br>3.3 Inform landowner or tenant of construction completion and expected next steps according to enterprise guidelines |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.5, 2.3, 2.4 | • Recognises and interprets various texts in a variety of forms to determine key information and specific requirements and responsibilities |
| Writing | 1.2-1.4, 3.1-3.3 | • Develops material for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations |
| Oral Communication | 1.1-1.4, 3.3 | • Explains requirements using relevant language suitable for specific audiences |
| Numeracy | 2.3 | • Interprets numerical information and applies basic mathematical calculations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.1, 1.2, 1.5, 1.6, 2.1, 2.2, 2.4, 3.2, 3.3 | • Recognises and follows explicit and implicit protocols and meets expectations associated with own role<br>• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, with specific reference to workplace safety |
| Interact with others | 3.1 | • Uses appropriate communication modes for specific work task |
| Get the work done | 1.1, 1.3, 1.6, 2.3 | • Plans and implements routine tasks to achieve requirements<br>• Implements standard procedures to make routine decisions<br>• Understands the purpose and specific functions of common digital tools used in some work contexts |

# Assessment Requirements for ICTPMG201 Prepare site for support installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare and clear site for installation
- measure and peg out excavation location and levels
- safely excavate site
- obtain sign off, complete reports and record variations to plans.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify construction methods and performance requirements
- outline the features and operating requirements of construction equipment
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- identify manufacturer requirements for safe operation of equipment
- identify specific work health and safety (WHS) requirements relating to the activity and site conditions
- describe the levelling and measuring procedures for marking out an excavation
- identify and describe the operation of tools and equipment suitable for site preparation and excavation
- explain typical issues and challenges that occur on site
- discuss the communications strategies required when dealing with landowners and tenants.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- sites on which installations can be performed
- equipment and personal protective equipment
- relevant regulatory, organisational and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG202 Plan, organise and undertake work activities

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to plan, organise and undertake work activities in a telecommunications environment, including voice, video and data networks in domestic, commercial or industrial installations.

It applies to individuals who plan, organise and undertake work on client premises and who may be part of a project team responsible for cabling equipment deployment in network infrastructure, such as broadband provisioning, wireless mobile and data networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to undertake work activities | 1.1 Prepare work requirements from job request or work orders and confirm with appropriate parties, including client and other appropriate parties and/or by site inspection<br>1.2 Apply and monitor work health and safety (WHS) standards, statutory requirements, relevant legislation, codes, regulations and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | standards, and enterprise procedures throughout work procedure<br>1.3 Procure resources required to satisfy job plan for compliance with job specifications<br>1.4 Coordinate requirements, including requests for equipment isolation, with others involved or affected by the work according to enterprise requirements |
| 2. Coordinate and undertake work | 2.1 Coordinate work activities with appropriate parties according to enterprise procedures, and job and environmental requirements<br>2.2 Undertake and monitor tasks to comply with plans, work requirements and enterprise procedures |
| 3. Complete work | 3.1 Finalise work and restore worksite according to enterprise procedures and job requirements<br>3.2 Notify appropriate parties of work completion according to enterprise procedures and job requirements<br>3.3 Complete job records, costing data and necessary reports according to enterprise procedures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance criteria** | **Description** |
|---|---|---|
| Reading | 1.2, 2.1, 2.2, 3.1 | • Recognises and interprets visual and written text in a variety of forms to determine key information and job requirements |
| Writing | 1.1, 1.3, 1.4, 2.1, 3.2, 3.3 | • Develops material for a specific audience using clear and detailed language to convey explicit information |
| Oral Communication | 1.1-1.4, 2.1, 3.2 | • Explains information using relevant language suitable for specific audiences |
| Numeracy | 3.3 | • Uses basic mathematical calculations to determine job requirements and costs |
| Navigate the world of work | 1.2, 1.4, 2.1, 2.2, 3.1-3.3 | • Recognises and follows explicit and implicit protocols and meets expectations associated with own role<br>• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | work context with specific reference to workplace safety |
| Get the work done | 1.1, 1.3, 1.4, 2.1 | • Plans a range of routine tasks, accepting goals and aiming to achieve them efficiently<br>• Implements standard procedures for routine decisions<br>• Recognises and takes responsibility for addressing predictable and some less predictable problems in familiar work contexts<br>• Understands the purpose and specific functions of common digital tools used in some work contexts |

# Assessment Requirements for ICTPMG202 Plan, organise and undertake work activities

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan and prepare for work activities
- coordinate and undertake work activities, applying all related work health and safety (WHS) requirements and work practices
- complete all documents and reports for work activities according to organisation procedures
- demonstrate alignment with job request and consideration of client needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify appropriate tools, plant, equipment and materials required to do the work
- describe enterprise permit procedures and recording procedures
- identify and describe WHS requirements for work activities
- identify relevant engineering and design practices and procedures
- identify relevant statutory requirements
- explain the team communication process and goals
- list personal time management techniques
- outline work planning and organisation theory.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- sites on which work may be conducted
- equipment currently used in industry
- relevant regulatory and organisational procedures and equipment documentation that impact on the work undertaken.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG401 Support small scale ICT projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to support the management of low risk, straightforward information and communications technology (ICT) projects within an organisation.

It applies to individuals who may work under supervision but have responsibility to ensure workflow is planned and completed in line with requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Support project commencement | 1.1 Confirm business opportunity to ensure the project objectives are understood<br>1.2 Identify stakeholders and gather requirements<br>1.3 Prepare a project charter or project proposal and obtain agreement from project sponsor |
| 2. Support project plan development | 2.1 Break down the requirements to identify tasks and resources needed to complete the project plan |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Compile a schedule of project tasks, including realistic timeframes and costs if required<br>2.3 Allocate task responsibilities to project team members<br>2.4 Agree on a process with the sponsor to manage risks or unexpected events that may arise and affect project objectives |
| 3. Support project completion | 3.1 Work with project team to ensure project activities meet timeframe, scope, cost and quality expectations<br>3.2 Monitor and control project risks and issues according to the agreed process<br>3.3 Verify that project deliverables meet project expectations and sign off as complete<br>3.4 Train users, if applicable |
| 4. Support project closure | 4.1 Prepare ICT support or maintenance documents if applicable<br>4.2 Obtain final project sign-off from sponsor and key stakeholders<br>4.3 Document lessons learned and close the project |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 3.3 | • Interprets and analyses text to gather detailed information and confirm requirements |
| Writing | 1.3, 2.2, 4.1, 4.3 | • Produces texts of varying complexity using appropriate language and grammar in logical sequence to convey information effectively |
| Oral Communication | 1.1, 1.3, 2.3, 2.4, 3.1, 3.3, 3.4, 4.2 | • Listens and participates in oral exchanges to effectively identify and confirm requirements<br>• Delivers presentation using appropriate and effective language to convey information |
| Numeracy | 2.2 | • Formulates numerical assumptions and performs mathematical calculations appropriate to the task |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 4.2 | • Follows protocols and meets expectations associated with own role when obtaining final sign-off |
| Interact with others | 2.3, 3.1, 3.4 | • Collaborates with others to achieve joint outcomes, allocating tasks to team members and working with them to complete tasks according to plan |
| Get the work done | 1.1-1.3, 2.1-2.4, 3.2, 3.3 | • Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• Applies formal problem-solving processes when tackling unfamiliar problems, breaking complex issues into manageable parts and identifying and evaluating several options for action when managing risks |

# Unit Mapping Information

# Assessment Requirements for ICTPMG401 Support small scale ICT projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop a project plan appropriate to the project objectives and the project proposal
- support the initiation, control and completion of a simple small-scale information and communications technology (ICT) project
- identify and apply requirements and expectations of a project according to the project plan.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the different project-management and planning methods and tools
- explain the characteristics of technical teams
- describe the different methods of communication and communication styles, including interviewing techniques
- explain the organisational values, policies and processes that may be relevant to the project
- describe the risks associated with small scale projects including:
  - cost
  - scope
  - timelines.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work, and include access to office equipment, materials and industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPMG402 Schedule installation of customer premises equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge to effectively schedule the installation of customer premises equipment (CPE), including planning, provisioning and monitoring of customer premises installations.

It applies to individuals with a range of telecommunications skills, involves a degree of autonomy and may include limited supervision of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan installation project | 1.1 Obtain relevant legislation, codes, regulations and standards, and follow work health and safety (WHS) and environmental requirements for given work<br>1.2 Plan work schedules for relevant parties to provision services and |

# Assessment Requirements for ICTPMG402 Schedule installation of customer premises equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- access relevant information and plan an installation project
- schedule work for the installation team according to the plan
- organise supply of materials in a timely manner
- arrange for connection of network services
- monitor and apply contingencies if required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss the importance and requirements of Australian Communications and Media Authority (ACMA) licensing
- outline the use of computers and application of software programs used in the telecommunications industry
- outline industry cabling practices
- identify work health and safety (WHS) procedures
- outline the stages of project management including:
  - phases of project management
  - roles and responsibilities within project management
  - project reporting
- identify telecommunications components and assemblies
- identify telecommunications customer premises equipment (CPE).

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- a work site where scheduling may be conducted
- relevant hardware and software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG403 Manage the delivery of network infrastructure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to manage the delivery of network infrastructure, including scoping the project, developing a project brief, managing the project and directing the activities of installation staff, building workers, contractors, manufacturers and vendors.

It applies to individuals who work in appropriate project management roles associated with access and core networks, including switching and transmission via optical fibre, radio, microwave and satellite.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Scope network infrastructure requirements | 1.1 Determine requirements of project from client and approved network plan<br>1.2 Assess current access network conditions to determine existing |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | network capacity and capability<br>1.3 Analyse site survey data and geographical information where necessary to assess suitability of site to design requirements<br>1.4 Assess risk of barriers to plan realisation to ensure delivery of network infrastructure project is achievable<br>1.5 Analyse impact on planning of relevant legislation and associated operational codes<br>1.6 Produce scoping document with consideration to new technology or technology features required in project |
| 2. Develop project brief | 2.1 Develop planning options considering current and new technology, facilities, features, and present and future needs<br>2.2 Conduct cost-benefit studies to guide decision making processes according to sound business practice<br>2.3 Discuss project brief with client, as required, and obtain approval of planning options<br>2.4 Produce planning specifications relating to location, route, area, product and/or platform<br>2.5 Estimate timing, costing and operating budget according to enterprise policy<br>2.6 Prepare final project brief and present to operational staff for implementation |
| 3. Manage project | 3.1 Define roles and responsibilities of stakeholders within terms of project<br>3.2 Establish reporting and communications line to ensure project is effectively managed<br>3.3 Review and continually monitor progress of project against deliverables and timelines, and invoke contingencies if required<br>3.4 Complete project documents in line with enterprise standards and guidelines |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 1.3, 1.5, 1.6, 3.3, 3.4 | • Interprets and comprehends visual and written content in a variety of forms to determine key information, requirements and responsibilities<br>• Researches relevant codes and standards to ensure latest requirements, regulations and standards are adhered to |
| Writing | 1.6, 2.1, 2.3-2.6, 3.2, 3.4 | • Develops accurate technical documents for a specific audience using clear and specific instructions and data in a format and sequence that convey explicit information |
| Oral Communication | 2.3, 2.6, 3.1, 3.2 | • Elicits the views and opinions of others using listening and questioning skills<br>• Clearly articulates information using relevant language with a level of negotiation |
| Numeracy | 1.3, 2.2, 2.4, 2.5, 3.3 | • Uses mathematical equations to estimate and cost numerical information<br>• Uses financial analysis skills to identify potentially misleading information, review financial outcomes and develop material based on verified data |
| Navigate the world of work | 1.5, 2.5, 3.4 | • Monitors adherence to legal and regulatory rights and responsibilities, and organisational policies and procedures, and considers own role in terms of its contribution to the broader goals of the work environment |
| Interact with others | 2.6 | • Selects the appropriate form, channel and mode of communication for a specific purpose |
| Get the work done | 1.1-1.4, 1.6, 2.1, 2.4, 2.5, 3.1-3.3 | • Plans a range of routine tasks, accepting stated goals and aiming to achieve them efficiently<br>• Takes responsibility for the outcomes of routine decisions related directly to own role<br>• Recognises and anticipates an increasing range of familiar problems, their symptom and causes, actively looking for early warning signs and implementing contingency plans<br>• Reflects on the ways in which digital systems and tools are used or could be used to achieve work goals, and begins to recognise strategic and operational applications |

# Assessment Requirements for ICTPMG403 Manage the delivery of network infrastructure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine scope of network infrastructure requirements
- accurately analyse and document considerations in project specifications and the impact of legislative and environmental conditions on the project plan
- prepare a project brief outlining specifications, timeframes, costing and operating budget
- manage the delivery of network infrastructure to completion.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline Australian Communications and Media Authority (ACMA) licensing requirements
- explain common client telecommunications applications and related equipment
- identify correct computer operation
- describe the workplace and industry environment
- outline industry cabling practices
- explain leasing versus purchase options
- identify legislative and environmental impacts, including options for green information and communications technology (ICT) installations
- outline network and transmission equipment, network topologies, interfaces and interconnect solutions
- describe work health and safety (WHS) procedures
- identify performance parameters and typical faults in equipment and related connection and transmission media, and various test equipment types
- explain the process of project management
- identify telecommunications components and assemblies

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify warranty information and contractor work guarantees.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- sites on which projects may be conducted
- relevant databases, legislative requirements and other project related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG501 Manage ICT projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage the initiation, implementation and completion of reasonably complex information and communications technology (ICT) projects incorporating scope, risk control and financial factors.

It applies to individuals who utilise a range of specialised technical and managerial techniques to plan, carry out and evaluate their own work and/or the work of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Manage project definition activities | 1.1 Confirm organisational project governance policy and processes<br>1.2 Confirm business problem or opportunity and project objectives<br>1.3 Develop project charter, including preliminary statement of project scope and obtain sign-off<br>1.4 Conduct a feasibility study and prepare a business case as |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | necessary |
| 2. Undertake project planning | 2.1 Plan information gathering activities to determine project requirements, constraints and risks<br>2.2 Identify project partitioning on the basis of intended system development life cycle and risk<br>2.3 Prepare project work breakdown, schedule and budget<br>2.4 Compile project management plan documents as necessary to communicate the intended management strategy for the project and obtain sign-off |
| 3. Establish the IT project team | 3.1 Identify and select team members, and allocate roles and responsibilities, based on project solution requirements<br>3.2 Determine training and support needs of team members<br>3.3 Establish project team values and agreed behavioural standards with team members |
| 4. Manage project execution activities | 4.1 Monitor delivery and acceptance of assigned project team work activities and manage individuals<br>4.2 Monitor and control the quality of project deliverables<br>4.3 Monitor and control project scope changes, risks and issues<br>4.4 Manage system testing and hand over activities |
| 5. Coordinate project closure | 5.1 Prepare IT support plans and maintenance or support documents<br>5.2 Obtain final project sign-off<br>5.3 Conduct post project review and document lessons learned<br>5.4 Review and update disaster recovery plan<br>5.5 Close project |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 2.2 | • Interprets complex text in order to appropriately address the project requirements |
| Writing | 1.3, 1.4, 2.3, 2.4, 3.3, 5.1, 5.2, 5.4 | • Prepares complex documents using appropriate language and grammar, and presents ideas, options and recommendations in a logical sequence |
| Oral Communication | 1.1-1.3, 2.4, 3.2, 3.3, 4.1, 5.2, 5.3 | • Actively listens and contributes to discussions to confirm requirements or discuss solutions to identified problems<br>• Conducts presentation to senior management and other team members, and effectively communicates ideas in a logical sequence |
| Numeracy | 2.3 | • Uses a wide range of mathematical calculations to interpret numerical information and to prepare/reconcile financial data |
| Navigate the world of work | 2.4, 4.4, 5.2, 5.5 | • Recognises and follows explicit and implicit protocols and meets expectations associated with own role |
| Interact with others | 3.1, 3.2, 3.3 | • Fosters a collaborative culture within own sphere of influence, facilitating a sense of commitment and cohesion, and highlighting and using the strengths of those involved when establishing the project team<br>• Actively builds formal and informal networks to include key people/communities with expert skills and knowledge |
| Get the work done | 1.1-1.4, 2.1-2.4, 4.1-4.4, 5.3, 5.4 | • Makes a range of decisions in relatively complex situations, taking a range of constraints into account when monitoring the project and system testing<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria when conducting post project reviews |

# Assessment Requirements for ICTPMG501 Manage ICT projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- scope the activities of a complex information and communications technology (ICT) project
- prepare a project plan
- determine the project team and duties
- execute a project
- close the project, ensuring it has met requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the characteristics of leaders and technical teams
- outline the consultation and communication techniques and strategies
- describe the process of establishing technical teams and determine stages of team development
- explain estimation and cost-analysis techniques
- describe the methods of communication and communication styles, including interviewing techniques
- identify the objectives and perform benefits analysis
- outline the organisational values, policies and processes that apply to the project
- conduct performance management and project team appraisal methods
- explain the processes for monitoring team and own performance
- outline the project cash flow and budgeting processes
- identify the range of project-management methods and tools
- conduct systems analysis and modelling techniques
- explain team roles and delegation within a multi-project methodology context

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify and analyse technology solution models and frameworks.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work, and include access to office equipment, materials and industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPMG502 Develop customer premises equipment installation project plans

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to plan installation of customer premises equipment (CPE).

It applies to individuals who have a high level of specialist technical skills and knowledge in telecommunications and IT networks using internet protocol (IP) systems, and who may supervise others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Assess project requirements | 1.1 Discuss and clarify project deliverables with customer using available documentation<br>1.2 Determine the type of CPE installation project proposed<br>1.3 Evaluate access, work health and safety (WHS) and environmental |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | issues and include in job specification<br>1.4 Quantify and source equipment required<br>1.5 Estimate costs using organisational costing guidelines |
| 2. Prepare detailed system design and configuration | 2.1 Capture data necessary to project design brief<br>2.2 Negotiate system specifications based on project requirements with customer and sales staff<br>2.3 Translate available data into detailed system design and configuration<br>2.4 Verify deliverables with customer |
| 3. Detail project and quality plans | 3.1 Develop project plan to meet customer's needs with detailed task list, resource needs and timeframes<br>3.2 Develop contingency plans to meet problems that may arise<br>3.3 Produce a quality plan, incorporating process flow charts<br>3.4 Verify plans with customer and appropriate personnel |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1-1.3 | • Analyses and interprets a variety of textual information to determine key information, requirements and project deliverables |
| Writing | 1.1, 1.3, 2.2, 2.4, 3.1, 3.3, 3.4 | • Develops accurate technical documents and diagrams for a specific audience using clear and detailed language to convey explicit information |
| Oral Communication | 1.1, 2.2, 2.4, 3.4 | • Clearly articulates information using relevant language suitable for specific audiences and checks for understanding |
| Numeracy | 1.4, 1.5, 3.1, 3.3 | • Uses mathematical calculations to determine costs and timelines<br>• Produces flow charts and other diagrams that capture job specifications |
| Navigate the world of work | 1.3, 1.5 | • Monitors adherence to legal and regulatory rights and responsibilities and organisational policies and procedures, with specific reference to workplace |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | safety<br>• Considers own role in terms of its contribution to the broader goals of the work environment |
| Get the work done | 1.2-1.4, 2.1, 2.3, 3.2 | • Plans a range of routine tasks, accepting stated goals and aiming to achieve them efficiently<br>• Takes responsibility for the outcomes of routine decisions related directly to own role<br>• Recognises and anticipates an increasing range of familiar problems, their symptom and causes, actively looking for early warning signs and implementing contingency plans<br>• Reflects on the ways in which digital systems and tools are used or could be used to achieve work goals, and begins to recognise strategic and operational applications |

# Assessment Requirements for ICTPMG502 Develop customer premises equipment installation project plans

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- assess the equipment and performance requirements for a project on customer premises
- prepare detailed system design and configuration to customer requirements
- develop project and quality plans for the installation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and discuss the advantages of cabling types, structures and connectors
- describe the common customer telecommunications applications and related equipment
- explain the key advantages of connections to carrier infrastructure or equipment
- identify and summarise the current legislation relating to installation of telecommunications equipment and connection to carrier services
- explain environmental impacts, including options for green information and communications technology (ICT) installations
- identify and determine cost-effective solutions in installations, including the advantages of leasing and purchasing
- describe the attributes of network and transmission equipment
- explain network topologies, interface and interconnect solutions
- explain work health and safety (WHS) requirements for installations in terms of:
  - electrical safety
  - materials handling
  - physical hazards

© Commonwealth of Australia, 2025 Future Skills Organisation

  - confined spaces
  - heights
  - lifting
- calculate the power requirements for the installation plan
- describe typical performance parameters and typical faults that may be encountered in customer equipment and related connection and transmission media
- identify warranty information for equipment supplies and contractor work guarantees.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- a site on which customer premises equipment (CPE) installation can be planned
- relevant documentation, data, technical manuals and other site related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG503 Prepare a project brief

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare a brief for realising a telecommunications project, including costing, vendor and technology choices, scheduling and resourcing.

It applies to individuals who may work under limited supervision and have responsibility to provide guidance or to delegate aspects of tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan project brief | 1.1 Contact client to obtain project details and approved network plan<br>1.2 Assess current network conditions<br>1.3 Analyse site survey data and geographical information to initiate studies if required |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Assess barriers to plan realisation<br>1.5 Analyse impact of relevant legislation, codes, regulations and standards on planning processes |
| 2. Develop preliminary project brief | 2.1 Develop project specifications, including new technology, according to client requirements<br>2.2 Draft sketch plan according to enterprise practice for area in question<br>2.3 Clarify project brief with client as required<br>2.4 Present final report with option for approval before proceeding with project brief |
| 3. Assess tenders | 3.1 Follow process for seeking quotes or issuing tenders for completion of project<br>3.2 Assess quotes or tenders against project criteria and any proposed variations<br>3.3 Examine detailed project costing estimates to ensure that budget parameters are attained<br>3.4 Assess competitive tenders with consideration to meet specified timeframes<br>3.5 Obtain tender approval from client |
| 4. Monitor contract progress and completion | 4.1 Monitor contract activity with progress against specifications<br>4.2 Establish and maintain regular liaison with project manager and site supervisor<br>4.3 Discuss contract problems or difficulties with project manager and contractor as required<br>4.4 Negotiate and implement contract variations<br>4.5 Prepare project completion advice in conjunction with project manager, installation manager and operational staff<br>4.6 Undertake quality audit of project and submit any recommendations for improvement according to enterprise procedures<br>4.7 Prepare final report on project outcomes and achievement<br>4.8 Present report to client and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.4, 1.5, 3.2-3.4, 4.1, 4.6 | • Draws on a broad range of strategies to build and maintain understanding throughout complex texts<br>• Identifies relevant information and extrapolates content to determine project impact, provide recommendations and confirm requirements |
| Writing | 1.1, 2.1-2.4, 3.1, 3.5, 4.2-4.7 | • Generates complex written texts, demonstrating control over a broad range of writing styles and purposes<br>• Demonstrates sophisticated writing skills by selecting appropriate conventions and stylistic devices to express precise meaning |
| Oral Communication | 1.1, 2.3, 2.4, 3.5, 4.2-4.6 | • Clearly articulates information using relevant language suitable for specific audiences and checks for understanding<br>• Participates in a verbal exchange of ideas and solutions and uses detailed and clear language to clarify and present information according to requirements and audience |
| Numeracy | 1.3, 2.1, 2.2, 3.2-3.4, 4.1, 4.6 | • Uses highly developed numeracy skills to interpret complex financial information and perform difficult calculations<br>• Performs mathematical calculations to analyse labour, costs and quantities, and accurately process costs and estimates |
| Navigate the world of work | 1.5, 3.1, 4.6 | • Considers legal requirements and organisational policies and procedures relevant to own role |
| Interact with others | 2.4, 4.8 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts<br>• Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships |
| Get the work done | 1.2-1.4, 2.1, 3.2, 3.4, 4.1, 4.6 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Develops plans to manage relatively complex, non-routine tasks<br>• Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the |

# Assessment Requirements for ICTPMG503 Prepare a project brief

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- develop a project brief for a telecommunications project
- analyse and document considerations in project specifications
- apply legislative and environmental conditions to project brief development
- appropriately assess tenders
- monitor contract work to completion.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the key aspects of common client telecommunications applications and related equipment
- discuss the telecommunications workplace and industry environment, and how it affects project design
- describe leasing versus purchase options
- identify legislative and environmental impacts, including options for green information and communications technology (ICT) installations
- identify and discuss the key features of network and transmission equipment
- discuss a variety of network topologies, interface and interconnect solutions
- describe the performance parameters and typical faults in equipment and related connection and transmission media, and various test equipment types
- identify the key features of warranty information and contractor work guarantees.

# ICTPMG504 Prepare project specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to develop specifications for a telecommunications project, including switching, transmission and radio networks, and the various transmission paths including cable, optical fibre, radio, microwave and satellite.

It applies to individuals who have a high level of specialist technical skills and knowledge in telecommunications and IT networks using internet protocol (IP) systems and who may supervise others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for project estimate | 1.1 Analyse project design obtained from appropriate personnel to determine project requirements according to project plan<br>1.2 Verify project requirements with clients and project team |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Ascertain impact of time restraints on estimate<br>1.4 Analyse impact of relevant legislation, codes, regulations and standards on planning processes<br>1.5 Establish availability of all appropriate data and documentation to allow for completion of work |
| 2. Estimate resource requirements | 2.1 Conduct site inspection to verify design details and project context<br>2.2 Produce estimate of type, quantity and schedule of resources required for project from project plans<br>2.3 Prioritise sequence of work appropriate to enterprise needs<br>2.4 Calculate contractor and employee labour hours required according to project requirements, industrial awards and enterprise policies<br>2.5 Record estimates of materials, equipment and labour hours according to enterprise guidelines |
| 3. Calculate costing details | 3.1 Estimate amount and type of resources required for successful completion of project, including risk management and contingencies<br>3.2 Calculate costs for resources from current information, following standard costing procedures<br>3.3 Produce detailed record of all required resources and costing details for project specifications |
| 4. Prepare detailed project plan | 4.1 Prepare detailed plan, including specifications for materials, equipment, resources, locations and network routes<br>4.2 Forward plan and specifications to appropriate personnel for project implementation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.4 | • Analyses and interprets text in a variety of forms to determine key information and design requirements |
| Writing | 1.2, 1.5, 2.5, 3.2, 3.3, 4.1 | • Records and presents information according to enterprise requirements<br>• Develops accurate technical documents and diagrams using language and structure appropriate to the audience and requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral Communication | 1.2, 1.5, 2.1 | • Conveys information using language suitable for specific audiences<br>• Uses listening and questioning skills to clarify understanding |
| Numeracy | 1.3, 2.2-2.5, 3.1-3.3 | • Performs mathematical calculations to analyse labour, costs and quantities to accurately process costs and estimates<br>• Applies financial modelling skills to identify, analyse and evaluate budgetary information, time durations and human resource allocations |
| Navigate the world of work | 1.4, 2.4, 2.5 | • Considers legal requirements and organisational policies and procedures when planning and implementing a project |
| Interact with others | 2.4, 4.2 | • Selects the appropriate form, channel and mode of communication for a specific purpose |
| Get the work done | 1.1, 1.3, 1.5, 2.1-2.4, 3.1 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom<br>• Uses problem solving skills to analyse and evaluate effective solutions |

# Assessment Requirements for ICTPMG504 Prepare project specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- analyse project design to determine specification options
- prepare estimates and calculate the cost of resources for a telecommunications project
- prepare detailed project plan, including specifications for resources and network routes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain common client telecommunications applications and related equipment
- describe cost effective solutions employed in planning
- describe and apply drafting techniques
- explain the workplace and industry environment
- describe the impact of legislative and environmental impacts, including options for green information and communications technology (ICT) installations
- identify and evaluate the benefits of different network and transmission equipment
- identify and evaluate the benefits of different network topologies and interface and interconnect solutions
- identify the possible implications for a planned design on health and safety
- identify and describe various warranty information and contractor work guarantees.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- sites on which projects may be conducted
- relevant databases, legislative requirements and other site and project related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG601 Establish ICT project governance

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to establish an information and communications technology (ICT) project, with a governance framework within small, medium or large organisations.

It applies to individuals who may be required to use advanced project management skills in developing logical and sustainable IT project plans using organisational/established benchmarks and ethical practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish project governance framework | 1.1 Assess current project methodology and determine state of project management maturity<br>1.2 Determine governance framework<br>1.3 Appoint project governance team<br>1.4 Establish project governance reporting processes |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Establish project governance roles and responsibilities | 2.1 Agree with project sponsor on responsibilities<br>2.2 Delegate steering committee or project board responsibilities<br>2.3 Confirm project manager responsibilities |
| 3. Establish IT project stakeholder expectations | 3.1 Educate stakeholders on characteristics of ICT projects<br>3.2 Develop and maintain project relationships<br>3.3 Negotiate successful project outcomes |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2 | • Interprets and analyses complex text in order to ascertain requirements |
| Writing | 1.4, 2.3 | • Develops documents that present ideas and directives in an acceptable sequence and in a precise manner |
| Oral Communication | 1.1-1.3, 2.1-2.3, 3.1-3.3 | • Determines requirements through active listening, use of open ended questioning and paraphrasing<br>• Uses appropriate language and style to present complex or technical information and ideas appropriate to the audience<br>• Facilitates successful discussions by comparing and building on ideas of others and ensuring a win-win outcome |
| Navigate the world of work | 1.3, 1.4, 2.1-2.3 | • Recognises and follows explicit and implicit protocols when establishing reporting processes, appointing team and establishing roles and responsibilities |
| Interact with others | 2.2, 2.3, 3.2, 3.3 | • Demonstrates understanding of what to communicate, with whom and how, when developing and maintaining project relationships, negotiating outcomes and educating stakeholders<br>• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and taking a |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | leadership role on occasion |
| Get the work done | All | • Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to identify relevant information and risks, and identify and evaluate alternative strategies and resources<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria |

# Assessment Requirements for ICTPMG601 Establish ICT project governance

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- assess the project environment
- establish or implement an information and communications technology (ICT) project management governance framework
- negotiate with stakeholders to agree achievable project objectives.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the organisation’s industry
- outline the organisation's current information systems and processes
- explain organisational policies and procedures, including:
  - project management and procurement policies
  - environment
  - duty of care
  - contract
  - company
  - freedom of information
  - industrial relations
  - privacy and confidentiality
  - due diligence
  - records management
- explain project governance approaches and methods

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline relevant legislation and regulations that impact on project governance.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work, and include access to office equipment, materials and industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPMG602 Manage ICT project initiation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to initiate an information and communications technology (ICT) project within small, medium or large organisations.

It applies to individuals who may be required to apply project management skills to establish the necessary foundation to facilitate successful delivery of agreed project outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Define project | 1.1 Define business problems and initial scope<br>1.2 Identify key stakeholders and analyse stakeholder needs<br>1.3 Define project constraints |
| 2. Develop project business case and feasibility | 2.1 Identify project objectives and benefits<br>2.2 Identify and select feasible ICT solutions<br>2.3 Develop and present the business case or feasibility study<br>2.4 Obtain appropriate sign-off |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Select project approach | 3.1 Identify project core technology areas<br>3.2 Identify solution approach requirements<br>3.3 Negotiate project outcomes |
| 4. Establish the ICT project team | 4.1 Identify and select team members<br>4.2 Establish team member roles and responsibilities<br>4.3 Develop a cohesive technical team<br>4.4 Train and support team members |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 2.1, 2.2, 3.1, 3.2 | • Interprets and analyses complex textual data to ascertain requirements |
| Writing | 1.1, 1.3, 2.3 | • Prepares a well-structured and cohesive document presenting alternative views, evidence and recommendations utilising technical language and correct spelling and grammar |
| Oral Communication | 1.1-1.3, 2.3, 2.4, 3.3, 4.4 | • Determines requirements through active listening, use of open ended questioning and paraphrasing<br>• Uses appropriate language and style to present complex or technical information and ideas appropriate to the audience<br>• Facilitates successful discussions by comparing and building on ideas of others and ensuring a win-win outcome |
| Numeracy | 2.3 | • Tests the viability of data by completing estimates and cost comparisons using relevant mathematical calculations |
| Navigate the world of work | 2.4 | • Recognises and follows explicit and implicit protocols and meets expectations associated with own role |
| Interact with | 4.1-4.4 | • Invests time and energy in building rapport with others as an integral part of all work based |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| others | | interactions<br>• Plays a lead role in situations requiring effective collaboration, demonstrating high level influencing skills, focusing and shaping awareness, and engaging and motivating others<br>• Shares knowledge, experience information and resources with others as an integral part of work relationships<br>• Seeks to establish a climate in which it is possible to clarify and share the real needs and issues |
| Get the work done | 1.1-1.3, 2.2, 3.1-3.3 | • Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• May use formal analytical and lateral thinking techniques for identifying issues, generating and evaluating feasible ICT solutions<br>• Considers the strategic and operational potential of digital trends when selecting ICT solutions |

# Assessment Requirements for ICTPMG602 Manage ICT project initiation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce a comprehensive business case information and communications technology (ICT) project implementation approach that takes into account core technology limitations and project constraints
- establish and work in a cohesive project team.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the characteristics of leadership and technical teams
- describe the consultation and communication techniques, styles and strategies, including interviewing techniques required when managing a project
- describe estimation and cost analysis techniques
- explain the process of establishing technical teams and determining stages of team development
- describe the process of setting objectives and conducting a benefits analysis
- identify the organisational values, policies and processes that are applicable to the project
- describe performance management and project team appraisal methods
- identify and describe the processes for monitoring team and own performance
- explain cash flow and how it is managed through budgeting
- describe a range of project management methods and tools, and how they apply in a formal project management methodology
- explain the proposed systems analysis and modelling techniques
- summarise the process of determining team roles, and describe the delegation process within a multi-project methodology context

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain the proposed technology solution models and frameworks.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work and include access to:

- industry software packages
- an organisation's identified problem, opportunity or unfulfilled legislative need.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPMG603 Manage ICT project planning

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan and manage an information and communications technology (ICT) project within small, medium or large organisations.

It applies to individuals who may be required to apply advanced project management skills in developing and documenting logical processes and timelines to ensure that projects are delivered in accordance with stakeholder expectations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish project control plans | 1.1 Develop the project management plan<br>1.2 Develop management sub-plans |
| 2. Determine appropriate methodology | 2.1 Assess models of project management<br>2.2 Assess product development or procurement approach<br>2.3 Select appropriate project management and systems development methodology |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.4 Tailor methodologies to solution requirements |
| 3. Develop project schedule | 3.1 Develop project component breakdown<br>3.2 Estimate project effort and duration<br>3.3 Create project schedule<br>3.4 Develop and allocate work packages<br>3.5 Establish schedule controls |
| 4. Finalise project budget | 4.1 Identify areas of anticipated project spend<br>4.2 Determine dollar amounts and timing of cash flows<br>4.3 Develop a project budget<br>4.4 Establish budget controls |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 2.2 | • Interprets and analyses complex text to ascertain requirements |
| Writing | 1.1, 1.2, 2.4, 3.1, 3.3-3.5 | • Develops documents that present ideas in logical and precise sequence while establishing inter-relationships between project stages<br>• Presents ideas in a manner that is prescriptive and eliminates ambiguity |
| Oral Communication | 1.1, 1.2, 2.1, 2.2 | • Determines requirements through active listening, use of open-ended questioning and paraphrasing<br>• Uses appropriate language and style to present complex or technical information and ideas appropriate to the audience<br>• Facilitates successful discussions by comparing and building on ideas of others and ensuring a win-win outcome |
| Numeracy | 3.2, 4.2-4.4 | • Uses sound mathematical assumptions and applies equations in developing cost-benefit analyses, budgets and cash flows |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation and manages relevant communications<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• May invest time in developing and shaping several options before making a final choice, using a combination of lateral and analytical thinking to choose an idea to suit needs, resources and constraints |

# ICTPMG604 Manage ICT project delivery

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage the creation and delivery of the products of an information and communications technology (ICT) project within small, medium or large organisations.

It applies to individuals who are required to manage teams and apply high-level project management, business and technical skills necessary to ensure that the project delivered is consistent with system requirements and agreed design.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Manage systems analysis and design | 1.1 Apply systems thinking to project design<br>1.2 Model ICT process and systems according to specifications<br>1.3 Re-engineer business processes<br>1.4 Control ICT systems development<br>1.5 Review ICT architecture |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.6 Manage the design and integration of the system |
| 2. Facilitate project-related workshops | 2.1 Apply facilitation techniques<br>2.2 Apply problem-solving techniques<br>2.3 Facilitate requirements gathering<br>2.4 Facilitate ICT design workshops |
| 3. Manage ICT project team performance | 3.1 Establish a project team performance framework<br>3.2 Measure team member performance<br>3.3 Manage the technical staff performance<br>3.4 Manage project team dissolution |
| 4. Manage the project delivery cycle | 4.1 Delegate project work to project team members<br>4.2 Review and report status of project<br>4.3 Assess progress and update plans<br>4.4 Assess the quality of deliverables and rectify where required<br>4.5 Control project issues and take corrective action<br>4.6 Update project control documents |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.5, 2.3, 2.4, 4.2-4.5 | • Interprets and analyses models, diagrams and specifications for appropriate inclusion into the project requirements, plans and methodologies |
| Writing | 1.2, 2.3, 3.1, 4.1-4.3, 4.6 | • Uses technically specific language in developing design solutions for communication to project-team members and technical staff<br>• Articulates researched information and presents this in a clear, concise sequential and grammatically-correct manner, and in a writing style that is appropriate to the audience |
| Oral | 1.2, 1.6, 2.1, 2.3, | • Uses appropriate language and style when presenting complex ideas to all stakeholders to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | 2.4, 3.1-3.4, 4.1-4.5 | ensure that project requirements are understood<br>• Facilitates successful discussions by employing effective listening, questioning and summarising skills to ensure that the audience fully understands the proceedings |
| Interact with others | 2.1-2.4, 3.1-3.4, 4.1 | • Shares knowledge, experience, information and resources with others as an integral part of work relationships when facilitating design workshops<br>• Plays a lead role in situations requiring effective collaboration, demonstrating high-level influencing skills, focusing and shaping awareness, and engaging and motivating others |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• May use formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions |

# Assessment Requirements for ICTPMG604 Manage ICT project delivery

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse and design the system
- facilitate workshops for design development
- manage the project team performance
- manage the project delivery cycle.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the formal management methodology, including project management roles and responsibilities
- identify the problem-solving tools and techniques
- identify and describe information and communications technology (ICT) process models and their application
- explain the key requirements of ICT design
- outline the business processes applicable to the project.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work and include access to:

- industry software packages
- an organisation's identified problem, opportunity or unfulfilled legislative need.

# ICTPMG605 Manage ICT project closure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to decommission or close an information and communications technology (ICT) project within a small, medium or large organisation.

It applies to individuals who may be required to use advanced project-management skills in undertaking a strategic assessment of the status of a project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate project performance | 1.1 Collect project performance metrics<br>1.2 Debrief project team<br>1.3 Debrief project stakeholders<br>1.4 Summarise and report on results |
| 2. Finalise the project | 2.1 Review project performance to determine whether the project should be continued, decommissioned or closed |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Assess the impact of continuing, decommissioning or closing the project<br>2.3 Recommend appropriate management action to the relevant governing authority<br>2.4 Decommission or close the project if required |
| 3. Action outstanding activities | 3.1 Identify outstanding activities and create an action plan<br>3.2 Assign responsibilities to action outstanding activities<br>3.3 Follow up outstanding activities to ensure completion |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.1, 2.2, 3.1 | • Analyses complex textual data to ascertain completion of project components and identify issues and root causes to facilitate the formulation of the appropriate recommendation |
| Writing | 1.4, 2.3, 3.2 | • Presents information in a logical manner and clear of any ambiguities using technical language appropriate to the stakeholders<br>• Uses the appropriate technical language when compiling reports based on verifiable data<br>• Uses correct grammar, spelling and punctuation when presenting options and recommendations to allow for an appropriate decision to be generated/formulated |
| Oral Communication | 1.1-1.4, 2.3, 2.4, 3.1-3.3 | • Uses appropriate language and style when with parties of various levels to ensure that the information being delivered accurately represents project status based on available analytical data, and that it is understood by all stakeholders<br>• Uses language that is appropriate when negotiating the best outcomes<br>• Facilitates discussions using active listening, questioning and summarising when undertaking reviews, debrief sessions and presentations to ensure the efficient exchange of ideas |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.1, 2.2 | • Analyses complex numerical information embedded in performance metrics |
| Get the work done | 2.1-2.3, 3.1-3.3 | • Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria |

# Assessment Requirements for ICTPMG605 Manage ICT project closure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review relevant project documentation, including project metrics
- analyse the project performance
- recommend and plan the decommissioning or closure of a complex information and communications technology (ICT) project.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify project stakeholders
- explain the problem-solving techniques to address issues related to project closure
- outline the project management methods, practices and processes
- identify and describe project performance metrics.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work and include access to industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPMG606 Manage ICT project quality

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to implement quality assurance processes using quality control data to ensure continuous improvement for the benefit of current and future information and communications technology (ICT) projects.

It applies to individuals who may be required to apply high level business management, quality and technical knowledge and skills to ensure that projects are delivered, evaluated and monitored in accordance with organisational quality management systems and processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish a quality management plan | 1.1 Determine project quality requirements with reference to project scope and stakeholder needs and expectations<br>1.2 Adopt or agree on organisational quality policy and quality standards with stakeholders<br>1.3 Determine project quality management approach, including proposed quality assurance processes and quality control measurement methods and benchmarks |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Negotiate project quality, cost, time trade-offs and changes to stakeholder expectations if necessary<br>1.5 Develop a quality management plan for the project and obtain sign-off |
| 2. Perform ICT quality assurance processes | 2.1 Execute quality assurance activities as the project progresses according to the quality management plan<br>2.2 Identify project processes not meeting quality standards agreed in the quality management plan<br>2.3 Raise project change request to action process changes or corrective actions, update project management plan and quality baselines as necessary |
| 3. Perform quality control | 3.1 Validate project processes and deliverables against quality requirements as the project progresses<br>3.2 Review quality control metrics and take action as necessary to investigate and understand the reasons for failure<br>3.3 Use quality management tools to determine failures and root causes, and implement continuous improvement processes |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 1.4, 2.1 | • Interprets and analyses complex textual data to identify stakeholder requirements, establish project scope and identify issues |
| Writing | 1.4, 1.5 | • Compiles the project management plan using technical language appropriate to the readers<br>• Presents project components in a logical and prescriptive manner to ensure clarity of expectations<br>• Uses writing style that meets organisational requirements when presenting plans and negotiating approvals for complex projects |
| Oral Communication | 1.1-1.5, 2.1-2.3 | • Uses effective listening, questioning and summarising skills when participating or facilitating discussions crucial to the development of project |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | management plans<br>• Uses appropriate language when addressing individuals or groups and when discussing audit results and negotiations |
| Numeracy | 1.4, 3.2, 3.3 | • Uses mathematical and statistical formulae when validating researched data necessary to support the project management strategy and evaluate project quality metrics |
| Get the work done | 1.1-1.5, 2.1, 2.2, 3.1, 3.2, 3.3 | • Uses a combination of formal logical planning processes and an increasingly intuitive understanding of context to identify relevant information and risks<br>• Identifies and evaluates alternative strategies and resources<br>• May use formal analytical and lateral thinking techniques for identifying issues and generating and evaluating possible solutions<br>• Recognises the potential of new approaches to enhance work practices and outcomes |

# Assessment Requirements for ICTPMG606 Manage ICT project quality

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- prepare a quality management plan
- identify and implement appropriate quality management processes within a complex information and communications technology (ICT) project
- evaluate performance using quality assurance processes
- prepare quality reports.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the problem-solving tools and techniques
- identify and explain project management roles and responsibilities
- outline the quality improvement processes and methodology
- explain the quality management theory, techniques, tools and methodologies
- identify and describe the purpose of quality standards and benchmarks.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work and include access to:

- industry software packages
- facilities suitable for holding quality assurance problem-solving workshops.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2

# ICTPMG607 Manage and control ICT project risks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage and control risks in an information and communications technology (ICT) project within small, medium or large organisations.

It applies to individuals who may be required to apply a high level of business, technical and risk management skills to ensure that project risks are managed and controlled in accordance with organisational risk management strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify project risks | 1.1 Review project planning documents, organisational risk policies and relevant lessons learned from earlier projects<br>1.2 Identify major project risks and potential sources of project risk<br>1.3 Establish relevant risk management processes and procedures<br>1.4 Develop a project risk management plan, including a risk |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | register in consultation with stakeholder and obtain sign-off |
| 2. Treat project risks | 2.1 Assess the likelihood of the risk occurring and the resulting consequence of the risk<br>2.2 Develop risk-response strategies and contingency measures as appropriate<br>2.3 Incorporate risk-response actions and contingency measures into the risk register and project schedule in consultation with stakeholders and obtain sign-off |
| 3. Monitor project risks | 3.1 Undertake activities to monitor the risk factors or identified events as the project progresses<br>3.2 Establish formal risk reviews at appropriate intervals or project milestones<br>3.3 Update risk register and raise project change requests to update baseline project schedule as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1 | • Interprets and analyses complex textual information and other relevant data to ensure the proper identification of project risks |
| Writing | 1.3, 1.4, 2.2, 3.3 | • Uses technical language in compiling complex strategic documents and support materials, and presents this information in a logical manner using correct grammar and spelling |
| Oral Communication | 1.2-1.4, 2.1-2.3, 3.1, 3.2 | • Uses techniques including active listening, open-ended questioning and paraphrasing when gathering information<br>• Uses appropriate language and style to present complex technical information and ideas appropriate to the audience |
| Get the work done | 1.1-1.3, 2.1, 2.2, 3.1, 3.2, 3.3 | • Uses a combination of formal logical planning processes and an increasingly intuitive understanding of context to identify relevant information and risks, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | and identify and evaluate alternative strategies and resources<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options |

# Unit Mapping Information

# Assessment Requirements for ICTPMG607 Manage and control ICT project risks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify actual and potential risks within a complex information and communications (ICT) project
- establish risk management processes and procedures
- develop and implement risk management plan
- monitor risk factors and update risk management strategies.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the methods and techniques of risk management
- identify organisational policies relating to risk and organisational risk potential
- explain processes and techniques of business analysis
- outline the project management and systems development techniques and their associated potential risks.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work and include access to:

- industry software packages
- project documentation
- relevant organisational documentation.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPMG608 Manage ICT project systems implementation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

ly to this unit at the time of publication.This unit describes the skills and knowledge required to manage the system-implementation process in an information and communications technology (ICT) project within small, medium or large organisations.

It applies to individuals who may be required to use high-level business management technical and communication skills to ensure that ICT projects are implemented to ensure alignment with project and system development documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for system implementation | 1.1 Review relevant project and system development documentation<br>1.2 Consider organisational culture as part of an implementation risk analysis<br>1.3 Identify implementation options and constraints, and select a preferred approach in consultation with stakeholders<br>1.4 Develop a detailed implementation plan and a high-level |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | training plan and obtain sign-off<br>1.5 Ensure the creation of system user documentation and obtain sign-off<br>1.6 Ensure the preparation of operations documentation and obtain sign-off |
| 2. Manage organisational change | 2.1 Communicate relevant information about the pending change through appropriate channels<br>2.2 Establish necessary support structures |
| 3. Coordinate release management | 3.1 Establish and confirm release management roles and responsibilities, including those of the release manager<br>3.2 Determine release configuration items, including any production system software, hardware and capacity changes required, and compile a request for change<br>3.3 Ensure the creation of required test environment<br>3.4 Establish ongoing monitoring procedure to cover the post-release warranty period<br>3.5 Undertake data conversion activities if needed |
| 4. Manage acceptance testing | 4.1 Review results of system test and ensure acceptance test entry criteria are met<br>4.2 Ensure test environment and ICT configuration management processes meet solution requirements and organisational standards<br>4.3 Ensure acceptance testing is performed and results are collated<br>4.4 Ensure test results meet acceptance test exit criteria and obtain sign-off |
| 5. Manage user training | 5.1 Undertake training needs analysis<br>5.2 Review high-level training plan and schedule, and add detailed activities as necessary<br>5.3 Ensure training materials are prepared and user training is conducted |
| 6. Release system to production | 6.1 Develop an hour-by-hour action plan or checklist for release activities<br>6.2 Create a rollback strategy and plan to guide rollback of changes if required |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 6.3 Prepare appropriate communication to inform users of possible interruption to service due to the release<br>6.4 Manage the installation of the new release into production and ensure performance of operational verification tests and rollback changes if necessary<br>6.5 Review and update service level agreements (SLAs) and disaster recovery plan |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 3.1, 3.2, 4.1-4.4, 5.1-5.3, 6.4, 6.5 | • Interprets and analyses complex textual information to ensure that all requirements are identified, understood and appropriately addressed |
| Writing | 1.4-1.6, 2.1, 2.2, 3.1, 4.3, 5.1-5.3, 6.1-6.3, 6.5 | • Uses high-level of narrative and technical language in developing and presenting ideas and information of a complex nature to ensure that these are understood by stakeholders<br>• Presents qualitative test results in a manner that is consistent with organisational and industry standards |
| Oral Communication | 1.1, 1.3-1.6, 2.1, 2.2, 3.1-3.5, 4.1-4.4, 5.1-5.3, 6.4 | • Uses appropriate language and style, effective listening, questioning and summarising skills when presenting complex ideas to all stakeholders to ensure that project requirements and test results are clearly understood |
| Get the work done | All | • Develops flexible plans for complex, high-impact activities with strategic implications that involve a diverse range of stakeholders with potentially competing demands when preparing for system implementation<br>• Sequences and schedules complex activities, monitors implementation and manages relevant communication when managing organisational change, coordinating release management, managing testing, user training and release of |

# Assessment Requirements for ICTPMG608 Manage ICT project systems implementation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review and analyse the project documentation and prepare an implementation plan
- communicate and establish structure in preparation for change
- coordinate the release of new system
- manage the system tests and acceptance
- manage the training of users
- release the system to production.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the methods and techniques of configuration management
- describe organisational policies and standards relating to information and communications technology (ICT) configuration management
- explain the business analysis, processes and techniques appropriate to the project
- explain the project management and systems development processes, as well as potential risks associated with implementation activities
- outline the structure and implications of disaster recovery plans and Service Level Agreements (SLAs)
- explain what a "training needs analysis" is and its role in a training program
- describe the purpose of a "rollback strategy" for an ICT project.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work and include access to:

- industry software packages
- project documentation
- relevant organisational documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPMG609 Plan and direct complex ICT projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify, plan, control and finalise complex information and communications technology (ICT) projects.

It applies to individuals who may be required to use high-level business and project management skills to ensure effective and timely delivery of projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Project management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the strategic and operational needs of the ICT project during the planning phase | 1.1 Identify the strategic and operational needs of the project during the planning phase<br>1.2 Identify and consider the project's strategic context and requirements<br>1.3 Identify and consider the organisation's strategic and business plans, and its output requirements<br>1.4 Identify and explore client requirements and the impact of legislation and industry codes and standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Conduct a risk management analysis and develop and document a risk-management plan |
| 2. Prepare the ICT project plan | 2.1 Define and document precise specifications and terms of reference for the project<br>2.2 Identify and document project budget, specified to a level that can be used for the management of sub-tasks<br>2.3 Define skills needed for the successful completion of project<br>2.4 Define, document and secure physical and other resources required to support the project<br>2.5 Develop and document timelines, schedules and critical path for the project, taking into consideration contingencies and planning for time slippages<br>2.6 Define and document a consultation strategy or process that will be used to inform clients, contractors and other interested parties of the project's progress, and seek their input as required |
| 3. Assemble the ICT project team and commence work | 3.1 Secure and brief appropriate project-team members regarding the project, their roles, levels of delegated responsibility and the outcomes to be achieved<br>3.2 Implement effective communication processes to coordinate work and inform team members of progress<br>3.3 Identify and communicate clear reporting processes for team members |
| 4. Manage the IT project | 4.1 Monitor project progress according to project plan requirements, using appropriate project management tools and methodologies<br>4.2 Manage team member performance, ensuring that their output is directed to the key performance indicators identified in the project plan<br>4.3 Make corrections, changes and additions to the project plan in light of changing circumstances to ensure project aims and outcomes<br>4.4 Monitor resourcing to support the project and make corrections to reflect changing circumstances<br>4.5 Report overall project progress to senior management or funding bodies as required and in line with the project plan |
| 5. Finalise the IT project | 5.1 Finalise the project in line with the project plan<br>5.2 Conduct handover to staff members responsible for the |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | ongoing implementation or maintenance of project products or services efficiently, effectively and in line with organisational procedures<br>5.3 Debrief project team members and relevant stakeholders about the conduct of the project and the outcomes achieved<br>5.4 Prepare a report analysing the strengths and weaknesses of the project plan and the conduct of the project |
| 6. Use the IT project to contribute to improved policies and processes | 6.1 Identify and analyse opportunities for wider organisational learning, including changes to processes or policies generated by the project<br>6.2 Forward opportunities for future further developments following project completion for consideration by senior management<br>6.3 Consider the strategic impact of the project and feed into the organisation's ongoing strategic planning processes |

# Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.5, 2.1-2.3, 3.3, 4.1, 4.2, 5.1, 5.4, 6.1 | • Interprets and analyses complex textual information to ensure that all requirements are identified, understood, addressed and aligned with the organisational strategic and operational plans |
| Writing | 1.5, 2.1-2.6, 3.1-3.3, 4.3-4.5, 5.1-5.2, 5.4, 6.2 | • Uses high level of narrative and technical language in developing and presenting ideas and information of a complex nature in a logical and sequential manner, to ensure that these are understood by stakeholders |
| Oral Communication | 1.1-1.5, 2.1-2.6, 3.1-3.3, 4.1- 4.5, 5.2, 5.3, 6.2 | • Uses appropriate language and style, and effective listening, questioning and summarising skills when presenting complex ideas to all stakeholders to ensure that project requirements are clearly understood |
| Numeracy | 2.2 | • Uses sound mathematical assumptions and applies equations in developing budgets |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Interact with others | 3.1-3.3, 4.2, 5.3 | • Plays a lead role in situations requiring effective collaboration, demonstrating high-level influencing skills, focusing and shaping awareness, and engaging and motivating others, including those who are geographically dispersed |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• May use formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions<br>• Recognises the potential of new approaches to enhance work practices and outcomes |

# Assessment Requirements for ICTPMG609 Plan and direct complex ICT projects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design, implement, manage and finalise a complex information and communications technology (ICT) project
- manage planning processes, scheduling, human resources, reporting and response to contingencies
- align projects with organisational strategies and requirements
- assess outcomes and provide recommendations that will refine and improve future ICT project management processes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the concepts of risk management planning and processes
- outline computer software functions and operation, including relevant proprietary software
- identify relevant current legislation, codes and standards
- explain sustainability requirements and ratings, including:
  - reporting mechanisms
  - conservation of energy
  - management of other resources
- explain tools and models of project management
- identify and explain organisational frameworks and functions, including:
  - enterprises
  - government bodies

© Commonwealth of Australia, 2025 Future Skills Organisation

- industry associations.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the ICT project management field of work and include access to:

- relevant computer software packages
- suitable hardware
- codes, standards and legislation relevant to the jurisdiction and the project
- project documentation
- research resources, including product information and data, theoretical texts and other information.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPMG610 Develop a project management plan

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge to develop a plan for a telecommunications project, including assessing project requirements and planning for all stages to completion and final documentation.

It applies to individuals who are likely to have responsibility for the provision of installations, maintenance, upgrades and new services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare project management plan | 1.1 Evaluate and assess project brief and related documents<br>1.2 Produce document on project tasks and associated timelines, including installation processes and test requirements<br>1.3 Assess and produce document on resource requirements to assist allocation of appropriate resources |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Produce training plan assessing training needs and associated timelines for efficient project implementation<br>1.5 Determine and document budgetary requirements<br>1.6 Discuss roles of all identified parties associated with project to ensure their involvement<br>1.7 Produce project verification document, including monitoring and control processes, and review processes such as quality audits<br>1.8 Consult with all relevant parties prior to finalising draft plan and make changes as appropriate |
| 2. Develop and evaluate management plan | 2.1 Produce preliminary plan for consultation, including identified factors that may impact on realisation of project and observance of relevant legislation, codes, regulation and standards<br>2.2 Consult with client and clarify any amendments<br>2.3 Develop final plan with recommendations |
| 3. Finalise documentation | 3.1 Produce and document final plan to include implementation details and training needs<br>3.2 Present plan to client and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.3, 1.5, 1.6, 2.1-2.3, 3.1 | • Analyses and interprets textual information in a variety of forms to determine key information, requirements and project design |
| Writing | 1.2-1.5, 1.7, 1.8, 2.1-2.3, 3.1 | • Uses factual and technically specific language to document a range of requirements<br>• Uses appropriate formats and structures to present information logically for different audiences, and revises documents based on feedback and outcomes |
| Oral Communication | 1.5, 1.6, 1.8, 2.2, 3.2 | • Uses listening and questioning techniques to elicit the opinions of others and confirm understanding |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Influences discussions using selective language, tone and gestures to clearly articulate information and requirements |
| Numeracy | 1.3, 1.5 | • Performs highly developed mathematical calculations to analyse labour, costs and quantities to accurately process quotations and estimates |
| Navigate the world of work | 2.1 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context<br>• Recognises and follows explicit and implicit protocols and meets expectations associated with own role |
| Interact with others | 1.6, 2.2, 3.2 | • Collaborates with others, sharing information to build strong work groups and avoids behaviours that are not conducive to a productive environment<br>• Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships |
| Get the work done | 1.1-1.5, 1.7, 2.1, 2.3, 3.1, 3.2 | • Reflects on the ways in which digital systems and tools are used or could be used to achieve work goals, and begins to recognise strategic and operational applications<br>• Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to identify relevant project requirements and priorities<br>• Makes critical decisions quickly and intuitively in complex situations, taking into consideration a range of variables including the outcomes of previous decisions<br>• Recognises and addresses some unfamiliar problems of increasing complexity within own scope, recognising when to seek the advice of others |

# Assessment Requirements for ICTPMG610 Develop a project management plan

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine the project attributes and specifications
- prepare a coherent draft project management plan
- consult on and revise a project management plan
- document final project management plan and obtain sign off.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the key attributes of common telecommunications applications and related equipment
- identify and evaluate the connections to carrier infrastructure or equipment
- identify current legislation relating to the design of installation of telecommunications equipment and connection to carrier services
- evaluate the advantages of leasing and purchase options to assist in delivering cost effective solutions
- identify and evaluate network and transmission equipment
- outline network topologies, and interface and interconnect solutions
- outline work health and safety (WHS) issues that need to be built into a plan, with consideration of:
  - electrical safety
  - materials handling
  - physical hazards
  - confined spaces
  - heights

© Commonwealth of Australia, 2025 Future Skills Organisation

    - lifting
- describe and evaluate the power requirements and electrical safety aspects of the installation plan
- describe typical performance parameters and typical faults that may be encountered in client equipment and related connection and transmission media
- identify various test equipment types suitable for tests to be made
- identify warranty information for equipment supplies and contractor work guarantees.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- a telecommunications operations site with relevant technology and infrastructure
- relevant databases, legislative requirements and other project related documentation
- organisational documentation relating to equipment, warranties, leasing, contracts and audits.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG611 Prepare a detailed design brief

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare a detailed design brief to realise a building and equipment provisioning project, including costing, vendor and technology choices, scheduling and resourcing.

It applies to individuals with a high level of specialist technical skills and knowledge in optical telecommunications and IT networks using internet protocol (IP) systems for a new installation or upgrade of capacity or technology for an existing network or subsystem for convergence to next generation networks (NGN).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate design requirements | 1.1 Consult relevant legislation, codes, regulations and standards that impact on project<br>1.2 Determine need for enhancement to new or existing telecommunications network from telecommunications project plan |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | and associated project brief<br>1.3 Determine specific purpose and type of network growth and enhancement using collated data from other relevant sources<br>1.4 Consult client regarding enterprise criteria and determine timeframe for design plan<br>1.5 Establish and organise design resource requirements |
| 2. Evaluate information to prepare design drawings | 2.1 Obtain site access through consultation with affected property owners where project impacts on private property<br>2.2 Collect field data and propose ways to manage physical impediments that may affect building construction work<br>2.3 Verify existing equipment, equipment layouts and building services to plan for network growth<br>2.4 Ascertain impact of relevant heritage, environmental and other governmental legislation, and initiate action or organise consultative processes to gain approvals according to enterprise policy<br>2.5 Prepare design drawing according to enterprise requirements |
| 3. Select design option | 3.1 Analyse proposed network needs to determine set of realistic design options<br>3.2 Evaluate and select preferred design option according to approved enterprise criteria and discuss selected option with client<br>3.3 Assess system compatibility and make modifications to design |
| 4. Prepare design plan | 4.1 Prepare detailed design plan, including relevant geographical and topological information, equipment and material and cost estimates<br>4.2 Discuss final designs with planners and project management, and obtain approval to proceed<br>4.3 Produce final detailed design brief with drawings, material requirements, and testing and maintenance plans for operational staff to follow |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1-1.3, 2.4 | • Analyses and interprets technical text in a variety of forms to determine key information, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | requirements and project design |
| Writing | 1.4, 2.1, 2.3-2.5, 3.2, 4.1-4.3 | • Develops accurate technical documents and diagrams for a specific audience, using clear and detailed language and diagrams to convey explicit information |
| Oral Communication | 1.4, 2.1-2.4, 3.2, 4.2, 4.3 | • Clearly articulates information using relevant language and persuasive techniques suitable for specific audiences |
| Numeracy | 1.4, 1.5, 2.5, 4.1 | • Uses mathematical calculations to determine costs, timelines and project specifications<br>• Accurately produces charts and other diagrams that capture site plans |
| Navigate the world of work | 1.1, 2.4, 2.5 | • Monitors adherence to all legislative and regulatory rights and responsibilities, and organisational policies and procedures<br>• Considers own role in terms of its contribution to the broader goals of the work environment |
| Get the work done | 1.2, 1.3, 1.5, 2.1-2.3, 3.1-3.3, 4.1 | • Reflects on the ways in which digital systems and tools are used or could be used to achieve work goals, and recognises strategic and operational applications<br>• Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to identify relevant project requirements and priorities<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account<br>• Recognises and addresses some unfamiliar problems of increasing complexity within own scope, recognising when to seek the advice of others |

# Assessment Requirements for ICTPMG611 Prepare a detailed design brief

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- assess the implications of legislation, regulations and standards on project design
- analyse the network and enterprise needs to determine design options
- consult widely to ensure design represents client requirements
- prepare a design brief for building and equipment design provisioning
- prepare detailed design documentation to enable realisation of design.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain common client telecommunications applications and related equipment
- identify and critique connections to carrier infrastructure or equipment
- describe cost-effective solutions in planning
- identify and explore current legislation relating to installation of telecommunications equipment and connection to carrier services
- review the range of client premises equipment (CPE)
- outline environmental impacts and options for green information and communications technology (ICT) installations
- review network and transmission equipment
- explain network topologies, and interface and interconnection solutions
- outline work health and safety (WHS) issues that are required to be included in the design brief for:
  - electrical safety
  - materials handling
  - physical hazards

© Commonwealth of Australia, 2025 Future Skills Organisation

  - confined spaces
  - heights
  - lifting
- review the power requirements and electrical safety of the project
- explain technology of next generation networks (NGN)
- identify test equipment types.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- sites on which projects may be designed
- relevant databases, legislative requirements and other project related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG801 Manage a telecommunications workplace

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to fulfil workplace management responsibilities at a managerial and supervisory level in a telecommunications business environment.

It applies to individuals who combine technical skills with management skills to manage technical staff in an advanced technological environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Support human resources activities | 1.1 Assist and advise on recruitment action and induction of new staff<br>1.2 Monitor staff training needs and implement technical training activities for staff<br>1.3 Provide information and advice to relevant personnel<br>1.4 Review and advise on work health and safety (WHS) and security in workplace |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| 2. Manage conflict in workplace | 2.1 Assess conflict situation<br>2.2 Determine ways to resolve conflict with conflicting parties<br>2.3 Apply decision making procedures to business model for conflict resolution |
| 3. Apply quality management systems and processes in workplace | 3.1 Document essential requirements of product using quality management approach<br>3.2 Assess relationship between client and owner to identify process to achieve agreement on measurable quality features<br>3.3 Analyse quality investigation for improvement by involving individuals, groups and managers |
| 4. Monitor work practices to ensure business objectives will be met | 4.1 Develop strategies, using management characteristics to meet business objectives<br>4.2 Analyse individual management objectives applicable to workplace<br>4.3 Produce business model representing activities of sound management plan for telecommunications workplace |
| 5. Determine human factors when managing people and groups | 5.1 Establish consultation processes between management and staff to resolve grievances<br>5.2 Analyse interpersonal skills required of managers and team leaders using identified communications channels<br>5.3 Conduct performance reviews and take appropriate action |
| 6. Perform work using self-organisation principles | 6.1 Evaluate methods of improving own productivity and perform a self-appraisal<br>6.2 Evaluate effectiveness of information processing methods used in workplace, applying time management techniques<br>6.3 Produce report to communicate information efficiently and effectively in workplace |
| 7. Apply effective communication techniques to business meetings | 7.1 Research levels, directions and effectiveness of channels used when communicating in business<br>7.2 Develop plan for managing business meetings in workplace |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 6.1 | • Uses investigative techniques to expand on existing knowledge and experience |
| Reading | 1.4, 3.1, 4.2, 7.1 | • Analyses and interprets textual information from a variety of sources to determine key information and requirements |
| Writing | 1.1-1.4, 3.3, 4.1-4.3, 5.1, 5.3, 6.3, 7.2 | • Develops material using an appropriate format containing clear, instructional and informative language to communicate specific information |
| Oral Communication | 1.1, 1.3, 1.4, 3.3, 5.3 | • Facilitates discussions by using listening and questioning techniques and appropriate tone to confirm understanding and obtain information<br>• Clearly articulates information using tone, pace and language appropriate for the audience |
| Navigate the world of work | 1.4 | • Considers own role in terms of its contribution to the broader goals of the work environment<br>• Monitors and reviews the organisation's policies, procedures and adherence to legislative requirements to implement and manage change |
| Interact with others | 3.3, 5.2, 6.1 | • Invests considerable time and energy in building and maintaining effective working relationships within and beyond the immediate work context, recognising and intuitively responding to the subtle and complex mix of factors at play in every interaction<br>• Sets time aside for self-reflection, recognising personal strength and limitations, and exploring beliefs and assumptions about own behaviour and that of others<br>• Recognises potential for conflict in working with others and seeks to develop organisational processes to deal with conflict |
| Get the work done | 1.2, 2.1-2.3, 3.2, 4.1-4.3, 5.1, 5.3, 6.2 | • Recognises the critical importance of clarifying, focusing and aligning goals and expectations, and uses the process to build ownership of and broad commitment to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | achieving outcomes<br>• Takes responsibility for high impact decisions in complex situations involving many variables and constraints<br>• Uses formal analytical and lateral thinking techniques for identifying issues, and generating and evaluating possible solutions<br>• Articulates and challenges the values, beliefs and assumptions that shape thinking and routinely reframes and redefines problems to get new perspectives and generate new ideas<br>• Uses digital technologies to manage business operations and actively investigates new technologies for strategic and operational purposes |

# Assessment Requirements for ICTPMG801 Manage a telecommunications workplace

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine the human factors that need to be analysed when managing people and groups
- conduct business meetings, applying effective communication techniques
- determine essential requirements of a product, applying quality management principles
- monitor and implement training for staff
- resolve problems and conflicts professionally in a business environment
- support a human resources management program.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- evaluate equity and diversity legislation and underlying principles
- critique a range of organisational procedures and policies relating to human resources management
- assess work health and safety (WHS) requirements and contrast with legislation and regulations
- outline behaviour theories relevant to managing staff in a workplace
- summarise the effect of public sector legislation, codes of practice and other formal agreements that directly impact on business operations
- establish the technical aspects of telecommunications networks that impact directly on human resources management
- formulate strategies to manage the workplace and industry environment.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- a telecommunications workplace
- relevant enterprise documentation, including human resources and quality management policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG802 Manage a telecommunications project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to produce a plan, develop risk management strategies, prepare budgets, plan for contingencies, develop procedures for commissioning the project and archive project documentation.

It applies to individuals who implement specified projects for an installation or upgrade of the telecommunications network.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to manage project | 1.1 Develop project proposal, including specific project management processes from specifications and/or contracts<br>1.2 Document role of major stakeholders and implications for project<br>1.3 Develop risk management strategy and present to stakeholders for agreement |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Check for technical compliance of project with relevant standards<br>1.5 Select project management computer software<br>1.6 Conduct skills audit of personnel and identify additional training requirements |
| 2. Apply project management processes | 2.1 Determine participants' responsibilities using critical path method (CPM) to draw network diagram<br>2.2 Sequence and coordinate activities required for specific project<br>2.3 Determine critical path to optimise timing of project deliverables<br>2.4 Assess viability of project estimates by preparing budget<br>2.5 Perform risk analysis to determine factors that may hinder project deliverables<br>2.6 Assess progress of project with contingencies to manage risks<br>2.7 Determine any updates and recommendations in agreement with client<br>2.8 Determine if contract variations are required and make changes |
| 3. Complete work and document activities | 3.1 Make provision for commissioning and project completion<br>3.2 Produce final documentation with recommendations and present to client<br>3.3 Document and archive project documentation<br>3.4 Obtain sign off |

# Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1,1.4-1.6, 2.1, 2.5, 2.6, 2.8, 3.2 | • Analyses, interprets and compares a variety of textual material to determine key information and requirements |
| Writing | 1.1, 1.3, 1.6, 2.2, 2.5, 2.7, 2.8, 3.2, 3.3, 3.4 | • Produces technical documents using a cohesive format to clearly and logically convey a range of information and data |
| Oral Communication | 1.3, 2.7, 3.2 | • Facilitates discussions using listening and questioning techniques to confirm understanding and obtain required information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Clearly articulates information using relevant language and techniques to obtain a mutually acceptable result |
| Numeracy | 2.2, 2.4 | • Applies knowledge of mathematical formulas to estimate monetary requirements against a project plan and calculate required timelines against tasks |
| Navigate the world of work | 1.4 | • Monitors adherence to relevant standards, policies and procedures and considers own role in terms of its contribution to the broader goals of the work environment |
| Interact with others | 1.3, 3.2 | • Tailors every communication to achieve its purpose, demonstrating a sophisticated understanding of the needs, interests, issues and priorities of each audience |
| Get the work done | 1.1, 1.3, 1.5, 1.6, 2.1-2.7, 3.1, 3.3, 3.4 | • Recognises and anticipates an increasing range of familiar problems, their symptoms and causes, actively looking for early warning signs and implementing contingency plans<br>• Takes responsibility for high impact decisions in complex situations involving many variables and constraints<br>• Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, identifying and addressing issues and reallocating resources<br>• Defines benefits, costs, risks and feasibility from a broad range of perspectives, and thinks laterally to redesign aspects to address potential issues<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks, adapting some functions to improve personal efficiency |

# Assessment Requirements for ICTPMG802 Manage a telecommunications project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare and apply a project management process to a telecommunications project using project management software
- develop a comprehensive plan to manage a telecommunications project with a risk management strategy, budget and contingencies
- complete work and project documentation accurately.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- critically analyse organisational project management policies and procedures
- assess safety management processes and procedures in a workplace environment including:
  - personal protective equipment conforming to industry and work health and safety (WHS) standards
  - precautions required to minimise, control or eliminate hazards that may exist during work activities
- evaluate the impact of relevant legislation, codes, regulations and standards on the management of a communications project
- assess the workplace and industry environment and its impact on project development to implementation, including:
  - commissioning procedures

© Commonwealth of Australia, 2025 Future Skills Organisation

  - industrial issues
  - roles and responsibilities
  - skills audit
- evaluate the telecommunication systems and their impact on a project
- define the role that site engineering has on the development of a project management plan
- evaluate project management processes and the software packages available to assist management.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- a telecommunications site
- computers and relevant computer software
- relevant legislation, codes, regulations and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG803 Undertake a telecommunications project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to research and plan a telecommunications project covering an extensive range of complexities and technologies.

It applies to telecommunications technical staff who undertake complex projects requiring high levels of planning and management, and combine technical and work health and safety (WHS) skills in planning and management work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section* |
| 1. Prepare for telecommunications project | 1.1 Obtain project plan from authorised personnel to identify nature of project and project specifications<br>1.2 Verify location of proposed project work according to appropriate plans<br>1.3 Critically analyse project specifications and research emerging telecommunications technology that may benefit project |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Consult authorised personnel to finalise project specifications and obtain agreement<br>1.5 Source project resources required, including those for safe work practice<br>1.6 Prepare contingency plans, including any risks that could impact on project<br>1.7 Develop project implementation plan according to standards with minimal workplace disruption, and obtain agreement from authorised personnel<br>1.8 Notify authorised personnel of possible network outage where required |
| 2. Carry out telecommunications project work | 2.1 Follow work health and safety (WHS) and environmental requirements according to plan and manufacturer's specifications<br>2.2 Inform appropriate personnel of existing and potential hazards on worksite<br>2.3 Perform project work phases according to agreed plan and accepted work practice<br>2.4 Implement project planning principles, including risks that may impact on project<br>2.5 Monitor project to completion to ensure that it is progressing according to plan and risks are minimised<br>2.6 Report on implementation phases |
| 3. Clean up worksite and complete documentation | 3.1 Remove and dispose of project waste and debris from worksite according to environmental requirements<br>3.2 Restore changes made to work area to client's satisfaction<br>3.3 Complete all project documents and present to client<br>3.4 Declare asset ready for commissioning and integration if required<br>3.5 Notify client and obtain sign off |

# Foundation Skills

*This section describes the Foundation Skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1-1.3, 1.7, 2.1 | • Organises, evaluates and critiques ideas and information from a wide range of complex texts<br>• Draws on a broad range of strategies to build and maintain understanding throughout complex texts |
| Writing | 1.4, 1.6-1.8, 2.2, 2.6, 3.3-3.5 | • Demonstrates sophisticated writing skills by selecting appropriate conventions and stylistic devices to express precise meaning<br>• Prepares documentation expressing ideas, explores complex issues and is constructed logically, succinctly and accurately |
| Oral Communication | 1.1, 1.2, 1.4, 1.7, 1.8, 2.2, 2.6, 3.2, 3.4, 3.5 | • Determines and confirms client requirements using collaborative and inclusive techniques including active listening and questioning<br>• Reads verbal and non-verbal signals to convey and clarify information and to confirm understanding |
| Numeracy | 1.5-1.7 | • Analyses and synthesises highly embedded mathematical information in a broad range of tasks and texts |
| Navigate the world of work | 1.7, 2.1, 3.1 | • Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are being met |
| Interact with others | 1.1, 1.2, 1.4, 1.8, 2.2, 2.3, 2.5, 3.2-3.5 | • Develops and implements communications strategies with internal and external persons to build rapport<br>• Influences and fosters a collaborative culture, facilitating a sense of commitment and workplace cohesion<br>• Shares knowledge, information and experience openly as an integral part of the working relationship<br>• Understands diversity and seeks to integrate diversity into the work context for managing change, making decisions and achieving shared outcomes |
| Get the work done | 1.1, 1.2, 1.5-1.7, 2.1-2.5, 3.1, 3.2, 3.4 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands<br>• Gathers and analyses data and seeks feedback to improve plans and processes<br>• Makes high impact decisions in a complex and diverse environment, using input from a range of sources<br>• Addresses complex problems involving multiple variables, using formal analytical and lateral thinking techniques, experience and knowledge to focus on the root cause<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Uses digital technologies to manage business operations |

# Assessment Requirements for ICTPMG803 Undertake a telecommunications project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- research and critically analyse the deliverables for a telecommunications project
- consult with relevant personnel to elicit and confirm project outcomes
- prepare plans for implementation, address contingencies and manage risk
- implement and monitor telecommunications project work and report progress to relevant personnel
- ensure project is completed in accordance with environmental and client requirements
- document the project outcomes and obtain client sign off.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- evaluate organisational project management policies and procedures in relation to project development
- critically analyse the operation of transmitters and receivers
- explore the management of safety on projects and setting project policies and procedures for:
  - personal protective equipment conforming to industry and work health and safety (WHS) standards
  - precautions required to minimise, control or eliminate hazards that may exist during work activities
- evaluate the impact of relevant legislation, codes, regulations and standards on the project

© Commonwealth of Australia, 2025 Future Skills Organisation

- explore the telecommunications system principles and operational procedures that contribute to project development, including:
  - personnel involved
  - project specifications
  - project resources
- evaluate the workplace and industry environment and its impact on development of the project.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- a telecommunications operations site on which a project can be carried out
- computers and relevant computer software
- relevant legislation, codes, regulations and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPMG804 Evaluate and use telecommunications management networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to analyse, evaluate and monitor business performance using telecommunications management network (TMN) systems in the management of open systems in communications networks.

It applies to individuals who have a very high level of technical management skills and knowledge in telecommunications networks and systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – project management

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to evaluate and use telecommunications management network | 1.1 Research and evaluate network management architectures in common carrier and extended models<br>1.2 Evaluate features and functionality of Standards Committee International Telecommunications Union (ITU-T) TMN architecture and network models<br>1.3 Research and evaluate techniques for collecting management |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | information from network nodes using interrupts and polling<br>1.4 Analyse configuration management problems and produce assessment report on solutions by integrated network management systems |
| 2. Analyse fault management and accountability procedures | 2.1 Evaluate effectiveness of fault management processes from beginning to resolution, including automation of fault management<br>2.2 Analyse reasons for alarm correlation with process analysis and apply fault identification to network problems |
| 3. Plan for reliability and survivability | 3.1 Research and produce a report on quality of service (QoS) in a telecommunications context, including relevant international standards and range and type of possible monitoring parameters for QoS<br>3.2 Analyse reasons for service levels in telecommunications context<br>3.3 Perform linear and exponential trend analysis on real or simulated data for single monitoring parameter<br>3.4 Research and assess reliability and survivability in telecommunications context with reference to disaster and security management policies and procedures<br>3.5 Develop disaster recovery plan for telecommunications network |
| 4. Research and report network management techniques | 4.1 Research how accounting records are generated and used for both voice and data networks<br>4.2 Analyse process of generating bills from accounting records, configuration and client information<br>4.3 Research and report on network management techniques and standards used for internet<br>4.4 Research and report on standards used in simple network management protocol (SNMP) network management model and global system for mobiles (GSM) network<br>4.5 Analyse network management functions over CNET network simulation or similar data network and produce report on findings |

# Foundation Skills

*This section describes the Foundation Skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 3.1, 3.4, 4.1, 4.3-4.5 | • Analyses and interprets text to determine key information and applications<br>• Interprets textual and numerical information in a variety of forms, and applies the knowledge gained to evaluate methodologies |
| Writing | 1.2-1.4, 2.1, 2.2, 3.1-3.5, 4.2-4.5 | • Produces accurate technical documents for a specific audience using clear and detailed language and visuals to convey explicit information<br>• Prepares information that incorporates evaluation of information and specialised and cohesive language in a format and style appropriate for a specific audience |
| Oral Communication | 3.1, 4.3, 4.4 | • Clearly articulates information using relevant language and persuasive techniques suitable for specific audiences |
| Numeracy | 3.3, 4.1, 4.2 | • Applies mathematical techniques to analyse and report on technical requirements and implications |
| Get the work done | 1.1-1.4, 2.1, 2.2, 3.1-3.5, 4.1-4.5 | • Gathers and analyses data and seeks feedback to improve plans and processes<br>• Makes high impact decisions in a complex and diverse environment, using input from a range of sources<br>• Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities and decision making strategies where appropriate<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking<br>• Uses digital technologies to manage business operations and actively investigates new technologies for strategic and operational purposes |

# Assessment Requirements for ICTPMG804 Evaluate and use telecommunications management networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- research and evaluate the architectural features and functions of network management systems
- research and report on the following:
  - the major features, configuration and functions of management systems
  - fault management and accountability procedures
  - the major features and functions of quality of service (QoS) agreements
  - network management techniques
- analyse the major features of planning for reliability and survivability.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- evaluate administrative network management systems
- review business models and business processes used in telecommunications management networks
- investigate enterprise solutions for a given situation
- evaluate operations network management systems
- determine organisational policies and procedures that relate to management systems
- evaluate the impact of the workplace and industry environment on the use of a telecommunications management system.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- a telecommunications operations site with a network management system
- networked computers with relevant software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTPRG301 Apply introductory programming techniques

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create simple applications or games.

It applies to individuals with responsibility for creating applications or games and includes creating code, using programming standards, testing, and debugging.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Apply language syntax and layout | 1.1 Apply basic language syntax rules<br>1.2 Use language data types, operators, and expressions to create a clear and concise code<br>1.3 Apply the variables and variable scope<br>1.4 Use the library functions in a program<br>1.5 Use commenting to create a clear meaning to the code |
| 2. Apply control | 2.1 Apply the language syntax for sequence, selection and iteration |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| structures | constructs<br>2.2 Use logical operators to create expressions for use in selection and iteration constructs |
| 3. Code using standard algorithms | 3.1 Develop algorithms that use the sequence, selection and iteration constructs<br>3.2 Create and use arrays<br>3.3 Code the standard sequential access algorithms, for reading and writing text files, including end-of-file detection loops<br>3.4 Apply string manipulation |
| 4. Test the code | 4.1 Use debugging techniques to trace code execution and examine the variable contents to detect, and correct, errors<br>4.2 Create and conduct simple tests, to confirm that the code meets the design specification<br>4.3 Document the tests performed and results achieved |
| 5. Create an application or game | 5.1 Design an algorithm in response to basic program specifications<br>5.2 Develop the application or game to meet the program specification<br>5.3 Test and confirm that the application, or game, meets the initial specifications |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Writing | 1.2, 1.5, 4.3 | • Prepares workplace documentation, according to organisational formats and protocols<br>• Creates program code using the correct syntax |
| Numeracy | 2.2, 3.1, 5.1 | • Uses mathematical formulae to ensure that the program specifications are met |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 1.5, 2.1, 2.2, 3.1, 3.2, 3.3, | • Takes responsibility for planning, sequencing and prioritising tasks and own workload, for efficiency and effective outcomes |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 3.4, 4.1, 4.2, 5.2, 5.3 | • Uses problem-solving techniques to analyse the required outcomes, in order to determine the correct program code<br>• Uses a formal decision-making process, identifying and evaluating several choices against a limited set of criteria, when selecting syntax<br>• Evaluates the effectiveness of decisions in terms of how well they meet stated design specifications<br>• Uses the features of digital tools to complete complex tasks |

# Unit Mapping Information

# Assessment Requirements for ICTPRG301 Apply introductory programming techniques

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- apply programming language syntax, sequence, selection and iteration control structures to the development of an application, or game
- produce an application, or game, that is designed and built from the program specifications
- confirm that the created application, or game, meets the original program specifications, and obtain user sign-off for the completed program.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe common games programming languages, their syntax, and command structure
- describe the development of small-sized applications or games.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the requirement documents
- the site documents
- software development tools currently used in industry, such as a compiler
- an independent development environment (IDE).

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG401 Maintain open-source code programs

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to contribute as a member of an open-source software project community, and to maintain open-source code.

It applies to individuals working in software and system development, and maintenance. They may work as open-source software developers who are required to build, test and distribute open-source software applications, or as programmers responsible for integrating open-source components, tools or technologies into their applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Investigate the open-source paradigm | 1.1 Examine the open-source paradigm and analyse the differences with traditional software development models<br>1.2 Investigate the types of online resources<br>1.3 Investigate the types of project documentation<br>1.4 Recognise the role of an online community, and international |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | collaboration<br>1.5 Examine motivational factors for contributors to open-source code<br>1.6 Analyse the open-source licensing models |
| 2. Familiarise with target project | 2.1 Examine the online resources associated with the target project<br>2.2 Download pre-built executable binaries to install, and run, the project<br>2.3 Download and analyse the supporting documentation |
| 3. Prepare for maintenance activities | 3.1 Select, and register with, a relevant online community open-source group<br>3.2 Download nightly snapshots of the latest source code and the supporting documentation<br>3.3 Build and execute a snapshot, where appropriate |
| 4. Maintain the code | 4.1 Access the project bug database, and select the bugs to be resolved or the features to be added<br>4.2 Make changes to the local copy of the code, in order to resolve selected bugs<br>4.3 Test the resulting code to ensure that it performs appropriately<br>4.4 Prepare the code patch for submission<br>4.5 Submit a code patch to the project<br>4.6 Use the appropriate software-development tools and environment |
| 5. Maintain the documentation | 5.1 Access the project documentation<br>5.2 Prepare and contribute new information, or updates, to the existing documentation<br>5.3 Prepare and submit documented changes to the project |
| 6. Participate in community | 6.1 Exchange messages with other project members and actively participate in community activities<br>6.2 Take action to ensure that exchanges are socially acceptable<br>6.3 Submit the code and documentation code patches for inclusion<br>6.4 Access online project resources frequently, to keep up-to-date with the project and with community developments<br>6.5 Take action to ensure that community-participation standards are observed and maintained |

# Assessment Requirements for ICTPRG401 Maintain open-source code programs

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- contribute to an open-source project
- program source code changes and/or additions
- document changes or additions
- investigate, utilise and participate in online resources for the project's direction
- build, modify, and test the code
- participate in the online community.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain debugging and testing techniques
- describe documentation techniques, including internal documentation, user guides and technical documentation
- explain open-source development methodology
- describe online project communities, and their involvement in games development.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the software development environment
- the internet

© Commonwealth of Australia, 2025 Future Skills Organisation

- technical requirements
- databases
- information repositories
- programming languages
- group-facilitation software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG402 Apply query language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to retrieve and manipulate information stored in information systems, using a query language.

It applies to individuals in a range of work environments, who are required to extract information from a source such as a database, a text file, or an extensible markup language (XML), by creating and running queries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine the requirements of developing queries | 1.1 Recognise various query-related terminologies<br>1.2 Identify the type of data source for a chosen query language<br>1.3 Identify and use the necessary tools, and environment, in building queries |
| 2. Write queries to retrieve and sort values | 2.1 Use an expression to retrieve values from a single unit<br>2.2 Use an expression to combine values from more than one unit |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Use an expression to sort values into a certain order |
| 3. Write queries to selectively retrieve values | 3.1 Use an expression to filter a sequence, based on a predicate or a condition<br>3.2 Use an expression to filter the subset of a sequence, based on a predicate or a condition<br>3.3 Use an expression to extract a specific value by position |
| 4. Perform a calculation in queries | 4.1 Use an expression to perform a calculation on numeric values<br>4.2 Use an expression to perform an operation on text values<br>4.3 Use an expression to perform an operation on date and time values |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3 | • Analyses and interprets technical data to determine requirements |
| Writing | 2.1-4.3 | • Writes and edits, computer code and technical data, ensuring the correct syntax and accuracy |
| Numeracy | 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 4.1, 4.2, 4.3 | • Makes basic calculations involving arithmetical operations<br>• Makes estimates and comparisons involving date and time data |
| Get the work done | 1.3, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 4.1, 4.2, 4.3 | • Uses digitally-based technologies and systems to enter, store and manage data |

# Assessment Requirements for ICTPRG402 Apply query language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- select and use tools in developing, storing, and executing queries to extract the appropriate data required for ad hoc reports, or to support developers
- incorporate calculations using control statements, operators and functions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the information gathering methods
- outline the data analysis techniques
- define data mining
- outline the characteristics of the data source
- explain the features of the information system
- explain typical systems and procedures.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- a data source
- resources in the chosen query language
- documentation regarding client and functionality requirements
- resources to aid calculation.

# ICTPRG403 Develop data-driven applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create data-driven applications that access data from a range of sources, such as databases, object data sources or eXtensible markup language (XML).

It applies to individuals who may work as programmers or database application developers and who are responsible for data-access coding.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Select data-access layer (DAL) | 1.1 Review function of DAL in multi-layer application model<br>1.2 Determine data-access application programming interface (API) for connecting to various data sources |
| 2. Establish connection with data source | 2.1 Create and manage connection strings<br>2.2 Connect to data source by using different data providers<br>2.3 Create code to handle connection exceptions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Execute commands and return results from data source | 3.1 Query data from data source<br>3.2 Retrieve data from data source as result sets<br>3.3 Manage result sets<br>3.4 Manage exceptions when retrieving data |
| 4. Modify data in data source | 4.1 Insert, update or delete data<br>4.2 Manage data integrity<br>4.3 Manage exceptions when modifying data |
| 5. Manage disconnected data | 5.1 Research disconnected data management strategy<br>5.2 Ensure that application can deal with disconnected data |
| 6. Document data-access layer | 6.1 Document code<br>6.2 Document database connectivity |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 3.1, 5.1 | • Interprets complex technical documents to ensure outcomes are met |
| Writing | 2.3, 3.1, 4.1, 4.3, 6.1, 6.2 | • Completes workplace documentation accurately and in an appropriate format |
| Get the work done | 1.1, 1.2, 2.1, 2.2, 2.3, 3.1, 3.3, 3.4, 4.1, 4.2, 4.3, 5.1, 5.2 | • Uses digitally based technologies and systems to design and create complex models and codes<br>• Identifies technical or conceptual issues and applies analytical processes to resolve these issues<br>• Recognises opportunities to investigate potential new techniques to access data from various resources |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTPRG403 Develop data-driven applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- select and code the data-access layer of multi-layer applications
- retrieve and update data from various data sources.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features of object-oriented design and multi-layer applications
- outline relational database management systems
- describe object-oriented programming at an intermediate level
- outline the principles of a Structured Query Language (SQL).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development field of work and include access to:

- integrated development environment (IDE)
- data access application program interfaces (APIs)
- database management system software and files
- coding standard
- specific tools and licences, depending on particular data-access API
- different types of data-access methods including data retrieval and storage, back-end coding and disconnect data management

© Commonwealth of Australia, 2025 Future Skills Organisation

- eXtensible markup language (XML) documents.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG404 Test applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to prepare test plans, write test procedures or scripts according to test plans, and maintain test plans and scripts.

It applies to individuals who may be responsible for test plan preparation, execution, maintenance, and reporting of tests; as well as defect management in the software development life cycle.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine testing need in development | 1.1 Identify testing role across software development life cycle<br>1.2 Identify testing types and testing tools<br>1.3 Recognise testing benefits, standard and terms |
| 2. Prepare test plan document | 2.1 Gather requirements to develop test plan<br>2.2 Analyse and identify test data using various test-case design techniques |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Define and design test cases |
| 3. Write and execute test procedures | 3.1 Choose and adopt a unit test framework<br>3.2 Design and implement algorithm in test procedures<br>3.3 Perform test executions |
| 4. Review test results | 4.1 Record test results<br>4.2 Analyse test results<br>4.3 Produce test progress reports<br>4.4 Manage defects |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.2, 4.2 | • Interprets technical documentation to determine requirements |
| Writing | 3.2, 4.1, 4.3 | • Completes workplace documentation accurately and in an appropriate format |
| Numeracy | 3.2 | • Creates and uses basic mathematical equations |
| Get the work done | 1.2, 2.1, 2.2, 2.3, 3.1, 3.3, 4.2, 4.4 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload to achieve outcomes<br>• Uses systematic, analytical processes, gathering relevant information, and identifying and evaluating options against agreed criteria when applying testing and debugging techniques<br>• Employs a range of sophisticated digital tools and techniques to meet desired outcomes |

# Assessment Requirements for ICTPRG404 Test applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- apply test case design techniques to develop a test plan, and to test cases that adequately cover specific test requirements
- design, implement and execute test procedures, or scripts, by using a unit test framework and an integrated development environment (IDE)
- create test progress reports based on recorded test results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the characteristics of programming languages
- explain input and output requirements
- outline the life cycle for software development
- outline the processes and techniques for testing small-size applications.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the software development environment
- specific test requirements, such as the test-plan document
- suitable code to be tested
- word-processing software.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG405 Automate processes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to write scripts to automate solutions, by using basic scripting processes, and application-specific scripting options.

It applies to individuals who may work in information and communications technology (ICT) support roles and who are required to automate tasks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop algorithms to represent a solution to a given problem | 1.1 Develop an algorithm that is an exact and sufficient description of the solution<br>1.2 Develop an algorithm that takes account of all possible situations<br>1.3 Develop an algorithm that is guaranteed to end |
| 2. Describe the structures of the algorithms | 2.1 Use structures, sequence, selection and iteration<br>2.2 Use structures to describe algorithmic solutions to a problem |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Design and write the script or code | 3.1 Create an abstract design, to fulfil the requirements of the proposed process<br>3.2 Review the abstract design for any omissions or errors<br>3.3 Translate the abstract design to the chosen language<br>3.4 Create the internal documentation |
| 4. Verify and review the script or code | 4.1 Check the script or code, for syntax and semantic errors<br>4.2 Identify any areas that are not covered, or are covered incorrectly, in the script or code |
| 5. Document the script or code | 5.1 Create technical-level documentation<br>5.2 Create user-level documentation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.2, 4.1, 4.2 | • Analyses complex technical documentation for any inconsistencies and errors |
| Writing | 3.1, 3.3, 3.4, 5.1, 5.2 | • Completes code and workplace documentation, using the vocabulary and form appropriate to the context and audience |
| Numeracy | 1.1, 1.2, 1.3, 2.1 | • Interprets, and manipulates, complex formulae and numerical information |
| Get the work done | 1.2, 2.2, 3.1, 3.2, 3.3, 4.2 | • Uses systematic analytical processes to review and identify coding errors<br>• Uses familiar digital technologies and systems to access information, search and enter data, code, and to present information and communicate with others, cognisant of data security and safety |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTPRG405 Automate processes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop an algorithmic statement of a solution, for a set process
- produce a functional script to automate a set process
- document this script for internal and external stakeholders.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain debugging for a variety of scripting scenarios
- describe the principles of algorithms, and their application, in computer programming
- describe scripting language syntax
- identify and describe scripting techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- applications capable of being scripted, or having their own scripting language
- templates for automating processes
- executable scripts for set repeat time slices, single runs or break-out loops
- debugging tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG406 Apply introductory object-oriented language skills

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the performance outcomes, skills and knowledge required to undertake introductory programming tasks using an object-oriented programming language, including tool usage, documentation, debugging, and testing techniques.

It applies to individuals who are programmers in a variety of fields and who are required to produce simple programs in object-oriented languages.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Apply basic language syntax and layout | 1.1 Apply basic language syntax rules and best practices<br>1.2 Select and use language data types, operators and expressions, in order to create clear and concise code<br>1.3 Use the appropriate language syntax for sequence, selection and iteration constructs<br>1.4 Use a modular programming approach within member or |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | function logic<br>1.5 Apply arrays, including arrays of objects to introductory programming tasks<br>1.6 Use standard-array processing algorithms<br>1.7 Use the facilities of the language to read and write data, from and to, text files, and record the outcomes |
| 2. Apply basic object-oriented principles in the target language | 2.1 Implement a class that contains primitive member or instance variables<br>2.2 Implement a class that contains multiple options for object construction<br>2.3 Implement a class that uses user-defined aggregation (object instance or member variables)<br>2.4 Use the facilities of the language to implement inheritance, to at least two levels<br>2.5 Use polymorphism at a simple level through inheritance, to enable the easy extension of the code |
| 3. Debug the code | 3.1 Use the language debugging facilities of an integrated development environment (IDE)<br>3.2 Interpret the compiler or interpreter messages to resolve syntax errors, and use debugging techniques to resolve logic errors |
| 4. Document the activities | 4.1 Follow organisational guidelines for developing maintainable code, and adhere to the provided coding standards, when documenting activities<br>4.2 Apply internal documentation to all the code created, and use the documentation tools available in the target language, when documenting activities |
| 5. Test the code | 5.1 Create and conduct simple tests, to confirm that the code meets the design specification<br>5.2 Document the tests performed and the results achieved |
| 6. Create an application | 6.1 Develop a solution, when provided with a basic object-oriented design document<br>6.2 Refer to the appropriate documentation for the language |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.2, 4.1, 5.1, 6.2 | • Evaluates, and integrates, information and ideas to construct meaning and selects, and applies, a range of reading strategies in relation to design specifications, coding standards, and coding- language documentation |
| Writing | 1.1-1.7, 4.1, 4.2, 5.2 | • Communicates relationships between ideas and information, in a style appropriate to the audience and purpose, and selects the vocabulary, grammatical structures and conventions appropriate to the text, in relation to coding, recording outcomes, and documenting activities |
| Numeracy | 1.2, 1.3, 1.4, 1.5, 1.6, 2.1, 2.2, 2.3, 2.4, 2.5 | • Selects from, and flexibly applies, mathematical and problem-solving strategies and techniques, in a programming context<br>• Uses formal written mathematical language and representation, in the context of programming |
| Navigate the world of work | 1.1, 4.1 | • Recognises and follows, explicit and implicit protocols, and meets expectations associated with own role, when developing code that is compliant with standards and organisational guidelines |
| Get the work done | 1.1, 1.2, 3.1, 3.2, 4.2, 5.1, 6.1 | • Uses a formal decision-making process, identifying and evaluating several choices against a limited set of criteria, when selecting language data types, operators and expressions<br>• Evaluates the effectiveness of decisions, in terms of how well they meet the stated design specifications<br>• Uses analytical processes to decide on a course of action, when translating requirements from the problem space to machine space, and when debugging<br>• Utilises a broad range of features within applications in order to develop software programs<br>• Recognises, and uses, a wide range of relevant language and symbols, when applying the coding syntax<br>• Actively identifies systems, devices and applications with the potential to meet current and/or future needs regarding programming |

# Assessment Requirements for ICTPRG406 Apply introductory object-oriented language skills

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use an application program to design, and build, standard reusable software modules in response to a design specification
- generate the code, and the documentation
- undertake testing and debugging, to meet specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the processes and techniques related to object-oriented programming, including the concepts and language used
- describe the process for developing small-size applications
- identify and outline the key features of a graphical user interface (GUI), for interaction with an operator.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the software development environment
- software packages.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG407 Write script for software applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan, design and build scripts, using a scripting language to construct a highly interactive and automated software application.

It applies to individuals who build and integrate interactive applications, or websites for internal, and public, sites. They may work as application developers, application-support personnel, programmers specialising in a scripting language, web application programmers, or web developers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine the requirements of building the script | 1.1 Identify the main characteristics of scripting languages<br>1.2 Identify and use a framework, and integrated development environment (IDE), to build the script using the chosen scripting language<br>1.3 Identify the protocols and the object model used in the chosen scripting language |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Design the script | 2.1 Create pseudo code to describe the logic needed in the script<br>2.2 Review pseudo code for missing logic and error |
| 3. Write the script | 3.1 Translate pseudo code into scripts, incorporating the use of basic language elements<br>3.2 Create internal documentation in the script<br>3.3 Incorporate item manipulation using the chosen scripting language<br>3.4 Review, debug, and document the script |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.2, 3.4 | • Applies the appropriate strategies to construct meaning from the requirements and technical documentation<br>• Interprets and critically analyses, complex scripting language texts, and pseudo code when reviewing for missing logic, error and bugs |
| Writing | 2.1, 3.2, 3.4 | • Selects the vocabulary, grammatical structures and conventions appropriate to text, when documenting script and using pseudo code |
| Get the work done | 1.1-1.3, 2.1, 2.2, 3.1-3.4 | • Uses systematic, analytical processes, identifying and evaluating scripting language texts, and pseudo code, against the agreed criteria when reviewing for missing logic, error and bugs<br>• Considers the purpose, needs and limitations when selecting a framework and IDE to build script<br>• Recognises and uses a wide range of relevant language and symbols, when using pseudo code and scripting language, and when creating documentation |

# Assessment Requirements for ICTPRG407 Write script for software applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design, write, and integrate scripts into software solutions to accommodate specified application requirements
- test and debug scripts, to ensure that the software meets the specification
- use a framework and an integrated development environment (IDE) in developing scripts.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the platforms suited to software development
- identify and summarise, copyright and intellectual property legislative requirements
- describe the life cycle of software development
- describe the processes and techniques related to the development of small-size applications.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- a brief for the development of a small-size application
- the runtime environment
- the development environment
- scripting language.

# ICTPRG409 Develop mobile applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop, debug, test, and deploy applications for hand-held devices, using development platform environments.

It applies to individuals who work as mobile device application developers. They may be programmers, game developers, designers, or testers who are working in the area of mobile applications development.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Define a platform | 1.1 Determine the target platform for the hand-held device<br>1.2 Choose and evaluate a development environment, based on the target platform and hardware<br>1.3 Prepare and configure the application development environment |
| 2. Design the user | 2.1 Create views for different screen orientations and resolutions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| interface for a mobile application | 2.2 Integrate the appropriate navigation techniques<br>2.3 Design the page layout and content<br>2.4 Integrate the appropriate user input techniques |
| 3. Permit the personalisation of parameters | 3.1 Write the code to allow users to configure application settings<br>3.2 Write the code to allow users to configure application output, such as text size, brightness, and sound effects |
| 4. Build a user interface for a mobile application | 4.1 Itemise the required functionality<br>4.2 Build a user interface, in the determined development environment to fulfil this functionality |
| 5. Connect to the data sources | 5.1 Bind controls to data sources<br>5.2 Persist data using extensible markup language (XML) serialisation<br>5.3 Access remote data using XML web services |
| 6. Test and debug a mobile device application | 6.1 Test the application for overall functionality, according to the requirements<br>6.2 Iterate the application design, or build, until the test results meet the requirements |
| 7. Deploy a mobile device application | 7.1 Create an application packaging for deployment<br>7.2 Deploy an application to target devices |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2 | • Interprets, and critically analyses, complex texts when choosing and evaluating a development environment |
| Writing | 2.3 | • Communicates complex relationships between ideas and information, matching the style of writing to the purpose and audience, when designing the content<br>• Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and conventions appropriate to text, when designing content |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 2.3 | • Extracts and evaluates the mathematical information embedded in a range of tasks and texts, when designing layout<br>• Selects from, and applies, an expanding range of mathematical and problem-solving strategies, when designing layout |
| Get the work done | 1.1, 1.2, 1.3, 2.1-2.4, 3.1, 3.2, 4.1, 4.2, 5.1-5.3, 6.1, 6.2, 7.1, 7.2 | • Uses systematic, analytical processes, setting goals, gathering relevant information and identifying, and evaluating, options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Identifies concepts, principles and features of approaches in use in other contexts, and redesigns these to suit own situation<br>• Understands, and explicitly applies, some basic principles of analytical and lateral thinking<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world |

# Assessment Requirements for ICTPRG409 Develop mobile applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify the relevant mobile platform
- determine, prepare and configure a development environment
- design and build an application for the platform
- test and debug the application, to ensure that it meets requirements

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the considerations of mobile device hardware and networking, when programming
- summarise the principles of object-oriented programming
- describe user-interface design principles
- describe extensible markup language (XML) programming and web services
- explain the language integration for web design including:
  - hypertext markup language (HTML)
  - JavaScript
  - cascading style sheet (CSS)
  - Asynchronous JavaScript and XML (AJAX)
- identify and describe contemporary mobile platforms including:
  - mobile phones
  - pocket and tablet personal computers
  - digital assistants.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- mobile devices or simulators
- an integrated development environment (IDE)
- the internet, and web services
- the server system, with sufficient privileges to deploy applications
- specific tools and licences for platform.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG410 Build a user interface

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, build, and test a user interface (UI) to specification, including command-line interfaces (CLI), graphical user interfaces (GUI), web user interfaces (WUI) and natural user interfaces (NUI).

It applies to individuals who work as user-interface designers, and are responsible for specifying the layout and style of the desired user interface. They may be developers working in the area of user interface design and implementation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Build a prototype user interface (UI) | 1.1 Gather the requirements for the UI<br>1.2 Determine the application development language for writing the UI<br>1.3 Build a prototype, using the prototyping tools available in the determined language |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Review the UI prototype with the client, and edit as required |
| 2. Design the UI | 2.1 Formulate the application content flow<br>2.2 Design the UI components<br>2.3 Define UI actions<br>2.4 Itemise UI events |
| 3. Build the UI | 3.1 Determine the appropriate language<br>3.2 Build the UI with the required functionality |
| 4. Test the UI | 4.1 Test the UI for overall functionality, according to requirements<br>4.2 Iterate the UI design, or build, until the test results meet requirements |
| 5. Document the UI and obtain client sign-off | 5.1 Document the user requirements<br>5.2 Document the UI<br>5.3 Obtain client sign-off to the completed UI |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.2 | • Applies appropriate strategies in order to construct meaning from complex texts, when reading technical data |
| Writing | 5.1-5.3 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text |
| Numeracy | 2.2 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies |
| Navigate the world of work | 5.1-5.3 | • Recognises and follows explicit, and implicit, protocols, and meets expectations associated with own role when documenting user requirements, and gaining sign-off |
| Interact with others | 1.4 | • Participates in complex formal and informal conversations relevant to own role, initiating and taking the lead where appropriate |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1-1.4, 2.1-2.4, 3.1, 3.1, 4.1, 4.2 | • Uses a combination of formal, logical planning processes, and an increasingly intuitive understanding of context, to identify relevant information and risks, identify and evaluate alternative strategies, and resources, when gathering requirements<br>• Uses systematic, analytical processes, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Actively identifies systems, devices and applications with the potential to meet current and/or future needs<br>• Utilises a broad range of features within applications to improve personal productivity, optimising software functions |

# Assessment Requirements for ICTPRG410 Build a user interface

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design a fully functional user interface (UI) in consultation with the user, using the determined language
- create a prototype UI
- review the prototype with the user
- build the UI
- test that the UI is complete, consistent and functional
- document the user requirements, UI and client sign-off.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- apply a range of basic mathematical strategies
- use object-oriented programming
- use open-source development tools
- describe the process of small-size application development.

## Assessment Conditions

conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the internet, to use the online tools available for prototyping and UI design
- an integrated development environment (IDE) for the determined language
- specific tools and licenses available, depending on the particular platform including:

© Commonwealth of Australia, 2025 Future Skills Organisation

- Windows
- Linux
- Unix
- Mac
- Google Chrome.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG412 Configure and maintain databases

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install a database, manage data, data access and data security, and improve database performance.

It applies to individuals responsible for the maintenance and coordination of database operations. They usually work in an organisation, providing daily services as database administrators, database developers, database coordinators, or application developers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine the requirements of database administration | 1.1 Identify the components of a database instance<br>1.2 Define and use tools to administer the database |
| 2. Install and configure the database system | 2.1 Verify the database software installation prerequisites<br>2.2 Install the database software and related services<br>2.3 Configure database instance, components and services |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.4 Perform data management tasks |
| 3. Manage database security and integrity | 3.1 Create and administer users<br>3.2 Create and manage the permissions to perform database operations<br>3.3 Create and manage roles |
| 4. Optimise and back up database | 4.1 Configure the database for backup and recovery operations<br>4.2 Create and manage database backups<br>4.3 Restore and perform database recovery<br>4.4 Tune and perform database optimisation |
| 5. Document the database | 5.1 Document the maintenance and tuning work performed on the database<br>5.2 Document the users added to system |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2 | • Applies appropriate strategies to construct meaning from technical specifications, when identifying the database components, and defining tools |
| Writing | 5.1, 5.2 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text |
| Interact with others | 2.1 | • Seeks clarification when meanings and intended actions are open to interpretation, when verifying prerequisites |
| Get the work done | 1.1, 1.2, 2.2, 2.3, 2.4, 3.1, 3.2, 3.3, 4.1, 4.2, 4.3, 4.4 | • Uses systematic analytical processes, gathering relevant information and identifying, and evaluating, options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools, and applies these when |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | troubleshooting database technology<br>• Utilises a broad range of features within database applications and tools, to improve personal productivity, optimising software functions for specific purposes |

# Unit Mapping Information

# Assessment Requirements for ICTPRG412 Configure and maintain databases

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- install and configure database software, according to requirements
- manage database files, integrity, users and security
- create backup and restore databases
- monitor database performance
- document the database work, and database users added.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the principles of database design
- summarise the features of desktop operating systems
- explain the principles of relational databases
- describe the functions of computer hardware and components
- explain computer networking and components
- explain uses of structured query language (SQL).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the database-management system software

© Commonwealth of Australia, 2025 Future Skills Organisation

- specific requirements, including client and functionality requirements
- naming standard.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG413 Use a library or pre-existing components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify, evaluate and incorporate pre-existing (re-use) components from a library, or other source, as part of a software project.

It applies to individuals working in a programming role in a variety of information technology areas, who are required to use programming libraries to support their work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify potential re-use units | 1.1 Analyse the project design and functionality, to identify re-use components<br>1.2 Source re-use components with the desired functionality |
| 2. Evaluate re-use components for suitability in parent project | 2.1 Evaluate the re-use component, or libraries, for suitability for use within the parent software project<br>2.2 Compare the functionality of each potential re-use component to the functionality required by the parent project |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Evaluate the cost of implementing the re-use component<br>2.4 Consider the technical impact on the parent project design<br>2.5 Consider re-use component vendor licensing issues<br>2.6 Finalise the selection of re-use components<br>2.7 Document selection, evaluation and decision processes, as part of the parent project design documentation |
| 3. Incorporate the re-use components | 3.1 Configure the development environment to include re-use components during the build process<br>3.2 Construct test programs or use provided example programs, to become familiar with re-use components, in preparation for incorporation into the parent project<br>3.3 Add re-use components to the parent project incrementally<br>3.4 Resolve re-use component dependencies<br>3.5 Assemble and test the parent project, with a focus on the functionality provided by the re-use components |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Writing | 2.7 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure, and the conventions appropriate to text when preparing documentation |
| Numeracy | 2.3 | • Selects from, and applies, an expanding range of mathematics and problem-solving, when evaluating costs |
| Get the work done | 1.1, 1.2, 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 3.1, 3.2, 3.3, 3.4, 3.5 | • Uses systematic analytical processes in complex non-routine situations, setting goals, gathering relevant information and identifying, and evaluating, options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Utilises a broad range of features within applications to improve personal productivity, optimising software functions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools, and applies these to troubleshoot technology |

# Assessment Requirements for ICTPRG413 Use a library or pre-existing components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify, evaluate, and select the appropriate components that may be re-used
- modify and integrate the re-used components into a project
- document the selection and evaluation processes
- test the functionality of the re-used components.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- define and prepare the contract's specifications
- outline, and apply, current industry development and design methodologies
- describe domain modelling
- recognise and apply generic specification
- define the content and structure of libraries
- select and apply the techniques for metrics collection
- recognise patterns, frameworks and idioms
- identify and apply repository tools.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- the software development environment
- a reuse library
- the technical requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG414 Apply introductory programming skills in another language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to carry out programming activities using a procedural approach.

It applies to individuals working in programming, development and technical roles. They may work as programmers, software developers or may be IT staff with responsibility for conducting programming activities, including writing, maintaining and updating programs, defining data and file handling.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Apply basic language syntax and layout | 1.1 Apply basic language syntax rules<br>1.2 Use language data types, operators and expressions to create clear and concise code<br>1.3 Use appropriate language syntax for sequence, selection and iteration constructs |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Code using data structures | 2.1 Use data structures<br>2.2 Write code to create and manipulate arrays<br>2.3 Design, define and use data structures |
| 3. Code using standard algorithms | 3.1 Create sequential search, binary search, insertion and deletion algorithms to operate on arrays<br>3.2 Code standard sequential access algorithms and random access algorithms |
| 4. Debug code | 4.1 Use stand-alone debugging tools or tools provided by integrated development environment (IDE) to debug code<br>4.2 Use a debugger to trace code execution and examine variable contents to detect and correct errors |
| 5. Document activities | 5.1 Follow organisational guidelines for developing maintainable code and adhere to provided coding standard when documenting activities<br>5.2 Apply internal documentation, suitable for use by peers, to all code created and use documentation tools available in target language when documenting activities |
| 6. Test code | 6.1 Design and document tests<br>6.2 Capture and record test results |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 5.1 | • Interprets and critically analyses and applies appropriate strategies to construct meaning from complex texts |
| Writing | 5.2, 6.1, 6.2 | • Displays knowledge of structure and layout, employing broad vocabulary, grammatical structure and conventions appropriate to text |
| Navigate the world of work | 5.1, 5.2 | • Takes personal responsibility for following explicit and implicit policies, procedures and industry standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 3.1, 3.2, 4.1, 4.2, 5.1, 5.2, 6.1, 6.2 | • Automatically implements standard procedures for routine decisions when programming, according to guidelines and standards<br>• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options<br>• Understands key principles and concepts underpinning the design and operation of digital systems and tools |

# Unit Mapping Information

# Assessment Requirements for ICTPRG414 Apply introductory programming skills in another language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- perform coding activities to create, maintain and update programs using basic language and layout
- write coding using data structures and standard algorithms, and following guidelines
- debug code
- generate design and code documentation
- test and confirm that the application meets program specifications
- record the test results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe and explain programming techniques
- describe documentation techniques
- give details of application development processes
- summarise testing techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development field of work and include access to:

- integrated development environment (IDE) for the determined language
- specific tools and licences, depending on particular platform and language.

# ICTPRG415 Apply skills in object-oriented design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to produce an object-oriented design from specifications, applying the cyclic process of iteration from identification of class, instance, role and type to the final object-oriented model of the application.

It applies to system designers who are required to design systems using an object-oriented method.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Derive high-level design from specification | 1.1 Develop static class diagram from given set of specifications<br>1.2 Develop either collaboration diagram or sequence diagram from given set of specifications<br>1.3 Develop either activity diagram or state diagram from given set of specifications |
| 2. Refine design | 2.1 Investigate and refine behaviour, state of classes and |

# Assessment Requirements for ICTPRG415 Apply skills in object-oriented design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce an object-oriented design from requirements, documents or system specifications, including:
  - static class diagrams
  - collaboration or sequence diagrams
  - activity or state diagrams
- refine the design
- document the design.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain design quality metrics such as coupling and cohesion
- explain design refinement techniques
- describe programming design principles
- describe different programming methodologies
- outline various developmental life cycle options.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development field of work and include access to:

- system specifications
- requirement documents

# ICTPRG416 Manage a software component re-use library

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to store, document and maintain information and communications technology (ICT) components for reuse.

It applies to individuals in a software development area who are required to manage a library that contains reusable code.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Specify the components for re-use library | 1.1 Determine component suitability for reuse by checking its quality, and uses<br>1.2 Review the size and complexity of re-use components for generalisation, and remove project-specific refinements<br>1.3 Evaluate the components, including patterns, clusters and frameworks, and break them down into smaller components for greater flexibility or use<br>1.4 Review the components for duplication, and remove the |

# Assessment Requirements for ICTPRG416 Manage a software component re-use library

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- manage a software component re-use library
- specify the re-use library components
- document the re-use library components
- ensure logical structuring and interface facilitate retrieval and use.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain abstraction of code module interfaces
- describe the features of component libraries
- explain the design paradigms
- describe patterns, frameworks and idioms
- describe the re-use components, and metrics
- describe the content and structure of re-use libraries.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the software development environment
- technical requirements.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG417 Apply mathematical techniques for software development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use basic mathematical methods and operations in standard computer notation, Boolean algebra, data types and computer storage.

It applies to individuals in software development roles who are required to use mathematical constructions in programming.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Manipulate algebraic terms, leading to the solution of linear equations | 1.1 Position number types on the number line<br>1.2 Evaluate various numerical expressions involving integers, fractions and indices<br>1.3 Simplify various algebraic expressions involving integers, fractions and indices |
| 2. Construct | 2.1 Solve simple equations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| mathematical formulas | 2.2 Convert formulas between standard algebraic form and computer form<br>2.3 Create several formulas in standard algebraic form and in computer form |
| 3. Simplify and evaluate Boolean expressions and formulas | 3.1 Simplify and evaluate several Boolean expressions<br>3.2 Complete truth tables based on simple Boolean expressions and logic<br>3.3 Simplify and evaluate several formulas |
| 4. Manipulate number and character representation systems | 4.1 Convert numbers between binary, decimal and hexadecimal number systems<br>4.2 Add, subtract and multiply numbers in binary<br>4.3 Determine binary memory storage of an integer and a character |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 2.1, 2.2, 3.1, 3.3 | • Interprets, and critically analyses, information from a variety of sources and records |

# Assessment Requirements for ICTPRG417 Apply mathematical techniques for software development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- solve and evaluate mathematical problems
- use mathematical formulae in standard and computer notation
- simplify and evaluate Boolean expressions and formulae
- manipulate binary, decimal and hexadecimal number systems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain Boolean algebra
- explain number types
- explain binary memory storage
- explain the application of mathematical terms and operations in computing
- explain the calculation tools available.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to the programming language.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG418 Apply intermediate programming skills in another language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to carry out intermediate programming activities using another programming language. The language may be an object-oriented language.

It applies to individuals who are programmers in a variety of fields and who are required to produce software programs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Code using user-defined data structures | 1.1 Design, define and use data structures that are aggregate of other data types<br>1.2 Code using array of user-defined data types<br>1.3 Use facilities in language to create, manipulate and destroy dynamic variables such as arrays |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Code using standard algorithms | 2.1 Use modular programming approach to coding, including pass-by-reference parameter passing<br>2.2 Write code to create and manipulate 2-D array<br>2.3 Create and maintain sorted array and use language-provided facilities for sorting array of ordered elements<br>2.4 Code simple binary search technique for use with array of sorted data<br>2.5 Code binary file-handling solutions using random-access algorithms |
| 3. Debug code | 3.1 Use stand-alone debugging tools or tools provided by integrated development environment (IDE) to debug code<br>3.2 Use debugger to trace code execution and examine variable contents to detect and correct errors |
| 4. Document activities | 4.1 Follow organisational guidelines for developing maintainable code and adhere to provided coding standard when documenting activities<br>4.2 Apply internal documentation, suitable for use by peers, to all code created<br>4.3 Use documentation tools available in target language when documenting activities |
| 5. Test code | 5.1 Design and document tests<br>5.2 Undertake limited testing of produced code to ensure compliance with program specification<br>5.3 Capture and record test results |
| 6. Create application | 6.1 Build application in response to user requirement<br>6.2 Access multiple source-code files<br>6.3 Employ IDE project maintenance facilities or make files to automate program building<br>6.4 Develop program specification solution when provided with basic design document<br>6.5 Design algorithm and document, construct and test applications in response to problem description using target language<br>6.6 Document completed application |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.1, 3.2, 4.1, 6.1 | • Interprets and critically analyses and applies appropriate strategies to construct meaning from texts relating to organisational guidelines and coding standards |
| Writing | 1.2-1.3, 2.1-2.5, 4.1, 4.2, 4.3, 6.1, 6.6 | • Communicates complex relationships between ideas and information, matching style of writing to purpose and audience when documenting activities<br>• Displays knowledge of structure and layout, employing broad vocabulary, grammatical structure and conventions appropriate to text when documenting activities |
| Navigate the world of work | 4.1 | • Takes personal responsibility for following explicit and implicit policies, procedures and industry standards |
| Get the work done | All | • Uses systematic, analytical processes, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options<br>• Uses a systematic process to identify possible solutions to a difficult problem<br>• Understands key principles and concepts underpinning the design and operation of digital systems and tools |

# Assessment Requirements for ICTPRG418 Apply intermediate programming skills in another language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design and build application programs in response to a user specification, including:
  - coding using user-defined data structures and standard algorithms
  - debugging and testing the code
  - producing technical documentation of activities and completed application.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe in detail:
  - dynamic variables
  - medium-size application development
  - standard array and file handling algorithms
  - user-defined data structures
- describe a limited range of development methodologies and their application
- outline the principles of language development.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development field of work and include access to:

- software development environment

© Commonwealth of Australia, 2025 Future Skills Organisation

- technical requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG419 Analyse software requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to research and analyse client requirements, produce a range of options, and create a software-requirements document.

It applies to individuals in a range of work environments who are required to perform an analysis role in formulating software requirements. They may work as database or computer developers, business analysts, or project managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Gather and confirm client requirements | 1.1 Confirm the requirements, and the scope, of the project with the client<br>1.2 Gather information regarding requirements via sources of information and business processes<br>1.3 Analyse client requirements, to determine the project scope and the problem context or opportunity faced by the business<br>1.4 Document the client requirements, project's scope, related |

# Assessment Requirements for ICTPRG419 Analyse software requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- Analyse client requirements to create a software requirements document, including:
  - gathering, confirming and documenting client requirements
  - analysing functional and related non-functional requirements, and project feasibility
  - developing high-level system solutions
  - submitting documents for approval.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the client business domain
- describe content features, such as clarity and readability
- summarise the system's current functions
- explain document design and usability
- explain the functions and features, of templates and style guides
- summarise instructional design principles
- describe the role of stakeholders and the degree of stakeholder involvement
- explain two or more current industry systems development methodologies.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- documentation regarding client and functionality requirements
- word processing software
- modelling software currently used in industry.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG425 Use structured query language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use a structured query language (SQL) to define, create, and manipulate database structures, and the associated data in a relational database.

It applies to individuals in a wide variety of information and communications technology (ICT) roles, where relational databases and SQL are being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Write a simple SQL statement to retrieve and sort data | 1.1 Retrieve all the data from a single table<br>1.2 Retrieve data from specific columns in a single table<br>1.3 Use 'order by' to sort query output |
| 2. Write an SQL statement that selectively retrieves data | 2.1 Restrict the number of rows retrieved, by placing criteria in the 'where' clause<br>2.2 Restrict the number of rows retrieved, by placing specific |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | criteria in the select statement<br>2.3 Use comparison operators in the 'where' clause to compare numeric, character, string, date and time data<br>2.4 Use Boolean operators with the correct precedence<br>2.5 Use criteria in the 'where' clause, to check for a range of values, to select values from a list, and to check for values that match a pattern<br>2.6 Use SQL syntax to suppress duplicate values from query results<br>2.7 Take action to exclude null values from a query result |
| 3. Write SQL statements that use functions | 3.1 Use arithmetical operators with the correct precedence<br>3.2 Use string functions, and operators, to obtain the required query output<br>3.3 Use mathematical functions to obtain the required output<br>3.4 Use date functions to obtain the required output<br>3.5 Use SQL aggregate functions to obtain the required output |
| 4. Write SQL statements that use aggregation and filtering | 4.1 Use 'group by' to aggregate data by multiple columns<br>4.2 Sort aggregated data in the query output<br>4.3 Filter aggregated data using the 'having' clause |
| 5. Write SQL statements that retrieve data from multiple tables | 5.1 Employ the inner join syntax, to retrieve data from two or more tables<br>5.2 Use 'left outer', 'right outer' and 'full outer' syntax, to join tables in the select statement<br>5.3 Use correct syntax in the 'where' clause, to retrieve data from multiple tables<br>5.4 Write a union query that retrieves data from more than one table |
| 6. Write and execute SQL sub-queries | 6.1 Construct single and nested sub-queries<br>6.2 Construct sub-queries that return a single row and multiple rows<br>6.3 Use correlated sub-queries to retrieve required data<br>6.4 Write sub-queries that use aggregates |
| 7. Create and manipulate tables | 7.1 Identify the required columns, data types, keys, relationships, indexes and constraints |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 7.2 Use the relevant naming conventions for database elements<br>7.3 Create tables that implement the required elements<br>7.4 Manipulate tables to meet specific requirements |
| 8. Create and use views | 8.1 Create views that satisfy information requirements<br>8.2 Use check constraints in a view<br>8.3 Retrieve, insert, update, and delete data using a view<br>8.4 Drop a view from a database |
| 9. Create and use stored procedures | 9.1 Create and execute stored procedures that use SQL to retrieve, insert, or modify data, according to information requirements<br>9.2 Create and execute stored procedures, that use one or more parameters<br>9.3 Drop a stored procedure from the database<br>9.4 Create and test database triggers that automate data management, or perform specific required data-related functions |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 7.1 | • Interprets and critically analyses complex texts<br>• Applies the appropriate strategies to construct meaning from complex texts |
| Writing | 2.3-2.7, 3.1-3.5, 4.1, 5.1-5.4, 6.1-6.4, 7.3, 7.4, 8.1, 8.3, 9.1, 9.2, 9.4 | • Prepares documentation that expresses ideas, explores complex issues, and is constructed logically, succinctly and accurately<br>• Writes and edits, computer code and technical data, ensuring the correct syntax and accuracy |
| Numeracy | 3.1, 3.3 | • Selects from, and flexibly applies, a wide range of highly developed mathematical and problem-solving strategies and techniques in an SQL context<br>• Uses a wide range of mainly formal, written mathematical language and representation, to communicate mathematically in an SQL context |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | All | • Sequences and schedules complex activities and monitors implementation, when analysing and organising data, according to requirements<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria, when evaluating business requirements in relation to the database design<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options, when problem-solving in relation to typical warnings and syntax errors<br>• Uses formal and informal processes to monitor implementation of solutions and reflect on outcomes when creating tables, views, and stored procedures<br>• Uses a systematic process to identify possible solutions to a difficult problem when writing SQL statements and sub-queries<br>• Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools, and applies these in relation to using SQL in a relational database |

# Assessment Requirements for ICTPRG425 Use structured query language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- write a simple, structured query language (SQL) statement to retrieve and sort data
- write an SQL statement that selectively retrieves data
- write SQL statements that:
  - use functions and operators
  - use aggregation and filtering
  - retrieve data from multiple tables
  - write and execute SQL sub-queries
  - create and manipulate tables to meet specific requirements
  - create and use views that satisfy information requirements
  - create and use stored procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain client-server concepts
- explain data-integrity concepts
- describe data-modelling structures
- explain databases and database objects, including data types, data structures, identifiers and metadata
- summarise programming concepts
- give an overview of query design
- give an overview of relational database design
- describe the SQL client environment

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the SQL server architecture.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development, and include access to:

- special purpose tools, equipment and materials
- industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG426 Prepare software development review

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to establish the standards associated with information technology and communications technology (ICT) technical requirements, in the context of quality assurance processes applicable to software development.

It applies to staff in the software development area who are required to ensure that the software development process incorporates quality considerations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Review the software standards | 1.1 Ensure that stakeholders have an understanding of organisational requirements<br>1.2 Document the software standards, according to project standards |
| 2. Review the implementation standards | 2.1 Assign the software standards to functions, according to a detailed technical plan |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Take action to ensure that the communication and distribution strategies are clear, coherent, and meet the overall project plan requirements<br>2.3 Monitor and report on the implementation of standards against the acceptance criteria and detailed technical specifications |
| 3. Review the software metrics and milestones | 3.1 Define metrics related to the project milestones, timeframe, and cost considerations<br>3.2 Develop a schedule of quality reviews<br>3.3 Determine quality considerations by identifying in-process measurement points that relate to critical organisational requirements<br>3.4 Determine a method to benchmark and scale achievement against stated stakeholder requirements and cost considerations<br>3.5 Report metrics and milestones to stakeholders in a clear and coherent manner, and take action to ensure the written agreement |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2 | • Interprets and critically analyses, and applies the appropriate strategies, to construct meaning from complex texts relating to organisational requirements and project standards |
| Writing | 1.2, 2.3, 3.5 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text, when documenting standards and reporting on implementation, metrics, and milestones |
| Numeracy | 3.1 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies, in the context of metrics and cost considerations |
| Interact with others | 1.1 | • Recognises the importance of taking audience, purpose and contextual factors into account, when making decisions about what to communicate, with whom, why and how, in relation to ensuring stakeholder |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | understanding of organisational requirements |
| Get the work done | 1.2, 2.1, 2.2, 2.3, 3.2, 3.3, 3.4, 3.5 | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication in relation to quality reviews<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying, and evaluating, options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Uses familiar digital systems and tools to access, organise, analyse and display information relevant to own role |

# Assessment Requirements for ICTPRG426 Prepare software development review

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review the software standards, including:
  - ensuring that stakeholders have an understanding of organisational requirements
  - documenting software standards according to project standards
- review the implementation standards, including:
  - assigning software standards to functions, according to the technical plan
  - ensuring that communication and distribution strategies are clear, coherent, and meet requirements
  - monitoring and reporting on the implementation of standards
- review software metrics and milestones, including:
  - defining metrics
  - developing a schedule of quality reviews
  - determining quality considerations by identifying the in-process measurement points
  - determining a method to benchmark and scale achievement
  - reporting the metrics and milestones to stakeholders
  - ensuring the written agreement is met.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and explain current industry-accepted software configuration management processes
- identify and explain quality assurance practices and standards

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain software metrics development
- identify and describe the client business domain.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to the:

- technical specifications
- organisational standards, for documentation and version control
- project management process, and hierarchy
- organisational business processes
- software requirement specifications
- interface requirement specifications
- system requirements
- design specifications
- validated data
- project budget and timeframe.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG427 Use XML effectively

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create extensible markup language (XML) documents, web-service applications, and client applications to consume web services.

It applies to individuals who are web developers, web programmers or application programmers, who build Windows or web-based applications that access data in XML format, or who develop and consume web services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Represent the structured data with XML | 1.1 Gather information by analysing data, documents, and problem domains<br>1.2 Write a well-formed XML document by incorporating the appropriate structure and syntax<br>1.3 Validate the XML document using validation tools |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Format the XML document using styling tools |
| 2. Access and manipulate the XML document | 2.1 Create a new XML document using an XML parser application programming interface (API)<br>2.2 Access and traverse elements, and attributes, using an XML parser API<br>2.3 Modify elements and attributes using an XML parser API<br>2.4 Delete elements and attributes using an XML parser API<br>2.5 Transform the XML document into a data object, using an XML parser API<br>2.6 Transform the data object into an XML document, using an XML parser API |
| 3. Create a service-oriented application using XML | 3.1 Define the web-services architecture and platform elements<br>3.2 Develop and deploy web-service applications using a language<br>3.3 Develop a client application to consume web service, using a language |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Interprets and critically analyses, and applies the appropriate strategies, to construct meaning when gathering information by analysing data, documents and problem domains |
| Writing | 1.2, 1.4, 2.1, 2.3, 2.5, 2.6 | • Prepares documentation expressing ideas, explores complex issues, and is constructed logically, succinctly and accurately<br>• Writes, and edits, computer code and technical data, ensuring the correct syntax and accuracy |
| Numeracy | 1.2 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies in a range of contexts, identifying the order and position of elements in a sequence, when using XML |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | All | • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying, and evaluating, options against the agreed criteria<br>• Applies formal problem-solving processes when tackling an unfamiliar problem, breaking complex issues into manageable parts and identifying, and evaluating, several options for action<br>• Utilises a broad range of features within applications to improve personal productivity, and optimising software functions for specific purposes |

# Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

| | |
|---|---|
| Structure must include: | • child element<br>• root element<br>• sub-child element. |
| Syntax must use rules relating to: | • case sensitivity<br>• closing tag<br>• entity reference<br>• proper nesting<br>• quoted attribute values<br>• single-root element. |

# Unit Mapping Information

# Assessment Requirements for ICTPRG427 Use XML effectively

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- gather relevant information and produce a well-formed, formatted and validated XML document
- use an XML parser to access, modify and transform the XML documentation
- create a service-oriented application using XML.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the hierarchy and tree structure
- explain the programming concept and language
- describe the main features and services of the world wide web (WWW)
- explain data modelling
- outline commonly used items in hypertext markup language (HTML)
- identify information system features
- identify source characteristics.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- tools to access and develop a data source, such as an integrated development environment (IDE), a text editor and a web browser
- specific requirements, including client and functionality requirements

© Commonwealth of Australia, 2025 Future Skills Organisation

- a web server and software that hosts the services to deploy and test, the web-service application
- libraries to develop the web service and client applications.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG428 Use regular expressions in programming languages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use regular expressions (regex) for manipulating text and data.

It applies to individuals who are programmers and system administrators, and whose main responsibilities are to code complex text processing, such as search-and-replace tasks, validate inputs, and create regex-based queries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Differentiate the use of regular expressions in programming languages | 1.1 Compare the regular expression features among the different languages and tools<br>1.2 Define the different regular expression engine types and how they work<br>1.3 Determine the programming language, and tools, for writing regular expressions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Code using regular expressions | 2.1 Use regular expression characters, operators, anchors and quantifiers to match the patterns of text<br>2.2 Write regular expression patterns to search, and manipulate, text<br>2.3 Write code to split strings and collect matches<br>2.4 Validate user input using regular expressions |
| 3. Test regular expressions | 3.1 Use test tools to test and validate regular expressions<br>3.2 Capture results, and edit, as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Interprets and critically analyses complex texts, and applies appropriate strategies, to construct the meaning from complex texts, when comparing regex features in different languages and tools |
| Writing | 1.2, 2.1, 2.2, 2.3, 3.2 | • Communicates complex relationships between ideas and information, matching the style of writing to the purpose and audience<br>• Writes, and edits, computer code and technical data, ensuring the correct syntax and accuracy |
| Numeracy | 2.1, 2.2, 2.3, 2.4 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies |
| Get the work done | 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 2.4, 3.1, 3.2 | • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options when evaluating, and comparing, tools and languages, and when using and testing regex<br>• Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTPRG428 Use regular expressions in programming languages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- compare regular expression (regex) languages, tools and engine types
- prepare and validate code using regex
- test and edit regex code.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe and explain the principles of:
  - coding
  - database systems
  - object-oriented programming
  - open-source development tools
  - small-size application development.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the internet, in order to use the online tools available for regular expressions
- an integrated development environment (IDE)

© Commonwealth of Australia, 2025 Future Skills Organisation

- specific tools and licences, depending on the particular platform.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG501 Apply advanced object-oriented language skills

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to undertake advanced programming tasks using an object-oriented programming language.

It applies to individuals who are programmers producing complex object-oriented programming.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop client-server application | 1.1 Build and test object-oriented applications<br>1.2 Make use of features of language that enable inter-process communication through at least one mechanism<br>1.3 Make use of features of language that enable remote procedure calls (RPCs) using class based on multiple inheritances<br>1.4 Build programs using classes based on nested classes |
| 2. Develop graphical user | 2.1 Code to implement drag and drop |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| interface (GUI) | 2.2 Develop GUI help files<br>2.3 Code using 2-D graphics |
| 3. Build applications | 3.1 Code within existing architectural framework<br>3.2 Ensure code follows standards for object-oriented language<br>3.3 Develop application that includes data transfer between client and server<br>3.4 Review concept of design patterns used by architectural framework |
| 4. Debug code | 4.1 Use stand-alone debugging tools or tools provided by integrated development environment to examine running code<br>4.2 Detect logical and coding errors using debugger<br>4.3 Detect and correct errors by tracing code and examining variable content |
| 5. Test application | 5.1 Design and document tests to be performed<br>5.2 Undertake limited testing of produced code to ensure it complies with program specification<br>5.3 Document test results |
| 6. Document system | 6.1 Demonstrate adherence to guidelines for developing maintainable code and company or institutional coding standards<br>6.2 Create code using supplied design documents<br>6.3 Create and maintain program documentation<br>6.4 Ensure that user documentation in form of online help is built into applications |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.2, 6.1, 6.2 | • Interprets and critically analyses complex texts and applies appropriate strategies to construct meaning from complex standards and guidelines documents |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 5.1, 6.1, 6.3 | • Displays knowledge of structure and layout, employing broad vocabulary, grammatical structure and conventions appropriate to text when creating program documentation and documenting tests and test results |
| Numeracy | 1.3, 1.4 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies |
| Get the work done | All | • Accepts responsibility for planning and sequencing complex tasks and workload, taking into account capabilities, efficiencies and effectiveness<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options<br>• Understands key principles and concepts underpinning the design and operation of digital systems and tools |

# Assessment Requirements for ICTPRG501 Apply advanced object-oriented language skills

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop client-server applications using an object oriented language
- produce a graphical user interface (GUI)
- build, debug and test the applications
- produce documentation for the applications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the architecture of a framework for web-enabled application development
- summarise the techniques for implementing inter-process communication
- describe the process for the development of large-size application
- identify and outline testing techniques as applied to distributed application development
- identify and outline techniques for implementing third-party supplied code.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development field of work and include access to:

- database management system (DBMS)
- networked computers
- software-development environment

© Commonwealth of Australia, 2025 Future Skills Organisation

- technical requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG502 Manage a project using software management tools

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use software management tools, to manage a project from initiation to completion.

It applies to individuals who work in a team, or who individually develop systems to specification, using software management tools to manage delivery within time and budget parameters.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Select the software management tools | 1.1 Determine the software development methodology to be used<br>1.2 Determine the project management software to be used<br>1.3 Determine the source-control system to manage the source code and to handle conflicts<br>1.4 Determine the collaboration software to be used |
| 2. Use the software | 2.1 Create a project plan, according to the software requirement |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| management tools | specifications<br>2.2 Define the source-control procedures<br>2.3 Create a collaboration environment |
| 3. Monitor the use of software management tools | 3.1 Monitor, and adjust, the project plan to maintain progress according to the project plan<br>3.2 Ensure that the code is correctly entered into the source-control system<br>3.3 Monitor the collaboration environment, and resolve issues where required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1 | • Interprets and critically analyses, and applies, the appropriate strategies to construct meaning from complex texts |
| Writing | 2.1, 3,1, 3.2 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure, and the conventions appropriate to text |
| Numeracy | 2.1 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies |
| Interact with others | 2.3, 3.3 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit the purpose and audience, and monitoring the impact when creating and resolving issues<br>• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and, on occasion, taking a leadership role |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation and manages relevant communication, in a collaborative project environment<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | information and identifying, and evaluating, options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options and seeking input, and advice from others, before taking action when necessary<br>• Uses a range of digitally-based technology and applications to access and filter data, extract, organise, integrate, and share relevant information, in increasingly effective ways |

# Unit Mapping Information

# Assessment Requirements for ICTPRG502 Manage a project using software management tools

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use software management tools to manage the development of a system to specification
- select the software development methodology, project management software, source-control system, and collaboration software
- create, monitor and adjust a project plan, according to the requirement specifications
- define source-control procedures, and ensure the correct entries into the system
- create, monitor, and resolve issues in a collaborative environment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the basic principles of project management
- describe the key features of the software development life cycle (SDLC)
- describe the importance of software specifications
- identify the methods and importance of version control.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the internet
- project management software
- source-control software

© Commonwealth of Australia, 2025 Future Skills Organisation

- specific tools and licences, depending on the particular platform.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG503 Debug and monitor applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to debug and monitor a software application.

It applies to individuals who work as developers, testers and support engineers, using logging and tracing techniques to identify software problems and to monitor systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Implement a framework for logging and error handling | 1.1 Determine the logging framework for writing text messages at a certain level or priority to log files, or for sending data to monitoring applications<br>1.2 Create a custom event log for an application<br>1.3 Analyse the logs to check the state of the running application |
| 2. Debug and trace an application | 2.1 Apply basic debugging techniques such as breakpoints, stepping through and over code, and stack trace |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Identify and use the tools to debug software applications<br>2.3 Write the code for debugging (print, assert and stop statements) |
| 3. Monitor the application's performance | 3.1 Identify and use profiling tools to verify the parts of the system that consume the most resources, such as random access memory (RAM), central processing unit (CPU) and time<br>3.2 Analyse performance issues, and apply any changes to improve the performance of the application |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.1, 2.2, 2.3, 3.1 | • Interprets and critically analyses complex texts, and applies the appropriate strategies to construct meaning from complex texts |
| Writing | 1.2 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure, and the conventions appropriate to text when creating a custom event log |
| Numeracy | 1.3, 3.2 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies when analysing logs, and monitoring applications data |
| Get the work done | All | • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Uses a systematic process to identify possible solutions to a difficult problem<br>• Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools |

# Assessment Requirements for ICTPRG503 Debug and monitor applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use a logging framework to create an event log for an application
- use tools and techniques to trace and debug an application
- use profiling tools to collect data about an application's performance, identify and analyse identified issues and implement changes to improve performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- provide examples of common logging frameworks. logging and tracing tools, and profiling tools
- explain the functions of profiling tools, and logging and tracing tools
- explain the basic principles of:
  - computer hardware, networking and components
  - database-management systems
  - object-oriented programming
  - open-source development tools
- describe procedures for developing small-size applications
- outline the software development life cycle (SDLC).

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- sufficient privileges to use performance monitoring tools on client and server system
- specific debugging tools and licenses, depending on the particular platform.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG504 Deploy an application to a production environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the, skills and knowledge required to install, uninstall, and configure an application to a production environment.

It applies to individuals responsible for the software deployments of enterprise applications. They may work as application developers, administrators, release managers or deployment coordinators.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan a software installation | 1.1 Determine if a client system and a server system meet the requirements for installation<br>1.2 Determine an installation method<br>1.3 Review the security requirements<br>1.4 Prepare a software-installation plan |
| 2. Perform the software | 2.1 Create an install package for an application |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| installation | 2.2 Test the install package in a test environment<br>2.3 Deploy the install package to a production environment |
| 3. Plan and test an application removal | 3.1 Create an uninstall package for removal of installed components<br>3.2 Test the uninstall package in a test environment |
| 4. Perform the database installation | 4.1 Deploy a database from the development environment to the production environment<br>4.2 Specify the connection string to the database |
| 5. Manage an application configuration | 5.1 Configure the application to use parameters that are valid for the production environment<br>5.2 Use the configuration files to modify the deployment variables<br>5.3 Configure the security features in an application |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 5.3 | • Interprets, and critically analyses, complex texts and applies the appropriate strategies to construct meaning from complex texts |
| Writing | 1.4, 2.1, 3.1, 4.2, 5.1, 5.3 | • Displays a knowledge of structure and layout employing a broad vocabulary, grammatical structure, and the conventions appropriate to text<br>• Writes and edits computer code, and technical data, ensuring the correct syntax and accuracy |
| Navigate the world of work | 1.1, 1.3 | • Identifies and complies with organisational requirements relevant to deployment of applications |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools |

# Assessment Requirements for ICTPRG504 Deploy an application to a production environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- prepare plans for software installation taking into account data, resource and security requirements
- create application install and uninstall packages, and then test and troubleshoot any issues
- install a database to a production environment
- configure variables, parameters and security features for a production environment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the basic principles of database management systems
- outline the software development life cycle (SDLC)
- explain the coding used to create deployment applications
- explain the information and communications technology (ICT) hardware, software, security protocols and standards and organisational policies relevant to deployment of applications.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- sufficient privileges to install packages on client and server system
- database management system software

© Commonwealth of Australia, 2025 Future Skills Organisation

- specific tools and licences, depending on the particular platform.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG505 Build advanced user interface

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, build and test an advanced user interface (UI), including interaction techniques, rich controls, improved client-side validation, customisation and personalisation, graphics and multimedia.

It applies to individuals who work as user-interface designers and who are responsible for managing, and implementing, complex UI design.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan the UI design | 1.1 Determine the appropriate client technology, development tools, and platform for writing the UI<br>1.2 Review the conceptual design with the client, and edit as required<br>1.3 Design the UI layout and structure |
| 2. Implement interaction | 2.1 Apply the interaction design patterns |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| techniques | 2.2 Implement client-side validation |
| 3. Implement a customisable and personalised UI | 3.1 Build a customisable UI, to allow users to select their own customised version of the underlying application<br>3.2 Build a personalised UI to improve user experience |
| 4. Implement the graphics and multimedia | 4.1 Create and display the graphics<br>4.2 Add the multimedia content to an application |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2 | • Interprets, and critically analyses, complex texts and applies the appropriate strategies to construct meaning from complex texts, when reading and interpreting technical information, and determining suitable technology and tools |
| Writing | 1.3, 2.1, 3.1, 3.2, 4.1, 4.2 | • Prepares documentation, expressing ideas and exploring complex issues, that is constructed logically, succinctly and accurately<br>• Writes and edits computer code, and technical data, ensuring the correct syntax and accuracy |
| Oral communication | 1.2 | • Demonstrates flexibility in spoken texts by choosing appropriate structures, and strategies, in a range of contexts, and applies appropriate strategies to extract the main ideas from oral texts, when communicating with the client about the conceptual design of UI |
| Numeracy | 1.3 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies in a range of contexts, when designing layout and structure |
| Get the work done | 1.1, 1.3, 2.1, 2.2, 3.1, 3.2, 4.1, 4.2 | • Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools, and applies these when troubleshooting existing technology<br>• Seeks to understand the potential of new technology, in the context of implementing interaction, and customisable features, and graphics and multimedia, |

# Assessment Requirements for ICTPRG505 Build advanced user interface

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- apply advanced techniques in order to create a complex user interface (UI)
- determine the client's technology, development tools, and the UI platform
- plan the layout and structure
- review the conceptual design with the client
- implement interaction techniques, including interaction design patterns and client-side validation
- implement a customisable and personalised UI
- create and display the graphics
- add the multimedia.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the concepts of programming, including:
  - client-side programming
  - object-oriented programming
  - web design programming in hypertext markup language (HTML), cascading style sheet (CSS), and JavaScript
- describe the purpose of UI prototyping
- outline the documentation requirements for UI development.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- an integrated development environment (IDE)
- the client system, and the server system
- multimedia tools
- specific tools and licences, depending on the particular platform.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG506 Design application architecture

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design the structure of software or systems components, and how they interact.

It applies to individuals who may work as software architects, developers, designers, software engineers or programmers responsible for designing, and building, solution architecture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Gather and confirm the architecture requirements | 1.1 Gather information regarding the architectural requirements<br>1.2 Establish and document the architectural requirements |
| 2. Design layered architecture | 2.1 Separate the areas of concern into logical layers<br>2.2 Determine cross-cutting concerns<br>2.3 Define the system into components<br>2.4 Identify the responsibilities of each component |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.5 Identify the interconnections between components |
| 3. Plan a strategy to re-use components | 3.1 Determine an appropriate strategy for communicating with external systems<br>3.2 Interact with existing legacy components |
| 4. Design for globalisation and localisation | 4.1 Determine culture specific information<br>4.2 Consider database design features<br>4.3 Select the appropriate user interface<br>4.4 Develop a software product for worldwide distribution<br>4.5 Develop a software product for a specific country |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.2, 2.3, 2.4, 2.5, 4.1 | • Interprets complex technical, and non-technical, information from a range of sources |
| Writing | 1.2 | • Prepares technical workplace documents that fulfil the expectations of different stakeholders |
| Communicate with others | 4.1, 4.2 | • Identifies, and explores, the differences between a diverse range of people and cultures in a programming context |
| Get the work done | 1.1, 1.2, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 4.2, 4.3, 4.4, 4.5 | • Takes responsibility for planning, sequencing, and prioritising tasks in order to achieve the required outcomes<br>• Uses a range of digital tools and sophisticated techniques, to meet the desired outcomes<br>• Identifies technical or conceptual issues, and applies analytical processes to resolve these issues<br>• Uses analytical and lateral thinking to review current practices, and to develop new or improved software or systems |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTPRG506 Design application architecture

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design layered applications to increase application performance, scalability and re-usability
- create flexible and configurable applications, and adapt these to suit different locales
- adapt a software product to a particular language, and culture, of the target market.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the principles of database design
- outline current software development methodologies
- explain object-oriented programming and its role in application architecture
- describe the software development life cycle.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- both functional and non-functional requirements
- the tools to design software architecture
- specific information for the target culture, or language
- the appropriate learning and assessment support, when required.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG507 Implement security for applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to implement security for software applications, including code access security, security access control, cryptographic and secure, input and output handling.

It applies to individuals who may be responsible for coding secure software applications and who may work as software developers, software engineers, system and security administrators, and testers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Implement policy-based code-access security in an application | 1.1 Identify the purpose of application security in software development<br>1.2 Configure the platform security configuration files using security configuration tools<br>1.3 Define a custom code access permission, to restrict access to protected resources or to run protected operations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Implement security access control in an application | 2.1 Plan an authentication and authorisation strategy<br>2.2 Develop an appropriate authentication and authorisation strategy for an application |
| 3. Write code to encrypt and decrypt data for secure communication | 3.1 Analyse the standard cryptographic algorithms<br>3.2 Encrypt, and decrypt, data using standard cryptographic algorithms |
| 4. Protect an application against injections | 4.1 Plan secure input and output handling, to prevent vulnerabilities related to code injections<br>4.2 Use secure input and output handling |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1 | • Evaluates complex and varied information, and concepts, in software security |
| Writing | 1.2, 3.2, 4.2 | • Writes and edits computer code, and technical data, ensuring the correct syntax and accuracy |
| Get the work done | 1.2, 1.3, 2.1, 2.2, 3.2, 3.1, 4.1, 4.2 | • Takes responsibility for planning, sequencing and prioritising processes and tasks to achieve the required outcomes<br>• Applies systematic and analytical problem-solving processes, in order to develop appropriate security access control strategies<br>• Uses a range of digital tools and sophisticated techniques to meet desired outcomes<br>• Is acutely aware of the importance of data security and of monitoring, and controlling, access to digitally stored and transmitted information |

# Assessment Requirements for ICTPRG507 Implement security for applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the following must be provided:

- creating secure applications
- planning effective security strategies
- ensuring safe communications
- preventing security attacks.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

Evidence of the ability to:

- outline basic hardware, and networking
- outline basic programming algorithms
- explain object-oriented programming
- recognise the mathematics required for programming algorithms.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- security configuration tools
- the software development environment
- testing and debugging tools
- the network resources

# ICTPRG508 Create mashups

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to combine content from more than one source into new integrated applications, and to create custom mashups.

It applies to individuals responsible for developing modern web application (Web 2.0) using the enabling technologies to create mashup applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Remix elements from multiple websites to create new mashups | 1.1 Analyse Web 2.0 concepts and the web as a platform<br>1.2 Search various application programming interface (API) providers, and the types of services available<br>1.3 Evaluate and select which APIs to use<br>1.4 Determine which programming language to use with the selected APIs |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Create mashups of several services |
| 2. Use mashup tools | 2.1 Search various mashup tools<br>2.2 Evaluate and select which tool to use<br>2.3 Create mashups using the selected tool |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 2.1, 2.2 | • Critically analyses documentation from a variety of sources and records, and consolidates the information to determine requirements |
| Writing | 1.5, 2.3 | • Writes and edits computer code, and technical data, ensuring the correct syntax and accuracy |
| Get the work done | 1.2, 1.3, 1.4, 1.5, 2.1, 2.2, 2.3 | • Systematically gathers and analyses all relevant information and evaluates options, in order to make decisions about APIs<br>• Identifies technical or conceptual issues, and applies analytical processes, to resolve issues<br>• Uses a range of digital tools and sophisticated techniques, to meet the desired outcomes |

# Unit Mapping Information

# Assessment Requirements for ICTPRG508 Create mashups

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- create programmable web applications that combine data and functionality from various sources, to create new services.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline hypertext markup language (HTML), cascading style sheet (CSS) and JavaScript
- outline server-side scripting language
- outline extensible markup language (XML), web services, Asynchronous JavaScript (AJAX), and metadata
- explain web design and development.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the internet, in order to use mashup tools, and API providers
- Web 2.0 tools
- an integrated development environment (IDE)
- the appropriate learning and assessment support, when required.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG509 Build using rapid application development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to build using rapid application development (RAD) tools.

It applies to individuals who may work as programmers and who are required to develop new systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Construct an application using RAD | 1.1 Capture and record business rules, using a methodology well-suited for the chosen RAD and RAD techniques<br>1.2 Design an application with a focus on modularity and future extension<br>1.3 Develop the code by other RAD tools<br>1.4 Build and demonstrate the completed transaction to the user, for revision within the agreed terms of reference |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Take action to ensure that the design caters for continuous change, by involving the user in the iteration process<br>1.6 Provide quality assurance (QA) testing throughout the phase and provide feedback to the appropriate person<br>1.7 Use code optimisers and performance tools |
| 2. Prepare the handover stage | 2.1 Track the implemented modules, and follow up where necessary with the appropriate person<br>2.2 Review user and builds for each module in the deliverables as preparation for handover<br>2.3 Compare the specification and implementation schedules for each module, and confirm the functional requirements, according to the specifications<br>2.4 Document the completed work |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.2, 2.3 | • Interprets and analyses complex technical documents |
| Writing | 1.1, 1.2, 1.3, 2.4 | • Documents technical processes and completes workplace documents, in a style and form appropriate to the audience |
| Interacts with others | 1.4, 1.5, 1.6, 2.1 | • Liaises with users, and manages changes in design, by collaborating with different stakeholders in the development process |
| Get the work done | 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 2.1, 2.3 | • Identifies technical, or conceptual issues, and applies analytical processes in order to resolve issues<br>• Uses a range of digital tools and sophisticated techniques, to meet the desired outcomes<br>• Takes responsibility for planning, sequencing and prioritising tasks, to achieve the required outcomes<br>• Uses analytical and lateral thinking to review practices and to suggest improvements |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTPRG509 Build using rapid application development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design an application and develop high quality code, according to client specifications
- provide quality assurance testing and monitoring
- effectively demonstrate use of code optimisers using rapid application development (RAD) techniques
- accurately document completed work.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline industry-accepted prototyping tools
- describe quality assurance practices as they relate to RAD
- describe the impact that the client business domain will have on RAD in particular there effect on:
  - cost
  - quality
- outline the role of the stakeholder, and the involvement required in RAD
- describe three or more current industry development methodologies
- identify and apply three or more programming languages
- identify and apply the most appropriate RAD tool, taking into consideration the targeted platform or multi-platform options.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the computer-aided software engineering tools (CASE) repository, to facilitate the re-use of templates and components
- CASE tools
- a code generator
- detailed user requirements
- prototyping software
- the requirements document, including the model and scope
- the appropriate learning and assessment support, when required.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG510 Maintain custom software

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to maintain software so that it continues to meet client user requirements.

It applies to individuals who may work as programmers who are required to maintain existing software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine the software fault to be corrected | 1.1 Collect and review the software fault details from sources<br>1.2 Obtain technical data to assist in identifying the problem<br>1.3 Clarify nature of the problem with appropriate person where necessary |
| 2. Identify and isolate the fault | 2.1 Review program documentation for specific modules in order to pinpoint problem areas<br>2.2 Review the source code for logic errors |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Read manuals, help files and 'read me files' to determine if there is a known fix<br>2.4 Undertake additional testing to identify or duplicate fault<br>2.5 Escalate the difficult faults that cannot be identified |
| 3. Design a fix for the fault | 3.1 Ensure that the requirements needed to fix the fault are understood by the client<br>3.2 Consider alternative options and choose the most effective solution<br>3.3 Consider the possible impact of the fix on other parts of the system<br>3.4 Document the changes according to the organisational guidelines |
| 4. Carry out the fix to the software | 4.1 Identify, and obtain, access to the appropriate software development tools, source code, and libraries<br>4.2 Construct the appropriate code to correct the fault, according to organisational and programming standards<br>4.3 Compile, or regenerate, the code for changed programs and the associated modules<br>4.4 Correct, and resubmit, the code until error free<br>4.5 Document the changes, according to organisational and programming standards |
| 5. Test the fix and associated system areas | 5.1 Check logic to ensure that it works with test data, corrects original fault, and does not cause problems elsewhere<br>5.2 Request users to perform acceptance testing and record outcomes |
| 6. Hand over to systems operations area | 6.1 Update the documentation to reflect all the changes made<br>6.2 Confirm acceptance by systems operations and arrange for sign-off, according to procedures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | **Criteria** | |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2, 2.3 | • Analyses and interprets complex technical documents for specific information |
| Writing | 3.4, 4.5, 5.2, 6.1 | • Completes workplace documentation using a tone and format appropriate to the end audience |
| Oral communication | 1.3 | • Articulates issues in a clear and succinct manner using language appropriate to the audience |
| Navigate the world of work | 4.2, 4.5, 6.2 | • Takes personal responsibility for following explicit and implicit policies, procedures and standards |
| Interact with others | 1.3, 2.5, 3.1, 5.2, 6.2 | • Liaises with various stakeholders and negotiates mutually agreeable outcomes |
| Get the work done | 2.4, 3.2, 3.3, 4.1, 4.2, 4.3, 4.4, 5.1, 6.2 | • Identifies technical or conceptual issues, and applies analytical processes to resolve issues, with consideration of the possible impacts of various solutions<br>• Uses a range of digital tools and sophisticated techniques to meet the desired outcomes<br>• Takes responsibility for planning, sequencing and prioritising tasks to achieve deadlines |

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- effectively maintain custom software
- apply a fix that works
- deploy a possible range of solutions to produce the same results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the concepts relating to analysing a system performance compared with the system's current functionality
- describe the processes and procedures relating to testing software systems
- describe current industry-accepted hardware and software products, as they relate to system maintenance
- specify the programming code required for the project
- describe the program documentation required
- describe the impact of changes on applications and systems
- identify and summarise the programming standards relating to custom software.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the fault logs, and help-desk reports

© Commonwealth of Australia, 2025 Future Skills Organisation

- software development tools, documentation and environment
- source code and libraries
- the appropriate learning and assessment support.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG511 Monitor and support data conversion to new ICT system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to monitor and support data conversion to a new information and communications technology (ICT) system.

It applies to individuals involved in the development process, who are required to convert data to work on new systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Monitor data conversion | 1.1 Obtain the conversion supporting documentation, and apply it to the conversion process<br>1.2 Protect production data, by taking action to ensure backup before the conversion<br>1.3 Determine the requirements of the client, and the impact on the business operation<br>1.4 Identify and confirm the software, hardware or environmental |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | prerequisites in the conversion plan<br>1.5 Validate data accuracy and integrity, according to conversion specifications<br>1.6 Identify data rejected by conversion tools, and carry out the actions detailed in the conversion plan<br>1.7 Document the data rejection or errant behaviour of the conversion process |
| 2. Support conversion | 2.1 Verify the results<br>2.2 Present results to the appropriate person and obtain sign-off<br>2.3 Maintain and document backup copies of the conversion files, according to requirements<br>2.4 Develop clear and coherent technical documentation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 1.4, 1.5, 1.6, 2.1 | • Interprets, and critically analyses, complex texts and applies the appropriate strategies in order to construct meaning from the supporting documentation for conversion, and when identifying prerequisites in the plan |
| Writing | 1.3, 1.7, 2.3, 2.4 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text, when writing documentation, and when liaising with the client |
| Oral communication | 1.3 | • Demonstrates flexibility in spoken texts by choosing the appropriate structures and strategies, and applies these to extract the main ideas from oral texts when liaising with the client |
| Interact with others | 2.2 | • Selects, implements and seeks to improve protocols governing communications with clients and co-workers in a range of work contexts<br>• Collaborates with others, sharing information to build strong work groups |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication when taking action to ensure backup before conversion<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria when validating data accuracy and integrity, and when verifying results<br>• Recognises and anticipates an increasing range of familiar problems, their symptoms and causes, actively looking for early warning signs, and implementing contingency plans in relation to the data rejected by conversion tools<br>• Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot, and understand, the uses and potential of new technology, when monitoring and supporting data conversion to a new ICT system |

# Unit Mapping Information

# Assessment Requirements for ICTPRG511 Monitor and support data conversion to new ICT system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- obtain and apply the conversion supporting documentation
- ensure backup before conversion
- determine client requirements, and the impact on the business operation
- identify and confirm the software, hardware or environmental prerequisites in the plan
- validate data accuracy and integrity, according to the specifications
- identify the data rejected by the conversion tools, and carry out actions specified in the plan
- document any data rejection or errant behaviour of the process
- verify the results, presenting them to the appropriate person and obtaining sign-off
- maintain and document backup copies of the conversion files, according to requirements
- develop clear and coherent technical documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe current data modelling methodologies
- explain current industry data conversion tools
- describe current industry-accepted hardware and software products, including their general features and capabilities
- explain data conversion from legacy systems.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to the:

- conversion specifications
- data conversion plan
- documentation guidelines
- sample data to be converted
- data conversion tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG512 Prepare for the build phase of an ICT system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to prepare the development environment for the build phase, and coding, of an information and communications technology (ICT) system.

It applies to individuals in software development environments who are required to organise the documents, environments, and tools for the build phase of software development.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the best development platform for project | 1.1 Identify the requirements of the development platform, using the detailed technical specifications<br>1.2 Match the technical specification of the development platform, with the technical specification of the project and with the quality standards |
| 2. Identify the best development tools for | 2.1 Identify the functional requirements for development tools, using the detailed technical specifications and other program |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| project | documentation<br>2.2 Evaluate the development tools for a match with the requirements, and document the evaluation outcomes<br>2.3 Select the appropriate development tools |
| 3. Prepare the development environment | 3.1 Obtain the components for the development platform, development tools and the required hardware<br>3.2 Install, configure and test the development platform and tools<br>3.3 Document the configuration of the development platform |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2, 2.3 | • Interprets, and critically analyses, complex texts and applies the appropriate strategies, to construct meaning from complex documentation when selecting the platform and tools |
| Writing | 3.2, 3.3 | • Displays a knowledge of structure and layout employing a broad vocabulary, grammatical structure and the conventions appropriate to text, when developing documentation of platform configuration<br>• Writes, and edits, computer code and technical data ensuring the correct syntax and accuracy |
| Get the work done | 2.2, 2.3, 3.1, 3.2 | • Plans a range of routine, and some non-routine tasks, accepting stated goals and aiming to achieve them efficiently when obtaining components required for the development platform, development tools and the required hardware<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria, when selecting and testing the platform and tools<br>• Considers purpose, needs and limitations when selecting the development platform and tools<br>• Understands the key principles and concepts |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | underpinning the design, and operation, of digital systems and tools, and applies these in the context of installing, configuring, and testing the development platform and tools |

# Assessment Requirements for ICTPRG512 Prepare for the build phase of an ICT system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify the best development platform, according to the project's technical specifications and quality standards
- identify the best development tools, according to the functional requirements, and documenting selection and evaluation
- obtain components for the platform, tools and the required hardware
- install, configure and test the platform and tools
- document the configuration of the platform.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the client business domain
- explain current industry-accepted coding methods and standards in a recognised language, and in database management system (DBMS) modelling techniques
- outline the processes and techniques related to:
  - software and database design
  - architectures and their technical requirements
- describe the quality assurance practices required when building an information and communications technology (ICT) system.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to the:

- design specification
- software requirement specifications
- system requirements
- technical specifications
- version control standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG513 Coordinate the build phase of an ICT system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to coordinate the day-to-day management activities during the build phase, and coding of, an information and communications (ICT) system, according to the design specifications and project plan.

It applies to individuals in the software development area who are required to synchronise the coding activities of a new system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare the work | 1.1 Review the specifications and standards for the project<br>1.2 Review the project documentation for the development environment<br>1.3 Analyse, and confirm, that the development environment matches the project documentation and meets the standards<br>1.4 Select the development tools |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Coordinate the work | 2.1 Determine the work units based on the design<br>2.2 Delegate the work units to the appropriate developers<br>2.3 Brief the developers on standards, procedures, schedules and other requirements<br>2.4 Implement project management techniques to ensure that all tasks are completed on time, and according to standards, and the specification |
| 3. Coordinate the development environment | 3.1 Implement and test the changes to the development environment, and document the outcomes<br>3.2 Update the project documentation for the development environment |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2 | • Interprets, and critically analyses, complex texts and applies the appropriate strategies to construct meaning from specifications, standards and the development environment documentation |
| Writing | 2.3, 3.1, 3.2 | • Communicates complex relationships between ideas and information, matching the style of writing to the purpose and audience, and displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text |
| Oral communication | 2.3 | • Demonstrates flexibility in spoken texts by choosing the appropriate structures and strategies in a range of contexts |
| Interact with others | 2.2, 2.4 | • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction, and taking a leadership role on occasion, when implementing project management techniques |
| Get the work | All | • Sequences and schedules complex activities, monitors implementation and manages relevant communication |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| done | | • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria, and implementing and testing changes<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world |

# Assessment Requirements for ICTPRG513 Coordinate the build phase of an ICT system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse and confirm that the development environment matches the project documentation, and meets standards
- select the development tools
- determine work units based on the design
- delegate work units to appropriate developers
- brief developers on standards, procedures, schedules and other requirements
- implement project management techniques to ensure that tasks are completed on time, and according to requirements
- implement and test changes to the development environment, and document the outcomes
- update the project documentation for the development environment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the client business domain, to inform the system build
- describe the client-server architecture
- describe the current industry-accepted coding in a recognised language, including features and capabilities
- summarise current industry-accepted database management system (DBMS) modelling techniques
- identify and describe current industry-accepted hardware, and software products, including their general features and capabilities
- describe the principles of contemporary databases development, and their application

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the quality assurance practices required for the build phase of information and communications technology (ICT) systems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to the:

- design specification
- software requirement specifications
- system requirements
- technical specifications
- version-control standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG514 Prepare for software development using rapid application development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to carry out rapid application development (RAD), in the context of preparing for software development. The selection and use of suitable RAD tools can have an impact on the cost and quality of a software project.

It applies to individuals who are programmers in a variety of information technology areas, who develop software using RAD.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine RAD requirements | 1.1 Select and use, the most suitable industry-standard tool set<br>1.2 Implement a prioritised plan using a series of recursive stages of build, and review for delivery of the system<br>1.3 Implement and incorporate a physical database<br>1.4 Identify, document, and schedule the modules to be |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | implemented by incremental development techniques<br>1.5 Identify and formally allocate responsibilities to the authorised user, and to suitably skilled builders, for each module<br>1.6 Plan for, and document, the endorsement of reviews, administration schedules and development milestones |
| 2. Determine the work metrics | 2.1 Set development goals<br>2.2 Seek and secure agreement on, and adherence to, a single common notation<br>2.3 Determine the tools, features and techniques most appropriate to the development environment<br>2.4 Facilitate, plan, develop, and document version and change-control methods<br>2.5 Facilitate training and exposure for the user participants via RAD |
| 3. Implement the administration method | 3.1 Determine and reach agreement of stakeholders on the specifications<br>3.2 Confirm the dates for milestones with stakeholders, and secure with written agreement<br>3.3 Inform the production system’s parties, and secure with written acknowledgment<br>3.4 Administer and maintain, time-recording and management methodologies |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Interprets, and critically analyses, complex texts and applies the appropriate strategies to construct meaning from complex technical documents |
| Writing | 1.4, 1.6, 2.4, 3.2, 3.3 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text, when developing documentation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral communication | 2.5, 3.1, 3.2, 3.3 | • Demonstrates flexibility in spoken texts by choosing the appropriate structures and strategies, and applies appropriate strategies to extract the main ideas from oral texts when liaising with stakeholders, facilitating training and informing parties on the administration method |
| Interact with others | 2.2, 2.5, 3.1, 3.3 | • Recognises and applies, the protocols governing what to communicate, with whom, and how, when liaising with stakeholders, facilitating training and informing parties on administration methods<br>• Recognises the importance of joint ownership of the process, and outcomes, and tries to identify common ground, shared goals, and agreement on the best course of action |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication, when implementing a prioritised plan and database, scheduling timelines, allocating responsibilities, and establishing goals and methods<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot and understand, the uses and potential of new technology |

# Assessment Requirements for ICTPRG514 Prepare for software development using rapid application development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- select, and use, a rapid application development (RAD) tool set
- implement a prioritised plan
- implement and incorporate a physical database
- identify, document and schedule the modules to be implemented
- identify and allocate responsibilities
- plan for and document the endorsement of reviews, administration schedules and milestones
- determine work metrics
- set the development goals
- seek and secure an agreement on, and adherence to, a single common notation
- determine the most appropriate tools, features and techniques
- facilitate, plan, develop and document version and change-control methods
- facilitate training and exposure for the user participants via RAD
- implement administration
- determine and secure the agreement of stakeholders
- confirm dates, and secure written agreement for the milestones
- inform the production-system parties and secure written acknowledgment
- administer and maintain, time-recording and management.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe commonly used and industry-accepted prototyping tools

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the client business and the impact on the software application
- identify, and describe, the programming languages commonly used for application development
- outline the quality assurance practices required for software development
- outline the industry development methodologies used for software development.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the computer-aided software engineering tools (CASE) repository, to facilitate the re-use of templates and components
- CASE tools
- detailed user requirements
- prototyping software
- the requirements document, including the model and scope.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG515 Review developed software

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to review developed software in relation to quality standards. This involves reviewing quality standards, determining development quality issues, and closely reviewing specific quality areas.

It applies to individuals who are senior programmers who ensure the quality of software produced by others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Review the quality standards | 1.1 Review the organisation's quality standards, and the standards related to software development, and prepare them for use<br>1.2 Contact the appropriate person to discuss their involvement in the review, and establish their role<br>1.3 Determine and document the approach to be used to validate quality during the review |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Determine development quality issues | 2.1 Examine and document processes that have a significant impact on the quality of a particular product under development<br>2.2 Hold discussions on quality issues with the development staff and establish agreed actions<br>2.3 Allocate responsibilities to the development staff<br>2.4 Obtain agreement from the appropriate person on the procedures to ensure quality of development, where necessary |
| 3. Review the specific quality areas | 3.1 Review plans to ensure that they are adequate to control the quality of the development process<br>3.2 Review testing processes, to ensure that defect-free software will be developed<br>3.3 Examine documentation and methods for development, to ensure that the software will be supportable<br>3.4 Monitor the requirements to ensure that client needs are met |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Interprets, and critically analyses, complex texts and applies appropriate strategies, to construct meaning from the organisation's quality standards and the standards related to software development |
| Writing | 1.3, 2.1 | • Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text, when documenting the validation approach, and the processes, that have an impact on quality |
| Oral communication | 1.1, 1.2 | • Demonstrates flexibility in spoken texts by choosing appropriate structures and strategies in a range of contexts, and applies appropriate strategies, to extract the main ideas from oral texts |
| Navigate the world of work | 2.4 | • Recognises and responds to both, explicit and implicit, protocols within familiar work contexts and appreciates the importance of identifying, and responding to, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | protocols in new situations, in the context of gaining agreement on procedures |
| Interact with others | 2.2 | • Uses active listening, observational and questioning techniques in order to identify different perspectives, and confirm, clarify or revise understanding<br>• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction, and taking a leadership role on occasion |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options, and seeking input and advice from others, before taking action when necessary<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world |

# Assessment Requirements for ICTPRG515 Review developed software

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review and discuss the organisation's quality standards relevant to software development
- determine and document quality standards and procedures that support the development of defect-free products to meet client requirements
- review plans, testing processes and documentation related to the quality of software development to ensure that client needs are met.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business domain
- summarise industry-accepted hardware and software products
- describe input and output drivers
- identify and describe operating systems
- identify and describe:
  - two or more procedural languages
  - three or more object-oriented languages
- describe quality assurance practices, and the identification of standards
- explain real-time programming techniques
- describe software application measuring and estimating methodologies
- describe software development and configuration management processes
- explain the process of software metrics development.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- data dictionaries
- design specifications
- a data stream management system (DSMS)
- a simulated scenario
- Australian and international software quality standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG516 Develop integration blueprint for ICT systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to document and to maintain the details of the technology, and architectural components, incorporated into the integration blueprint for an information and communications technology (ICT) system.

It applies to individuals in senior roles in the development environment, who are required to integrate a series of components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Review the technical architecture documents | 1.1 Review the technical architecture documents, supplemented with discussions where necessary<br>1.2 Identify, and evaluate, technical considerations that cover the overall requirements and provide the best technical fit against requirements<br>1.3 Update the integration blueprint according to best-fit technical specifications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Undertake compatibility tests | 2.1 Assemble components and component technologies, according to design specifications<br>2.2 Test the components for functionality, against design specifications<br>2.3 Identify non-compliance, against technical specifications<br>2.4 Update the integration blueprint to reflect functionality and non-compliance changes |
| 3. Assess the risk areas | 3.1 Identify the scope of the modifications required from the compatibility test<br>3.2 Negotiate the modifications required with the suppliers, based on the outcomes of the compatibility test<br>3.3 Update the integration blueprint to reflect modifications to risk areas |
| 4. Assess readiness for stress testing | 4.1 Continue integration activities until the platform is stable<br>4.2 Evaluate the platform's compliance with technical requirements<br>4.3 Update the integration blueprint for stress testing |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Interprets, and critically analyses, complex texts and applies appropriate strategies, to construct meaning from complex texts when reviewing technical architecture documents |
| Writing | 1.3, 2.4, 3.3, 4.3 | • Communicates complex relationships between ideas and information, matching the style of writing to the purpose and audience<br>• Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text |
| Oral | 1.1, 3.2 | • Demonstrates flexibility in spoken texts by choosing appropriate structures and strategies |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| communication | | • Applies appropriate strategies to extract main ideas from oral texts when having discussions to supplement documentation and when negotiating modifications with suppliers |
| Interact with others | 3.2 | • Participates in complex formal and informal conversations relevant to own role, initiating and taking the lead where appropriate, in relation to negotiating with suppliers |
| Get the work done | All | • Uses a combination of formal, logical planning processes, and an increasingly intuitive understanding of context to identify relevant information and risks, and identify, and evaluate, alternative strategies and resources<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world |

# Assessment Requirements for ICTPRG516 Develop integration blueprint for ICT systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review technical architecture documentation and update the integration blueprint
- undertake component compatibility testing and update the integration blueprint accordingly
- assess the risk of possible modifications and update the integration blueprint accordingly
- stabilise the platform, assess compliance with the technical requirements and update the integration blueprint.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the sources of technology suppliers and components
- outline contemporary industry development and design methodologies
- identify and describe, industry-accepted hardware and software products, features, and capabilities
- identify and describe, industry-accepted testing procedures
- describe the principles of stress load testing.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- design specifications

© Commonwealth of Australia, 2025 Future Skills Organisation

- a high-level, diagrammatic view of the main system components.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG517 Install, test and evaluate pilot version of ICT system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to install a pilot version of a developed information and communications (ICT) system, and test it with a small group of users, in order to evaluate it against the agreed criteria.

It applies to individuals who are senior staff in a development area who are required to test and evaluate new systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for the pilot system | 1.1 Establish and confirm the objectives, success criteria and acceptance criteria, for pilot implementation<br>1.2 Identify and secure, the technical and organisational resources required for pilot implementation<br>1.3 Establish and confirm executive support for the pilot<br>1.4 Complete the project plan for the pilot, and refer the project |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | documentation to the appropriate person for their approval |
| 2. Install the pilot system | 2.1 Install and configure pilot according to the project plan<br>2.2 Verify and record the technical readiness of the pilot<br>2.3 Take the necessary actions to determine accuracy of the data<br>2.4 Prepare a status report, and submit to the appropriate person for their sign-off |
| 3. Test the pilot system | 3.1 Work with stakeholders to identify and release the appropriate pilot group<br>3.2 Brief the pilot-team members on the objectives of the test<br>3.3 Train the pilot-team members in the new system<br>3.4 Run the test |
| 4. Evaluate the results and feedback of the pilot | 4.1 Assess computerised results of the pilot test<br>4.2 Interview pilot group members in order to obtain feedback<br>4.3 Document the feedback and results<br>4.4 Evaluate according to success, and the acceptance criteria previously established<br>4.5 Report the final recommendations from the pilot, with regard to a complete installation of the pilot system, to the appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Interprets, and critically analyses, complex texts and applies appropriate strategies, to construct meaning from complex texts |
| Writing | 1.4, 2.2, 2.4, 4.3, 4.5 | • Communicates complex relationships between ideas and information, matching the style of writing to the purpose and audience and displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral communication | 3.1, 3.2, 3.3, 4.2, 4.5 | • Demonstrates flexibility in spoken texts by choosing appropriate structures and strategies, and applies appropriate strategies, in order to extract the main ideas from oral texts |
| Numeracy | 1.4 | • Selects from, and applies, an expanding range of mathematical and problem-solving strategies in a range of contexts |
| Navigate the world of work | 1.4, 2.4 | • Recognises and follows, explicit and implicit, protocols, and meets expectations associated with own role |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating, options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options, and seeking input and advice from others, before taking action when necessary<br>• Understands the key principles and concepts, underpinning the design and operation of digital systems and tools |

# Assessment Requirements for ICTPRG517 Install, test and evaluate pilot version of ICT system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- establish objectives, acceptance criteria and resource requirements for implementation of a pilot system
- prepare a project plan for a pilot system, according to organisational requirements
- install and verify a pilot system
- test a pilot system with the pilot team
- evaluate the results and feedback on a pilot
- report on the outcomes of a pilot system.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the role of stakeholders, and the degree of stakeholder involvement in the development of a pilot system
- explain three or more current industry information-gathering methodologies
- describe current industry system development and design methodologies
- describe current industry-accepted hardware and software products, providing an overview of general features and capabilities, and in-depth details of installing pilot systems
- describe the general features and capabilities of current industry-accepted system piloting methodologies
- outline quality assurance practices with regard to installing, testing and evaluating a system.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to the:

- pilot system
- planning documentation, including acceptance criteria
- technical materials
- interaction with others involved in the pilot.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG518 Monitor the system pilot

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to monitor the implementation of a system pilot, and to evaluate its performance through testing and review.

It applies to individuals who are senior programmers and systems analysts who implement systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Monitor the implementation of the pilot system | 1.1 Review the pilot and the support documentation<br>1.2 Identify the pilot and system procedures<br>1.3 Supervise system functionality and integrity tests<br>1.4 Document the findings<br>1.5 Provide technical support, as required |
| 2. Evaluate the pilot | 2.1 Review pilot operation against pilot objectives, and success |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| system | criteria<br>2.2 Review client and executive feedback on the pilot, against the acceptance criteria<br>2.3 Identify and areas of success, and those needing improvement<br>2.4 Prioritise, implement and assess, the impact of required improvements<br>2.5 Document the review process and submit to the appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2 | • Interprets and critically analyses complex texts |
| Writing | 1.4, 2.5 | • Produces texts using required structure, layout and conventions |
| Navigate the world of work | 1.2 | • Identifies and follows relevant organisational policies and procedures |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication<br>• Takes responsibility for decisions about when, and how, to complete tasks and coordinate with others<br>• Reflects on outcomes and feedback from others in order to identify general principles and concepts that may be applicable in new situations<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options, and seeking input and advice from others before taking action, when necessary<br>• Understands the key principles and concepts, underpinning the design and operation of digital systems and tools |

# Assessment Requirements for ICTPRG518 Monitor the system pilot

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review documentation to identify pilot objectives, client requirements and relevant procedures
- observe and support testing and document findings
- evaluate the pilot's success using acceptance criteria and stakeholder feedback
- document the evaluation process, including successes, improvements and impact of changes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the current industry-accepted system of piloting methodologies including their general features and capabilities, with particular emphasis on acceptance criteria
- describe current industry system development and design methodologies
- explain three or more current industry information-gathering methodologies
- outline the role of stakeholders and the degree of stakeholder involvement
- describe the system's current functionality, with a specific emphasis on:
  - system integration
  - system response and recovery times
  - user interfaces
  - the validation of inputs and outputs.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to the:

- pilot plan
- acceptance criteria
- system to be piloted.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG520 Validate an application design against specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to check a software application design against the specifications, and to apply validation techniques across the system's life cycle.

It applies to individuals employed in the area of software development who are responsible for verifying and validating software design specifications. They may be software project managers, testers, software engineers, system analysts or software developers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate the software requirement specifications | 1.1 Review the software requirement specifications document prior to design, to ensure that it is complete and correct<br>1.2 Validate the software requirement specifications document |
| 2. Create a proof of concept prototype | 2.1 Use rapid application development tools (RAD) to create a prototype system<br>2.2 Present the prototype system for demonstration to the |

# Assessment Requirements for ICTPRG520 Validate an application design against specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- interpret and check software requirement specifications documents
- use rapid application development (RAD) tools to create and present a validated proof of concept prototype
- validate the software design, source code and testing requirements and document the results
- report on results of validation, including recommended actions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the database design and implementation
- describe business and technical modelling using UML tools at intermediate level
- outline current software development methodologies
- describe, in detail, the system development life cycle (SDLC)
- explain object-oriented programming
- describe open-source development tools
- describe software-testing techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- tools to create prototype systems
- static analysis tools
- test plan and test cases.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG523 Apply advanced programming skills in another language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to undertake advanced programming tasks using a selected choice of another programming language. The language may be an object-oriented language.

It applies to individuals who are programmers required to develop program code.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Code using advanced data structures | 1.1 Design dynamic data structures<br>1.2 Implement and use dynamic data structures, including double-linked lists and binary trees for coding |
| 2. Code using advanced algorithms | 2.1 Code using hashing techniques<br>2.2 Consider and record, the advantages and disadvantages, of at least three sorting algorithms |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Code at least one sorting algorithm<br>2.4 Code advanced searching techniques for use with complex data structures |
| 3. Write a simple multi-process application | 3.1 Use features of the language that enable inter-process communication through at least one mechanism<br>3.2 Use features of the language that allow for operating system 'signals' to be captured and responded to |
| 4. Use third-party libraries | 4.1 Use a third-party library in the construction of an application<br>4.2 Reference third-party documentation<br>4.3 Use procedural techniques to write an application, to work within a graphical user interface (GUI) environment |
| 5. Debug the code | 5.1 Use integrated development environment (IDE) debugging facilities, or a stand-alone debugger<br>5.2 Use program debugging techniques to detect, and resolve, errors of syntactical, logical and design origin |
| 6. Document activities | 6.1 Use source-code version control<br>6.2 Adhere to guidelines for developing maintainable code, and to a set of provided coding standards<br>6.3 Apply suitable internal documentation to all the code created, using the tools available in the target language |
| 7. Test the code | 7.1 Design and document the tests to be undertaken<br>7.2 Undertake limited testing of the produced code, to ensure that it complies with the program specification<br>7.3 Capture the test results |
| 8. Create an application | 8.1 Develop a solution, according to program-specification design document<br>8.2 Design the algorithm, and construct, and test, the application in response to a problem description and language |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 4.2, 6.2, 7.2, 8.1 | • Interprets, and critically analyses, complex texts and applies the appropriate strategies to construct meaning from complex texts |
| Writing | 2.2, 6.1, 6.2, 6.3, 7.1 | • Communicates complex relationships between ideas and information, matching the style of writing to the purpose and audience, and displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure, and the conventions appropriate to text |
| Get the work done | All | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, taking into account capabilities, efficiencies and effectiveness<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating, options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options<br>• Understands the key principles and concepts, underpinning the design and operation of digital systems and tools |

# Assessment Requirements for ICTPRG523 Apply advanced programming skills in another language

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design and write code using dynamic data structures
- write code using hashing techniques, sorting algorithms and advanced searching techniques
- use language features that enable inter-process communication and responses to operating system signals
- use third-party libraries in the construction of an application, including referencing third-party documentation
- design and build an application program according to a design document
- test and debug code and resolve errors of a syntactical, logical and design origin
- produce documentation according to guidelines and standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe a range of programming languages
- identify and describe languages for a GUI environment
- summarise the techniques for developing large-scale applications
- outline the procedures for programming with complex data structures
- describe the procedures for using a third-party supplied library, for standard programming features.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the software development environment
- technical documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG524 Develop high-level object-oriented class specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to analyse requirements and produce a set of high-level object-oriented class specifications.

It applies to individuals who are required to develop object designs as part of the systems design process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse the behaviour of objects | 1.1 Analyse behaviour scenarios and the prepare documentation, according to standards<br>1.2 Identify classes, objects and abstract data types, according to requirements<br>1.3 Prepare class, object, module and process diagrams, according to specifications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Prepare a state model | 2.1 Analyse data requirements and iterate data flows<br>2.2 Prepare state-transition diagrams, according to standards<br>2.3 Improve the abstract data types and specifications |
| 3. Describe the roles and responsibilities of classes | 3.1 Review the functional requirements, assign responsibilities and update class structures<br>3.2 Specify the interface and class communication requirements<br>3.3 Prepare the interaction diagrams, according to standards |
| 4. Iterate and review the object model | 4.1 Review the current object model, class functionality and data transformation<br>4.2 Identify and develop class relationships, priorities, and the inheritance hierarchy<br>4.3 Review the class-service requirements and initial test criteria<br>4.4 Identify object processes and reuse classes<br>4.5 Document the model and forward it to the appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 4.1, 4.2 | • Interprets, and analyses, complex technical documentation |
| Writing | 1.1, 1.3, 2.2, 3.3, 4.5 | • Accurately records and completes documentation according to organisational formats and protocols<br>• Writes and edits documents to ensure accuracy and consistency of information, and clarity of meaning |
| Interact with others | 4.5 | • Shares knowledge, information and experience openly, liaising with colleagues to achieve the best possible outcome |
| Get the work done | 1.3, 3.1, 3.2, 4.1, 4.2, 4.3, 4.4 | • Uses a range of digitally-based technologies to access, extract and share relevant information, in order to achieve the required outcomes<br>• Identifies technical or conceptual issues, and applies analytical processes, to resolve these issues |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Uses analytical and lateral thinking to review current practices, and to develop new or improved software or systems |

# Assessment Requirements for ICTPRG524 Develop high-level object-oriented class specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- specify and model abstract data types
- specify the interface between classes and objects
- document the results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline configuration management
- outline current industry-accepted object-oriented methodologies
- outline current program development methodologies
- describe data modelling techniques
- describe object-oriented analysis tools
- describe quality assurance practices.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the business, system and user requirement
- a unified modelling language (UML) modelling tool
- the appropriate learning and assessment support, when required.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG525 Build Java applets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to compile and run an applet that executes in Java-enabled browsers, and interacts with users.

It applies to individuals involved in software, web or games development and who are required to build applets, using Java that interacts with users via a browser.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Create Java source file | 1.1 Create a file with a text editor<br>1.2 Create a sub-class of the class Java.applet.<br>1.3 Ensure that applet sub-class implements at least one of the following methods: init and paint<br>1.4 Define classes that contain instance variables, methods and local variables<br>1.5 Ensure that the init method initialises instance variables, and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | constructs any graphical interface used in the applet sub-class<br>1.6 Implement the paint and update methods to manage output that is drawn in the applet window<br>1.7 Incorporate event handling methods<br>1.8 Implement the code that allows a user to enter values, and assigns these values to variables<br>1.9 Use available graphical user interface (GUI) components to allow user interaction with the applet<br>1.10 Specify and load images and sounds<br>1.11 Include comments to describe the behaviour of the applet |
| 2. Compile a source file | 2.1 Use a Java compiler to compile the file<br>2.2 Correct errors detected by the compiler<br>2.3 Confirm basic correctness of the file, to ensure that all variables have been initialised<br>2.4 Ensure the compiler creates a class file, and that the class is interpreted correctly |
| 3. Run applet | 3.1 Create and name a hypertext markup language (HTML) file, and add APPLET tag<br>3.2 Write the applet class file to match the HTML document that contains an APPLET tag<br>3.3 Confirm that the applet loads and executes correctly<br>3.4 Identify and correct run-time errors<br>3.5 Identify and correct logic errors<br>3.6 Ensure that the appearance of the applet window renders it accessible and intuitive for the user, and that its design complies with organisational standards<br>3.7 Ensure that user interaction is implemented efficiently and effectively |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | **Criteria** | |
|---|---|---|
| Reading | 2.2, 3.4, 3.5 | • Recognises and interprets complex information |
| Writing | 1.1, 3.1 | • Develops material for a specific audience, using clear and detailed language |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7, 1.8, 1.9, 1.10, 2.1, 2.3, 2.4, 3.3, 3.4, 3.4, 3.6, 3.7 | • Takes responsibility for planning, sequencing and prioritising tasks to achieve the required outcomes<br>• Uses a range of digital tools and sophisticated techniques to meet the desired outcomes<br>• Identifies technical or conceptual issues, and applies analytical processes, to resolve these issues |

# Assessment Requirements for ICTPRG525 Build Java applets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review the requirements to provide an applet that executes in Java-enabled browsers, and allows users to customise the applet's operation
- write, compile and run an applet that accepts user input, and generates a response based on the input.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain object-oriented programming concepts
- outline the theoretical concepts of Java programming
- recognise, and describe, the Australian Computer Society Code of Ethics
- identify the sources of browser security restrictions.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the Java development environment
- a Java compiler and interpreter
- a Java-enabled web browser
- the appropriate learning and assessment support.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG526 Maintain functionality of legacy code programs

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to maintain the functionality of legacy code programs.

It applies to individuals working in software development who are required to maintain legacy programs, updating them as required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine the functional changes required | 1.1 Consult the user to determine, and document, the functional change required<br>1.2 Clarify the impact of changes with operational personnel |
| 2. Review legacy language | 2.1 Identify the basic structures of the legacy language<br>2.2 Review the data storage of the legacy language with regard to global variables, modularisation, cohesion and coupling<br>2.3 Review the basic algorithms of the legacy language |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Identify and isolate the change | 3.1 Review the technical documentation for the system, to determine which modules to change<br>3.2 Review the source code to determine program logic and flow<br>3.3 Update the technical documentation to reflect the current state of the program |
| 4. Determine the framework for change | 4.1 Determine the change approach to be used to implement the change<br>4.2 Ascertain and detail the risks for each approach<br>4.3 Determine the personnel who will make the changes |
| 5. Design the change | 5.1 Develop the changes required, considering the impact of the changes on other parts of the system<br>5.2 Document the changes according to change-management standards |
| 6. Code the change | 6.1 Identify and obtain, the appropriate hardware and software for the change<br>6.2 Write the code according to programming standards<br>6.3 Compile and unit test the changes<br>6.4 Document the changes according to programming standards |
| 7. Test the change | 7.1 System test the changes and record the outcomes<br>7.2 Perform user acceptance testing and record the outcomes<br>7.3 Sign off the change request |
| 8. Archive the system | 8.1 Create a new version of software, according to configuration management standards<br>8.2 Archive the development system, including the source code, compilers and test data |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 2.1, 2.2, 2.3, 3.1, 3.2 | • Analyses, and interprets, technical information and defines specific features |
| Writing | 3.3, 4.2, 5.2, 6.2, 6.4, 7.1, 7.2 | • Completes documentation accurately using industry-relevant terminology and the appropriate structure for the target audience |
| Interact with others | 1.1, 1.2 | • Shares knowledge, information and experience openly, liaising with colleagues to achieve the best possible outcome |
| Get the work done | 4.1, 4.2, 4.3, 5.1, 6.1, 6.3, 7.1, 7.2, 7.3, 8.1, 8.2 | • Uses a formal change management process, identifying and evaluating several choices<br>• Evaluates the effectiveness of decisions, in terms of how well they meet stated design specifications<br>• Uses the features of digital tools to complete complex tasks |

# Unit Mapping Information

# Assessment Requirements for ICTPRG526 Maintain functionality of legacy code programs

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- read legacy language
- identify and isolate the required change
- implement the change via the chosen technique.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain operational procedures on the required operating system
- outline the organisational standards for software development
- define security and viruses
- identify privacy legislation and copyright with regard to the legacy code, the particular system involved and its data
- define the technical terminology related to reading help files and manuals
- outline different types of software.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- documents detailing the organisational standards for software development
- the existing legacy code
- appropriate compilers

© Commonwealth of Australia, 2025 Future Skills Organisation

- the appropriate learning and assessment support.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG527 Apply intermediate object-oriented language skills

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to undertake intermediate level programming tasks using an object-oriented programming language.

It applies to programmers in a variety of fields who are required to produce programs in object-oriented languages.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Build applications using the provided language utilities | 1.1 Review the program requirements<br>1.2 Divide multiple source-code files into logical units and packages<br>1.3 Use at least two of the utilities of the target language, allowing for the internal storage of collections of data<br>1.4 Use the utilities of the target language, providing internal data-sorting and searching facilities |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Employ integrated-development environment facilities, to make files to automate program building<br>1.6 Follow the guidelines for developing maintainable code, adhering to coding standards<br>1.7 Use the facilities in the language for persisting objects to binary files<br>1.8 Use the operator and function or method overloading facilities available in the language, at an introductory level<br>1.9 Use exception-handling techniques to ensure program stability<br>1.10 Use of a class that is based on multiple inheritances |
| 2. Write programs that interact with a database | 2.1 Design and implement programs that connect to a database<br>2.2 Design and implement programs that use the language facilities to extract, update, and delete data stored in a database<br>2.3 Design and implement programs that use the language facilities to manipulate database structure (query, create and delete)<br>2.4 Write programs that deliver transactional integrity |
| 3. Write the graphical user interface | 3.1 Employ the graphical user interface (GUI) framework, or text windowing interface, appropriate to the chosen language<br>3.2 Use standard GUI components<br>3.3 Use the facilities within the language for GUI objects to respond to user and program-generated events |
| 4. Debug the application | 4.1 Use stand-alone debugging tools, or tools provided by the integrated development environment, to examine variables, and trace the running code<br>4.2 Use the debugger to detect logical and coding errors<br>4.3 Use the tracing of code and examination of variable contents during execution, to detect and correct errors |
| 5. Test the application | 5.1 Design and document limited tests of code<br>5.2 Undertake limited testing of the produced code to ensure that it complies with the program specification<br>5.3 Capture and document the test results |
| 6. Create and maintain documentation | 6.1 Read and interpret the supplied design document, to create the code<br>6.2 Create and maintain program documentation |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.6, 6.1 | • Analyses and interprets technical documents |
| Writing | 2.2, 2.3, 3.1, 3.3, 5.1, 5.3, 6.2 | • Completes technical documentation, selecting the appropriate vocabulary and structure for the intended audience |
| Get the work done | 1.2, 1.3, 1.4, 1.5, 1.7, 1.8, 1.9, 1.10, 2.1, 2.2, 2.3, 2.4, 3.1, 3.2, 3.3, 4.1, 4.2, 4.3, 5.1, 5.2 | • Creates, and selects, an appropriate application that meets the set requirements<br>• Uses a range of digitally-based technologies to access, extract, and share relevant information in order to achieve the required outcomes<br>• Identifies technical or conceptual issues, and applies analytical processes, to resolve these issues<br>• Uses analytical and lateral thinking to review current practices, and to develop new or improved software or systems |

# Assessment Requirements for ICTPRG527 Apply intermediate object-oriented language skills

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design and build application programs from a problem scenario and program specification
- use object oriented programming language.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain data structures
- explain small-size and medium-size application development
- define object-oriented programming concepts
- define object-oriented programming language
- explain the process and techniques related to the use of a graphical user interface (GUI), to interact with an operator
- outline the techniques to document applications.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the requirements document or object-oriented design structures
- programming languages that support object-oriented development
- the database management system (DBMS)
- the appropriate learning and assessment support

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG528 Perform ICT data conversion

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to translate information and communications technology (ICT) data from one format to another, by means of a data conversion process.

It applies to individuals in support and implementation roles who are required to convert data from one system to another.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare the system for conversion | 1.1 Obtain the data stores that are subject to conversion<br>1.2 Protect and confirm backup solutions<br>1.3 Trial conversion work in an isolated environment, secure from the production system<br>1.4 Map and document, the required data fields from the old system to the new or upgraded system |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Determine field validation requirements from conversion plans, including data field legal ranges<br>1.6 Determine the actions to be taken with the fields or records that are rejected by the conversion plan<br>1.7 Consult stakeholders on the creation of a conversion plan<br>1.8 Design the data conversion program modules from the conversion specifications<br>1.9 Code and test data conversion program modules, according to conversion specifications<br>1.10 Confirm data conversion and test the converted production data |
| 2. Perform data conversion | 2.1 Estimate and plan for conversion time<br>2.2 Prepare the production system for data conversion and take off-line<br>2.3 Undertake action to protect production data<br>2.4 Take action to ensure minimal disruption to client business requirements during the conversion process<br>2.5 Document the data rejected by conversion routines, and the reason for rejection<br>2.6 Execute the conversion program modules<br>2.7 Document the results of the conversion process, and report to the appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.5, 1.8, 1.9 | • Interprets and analyses complex technical documentation |
| Writing | 1.4, 2.5, 2.7 | • Accurately records and completes documentation, according to organisational formats and protocols<br>• Writes, and edits, documents to ensure the accuracy and consistency of information, and clarity of meaning |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Interact with others | 1.7, 2.7 | • Liaises with others to check own understanding and ensure that the objective is being met |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 1.6, 1.8, 1.9, 1.10, 2.1, 2.2, 2.3, 2.4, 2.6 | • Takes responsibility for planning, sequencing and prioritising tasks, in order to achieve the required outcomes<br>• Uses a range of digital tools and sophisticated techniques to meet the desired outcomes<br>• Identifies technical or conceptual issues, and applies analytical processes, to resolve these issues<br>• Uses analytical and lateral thinking to review current practices, and develop new or improved software or systems |

# Assessment Requirements for ICTPRG528 Perform ICT data conversion

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- define the inherent data requirements of both old and upgraded, or new systems
- remodel data to achieve successful conversion
- back up data prior to conversion
- effectively code conversion programs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain hardware and software products, including their general features and their capabilities
- explain data conversion tools and data modelling methodologies
- outline the conversion from legacy systems
- outline industry-accepted database management system (DBMS) modelling.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to the:

- analysis of the source data
- business quality assurance rules associated with data
- data mappings
- logic to convert the data

© Commonwealth of Australia, 2025 Future Skills Organisation

- plan of the conversion routines
- software development environment
- technical requirements
- data conversion plan
- appropriate learning and assessment support.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG529 Apply testing techniques for software development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop test strategies and implement tests to assure the reliability and quality of an application.

It applies to individuals who are responsible for test plan preparation, execution and maintenance, the reporting of tests and defect management in an application. These individuals include quality assurance analysts, test analysts, testers, system testers, software testers, test leads and developers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan and design the test | 1.1 Analyse and review software development specifications<br>1.2 Determine the test context, scope, standard and methodology<br>1.3 Determine the test types and tools<br>1.4 Determine test input data requirements<br>1.5 Design the test plan, and test cases, using various test design |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | techniques |
| 2. Prepare the test environment | 2.1 Analyse and review documents to prepare the test environment<br>2.2 Determine test environment requirements<br>2.3 Build and set up the test environment |
| 3. Implement and execute the test | 3.1 Build input data for testing<br>3.2 Create the test suite or script from test cases<br>3.3 Execute the test cases<br>3.4 Create the test record to store test result |
| 4. Manage defect and testing process | 4.1 Evaluate and report the test results<br>4.2 Track the defect and verify the fixes<br>4.3 Maintain and archive test ware |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.1 | • Reviews, and evaluates, technical and business requirements |
| Writing | 4.1 | • Develops the technical reports and documentation appropriate for the target audience |
| Get the work done | 1.2, 1.3, 1.5, 2.2, 2.3, 3.1, 3.2, 3.3, 3.4, 4.2, 4.3 | • Takes responsibility for planning, sequencing and prioritising processes, and tasks, to achieve the required outcomes<br>• Applies systematic and analytical problem-solving processes, to develop the appropriate security access control strategies<br>• Uses a range of digital tools and sophisticated techniques to meet the desired outcomes |

# Assessment Requirements for ICTPRG529 Apply testing techniques for software development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop a test-plan document and test cases, to verify the completeness, reliability and performance of an application, according to requirement specifications
- analyse and prepare the test environment, and execute test cases, by using automated test tools
- document and manage the test result, by performing an application debugging process, and re-testing the application.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the characteristics of the programming language
- explain the input and output requirements
- outline software development life cycle (SDLC) methodologies
- define system layers such as the data network, hardware, operating system, database management systems, web servers, application servers, and client deployment
- explain the processes and techniques related to small-size application development.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- a test environment that closely resembles the production environment

© Commonwealth of Australia, 2025 Future Skills Organisation

- business, functional, system and user requirements
- a system or application suitable for testing
- the appropriate learning and assessment support, when required

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG601 Develop advanced mobile multi-touch applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, develop, debug, test and deploy applications, for hand-held digital devices using the advanced features of these devices.

It applies to individuals with information and communications technology (ICT) skills who work as mobile device application developers. They may be programmers, game developers, designers and testers, who are working in the area of mobile applications development.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Work effectively on the target platform | 1.1 Review the requirements<br>1.2 Establish the platform<br>1.3 Install the required development tools, and environment<br>1.4 Use the available debugging tools and techniques<br>1.5 Deploy the completed applications on the target device, and for |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | public download<br>1.6 Test the application using an emulator |
| 2. Develop an application for a multi-touch device | 2.1 Design and code the application, responding to events<br>2.2 Design and code the application, responding to taps, touches and gestures<br>2.3 Use a model view controller to design the approach<br>2.4 Develop the application, making effective use of auto-rotation and auto-resizing facilities |
| 3. Develop the code using features of the mobile device | 3.1 List the available features of the mobile device<br>3.2 Write code requiring web connectivity, and using web services<br>3.3 Write code that communicates with another device, using a communication protocol<br>3.4 Write code using an application programming interface (API) related to at least one other advanced device feature |
| 4. Use available data persistence facilities | 4.1 Write code, to read and write, to the devices file system<br>4.2 Use synchronisation techniques to synchronise data between the device and external data sources<br>4.3 Write code to make use of available database facilities, on the chosen device |
| 5. Develop applications that are secure and stable | 5.1 Determine and apply the performance objectives<br>5.2 Ensure memory management, using tools and techniques effectively<br>5.3 Use tools and techniques to evaluate performance<br>5.4 Eliminate zombies, using appropriate tools and techniques |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.3 | • Identifies, analyses, and interprets complex technical and business protocol material in order to determine business |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | requirements |
| Writing | 3.1, 3.2, 3.3, 3.4, 4.1 | • Develops complex and technical material, using industry-specific metalanguage that allows users to define their own customised markup languages for displaying documents on the world wide web (WWW) |
| Numeracy | 2.2, 3.2 | • Extracts, evaluates and manipulates the mathematical information embedded in a range of tasks and texts |
| Navigate the world of work | 3.3 | • Recognises and responds to both, explicit and implicit, protocols within familiar work contexts |
| Get the work done | 1.2, 1.3, 1.4, 1.5, 1.6, 2.1, 2.2, 2.3, 2.4, 3.2, 3.3, 3.4, 4.1, 4.2, 5.1, 5.2, 5.3, 5.4 | • Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot, and understand the uses and potential of new technology<br>• Is acutely aware of the importance of understanding, monitoring, and controlling access to digitally stored and transmitted information<br>• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences, and consider implementation issues, and contingencies<br>• When dealing with complex issues, may use intuition to identify common problems in building, and deploying mobile applications, and completing basic program debugging |

# Assessment Requirements for ICTPRG601 Develop advanced mobile multi-touch applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design applications for small devices that allow multi-touch user input and have advanced mobile features
- build and test these applications
- deploy these applications onto mobile devices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the hardware, and networking, requirements of a multi-touch application
- describe and apply object-oriented programming
- identify and describe user interface designs, and their application
- describe web design methodology and its integration with hand-held devices
- identify and describe typical mobile devices that use multi-touch technologies
- summarise extensible markup language (XML) programming, and web services
- describe techniques for developing software applications.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the programming and software development industry, and include access to:

- hand-held devices and simulators
- an integrated development environment (IDE)

© Commonwealth of Australia, 2025 Future Skills Organisation

- the internet and web services
- the server system, with sufficient privileges to deploy applications
- specific tools and licences, depending on the particular platform.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG602 Manage the development of technical solutions from business specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage the process of compiling client business specifications, to produce business solutions for consideration.

It applies to individuals with the project management, business, and technical skills necessary to manage complex technology projects within the information and communications technology (ICT) industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Obtain the business requirements | 1.1 Ensure that the business requirements and business specifications have been obtained from the client or the appropriate person<br>1.2 Manage the team's identification of the client's business model<br>1.3 Ensure that the technical specifications for the business problem have been determined |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Manage the confirmation of key stakeholder requirements with stakeholders<br>1.5 Confirm the documentation of business objectives, technical requirements, and the problem |
| 2. Evaluate the impact of the technical requirements | 2.1 Review business problems, opportunities and objectives<br>2.2 Confirm that the technical requirements are complete<br>2.3 Review the hardware, software and network requirements<br>2.4 Coordinate the investigation into the processes to be changed by the business solution<br>2.5 Review the evaluation document, on the impact of the technical requirements on the business |
| 3. Produce technical business solutions | 3.1 Confirm the technical solutions produced in response to problems and business requirements<br>3.2 Review the costs involved in implementing the solutions<br>3.3 Review the recommendation from a range of supplier products, to determine which one best meets the technical requirements<br>3.4 Review, and report on, the technical solutions addressing the business specifications, and provide recommendations against the business requirements |
| 4. Document and validate the agreed solutions | 4.1 Ensure the report is forwarded to the appropriate person for feedback<br>4.2 Manage the feedback and incorporate changes, as required<br>4.3 Coordinate the redistribution of adjusted reports to the appropriate person<br>4.4 Obtain sign-off on the final business solution |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 1.5, 2.1, 2.2, 2.3, 2.5, 3.1, 3.4, 4.2 | • Recognises, and interprets, complex technical and operational documentation, to determine and confirm job requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.4, 4.2 | • Develops a broad range of material including reports, design solutions, technical specifications and recommendations in required formats, for a specific audience, using clear and detailed language in order to convey explicit information, requirements, and recommendations |
| Oral Communication | 1.3, 1.4, 4.2 | • Articulates technically complex concepts and operational, and business-related, matters using the specific and relevant language suitable to the audience, and liaises with diverse personnel<br>• Uses listening and questioning skills to confirm understanding for requirements |
| Numeracy | 2.1, 2.5, 3.2 | • Uses mathematical formulas and calculations to estimate and plan project costs |
| Interact with others | 1.1, 1.2, 4.1, 4.3, 4.4 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit the purpose and audience<br>• Fosters a collaborative culture within own sphere of influence, facilitating a sense of commitment and cohesion, and highlighting, and using the strengths of those involved |
| Get the work done | 1.1, 1.2, 2.3, 2.4, 3.1, 3.3 | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot, and understand, the uses and potential of new technology<br>• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved, and how it may be interpreted, and used<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences, and consider implementation issues and contingencies<br>• Uses a nuanced understanding of context to adapt varied business procedures to requirements, depending on operational contingencies, risk situations and environments |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTPRG602 Manage the development of technical solutions from business specifications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- adapt technologies to specified technical solutions
- use site design software and hardware
- evaluate client specifications against accepted industry practices
- produce technical solutions from business specifications
- produce information that can be shared between businesses
- apply design concepts to business solutions
- produce technical reports
- make recommendations, and offer optimum design solutions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the business processes for a project
- outline the client business domain, including the client organisation structure and business functionality
- explain compatibility issues and resolution procedures
- outline the configuration of internet protocol (IP) networks
- describe the importance of customer and business liaison
- summarise desktop applications and the operating system (OS), as required
- explain the procedures for linking processes
- outline project management methodologies and processes
- explain security protocols, standards and data encryption
- explain technologies, such as:

© Commonwealth of Australia, 2025 Future Skills Organisation

- access networks
- core networks
- information and communications technology (ICT) network topologies
- mobile cellular networks
- network protocols and OS
- optical networks and principles
- radio frequency (RF) networks and principles
- radio frequency identification (RFID) hardware and software

- describe the development platform that provides the tools to build, and deploy, applications into target platform environments.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the programming and software development industry, and include access to:

- the client's functional requirements
- business specifications
- the database and simulation software
- organisational guidelines
- the network or computer layout
- site-design software and hardware
- information on a range of ICT business solutions.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRG604 Create cloud computing services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, build, test and deploy web services and cloud computing applications to specifications.

It applies to individuals, in computer programmer roles, with the information and communications technology (ICT) skills required to create and install web services and cloud computing applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Programming and software development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Design web service or cloud computing application | 1.1 Gather requirements for the web service or cloud computing application<br>1.2 Determine the development environment and tools required to create web service or cloud computing application<br>1.3 Identify any possible big data applications<br>1.4 Define architecture and framework |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Build web service | 2.1 Itemise required functionality<br>2.2 Build web service in the determined environment to meet required functionality |
| 3. Build cloud computing application | 3.1 Determine required functionality<br>3.2 Build cloud computing application in the determined environment to meet the required functionality |
| 4. Test web service or cloud computing application | 4.1 Test web service or cloud computing application for overall functionality according to requirements<br>4.2 Iterate design or build until test results meet requirements |
| 5. Deploy web service or cloud computing application | 5.1 Deploy web service or cloud computing application to the specified environment<br>5.2 Publish web service or cloud computing application to the specified environment |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 3.1, 4.1 | • Recognises and interprets complex technical and operational documentation to determine and confirm job requirements |
| Writing | 1.3, 1.4, 2.1, 3.2, 4.2, 5.1, 5.2 | • Develops complex documentation in required formats using clear and detailed language to convey explicit information, requirements and recommendations<br>• Writes and edits computer code and technical data ensuring correct syntax |
| Oral Communication | 1.1 | • Uses listening and questioning skills to confirm understanding for requirements<br>• Articulates technically complex concepts and operational and business-related matters using specific and relevant language suitable to audience |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 2.2, 3.1, 3.2, 4.1, | • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 4.2, 5.1, 5.2 | and understands the uses and potential of new technology<br>• Uses a broad range of strategies to store, access and organise virtual information recognising that design choices will influence what information is retrieved and how it may be interpreted and used<br>• Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information<br>• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies<br>• Uses understanding of context to address common problems in operating a web service or cloud computing application and performs basic debugging when required |

# Assessment Requirements for ICTPRG604 Create cloud computing services

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design, build, test and deploy a web service to specification that can be accessed and used from a separate web application
- design, build, test and deploy a cloud computing application to specification that can be accessed from a variety of portals
- document the completed development.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe the development tools required to produce services deployable through cloud computing
- summarise the internet infrastructure necessary for cloud computing
- describe object-oriented programming and its application to cloud computing
- describe database access and manipulation on the web using:
  - hypertext markup language (HTML)
  - eXtensible markup language (XML)
- describe the term "big data" and explain its relevance to cloud computing.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the programming and software development industry and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- specific requirements, including client and functionality requirements
- integrated development environment (IDE) for the determined language
- the database server with tools to access data source and develop queries
- the web server for the determined environment
- the internet and a web browser.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTPRO501 Develop training, marketing and sales resources for telecommunications products

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to develop documentation and training material, providing product-specific technical information resources for use by technical, sales and training personnel within an organisation.

It applies to individuals with responsibilities for professional development on product-specific material who may be technical or semi-technical staff involved in sales and marketing of new and emerging technologies in next generation networks (NGN). The training resources, including web resources, are likely to be for new products using emerging technologies, supplied by the service provider.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – product skills and advice

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| 1. Prepare information and formats for training, marketing and sales resources | 1.1 Identify target audience, product type, resources type, format and purpose to be developed<br>1.2 Locate enterprise resources relating to telecommunications product information and technical data suitable for training, such as marketing and sales materials, manufacturer's documentation and sites for suitable resources<br>1.3 Research range of formats for resources and materials to meet requirements of identified audience<br>1.4 Determine specifications for resource material and confirm with client for approval |
| 2. Develop resources and obtain approvals | 2.1 Produce draft training, marketing and sales resources in consultation with relevant user groups and training resource designers<br>2.2 Check that resources are for latest product available for sales and marketing<br>2.3 Produce clear and accurate training manuals and user guides<br>2.4 Confirm accuracy of information with appropriate technical staff prior to publication or production, and obtain approvals |
| 3. Monitor distribution and maintenance of resources | 3.1 Develop schedule for distribution of resources consistent with product or facility release and list of users<br>3.2 Seek feedback on content and presentation from users and make improvements as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1-1.4, 2.2, 2.4, 3.2 | • Critically organises, evaluates and applies content from a range of structurally complex texts including client briefs, product and technical information and interpretation of feedback from users |
| Writing | 1.3, 1.4, 2.1, | • Generates complex written texts appropriate for a specific audience, demonstrating control over a |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 2.3, 3.1, 3.2 | broad range of writing styles and purposes |
| Oral Communication | 1.1, 1.4, 2.1, 2.4, 3.2 | • Establishes and maintains complex and effective rapport with clients and colleagues, with a depth of understanding that includes multiple and unstated meanings |
| Navigate the world of work | 1.4, 2.4 | • Recognises and follows explicit and implicit protocols in relation to liaison with clients and staff<br>• Ensures knowledge of legislative requirements and products is kept up to date to provide accurate information |
| Get the work done | 1.1-1.4, 2.1, 2.2, 3.2 | • Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies in relation to resource production<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account when determining content and format requirements<br>• Adopts content and presentation proposals suggested by others and finds ways to make them work in practice<br>• Reflects on the ways in which digital systems and tools are used or could be used to develop resources, and begins to recognise strategic as well as operational applications |

# Assessment Requirements for ICTPRO501 Develop training, marketing and sales resources for telecommunications products

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- interpret and use equipment and system manuals, specifications, relevant enterprise policy and documentation
- develop product training, marketing and sales resources for different knowledge and skill levels and applications
- evaluate web based training, marketing and sales resources
- implement improvements based on feedback
- provide a range of resource types, including print based and web based.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- evaluate common client telecommunications applications and related equipment
- investigate work health and safety (WHS) and regulatory requirements relevant to training and marketing
- investigate and compare specific product knowledge and reference documents relevant to products for inclusion in appropriate resources
- define relevant technical terminology
- outline the steps in the process of developing product resources.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – product skills and advice field of work and include access to:

- a workplace where technical information may be developed and distributed to technical, sales and training staff
- relevant product technical information, databases, legislative requirements and other site and project related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN201 Install a satellite antenna

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to assemble, connect, align and test equipment according to plans, specifications and site specific requirements.

It applies to individuals who work on single and multiple dwellings, commercial buildings, telecommunications structures and at ground level to enable signals from geostationary communications satellites. Installations might be new or existing, stand alone or be a part of a site with multiple antennas.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for work on satellite antenna | 1.1 Prepare for installation, applying all relevant legislation, codes, regulations and standards, and identify any safety issues<br>1.2 Organise resources to be available on site |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Contact client to arrange access to site and notify about possible outage<br>1.4 Organise tools and equipment and ensure they are in safe working order and adjusted to manufacturer's specifications<br>1.5 Obtain details of satellite to be acquired and precise details of satellite antenna location<br>1.6 Determine azimuth and elevation for satellite receiving antenna<br>1.7 Determine polarisation angle of satellite receiving antenna feedhorn<br>1.8 Determine suitable position to mount antenna with agreement from client |
| 2. Assemble and mount satellite antenna and cables | 2.1 Assemble satellite antenna on site according to plans, specifications and enterprise guidelines using safe industry practices<br>2.2 Connect coaxial cable to antenna and install lightning protection devices<br>2.3 Mount satellite antenna on to installed mounting arrangements and set initial antenna azimuth, elevation and polarisation |
| 3. Test and align antenna system | 3.1 Connect installed antenna system to satellite receiver or test equipment and make final adjustments to azimuth, elevation and polarisation to optimise signal level and quality<br>3.2 Conduct performance tests according to manufacturer's specifications and enterprise guidelines<br>3.3 Interpret test results, compare with manufacturer's design specifications and make adjustments |
| 4. Complete administrative duties | 4.1 Record test results and complete appropriate records<br>4.2 Secure and clean up site to original condition in environmentally safe manner<br>4.3 Notify client of work completion and obtain sign off |

# Foundation Skills

**Foundation Skills**

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.4, 2.1, 3.2, 3.3 | • Recognises and interprets textual information from relevant sources to determine specifications, enterprise guidelines and plans |
| Writing | 1.3, 1.8, 4.1, 4.3 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications with clients |
| Oral Communication | 1.3, 1.8, 4.3 | • Uses specific and relevant language to clearly articulate operational and site matters<br>• Uses questioning and listening techniques to determine the views and opinions of others |
| Numeracy | 1.6, 1.7 | • Analyses numerical information to measure angles, evaluate technical data, interpret results and take measurements |
| Navigate the world of work | 1.1, 1.4, 2.1, 4.2 | • Takes personal responsibility for adherence to legal and regulatory requirements, with specific reference to safe industry practices<br>• Understands the main tasks, responsibilities and boundaries of own work |
| Get the work done | 1.2, 1.4, 1.5, 1.8, 2.1-2.3, 3.1-3.3 | • Determines job priorities, sequences the steps involved in clearly defined and familiar tasks, and identifies and assembles the resources and access required<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account<br>• Identifies and implements standard solutions for routine problems |

# Assessment Requirements for ICTRFN201 Install a satellite antenna

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare the site and obtain resources in preparation for installation
- determine satellite type and orientation
- assemble, install, align and test a satellite antenna according to plans and specifications, and site specific safety requirements
- conduct performance tests according to manufacturer's specifications and enterprise guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the following features of a satellite antenna:
  - directivity
  - operation of parabolic reflector and feedhorn
  - optimum placement
  - pattern
  - polarisation
- discuss bit error ratio (BER)
- summarise coaxial cable types and properties
- discuss electromagnetic waves with reference to:
  - absorption by trees and buildings
  - effect of weather on absorption
  - awareness of exposure to electromagnetic radiation (EMR)

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline legislation, codes of practice and other formal agreements that directly impact on antenna installation
- explain modulation:
  - bandwidth
  - individual spectrum shape of digital satellite television signals
- discuss modulation error ratio (MER)
- outline radio frequency (RF) spectrum terminology related to bands used for satellite broadcasting (C, S, L, Ku, Ka bands)
- outline satellite antenna product knowledge
- summarise signal level expressed in dBuV units
- explain specific work health and safety (WHS) requirements that impact on the installation of satellite antenna equipment.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- a suitable site for satellite antenna installation
- a range of antennas and cables currently used in industry
- a range of general tools and test equipment required for satellite antenna installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN202 Install a terrestrial antenna

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to assemble, connect and test receiving antenna equipment according to plans, specifications and site specific requirements.

It applies to individuals who might work on single and multiple dwellings, commercial buildings and other telecommunications structures that may be new or existing, stand alone or be a part of a site with multiple antennas.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for work on terrestrial antenna | 1.1 Prepare for installation, applying all relevant legislation, codes, regulations and standards, and identify any safety issues<br>1.2 Organise resources to be available on site<br>1.3 Contact client to arrange access to site and notify about possible |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | outage<br>1.4 Organise tools and equipment, and ensure they are in safe working order and adjusted to manufacturer's specifications |
| 2. Assemble and mount antenna and coaxial cable | 2.1 Assemble antenna on site according to plans, specifications and enterprise guidelines using safe industry practice<br>2.2 Connect coaxial cable to antenna and install lightning protection devices<br>2.3 Mount antenna to structure, and set polarisation and initial antenna azimuth and elevation |
| 3. Test and align antenna system | 3.1 Connect installed antenna system to appropriate test equipment and pan antenna to optimise signal across all specified channel frequencies<br>3.2 Conduct performance tests according to manufacturer's specifications and enterprise guidelines<br>3.3 Interpret test results, compare with manufacturer's design specifications and make adjustments |
| 4. Complete administrative duties | 4.1 Record test results and complete appropriate records<br>4.2 Secure and clean up site to original condition in environmentally safe manner<br>4.3 Notify client of work completion and obtain sign off |

# Foundation Skills

# Assessment Requirements for ICTRFN202 Install a terrestrial antenna

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- organise the site and obtain relevant resources in preparation for installation
- assemble, install, align and test a terrestrial antenna according to plans and specifications, and site specific safety requirements
- conduct performance tests according to manufacturer's specifications and enterprise guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the following features of an antenna:
  - directivity
  - front to back ratio
  - optimum placement
  - pattern
  - polarisation
- discuss bit error ratio (BER)
- summarise coaxial cable types and properties
- discuss electromagnetic waves including:
  - absorption by trees and buildings
  - awareness of exposure to electromagnetic radiation (EMR)
  - reflection

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline legislation, codes of practice and other formal agreements that directly impact on antenna installation
- explain modulation including:
  - bandwidth
  - individual spectrum shape of analog and digital television signals and digital audio broadcasting plus (DAB+) digital radio signals
- discuss modulation error ratio (MER)
- outline radio frequency (RF) spectrum including:
  - Australian DAB+ digital radio channel frequencies
  - Australian television ultra high frequency (UHF) and very high frequency (VHF) channel plan (digital and analog)
  - terminology related to bands used for broadcasting (Bands I , II, III, IV and V)
- explain signal level expressed in dBuV units
- discuss specific work health and safety (WHS) requirements that impact on the installation of terrestrial antenna equipment
- summarise television antenna product knowledge.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- a suitable site for satellite antenna installation
- a range of antennas and cables currently used in industry
- a range of general and test equipment required for satellite antenna installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN301 Install a radio communications antenna and feedline

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install and test a communications antenna and feedline on a range of fixed or mobile structures

It applies to individuals working as telecommunications and radio communications technicians who operate within cellular, radio broadband and digital TV reception applications. Installations may be new or existing, standalone or part of a site with multiple antennas.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan assembly of antenna system | 1.1 Arrange access to site according to required procedure<br>1.2 Apply all relevant legislation, codes, regulations and standards in planning process |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Obtain relevant antenna specifications, requirements and radio communication site management book (RCSMB) from appropriate personnel<br>1.4 Organise appropriate installation personnel to be available on site<br>1.5 Assess relevant hazard levels from RCSMB and take appropriate preventative action according to prescribed safety requirements<br>1.6 Identify other antennas at site location and notify those who may be affected by outages<br>1.7 Inspect antenna system and feedline for physical damage before further work is performed<br>1.8 Organise tools and equipment and ensure they are in safe working order and adjusted to manufacturer's specifications |
| 2. Assemble, mount and align antenna and prepare feedline | 2.1 Follow site specific safety requirements and enterprise work health and safety (WHS) processes and procedures<br>2.2 Assemble antenna system in safe manner according to manufacturer's instructions<br>2.3 Mount antenna with correct azimuth and polarisation according to manufacturer's instructions and work practices<br>2.4 Install radome to antenna if provided<br>2.5 Install lightning protection systems according to plans and specifications<br>2.6 Align antenna in horizontal and vertical planes to maximise signal |
| 3. Test antenna installation and document test results | 3.1 Conduct performance tests in safe manner according to manufacturer's specifications and instructions<br>3.2 Record, interpret and compare test results with manufacturer's data or design specifications<br>3.3 Confirm correct overall operation of antenna system |
| 4. Complete administrative tasks and clean up site | 4.1 Complete and store appropriate records and test results according to enterprise policy<br>4.2 Label radio frequency (RF) transmitter equipment and feedlines according to legislation<br>4.3 Notify all affected by outage that normal operation can resume<br>4.4 Clean, pack and store all tools and test equipment, and organise transport in suitable protective casing where appropriate<br>4.5 Restore any changes made to worksite to client's satisfaction and obtain sign off |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.8, 2.2, 2.5, 3.1, 4.1 | • Recognises and interprets textual information from relevant sources to determine specifications, enterprise guidelines, policy and instructional material |
| Writing | 1.4, 1.6, 3.2, 4.1-4.3 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications with clients |
| Oral Communication | 1.3, 1.4, 1.6, 4.3 | • Uses specific and relevant language to clearly articulate operational and site matters and appropriate tone for successful negotiations<br>• Uses questioning and listening techniques to determine the view and opinions of others |
| Numeracy | 2.6, 3.1, 3.2 | • Analyses numerical information to evaluate technical data and interpret results, take measurements and correctly calibrate equipment |
| Navigate the world of work | 1.5, 2.1-2.3, 4.2 | • Takes personal responsibility for adherence to legal and regulatory requirements with specific reference to safe industry practices<br>• Understands the main tasks, responsibilities and boundaries of own work |
| Get the work done | 1.1, 1.6-1.8, 2.3-2.5, 3.1, 3.3, 4.1, 4.4, 4.5 | • Determines job priorities, sequences the steps involved in clearly defined and familiar tasks, and identifies and assembles the resources and access required<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account<br>• Identifies and implements standard solutions for typical installation challenges<br>• Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to own enterprise policy |

# Assessment Requirements for ICTRFN301 Install a radio communications antenna and feedline

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine installation requirements and ensure site inspection activities are conducted prior to installation
- conduct installation of a communications antenna according to plans and specifications
- assess hazard levels at a radio frequency (RF) site and apply knowledge of safety precautions for self, fellow workers and the public
- mount an antenna, connect a transmission line and physically align an antenna
- use appropriate test equipment to perform a return loss sweep measurement or a measurement of forward and reflected power on at least two different antenna systems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline current industry practice for antenna installation including:
  - earthing
  - lightning protection
- describe the procedures and equipment required for:
  - antenna sweep testing to measure return loss
  - measurement of distance to fault
  - measurement of feedline insertion loss
  - measurement of forward and reflected RF power
- summarise features of instrument and equipment test methods and performance requirements

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline legislation, codes of practice and other formal agreements that directly impact on operation and testing of radio communications antennas and equipment
- identify the general components and installation of antennas and feedlines
- discuss the application of RF and electromagnetic radiation (EMR) standards and specific work health and safety (WHS) requirements
- discuss the impact on the use and testing of radio communications instruments and equipment
- identify the types of antennas that can withstand extreme environments
- summarise typical issues and challenges that occur in telecommunications antenna installations.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- a site for antenna installation
- a range of antennas and feedlines currently used in industry
- a range of general tools and test equipment required for antenna installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN302 Install mobile telecommunications in motor vehicles

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to fit radio transceivers and cellular mobile phone handsets with powered docking cradles and to install peripheral components such as external antenna, microphone, loudspeaker, mobile data terminals and global positioning systems (GPS) in domestic, commercial or industrial motor vehicles.

It applies to individuals working as installers and technicians who liaise with clients to determine all technical requirements and interpret all regulatory and legislative requirements appropriately.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan for installation of mobile telecommunications in motor vehicles | 1.1 Obtain relevant legislation, codes, regulations and standards and follow work health and safety (WHS) and environmental requirements for given work<br>1.2 Obtain mobile telecommunications equipment and manufacturer's |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | installation documentation<br>1.3 Determine critical automotive electrical systems that need to be considered during installation process to prevent any damage to vehicle system<br>1.4 Verify installation requirements from client and advise client of issues affecting performance<br>1.5 Obtain tools and test equipment required for safe work practices |
| 2. Install mobile equipment | 2.1 Attach primary mobile telecommunications equipment to vehicle using fixing and fastening hardware, clear of air bag deployment and according to client, vehicle and equipment manufacturer and WHS requirements<br>2.2 Wire primary mobile telecommunications equipment to vehicle electrical system using industry wiring practices without impacting on other electrical systems<br>2.3 Attach and wire peripheral mobile telecommunications equipment and components of installation to client’s and manufacturer's requirements<br>2.4 Replace any existing fittings or vehicle components removed during installation and restore to original condition<br>2.5 Test completed installation to verify that operation of critical automotive electrical systems have not been affected, and rectify if required |
| 3. Complete installation | 3.1 Restore vehicle and worksite to client's satisfaction by disposing of waste materials according to environmental requirements<br>3.2 Note and document any damage that may have occurred during installation and report according to enterprise procedures<br>3.3 Instruct client on operation of installed equipment<br>3.4 Complete all administrative tasks and file according to enterprise requirements |

# Foundation Skills

# Assessment Requirements for ICTRFN302 Install mobile telecommunications in motor vehicles

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- obtain installation parameters and compliance requirements in preparation for installation
- install cable loom, wiring mobile and peripheral equipment
- test the equipment to verify correct installation and operation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline customer service principles, particularly dealing with clients face to face
- discuss electrical fundamentals
- summarise electromagnetic radiation (EMR)
- discuss enterprise or service-specific knowledge of products and services supplied
- outline objectives and methods of training for product use for client education
- summarise work health and safety (WHS) principles and enterprise-specific job safety analysis (JSA) requirements
- provide an overview of mobile radio and cellular radio product range and connection methods
- summarise pre-installation enterprise-specific requirements
- explain the following aspects of radio frequency (RF):
  - principles
  - safety
  - theory
- explain return path technology

© Commonwealth of Australia, 2025 Future Skills Organisation

- discuss telephony principles to support return path awareness
- summarise test set ups for final testing
- outline vehicle electrical, electronics and computer-managed systems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- vehicles and sites at which installation may be conducted
- testing equipment currently used in industry
- relevant regulatory and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to connect, set up and test Worldwide Interoperability for Microwave Access (WiMAX) customer premises equipment (CPE) in homes and commercial premises.

It applies to individuals working as technicians who connect indoor units to a customer network.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for WiMAX equipment installation | 1.1 Arrange access to site according to required procedure<br>1.2 Verify customer requirements, type of WiMAX CPE equipment and location of proposed installation according to plans obtained from authorised personnel |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Prepare tools, equipment and CPE required for installation |
| 2. Install outdoor unit and antenna | 2.1 Make worksite safe by identifying existing and potential hazards<br>2.2 Comply with relevant legislation, codes, regulations and standards, work health and safety (WHS) and environmental requirements<br>2.3 Mount outdoor unit according to manufacturer's specifications and enterprise plans<br>2.4 Connect outdoor unit to indoor unit using specified cable<br>2.5 Position antenna towards distant WiMAX base station for preliminary orientation<br>2.6 Align unit for maximum signal strength using received signal strength indication (RSSI) display<br>2.7 Record installation and alignment details<br>2.8 Connect indoor unit and accessories to customer equipment |
| 3. Test performance of installation | 3.1 Test WiMAX CPE according to manufacturer's procedures<br>3.2 Check operating environment does not degrade test results<br>3.3 Evaluate test results to verify operational performance with customer |
| 4. Restore site and complete documentation | 4.1 Restore worksite to customer's satisfaction<br>4.2 Complete reports on installation<br>4.3 Notify customer and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.3, 3.1 | • Recognises and interprets textual information from relevant sources to determine job specifications and regulatory and legislative requirements |
| Writing | 2.7, 4.2, 4.3 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications with customers |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 2.6, 3.3 | • Analyses numerical information to interpret technical data |
| Oral Communication | 1.2, 4.3 | • Uses specific and relevant language to clearly articulate technical information<br>• Uses appropriate tone and listening techniques to determine the understanding of others |
| Navigate the world of work | 2.1, 2.2 | • Takes personal responsibility for adherence to legal and regulatory requirements, with specific reference to safe industry practices<br>• Understands the nature and purpose of own role and associated responsibilities |
| Get the work done | 1.1-1.3, 2.3-2.6, 2.8, 3.1, 3.2, 4.1 | • Determines job priorities and sequences the steps involved in clearly defined and familiar tasks, and identifies and assembles the resources and access required<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account<br>• Identifies and implements standard solutions for typical installation challenges<br>• Reflects on outcomes and identifies what worked and where things could be done differently in the future |

# Assessment Requirements for ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- ensure that the site access, resources and installation requirements are confirmed prior to installation
- install and test Worldwide Interoperability for Microwave Access (WiMAX) customer premises equipment (CPE) outdoor units
- install indoor unit and connect to customer network
- reinstate site, document and complete installation reports.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the wireless standard ‘WiMAX’ including:
  - general characteristics of WiMAX networks e.g. mobile broadband and internet access
  - applications of WiMAX technology
  - terminology associated with WiMAX technologies
  - range and function of gateway devices
  - protocols IEEE 802.16 and IEEE 802.11
- identify and discuss the relevant legislation, codes, regulations and standards, work health and safety (WHS) and environmental requirements
- explain the impact of location on microwave propagation and losses.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which WiMAX installations can be conducted
- tools and equipment required for installation
- relevant regulatory and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN304 Construct and test a radio communications device

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to plan, build and review a radio communications transmitting or receiving device.

It applies to individuals working as radio maintenance technicians, radio installers and radio repairers who use specialist equipment and work within regulatory and legislative frameworks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to construct radio communications device | 1.1 Prepare for construction, applying all relevant legislation, codes, regulations and standards, and identify any safety issues<br>1.2 Determine details of radio communications device to be constructed from project specifications<br>1.3 Produce wiring diagram, component list and block diagram of radio |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | communications device to prepare for construction and testing of device<br>1.4 Draw up plans showing method of construction and enclosure details<br>1.5 Designate suitable test points along signal flow paths on circuit diagram for testing of functional blocks<br>1.6 Produce test setups to evaluate performance of radio communications device<br>1.7 Obtain tools and test equipment |
| 2. Construct and test radio communications device | 2.1 Assemble radio communications device according to circuit diagram and layout drawing<br>2.2 Test performance and operation of individual functional blocks and overall radio communications device according to test regime<br>2.3 Transmit or receive signals to evaluate qualitative performance through radio communications device |
| 3. Complete documentation and clean up worksite | 3.1 Document results of test procedures and compare with initial project specifications<br>3.2 Finalise project report and make recommendations for improvement to radio communications device<br>3.3 Remove waste from worksite according to environmental requirements and restore site to safe condition |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2 | • Recognises and interprets textual information from relevant sources to determine job specifications and regulatory and legislative requirements |
| Writing | 1.3-1.5, 3.1, 3.2 | • Uses clear, technically specific language, appropriate formatting and diagrammatic information to complete and update workplace documentation |
| Numeracy | 2.3 | • Analyses numerical information when undertaking test measurements, interpreting results and evaluating performance |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.1, 3.3 | • Takes personal responsibility for adherence to legal and regulatory requirements, with specific reference to safe industry practices<br>• Understands the nature and purpose of own role and associated responsibilities |
| Get the work done | 1.1, 1.6, 1.7, 2.1, 2.2, 3.2 | • Determines job priorities, sequences the steps involved in clearly defined and familiar tasks, and identifies and assembles the equipment, resources and access required<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account<br>• Identifies and implements standard solutions when troubleshooting and managing contingencies to adapt assembly and review procedures<br>• Reviews outcomes and identifies technical improvements that could be made |

# Assessment Requirements for ICTRFN304 Construct and test a radio communications device

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan and prepare for construction of a radio communications device
- prepare a wiring diagram and component list
- construct a radio communications device
- test a radio communications device.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain electrical symbols and circuit diagrams
- summarise the general principles of radio communications and radio propagation
- identify and outline the characteristics of:
  - radio communications components
  - device pinouts
  - part numbers
  - polarities
  - ratings
- summarise the operation and characteristics of:
  - amplifiers
  - demodulators
  - mixers
  - modulators

© Commonwealth of Australia, 2025 Future Skills Organisation

  - oscillators
- explain the principles of modulation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites where radio communications devices may be constructed and tested
- test instruments currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN305 Operate and maintain radio communications technical instruments and field equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to take measurements, find faults, undertake minor repairs and commission new instruments and equipment.

It applies to individuals with proficient technical skills including field officers from regulatory authorities or other private and public organisations. In this role, individuals must comply with radio communications transmitter licensing requirements, operator certificates for maritime and aeronautical services, work health and safety (WHS) and electromagnetic radiation (EMR) licensing requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for use of instruments and field equipment | 1.1 Plan and prepare work according to site procedures, operating environment and relevant legislation, codes, regulations and standards<br>1.2 Select measurements required to meet performance outcomes |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Read, interpret and use equipment and system manuals, specifications and relevant organisational policy to determine work requirements<br>1.4 Select and ensure equipment for work activities is ready for operation<br>1.5 Determine, address and report potential risks, hazards and environmental issues<br>1.6 Adhere to relevant emergency procedures, policy guidelines and WHS procedures to ensure safety of personnel and plant |
| 2. Test instruments and field equipment | 2.1 Perform safety checks according to instrument and equipment manual and organisational procedures<br>2.2 Confirm equipment is calibrated and calibration label is within approved timeframes<br>2.3 Select appropriate traceable calibrated equipment where measurements are required to be traceable according to national standards<br>2.4 Label and report damaged or unsafe instruments and field equipment, and send for service<br>2.5 Update operational log books |
| 3. Operate instruments and field equipment | 3.1 Optimise instrument and equipment settings for particular measurement or analysis<br>3.2 Perform measurements with optimum precision given field and technical constraints<br>3.3 Assess data for accuracy and precision against quality control information, known standards and references within measurement uncertainty |
| 4. Maintain instruments and field equipment | 4.1 Use fault finding techniques to verify and rectify faults<br>4.2 Perform preventative maintenance within limits of authorisation and report equipment wear and faults<br>4.3 Replace defective parts and make adjustments according to equipment specifications<br>4.4 Seek expert help from appropriate colleagues where problems are encountered<br>4.5 Update maintenance and calibration records according to organisational procedures |
| 5. Commission new instruments and equipment | 5.1 Arrange commissioning procedures with manufacturer's agent<br>5.2 Unpack, check and assemble instruments and equipment according to manufacturer's warranty requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 5.3 Check instrument and equipment performance against specifications prior to acceptance of item<br>5.4 Prepare operating instructions and make available to relevant personnel |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 3.3, 4.3, 5.2, 5.3 | • Recognises and interprets information from relevant sources to determine technical specifications and regulatory and legislative requirements |
| Writing | 1.5, 2.4, 2.5, 4.2, 4.5, 5.1, 5.4 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications with relevant internal and external personnel |
| Oral Communication | 1.5, 4.2, 4.4, 5.1 | • Uses specific and relevant language and appropriate tone to clearly articulate technical, operational and legal information to internal and external personnel<br>• Uses listening techniques to determine the understanding of others |
| Numeracy | 3.2, 3.3, 5.3 | • Analyses numerical information when undertaking test measurements, interpreting results, calibrating equipment and evaluating performance |
| Navigate the world of work | 1.1, 1.6, 2.1, 2.3, 4.5 | • Takes personal responsibility for adherence to legal and regulatory requirements, with specific reference to the safety of self, other personnel and the plant<br>• Understands the nature and purpose of own role and associated responsibilities |
| Get the work done | 1.1, 1.2, 1.4, 2.2, 2.4, 3.1, 4.1-4.3, 5.2 | • Determines job priorities, sequences the steps involved in clearly defined and familiar tasks, and identifies and assembles the instruments, equipment and other resources required<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and |

# Assessment Requirements for ICTRFN305 Operate and maintain radio communications technical instruments and field equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- obtain read and interpret radio communications instrument operating documentation
- prepare, operate and maintain radio communications instruments and field equipment appropriate to a radio communications environment
- comply with site risk control, work health and safety (WHS), environmental, quality and communication requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the features and operating requirements of calibrated equipment and test equipment including:
  - digital radio communications measuring equipment
  - radio frequency (RF) termination
  - spectrum analyser
  - power meter
  - modulation analyser
- outline features of instrument and equipment test methods and performance requirements
- explain legislation, codes of practice and other formal agreements that directly impact on operation and testing of radio communications instruments and equipment
- outline manufacturer’s requirements for operation and testing of radio communications equipment and calibrated equipment
- summarise measurements according to test specifications

© Commonwealth of Australia, 2025 Future Skills Organisation

- list radio communications instruments and equipment
- list and describe the common WHS requirements that impact on the use and testing of radio communications instruments and equipment
- discuss typical issues and challenges that occur with radio communications instruments and field equipment.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which instruments and field equipment can be operated
- field measurement equipment currently used in industry
- relevant instrument and equipment manuals and other procedural documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN401 Conduct radio frequency measurements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge to plan and undertake testing, including measuring, recording and interpreting results within all legislative and regulatory frameworks.

It applies to individuals who work in the field to install, maintain, upgrade and commission radio frequency (RF) telecommunications systems. These systems may include satellite and microwave, radio or television broadcasting, pay television, free to air television, radio frequency identification (RFID), mobile radio, cellular and Worldwide Interoperability for Microwave Access (WiMAX) networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan to conduct RF measurements | 1.1 Arrange access to site according to required procedure<br>1.2 Determine type of measurements required based on industry environment |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Assess impact of conducting measurements on network and advise clients and appropriate person accordingly<br>1.4 Assess previous measurement data if available |
| 2. Conduct RF measurements | 2.1 Check that prescribed safety arrangements associated with RF radiation are in place; otherwise, take corrective action<br>2.2 Monitor work activity to ensure it meets site specifications, and relevant legislation, codes, regulations and standards<br>2.3 Configure test equipment according to manufacturer's specifications<br>2.4 Conduct measurements according to planned requirements<br>2.5 Assess RF levels at occupational and non-occupational distances<br>2.6 Record all measurements and test configurations |
| 3. Analyse measurement outcomes | 3.1 Verify measurements against relevant standards and vendor specifications<br>3.2 Assess problems and variance for corrective action, and notify appropriate person according to enterprise procedures<br>3.3 Record processes and recommendations |
| 4. Document measurement results | 4.1 Complete client documentations<br>4.2 Notify client to obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.3, 3.1 | • Recognises and interprets information from relevant sources to determine technical specifications and regulatory and legislative requirements |
| Writing | 1.3, 2.6, 3.2, 3.3, 4.1, 4.2 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications with clients |
| Oral Communication | 1.3, 3.2, 4.2 | • Uses specific and relevant language and appropriate tone to provide and ask for technical, operational and legal advice |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Uses listening techniques to determine understanding |
| Numeracy | 1.4, 2.4, 2.5, 3.1 | • Evaluates and reviews numerical information when undertaking test measurements, interpreting results, calibrating equipment and evaluating performance |
| Navigate the world of work | 2.1, 2.2, 3.2 | • Takes personal responsibility for adherence to legal and regulatory requirements, with specific reference to safety<br>• Understands the nature and purpose of own role and associated responsibilities |
| Get the work done | 1.1-1.3, 2.3, 3.2, 3.3 | • Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks<br>• Identifies and assembles the instruments, equipment and access required to competently undertake the job<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account<br>• Diagnoses and implements standard solutions to minimise measurement errors |

# Assessment Requirements for ICTRFN401 Conduct radio frequency measurements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan and conduct radio frequency (RF) testing using appropriate equipment and instruments
- measure, record and interpret test results
- monitor work to meet related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss the principles and operation of the following
  - analog and digital modulation methods
  - logarithmic units
  - standard test procedures and test setups
  - transmitter and receiver architectures
- discuss the principles of radio frequency (RF) operation including:
  - instrument and features and types
  - radiation hazards
  - safety practices.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites for RF measurements
- a range of test equipment and items to test
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN402 Select antenna system for radio communications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to interpret industry practices and theories, and select appropriate antenna equipment for small projects or parts of larger projects to a job specification.

It applies to individuals working alone or responsible for a technical team within regulatory authorities or other private and public organisations where they combine technical radio communications skills with broader organisational and administrative skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to select antenna system | 1.1 Establish extent of project from design brief or specification within team environment<br>1.2 Obtain and review plans and drawings of existing or proposed installation site |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Determine whether antenna system hardware requires secure hut or shelter<br>1.4 Determine antenna requirements and antenna feedline requirements from design brief or specifications, and research available commercial products<br>1.5 Determine earthing components to meet regulatory and earthing requirements of antenna system<br>1.6 Prepare antenna feedline route to comply with job specifications and regulatory requirements<br>1.7 Identify installation options, and assess against performance requirements and client requirements |
| 2. Select antenna system | 2.1 Evaluate potential antenna system solutions that satisfy required performance, budgetary and regulatory requirements, and are suitable for installation in specified environment<br>2.2 Make recommendations and select optimum antenna system |
| 3. Document antenna system *selection* | 3.1 Document calculations, final specifications and reasons for selection of antenna system<br>3.2 Prepare final report, including documentation and drawings of selected antenna system, and distribute to appropriate persons in accordance with enterprise policies and procedures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 1.6, 2.1, 3.2 | • Examines and interprets plans, specifications and data from relevant sources to determine all technical requirements |
| Writing | 3.1, 3.2 | • Uses clear, specific and industry related terminology in appropriate formats to complete and update workplace documentation |
| Numeracy | 1.4, 2.1, 2.2 | • Evaluates and reviews numerical information when evaluating budgetary considerations, test results and technical data, and when converting values to ratios |
| Interact with others | 1.1, 2.2, 3.2 | • Collaborates with others as part of familiar routine activities and contributes to specific activities requiring joint responsibility and accountability |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Understands what to communicate to relevant personnel in routine work situations |
| Get the work done | 1.2, 1.3, 1.5-1.7, 2.1, 2.2 | • Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks<br>• Identifies and assembles the instruments, equipment and other resources required to competently undertake the job<br>• Uses formal decision making processes with support to clarify goals in more complex, non-routine situations<br>• Gathers information and identifies and evaluates choices against a limited set of criteria<br>• Applies formal problem solving processes, breaking difficult issues into manageable parts and identifying relevant options for action |

# Assessment Requirements for ICTRFN402 Select antenna system for radio communications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- identify the antenna installation parameters
- select an antenna system required to meet the parameters
- determine the feedline installation from design and specifications
- document the recommendations for the antenna system selection
- comply with specifications and regulatory requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the principles of antenna wave propagation and the impact on antenna array design
- describe the principles of transmission line design and operation, and the impact on antenna design and installation including:
  - allowable loss in dB
  - characteristic impedance
  - mechanical characteristics
  - method of securing
  - radio frequency (RF) connector type
  - weatherproofing.
- describe the process for selecting an antenna design based on the application and performance requirements
- identify and describe a range of antenna systems

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise specific issues related to antenna installations and the creation of particular radiation patterns
- identify and describe the regulatory and industry standards relevant to antenna installations.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- antenna resources such as manufacturers' data sheets, specifications and catalogues
- transmission line resources such as manufacturers' data sheets, specifications and catalogues.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN403 Test and repair cellular network equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to analyse cell performance and perform diagnostic tests and repairs on sub-elements and subsystems within cellular networks.

It applies to individuals working as field officers and technicians who may be responsible under supervision for small projects or parts of larger projects and for the coordination of projects in sites remote from the organisational headquarters.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to test cellular network equipment | 1.1 Produce alarm list from cellular network subsystem that shows faults or disturbances<br>1.2 Reset sub-element according to manufacturer's specifications<br>1.3 Clear or block alarms and adjust alarm thresholds according to manufacturer's specifications |
| 2. Test cellular network | 2.1 Test parameters influencing cell performance and record |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| sub-element equipment | performance for a range of field settings<br>2.2 Test, record and report sub-element performance according to manufacturer's specifications<br>2.3 Run diagnostic test on sub-element<br>2.4 Swap working or executing sub-element with spare or idle unit to allow software upgrades<br>2.5 Swap working or executing sub-element with spare or idle sub-element to allow replacement of hardware |
| 3. Rectify faults in cellular network equipment subsystems | 3.1 Locate faulty sub-element within subsystem and identify fault<br>3.2 Identify faulty parts or equipment and replace or repair according to service agreement<br>3.3 Record fault details and rectification summary<br>3.4 Hand over and sign off with client |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 2.2 | • Recognises and interprets information from relevant sources to determine technical specifications |
| Writing | 1.1, 2.1, 2.2, 3.3, 3.4 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications with clients |
| Oral Communication | 3.4 | • Liaises with internal and external personnel about technical requirements using specific and relevant language<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 2.1-2.3 | • Evaluates and reviews numerical information when interpreting measurements |

# Assessment Requirements for ICTRFN403 Test and repair cellular network equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare the cellular network alarm system
- produce an alarm list and use this to locate faults
- test cellular network parameters and performance
- measure output power received around a cell
- run diagnostic tests on sub-elements and subsystems
- locate and repair faulty sub-elements and subsystems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain anti-static protection and its importance and potential effect on cellular network equipment
- summarise cellular antenna installation procedures
- outline electrical concepts and measurements required for cellular network repairs
- explain electromagnetic radiation (EMR) and mitigation
- list the common network components and describe their basic functions
- provide an overview of:
  - the progression of generations of cellular networks
  - features and operating requirements of test equipment
- outline procedures for repairs and swap activities
- summarise test operation of cellular network equipment
- list and describe the tests required for network components

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the importance of voltage levels and polarity
- describe the precautions and actions required to minimise, control or eliminate hazards related to cellular network equipment installations.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- a site for mobile phone network tests and measurements
- performance testing software
- relevant legislation and documentation to test and repair network equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN404 Undertake radio communications signals monitoring

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to check radio communications signals for interference management, investigation, licence conditions intelligence and frequency occupancy purposes with discretion to determine appropriate action according to relevant legislation and regulations.

It applies to individuals working as field officers from regulatory authorities or other private and public organisations. They combine technical skills with broader organisational and administrative skills to monitor and action non-compliance of radio communications.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for radio communications | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards, including work health and safety (WHS) issues and possible hazards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| signals monitoring | 1.2 Identify specific triggers that lead to need for monitoring activities<br>1.3 Determine monitoring coordinates as result of client complaint<br>1.4 Determine extent and nature of communications problem through desktop research and relevant information<br>1.5 Enter necessary details into appropriate work management system |
| 2. Plan and organise monitoring activities | 2.1 Determine monitoring activities and responsibilities according to organisational requirements<br>2.2 Determine procedures, timeframes, resources and equipment requirements for self and others according to organisational and task requirements<br>2.3 Obtain resources and equipment and prepare according to organisational and task requirements<br>2.4 Identify communication strategies to make clients aware of their obligations under relevant legislation, codes, regulations and standards according to organisational policies and procedures<br>2.5 Update and review procedural and information guides as required<br>2.6 Implement risk management strategies as required according to set procedures and timelines |
| 3. Undertake monitoring | 3.1 Carry out monitoring activities according to organisational and legislative requirements, including WHS<br>3.2 Use and maintain resources and equipment according to organisational and task requirements<br>3.3 Identify and confirm communications and/or interference problems<br>3.4 Locate position and source of communications and/or interference problems<br>3.5 Identify organisation responsible for communications and/or interference problems<br>3.6 Undertake compliance analysis of unlicensed, unauthorised and non-standard equipment if appropriate<br>3.7 Provide advice to operational and technical subordinate officers according to organisational policies and procedures as required |
| 4. Act on non-compliance | 4.1 Provide information to client and take action as result of failure to achieve compliance according to organisational guidelines and legislative requirements based on seriousness of possible breach<br>4.2 Identify contraventions of compliance requirements and report recommended action according to organisational policies and procedures<br>4.3 Refer serious or complex situations for advice or resolution according to organisational policies and procedures |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 4.4 Use relevant collection methods to gain information and evidence about elements of each offence to be prosecuted and provide according to legislation, procedures and rules of evidence<br>4.5 Conduct and fulfil court attendance requirements in compliance with organisational guidelines as required<br>4.6 Ensure case is finalised according to court outcomes and organisational guidelines |
| 5. Provide reports and information | 5.1 Interpret requirements of relevant legislation and provide information and advice on technical and operational matters<br>5.2 Advise clients affected by outcomes within limits of privacy legislation<br>5.3 Maintain records and prepare and provide reports according to organisational requirements<br>5.4 Update any compliance management systems with relevant findings and outcomes |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.4, 3.5, 4.4, 5.1 | • Analyses and consolidates information and data from a range of sources, against defined criteria and requirements, and checks for accuracy and completeness |
| Writing | 1.5, 2.5, 3.7, 4.1, 4.2, 5.2-5.4 | • Accurately records and completes organisational documents and correspondence using clear language and correct spelling, grammar and terminology |
| Oral Communication | 1.4, 3.7, 4.2, 5.2 | • Uses collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals, to convey and clarify information and to confirm understanding |
| Numeracy | 2.2 | • Applies numerical modelling skills to identify, analyse and evaluate budgetary information, time durations and human resource allocations |
| Navigate the world | 1.1, 2.1-2.5, 3.1, 3.2, | • Accepts responsibility and ownership for the task and makes decisions on completion |

# Assessment Requirements for ICTRFN404 Undertake radio communications signals monitoring

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- comply with site risk control, work health and safety (WHS), environmental, quality and communication requirements
- apply knowledge of appropriate procedures and techniques for conducting radio communications signals monitoring
- perform efficient and effective preparation and monitoring appropriate to a communications environment site
- calibrate, maintain and commission instruments and field equipment
- monitor communications under general direction in a range of different contexts
- respond effectively to different challenges and operational requirements for monitoring, including coping with difficulties, irregularities and breakdowns in routine.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and summarise the legislation, codes of practice and other formal agreements that directly impact on monitoring of radio communications signals including:
  - specifics of what constitutes an offence
  - responses for non-compliance
  - environmental requirements
  - privacy issues
- outline specific WHS requirements that impact on monitoring in terms of safety of self and public safety including:
  - radio frequency (RF) personal protective equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

  - electromagnetic radiation (EMR) at RF transmission sites
  - building site induction requirements
  - environmental conditions
- explain specific monitoring procedures for radio communications and relevant organisational policies and procedures
- summarise characteristics of different environments and workplaces where monitoring takes place
- explain radio communications systems used in the relevant work context
- outline specific issues related to antenna performance including:
  - directivity
  - gain
  - height
- summarise the effects of cable attenuation and impedance mismatch
- outline the effects of ionosphere including:
  - high frequency (HF) propagation
  - warning, fadeout and solar flares
  - ionospheric prediction service (IPS)
- explain modulation methods, AM, FM and digital formats
- explain field strength surveys and EMR measurements
- outline the propagation properties of the terrain
- describe the legal process for prosecuting a complaint and undertaking attendance at court
- describe the process and use of direction finding equipment for HF, very high frequency (VHF), ultra high frequency (UHF) and microwave technologies.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which monitoring may be conducted
- monitoring and testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on monitoring activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN405 Install radio communications base station equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skill and knowledge required to operate transmitters, receivers, feedline, multicoupling, data and voice equipment to connect a station in the very high frequency (VHF), ultra high frequency (UHF) or microwave bands.

It applies to individuals working as field officers from private or public organisations. They combine technical radio communications skills with organisational and administrative skills in a range of commercial and community contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install radio communications base station equipment | 1.1 Assess available installation options against client requirements and relevant legislation, codes, regulations and standards<br>1.2 Arrange access to site according to required procedure<br>1.3 Confirm equipment locations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|

# Assessment Requirements for ICTRFN405 Install radio communications base station equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- assess the client and installation requirements
- ensure relevant regulations and standards will be applied
- install radio communications base station equipment
- perform distance to fault measurement on feedline
- perform return loss measurement on feedline
- document and complete installation report.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the following:
  - anti-static precautions
  - radio frequency (RF) radiation hazard awareness
  - network termination unit
  - radio transmitter system
  - radio receiver system
  - multicoupler
  - supervisory, control and data acquisition (SCADA) system inputs and outputs
- outline the operation and purpose of testing equipment
- interpret the meaning of various test results
- identify network element and system specifications

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the principles and performance testing and fault finding techniques of telecommunications networks
- describe the practices and procedures for installation of radio communications equipment for the following:
  - fibre optic connector cleaning techniques
  - computer software installations to various devices
- identify and describe the appropriate test equipment to undertake performance and fault-finding techniques in telecommunications networks including:
  - distance to fault measurement
  - return loss measurement
  - terminate data and voice and RF cable.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which base station installation can be conducted
- tools and equipment required for installation
- technical specifications, organisational documentation and requirements for installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to conduct routine maintenance tasks, analysing results and initiating corrective action.

It applies to individuals working as field officers from telecommunications carriers, service providers and contractors. They combine a broad range of optical and radio frequency (RF) technical skills with organisational skills to maintain the hybrid fibre coaxial (HFC) broadband cable network, generally with limited supervision and guidance.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for routine maintenance of | 1.1 Obtain relevant legislation, codes, regulations and standards for given work |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| broadband cable network | 1.2 Determine HFC network elements requiring maintenance and obtain maintenance details from various HFC manufacturer equipment manuals<br>1.3 Plan detailed routine maintenance schedule and discuss with all relevant personnel<br>1.4 Notify network operations centre (NOC) of proposed maintenance details and maintenance schedule<br>1.5 Assess potential impact of proposed maintenance on clients and network, and plan for minimal possible outage or deferral of maintenance<br>1.6 Obtain necessary tools and resources, and test equipment to undertake maintenance<br>1.7 Ascertain and record recent network stability and network performance |
| 2. Undertake routine HFC network maintenance tasks | 2.1 Conduct routine maintenance tasks according to documented enterprise instructions, following work health and safety (WHS) and environmental requirements, and record results<br>2.2 Protect network from excessive interference or degradation of service during maintenance routines<br>2.3 Monitor relevant alarms during running of maintenance tasks and report incidences to NOC<br>2.4 Escalate unresolved faults according to established enterprise procedure<br>2.5 Conduct performance measurements following routine maintenance schedule |
| 3. Analyse results and initiate corrective action | 3.1 Assess outcomes of performance measurements and maintenance routines to ensure they are according to specification<br>3.2 Analyse identified problems for likely impact and repair within capability, and initiate or escalate repair action where repair is beyond capability<br>3.3 Undertake outage if required in conjunction with NOC and according to prescribed enterprise outage plan<br>3.4 Record problems and incidences in maintenance log for future action as required by maintenance agreement<br>3.5 Verify alarms to ensure maintenance routines did not generate further problems |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 2.1, 2.4, 2.5, 3.3 | • Recognises and interprets enterprise, regulatory and technical information from relevant sources to determine all specifications and frameworks |
| Writing | 1.3, 1.4, 1.7, 2.1, 3.4 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications to relevant personnel |
| Oral Communication | 1.3, 1.4 | • Liaises with a diverse range of personnel to provide advice and guidance using relevant language<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 2.5 | • Interprets numerical information and applies basic calculations to conduct performance measurements |
| Navigate the world of work | 2.1, 2.4 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, with specific reference to safety and environmental requirements<br>• Seeks advice from others when a situation becomes too complex to manage personally |
| Get the work done | 1.1, 1.2, 1.5-1.7, 2.1-2.3, 3.1-3.5 | • Determines job priorities, resources and equipment and works logically and systematically to undertake clearly defined and familiar tasks<br>• Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account<br>• Responds to typical problems in different situations and implements standard solutions<br>• Understands the purposes and specific functions of common digital systems and uses them effectively to complete routine tasks<br>• Uses experiences to evaluate and identify improvements for future work |

# Assessment Requirements for ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine the performance of and maintenance requirements for the hybrid fibre coaxial (HFC) broadband cable
- prepare a maintenance schedule and planned activities, and arrange resources
- carry out maintenance activities following appropriate procedures and techniques
- perform radio frequency (RF) and optical measurements and analyse results
- administer corrective measures where required, and verify and document actions
- comply with site risk control, work health and safety (WHS), environmental, quality and communication requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- define the following terms: 16 QAM, 64 QAM, 256 QAM
- explain the relevance of alternating current (AC) and direct current (DC) electrical equipment in HFC broadband cable network
- define forward error correction (FEC) and Reed-Solomon Code
- explain bit error ratio (BER) and acceptable values
- interpret constellation diagrams
- describe digital modulation techniques
- summarise Data Over Cable Service Interface Specification (DOCSIS) cable modem characteristics
- discuss future broadband cable network (BCN) and migration to all-optical cable networks
- outline HFC broadband cable network principles, architecture and associated equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the minimum standards allowable in the return path for ingress
- summarise optical fibre characteristics
- explain quadrature phase shift keying (QPSK)
- summarise the services carried on the HFC broadband cable network
- discuss spectrum utilisation of the return path showing location of telephony and data channels, and signalling and test frequencies
- explain video stream transport formats including:
  - digital video broadcasting (DVB) - asynchronous serial interface (ASI)
  - high definition serial digital interface (HD-SDI)
  - motion picture experts group 2 (MPEG-2)
  - standard definition serial digital interface (SD-SDI)
  - modulation error ratio (MER) and acceptable values
- describe the types of amplifier and placement in a HFC broadband cable network
- summarise bi-directional RF amplifier and unidirectional RF amplifier
- explain eye diagram interpretation
- explain frequency spectrum and RF frequency plan HFC broadband cable network
- describe the use of passive devices including filter, attenuator, power inserter, coaxial splitter, coupler, multitap and equaliser
- outline the calculation of overall gain or loss when given signal levels in dBmv
- summarise coaxial transmission line characteristics including cable tilt or slope
- summarise forward path from head end to subscriber showing expected signal levels at key points
- outline power supply requirements in a HFC broadband cable network
- outline the return path from subscriber to head end showing expected signal levels at key points
- discuss RF amplifier characteristics including gain and tilt adjustment, equalisation and overload
- outline forms of ingress and where they may fall in the return path
- describe the set up, operation and interpretation of test equipment for complex tests including:
  - optical time domain reflectometer (OTDR)
  - optical power meter
  - digital signal level meter
  - RF sweep equipment
  - spectrum analyser
- identify the hand and power tools required to assemble and disassemble equipment in pits and in elevated work situations.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which HFC maintenance may be conducted
- maintenance tools and test instruments currently used in industry
- relevant regulatory, enterprise and equipment documentation that impact on maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to conduct and analyse the results of testing a subscriber's cellular phone service in a public land mobile network (PLMN) overseas and make recommendations accordingly.

It applies to individuals who work as technical officers and supervisors. They are proficient in the use of specialised testing equipment, are effective communicators and operate with a high degree of autonomy.

No licensing, legislative or certification requirements apply at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to conduct roaming tests | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Identify need for tests from service provider mobile network deployment taskforce<br>1.3 Develop enterprise test procedure according to roaming arrangements and manufacturer test regime |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Arrange access to location where tests are to be conducted according to required procedure<br>1.5 Select resources needed to conduct tests, complying with roaming arrangements<br>1.6 Confirm details of international roaming partners and agreements with partner mobile operators<br>1.7 Advise network operations centre of test details and test schedule |
| 2. Conduct tests and analyse test results | 2.1 Conduct tests according to enterprise test procedure<br>2.2 Analyse recorded test results for roaming compliance and functionality of subscriber identity module (SIM) card and phone enhancements |
| 3. Document results | 3.1 Document details of roaming tests, SIM card validity and functionality of phone enhancements, and make recommendations to appropriate person<br>3.2 Report non-compliance to appropriate person for investigation with international roaming partners and mobile phone manufacturer |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.2, 1.3, 2.1 | • Recognises and interprets enterprise, regulatory and technical information from relevant sources to determine all specifications and frameworks |
| Writing | 1.3, 1.6, 1.7, 3.1, 3.2 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications to relevant personnel |
| Oral Communication | 1.2, 1.6, 1.7, 3.1, 3.2 | • Provides advice and guidance using relevant language with enterprise personnel, international roaming partners and clients to maintain a client focus and consider client needs<br>• Uses listening and questioning techniques to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | confirm understanding |
| Numeracy | 2.1, 2.2 | • Performs mathematical calculations to check, analyse and confirm results of system tests |
| Navigate the world of work | 1.1 | • Takes personal responsibility for adherence to legal and regulatory requirements |
| Get the work done | 1.1, 1.4, 1.5, 2.1, 2.2 | • Determines job priorities, resources and equipment. and works logically and systematically to undertake clearly defined and familiar tasks<br>• Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account<br>• Responds to typical challenges in different situations and implements standard solutions<br>• Uses and investigates new digital technologies and applications to manage and manipulate data, and communicate effectively with others, in a secure and stable digital environment<br>• Uses experiences to evaluate and identify improvements for future work |

# Assessment Requirements for ICTRFN501 Test cellular handset enhancements and international roaming agreements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- collect and collate relevant information in preparation for roaming tests
- conduct tests on international roaming capability and functionality of handset enhancements
- analyse results of testing
- make recommendations based on test results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the features and operating requirements of specialised roaming test equipment
- outline information required to operate equipment according to a test specification
- explain legislation, codes of practice and other formal agreements that impact on the work activity
- outline manufacturer’s requirements for safe operation of equipment
- summarise mobile phone network standards and specifications
- explain specific work health and safety (WHS) requirements relating to the activity and site conditions
- describe the testing and analysis process and procedures for cellular handsets.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- a site where tests on handsets and international roaming agreements may be conducted
- testing equipment currently used in industry
- equipment, system manuals, specifications and relevant enterprise policy and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN502 Test and measure cellular phone and network equipment performance

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to analyse test results and recommend modifications to the network.

It applies to individuals working as field officers and supervisors from telecommunications carriers, service providers, contractors and other public or private organisations who perform measurements during equipment upgrades or during commissioning, acceptance testing and routine maintenance on cellular network equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to test cellular phone and network equipment | 1.1 Obtain and follow relevant legislation, codes, regulations and standards<br>1.2 Scope work by obtaining work details from appropriate personnel and arrange for site access to comply with security |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | arrangements<br>1.3 Evaluate manufacturer's technical documentation and network procedures to plan test schedule for cellular network<br>1.4 Verify calibration of test equipment to ensure that tested cellular equipment is compliant<br>1.5 Prepare cellular equipment for testing according to manufacturer's test procedure<br>1.6 Notify operational staff of test and measurement schedule to ensure minimal impact on cellular network |
| 2. Test and measure cellular phone and network equipment | 2.1 Work safely following work health and safety (WHS) and environmental requirements for given work, identifying hazards and using personal protective equipment<br>2.2 Configure network equipment for testing and set options to record test results<br>2.3 Block or mask alarms that may be triggered and interfere with test program<br>2.4 Run performance measurement software with options set and record test results<br>2.5 Re-establish alarms and normal operational status at conclusion of tests, and notify appropriate personnel of completion of test schedule |
| 3. Analyse measurement and prepare evaluation report | 3.1 Analyse results of performance tests and measurements and determine performance level of cellular equipment and compatibility with network<br>3.2 Prepare evaluation report, making recommendations on network modifications or changes to configurations settings for improved quality of service<br>3.3 Present test results and evaluation report to appropriate personnel according to enterprise policy |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.3, 1.5, 3.3 | • Recognises and interprets regulatory and technical information from relevant sources to determine all |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | specifications and frameworks |
| Writing | 1.6, 2.4, 2.5, 3.2 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and when presenting information to work associates, supervisors, team members and clients |
| Oral Communication | 1.2, 1.6, 2.5, 3.3 | • Liaises with internal and external personnel about technical requirements using specific and relevant language<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 3.1 | • Evaluates and interprets technical data and results according to predetermined specifications |
| Navigate the world of work | 2.1 | • Understands the nature and purpose of own role and associated responsibilities<br>• Takes personal responsibility for adherence to legal and regulatory requirements, with specific reference to safety |
| Get the work done | 1.1-1.5, 2.2-2.5, 3.1 | • Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks<br>• Understands the purposes and specific functions of common digital systems and uses them effectively to complete routine tasks<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account<br>• Diagnoses faults in different situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments<br>• Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues |

# Assessment Requirements for ICTRFN502 Test and measure cellular phone and network equipment performance

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan and coordinate test activities and equipment
- test cellular phone and network equipment according to test procedure
- analyse test results
- report and make recommendations on performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the features and operating requirements of cellular test equipment, including the digital cellular test set, spectrum analyser and radio frequency (RF) power meter
- explain network components, their functions and approved specifications
- provide detailed information about transmission lines, transmitter and receiver architecture and associated cellular network
- provide detailed information about cellular antenna and feedlines, and their impact on mobile spectrum interference
- explain testing network components
- outline the types of adjustments that need to be made when measuring cellular transmission
- summarise the types of networks that will influence the transmission on the radio path and/or the transmission line.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which cellular network testing may be conducted
- test equipment currently used in industry
- manufacturer's and enterprise technical documentation
- relevant regulations and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN503 Evaluate and analyse radio frequency signal coverage plots

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to combine technical radio communications skills with organisational and administrative skills to generate and evaluate coverage maps in a range of commercial and community contexts for radio and television broadcasting, radio base station coverage, and point-to-point links.

It applies to individuals who are technically proficient and who work for regulatory authorities and private and public organisations. They may be responsible for small projects or parts of larger projects, and for the coordination and direction of small technical groups.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan and prepare for coverage | 1.1 Prepare for given work according to relevant legislation, work health and safety (WHS), codes, regulations and standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| prediction | 1.2 Arrange access to site according to required procedure<br>1.3 Establish type of coverage required<br>1.4 Determine specifications and minimum acceptable signal level or timing signal delay within coverage area<br>1.5 Use prediction software specific to enterprise<br>1.6 Verify mapping coordinate system to be used<br>1.7 Create custom antenna pattern files representative of expected antenna type for type of coverage required |
| 2. Load data into software program and create coverage plot | 2.1 Select and load system parameters<br>2.2 Select and load antenna elements or antenna pattern files<br>2.3 Select suitable propagation model settings applicable to study<br>2.4 Load appropriate clutter properties<br>2.5 Create coverage plot using appropriate plot options settings |
| 3. Analyse coverage plot outcomes | 3.1 Evaluate initial coverage plot against initial specifications<br>3.2 Adjust system parameters and antenna elements until coverage plot is within specifications<br>3.3 Compare measured signal strength at various locations with predicted values<br>3.4 Use measured data to correct and fine tune model<br>3.5 Evaluate range of possible solutions and make appropriate recommendations to ensure transmission meets operational requirements |
| 4. Complete documentation | 4.1 Tabulate results<br>4.2 Prepare report with final recommendations |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.4 | • Recognises and interprets regulatory and technical information from relevant sources to determine all specifications and frameworks |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 3.5, 4.1, 4.2 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and when presenting recommendations to relevant personnel |
| Oral Communication | 1.2, 1.6, 3.5 | • Liaises with internal and external personnel about technical, operational and commercial matters using specific and relevant language<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 1.4, 3.3, 3.4 | • Evaluates and interprets technical data to convert measurements and comprehend results |
| Navigate the world of work | 1.1 | • Takes personal responsibility for adherence to legal and regulatory requirements with specific reference to safety |
| Get the work done | 1.2, 1.3, 1.5-1.7, 2.1-2.5, 3.1, 3.2, 3.5 | • Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks<br>• Understands the ways in which digital systems and tools are used and recognises all operational applications<br>• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account<br>• Diagnoses faults in different situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments<br>• Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues |

# Assessment Requirements for ICTRFN503 Evaluate and analyse radio frequency signal coverage plots

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan and coordinate activities to produce coverage plots using appropriate software settings
- generate:
  - a radio frequency (RF) signal coverage plot
  - a path profile for a point-to-point link
- evaluate, analyse and make recommendations on antenna installation specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain antenna and propagation theory
- explain antenna array theory
- summarise various mapping coordinate systems and their datums
- outline propagation models and their limitations in various environments
- outline specific issues related to antenna installations and the creation of particular radiation patterns.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a computer facility on which coverage plots and paths may be generated
- propagation prediction software
- a digital terrain database.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN601 Monitor the capacity of and recommend changes to the cellular mobile network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to evaluate, analyse and make recommendations at the system design level on antenna installation specifications.

It applies to individuals working as technical officers and engineers who undertake mobile network performance measurements and report on mobile capacity enhancement to senior management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Monitor capacity of cellular mobile network | 1.1 Monitor traffic levels from network management system<br>1.2 Use approved enterprise plans to identify planned network growth<br>1.3 Obtain client forecast data from marketing<br>1.4 Apply identified data against capacity trigger criteria |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.5 Determine coverage and cell parameters |
| 2. Make recommendations relating to capacity changes | 2.1 Identify requirements for additional capacity<br>2.2 Recommend changes or additions to frequency parameters and submit to planning personnel<br>2.3 Assess capacity of transmission path, switch resources and recommend improvements, noting transmission medium<br>2.4 Manipulate traffic through switch parameter settings as a means of relieving traffic congestion<br>2.5 Determine cost of proposed changes and undertake studies of appropriate return on investment (RoI) |
| 3. Assess capacity changes | 3.1 Organise tests and studies to ensure that increased capacity adequately caters for traffic flow<br>3.2 Make recommendations for further change to network should increased capacity not meet need |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.2 | • Recognises and interprets technical information from relevant sources to determine all specifications and frameworks |

# Assessment Requirements for ICTRFN601 Monitor the capacity of and recommend changes to the cellular mobile network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- source and analyse relevant data to prepare a plan indicating growth potential and recommendations for meeting growth within timeframes
- use tools and software packages for forecasting and measurement
- identify site or channel capacity, relevant network growth and forecasting growth.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain blocking, non-blocking and grade of service
- explain Erlang B measurements
- summarise features and operating requirements of test equipment
- outline field measurements for cell traffic capacity
- explain the information required to:
  - analyse and interpret statistical data as applied to teletraffic measurement
  - prepare and conduct a capacity measurement
- summarise legislation, codes of practice and other formal agreements that directly impact on radio communications site transmission
- outline the following including:
  - transmission lines
  - transmitter and receiver architecture and their impact on radio communications traffic
- outline switching architecture with specific reference to space and time switching

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the types of adjustments that need to be made to procedures to meet the requirements of particular sites and environmental conditions
- explain typical issues and challenges that occur in telecommunications cellular capacity design and how these may be addressed.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites with cellular mobile network
- capacity monitoring data and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN602 Produce and evaluate architecture designs for WiMAX networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to specify the design of Worldwide Interoperability for Microwave Access (WiMAX) network architecture.

It applies to individuals working as information and communication technologies (ICT) technicians, designing and operating WiMAX networks in wireless core and access networks. Wireless convergence technology in telecommunications particularly applies to the deployment of fast wireless broadband access.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to produce architecture designs for | 1.1 Review WiMAX specification 802.16 protocol structure for point-to-point (backhaul) and point-to-multipoint (end user) topologies, and identify requirements of network |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| wireless broadband | 1.2 Assess technical characteristics and functions of network elements in WiMAX network<br>1.3 Evaluate advantages of modulation techniques used in wireless access technologies<br>1.4 Compare characteristics and operating principles of multiplexing techniques used at physical layer of wireless access technologies |
| 2. Design architectures for proposed fixed and mobile WiMAX network | 2.1 Develop proposed network topology for fixed (802.16d) WiMAX network, showing relationship of network elements<br>2.2 Develop proposed network topology for mobile (802.16e) WiMAX network showing relationship of network elements<br>2.3 Evaluate design considerations between fixed and mobile WiMAX network and produce design specifications<br>2.4 Determine appropriate multiple-antenna system in WiMAX design by considering their benefits<br>2.5 Produce report on architecture design for WiMAX network |
| 3. Evaluate network management products | 3.1 Research, analyse and evaluate current network management products<br>3.2 Produce evaluation report on effectiveness of network management products that could be used to manage WiMAX network elements |
| 4. Produce network designs for possible implementation | 4.1 Compare WiMAX with other competing wireless technologies and their interoperability<br>4.2 Investigate inclusion of wireless fidelity (wi-fi) in the design architectures as complementary technology<br>4.3 Use latest technical specifications and pricing to evaluate range of architecture design solutions<br>4.4 Determine support and training requirements needed<br>4.5 Produce implementation document on WiMAX architecture configurations and designs, and present to appropriate person for approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 3.1 | • Recognises and analyses complex technical information to evaluate a broad range of features of current security issues and best practice in security, equipment and procedures |
| Writing | 2.1-2.3, 2.5, 3.2, 4.3, 4.5 | • Uses clear, specific and industry related terminology to complete and update workplace documentation and when presenting recommendations to relevant personnel |
| Oral Communication | 4.3, 4.5 | • Liaises with personnel about technical, operational and commercial matters using specific and relevant language<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 4.3 | • Performs mathematical calculations to analyse pricing data and statistics |
| Get the work done | 1.2-1.4, 2.4, 4.1 4.2 | • Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and understands the potential of new technology<br>• Uses systematic, analytical processes in complex situations, gathering relevant information and identifying and evaluating options against predetermined criteria<br>• Diagnoses faults in different situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments<br>• Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom |

# Assessment Requirements for ICTRFN602 Produce and evaluate architecture designs for WiMAX networks

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- review and assess the Worldwide Interoperability for Microwave Access (WiMAX) communication architecture, hardware, protocols and networking systems for a new design
- integrate other wireless technologies
- analyse and evaluate competing wireless technologies
- design viable WiMAX network solutions
- assess network performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the client business domain
- explain current industry accepted network hardware and software products and their general features and capabilities
- explain the design implications of the following:
  - current industry accepted WiMAX network protocols
  - remote user issues
  - management systems
  - WiMAX network design
  - WiMAX network traffic evaluation
- explain current industry security products, devices and procedures and their general features and capabilities

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline theoretical concepts of current industry network development and design methodologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- IEEE 802.16 standards for WiMAX
- client requirements
- technical specifications
- expected traffic volume
- vendors and vendor offerings and pricing
- information on a range of IT business solutions
- future organisational business processes
- a budget for architecture designs for WiMAX networks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN801 Produce a radio link budget

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to analyse technical performance of fixed and mobile radio systems, and plan and calculate link budgets.

It applies to individuals working as telecommunications engineers who take responsibility for establishing layout of a digital radio system to minimise transmission loss and optimise system performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Radio Frequency Networks

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Critically analyse suitability of radio systems | 1.1 Critically analyse spectral efficiency of functional elements of mobile radio systems for determining optimal frequency utilisation<br>1.2 Critically analyse features of radio systems to evaluate effectiveness of a particular application<br>1.3 Compare features and specifications of antennas used in radio systems to assist with radio link budget<br>1.4 Report on suitability of radio systems, including |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | recommendations to improve network performance |
| 2. Calculate a radio link budget | 2.1 Calculate path loss using variables in appropriate propagation models for a power link budget<br>2.2 Evaluate power link budget against allowable power margin specifications<br>2.3 Evaluate modulation types and spectral efficiency<br>2.4 Confirm radio power link budget achieves specified reliability |
| 3. Complete evaluation and planning documentations | 3.1 Complete an evaluation report on performance of radio systems with recommendations on system improvements<br>3.2 Document processes used to determine optimal power link budget for a radio system |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Writing | 1.4, 3.1, 3.2 | • Uses clear, specific and industry-related terminology to complete and update specific workplace documentation and when presenting recommendations to relevant personnel |
| Oral Communication | 1.4 | • Liaises with personnel about technical, operational and commercial matters using specific and relevant language, using listening and questioning techniques to confirm understanding |
| Numeracy | 2.1, 2.2, 2.4 | • Analyses, synthesises and performs calculations using highly embedded mathematical information in a broad range of tasks and texts |
| Get the work done | 1.1-1.3, 2.1-2.3 | • Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and understands potential of new technology<br>• Uses systematic, analytical processes in complex |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | situations, gathering relevant information and identifying and evaluating options against predetermined criteria<br>• Diagnoses faults in different situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments |

# Unit Mapping Information

# Assessment Requirements for ICTRFN801 Produce a radio link budget

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse signal degradation characteristics of radio paths and calculate power budgets for various distances and antenna heights versus transmitted power
- research constraints imposed by mobile phone frequency allocations and simulate carrier to interference radiation patterns around a cell site
- create evaluation report on radio system performance
- document processes used to determine power link budget.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain high frequency (HF), very high frequency ( VHF), ultra high frequency (UHF) and microwave receiving techniques
- summarise modulation methods:
  - AM
  - FM
  - digital
- outline multiplexing systems
- summarise operation of transmitters and receivers
- explain organisational policies and procedures
- summarise personal safety issues
- explain propagation methods
- summarise radio communications systems
- weigh factors affecting radio frequency (RF) path loss

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise RF technologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Radio Frequency Networks industry and include access to:

- a telecommunications operations site
- mobile telephony devices and equipment
- networked computers and relevant software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTRFN802 Analyse a cellular mobile network system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to study the detailed architecture and operation of individual cellular mobile elements and develop a plan to integrate emerging cellular technologies.

It applies to individuals working as telecommunications engineers or senior technical officers as they prepare to upgrade to next generation mobile networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research mobile network systems and interfaces to interconnected networks | 1.1 Analyse interfaces between cellular mobile network and clients, including public switched telephone network (PSTN) and internet to validate interoperability of individual systems<br>1.2 Research latest generation of mobile radio systems and develop plan for integration of emerging cellular technologies to meet future |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | demands and client expectations |
| 2. Analyse constraints imposed by frequency spectrum allocations | 2.1 Analyse techniques to increase system capacity for fixed spectrum bandwidth<br>2.2 Plan frequency allocation for cellular network from derived specifications<br>2.3 Develop simulation that plots carrier to interference radiation pattern for given cell geometry in reflective environment |
| 3. Analyse operations of major subsystems of cellular network | 3.1 Evaluate major subsystem functions of cellular network and analyse subsystem components to determine capability for upgrades<br>3.2 Research and report how major subsystems interface to other network subsystems<br>3.3 Simulate transmission path for cellular network |
| 4. Analyse system capability | 4.1 Simulate traffic flow measurements in microcellular environment<br>4.2 Produce analytical report on cellular mobile convergence with plan for cellular mobile system integration to existing networks |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.2, 3.2 | • Interprets complex technical information in a variety of forms and applies the knowledge gained to evaluate different types of technical data and compare with theoretical values and approved specifications |
| Writing | 1.2, 3.2, 4.2 | • Uses clear, specific and industry related terminology to complete and update specific workplace documentation and when presenting recommendations to relevant personnel |
| Oral Communication | 3.2 | • Liaises with personnel about technical and operational issues using specific and relevant language<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 2.2, 3.3, 4.1 | • Interprets the results of complex numerical measurements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1, 2.1-2.3, 3.1, 3.3, 4.1 | • Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues as the work progresses<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and understands the potential of new technology<br>• Uses systematic, analytical processes in complex situations, gathering relevant information and identifying and evaluating options against predetermined criteria<br>• Undertakes testing procedures in different situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments<br>• Uses digital technologies to manage business operations and actively investigates new technologies for strategic and operational purposes |

# Assessment Requirements for ICTRFN802 Analyse a cellular mobile network system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan a frequency allocation for a cellular network
- analyse techniques to increase system capacity for a fixed spectrum bandwidth
- develop a plan for integration of emerging cellular technologies
- analyse the interfaces between a mobile network and clients
- research and report the interfacing of major subsystems to other network subsystems
- produce an analytical report on cellular mobile convergence with a plan for cellular mobile system integration to existing networks.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- evaluate allocations and bandwidth requirements of cellular systems
- investigate efficiency and system capacity given the spectrum allocation, number of channels required and grade of service
- describe equipment subsystem diagnosis and repair procedures
- summarise features and differences between major frequency bands and their allocation of licences
- compare features and operating requirements of cellular test equipment
- outline key features of cellular mobile radio systems
- summarise major element functions of a mobile radio system
- explain major frequency bands and their allocation of licences
- describe a microcellular system
- explain minimising latency

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline network components and their functions
- provide a detailed summary of transmission lines, transmitter and receiver architecture
- summarise radio spectrum in use, specifying restrictions and characteristics
- describe radio frequency (RF) and electromagnetic energy (EME) hazards
- investigate and evaluate antenna performance and mobile components, and their impact on mobile spectrum interference
- explain spectrum efficiency
- describe system configuration procedures
- outline testing network components
- summarise the types of adjustments that need to be made when measuring cellular transmission
- outline the types of networks that will influence the transmission on the radio path and/or transmission line.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which cellular network analysis, research and simulation may be conducted
- test equipment currently used in industry
- manufacturer's and enterprise technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN803 Analyse a satellite communications system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required for a new installation project, an upgrade of capacity or technology in an existing network or as a result of convergence to next generation networks (NGN).

It applies to individuals working as supervisors and engineers, who plan, design and implement satellite communications systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research satellite communication systems | 1.1 Research satellite applications with various orbit types for assessing their spatial positioning for specific purposes<br>1.2 Analyse and report on architecture, major subsystems and critical components in communication systems of recently launched commercial satellite |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Research and report on multiple access techniques and their typical applications |
| 2. Analyse uplink and downlink variables | 2.1 Determine uplink and downlink criteria that impact on carrier to noise ratio<br>2.2 Determine up/down link criteria that impact on baseband signal to noise ratio<br>2.3 Determine critical parameters of a satellite system<br>2.4 Research common types of baseband signal processing, and their spectral and noise improvement parameters for determining criteria for link budget evaluations |
| 3. Conduct link budget analysis | 3.1 Produce satellite link budget and calculate link margin for satellite system with specified modulation types<br>3.2 Analyse relationship between bit error ratio (BER) for given energy per bit per noise power density (Eb/No) and forward error correction (FEC) parameter for determining operational performance of link |
| 4. Analyse properties of geostationary satellites | 4.1 Calculate look angles for geostationary satellite from any receiving location<br>4.2 Research and report on frequency re-use in conjunction with polarisation selection and use of spot beams<br>4.3 Analyse and specify major features of very small aperture terminal (VSAT) systems, and calculate link reliability in high rainfall regions |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.4, 4.2 | • Interprets complex technical information in a variety of forms and applies the knowledge gained to solve complex problems by making informed judgements and assumptions |
| Writing | 1.2, 1.3, 3.1, 4.2 | • Uses clear, specific and industry related terminology to prepare detailed reports containing recommendations for relevant personnel |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 2.4, 3.1, 3.2, 4.1, 4.3 | • Uses and applies knowledge about space and shape, including angle properties, when analysing variables<br>• Determines link budgets by selecting antennae size, power requirements, link availability and bit error rate (BER) by solving complex mathematical formulas |
| Get the work done | 1.2, 2.1-2.3, 3.1, 3.2, 4.1, 4.3 | • Gathers and analyses data and seeks feedback to improve plans and processes<br>• Makes high impact decisions in a complex and diverse environment, using input from a range of sources<br>• Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities and decision making strategies where appropriate<br>• Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues as the work progresses<br>• Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques, experience and knowledge to focus on the root cause<br>• Takes responsibility for high impact decisions in complex situations involving many variables and constraints |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTRFN803 Analyse a satellite communications system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- analyse satellite communications system architecture
- produce a satellite link budget and calculate link margin for a range of digital modulation types
- calculate the look angles for a geostationary satellite from any receiving location
- analyse and specify the major features of very small aperture terminal (VSAT) systems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and perform antenna calculations including:
  - gain
  - beamwidth
  - polarisation
  - effective isotropic radiated power (EIRP)
- define bit error rate (BER) and how it affects satellite communications
- outline carrier and noise ratio
- explain constellation and eye diagrams
- outline distance to satellite and typical delays
- summarise frequency spectrum (satellite bands)
- explain gain-to-noise-temperature G/T ratio
- outline geostationary orbit
- explain link budget calculation

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain look angle calculations
- describe low earth orbiting (LEO) satellites
- evaluate the following modulation types suitable for satellite communications:
  - n-FSK:
    - 2FSK
    - 4FSK
  - n-PSK:
    - 2PSK
    - 4PSK
    - 8PSK
    - 16PSK
  - n-QAM:
    - 16 QAM
    - 256QAM
- define spread spectrum techniques including:
  - direct sequence
  - frequency hopping.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- a site on which satellite analysis may be conducted
- data, calculators and appropriate software tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTSAD401 Develop and present feasibility reports

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to research and analyse potential system solutions and present a feasibility report to the client.

It applies to individuals required to investigate potential solutions within the context of an information and communications technology (ICT) project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm client requirements | 1.1 Analyse client requirements to determine project scope and the problem or opportunity faced by the business<br>1.2 Document client requirements, project scope, related problems and sources of information<br>1.3 Confirm requirements and scope with the client |
| 2. Develop high-level alternative scenarios | 2.1 Compare future client requirements with current requirements<br>2.2 Develop and document feasible solutions for client |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | requirements<br>2.3 Explore and document the feasibility of each solution<br>2.4 Examine alternatives against project constraints |
| 3. Prepare and publish feasibility report | 3.1 Develop a feasibility report that describes client requirements and project scope, analyses alternative scenarios, and provides recommendations<br>3.2 Submit feasibility report to appropriate person for project approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.4 | • Reads and interprets specifications and other documentation from a variety of sources, and consolidates information to determine client requirements |
| Writing | 1.2, 1.3, 2.2, 2.3, 3.1 | • Prepares and produces a document that conveys complex relationships between alternative solutions to achieve business outcomes<br>• Uses technical report format and terminology appropriate to the stakeholders |
| Oral Communication | 1.3 | • Determines and confirms client requirements, using collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and to confirm understanding |
| Numeracy | 2.1-2.4, 3.1 | • Applies financial modelling skills to identify, analyse and evaluate budgetary information, time durations and human resource allocations |
| Interact with others | 1.3, 3.2 | • Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships |
| Get the work done | 1.1, 2.1, 2.2, 2.4, 3.1 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | efficiencies and effectiveness<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation, and formal and analytical thinking<br>• Uses and investigates new digital technologies and applications to manage and manipulate data, and communicate effectively with others in a secure and stable digital environment |

# Assessment Requirements for ICTSAD401 Develop and present feasibility reports

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify and confirm services required
- document the project scope
- develop solutions to client’s requirements that fit within the constraints
- document the feasibility report according to requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the client business domain
- outline the system's current functionality
- explain the role of stakeholders and the degree of stakeholder involvement
- describe and compare TWO or more current industry systems development methodologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- client requirements
- report writing template
- client expectations brief

© Commonwealth of Australia, 2025 Future Skills Organisation

- information on a range of information and communications technology (ICT) business solutions
- future organisational business processes
- budgets for scenarios
- outcomes of the business analysis process.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD501 Model data objects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to understand business operations, identify entities and data, diagrammatically represent their relationships, and prepare a data model.

It applies individuals who have a broad range of analytical, technical and communication skills and who work within broad but established parameters.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify entities and relationships | 1.1 Analyse business data to understand operations<br>1.2 Identify boundaries of the system<br>1.3 Identify entities, attributes, data types and relationships of data<br>1.4 Review business rules to determine impact<br>1.5 Document relationships in an entity relationship diagram |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Develop normalisation | 2.1 Identify suitable business data<br>2.2 Undertake normalisation of business data and document results<br>2.3 Compare normalisation results with entity relationship diagram<br>2.4 Reconcile differences between data |
| 3. Validate model | 3.1 Validate data model with client<br>3.2 Resolve issues or recommendations<br>3.3 Document completed data model<br>3.4 Submit to client for final approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.3, 2.4 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 1.5, 2.2, 2.4, 3.3, 3.4 | • Prepares and produces diagrammatic models and associated documents that convey complex relationships between data<br>• Documents outcomes and changes to discussions, using industry relevant terminology and recognised symbols |
| Oral Communication | 3.1-3.4 | • Participates in verbal exchanges by listening and questioning clients to elicit information, resolve issues, and obtain final product and work outcome approval |
| Interact with others | 3.1, 3.2, 3.4 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts<br>• Elicits feedback and provides feedback to others |
| Get the work done | 1.1-1.4, 2.1, 3.2, 3.3 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Applies systematic and analytical decision making |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | processes for complex and non-routine situations<br>• Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others, in a secure and stable digital environment |

# Assessment Requirements for ICTSAD501 Model data objects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- document client business requirements
- construct an entity relationship diagram
- construct and document a data model
- normalise the model
- validate the model.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- fully describe:
  - database identifiers and their impact on database usability
  - normalisation rules and processes
  - type hierarchies, including sub-types, super-types and root-types related to development of structured data types
  - validation procedures and processes
- describe the function and features of:
  - an approach to data modelling, such as the entity-relationship model
  - keys, e.g. unique keys, composite keys, primary keys and primary index
  - time stamps related to the use of keys
  - user defined types, structured types, reference types and user defined functions
  - data types and their application
- summarise the particular business domain.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- client's business requirements
- special purpose tools, equipment and materials
- industry software packages
- computer aided software engineering (CASE) tools
- entity relationship diagrams.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD502 Model data processes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to gather process data and business information in order to model data processes within an organisation.

It applies to individuals who can apply a broad range of technical knowledge and skills within the context of a complex project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop scope of model | 1.1 Identify relevant data processes and sources of information<br>1.2 Identify information gathering method and modelling methodology to be used<br>1.3 Document modelling information gathered<br>1.4 Validate modelling information with client |
| 2. Gather process data | 2.1 Identify business functions and collect process data using chosen method |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Identify external events, procedures and results<br>2.3 Identify processes and required decomposition |
| 3. Develop and validate data model | 3.1 Model process data according to modelling methodology<br>3.2 Validate process model with client to determine inaccuracies<br>3.3 Incorporate identified changes, as required<br>3.4 Review business rules to determine impact on process models and change as required<br>3.5 Validate completed process models with client |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.3, 3.4 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 1.3, 1.4, 3.3-3.5 | • Prepares and produces diagrammatic models and associated documents that convey complex relationships between data |
| Oral Communication | 1.4, 3.2, 3.5 | • Determines and confirms client requirements using collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and confirm understanding |
| Interact with others | 1.4, 3.2, 3.5 | • Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships |
| Get the work done | 1.1, 1.2, 2.1-2.3, 3.1, 3.4 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Applies systematic and analytical decision making processes for complex and non-routine situations<br>• Uses and investigates new digital technologies and applications to manage and manipulate data, and |

# Assessment Requirements for ICTSAD502 Model data processes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify data processes that represent the client's business reality
- model data processes according to industry and organisation standards
- complete documentation of the data model.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss modelling rules and conventions with reference to naming processes and events
- outline features and functions of process mappers
- explain features of data analysis, particularly in determining process flows
- describe processes and techniques, using logical design concepts related to designing process models.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- client’s business requirements
- special purpose tools and equipment
- industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD503 Minimise risk of new technologies to business solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify and plan to minimise the business and technological risks associated with business solutions that utilise new technologies.

It applies to individuals who are responsible for performing complex technical analysis to provide solutions to complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish the risk context | 1.1 Review organisational and technical environment and proposed business solution<br>1.2 Identify scale, importance and complexity of project risks<br>1.3 Establish acceptable and unacceptable levels of risk and consequences for the solution |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Identify the impact of risks against the business environment<br>1.5 Determine and document proposed actions to insure against identified generic risks |
| 2. Conduct risk analysis | 2.1 Conduct a risk analysis to determine the likelihood of risks identified<br>2.2 Rank risk factors according to the impact and likelihood of occurrence<br>2.3 Develop contingency plans to mitigate identified risks<br>2.4 Document risk analysis and contingencies in a risk management plan<br>2.5 Implement risk management plans and undertake awareness training to inform stakeholders |
| 3. Monitor risks | 3.1 Establish feedback channels to warn of unforeseen and identified risks<br>3.2 Conduct regular reviews to identify new risks and update established risks<br>3.3 Document changes to risk management plans as appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 3.2 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 1.5, 2.1, 2.3, 2.4, 3.3 | • Prepares documentation that expresses ideas, explores complex issues and is constructed logically, succinctly and accurately |
| Navigate the world of work | 1.4 | • Seeks to improve policies and procedures to better meet organisational goals and mitigate risk |
| Interact with others | 2.5, 3.1, 3.2 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Elicits feedback and provides feedback to others |
| Get the work done | 1.2-1.5, 2.1-2.5 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Applies systematic and analytical decision making processes for complex and non-routine situations<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation, and formal and analytical thinking<br>• Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others, in a secure and stable digital environment |

# Assessment Requirements for ICTSAD503 Minimise risk of new technologies to business solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop procedures that identify where risk occurs
- identify measures to be taken to treat the risk
- document a risk management plan
- implement risk management plan
- establish a risk review procedure.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline business process design
- explain business supply chain
- describe copyright and intellectual property relating to new technologies
- identify and describe how business sites fit into corporate strategy
- explain the purpose of user analysis and customer relationship management software
- describe risk management process and planning strategies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- analysis software

© Commonwealth of Australia, 2025 Future Skills Organisation

- business website
- customer relationship model
- requirements documentation
- site server and software
- updated or new technology
- user analysis
- web servers.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD504 Implement quality assurance processes for business solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to define and implement quality assurance processes and procedures to ensure that business solutions achieve quality performance expectations.

It applies to senior information and communications technology (ICT) staff in a range of areas that are required to ensure quality in ICT systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan business quality assurance process | 1.1 Determine business quality performance expectations and benchmark standards<br>1.2 Develop business standards and guidelines for achieving each benchmark<br>1.3 Allocate strategic quality responsibilities for meeting business standards and guidelines according to business procedures |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Document expectations, standards and benchmarks in a quality plan based on business documentation standards<br>1.5 Identify appropriate quality management systems guides, including quality management plan for complex activities<br>1.6 Communicate quality policy and procedures to appropriate stakeholders |
| 2. Implement quality policies and plans | 2.1 Write quality policy for business directive<br>2.2 Create quality management plan for business solution<br>2.3 Distribute quality management plan to key people for feedback<br>2.4 Analyse feedback to determine if corrective action needs to be taken<br>2.5 Make changes to quality management plan, if required, to incorporate corrective action<br>2.6 Allocate key quality tasks and functions to appropriate person as per the quality management plan<br>2.7 Establish and document a quality reporting and monitoring program<br>2.8 Check and document skills of staff to ensure that they are able to meet the quality standards required |
| 3. Control quality assurance processes | 3.1 Implement quality performance guidelines, procedures and processes as per the quality management plan<br>3.2 Obtain stakeholder feedback, including client satisfaction to monitor implementation of quality processes<br>3.3 Monitor quality process performance as per the quality management plan<br>3.4 Report on monitoring of quality performance to key decision makers<br>3.5 Identify and record breakdowns in the system and create corrective action requests<br>3.6 Take immediate corrective action, where necessary |
| 4. Improve quality | 4.1 Collect, analyse and measure quality performance results against benchmarks to determine if quality standards are being met<br>4.2 Determine the frequency of quality breakdowns through corrective action requests in order to identify whether defects are isolated incidents or require a wider analysis and corrective action<br>4.3 Determine corrective actions to be taken and assign |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | responsibility for taking the action where appropriate<br>4.4 Identify who will be responsible for quality improvement<br>4.5 Implement corrective action solutions and measure performance<br>4.6 Review and adjust benchmark standards periodically in order to improve quality performance<br>4.7 Document quality performance results and disseminate the information to stakeholders as appropriate<br>4.8 Review business procedures at predetermined schedules as part of a management review process and quality reporting function |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.6, 3.5, 4.1, 4.6, 4.8 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 1.1, 1.2, 1.5, 2.1, 2.2, 2.5, 2.7, 2.8, 3.4, 4.6, 4.7 | • Accurately records information and prepares correspondence and documentation using clear language and organisational formats and protocols<br>• Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information |
| Oral Communication | 1.4, 3.4, 4.7 | • Uses collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and to confirm understanding |
| Navigate the world of work | 1.1-1.3, 1.5, 2.1, 2.5, 2.6, 3.1, 3.3, 4.8 | • Modifies or develops organisational policies and procedures to comply with legislative requirements and organisation goals<br>• Seeks to improve policies and procedures to better meet organisational goals<br>• Contributes to roles and responsibilities of self and others |
| Interact with | 1.3, 1.4, 2.3, 2.6, | • Selects, implements and seeks to improve protocols |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| others | 2.8, 3.2, 3.4, 3.5, 4.3, 4.4, 4.7 | governing communications to clients and co-workers in a range of work contexts<br>• Implements strategies for a diverse range of colleagues and clients in order to build rapport and foster strong relationships<br>• Elicits feedback and provides feedback to others in order to improve self or workgroup behaviours |
| Get the work done | 1.2-1.3, 2.2, 2.4, 2.7, 3.1-3.3, 3.5, 3.6, 4.1-4.8 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others taking into account capabilities, efficiencies and effectiveness<br>• Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities<br>• Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation, and formal and analytical thinking<br>• Uses and investigates new digital technologies and applications to manage and manipulate data, and communicate effectively with others in a secure and stable digital environment |

# Assessment Requirements for ICTSAD504 Implement quality assurance processes for business solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and implement appropriate processes and procedures to ensure quality expectations are met
- constructs quality standards that can be measured quantitatively and applied universally
- document quality assurance standards
- monitor and review quality assurance standards and processes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain copyright and intellectual property relating to information and communications technology (ICT) systems development
- outline features of business models
- explain the relevance to the development of quality assurance and quality management plans of:
  - International Organization for Standardization (ISO)
  - International Electrotechnical Commission (IEC) standards
  - Australian Standards (AS)
- describe quality concepts applied to ICT
- outline quality improvement processes
- explain techniques of technical performance measurement
- explain the implications of website architecture, including operating system on:
  - privacy
  - accessibility

© Commonwealth of Australia, 2025 Future Skills Organisation

  - equity
- describe the structure of a quality assurance management plan and list the standards that may be included.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- relevant quality standards
- data related to the business model
- organisational guidelines that apply to quality standards.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD505 Develop technical requirements for business solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the outcomes, skills and knowledge required to develop technical and related requirements that will enable business solutions to be implemented in an organisation.

It applies to individuals who are responsible for performing complex technical analysis to complete a range of tasks and provide solutions to complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research business requirements | 1.1 Define hardware and software requirements of the business solution<br>1.2 Determine model of business<br>1.3 Determine technical specifications for business<br>1.4 Establish interface requirements for end users and external parties |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Document business solution requirements for approval from stakeholders<br>1.6 Determine information and communications technology (ICT) security requirements |
| 2. Analyse the impact of technical solutions | 2.1 Identify hardware, software and network requirements<br>2.2 Identify software solutions to build business platform<br>2.3 Identify processes to be changed by the business solution<br>2.4 Determine the effect changes will have on the value or supply chain<br>2.5 Research a range of security protocols suitable for business solutions<br>2.6 Document impact of changes and submit to relevant stakeholders |
| 3. Develop and test business solutions | 3.1 Implement hardware and software solutions for testing purposes<br>3.2 Identify training needs to update personnel skills<br>3.3 Plan timelines and allocation of resources for business solution<br>3.4 Develop performance standards and benchmark results<br>3.5 Determine costs involved to implement business solution<br>3.6 Document the business solution |
| 4. Secure sign-off of validated solution | 4.1 Test, validate and document results of the business solution<br>4.2 Provide results to appropriate person for verification<br>4.3 Obtain sign-off on business solution |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.4, 1.6, 2.1-2.4 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.5, 2.6, 3.4, 3.6, 4.1 | • Accurately records and completes organisational documents and correspondence, using clear language and correct spelling, grammar and terminology<br>• Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information |
| Numeracy | 3.5 | • Performs mathematical calculations to analyse financial information, costs and values to accurately determine cost of implementation |
| Navigate the world of work | 2.3, 3.2 | • Seeks to improve policies and procedures to better meet organisational goals<br>• Contributes to roles and responsibilities of self and others |
| Interact with others | 1.5, 2.6, 4.2, 4.3 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts<br>• Implements strategies for a diverse range of colleagues and clients in order to build rapport and foster strong relationships |
| Get the work done | 1.1-1.4, 1.6, 2.1-2.5, 3.1-3.4, 4.1, 4.2 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation, and formal and analytical thinking<br>• Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others, in a secure and stable digital environment |

# Assessment Requirements for ICTSAD505 Develop technical requirements for business solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- document the internal and external technical environments required to provide a business solution
- produce a list of technical requirements
- produce an impact statement of the technical solution
- evaluate the functionality of the business solution.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline business process design
- list copyright and intellectual property relating to information and communications technology (ICT) systems development
- explain the customer and business liaison processes
- describe the implications of technology connectivity
- list and describe the potential business solutions
- explain the prevailing corporate strategies that may influence business solutions.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- business model

© Commonwealth of Australia, 2025 Future Skills Organisation

- business requirements documentation
- customer relationship model
- hardware, software and network requirements
- software solutions to build business platform
- processes to be changed by the business solution
- security protocols suitable for business solutions
- special purpose tools, equipment, materials and industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD506 Produce a feasibility report

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to recommend the preferred scenario from a range of feasible options offered to the client.

It applies to individuals who are responsible for researching, planning and designing solutions for complex information and communications technology (ICT) projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm client requirements | 1.1 Confirm client requirements to determine project scope and the problem context or opportunity faced by the business<br>1.2 Review documented client requirements, project scope, related problems and sources of information<br>1.3 Confirm requirements and scope with the client |
| 2. Examine and review alternatives | 2.1 Ensure that future client requirements are considered<br>2.2 Research and document feasible solutions for client |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | requirements<br>2.3 Ensure that the feasibility of each solution has been assessed, including constraints |
| 3. Prepare and publish feasibility report | 3.1 Prepare a feasibility report<br>3.2 Ensure that the completed feasibility report covers client requirements, project scope and analysis of alternative scenarios<br>3.3 Confirm the recommendation of the preferred scenario<br>3.4 Present feasibility report to appropriate person for project approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.2, 3.2 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 2.2, 3.1 | • Writes, edits and proofreads reports to ensure clarity of meaning, and accuracy and consistency of information<br>• Accurately records and completes organisational documents and correspondence using clear language and correct spelling, grammar and terminology |
| Oral Communication | 1.1, 1.3, 3.3, 3.4 | • Uses collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and to confirm understanding |
| Interact with others | 1.1, 1.3, 2.1, 3.4 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts<br>• Elicits feedback and provides feedback to others<br>• Recognises the diversity in people and manages this diversity to improve workplace relations and practices |
| Get the work done | 2.1-2.3, 3.1-3.3 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation, and formal and analytical thinking |

# Assessment Requirements for ICTSAD506 Produce a feasibility report

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review documentation and confirm client requirements for the project
- confirm the scope with the client
- document alternative solutions for the project
- prepare a feasibility report ensuring it meets client requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business domain and list the client requirements
- describe the role of stakeholders and the degree of stakeholder involvement in developing a feasibility report
- list the system's current functionality and improvement options
- outline TWO or more current industry systems development methodologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- contributions to a feasibility report
- client requirements
- report writing template
- client expectations brief

© Commonwealth of Australia, 2025 Future Skills Organisation

- information on a range of information and communications technology (ICT) business solutions
- future organisational business processes
- budgets for scenarios
- outcomes of the business analysis process
- financial modelling
- business context
- use of special purpose tools, equipment, materials and industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD601 Perform ICT-focused enterprise analysis

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to provide an enterprise analysis and determine the possible information and communications technology (ICT) solutions available for a given initiative or for long-term planning.

It applies to individuals who combine high-level management, business and technical skills necessary to manage complex analysis efforts within the ICT industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Define business need | 1.1 Analyse business goals and objectives, and link to measures to allow objective assessment of achievement<br>1.2 Investigate issues to determine the business problem or opportunity<br>1.3 Identify possible ICT solutions to the business problem<br>1.4 Determine desired outcomes to enable evaluation of proposed |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | solutions |
| 2. Assess capability gaps | 2.1 Determine current capabilities of the enterprise and relate to the desired objectives<br>2.2 Identify new capabilities required to achieve the desired future state and assess gaps<br>2.3 Test assumptions to facilitate appropriate decision making |
| 3. Determine solution approach | 3.1 Generate potential ICT options to meet the business objectives<br>3.2 Generate valid assumptions and recognise constraints that may affect the choice of solutions<br>3.3 Assess and rank solution approaches to facilitate selection |
| 4. Define solution scope | 4.1 Define solution scope in terms of the major features or functions to be included<br>4.2 Explain the implementation approach in terms of how the chosen solution will deliver the solution scope<br>4.3 Delineate major business and technical dependencies |
| 5. Define business case | 5.1 Identify benefits of the recommended solution in terms of both qualitative and quantitative gains to the enterprise<br>5.2 Estimate the total net cost of the solution<br>5.3 Perform initial risk assessment<br>5.4 Agree how identified costs and benefits will be assessed and evaluated |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1-2.3, 3.3, 4.3 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 1.1-1.4, 2.1-2.3, 3.1-3.3, 4.1-4.3, 5.1-5.4 | • Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information<br>• Prepares documentation that expresses ideas, explores |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | complex issues and is constructed logically, succinctly and accurately |
| Numeracy | 5.1-5.3 | • Uses highly developed numeracy skills to interpret complex financial information and perform calculations to make estimates of costs |
| Navigate the world of work | 1.1, 2.1, 4.1, 4.2 | • Works autonomously, making high-level decisions to achieve and improve organisational goals<br>• Takes a lead role in the development of organisational goals, roles and responsibilities<br>• Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are met |
| Interact with others | 5.4 | • Selects, implements and manipulates communications systems, processes and practices for maximum impact |
| Get the work done | 1.2-1.4, 2.1-2.3, 3.1-3.3, 4.2, 4.3, 5.1, 5.3, 5.4 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands<br>• Gathers and analyses data, and seeks feedback to improve plans and processes<br>• Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision making strategies where appropriate<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisation's goals |

# Assessment Requirements for ICTSAD601 Perform ICT-focused enterprise analysis

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- examine in detail a business situation and document a comprehensive business case for a proposed solution that addresses:
  - business need
  - required capabilities
  - solution scope
  - risk assessment
  - cost estimates
  - most feasible approach.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the business analysis processes, procedures and techniques
- discuss market trends and best practices to assist in identifying business opportunities
- explain technology and technology solution patterns.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- appropriate policies

© Commonwealth of Australia, 2025 Future Skills Organisation

- current business analysis practices and tools
- legislation
- reports and plans prepared for projects.

Assessors must satisfy NVR/AQTF assessor requirements.

# Links

# ICTSAD602 Conduct knowledge audits

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to conduct a knowledge management audit.

It applies to individuals in senior management positions who are responsible for high-level analysis of organisational strategies and practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Conduct a knowledge needs analysis | 1.1 Identify current and future directions of the business<br>1.2 Identify knowledge and skills required to support the current business activities<br>1.3 Identify knowledge and skills required to support future business directions |
| 2. Analyse the knowledge inventory | 2.1 Produce knowledge questionnaires to request information from staff about corporate knowledge |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Identify explicit knowledge currently resident in data sources, such as policies, procedures, databases and libraries, and record its location<br>2.3 Identify the accessibility, aim and integrity of the knowledge<br>2.4 Identify the frequency of update of this knowledge, its previous versions, and its backup status<br>2.5 Identify implicit knowledge currently resident in informal sources and organisational knowledge |
| 3. Chart the knowledge flow | 3.1 Examine how knowledge flows from one data store to another within the organisation, and how this flow is facilitated or impeded by policies, such as access control or records management policies<br>3.2 Examine the procedures that facilitate the flow of knowledge within the organisation and their ease of use<br>3.3 Identify the corporate and individual attitudes to knowledge within the organisation |
| 4. Produce a knowledge audit report | 4.1 Analyse the results of the knowledge audit<br>4.2 Document findings and present to the appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.2, 2.4, 2.5, 3.2, 4.1 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 2.1, 4.2 | • Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information<br>• Prepares documentation that expresses ideas, explores complex issues, and is constructed logically, succinctly and accurately |
| Navigate the world of work | 2.2, 3.1-3.3 | • Takes a lead role in the development of organisational goals, roles and responsibilities<br>• Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are met |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Monitors and reviews the organisation's policies, procedures and adherence to legislative requirements in order to implement and manage change |
| Interact with others | 3.3, 4.2 | • Selects, implements and manipulates communications systems, processes and practices for maximum impact<br>• Develops and implements communications strategies with internal and external persons in order to build rapport<br>• Influences and fosters a collaborative culture, facilitating a sense of commitment and workplace cohesion |
| Get the work done | 1.1-1.3, 2.3-2.5, 3.1, 3.3, 4.1 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands<br>• Gathers and analyses data and seeks feedback to improve plans and processes<br>• Makes high-impact decisions in a complex and diverse environment, using input from a range of sources<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisation's goals |

# Assessment Requirements for ICTSAD602 Conduct knowledge audits

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- document the identified explicit and implicit knowledge in an organisation
- establish and record the knowledge required to meet current needs
- establish and record the forecast knowledge required to meet future needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how the organisation’s business, policies, procedures and structure influence corporate knowledge
- describe the difference between implicit and explicit knowledge
- analyse and identify concepts of risk management planning and processes
- explain the requirements for the design and development of questionnaires and the procedures for analysis of completed questionnaires
- explain the reporting mechanisms that influence a knowledge audit
- describe the key tools and models of project management.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- an organisation
- data sources and staff

© Commonwealth of Australia, 2025 Future Skills Organisation

- relevant tools, equipment and materials
- relevant industry software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD603 Plan and monitor business analysis activities in an ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to establish and manage information and communications technology (ICT) business analysis activities in a medium-to-large organisation.

This unit applies to individuals who require high-level management, business and technical skills to manage complex analysis efforts within the information and communications technology (ICT) industry, often as part of business critical ICT projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan business analysis approach | 1.1 Establish organisational process needs and objectives that apply to the initiative, and if necessary, define the requirements that the process must meet<br>1.2 Review existing organisational standards, including standards, guidelines and processes relating to the current initiative |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Tailor an approach to the needs of a specific business analysis initiative, according to organisational standards if required<br>1.4 Engage with the appropriate stakeholders to determine how the work will be completed<br>1.5 Plan the execution of business activities |
| 2. Conduct stakeholder analysis | 2.1 Recognise stakeholders who may be affected by the business need or a new solution<br>2.2 Assess stakeholder attitudes toward, and influence over, the initiative<br>2.3 Decide which stakeholders will have authority over business analysis activities<br>2.4 Instigate regular reviews to identify new stakeholders or changed positions as clarity of business needs evolve |
| 3. Plan business analysis activities | 3.1 Decide the type of project or initiative and the business analysis deliverables<br>3.2 Determine the scope of work for business analysis activities<br>3.3 Approve which activities the business analyst will perform and when<br>3.4 Develop estimates for business analysis work |
| 4. Plan business analysis communication | 4.1 Determine how best to receive, distribute, access, update and escalate information from project stakeholders<br>4.2 Decide how best to communicate with each stakeholder according to stakeholder needs and constraints to communication |
| 5. Plan requirements management process | 5.1 Establish a requirements repository for storing requirements, including those under development, those under review, and approved requirements<br>5.2 Assess the need and process for requirements traceability, based on relevant factors<br>5.3 Conclude which requirements attributes will be captured<br>5.4 Determine the process for requirements change management |
| 6. Manage business analysis performance | 6.1 Determine which metrics will be used to measure the work performed by the business analyst<br>6.2 Report performance in an appropriate format, based on the needs of the project<br>6.3 Assess performance measures to determine where problems |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | may be occurring in executing business analysis activities<br>6.4 Identify preventative or corrective actions as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 6.3 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 1.1, 2.2, 5.1, 6.2 | • Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information<br>• Prepares documentation that expresses ideas, explores complex issues, and is constructed logically, succinctly and accurately |
| Oral Communication | 2.2 | • Determines and confirms stakeholder requirements, using collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and to confirm understanding |
| Numeracy | 3.4 | • Performs mathematical calculations to analyse financial information, costs and values to accurately determine estimates |
| Navigate the world of work | 1.2, 1.3 | • Works autonomously, making high-level decisions to achieve and improve organisational goals<br>• Takes a lead role in the development of organisational goals, roles and responsibilities<br>• Monitors and reviews the organisation's policies, procedures and adherence to legislative requirements in order to implement and manage change |
| Interact with others | 1.4, 2.1, 2.2, 2.4, 3.3, 4.2 | • Selects, implements and manipulates communications systems, processes and practices for maximum impact<br>• Develops and implements communications strategies with internal and external stakeholders in order to build rapport and achieve desired outcomes |

# Assessment Requirements for ICTSAD603 Plan and monitor business analysis activities in an ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and monitor business analysis activities, including determining an approach and processes that are appropriate to the circumstances
- determine business analysis deliverables, tasks and estimates
- plan business analysis communications
- determine metrics for monitoring business analysis work
- assess business performance and identify measures to rectify.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the business analysis process, procedures and techniques
- describe project management process, procedures and techniques
- identify and apply risk management strategies
- overview technology and technology solution patterns
- describe communication constraints that may impact on stakeholders.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- special purpose materials
- industry software packages.

# ICTSAD604 Manage and communicate ICT solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage and communicate requirements for new information and communications technology (ICT) systems to a broad and diverse audience.

This unit applies to individuals who require high-level management, business and technical skills to manage complex analysis within the information and communications technology (ICT) industry, often as part of business critical ICT projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Manage identified client ICT requirements and scope of solution | 1.1 Establish baseline client ICT requirements and change control processes to track changes to requirements and solution scope<br>1.2 Resolve issues and conflicts that emerge during final stages of identifying and analysing requirements<br>1.3 Determine how requirements will be presented for review<br>1.4 Secure approval of requirements from those stakeholders who |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | have the appropriate authority |
| 2. Manage requirement relationships and dependencies | 2.1 Examine and organise the set of requirements and record the dependencies and relationships for each<br>2.2 Perform impact analysis to assess or evaluate the impact of a change<br>2.3 Deploy requirements management tools as necessary |
| 3. Maintain requirements for re-use | 3.1 Identify requirements that the organisation will use in the long term<br>3.2 Name and define requirements available for future re-use |
| 4. Prepare requirements package | 4.1 Decide which formats are appropriate for a particular project and its stakeholders<br>4.2 Prepare requirements package according to organisational need |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.2 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 1.4, 2.1, 3.2, 4.2, 5.1, 5.2 | • Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information<br>• Prepares documentation and correspondence using clear language, correct spelling and terminology, and ensuring accuracy of information |
| Oral Communication | 1.4, 5.1, 5.2 | • Uses collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and to confirm understanding |
| Navigate the world of work | 4.2, 5.2 | • Works autonomously, making high-level decisions to achieve and improve organisational goals<br>• Develops and implements strategies that ensure organisational policies and procedures are being met |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Interact with others | 1.2, 1.4, 5.1, 5.2 | • Selects, implements and manipulates communications systems, processes and practices for maximum impact<br>• Influences and fosters a collaborative culture, facilitating a sense of commitment and workplace cohesion<br>• Shares knowledge, information and experience openly as an integral part of the working relationship<br>• Recognises potential for conflict and, working with others, seeks to develop organisational processes to deal with conflict |
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1, 3.2, 4.1 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands<br>• Gathers and analyses data and seeks feedback to improve plans and processes<br>• Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision making strategies where appropriate<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisation's goals |

# Assessment Requirements for ICTSAD604 Manage and communicate ICT solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- establish processes to:
  - trace requirements
  - control and track changes to requirements
  - scope solutions
- manage requirement relationships
- package and communicate requirements according to what is appropriate for a project or stakeholder group.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain conflict resolution and issue management techniques to handle possible changes to solution scope
- outline requirements management and traceability processes
- list and apply techniques for managing version control and configuration.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- a simulated or workplace project in a medium-to-large enterprise

© Commonwealth of Australia, 2025 Future Skills Organisation

- observation of the candidate carrying out business analysis work
- reports and plans prepared for the projects
- a portfolio of the project work to be undertaken.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD605 Elicit ICT requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the outcomes, skills and knowledge required to undertake and engage stakeholders in the key task of defining information and communications technology (ICT) requirements.

This unit applies to individuals required to ensure that requirements elicited are complete, clear, correct and consistent, and can serve as a solid foundation for the solution to the business needs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for elicitation | 1.1 Define the specific activities and the planned dates for a particular elicitation activity<br>1.2 Build a detailed schedule<br>1.3 Communicate the plan to affected parties |
| 2. Conduct elicitation | 2.1 Conduct elicitation activity |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| activity | 2.2 Monitor captured requirements against business objectives to prevent scope creep<br>2.3 Capture and document requirements attributes<br>2.4 Update process metrics as the basis for future planning |
| 3. Document elicitation results | 3.1 Record elicitation outcomes in the appropriate form<br>3.2 Present elicitation outcomes to stakeholders and obtain agreement |
| 4. Confirm elicitation results | 4.1 Review the documented outputs with the stakeholders<br>4.2 Confirm that own understanding reflects stakeholder intentions and preferences |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.3, 4.1 | • Analyses and consolidates information and data from a range of sources against defined criteria and requirements, and checks for accuracy and completeness |
| Writing | 1.1, 1.3, 2.3, 2.4, 3.1, 3.2 | • Accurately records information and prepares correspondence and documentation using clear language and organisational formats and protocols<br>• Records outcomes of discussions |
| Oral Communication | 1.3, 2.1, 3.2, 4.1, 4.2 | • Determines and confirms stakeholder requirements, using collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and to confirm understanding |
| Interact with others | 1.3, 2.1, 3.2, 4.2 | • Selects, implements and manipulates communications systems, processes and practices for maximum impact<br>• Develops and implements communications strategies with internal and external persons in order to build rapport |
| Get the work | 1.1, 1.2, 2.2, 2.4, 4.2 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse |

# Assessment Requirements for ICTSAD605 Elicit ICT requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- construct and implement requirements for elicitation activities
- select and apply elicitation techniques that are appropriate to the situation
- document requirements and obtain stakeholder sign-off.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain conflict resolution and issue management techniques
- provide an overview of negotiation and consensus strategies
- summarise techniques to elicit and manage the gathering of requirements
- formulate risk management strategies with regard to requirements gathering, staff management and proposed systems
- outline scope management and change control processes
- describe version control and configuration management approaches.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- appropriate policies
- current business analysis tools
- appropriate legislation

© Commonwealth of Australia, 2025 Future Skills Organisation

- reports and plans prepared for the projects
- a portfolio of the project work to be undertaken.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD606 Analyse stakeholder requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to analyse stated requirements, determine potential solutions, and define possible features available to meet stakeholder needs.

This unit applies to individuals who require high-level management, business and technical skills necessary to manage complex analysis efforts within the information and communications technology (ICT) industry, often as part of business critical ICT projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prioritise requirements | 1.1 Determine the basis for prioritisation of requirements<br>1.2 Resolve challenges in facilitating the prioritisation |
| 2. Organise requirements | 2.1 Articulate requirements at an appropriate level of abstraction<br>2.2 Devise appropriate models to describe the solution scope, based on informational needs of stakeholders |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Document dependencies and inter-relationships among requirements |
| 3. Specify and model requirements | 3.1 Develop textual requirements<br>3.2 Generate matrices to convey or support identified requirements<br>3.3 Create models to document and communicate requirements and improvement opportunities |
| 4. Define assumptions and constraints | 4.1 Agree on assumptions to be defined and clarified as requirements are understood<br>4.2 Document and examine business constraints to identify options no longer available<br>4.3 Recognise and examine technical constraints that may restrict design or mandate standards to be followed |
| 5. Verify requirements | 5.1 Establish characteristics of requirements' quality<br>5.2 Undertake verification activities iteratively throughout the requirements analysis process |
| 6. Validate requirements | 6.1 Identify and define stakeholder requirement benefit assumptions so that associated risks can be managed<br>6.2 Generate measurable evaluation criteria to assess success of requirements benefit post implementation<br>6.3 Assign business value of requirements to assist in identifying candidates for elimination<br>6.4 Determine requirement dependencies for benefits realisation<br>6.5 Evaluate alignment with business case and opportunity cost to assist validation and decision making |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 4.3, 5.2, 6.1, 6.4, 6.5 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 2.1, 2.3, 3.1-3.3, 4.2 | • Prepares documentation that expresses ideas, explores complex issues, and is constructed logically, succinctly and accurately<br>• Documents outcomes and changes to discussions, using industry relevant terminology<br>• Writes, edits and proofreads documents to ensure clarity of meaning, and consistency of information |
| Oral Communication | 2.1 | • Presents complex information in formal situations, using clear and convincing language, tone and pace appropriate for the audience and purpose |
| Numeracy | 6.2, 6.3 | • Performs mathematical calculations to interpret and manipulate complex numerical information |
| Navigate the world of work | 4.2 | • Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are being met |
| Interact with others | 2.2, 4.1, 6.3 | • Selects, implements and manipulates communications systems, processes and practices for maximum impact<br>• Uses a variety of relevant communication tools and strategies in building and maintaining effective working relationships |
| Get the work done | 1.1, 1.2, 2.2, 4.1, 4.3, 5.1, 5.2, 6.1-6.5 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands<br>• Gathers and analyses data and seeks feedback to improve plans and processes<br>• Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision making strategies where appropriate<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisation’s goals |

# Assessment Requirements for ICTSAD606 Analyse stakeholder requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- define, specify and prioritise stakeholder and solution requirements to a standard that would allow construction of a business solution
- verify and validate the requirements to ensure necessary quality, and support for stakeholder needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe business rules analysis
- explain data flow diagramming
- outline data, organisation and process modelling, and their relevant business and technical constraints
- explain functional decomposition
- describe risk management strategies
- explain the purpose of using scenarios, stories and case studies
- describe scope modelling.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- appropriate policies, current business analysis practices and tools

© Commonwealth of Australia, 2025 Future Skills Organisation

- relevant legislation
- special purpose tools, equipment and materials
- industry software packages
- reports and plans prepared for projects
- a portfolio of projects to be undertaken.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAD607 Manage assessment and validation of ICT solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to determine the best information and communications technology (ICT) solution and facilitate its implementation.

This unit applies to individuals who are required to assess and validate business processes, organisational structures, outsourcing agreements, software applications, and any other component of the solution to ensure that the overall solution delivers maximum value to stakeholders.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems analysis and design

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Assess proposed solution | 1.1 Rank solution options on business value, and advantages and disadvantages of alternatives<br>1.2 Generate and consider solution options and additional capabilities |
| 2. Allocate requirements | 2.1 Allocate requirements to solution components to maximise |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | business value<br>2.2 Facilitate allocation of requirements to a specific project release, phase or iteration |
| 3. Assess organisational readiness | 3.1 Conduct cultural assessment<br>3.2 Conduct operational or technical assessment<br>3.3 Perform stakeholder impact analysis |
| 4. Define transition requirements | 4.1 Evaluate old system actual data and metadata<br>4.2 Develop options for managing ongoing work during transition to the new solution<br>4.3 Participate in organisational change management recommendations or processes as required |
| 5. Validate solution | 5.1 Investigate defective solution outputs<br>5.2 Assess defects and issues |
| 6. Evaluate solution performance | 6.1 Realise value delivered by the solution<br>6.2 Validate solution metrics<br>6.3 Decide solution replacement or elimination |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.1-3.3, 4.1, 5.1, 6.2 | • Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements |
| Writing | 1.1, 1.2, 3.2, 3.3 | • Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information<br>• Prepares documentation that expresses ideas, explores complex issues, and is constructed logically, succinctly |
| Navigate the world of work | 4.3 | • Takes a lead role in the development of organisational goals, roles and responsibilities<br>• Monitors and reviews the organisation's policies, procedures and adherence to requirements in order to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | implement and manage change |
| Interact with others | 3.1, 4.3 | • Uses a variety of relevant communication tools and strategies in building and maintaining effective working relationships<br>• Understands diversity and seeks to integrate diversity into the work context, for managing change, making decisions and achieving shared outcomes |
| Get the work done | 1.1, 1.2, 2.1, 2.2, 3.1, 3.2, 4.1-4.3, 5.1, 5.2, 6.1-6.3 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands<br>• Gathers and analyses data and seeks feedback to improve plans and processes<br>• Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques, experience and knowledge to focus in on the root cause<br>• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisation's goals |

# Assessment Requirements for ICTSAD607 Manage assessment and validation of ICT solutions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- categorise benefits and disadvantages of various solution options
- assess cultural impact of different solutions
- compare transition requirements between solutions
- analyse output variances between solutions
- remove inappropriate solutions from list
- recommend remaining solutions in priority order
- validate solutions
- confirm solution metrics and evaluate the solution.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the impact of the business environment with regard to proposed information and communications technology (ICT) solutions
- describe and implement techniques for assessing options and validating solutions
- explain and apply organisational change management
- outline the principles of solution performance metrics.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- appropriate policies
- current business analysis practices and tools
- relevant legislation
- special purpose tools, equipment and materials
- industry software packages
- reports and plans prepared for projects
- portfolio of project work to be undertaken.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAS201 Maintain inventories for equipment, software and documentation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to record and store details of software, hardware and technical documentation.

It applies to frontline technical support personnel who maintain equipment, software and related technical documentation in a small to large office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems administration and support

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Document and update inventory | 1.1 Maintain hardware inventory that creates a profile or description of each piece of equipment<br>1.2 Maintain software inventory and update licences as required, particularly when upgrading software<br>1.3 Record and organise storage of user documentation or technical manuals |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Store technical documentation | 2.1 Store hardware, software and equipment that is not in use, according to technical manuals<br>2.2 Ensure technical documentation is stored securely<br>2.3 Access and disseminate technical documentation as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 2.2, 2.3 | • Accesses and interprets textual information from a range of sources to record, manage and maintain information |
| Writing | 1.1, 1.2, 1.3, 2,2 | • Records organisation, software and client technical information, and sequences writing to produce cohesive text for reference |
| Oral Communication | 1.3, 2.1 | • Participates in verbal exchanges of basic ideas that elicit views, opinions and feedback from others |
| Navigate the world of work | 1.2-1.3, 2.1-2.3 | • Understands roles and responsibilities for task and makes basic decisions on work completion parameters |
| Get the work done | 1.1-1.3, 2.1-2.3 | • Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeking assistance in setting priorities<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Assessment Requirements for ICTSAS201 Maintain inventories for equipment, software and documentation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- update and maintain software, equipment and technical documentation inventory, according to identified storage and retrieval policy and procedures
- comply with software licensing requirements, according to vendor specifications
- access and update inventories.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe technical documentation processes
- describe common software licensing requirements
- describe inventory principles and procedures
- explain current industry practices related to storage of hardware, software and technical documentation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to:

- personal computer, equipment and materials
- industry and inventory management software packages
- organisational documentation
- enterprise intranet.

# ICTSAS202 Apply problem-solving techniques to routine ICT malfunctions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to apply problem-solving techniques to determine the origin of a routine malfunction and plan for its resolution.

It applies to individuals who work under supervision to provide frontline technical support, diagnose technical problems and determine potential solutions. These are key components of this support role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems administration and support

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify routine problems | 1.1 Identify hardware, software, user or procedural problem areas to appropriate person in the organisation<br>1.2 Define and determine problem to be investigated<br>1.3 Identify and document current conditions of the hardware, software, user or problem |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Research solutions to routine problems | 2.1 Identify potential solutions to problem<br>2.2 Develop, document, rank and present recommendations about possible solutions to appropriate person for decision |
| 3. Recommend solutions to problems | 3.1 Plan implementation of solutions<br>3.2 Plan evaluation of implemented solutions<br>3.3 Document recommended solution and submit to appropriate person for confirmation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1-2.2, 3.1-3.3 | • Interprets familiar textual information from a range of sources to identify misleading information, compare technical specifications, and identify solutions to new and emerging issues |
| Writing | 1.3, 2.2, 3.3 | • Develops materials and resources using simple vocabulary to record information in a sequential manner for client engagement as well as internal reference |
| Oral Communication | 1.1, 2.2 | • Participates in verbal exchanges of familiar ideas using questioning and active listening to elicit information and feedback from others |
| Navigate the world of work | 1.1- 1.3, 2.1, 2.2, 3.1-3.3 | • Understands roles and responsibilities for task and makes basic decisions on work completion parameters |
| Interact with others | 1.3, 2.2 | • Identifies and takes steps to follow accepted communication practices and protocols |
| Get the work done | 1.1-1.3, 2.1, 2.2, 3.1-3.3 | • Plans and implements routine tasks, aiming to complete them efficiently<br>• Initiates standard diagnostic procedures when responding to familiar and unfamiliar problems within immediate context, and seeks input from others when problems remain unresolved<br>• Understands the purposes, specific functions and key |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Assessment Requirements for ICTSAS202 Apply problem-solving techniques to routine ICT malfunctions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine the root cause of a routine malfunction
- identify solutions
- produce documentation that recommends solutions to problems
- follow established procedures
- refer unresolved problems to support persons.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify current industry hardware and software products and services
- identify current industry maintenance, service and helpdesk practices, processes and procedures
- identify current operating systems
- identify current industry standard diagnostic tools
- describe common computer malfunctions and resolutions.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to:

- a workstation and industry software packages
- detailed information relating to organisational processes and procedures

© Commonwealth of Australia, 2025 Future Skills Organisation

- information on a range of Information and Communications
- Technology (ICT) business solutions.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTSAS203 Connect hardware peripherals

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to connect hardware peripherals according to instructions.

It applies to individuals employed in an information and communications technology (ICT) support role who are required to solve technical hardware and software incompatibility conflicts and problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Systems administration and support

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm client requirements | 1.1 Identify and confirm peripheral requirements of client according to organisational standards<br>1.2 Document client requirements and peripherals needed, and report findings to the appropriate person according to organisational standards<br>1.3 Verify client requirements with appropriate person according to organisational standards and reporting procedures |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Take action to ensure client support expectations are covered by vendor warranty and support services |
| 2. Obtain required peripherals | 2.1 Obtain peripherals under instruction from appropriate person<br>2.2 Enter details of peripherals into equipment inventory according to organisational standards<br>2.3 Validate that contents of delivered components and physical contents match the packing list and resolve discrepancies if necessary<br>2.4 Store peripherals according to vendors guidelines |
| 3. Connect hardware peripherals | 3.1 Verify timeframe for installation schedule with client<br>3.2 Remove old peripherals with minimal disruption to clients if they are to be replaced, taking into account environmental considerations and work health and safety (WHS) standards<br>3.3 Connect new peripherals with minimum disruption to clients, taking into account operating system procedures<br>3.4 Configure computer to accept new peripherals<br>3.5 Test hardware peripherals and confirm client satisfaction, paying particular attention to possible effect on other systems and making adjustments as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.4, 2.1-2.4, 3.1-3.5 | • Interprets textual information from a range of sources to identify and adhere to requirements |
| Writing | 1.2, 1.3, 1.4, 2.1 | • Develops materials and resources using simple vocabulary to convey and record information and inventory, according to client and vendor requirements |
| Oral Communication | 1.2, 1.3, 1.4, 2.1, 3.1, 3.5 | • Participates in verbal exchanges of familiar ideas and information using questioning and active listening to elicit views, opinions and feedback from others |
| Navigate the | 1.1, 1.3, 1.4, 2.1-2.4, | • Understands roles and responsibilities for task and makes basic decisions on work completion parameters |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| world of work | 3.2-3.5 | in accordance with organisational requirements, WHS standards and environmental considerations |
| Interact with others | 1.1-1.4, 2.1, 3.1 | • Identifies and takes steps to follow accepted communication practices and protocols |
| Get the work done | 1.1-1.4, 2.1-2.4, 3.1-3.5 | • Plans and implements routine tasks, aiming to achieve them efficiently<br>• Responds to predictable routine problems and implements standard or logical solutions<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Assessment Requirements for ICTSAS203 Connect hardware peripherals

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- connect several different types of hardware peripherals to the system safely and according to vendor instructions with a minimum of downtime, using known routines and procedures
- locate, interpret and use vendor documentation related to connection and storage of hardware peripherals
- test the operation of newly installed hardware peripherals and confirm client satisfaction
- follow work health and safety policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the commonly used computer operating systems
- identify help desk and maintenance practices
- describe common peripheral devices
- summarise WHS procedures for electrical equipment
- list the system components and describe their interconnectivity
- identify current industry accepted hardware and software products
- describe procedures relevant to maintaining inventory
- list the organisational guidelines and standards that impact on service support including:
  - external suppliers and vendors
  - internal and external communications
  - internet access
  - security of information and data

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify common principles for environmentally sustainable business practices.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to:

- sites with a representative range of workstations, hardware peripherals, internet connections and cabling
- software to be installed, interconnected and configured
- hardware and software currently used in industry
- technical documentation, including organisational hardware blueprint and vendor support.

Assessors must satisfy NVR/AQTF assessor requirements.
