# ICT Information and Communications Technology

**Release: 3.1**

# CONTENTS

**ICT10115 Certificate I in Information, Digital Media and Technology ..... 41**
**ICT20115 Certificate II in Information, Digital Media and Technology ..... 43**
**ICT20215 Certificate II in Telecommunications Network Build and Operate ..... 46**
**ICT20315 Certificate II in Telecommunications Technology ..... 52**
**ICT30115 Certificate III in Information, Digital Media and Technology ..... 59**
**ICT30215 Certificate III in Telecommunications Digital Reception Technology ..... 64**
**ICT30315 Certificate III in Telecommunications Rigging Installation ..... 69**
**ICT30415 Certificate III in Telecommunications Network Build and Operate ..... 76**
**ICT30515 Certificate III in Telecommunications Technology ..... 83**
**ICT40115 Certificate IV in Information Technology ..... 92**
**ICT40215 Certificate IV in Information Technology Support ..... 99**
**ICT40315 Certificate IV in Web-Based Technologies ..... 104**
**ICT40415 Certificate IV in Information Technology Networking ..... 108**
**ICT40515 Certificate IV in Programming ..... 111**
**ICT40615 Certificate IV in Information Technology Testing ..... 114**
**ICT40715 Certificate IV in Systems Analysis and Design ..... 117**
**ICT40815 Certificate IV in Digital Media Technologies ..... 120**
**ICT40915 Certificate IV in Digital and Interactive Games ..... 124**
**ICT41015 Certificate IV in Computer Systems Technology ..... 128**
**ICT41115 Certificate IV in Telecommunications Network Design ..... 131**
**ICT41215 Certificate IV in Telecommunications Engineering Technology ..... 136**
**ICT50115 Diploma of Information Technology ..... 143**
**ICT50215 Diploma of Digital and Interactive Games ..... 150**
**ICT50315 Diploma of Information Technology Systems Administration ..... 154**
**ICT50415 Diploma of Information Technology Networking ..... 157**
**ICT50515 Diploma of Database Design and Development ..... 161**
**ICT50615 Diploma of Website Development ..... 164**
**ICT50715 Diploma of Software Development ..... 168**
**ICT50815 Diploma of Systems Analysis and Design ..... 171**
**ICT50915 Diploma of Digital Media Technologies ..... 174**
**ICT51015 Diploma of Telecommunications Engineering ..... 177**
**ICT51115 Diploma of Telecommunications Planning and Design ..... 184**
**ICT60115 Advanced Diploma of Information Technology ..... 188**
**ICT60215 Advanced Diploma of Network Security ..... 191**
**ICT60315 Advanced Diploma of Information Technology Business Analysis ..... 194**
**ICT60415 Advanced Diploma of Information Technology Project Management ..... 197**
**ICT60515 Advanced Diploma of Computer Systems Technology ..... 200**
**ICT60615 Advanced Diploma of Telecommunications Network Engineering ..... 203**
**ICT80115 Graduate Certificate in Information Technology and Strategic Management 207**
**ICT80215 Graduate Certificate in Information Technology Sustainability ..... 210**
**ICT80315 Graduate Certificate in Telecommunications ..... 213**
**ICT80415 Graduate Diploma of Telecommunications Network Engineering ..... 216**
**ICT80515 Graduate Diploma of Telecommunications and Strategic Management ..... 220**
**ICT80615 Graduate Certificate in Telecommunications Network Engineering ..... 224**
**BSBSUS401 Implement and monitor environmentally sustainable work practices ..... 228**
**Assessment Requirements for BSBSUS401 Implement and monitor environmentally sustainable work practices ..... 232**
**CPCPCM2043A Carry out WHS requirements ..... 234**
**CPCPCM2055A Work safely on roofs ..... 244**

**CUAANM301 Create 2D digital animations ....254**
**Assessment Requirements for CUAANM301 Create 2D digital animations ....258**
**CUAANM302 Create 3D digital animations ....260**
**Assessment Requirements for CUAANM302 Create 3D digital animations ....264**
**CUAANM303 Create 3D digital models ....266**
**Assessment Requirements for CUAANM303 Create 3D digital models ....270**
**CUAANM402 Create digital visual effects ....272**
**Assessment Requirements for CUAANM402 Create digital visual effects ....276**
**CUACAM201 Assist with a basic camera shoot ....278**
**Assessment Requirements for CUACAM201 Assist with a basic camera shoot ....282**
**CUACAM301 Shoot material for screen productions ....284**
**Assessment Requirements for CUACAM301 Shoot material for screen productions ....288**
**CUADIG201 Maintain interactive content ....290**
**Assessment Requirements for CUADIG201 Maintain interactive content ....293**
**CUADIG301 Prepare video assets ....295**
**Assessment Requirements for CUADIG301 Prepare video assets ....298**
**CUADIG302 Author interactive sequences ....300**
**Assessment Requirements for CUADIG302 Author interactive sequences ....303**
**CUADIG303 Produce and prepare photo images ....305**
**Assessment Requirements for CUADIG303 Produce and prepare photo images ....309**
**CUADIG304 Create visual design components ....311**
**Assessment Requirements for CUADIG304 Create visual design components ....314**
**CUADIG401 Author interactive media ....316**
**Assessment Requirements for CUADIG401 Author interactive media ....320**
**CUADIG502 Design digital applications ....322**
**Assessment Requirements for CUADIG502 Design digital applications ....326**
**CUADIG503 Design e-learning resources ....328**
**Assessment Requirements for CUADIG503 Design e-learning resources ....332**
**CUADIG504 Design games ....334**
**Assessment Requirements for CUADIG504 Design games ....338**
**CUADIG507 Design digital simulations ....340**
**Assessment Requirements for CUADIG507 Design digital simulations ....344**
**CUADRA201 Develop drawing skills ....346**
**Assessment Requirements for CUADRA201 Develop drawing skills ....349**
**CUAPHI504 Employ specialised imaging technologies ....351**
**Assessment Requirements for CUAPHI504 Employ specialised imaging technologies ....354**
**CUAPOS201 Perform basic vision and sound editing ....356**
**Assessment Requirements for CUAPOS201 Perform basic vision and sound editing ....360**
**CUAPOS401 Edit screen content for fast turnaround ....362**
**Assessment Requirements for CUAPOS401 Edit screen content for fast turnaround ....366**
**CUAPOS402 Manage media assets ....368**
**Assessment Requirements for CUAPOS402 Manage media assets ....372**
**CUAPPM407 Create storyboards ....374**
**Assessment Requirements for CUAPPM407 Create storyboards ....378**
**CUASOU202 Perform basic sound editing ....380**
**Assessment Requirements for CUASOU202 Perform basic sound editing ....384**
**CUASOU304 Prepare audio assets ....386**
**Assessment Requirements for CUASOU304 Prepare audio assets ....389**
**CUASOU307 Record and mix a basic music demo ....391**
**Assessment Requirements for CUASOU307 Record and mix a basic music demo ....394**
**CUASOU407 Edit sound ....396**
**Assessment Requirements for CUASOU407 Edit sound ....400**
**CUASOU504 Produce sound recordings ....402**

**Assessment Requirements for CUASOU504 Produce sound recordings....406**
**ICTBWN302 Install optical fibre splitters in fibre distribution hubs....408**
**Assessment Requirements for ICTBWN302 Install optical fibre splitters in fibre distribution hubs....412**
**ICTBWN303 Install lead-in module and cable for fibre to the premises....414**
**Assessment Requirements for ICTBWN303 Install lead-in module and cable for fibre to the premises....418**
**ICTBWN304 Work safely with live fibre to test and commission a fibre to the x installation....420**
**Assessment Requirements for ICTBWN304 Work safely with live fibre to test and commission a fibre to the x installation....425**
**ICTBWN305 Use optical and radio frequency measuring instruments....427**
**Assessment Requirements for ICTBWN305 Use optical and radio frequency measuring instruments....431**
**ICTCBL201 Install customer cable support systems....433**
**Assessment Requirements for ICTCBL201 Install customer cable support systems....437**
**ICTCBL202 Place and secure customer cable....439**
**Assessment Requirements for ICTCBL202 Place and secure customer cable....443**
**ICTCBL203 Terminate metallic conductor customer cable....445**
**Assessment Requirements for ICTCBL203 Terminate metallic conductor customer cable449**
**ICTCBL204 Install functional and protective telecommunications earthing system....451**
**Assessment Requirements for ICTCBL204 Install functional and protective telecommunications earthing system....455**
**ICTCBL205 Joint metallic conductor cable on customer premises....457**
**Assessment Requirements for ICTCBL205 Joint metallic conductor cable on customer premises....460**
**ICTCBL206 Alter services to existing cable system....462**
**Assessment Requirements for ICTCBL206 Alter services to existing cable system....465**
**ICTCBL207 Haul underground cable....467**
**Assessment Requirements for ICTCBL207 Haul underground cable....470**
**ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers 472**
**Assessment Requirements for ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers....476**
**ICTCBL209 Joint and terminate coaxial cable....478**
**Assessment Requirements for ICTCBL209 Joint and terminate coaxial cable....482**
**ICTCBL210 Install a telecommunications service to a building....484**
**Assessment Requirements for ICTCBL210 Install a telecommunications service to a building....487**
**ICTCBL211 Install an above ground equipment enclosure....489**
**Assessment Requirements for ICTCBL211 Install an above ground equipment enclosure492**
**ICTCBL212 Erect aerial cable supports....494**
**Assessment Requirements for ICTCBL212 Erect aerial cable supports....497**
**ICTCBL213 Construct underground telecommunications infrastructure....499**
**Assessment Requirements for ICTCBL213 Construct underground telecommunications infrastructure....502**
**ICTCBL214 Fix aerial cable....504**
**Assessment Requirements for ICTCBL214 Fix aerial cable....508**
**ICTCBL215 Joint metallic conductor cable in access network....510**
**Assessment Requirements for ICTCBL215 Joint metallic conductor cable in access network....513**
**ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit....515**

**Assessment Requirements for ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit....519**
**ICTCBL220 Install a cable lead-in....521**
**Assessment Requirements for ICTCBL220 Install a cable lead-in....525**
**ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule....527**
**Assessment Requirements for ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule....532**
**ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule....535**
**Assessment Requirements for ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule....541**
**ICTCBL238 Install, maintain and modify customer premises communications cabling: ACMA Lift Rule....544**
**Assessment Requirements for ICTCBL238 Install, maintain and modify customer premises communications cabling: ACMA Lift Rule....550**
**ICTCBL301 Install, terminate and certify structured cabling installation....552**
**Assessment Requirements for ICTCBL301 Install, terminate and certify structured cabling installation....556**
**ICTCBL302 Install and terminate optical fibre cable on customer premises....558**
**Assessment Requirements for ICTCBL302 Install and terminate optical fibre cable on customer premises....561**
**ICTCBL303 Install and terminate coaxial cable....563**
**Assessment Requirements for ICTCBL303 Install and terminate coaxial cable....567**
**ICTCBL304 Perform cable and system test on customer premises....569**
**Assessment Requirements for ICTCBL304 Perform cable and system test on customer premises....573**
**ICTCBL305 Hand over cable systems and equipment....575**
**Assessment Requirements for ICTCBL305 Hand over cable systems and equipment....578**
**ICTCBL306 Locate and identify cable system faults....580**
**Assessment Requirements for ICTCBL306 Locate and identify cable system faults....584**
**ICTCBL307 Install underground enclosures and conduit....586**
**Assessment Requirements for ICTCBL307 Install underground enclosures and conduit590**
**ICTCBL308 Install underground cable....592**
**Assessment Requirements for ICTCBL308 Install underground cable....596**
**ICTCBL309 Construct aerial cable supports....598**
**Assessment Requirements for ICTCBL309 Construct aerial cable supports....602**
**ICTCBL310 Install aerial cable....604**
**Assessment Requirements for ICTCBL310 Install aerial cable....608**
**ICTCBL311 Install systems and equipment on customer premises....610**
**Assessment Requirements for ICTCBL311 Install systems and equipment on customer premises....614**
**ICTCBL312 Cutover new systems and equipment on customer premises....616**
**Assessment Requirements for ICTCBL312 Cutover new systems and equipment on customer premises....620**
**ICTCBL313 Modify and cutover cable....622**
**Assessment Requirements for ICTCBL313 Modify and cutover cable....626**
**ICTCBL314 Install network cable equipment....628**
**Assessment Requirements for ICTCBL314 Install network cable equipment....632**
**ICTCBL315 Maintain cable network....634**
**Assessment Requirements for ICTCBL315 Maintain cable network....638**
**ICTCBL316 Install ribbon fibre cable in the FTTX distribution network....640**

**Assessment Requirements for ICTCBL316 Install ribbon fibre cable in the FTTX distribution network ..... 644**
**ICTCBL317 Cut over metallic conductor cable in the access network ..... 647**
**Assessment Requirements for ICTCBL317 Cut over metallic conductor cable in the access network ..... 651**
**ICTCBL318 Install and cut over metallic conductor cable to access network cabinet ..... 653**
**Assessment Requirements for ICTCBL318 Install and cut over metallic conductor cable to access network cabinet ..... 657**
**ICTCBL319 Rearrange large size copper cable ..... 659**
**Assessment Requirements for ICTCBL319 Rearrange large size copper cable ..... 663**
**ICTCBL320 Jumper metallic conductor cable in the access network ..... 665**
**Assessment Requirements for ICTCBL320 Jumper metallic conductor cable in the access network ..... 669**
**ICTCBL401 Prepare design drawings and specification for a cable installation ..... 671**
**Assessment Requirements for ICTCBL401 Prepare design drawings and specification for a cable installation ..... 674**
**ICTCBL402 Schedule and supply cabling installation ..... 676**
**Assessment Requirements for ICTCBL402 Schedule and supply cabling installation ..... 679**
**ICTCBL403 Supervise cabling project ..... 681**
**Assessment Requirements for ICTCBL403 Supervise cabling project ..... 685**
**ICTCBL404 Test cable bearers ..... 687**
**Assessment Requirements for ICTCBL404 Test cable bearers ..... 691**
**ICTCBL405 Remotely locate and identify cable network faults ..... 693**
**Assessment Requirements for ICTCBL405 Remotely locate and identify cable network faults ..... 696**
**ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards ..... 698**
**Assessment Requirements for ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards ..... 701**
**ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule ..... 703**
**Assessment Requirements for ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule ..... 706**
**ICTCMP501 Undertake radio communications site audit ..... 708**
**Assessment Requirements for ICTCMP501 Undertake radio communications site audit 712**
**ICTDBS401 Identify physical database requirements ..... 714**
**Assessment Requirements for ICTDBS401 Identify physical database requirements ..... 717**
**ICTDBS402 Complete database backup and restore ..... 719**
**Assessment Requirements for ICTDBS402 Complete database backup and restore ..... 722**
**ICTDBS403 Create basic databases ..... 724**
**Assessment Requirements for ICTDBS403 Create basic databases ..... 727**
**ICTDBS404 Identify and resolve common database performance problems ..... 729**
**Assessment Requirements for ICTDBS404 Identify and resolve common database performance problems ..... 732**
**ICTDBS407 Monitor physical database implementation ..... 734**
**Assessment Requirements for ICTDBS407 Monitor physical database implementation . 737**
**ICTDBS408 Link an RFID system to a database ..... 739**
**Assessment Requirements for ICTDBS408 Link an RFID system to a database ..... 742**
**ICTDBS409 Monitor and administer a database ..... 744**
**Assessment Requirements for ICTDBS409 Monitor and administer a database ..... 747**
**ICTDBS412 Build a database ..... 749**
**Assessment Requirements for ICTDBS412 Build a database ..... 752**
**ICTDBS501 Monitor and improve knowledge management system ..... 754**

**Assessment Requirements for ICTDBS501 Monitor and improve knowledge management system....757**
**ICTDBS502 Design a database....759**
**Assessment Requirements for ICTDBS502 Design a database....763**
**ICTDBS503 Create a data warehouse....765**
**Assessment Requirements for ICTDBS503 Create a data warehouse....769**
**ICTDBS504 Integrate database with a website....771**
**Assessment Requirements for ICTDBS504 Integrate database with a website....774**
**ICTDBS601 Build a data warehouse....776**
**Assessment Requirements for ICTDBS601 Build a data warehouse....780**
**ICTDBS602 Develop a knowledge management strategy....782**
**Assessment Requirements for ICTDBS602 Develop a knowledge management strategy....786**
**ICTDBS603 Determine suitability of database functionality and scalability....788**
**Assessment Requirements for ICTDBS603 Determine suitability of database functionality and scalability....791**
**ICTDMT401 Create visual design components for digital media....793**
**Assessment Requirements for ICTDMT401 Create visual design components for digital media....796**
**ICTDMT402 Produce interactive animation....798**
**Assessment Requirements for ICTDMT402 Produce interactive animation....801**
**ICTDMT403 Produce and edit digital images....803**
**Assessment Requirements for ICTDMT403 Produce and edit digital images....807**
**ICTDMT501 Incorporate and edit digital video....809**
**Assessment Requirements for ICTDMT501 Incorporate and edit digital video....813**
**ICTDRE301 Install digital reception equipment....815**
**Assessment Requirements for ICTDRE301 Install digital reception equipment....819**
**ICTDRE302 Locate and rectify digital reception equipment faults....821**
**Assessment Requirements for ICTDRE302 Locate and rectify digital reception equipment faults....825**
**ICTDRE303 Install a complex digital reception system....827**
**Assessment Requirements for ICTDRE303 Install a complex digital reception system....830**
**ICTDRE304 Design communications wiring systems for customer premises....832**
**Assessment Requirements for ICTDRE304 Design communications wiring systems for customer premises....836**
**ICTDRE305 Develop integrated digital reception systems....838**
**Assessment Requirements for ICTDRE305 Develop integrated digital reception systems842**
**ICTDRE401 Integrate customer digital reception equipment....844**
**Assessment Requirements for ICTDRE401 Integrate customer digital reception equipment....848**
**ICTDRE402 Integrate data delivery modes....850**
**Assessment Requirements for ICTDRE402 Integrate data delivery modes....854**
**ICTEDU301 Train customers in new technology....856**
**Assessment Requirements for ICTEDU301 Train customers in new technology....859**
**ICTEDU501 Develop and deliver training associated with new and modified products....861**
**Assessment Requirements for ICTEDU501 Develop and deliver training associated with new and modified products....865**
**ICTGAM301 Apply simple modelling techniques....867**
**Assessment Requirements for ICTGAM301 Apply simple modelling techniques....870**
**ICTGAM302 Design and apply simple textures to digital art....872**
**Assessment Requirements for ICTGAM302 Design and apply simple textures to digital art876**
**ICTGAM303 Review and apply the principles of animation....878**
**Assessment Requirements for ICTGAM303 Review and apply the principles of animation882**
**ICTGAM401 Produce an interactive game....884**

**Assessment Requirements for ICTGAM401 Produce an interactive game.....888**
**ICTGAM402 Identify and apply principles of games design and game playing.....890**
**Assessment Requirements for ICTGAM402 Identify and apply principles of games design and game playing.....893**
**ICTGAM403 Create design documents for interactive games.....895**
**Assessment Requirements for ICTGAM403 Create design documents for interactive games.....899**
**ICTGAM404 Apply artificial intelligence in game development.....901**
**Assessment Requirements for ICTGAM404 Apply artificial intelligence in game development.....904**
**ICTGAM405 Write story and content for digital games.....906**
**Assessment Requirements for ICTGAM405 Write story and content for digital games..909**
**ICTGAM406 Create visual design components for interactive games.....911**
**Assessment Requirements for ICTGAM406 Create visual design components for interactive games.....915**
**ICTGAM407 Write scripts for interactive games.....917**
**Assessment Requirements for ICTGAM407 Write scripts for interactive games.....921**
**ICTGAM408 Use 3-D animation interface and toolsets.....923**
**Assessment Requirements for ICTGAM408 Use 3-D animation interface and toolsets....927**
**ICTGAM409 Create 3-D characters for interactive games.....929**
**Assessment Requirements for ICTGAM409 Create 3-D characters for interactive games932**
**ICTGAM410 Develop 3-D components for interactive games.....934**
**Assessment Requirements for ICTGAM410 Develop 3-D components for interactive games.....937**
**ICTGAM412 Design interactive media.....939**
**Assessment Requirements for ICTGAM412 Design interactive media.....943**
**ICTGAM413 Design and create 3-D digital models.....945**
**Assessment Requirements for ICTGAM413 Design and create 3-D digital models.....948**
**ICTGAM414 Create audio for digital games.....950**
**Assessment Requirements for ICTGAM414 Create audio for digital games.....954**
**ICTGAM415 Develop simple environments for 3-D games.....956**
**Assessment Requirements for ICTGAM415 Develop simple environments for 3-D games960**
**ICTGAM416 Prepare and complete image rendering processes.....962**
**Assessment Requirements for ICTGAM416 Prepare and complete image rendering processes.....966**
**ICTGAM417 Apply digital effects to interactive products.....968**
**Assessment Requirements for ICTGAM417 Apply digital effects to interactive products971**
**ICTGAM418 Use simple modelling for animation.....973**
**Assessment Requirements for ICTGAM418 Use simple modelling for animation.....977**
**ICTGAM419 Build a database to support a computer game.....979**
**Assessment Requirements for ICTGAM419 Build a database to support a computer game983**
**ICTGAM501 Create design concepts for digital games and 3-D media.....986**
**Assessment Requirements for ICTGAM501 Create design concepts for digital games and 3-D media.....990**
**ICTGAM503 Create a complex 3-D interactive computer game.....992**
**Assessment Requirements for ICTGAM503 Create a complex 3-D interactive computer game.....996**
**ICTGAM504 Manage interactive media production.....998**
**Assessment Requirements for ICTGAM504 Manage interactive media production.....1001**
**ICTGAM506 Create complex code for mobile game devices.....1003**
**Assessment Requirements for ICTGAM506 Create complex code for mobile game devices1006**
**ICTGAM507 Develop intermediate 3-D software for games and interactive media.....1008**

**Assessment Requirements for ICTGAM507 Develop intermediate 3-D software for games and interactive media ..... 1012**
**ICTGAM508 Develop complex 3-D software for games and interactive media ..... 1014**
**Assessment Requirements for ICTGAM508 Develop complex 3-D software for games and interactive media ..... 1018**
**ICTGAM509 Design interactive 3-D applications for scientific and mathematical modelling ..... 1020**
**Assessment Requirements for ICTGAM509 Design interactive 3-D applications for scientific and mathematical modelling ..... 1023**
**ICTGAM510 Prepare games for different platforms and delivery modes ..... 1025**
**Assessment Requirements for ICTGAM510 Prepare games for different platforms and delivery modes ..... 1028**
**ICTGAM511 Manage testing of games and interactive media ..... 1030**
**Assessment Requirements for ICTGAM511 Manage testing of games and interactive media ..... 1034**
**ICTGAM512 Create and implement designs for a 3-D games environment ..... 1036**
**Assessment Requirements for ICTGAM512 Create and implement designs for a 3-D games environment ..... 1039**
**ICTGAM514 Design and create models for a 3-D and digital effects environment ..... 1041**
**Assessment Requirements for ICTGAM514 Design and create models for a 3-D and digital effects environment ..... 1045**
**ICTGAM515 Design and create advanced particles, fluids and bodies for 3-D digital effects ..... 1047**
**Assessment Requirements for ICTGAM515 Design and create advanced particles, fluids and bodies for 3-D digital effects ..... 1051**
**ICTGAM516 Animate a 3-D character for digital games ..... 1053**
**Assessment Requirements for ICTGAM516 Animate a 3-D character for digital games 1057**
**ICTGAM517 Produce a digital animation sequence ..... 1059**
**Assessment Requirements for ICTGAM517 Produce a digital animation sequence ..... 1062**
**ICTGAM518 Animate physical attributes of models and elements ..... 1064**
**Assessment Requirements for ICTGAM518 Animate physical attributes of models and elements ..... 1068**
**ICTGAM519 Manage technical art and rigging in 3-D animation ..... 1070**
**Assessment Requirements for ICTGAM519 Manage technical art and rigging in 3-D animation ..... 1074**
**ICTGAM520 Create and combine 3-D digital games and components ..... 1076**
**Assessment Requirements for ICTGAM520 Create and combine 3-D digital games and components ..... 1079**
**ICTGAM521 Create interactive 3-D environments for digital games ..... 1081**
**Assessment Requirements for ICTGAM521 Create interactive 3-D environments for digital games ..... 1085**
**ICTGAM522 Complete digital editing for the 3-D and digital effects environment ..... 1087**
**Assessment Requirements for ICTGAM522 Complete digital editing for the 3-D and digital effects environment ..... 1091**
**ICTGAM523 Collaborate in the design of 3-D game levels and environments ..... 1093**
**Assessment Requirements for ICTGAM523 Collaborate in the design of 3-D game levels and environments ..... 1097**
**ICTGAM524 Integrate multiple data sources into interactive 3-D environments ..... 1099**
**Assessment Requirements for ICTGAM524 Integrate multiple data sources into interactive 3-D environments ..... 1102**
**ICTGAM525 Apply digital texturing for the 3-D environment in digital games ..... 1104**
**Assessment Requirements for ICTGAM525 Apply digital texturing for the 3-D environment in digital games ..... 1107**

## Qualification Description

This qualification provides the skills and knowledge for individuals to safely perform foundation digital literacy tasks using a personal computer and a range of software applications and digital devices.

*Licensing/Regulatory Information*

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 6**

**4 core units** plus

**2 elective units**

The elective units consist of:

- up to 2 from the elective units listed below
- up to 1 from elsewhere in the ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Certificate I or II level.

© Commonwealth of Australia, 2025 Future Skills Organisation

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

ICTICT101 Operate a personal computer

ICTICT102 Operate word-processing applications

ICTICT103 Use, communicate and search securely on the internet

ICTICT104 Use digital devices

**Elective units**

BSBWHS201 Contribute to health and safety of self and others

BSBSUS201 Participate in environmentally sustainable work practices

BSBCMM101 Apply basic communication skills

ICTICT105 Operate spreadsheet applications

ICTICT106 Operate presentation packages

ICTICT107 Use personal productivity tools

ICTICT108 Use digital literacy skills to access the internet

**Core units**

BSBWHS201 Contribute to health and safety of self and others

BSBSUS201 Participate in environmentally sustainable work practices

ICTICT201 Use computer operating systems and hardware

ICTICT202 Work and communicate effectively in an ICT environment

ICTICT203 Operate application software packages

ICTICT204 Operate a digital media technology package

ICTWEB201 Use social media tools for collaboration and engagement

**Elective units**

CUACAM201 Assist with a basic camera shoot

CUADIG201 Maintain interactive content

CUADIG303 Produce and prepare photo images

CUAPOS201 Perform basic vision and sound editing

CUASOU202 Perform basic sound editing

ICPDMT321 Capture a digital image

ICTICT205 Design basic organisational documents using computing packages

ICTICT206 Install software applications

ICTICT207 Integrate commercial computing packages

ICTICT208 Operate accounting applications

ICTICT209 Interact with ICT clients

ICTICT210 Operate database applications

ICTICT211 Identify and use basic current industry specific technologies

ICTICT212 Incorporate Indigenous needs and perspectives into ICT environment

ICTSAS201 Maintain inventories for equipment, software and documentation

ICTSAS202 Apply problem-solving techniques to routine ICT malfunctions

ICTSAS203 Connect hardware peripherals

ICTSAS204 Record client support requirements

ICTSAS205 Maintain ICT system integrity

ICTSAS206 Detect and protect from spam and destructive software

ICTSAS207 Protect and secure information assets

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTSAS208 Maintain ICT equipment and consumables

ICTSAS209 Connect and use a home based local wireless network

# ICT20215 Certificate II in Telecommunications Network Build and Operate

## Modification History

| Release | Comments |
|---|---|
| Release 3 | This version released with ICT Information and Communications Technology Training Package Version 3.1.<br>ICTCBL320 and ICTBWN305 added to list of elective units.<br>ICTCBL212 replaced with ICTCBL220 in the Telecommunications Linesworker HFC specialisation stream. |
| Release 2 | This version released with ICT Information and Communications Technology Training Package Version 3.0. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification has been designed as a pathway for entry into work on the National Broadband Network (NBN).

This qualification provides individuals with the skills and knowledge in a range of NBN industry occupations, specifically for the national rollout of high speed broadband network infrastructure. This may be undertaken as part of a traineeship.

In conjunction with safe working practices, the Telecommunications Linesworker occupational outcome is achieved by selecting one of three specialist technology streams: Fibre or Copper or Hybrid Fibre Coaxial (HFC).

The Linesworker occupation reflects the role of operators who perform cable and infrastructure work underground. This involves safe civil and construction work in site preparation, building of enclosures, installing mounting brackets and hauling of underground cables. It also reflects the role of operators in performing work safely aboveground to install fibre or metallic aerial cable and infrastructure. This may also include installation of aerial lead-in cables to customer premises and providing traffic management.

© Commonwealth of Australia, 2025 Future Skills Organisation

*Licensing/Regulatory Information*

Work functions in the occupational areas where this qualification may be used may be subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner. Refer to "Pathways to ACMA Cabling Provider Rules - Cabling registration" and the mandatory industry practical hours required for registration.

# Entry Requirements

Nil.

# Packaging Rules

**Total number of units = 12**

**5 core units** plus

**7 elective** units

The elective units consist of

- up to 7 from Group A or Group B
- up to 2 may be from elsewhere in this Training Package, another currently endorsed Training Package or any accredited course at AQF level II or III.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. This could be achieved by selecting a specialisation (see below) or by selecting an appropriate mix of electives from both Group A and B.

Units selected from other training packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Refer to the *Specialisations* information below, and to the Companion Volume Implementation Guide, for advice about choosing electives to support specialisations.

**Core Units**

© Commonwealth of Australia, 2025 Future Skills Organisation

CPCCOHS1001A Work safely in the construction industry
ICTTEN201 Use electrical skills in telecommunications work
ICTTEN202 Use hand and power tools
ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTWOR201 Work effectively in telecommunications technology

**Elective Units**

**Group A**

**Cabling**

ICTBWN303 Install lead-in module and cable for fibre to the premises
ICTBWN305 Use optical and radio frequency measuring instruments
ICTCBL207 Haul underground cable
ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers
ICTCBL209 Joint and terminate coaxial cable
ICTCBL211 Install an above ground equipment enclosure
ICTCBL212 Erect aerial cable supports
ICTCBL213 Construct underground telecommunications infrastructure
ICTCBL214 Fix aerial cable
ICTCBL215 Joint metallic conductor cable in access network
ICTCBL220 Install a cable lead-in
ICTCBL302 Install and terminate optical fibre cable on customer premises
ICTCBL303 Install and terminate coaxial cable
ICTCBL307 Install underground enclosures and conduit
ICTCBL308 Install underground cable
ICTCBL310 Install aerial cable
ICTCBL320 Jumper metallic conductor cable in the access network
ICTPMG201 Prepare site for support installation
ICTTEN302 Install telecommunications network equipment
ICTTEN303 Locate, identify and rectify recurrent network faults
ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
ICTTEN311 Inspect, clean and handle optical fibre cable and connectors

**Group B**

© Commonwealth of Australia, 2025 Future Skills Organisation

## General

BSBSUS201 Participate in environmentally sustainable work practices

CPCCCM2007B* Use explosive power tools

CPCCDE3014A* Remove non-friable asbestos

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

CPCPCM2043A Carry out WHS requirements

CPCPCM2055A* Work safely on roofs

HLTAID001 Provide cardiopulmonary resuscitation

HLTAID003 Provide first aid

ICTTEN207 Install and test internet protocol devices in convergence networks

ICTWHS201 Provide telecommunications services safely on roofs

RIIWHS204D Work safely at heights

ICTWHS203 Work safely near power infrastructure

## Specialisations

The use of specialist streams is appropriate for this qualification in accordance with the AQF, Standards for Training Packages and the packaging rules. Where a specialist stream is achieved, testamurs must show the appropriate specialisation in brackets. Refer to the Companion Volume Implementation Guide for further advice about specialisations.

### Minimum elective units required for technology specialisations are described below.

#### Telecommunications Linesworker Fibre

The following 7 units must be selected:

- ICTCBL211 Install an above ground equipment enclosure
- ICTCBL213 Construct underground telecommunications infrastructure
- ICTCBL214 Fix aerial cable
- ICTCBL207 Haul underground cable
- ICTPMG201 Prepare site for support installation
- ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
- ICTTEN311 Inspect, clean and handle optical fibre cable and connectors.

#### Telecommunications Linesworker Copper

The following 6 units must be selected:

- ICTCBL211 Install an above ground equipment enclosure
- ICTCBL213 Construct underground telecommunications infrastructure
- ICTCBL214 Fix aerial cable

© Commonwealth of Australia, 2025 Future Skills Organisation

- ICTCBL207 Haul underground cable
- ICTCBL320 Jumper metallic conductor cable in the access network
- ICTPMG201 Prepare site for support installation.

**Telecommunications Linesworker HFC**

The following 6 units must be selected:

- ICTCBL209 Joint and terminate coaxial cable
- ICTCBL211 Install an above ground equipment enclosure
- ICTCBL214 Fix aerial cable
- ICTCBL220 Install a cable lead-in
- ICTBWN305 Use optical and radio frequency measuring instruments
- ICTPMG201 Prepare site for support installation

Plus:

- ICTWHS201 Provide telecommunications services safely on roofs

or

- RIIWHS204D Work safely at heights.

*Note the following prerequisite unit requirements:

| **Unit in this qualification** | **Prerequisite unit** |
|---|---|
| CPCCCM2007B Use explosive power tools | CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry |
| CPCCDE3014A Remove non-friable asbestos | CPCCOHS1001A Work safely in the construction industry |
| CPCPCM2055A Work safely on roofs | CPCPCM2043A Carry out WHS requirements |

| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification reflects the role of a new entrant into the telecommunications industry who can apply a range of competencies in a varied work context from installation to operation of telecommunications equipment and products.

The qualification has a generic outcome if no specialisation has been undertaken. When a specialisation has been selected then the qualification has one of the following outcomes.

### Cabling

This specialisation reflects the role of an operator for the installation of telecommunications equipment, data cabling and cabling products on customer premises.

### Networking

This specialisation reflects the role of an operator for a limited range of digital reception equipment for either a customer or an enterprise. They would perform limited fault finding on a range of digital reception equipment for both cable TV and free to air TV reception.

### Radio Communications

This specialisation reflects the role of an operator for the installation and maintenance of telecommunications radio communications equipment installed in base stations. It prepares an individual for entry to the industry in a general area of installation of telecommunication radio communications equipment and connection of wireless base stations.

### Rigging

© Commonwealth of Australia, 2025 Future Skills Organisation

This specialisation reflects the role of an operator for the installation and maintenance of telecommunications equipment installed on structures requiring rigging skills. It prepares an individual for entry to the industry in a specialised area of installation of telecommunication equipment on high structures including radio towers or for installation and connection of wireless base stations.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

Refer to "Pathways to ACMA Cabling Provider Rules - Cabling registration" and the mandatory industry practical hours required for registration.

Dogging and rigging are classified under the National Standards for licensing persons performing high risk work. Age restrictions apply to eligibility for licencing. Please refer to the relevant federal and state legislation to ensure compliance with the regulations.

# Entry Requirements

Nil

# Packaging Rules

**Total number of units = 15**

**6 core units** plus

**9 elective** units

The elective units consist of:

- up to 9 may be from any group of elective units listed below
- up to 2 units from elsewhere in this Training Package, or another currently endorsed Training Package or accredited course at AQF Level 2 or 3.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the Australian Quality Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

© Commonwealth of Australia, 2025 Future Skills Organisation

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Refer to the *Specialisations* information below, and to the Companion Volume Implementation Guide, for advice about choosing electives to support specialisations in particular sectors of the information and communications industry.

**Core Units**

BSBSUS201 Participate in environmentally sustainable work practices

ICTTEN201 Use electrical skills in telecommunications work

ICTTEN202 Use hand and power tools

ICTTEN207 Install and test internet protocol devices in convergence networks

ICTWHS204 Follow work health and safety and environmental policy and procedures

ICTWOR201 Work effectively in telecommunications technology

**Elective Units**

**Group A Radio communications and rigging**

ICTTCR201 Use rigging practices and systems on telecommunications network structures

ICTTCR202 Use operational safety in a telecommunications rigging environment

ICTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures

CPCCLDG3001A Licence to perform dogging

CPCCLRG3001A Licence to perform rigging basic level*

ICTRFN201 Install a satellite antenna

ICTRFN202 Install a terrestrial antenna

ICTRFN304 Construct and test a radio communications device

**Group B Cabling**

ICTCBL201 Install customer cable support systems

ICTCBL202 Place and secure customer cable

ICTCBL203 Terminate metallic conductor customer cable

ICTCBL204 Install functional and protective telecommunications earthing system

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTCBL205 Joint metallic conductor cable on customer premises

ICTCBL206 Alter services to existing cable system

ICTCBL207 Haul underground cable

ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers

ICTCBL209 Joint and terminate coaxial cable

ICTCBL210 Install a telecommunications service to a building

ICTCBL211 Install an above ground equipment enclosure

ICTCBL212 Erect aerial cable supports

ICTCBL213 Construct underground telecommunications infrastructure

ICTCBL214 Fix aerial cable

ICTCBL215 Joint metallic conductor cable in access network

ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit

ICTCBL220 Install a cable lead-in

ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule*

ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards

ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule*

**Group C Networking**

ICTTEN203 Install and configure a home or small office network

ICTTEN204 Install and configure a small to medium business network

ICTTEN205 Build and maintain a secure network

ICTTEN206 Operate new media software packages

**Group D General**

BSBCUS201 Deliver a service to customers

CPCCOHS1001A Work safely in the construction industry

HLTAID001 Provide cardiopulmonary resuscitation

HLTAID003 Provide first aid

ICTICT206 Install software applications

ICTPMG201 Prepare site for support installation

ICTPMG202 Plan, organise and undertake work activities

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTSAS203 Connect hardware peripherals

ICTWHS201 Provide telecommunications services safely on roofs

ICTWHS202 Work safely in a radio frequency electromagnetic radiation environment

ICTWHS203 Work safely near power infrastructure

**Specialisations**

The use of specialist streams is appropriate for this qualification in accordance with the AQF, Standards for Training Packages and the packaging rules. Where a specialist stream is achieved, testamurs must show the appropriate specialisation in brackets. Refer to the Companion Volume Implementation Guide for further advice about specialisations.

**The minimum elective units required for the specific specialisations are described below.**

## Cabling

*(Note: See licencing information in the ICT Companion Volume Implementation Guide regarding ACMA registration)*

Select at least 6 electives from Group B Cabling.

## Networking

Select at least 4 electives from Group C Networking.

## Radio Communications

Select the following 3 elective units:

- ICTRFN201 Install a satellite antenna
- ICTRFN202 Install a terrestrial antenna
- ICTRFN304 Construct and test a radio communications device
- plus at least 1 more from Group A Radio communications and rigging.

## Rigging

*(Note: This specialisation is not suitable for delivery in a school as a Vocational Education and Training (VET) program. See information in the ICT Companion Volume Implementation Guide regarding licencing for dogging and rigging.)*

Select the following 4 elective units from Group A Radio communications and rigging:

- ICTTCR202 Use operational safety in a telecommunications rigging environment
- ICTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures
- CPCCLDG3001A Licence to perform dogging

© Commonwealth of Australia, 2025 Future Skills Organisation

- CPCCLRG3001A Licence to perform rigging basic level*.
-

*Note the following prerequisite unit requirements:

| Unit in this qualification | Prerequisite unit |
|---|---|
| CPCCLRG3001A Licence to perform rigging basic level | CPCCLDG3001A Licence to perform dogging |
| ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule | ICTWHS204 Follow work health and safety and environmental policy and procedures<br>ICTTEN201 Use electrical skills in telecommunications work |
| ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule | ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule<br>OR<br>ICTCBL201 Install customer cable support systems, and ICTCBL202 Place and secure customer cable, and ICTCBL203 Terminate metallic conductor customer cable, and ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards |

| Release 2 | This version released with ICT Information and Communications Technology Training Package version 2.0.<br><br>Release 2 created to update unit codes. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to be competent in a wide range of general information and communications technology (ICT) technical functions and to achieve a degree of self-sufficiency as an advanced ICT user.

Persons working at this level will support information technology activities in the workplace across a wide range of ICT areas, including technical support, network administration, web technologies, software applications and digital media technologies.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 17**

**6 core units** *plus*

**11 elective units**

© Commonwealth of Australia, 2025 Future Skills Organisation

The elective units consist of:

- 5 units from one of the following specialist elective groups:
  Group A Applications
  Group B Network administration
  Group C Support
  Group D Web technologies
  Group E Multimedia
- up to 6 from any of the specialist elective groups below or from Group F general elective units below
- up to 3 from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Certificate III or IV level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

BSBWHS304 Participate effectively in WHS communication and consultation processes

BSBSUS401 Implement and monitor environmentally sustainable work practices

ICTICT202 Work and communicate effectively in an ICT environment

ICTICT301 Create user documentation

ICTICT302 Install and optimise operating system software

ICTSAS301 Run standard diagnostic tests

**Elective units**

**Specialist elective units**

**Group A Applications**

ICTICT203 Operate application software packages

ICTICT304 Implement system software changes

ICTICT307 Customise packaged software applications for clients

ICTICT308 Use advanced features of computer applications

ICTICT409 Develop macros and templates for clients using standard products

**Group B Network administration**

ICTNWK301 Provide network systems administration

ICTNWK302 Determine and action network problems

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTNWK304 Administer network peripherals

ICTNWK305 Install and manage network protocols

ICTSAS307 Install, configure and secure a small office or home office network

**Group C Support**

ICTICT303 Connect internal hardware components

ICTSAS303 Care for computer hardware

ICTSAS304 Provide basic system administration

ICTSAS305 Provide ICT advice to clients

ICTSAS306 Maintain equipment and software

**Group D Web technologies**

BSBEBU401 Review and maintain a website

ICTWEB201 Use social media tools for collaboration and engagement

ICTWEB301 Create a simple markup language document

ICTWEB302 Build simple websites using commercial programs

ICTWEB303 Produce digital images for the web

**Group E Multimedia**

CUAANM301 Create 2D digital animations

CUAANM302 Create 3D digital animations

ICTGAM301 Apply simple modelling techniques

ICTGAM302 Design and apply simple textures to digital art

ICTGAM303 Review and apply the principles of animation

**General elective units**

**Group F**

BSBIPR301 Comply with organisational requirements for protection and use of intellectual property

CUADIG301 Prepare video assets

CUADIG302 Author interactive sequences

CUADIG304 Create visual design components

ICPDMT346 Incorporate video into multimedia presentations

ICTBWN301 Perform tests on optical communication system and components

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTBWN302 Install optical fibre splitters in fibre distribution hubs

ICTBWN303 Install lead-in module and cable for fibre to the premises

ICTBWN304* Work safely with live fibre to test and commission a fibre to the x installation

ICTBWN305 Use optical and radio frequency measuring instruments

ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers

ICTCBL236* Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

ICTCBL237* Install, maintain and modify customer premises communications cabling: ACMA Open Rule

ICTCBL219 Apply safe technical work practices for cabling registration when configuring ADSL circuits

ICTICT305 Identify and use current industry specific technologies

ICTICT306 Migrate to new technology

ICTNWK303 Configure and administer a network operating system

ICTNWK306 Evaluate characteristics of cloud computing solutions and services

ICTNWK419 Identify and use current virtualisation technologies

ICTPRG301 Apply introductory programming techniques

ICTTEN201 Use electrical skills in telecommunications work

ICTWHS204 Follow work health and safety environmental policy and procedures

* Note the following prerequisite unit requirements:

# ICT30315 Certificate III in Telecommunications Rigging Installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification prepares an individual for entry into the telecommunications industry and its convergent technologies, including radio, optical, data and internet protocol (IP) networks.

This qualification reflects the role of an operator who can apply a broad range of competencies in a varied work context. An operator uses rigging skills to install and maintain radio antennas on high structures, such as radio towers, and build and mount sections of radio masts for a complete radio structure.

The role requires the use of rigging skills to install and maintain telecommunications equipment mounted on structures. The role includes assessing installation requirements, planning and performing installations, testing installed equipment and fault-finding. It involves a degree of autonomy and may include some supervision of others. Work is performed according to known routines and procedures and there is some accountability for the quality of outcomes in a specialised area of telecommunications installations.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner. Refer to "Pathways to ACMA Cabling Provider Rules - Cabling registration" and the mandatory industry practical hours required for registration.

© Commonwealth of Australia, 2025 Future Skills Organisation

Dogging and rigging are classified under the National Standards for licensing persons performing high risk work. Age restrictions apply to eligibility for licencing. Please refer to the relevant federal and state legislation to ensure compliance with the regulations.

## Modification History

| Release | Comments |
|---|---|
| Release 3 | This version released with ICT Information and Communications Technology Training Package Version 3.1.<br>Updates to packaging rules. Addition of ICTTEN409 to Elective Group B and to the Technician Fibre specialist elective stream. |
| Release 2 | This version released with ICT Information and Communications Technology Training Package Version 3.0. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification has been designed as a pathway for specialised work across the occupation and technology streams as outlined below, on the National Broadband Network (NBN).

This qualification, which may be undertaken as part of a traineeship, provides individuals with skills and knowledge in a range of specialised NBN broadband industry occupations specifically for the national rollout of the high speed broadband infrastructure.

In conjunction with safe working practices, one of four specialist streams is to be undertaken as described below.

### Copper Cable Jointer

This stream reflects the role of operators in performing equipment and system installation work on customer network to enable efficient access and interconnection to the NBN broadband services. This includes connection and jointing of copper cable, diagnosing and rectifying copper cable system faults, and migration, remediation and augmentation of copper services to maximise benefits of the high speed broadband connection.

### Technician Fibre

© Commonwealth of Australia, 2025 Future Skills Organisation

This stream reflects the role of operators in performing equipment and system installation work on customer network to enable efficient access and interconnection to the NBN broadband services. This includes diagnosing and rectifying fibre system faults, working with active equipment, and performing integration and commissioning activities to maximise benefits of the high speed broadband connection.

### Fibre Splicer

This stream reflects the role of operators in applying optical fibre handling skills to splicing, testing and fault finding on live fibre cable in the fibre distribution network for NBN broadband networks.

### Technician Hybrid fibre coaxial (HFC)

This stream reflects the role of operators in performing equipment and system installation work on customer network to enable efficient access and interconnection to the NBN broadband services. This includes connection and termination of HFC cabling, diagnosing and rectifying complex HFC system faults, and performing commissioning activities to maximise benefits of the high speed broadband connection.

*Licensing/Regulatory Information*

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner. Refer to "Pathways to ACMA Cabling Provider Rules - Cabling registration" and the mandatory industry practical hours required for registration.

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 14**

**5 core** plus

**9 elective** units

© Commonwealth of Australia, 2025 Future Skills Organisation

The elective units consist of:

- up to 9 units may be selected from Group A Copper cabling, or Group B Fibre cabling or Group C HFC cabling
- up to 6 units may be selected from Group D General or from elsewhere in this Training Package
- 2 units of competency may be selected from any currently endorsed Training Package or accredited course at AQF Level 3 or 4.

Elective units must be relevant to the work environment and the qualification, and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Refer to the *Specialisations* information below, and to the Companion Volume Implementation Guide, for advice about choosing electives to support specialisations.

**Core units**

BSBSUS401 Implement and monitor environmentally sustainable work practices

ICTTEN201 Use electrical skills in telecommunications work

ICTTEN202 Use hand and power tools

ICTWHS204 Follow work health and safety and environmental policy and procedures

ICTWOR305 Supervise worksite activities

**Elective units**

**Group A Copper cabling**

ICTCBL215 Joint metallic conductor cable in access network

ICTCBL313 Modify and cutover cable

ICTCBL317 Cut over metallic conductor cable in the access network

ICTCBL318 Install and cut over metallic conductor cable to access network cabinet

ICTCBL319 Rearrange large size copper cable

ICTCBL320 Jumper metallic conductor cable in the access network

ICTTEN303 Locate, identify and rectify recurrent network faults

**Group B Fibre cabling**

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTBWN301 Perform tests on optical communication system and components

ICTBWN302 Install optical fibre splitters in fibre distribution hubs

ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers

ICTCBL302 Install and terminate optical fibre cable on customer premises

ICTCBL316 Install ribbon fibre cable in the FTTX distribution network

ICTTEN409 Commission an electronic system

ICTTEN416 Install, configure and test an internet protocol network

**Group C HFC cabling**

ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

ICTCBL303 Install and terminate coaxial cable

ICTCBL310 Install aerial cable

ICTCBL309 Construct aerial cable supports

**Group D General**

CPCCOHS1001A Work safely in the construction industry

CPCCCM2007B* Use explosive power tools

CPCCDE3014A* Remove non-friable asbestos

CPCPCM2043A Carry out WHS requirements

CPCPCM2055A* Work safely on roofs

ICTBWN304* Work safely with live fibre to test and commission a fibre to the x installation

ICTBWN305 Use optical and radio frequency measuring instruments

ICTBWN303 Install lead-in module and cable for fibre to the premises

ICTCBL307 Install underground enclosures and conduit

ICTCBL308 Install underground cable

ICTCBL236* Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

ICTCBL237* Install maintain and modify customer premises communications cabling: ACMA Open Rule

ICTTEN302 Install telecommunications network equipment

ICTTEN310 Remove and replace electronic circuit boards in carrier equipment

ICTTEN311 Inspect, clean and handle optical fibre cable and connectors

HLTAID001 Provide cardiopulmonary resuscitation

ICTTEN207 Install and test internet protocol devices in convergence networks

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTWHS203 Work safely near power infrastructure

TLID2010A Operate a forklift

ICTWHS201 Provide telecommunications services safely on roofs

RIIWHS204D Work safely at heights

## Specialisations

The use of specialist streams is appropriate for this qualification in accordance with the AQF, Standards for Training Packages and the packaging rules. Where a specialist stream is achieved, testamurs must show the appropriate specialisation in brackets. Refer to the Companion Volume Implementation Guide for further advice about specialisations.

Minimum elective units required for the specific specialisations are described below.

### Copper Cable Jointer

The following 7 electives must be selected:

- CPCCOHS1001A Work safely in the construction industry
- ICTCBL215 Joint metallic conductor cable in access network
- ICTCBL317 Cut over metallic conductor cable in the access network
- ICTCBL318 Install and cut over metallic conductor cable to access network cabinet
- ICTCBL319 Rearrange large size copper cable
- ICTTEN302 Install telecommunications network equipment
- ICTTEN303 Locate, identify and rectify recurrent network faults.

### Technician Fibre

The following 8 electives must be selected:

- CPCCOHS1001A Work safely in the construction industry
- ICTBWN304* Work safely with live fibre to test and commission a fibre to the x installation
- ICTCBL302 Install and terminate optical fibre cable on customer premises
- ICTTEN302 Install telecommunications network equipment
- ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
- ICTTEN311 Inspect, clean and handle optical fibre cable and connectors
- ICTTEN409 Commission an electronic system
- ICTTEN416 Install, configure and test an internet protocol network.

### Fibre Splicer

The following 7 electives must be selected:

- CPCCOHS1001A Work safely in the construction industry

© Commonwealth of Australia, 2025 Future Skills Organisation

- ICTBWN302 Install optical fibre splitters in fibre distribution hubs
- ICTBWN304* Work safely with live fibre to test and commission a fibre to the x installation
- ICTBWN305 Use optical and radio frequency measuring instruments
- ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers
- ICTCBL316 Install ribbon fibre cable in the FTTX distribution network
- ICTTEN311 Inspect, clean and handle optical fibre cable and connectors.

**Technician HFC**

The following 6 electives must be selected:

- CPCCOHS1001A Work safely in the construction industry
- ICTBWN305 Use optical and radio frequency measuring instruments
- ICTCBL303 Install and terminate coaxial cable
- ICTRFN406 Maintain hybrid fibre coaxial broadband cable network
- ICTTEN302 Install telecommunications network equipment
- ICTCBL310 Install aerial cable

Plus:

- CPCPCM2055A* Work safely on roofs and CPCPCM2043A Carry out WHS requirements

or

- ICTWHS201 Provide telecommunications services safely on roofs

or

- RIIWHS204D Work safely at heights.

| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification prepares an individual for entry into the telecommunications industry and its convergent technologies, including radio, optical, data and internet protocol (IP) networks.

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies using a defined range of skills where some discretion and judgement is required in the selection, installation and configuration of equipment in convergence technologies that integrate radio, optical and internet protocol (IP) based applications.

This role includes assessing installation requirements, planning and performing installations, testing installed equipment and fault finding. It involves a degree of autonomy and may include some supervision of others. Work is performed according to known routines and procedures and there is some accountability for the quality of outcomes.

The following specialisations can be achieved through selection of specific units of competency:

- Optical Networks
- Wireless Networks
- Cabling Networks
- Telecommunications Networking
- Radio Communications.

Licensing/Regulatory Information

© Commonwealth of Australia, 2025 Future Skills Organisation

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner. Refer to "Pathways to ACMA Cabling Provider Rules - Cabling registration" and the mandatory industry practical hours required for registration.

# Packaging Rules

**Total number of units = 16**

**7 core units,** plus

**9 elective** units

The elective units consist of:

- 1 elective unit from Group A workplace units
- up to 8 elective units from any of the elective groups below
- up to 2 units of competency may be selected from any currently endorsed Training Package or accredited course at AQF Level 3 or 4.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the Australian Qualifications Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Refer to the *Specialisations* information below, and to the Companion Volume Implementation Guide, for advice about choosing electives to support specialisations in particular sectors of the information and communications industry.

**CORE UNITS**

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTCBL306 Locate and identify cable system faults

ICTTEN201 Use electrical skills in telecommunications work

ICTTEN202 Use hand and power tools

ICTTEN207 Install and test internet protocol devices in convergence networks

ICTTEN302 Install telecommunications network equipment

ICTWHS204 Follow work health and safety and environmental policy and procedures

ICTWOR201 Work effectively in telecommunications technology

## ELECTIVE UNITS

### Group A - Workplace units

BSBSMB305 Comply with regulatory, taxation and insurance requirements for the micro business

BSBSMB306 Plan a home based business

BSBSUS401 Implement and monitor environmentally sustainable work practises

ICTEDU301 Train customers in new technology

ICTSAS305 Provide ICT advice to clients

ICTWOR301 Organise resources

ICTWOR302 Organise material supply

ICTWOR303 Schedule resources

ICTWOR304 Manage spare parts

ICTWOR305 Supervise worksite activities

ICTWOR306 Resolve technical enquiries using multiple information systems

ICTWOR307 Collect and analyse technical information

### General Electives

### Group B Optical networks

ICTBWN301 Perform tests on optical communication system and components

ICTBWN302 Install optical fibre splitters in fibre distribution hubs

ICTBWN303 Install lead-in module and cable for fibre to the premises

ICTBWN304 Work safely with live fibre to test and commission a fibre to the x installation*

ICTBWN305 Use optical and radio frequency measuring instruments

© Commonwealth of Australia, 2025 Future Skills Organisation

## Group C Cabling

ICTCBL201 Install customer cable support systems, and

ICTCBL202 Place and secure customer cable, and

ICTCBL203 Terminate metallic conductor customer cable

ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers

ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule*

ICTCBL215 Joint metallic conductor cable in access network

ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule*

ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit

ICTCBL220 Install a cable lead-in

ICTCBL301 Install, terminate and certify structured cabling installation

ICTCBL302 Install and terminate optical fibre cable on customer premises

ICTCBL303 Install and terminate coaxial cable

ICTCBL304 Perform cable and system test on customer premises

ICTCBL305 Hand over cable systems and equipment

ICTCBL307 Install underground enclosures and conduit

ICTCBL308 Install underground cable

ICTCBL309 Construct aerial cable supports

ICTCBL310 Install aerial cable

ICTCBL311 Install systems and equipment on customer premises

ICTCBL312 Cutover new systems and equipment on customer premises

ICTCBL313 Modify and cutover cable

ICTCBL314 Install network cable equipment

ICTCBL315 Maintain cable network

ICTCBL316 Install ribbon fibre cable in the FTTX distribution network

ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards

ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule*

## Group D Digital reception technology

ICTDRE301 Install digital reception equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTDRE302 Locate and rectify digital reception equipment faults

ICTDRE303 Install a complex digital reception system

**Group E ICT use**

ICTICT302 Install and optimise operating system software

ICTICT303 Connect internal hardware components

ICTICT304 Implement system software changes

ICTICT306 Migrate to new technology

ICTNWK305 Install and manage network protocols

ICTSAS301 Run standard diagnostic tests

ICTSAS303 Care for computer hardware

ICTSAS304 Provide basic system administration

**Group F Work health and safety**

CPCCCM2007B Use explosive power tools*

CPCCDE3014A Remove non-friable asbestos*

CPCCOHS1001A Work safely in the construction industry

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry *(Note: CPCCOHS2001A is a prerequisite unit for CPCCCM2007B. It is not to be selected without CPCCCM2007B.)*

ICTWHS201 Provide telecommunications services safely on roofs

ICTWHS203 Work safely near power infrastructure

RIIWHS204D Work safely at heights

**Group G Radio frequency networks**

ICTBWN305 Use optical and radio frequency measuring instruments

ICTRFN301 Install a radio communications antenna and feedline

ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment

ICTRFN305 Operate and maintain radio communications technical instruments and field equipment

ICTRFN401 Conduct radio frequency measurements

ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

ICTRFN302 Install mobile telecommunications in motor vehicles

ICTRFN304 Construct and test a radio communications device

© Commonwealth of Australia, 2025 Future Skills Organisation

### Group H Telecommunications network

ICTTEN301 Provide infrastructure for telecommunications network equipment

ICTTEN303 Locate, identify and rectify recurrent network faults

ICTTEN304 Recover customer premises equipment

ICTTEN305 Refurbish customer premises equipment

ICTTEN306 Commission an electronic unit

ICTTEN307 Repair and replace telecommunications network hardware

ICTTEN308 Maintain an electronic system

ICTTEN309 Provide infrastructure for telecommunications network customer equipment

ICTTEN416 Install, configure and test an internet protocol network

### Specialisations

The use of specialist streams is appropriate for this qualification in accordance with the AQF, Standards for Training Packages and the packaging rules. Where a specialist stream is achieved, testamurs must show the appropriate specialisation in brackets. Refer to the Companion Volume Implementation Guide for further advice about specialisations.

Minimum elective units required for the specific specialisations are described below.

### Optical Networks

At least 4 of the 8 electives must be selected from the following list:

- ICTBWN301 Perform tests on optical communication system and components
- ICTBWN302 Install optical fibre splitters in fibre distribution hubs
- ICTBWN303 Install lead-in module and cable for fibre to the premises
- ICTBWN304 Work safely with live fibre to test and commission a fibre to the x installation*
- ICTBWN305 Use optical and radio frequency measuring instruments.

### Wireless Networks

At least 4 of the 8 electives must be selected from the following list:

- ICTRFN301 Install a radio communications antenna and feedline
- ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment
- ICTRFN305 Operate and maintain radio communications technical instruments and field equipment
- ICTRFN401 Conduct radio frequency measurements

© Commonwealth of Australia, 2025 Future Skills Organisation

- ICTRFN406 Maintain hybrid fibre coaxial broadband cable network.

**Cabling Networks**

The following unit must be selected:

- ICTTEN309 Provide infrastructure for telecommunications network customer equipment.

At least 3 of the 7 remaining electives must be selected from Group C Cabling.

**Radio Communications**

The following unit must be selected:

- ICTWOR307 Collect and analyse technical information.

At least 3 of the 7 remaining electives must be selected from Group G Radio frequency networks.

**Telecommunications Networking**

The following unit must be selected:

- ICTWOR307 Collect and analyse technical information.

At least 3 of the 7 remaining electives must be selected from Group H Telecommunications network.

## Qualification Description

This qualification provides the skills and knowledge for an individual to be competent in a wide range of general information and communications technology (ICT) technologies and to support small to medium enterprises (SMEs) that require broader rather than more specialised ICT support.

Persons working at this level apply a wide range of knowledge and skills in basic networking, ICT support, database development, programming and web development support; working safely and ethically in a sustainable work environment.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

ICTPRG428 Use regular expressions in programming languages

### Group C ICT support

ICTDBS403 Create basic databases

ICTDBS407 Monitor physical database implementation

ICTDBS408 Link an RFID system to a database

ICTDBS503 Create a data warehouse

ICTICT402 Determine project specifications and secure client agreement

ICTICT403 Apply software development methodologies

ICTICT404 Use online learning tools

ICTICT405 Develop detailed technical design

ICTICT406 Build a graphical user interface

ICTICT408 Create technical documentation

ICTICT411 Select and employ software and hardware testing tools

ICTICT412 Coordinate and maintain ICT work teams

ICTICT413 Relate to clients on a business level

ICTICT415 Provide one-to-one instruction

ICTICT416 Contribute to the development of strategic plans

ICTICT417 Identify, evaluate and apply current industry specific technologies to meet industry standards

ICTSAD401 Develop and present feasibility reports

ICTSAS402 Implement configuration management strategies

ICTSAS403 Review site environmental factors prior to ICT system implementation

ICTSAS404 Acquire ICT system components

ICTSAS405 Identify and evaluate ICT industry vendor technologies

ICTSAS407 Conduct pre-installation audit for software installation

ICTSAS408 Complete data transition in data migration process

ICTSAS409 Manage risks involving ICT systems and technology

ICTSAS410 Identify and resolve client ICT problems

ICTSAS411 Assist with policy development for client support procedures

ICTSAS412 Action change requests

ICTSAS413 Manage resolution of system faults on a live system

ICTSAS414 Evaluate system status

ICTSAS415 Optimise ICT system performance

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTSAS416 Implement maintenance procedures

ICTSAS417 Undertake ICT system capacity planning

ICTSAS418 Monitor and administer security of an ICT system

ICTSAS419 Support system software

ICTSAS420 Provide first-level remote help-desk support

ICTSAS421 Support users and troubleshoot desktop applications

ICTSAS424 Support different operating systems

**Group D Web design and development**

ICTICT407 Maintain website information standards

ICTWEB401 Design a website to meet technical requirements

ICTWEB402 Confirm accessibility of websites for people with special needs

ICTWEB403 Transfer content to a website using commercial packages

ICTWEB404 Maintain website performance

ICTWEB405 Monitor traffic and compile website traffic reports

ICTWEB406 Create website testing procedures

ICTWEB407 Conduct operational acceptance tests of websites

ICTWEB408 Ensure basic website security

ICTWEB409 Develop cascading style sheets

ICTWEB410 Apply web authoring tool to convert client data for websites

ICTWEB411 Produce basic client-side script for dynamic web pages

ICTWEB412 Produce interactive web animation

ICTWEB413 Optimise search engines

ICTWEB414 Design simple web page layouts

ICTWEB415 Produce server-side script for dynamic web pages

ICTWEB416 Customise content management system

ICTWEB417 Integrate social web technologies

ICTWEB418 Use development software and ICT tools to build a basic website

ICTWEB419 Develop guidelines for uploading information to a website

ICTWEB420 Write content for web pages

ICTWEB421 Ensure website content meets technical protocols and standards

ICTWEB422 Ensure website access and useability

ICTWEB423 Ensure dynamic website security

ICTWEB424 Evaluate and select a web hosting service

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTWEB425 Apply structured query language to extract and manipulate data

ICTWEB429 Create a markup language document to specification

**Group E Digital games**

ICTGAM401 Produce an interactive game

ICTGAM402 Identify and apply principles of games design and game playing

ICTGAM403 Create design documents for interactive games

ICTGAM405 Write story and content for digital games

ICTGAM406 Create visual design components for interactive games

ICTGAM407 Write scripts for interactive games

ICTGAM408 Use 3-D animation interface and toolsets

ICTGAM409 Create 3-D characters for interactive games

ICTGAM410 Develop 3-D components for interactive games

ICTGAM412 Design interactive media

ICTGAM413 Design and create 3-D digital models

ICTGAM414 Create audio for digital games

ICTGAM415 Develop simple environments for 3-D games

ICTGAM416 Prepare and complete image rendering processes

ICTGAM417 Apply digital effects to interactive products

ICTICT419 Work effectively in the digital media industry

**Group F Digital media technologies**

BSBCRT401 Articulate, present and debate ideas

CUAANM301 Create 2D digital animations

CUAANM302 Create 3D digital animations

CUAANM402 Create digital visual effects

CUADIG401 Author interactive media

CUAPPM407 Create storyboards

CUASOU202 Perform basic sound editing

CUASOU304 Prepare audio assets

ICTDMT401 Create visual design components for digital media

ICTDMT402 Produce interactive animation

ICTDMT403 Produce and edit digital images

© Commonwealth of Australia, 2025 Future Skills Organisation

**Group G Project management**

ICTPMG401 Support small scale ICT projects

|---|---|
| Release 2 | This version released with ICT Information and Communications Technology Training Package version 2.0.<br><br>Release 2 created to update unit codes. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to be competent in supporting clients in a range of technical areas. The qualification has a strong information technology base of core units with the potential for inclusion of a range of broader industry-specific units in the areas of service desk, database, sustainability and network support to suit particular needs.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 22**

**8 core units** *plus*

**14 elective units**

The elective units consist of:

© Commonwealth of Australia, 2025 Future Skills Organisation

- 5 from one of the following specialist elective groups:
  Group A Database support
  Group B Network communications
  Group C Service desk
  Group D Sustainability.

Of the remaining elective units:

- up to 9 may be from the specialist elective groups below or from Group E general elective units below
- up to 4 may be from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Certificate IV or Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

BSBWHS403 Contribute to implementing and maintaining WHS consultation and participation processes

BSBSUS401 Implement and monitor environmentally sustainable work practices

ICTICT401 Determine and confirm client business requirements

ICTICT408 Create technical documentation

ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

ICTSAS307 Install, configure and secure a small office or home office network

ICTSAS410 Identify and resolve client ICT problems

ICTSAS412 Action change requests

**Elective units**

**Specialist elective units**

**Group A Database support**

ICTDBS402 Complete database backup and restore

ICTDBS404 Identify and resolve common database performance problems

ICTDBS409 Monitor and administer a database

ICTDBS412 Build a database

ICTPRG425 Use structured query language

© Commonwealth of Australia, 2025 Future Skills Organisation

### Group B Network communications

ICTNWK401 Install and manage a server

ICTNWK404 Install, operate and troubleshoot a small enterprise branch network

ICTNWK405 Build a small wireless local area network

ICTNWK406 Install, configure and test network security

ICTNWK408 Configure a desktop environment

### Group C Service desk

ICTICT421 Connect, maintain and configure hardware components

ICTSAS414 Evaluate system status

ICTSAS421 Support users and troubleshoot desktop applications

ICTSAS425 Configure and troubleshoot operating system software

ICTSAS426 Locate and troubleshoot ICT equipment, system and software faults

### Group D Sustainability

BSBSUS501 Develop workplace policy and procedures for sustainability

ICTSUS401 Install and test renewable energy system for ICT networks

ICTSUS402 Install and test power saving hardware

ICTSUS403 Install and test power management software

ICTSUS404 Install thin client applications for power over ethernet

## General elective units

### Group E

BSBCRT401 Articulate, present and debate ideas

ICTCBL236* Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

ICTCBL237* Install, maintain and modify customer premises communications cabling: ACMA Open Rule

ICTCBL219 Apply safe technical work practices for cabling registration when configuring ADSL circuits

ICTDBS401 Identify physical database requirements

ICTDBS403 Create basic databases

ICTICT413 Relate to clients on a business level

ICTICT415 Provide one-to-one instruction

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTICT417 Identify, evaluate and apply current industry specific technologies to meet industry standards

ICTICT422 Participate in ICT services

ICTICT423 Select cloud storage strategies

ICTNWK409 Create scripts for networking

ICTNWK410 Install hardware to a network

ICTNWK411 Deploy software to networked computers

ICTNWK419 Identify and use current virtualisation technologies

ICTOPN402 Use advanced optical test equipment

ICTPMG401 Support small scale ICT projects

ICTPRG405 Automate processes

ICTSAD401 Develop and present feasibility reports

ICTSAS411 Assist with policy development for client support procedures

ICTSAS413 Manage resolution of system faults on a live system

ICTSAS416 Implement maintenance procedures

ICTSAS420 Provide first-level remote help-desk support

ICTSAS424 Support different operating systems

ICTSAS518 Install and upgrade operating systems

ICTTEN417 Install, configure and test a router

ICTTEN201 Use electrical skills in telecommunications work

ICTWEB415 Produce server-side script for dynamic web pages

ICTWHS204 Follow work health and safety environmental policy and procedures

* Note the following prerequisite unit requirements:

| Unit in this qualification | Prerequisite unit |
|---|---|
| ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule | ICTTEN201 Use electrical skills in telecommunications work<br>ICTWHS204 Follow work health and safety environmental policy and procedures |
| ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule | ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule |

# ICT40515 Certificate IV in Programming

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This qualification first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to develop basic programming skills in the most commonly used programming languages.

An individual with this qualification could work as an assistant programmer in a team of software developers, or as a support programmer to senior programmers or systems analysts.

### Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 18**

**10 core units** plus

**8 elective units**

The elective units consist of:

- up to 8 from the elective units listed below
- up to 3 from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Certificate IV or Diploma level.

© Commonwealth of Australia, 2025 Future Skills Organisation

The elective units chosen must be relevant to the work outcome and meet local industry needs.

### Core units

ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

ICTPRG402 Apply query language

ICTPRG403 Develop data-driven applications

ICTPRG404 Test applications

ICTPRG405 Automate processes

ICTPRG406 Apply introductory object-oriented language skills

ICTPRG410 Build a user interface

ICTPRG414 Apply introductory programming skills in another language

ICTPRG415 Apply skills in object-oriented design

ICTPRG419 Analyse software requirements

### Elective units

BSBCRT401 Articulate, present and debate ideas

BSBWHS304 Participate effectively in WHS communication and consultation processes

ICTDBS403 Create basic databases

ICTICT404 Use online learning tools

ICTICT408 Create technical documentation

ICTICT417 Identify, evaluate and apply current industry specific technologies to meet industry standards

ICTICT420 Develop client user interface

ICTPMG401 Support small scale ICT projects

ICTPRG401 Maintain open-source code programs

ICTPRG407 Write script for software applications

ICTPRG409 Develop mobile applications

ICTPRG412 Configure and maintain databases

ICTPRG413 Use a library or pre-existing components

ICTPRG418 Apply intermediate programming skills in another language

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTPRG427 Use XML effectively

ICTPRG428 Use regular expressions in programming languages

ICTPRG527 Apply intermediate object-oriented language skills

ICTSAD401 Develop and present feasibility reports

ICTSAD501 Model data objects

ICTSAD502 Model data processes

**Specialist elective units**

**Group A Web development**

ICTWEB402 Confirm accessibility of websites for people with special needs

ICTWEB406 Create website testing procedures

ICTWEB407 Conduct operational acceptance tests of websites

ICTWEB409 Develop cascading style sheets

ICTWEB411 Produce basic client-side script for dynamic web pages

ICTWEB412 Produce interactive web animation

ICTWEB414 Design simple web page layouts

ICTWEB415 Produce server-side script for dynamic web pages

ICTWEB421 Ensure website content meets technical protocols and standards

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTWEB425 Apply structured query language to extract and manipulate data

**Group B Programming**

ICTPRG301 Apply introductory programming techniques

ICTPRG402 Apply query language

ICTPRG405 Automate processes

ICTPRG406 Apply introductory object-oriented language skills

ICTPRG407 Write script for software applications

ICTPRG412 Configure and maintain databases

ICTPRG414 Apply introductory programming skills in another language

**Group C Interactive media**

CUAANM301 Create 2D digital animations

CUAANM302 Create 3D digital animations

CUAANM402 Create digital visual effects

CUACAM301 Shoot material for screen productions

ICTDMT401 Create visual design components for digital media

ICTDMT402 Produce interactive animation

ICTDMT403 Produce and edit digital images

ICTGAM401 Produce an interactive game

ICTGAM403 Create design documents for interactive games

ICTGAM405 Write story and content for digital games

ICTGAM413 Design and create 3-D digital models

CUAPOS401 Edit screen content for fast turnaround

CUAPOS402 Manage media assets

CUAPPM407 Create storyboards

CUASOU202 Perform basic sound editing

CUASOU304 Prepare audio assets

**General elective units**

**Group D**

BSBSUS401 Implement and monitor environmentally sustainable work practices

ICTDBS412 Build a database

ICTICT408 Create technical documentation

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTICT417 Identify, evaluate and apply current industry specific technologies to meet industry standards

## Qualification Description

This qualification provides the skills and knowledge for an individual to be competent in supporting the design, development and programming of basic digital games briefs as part of a larger development team. The qualification has a small suite of core units with an opportunity to select units from specialist groups of electives across the different artistic or programming fields of the industry.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 16**

**4 core units** *plus*

**12 elective units**

© Commonwealth of Australia, 2025 Future Skills Organisation

The elective units consist of:

- 5 units from one of the following specialist elective groups:
  Group A Design
  Group B Programming
  Group C Art.

Of the remaining elective units:

- up to 7 may be from the specialist elective groups below or from Group D general elective units below or elsewhere in ICT Information and Communications Technology Training Package
- up to 3 may be from any other Training Package or accredited course at Certificate IV or Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

BSBWHS304 Participate effectively in WHS communication and consultation processes

ICTGAM401 Produce an interactive game

ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

ICTICT419 Work effectively in the digital media industry

**Elective units**

**Specialist elective units**

**Group A Design**

CUAPPM407 Create storyboards

ICTGAM402 Identify and apply principles of games design and game playing

ICTGAM403 Create design documents for interactive games

ICTGAM405 Write story and content for digital games

ICTGAM406 Create visual design components for interactive games

ICTGAM407 Write scripts for interactive games

**Group B Programming**

ICTGAM404 Apply artificial intelligence in game development

ICTICT406 Build a graphical user interface

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTPRG301 Apply introductory programming techniques

ICTPRG405 Automate processes

ICTPRG406 Apply introductory object-oriented language skills

ICTPRG413 Use a library or pre-existing components

ICTPRG415 Apply skills in object-oriented design

ICTPRG417 Apply mathematical techniques for software development

ICTPRG527 Apply intermediate object-oriented language skills

**Group C Art**

CUAANM301 Create 2D digital animations

CUAANM302 Create 3D digital animations

CUAANM303 Create 3D digital models

CUAANM402 Create digital visual effects

CUADRA201 Develop drawing skills

ICTDMT402 Produce interactive animation

ICTDMT403 Produce and edit digital images

ICTGAM301 Apply simple modelling techniques

ICTGAM302 Design and apply simple textures to digital art

ICTGAM303 Review and apply the principles of animation

ICTGAM408 Use 3-D animation interface and toolsets

ICTGAM409 Create 3-D characters for interactive games

ICTGAM410 Develop 3-D components for interactive games

ICTGAM412 Design interactive media

ICTGAM413 Design and create 3-D digital models

ICTGAM414 Create audio for digital games

ICTGAM416 Prepare and complete image rendering processes

ICTGAM417 Apply digital effects to interactive products

ICTGAM418 Use simple modelling for animation

**General elective units**

**Group D**

BSBCRT401 Articulate, present and debate ideas

ICTICT408 Create technical documentation

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTICT417 Identify, evaluate and apply current industry specific technologies to meet industry standards

ICTICT420 Develop client user interface

| Release 2 | This version released with ICT Information and Communications Technology Training Package version 2.0.<br><br>Release 2 created to update unit codes. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to install and administer simple networks, servers, and client desktop deployments either as an independent information and communications technology (ICT) specialist or as part of a team.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 20**

**12 core units** *plus*

**8 elective units**

The elective units consist of:

- up to 8 from the elective units listed below

© Commonwealth of Australia, 2025 Future Skills Organisation

- up to 4 from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Certificate IV or Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

BSBSUS401 Implement and monitor environmentally sustainable work practices

BSBWHS304 Participate effectively in WHS communication and consultation processes

ICTICT401 Determine and confirm client business requirements

ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

ICTICT421 Connect, maintain and configure hardware components

ICTNWK404 Install, operate and troubleshoot a small enterprise branch network

ICTNWK405 Build a small wireless local area network

ICTPRG414 Apply introductory programming skills in another language

ICTSAS425 Configure and troubleshoot operating system software

ICTSAS426 Locate and troubleshoot ICT equipment, system and software faults

ICTTEN417 Install, configure and test a router

ICTWEB411 Produce basic client-side script for dynamic web pages

**Elective units**

BSBCRT401 Articulate, present and debate ideas

ICTICT405 Develop detailed technical design

ICTICT408 Create technical documentation

ICTICT412 Coordinate and maintain ICT work teams

ICTICT415 Provide one-to-one instruction

ICTICT417 Identify, evaluate and apply current industry specific technologies to meet industry standards

ICTICT423 Select cloud storage strategies

ICTNWK401 Install and manage a server

ICTNWK402 Install and configure virtual machines for sustainable ICT

ICTNWK403 Manage network and data integrity

ICTNWK407 Install and configure client-server applications and services

ICTNWK408 Configure a desktop environment

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTNWK419 Identify and use current virtualisation technologies

ICTNWK507 Install, operate and troubleshoot medium enterprise routers

ICTPMG401 Support small scale ICT projects

ICTPRG406 Apply introductory object-oriented language skills

ICTPRG409 Develop mobile applications

ICTSAS307 Install, configure and secure a small office or home office network

ICTSAS420 Provide first-level remote help-desk support

ICTTEN202 Use hand and power tools

ICTTEN416 Install, configure and test an internet protocol network

ICTWEB414 Design simple web page layouts

ICTWEB415 Produce server-side script for dynamic web pages

ICTWEB425 Apply structured query language to extract and manipulate data

ICTWEB429 Create a markup language document to specification

# ICT41115 Certificate IV in Telecommunications Network Design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification reflects the role of a technician with a range of telecommunications skills and extensive knowledge of the access, building and core networks and client capabilities of the service provider. Graduates can design the customer access network, design the building network, design the core network for the service provider and asset owner and design carrier equipment infrastructure.

This qualification prepares an individual for entry into design for network additions and implementations to accommodate network growth and new technologies within the industry. These skills are required for the telecommunications infrastructure network design.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licencing, legislative or certification requirements.

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 16**

**8 core units** plus

**8 electives** units

© Commonwealth of Australia, 2025 Future Skills Organisation

The elective units consist of:

- 1 elective unit from Group A Workplace elective units, plus
- 7 elective units from Group B General elective units with no more than 2 at AQF Level 3 or below.

A maximum of 2 units from the Group B general elective units may be substituted with units from any endorsed Training Package or accredited course at Australian Qualifications Framework (AQF) Level 4 or 5. One of the 2 Group B general electives units may be substituted with a Group A workplace elective unit where required by a specific job role.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

**Core Units**

ICTICT408 Create technical documentation

ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry

ICTTEN426 Design network projects

ICTTEN427 Conduct site surveys to identify carrier installation requirements

ICTTEN428 Prepare design drawings and specifications for telecommunications installations

ICTTEN429 Estimate and quote for carrier telecommunications equipment installations

ICTWHS204 Follow work health and safety and environmental policies and procedures

ICTWOR201 Work effectively in telecommunications technology

**Elective Units**

**Group A - Workplace elective units**

BSBLDR402 Lead effective workplace relationships

BSBMGT401 Show leadership in the workplace

BSBSMB407 Manage a small team

ICTICT401 Determine and confirm client business requirements

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTSMB401 Set up and operate a contractor business

ICTSMB402 Operate a contractor business with employees

## Group B – General elective units

### Network planning

ICTNPL401 Apply business acumen to network planning

ICTNPL402 Plan the deployment of access network architectures

ICTNPL403 Evaluate the capability of access networks

ICTNPL404 Evaluate the planning requirements for provisioning a telecommunications building facility

ICTNPL405 Develop provisioning of telecommunications building works project

ICTNPL406 Evaluate core network architectures

ICTNPL407 Plan the deployment of core network

ICTNPL408 Produce planning specifications for end-to-end service delivery

ICTNPL410 Plan the telecommunications access network for an estate

ICTNPL411 Apply compliance requirements to telecommunications work

### Design

BSBDES401 Generate design solutions

BSBDES402 Interpret and respond to a design brief

BSBDES403 Develop and extend design skills and practice

BSBDES501 Implement design solutions

BSBDES502 Establish, negotiate and refine a design brief

### Radio frequency networks

ICTRFN401 Conduct radio frequency measurements

ICTRFN402 Select an antenna system for radio communications

ICTRFN404 Undertake radio communications signals monitoring

ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

ICTRFN502 Test and measure cellular phone and network equipment performance

### Optical networks

ICTOPN401 Install and test a dense wavelength division multiplexing system

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation

**Project management**

ICTPMG402 Schedule installation of customer premises equipment

ICTPMG403 Manage the delivery of network infrastructure

ICTPMG503 Prepare a project brief

**Sustainability**

BSBSUS401 Implement and monitor environmentally sustainable work practices

**Workplace effectiveness**

ICTWOR401 Undertake a civil site survey

**Telecommunications network engineering**

ICTTEN401 Identify requirements for customer telecommunications equipment

ICTTEN402 Estimate and quote for customer telecommunications equipment installation

ICTTEN403 Assign a transmission path

ICTTEN406 Effect changes to existing customer premises equipment systems and equipment

ICTTEN407 Cut over customer premises equipment major upgrades

ICTTEN416 Install, configure and test an internet protocol network

ICTTEN417 Install, configure and test a router

ICTTEN420 Design, install and configure an internetwork

ICTTEN421 Apply advanced routing protocols to network design

ICTTEN425 Design, install and configure a customer smart technology network

ICTTEN430 Design infrastructure for telecommunications network installations

ICTTEN431 Design dense wavelength digital multiplexing installations

**ICT use**

ICTICT405 Develop detailed technical design

**General**

# ICT41215 Certificate IV in Telecommunications Engineering Technology

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification reflects the role of an advanced technician (technical officer), team leader or supervisor with a wide range of telecommunications skills who can install and maintain:

- enterprise networks in emerging and converging technologies
- optical and wireless equipment for high speed broadband network infrastructure
- internet protocol (IP) based network telecommunications equipment
- IP based networks in home networks and small and medium enterprises
- telecommunications, data cabling and cabling products in line with the specifications of the access network owner
- telecommunications access network cabling and infrastructure, systems and customer equipment

The qualifications also enables technicians to assess installation requirements of converging voice, video and data IP networks, plan and perform installations and test installed equipment and fault find. It may also involve a degree of autonomy and may include limited supervision of others.

The following specialisations can be achieved through selection of specific units of competency:

- Network Engineering
- Optical Networks
- Radio Communications.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

# Entry Requirements

Nil

# Packaging Rules

**Total number of units = 16**

**8 core units** plus

**8 electives** units

The elective units consist of:

- 2 elective units selected from Group A
- up to 6 elective units selected from Groups B, C and D, with no more than 3 at AQF Level 3 or below
- up to 2 units selected from any currently endorsed Training Package or accredited course at AQF Level 4 or above.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the Australian Qualifications Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Refer to the *Specialisations* information below, and to the Companion Volume Implementation Guide, for advice about choosing electives to support specialisations in particular sectors of the information and communications industry.

### Core Units

ICTICT408 Create technical documentation

ICTPMG403 Manage the delivery of network infrastructure

ICTTEN201 Use electrical skills in telecommunications work

ICTTEN202 Use hand and power tools

ICTTEN410 Locate, diagnose and rectify faults

ICTTEN414 Repair telecommunication system faults

ICTWHS204 Follow work health and safety and environmental policy and procedures

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTWOR201 Work effectively in telecommunications technology

**Elective Units**

**Group A**

BSBCUS402 Address customer needs

BSBSMB401 Establish legal and risk management requirements of small business

BSBSMB405 Monitor and manage small business operations

BSBSMB407 Manage a small team

ICTCBL403 Supervise cabling project

ICTICT401 Determine and confirm client business requirements

ICTSMB401 Set up and operate a contractor business

ICTSMB402 Operate a contractor business with employees

ICTTEN402 Estimate and quote for customer telecommunications equipment installation

**Group B General**

CPCCOHS1001A Work safely in the construction industry

HLTAID003 Provide first aid

ICTCBL402 Schedule and supply cabling installation

ICTCBL405 Remotely locate and identify cable network faults

ICTNWK410 Install network hardware to a network

ICTWHS203 Work safely near power infrastructure

ICTOPN401 Install and test a dense wavelength division multiplexing system

ICTOPN402 Use advanced optical test equipment

ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation

ICTPMG402 Schedule installation of customer premises equipment

ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

ICTSUS401 Install and test renewable energy system for ICT networks

ICTSUS402 Install and test power saving hardware

ICTSUS404 Install thin client applications for power over ethernet

ICTTEN401 Identify requirements for customer telecommunications equipment

ICTTEN403 Assign a transmission path

ICTTEN404 Install and configure a wireless mesh network

ICTTEN405 Install configuration programs on PC based customer equipment

ICTTEN406 Effect changes to existing customer premises equipment systems and equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTTEN407 Cut over customer premises equipment major upgrades

ICTTEN408 Complete equipment and software upgrades

ICTTEN409 Commission an electronic system

ICTTEN412 Undertake routine maintenance of the telecommunications network

ICTTEN413 Undertake remote diagnosis and repair of network faults

ICTTEN415 Install and configure internet protocol TV in a home network

ICTTEN416 Install, configure and test an internet protocol network

ICTTEN417 Install, configure and test a router

ICTTEN419 Implement and troubleshoot enterprise routers and switches

ICTTEN424 Install and configure internet protocol TV in a service provider network

ICTTEN425 Design, install and configure a customer smart technology network

**Group C Network engineering**

ICTCBL401 Prepare design drawings and specification for a cable installation

ICTCBL404 Test cable bearers

ICTDRE401 Integrate customer digital reception equipment

ICTDRE402 Integrate data delivery modes

ICTICT405 Develop detailed technical design

ICTNWK406 Install, configure and test network security

ICTNWK411 Install software to networked computers

ICTNWK416 Build security into virtual private networks

ICTNWK417 Build an enterprise wireless network

ICTSUS403 Install and test power management software

ICTTEN301 Provide infrastructure for telecommunications network equipment

ICTTEN302 Install telecommunications network equipment

ICTTEN308 Maintain an electronic system

ICTTEN405 Install configuration programs on PC based customer equipment

ICTTEN411 Monitor, analyse and action telecommunications network alarms

ICTTEN420 Design, install and configure an internetwork

ICTTEN421 Apply advanced routing protocols to network design

ICTTEN422 Configure and troubleshoot advanced network switching

ICTTEN423 Install and maintain a wide area network

ICTTEN514 Install, configure and test a server

© Commonwealth of Australia, 2025 Future Skills Organisation

### Group D Radio communications

ICTCMP501 Undertake radio communications site audit

ICTRFN301 Install a radio communications antenna and feedline

ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment

ICTRFN304 Construct and test a radio communications device

ICTRFN305 Operate and maintain radio communications technical instruments and field equipment

ICTRFN401 Conduct radio frequency measurements

ICTRFN402 Select antenna system for radio communications

ICTRFN403 Test and repair cellular network equipment

ICTRFN404 Undertake radio communications signals monitoring

ICTRFN405 Install radio communications base station equipment

ICTRFN502 Test and measure cellular phone and network equipment performance

ICTTEN418 Install and test a radio frequency identification system

ICTWOR401 Undertake a civil site survey

ICTWOR402 Schedule equipment maintenance

### Specialisations

The use of specialist streams is appropriate for this qualification in accordance with the AQF, Standards for Training Packages and the packaging rules. Where a specialist stream is achieved, testamurs must show the appropriate specialisation in brackets. Refer to the Companion Volume Implementation Guide for further advice about specialisations.

Minimum elective units required for the specific specialisations are described below.

### Network Engineering

Select 6 electives from Groups B and C only.

### Optical Networks

Select the following 3 electives:

- ICTOPN401 Install and test a dense wavelength division multiplexing system
- ICTOPN402 Use advanced optical test equipment
- ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation.

The remaining 3 units must be selected from Groups B and C only.

© Commonwealth of Australia, 2025 Future Skills Organisation

**Radio Communications**

Select the following 4 electives:

- ICTRFN301 Install a radio communications antenna and feedline
- ICTRFN304 Construct and test a radio communications device
- ICTRFN401 Conduct radio frequency measurements
- ICTRFN402 Select antenna system for radio communications.

The remaining 2 units must be selected from Groups B and D only.

# ICT50115 Diploma of Information Technology

## Modification History

| Release | Comments |
|---|---|
| Release 2 | This version released with ICT Information and Communications Technology Training Package version 2.0.<br><br>Release 2 created to update unit codes. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to administer and manage information and communications technology (ICT) support in small-to-medium enterprises (SMEs) using a wide range of general ICT technologies.

Persons working at this level provide a broader rather than specialised ICT support function, applying a wide range of higher level technical skills in ICT areas such as networking, IT support, database development, programming and web development.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 20**

**4 core units** *plus*

**16 elective units**

© Commonwealth of Australia, 2025 Future Skills Organisation

The elective units consist of:

- up to 16 units from the specialist elective groups below, with a maximum of 5 units from any one group:
  Group A Networking
  Group B Programming
  Group C IT support
  Group D Web design and development
  Group E Digital games
  Group F Digital media technologies
  Group G Project management

- up to 5 from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Diploma or Advanced Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

BSBSUS501 Develop workplace policy and procedures for sustainability

BSBWHS501 Ensure a safe workplace

ICTICT509 Gather data to identify business requirements

ICTICT511 Match ICT needs with the strategic direction of the enterprise

**Specialist elective units**

**Group A Networking**

ICTNWK501 Plan, implement and test enterprise communication solutions

ICTNWK502 Implement secure encryption technologies

ICTNWK503 Install and maintain valid authentication processes

ICTNWK504 Design and implement an integrated server solution

ICTNWK505 Design, build and test a network server

ICTNWK506 Configure, verify and troubleshoot WAN links and IP services in a medium enterprise network

ICTNWK507 Install, operate and troubleshoot medium enterprise routers

ICTNWK508 Install, operate and troubleshoot medium enterprise switches

ICTNWK509 Design and implement a security perimeter for ICT networks

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTNWK510 Develop, implement and evaluate system and application security

ICTNWK511 Manage network security

ICTNWK513 Manage system security

ICTNWK514 Model preferred system solutions

ICTNWK515 Develop configuration management protocols

ICTNWK516 Determine best-fit topology for a local network

ICTNWK517 Determine best-fit topology for a wide area network

ICTNWK518 Design an enterprise wireless local area network

ICTNWK519 Design an ICT security framework

ICTNWK520 Design ICT system security controls

ICTNWK521 Install, configure and test a payment gateway

ICTNWK522 Build decks using wireless markup language

ICTNWK524 Install and configure network access storage devices

ICTNWK525 Configure an enterprise virtual computing environment

ICTNWK527 Manage an enterprise virtual computing environment

ICTNWK529 Install and manage complex ICT networks

ICTNWK531 Configure an internet gateway

ICTNWK532 Identify and resolve network problems

ICTNWK533 Configure and manage advanced virtual computing environments

ICTNWK534 Monitor and troubleshoot virtual computing environments

ICTNWK535 Install an enterprise virtual computing environment

ICTNWK614 Manage ICT security

ICTNWK615 Design and configure desktop virtualisation

**Group B Programming**

ICTPRG501 Apply advanced object-oriented language skills

ICTPRG502 Manage a project using software management tools

ICTPRG503 Debug and monitor applications

ICTPRG504 Deploy an application to a production environment

ICTPRG505 Build advanced user interface

ICTPRG506 Design application architecture

ICTPRG507 Implement security for applications

ICTPRG508 Create mashups

ICTPRG509 Build using rapid application development

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTPRG510 Maintain custom software

ICTPRG511 Monitor and support data conversion to new ICT system

ICTPRG512 Prepare for the build phase of an ICT system

ICTPRG513 Coordinate the build phase of an ICT system

ICTPRG514 Prepare for software development using rapid application development

ICTPRG515 Review developed software

ICTPRG516 Develop integration blueprint for ICT systems

ICTPRG517 Install, test and evaluate pilot version of ICT system

ICTPRG518 Monitor the system pilot

ICTPRG523 Apply advanced programming skills in another language

ICTPRG524 Develop high-level object-oriented class specifications

ICTPRG525 Build Java applets

ICTPRG526 Maintain functionality of legacy code programs

ICTPRG527 Apply intermediate object-oriented language skills

ICTPRG528 Perform ICT data conversion

ICTPRG601 Develop advanced mobile multi-touch applications

ICTSAD501 Model data objects

ICTSAD502 Model data processes

ICTSAD503 Minimise risk of new technologies to business solutions

**Group C IT Support**

ICTICT501 Research and review hardware technology options for organisations

ICTICT502 Develop detailed component specifications from project specifications

ICTICT503 Validate quality and completeness of system design specifications

ICTICT504 Confirm transition strategy for a new system

ICTICT506 Implement process re-engineering strategies

ICTICT507 Select new technology models for business

ICTICT510 Determine appropriate ICT strategies and solutions

ICTICT512 Plan process re-engineering strategies for business

ICTICT514 Identify and manage the implementation of current industry-specific technologies

ICTICT515 Verify client business requirements

ICTSAD506 Produce a feasibility report

ICTSAS501 Develop, implement and evaluate an incident response plan

ICTSAS502 Establish and maintain client user liaison

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTSAS503 Perform systems tests

ICTSAS504 Develop and conduct client acceptance test

ICTSAS505 Review and update disaster recovery and contingency plans

ICTSAS506 Update ICT system operational procedures

ICTSAS507 Implement and evaluate systems for regulatory and standards compliance

ICTSAS509 Provide client ICT support services

ICTSAS510 Review and develop ICT maintenance strategy

ICTSAS511 Prioritise ICT change requests

ICTSAS512 Review and manage delivery of maintenance services

ICTSAS513 Develop detailed test plans

ICTSAS515 Manage the testing process

ICTSAS517 Use network tools

ICTSAS518 Install and upgrade operating systems

**Group D Web design and development**

ICTWEB411 Produce basic client-side script for dynamic web pages

ICTWEB429 Create a markup language document to specification

ICTWEB501 Build a dynamic website

ICTWEB502 Create dynamic web pages

ICTWEB503 Create web-based programs

ICTWEB504 Build a document using eXtensible markup language

ICTWEB505 Develop complex web page layouts

ICTWEB506 Develop complex cascading style sheets

ICTWEB507 Customise a complex ICT content management system

ICTWEB508 Develop website information architecture

ICTWEB509 Use site server tools for transaction management

ICTWEB510 Analyse information and assign meta tags

ICTWEB511 Implement quality assurance process for websites

ICTWEB512 Administer business websites and servers

ICTWEB515 Implement and use web services

ICTWEB516 Research and apply emerging web technology trends

**Group E Digital games**

ICTGAM501 Create design concepts for digital games and 3-D media

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTGAM503 Create a complex 3-D interactive computer game
ICTGAM504 Manage interactive media production
ICTGAM506 Create complex code for mobile game devices
ICTGAM507 Develop intermediate 3-D software for games and interactive media
ICTGAM508 Develop complex 3-D software for games and interactive media
ICTGAM509 Design interactive 3-D applications for scientific and mathematical modelling
ICTGAM510 Prepare games for different platforms and delivery modes
ICTGAM511 Manage testing of games and interactive media
ICTGAM512 Create and implement designs for a 3-D games environment
ICTGAM514 Design and create models for a 3-D and digital effects environment
ICTGAM515 Design and create advanced particles, fluids and bodies for 3-D digital effects
ICTGAM516 Animate a 3-D character for digital games
ICTGAM517 Produce a digital animation sequence
ICTGAM518 Animate physical attributes of models and elements
ICTGAM519 Manage technical art and rigging in 3-D animation
ICTGAM520 Create and combine 3-D digital games and components
ICTGAM521 Create interactive 3-D environments for digital games
ICTGAM522 Complete digital editing for the 3-D and digital effects environment
ICTGAM523 Collaborate in the design of 3-D game levels and environments
ICTGAM524 Integrate multiple data sources into interactive 3-D environments
ICTGAM525 Apply digital texturing for the 3-D environment in digital games
ICTGAM526 Create complex 3-D characters for games
ICTGAM527 Integrate database with online game
ICTGAM529 Analyse business opportunities in the digital games environment

**Group F Digital media technologies**

BSBCRT501 Originate and develop concepts
CUADIG502 Design digital applications
CUADIG503 Design e-learning resources
CUADIG507 Design digital simulations
CUAPHI504 Employ specialised imaging technologies
CUAPOS201 Perform basic vision and sound editing
CUAPOS401 Edit screen content for fast turnaround
CUASOU307 Record and mix a basic music demo

© Commonwealth of Australia, 2025 Future Skills Organisation

CUASOU504 Produce sound recordings

ICTDMT501 Incorporate and edit digital video

ICTICT406 Build a graphical user interface

ICTICT419 Work effectively in the digital media industry

**Group G Project management**

ICTPMG501 Manage ICT projects

|---|---|
| Release 2 | This version released with ICT Information and Communications Technology Training Package version 2.0.<br><br>Release 2 created to update unit codes. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to be competent in a variety of skill areas within the digital and interactive games industry. It provides an opportunity to develop the design, graphic/digital media and programming skills required in the development of digital games briefs, either as a small independent specialist or as part of a larger team. The qualification also provides opportunities to work in new and emerging games genres, such as online game development, mobile device gaming, interactive internet and TV game development.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 16**

**5 core units** *plus*

**11 elective units**

The elective units consist of:

© Commonwealth of Australia, 2025 Future Skills Organisation

- 5 from one of the following specialist groups:
  Group A Programming
  Group B Art
  Group C Digital media.

Of the remaining elective units:

- up to 6 may be from the specialist elective groups below or from Group D general elective units below
- up to 3 may be from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Diploma or Advanced Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

BSBWHS403 Contribute to implementing and maintaining WHS consultation and participation processes

ICTGAM501 Create design concepts for digital games and 3-D media

ICTGAM503 Create a complex 3-D interactive computer game

ICTGAM523 Collaborate in the design of 3-D game levels and environments

ICTICT419 Work effectively in the digital media industry

**Elective units**

**Specialist elective units**

**Group A Programming**

ICTGAM419 Build a database to support a computer game

ICTGAM506 Create complex code for mobile game devices

ICTGAM507 Develop intermediate 3-D software for games and interactive media

ICTGAM508 Develop complex 3-D software for games and interactive media

ICTGAM509 Design interactive 3-D applications for scientific and mathematical modelling

ICTGAM510 Prepare games for different platforms and delivery modes

ICTGAM511 Manage testing of games and interactive media

ICTGAM527 Integrate database with online game

ICTPRG425 Use structured query language

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTPRG501 Apply advanced object-oriented language skills

ICTPRG515 Review developed software

ICTPRG523 Apply advanced programming skills in another language

ICTWEB508 Develop website information architecture

**Group B Art**

ICTGAM512 Create and implement designs for a 3-D games environment

ICTGAM514 Design and create models for a 3-D and digital effects environment

ICTGAM515 Design and create advanced particles, fluids and bodies for 3-D digital effects

ICTGAM516 Animate a 3-D character for digital games

ICTGAM517 Produce a digital animation sequence

ICTGAM518 Animate physical attributes of models and elements

ICTGAM519 Manage technical art and rigging in 3-D animation

ICTGAM520 Create and combine 3-D digital games and components

ICTGAM526 Create complex 3-D characters for games

**Group C Digital media**

CUADIG502 Design digital applications

CUADIG503 Design e-learning resources

CUADIG507 Design digital simulations

CUASOU407 Edit sound

ICTGAM521 Create interactive 3-D environments for digital games

ICTGAM522 Complete digital editing for the 3-D and digital effects environment

ICTGAM524 Integrate multiple data sources into interactive 3-D environments

ICTGAM525 Apply digital texturing for the 3-D environment in digital games

**General elective units**

**Group D**

BSBCRT501 Originate and develop concepts

BSBSUS501 Develop workplace policy and procedures for sustainability

ICTGAM504 Manage interactive media production

ICTGAM528 Create games for mobile devices

ICTGAM529 Analyse business opportunities in the digital games environment

ICTGAM530 Develop and implement physics in a 3-D digital game

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTGAM531 Complete compositing to create elements for the 3-D and digital effects environment

ICTICT408 Create technical documentation

ICTICT511 Match ICT needs with the strategic direction of the enterprise

ICTICT514 Identify and manage the implementation of current industry specific technologies

ICTPMG501 Manage ICT projects

ICTWEB411 Produce basic client-side script for dynamic web pages

ICTWEB429 Create a markup language document to specification

| Release 2 | This version released with ICT Information and Communications Technology Training Package version 2.0.<br><br>Release 2 created to update unit codes. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to be competent in administering a variety of networked computer systems. The qualification has a strong information technology base of core units with the potential for inclusion of a range of broader industry-specific units in the areas of virtualisation, sustainability and project management to suit particular needs.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 19**

**10 core units** *plus*

**9 elective units**

The elective units consist of:

© Commonwealth of Australia, 2025 Future Skills Organisation

- up to 9 elective units from the elective units listed below
- up to 4 from elsewhere in ICT Information and Communications Technology Training Package
- or any other Training Package or accredited course at Diploma or Advanced Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

BSBSUS501 Develop workplace policy and procedures for sustainability

ICTICT418 Contribute to copyright, ethics and privacy in an IT environment

ICTICT509 Gather data to identify business requirements

ICTNWK513 Manage system security

ICTSAS406 Implement and hand over system components

ICTSAS502 Establish and maintain client user liaison

ICTSAS505 Review and update disaster recovery and contingency plans

ICTSAS512 Review and manage delivery of maintenance services

ICTSAS515 Manage the testing process

ICTTEN516 Produce technical solutions from business specifications

**Elective units**

ICTICT501 Research and review hardware technology options for organisations

ICTICT511 Match ICT needs with the strategic direction of the enterprise

ICTICT514 Identify and manage the implementation of current industry specific technologies

ICTICT515 Verify client business requirements

ICTNWK501 Plan, implement and test enterprise communication solutions

ICTNWK502 Implement secure encryption technologies

ICTNWK504 Design and implement an integrated server solution

ICTNWK505 Design, build and test a network server

ICTNWK506 Configure, verify and troubleshoot WAN links and IP services in a medium enterprise network

ICTNWK509 Design and implement a security perimeter for ICT networks

ICTNWK525 Configure an enterprise virtual computing environment

ICTNWK527 Manage an enterprise virtual computing environment

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTNWK529 Install and manage complex ICT networks

ICTNWK531 Configure an internet gateway

ICTNWK533 Configure and manage advanced virtual computing environments

ICTNWK534 Monitor and troubleshoot virtual computing environments

ICTNWK535 Install an enterprise virtual computing environment

ICTNWK615 Design and configure desktop virtualisation

ICTPMG501 Manage ICT projects

ICTSAD506 Produce a feasibility report

ICTSAS503 Perform systems tests

ICTSAS513 Develop detailed test plans

ICTSAS517 Use network tools

ICTSAS518 Install and upgrade operating systems

ICTSUS501 Implement server virtualisation for a sustainable ICT system

ICTSUS601 Integrate sustainability in ICT planning and design projects

ICTSUS602 Establish a business case for sustainability and competitive advantage in ICT projects

ICTTEN611 Produce an ICT network architecture design

ICTICT501 Research and review hardware technology options for organisations

ICTICT509 Gather data to identify business requirements

ICTICT514 Identify and manage the implementation of current industry specific technologies

ICTICT603 Manage the use of appropriate development methodologies

ICTNWK501 Plan, implement and test enterprise communication solutions

ICTNWK502 Implement secure encryption technologies

ICTNWK503 Install and maintain valid authentication processes

ICTNWK504 Design and implement an integrated server solution

ICTNWK505 Design, build and test a network server

ICTNWK506 Configure, verify and troubleshoot WAN links and IP services in a medium enterprise network

ICTNWK507 Install, operate and troubleshoot medium enterprise routers

ICTNWK508 Install, operate and troubleshoot medium enterprise switches

ICTNWK509 Design and implement a security perimeter for ICT networks

ICTNWK510 Develop, implement and evaluate system and application security

ICTNWK511 Manage network security

ICTNWK513 Manage system security

ICTNWK524 Install and configure network access storage devices

ICTNWK525 Configure an enterprise virtual computing environment

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTNWK527 Manage an enterprise virtual computing environment

ICTNWK531 Configure an internet gateway

ICTNWK533 Configure and manage advanced virtual computing environments

ICTNWK534 Monitor and troubleshoot virtual computing environments

ICTNWK535 Install an enterprise virtual computing environment

ICTNWK615 Design and configure desktop virtualisation

ICTOPN502 Perform acceptance and commissioning tests on optical network

ICTOPN503 Plan for an optical system upgrade and cut over

ICTOPN505 Test the performance of specialised optical devices

ICTOPN506 Analyse and integrate specialised optical devices in the network

ICTPMG501 Manage ICT projects

ICTSAD506 Produce a feasibility report

ICTSAS406 Implement and hand over system components

ICTSAS501 Develop, implement and evaluate an incident response plan

ICTSAS502 Establish and maintain client user liaison

ICTSAS503 Perform systems test

ICTSAS505 Review and update disaster recovery and contingency plans

ICTSAS512 Review and manage delivery of maintenance services

ICTSAS515 Manage the testing process

ICTSUS601 Integrate sustainability in ICT planning and design projects

ICTSUS602 Establish a business case for sustainability and competitive advantage in ICT projects

ICTTEN422 Configure and troubleshoot advanced network switching

ICTTEN512 Design and implement an enterprise voice over internet protocol and a unified communications network

ICTTEN514 Install, configure and test a server

ICTTEN515 Dimension and design a radio frequency identification system

ICTTEN516 Produce technical solutions from business specifications

ICTTEN517 Plan a wireless mesh network

ICTTEN610 Design and configure an IP-MPLS network with virtual private network tunnelling

## Qualification Description

This qualification provides the skills and knowledge for an individual to determine client business requirements and to support a project team in the analysis and redesign of systems to ensure they meet client needs.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 21**

**9 core units** *plus*

**12 elective units**

The elective units consist of:

- up to 12 from the elective units listed below

© Commonwealth of Australia, 2025 Future Skills Organisation

- up to 4 from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Diploma or Advanced Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

ICTDBS502 Design a database

ICTICT401 Determine and confirm client business requirements

ICTICT403 Apply software development methodologies

ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

ICTICT502 Develop detailed component specifications from project specifications

ICTICT509 Gather data to identify business requirements

ICTICT511 Match ICT needs with the strategic direction of the enterprise

ICTSUS601 Integrate sustainability in ICT planning and design projects

ICTTEN516 Produce technical solutions from business specifications

**Elective units**

ICTICT510 Determine appropriate ICT strategies and solutions

ICTICT512 Plan process re-engineering strategies for business

ICTICT514 Identify and manage the implementation of current industry specific technologies

ICTNWK514 Model preferred system solutions

ICTPMG501 Manage ICT projects

ICTPRG418 Apply intermediate programming skills in another language

ICTPRG509 Build using rapid application development

ICTPRG514 Prepare for software development using rapid application development

ICTPRG515 Review developed software

ICTPRG518 Monitor the system pilot

ICTPRG524 Develop high-level object-oriented class specifications

ICTPRG527 Apply intermediate object-oriented language skills

ICTSAD501 Model data objects

ICTSAD502 Model data processes

ICTSAS422 Scope implementation requirements

ICTSAS502 Establish and maintain client user liaison

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTSAS505 Review and update disaster recovery and contingency plans

ICTSAS506 Update ICT system operational procedures

ICTSAS507 Implement and evaluate systems for regulatory and standards compliance

ICTSAS513 Develop detailed test plans

ICTTEN501 Provide consultancy and technical support in the customer premises equipment sector

# ICT50915 Diploma of Digital Media Technologies

## Modification History

| Release | Comments |
|---|---|
| Release 2 | This version released with ICT Information and Communications Technology Training Package version 2.0.<br><br>Release 2 created to update unit codes. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to be competent in designing, developing and refining digital media technologies as an independent information and communications technology (ICT) specialist or as part of a team. It provides the opportunity to work in new and emerging digital media technology areas, such as online, and interactive design and development, and with tools and equipment, such as software, Web 2 tools, technologies and mobile devices.

### Licensing/Regulatory Information

*No licensing, legislative or certification requirements apply to this qualification at the time of publication.*

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 18**

**7 core units** *plus*

**11 elective units**

The elective units consist of:

- up to 11 from the elective units listed below

© Commonwealth of Australia, 2025 Future Skills Organisation

- up to 3 from elsewhere in ICT Information and Communications Technology Training Package
- or any other Training Package or accredited course at Diploma or Advanced Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

BSBCRT501 Originate and develop concepts

BSBWHS501 Ensure a safe workplace

ICTGAM504 Manage interactive media production

ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

ICTICT419 Work effectively in the digital media industry

ICTICT515 Verify client business requirements

ICTPMG501 Manage ICT projects

**Elective units**

CUADIG502 Design digital applications

CUADIG503 Design e-learning resources

CUADIG504 Design games

CUADIG507 Design digital simulations

CUAPOS201 Perform basic vision and sound editing

CUAPOS401 Edit screen content for fast turnaround

CUASOU307 Record and mix a basic music demo

CUASOU504 Produce sound recordings

CUAPHI504 Employ specialised imaging technologies

ICTDBS504 Integrate database with a website

ICTDMT501 Incorporate and edit digital video

ICTGAM507 Develop intermediate 3-D software for games and interactive media

ICTGAM511 Manage testing of games and interactive media

ICTGAM512 Create and implement designs for a 3-D games environment

ICTGAM514 Design and create models for a 3-D and digital effects environment

ICTICT406 Build a graphical user interface

ICTICT511 Match ICT needs with the strategic direction of the enterprise

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTICT514 Identify and manage the implementation of current industry specific technologies

ICTPRG409 Develop mobile applications

ICTPRG413 Use a library or pre-existing components

ICTPRG418 Apply intermediate programming skills in another language

ICTPRG425 Use structured query language

ICTPRG527 Apply intermediate object-oriented language skills

ICTSAD504 Develop and conduct client acceptance test

ICTWEB429 Create a markup language document to specification

ICTWEB501 Build a dynamic website

ICTWEB516 Research and apply emerging web technology trends

# ICT51015 Diploma of Telecommunications Engineering

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification reflects the role of a technical specialist, with high level skills and knowledge in telecommunications and information technology (IT) networks using internet protocol (IP) systems.

An individual in this role can install, test and commission voice and data communications networks in medium to large enterprises using next generation networks technologies. They canprovide specialist technical support in monitoring and administering the installation and upgrade of large telecommunications and IT networks including local area networks (LAN) and wide area networks (WAN), IP based protocol systems, voice over internet protocol (VoIP) and unified communications networks, secured networks, cellular mobile networks, microwave systems, wireless and wired line networks, databases, routers, switches and servers.

The following specialisations can be achieved through selection of specific units of competency:

- Management
- Network Engineering
- Optical Networks
- Radio Communications.

*Licensing/Regulatory Information*

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Entry Requirements

Entry to this qualification is limited to those individuals who:

© Commonwealth of Australia, 2025 Future Skills Organisation

- Have completed a Certificate IV or Diploma from the ICT Information and Communications Technology Training Package.

or

- Have completed a Certificate III in Telecommunications with at least one year full time equivalent and relevant telecommunications practical experience.

or

- Have completed a Certificate III or a Certificate IV qualification in related technical fields of study with at least one year full time equivalent and relevant telecommunications practical experience.

or

Have completed a minimum of three years equivalent full-time experience in the telecommunications industry with particular technical experience in; installation of cabling; diagnosis and rectification of telecommunications system faults; and the delivery and operation of network infrastructure, for core and access networks in accordance with industry regulations and legislative requirements.

# Packaging Rules

**Total number of units = 12**

**5 core units** plus

**7 electives** units

The electives consist of:

- up to 7 units selected from the electives listed below
- up to 2 may be selected from any currently endorsed Training Package or accredited course at AQF Level 5 or above.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

© Commonwealth of Australia, 2025 Future Skills Organisation

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Refer to the *Specialisations* information below, and to the Companion Volume Implementation Guide, for advice about choosing electives to support specialisations in particular sectors of the information and communications industry.

**Core Units**

BSBSUS501 Develop workplace policy and procedures for sustainability

BSBWHS501 Ensure a safe workplace

ICTPMG503 Prepare a project brief

ICTPMG504 Prepare project specifications

ICTTEN516 Produce technical solutions from business specifications

**Elective Units**

**Group A General administration**

BSBPMG522 Undertake project work

ICTICT508 Evaluate vendor products and equipment

ICTEDU501 Develop and deliver training associated with new and modified products

ICTPRO501 Develop training, marketing and sales resources for telecommunications products

ICTSUS501 Implement server virtualisation for a sustainable ICT system

ICTTEN502 Design a telecommunications project

**Group B General ICT**

ICTNWK516 Determine best-fit topology for a local network

ICTCMP501 Undertake radio communications site audit

ICTICT516 Test telecommunications network using virtual instruments

ICTPMG502 Develop customer premises equipment installation project plans

ICTTEN503 Design an electronic system for a telecommunications network

ICTTEN504 Acceptance test new systems and equipment

ICTTEN505 Commission telecommunications network equipment

ICTTEN506 Integrate new systems and equipment into the telecommunications network

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTTEN507 Cut over new and replacement network equipment

ICTTEN508 Locate, diagnose and rectify complex faults

ICTTEN509 Provide expert advice and support on complex faults

ICTTEN510 Undertake planned outage management

ICTTEN511 Administer a data communications network

ICTTEN512 Design and implement an enterprise voice over internet protocol and a unified communications network

ICTTEN515 Dimension and design a radio frequency identification system

ICTTEN517 Plan a wireless mesh network

**Group C Radio communications**

ICTRFN501 Test cellular handset enhancements and international roaming agreements

ICTRFN502 Test and measure cellular phone and network equipment performance

ICTRFN503 Evaluate and analyse radio frequency signal coverage plots

ICTRFN601 Monitor the capacity of and recommend changes to the cellular mobile network

ICTRFN602 Produce and evaluate architecture designs for WiMAX networks

**Group D Network engineering and management**

ICTNPL503 Apply service measures and demand forecasting to products and services planning

**Group E Optical and network engineering**

ICTOPN501 Plan and configure dense wavelength division multiplexing systems

ICTOPN502 Perform acceptance and commissioning tests on optical network

ICTOPN503 Plan for an optical system upgrade and cut over

ICTOPN504 Test and commission a dense wavelength division multiplexing transmission system

ICTOPN505 Test the performance of specialised optical devices

ICTOPN506 Analyse and integrate specialised optical devices in the network

**Group F Management**

BSBDES501 Implement design solutions

BSBDES502 Establish, negotiate and refine a design brief

BSBDES601 Manage design realisation

BSBDES602 Research global design trends

© Commonwealth of Australia, 2025 Future Skills Organisation

BSBFIM501 Manage budgets and financial plans

BSBPMG521 Manage project integration

BSBWHS504 Manage WHS risks

ICTNPL401 Apply business acumen to network planning

ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry

ICTPMG610 Develop a project management plan

**Group G Network engineering**

ICTNPL501 Develop planning strategies for core network design

ICTNPL502 Develop planning strategies for access network design

ICTNPL504 Develop planning strategies for building environment design

ICTTEN501 Provide consultancy and technical support in the customer premises equipment sector

ICTTEN513 Install, configure and test a local area network switch

ICTTEN514 Install, configure and test a server

**Specialisations**

The use of specialist streams is appropriate for this qualification in accordance with the AQF, Standards for Training Packages and the packaging rules. Where a specialist stream is achieved, testamurs must show the appropriate specialisation in brackets. Refer to the Companion Volume Implementation Guide for further advice about specialisations.

Minimum elective units required for the specific specialisations are described below.

**Management**

Select the following 5 units:

- ICTNPL401 Apply business acumen to network planning
- ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry
- ICTNPL503 Apply service measures and demand forecasting to products and services planning
- ICTPMG610 Develop a project management plan
- BSBFIM501 Manage budgets and financial plans.

The remaining 2 electives must be selected from Groups A, D and F only.

© Commonwealth of Australia, 2025 Future Skills Organisation

**Network Engineering**

Select the following 4 units:

- BSBPMG522 Undertake project work
- ICTTEN502 Design a telecommunications project
- ICTTEN513 Install, configure and test a local area network switch
- ICTTEN514 Install, configure and test a server.

The remaining 3 electives must be selected from Groups A, B, C, D, E, and G only.

**Optical Network**

Select the following 5 units:

- ICTOPN501 Plan and configure dense wavelength division multiplexing systems
- ICTOPN502 Perform acceptance and commissioning tests on optical network
- ICTOPN503 Plan for an optical system upgrade and cut over
- ICTOPN504 Test and commission a dense wavelength division multiplexing transmission system
- ICTOPN506 Analyse and integrate specialised optical devices in the network.

The remaining 2 electives must be selected from Groups A, B and E only.

**Radio Communications**

Select the following 5 units:

- ICTRFN502 Test and measure cellular phone and network equipment performance
- ICTRFN503 Evaluate and analyse radio frequency signal coverage plots
- ICTRFN602 Produce and evaluate architecture designs for WiMAX networks
- ICTTEN502 Design a telecommunications project
- ICTTEN517 Plan a wireless mesh network.

The remaining 2 electives must be selected from Groups A, B and C only.

# ICT51115 Diploma of Telecommunications Planning and Design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification reflects the role of a technical specialist with a range of telecommunications skills and extensive knowledge of the core and access network capabilities of the service provider. An individual in this role can:

- plan the development of the customer access network infrastructure
- plan the development of the core network for the service provider and asset owner
- plan network capacity for new technology in products and services
- analyse demand data and evaluate network growth and impact on the network.

This qualification prepares individuals to work in the telecommunications industry in planning and designing additions and implementations to accommodate network growth and new technologies. This is required for the national broadband infrastructure network planning.

*Licensing/Regulatory Information*

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Entry Requirements

Entry to this qualification is limited to those individuals who:

- Have completed a Certificate IV in Telecommunications Network Design or its equivalent.

or

© Commonwealth of Australia, 2025 Future Skills Organisation

- Have completed a minimum of three years equivalent full-time relevant workplace experience in the telecommunications industry with experience in provisioning, evaluation, planning, design, costing and deployment of core networks and access networks.

# Packaging Rules

**Total number of units = 12**

**6 Core units plus**

**6 Electives units**

The elective units consist of:

- 6 units selected from any of the elective groups listed below.

A maximum of two elective units may be substituted with two units of competency from any currently endorsed Training Package or accredited course at AQF Level 5 or 6.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the Australian Qualifications Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

### Core

BSBPMG521 Manage project integration

BSBSUS501 Develop workplace policy and procedures for sustainability

ICTNPL501 Develop planning strategies for core network design

ICTNPL502 Develop planning strategies for access network design

# ICT60415 Advanced Diploma of Information Technology Project Management

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This qualification first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge for an individual to manage a range of information and communications technology (ICT) projects to meet customer requirements. Projects may cover a wide range of specialities, including software development, hardware procurement and implementation, network analysis and deployment, and web and/or system development

### Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 15**

**6 core units** plus

**9 elective units**

The elective units consist of:

- up to 9 from the elective units listed below
- up to 3 from elsewhere in ICT Information and Communications Technology Training Package or any other Training Package or accredited course at Advanced Diploma level.

© Commonwealth of Australia, 2025 Future Skills Organisation

The elective units chosen must be relevant to the work outcome and meet local industry needs.

**Core units**

ICTICT610 Manage copyright, ethics and privacy in an ICT environment

ICTPMG601 Establish ICT project governance

ICTPMG602 Manage ICT project initiation

ICTPMG603 Manage ICT project planning

ICTPMG604 Manage ICT project delivery

ICTPMG605 Manage ICT project closure

**Elective units**

BSBINN601 Lead and manage organisational change

ICTICT505 Determine acceptable developers for projects

ICTICT509 Gather data to identify business requirements

ICTICT603 Manage the use of appropriate development methodologies

ICTICT608 Interact with clients on a business level

ICTICT609 Lead the evaluation and implementation of current industry specific technologies

ICTICT813 Manage ICT services

ICTPMG606 Manage ICT project quality

ICTPMG607 Manage and control ICT project risks

ICTPMG608 Manage ICT project systems implementation

ICTPRG602 Manage the development of technical solutions from business specifications

ICTSAS505 Review and update disaster recovery and contingency plans

ICTSAS515 Manage the testing process

# ICT60515 Advanced Diploma of Computer Systems Technology

## Modification History

| Release | **Comments** |
|---|---|
| Release 1 | This qualification first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Qualification Description

This qualification provides the skills and knowledge required to coordinate and administer the installation, commissioning and ongoing maintenance of a range of networks, enterprise servers and systems, including internetworking, security and e-business solutions.

An individual with these skills may be part of a team or provide services as an independent information and communications technology (ICT) specialist.

**Licensing/Regulatory Information**

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

Nil

## Packaging Rules

**Total number of units = 18**

**12 core units** plus

**6 elective units**

The elective units consist of:

- up to 6 from the elective units listed below
- up to 3 from elsewhere in ICT Information and Communications Technology Training Package at Advanced Diploma level

© Commonwealth of Australia, 2025 Future Skills Organisation

- up to 3 from any other Training Package or accredited course at Diploma or Advanced Diploma level.

The elective units chosen must be relevant to the work outcome and meet local industry needs.

### Core units

ICTNWK506 Configure, verify and troubleshoot WAN links and IP services in a medium enterprise network

ICTNWK507 Install, operate and troubleshoot medium enterprise routers

ICTNWK508 Install, operate and troubleshoot medium enterprise switches

ICTNWK509 Design and implement a security perimeter for ICT networks

ICTNWK529 Install and manage complex ICT networks

ICTNWK602 Plan, configure and test advanced server based security

ICTNWK607 Design and implement wireless network security

ICTPMG608 Manage ICT project systems implementation

ICTPMG609 Plan and direct complex ICT projects

ICTPRG527 Apply intermediate object-oriented language skills

ICTWEB501 Build a dynamic website

ICTWEB502 Create dynamic web pages

### Elective units

ICTDBS504 Integrate database with a website

ICTICT502 Develop detailed component specifications from project specifications

ICTICT604 Identify and implement business innovation

ICTICT609 Lead the evaluation and implementation of current industry specific technologies

ICTNWK502 Implement secure encryption technologies

ICTNWK503 Install and maintain valid authentication processes

ICTNWK504 Design and implement an integrated server solution

ICTNWK505 Design, build and test a network server

ICTNWK524 Install and configure network access storage devices

ICTNWK525 Configure an enterprise virtual computing environment

ICTNWK527 Manage an enterprise virtual computing environment

© Commonwealth of Australia, 2025 Future Skills Organisation

ICTNWK533 Configure and manage advanced virtual computing environments

ICTNWK534 Monitor and troubleshoot virtual computing environments

ICTNWK535 Install an enterprise virtual computing environment

ICTNWK603 Plan, configure and test advanced internetwork routing solutions

ICTNWK605 Design and configure secure integrated wireless systems

ICTNWK610 Design and build integrated VoIP networks

ICTNWK611 Configure call processing network elements for secure VoIP networks

ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks

ICTNWK613 Develop plans to manage structured troubleshooting process of enterprise networks

ICTNWK615 Design and configure desktop virtualisation

ICTNWK616 Manage security, privacy and compliance of cloud service deployment

ICTPRG505 Build advanced user interface

ICTPRG601 Develop advanced mobile multi-touch applications

ICTPRG602 Manage the development of technical solutions from business specifications

ICTSAS517 Use network tools

ICTWEB503 Create web-based programs

ICTWEB505 Develop complex web page layouts

# ICT60615 Advanced Diploma of Telecommunications Network Engineering

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification reflects the role a technical specialist with high level skills and knowledge in telecommunications and information technology networks using internet protocol (IP) systems who can:

- forecast network growth for enterprise network planning
- design and manage IP based network telecommunications equipment
- implement convergence technologies in enterprise telecommunications networks
- design and manage optical and wireless network telecommunications architectures for high speed broadband capability.

*Licensing /Regulatory Information*

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Entry Requirements

*Nil*

## Packaging Rules

**Total number of units = 10**

**4 Core units** plus

**6 Elective** units

The elective units consist of:

© Commonwealth of Australia, 2025 Future Skills Organisation

- all 6 units may be selected from the electives units listed below, with a minimum of 2 electives at AQF Level 6
- up to 2 elective units may be substituted with units of competency from any currently endorsed Training Package or accredited course at AQF Level 6 or above.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or are available within the ICT Information and Telecommunications Technology Training Package.

**Core Units**

ICTPMG610 Develop a project management plan

ICTPMG611 Prepare a detailed design brief

ICTSUS601 Integrate sustainability in ICT planning and design projects

ICTTEN611 Produce an ICT network architecture design

**Elective Units**

**ICT use (IP networks)**

ICTNWK502 Implement secure encryption technologies

ICTNWK503 Install and maintain valid authentication processes

ICTNWK509 Design and implement a security perimeter for ICT networks

ICTNWK517 Determine best-fit topology for a wide area network

ICTNWK518 Design an enterprise wireless local area network

ICTNWK520 Design ICT system security controls

ICTSAS409 Manage risks involving ICT systems and technology

ICTSAS505 Review and update disaster recovery and contingency plans

**Network planning**

ICTNPL601 Plan the development and growth of the telecommunications network

ICTNPL602 Forecast service demand

ICTNPL603 Undertake network performance analysis

© Commonwealth of Australia, 2025 Future Skills Organisation

**Planning**

BSBDES601 Manage design realisation

BSBDES602 Research global design trends

**Work health and safety**

BSBWHS501 Ensure a safe workplace

BSBWHS504 Manage WHS risks

**Optical networks**

ICTOPN601 Manage optical ethernet transmission

ICTOPN602 Manage dense wavelength division multiplexing transmission system

ICTOPN603 Design a dense wavelength division multiplexing system

ICTOPN604 Analyse optical transmission systems

**Radio frequency networks**

ICTRFN601 Monitor the capacity of and recommend changes to the cellular mobile network

ICTRFN602 Produce and evaluate architecture designs for WiMAX networks

**Sustainability**

ICTSUS602 Establish a business case for sustainability and competitive advantage in ICT projects

**Telecommunications engineering networks**

ICTTEN601 Undertake qualification testing of new or enhanced equipment and systems

ICTTEN602 Undertake system administration

ICTTEN603 Undertake network traffic management

ICTTEN604 Coordinate fault rectification and restoration of service following network outages

ICTTEN605 Implement planned network changes with minimal impact to the customer

ICTTEN606 Manage a common channel signalling network

ICTTEN607 Analyse and organise repair of highly complex telecommunications network faults

ICTTEN608 Verify new software and hardware releases

ICTTEN609 Produce and evaluate architecture designs for convergent cellular mobile networks

© Commonwealth of Australia, 2025 Future Skills Organisation

**Emerging technologies**

ICTTEN612 Design and manage internet protocol TV in a service provider network

**IP networks**

ICTTEN610 Install and configure an IP-MPLS network with virtual private network tunnelling

## Qualification Description

This qualification provides the skills and knowledge for individuals in strategic and operational leadership roles in the technology domain. The individual provides domain thought leadership; assesses best possible and commercially viable telecommunications networks and systems solutions and services; plans changes to networks and systems in line with business strategy and enterprise product and technology roadmaps; analyses potential and real network problems; and develops innovative, commercially advantageous solutions.

The individual is a recognised authority and trusted business advisor for delivering tomorrow's solutions as well as optimisation of current network system performance and customer satisfaction. Research, analysis, design, development and deployment of technical and commercially viable solutions for: cloud computing, digital signal processing, cellular and satellite systems and telecommunications networks are requirements of the individual.

### Licensing/Regulatory Information

## Qualification Description

This qualification provides the skills and knowledge for individuals to undertake strategic commercial and technical roles in the telecommunications industry. Individuals in this capacity collaborate with business leaders to set the telecommunications agenda, creating and deploying innovative and collaborative technologies that connect people and communities, enable superior levels of personal and collective productivity, and viably grow the telecommunications industry and enterprise profitability.

The individual is an authority and trusted business advisor in strategy development, identifying, designing, developing and deploying tomorrow's solutions. The individual leads and applies research; and analyses, designs, develops and deploys technical and commercially viable integrated solutions for businesses and organisations. The individual is regularly called upon to solve highly complex business and technical problems in geographically dispersed, dynamic and challenging environments.

# ICT80615 Graduate Certificate in Telecommunications Network Engineering

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Qualification Description

This qualification reflects the role of a technical manager utilising a high level of technical management skills and knowledge in telecommunications networks and systems who can:

- plan changes and analyse network problems over a wide range of telecommunications technologies at managerial/supervisory levels
- diagnose problems and provide network management support
- plan a project from a design specification, research telecommunications technologies to meet the required specifications and report on the implementation of the project plan
- research and analyse the key concepts in design, construct and modify network management databases
- evaluate management systems and procedures used by the telecommunications industry.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Entry Requirements

Entry to this qualification is limited to those individuals who:

- Have completed a Bachelor degree in related fields of study.

or

© Commonwealth of Australia, 2025 Future Skills Organisation

- Have completed a Diploma or Advanced Diploma qualification in related fields of study and two years equivalent full-time relevant workplace experience at a significant level of leadership and management responsibility and/or complexity in an enterprise.

or

Have three years equivalent full-time relevant workplace experience at a significant level of leadership and management responsibility and/or complexity in an enterprise.

# Packaging Rules

**Total number of units = 6**

**3 Core units** plus

**3 Elective** units

The elective units consist of:

- all 3 elective units may be selected from the elective list below
- up to 2 elective units may be selected from any currently endorsed Training Package or accredited course at AQF Level 8 or above.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Telecommunications Technology Training Package.

### Core Units

ICTPMG801 Manage a telecommunications workplace

ICTPMG803 Undertake a telecommunications project

ICTSUS804 Use ICT to improve sustainability outcomes

### Elective Units

### IT use (IP networks)

ICTICT815 Manage automated ICT system applications using Unix

© Commonwealth of Australia, 2025 Future Skills Organisation

**Project management**

ICTPMG802 Manage a telecommunications project

**Sustainability**

ICTSUS805 Manage improvements in ICT sustainability

**Radio frequency networks**

ICTRFN801 Produce a radio link budget

**Telecommunications engineering networks**

ICTTEN801 Plan a transmission network

ICTTEN802 Manage alignment of systems with product and technology strategy

ICTTEN803 Translate domain and solution architectures into platform requirements and designs

ICTTEN804 Manage end to end architectural solutions across multiple domains

ICTTEN805 Manage solution architecture and impacts in line with organisational processes

ICTTEN806 Manage application layer solutions

ICTTEN807 Manage voice, data and internet protocol network solutions

ICTTEN808 Manage network testing strategies

ICTTEN809 Analyse business specifications to produce technical solutions

ICTTEN814 Manage development and application of testing artefacts

ICTTEN815 Manage project requirements and process implementations

ICTTEN816 Scope project requirements and process solutions

# BSBSUS401 Implement and monitor environmentally sustainable work practices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with BSB Business Services Training Package Version 2.0.<br><br>Version created to better align unit to AQF level. |

## Application

This unit describes the skills and knowledge required to effectively analyse the workplace in relation to environmentally sustainable work practices and to implement improvements and monitor their effectiveness.

It applies to individuals with responsibility for a specific area of work or who lead a work group or team and addresses the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Industry Capability – Sustainability

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Investigate current practices in relation to resource usage | 1.1 Identify environmental regulations applying to the enterprise<br>1.2 Analyse procedures for assessing compliance with |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | environmental/sustainability regulations<br>1.3 Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate<br>1.4 Collect, analyse and organise information from a range of sources to provide information/advice and tools/resources for improvement opportunities<br>1.5 Measure and document current resource usage of members of the work group<br>1.6 Analyse and document current purchasing strategies<br>1.7 Analyse current work processes to access information and data to assist in identifying areas for improvement |
| 2. Set targets for improvements | 2.1 Seek input from stakeholders, key personnel and specialists<br>2.2 Access external sources of information and data as required<br>2.3 Evaluate alternative solutions to workplace environmental issues<br>2.4 Set efficiency targets |
| 3. Implement performance improvement strategies | 3.1 Source and use appropriate techniques and tools to assist in achieving efficiency targets<br>3.2 Apply continuous improvement strategies to own work area of responsibility, including ideas and possible solutions to communicate to the work group and management<br>3.3 Implement and integrate environmental and resource efficiency improvement plans for own work group with other operational activities<br>3.4 Supervise and support team members to identify possible areas for improved practices and resource efficiency in work area<br>3.5 Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon where appropriate<br>3.6 Implement costing strategies to fully utilise environmental assets |
| 4. Monitor performance | 4.1 Use and/or develop evaluation and monitoring, tools and technology<br>4.2 Document and communicate outcomes to report on efficiency targets to key personnel and stakeholders<br>4.3 Evaluate strategies and improvement plans<br>4.4 Set new efficiency targets, and investigate and apply new tools |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | and strategies<br>4.5 Promote successful strategies and reward participants where possible |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.4, 1.6, 1.7, 2.3, 3.1 | • Identifies and analyses complex texts to determine legislative, regulatory and business requirements<br>• Reviews reported information to evaluate workplace strategies and improvement practices |
| Writing | 1.5, 1.6, 2.1, 2.2, 2.4, 3.1-3.3, 4.4, 4.5 | • Documents findings of investigations from written and oral sources according to organisational requirements<br>• Provides updates about progress using formats and language appropriate to the audience and context |
| Oral Communication | 2.1, 2.2, 3.3-3.5, 4.4, 4.5 | • Presents information and seeks advice using structure and language appropriate to audience<br>• Participates in discussions using listening and questioning to elicit the views of others and to clarify or confirm understanding |
| Numeracy | 1.5, 2.4, 3.1, 3.6, 4.4 | • Analyses numerical information to measure usage and calculates metric measurements, quantities/ratios and financial data using appropriate tools |
| Navigate the world of work | 1.1, 1.2 | • Recognises and follows legislative requirements and organisational policies and procedures associated with own role |
| Interact with others | 1.3, 2.1, 2.2, 3.3-3.5, 4.2, 4.4, 4.5 | • Selects and uses appropriate conventions and protocols when communicating with internal and external stakeholders to seek or share information<br>• Collaborates and consults with a range of stakeholders to achieve shared understanding of individual roles in meeting objectives |
| Get the work done | 1.2, 1.4-1.7, 2.3, 2.4, 3.1, 3.2, 3.3, 3.5, 3.6, 4.1, 4.3, 4.4 | • Develops plans to manage routine and non-routine tasks for own work group with an awareness of how they contribute to the broader organisation<br>• Uses systematic, analytical processes to set |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | environmental targets, gather relevant information, identify and evaluate alternative approaches<br>• Evaluates outcomes of decisions to identify opportunities for improvement<br>• Uses the main features and functions of digital tools to complete work tasks and access information |

# Unit Mapping Information

# Assessment Requirements for BSBSUS401 Implement and monitor environmentally sustainable work practices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with BSB Business Services Training Package Version 2.0.<br><br>Version created to better align unit to AQF level. |

## Performance Evidence

Evidence of the ability to:

- analyse information from a range of sources to identify current procedures, practices and compliance requirements in relation to environmental and resource sustainability
- consult and communicate with relevant stakeholders to seek input and encourage engagement with developing and implementing sustainability improvements, encourage feedback and suggestions and report on outcomes
- plan and organise work group activities to:
  - measure current resource usage
  - solve problems and generate ideas for improvements
  - evaluate and implement strategies to improve resource usage
  - plan, implement and integrate improvements into operations
  - meet environmental requirements
- apply continuous improvement approach to sustainability performance
- apply change management techniques to support sustainability performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify relevant internal and external sources of information and explain how they can be used to identify sustainability improvements

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain the compliance requirements for the work area with reference to legislation, regulations, codes of practice and workplace procedures that relate to environmental and resource issues
- outline common environmental and energy efficiency issues within the industry
- give examples of benchmarks for environmental and resource sustainability that are relevant to the organisation
- outline organisational systems and procedures that relate to environmental and resource sustainability improvements including:
  - supply chain, procurement and purchasing
  - quality assurance
  - making recommendations and seeking approvals

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the sustainability field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or, where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# CPCPCM2043A Carry out WHS requirements

## Modification History

Changes to application, elements and performance criteria, required skills and knowledge, range statement and critical aspects

Not equivalent to CPCPCM2023A

## Unit Descriptor

This unit of competency specifies the outcomes required to carry out work health and safety (WHS) requirements through safe work practices in a plumbing and services work environment.

The unit requires the performance of work in a safe manner through awareness of risks, work requirements and the planning and performance of safe work practices with concern for personal safety and the safety of others.

It includes the initial response to workplace emergencies; the safe use of electricity; the identification of hazardous materials, including asbestos; and compliance with legislated work safety practices.

## Application of the Unit

This unit of competency supports safe work practices for the plumbing and services industry.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure or fitting being renovated, extended, restored or maintained. It could also be conducted in an on or off-site workshop or at a customer's premises.

The unit does not cover the removal of asbestos, which is a licensed activity.

## Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

## Pre-Requisites

Nil

## Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Elements and Performance Criteria Pre-Content

| | |
|---|---|
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

# Elements and Performance Criteria

| | | | |
|---|---|---|---|
| 1 | Participate in workplace induction. | 1.1 | ***Workplace induction*** is received. |
| | | 1.2 | Location of emergency equipment is identified. |
| | | 1.3 | Current workplace emergency and evacuation procedures are identified. |
| | | 1.4 | Identify safe working conditions with employer. |
| | | 1.5 | Identify employee and employer rights and responsibilities regarding safe working conditions. |
| 2 | Assess risks. | 2.1 | Hazards in the work area are identified, assessed and reported to designated personnel. |
| | | 2.2 | WHS issues and risks in the work area are identified, assessed and reported to designated personnel. |
| | | 2.3 | ***Safe work practices***, procedures and instructions are followed. |
| | | 2.4 | WHS, hazard, accident or incident reports are completed according to workplace procedures and ***statutory and regulatory authorities*** and legislation. |
| 3 | Identify hazards and hazardous materials on work site. | 3.1 | Hazardous materials on a work site are identified, secured and tagged using appropriate signs and symbols; and if appropriate, handled and used according to company and legislated procedures. |
| | | 3.2 | Measures for controlling risks and construction hazards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | | |
|---|---|---|---|
| | | | are applied effectively and immediately. |
| | | 3.3 | ***Asbestos-containing materials (ACM) are identified*** on a work site ***and reported*** to designated personnel. |
| 4 | Plan and prepare for safe work practices. | 4.1 | Quality assurance requirements of company operations and safe work practices are identified and adhered to. |
| | | 4.2 | Personal protective equipment (PPE) is selected, correctly fitted and used according to the requirements of the job. |
| | | 4.3 | Tools and equipment are selected consistent with safe work practice requirements, checked for serviceability, and any faults are reported to supervisor. |
| | | 4.4 | Required barricades, hoardings and signage are determined and erected at job location. |
| | | 4.5 | Material safety data sheets (MSDS) are identified and applied. |
| | | 4.6 | ***Sustainability principles and concepts*** are observed when preparing for and undertaking work process. |
| 5 | Use safe work practices to carry out work. | 5.1 | Work is carried out safely and according to state or territory statutory requirements and company policy. |
| | | 5.2 | ***Safety hazards*** and common workplace accidents and incidents are identified in the course of work and reported according to policy. |
| | | 5.3 | Industry, site and personal safety rights and responsibilities are applied. |
| | | 5.4 | Prohibited tools and equipment in areas with identified asbestos are identified and isolated. |
| | | 5.5 | Firefighting equipment is selected and used according to type of fire and correct operating procedures. |
| | | 5.6 | Current site emergency and first aid procedures are followed. |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | | |
|---|---|---|---|
| 6 | Maintain safety of self and others. | 6.1 | Safety signs, identified in terms of colour and shape, symbols and alarms, are adhered to. |
| | | 6.2 | Hazardous chemicals and materials are identified, handled and stored, maintaining the safety to self, others and the environment. |
| | | 6.3 | Incidents are reported according to legislative requirements and workplace procedures. |
| | | 6.4 | Common causes of accidents in the industry are identified and prevention measures implemented in line with site induction. |
| | | 6.5 | Site area is maintained to prevent incidents and accidents and protect self and others |
| 7 | Use electricity safely. | 7.1 | Safest supply and route for electrical supply are determined. |
| | | 7.2 | Leads are supported and placed according to regulations. |
| | | 7.3 | Power board visual check is conducted. |
| | | 7.4 | Leads and equipment are checked for tags and visual damage. |
| | | 7.5 | Electrical hazards are identified and reported. |
| 8 | Apply emergency response. | 8.1 | ***Emergencies*** are identified. |
| | | 8.2 | ***Emergency response*** is provided according to company procedures and requirements. |
| | | 8.3 | Details of actions taken are reported according to company procedures and requirements using appropriate communications. |
| 9 | Clean up work site area. | 9.1 | Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications. |
| | | 9.2 | Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations |

© Commonwealth of Australia, 2025 Future Skills Organisation

and standard work practices.

9.3 Information is accessed and documentation completed according to workplace requirements.

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- communication skills to:
  - complete written reports and other relevant documentation
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - evaluate safety issues in the workplace and determine appropriate action
  - recognise WHS hazards, including asbestos, and take all opportunities to alleviate safety problems in a variety of construction work sites and environments
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools or materials
- literacy skills to read and interpret:
  - documentation from a variety of sources
  - MSDS
  - work safety procedures and instructions
- self-management skills to deal calmly and effectively with any potential safety problems and work closely with other team members and supervisors to ensure safe working conditions are maintained
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

### Required knowledge

- asbestos management code relating to prevention of exposure
- job safety analysis (JSA) and safe work method statements (SWMS)

© Commonwealth of Australia, 2025 Future Skills Organisation

- manual handling techniques
- MSDS
- relevant legislation, regulations and workplace requirements relating to WHS, including hazard reduction and personal safety
- requirements for working in confined spaces and at height, including on rooves
- tools and equipment prohibited from being used near identified ACM
- risk assessment
- safe work practices in normal working environment
- types, possible location and risks of ACM, including serpentine and amphobile groups and their use in common building materials
- workplace and equipment safety requirements
- workplace hazards and their precautions and reduction
- workplace response to emergencies

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| | |
|---|---|
| **Overview of assessment** | This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures. |
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | A person who demonstrates competency in this unit must be able to provide evidence of the ability to:<br>• locate, interpret and apply relevant information, standards and specifications for applying safe work practices in the workplace<br>• apply safety requirements throughout the performance of work sequences, including electrical requirements and personal protective clothing and equipment<br>• apply sustainability principles and concepts<br>• undertake site and workplace induction<br>• correctly identify the location of ACM<br>• understand and apply policies and procedures for reporting presence of ACM to designated personnel<br>• assess workplace risks and interpret and apply safe work practices |

© Commonwealth of Australia, 2025 Future Skills Organisation

- understand workplace requirements for emergency response, including evacuation procedures
- correctly locate and identify workplace firefighting and other safety equipment and appliances
- correctly select and use appropriate processes, tools and equipment
- safely complete all work to specification
- comply with regulations, standards and workplace instructions, procedures and processes, including reporting and documentation
- communicate and work effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or

© Commonwealth of Australia, 2025 Future Skills Organisation

simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace induction*** may include:

- first aid officers and kits

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | • personnel competent and/or licensed in the safe handling of asbestos<br>• site induction work site locations<br>• specific site WHS issues<br>• specific site requirements. |
| ***Safe work practices*** are to be according to state and territory legislation and regulations and may include: | • handling of materials<br>• hazard control procedures and procedures for handling hazardous materials and substances<br>• PPE prescribed under legislation, regulations and workplace policies and practices<br>• use of firefighting equipment<br>• use of first aid equipment<br>• use of tools and equipment<br>• workplace environment and safety. |
| ***Statutory and regulatory authorities*** include: | • commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice. |
| ***Identifying and reporting asbestos-containing materials***: | • includes recognising common types of ACM that may be found in construction materials and buildings<br>• covers asbestos rope/fabrics, asbestos cement sheeting, asbestos cement piping and lagging on pipes, bituminous waterproof membrane, millboard, asbestos flues, sheeting under ceramic or vinyl floor or wall tiles in wet areas<br>• involves reporting ACM to person in control of the workplace as set out in the relevant Asbestos Management Code. |
| ***Sustainability principles and concepts***: | • cover the social, economic and environmental use of resources to meet current and future needs<br>• may include:<br>  • selecting appropriate components and material<br>  • choosing efficient products<br>  • using material efficiently<br>  • storing and disposing of hazardous material to ensure minimal environmental impact. |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| ***Safety hazards*** may include: | • hazards and risks associated with tools and equipment<br>• inflammable materials and fire hazards<br>• lifting practices<br>• lighting, gases, electricity and water<br>• spillage, waste and debris<br>• toxic and hazardous substances<br>• working at heights<br>• working in confined spaces. |
| ***Emergencies*** may include: | • accidents<br>• fires<br>• injuries<br>• sudden illness. |
| ***Emergency response*** may include: | • common site signs<br>• equipment tags<br>• facility or location signs<br>• safety barricades and warning signs<br>• site direction<br>• traffic signs<br>• workplace evacuation involving staff and customers. |

# CPCPCM2055A Work safely on roofs

## Modification History

Prerequisite unit updated

Changes to performance criteria, required skills and knowledge, range statement and critical aspects

Not equivalent to CPCPCM2035A

## Unit Descriptor

This unit of competency specifies the outcomes required to perform safe work practices when undertaking plumbing work on roofing structures.

## Application of the Unit

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

## Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

## Pre-Requisites

| | |
|---|---|
| CPCPCM2043A | Carry out WHS requirements |

## Employability Skills Information

This unit contains employability skills..

## Elements and Performance Criteria Pre-Content

| | |
|---|---|
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Elements and Performance Criteria

| | | | |
|---|---|---|---|
| 1 | Identify work safety requirements. | 1.1 | Scope of task and proposed work practices and activities are identified and documented according to workplace procedures, ***statutory and regulatory authorities'*** requirements and relevant ***information***. |
| | | 1.2 | ***Work health and safety*** (WHS) and ***environmental requirements*** associated with working safely on roofs are adhered to throughout the work. |
| | | 1.3 | ***Quality assurance requirements*** are identified and adhered to according to workplace requirements. |
| | | 1.4 | Site is inspected to determine layout and physical condition, condition of structure, prevailing weather conditions, equipment requirements and potential hazards. |
| | | 1.5 | Safety equipment is identified, selected and checked for serviceability according to workplace requirements. |
| | | 1.6 | Certification of suitability of structure to support the safety system is obtained. |
| 2 | Prepare for work. | 2.1 | Work procedures and instructions for the task are identified. |
| | | 2.2 | Materials, ***tools and equipment***, including personal protective equipment, are selected and checked for serviceability. |
| | | 2.3 | Fall protection and perimeter protection equipment is inspected and installed, ensuring adequacy for work and conformance to regulatory requirements. |
| | | 2.4 | ***Roof safety system*** is installed according to workplace and regulatory requirements. |
| | | 2.5 | Appropriate signage and barricades are selected and installed. |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | | |
|---|---|---|---|
| 3 | Perform work on roof. | 3.1 | Access from ground to work area is checked to ensure it is safe and according to regulatory requirements. |
| | | 3.2 | Fall protection and personal safety requirements are applied according to regulatory requirements. |
| | | 3.3 | Manual handling of materials and equipment is undertaken according to regulatory requirements. |
| | | 3.4 | Roof materials and equipment are located on roof, ensuring that they are safely secured and distributed to eliminate risk of distorting or collapsing the building framework. |
| | | 3.5 | Safety system is checked periodically for compliance with regulations according to workplace procedures, and ***faults are reported***. |
| | | 3.6 | Risk control measures are monitored to ensure that they are effective and appropriate to the task and work environment. |
| | | 3.7 | Risk control measures are reassessed, as required, according to changed work practices and/or site conditions, and alterations are undertaken within scope of authority. |
| | | 3.8 | ***Sustainability principles and concepts*** are applied throughout the work process. |
| 4 | Clean up. | 4.1 | Safety system is dismantled according to sequence and removed from work site. |
| | | 4.2 | Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification. |
| | | 4.3 | Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures. |
| | | 4.4 | Documentation is completed according to workplace requirements. |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
- conduct a safety assessment of a roof work site
- identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete written workplace documentation
  - document scope of work and work practices
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- technical skills to provide necessary safety measures, including the installation of a roof safety system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

### Required knowledge

- job safety analysis (JSA) and safe work method statements (SWMS)
- nature of work undertaken on roofs
- processes of providing for safe work practices
- relevant statutory and regulatory authorities' requirements related to working safely on roofs
- risks associated with photovoltaic (solar) panels and systems
- roof safety equipment and systems and considerations to facilitate working safely on roofs
- SI system of measurement

© Commonwealth of Australia, 2025 Future Skills Organisation

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for working safely on roofs
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for the roof working area of a corner, extending at least 4 metres in either direction and greater than 1.8m high, provide for erection, maintenance and dismantling of the fall and perimeter protection requirements for the site, incorporating handrails and footwalk or harnesses and harness fixing points for safe personal and stores access to the roof, stores and equipment locations; and risk assessment, ensuring:
  - application of sustainability principles and concepts
  - correct identification of risks and safety requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and

© Commonwealth of Australia, 2025 Future Skills Organisation

safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and

© Commonwealth of Australia, 2025 Future Skills Organisation

environments.

- Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

**Guidance information for assessment**

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Statutory and regulatory authorities*** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

***Information*** may include:

- charts and hand drawings
- instructions issued by authorised organisational or

***Quality assurance requirements*** may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

***Tools and equipment*** include:

- fall protection
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
- perimeter protection
- signage and barricades.

***Roof safety systems*** include:

- footwalks
- handrails
- harness fixing points
- kickboards
- safety harness
- scaffolds.

***Fault reporting*** include:

- may be written or verbal
- is to be according to company's workplace procedures.

***Sustainability principles and concepts***:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate components and material
  - choosing efficient products

# CUAANM301 Create 2D digital animations

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to plan and implement design concepts and use industry animation software to create 2D animations for inclusion in interactive media products, short stand-alone animated sequences and basic games.

It applies to individuals who work in a team environment and report to a senior animator, designer, director or producer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Animation and Digital Effects

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify animation requirements | 1.1 Clarify 2D animation requirements, including design specifications and storyboard in consultation with relevant people<br>1.2 Clarify target users or audience and requirements with regard to output formats and delivery platforms |
| 2. Generate and assess ideas | 2.1 Review animations, artworks and other creative sources that may inspire design ideas<br>2.2 Generate a range of animation ideas that are technically feasible, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | respond to specifications and provide creative solutions to all design issues<br>2.3 Discuss animation ideas with relevant people |
| 3. Plan approach | 3.1 Assess the range of 2D animation software to determine compatibility with design specifications<br>3.2 Select the most appropriate 2D animation software in consultation with relevant people<br>3.3 Evaluate initial design ideas and discuss with relevant people to select final design concept to meet production requirements and timelines |
| 4. Produce animations | 4.1 Apply basic screen, visual design, communication and animation principles and animation techniques to produce animated sequences based on concept<br>4.2 Use animation software to import or generate sufficient quantity of key frames to establish required actions<br>4.3 Check copyright conditions on images from external sources<br>4.4 Combine animated objects to produce single sequences according to creative requirements and specifications<br>4.5 Integrate audio assets where necessary<br>4.6 Adopt safe ergonomic practices when using screens and keyboards for long periods of time<br>4.7 Save and store animations using appropriate output file formats and standard naming conventions |
| 5. Finalise animations | 5.1 Review animations to assess creative solutions to design specifications, appropriateness to users or audience and technical feasibility<br>5.2 Discuss and confirm with relevant people additional requirements or modifications to overall designs or animations and undertake necessary amendments |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | **Criteria** | |
|---|---|---|
| Reading | 1.1, 2.1-2.3, 3.1, 3.3, 4.3, 4.4, 5.1 | • Interprets production documentation and design specifications in relation to own duties<br>• Locates and reviews creative sources that may inspire new ideas |
| Writing | 2.3, 4.1, 4.7, 5.2 | • Generates and records information for the design of 2D animations in required format<br>• Uses standard naming conventions and version control protocols when saving and storing files |
| Oral Communication | 1.1, 2.3, 3.2, 3.3, 4.1, 5.2 | • Obtains information by listening and questioning<br>• Uses clear language to discuss ideas, contribute information, and express requirements |
| Navigate the world of work | 4.3, 4.6 | • Complies with legislative requirements relevant to own position |
| Interact with others | 1.1, 2.3, 3.2, 3.3, 4.1, 5.2 | • Responds to and draws on others' perspectives when negotiating design of 2D animations<br>• Collaborates to achieve joint outcomes in the design process, playing an active role in facilitating effective group interaction |
| Get the work done | 1.1, 1.2, 2.1-2.3, 3.1-3.3, 4.1, 4.2, 4.4, 4.5, 5.1, 5.2 | • Organises and completes animation requirements in line with specifications, arranging consultations at key design points<br>• Takes responsibility for decisions directly related to completion of own tasks<br>• Uses digital software to create drawings and animations and to manage files |

# Assessment Requirements for CUAANM301 Create 2D digital animations

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- interpret design specifications and generate a range of creative ideas and concepts that respond to the brief
- collaborate with others to clarify requirements, discuss ideas, select final design concept and review final animations
- use animation software to create 2D animations that meet requirements of design briefs within production deadlines
- correctly name and store animations in appropriate file formats.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain basic animation techniques and principles
- describe screen, visual design and communication principles as they apply to animations
- outline intellectual property considerations if using images from external sources
- identify work health and safety standards as they apply to using screens and keyboards for extended periods of time.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- production documents and briefs
- resources, equipment and software required for 2D animations

© Commonwealth of Australia, 2025 Future Skills Organisation

- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUAANM302 Create 3D digital animations

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to animate simple 3D models and create 3D animations, which may include audio components. The models are for inclusion in interactive media products, short stand-alone animated sequences and basic games.

It applies to individuals who plan and create 3D animated sequences in consultation with relevant personnel in a wide variety of contexts in the digital content industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Animation and Digital Effects

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify animation requirements | 1.1 Clarify 3D animation requirements documented in design briefs with relevant personnel<br>1.2 Examine models to be animated to determine appropriate animation techniques<br>1.3 Identify file formats and delivery platform for animated sequences<br>1.4 Identify factors that may influence animation design approach |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Clarify work flow sequences with relevant personnel to ensure production schedule deadlines are met |
| 2. Plan approach | 2.1 Research animations, artworks and other creative sources that may inspire ideas<br>2.2 Generate a range of ideas for animations that are technically feasible, respond to briefs and provide creative solutions to all design issues<br>2.3 Present ideas to relevant personnel using appropriate design techniques<br>2.4 Adjust approach to incorporate feedback and agree on final design concept<br>2.5 Discuss and select 3D animation software with relevant personnel to ensure animated sequences meet technical and creative requirements<br>2.6 Identify audio assets to support animations as required |
| 3. Produce animated sequences for review | 3.1 Create 3D animations using software and animation techniques to suit design requirements<br>3.2 Adopt safe ergonomic practices when using equipment for long periods of time<br>3.3 Apply basic animation, screen, visual design and communication principles to produce animations<br>3.4 Apply real world camera techniques to virtual cameras used in 3D animation as required<br>3.5 Confirm with relevant personnel that models have not infringed copyright<br>3.6 Render completed animated sequences using appropriate output file formats<br>3.7 Save and store animated sequences using standard naming conventions and version control protocols<br>3.8 Demonstrate 3D animated sequences to relevant personnel for evaluation by agreed deadlines |
| 4. Finalise animated sequences | 4.1 Review animated sequences to assess creative solutions to design briefs, appropriateness to users or audience, and technical feasibility<br>4.2 Discuss and confirm additional requirements or modifications with relevant personnel, and complete changes as required for signoff |

# CUAANM303 Create 3D digital models

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to create 3D digital models that meet technical and design specifications.

It applies to individuals who clarify production requirements and produce 3D models under supervision, but may have responsibility for planning their own work. They produce these 3D models primarily for online and mobile device application.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Animation and Digital Effects

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify work requirements | 1.1 Clarify requirements and purpose for 3D digital models with reference to production documents<br>1.2 Clarify workflow sequences in consultation with relevant personnel to ensure production schedule deadlines are met<br>1.3 Clarify with relevant personnel the modelling technique that suits production requirements<br>1.4 Discuss and select digital modelling software with relevant personnel that suits production delivery platform and modelling |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | techniques<br>1.5 Gather and analyse reference materials to help visualise 3D models |
| 2. Develop 3D digital models | 2.1 Use software features and apply modelling principles to block out models based on reference materials<br>2.2 Adopt safe ergonomic practices when using screens and keyboards for extended periods of time<br>2.3 Use software features and geometry to shape models and apply various effects as required<br>2.4 Check that models' topology allows appropriate deformation as required<br>2.5 Refine and check integrity of models progressively until they meet design requirements<br>2.6 Confirm with relevant personnel that models have not infringed copyright<br>2.7 Test models to identify faults, and modify as required<br>2.8 Demonstrate models to relevant personnel for feedback, and make adjustments as required |

# Assessment Requirements for CUAANM303 Create 3D digital models

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- create 3D digital models that meet design requirements and production deadlines
- collaborate with others to clarify requirements, discuss techniques, select modelling software and review models
- use 3D modelling software proficiently to build models and apply various modelling effects
- correctly store 3D models in appropriate file formats using industry naming conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the stages in the production process from initial design through to finished product
- outline basic modelling principles used to build 3D digital models
- explain how geometry is used to create scale, form, weight and volume in 3D models
- describe the concept of integrity as it applies to 3D modelling
- explain the relationship between topology and deformation
- describe the process of rendering as it applies to 3D modelling
- outline intellectual property considerations if using images from external sources
- outline work health and safety standards as they apply to using screens and keyboards for extended periods of time.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- production documentation
- software for producing 3D digital models
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUAANM402 Create digital visual effects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to use a range of industry software applications and material from various sources to create and refine digital visual effects sequences for projects in film, television or digital media productions, including games.

It applies to individuals who combine elements into the final image while retaining the established style and continuity of the project. They work collaboratively with a production team in 3D animation to meet production deadlines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Animation and Digital Effects

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify work requirements | 1.1 Clarify requirements for digital visual effects with reference to production documentation<br>1.2 Clarify workflow sequences in consultation with relevant personnel to ensure production deadlines are met<br>1.3 Select software that best suits the type of production and delivery platform for which visual effects sequences are being created |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Gather and analyse reference material to help with visualisation of final sequences |
| 2. Prepare components | 2.1 Gather all assets for integration and check they are in the correct output file format and do not infringe copyright laws<br>2.2 Choose digital visual effects that best represent the vision of scripts to create optimum visual impact<br>2.3 Check components comply with storyboard requirements<br>2.4 Determine appropriate methods and techniques to create required digital visual effects |
| 3. Assemble previsualisations | 3.1 Create previsualisation of required visual effects sequences using appropriate assets and compositing techniques<br>3.2 Adopt safe ergonomic practices when using screens and keyboards for extended periods of time<br>3.3 Experiment with previsualisation to establish the best results and solve problems that arise during the process of creating the visual effects<br>3.4 Submit previsualisation visual effects sequences to relevant personnel for evaluation and feedback<br>3.5 Match elements as required, such as colour, lighting and camera |
| 4. Produce visual effects | 4.1 Create final visual effects<br>4.2 Generate additional required effects to final stage<br>4.3 Render visual effects to desired format<br>4.4 Submit visual effects sequences to relevant personnel for evaluation and feedback by agreed deadlines |
| 5. Finalise visual effects | 5.1 Respond to feedback by making adjustments to visual effects so they comply with design and production specifications<br>5.2 Save files to specified storage system accessible to production team<br>5.3 Make back-up copies of files, and save and store visual effects using appropriate output file formats and standard naming conventions<br>5.4 Review personal performance and the process of creating digital visual effects for improvement |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 2.1-2.3 | • Interprets textual and diagrammatic information to identify most efficient and productive approach to the job<br>• Refers to script and storyboard requirements at all times during production |
| Writing | 1.1, 1.2 | • Uses clear language to convey project workflow, process improvement opportunities and to complete work related documentation |
| Oral Communication | 1.1, 1.2, 2.4, 3.4, 4.4, 5.1, 5.2 | • Clearly states work requirements and listens carefully to discussion and feedback using questions as required |
| Navigate the world of work | 3.2, 5.3 | • Follows enterprise procedures when managing files and directories including back-up of files<br>• Follows work health and safety (WHS) requirements |
| Interact with others | 1.1, 1.2, 2.4, 3.4, 4.4, 5.1, 5.2 | • Collaborates and cooperates with other personnel to meet production deadlines<br>• Uses appropriate communication practices to seek and respond to feedback from others |
| Get the work done | 1.2-1.4, 2.1-2.4, 3.1-35, 4.1-4.4, 5.1-5.4 | • Solves technical and production problems as required<br>• Manages time and priorities to ensure job outcomes meet production requirements<br>• Makes decisions directly related to task requirements<br>• Selects appropriate software for a range of productions and selected delivery platforms |

# Assessment Requirements for CUAANM402 Create digital visual effects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- create digital visual effects sequences that meet specifications provided in production documents
- select visual effects software appropriate for delivery platform
- assemble previsualisations based on storyboards and scripts to achieve optimum visual impact
- store visual effects in appropriate file formats using industry naming conventions
- work collaboratively with other production personnel to ensure product meets all requirements and production deadlines
- review own performance and the visual effects process for improvement.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline typical challenges of creating visual effects and how to handle these
- explain how effects such as lighting, colour and composition influence visual impact
- explain how the delivery platform impacts the visual effects creation process
- describe compositing methods and techniques as they apply to visual effects creation
- describe the process of rendering visual effects
- outline procedures for checking copyright requirements
- describe the relevant work health and safety standards which relate to working with computers and keyboards.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- production documents and briefs
- relevant personnel
- visual effects software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUACAM201 Assist with a basic camera shoot

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to assist with setting up and shooting low-budget, low-end single-camera video productions.

It applies to individuals who work under the direction of a qualified camera operator on pre-production and production tasks, including shooting footage with basic camera equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and Entertainment Production – Camera/Cinematography

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for camera shoots | 1.1 Confirm camera shoot requirements with relevant personnel<br>1.2 Take location features into account when organising and preparing equipment for shoots<br>1.3 Check equipment is clean and operational<br>1.4 Report equipment faults to relevant personnel<br>1.5 Check sufficiently charged batteries are available to meet production needs |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.6 Select required capture format and ensure sufficient supply for shoots |
| 2. Assist with camera set-up on location | 2.1 Use safe handling techniques when lifting camera and other equipment<br>2.2 Check camera and other equipment is safely secured<br>2.3 Under direction, assist with positioning camera to achieve required shots<br>2.4 Safely connect cables and camera to power source as required<br>2.5 Assist with final check of equipment prior to shoot and report faults to relevant personnel<br>2.6 Label and load capture media<br>2.7 Check camera tilt and pan functions |
| 3. Set up lighting | 3.1 Mount lighting equipment, following safety guidelines<br>3.2 Run lighting cables and connect safely to power sources<br>3.3 Position lights to achieve required effect as directed<br>3.4 Adjust focus and angles of lights as required<br>3.5 Install colour frames and gels according to lighting requirements |
| 4. Shoot video | 4.1 Adjust and move equipment as required<br>4.2 Operate clapperboard if needed<br>4.3 Operate camera according to manufacturer's guidelines and instructions<br>4.4 Shoot and record sequences as directed<br>4.5 Time-code recording of takes with descriptions as required |
| 5. Wrap up shoots | 5.1 Clean and pack equipment using safe lifting techniques<br>5.2 Check all equipment is accounted for and report faults to relevant personnel<br>5.3 Label recordings correctly and complete relevant documentation<br>5.4 Leave location in original condition and check there are no adverse effects to the site<br>5.5 Review and reflect on own performance and note areas for improvement |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 4.3 | • Recognises and interprets textual information to determine and adhere to requirements |
| Writing | 2.6, 4.4, 4.5, 5.3 | • Uses specific and accurate language to interpret and complete production documentation |
| Numeracy | 4.5 | • Performs calculations when recording time codes |
| Oral Communication | 1.1, 1.4, 2.3, 2.5, 3.3, 4.1, 4.4, 5.2 | • Listens carefully and responds to verbal instructions and creative directions as required<br>• Selects and uses appropriate language to report results and faults |
| Navigate the world of work | 1.3, 2.1, 2.2, 2.4, 3.1, 3.2, 5.1, 5.4 | • Takes responsibility for meeting legal and regulatory responsibilities within scope of own role and work context |
| Interact with others | 1.1, 1.4, 2.3, 2.5, 3.3, 4.1, 4.4, 5.2 | • Works collaboratively with technical experts to achieve desired results |
| Get the work done | 1.1, 1.2, 1.4-1.6, 2.5-2.7, 3.3-3.5, 4.1-4.3, 5.2 | • Plans and organises routine tasks, taking some limited responsibility for decisions regarding sequencing and timing<br>• Prioritises work tasks, meeting deadlines as required<br>• Recognises and responds to predictable routine problems<br>• Seeks assistance when problems are beyond immediate responsibilities or experience |

# Assessment Requirements for CUACAM201 Assist with a basic camera shoot

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- assemble required camera equipment and accessories in readiness for shoots
- connect cabling for equipment to power sources
- assist others with setting up and testing cameras and lighting for basic camera shoots
- follow workplace safety and security procedures
- operate a basic camera to shoot video under direction
- assist with clearing locations and packing equipment at the conclusion of shoots.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the type of cameras and lighting equipment used in low-end productions
- outline the full range of functions typically found on cameras employed in low-end productions and how they are used
- describe the type of lighting used for shooting low-end productions
- identify key personnel involved in low-end video productions
- describe work health and safety procedures that apply to working under direction on camera shoots.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- basic camera and lighting equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

- a range of locations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUACAM301 Shoot material for screen productions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to shoot material for screen productions using a single-camera unit.

It applies to individuals whose prime responsibility is to capture screen images using a range of video equipment. They generally work under direction, and perform all camera, sound and lighting functions. Depending on the scale of the shoot, they may have an assistant or may be required to assist senior camera operators.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and Entertainment Production – Camera/Cinematography

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for shoots | 1.1 Participate in pre-production briefings to confirm production and post-production requirements<br>1.2 Arrange equipment and accessories for shoots as directed, checking everything is clean and operational<br>1.3 Check there are adequate supplies of charged batteries and capture media for shoots |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Prepare and pack lighting equipment<br>1.5 Undertake minor repairs on faulty equipment and report significant faults to relevant production personnel<br>1.6 Confirm location, shooting schedules and timelines<br>1.7 Complete workplace documentation prior to shoots |
| 2. Set up on location | 2.1 Contribute ideas to initial concepts in discussion with crew and talent<br>2.2 Plan camera positions to ensure composition of shots provides correct visual interpretation of material or subject<br>2.3 Take safety of personnel on location into account when setting up and securing cameras and other equipment<br>2.4 Plan repositioning of equipment and accessories during shoots in line with production schedules<br>2.5 Label and load capture media and check camera functions<br>2.6 Position microphones and conduct audio check |
| 3. Set up lighting | 3.1 Assess quality and quantity of available light to determine whether correction is required<br>3.2 Mount and position lighting equipment following safety guidelines<br>3.3 Run lighting cables and connect safely to power sources<br>3.4 Install colour frames and gels according to requirements<br>3.5 Select lenses and filters appropriate to prevailing weather conditions |
| 4. Position and operate camera to capture shots | 4.1 Use camera shots and angles that produce effective cuts between shots in line with production requirements<br>4.2 Take account of editing or other post-production requirements while shooting<br>4.3 Check camera movements to implement planned or rehearsed shots according to direction from production personnel<br>4.4 Shoot and record sequences as directed, maintaining focus throughout |
| 5. Manipulate cables and camera positioning | 5.1 Participate in pre-production meetings and rehearsals to confirm final camera and cable movements<br>5.2 Position and move camera cabling during shoots according to instructions and cues from production personnel |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 5.3 Respond consistently to cues from production personnel to avoid undue lapses in timing<br>5.4 Cooperate with other crew members to move cameras and cabling without impeding work of camera operators<br>5.5 Handle cabling without damaging equipment or causing injury to others |
| 6. Wrap up shoots | 6.1 Use safe lifting techniques when packing equipment and accessories<br>6.2 Label recorded material and associated documentation correctly<br>6.3 Report equipment faults and complete required documentation<br>6.4 Leave locations in original or improved condition<br>6.5 Review and reflect on own performance and note areas for improvement |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.6, 3.2, 6.2 | • Recognises and interprets textual information to determine and adhere to requirements |
| Writing | 1.6, 1.7, 6.2, 6.3, 6.5 | • Completes production documentation according to requirements |
| Oral Communication | 1.1, 1.5, 2.1, 4.3, 5.1-5.3, 6.3 | • Listens carefully and responds to verbal and non-verbal instructions<br>• Selects and uses appropriate language to report results and faults |
| Navigate the world of work | 1.1, 2.3, 3.2, 3.3, 5.5, 6.1 | • Takes responsibility for meeting legal and regulatory responsibilities within scope of own role |
| Interact with others | 1.1, 1.5, 2.1, 5.1, 5.4 | • Works collaboratively with technical experts to achieve desired results |
| Get the work done | 1.2-1.6, 2.2, 2.5, 2.6, 3.1, 3.4, 3.5, 4.1-4.4, 5.2-5.4, 6.2-6.5 | • Plans, organises and implements routine tasks according to schedules<br>• Follows instructions to complete tasks according to |

# Assessment Requirements for CUACAM301 Shoot material for screen productions

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- contribute to pre-production discussions about ways to capture desired style of moving images
- assemble equipment and accessories in readiness for camera shoots
- position camera on location so shots are captured from the best angles
- safely set up and test sound equipment, lighting equipment and accessories
- safely operate a range of professional video camera equipment and accessories to capture shots as directed and in a way that facilitates post-production editing
- work within production deadlines
- work effectively as a team member to position equipment before and during shoots and to pack up gear at the conclusion of shoots
- assist with moving cables and cameras during shoots
- follow procedures to complete workplace documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline roles and responsibilities of production and post-production personnel
- identify typical problems that arise in the context of shooting material for screen productions, and briefly describe solutions
- explain how different image capture media are used
- describe basic framing techniques and methods of composition
- describe characteristics of microphones and audio equipment commonly used for shooting screen productions
- outline the effect different light sources, lenses and filters have on lighting sets and talent

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain basic principles of lighting that apply in the context of shooting material for screen productions
- describe techniques for handling and attaching cabling
- outline work health and safety procedures that apply to shooting on location.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- camera, lighting and sound equipment
- locations for shooting video
- productions for which material needs to be filmed
- production documents
- workplace safety and security procedures that apply to shooting video on location
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADIG201 Maintain interactive content

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to maintain interactive content for websites, learning resources or social media channels, using a content management system.

It applies to individuals, working under direction, who upload media assets and change text content.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Check content | 1.1 Confirm frequency of content updates and production deadlines with relevant personnel<br>1.2 Obtain, access and review content to ensure correct versions<br>1.3 Confirm existing content to be retained or deleted with relevant personnel |
| 2. Check links and media assets | 2.1 Check existing links are valid and source replacement links if required<br>2.2 Check assets are functional and in correct file format and size for |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | inclusion<br>2.3 Document technical and content issues in accordance with enterprise procedures<br>2.4 Confirm with relevant personnel that copyright clearance has been obtained on all new content |
| 3. Update content | 3.1 Access content management system to upgrade content<br>3.2 Adopt safe ergonomic practices when using equipment for long periods of time<br>3.3 Delete closed links and re-establish new site links if available<br>3.4 Check internal page links and rectify or delete as required<br>3.5 Import and/or change content material as required and specify appropriate metadata or tags<br>3.6 Make heading, typographical, caption and image revisions, applying appropriate style sheets and alt tags if required<br>3.7 Add pages or screens as required, applying appropriate templates or themes<br>3.8 Submit edited files to server, and check upload was successful<br>3.9 Advise relevant personnel if new interface designs are required to incorporate additional materials |
| 4. Test and confirm changes | 4.1 Check all content is displayed and functions on server as required<br>4.2 Confirm with relevant personnel that all changes have been made<br>4.3 Store original content securely and file using standard industry conventions |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 2.1, 2.3, 3.3-3.7, 4.1, 4.3 | • Identifies and follows familiar written instructions<br>• Checks content to ensure styles, links and subject |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | matter are accurate |
| Writing | 2.3, 3.3-3.7, 4.3 | • Accurately enters electronic information in required format<br>• Prepares technical documents in required format |
| Oral Communication | 1.1, 1.3, 2.4, 3.9, 4.2 | • Uses questioning and listening techniques to clarify requirements<br>• Uses clear, everyday language to discuss tasks with relevant personnel |
| Navigate the world of work | 2.3, 2.4, 3.2 | • Adheres to organisational and legislative requirements |
| Interact with others | 1.1, 1.3, 2.4, 3.9, 4.2 | • Uses appropriate communication practices to discuss and confirm requirements |
| Get the work done | 1.2, 2.1, 2.2, 3.1, 3.3-3.8, 4.1, 4.3 | • Plans and completes work tasks, seeking advice as necessary<br>• Uses relevant software to examine, amend and upload interactive content |

# Assessment Requirements for CUADIG201 Maintain interactive content

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- maintain interactive content for websites and/or social media channels including:
  - checking links and media assets
  - updating text, media assets and pages
  - assigning correct metadata or tags
  - checking that changes have uploaded successfully
- use a content management system proficiently
- document technical and content issues according to enterprise procedures
- store content according to industry conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how outdated links impact usability of web pages
- explain the procedure for checking copyright clearance
- describe how metadata and tags are used to classify content
- describe the purpose of alt tags and how they relate to accessibility standards
- explain safe work practices in relation to working on computers for periods of time.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- appropriate content
- content management system, the internet and authoring tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADIG301 Prepare video assets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare video assets for inclusion in interactive media.

It applies to individuals who work in collaboration with others and under supervision to convert video into forms appropriate for streaming, downloading and/or digital media products. In smaller organisations, they may combine this role with video editing, authoring or programming.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify video assets | 1.1 Obtain and assess digital video content as determined by production<br>1.2 Clarify production schedules and deadlines with relevant personnel<br>1.3 Identify file format, output purpose, destination and platform of source video according to production requirements<br>1.4 Discuss, with relevant personnel, required output file format and |

# Assessment Requirements for CUADIG301 Prepare video assets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare video sequences for use in media distribution channels or interactive media products
- use video encoding software to prepare video sequences that meet quality requirements within production deadlines
- save and store files according to industry or enterprise conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the features of the delivery platforms used to prepare video assets
- explain why video file compression is required
- identify common digital video sources and output formats
- explain appropriate codecs for various platforms and destinations
- describe techniques for saving and preparing digital video output to optimise file size
- explain purposes and procedures for correctly naming and tagging video files
- explain safe work practices in relation to working on computers for periods of time.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- video encoding and editing software and equipment
- manuals and instructions.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to use an authoring tool to produce discrete interactive sequences for websites.

It applies to individuals working collaboratively with technical assistance and under direction, who develop small components such as web pages or a sequence of screens, which are integrated into a larger project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan use of authoring tool | 1.1 Identify a range of appropriate authoring software and discuss their application to various delivery platforms with relevant people<br>1.2 Clarify design specifications of the project and deadlines with relevant people<br>1.3 Discuss with relevant personnel the technical requirements of the project and select appropriate authoring software |
| 2. Prepare to author | 2.1 Load selected authoring software, create a new file in website |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| sequence | directory for specified task and name using standard industry naming conventions<br>2.2 Source and assemble all media assets and text content, and check compliance with copyright conditions<br>2.3 Display and use tools and features of authoring software<br>2.4 Adopt safe ergonomic practices when using screens and keyboards for extended periods of time |
| 3. Produce interactive sequences | 3.1 Produce screen layout according to design specifications applying basic visual design principles and/or templates or themes<br>3.2 Create interactive media components as required<br>3.3 Source text content and apply style sheets to format text<br>3.4 Source relevant media assets, optimise if required, and integrate using appropriate file formats<br>3.5 Link all components according to production storyboard<br>3.6 Manipulate HTML mark-up code where errors are occurring or to refine sequence functionality<br>3.7 Apply features to optimise accessibility<br>3.8 Save file to website directory structure as components are produced |
| 4. Check functionality of interactive sequence | 4.1 Check interactive elements function with minimal error on a variety of devices, operating systems and browsers<br>4.2 Incorporate changes as required<br>4.3 Present sequence to relevant people |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 2.2, 3.1, 3.3, 3.5, 3.6, 3.8 | • Identifies and interprets information in organisational documents<br>• Locates correct folders for storing electronic data<br>• Checks textual information for accuracy |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 2.1, 3.6, 3.8 | • Selects the vocabulary and conventions appropriate to text for writing code and naming files |
| Oral Communication | 1.1-1.3, 4.3 | • Asks questions and listens carefully to confirm design and technical specifications of the project |
| Navigate the world of work | 2.2, 2.4 | • Complies with legislative requirements |
| Interact with others | 1.1-1.3, 4.3 | • Uses appropriate communication practices and protocols to confirm requirements and present interactive sequences |
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1-3.8, 4.1, 4.2 | • Takes responsibility for planning and producing interactive sequences according to project requirements and design principles<br>• Makes decisions directed related to completion of tasks<br>• Uses digital tools to create, optimise and store interactive sequences |

# Unit Mapping Information

| **Code and title current version** | **Code and title previous version** | **Comments** | **Equivalence status** |
|---|---|---|---|
| CUADIG302 Author interactive sequences | CUFDIG302A Author interactive sequences | Updated to meet Standards for Training Packages. Minor edits to elements and performance criteria to clarify intent. | Equivalent unit |

# Assessment Requirements for CUADIG302 Author interactive sequences

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- assemble text content, interactive media components and media assets required for a project
- use appropriate software to produce interactive media sequences that meet design and project specifications within deadlines
- apply visual design principles, templates, style sheets and HTML mark-up language to interactive sequences
- check interactive sequence functionality on at least two operating systems, browsers and devices
- save and store files correctly.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list appropriate file formats for web delivery
- outline when optimisation of media assets is necessary
- explain why application of accessibility standards in the web environment is important
- describe basic visual design principles as they apply to website page layout
- explain safe work practices in relation to working on computers for periods of time
- explain the procedure for checking copyright clearance.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- text and media assets
- authoring software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADIG303 Produce and prepare photo images

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare photo images for integration into an interactive media sequence or product.

It applies to individuals who produce a variety of photo images for production of virtual worlds, from digital still composition to panoramas. They work closely with a programmer or interactive media author and may offer technical advice and support to a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Use scanner to capture photo images | 1.1 Source and identify appropriate photographic images according to requirements of photographic project brief<br>1.2 Discuss selection of images with relevant personnel, and check compliance with copyright conditions<br>1.3 Assess scanner features to confirm quality outcomes will meet brief requirements<br>1.4 Operate scanner according to manufacturer’s specifications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Use appropriate scanner settings to ensure image output meets production requirements<br>1.6 Transfer and store photographic image files to a computer using standard naming conventions |
| 2. Use digital camera to create photo images | 2.1 Clarify photographic project brief with relevant personnel<br>2.2 Assess digital camera features to ensure outcome will meet requirements of brief<br>2.3 Plan camera shots, taking into account lighting, framing, composition and other relevant factors<br>2.4 Load and operate digital camera according to manufacturer's specifications<br>2.5 Consider digital camera focus, exposure and shutter speed to ensure image capture meets production requirements<br>2.6 Check photographic images meet brief requirements<br>2.7 Transfer and store photographic image files to a computer using standard naming conventions |
| 3. Edit photo images | 3.1 Load digital imaging software and import photo image source files<br>3.2 Adopt safe ergonomic practices when using screens and keyboards for extended periods of time<br>3.3 Manipulate and save digital images using designated digital imaging software<br>3.4 Create photo images that incorporate visual design and communication principles<br>3.5 Evaluate outcome for visual impact, effectiveness and fitness for purpose<br>3.6 Confirm images meet project requirements with relevant personnel |
| 4. Prepare photo image assets | 4.1 Save files in appropriate output format to meet platform requirements<br>4.2 Assign metadata tags if required<br>4.3 Group files logically in a folder system using standard naming conventions<br>4.4 Store files in share drive or repository for production team access |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4-1.6, 2.4-2.7, 4.1, 4.3 | • Interprets textual information to follow equipment operation and project requirements |
| Writing | 1.6, 2.7, 4.1-4.3 | • Selects the vocabulary and conventions appropriate to text for naming files |
| Oral Communication | 1.2, 2.1, 3.6 | • Uses listening and questioning techniques to discuss project brief and to confirm outcomes<br>• Uses descriptive and technical language to participate in oral exchanges |
| Navigate the world of work | 1.2, 3.2 | • Complies with legislative requirements |
| Interact with others | 1.2, 2.1, 3.6 | • Uses appropriate communication practices and protocols to confirm requirements and present images |
| Get the work done | 1.1, 1.3-1.6, 2.2-2.7, 3.1, 3.3-3.6, 4.1-4.4 | • Takes responsibility for logically planning and producing photo images according to design briefs and visual design principles<br>• Makes decisions directly related to task completion<br>• Utilises a range of features within digital cameras, scanners and digital imaging software to create and store photo images |

# Assessment Requirements for CUADIG303 Produce and prepare photo images

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- use a scanner and digital camera to capture images that satisfy project briefs
- use digital imaging software and techniques, design and communication principles to produce images that meet project requirements
- save and store files according to requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features of a digital camera that are essential for creating images to the required standard
- outline the basic techniques used to compose camera shots
- explain how visual design and communication principles are are relevant to photography
- explain safe work practices in relation to working on computers for periods of time
- explain the procedure for checking copyright clearance.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- a scanner and digital camera
- digital imaging software
- project briefs
- information or manuals about operating equipment.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADIG304 Create visual design components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to create visual designs for interactive media components that can be integrated into a range of media products.

It applies to individuals who generate and assess ideas to create visual design components in response to specifications under supervision in a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify work requirements | 1.1 Clarify visual design components required in the project brief, in consultation with relevant personnel<br>1.2 Identify project timelines and discuss factors that may determine or affect visual design concepts<br>1.3 Clarify, in discussion with relevant personnel, the target user or audience, and determine format and delivery platform |
| 2. Generate and assess ideas | 2.1 Research media products, designs, images, artwork and other creative sources that may inspire visual design ideas |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Develop a range of visual design ideas that are technically feasible, respond to project specifications and provide creative solutions to design issues<br>2.3 Present and review visual design ideas with relevant personnel |
| 3. Develop design concept | 3.1 Experiment with traditional and digital methods to create required visual design components<br>3.2 Explore a range of typographical and visual design elements to create components<br>3.3 Evaluate initial design ideas with relevant personnel to select final design concept<br>3.4 Confirm design concept complies with copyright laws<br>3.5 Check output format meets delivery platform requirements<br>3.6 Adopt safe ergonomic practices when using equipment for long periods of time |
| 4. Produce components | 4.1 Develop components based on the final design concept using various design techniques<br>4.2 Apply visual design principles and communication principles to produce components that have high visual impact<br>4.3 Save components in an appropriate format according to project specifications |
| 5. Finalise visual design components | 5.1 Review visual design components against design and technical specifications<br>5.2 Discuss and confirm additional requirements or modifications with relevant personnel, and make amendments as required<br>5.3 Save and archive visual design components using industry or enterprise naming conventions and version control protocols |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 3.1, 3.2, 3.3, | • Reviews and researches creative source material to generate ideas |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 4.1, 4.3, 5.1, 5.2, 5.3 | • Checks that output meets requirements<br>• Locates correct folders for storing electronic data |
| Writing | 2.2, 3.1, 3.2, 4.1, 4.3, 5.2, 5.3 | • Prepares information to accompany design components<br>• Names files according to requirements |
| Oral Communication | 1.1-1.3, 2.3, 3.3, 4.3, 5.2 | • Participates effectively in spoken interactions using active listening and questioning to confirm and clarify understanding |
| Navigate the world of work | 3.4, 3.6 | • Complies with legislative requirements |
| Interact with others | 1.1-1.3, 2.3, 3.3, 4.3, 5.2 | • Collaborates with relevant personnel to ensure that end result meets requirements |
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1-3.3, 3.5, 4.2, 4.3, 5.1-5. | • Takes responsibility for planning and producing design components according to project requirements and design principles<br>• Makes decisions directed related to completion of tasks<br>• Uses experimentation to develop new or innovative design approaches<br>• Selects and uses appropriate software to conceive, produce, store and present visual design components |

# Assessment Requirements for CUADIG304 Create visual design components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- explore and experiment with design techniques and visual design and communication principles to produce ideas and concepts for visual design components
- use design techniques to create visual design components that respond effectively to a project brief
- present and discuss ideas, concepts and designs with relevant personnel
- save and archive files using standard industry or enterprise naming conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe differences between traditional and digital methods in creating visual images, and advantages and disadvantages of each
- describe visual design, typographic and communication principles used to construct visual design components
- explain safe work practices in relation to working on computers for periods of time
- explain the procedure for checking copyright clearance.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- project briefs
- relevant software

© Commonwealth of Australia, 2025 Future Skills Organisation

- manuals and information to support software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADIG401 Author interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to author a complete interactive media product, for example, an entire website.

It applies to individuals who apply sound knowledge of mark-up and scripting languages to develop templates, themes styles sheets, forms and form objects for programmers and the technical support team. They may also use a variety of authoring software used to produce complex interactions such as digital simulations, games and puzzles. They work primarily on client-side technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify multimedia elements | 1.1 Assess design specifications to determine technical and creative objectives of the project<br>1.2 Locate and assess content required for production<br>1.3 Discuss issues of integration and formats of media assets with relevant personnel, and confirm production timelines<br>1.4 Determine, with relevant personnel, an interactive sequence to |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | become the prototype |
| 2. Identify scope of authoring software | 2.1 Identify a range of industry-standard authoring software and assess in relation to specified delivery platform<br>2.2 Discuss suitability of authoring software to meet specified outcomes with relevant personnel<br>2.3 Select authoring software to meet production requirements |
| 3. Use authoring software | 3.1 Load authoring software and create a file directory structure for the specified task and name using standard industry or enterprise naming conventions<br>3.2 Display and use tools and features of authoring software relevant to the authoring process<br>3.3 Adopt safe ergonomic practices when using screens and keyboards for extended periods of time. |
| 4. Create interactive sequence | 4.1 Slice and reassemble the user interface appropriate to the authoring software<br>4.2 Import and assemble components in appropriate sequence according to creative requirements<br>4.3 Create interactive features according to creative and technical requirements, sourcing and writing appropriate mark-up and scripting languages as required<br>4.4 Check that interactive sequence conforms to navigation design<br>4.5 Integrate media assets to optimum levels of technical performance<br>4.6 Check interactive sequence conforms to loading specifications<br>4.7 Test for interoperability and accessibility, eliminate all bugs and validate scripting<br>4.8 Present interactive sequence as a prototype ensuring sequence meets creative, production and technical requirements<br>4.9 Save output file formats and identify for specified purpose |
| 5. Evaluate interactive prototype | 5.1 Present prototype to relevant personnel<br>5.2 Evaluate prototype against design specifications, including achievement of a creative and user-centred product<br>5.3 Discuss and agree on any required changes and make adjustments to prototype<br>5.4 Assist in user testing as required |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 5.5 Evaluate feedback from user testing<br>5.6 Seek confirmation from relevant personnel to transform prototype into final product |
| 6. Finalise interactive media product | 6.1 Make necessary changes as indicated by user testing<br>6.2 Replicate prototype functionality to complete the interactive product<br>6.3 Make final checks to ensure sequences conform to design specifications<br>6.4 Test for interoperability and accessibility, eliminate bugs and validate scripting<br>6.5 Save to specified storage system accessible to production team<br>6.6 Assist in loading product to specified platform as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 3.1, 4.2-4.4, 4.6-4.9, 5.2, 5.5, 6.1, 6.3, 6.4, 6.5 | • Selects and applies a range of reading strategies to interpret design and technical requirements<br>• Reviews and interprets feedback from user trials to enable completion of final product<br>• Validates scripting to ensure accurate operation of interactive media<br>• Locates correct folders for logical storing of electronic data to assist with production |
| Writing | 3.1, 4.3, 4.9, 6.5 | • Creates a range of texts incorporating specific scripting language, mark-up and standard file naming conventions |
| Oral Communication | 1.3, 1.4, 2.2, 4.8, 5.1-5.6 | • Uses clear language, questioning and listening techniques to specify and discuss interactive prototypes and final product |
| Navigate the world of work | 3.3 | • Complies with legislative responsibilities |

# Assessment Requirements for CUADIG401 Author interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- discuss and determine requirements for an interactive media product
- use authoring software to create logical file directory structures and build a prototype of an interactive media product
- evaluate and incorporate feedback from user testing to the prototype
- use authoring software to develop a fully functional interactive media product that:
  - conforms to design and creative requirements specifications
  - meets accessibility and interoperability standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain technical requirements for integrating media assets (video, audio, animation, images) for use on a range of delivery platforms
- describe interoperability and accessibility standards used in interactive media product design
- explain the purpose and process of script validation
- outline basic health and safety requirements when working on computers and keyboards.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- design specifications

© Commonwealth of Australia, 2025 Future Skills Organisation

- sample content including a range of media assets
- authoring software
- software manuals and other relevant information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADIG502 Design digital applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to design digital applications, which may consist of one or many technologies integrated in various combinations.

It applies to individuals who work with clients to design specifications for digital applications, which are then built by other specialised team members. Digital applications may be operated in a web or mobile device environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine project requirements | 1.1 Analyse project brief to identify purpose of, and target audience for, digital applications<br>1.2 Consult with clients or relevant personnel to clarify project requirements, including project timelines<br>1.3 Identify target audience characteristics and determine how these influence design<br>1.4 Identify content and application functions and how these are |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | accessed, searched and delivered |
| 2. Research digital applications | 2.1 Research digital applications and analyse how these meet audience, function and content requirements<br>2.2 Identify issues relating to delivery platform and technical and industry standards, and determine how these may affect digital application options<br>2.3 Consult relevant personnel to confirm all digital application options are considered<br>2.4 Select applications that will meet creative, production and technical requirements |
| 3. Draft design specifications | 3.1 Design architecture of digital application to show interrelationship of various components and screens<br>3.2 Specify interactive features, functionality and navigation<br>3.3 Identify content and data displays, and specify how these will be logically structured and integrated into and/or generated in the digital application<br>3.4 Specify levels of access permissions as required<br>3.5 Specify media assets as required<br>3.6 Specify user interfaces, taking screen sizes into account<br>3.7 Specify report generation if required<br>3.8 Specify production requirements, including appropriate testing strategies<br>3.9 Produce draft design specifications and instructions for design and development teams to use |
| 4. Review and confirm design specifications | 4.1 Use a range of techniques to present draft design specifications, and discuss with client<br>4.2 Review designs against creative and technical requirements, and client and audience needs<br>4.3 Adjust designs as necessary after discussions with relevant personnel<br>4.4 Clarify ownership of intellectual property to comply with production and organisational requirements<br>4.5 Confirm, with client, acceptance of design specifications, including deliverables, milestones and timelines |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 1.4, 2.1, 2.2, 3.1-3.9, 4.4 | • Selects and applies a range of reading strategies to interpret texts |
| Writing | 3.1-3.9 | • Uses text, graphic diagrammatic and visual formats to draft and confirm specifications and instructions |
| Oral Communication | 1.2, 2.3, 4.1, 4.5 | • Participates effectively in spoken interactions using language and features appropriate to the audience<br>• Uses questioning and listening strategies to confirm project requirements and elicit relevant feedback |
| Navigate the world of work | 4.4 | • Understands and adheres to organisational and legislative requirements |
| Interact with others | 1.2, 2.3, 4.1, 4.5 | • Collaborates with others throughout all stages of the design process<br>• Selects and uses appropriate practices and protocols to communicate with a range of audiences |
| Get the work done | 1.1-1.4, 2.1-2.4, 3.1-3.6, 3.8, 3.9, 4.1-4.5 | • Takes responsibility for planning, organising and implementing tasks required to complete project, coordinating with others when required<br>• Analyses information to make decisions that affect the entire project<br>• Uses digital tools to specify architecture, navigation and content to meet project brief specifications |

# Assessment Requirements for CUADIG502 Design digital applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- research digital applications and analyse how they meet audience, function and content requirements
- design specifications for digital applications that:
  - meet client and audience requirements
  - are technically feasible
  - detail all aspects of the application's permissions, search capability, architecture, content, assets, screen designs, functions, reports, production requirements and testing strategies
- present and discuss draft specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the sequence and interrelationships of stages in the process of designing digital applications
- outline issues relating to technical standards and platform functions that may impact on digital application options
- outline the impact of web standards on the design of digital applications
- describe typical formats and techniques for documenting the design of digital applications
- describe the concept of intellectual property rights and how this is managed in context of digital applications.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- project briefs on which designs can be based
- sample content.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADIG503 Design e-learning resources

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to develop the design of e-learning resources in consultation with clients.

It applies to individuals who work in education or training organisations, or in media production companies that specialise in the development of e-learning resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify project requirements | 1.1 Refer to project briefs to identify target learner characteristics and their impact on resource design<br>1.2 Identify content to be incorporated, generated and managed, and how content is accessed or delivered<br>1.3 Identify delivery platforms including learning management systems, and assess implications for media asset formats and content modification<br>1.4 Consult with clients to clarify project requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Research and select instructional design model | 2.1 Analyse content to establish learning outcomes and assessment strategies<br>2.2 Research a range of instructional design models and consider their suitability to meet briefs<br>2.3 Identify accessibility and technical standards that may apply for the delivery platforms<br>2.4 Identify learning styles of target audience and consider how these may impact design<br>2.5 Evaluate a range of interactive learning and assessment activities to meet learning needs of target learners<br>2.6 In consultation with relevant personnel, select the instructional design model that best meets learning needs and project requirements |
| 3. Draft design specifications | 3.1 Use selected instructional design model to design architecture of the e-learning resource<br>3.2 Design sequences and interactivity based on content and project requirements<br>3.3 Develop content templates for content experts if required<br>3.4 Specify media assets as required<br>3.5 Specify communication and collaboration tools as required<br>3.6 Specify user interface of the e-learning resource<br>3.7 Specify production requirements, including appropriate testing strategies<br>3.8 Produce design specifications and instructions for design and development teams to use |
| 4. Finalise design specifications | 4.1 Present design specifications and discuss with clients<br>4.2 Review designs against required project outcomes and target learner needs<br>4.3 Review designs against creative and technical requirements<br>4.4 Adjust designs as necessary after discussions with relevant personnel<br>4.5 Clarify ownership of intellectual property to comply with production and organisational requirements<br>4.6 Confirm with clients their acceptance of design specifications, including deliverables, milestones and timelines |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1-2.5, 3.2-3.8, 4.2-4.5 | • Identifies and interprets relevant information including applicable legislation and organisational requirements<br>• Integrates technical and descriptive information and ideas from a range of sources<br>• Interprets project briefs to inform the process of designing e-learning resources |
| Writing | 2.1, 3.1-3.8, 4.4 | • Uses text, diagrammatic and graphic formats to draft and confirm requirements and specifications |
| Oral Communication | 1,4, 2.6, 4.1, 4.6 | • Participates effectively in spoken interactions using language and features appropriate to the audience<br>• Uses questioning and listening strategies to confirm project requirements and elicit relevant feedback |
| Navigate the world of work | 4.5 | • Understands and adheres to organisational and legislative requirements |
| Interact with others | 1,4, 2.6, 4.1, 4.6 | • Collaborates with others throughout all stages of the design process<br>• Selects and uses appropriate practices and protocols to communicate with a range of audiences |
| Get the work done | 1.1-1.3, 2.1-2.6, 3.1-3.7, 4.2-4.6 | • Adopts a methodical and logical approach to planning, organising and implementing tasks required to meet requirements<br>• Generates complex creative ideas in alignment with the design brief<br>• Takes responsibility for analysing information and making decisions to ensure designs meet all requirements<br>• Uses digital tools to assist with the design of e-learning resources |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for CUADIG503 Design e-learning resources

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- research and select suitable instructional design models to meet project requirements
- design specifications for e-learning resources for delivery on different platforms that:
  - meet the project brief, including learner requirements
  - are technically feasible
  - detail all aspects of e-learning resource architecture, interactive learning and assessment activities, media assets, communication and collaboration tools, user interface production requirements and testing strategies
- present and discuss design specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list and briefly describe instructional design learning models for e-learning
- outline target learner characteristics and how these may impact on instructional design choices
- list a range of e-learning delivery platforms, and briefly describe any particular design requirements
- outline typical media assets used for e-learning
- describe common formats and techniques for documenting design of e-learning resources
- outline the impact of web standards on the design of e-learning resources
- describe the concept of intellectual property rights and how this is managed in the context of e-learning resource development.

# CUADIG504 Design games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to design technically feasible games and document production requirements.

It applies to individuals who generate and develop a game idea through to documentation of the mechanics and design. They communicate the vision for a game to the rest of the team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify project requirements | 1.1 Confirm objective and outcomes of a game proposal or brief in consultation with relevant personnel<br>1.2 Identify factors that may impact game's design<br>1.3 Clarify target audience to determine format and delivery platform of the game in discussion with relevant personnel |
| 2. Research games and generate ideas | 2.1 Identify and source a full range of genres, in consultation with relevant personnel<br>2.2 Select and play different genres as a source of inspiration, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | including traditional and state of the art games<br>2.3 Search game literature to identify various games' objectives and game theory<br>2.4 Generate a range of ideas for game designs that are technically feasible, respond to the proposal or brief, and provide creative solutions to design issues<br>2.5 Discuss ideas and creative solutions in collaboration with relevant personnel |
| 3. Select a game genre | 3.1 Identify a range of game genres with potential to meet the game brief, and present to relevant personnel for consideration<br>3.2 Select the game genre that meets the creative, technical and production requirements of proposal or brief in consultation with relevant personnel |
| 4. Draft game design document | 4.1 Propose a game concept that is original and compelling for users<br>4.2 Establish game strategy outcomes<br>4.3 Develop the structure of the game and document all elements, including style and game mechanics<br>4.4 Develop criteria to determine the scope of a prototype game sequence to be used in the development phase<br>4.5 Confirm the proposed prototype can test effectiveness of the game-play elements<br>4.6 Develop a register of game assets in consultation with relevant personnel<br>4.7 Use various presentation techniques to present a draft game design document for feedback from other team members |
| 5. Finalise game design document | 5.1 Review game design objectives based on feedback on the draft game design document<br>5.2 Discuss and confirm additional requirements or modifications to the game design with relevant personnel<br>5.3 Specify game production requirements, including appropriate testing strategies<br>5.4 Produce final game design document to reflect all additional requirements or modifications |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1- 2.4, 3.1, 3.2, 4.2-4.4, 5.1, 5.4 | • Selects and critically analyses information from a variety of sources to clarify details and inform concept development<br>• Integrates detailed information and ideas from a variety of sources |
| Writing | 1.1, 1.3, 4.1-4.4, 4.6, 4.7, 5.1, 5.4 | • Uses text, diagrammatic and visual formats to develop detailed specifications and final documentation of game design analysis |
| Oral Communication | 1.1, 1.3, 2.1, 2.5, 3.1, 3.2, 4.6, 4.7, 5.2 | • Participates effectively in spoken interactions using language and features appropriate to the audience<br>• Uses questioning and listening strategies to confirm project requirements and elicit relevant feedback |
| Numeracy | 5.3 | • Uses estimation and other assessment skills and knowledge to incorporate financial and timeline calculations into production specifications |
| Interact with others | 1.1, 1.3, 2.1, 2.5, 3.1, 3.2, 4.6, 4.7, 5.2 | • Collaborates with others throughout all stages of the design process<br>• Selects and uses appropriate practices and protocols to communicate with a range of audiences |
| Get the work done | 1.1-1.3, 2.2-2.5, 3.1, 3.2, 4.1-4.7, 5.1-5.4 | • Adopts a methodical and logical approach to planning, organising and implementing tasks required to meet requirements<br>• Generates complex creative ideas in alignment with the design brief<br>• Takes responsibility for analysing information and making decisions to ensure designs meet all requirements<br>• Uses digital tools to assist with game design |

# Assessment Requirements for CUADIG504 Design games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- research and generate ideas for games
- design games which:
  - are original and compelling for the user
  - are technically feasible
  - meet requirements of the game proposal or brief
- document all game aspects including strategy outcomes, style, mechanics and game assets
- specify a prototype game sequence that effectively tests game-play elements
- specify testing strategies
- present and discuss design specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the objectives and theories that underpin some common games
- identify and describe common traditional and digital game genres
- describe technical parameters of various platforms and their influence on game design
- explain the term 'game mechanics' in relation to game design
- list and describe strategies to test the function and operation of games
- describe formats for documenting and presenting game designs.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- game proposals or briefs on which designs can be based
- equipment and facilities for games design.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADIG507 Design digital simulations

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to design digital simulations of real world environments and processes.

It applies to individuals who work closely with subject experts to develop virtual environments for fields including architecture, science and engineering, medicine, conservation and manufacturing. They may also collaborate with programmers and software authors so the simulation is technically achievable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual Communication – Digital Content and Imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify project requirements | 1.1 Confirm objectives and outcomes of project briefs in consultation with relevant personnel<br>1.2 Confirm target audience and determine format and delivery platform of simulations in discussion with relevant personnel |
| 2. Research and plan approach | 2.1 Investigate the real world environment to be simulated, to inform algorithms, rules, laws, physical and mathematical formulas that |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | may be required<br>2.2 Evaluate designs, plans and other information relevant to the project brief that may assist in modelling the real world environment<br>2.3 Determine performance objectives, task complexity and user skill levels<br>2.4 Determine the required depth of physical and functional fidelity, taking into account production requirements<br>2.5 Research and suggest appropriate simulation authoring tools<br>2.6 Collaborate with relevant personnel and discuss ideas and creative solutions |
| 3. Draft simulation design documents | 3.1 Identify processes that determine the functional behaviour of the simulation and specify how this behaviour is to be represented by control objects<br>3.2 Define the underlying functionality in a model that specifies essential settings, states, conditions and parameters<br>3.3 Specify user interface controls that enable users to interact with simulations<br>3.4 Identify critical impacts, alerts or costs for incorrect user operation<br>3.5 Specify positive and negative feedback to user responses when interacting with simulations<br>3.6 Specify sequencing of difficulty levels, if required<br>3.7 Confirm proposed simulation is technically achievable, in consultation with relevant personnel<br>3.8 Present clear and detailed draft simulation design specifications in a format that can be used for discussion with and feedback from other team members |
| 4. Finalise simulation design documents | 4.1 Review designs against required project outcomes and performance objectives<br>4.2 Review designs against creative, technical and intellectual property requirements<br>4.3 Adjust design specifications as necessary after discussions with relevant personnel<br>4.4 Archive user interface controls for other projects |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 2.2, 2.4, 2.5, 3.1-3.6, 4.1-4.3 | • Interprets and comprehends a range of familiar and unfamiliar technical, descriptive, and legal textual information<br>• Integrates prior knowledge with new technical research and feedback from relevant personnel |
| Writing | 2.1, 2.3, 2.4, 3.1-3.6, 3.8, 4.1-4.3 | • Documents information using correct formatting procedures, and uses appropriate, specialised vocabulary when drafting design documents<br>• Accurately incorporates modifications and user feedback in specification documentation |
| Oral Communication | 1.1, 1.2, 2.6, 3.7, 4.3 | • Participates effectively in spoken interactions using language and features appropriate to the audience<br>• Uses questioning and listening strategies to confirm project requirements and elicit relevant feedback |
| Navigate the world of work | 4.2 | • Understands legislative requirements related to intellectual property |
| Interact with others | 1.1, 1.2, 2.6, 3.7, 4.3 | • Works collaboratively with production personnel throughout all stages of project<br>• Selects and uses appropriate practices and protocols to communicate with a range of audiences |
| Get the work done | 1.1, 1.2, 2.1-2.6, 3.1-3.7, 4.1-4.4 | • Coordinates and plans tasks, taking responsibility for ensuring that project is continually assessed and evaluated to meet project requirements<br>• Generates and continually evaluates ideas for the design, ensuring design integrity is maintained<br>• Makes decisions that impact on the entire project<br>• Uses digital tools to assist with design tasks |

# Assessment Requirements for CUADIG507 Design digital simulations

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- research and generate a range of ideas for simulations that meet the project brief and target audience
- develop draft design specifications for digital simulations that are clear, detailed and technically feasible
- review and seek feedback from relevant personnel and produce final design specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe typical formats and documentation for presenting simulation designs
- outline a range of authoring tools used for digital simulations
- describe the ways in which algorithms, laws, rules and mathematical formulas can represent real world processes
- outline intellectual property rights and how these are managed in design of digital simulations.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- briefs for digital simulations on which designs can be based
- facilities and resources to develop design simulations.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUADRA201 Develop drawing skills

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to use a limited range of basic drawing techniques to produce fundamental drawings from simple ideas. This unit relates to drawing as an art form and differs from units that focus on drawing as a visual representation tool.

It typically applies to individuals who have developed some general design or drawing skills and who are now embarking on a career in visual arts. They have little or no experience in drawing and work under close supervision and with guidance from others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Visual communication – drawing

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare drawing resources | 1.1 Calculate and obtain type and quantity of drawing equipment, tools and materials according to own selected ideas for the work<br>1.2 Prepare equipment, tools and materials according to procedures for workplace safety, cost control and waste minimisation<br>1.3 Set up a safe work space with guidance from key people |
| 2. Use and test drawing | 2.1 View a range of drawings in different styles, and discuss with |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| techniques | key people how effects are achieved<br>2.2 Match potential techniques to ideas for own drawings with assistance from key people<br>2.3 Test a range of techniques to determine the effects they achieve through experimentation with samples, practice pieces or work in progress<br>2.4 Use selected techniques to produce fundamental drawings, considering and applying elements and principles of design<br>2.5 Clean and store equipment, tools, and materials according to specific needs of different items<br>2.6 Handle equipment, tools and materials safely and minimise waste throughout all processes |
| 3. Review work to develop skills | 3.1 Review own drawings and note areas for future improvement<br>3.2 Seek and consider feedback from key people to identify areas for improvement<br>3.3 Review different opportunities to build own skills and select suitable options |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 3.3 | • Plans a learning process to build own skills |
| Reading | 1.2 | • Interprets detailed information from familiar procedural documents to determine production and safety requirements |
| Oral Communication | 1.3, 2.1, 2.2, 3.2 | • Clearly explains ideas for designs and techniques using relevant industry language<br>• Uses questioning and active listening techniques to gain information and feedback and confirm understanding |
| Numeracy | 1.1, 1.3, 2.4 | • Uses basic calculations to determine quantities of materials, measure dimensions of work space and drawings |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.2, 1.3, 2.4, 2.6 | • Follows defined procedures and legislative requirements, understands boundaries of own work and skill, and seeks clarification and guidance on all issues |
| Interact with others | 1.3, 2.1, 2.2, 3.2 | • Seeks guidance and cooperates with instructions and advice from others to achieve best outcomes for own creative work |
| Get the work done | 1.1-1.3, 2.1-2.4 | • Organises all processes to set up work space, test techniques and produce creative work with close guidance from others<br>• Makes routine decisions using procedures to guide activities<br>• Makes decisions about appropriate techniques by evaluating and testing a limited range of known options with assistance from others<br>• Resolves problems with technique through trial, error and practice |

# Assessment Requirements for CUADRA201 Develop drawing skills

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- produce multiple fundamental drawings where the materials and techniques support own ideas for work
- document a basic plan to build own skills, outlining own selected skill development options.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the general features of major styles of drawing and the work of key practitioners relevant to individual area of interest
- outline, for the elements and principles of design, the fundamental characteristics, primary interrelationships and use in fundamental drawings
- outline, for a range of equipment and tools used to produce drawings, key physical features and uses, cleaning techniques and storage requirements
- outline the general features and use of a basic range of materials and techniques used to produce fundamental drawings
- outline typical work space requirements for producing fundamental drawings including ways of organising space and equipment for efficient work operation
- outline procedures for working safely with drawing materials, tools and equipment.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- equipment, tools and materials used to produce drawings
- relevant information sources.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUAPHI504 Employ specialised imaging technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to investigate specialised imaging technologies and their application in photo imaging practice.

It applies to individuals who create innovative images using specialised imaging technologies. They may be engaged in scientific, forensic, geographical, exploratory and other industry areas. At this level work is usually carried out independently, with supervision or guidance available as required.

No licensing, legislative or certification conditions apply to this unit at the time of publication.

## Unit Sector

Visual communication – photo imaging

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research range of specialised imaging technologies | 1.1 Investigate historic, contemporary and emerging specialised imaging technologies using reliable information sources<br>1.2 Examine relevant photo imaging discipline, subject matter and themes, and identify their specialist imaging technologies<br>1.3 Analyse connection between imaging technology and visual representation, attributes and opportunities of an image's subject matter |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Evaluate specialised imaging technologies and their corresponding imaging workflow |
| 2. Test and evaluate attributes of specialised imaging technologies | 2.1 Arrange access to specialised imaging technologies in cooperation with imaging specialists and suppliers, where applicable<br>2.2 Use specialised imaging technologies following work health and safety procedures<br>2.3 Apply specialised imaging techniques and workflow to create test images<br>2.4 Review own performance in creation of test images |
| 3. Create body of work using specialised imaging technologies | 3.1 Select relevant specialised imaging technology to create innovative body of work with specific subject matter or theme<br>3.2 Develop concepts to guide creative vision using specialised imaging technology and techniques<br>3.3 Review and adapt imaging techniques to ensure consistency of creative vision across body of work<br>3.4 Plan, prepare and organise body of work for presentation using appropriate technology and space<br>3.5 Document work processes using specialised imaging technology and archive imaging products according to industry standards<br>3.6 Evaluate personal performance in creation of body of work and identify concepts for further research |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.2 | • Interprets and evaluates complex technical information and regulatory safety requirements to inform work practice |
| Writing | 1.1, 2.1, 3.4, 3.5 | • Uses clear language and technical terminology to complete comprehensive workplace documentation |
| Oral Communication | 1.1, 2.1 | • Elicits information from industry sources using effective listening and open questioning techniques |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 2.2, 3.5 | • Meets workplace expectations to follow work health and safety procedures and industry standards when undertaking and archiving work |
| Get the work done | 1.2-1.4, 2.1, 2.3, 2.4, 3.1-3.4, 3.6 | • Plans, organises and undertakes tasks required to familiarise self with imaging technologies<br>• Makes informed decisions about techniques, processes and presentation requirements<br>• Evaluates outcomes of decisions and identifies opportunities for further research<br>• Investigates and analyses the application, operation and potential of specialised technologies in photo imaging contexts |

# Assessment Requirements for CUAPHI504 Employ specialised imaging technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- create a body of photo images experimenting with, and applying, specialised imaging technologies around a specific theme or subject matter
- document specialised imaging processes for use in future contexts
- evaluate own performance for improvement.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a range of specialised imaging technologies, their attributes and their applications
- outline the history of the development of photo imaging technologies
- explain the opportunities offered by imaging technology to represent the subject matter in different ways
- explain the health and safety considerations associated with imaging technology.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- specialised image technologies
- sources of information on historical and contemporary imaging technology and techniques.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUAPOS201 Perform basic vision and sound editing

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to perform basic editing functions for screen productions.

It applies to individuals responsible for digitising, cutting and logging pre-recorded image and audio content under the direction of an experienced editor. Within clearly defined parameters, they also edit content using the basic functions of editing software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and entertainment production – post-production

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare source materials for edit | 1.1 Clarify technical and creative requirements for online editing in consultation with production personnel<br>1.2 Obtain and label source materials<br>1.3 Organise transfer of source materials to appropriate medium as required<br>1.4 Check sufficient storage and memory is available to meet content resolution requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Assess source materials for technical and creative quality and arrange for remedial action where problems are identified<br>1.6 Capture content to specified formats and burn time code where applicable, checking format is compatible with available software and hardware<br>1.7 Align, synchronise and organise uncut images and sound in preparation for evaluation and editing<br>1.8 In consultation with relevant production personnel, finalise list of required shots and the method for logging them |
| 2. Prepare for editing | 2.1 Check editing facilities are operational and arrange for faults or problems to be resolved according to enterprise procedures<br>2.2 Load source materials onto appropriate editing facility, checking correct image and sound are ready for use and that images and sound are synchronised or aligned accurately<br>2.3 Identify and catalogue required shots and sequences from source materials in the agreed way<br>2.4 Log selected edits with reference to time codes and shot descriptions according to enterprise procedures<br>2.5 Use a batch digitise list to digitise selected sequences according to relevant documentation and consistent with technical and creative requirements<br>2.6 Create edit decision lists (EDLs) according to instructions from relevant production personnel<br>2.7 Organise and save selected materials according to overall editing requirements<br>2.8 Finalise logging sheets and submit EDLs to relevant production personnel by the agreed deadline |
| 3. Perform basic edits | 3.1 Use software functions to assemble sequences according to EDLs<br>3.2 Observe health and safety procedures when working at computers for long periods of time<br>3.3 Review edited sequences to evaluate quality and content and to identify problems<br>3.4 Manipulate the editing software to solve identified problems and seek expert advice if required<br>3.5 Submit sequences to relevant production personnel for feedback by agreed deadlines |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 3.6 Amend sequences as required and save in appropriate format<br>3.7 Check source materials and back-up copies are stored securely and labelled correctly<br>3.8 Complete required documentation, noting variations and issues from original instructions<br>3.9 Leave workstation in original or improved condition |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.4-2.6, 2.8, 3.2, 3.5, | • Interprets and reviews relevant visual and textual material to determine job requirements |
| Writing | 1.2, 1.8, 2.1, 2.4, 2.5, 2.7, 2.9, 3.6, 3.7 | • Uses clear and specialised language to record accurate identification information and report faults<br>• Produces lists, logs, and catalogue information, and updates records to reflect changes in requirements |
| Oral Communication | 1.1, 1.8, 2.1, 3.3, 3.4 | • Uses clear and relevant language to provide information<br>• Obtains information and instructions by listening and questioning |
| Numeracy | 1.6, 2.5 | • Applies mathematical techniques to implement and record time codes and timings |
| Navigate the world of work | 2.1, 2.5, 3.4 | • Accepts responsibility for tasks within the boundaries of own role and seeks assistance as required<br>• Ensures workplace protocols and enterprise procedures are followed in the planning and completion of editing tasks |
| Interact with others | 1.1, 1.8, 2.1, 3.3, 3.4, | • Works in collaboration with others to complete editing tasks<br>• Follows accepted communication methods and practices when receiving instructions, seeking advice and reporting information |
| Get the work done | 1.2-1.7, 2.1-2.4, 2.6-2.9, 3.1-3.3, 3.5, | • Organises and implements routine tasks making limited decisions about sequencing, timing and |

# Assessment Requirements for CUAPOS201 Perform basic vision and sound editing

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- transfer and digitise video content
- prepare vision and sound content segments for editing
- log single images, audio grabs and basic sequences according to enterprise procedures
- edit content using basic functions of editing software, within clearly defined parameters
- take direction and respond to feedback from a supervising editor
- follow procedures for completing workplace documentation
- meet work deadlines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline basic vision and sound editing conventions and techniques
- explain roles of post-production personnel
- outline basic features of digital vision and sound editing software
- describe health and safety procedures that apply to using computers and keyboards.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- screen content that requires editing
- post-production facilities

© Commonwealth of Australia, 2025 Future Skills Organisation

- editing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUAPOS401 Edit screen content for fast turnaround

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to use non-linear digital facilities to edit screen content for fast turnaround.

It applies to individuals with a reasonable level of experience who are involved in editing for daily programs such as television news and current affairs. At times they work on more complex programs of a formatted or routine nature, or on the editing of daily rushes for feature films.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and entertainment production – post-production

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for edit | 1.1 Clarify editing requirements in consultation with production personnel and with reference to documentation as required<br>1.2 Check operation of editing equipment and software<br>1.3 Identify and prepare source materials for off-line and online editing |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Assess materials to be edited against required technical and creative criteria in consultation with relevant production personnel<br>1.5 Agree on replacement material or editing approach to overcome technical problems identified with source material<br>1.6 Review source materials and visualise the look of the final edited sequences |
| 2. Commence editing process | 2.1 Digitise and transfer materials to suitable format, checking compatibility with editing equipment and monitoring capture for sound and image quality<br>2.2 If time allows, create and edit decision list noting in and out points for each edit<br>2.3 Maintain accurate documentation of editing instructions for use in all stages of post-production as required<br>2.4 Prioritise and select materials in terms of their relevance to production requirements<br>2.5 Arrange and present selected material to retain the intended meaning of words and images<br>2.6 Consider how other materials could be used to clarify and enhance final edit |
| 3. Assemble vision and sound | 3.1 Check technical and creative criteria with relevant production personnel to ensure integrity of edit<br>3.2 Assemble content in a way that produces coherent images and sound according to standard editing conventions<br>3.3 Confirm assembled materials meet duration requirements, as well as technical and creative criteria for transmission<br>3.4 Insert transitions, special effects and additional materials as required<br>3.5 Make appropriate compromises between content and quality to meet time restrictions |
| 4. Finalise edits | 4.1 Review assembled online or off-line edits with relevant production personnel<br>4.2 Implement changes as required and finalise edit to meet deadlines<br>4.3 Complete necessary documentation and archive source materials according to enterprise procedures<br>4.4 Report problems encountered with completing edits to relevant personnel |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 4.5 Provide information required for successful transmission of edited material<br>4.6 Evaluate own performance against technical and creative criteria and discuss with colleagues where appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.6, 3.1 | • Interprets production documentation, extracts and analyses relevant information to establish job requirements |
| Writing | 2.2, 2.3, 4.2, 4.3 | • Uses clear language and terminology to record lists, relevant information and report faults<br>• Completes documentation using required formats, terminology and conventions specific to industry and enterprise procedures |
| Oral Communication | 1.1, 1.4, 3.1, 3.6, 4.1, 4.4 | • Uses clear, specific language to provide information, discuss requirements and solutions<br>• Uses listening and questioning techniques to obtain and confirm information |
| Navigate the world of work | 3.3, 4.1, 4.3, 4.4 | • Meets expectations associated with own role and responsibilities for planning and completing work within time constraints and in compliance with enterprise procedures |
| Interact with others | 1.1, 1.4, 3.1, 3.6, 4.1, 4.4 | • Collaborates with others to achieve joint outcomes<br>• Selects and uses appropriate communication methods and practices to clarify information, engage in discussions and elicit feedback from others |
| Get the work done | 1.2-1.4, 2.1- 2.6, 3.2-3.6, 4.2, 4.3, 4.5, 4.6 | • Plans and sequences content preparation and editing tasks to meet creative and technical criteria and production requirements<br>• Makes decisions about sequencing and the use of other material to preserve and enhance meaning<br>• Uses a range of features and functions of digital editing tools and equipment to assemble sound and vision components |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Makes considered editing decisions under some pressure and evaluates their effectiveness in meeting requirements |

# Assessment Requirements for CUAPOS401 Edit screen content for fast turnaround

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- review and prepare materials to be edited
- select and note in and out points of sequences to be used in edits
- produce final edits that bring vision and sound content together in line with production requirements and deadlines
- follow procedures for completing workplace documentation
- work collaboratively with production personnel to produce edited sequences.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline vision and sound editing techniques
- describe features of industry-standard editing software and equipment
- outline roles and responsibilities of post-production personnel
- describe creative and technical elements of screen content that typically need to be edited within short timeframes
- identify typical problems with editing vision and sound content for fast turnaround, and briefly describe solutions.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- vision and sound content to be edited

© Commonwealth of Australia, 2025 Future Skills Organisation

- editing software and equipment
- production documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUAPOS402 Manage media assets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to implement systems and processes to manage media assets for screen productions and projects.

It applies to individuals working in large enterprises on projects or productions that require a wide range of media assets. They work directly with the creators of audio, video and graphic assets to ensure the asset management system accommodates their needs. They set up conventions for file naming, sourcing, sorting and storing formal documents and media assets. Though reporting to a producer or manager, they work with a fair degree of autonomy.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and entertainment production – post-production

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish procedures for managing content and outputs | 1.1 Confirm media asset management requirements with relevant personnel<br>1.2 Set up file naming system for projects based on standard conventions and protocols<br>1.3 Source and review storage repository and back-up systems appropriate for projects |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Set up processes to record information required for tracking formal documents and media assets<br>1.5 Establish conventions for recording progress and locations of media assets<br>1.6 Develop strategies for tracking and recording media assets<br>1.7 Brief team members on the media asset management system, including the process for advising personnel of problems encountered as the system is implemented |
| 2. Record documentation and media assets | 2.1 Document sources of media assets according to enterprise procedures<br>2.2 Document progress and details of a range of project outputs<br>2.3 Maintain records of technical information on work in progress<br>2.4 Maintain copyright and permissions information<br>2.5 Track media assets and record information according to established system<br>2.6 Maintain version control and identify status of interim products, prototypes and other media assets<br>2.7 Respond to and resolve problems encountered as the system is implemented, seeking specialist assistance as required |
| 3. Finalise projects | 3.1 Confirm procedures and schedule for signing-off projects with relevant personnel<br>3.2 Determine requirements for archiving<br>3.3 File and index formal documents and scripts according to agreed project or enterprise procedures and timelines<br>3.4 Archive media assets in established repository system in line with industry practice<br>3.5 Check relevant personnel have ongoing access to formal documents and media assets developed for projects<br>3.6 Review effectiveness of the media asset management system and note areas for future improvement |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 2.1, 2.3-2.6, 3.3, 3.4, 3.6 | • Interprets texts of varying complexity and extracts information to determine work requirements |
| Writing | 1.2, 1.4-1.6, 2.1-2.6, 3.3, 3.4, 3.6 | • Prepares detailed, logically sequenced text to describe procedures and processes required to identify, record, track and file information<br>• Maintains and updates documentation |
| Oral Communication | 1.1, 1.7, 2.7, 3.1 | • Uses language to provide information and instructions appropriate to audience and environment<br>• Uses careful listening and questioning techniques to obtain and confirm information |
| Navigate the world of work | 2.1, 3.1, 3.3 | • Meets expectations associated with own role, taking responsibility for planning and implementing a media asset management system in line with enterprise processes and procedures and recognised industry practice |
| Interact with others | 1.1, 1.7, 2.7, 3.1 | • Collaborates with others to achieve joint outcomes<br>• Selects and uses appropriate communication methods and practices to clarify requirements and provide comprehensive information and support to others about operation of the media asset management system |
| Get the work done | 1.1-1.6, 2.3, 2.4, 2.6, 2.7, 3.1-3.6 | • Plans, organises and implements systematic procedures and processes to manage media assets and handles relevant communication<br>• Selects storage and back-up system that meets requirements<br>• Uses system to organise and maintain required information, and tracks project assets to identify and resolve operational problems<br>• Uses digital technologies and systems to organise, enter, update, and track information and assets |

# Assessment Requirements for CUAPOS402 Manage media assets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- develop processes and systems for the organisation and filing of formal documents and media assets
- use information tracking and repository systems to meet project requirements
- produce and accurately update records
- archive assets from completed projects with suitable ongoing access conditions
- provide clear directions to users of the processes and systems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline roles and responsibilities of personnel involved in creating and managing media assets for screen and media projects
- explain the relationship between creative aspects of screen and media projects and the process of managing media assets
- identify typical problems with implementing media asset management systems, and briefly describe solutions
- explain the requirements for maintaining copyright and permissions requirements
- describe features of file and resource repository systems.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- file and resource management systems

© Commonwealth of Australia, 2025 Future Skills Organisation

- media assets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUAPPM407 Create storyboards

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to create and develop storyboards for a broad range of digital content, including video, film, animation and interactive media.

It applies to individuals who break down content, stories or scripts into discrete elements and visualise creative concepts in collaboration with a creative production team. Storyboard artists, designers, producers and information architects can create storyboards, depending on the type and scale of production. In the film and television industry, people creating storyboards work closely with directors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and Entertainment Production – Production Planning and Management

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan storyboards | 1.1 Clarify storyboard requirements for productions with reference to scripts and stories, and in consultation with relevant personnel<br>1.2 Identify factors that affect type of storyboard to be created<br>1.3 Contribute ideas in pre-production meetings to help refine storyboard requirements<br>1.4 Research and select suitable amount of storyboard tools for a |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | given purpose<br>1.5 Obtain sign-off, from relevant personnel, on the type of storyboard to be created |
| 2. Draft storyboards | 2.1 Break down content, scripts and stories into frames using storyboard techniques and appropriate tools, and methods in line with organisational and work health and safety (WHS) procedures<br>2.2 Specify storyboard elements for each frame, reflecting creative concepts<br>2.3 Specify the logical linear or non-linear frame sequence, showing the connection between each frame<br>2.4 Provide descriptions for each frame<br>2.5 Seek feedback, and assistance as required, on work in progress from relevant personnel, and incorporate ideas and feedback as appropriate<br>2.6 Check draft storyboards are clear and legible and show sufficient detail for production teams to use |
| 3. Finalise storyboards | 3.1 Present draft storyboards to relevant personnel for discussion and feedback<br>3.2 Refine storyboards as required to incorporate feedback<br>3.3 Produce final storyboards that present accurate visual interpretations of scripts, stories or text, and meet agreed specifications<br>3.4 Make back-up copies of storyboards as required according to organisational procedures<br>3.5 Submit storyboards to relevant personnel by agreed deadlines<br>3.6 Review the process of creating storyboards and note areas for future improvement |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 3.4 | • Interprets a broad range of information in a variety of forms and uses the knowledge gained to determine specifications and key action in script sequence, and to contribute to the development of ideas for storyboards<br>• Analyses and contrasts information to select that which informs own work |
| Writing | 2.1, 2.2, 2.4, 2.6 | • Records detail of research and consultation outcomes, drawing on sufficient vocabulary and grammar to convey ideas effectively<br>• Creates legible and clear descriptions to convey information and requirements in sequential order |
| Oral Communication | 1.1, 1.3, 2.5, 3.1 | • Presents explanation of own ideas to others, and discusses ideas and solutions, choosing language appropriate to those taking part in the discussion<br>• Facilitates and participates in potentially abstract discussions, using listening and questioning skills to elicit participant views |
| Navigate the world of work | 3.3-3.5 | • Meets expectations associated with own role and accepts responsibility for storyboard production to specifications in compliance with organisational procedures and legislative requirements |
| Interact with others | 1.1-1.3, 1.5, 2.5, 3.1 | • Collaborates effectively with relevant personnel to achieve understanding and realise joint outcomes<br>• Selects and uses appropriate communication methods and practices to present storyboards, engage in discussions and elicit feedback |
| Get the work done | 1.2, 1.4, 2.1-2.3, 2.6, 3.2-3.4, 3.6 | • Plans, sequences and prioritises storyboard tasks with awareness of how they contribute to production goals<br>• Uses analytical processes to make decisions directly related to task<br>• Uses feedback to inform refinement and identifies opportunities to improve storyboard processes |

# Assessment Requirements for CUAPPM407 Create storyboards

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- interpret scripts and specifications
- visualise creative concepts using storyboard techniques and appropriate tools and methods
- produce clear and logical storyboards that break down content, stories and scripts into discrete elements and meet specified requirements
- present storyboards to others for discussion or implementation, and adjust as required in response to feedback.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe roles and responsibilities of different members of the creative team, and how they contribute to the process of visualising and interpreting creative concepts into storyboards
- list and describe typical storyboard tools
- explain the components of storyboards including frames, elements and descriptions
- outline health and safety procedures that apply to creating storyboards and working for periods of time on computers.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- scripts, stories or texts to serve as the basis for creating storyboards
- storyboard and visualising tools

© Commonwealth of Australia, 2025 Future Skills Organisation

- different types of productions requiring storyboards

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUASOU202 Perform basic sound editing

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required for basic digital sound editing.

It applies to individuals working under supervision who are responsible for preparing, assembling and digitally editing relatively simple sound sequences for media content.

Individuals are expected to contribute to creative outcomes, including selection and acquisition of sound materials.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and Entertainment Production – Audio/Sound

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for editing sound | 1.1 Clarify production requirements, including creative and technical objectives in consultation with relevant production personnel<br>1.2 Obtain, label and securely store audio source materials<br>1.3 Check editing hardware has sufficient capacity to handle digitising and editing processes<br>1.4 Check editing software is suited to technical requirements and enterprise practices |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Organise additional equipment to minimise interruptions during editing, if required<br>1.6 Adopt safe ergonomic practices when using screens and keyboards for long periods of time |
| 2. Assemble sequences for editing | 2.1 Digitise content in a compatible format for specified platform<br>2.2 Monitor and optimise quality of digital output and arrange to fix problems where necessary<br>2.3 Identify sound edit positions and document appropriately<br>2.4 Log and assess sound sequences and create and save digital back-up copies<br>2.5 Use safe listening procedures to evaluate and edit audio content to meet technical and creative objectives |
| 3. Edit sound sequences | 3.1 Edit audio content and document details of each edited sound sequence according to production requirements<br>3.2 Generate an appropriate track list to facilitate sound mixing processes<br>3.3 Chart positions and durations of sound sequences, noting requirements for transitions where applicable<br>3.4 Apply audio effects and enhancements to maximise creative outcomes as required<br>*3.5* Use editing software to produce sequences and resolve identified problems<br>3.6 Seek feedback on edits from relevant production personnel and refine as required<br>3.7 Submit final edits by agreed deadline in accordance with enterprise procedures |
| 4. Finalise sound edits | 4.1 Archive and document edited audio files following enterprise procedures<br>4.2 Report on editing equipment requiring maintenance if required and leave workstation in original or improved condition<br>4.3 Participate in post-production debriefing sessions as required<br>4.4 Seek feedback from colleagues and evaluate own creative and technical performance for improvement |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.3 | • Interprets textual information to determine job requirements |
| Writing | 1.2, 2.4, 3.1-3.3, 4.1 | • Records accurate and detailed information in workplace documentation using simple vocabulary and industry terminology |
| Oral Communication | 1.1, 3.6, 4.2, 4.3, 4.4 | • Uses clear and relevant language to gather and provide information<br>• Uses listening and questioning techniques to confirm understanding |
| Navigate the world of work | 1.6, 2.4, 3.7, 4.1, 4.2, | • Complies with enterprise procedures and production requirements in preparation and completion of editing tasks to defined deadlines |
| Interact with others | 1.1, 3.6, 4.2, 4.3, 4.4 | • Follows accepted communication methods and practices when discussing task requirements and seeking feedback on task progress<br>• Participates in debrief with colleagues to receive feedback on own performance |
| Get the work done | 1.2-1.5, 2.1-2.5, 3.1, 3.2, 3.4-3.6, 4.4 | • Plans and implements routine tasks and workload in a methodical sequence with input from others<br>• Makes routine decisions about source materials, equipment capacity and audio formats, and monitors output for problems<br>• Determines the most effective editing techniques for creative impact, and manipulates software to resolve problems<br>• Uses digital tools to prepare sound components, and edit and refine sequences to achieve creative and technical expectations of the production |

# Assessment Requirements for CUASOU202 Perform basic sound editing

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare and edit audio content to meet creative and technical production requirements
- use editing software and equipment proficiently, manipulating and applying effects where required
- digitise audio content in compatible formats
- assess and optimise quality of sound sequences
- accurately mark, log, document and archive edited sequences
- seek feedback from others to improve own technical and creative performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a range of digital formats compatible with various editing processes, platforms and equipment
- outline procedures to log and document edited sequences
- outline typical challenges that arise collecting and organising content for broadcast and publication, and how to handle these
- identify characteristics of sound that can be manipulated to achieve high quality output
- outline work health and safety requirements for working with sound.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- audio editing software and equipment
- manuals and instructions to support software and equipment
- audio content.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUASOU304 Prepare audio assets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare audio assets for inclusion in broadcasting, games and interactive media.

It applies to individuals who prepare and package audio content into formats appropriate for various media distribution channels and interactive products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and Entertainment Production – Audio/Sound

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify audio assets | 1.1 Obtain analogue or digital sources of audio and identify the source file formats<br>1.2 Clarify output purpose, destination and platform<br>1.3 Discuss with relevant personnel the required output file format and audio codecs for specified bandwidths<br>1.4 Discuss with relevant personnel the appropriate audio encoding software |
| 2. Prepare audio assets | 2.1 Open appropriate audio encoding software and load audio file |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Eliminate or treat defects on sound recordings<br>2.3 Equalise sound output levels where necessary<br>2.4 Check duration and quality of audio sequences meet production requirements, and adjust if necessary<br>2.5 Determine and apply appropriate audio codecs<br>2.6 Batch optimise audio files where possible<br>2.7 Save files in appropriate output file format using standard industry or enterprise naming conventions<br>2.8 Follow safe ergonomic practices when using screens and keyboards for long periods of time |
| 3. Package audio assets | 3.1 Assign metadata tags if required<br>3.2 Group files logically in folder system using standard industry or enterprise naming conventions<br>3.3 Archive and store in share drive or repository for production team access |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 2.4 | • Interprets information to determine standards and job requirements |
| Writing | 2.7, 3.1, 3.2 | • Uses clear language and terminology to identify and group files |
| Oral Communication | 1.3, 1.4 | • Uses clear language to contribute information<br>• Obtains information by listening and questioning |
| Numeracy | 2.4 | • Uses basic calculations to measure time |
| Navigate the world of work | 2.7, 2.8, 3.2, 3.3 | • Accepts responsibility for tasks within boundaries of own role<br>• Meets organisational expectations in performance of task |
| Interact with | 1.3, 1.4 | • Follows accepted communication methods and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| others | | practices in discussions with project team members |
| Get the work done | 1.1, 1.2, 2.1-2.7, 3.2 | • Makes decisions about audio asset requirements with guidance from others<br>• Uses digital tools to prepare, refine and package audio assets that meet interactive media requirements |

# Assessment Requirements for CUASOU304 Prepare audio assets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare audio content for inclusion in interactive media products and media distribution channels
- use editing software to treat, equalise and clip sound sequences to meet technical standards
- use audio encoding and editing software
- complete file naming and storage according to industry or enterprise conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the need for audio file compression in media distribution channels and interactive media products
- describe how codecs work to optimise audio outputs and identify appropriate codecs for various platform destinations
- explain techniques to achieve audio equalisation
- explain file compression
- outline procedures for naming and tagging audio files following standard enterprise or industry conventions
- outline work health and safety requirements for working with sound.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- audio encoding and editing software and equipment
- manuals and instructions that support encoding and editing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUASOU307 Record and mix a basic music demo

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to plan, record and mix a basic music demonstration (demo).

It applies to individuals who work collaboratively with performers to produce basic music recordings that are intended for limited circulation or reference purposes, rather than general public release.

No licensing, legislative or certification requirements apply to this unit at the time of publication

## Unit Sector

Media and entertainment production – audio/sound

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify music demo requirements | 1.1 Confirm the purpose of the music demo in consultation with relevant people<br>1.2 Contribute to the development of an appropriate recording plan<br>1.3 Agree on the method of, and format for, final recording |
| 2. Record performers | 2.1 Position performers, instruments and equipment for optimum sound quality<br>2.2 Check that equipment is installed and aligned correctly |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Confirm that microphones are operational at all times<br>2.4 Route test signals to the correct signal path and check that level of test signal is correct<br>2.5 Create a headphone mix for performers<br>2.6 Capture sound sources according to the agreed recording method |
| 3. Mix sound sources | 3.1 Mix and balance sound sources to achieve required effect<br>3.2 Produce accurate transitions between sounds to achieve required effect<br>3.3 Apply effects and signal processing as required<br>3.4 Monitor levels according to safe work practices<br>3.5 Assess the quality of each recorded track, and evaluate overall mix against the purpose of the music demo<br>3.6 Confirm that the level of the mix is within technical limits and the required dynamic range |
| 4. Finalise music demo | 4.1 Assess mix on speakers that are appropriate to the end use of the music demo<br>4.2 Listen to overall mix with relevant people, and agree on any necessary adjustments<br>4.3 Produce a master that incorporates any adjustments and a backup copy in the agreed format<br>4.4 Complete recording documentation as required<br>4.5 Clean and restore recording location to pre-use condition |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 4.4 | • Comprehends textual information in workplace documents |
| Writing | 1.2, 4.4 | • Uses relevant language to complete workplace documents and forms |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral Communication | 1.1-1.3, 3.5, 4.2 | • Uses specific and relevant language to clearly articulate recording issues<br>• Uses listening techniques to clarify that quality of mix meets requirements |
| Navigate the world of work | 3.4, 4.5 | • Follows safety and organisational requirements |
| Interact with others | 1.1-1.3, 4.2 | • Collaborates with others to achieve results |
| Get the work done | 1.1-1.3, 2.1, 2.4, 3.1, 3.2, 3.5, 3.6, 4.1, 4.4, 4.5 | • Plans, organises and completes work according to requirements<br>• Monitors and assesses quality of output to identify problems and decide on action required |

# Assessment Requirements for CUASOU307 Record and mix a basic music demo

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- collaborate with others to prepare basic recording plans
- record, mix and finalise at least two basic music demos according to requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list and briefly describe the components of a basic recording plan
- describe the different types of equipment used to produce a music demo
- explain the issues and challenges that typically arise when recording and mixing a basic music demo, and how to address them
- outline the safe work practices that relate to the use of sound recording and mixing equipment.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- performers requiring a basic music demo
- recording location
- sound recording and mixing equipment.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUASOU407 Edit sound

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to edit sound material to meet production requirements. This involves assessing the quality of source materials, preparing source materials for sound editing, making technically accurate sound edits, and applying sound effects to enhance the final product.

It applies to individuals who work as part of a production team to edit sound material for a range of productions. It also applies to individuals working in film and sound archives. Individuals work with minimal supervision and guidance, and may supervise others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and entertainment production – audio/sound

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for sound editing | 1.1 Discuss production requirements and procedures with relevant people<br>1.2 Confirm necessary copyright releases have been obtained<br>1.3 Consider impact of using different release sound formats<br>1.4 Confirm sound editing software and equipment is operational |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | and appropriate for production requirements<br>1.5 Prepare team work plan as required, and brief relevant people accordingly<br>1.6 Obtain original or copies of sound sources, and assess their quality against production requirements<br>1.7 Advise relevant people if sound sources do not meet production requirements, and propose options to resolve issues as required<br>1.8 Anticipate problems that may arise during sound editing, and plan accordingly |
| 2. Edit complex sound sequences | 2.1 Confirm format of sound sources is compatible with sound editing software and equipment<br>2.2 Follow work health and safety (WHS) procedures, and use safe work practices when using sound editing software and equipment<br>2.3 Listen critically to sound sources to determine extent and range of required edits<br>2.4 Use sound editing software and equipment to achieve technical and creative production outcomes, and to resolve identified problems<br>2.5 Collaborate with relevant people to meet production requirements |
| 3. Create overall sound context | 3.1 Determine purpose for which sound is being used in production<br>3.2 Select or produce appropriate sound effects that enhance the purpose, genre and technical/creative outcomes of the production<br>3.3 Incorporate sound effects and elements to meet creative and production requirements |
| 4. Finalise editing operations | 4.1 Listen to final sound mix with relevant people, and make adjustments as necessary<br>4.2 Save final files in correct format<br>4.3 Conduct quality check of final sound mix according to production requirements and enterprise procedures<br>4.4 Archive edited files, and complete relevant documentation according to production requirements and enterprise procedures<br>4.5 Confirm work environment is cleaned after use and restored to pre-editing condition<br>4.6 Collaborate with relevant people to organise a sound effect library for future productions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 4.7 Provide feedback to production team members as required<br>4.8 Evaluate own performance and note areas for improvement |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 1.8 | • Interprets textual information and applies the knowledge that has been gained to evaluate methodologies and elements according to production requirements |
| Writing | 1.8 | • Prepares specific information that conveys an understanding of outcomes and alternatives, and uses terminology appropriate to present to relevant personnel |
| Oral Communication | 1.1, 1.5, 1.7, 2.3, 2.5, 4.1 | • Uses industry appropriate language and chooses appropriate strategies to establish clear directions<br>• Derives meaning from a range of audio sources to inform work requirements |
| Navigate the world of work | 1.2, 1.3, 2.2, 4.2-4.5 | • Follows required safety procedures<br>• Identifies, confirms and applies copyright requirements relevant to role<br>• Follows organisational protocols and procedures to achieve work outcomes |
| Interact with others | 1.1, 1.5, 1.7, 2.5, 4.1, 4.6, 4.7 | • Collaborates with others to achieve joint production outcomes |
| Get the work done | 1.1-1.8, 2.1-2.5, 3.1-3.3, 4.1-4.5 | • Plans and prioritises a range of complex tasks, including contingencies to achieve goals efficiently<br>• Uses innovative techniques to organise work and support the creative process<br>• Provides feedback and evaluates options to determine solutions and improvements<br>• Uses problem-solving skills to anticipate and plan for issues<br>• Uses digital equipment and software to manage and backup files |

# Assessment Requirements for CUASOU407 Edit sound

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- edit sound material and create final mix for productions
- incorporate appropriate sound effects into final mix
- work collaboratively as part of a production team within set deadlines
- use the features of a range of industry current sound editing software and equipment in line with production requirements and industry standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the different purposes for which sound is used in productions
- explain the copyright implications that relate to sound editing
- explain the main principles and techniques of sound editing
- explain the issues and challenges that typically arise when editing sound material, and how to address them
- explain the work health and safety (WHS) procedures and principles that relate to sound editing.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- sound editing software and equipment
- productions where sound editing is required
- production documentation

© Commonwealth of Australia, 2025 Future Skills Organisation

- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# CUASOU504 Produce sound recordings

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Application

This unit describes the skills and knowledge required to plan, organise and produce audio recordings.

It applies to individuals who work collaboratively and creatively with artists and performers to produce audio recordings for distribution via any media.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Media and entertainment production – audio/sound

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm concept for recording project | 1.1 Use knowledge of commercial trends, market niches, new styles and artists to develop the vision and concept for a recording project<br>1.2 Discuss and confirm vision and concepts with relevant people, and achieve consensus on project outcomes<br>1.3 Establish and discuss production requirements for recording project with relevant people<br>1.4 Research copyright requirements to confirm project process and outcomes will comply with legislation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | |
| 2. Confirm arrangements for recording project | 2.1 Confirm repertoire, artists, project outcomes and operational details with relevant people<br>2.2 Confirm project outcomes can be achieved within time and budget constraints<br>2.3 Plan and agree on communication processes and recording schedule with relevant people<br>2.4 Draw up and distribute rehearsal and recording schedules to relevant people<br>2.5 Discuss and confirm appropriate recording locations with relevant people |
| 3. Coordinate and conduct sound recording sessions | 3.1 Confirm that sessions are scheduled to allow adequate rehearsal and sound testing prior to main recording sessions<br>3.2 Confirm recording location, sound equipment and recording format meet production and work health and safety (WHS) requirements<br>3.3 Assess the acoustic characteristics of the recording location, and provide feedback on instrument/voice placement and settings to relevant people<br>3.4 Provide balanced, constructive and supportive feedback to artists, to ensure that performance meets project expectations<br>3.5 Recognise and consider individual perspectives, and negotiate acceptable outcomes to conflicts as required<br>3.6 Monitor and adjust recording to produce a final product that meets required project outcomes |
| 4. Evaluate recording process and product | 4.1 Use appropriate techniques to evaluate the recording process and completed product<br>4.2 Seek feedback and opinions from relevant people, and document results of evaluation<br>4.3 Evaluate own role in the recording process, and note areas for improvement<br>4.4 Use evaluation results to improve future practice |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 4.3, 4.4 | • Uses self-evaluation and reflection to identify strategies to build own skills and knowledge |
| Reading | 1.4 | • Interprets textual information from relevant sources to identify compliance with policy and procedures |
| Writing | 1.1, 2.3, 2.4, 4.3 | • Prepares specific information using terminology and a form appropriate to the task and audience |
| Oral Communication | 1.2, 1.3, 2.1, 2.3, 2.5, 3.3-3.5, 4.2 | • Uses industry appropriate language to check understandings and elicit different viewpoints<br>• Participates in a verbal exchange of ideas/solutions, and draws on active listening strategies |
| Numeracy | 2.2, 2.3, 3.1 | • Uses mathematical concepts and calculations to estimate and plan project costs and timeframes |
| Navigate the world of work | 1.4, 3.2 | • Identifies, confirms and applies legislative requirements relevant to role |
| Interact with others | 1.2, 1.3, 2.1, 2.3, 2.5, 3.3-3.5, 4.2 | • Collaborates and works cooperatively to maximise creative objectives<br>• Uses appropriate communication practices to discuss and direct requirements and agree on outcomes<br>• Considers the perspectives of others during planning and production<br>• Anticipates potential for conflict and deals with conflict effectively |

# Assessment Requirements for CUASOU504 Produce sound recordings

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with CUA Creative Arts and Culture Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- develop creative sound concepts for recording projects
- work creatively, collaboratively and constructively with others to produce at least two sound recordings for distribution
- adjust recordings to achieve project outcomes
- document the evaluation of the recording process, outcomes and own role.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the production requirements that may impact decisions about recording projects
- explain the legislative requirements that relate to sound recording
- explain how different recording and performance environments affect sound, and what adjustments can be made to produce required sound recordings
- explain the sound equipment required for a range of recording situations
- describe techniques for evaluating the quality of a sound recording
- explain the issues and challenges that typically arise when producing sound recordings, and how to address them.

## Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- relevant instruments and equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

- scores, charts or other written music resources
- participants, such as performers and technical crew
- appropriate recording facilities with adequate space and acoustic qualities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

# ICTBWN302 Install optical fibre splitters in fibre distribution hubs

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install optical fibre splitters in fibre distribution hubs (FDH) as part of a fibre to the premises (FTTP) network.

It applies to individuals who work in teams to deliver very high speed broadband capacity for the National Broadband Network (NBN) initiative.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – broadband and wireless networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Set up and prepare for installation | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Scope work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements<br>1.3 Notify appropriate personnel of identified safety hazards at worksite |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Determine type of FDH enclosure and optical splitter module from project plan, and identify splitter installation requirements using work instructions<br>1.5 Obtain tools and safety equipment and material to perform tasks safely and efficiently<br>1.6 Select and use required protective equipment and make site safe and secure for installation work<br>1.7 Obtain splitter module, visually inspect for splitter module damage and replace if necessary |
| 2. Install splitter module in FDH | 2.1 Follow work health and safety (WHS) and environmental requirements, and identify and avoid other services<br>2.2 Open enclosure and assess suitability of FDH according to project plan<br>2.3 Locate next available slot in splitter module area of FDH for installation<br>2.4 Insert splitter module and secure according to manufacturer's specifications<br>2.5 Inspect installed splitter module and surrounding area for completeness of job |
| 3. Prepare and connect splitter input fibres to feeder cable | 3.1 Locate feeder port to be connected and remove protective cover in preparation<br>3.2 Use optical power meter to verify feeder port is not active<br>3.3 Clean adaptor and mated connector according to manufacturer's specifications, and route splitter input fibre to correct feeder port<br>3.4 Remove dust cap and clean end face according to manufacturer's specifications to prevent possible damage from mating contaminated connectors<br>3.5 Connect input fibre to feeder port and record connection according to organisational policy |
| 4. Connect output fibres and test splitter | 4.1 Determine output fibre to be connected and required adapter in distribution field<br>4.2 Clean adapter and fibre end-face according to manufacturer's specifications<br>4.3 Route output fibre and connect with adapter in distribution field<br>4.4 Test operation of optical splitter for optical power levels at operating wavelength division multiplexing (WDM) optical wavelengths<br>4.5 Record connections, test results and park unused fibre leads for safety reasons according to organisational policy |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| 5. Clean up work site | 5.1 Replace all dust caps on internal enclosures and close FDH<br>5.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements<br>5.3 Notify appropriate personnel of job completion and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 2.1-2.4, 3.2-3.4, 4.1, 4.2, 4.5 | • Reads and interprets specifications and other documentation from a variety of sources and consolidates information to determine requirements |
| Writing | 1.2, 1.3, 3.5, 4.5, 5.3 | • Accurately completes relevant reports and documentation using clear and technically specific language and numerical data |
| Oral Communication | 1.2, 1.3, 5.3 | • Participates in verbal exchanges with key personnel using appropriate, clear and detailed language to exchange information, ideas or solutions<br>• Uses listening and questioning skills to confirm understanding of requirements |
| Numeracy | 3.2, 3.5, 4.4 | • Performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | 1.4, 2.1, 3.5, 4.5, 5.2 | • Complies with explicit policies and procedures<br>• Explores and implements where identified the implicit expectations of policies and procedures |
| Interact with others | 1.2, 1.3, 5.3 | • Identifies and takes steps to follow accepted communication practices and protocols<br>• Complies with work instructions and contributes to work group discussions using accepted conventions |
| Get the work done | 1.1, 1.4-1.7, 2.2-2.5, 3.1-3.5, 4.1-4.5, 5.1, 5.2 | • Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities<br>• Responds to predictable routine problems and implements standard or logical solutions<br>• Uses the main features and functions of digital tools |

# Assessment Requirements for ICTBWN302 Install optical fibre splitters in fibre distribution hubs

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- comply with all work health and safety (WHS) regulations, standards and work practices
- safely use optical power test equipment
- accurately measure optical signals at two wavelength division multiplexing (WDM) wavelengths
- correctly install splitter in the enclosure
- connect input and out optical fibres to the splitter
- test optical splitter
- complete connection recording.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the location and summarise the contents of relevant organisational policies and procedures
- discuss WHS risks and control measures when working with optical fibre and equipment
- explain propagation of light in optical communication systems
- outline the role of transmitters and receivers in optical communication systems
- identify and describe the critical aspects of cleaning of connectors
- summarise specific WHS requirements relating to the handling of optical fibre and the use of laser light sources
- explain WDM applications.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – broadband and wireless networks field of work and include access to:

- a fibre distribution hub and relevant optical splitter
- tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTBWN303 Install lead-in module and cable for fibre to the premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install a lead-in module and its associated cable for a fibre to the premises (FTTP) installation. Optical networks and FTTP are part of the strategies by service providers using wavelength division multiplexing (WDM) to deliver very high speed broadband capacity through the access network for the National Broadband Network (NBN) initiative.

It applies to individuals with specialist technical skills who work in teams to provide either underground or aerial services in next generation networks (NGN) using emerging technologies.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – broadband and wireless networks

## Elements and Performance Criteria

| Elements | Performance Criteria |

# Assessment Requirements for ICTBWN303 Install lead-in module and cable for fibre to the premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- safely use optical power test equipment
- accurately measure optical signals at TWO wavelength division multiplexing (WDM) wavelengths
- install lead-in module in the enclosure for both an aerial and an underground installation
- complete connection recording for both lead-ins
- perform and test an optical fibre lead-in to a distribution joint.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline licence requirements for working at heights
- identify the location and summarise the contents of relevant organisational policies and procedures
- discuss personal safety issues
- explain the propagation of light in optical communication systems
- describe the role of transmitters and receivers in optical communication systems
- identify the critical aspects of site engineering
- explain specific WHS requirements relating to the handling of optical fibre and the use of laser light sources
- explain WDM applications.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – broadband and wireless networks field of work and include access to:

- a fibre lead-in module, distribution pit, premises conduit and relevant optical network termination (ONT) unit
- tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTBWN304 Work safely with live fibre to test and commission a fibre to the x installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to work safely on a live optical fibre installation to test and commission a wavelength division multiplexing (WDM) system or connect a splitter for fibre to the x (FTTx) deployment.

It applies to individuals who engage in safe work practices as members of a team using emerging technologies to deliver very high speed broadband capacity through the access network for the National Broadband Network (NBN) initiative.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

ICTBWN305 Use optical and radio frequency measuring instruments

and

ICTWHS204 Follow work health and safety and environmental policy and procedures

## Unit Sector

Telecommunications – broadband and wireless networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements* | *Performance criteria describe the performance needed to demonstrate* |

© Commonwealth of Australia, 2025 Future Skills Organisation

| *describe the essential outcomes* | *achievement of the element.* |
|---|---|
| 1. Set up and prepare for working with live fibre | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Scope work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements<br>1.3 Notify appropriate personnel of identified safety hazards at worksite<br>1.4 Determine type of FTTx equipment, components of optical distribution network (ODN) and WDM components from project plan for testing and commissioning<br>1.5 Obtain tools and safety equipment and materials to perform tasks safely and efficiently<br>1.6 Select and use required protective equipment and make site safe and secure for commissioning work<br>1.7 Create safe working environment by following safe work practices and identifying optical fibre hazards that could cause injuries when handling optical fibres and laser based equipment |
| 2. Connect splitter input fibre to feeder cable | 2.1 Follow workplace health and safety (WHS) and environmental requirements for given work, and identify and avoid other services<br>2.2 Locate feeder fibre port to be connected<br>2.3 Determine state (live or not) of fibre port to be connected and notify transmitter to ensure that power is turned off at source if fibre port is live<br>2.4 Connect up connectorised splitter input fibres as instructed by manufacturer<br>2.5 Arrange for power to be turned back on to newly connected feeder port |
| 3. Perform live WDM commission testing of ODN installation used in FTTx network | 3.1 Locate appropriate test points in ODN from manufacturer’s instructions for WDM testing<br>3.2 Test live wavelengths for WDM tests following safety precautions<br>3.3 Test optical signal strengths for operating wavelengths incoming into optical network termination (ONT) and determine if signal strengths are within range of acceptable power levels<br>3.4 Test losses between WDM outputs and individual line multiplexers (LM) for each wavelength, and determine if within maximum and minimum power losses<br>3.5 Conduct all acceptance tests as specified by manufacturer<br>3.6 Record and tabulate all test results for commissioning requirements |

# Assessment Requirements for ICTBWN304 Work safely with live fibre to test and commission a fibre to the x installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- comply with all job requirements and work health and safety (WHS) regulations, standards and work practices
- use optical power test equipment
- evaluate test results
- safely connect input and output optical fibres to the splitter
- conduct live tests measuring optical signals at three wavelength division multiplexing (WDM) wavelengths on optical devices
- conduct acceptance tests for commissioning
- complete connection recording.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the location and summarise the contents of relevant organisational policies and procedures
- discuss personal safety issues
- outline the propagation of light in optical communication systems
- explain the role of transmitters and receivers in optical communication systems
- identify the critical aspects of site engineering
- describe the specific WHS risks and controls relating to the handling of optical fibre and the use of laser light sources
- describe WDM applications.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – broadband and wireless networks field of work and include access to:

- a WDM system and relevant optical splitter
- tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTBWN305 Use optical and radio frequency measuring instruments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to set up and use hand-held optical and radio frequency (RF) communications instruments to perform installations, upgrades and fault-finding on optical and RF equipment.

It applies to individuals who are able to combine technical skills with organisational and administrative skills. They often work as members of a team and communicate well with others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – broadband and wireless networks

## Elements and Performance Criteria

| Elements | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.2, 2.1, 2.2, 2.4 | • Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirements<br>• Interprets and consolidates test results and data from a range of sources, against defined requirements |
| Writing | 1.1, 1.6, 2.4, 3.1, 3.2 | • Accurately records and completes organisational documents and correspondence using clear language and correct spelling, grammar and terminology |
| Oral Communication | 1.1, 1.6, 3.2 | • Participates in verbal exchanges with key personnel using appropriate, clear and detailed language to exchange information, ideas or solutions<br>• Uses listening and questioning skills to confirm understanding of requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.4, 2.3 | • Performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | 2.1, 2.2, 2.5 | • Complies with explicit policies and procedures<br>• Explores and implements where identified the implicit expectations of policies and procedures |
| Interact with others | 1.1, 1.6, 3.2 | • Uses a limited range of accepted practices for communicating in a work environment<br>• Complies with work instructions and contributes to work group discussions using accepted conventions |
| Get the work done | 1.2-1.6, 2.2-2.5, 3.1 | • Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities<br>• Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates the effectiveness of the outcome<br>• Uses the main features and functions of digital tools to complete work tasks and access information |

# Range of Conditions

*This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) should be included.*

| | |
|---|---|
| Type of measurement must include: | • optical measurement:<br>  • detecting the presence of an active optical network terminal (ONT)<br>  • determining absolute optical power (in dBm)<br>  • determining insertion loss (in dB)<br>  • determining relative optical power level (in dB)<br>• RF measurement:<br>  • determining absolute RF power (in dBm)<br>  • determining relative RF power level (in dB)<br>  • determining relative RF voltage (in dBmV). |
| Instruments must include: | • hand-held optical power meter<br>• hand-held optical source<br>• handheld optical fiber identifier (OFI-FTTx) active optical network termination (ONT) detector<br>• operate optical loss test set (OLTS) |

# Assessment Requirements for ICTBWN305 Use optical and radio frequency measuring instruments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- comply with all job requirements and work health and safety (WHS) regulations, standards and work practices
- check and calibrate tools and instruments
- perform optical measurements using hand-held instrument
- perform radio frequency (RF) measurements using hand-held instrument
- operate the following equipment:
  - hand-held optical power meter
  - hand-held optical source
  - passive optical network (PON) meter
  - radio frequency (RF) signal level meter (SLM)
- perform the following optical measurements:
  - detect the presence of an active optical network terminal (ONT)
  - determine absolute optical power (in dBm)
  - determine insertion loss (in dB)
  - determine relative optical power level (in dB)
- perform the following RF measurements:
  - determine absolute RF power (in dBm)
  - determine relative RF power level (in dB)
  - determine relative RF voltage (in dBmV).

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe the various instruments used in measuring RF and optical frequencies
- list the types of measurements and their respective interpretation for optical and RF frequencies
- explain the consequences of mating contaminated optical connectors
- correctly record and discuss data using the units decibels, dBm and dBmV
- discuss the variations between optical and RF connector types
- identify and describe the WHS hazards and risks, and describe controls when working with RF frequency measuring equipment
- outline RF spectrum and optical spectrum limits and allocations
- discuss safe handling procedures with optical fibres.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – broadband and wireless networks field of work and include access to:

- a site where measuring instruments can be used
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL201 Install customer cable support systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install support systems for cable infrastructure for new installations or upgrades, or maintain existing networks in domestic, commercial and industrial installations.

It applies to individuals who work in technical roles planning cable routes and selecting and installing support structures for communications applications including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare cable support installation | 1.1 Arrange access to site according to customer requirements, required procedures, site security arrangements and relevant legislation, codes, regulations and standards<br>1.2 Confirm site capacities for storage and location of cable feeders or |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | establish alternative methods<br>1.3 Determine customer specifications, and manufacturer and enterprise requirements for cable support<br>1.4 Notify appropriate personnel of identified safety hazards at cabling worksite<br>1.5 Plan cable route identifying and avoiding other services, and remote power feeding services operating at above telecommunications network voltage (TNV) on site in commercial buildings<br>1.6 Select tools and materials for installation of support system from work specifications and schedules |
| 2. Determine cable routes | 2.1 Review relevant plans and verify cable locations<br>2.2 Select cable routes appropriate to location of building services, providing access to all outlets and enabling cable to be supported to outlet point<br>2.3 Plan safe and efficient installation by accurate identification of structural building requirements and identified site constraints<br>2.4 Identify cable and services segregation clearances to ensure cable route complies with manufacturer, enterprise, legislative and industry codes of practice |
| 3. Determine support method | 3.1 Select appropriate support system for planned cable route and identified site constraints<br>3.2 Prepare support system for capability to meet planned concentration of cable in any location to facilitate ready access for maintenance and allow for future expansion |
| 4. Mark out and install fixings and support structure | 4.1 Mark out and install fixings and structures securely in safe manner to manufacturer’s specifications, ensuring cable weight can be supported in all operating conditions<br>4.2 Align support structure correctly to enable cable to be installed evenly, in order and without damage<br>4.3 Install protective earthing to industry standards<br>4.4 Conduct work with minimal disruption to ongoing customer activity |
| 5. Complete support installation | 5.1 Check and adjust installed supports to ensure cable will not be exposed to damage during installation and operation<br>5.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 5.3 Complete documentation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.4 | • Interprets textual information from relevant sources to identify relevant and key information |
| Writing | 1.4, 5.3 | • Uses clear, specific and industry-related terminology to complete workplace documentation |
| Oral Communication | 1.4 | • Uses clear language and concepts, and tone and pace appropriate for the audience and purpose |
| Numeracy | 1.2, 1.3, 1.5 | • Takes readings and measurements and interprets results |
| Navigate the world of work | 1.1, 1.4, 2.3, 2.4, 4.1, 4.3, 5.2 | • Complies with explicit policies, procedures and legislative requirements relevant to own role |
| Interact with others | 1.1, 1.4 | • Identifies and follows accepted communication practices and protocols when liaising with internal and external personnel on technical and operational matters |
| Get the work done | 1.1-1.6, 2.2, 3.1, 3.2, 4.1-4.4, 5.1, 5.2 | • Determines job sequence and works logically and systematically to undertake clearly defined tasks<br>• Analyses task requirements to decide on appropriate equipment and practices<br>• Selects and uses appropriate tools and equipment to perform tasks |

# Assessment Requirements for ICTCBL201 Install customer cable support systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan a cable route and cable support system
- interpret plans and schematic drawings to verify cable layout
- install three different support structures:
  - catenary wire
  - ducts and/or trays
  - frame back-mounts
- complete cable support installation, applying relevant regulations, standards and work practices
- comply with all related work health and safety (WHS) requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise building construction methods of commercial buildings as they relate to routing cables
- describe features and operating requirements of cable installation equipment
- identify other services that may impact on cable installations
- describe cable installation support methods and their performance features
- outline legislation, codes of practice and other formal agreements that impact on the work activity
- discuss typical safety issues and challenges that occur on a commercial installation site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where customer cable support systems may be installed
- equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

# ICTCBL202 Place and secure customer cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install customer cable infrastructure. It involves selecting cable route, setting up cable dispensers and placing and securing cable.

It applies to individuals who work in technical roles and who may be required to do new installations, upgrades or maintain existing networks in domestic, commercial and industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for task and identify cable route | 1.1 Arrange access to site according to customer instructions, required procedures, site security arrangements and relevant legislation, codes, regulations and standards<br>1.2 Notify appropriate personnel of identified safety hazards at cabling |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | worksite<br>1.3 Plan cable route, identifying and avoiding other services and remote power feeding services operating at above telecommunications network voltage (TNV) on site in commercial buildings<br>1.4 Select cable route to maintain required clearances and segregations according to cable plan and complying with relevant industry standards<br>1.5 Confirm cable route and requirements with customer<br>1.6 Select tools, equipment and cables for installation of support system from work specifications and schedules |
| 2. Set up cable dispensers | 2.1 Determine feeder locations to minimise wastage of cable and efficiency<br>2.2 Set up feeders in locations to provide ease of access during hauling of cable<br>2.3 Secure feeder locations to minimise safety risks during installation<br>2.4 Label hauling end of cable with unique identifier prior to placement |
| 3. Place and secure cable | 3.1 Haul and place cable in safe manner within clearances required by industry standards, and manufacturer and work specifications<br>3.2 Place cable in neat, orderly and methodical manner, allowing sufficient excess at cable ends to facilitate termination<br>3.3 Inspect cable to maintain separations to comply with regulations<br>3.4 Install barriers to achieve separations where sufficient spatial separation cannot be met with other services<br>3.5 Install and trim securing anchors promptly to restrain cable movement to manufacturer’s specifications |
| 4. Complete cable installation | 4.1 Update records and cable plans promptly and accurately<br>4.2 Store records and plans according to customer and company requirements<br>4.3 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions |

# Assessment Requirements for ICTCBL202 Place and secure customer cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan cable placement and discuss the installation requirements with appropriate personnel
- organise tools, equipment and materials for cable installation according to specifications
- set up cable dispensers for internal or external premises structures or aerial and underground cabling between premises
- haul and install cables on support structures and building faces for both internal and external locations, applying relevant regulations and standards
- install securing methods for above locations
- complete records and relevant statutory forms
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise building construction of commercial buildings
- examine cable and services segregation clearances to ensure cable route complies with manufacturer, enterprise, legislative and industry codes of practice
- describe features and operating requirements of equipment
- indicate the information required to operate appropriate equipment according to specifications
- explain installation methods and performance requirements
- outline legislation, codes of practice and other formal agreements that impact on cable installation
- state manufacturer’s requirements for safe operation of equipment
- describe the common methods of hauling cable

© Commonwealth of Australia, 2025 Future Skills Organisation

- discuss typical damage that can occur to cable when it is hauled incorrectly
- discuss specific WHS requirements relating to the activity and site conditions
- discuss typical safety issues and challenges that occur on cable installation sites.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where placing and securing customer cable may be conducted
- equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

# ICTCBL203 Terminate metallic conductor customer cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to terminate metallic conductor cable or join cable in a terminating block for a new cable installation or upgrade of cable capacity for an existing network or subsystem, or cabling infrastructure for convergence to next generation networks (NGN).

It applies to individuals who work in technical roles carrying out indoor and outdoor, domestic, commercial or industrial installations for all communications applications, digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare cable termination | 1.1 Arrange access according to customer and individual worksite requirements<br>1.2 Prepare for cable terminating work within regulatory environment, cabling environment, cable type, cable identification, termination |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | systems, earthing and protection, records and relevant legislation, codes, regulations and standards<br><br>1.3 Select correct termination for installation according to strategies to manage infrastructure and relevant legislation, codes, regulations and standards<br><br>1.4 Notify appropriate personnel of identified safety hazards at cabling worksite<br><br>1.5 Identify remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises, and risks posed by contact with remote power feed<br><br>1.6 Remove all contaminants from worksite that may adversely affect termination and prepare worksite to ensure adequate visibility to minimise errors and reduce eye strain<br><br>1.7 Design cable and block location within frame with capacity for expansion where possible<br><br>1.8 Segregate incoming and outgoing cables for ease of access and to minimise overlaying and backtracking of cable |
| 2. Terminate cable | 2.1 Remove cable sheath to allow for conductor length and installation requirements<br><br>2.2 Fan out cable pair groups to manufacturer's coding system to ensure correct terminating sequence and unique identification where appropriate<br><br>2.3 Install over-voltage protection devices to all cables with metallic component where required<br><br>2.4 Install terminating modules to frame according to manufacturer's specifications<br><br>2.5 Fan cable pairs neatly to termination equipment to facilitate accurate termination<br><br>2.6 Terminate cable following work health and safety (WHS) and environmental requirements to manufacturer's specifications using correct tool<br><br>2.7 Earth cable shield to manufacturer's specifications and industry standards |
| 3. Test termination | 3.1 Conduct visual inspection to confirm that termination colour code sequence has been followed<br><br>3.2 Test termination to satisfy performance specifications and record results if required |
| 4. Complete records and | 4.1 Label cable pairs clearly to provide an accurate identification |

# Assessment Requirements for ICTCBL203 Terminate metallic conductor customer cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan and prepare for cable termination activity
- terminate systems at both distributor and outlet locations
- terminate one jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater and one non-jumperable distributor (local distributor) and a patch panel
- terminate at least one 50 pair, one 4 pair ethernet unshielded twisted pair (UTP) data cable and one ethernet shielded twisted pair (STP) data cable, including accurate completion of installation records, drawing alterations and compliance forms
- use correct methods to terminate a range of cables
- conduct and interpret cable test results on a minimum of three different lead-in faults
- interpret and apply relevant legislation, codes, regulations and standards
- update records and plans to show cable locations
- comply with all related workplace health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features and operating requirements of testing
- explain how to operate termination tools to manufacturer's guidelines
- outline legislation, codes of practice and other formal agreements that impact on the work activity
- describe how to install and maintain cabling products to manufacturer's guidelines
- discuss specific WHS requirements relating to the activity and site conditions

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain termination methods and performance requirements
- discuss typical issues and challenges that occur on site.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where metallic conductor cable may be terminated
- colour codes for visual inspections or wire-mappers for 4 pair cable tests
- relevant regulatory and cabling documentation that impacts on cable terminating activities.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

# ICTCBL204 Install functional and protective telecommunications earthing system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install telecommunications earthing system to metallic frames, which includes digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to telecommunications technicians and field officers who install indoor or outdoor earthing systems for domestic, small office home office (SOHO), commercial or industrial installations in multi-storey and multi-site locations within a client's premises.

Licensing, legislative, regulatory and certification requirements apply to telecommunications earthing systems. All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install telecommunications earthing system | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards<br>1.2 Arrange access according to client and individual site |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | requirements<br>1.3 Select earth wire for purpose intended according to specifications or current Australian Standards<br>1.4 Establish location of earthing applications, minimising risks posed by contact with remote power feeding services<br>1.5 Select route to minimise interference to system performance and according to safe working practices<br>1.6 Select earthing materials to comply with relevant industry standards |
| 2. Install and secure earth cable | 2.1 Maintain cable separations to meet performance requirements of application environment<br>2.2 Check earth cable insulation is undamaged to ensure integrity of earth provided<br>2.3 Isolate protective earth (PE), functional earth and telecommunication reference conductors (TRC) at all times to ensure operation according to industry standards<br>2.4 Install and secure cable following work health and safety (WHS) and environmental requirements, meeting manufacturer's specifications and industry standards |
| 3. Terminate and test earth cable installation | 3.1 Terminate earth with connectors recommended by manufacturer and according to industry standards<br>3.2 Maintain earth continuity at all times to ensure safe and reliable system operation<br>3.3 Maintain correct interface requirements with electrical systems according to industry standards<br>3.4 Test earthing system according to manufacturer's specifications in safe manner<br>3.5 Rectify earth system faults, where required, prior to re-testing |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1, 3.4, 4.2 | • Recognises when unknown words are essential to meaning and uses a range of decoding strategies to identify them<br>• Recognises the structures and distinguishing features of a range of text types |
| Writing | 1.2, 4.1-4.2 | • Produces a range of text types (familiar and some unfamiliar) with appropriate structures |
| Oral Communication | 1.2, 4.4 | • Demonstrates awareness of choices for register, especially in situations that are familiar |
| Navigate the world of work | 1.1-1.2, 1.4-1.6, 2.1, 2.3-2.4, 3.1, 3.3 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others<br>• Recognises and follows explicit and implicit protocols and meets expectations associated with own role |
| Get the work done | 1.1-1.2, 1.4-1.6, 2.2, 3.4-3.5, 4.3 | • Automatically implements standard procedures for routine decisions<br>• Initiates standard procedures when responding to familiar problems within immediate context |

# Assessment Requirements for ICTCBL204 Install functional and protective telecommunications earthing system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- evaluate earthing needs for cable systems on client premises
- determine potential earthing locations
- determine earth route and support system
- install earth to a backmount, rack or enclosure
- test the earth installation
- label and document the installation
- manage remote power feed services
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the current Australian Communications and Media Authority (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules, legislation, codes of practice and other formal agreements that impact on the work activity
- describe the features and operating requirements of test equipment
- describe the information required to operate equipment according to a test specification
- describe the types of location in which installations may be required
- identify manufacturer‘s requirements for safe operation of equipment
- identify the applicable Commonwealth, state and territory legislation, regulations, standards, codes of practice and industry standards and guidance notes relevant to WHS, own workplace, work role and responsibilities, the activity and site conditions
- outline the differences between the Commonwealth, state and territory WHS legislation and regulations

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe test methods and performance requirements
- identify typical issues and challenges that occur on site
- describe electrical earthing applications including electrical bonding and equipotential bonding
- define earth systems with functionality including elimination of interference from electromagnetic, radio frequency (RF) and power sources, and reduce interference from electromagnetic RF and power sources.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- special purpose tools, equipment and materials
- a relevant telecommunications earthing system
- cable plans and records.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

# ICTCBL205 Joint metallic conductor cable on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to joint metallic conductor cable.

It applies to individuals who work in technical roles completing tasks on customer premises in underground situations, pits, jointing enclosures or above ground.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1 Prepare for jointing | 1.1 Arrange access to site according to required procedures<br>1.2 Inform appropriate personnel of identified hazards on worksite<br>1.3 Organise tools, equipment and materials for given work<br>1.4 Review site plans and documentation<br>1.5 Select cable type and requirements for cable joint |
| 2 Joint cable and test | 2.1 Joint metallic cable following work health and safety (WHS) and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| joint | environmental requirements and complying with manufacturer's requirements and relevant industry standards<br>2.2 Perform relevant cable tests to ensure joint complies with site specifications, manufacturer's specifications and relevant legislation, codes, regulations and standards<br>2.3 Rectify any cable faults<br>2.4 Make visual inspection of joint to confirm soundness and completeness |
| 3 Complete records and clean up site | 3.1 Complete required records and notify customer<br>3.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions<br>3.3 Reinstate site according to customer and company requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.4, 2.2 | • Interprets textual information from relevant sources to identify relevant and key information |
| Writing | 3.1 | • Uses clear, specific and industry related terminology to complete workplace documentation |
| Numeracy | 1.3, 2.2 | • Takes readings and measurements and interprets results |
| Navigate the world of work | 1.1, 2.1, 2.2, 3.2 | • Complies with explicit policies, procedures and legislative requirements relevant to own role |
| Interact with others | 1.2, 3.1 | • Identifies and follows accepted communication practices and protocols when liaising with internal and external personnel on technical and operational matters |
| Get the work done | 1.3, 1.5, 2.1-2.4, 3.3 | • Determines job sequence and works logically and systematically to undertake clearly defined tasks<br>• Analyses task requirements to decide on appropriate equipment and practices |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTCBL205 Joint metallic conductor cable on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- organise resources and prepare for the task of jointing
- joint at least one 20 pair (or greater) cable
- test joint
- interpret test results
- rectify cable faults
- check that the enclosure is properly sealed
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the current Australian Communications and Media Authority (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules, legislation, codes of practice and other formal agreements that impact on the work activity
- describe features and operating requirements of test equipment
- indicate information required to operate equipment according to a test specification
- outline manufacturer’s requirements for safe operation of equipment
- discuss specific WHS requirements relating to the activity and site conditions
- explain test methods and performance requirements
- discuss typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where jointing metallic conductor cable may be conducted
- use of joint testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable jointing and testing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL206 Alter services to existing cable system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes skills and knowledge required to alter existing services to a voice or data cable system within a client's premises and use formal documentation procedures.

It applies to technical staff who alter services to existing cable systems for indoor and outdoor installation within domestic, commercial or industrial installations of communications applications including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to alter services to existing cable system | 1.1 Arrange access to site according to client instructions and required procedures<br>1.2 Survey site to determine system alteration requirements to existing cable system<br>1.3 Inform appropriate personnel of identified hazards on worksite |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Organise equipment and materials to meet required industry standards and ensure compatibility with existing system |
| 2. Alter cable system | 2.1 Follow work health and safety (WHS) and environmental requirements for given work and according to industry standards<br>2.2 Alter cabling system, conforming to client system specifications and according to industry standards and relevant legislation, codes, regulations and standards |
| 3. Restore and test cable system | 3.1 Confirm compatibility of alterations with existing cabling systems and client equipment<br>3.2 Test new work in isolation and when integrated with existing cabling systems and client equipment<br>3.3 Rectify any cabling faults or escalate client equipment faults to authorised person |
| 4. Complete records and clean up site | 4.1 Update plans and documents to show revised cabling systems accurately and clearly, or create new plans as appropriate<br>4.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions<br>4.3 Reinstate site according to client and company requirements<br>4.4 Complete requisite Telecommunications Advice Form and sign off with client to record satisfaction |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1-2.2, 4.4 | • Recognises when unknown words are essential to meaning and uses a range of decoding strategies to identify them |
| Writing | 4.1, 4.4 | • Uses a legible handwriting style or a computer font appropriate to the audience and purpose |
| Oral Communication | 1.1,1.3 | • Demonstrates awareness of choices for register, especially in situations that are familiar |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.1, 1.4, 2.1-2.2, 4.2, 4.3 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others<br>• Recognises and follows explicit and implicit protocols and meets expectations associated with own role |
| Get the work done | 1.2, 1.4, 3.1-3.3 | • Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected terms<br>• Automatically implements standard procedures for routine decisions |

# Assessment Requirements for ICTCBL206 Alter services to existing cable system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine alteration requirements and document specifications and cable plan
- alter, restore and test cable system according to industry standards
- rectify cable faults
- complete documentation to industry and company standards
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the relevance of Australian Communications and Media Authority (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules
- identify the relevant legislation, codes of practice and other formal agreements that impact on the work activity
- describe the features and operating requirements of test equipment
- describe the information required to operate equipment according to a test specification
- identify manufacturer’s requirements for safe operation of equipment
- identify specific WHS requirements relating to the activity and site conditions, test methods and performance requirements
- describe test methods and performance requirements
- describe typical cable systems
- list the common types of alterations that can be expected for existing cable systems
- identify typical issues, hazards, access difficulties and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- special purpose tools, equipment and materials
- testing equipment currently used in industry
- regulatory and equipment documentation that impacts on alteration activities.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL207 Haul underground cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to haul underground cable for maintenance, new installations or upgrades in access networks or client premises.

It applies to individuals who work in technical roles involving installation and recovery of cables, including multi-pair, coaxial and optical fibre for domestic, commercial or industrial situations.

All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1 Prepare for safe underground cable hauling | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards<br>1.2 Arrange access to site according to required procedure<br>1.3 Inform appropriate personnel of identified hazards on worksite<br>1.4 Confirm hauling location of proposed cable according to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | appropriate plan specifications obtained from authorised personnel<br>1.5 Obtain information on proposed locations of other services from relevant authorities<br>1.6 Set up tools and equipment required for safe work practice according to enterprise guidelines<br>1.7 Check for dangerous gases and place guards around open manholes following work health and safety (WHS) and environmental requirements |
| 2 Haul cable | 2.1 Handle existing cables in manner that avoids cable damage<br>2.2 Use roping techniques to prove that conduit is clear for hauling<br>2.3 Attach cable to rope and haul cable into and out of pits and manholes, ensuring no sheath damage<br>2.4 Lubricate cable and haul at correct tension, maintaining smooth passage between dispenser and hauler<br>2.5 Maintain cable and services separations in parallel runs and crossovers to meet manufacturer's and regulation requirements<br>2.6 Maintain sufficient cable length allowance for jointing and ensure cable is laid up and bent within bending radius tolerance for cable materials in underground enclosure<br>2.7 Seal cables according to enterprise requirements to ensure no sheath damage<br>2.8 Tag cable for future identification |
| 3 Complete works on site | 3.1 Record any approved alteration to original design using correct symbols and return to appropriate personnel<br>3.2 Complete and sign reports, where required, according to enterprise policy<br>3.3 Reinstate site to client's satisfaction and dispose of wastes in environmentally safe manner<br>3.4 Notify appropriate personnel and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance | Description |
|---|---|---|

# Assessment Requirements for ICTCBL207 Haul underground cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- haul cable applying related work health and safety (WHS) requirements and work practices
- use cable dispensing equipment
- use specialised hand or power tools and equipment for hauling cable safely
- read and interpret drawings.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the relevance of Australian Communications and Media Authority (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules
- describe features and operating requirements of test equipment
- list information required to operate equipment according to a test specification
- outline legislation, codes of practice and other formal agreements that impact on the work activity
- state manufacturer’s recommendations for correct hauling of optical fibre cables
- clarify safety precautions when working with laser based systems
- discuss specific WHS requirements relating to the activity and site conditions
- explain test methods and performance requirements
- discuss typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where installation of underground cable may be conducted
- installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to splice and terminate optical fibre cable within an optical telecommunications transmission environment for new installations or upgrades of an optical backbone or access network, to achieve greater bandwidth and capacity required by emerging technology convergence for next generation networks (NGN).

It applies to technical staff who splice and terminate optical fibre cable for telecommunications projects for commercial or industrial fibre to the premises (FTTP) non-mechanical splicing installations.

All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for splicing | 1.1 Select safety equipment to protect self and public according to enterprise guidelines and work health and safety (WHS) practices<br>1.2 Confirm layout of installation according to physical conditions at site and relevant legislation, codes, regulations and standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Inform appropriate personnel of identified hazards on worksite<br>1.4 Locate other services from relevant authorities according to enterprise guidelines and safe practices<br>1.5 Test for dangerous gases and place guards around open manholes following WHS and environmental requirements<br>1.6 Obtain approval for alterations to design according to enterprise guidelines |
| 2. Check existing optical fibre cable | 2.1 Verify that cable was installed according to installation plan and visually inspect cable for signs of sheath damage<br>2.2 Maintain minimum bend ratios according to manufacturer's specifications to prevent cable damage and signal degradation<br>2.3 Secure cable according to safe industry practice to avoid cable and sheath damage |
| 3. Splice optical fibre cable | 3.1 Verify fibre is not live using appropriate equipment to maintain safe working practice and ensure correct fibre has been identified<br>3.2 Prepare cable end to expose optical fibres according to splicing method and manufacturer's specifications<br>3.3 Prepare and splice fibres using safe industry practice according to enterprise specifications<br>3.4 Test splice joint to manufacturer's and design requirements |
| 4. Terminate optical fibre cable | 4.1 Select connector unit to suit terminating frame according to design specifications<br>4.2 Terminate cable using type of termination specified in plan and according to manufacturer's specifications<br>4.3 Test termination for transmission loss and strength, and re-terminate if transmission loss exceeds manufacturer's specifications<br>4.4 Install protection devices on connectors to protect from exposure and contaminants<br>4.5 Label and lay up cables in enclosure according to manufacturer's instructions and enterprise guidelines |
| 5. Finish job and report | 5.1 Remove waste and reinstate site according to enterprise guidelines<br>5.2 Prepare reports, including test results and alterations to plans, according to enterprise policy<br>5.3 Notify appropriate personnel of work completion and obtain sign off |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.1, 2.2, 3.2, 3.4, 4.1, 4.2, 4.5, 5.2, 5.3 | • Understands familiar texts of limited complexity that may incorporate graphs, tables and charts<br>• Recognises the structures and distinguishing features of a range of familiar text types |
| Writing | 1.3, 1.4, 1.6, 5.2, 5.3 | • Interrelates ideas and information and some support material when writing about familiar topics |
| Oral Communication | 1.3, 1.4, 1.6, 5.3 | • Demonstrates an awareness of the need to vary structure, style, tone and vocabulary to meet the requirements of the audience, context and purpose |
| Numeracy | 2.2 | • Interprets and comprehends whole numbers and familiar or routine fractions, decimals and percentages |
| Navigate the world of work | 1.1, 1.5, 2.1, 2.3, 3.1-3.4, 4.1-4.3, 4.5, 5.1-5.3 | • Takes responsibility for decisions about when and how to complete tasks and coordinate with others<br>• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others |
| Get the work done | 1.5, 1.6, 2.2, 3.1, 3.3, 3.4, 4.1-4.5, 5.1 | • Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Initiates standard procedures when responding to familiar problems within immediate context |

# Assessment Requirements for ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- splice, terminate and test optical fibre cable, applying safety precautions when working with laser based systems
- splice at least 12 fibres and house in industry recognised enclosures according to manufacturer's instructions
- install a mechanical splice connector (fast or quick connector)
- install a pigtail that is fusion spliced to the cable fibre
- complete relevant documentation to manufacturer's and design requirements
- provide report documenting the installation and test results to client
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify causes of signal strength loss in optical fibre
- identify colour coding of fibres
- summarise relevant safety standards applicable to the operation of laser products
- describe the features and operating requirements of test equipment for optical fibre cable
- identify industry and organisational policies and procedures when splicing optical fibre cable
- describe the information required to operate equipment according to a test specification
- identify optical fibre equipment and summarise the manufacturer's requirement for safe operation
- describe the safety precautions when working with laser based systems

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify specific WHS requirements relating to the activity and site conditions, including hazardous gases
- discuss techniques for types of termination including:
  - direct termination
  - fusion splicing
- describe test methods and performance requirements
- identify types of optical cable
- state the relevant authorities that may be involved in optical fibre installations.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- special purpose tools, equipment and materials
- sites where splicing and termination of optical fibre cable may be conducted
- optical fibre testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on optical fibre cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL209 Joint and terminate coaxial cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install, joint and terminate coaxial cable in the customer access network (CAN) environment for emerging technologies using high speed broadband and the delivery of cable television services on a client's premises for domestic, commercial or industrial installations.

It applies to technical staff whose work involves jointing and terminating coaxial cable used in all telecommunications applications, including convergence technologies of telephony, data, video and multimedia as part of next generation networks (NGN).

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install and joint coaxial cable | 1.1 Confirm approval for site access with client prior to site entry and comply with site security arrangements and relevant legislation, codes, regulations and standards<br>1.2 Read and interpret client’s installation specifications and physical |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | conditions at site to determine layout of job<br>1.3 Locate and identify adjoining other services according to enterprise guidelines and work health and safety (WHS) practices<br>1.4 Test for and respond to presence of dangerous gases in underground enclosures according to enterprise guidelines<br>1.5 Undertake approved alterations to design according to enterprise guidelines |
| 2. Verify placement and secure coaxial cable | 2.1 Use safety equipment to protect self and public according to enterprise guidelines and WHS<br>2.2 Maintain coaxial cable segregation to industry standard requirements<br>2.3 Protect integrity of coaxial shield cable to ensure no loss of performance<br>2.4 Place cable in position with sufficient slack to allow termination and maintain minimum bend radius according to manufacturer's specifications<br>2.5 Follow installation designs to install cable safely without damage to cable or client's premises<br>2.6 Maintain radio frequency (RF) signal strength by installing cable lengths within manufacturer's or design specifications<br>2.7 Locate securing hardware to reduce cumulative effect on cable wave shape properties and attach cable ties to minimise cable damage |
| 3. Joint coaxial cable | 3.1 Strip coaxial cable according to specifications to required length using appropriate tools<br>3.2 Select appropriate kit to match type of coaxial cable in use and jointing method according to manufacturer's recommendations<br>3.3 Joint cable and ensure jointing fitting retains segregation of conductor and shield<br>3.4 Seal all joints according to manufacturer's specifications |
| 4. Terminate coaxial cable | 4.1 Prepare coaxial cable for termination according to specifications using appropriate tool<br>4.2 Select connectors to match type of coaxial cable in use and use terminating method recommended by manufacturer<br>4.3 Verify connector fitting retains segregation of conductor and shield<br>4.4 Terminate connectors to torque as recommended by manufacturer to prevent RF leakage |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 4.5 Test connectors to mating specifications using gauge tester<br>4.6 Maintain continuous ground on terminations and waterproof seal to preserve cable integrity |
| 5. Complete installation operation | 5.1 Place cables in enclosure and lay up according to manufacturer's instructions and enterprise guidelines, and check that no safety hazards are evident<br>5.2 Place other services according to enterprise guidelines<br>5.3 Reinstate site and remove waste and debris for disposal according to environmental requirements and to maintain safe worksite conditions |
| 6. Complete installation administration | 6.1 Complete reports according to enterprise policy<br>6.2 Note alterations to plans using appropriate symbols |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2-1.5, 2.5, 2.6, 3.2, 3.4, 4.2, 4.4, 6.1, 6.2 | • Reads familiar texts fluently, automatically recognising most everyday words and some specialised vocabulary |
| Writing | 1.5, 6.1, 6.2 | • Sequences writing to produce cohesive text and uses layout consistent with text type |
| Oral Communication | 1.1 | • Demonstrates awareness of choices for register, especially in situations that are familiar |
| Numeracy | 1.5, 2.4, 2.5, 3.1, 4.4, 4.5 | • Interprets and comprehends whole numbers and familiar or routine fractions, decimals and percentages<br>• Selects and uses appropriate tools, hand-held devices, computers and technological processes |
| Navigate the world of work | 1.1, 1.3-1.5, 2.1, 2.2, 2.4, 2.7, 4.5, 5.1, 5.3, 6.1 | • Takes responsibility for decisions regarding when and how to complete tasks, and coordinate with or delegate to others<br>• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | own work context, and draws attention to any issues that may affect self or others |
| Get the work done | 1.3-1.5, 2.2-2.6, 3.1-3.4, 4.1, 4.2, 4.4, 4.6, 5.2 | • Implements actions as per plan, makes slight adjustments if necessary, and addresses unexpected issues<br>• Automatically implements standard procedures for routine decisions |

# Assessment Requirements for ICTCBL209 Joint and terminate coaxial cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine installation requirements, and check and prepare the site ready for coaxial cable installation
- demonstrate joint and termination of coaxial cable using specialised hand or power tools and equipment
- apply related work health and safety (WHS) requirements and work practices
- conduct signal strength tests and interpret results
- finalise cable activities and reinstate the site
- document work according to enterprise requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the range of coaxial cables and connectors and their application
- identify information required to operate equipment according to a test specification
- describe the features and operating requirements of test equipment
- identify the manufacturer’s requirements for safe operation of equipment
- discuss test methods and performance requirements
- describe typical issues and challenges that occur on site
- identify specific WHS requirements relating to the activity and site conditions, including site security
- describe the impact that other services may have on the installation work
- identify and describe the operation of tools relevant to working with coaxial cable

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify relevant legislation, codes of practice and other formal agreements and contracts that impact on the work activity.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to special purpose tools, equipment and materials. These include access to:

- sites where jointing coaxial broadband cable may be conducted
- joint testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable jointing and testing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL210 Install a telecommunications service to a building

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install a telecommunications service to a building to provide a new service or a service upgrade.

It applies to individuals who work in technical roles that require bringing a telecommunications service from the broader network to a client's premises using metallic or optical cable or wireless connection.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare service installation | 1.1 Arrange access to site with client and obtain job specifications<br>1.2 Notify supervisor of identified safety hazards at worksite according to work health and safety (WHS) and environmental requirements<br>1.3 Use installation specifications to determine type of services, network cables and equipment required for installation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Select cables and equipment that comply with functionality and compatibility of existing installation<br>1.5 Select and obtain tools and equipment to carry out installation activity |
| 2. Install cable and equipment to building | 2.1 Locate, connect and check cables at entry into network for transmission quality and continuity where service to building exists<br>2.2 Install cable and equipment, and seal cable entry to building in safe manner according to installation plans and Australian Communications and Media Authority (ACMA) standards<br>2.3 Test overall functionality of new service to meet installation specifications<br>2.4 Rectify faults if required and minimise interruption to existing service in agreement with client<br>2.5 Install lightning protection, where required, according to enterprise guidelines and industry practice |
| 3. Complete records and clean up site | 3.1 Label cable pairs clearly to provide accurate identification according to manufacturer's, industry and client standards<br>3.2 Update records and plans with installation details to provide accurate record according to industry codes of practice and current Australian Standards<br>3.3 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions<br>3.4 Complete Telecommunications Cabling Advice (TCA) forms and present to client to obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 2.3 | • Interprets textual information from relevant sources to identify relevant and key information |
| Writing | 1.2, 3.1, 3.2, 3.4 | • Uses clear, specific and industry related terminology to complete workplace documentation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral Communication | 1.1 | • Articulates clearly using appropriate language for the environment<br>• Uses listening and questioning techniques to confirm understanding |
| Numeracy | 2.3 | • Takes readings and measurements and interprets results |
| Navigate the world of work | 1.2, 1.3, 2.2, 2.5, 3.1-3.4 | • Complies with explicit policies, procedures and legislative requirements relevant to own role |
| Interact with others | 1.2, 2.4, 3.4 | • Identifies and follows accepted communication practices and protocols when liaising with clients, internal and external personnel on technical and operational matters |
| Get the work done | 1.1-1.5, 2.1, 2.2, 2.5, 3.1 | • Determines job sequence and works logically and systematically to undertake clearly defined tasks<br>• Analyses task requirements to decide on appropriate equipment and practices<br>• Applies standard diagnostic practices to identify and rectify faults |

# Assessment Requirements for ICTCBL210 Install a telecommunications service to a building

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare and install cable and equipment to a building complying with Australian Communications and Media Authority (ACMA), enterprise and government regulations
- conduct tests related to transmission quality and continuity of cables at network entry point
- label and document installation work, complying with industry codes of practice
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list information required to operate equipment according to a test specification
- describe features and operating requirements of test equipment
- outline legislation, codes of practice and other formal agreements that impact on the work activity
- summarise manufacturer's requirements for safe operation of equipment
- discuss WHS requirements and work practices associated with cable provision, including:
  - adequate warning signs
  - protective clothing and personal safety items
  - safety devices
- explain test methods and performance requirements
- discuss typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where telecommunications services may be installed
- installation and testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL211 Install an above ground equipment enclosure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the, skills and knowledge required to plan, build, install and earth an equipment enclosure for cabling provisioning on or above the ground.

It applies to individuals who work in technical roles in civil construction including the installation of enclosures such as pillars, cabinets, remote integrated multiplexers (RIM) and mobile equipment enclosures for new or upgrade network installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to construct and install enclosure | 1.1 Obtain construction plan from appropriate personnel to scope work and arrange for site access<br>1.2 Notify appropriate personnel of identified safety hazards and other services at worksite<br>1.3 Obtain plant, tools, safety equipment and material to perform tasks safely and efficiently<br>1.4 Determine location and type of above ground enclosure specified |

# Assessment Requirements for ICTCBL211 Install an above ground equipment enclosure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare to install an enclosure using construction plans
- use appropriate tools and equipment to construct and connect an enclosure according to plans, specifications, and work health and safety (WHS) requirements
- complete reports and document alterations to plans as appropriate.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list the plant, tools and equipment required for construction
- describe enclosure construction methods
- describe footings and foundations
- read, interpret and make basic modifications to plans
- read and interpret legislation, codes of practice and other formal agreements that impact on the work activity
- identify specific WHS requirements relating to the activity and site conditions
- identify typical issues and challenges that occur on site.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where enclosure construction and connection may be conducted

© Commonwealth of Australia, 2025 Future Skills Organisation

- construction tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on construction.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL212 Erect aerial cable supports

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes skills and knowledge required to erect cable supports in small aerial client installations and access networks where they may be required to do new installations, upgrades or maintain existing networks in domestic, commercial and industrial installations to deliver services in xdigital subscriber lines (xDSL), fibre to the home (FTTH) and hybrid fibre coaxial (HFC) networks.

It applies to individuals working as telecommunications linesmen and line installers who make use of aerial support structures and specialist tools.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements.

Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install aerial cable structure | 1.1 Obtain construction plan from appropriate personnel to scope work and arrange for site access |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.2 Notify appropriate personnel of identified safety hazards at cabling worksite<br>1.3 Determine cable route from construction plan, identifying and avoiding other services<br>1.4 Obtain plant, tools, safety equipment and material to perform tasks safely and efficiently |
| 2. Install aerial support structures | 2.1 Use tools according to enterprise guidelines and work health and safety (WHS) regulations<br>2.2 Erect safety barriers according to enterprise guidelines to secure site<br>2.3 Excavate hole to specifications and according to enterprise guidelines for erection of mounting pole<br>2.4 Install pole using mechanical lifting devices according to enterprise guidelines<br>2.5 Install fixing structures on pole securely according to manufacturer's specifications<br>2.6 Install aerial fixing devices where support is other than pole according to enterprise guidelines |
| 3. Complete project | 3.1 Complete reports according to enterprise policy and record alterations to plans using appropriate symbols<br>3.2 Recover obsolete materials and equipment and return to appropriate point for disposal<br>3.3 Restore site according to requirements of enterprise or approving authority and to client satisfaction<br>3.4 Notify appropriate personnel of job completion and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.3, 2.5, 3.1, 3.4 | • Interprets information from technical sources to identify relevant and key information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.2, 3.1 | • Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols |
| Numeracy | 1.3, 2.3 | • Interprets scales and ratios on plans<br>• Performs basic calculations appropriate to measuring and estimating size |
| Navigate the world of work | 1.2, 2.1, 3.1, 3.3 | • Takes personal responsibility for adherence to legal, regulatory and organisational requirements relevant to own work context |
| Interact with others | 1.1, 1.2, 3.4 | • Identifies and follows accepted communication practices and protocols when liaising with clients and internal and external personnel on technical and operational matters |
| Get the work done | 1.1, 1.4, 2.1-2.6, 3.2, 3.3 | • Determines job sequence and works logically and systematically to undertake clearly defined tasks<br>• Analyses task requirements to decide on appropriate equipment and practices<br>• Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Automatically implements standard procedures for routine decisions in response to familiar problems |

# Assessment Requirements for ICTCBL212 Erect aerial cable supports

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- install a pole and aerial fixing device after relevant authorities have been notified and approvals obtained prior to commencement
- demonstrate use of specialised hand or power tools and equipment for the installation of aerial cable supports safely
- apply work health and safety (WHS) requirements and work practices associated with the installation of aerial cable supports, including protective clothing and personal safety items, adequate warning signs and safety devices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features and operating requirements of equipment
- describe the information required to operate equipment according to a specification
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- describe licence requirements for working at heights
- identify the manufacturer’s requirements for safe operation of equipment
- identify specific WHS requirements relating to the activity and site conditions
- describe test methods and performance requirements
- identify typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where aerial cable supports may be installed
- plant, tools and equipment to erect aerial supports currently used in industry
- relevant regulatory and equipment documentation that impacts on aerial support erection activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL213 Construct underground telecommunications infrastructure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes skills and knowledge required to construct underground telecommunications infrastructure made up of conduits and enclosures for cabling provisioning.

It applies to individuals in technical roles in civil construction whose work involves the installation of pits and pre-built enclosures with connecting pipes for underground telecommunications infrastructure.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to construct underground work | 1.1 Obtain construction design plan from appropriate personnel to scope work and arrange for site access<br>1.2 Notify appropriate personnel of identified safety hazards and other services<br>1.3 Obtain plant, tools and safety equipment to perform tasks safely |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | and efficiently<br>1.4 Determine type of underground enclosure specified in construction design plan required for project |
| 2. Install enclosure | 2.1 Use tools according to enterprise guidelines and work health and safety (WHS) regulations<br>2.2 Place foundation of suitable material to provide safe and stable footing prior to installing underground enclosure in excavation<br>2.3 Place recognised barrier over construction where enclosure is to be installed over power cables according to enterprise requirements or agreements with other authorities<br>2.4 Install earth mat facility under enclosure where specified and required by enterprise<br>2.5 Install enclosure specified in construction design plan to manufacturer's specifications using specified materials |
| 3. Install connecting pipe works | 3.1 Install conduit in trench to enterprise specifications<br>3.2 Connect conduit to enclosure according to manufacturer's specifications and industry practice |
| 4. Complete project | 4.1 Complete reports according to enterprise policy and record alterations to plans using appropriate symbols<br>4.2 Recover obsolete materials and equipment, and return to appropriate point for disposal<br>4.3 Restore site according to requirements of enterprise or approving authority and to client satisfaction<br>4.4 Notify appropriate personnel of job completion and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.5, 4.1 | • Interprets information from technical sources to identify relevant and key information |
| Writing | 4.1, 4.4 | • Documents outcomes and changes to plans using industry relevant terminology and recognised plan |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | symbols |
| Numeracy | 1.4, 2.4, 3.1 | • Interprets scales and ratios on plans<br>• Performs basic calculations appropriate to measuring and estimating size |
| Navigate the world of work | 1.2, 2.1-2.5, 3.2, 4.3 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others |
| Interact with others | 1.1, 1.2, 4.4 | • Identifies and follows accepted communication practices and protocols when liaising with clients, internal and external personnel on technical and operational matters |

# Assessment Requirements for ICTCBL213 Construct underground telecommunications infrastructure

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- interpret and apply design plans and prepare for construction
- install enclosures including pipe, pit and prefabricated manhole
- construct in two different soil types: sand, rock, soil or combination soil types
- shore an excavation site to meet enterprise and regulatory requirements
- demonstrate use of specialised hand or power tools and equipment normally used for excavation, pipe, conduit installation and site restoration safely
- complete the works and documentation
- apply related work health and safety (WHS) requirements and work practices associated with excavation, enclosure installation and site restoration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the following elements of civil construction:
  - construction plant, tools and equipment operation
  - enclosure construction methods
  - foundations
  - plans
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- identify the manufacturer’s requirements for safe operation of equipment
- identify specific WHS requirements relating to the activity and site conditions
- identify typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where enclosure construction may be conducted
- construction equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on construction.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL214 Fix aerial cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes skills and knowledge required to install aerial cables in client and access networks. It involves installing, terminating and securing cables. Aerial cable installation may be for a new cable, a cable upgrade or a cable in need of repair.

It applies to individuals working as telecommunications linesmen and line installers who use support anchors and catenaries for new installations and upgrades, or to maintain existing networks in domestic, commercial and industrial installations to deliver services in x-digital subscriber line (xDSL), fibre to the home (FTTH) and hybrid fibre coaxial (HFC) networks.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for aerial cable installation | 1.1 Obtain construction plan from appropriate personnel to scope work and arrange for site access<br>1.2 Notify appropriate personnel of identified safety hazards at cabling worksite |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Determine cable route and type of cable from construction plan, identifying and avoiding other services<br>1.4 Obtain plant, tools, safety equipment and material to perform tasks safely and efficiently |
| 2. Install aerial cable | 2.1 Use tools according to enterprise guidelines and work health and safety (WHS) regulations<br>2.2 Install catenary wire, gantry wire or integral bearer cable (IBC) and tension to required specifications<br>2.3 Install cable according to current Australian Standards and enterprise guidelines, ensuring that no damage is caused and that physical characteristics of cable are maintained<br>2.4 Secure cable permanently to support structure using aerial fixing devices according to manufacturer's and enterprise guidelines<br>2.5 Number cables on towers according to enterprise guidelines |
| 3. Terminate, seal and secure aerial cable | 3.1 Terminate and seal cables according to manufacturer's specifications<br>3.2 Joint cable in suitable closures using enterprise guidelines<br>3.3 Loop and secure cable on support structure with bending radius tolerance for cable materials to reduce damage to conductors<br>3.4 Test cable for continuity and rectify fault if required<br>3.5 Record test results for future reference |
| 4. Complete project | 4.1 Complete reports on installation and design amendments and file according to enterprise requirements<br>4.2 Recover obsolete materials and equipment and return to appropriate point for disposal<br>4.3 Restore site according to requirements of enterprise or approving authority and to client satisfaction<br>4.4 Notify appropriate personnel of job completion and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance | Description |

# Assessment Requirements for ICTCBL214 Fix aerial cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan the works and prepare the site
- install an aerial cable, including hauling aerial cable, cable securing and sealing
- demonstrate identification of safe support structures from pole status markings, visual inspection or approved testing procedures
- use specialised hand or power tools and equipment for installing aerial cable safely
- test the installation and document test result
- apply all related work health and safety (WHS) requirements and work practices, including documentation associated with installing aerial cable pole and ladder safety.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features and operating requirements of cable test equipment
- describe the information required to operate equipment according to a test specification
- discuss installation of a range of aerial cable types
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- identify the relevant licence requirements for working at heights
- identify the manufacturer’s requirements for safe operation of equipment
- identify specific WHS requirements relating to the activity and site conditions
- describe test methods and performance requirements
- identify typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where aerial cable may be installed
- plant, tools and equipment to erect aerial cable currently used in industry
- relevant regulatory and equipment documentation that impacts on aerial cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL215 Joint metallic conductor cable in access network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes skills and knowledge required to joint metallic conductor cable on the service provider side of the network boundary in communications applications including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to individuals working in technical roles who joint metallic conductor cable for indoor and outdoor installations on new installations and cable upgrades, and maintain infrastructure in domestic, commercial and industrial situations for service providers and asset owners.

All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for jointing metallic conductor cable for access network | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.2 Arrange access to site according to required procedure<br>1.3 Inform appropriate personnel of existing and potential hazards on worksite<br>1.4 Review site plans and documentation<br>1.5 Select cable type and appropriate connectors for cable joint<br>1.6 Set up tools and equipment, and materials required for safe work practice<br>1.7 Obtain information on location of other services from relevant authorities |
| 2. Joint metallic conductor cable for access network | 2.1 Joint metallic cable following work health and safety (WHS) and environmental requirements<br>2.2 Perform relevant cable tests to ensure joint complies with site specifications, manufacturer's specifications, and relevant legislation, codes, regulations and standards<br>2.3 Rectify any cable faults<br>2.4 Record cable tests and any modifications required<br>2.5 Label and tag cable joint according to enterprise guidelines and industry practice |
| 3. Protect and alarm cable | 3.1 Pressurise cable and check for any leakage<br>3.2 Reconnect alarms, if applicable, according to enterprise guidelines<br>3.3 Remove waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions |
| 4. Complete records and clean up site | 4.1 Complete required records including alterations and notify client<br>4.2 Reinstate site according to client and company requirements<br>4.3 Present all records to appropriate personnel and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 1.7 | • Interprets information from technical sources to |

# Assessment Requirements for ICTCBL215 Joint metallic conductor cable in access network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- joint cable with appropriate connectors and according to specifications
- perform relevant cable tests to comply with site specifications and industry standards
- rectify any cable faults
- apply work health and safety (WHS) requirements and work practices associated with the jointing of metallic cable, including documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
- describe the features and operating requirements of test equipment
- describe the information required to operate equipment according to a test specification
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- identify the manufacturer’s requirements for safe operation of equipment
- discuss safety precautions when working with cables
- identify specific WHS requirements relating to the activity and site conditions
- describe test methods and performance requirements
- identify typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where jointing metallic conductor cable may be performed
- cable testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable jointing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to practice safe installation, alteration and configuration of the carrier network termination device/asymmetric digital subscriber line (NTD/ADSL) filter and modem/mode 3 socket/cabling, for an alarm system connected to a monitoring station using a carrier line supporting an ADSL modem service, used for Open and Restricted Cabling Registration.

It applies to cablers, installers and technicians working in the field of installation, maintenance or upgrades of existing systems in voice, data or security systems, and in the context of technology convergence and digital subscriber line (DSL) technologies as applied in the telecommunications industry.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Build and test direct current (DC) and alternating current (AC) | 1.1 Identify any hazards and work health and safety (WHS) issues for safe worksite and notify appropriate personnel |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| circuits and telephone earthing | 1.2 Connect series and parallel DC and AC circuit configuration following safe work practices<br>1.3 Choose appropriate test equipment and measure values of electrical quantities of circuits<br>1.4 Use calculations to verify measured values of electrical quantities in series and in parallel circuit configuration<br>1.5 Compare measured values to calculated values and determine reasons for any variations<br>1.6 Evaluate results and determine probable faults if relevant<br>1.7 Measure voltages present on telephone line and compare to exchange battery voltage<br>1.8 Measure resistance to earth, ensuring electrical earth in telecommunications installation |
| 2. Configure a safe ADSL circuit configuration with mode 3 connection | 2.1 Determine effects of bandwidth, frequency and attenuation on DSL circuits as used for broadband client access<br>2.2 Design and configure ADSL circuit from network boundary through to mode 3 socket for alarm system connected to monitoring station<br>2.3 Configure connection to ensure that ADSL circuit is not disconnected for safety reasons when alarm activation in conjunction with a mode 3 socket disconnects plain old telephone service (POTS) circuit<br>2.4 Use level 3 tester to verify correct termination and installation of digital transmission line |
| 3. Diagnose and rectify faults | 3.1 Determine urgency and impact of faults and required response timeframe for clearance<br>3.2 Identify type of fault and determine most probable causes of fault from data and historical trends where available<br>3.3 Select tools and test equipment relevant to system and type of fault<br>3.4 Diagnose fault in methodical and safe manner using suitable fault-finding technique<br>3.5 Isolate fault progressively to remove likely variables from diagnostic<br>3.6 Determine options to rectify fault and present to client for decision on rectification<br>3.7 Document test methods and results, and file with other system |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | installation records |
| 4. Alter existing services | 4.1 Identify existing and proposed cable systems for altering services to existing installation<br>4.2 Plan alterations to cause minimal disruption to ongoing client activity<br>4.3 Use appropriate tools to safely terminate telecommunications cables and outlets<br>4.4 Identify and rectify any cable fault<br>4.5 Carry out alterations in safe manner and according to both mandatory and recommended industry standards<br>4.6 Identify risks posed by contact with remote power feeding services<br>4.7 Test alteration and obtain sign off with client |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.2, 4.7 | • Uses explicit strategies to make connections between information and ideas while reading |
| Writing | 3.6, 3.7 | • Interrelates ideas, information and some support material when writing about familiar topics |
| Oral Communication | 1.1, 3.6 | • Demonstrates awareness of choices for register, especially in situations that are familiar |
| Numeracy | 1.3-1.5, 1.7, 3.1, 3.2, 4.7 | • Uses 'in the head' and written methods to calculate, and uses calculation and technological processes and tools to undertake the problem solving process |
| Navigate the world of work | 1.1, 1.2, 2.1, 4.5, 4.6 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others |
| Get the work done | 1.3, 1.6, 2.1-2.4, 3.1-3.7, 4.1-4.4, | • Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 4.7 | • Automatically implements standard procedures for routine decisions in response to familiar problems<br>• Understands when to take responsibility and when to notify others |

# Assessment Requirements for ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- demonstrate the use of asymmetric digital subscriber line (ADSL) concepts in application and design
- demonstrate fault-finding techniques to locate cabling faults in telecommunications networks
- solve calculations for direct current (DC) and alternating current (AC) electrical problems
- apply digital transmission principles and testing
- demonstrate the use of ADSL test equipment
- comply with all related work health and safety (WHS) requirements and work practices in the alteration of existing client services.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss WHS issues and practices relating to ADSL circuits and working with electricity
- describe typical electrical faults, fault-finding techniques and the type and use of testing equipment, including:
  - multimeter to measure direct current (DC) voltage, current and resistance
  - continuity tester to check continuity wiring
  - testing of open circuits and short circuits
  - ADSL test set
- identify the appropriate tools used in ADSL cabling

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the types of cable terminations used for a range of telecommunications cable applications
- outline the following:
  - ADSL circuitry and configurations
  - digital transmission concepts, including installation practices and testing
  - procedures in altering existing services, including sign off
  - the distinction between analog and digital signals.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- special purpose tools, equipment and materials
- a site where altering of existing services for a client may be conducted
- appropriate AC and DC testing equipment
- manufacturer's documentation and equipment
- correct tools and measuring equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL220 Install a cable lead-in

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes skills and knowledge required to install indoor and outdoor aerial and underground lead-ins for client installations of a new metallic or optical cable installation, or upgrade for an existing network or subsystem, or cabling infrastructure for convergence to next generation networks (NGN) digital reception and broadband.

It applies to technical staff who haul underground or fix aerial cable lead-in. They may make use of tension meters and hauling equipment. It can be applied to new installations and upgrades of telecommunications cabling projects in domestic, commercial and industrial installations.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for cable installation | 1.1 Prepare for given work according to industry standards<br>1.2 Arrange access to site according to required procedure<br>1.3 Inform appropriate personnel of identified hazards and safety |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | constraints on worksite<br>1.4 Obtain cable installation plan and set up installation equipment according to manufacturer's requirements<br>1.5 Select suitable protective clothing, tools and equipment, and safety equipment, and confirm support structures are safe |
| 2 Install aerial cable lead-in | 2.1 Identify and use safe support structures<br>2.2 Select type of cable bearer and determine need for separate catenary wire installation<br>2.3 Secure catenary wire or bearer wire permanently to support structure using aerial fixing devices, and adjust tension to meet relevant height and minimum sag requirements to required specifications<br>2.4 Secure cable safely to catenary wire, leaving cable loop on support structure<br>2.5 Terminate cable in client enclosure and aerial enclosure |
| 3 Install underground cable lead-in | 3.1 Run push rod through pipe and attach cable for hauling<br>3.2 Haul cable using lubricant, cable slippers or rollers to ensure no sheath damage when hauling at correct tension into and out of enclosures<br>3.3 Provide sufficient cable allowance in enclosures for jointing and maintenance requirements<br>3.4 Terminate cable in client enclosure and pit enclosure |
| 4 Seal and secure cable | 4.1 Seal cable ends to prevent ingress of foreign material<br>4.2 Secure cable loop on support structure to minimise damage to conductors<br>4.3 Weather seal building entry points where appropriate<br>4.4 Fit over voltage protection devices to all cables with metallic component where required |
| 5 Complete tasks on site | 5.1 Record any approved alteration to original design and return to appropriate personnel<br>5.2 Complete appropriate records and sign reports where required according to enterprise policy<br>5.3 Restore site to original condition and dispose of waste in environmentally safe manner<br>5.4 Notify client and obtain sign off |

# Assessment Requirements for ICTCBL220 Install a cable lead-in

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- install at least one type of aerial cable and one type of underground cable, including placing and securing cables on support structures and building faces for both internal and external locations
- haul, secure and seal cables
- perform visual inspection to identify safe support structures from pole status markings
- terminate cables at the client and network ends of aerial and underground installations
- complete and provide a report documenting the installation and test results to client
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the features and operating requirements of testing equipment
- identify and apply industry standards and codes of practice for cabling
- identify common types of cable used in telecommunications
- identify and describe manufacturer’s requirements for selection and safe operation of tools and equipment
- identify workplace procedures reflecting the requirements of legislation, codes of practice and other formal agreements that impact on the work activity
- identify specific WHS hazards and safety requirements relating to the activity and site conditions
- list and describe the safety equipment, both personal and worksite related, required for safe work practices
- describe the issues relating to the safe use of support structures
- identify the appropriate fixing devices used in cable lead-in work

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe termination methods and performance requirements
- identify typical issues and challenges that occur on site
- identify and explain the purpose of appropriate records and documentation required for work activity.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- special purpose tools, equipment and materials
- sites where aerial and underground cable lead-ins may be conducted
- equipment and personal protective equipment currently used in industry
- testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to safely install, maintain and modify communications cabling required according to the Australian Communications and Media Authority's (ACMA) ‘Restricted’ Cabling Provider Rule on customers premises for cabling terminated on sockets and network termination devices (NTD) of indoor and external metallic cable in either aerial or underground situations.

It applies to individuals who may provide services to connect telecommunications devices including telephony systems, security alarm panels and fire control panels in either a new cable installation or upgrade of cable capacity for an existing network or subsystem for convergence to Next Generation Networks (NGN) applications. Customers are typically domestic premises, small offices, home offices and small business premises. Generally large commercial and industrial premises are excluded except in special circumstances where the cabling is behind a compliant device and is not via jumperable distributors or patch panels.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

## Pre-requisite Unit

ICTWHS204 Follow work health and safety and environmental policies and procedures

ICTTEN201 Use electrical skills in telecommunications work

## Unit Sector

Telecommunications – Cabling

© Commonwealth of Australia, 2025 Future Skills Organisation

# Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan for restricted cabling work | 1.1 Prepare for restricted cabling work within the ACMA regulatory environment, cabling environment, cable type, cable identification, termination systems, earthing and protection, records and according to requirements of relevant legislation, codes, regulations and standards<br>1.2 Identify building infrastructure which places critical constraints on cabling<br>1.3 Develop strategies to manage other infrastructure in relation to cabling<br>1.4 Notify appropriate personnel of safety hazards at the cabling work site |
| 2. Manage remote power feed | 2.1 Identify and avoid the risks posed by contact with remote power feeding services when performing cabling activity<br>2.2 Make site safe by identifying remote power feeding services which operate at above telecommunications network voltage (TNV) inside customer premises |
| 3. Install cables and protective earth wires | 3.1 Install cables according to manufacturer's application specifications, including tension and bending stress requirements<br>3.2 Identify and avoid sources of possible damage to cable, including hot pipes, sharp edges and cable burn<br>3.3 Allow sufficient excess at cable ends to facilitate termination<br>3.4 Place and secure cable to maintain safety and interference segregation according to legislative and industry standards<br>3.5 Install cable fasteners with correct tension to prevent cable sheath damage or transmission impairment and trimmed flush to prevent risk of personal damage<br>3.6 Install underground cables to minimum depth of cover and segregation from hazardous electrical and other services according to current Australian Standards<br>3.7 Install underground cables excluding blown fibre tube systems to incorporate a blocking agent within the cable to prevent the ingress of water<br>3.8 Install aerial cables to minimum clearance, segregation from hazardous electrical and other services and minimum height |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | requirements according to current Australian Standards<br>3.9Install over-voltage protection devices according to Australian Standards to all cable pairs, where required, to suppress voltage surges and protect from earth potential rise (EPR) hazards and protectively earth the devices<br>3.10 Protect earth wire insulation against damage and segregate protective earths according to relevant legislative and industry standards |
| 4. Terminate and test cables and earth wires | 4.1 Remove cable sheath to allow for correct termination length and without damage to underlying conductors and their insulation<br>4.2 Install Network Termination Device (NTD) modules according to manufacturer's specifications and cable pairs neatly and sequentially fanned for termination<br>4.3 Terminate conductors according to recommended colour code sequence using appropriate termination tools in the manufacturer's specified manner<br>4.4 Earth cable shield, if applicable, to manufacturer's specifications, relevant industry codes of practice and Australian Standards<br>4.5 Conduct visual inspection to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity<br>4.6 Terminate earth wire according to industry accepted codes of practice and Australian Standards<br>4.7 Ensure earth wire continuity throughout and observe interface requirements with electrical systems<br>4.8 Test earthing installation for continuity, insulation resistance and conductive resistance according to accepted industry standards and Australian Standards<br>4.9 Confirm compatibility of alterations with existing systems and test new work both in isolation and when integrated with existing systems |
| 5. Inspect cable route to ensure correct separations | 5.1 Inspect separations along the entirety of the cable route and rectify separations which do not comply with regulations<br>5.2 Install barriers to achieve separations where sufficient spatial separation cannot be met |
| 6. Create records | 6.1 Provide the client with a job sign-off, telecommunications cabling advice form, at the completion of each cabling task<br>6.2 Complete NTD record cards for the work undertaken |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 7. Monitor work activity | 7.1 Supervise cablers not holding appropriate registration for the task to ensure cabling activity is according to legislative requirements for safety and network integrity including the relevant Australian Standards |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1, 3.8 - 3.9, 4.2 - 4.4, 4.8, 6.1 - 6.2, 7.1 | • Recognises and responds to some conventions of complex texts<br>• Recognises when unknown words are essential to meaning and uses a range of decoding strategies to identify them |
| Writing | 1.4, 6.1 - 6.2 | • Uses a legible handwriting style or a computer font appropriate to the audience and purpose |
| Oral Communication | 1.4 | • Demonstrates awareness of choices for register, especially in situations that are familiar |
| Numeracy | 3.1, 3.6, 3.8 - 3.9, 4.1, 4.8, 4.9 | • Relies substantially on hands-on (concrete) and real life materials, personal experience and prior knowledge to make estimations and check the reasonableness of processes<br>• Identifies appropriate tools and uses them to take measurements<br>• Interprets information based on results of technical tests |
| Navigate the world of work | 1.1, 1.4, 3.4, 3.6, 3.8 - 3.10, 4.2, 4.4, 4.8, 7.1 | • Takes personal responsibility for adherence to legal/regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others |
| Get the work done | 1.1 - 1.3, 2.1 - 2.2, 3.1 - 3.7, 3.9 - 3.10, 4.1, 4.4 - 4.7, 4.9, 5.1 - 5.2 | • Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Automatically implements standard procedures for routine decisions in response to familiar problems |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

| | |
|---|---|
| Termination systems must include: | • network termination device<br>• Australian modular socket<br>• Mode 3 alarm socket<br>• RJ45, RJ12 or RJ11 modular socket.<br>(Note: jumperable distributors are not included in this requirement). |
| Earthing and protection must include: | • earthing for protection<br>• surge suppression. |

# Assessment Requirements for ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

## Modification History

| Release | Comments |
|---|---|
| Release 2 | This version first released with ICT Information and Communications Technology Training Package version 3.1.<br>New release provides updates to Elements and Performance Criteria. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- complete a cabling installation and termination for the following:
  - three different types of telephone sockets:
    - Australian modular socket
    - RJ45, RJ12 or RJ11 modular socket
    - Mode 3 alarm socket
  - one network termination device (NTD) completion of TCA1 compliance forms and NTD records
- apply cable conductor identification codes
- conduct and interpret cable test results
- interpret and apply standards and regulations
- comply with all related work health and safety (WHS) requirements and work practices
- meet Australian Communications and Media Authority's (ACMA) requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

© Commonwealth of Australia, 2025
Future Skills Organisation

- discuss the basic electrical principles of - insulation, resistance, capacitance, induction - as causes of, impedance, attenuation and cross-talk
- identify Australian Communications and Media Authority's (ACMA) cabling provider rules, cabler registration rules, regulations and standards
- describe the regulatory environment in which cabling can be carried out including:
  - accredited registrars and registration
  - ACMA
  - Certified Components List
  - labelling requirements
- describe the customer cabling environment for which restricted cabling may be required for internal, external, above ground or below ground installation
- identify and describe the various cable types, their identifiers, termination systems, separations, support systems and fastening techniques used for communications cabling
- describe the features and operating requirements of recognised cabling specific industry test equipment
- describe the information required to operate equipment according to a test specification
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- identify the manufacturer’s requirements for safe operation of equipment
- identify specific workplace health and safety (WHS) requirements relating to the activity and site conditions
- describe test methods and performance requirements
- describe the typical issues and challenges that occur on site
- summarise the mandatory and workplace records required when installing communications cabling
- describe the installation requirements for underground and aerial cables including:
  - minimum depth of cover (below ground)
  - segregation from hazardous electrical and other services
  - earthing requirements
  - compliance with current Australian Standards
- describe the design parameters for underground cables in regard to the purpose they will serve and for the prevention of water ingress.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to special purpose tools, equipment and materials. These include:

- access to a site on which communications cabling activities may be carried out
- cabling and field equipment currently used in industry
- licensing requirements and other site related documentation.

© Commonwealth of Australia, 2025
Future Skills Organisation

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to safely install, maintain and modify customer premises communications cabling required according to Australian Communications and Media Authority's (ACMA) 'Open' Cabling Provider Rule for small installations connected to sockets, and larger commercial and industry installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and advanced termination modules and distributors.

It applies to individuals who provide services in telephony, carrier modems or multiplexers, private modems or data systems operating over a category one or two twisted pair metallic customer cable in a specific customer location and install, maintain or modify new cable or upgrade cable capacity either, indoor, external, underground or aerial cabling on private and public property for an existing network or subsystem, or cabling infrastructure for convergence to Next Generation Networks (NGN).

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Pre-requisite Unit

ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

## Unit Sector

Telecommunications – Cabling

# Assessment Requirements for ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule

## Modification History

| Release | Comments |
|---|---|
| Release 2 | This version first released with ICT Information and Communications Technology Training Package version 3.1.<br>New release provides updates to Elements and Performance Criteria. |
| Release 1 | This version first released with ICT Information and Communications Technology Training Package version 2.0. |

## Performance Evidence

Evidence of the ability to:

- identify the correct telecommunications cable by its colour identifier
- terminate systems at both distributor and outlet locations
- install and terminate one jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater
- terminate one non-jumperable distributor (Local Distributor)
- terminate at least one 50 pair and one 4 pair data cable, including accurate completion of installation records, drawing alterations and compliance forms
- place cables on support structures and building faces for both internal and external locations
- secure cables with appropriate fasteners for the above locations
- demonstrate work practices which avoid cable damage
- install at least one common type of earthing system used in customer premises for cabling systems
- read and interpret drawings related to cable layouts, outlet location, cable coding system, and identifiers and distributor locations
- conduct and interpreting cable test results
- interpret and apply relevant legislation, codes, regulations and standards
- comply with all work, health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify Australian Communications and Media Authority's (ACMA) cabling provider rules, cabler registration rules, regulations and standards
- describe the features and operating requirements of recognised cabling specific industry test equipment
- describe the regulatory environment in which cabling can be carried out including:
  - accredited registrars and registration
  - ACMA
  - Certified Components List
  - labelling requirements
- describe the customer cabling environment for which cabling registration may be required for internal, external, above ground or below ground installation
- describe the information required to operate equipment according to a test specification
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- identify and describe the various cable types, their identifiers, termination systems (including jumperable and non-jumperable distributor), separations, support systems and fastening techniques used for telecommunications cabling
- describe important documentation and records required when cabling
- identify the manufacturer requirements for safe operation of equipment
- identify and describe earthing and protection strategies and technologies relevant to different cabling applications
- identify specific WHS requirements relating to the activity and site conditions
- describe test methods and performance requirements
- identify typical issues and challenges that occur on site
- describe devices for a range of telecommunications cabling applications, including, ethernet data systems, audio and video systems, security systems and fire protection systems
- define where integral bearer wires are required according to current Australian Standards
- describe underground cable minimum depth of cover and segregation from hazardous electrical and other services according to current Australian Standards
- describe cable blocking agents within used to prevent the ingress of water underground (excluding blown fibre tube systems)
- describe the feature of cables designed for underground use that may be laid in conduit trenches or direct buried
- describe the responsibilities and process for supervising communications installation works.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- a site on which communications cabling activities may be carried out
- a jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater
- a patched distributor
- a 50 pair and 4 pair data system
- use of cabling and field equipment currently used in industry
- relevant regulatory and site related documentation.

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL238 Install, maintain and modify customer premises communications cabling: ACMA Lift Rule

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to safely install, maintain and modify communications cabling required on a customer's premises, according to Australian Communications and Media Authority (ACMA) Lift Cabling Provider Rule.

It applies to individuals who are qualified licensed electricians working in technical roles for lift installations on new or upgrade installations for an existing network or subsystem for convergence to next generation network (NGN) applications.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Work within constraints imposed by customer premises and ACMA regulatory | 1.1 Prepare for lift cabling work according to regulatory environment, cabling environment, cable type, cable identification, termination systems, earthing and protection, records and relevant legislation, codes, regulations and standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| environment | 1.2 Identify building infrastructure that places critical constraints on cabling when undertaking typical lift cabling installation from local distributor (LD) to lift car socket<br>1.3 Develop strategies to manage other infrastructure in relation to cabling<br>1.4 Notify appropriate personnel of identified safety hazards at cabling worksite |
| 2. Manage remote power feed | 2.1 Identify and avoid risks posed by contact with remote power feeding services when performing cabling activity<br>2.2 Make site safe by identifying remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises |
| 3. Install and modify cable support, earthing and termination infrastructure | 3.1 Install fixings and cable support structures of adequate strength safely and align with environment according to manufacturer's and customer's specifications<br>3.2 Secure catenary supports to building structure and tension where necessary to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained, including adherence to current Australian Standards<br>3.3 Install protective earthing of metal work to industry standards where required<br>3.4 Inspect installed support structure to ensure cable will not be exposed to damage during installation and general operation<br>3.5 Position terminating equipment and fixing to accepted industry codes of practice, current Australian Standards and customer requirements<br>3.6 Inspect control cubicles, travelling cable supports, junction boxes, line isolator units, backmount and outlet layout, to ensure compliance with manufacturer's specifications, allow adequate work space for ease of access and avoid overlaying<br>3.7 Segregate incoming and outgoing cables to ensure ease of access, and avoid overlaying |
| 4. Install cables and earth wires | 4.1 Install lift communications cable from LD to lift car socket<br>4.2 Install cables according to manufacturer's application specifications, including tension and bending stress requirements<br>4.3 Identify and avoid sources of possible damage to cable, including hot pipes, sharp edges, cable burn, kinks and stretching<br>4.4 Allow sufficient excess at cable ends to facilitate termination |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | conductive resistance according to relevant industry standards, including current Australian Standards<br>5.9 Confirm compatibility of alterations with existing systems and test new work both in isolation and when integrated with existing systems |
| 6. Inspect cable route to ensure correct separations | 6.1 Inspect separations along entire cable route and rectify separations that do not comply with regulations<br>6.2 Install barriers to achieve separations where sufficient spatial separation cannot be met |
| 7. Evaluate earthing needs for cable systems on customer premises | 7.1 Locate existing customer earthing systems and analyse earthing needs of cable systems<br>7.2 Calculate upper and lower limits of resistance for variety of cable system earths using relevant cable characteristics |
| 8. Label earthing systems | 8.1 Identify label requirements for all types of earthing systems<br>8.2 Attach label to earthing systems according to industry regulations |
| 9. Create or update cable plans and records | 9.1 Document installation details on record sheets and plans, and store according to customer requirements<br>9.2 Label cable pairs clearly to provide accurate identification according to manufacturer's, industry and customer standards<br>9.3 Record cabling details in cable pair record books to provide accurate record according to industry codes of practice and current Australian Standards<br>9.4 Complete Telecommunications Cabling Advice (TCA) form |
| 10. Monitor work activity | 10.1 Maintain close supervision of cablers not holding appropriate registration for task to ensure installation and maintenance activity is strictly according to legislative requirements and industry standards for safety and network integrity, including all current Australian Standards |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | **Criteria** | |
|---|---|---|
| Reading | 1.1, 8.1 | • Interprets complex technical information, legislation, codes, regulations and standards to identify key requirements |
| Writing | 1.4, 9.1-9.4 | • Completes required documentation to meet customer, organisational and legislative requirements using industry relevant terminology |
| Oral communication | 10.1 | • Delivers clear and specific instructions and confirms understanding using questioning and active listening |
| Numeracy | 7.2 | • Takes measurements and interprets results |
| Navigate the world of work | 1.1, 2.1, 2.2, 3.2, 3.5, 4.5, 4.7-4.11, 5.4, 5.6, 6.1, 8.2, 10.1, | • Takes responsibility for adherence to legal, regulatory and organisational requirements relevant to own work context, including supervising the work of others |
| Interact with others | 1.4, 10.1 | • Identifies and follows accepted communication practices and protocols when liaising with customers, internal and external personnel on technical and operational matters |
| Get the work done | 1.2, 1.3, 5.2, 5.3, 7.1 | • Determines job sequence and works logically and systematically to undertake clearly defined tasks<br>• Analyses task requirements to decide on appropriate equipment and practices<br>• Implements actions as per plan, making adjustments if necessary, and addressing some unexpected issues<br>• Automatically implements standard procedures for routine decisions in response to familiar problems |

# Assessment Requirements for ICTCBL238 Install, maintain and modify customer premises communications cabling: ACMA Lift Rule

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- install a lift cabling system from local distributor (LD) via a traveling cable to a lift car socket, including accurate completion of installation records, drawing alterations and compliance forms
- read and interpret cable drawings and plans for locations and terminations
- apply cable conductor identification codes
- conduct and interpret cable test results
- interpret and apply related regulations and industry codes
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
- describe the features and operating requirements of test equipment
- describe the information required to operate equipment according to a test specification
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- identify the manufacturer’s requirements for safe operation of equipment
- explain protection earthing
- describe the features of lift construction and the types of cables required
- describe the types of cable used for manual controlled fire services

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify and describe cables and the types of cabling
- identify and describe common distributors
- outline specific WHS requirements relating to the activity and site conditions
- identify typical issues and challenges that occur on site.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- a site on which lift communications cabling activities may be carried out
- cabling and field equipment currently used in industry
- licensing requirements and other site related documentation.

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL301 Install, terminate and certify structured cabling installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to place, secure and terminate structured cabling for indoor and outdoor installations and to certify the installation within a domestic, commercial or industrial client's premises.

It applies to technical staff who install, terminate and certify structured cabling installations for communications applications including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for installation of structured cabling | 1.1 Confirm client requirements and ensure compliance with relevant legislation, codes, regulations and standards<br>1.2 Arrange access to site according to required procedure |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Inform appropriate personnel of identified safety hazards on worksite<br>1.4 Organise tools and cabling products equipment for given work<br>1.5 Erect barriers according to safety requirements<br>1.6 Select cable type and match structured cabling to installation environment and client requirements<br>1.7 Verify proposed route to meet manufacturer's specifications and industry standards |
| 2. Install structured cable | 2.1 Place and secure correct type of cable following work health and safety (WHS) and environmental requirements, and according to accepted industry practice and standards<br>2.2 Maintain cable and services separations in runs and cross overs to meet manufacturer and industry standards<br>2.3 Install structured cabling to industry standards<br>2.4 Minimise twist ratio defects to avoid accumulation effect on structured cable performance<br>2.5 Fit over-voltage protection devices to all cables and metallic components where required |
| 3. Terminate structured cable | 3.1 Terminate cable according to accepted industry practice and standards<br>3.2 Maintain correct twist ratio to optimise system performance at rated level<br>3.3 Use correctly rated termination hardware with appropriate termination tool to ensure integrity and performance of termination<br>3.4 Earth cable shield to manufacturer's specifications and relevant industry standards if applicable |
| 4. Certify system performance to required level and complete documentation for client | 4.1 Test installation and termination to comply with certification requirements<br>4.2 Record and verify system performance promptly where required<br>4.3 Authorise and issue appropriate documentation to client to certify system performance and complete records where required<br>4.4 Reinstate site to client's satisfaction and dispose of waste in environmentally safe manner<br>4.5 Notify client and obtain sign off |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.7, 4.2, 4.5 | • Integrates new ideas and information with existing understanding<br>• Recognises the structures and distinguishing features of a range of familiar text types |
| Writing | 1.2, 1.3, 4.2, 4.3 | • Sequences writing to produce cohesive text |
| Oral Communication | 1.1-1.3, 4.5 | • Uses clear language and concepts, and tone and pace appropriate for the audience and purpose |
| Numeracy | 3.2 | • Interprets and comprehends whole numbers and familiar or routine fractions, decimals and percentages |
| Navigate the world of work | 1.1-1.3, 1.5, 1.7, 2.1-2.3, 3.1, 3.3, 4.1-4.4 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others |
| Interact with others | 4.3 | • Recognises the purpose of various communications directly relevant to own role |
| Get the work done | 1.2-1.4, 1.6, 1.7, 2.1-2.5, 3.1-3.4, 4.1, 4.2 | • Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Automatically implements standard procedures for routine decisions in response to familiar problems<br>• Understands when to take responsibility and when to notify others |

# Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

| | |
|---|---|
| Over-voltage protection devices requirements ***must comply with:*** | • ACMA standards<br>• enterprise or local environmental hazard<br>• manufacturer. |

# Assessment Requirements for ICTCBL301 Install, terminate and certify structured cabling installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- install, terminate and certify a structured cabling installation to industry standards, applying related work health and safety (WHS) requirements and work practices
- install termination hardware
- conduct a termination test and interpret the results
- verify compliance with manufacturer's installation specifications and warranties
- provide a report certifying the installation and test results to the client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- identify and describe the application of industry standards on cable bending, anchors, tension, twist and labelling
- list and describe the tools and equipment commonly used in cable installations and testing
- describe the features and operating requirements of test equipment
- describe the types and structure of cable and termination hardware used in communications installations
- describe the information required to operate equipment according to a test specification
- identify the manufacturer's requirements for safe operation of equipment
- identify specific WHS hazards and requirements relating to the activity and site conditions
- describe test methods and performance requirements

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the different types of records and documentation that may be required for certification and reporting
- identify typical issues and challenges that occur on site.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to special purpose tools, equipment and materials. These include access to:

- sites where installation, termination and certification of structured cabling may be conducted
- testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on installation.

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL302 Install and terminate optical fibre cable on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install and test optical fibre cable on a customer's premises for communications applications using a range of terminations that may include direct termination, fusion splicing and mechanical splicing.

It applies to technical staff who place, secure and terminate optical fibre cable in new installations and upgrades or maintain existing networks in domestic, commercial and industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1 Prepare for installation of optical fibre cable | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.2 Arrange access to site according to required procedure<br>1.3 Inform appropriate personnel of identified hazards on worksite<br>1.4 Organise tools, cabling products, equipment and materials for given work<br>1.5 Match optical fibre cable type and connectors to installation environment and customer requirements<br>1.6 Check proposed route and bend ratios to meet manufacturer's specifications and industry standards<br>1.7 Test cable on drum for optical continuity if required |
| 2 Install, terminate and test optical fibre cable | 2.1 Install cable following work health and safety (WHS) and environmental requirements, and complying with manufacturer's specifications and industry standards<br>2.2 Join cable and perform type of termination specified in plan using safe work practices and according to manufacturer's specifications<br>2.3 Test joint for transmission loss and strength and re-terminate joint if transmission loss exceeds manufacturer's specifications<br>2.4 Record all measurements |
| 3 Remove fibre hazards from work area | 3.1 Clean work area thoroughly to minimise risk of injury from loose glass fibre<br>3.2 Dispose of waste safely according to relevant environmental requirements<br>3.3 Restore worksite to customer's satisfaction |
| 4 Document installation | 4.1 Update plans and records with details of installation and test results<br>4.2 Notify customer of work completion and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.5, 1.6, 2.2, 2.3, 4.1, 4.2 | • Recognises the structures and distinguishing features of a range of familiar text types |

# Assessment Requirements for ICTCBL302 Install and terminate optical fibre cable on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- install, terminate and test optical fibre cable, applying safety precautions when working with laser based systems
- install a mechanical splice connector and fusion splice a pigtail to cable fibre
- complete relevant documentation to manufacturer's and design requirements
- provide report documenting the installation and test results to the customer
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe the application of relevant legislation, codes of practice and standards for optical fibre
- describe the various types of optical fibre cable and associated connectors, enclosures and required equipment
- describe the features and operating requirements of test equipment for optical fibre cable
- describe the information required to operate equipment according to a test specification
- identify the manufacturer's requirements for safe operation of optical fibre equipment
- describe safety precautions when working with laser based systems
- identify specific WHS requirements relating to the activity and site conditions
- describe the hazards associated with working with optical cable:
  - bare fibres
  - hazardous laser light
- describe test methods and performance requirements

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify issues relating to environmental work practices and the disposal of waste
- discuss techniques for types of termination, including:
  - direct termination
  - fusion splicing.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to special purpose tools, equipment and materials.

These include access to:

- sites where installation and termination of optical fibre cable may be conducted
- optical fibre testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on optical fibre cable installation activities.

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL303 Install and terminate coaxial cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install and terminate coaxial cable on client premises in communications applications, digital and analog, including master antenna television (MATV), cable television (CATV), closed-circuit television (CCTV), digital video broadcasting – terrestrial (DBVT), digital video broadcasting – satellite (DVB-S), data and video, including digital broadcasting, computer networks such as local area networks (LAN) and wide area networks (WAN), and multimedia.

It applies to technical staff who install and terminate coaxial cable for new installations, upgrades or the maintenance of existing networks in domestic, commercial and industrial installations on a client's premises.

All cabling work for clients in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to install and terminate coaxial cable | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.2 Arrange access to site according to required procedure<br>1.3 Inform appropriate personnel of identified hazards on worksite<br>1.4 Select coaxial cable type, connectors and manufacturer's tool to comply with installation environment and client requirements<br>1.5 Check proposed route and bend radius to meet manufacturer's specifications and industry standards<br>1.6 Test cable on drum for continuity and inspect visually for crushing and kinks<br>1.7 Discuss with client proposed method of installation and cable route, and adjust if necessary |
| 2. Install, terminate and test coaxial cable | 2.1 Maintain cable segregation to industry standards<br>2.2 Protect integrity of coaxial shield cable to ensure no loss of signal during operation and maintain bend ratios to not exceed manufacturer's specifications and industry standard<br>2.3 Install cable securing hardware to ensure cable is not crushed or kinked while maintaining cable manufacturer's bend radius<br>2.4 Install cable following work health and safety (WHS) and environmental requirements, and complying with manufacturer's specifications and industry standards<br>2.5 Terminate cable and perform type of termination specified in plan using safe work practices and according to manufacturer's specifications<br>2.6 Test termination for transmission loss and signal levels, and re-terminate the coaxial cable if the transmission loss exceeds the manufacturer's specifications<br>2.7 Record all measurements<br>2.8 Fit over-voltage protection devices to all cables with metallic component where required |
| 3. Remove termination waste from work area | 3.1 Clean work area thoroughly to minimise risk of injury from loose metal strands<br>3.2 Dispose of waste safely according to relevant environmental requirements<br>3.3 Restore worksite to client's satisfaction |
| 4. Document installation | 4.1 Update plans and records with details of installation and test results<br>4.2 Show client completed work and ensure work matches agreed method of installation and cable route |

# Assessment Requirements for ICTCBL303 Install and terminate coaxial cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- install and terminate coaxial cable types including RG6 quad shielded coaxial cable
- install different connector types
- conduct and interpret test results
- verify the installation complies with manufacturer's specifications and warranties
- prepare a report for a client that documents the installation and test results
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and apply relevant legislation, regulations, standards and codes of practice associated with the installation of coaxial cables
- describe the features of types of coaxial cable and the manufacturer's specifications that apply
- describe the features and operating requirements of test equipment for coaxial cable
- describe the information required to operate equipment according to a test specification
- identify the manufacturer's requirements for safe operation of coaxial cable tools and equipment
- describe safety precautions when working with coaxial cable and radio frequency (RF) based systems
- identify specific WHS requirements relating to the activity and site conditions
- describe test methods and performance requirements
- discuss the types and techniques for connecting and termination of coaxial cable, including:

© Commonwealth of Australia, 2025 Future Skills Organisation

  - compression termination
  - crimp termination
- summarise the function of over-voltage protection devices
- describe the transmission and propagation characteristics of coaxial cable
- discuss typical issues and challenges that occur on site.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- special purpose tools, equipment and materials
- sites where installation and termination of coaxial cabling may be conducted
- equipment and personal protective equipment currently used in industry
- testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on installation activities.

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL304 Perform cable and system test on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to test the performance of copper telecommunications cable on customer premises for the purpose of commissioning, fault identification or routine maintenance. It includes ensuring a safe and secure work environment while work is being undertaken.

It applies to field officers, technicians or technical supervisors from carriers, contractors or other service providers carrying out domestic, commercial or industrial installations in both indoor and outdoor environments. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1 Prepare for cable and system test | 1.1 Establish purpose of test to be conducted on cables and systems with customer<br>1.2 Confirm customer's requirements and methods to comply with |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | relevant legislation, codes, regulations and standards<br>1.3 Select required tests according to site conditions, customer documentation and manufacturer's specifications<br>1.4 Arrange access to site and confirm service is available for testing<br>1.5 Select test equipment, tools and materials to meet required industry standards |
| 2 Perform tests | 2.1 Use tools and test equipment according to manufacturer's specifications<br>2.2 Perform work safely to remove risk of injury to operator, other users and equipment<br>2.3 Perform checks and adjustments to ensure operating environmental factors will not prejudice test results<br>2.4 Perform optical time domain reflectometer (OTDR) testing for multi-mode (MM) and single-mode (SM) fibre links, point to point networks or passive optical networks (PON) to determine fibre and event characteristics to meet customer or enterprise specifications and manufacturer's warranties<br>2.5 Perform structured cabling certification testing for categorised unshielded twisted pair (UTP) and shielded twisted pair (STP) copper links and point to point networks to determine cable system characteristics to meet customer or enterprise specifications and manufacturers' warranties |
| 3 Interpret test results and determine action | 3.1 Read test results accurately and compare with manufacturer's and site specifications for cable performance<br>3.2 Evaluate test results, taking into account measurement error margins against a known reference where appropriate<br>3.3 Assess test results fairly and accurately using verifiable data<br>3.4 Rectify any faults or escalate to appropriate level |
| 4 Complete records and clean up site | 4.1 Document test results and ensure test results remain current<br>4.2 Verify test results and provide to customer where required<br>4.3 Update site and installation files to ensure information on system performance is traceable<br>4.4 Reinstate site according to customer and company requirements<br>4.5 Notify customer and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 1.5, 2.1, 3.1-3.3, 4.2 | • Read, analyse and interpret plans, specifications and other documentation relevant to cable and systems testing |
| Writing | 1.4, 4.1, 4.3, 4.5 | • Prepare written technical reports and documentation for test results<br>• Record notes on communications and provide written feedback to customers |
| Oral Communication | 1.1, 1.2, 1.4, 4.5 | • Discuss parameters for the tests and provide oral feedback on results as required, using language appropriate to the understanding of the customer |
| Numeracy | 3.1-3.3, 4.2 | • Carry out calculations and analyse results as appropriate for the tests being performed |
| Navigate the world of work | 1.2, 2.2 | • Takes personal responsibility for following implicit policies, procedures and legislative requirements, particularly as they apply to safety |
| Interact with others | 1.1, 1.2, 3.4, 4.5 | • Selects and uses appropriate conventions and protocols when communicating with customers and co-workers |
| Get the work done | 1.1, 1.3-1.5, 2.1-2.5, 3.3, 3.4, 4.2, 4.4 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes |

# Assessment Requirements for ICTCBL304 Perform cable and system test on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- perform tests on at least 10 cables
- use a range of test devices including:
  - pulse echo tester
  - resistance fault locator
- use advanced multifunction test equipment to test:
  - an active public switched telephone network (PSTN) line
  - to perform a frequency response plot of a cable pair
- use exchange based testing equipment to test an active PSTN line
- identify at least 5 separate cable faults using test equipment
- interpret test results
- demonstrate appropriate methods of escalation of cable faults affecting service delivery
- report on the completed cable and system test.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- recognise cabling types, connectors and cabling structures
- identify connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- identify electrical and/or optical properties to be measured
- evaluate test results derived from test equipment and interpret test results against expected cable system performance specifications

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe typical performance parameters and faults that may be encountered in customer cabling and related connection and transmission equipment
- select types of equipment suitable for tests to be carried out.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where cable and system tests may be conducted
- cable and system testing equipment currently used in industry
- relevant regulatory and cable specifications that impact on cable and system testing installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL305 Hand over cable systems and equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to effectively transfer control of a newly installed or upgraded system to a client. It includes the transfer of information to the client and the completion of relevant documentation.

It applies to field officers, technicians or technical supervisors from carriers, contractors or other service providers completing domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1 Inform client of system functions and capacities | 1.1 Provide client with cables systems and equipment information<br>1.2 Demonstrate physical installation, cable system usage or equipment operation and answer client queries on system functions<br>1.3 Confirm variations to specifications with client |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2 Hand over records and documentation | 2.1 Update documentation and plans<br>2.2 Present complete and orderly records and system documentation to client<br>2.3 Adhere to all relevant company policies and relevant legislation, codes, regulations and standards |
| 3 Complete contract documentation | 3.1 Provide guarantees to client in required format where work is subject to guarantee<br>3.2 Present invoices to client to complete contractual arrangements<br>3.3 Obtain client's sign off to confirm acceptance of cabling work completed where required<br>3.4 Advise client of opportunities for system upgrades, additional services and training where appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 2.2, 3.2, 3.3 | • Reads and interprets plans, specifications and technical information to pass on to client<br>• Evaluates information and products from a variety of sources to ensure appropriateness to client needs |
| Writing | 1.1, 1.3, 2.1, 2.2, 3.2, 3.4 | • Prepares documentation and correspondence using clear language and correct spelling and terminology<br>• Accurately records and completes information in organisational systems<br>• Records outcomes of communication with client for action |
| Oral Communication | 1.1-1.3, 2.2, 3.2-3.4 | • Interacts effectively in verbal exchanges, using active listening and questioning, to convey and clarify information<br>• Clearly explains detailed information using language, tone and pace appropriate to the audience |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.3, 3.2 | • Performs mathematical calculations to present financial data and contract requirements, and to accurately process invoice |
| Navigate the world of work | 2.3 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements |
| Interact with others | 1.1-1.3, 3.1, 3.3, 3.4 | • Uses a range of strategies to establish a sense of connection and build rapport with clients and workmates<br>• Recognises and accommodates basic differences and priorities of others |
| Get the work done | 2.2, 3.1, 3.3 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Uses familiar digital technologies and systems to access information, enter data, present information and communicate with the client |

# Assessment Requirements for ICTCBL305 Hand over cable systems and equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- demonstrate and explain the cable and equipment system to the client
- present accurate records and system documentation to the client
- complete contract documentation
- respond to client requests.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- recognise and describe cabling types, connectors and cabling structures
- describe the equipment on the client's premises
- describe typical performance parameters and faults that may be encountered with the client test equipment
- explain the various equipment types suitable for tests to be performed
- describe warranty information for equipment supplied and contractor work guarantees.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where cabling system and client equipment have been installed or upgraded
- relevant regulatory and equipment documentation that impacts on system and equipment installation activities.

# ICTCBL306 Locate and identify cable system faults

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to locate and identify cable system faults in communications cables at enterprise and client premises sites. The cable types may be telecommunications digital, voice, data and active format description (AFD) in digital TV cabling.

It applies to technical staff who are required to locate and rectify communications cable system faults, including local area networks (LAN) and wide area networks (WAN), master antenna television (MATV), cable television (CATV), closed-circuit television (CCTV), digital video broadcasting – terrestrial (DVB-T), digital video broadcasting – satellite (DVB-S), security alarm systems, fire systems, voice over internet protocol (VoIP) networks and radio communications. Their roles could include carrying out installation, maintenance and cable upgrades including structured cabling, fibre cabling, coaxial cabling and cable termination equipment.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| **ELEMENT** | **PERFORMANCE CRITERIA** |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 1. Prepare to locate and rectify cable fault | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards<br>1.2 Inform appropriate personnel of existing and potential hazards on worksite<br>1.3 Arrange access to site according to required procedure<br>1.4 Establish type of cable and nature of fault from client for cable system<br>1.5 Select suitable testing tools and equipment and personal protective equipment to meet required industry standards |
| 2. Locate and diagnose cable fault | 2.1 Conduct appropriate test following work health and safety (WHS) and environmental requirements to identify type of cable fault<br>2.2 Isolate fault progressively to remove likely variables from assessment<br>2.3 Locate cable or cable termination equipment fault without undue interruptions to client activity in shortest possible time<br>2.4 Notify client of findings |
| 3. Rectify fault | 3.1 Present client with options to rectify fault<br>3.2 Advise client of costs of any repair not covered by service agreement<br>3.3 Conduct fault rectification, if client agrees, in a manner that is safe for repair team and client<br>3.4 Escalate any unresolved faults to other parties for resolution if required |
| 4. Complete documentation and clean up worksite | 4.1 Advise client of successful fault clearance and obtain sign off<br>4.2 Complete all records<br>4.3 Complete reports to justify fault diagnosis and rectification methodology if required<br>4.4 Remove all waste and debris from worksite and dispose of according to environmental requirements<br>4.5 Restore any changes made to worksite during fault repair to client’s satisfaction |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.1 | • Interprets, consolidates and checks information and data<br>• Interprets technical documentation and test results from equipment manuals and specifications |
| Writing | 1.2, 1.4, 2.4, 3.1, 3.2, 3.4, 4.1-4.3 | • Accurately records and completes information in organisational systems<br>• Prepares documentation and correspondence using clear language and correct spelling and terminology |
| Oral Communication | 1.2, 1.4, 2.4, 3.1, 3.2, 3.4, 4.1, 4.5 | • Clearly explains detailed information using language, tone and pace appropriate to the audience<br>• Interacts effectively in verbal exchanges using active listening, questioning, and reading of verbal and non-verbal signals to convey and clarify information |
| Numeracy | 2.1, 3.2 | • Performs mathematical calculations to check, interpret and confirm numerical information |
| Navigate the world of work | 1.1, 1.3, 1.5, 2.1, 4.4 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements<br>• Seeks advice and clarification for new activities |
| Interact with others | 1.2, 1.4, 2.4, 3.1, 3.2, 3.4, 4.1, 4.5 | • Uses a range of strategies and reads verbal and non-verbal signals to establish a sense of connection and build rapport with clients and workmates<br>• Selects and uses appropriate conventions and protocols when communicating to clients and co-workers in a range of work contexts |
| Get the work done | 1.3, 1.5, 2.1-2.3, 3.3, 4.4, 4.5 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Accepts responsibility for addressing less predictable problems and initiates standard procedures in response, applying problem solving processes in determining a solution<br>• Uses familiar digital technologies and systems to test cables, access information, enter data, present information and communicate with others |

# Assessment Requirements for ICTCBL306 Locate and identify cable system faults

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- identify different faults using checks, tests and fault-finding methodology
- determine and rank likely causes of fault
- provide the client with solutions for rectifying faults
- rectify the faults
- escalate unresolved faults to other parties for resolution
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
- recognise the features and operating requirements of test equipment
- describe how to operate equipment according to a test specification
- state the legislation, codes of practice and other formal agreements that impact on the work activity
- identify the manufacturer’s requirements for safe operation of testing instruments
- describe the specific work health and safety (WHS) requirements relating to the activity and site conditions
- select the test methods and identify the test performance requirements
- identify typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where cable system tests may be conducted
- fault-finding equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable system testing and fault-finding activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL307 Install underground enclosures and conduit

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install underground enclosures and conduit, either direct buried or in pits, for new or cable maintenance tasks in access networks for outdoor installations within client premises or in public locations permitted by the Australian Communications and Media Authority (ACMA).

It applies to technical staff who install underground infrastructure for new and upgraded telecommunications cabling for domestic, commercial or industrial clients.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for installation of underground enclosure and conduit | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards<br>1.2 Arrange access to site according to required procedure<br>1.3 Inform appropriate personnel of existing and potential hazards on worksite |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Verify location of proposed installation according to appropriate plans obtained from authorised personnel<br>1.5 Obtain information on location of other services from relevant authorities<br>1.6 Organise tools and equipment for given work and safe work practice<br>1.7 Erect barriers according to safety requirements |
| 2. Install enclosure and conduit | 2.1 Excavate site, maintaining stability and allowing ease of access<br>2.2 Construct or install enclosure or pit according to design specifications and following work health and safety (WHS) and environmental requirements<br>2.3 Install conduit to specifications and manufacturer's requirements, ensuring that internal surfaces are free from impediments and sharp edges due to cable hauling<br>2.4 Seal conduit entry into enclosure against ingress of foreign matter<br>2.5 Install cable support structure and access facilities in pits to specifications |
| 3. Restore site and complete documentation | 3.1 Complete backfill safely using suitable spoil and materials that ensure conduit protection<br>3.2 Reinstate site to identified requirements<br>3.3 Complete reports on installation and design amendments accurately and file promptly according to enterprise requirements<br>3.4 Notify client and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 1.5, 1.7, 2.2-2.5, 3.2 | • Critically analyses plans and other documentation from a variety of sources and consolidates information to determine requirements |
| Writing | 1.3, 3.3, 3.4 | • Prepares documentation and correspondence using clear language and correct spelling and terminology |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Accurately records and completes information in organisational systems |
| Oral Communication | 1.3, 3.4 | • Interacts effectively in verbal exchanges using active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information<br>• Clearly explains detailed information using language, tone and pace appropriate to the audience |
| Numeracy | 2.1-2.3, 2.5 | • Takes measurements and uses them for work layout and construction<br>• Make calculations appropriate for measuring and estimating materials for construction |
| Navigate the world of work | 1.1, 1.2, 2.2, 3.3 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements<br>• Identifies and acts on issues that contravene relevant policies, procedures and legal requirements |
| Interact with others | 1.3-1.5, 3.4 | • Uses a range of strategies to establish a sense of connection and build rapport with clients and workmates<br>• Identifies and explores differences in a diverse range of people in the work context and makes adjustments to communication in recognition of these differences |
| Get the work done | 1.2-1.4, 1.6, 1.7, 2.1-2.5, 3.1-3.3 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision making processes for more complex and non-routine situations |

# Assessment Requirements for ICTCBL307 Install underground enclosures and conduit

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- excavate for installation of an enclosure and conduit to industry standards, applying related health and safety requirements and work practices
- install enclosure and conduit according to specifications and industry standards
- restore site and complete documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- recognise the features and operating requirements of excavation and installation to select appropriate equipment
- outline the manufacturer’s requirements for safe operation of equipment
- recognise the legislation, codes of practice and other formal agreements that impact on the work activity
- specify health and safety requirements relating to the activity and site conditions
- identify the components required for enclosures, pits and conduit
- describe the methods of installing enclosures and conduit as they apply to manufacturer's specifications and regulation
- identify typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where installation of underground enclosures and conduit may be conducted
- installation pits, enclosures and conduit currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL308 Install underground cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install underground cable for all communications applications in access networks or client premises.

It applies to technical staff who install cable for new and upgrades of telecommunications cabling infrastructure for communications applications including broadcasting or reception (digital video broadcasting – terrestrial [DVB-T], digital video broadcasting – satellite [DVB-S], long term evolution [LTE]), closed-circuit television (CCTV), digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN), fibre optic networks and multimedia.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1 Prepare for underground cable hauling | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards<br>1.2 Arrange access to site according to required procedure |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Verify cable installation requirements from plan and recognise constraints<br>1.4 Inform appropriate personnel of existing and potential hazards on worksite<br>1.5 Obtain information on location of other services from relevant authorities<br>1.6 Select suitable tools and equipment and protective equipment to meet required industry standards<br>1.7 Erect barriers according to safety requirements<br>1.8 Set up cable installation equipment according to manufacturer's requirements and enterprise guidelines<br>1.9 Clean debris and obstructions from conduit using suitable safe methods<br>1.10 Seal cable ends to exclude ingress of foreign matter |
| 2 Haul underground cable | 2.1 Run hauling feeder through conduit to enable cable hauling following work health and safety (WHS) and environmental requirements<br>2.2 Attach cable to hauling feeder according to manufacturer's specifications<br>2.3 Employ cable slippers or rollers to ensure no sheath damage when hauling into and out of enclosures<br>2.4 Lubricate cable and haul evenly at correct tension to reduce risk of cable damage<br>2.5 Maintain sufficient cable length allowance for jointing |
| 3 Seal and secure cable and complete all documentation | 3.1 Tag all cables to enable future identification<br>3.2 Seal cable ends to prevent ingress of foreign material<br>3.3 Place cable on supports in enclosures to reduce damage to conductors and enable ease of access for maintenance<br>3.4 Fit over voltage protection devices to all cables with metallic component where required<br>3.5 Complete reports on installation and design amendments accurately and file promptly according to client requirements<br>3.6 Reinstate site to identified requirements if required<br>3.7 Notify client and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 1.5, 1.8, 2.2 | • Interprets textual information from plans, specifications, standards and regulations to identify relevant and key information |
| Writing | 1.4, 1.5, 3.1, 3.5 | • Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols<br>• Prepares documentation and correspondence using clear language and correct spelling and terminology |
| Oral Communication | 1.4, 1.5, 3.5, 3.7 | • Uses collaborative and inclusive techniques, including active listening and questioning, to convey and clarify information and to confirm understanding<br>• Clearly explains detailed information using language, tone and pace appropriate to the audience |
| Numeracy | 1.3, 2.5 | • Make calculations appropriate for measuring and estimating materials for hauling |
| Navigate the world of work | 1.1, 1.2, 1.6-1.8 | • Accepts responsibility and ownership for the task, and makes decisions on completion parameters and the need for coordination with others<br>• Identifies and acts on issues that contravene relevant policies, procedures and legal requirements |
| Interact with others | 1.2, 1.4, 1.5, 3.7 | • Uses a range of strategies and reads verbal and non-verbal signals, establishes a sense of connection and builds rapport with clients and workmates |
| Get the work done | 1.1-1.3, 1.6-1.10, 2.1-2.5, 3.3, 3.4, 3.6 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Accepts responsibility for addressing less predictable problems and initiates procedures in response, applying problem solving processes in determining a solution |

# Assessment Requirements for ICTCBL308 Install underground cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- haul underground cable to industry standards
- restore site and complete documentation
- comply with all related safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the Australian Communications and Media Authority (ACMA) regulation requirements for Telecommunications Cabling Provider Rules
- recognise the features and operating requirements of hauling equipment
- identify legislation, codes of practice and other formal agreements that impact on hauling
- outline the manufacturer's requirements for safe operation of hauling equipment
- specify health and safety requirements relating to the hauling and site conditions
- identify typical issues and challenges that occur on the worksite.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where installation of underground cable may be conducted
- installation equipment currently used in industry

© Commonwealth of Australia, 2025 Future Skills Organisation

- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL309 Construct aerial cable supports

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install aerial cable supports in domestic, commercial or industrial communications applications, including digital and analog, telephony, data, video, digital broadcasting, master antenna television (MATV), cable television (CATV), closed-circuit television (CCTV), long term evolution (LTE) computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to technical staff installing aerial cable for client and carrier networks. Installations are completed outdoors on a client's premises using basic rigging procedures, methods and equipment for working safely at heights.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare site for installation | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards<br>1.2 Arrange access to site according to required procedure |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Verify aerial cable support installation requirements according to appropriate plans and recognise constraints<br>1.4 Obtain information on location of other services from relevant authorities<br>1.5 Inform appropriate personnel of existing and potential hazards on worksite<br>1.6 Assess support structure as safe for normal working conditions<br>1.7 Set up cable support installation equipment according to manufacturer's requirements and enterprise guidelines |
| 2. Install aerial support structures | 2.1 Select type of aerial cable support for catenary wire or integrated bearer installation<br>2.2 Use basic rigging procedures, methods and equipment for working safely at heights<br>2.3 Erect barriers according to safety requirements<br>2.4 Construct support foundations to specifications and provide for safe and secure operation of support structure<br>2.5 Install aerial cable supports securely following work health and safety (WHS) and environmental requirements according to plan and manufacturer's specifications |
| 3. Restore site and complete documentation | 3.1 Reinstate site to identified requirements<br>3.2 Complete reports on installation and design amendments and file according to enterprise requirements<br>3.3 Notify client and obtain sign off |

# Assessment Requirements for ICTCBL309 Construct aerial cable supports

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare site for aerial cable support construction, ensuring all relevant authorities have been notified and approvals obtained prior to commencement
- install aerial support structures using pole and wall supports, applying all related health and safety requirements and work practices
- use rigging procedures, methods and equipment for working safely at heights
- restore site and complete documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the Australian Communications and Media Authority (ACMA) regulation requirements for Telecommunications Cabling Provider Rules as they apply to aerial cabling
- recognise the features and operating requirements of cable supports and installation equipment
- outline the legislation, codes of practice and other formal agreements that impact on aerial cable supports
- outline the requirements for safe operation of equipment
- describe the safety precautions required when working at heights
- specify other health and safety requirements relating to the activity and site conditions
- identify typical issues and challenges that occur on the work site.

# ICTCBL311 Install systems and equipment on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install customer premises cabling and equipment for indoor and outdoor installations. This may include communications applications such as telephony, broadband data, video including digital broadcasting, and computer networks including local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to field officers, technicians or technical supervisors from carriers, contractors or other service providers who provide voice, data and security installation and maintenance services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for customer premises systems and equipment installation | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards<br>1.2 Arrange access to site according to required procedure<br>1.3 Inform appropriate personnel of existing and potential hazards on |

# Assessment Requirements for ICTCBL311 Install systems and equipment on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- read and interpret:
  - related floor plans
  - building plans
  - reflected ceiling plans
  - schematic drawings
- install customer premises equipment
- configure and test systems and equipment
- apply relevant regulations and standards
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and select cabling types, connectors and cabling structures
- describe the connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or asymmetric digital subscriber line (ADSL), multiplexer (MUX), integrated services digital network (ISDN), network termination device (NTD) or other carrier interface unit
- recognise electrical and/or optical properties to be measured
- explain the health and safety considerations for the works including:
  - electrical safety
  - lifting hazards
  - manufacturer’s requirements for safe operation of equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the equipment to be installed on the customer's premises
- identify and select the test methods and performance requirements for the installation
- identify typical issues and challenges that occur on the worksite.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- a site where installation of electronic equipment and customer cabling may be conducted
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL312 Cutover new systems and equipment on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to cutover new or upgraded systems and equipment on a customer premises. This may include indoor or outdoor installations of communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LAN), wide area networks (WAN) and multimedia systems.

It applies to telecommunications trade workers carrying out new or upgrades of domestic, commercial or industrial systems and equipment at a customer's premises.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare system and equipment cutover | 1.1 Obtain relevant legislation, codes, regulations and standards<br>1.2 Scope work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Notify appropriate personnel of identified safety hazards at worksite<br>1.4 Determine cable route and type of cable and equipment from project plan, and identify and avoid other services<br>1.5 Obtain plant, tools and safety equipment, and material to perform tasks safely and efficiently<br>1.6 Prepare implementation plan with cutover tasks based on identified nature of job, and seek customer approval<br>1.7 Notify customer and network carrier of proposed cutover details and arrange for customer representation |
| 2. Cutover system or equipment into service | 2.1 Perform cutover tasks and connect network facilities according to approved plan, following health and safety and environmental requirements for given work<br>2.2 Test all cable connections, equipment and facilities as instructed in technical manuals and specifications<br>2.3 Evaluate test results to ensure proper system operation and performance, and rectify if required |
| 3. Complete project documentation | 3.1 Record test results for future reference, complete reports on cutover installation and design amendments according to enterprise requirements<br>3.2 Recover obsolete materials and equipment, and return to appropriate point for disposal<br>3.3 Restore site according to requirements of enterprise or approving authority and to customer satisfaction<br>3.4 Notify appropriate personnel of job completion and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.4, 1.6, 2.1, 2.2, 3.3 | • Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirements<br>• Analyses and consolidates test results and data from a range |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | of sources, against defined criteria and requirements |
| Writing | 1.3, 1.6, 1.7, 3.1 | • Prepares documentation and correspondence using clear language and correct spelling and terminology<br>• Documents outcomes of tests and changes to plans using industry relevant terminology and recognised plan symbols |
| Oral Communication | 1.3, 1.6, 1.7, 3.4 | • Interacts effectively in verbal exchanges using active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information<br>• Interacts effectively in verbal exchanges, using active listening and questioning to convey and clarify information |
| Numeracy | 1.5, 1.6, 2.1-2.3 | • Make calculations appropriate for measuring and estimating materials for construction<br>• Performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | 1.1, 2.1, 3.1 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements<br>• Identifies and acts on issues that contravene relevant policies, procedures and legal requirements |
| Interact with others | 1.3, 1.6, 1.7, 3.4 | • Selects and uses appropriate conventions and protocols when communicating with customers and co-workers in a range of work contexts<br>• Uses a range of strategies to establish a sense of connection and build rapport with customers and co-workers |
| Get the work done | 1.2, 1.4-1.6, 2.1-2.3, 3.2, 3.3 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes decisions and implements standard procedures for routine tasks, using formal decision making processes for more complex and non-routine situations<br>• Applies problem solving processes for determining solutions |

# Assessment Requirements for ICTCBL312 Cutover new systems and equipment on customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- read and interpret plans and specifications
- develop and implement a cutover work plan
- install customer premises equipment
- configure and test systems and equipment
- apply relevant regulations and standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and select cabling types, connectors and cabling structures
- describe the legislation, codes of practice and other formal agreements that impact on the work activity
- describe the manufacturer’s requirements for safe operation of equipment
- explain the equipment requiring cutover at the customer's premises
- specify the health and safety requirements relating to the activity and site conditions
- identify and select the test methods and performance requirements
- describe the features and operating requirements of test equipment for cutover
- identify typical issues and challenges that occur on the worksite.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- a site where installation of customer premises equipment may be conducted
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL313 Modify and cutover cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to modify an infrastructure to cutover new cables into an existing indoor and outdoor, domestic, commercial or industrial cabling installation including communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to field officers, technicians or lineman installers from carriers, contractors or other service providers who upgrade coaxial or optical fibre cables as part of a hybrid fibre coaxial (HFC) network, a broadband access network or a large client private network.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for cable modification and cutover | 1.1 Obtain relevant legislation, codes, regulations and standards for given work<br>1.2 Scope work by obtaining project plan from appropriate personnel |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | and arrange for site access to comply with security arrangements<br>1.3 Notify appropriate personnel of identified safety hazards at worksite<br>1.4 Determine cable route and type of cable from project plan, and identify and avoid other services<br>1.5 Obtain plant, tools and safety equipment and material to perform tasks safely and efficiently<br>1.6 Prepare implementation plan with cutover tasks based on identified nature of job and seek client approval<br>1.7 Notify client and network carrier of proposed cutover details and proposed disruption to services<br>1.8 Undertake additional preparatory non-jointing work, as required, according to enterprise guidelines and site conditions<br>1.9 Select labour support required according to cutover tasks and available skills<br>1.10 Select technical equipment for cutover to suit materials being used, cable type and joint enclosure |
| 2. Joint and cutover cable | 2.1 Follow work health and safety (WHS) and environmental requirements for given work<br>2.2 Joint cable according to sequencing plan, materials, joint type, location, and enterprise and manufacturer’s guidelines<br>2.3 Test cable for performance and rectify any faults relating to cutover according to location, materials available and industry practice<br>2.4 Seal all joints according to cable type, location, and enterprise and manufacturer’s guidelines |
| 3. Complete project documentation | 3.1 Record test results for future reference, complete reports on cutover installation and design amendments to reflect existing cable layout according to enterprise requirements<br>3.2 Recover obsolete materials and return to appropriate point for disposal<br>3.3 Restore site according to requirements of enterprise or approving authority and to client satisfaction<br>3.4 Notify appropriate personnel completion of cutover and obtain sign off |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 1.5, 1.9, 2.2, 2.3, 3.3 | • Analyses and consolidates test results and data from a range of sources, against defined criteria and requirements<br>• Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirements |
| Writing | 1.6, 1.7, 3.1, 3.4 | • Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols<br>• Prepares documentation and correspondence using clear language and correct spelling and terminology |
| Oral Communication | 1.2, 1.3, 1.6, 1.7, 3.4 | • Interacts effectively in verbal exchanges using active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information |
| Numeracy | 1.4-1.6, 2.3 | • Make calculations appropriate for measuring and estimating materials for construction<br>• Performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | 1.8, 2.1-2.4, 3.1, 3.3 | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements<br>• Identifies and acts on issues that contravene relevant policies, procedures and legal requirements |
| Interact with others | 1.2, 1.3, 1.6, 1.7, 1.9, 3.4 | • Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers |
| Get the work done | 1.1, 1.2, 1.4-1.6, 1.8, 1.10, 2.2-2.4, 3.2, 3.3 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Addresses less predictable problems and initiates standard procedures in response, applying problem solving processes in determining a solution |

# Assessment Requirements for ICTCBL313 Modify and cutover cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare for cutover
- rearrange cable
- conduct tests to determine success of cutover
- interpret results and rectify faults occurring as a result of cutover
- apply regulations and standards related to the cable rearrangement
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- recognise cabling types, connectors and cabling structures
- describe legislation, codes of practice and other formal agreements that impact on the work activity
- describe the manufacturer’s requirements for safe operation of equipment
- explain how the cutover of cable is performed on the client's equipment
- specify the health and safety requirements relating to the activity and site conditions
- describe the test methods and performance requirements
- describe the features and operating requirements of test equipment
- Identify typical issues and challenges that occur on the worksite
- describe the purpose of warranties and service level agreements (SLA).

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- systems and equipment involving cutover
- installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL314 Install network cable equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install indoor or outdoor, domestic, commercial or industrial network cable equipment at a client's premises or service provider access networks. This may include communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to technicians and lineman installers who install network cable equipment within the broadband infrastructure deployment where they may upgrade coaxial or optical fibre cables as part of a hybrid fibre coaxial (HFC) network, a broadband access network or a large client private network.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for installation | 1.1 Obtain relevant legislation, codes, regulations and standards for given work<br>1.2 Scope work by obtaining project plan from appropriate personnel |

# Assessment Requirements for ICTCBL314 Install network cable equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare for installation of network cable equipment
- provide cable infrastructure
- install cable equipment support structure for power, alarms and interrogation requirements
- install equipment, test and interpret test results
- label equipment correctly
- safely use any specialised hand or power tools and equipment
- apply regulations and standards related to the installation
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and select cabling types, connectors and cabling structures
- identify connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- describe the network cable installation requirements for the client's equipment
- define the electrical and/or optical properties to be measured
- identify the health and safety considerations including:
  - electrical safety
  - lifting hazards
  - manufacturer’s requirements for safe operation of equipment
- describe the test methods and performance requirements to be used
- identify the typical issues and challenges that occur on the worksite

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the purpose of warranties and service level agreements.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- a site where installation of network cable equipment may be conducted
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL316 Install ribbon fibre cable in the FTTX distribution network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the performance outcomes, skills and knowledge required to install ribbon cable in the fibre access node (FAN) site and distribution, local and access underground enclosure joints. Cables may range from 12 fibre to 576 fibre cables.

It applies to individuals who are optical fibre cable installers and splicers deploying broadband access networks using optical technologies. They combine technical skills with specific work health and safety (WHS) skills to work safely on ribbon fibre.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

| | |
|---|---|
| ICTCBL208 | Splice and terminate optical fibre cable for carriers and service providers |

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| 1. Prepare for installation of ribbon fibre | 1.1 Select safety equipment to protect self, co-workers and public in line with WHS and environmental requirements<br>1.2 Identify and obtain tools and appropriate equipment required for installation<br>1.3 Check physical conditions relevant to installation and confirm layout of equipment to be installed<br>1.4 Inform appropriate personnel of identified hazards on worksite<br>1.5 Locate other services from relevant authorities<br>1.6 Secure worksite with tests for dangerous gases and guards around open manholes<br>1.7 Obtain approval for alterations to design within organisational guidelines |
| 2. Check and secure existing optical fibre cable | 2.1 Following WHS practices, verify that cable was installed according to installation plan and inspect cable for signs of sheath damage<br>2.2 Maintain minimum bend ratios of cable according to manufacturer specifications while manoeuvring into position<br>2.3 Secure cable according to safe industry practice, avoiding damage to cable and sheath |
| 3. Install ribbon fibres into high density drawers and/or pivot sub-racks in internal cabinets | 3.1 Introduce cable into cabinet rack through appropriate route<br>3.2 Remove cable sheath and lay up ribbon loose tubes into sub-racks without damage to fibre<br>3.3 Remove loose tubes, clean ribbon fibres and prepare for splicing using organisational techniques<br>3.4 Splice ribbon fibres and secure into splice holders<br>3.5 Confirm that fibres are accurately spliced according to organisational specifications |
| 4. Install and splice ribbon cable in underground enclosures | 4.1 Select appropriate enclosure for function and cable type<br>4.2 Prepare cables for mid-span and butt splicing following vendor guidelines<br>4.3 Feed cable accurately into enclosure according to network owner guidelines<br>4.4 Lay up ribbon fibre in enclosure splice tray to allow accurate and efficient splicing<br>4.5 Cross-reference fibre numbering to match fibres accurately<br>4.6 Strip ribbon fibres to specifications<br>4.7 Splice ribbon fibres accurately |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 4.8 Apply heat-shrink sleeves to ensure protection of spliced ribbon fibres<br>4.9 Secure spliced ribbon fibres in splice holders |
| 5. Close and seal enclosure | 5.1 Check cable and ribbon fibre placement in splice trays conform to vendor and network owner specifications and adjust if necessary<br>5.2 Close and secure splice trays and fit enclosure cap<br>5.3 Heat shrink seals around cable entry ports when using heat shrinking techniques, according to vendor and network owner guidelines<br>5.4 Close and tighten seals around ribbon fibre cables when using mechanical sealing techniques, according to vendor and network owner guidelines<br>5.5 Check for signs of effective seal and re-seal if necessary |
| 6. Complete site reinstatement, reporting and sign off requirements | 6.1 Place sealed enclosure in pit and secure to vendor and network owner specifications<br>6.2 Identify signs of damage or potential damage to pit and cable and take steps to mitigate<br>6.3 Reinstate site to network owner specifications<br>6.4 Prepare and finalise reports, including test results and alterations to plans, according to network owner requirements<br>6.5 Advise client of work completion and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance** | **Description** |
|---|---|---|
| Reading | 1.5, 2.1, 2.2, 5.1, 5.3, 5.4 | • Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirements |
| Writing | 1.4, 6.4 | • Accurately records and completes organisational documents and correspondence using clear language and correct spelling, grammar and terminology |
| Oral Communication | 1.4, 1.5, 6.5 | • Uses clear language and concepts, and tone and pace appropriate for the audience and purpose |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.1, 1.7, 2.1, 3.5 | • Complies with explicit policies and procedures<br>• Explores and implements where identified the implicit expectations of policies, procedures and standards |
| Get the work done | 1.2, 1.3, 1.6, 1.7, 2.1-2.3, 3.1-3.5, 4.1-4.9, 5.2-5.5, 6.1-6.3 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision making processes for more complex and non-routine situations |

# Assessment Requirements for ICTCBL316 Install ribbon fibre cable in the FTTX distribution network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- prepare cable for mid-span splicing – strip and coil
- prepare cable for butt end splicing – strip and coil
- install ribbon fibre cable into:
  - one heat shrink seal enclosure
  - one mechanical seal enclosure
  - one high density ribbon fibre termination drawer
- splice ribbon fibre according to specifications
- observe all network owner requirements and product practices to ensure optimal performance of cable systems
- adapt techniques to a range of technical and environmental conditions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- determine the applicable network owner standards, specifications and procedures for cable installation
- determine the cable installation requirements, including:
  - causes of signal strength loss in optical fibre
  - colour coding and numerical coding of fibres
  - application of relevant safe operation of laser instruments
  - installation equipment
- specify the industry and organisational policies and procedures when splicing optical fibre cable

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify manufacturer requirements for safe operation of optical fibre equipment
- identify common hazards associated with the construction site
- describe work health and safety (WHS) and environmental control processes and responsibilities on worksites
- describe the safe handling of optical fibres and related equipment including:
  - hazards relating to handling of optical fibre and laser light source in the workplace
  - injuries:
    - damage to retina from lasers
    - damage to lungs from inhalation of fibre offcuts and particles
    - needle stick injury from fibres and offcuts
  - laser warning signs and labels relating to optical fibre components and equipment
  - safety requirements when handling and working with:
    - active equipment
    - laser light sources
    - optical fibre connectors
    - optical fibres
    - patch cords
- describe the major feature and use of ribbon fibre, including:
  - bend ratios for ribbon fibre
  - procedures for handling and placing ribbon fibre in enclosures
  - procedures for physical handling of ribbon fibre cables
  - structure of ribbon fibre cables
  - splicing techniques for ribbon fibre
  - types and functions of ribbon fibre enclosures
- describe the risks associated with confined spaces and determine the appropriate responses.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to special purpose tools, equipment and materials. These include:

- optic fibre cabling and equipment
- a range of cabinet types and other housings requiring cable-handling techniques
- personal protective equipment
- first aid and fire safety equipment
- ribbon fibre cleaners, stripper and splicer
- joint pressure testing equipment.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL317 Cut over metallic conductor cable in the access network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package version 3.0. |

## Application

This unit describes the skills and knowledge required to cut over and rearrange new and existing distribution cables in the telecommunications access network.

It applies to linesworkers, jointers or technicians from carriers, contractors or other service providers who work on new or existing copper cables in the access network.

Work functions in the occupational areas where this unit may be used may be subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for cable modification and cutover | 1.1 Obtain relevant legislation, codes, regulations, client practices, manufacturer's guidelines and standards for for the job.<br>1.2 Obtain project plan from appropriate personnel and use plan to scope work for job<br>1.3 Arrange for access to worksite, according to local government or other authority requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Inspect site to develop a work health and safety (WHS) plan and notify appropriate personnel of identified safety hazards<br>1.5 Determine cable route and type of cable from project plan, taking into account the location of other services<br>1.6 Obtain required plant, tools, safety equipment and materials<br>1.7 Prepare detailed plan of cut over tasks according to project plan, job scope, legislative and other requirements, and obtain necessary approvals<br>1.8 Notify client and network carrier of proposed cutover activity and proposed disruption to services that may impact on their service level agreements (SLAs)<br>1.9 Undertake additional preparatory non-jointing work, as required, according to client practices and site conditions |
| 2. Joint and cut over cable | 2.1 Prepare cabinet, joint enclosure and jointing chambers for cable handling, entry and sealing requirements<br>2.2 Joint cable according to jointing sequence, materials, connectors and joint type, location, client practices and manufacturer's guidelines<br>2.3 Test cable for performance and rectify cutover faults relating to cutover according to location, materials available and client practices, and record test results for future reference<br>2.4 Seal all joints according to cable type, location, client practices and manufacturer's guidelines |
| 3. Clean up worksite and complete documentation | 3.1 Complete reports on cutover installation and design amendments to reflect existing cable layout<br>3.2 Place and secure cables to supports in jointing chamber or cabinet according to client practices<br>3.3 Mark up As Built plans for return to client for their records<br>3.4 Recover obsolete materials and return to appropriate point for disposal<br>3.5 Restore site according to client practices or approving authority requirements<br>3.6 Notify appropriate personnel about completion of cutover and obtain sign off |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 1.5, 1.7, 1.8, 2.3, 2.4, 3.1, 3.3, 3.4 | • Interprets plans, specifications and other documentation from various sources<br>• Consolidates information to determine requirements |
| Writing | 1.2, 1.3, 1.7, 1.8, 3.1, 3.3, 3.6 | • Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols<br>• Prepares documentation and correspondence using clear language and correct spelling |
| Oral Communication | 1.2, 1.3, 1.6, 1.7, 1.8, 3.6 | • Interacts effectively in verbal exchanges using appropriate language, and listening and questioning skills to convey and clarify information |
| Numeracy | 1.4, 1.5, 1.6, 2.3, 2.4 | • Makes calculations required for measuring and estimating materials for construction<br>• Performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | 1.1, 1.3, 1.7, 1.9, 2.2, 2.3, 2.4, 3.2, 3.4, 3.5 | • Complies with policies, procedures and legislative requirements relevant to own role |
| Interact with others | 1.2, 1.3, 1.7, 1.8, 3.1, 3.3, 3.6 | • Uses appropriate practices and protocols to communicate effectively with colleagues, clients and others |
| Get the work done | 1.1, 1.2, 1.3, 1.5, 1.6, 1.7, 1.8, 1.9, 2.2, 2.3, 2.4, 3.3, 3.6 | • Plans, sequences and carries out tasks to meet required outcomes<br>• Analyses task requirements to decide on appropriate equipment and practices<br>• Uses problem solving processes to address less predictable problems, referring to standard procedures to determine solutions |

# Assessment Requirements for ICTCBL317 Cut over metallic conductor cable in the access network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package version 3.0. |

## Performance Evidence

Evidence of the ability to:

- communicate with stakeholders to set up the site for a cabling cutover job
- use project plan to determine cable route and necessary fittings for installation
- use project plan to prepare detailed cut over plan including any anticipated outages that may affect service level agreements (SLAs)
- follow client practices for the placement and sealing of the cables
- separate, label and joint cable units and pairs to client practices
- test cable, rectify faults, record results and action taken
- seal all joints and cabinets according to enterprise agreements
- comply with relevant work health and safety (WHS) requirements
- place and secure cables and mark up As Built plans
- hand over completed job to client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe common cabling types, connectors and cabling structures
- outline requirements of legislation, codes of practice and other formal agreements that impact on the work activity
- describe how the manufacturer’s jointing and sealing practices can be followed in a safe manner
- explain the process of cutting over a cable for various scenarios
- specify the WHS requirements relating to setting up an outdoor site and accessing underground facilities

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the features and operating conditions of test equipment and how the equipment is used to measure cable performance
- identify typical issues and challenges that may cause delays in job completion, and how these could be addressed
- describe the purpose of warranties and SLAs.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- cable systems and jointing equipment required to cut over cable
- cabling infrastructure required for installation
- regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL318 Install and cut over metallic conductor cable to access network cabinet

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package version 3.0. |

## Application

This unit describes the skills and knowledge required to install and cutover a new metallic conductor cable to an access network distribution cabinet. The cable types are typically up to 200 pair copper cables in the carrier access network. The cabinet types may be mixed mode bearer cabinets in the access network and cross connect units (CCUs) or pillars.

It applies to linesworkers, field officers or technicians working for carriers, contractors or other service providers who install and rearrange copper cables in the carrier network.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for installation | 1.1 Obtain relevant legislation, codes, regulations and standards for the job<br>1.2 Obtain project plan to scope work and then obtain approval from client on key features of installation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Arrange for site access to comply with landholder, government and statutory body regulations<br>1.4 Inspect site to develop work health and safety (WHS) plan and notify appropriate personnel of identified safety hazards<br>1.5 Determine cable route and type of network cable equipment from project plan, taking into account the location of other services<br>1.6 Obtain required plant, tools, safety equipment and materials for cabinet entry<br>1.7 Coordinate with other parties to minimise disruption to services and down time<br>1.8 Segregate incoming and outgoing cables to facilitate access and avoid overlaying and backtracking of cable<br>1.9 Notify stakeholders of proposed cutover details and proposed disruption to services<br>1.10 Undertake additional preparatory non-jointing work, as required, according to client practices and site conditions |
| 2. Install required cable and termination modules | 2.1 Follow WHS and environmental requirements for given work<br>2.2 Evaluate existing termination module type and capacity<br>2.3 Install additional termination modules, if required, and modify existing housing capacity according to manufacturer's specifications and industry practice<br>2.4 Determine cable route between the parent jointing chamber and the cable termination blocks to comply with client practices, site limitations, equipment specifications and regulations<br>2.5 Select entry port and sealing arrangements<br>2.6 Install cable to cabinet<br>2.7 Arrange and distribute cable fan out and routing according to industry practice |
| 3. Joint, jumpering and cutover cable | 3.1 Joint cable according to jointing standards, materials, joint type, location, client practices and manufacturer's guidelines<br>3.2 Install jumpers and cut away tails to industry practice and to minimise service outages<br>3.3 Test cable for performance and rectify any faults relating to cutover according to location, materials available and industry practice<br>3.4 Seal all joints and cabinet according to cable type, location, client practices and manufacturer's guidelines |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 4. Perform tests | 4.1 Visually check that all connections and interconnections are firm and sound<br>4.2 Electrically test all terminations for continuity according to client practices<br>4.3 Reseal and pressurise cables |
| 5. Complete site restoration and project documentation | 5.1 Supply test results to the client for future reference<br>5.2 Complete cut over report and design amendments report (As Built) to show final cable layout<br>5.3 Recover obsolete materials and return to appropriate point for disposal<br>5.4 Restore site according to client practices or approving authority requirements<br>5.5 Notify appropriate personnel about completion of cutover and obtain sign off |

# Foundation Skills

*This section describes language; literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 1.7, 1.9, 2.3, 3.3, 3.4, 4.2 | • Interprets plans, specifications and other documentation from various sources<br>• Consolidates information to determine requirements |
| Writing | 1.1, 1.2, 1.3, 1.4, 1.7, 1.9, 2.3, 3.1, 3.2, 3.3, 4.2, 5.2 | • Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols<br>• Prepares documentation and correspondence using clear language and correct spelling |
| Oral Communication | 1.2, 1.3, 1.4, 1.7, 1.9, 3.3, 5.5 | • Interacts effectively in verbal exchanges using appropriate language, listening and questioning skills to convey and clarify information |
| Numeracy | 1.2, 1.5, 2.2, 2.3, 2.4, 2.7, 3.1, 3.2, 3.3, 4.2, 4.3, 5.2 | • Makes calculations required for measuring and estimating materials for construction<br>• Performs mathematical calculations to check, interpret and confirm results of system tests |

# Assessment Requirements for ICTCBL318 Install and cut over metallic conductor cable to access network cabinet

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 3.0. |

## Performance Evidence

Evidence of the ability to:

- interpret project plan to determine cable route, required plant, tools, safety equipment and materials
- communicate with other stakeholders to arrange site access and safety requirements
- prepare cabinet and cable for cable entry according to client practices
- install cable, label and fan out for termination
- install termination modules
- coordinate with other parties to minimise service outages
- terminate pairs to termination modules following client practices
- run jumpers and cutover services with minimum outages
- conduct tests and rectify faults caused by cutover
- recover obsolete materials and restore site
- complete required documentation related to cut over
- comply with all related health and safety requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list and describe cabling types, connectors and cabling structures
- outline the requirements of the legislation, codes of practice and other formal agreements that impact on the work activity
- describe the manufacturer's requirements for the operation of jointing equipment
- summarise the process for the cut over of a cabinet entry cable
- specify the health and safety requirements relating to the activity and site conditions

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the features and operating conditions of test equipment and how the equipment is used to measure cable performance
- identify typical issues and challenges that may cause delays in project construction activities, and how these could be addressed
- describe the purpose of warranties and service level agreements (SLAs).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and are or replicate the workplace. Traffic and pedestrian control, noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- systems and equipment used for cut over
- installation equipment currently used in industry
- regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL319 Rearrange large size copper cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 3.0. |

## Application

This unit describes the skills and knowledge required to modify a large size cable network or cut over new large size cables in the telecommunications access network. It includes telephony, data security and emergency services within the cable sheath.

It applies to linesworkers, technicians or copper jointers working for carriers, contractors or other service providers who cut over and rearrange large size cable to distribution cabinets and housings.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for cable modification and cutover | 1.1 Obtain relevant legislation, codes, client practices, regulations and standards for given work<br>1.2 Obtain project plan from appropriate personnel and use it to scope work<br>1.3 Arrange for site access according to local government and other |

# Assessment Requirements for ICTCBL319 Rearrange large size copper cable

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 3.0. |

## Performance Evidence

Evidence of the ability to:

- obtain and use information to prepare a plan to implement cutover tasks
- obtain all resources required to carry out cutover tasks
- implement plan including:
  - preparing jointing cabinets and chambers for cutover
  - preparing, entering and sealing new cables to large size joint enclosures
  - using jointing machines and jigs for jointing
  - conducting tests to determine success of cutover
  - interpreting results and rectifying faults occurring as a result of cutover
  - sealing joints and restoring alarms
- comply with all related health and safety requirements, client and work practices
- complete and store required project documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list common cabling types, connectors and cabling structures
- describe legislation, codes of practice and other formal agreements that impact on the work activity
- list and describe equipment used for the work activity and the manufacturer’s requirements for safe operation
- explain how the cutover of large size cable is performed on the client's equipment
- explain the main health and safety concerns relevant to the work activity
- describe how cable performance is tested

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the equipment, including operating requirements, used to test cable
- identify typical issues and challenges that occur on worksites, and how to address them
- describe the purpose of warranties and service level agreements (SLAs).

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- systems and equipment required for cutover activities
- installation equipment currently used in industry
- regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL320 Jumper metallic conductor cable in the access network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 3.0. |

## Application

This unit describes the skills and knowledge required to jumper metallic conductor cable in access network cabinets or exchange distribution frames. It applies to new or existing jumpering for upgrades or network cabling rearrangements for convergence to next generation networks (NGN).

It applies to linesworkers, technicians or jointers who carry out technical roles involving indoor and outdoor distribution frame jumpering. All jumpering in access network distribution cabinets must be conducted by workers who have been authorised by the network owner or carrier to undertake the work involved.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare cabinet and termination frame for | 1.1 Arrange access according to customer and individual worksite requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| jumpering | 1.2 Set up work site to ensure public safety and to comply with utility provider, local, state and commonwealth requirements<br>1.3 Inspect site to develop work health and safety (WHS) plan and notify appropriate personnel of identified safety hazards<br>1.4 Prepare for cable jumpering work observing client practices, cable type, termination systems, earthing and protection and relevant legislative requirements<br>1.5 Select correct jumpering activities for installation according to client practices<br>1.6 Identify remote power feeding services that operate at above telecommunications network voltage (TNV) and special services that terminate in the cabinet of housing<br>1.7 Take necessary precautions to work safely with network voltages and minimise service disruption to special services<br>1.8 Remove all contaminants from worksite that may adversely affect jumpering and prepare worksite to ensure adequate visibility to minimise errors and reduce eye strain<br>1.9 Plan block locations following client practices within the frame and allow for capacity to expand jumpering where possible |
| 2. Jumper terminal blocks on frame | 2.1 Install terminating modules to frame according to manufacturer's specifications<br>2.2 Set up jumpering reel near source terminal block and draw jumper through frame<br>2.3 Terminate jumper to block and return, cut and terminate source end of jumper<br>2.4 Identify and label jumpers according to client practices<br>2.5 Install over-voltage protection devices to all cables with metallic component where required<br>2.6 Earth cable shield to manufacturer's specifications and industry standards |
| 3. Test jumpering and seal closure | 3.1 Conduct visual inspection to confirm that jumper is not kinked or jammed<br>3.2 Test termination to satisfy performance specifications and record results if required<br>3.3 Close housing, seal and re-pressurise where necessary |
| 4. Complete records and restore site | 4.1 Update records and plans accurately with cabling details according to industry codes of practice and current Australian standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 4.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions<br>4.3 Notify appropriate personnel about completion of job and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.1, 2.4, 2.6, 3.2, 4.1 | • Interprets textual information from relevant sources to identify relevant and key information |
| Writing | 1.3, 2.4, 3.2, 4.1, 4.3 | • Uses clear, specific and industry related terminology to complete workplace documentation |
| Oral communication | 1.1, 1.3, 4.3 | • Interacts effectively in verbal exchanges using appropriate language, listening and questioning skills to convey and clarify information |
| Numeracy | 1.4, 1.6, 2.1, 2.6, 3.2, 4.1 | • Takes readings and measurements and interprets results |
| Navigate the world of work | 1.1, 1.2, 1.3, 1.4, 1.7, 1.8, 2.5, 2.6, 4.1, 4.2 | • Complies with policies, procedures and legislative requirements relevant to own role |
| Interact with others | 1.1, 1.3, 4.3 | • Identifies and follows accepted communication practices and protocols when liaising with clients, colleagues and others |
| Get the work done | 1.1, 1.4, 1.5, 1.6, 1.9, 2.1, 3.1, 3.2, 4.1, 4.3 | • Plans, sequences and carries out tasks to meet required outcomes<br>• Analyses task requirements to decide on appropriate equipment and practices |

# Assessment Requirements for ICTCBL320 Jumper metallic conductor cable in the access network

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 3.0. |

## Performance Evidence

Evidence of the ability to:

- plan and prepare for jumpering activity including:
  - arranging safe access to site
  - identifying special services and remote power feeds a
  - following appropriate procedures
- carry out jumpering activity including:
  - populate terminal frames with new terminal blocks where necessary
  - running jumpers through frame and terminate jumper to terminal blocks
  - using correct methods to terminate a range of jumpers
  - conducting tests and interpreting cable test results for several different types of lead-in faults
  - interpreting and applying relevant legislative requirements
- finalise jumpering activity including:
  - updating records and plans to show cable locations
  - restoring site to required condition
  - obtaining final sign off.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list the termination tools required for the work activity and explain how to operate them according to safety and manufacturer's guidelines
- describe the features and operating requirements of testing equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe the process used to install and maintain cabling products according to manufacturer's guidelines
- outline legislation, codes of practice and other formal agreements that impact on the work activity
- describe specific work health and safety requirements relating to the activity and site conditions
- explain termination methods and performance requirements for jumpering activity
- describe typical issues and challenges that occur on site and how to address them.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where metallic conductor cable may be terminated
- colour codes for visual inspections or wire-mappers for 4 pair cable tests
- regulatory and cabling documentation that impacts on cable terminating activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL401 Prepare design drawings and specification for a cable installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to prepare design drawings and specification for indoor or outdoor, domestic, commercial or industrial cable installations for communications applications compliant with appropriate Australian Communications and Media Authority (ACMA) technical standards.

It applies to technical staff who prepare design drawings and specifications for digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia cable communication installations on a client's premises.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Gather information on existing and proposed | 1.1 Confirm cable installation requirements with client<br>1.2 Inspect site to confirm building plans where possible |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| installation | 1.3 Review existing cable plans and drawings |
| 2. Determine installation options | 2.1 Assess available installation options against client requirements and relevant legislation, codes, regulations and standards<br>2.2 Establish and assess cost of options against client's budget<br>2.3 Select most suitable option based on function and cost considerations, and present to client |
| 3. Prepare suitable drawings | 3.1 Prepare clear and accurate cable installation drawings indicating proposed outlets and services<br>3.2 Provide drawings to relevant parties and file copies for later reference according to company policies |
| 4. Prepare cabling specifications | 4.1 Prepare detailed cabling specifications for cabling system<br>4.2 Prepare accurate costing from detailed specification, including equipment and material required |
| 5. Verify specifications with client | 5.1 Verify prepared documentation with client<br>5.2 Obtain authorisation and sign off from client to proceed according to company policy |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1-2.3 | • Analyses complex documentation from a variety of sources<br>• Interprets and checks completeness and accuracy of information and data<br>• Evaluates information and products from a variety of sources to ensure appropriateness for client needs |
| Writing | 1.1, 2.3, 3.1, 4.1, 4.2, 5.1, 5.2 | • Writes, edits and proofreads plans and documents to ensure clarity of meaning, accuracy and consistency of information<br>• Records client information and completes organisational documents and correspondence using clear language and correct spelling, grammar and terminology |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Oral Communication | 1.1, 2.3, 5.1, 5.2 | • Use active listening and questioning to clarify requirements |
| Numeracy | 1.2, 1.3, 2.1-2.3, 3.1, 4.1, 4.2 | • Performs mathematical calculations to check, interpret and confirm information for design specifications and drawings<br>• Makes calculations appropriate for measuring, estimating materials and costs |
| Navigate the world of work | 2.1, 5.2 | • Takes full responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation or regulation on design parameters |
| Interact with others | 1.1, 2.3, 3.2, 5.1, 5.2 | • Selects and uses appropriate communication practices with others |
| Get the work done | 1.1, 1.2, 2.1, 2.3, 3.2 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities |

# Assessment Requirements for ICTCBL401 Prepare design drawings and specification for a cable installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- determine installation requirements and options
- produce schematic and floor plan drawings based on design parameters
- produce specifications based on design drawings
- verify design drawings and specifications with client
- produce a costing of the design and specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- recognise and apply the Australian Communications and Media Authority (ACMA) regulation requirements for Telecommunications Cabling Provider Rules in the design
- recognise and apply legislation, codes of practice and other formal resources that impact on the design
- recognise and apply industry recognised drafting principles and standards
- identify key features and operating requirements of resources and equipment required for the client cable installation
- identify and include the manufacturer’s performance specifications for equipment and consumables in the design
- assess health and safety requirements relating to the design.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where cable installation may be conducted
- equipment currently used in industry
- relevant regulations, company policies and cabling specifications that impact on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL402 Schedule and supply cabling installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to schedule and supply indoor and outdoor, domestic, commercial or industrial communications cabling installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to technical staff who schedule and supply cabling installations appropriate to Australian Communications and Media Authority (ACMA) rules.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Schedule supply and installation events | 1.1 Confirm cabling installation requirements and project specifications from client<br>1.2 Prepare work schedules and installation plans, identifying key dates and milestones |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Obtain information on location of other services from relevant authorities<br>1.4 Prepare schedule of material supplies to be available when required for installation |
| 2. Monitor and adjust supply requirements | 2.1 Adjust labour load variations to meet installation needs to enable completion within budget and timeframes<br>2.2 Prepare quote and confirm additional work requests with client prior to commencement<br>2.3 Monitor work progress against project schedules and budgets<br>2.4 Monitor compliance regularly with client specifications, licensing, relevant legislation, codes, regulations and standards<br>2.5 Prepare report detailing project scheduling and supply requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |

# Assessment Requirements for ICTCBL402 Schedule and supply cabling installation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- plan and provide appropriately skilled labour, volume and type of material to meet key dates and milestones for installations
- identify labour and material sources and negotiate with contractors, suppliers and other service providers to meet installation deadlines
- monitor work progress and adjustment of resource requirements to meet both client's needs and costing parameters in installations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe appropriate methods for scheduling labour and resources
- recognise the requirements to safely operate equipment and install components according to a manufacturer's specification
- outline the work health and safety (WHS) standards and practices required to:
  - manage risk and hazards in the workplace
  - use health and safety standards
  - work systematically with required attention to detail without injury to self or others
- identify and describe legislation, codes of practice and other formal agreements that impact on the work activity
- identify typical issues and challenges that occur in scheduling work and overseeing a worksite.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites and equipment where cabling installation may be conducted
- relevant regulatory and equipment documentation that impacts on installation activities
- organisational policies and procedures for documenting schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL403 Supervise cabling project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to supervise an indoor or outdoor, domestic, commercial or industrial communications cabling project. It requires planning, preparing financial budgets and monitoring cabling work. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to technical staff who supervise a cabling project on a client's premises where technical and organisational skills are required to ensure an effective outcome for the client.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan and organise cabling activities | 1.1 Obtain cabling installation specifications and project specifications from client<br>1.2 Prepare work schedules and installation plans identifying key dates and milestones |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Organise resource requirements<br>1.4 Verify location of proposed installation according to plans obtained from authorised personnel<br>1.5 Obtain information on location of other services from relevant authorities<br>1.6 Document plans for cabling project and advise relevant parties |
| 2. Prepare financial budgets | 2.1 Prepare budget identifying *c*ost and expenditure items from scheduling and planning documentation<br>2.2 Advise relevant personnel of purchasing and other delegations within budget allocations<br>2.3 Prepare budget projections within estimated and approved contract pricing |
| 3. Source human resource requirements for cabling | 3.1 Estimate number and determine availability of suitable human resources according to contract requirements and relevant industrial and enterprise policy<br>3.2 Establish necessary competency and licence requirements of project personnel prior to recruitment<br>3.3 Schedule personnel workloads and allocate within industrial and enterprise requirements |
| 4. Monitor cabling works | 4.1 Follow work health and safety (WHS) processes and site-specific safety requirements according to plan<br>4.2 Monitor compliance regularly with client specification, relevant legislation, codes, regulations and standards<br>4.3 Notify client promptly on difficult or known problem areas<br>4.4 Reallocate work as required to meet client and company requirements<br>4.5 Monitor costs and time schedules to identify and resolve any potential problem<br>4.6 Provide report on work progress activity and schedule |
| 5. Evaluate outcomes of cabling projects | 5.1 Review cabling projects to identify areas where performance has been below client and enterprise expectations<br>5.2 Implement recommendations to ensure effective improvements |
| 6. Complete administrative tasks | 6.1 Complete documentation<br>6.2 Notify client and obtain sign off |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3-1.5, 2.1 | • Critically analyses complex documentation from a variety of sources<br>• Checks completeness and accuracy of information and data |
| Writing | 1.2, 1.6, 2.1, 2.3, 3.3, 4.3, 4.6, 6.1, 6.2 | • Completes organisational documents and correspondence using clear language and correct spelling, grammar and terminology<br>• Documents outcomes and changes to schedules using industry relevant terminology and symbols<br>• Writes, edits and proofreads documents to ensure clarity of meaning, accuracy and consistency of information |
| Oral Communication | 1.1, 1.6, 2.2, 4.3, 4.6, 6.2 | • Participates in verbal exchanges using collaborative and inclusive techniques including active listening and questioning to convey and clarify information<br>• Presents complex information using clear and convincing language, tone and pace appropriate for the audience and purpose |
| Numeracy | 1.2-1.5, 2.1-2.3, 3.1, 3.3, 4.5 | • Interprets and manipulates numerical information relating to targets and timelines<br>• Make calculations appropriate for measuring and estimating materials for installation work<br>• Performs mathematical calculations to analyse labour, costs and quantities to accurately produce quotations and budgets |
| Navigate the world of work | 3.1-3.3, 4.1, 4.2, 4.4 | • Takes full responsibility for following policies, procedures and legislative requirements, and identifies the organisational implications of new legislation or regulation<br>• Identifies and acts on issues that contravene relevant policies, procedures and legal requirements |
| Interact with others | 1.1, 1.6, 2.2, 4.3, 6.2 | • Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships<br>• Collaborates with others, sharing information to build strong work groups and avoid behaviours that are not conducive to a productive environment<br>• Manages conflict in the workplace through the recognition |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | of contributing factors and by implementing strategies to resolve conflict |
| Get the work done | 1.2-1.6, 3.2, 4.2, 4.4, 4.5, 5.1, 5.2 | • Accepts responsibility for planning, sequencing and monitoring complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Responds to problems requiring immediate resolution, drawing on past experiences |

# Assessment Requirements for ICTCBL403 Supervise cabling project

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- complete all appropriate plans and financial budgets for cabling activities
- supervise cabling project applying human resource policies, including awards and conditions and all related health and safety and work practices
- monitor and implement alternate plans where necessary to meet work schedules and client requirements
- complete a project report on a cabling project detailing recommendations for improvement.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe appropriate methods for scheduling, costing and managing labour and resources on a project
- recognise the requirements to safely operate equipment and install components according to a manufacturer's specification
- outline the health and safety standards and practices required to:
  - manage risk and hazards in the workplace
  - use health and safety standards
  - work systematically with required attention to detail without injury to self or others
- identify and describe legislation, codes of practice and other formal agreements that impact on the work activity
- identify typical issues and challenges that occur in scheduling and supervising a worksite
- outline the components of reports and identify the reasons for other documentation required when supervising a project.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- a site with a cabling project
- human resource policies, including awards, conditions and all related work health and safety (WHS) and work practices
- relevant regulatory and equipment documentation that impacts on monitoring activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL404 Test cable bearers

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to test cable bearers. It involves setting up, testing and interpreting test results and determining appropriate action for all cable types (metallic, optical fibre and coaxial).

It applies to technicians and line installers whose work involves testing cable bearers for connections, signal strength or loss of cable links on client cable and service provider networks, in accordance with manufacturer's and design specifications.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare and set up for cable test | 1.1 Obtain relevant legislation, codes, regulations and standards<br>1.2 Scope work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements<br>1.3 Notify appropriate personnel of identified safety hazards at worksite |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Determine type of cable bearer and cable route from project plan and identify test requirements using work instructions<br>1.5 Obtain tools and safety equipment and material to perform tasks safely and efficiently<br>1.6 Select and use required protective equipment and make site safe and secure for testing work<br>1.7 Determine need for outage, extent, location and timing, if required, and negotiate with appropriate personnel<br>1.8 Select and set up suitable test equipment according to manufacturer's specifications for cable tests to be performed to ensure relevance of test data<br>1.9 Ensure equipment calibration certification is current to reduce possibility of unreliable test data and ensure traceability |
| 2. Perform cable tests | 2.1 Follow work health and safety (WHS) and environmental requirements for given work, and identify and avoid other services<br>2.2 Determine and record cable parameters for consideration in assessment of performance<br>2.3 Conduct performance tests as required by both equipment and enterprise specification for specific cable type and purpose |
| 3. Interpret test results and determine action | 3.1 Record test results for evaluation and compare against manufacturer's and site specifications<br>3.2 Analyse test results and evaluate cable performance with consideration of recorded cable parameters<br>3.3 Diagnose problems to determine cable faults and make arrangements for repairs or modifications<br>3.4 Retest faulty cable after faults have been rectified |
| 4. Document test results and clean up site | 4.1 Produce evaluated test results according to enterprise guidelines and without delay to ensure test results remain current<br>4.2 Update site and installation files to ensure traceability of information on system performance is maintained<br>4.3 Archive test record details for life of cable according to enterprise guidelines<br>4.4 Remove waste and debris from worksite and dispose of according to environmental requirements<br>4.5 Notify appropriate personnel of job completion and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 1.6-1.9, 2.1, 3.1 | • Analyses and consolidates information and data from a range of sources, against defined criteria and requirements, and checks for accuracy and completeness |
| Writing | 1.2, 2.2, 3.1, 4.1, 4.2, 4.5 | • Records information and prepares correspondence and documentation using clear language and organisational formats and protocols<br>• Records information in organisational systems |
| Oral Communication | 1.2, 1.3, 1.7, 3.3, 4.5 | • Conveys and clarifies information effectively to a range of personnel using active listening, questioning and reading of verbal and non-verbal signals<br>• Presents complex information in formal situations using clear and convincing language, tone and pace appropriate for the audience and purpose |
| Numeracy | 2.3, 3.1-3.4, 4.1 | • Performs mathematical calculations to check, analyse, interpret and confirm results of system tests |
| Navigate the world of work | 1.1, 1.4, 2.1, 2.3, 4.1, 4.3, 4.4 | • Takes full responsibility for following policies and procedures<br>• Identifies and resolves key variations to standard procedures identified from conducting tests |
| Interact with others | 1.2, 1.3, 1.7, 4.5 | • Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers |
| Get the work done | 1.2, 1.4-1.9, 2.1-2.3, 3.1, 3.3, 3.4, 4.1-4.4 | • Plans and sequences complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Makes critical decisions quickly and intuitively in complex situations, taking into consideration a range of variables including the outcomes of previous tests<br>• Applies systematic and analytical decision making processes for complex and non-routine situations |

# Assessment Requirements for ICTCBL404 Test cable bearers

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- perform tests on cable bearers
- use a range of tests
- interpret test results
- rectify a range of faults
- report on the completed tests
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features, operation and specifications of test equipment
- identify a range of tests performed on cable bearers
- describe codes of practice and standard procedures that apply to cable bearers
- list common cable bearer faults and describe how to rectify them
- specify health and safety requirements relating to use and operation of test equipment
- outline the components of reports and identify the reasons for other documentation required when conducting tests.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where testing may be conducted

© Commonwealth of Australia, 2025 Future Skills Organisation

- cabling and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on testing cable bearers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCBL405 Remotely locate and identify cable network faults

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to remotely locate and identify cable network faults in voice, video and data telecommunications applications using metallic and optical fibre cables.

It applies to technicians who are required to locate telecommunications cable faults in access networks. This may be done at a centralised testing office and make use of computer test routines and databases.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

## Unit Sector

Telecommunications – cabling

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Verify fault report | 1.1 Locate source of fault using available information and contacts to verify nature of fault as reported<br>1.2 Perform preliminary operational testing according to type of fault presentation, fault environment and enterprise guidelines to verify nature of fault |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Analyse historical data to identify possible causes and solutions |
| 2. Conduct remote testing to diagnose network fault | 2.1 Evaluate cable fault details and plan strategy to conduct remote testing<br>2.2 Conduct appropriate remote diagnostic test to isolate and diagnose network fault<br>2.3 Determine urgency and impact of fault and identify required response time frame<br>2.4 Evaluate diagnostic tests to determine type, location and nature of network fault |
| 3. Dispatch fault-finding field personnel | 3.1 Prepare fault report and forward to appropriate staff according to enterprise guidelines<br>3.2 Notify fault centre and arrange for dispatch of technician to rectify fault<br>3.3 Notify client of fault progress and arrange for fault clearance time |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.1, 2.4 | • Analyses and consolidates information and data from a range of sources, against defined criteria and requirements, and checks for accuracy and completeness |
| Writing | 2.1, 3.1-3.3 | • Prepares a range of textual information appropriate for the audience and for informal and formal purposes |
| Oral Communication | 1.1, 3.1-3.3 | • Interacts effectively in verbal exchanges, using active listening and questioning, to convey and clarify information |
| Numeracy | 1.2, 1.3, 2.2-2.4 | • Takes measurements and performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | 1.2 | • Takes full responsibility for following policies, procedures and legislative requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Interact with others | 1.1, 3.1-3.3 | • Collaborates with and implements strategies for a diverse range of colleagues and clients to build rapport, foster strong relationships and achieve outcomes |
| Get the work done | 1.1-1.3, 2.1-2.4, 3.3 | • Plans and sequences complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness<br>• Applies systematic and analytical decision making processes for complex and non-routine situations<br>• Uses digital technologies and systems to access information, research and diagnose faults |

# Assessment Requirements for ICTCBL405 Remotely locate and identify cable network faults

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of the ability to:

- methodically approach fault identification
- conduct tests appropriate to the type of fault identified
- interpret test results
- provide instructions to staff engaged in on-site repair.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features and operating requirements of test equipment
- identify appropriate tests to be performed
- describe the legislation, codes of practice and standard procedures for cable network faults
- specify health and safety requirements relating to fault finding in cable networks
- identify typical issues and challenges that occur when performing remote tests and fault finding.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where remote investigation of cable network faults may be conducted
- fault-finding equipment currently used in industry
- relevant documentation that impacts on cable network and fault-finding activities.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to organise teams undertaking cabling work on all cable types, and to ensure compliance with regulatory and industry standards.

It applies to technical staff supervising teams within a customer premises and ensuring compliance with the Australian Communications and Media Authority (ACMA) and industry standards. They may make use of formal documentation, such as accurate completion of a telecommunications cabling advice (TCA) form (TCA1 form), test routines and databases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Compliance

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Organise cabling work activity | 1.1 Arrange access to site according to required procedure<br>1.2 Make worksite safe by identifying and controlling hazards<br>1.3 Review site plans and documentation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.4 Organise supply of cable, equipment, tools and materials in line with customer and manufacturer's specifications<br>1.5 Schedule and allocate work<br>1.6 Establish communication protocols and processes |
| 2. Monitor work activity | 2.1 Manage remote power feed following workplace health and safety (WHS) and environmental requirements<br>2.2 Monitor work activity to ensure it meets site specifications, enterprise requirements, and relevant legislation, codes, regulations and standards<br>2.3 Reallocate work as needed |
| 3. Complete records and obtain sign off | 3.1 Complete required records<br>3.2 Ensure installation waste and debris is removed from worksite and disposed of according to environmental requirements to maintain safe worksite conditions<br>3.3 Ensure site is reinstated according to customer and company requirements<br>3.4 Notify customer and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.3, 1.4, 3.3 | • Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirements |
| Writing | 1.1, 1.6, 3.1, 3.4 | • Prepares workplace documentation and correspondence using clear language, correct spelling and accurate terminology |
| Oral Communication | 1.1, 1.6, 3.4 | • Uses everyday language to provide information or maintain a conversation in familiar spoken contexts |
| Numeracy | 1.3, 2.2 | • Makes calculations appropriate for measuring and estimating materials |
| Navigate the world of work | 1.1, 1.6, 2.1, 2.2, 3.2, 3.3 | • Follows clear instructions within defined level of responsibility<br>• Recognises organisational expectations and follows explicit protocols and procedures |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Seeks clarification when required |
| Interact with others | 1.6, 2.3, 3.4 | • Follows instructions regarding what and how to communicate following predetermined scripts<br>• Recognises common differences in other people and implements basic strategies to address own reaction to these differences |
| Get the work done | 1.1, 1.2, 1.4, 1.5, 2.1-2.3, 3.2, 3.3 | • Follows clearly defined instructions and sequencing, and monitors own progress for the task, seeking assistance when necessary<br>• Responds to highly obvious routine problems using step-by-step instruction and procedures or a trial and error process for non-critical situations<br>• Uses digital technologies following strict instructions to enter and retrieve data |

# Assessment Requirements for ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- organise, schedule and establish communication protocols for cabling work
- monitor work activity and reallocate as required to meet specifications, work health and safety (WHS) and ensure compliance with relevant regulations and standards
- ensure cabling work is completed and records are maintained.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete unit requirements safely and effectively, the individual must:

- describe and explain Australian Communications and Media Authority's (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules, legislation, codes of practice and other formal agreements that impact work activity
- describe and explain cable installations
- list features and operating requirements of test equipment
- describe and explain information required to operate equipment according to a test specification
- explain manufacturer’s requirements for safe operation of equipment
- identify specific work health and safety (WHS) requirements relating to activity and site conditions
- describe test methods and performance requirements
- identify and explain typical issues and challenges that occur on site.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Compliance field of work and include access to:

- sites where staff monitoring may be required
- supervision rules
- use of tools, materials and equipment currently used in industry
- relevant regulatory and equipment documentation that impact work activities.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

# ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install simple point-to-point broadband cabling on a customer's premises.

The unit applies to technical staff who install and terminate new installations or upgrades, or maintain existing networks in domestic premises, including small office / home office (SOHO) and small commercial premises that do not have a main distribution frame (MDF) or jumperable distributor as the network boundary point.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Pre-requisite Unit

ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

OR

ICTCBL201 Install customer cable support systems

and ICTCBL202 Place and secure customer cable

and ICTCBL203 Terminate metallic conductor customer cable

and ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards

## Unit Sector

Telecommunications – Compliance

© Commonwealth of Australia, 2025 Future Skills Organisation

# Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for installation | 1.1 Arrange access to site and organise tools and equipment for specialised broadband cabling for restricted cabling work<br>1.2 Review site according to work health and safety (WHS) and environmental requirements and assess hazards<br>1.3 Determine cable route and cabling environment meet manufacturer specifications, industry standards and regulatory requirements |
| 2. Install broadband cable | 2.1 Place and secure correct cable type according to accepted industry practice and relevant regulations and standards<br>2.2 Maintain cable and services separations in runs and crossovers to meet manufacturer specifications and relevant legislation, codes, regulations and standards<br>2.3 Fit over-voltage protection devices to cables and metallic components where required |
| 3. Terminate and test broadband cable | 3.1 Terminate cable according to accepted industry practice and relevant legislation, codes, regulations and standards<br>3.2 Maintain correct twist ratio to optimise system performance at rated level<br>3.3 Conduct compliance testing of cable installation and termination with suitable tester and record compliance<br>3.4 Supply system performance documents to client and complete cabling records and telecommunications cabling advice forms (TCA1) as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.3, 2.1, 2.2, 3.2 | • Evaluates information and products from a variety of sources to ensure appropriateness to client needs and specifications |
| Writing | 3.3, 3.4 | • Prepares documentation and correspondence using clear language, correct spelling and accurate terminology |
| Numeracy | 1.3, 2.1, 2.2 | • Make calculations appropriate for measuring and estimating materials for installations |
| Navigate the world of work | 1.2, 1.3, 2.1, 2.2, 3.1 | • Understands rights and responsibilities and complies with legal and regulatory requirements |
| Get the work done | 1.1, 2.1-2.3, 3.1-3.3 | • Plans and implements routine tasks and workload making limited decisions on sequencing, timing and collaboration, seeking assistance in setting priorities<br>• Responds to predictable routine problems and implements solutions<br>• Makes decisions within familiar situations, based on a range of predefined or routine solutions |

# Assessment Requirements for ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- review site and determine cable requirements for installation
- install and terminate fixed broadband cable to industry standards and manufacturer's specifications
- verify installed network is working and accessing the internet, and perform a data rate qualification test, recording test results
- provide a report to client, documenting installation and test results
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete unit requirements safely and effectively, the individual must:

- summarise the Australian Communications and Media Authority (ACMA) cabling provider rules, cabler registration rules, regulations and standards
- describe the types of cable test methods and system performance requirements
- identify the types of cabling situations and the resultant installation requirements
- describe features and operating requirements of applicable test equipment
- determine information required to operate equipment according to a test specification
- discuss key components of codes of practice and other formal agreements that impact work activity
- identify and describe manufacturer requirements for safe operation of equipment
- specify hazards and work health and safety regulations (WHS) relating to cabling activities and site conditions

© Commonwealth of Australia, 2025 Future Skills Organisation

- describe techniques for terminating data cable
- identify typical installation issues and challenges that may occur on cabling worksites
- identify and describe tools and equipment required for cabling works
- list and identify industry standards and regulatory requirements relevant to cabling
- specify cable separations and over-voltage protection requirements necessary for specific cable installations
- describe regulatory and industry standard documentation required for cabling.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Compliance field of work and include access to:

- sites where installation and termination of cabling may be conducted
- use of industry-current tools, testing equipment and personal protective equipment
- relevant regulatory and equipment documentation that impact installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTCMP501 Undertake radio communications site audit

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to undertake a radio communications site audit regarding compliance of radio frequency (RF) transmissions with relevant transmitter licence requirements.

It applies to individuals who may be field officers from regulatory authorities or other private and public organisations. They combine technical radio communications skills with broader organisational and administrative skills to conduct audits in a range of commercial and community contexts and environments, make recommendations for improvement and follow up by monitoring resulting actions.

Work functions in occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – Compliance

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for radio | 1.1 Confirm need for site audit through appropriate triggers and arrange formal approval for site access from authorised personnel |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| communications site audit | 1.2 Clarify audit requirements according to relevant legislation, codes, regulations and standards, including safety and security arrangements, and action required to comply<br>1.3 Clarify audit requirements with client or project originator, where appropriate, and incorporate broader audit considerations<br>1.4 Prepare a hardcopy of site information for use as an audit validation list at site<br>1.5 Specify staff, equipment and material resource requirements for audit, based on particular site requirements ensuring equipment has been correctly calibrated and labelled<br>1.6 Check industry requirements for site and obtain industry licence where appropriate |
| 2. Undertake radio communications site audit | 2.1 Validate specific site location according to database information<br>2.2 Undertake audit tasks according to work health and safety (WHS), enterprise procedures and site specific safety requirements, and meet client or representative on site as required<br>2.3 Conduct transmission and radio frequency (RF) tests against approved specifications<br>2.4 Conduct check of transmitters for licensing conditions<br>2.5 Check transmission radio frequency against database list and obtain permission to check or alter transmission or radio frequency where appropriate<br>2.6 Confirm site meets specific RF WHS requirements and licensing requirements where appropriate<br>2.7 Confirm defined site equipment labelling comply with Australian Communications and Media Authority (ACMA) technical standards |
| 3. Complete audit administration tasks | 3.1 Update or arrange for update of required records regarding audit findings and action required, including liaison with authorised personnel as agreed<br>3.2 Monitor recommended actions to ensure compliance with findings<br>3.3 Issue enforcement actions as required<br>3.4 Finalise audit administration and return equipment and resources according to organisational procedures |

# Foundation Skills

*This section describes the language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1, 2.3, 2.5, 2.7, 3.2 | • Critically analyses documentation from a variety of sources and records and consolidates information to determine requirements |
| Writing | 1.1, 1.3, 1.4, 3.1, 3.3 | • Accurately records and completes organisational documents and correspondence using clear language and correct spelling, grammar and terminology |
| Oral Communication | 1.1,1.3, 2.2, 3.1, 3.2 | • Presents complex information in formal situations using clear and convincing language, tone and pace appropriate for the audience and purpose |
| Numeracy | 1.4, 2.3, 2.4, 2.5, 2.6 | • Performs mathematical calculations to interpret complex tests results and information<br>• Analyses and synthesises highly embedded mathematical information in a broad range of tasks and texts |
| Navigate the world of work | 1.2, 1.6, 2.2, 2.4, 2.6, 2.7, 3.4 | • Takes full responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation or regulations<br>• Identifies and resolves key business issues, processes and practices that may have legal implications |
| Interact with others | 1.1, 1.3, 1.5, 3.1, 3.3 | • Collaborates with others sharing information to build strong work groups and avoid behaviours that are not conducive to a productive environment<br>• Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts |
| Get the work done | 1.2, 1.5, 1.6, 2.2-2.7, 3.2, 3.4 | • Accepts responsibility for planning and sequencing complex tasks and workloads, negotiating key aspects with others, and taking into account capabilities, efficiencies and effectiveness<br>• Monitors progress of plans and schedules and reviews and changes them to meet new demands and priorities<br>• Applies systematic and analytical decision-making processes for complex and non-routine situations<br>• Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom |

# Assessment Requirements for ICTCMP501 Undertake radio communications site audit

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- determine the need for a site audit and gain access approvals
- conduct radio communications site audit for at least three sites with differing licensing requirements
- conduct transmission and radio frequency (RF) tests
- monitor non-compliances to ensure actions completed
- document enforcement actions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain features and functions of test equipment including:
  - digital radio communications measuring equipment
  - modulation analyser
  - power meter
  - RF termination
  - spectrum analyser
- describe the features of licensing databases
- describe information required to prepare and conduct telecommunications audits
- explain legislation, licensing requirements for transmitters, codes of practice and other formal agreements that directly impact radio communications site audits
- give an overview of transmission lines, transmitter and receiver architecture and their impact on radio communications audits

© Commonwealth of Australia, 2025 Future Skills Organisation

- list required field measurements including:
  - carrier frequency
  - harmonics
  - intermodulation distortion (IMD) products
  - modulation
  - RF power
- explain specific issues related to antenna installations and their impact on radio communications interference
- explain specific work health and safety (WHS) requirements that impact the conduct of radio communications audits, including:
  - use of equipment
  - use of RF protective equipment
  - other personal protective equipment
- explain types of adjustments that need to be made to audit procedures to meet requirements of particular sites and environmental conditions
- typical issues and challenges that occur in telecommunications site audit and how these may be addressed.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Compliance field of work and include access to:

- sites on which audits may be conducted
- use of field measurement equipment currently used in industry
- relevant databases, licensing requirements and other site related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTDBS401 Identify physical database requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify the scope, and the physical and security requirements of a database.

It applies to individuals employed as database administrators who are required to plan a database to a user's requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the database scope | 1.1 Review the requirements of the user, and the current system's architecture<br>1.2 Determine database size from the requirements and the technical specifications<br>1.3 Document the database design, and scope, of the project<br>1.4 Evaluate several database management systems against the requirements, and make the appropriate selection |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Identify the database requirements | 2.1 Review the technical specifications for the database<br>2.2 Identify the database tables and relationships<br>2.3 Identify the database data dictionary, table attributes and keys<br>2.4 Determine the database reports based on the acceptance criteria and requirements |
| 3.Identify the security requirements | 3.1 Review the system security plan<br>3.2 Clarify and confirm that the database management system, and user security, aligns with the system security plan<br>3.3 Identify, evaluate and record database performance, recovery and audit trail needs |
| 4. Seek client feedback and approval | 4.1 Present database scope, technical requirements and security documentation to the user for feedback<br>4.2 Review user feedback and adjust the database documentation, as required<br>4.3 Present database documentation to the user for final approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 2.1-2.4, 3.1-3.3, 4.2 | • Interprets and analyses textual information in order to gather detailed information, and confirm requirements |
| Writing | 1.3, 2.4, 3.3, 4.1, 4.2 | • Uses technically appropriate language and presents information in a format and layout that conveys factual information |
| Oral Communication | 1.1, 3.2, 4.1-4.3 | • Uses active listening, questioning and summarising skills, in order to effectively identify, and confirm, requirements |
| Get the work | 1.1-1.4, 2.1-2.4, | • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| done | 3.2, 3.3, 4.2 | relevant information, and identifying, and evaluating options against the agreed criteria<br>• Applies formal problem-solving processes when tackling an unfamiliar problem, breaking complex issues into manageable parts, identifying, and evaluating several options for action<br>• Understands key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when identifying database scope and requirements |

# Assessment Requirements for ICTDBS401 Identify physical database requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse client requirements
- identify the technical considerations affecting the physical design of a database
- document the database requirements
- review the security plan for the database.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the principles of databases and database design
- outline the general features, and capabilities, of current industry-accepted hardware and software products
- explain the quality assurance practices that apply to database design
- identify the client's business domain
- describe database requirements appropriate for client's business.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- special purpose materials and industry software packages
- user business requirements
- technical documentation defining the architecture platform

© Commonwealth of Australia, 2025 Future Skills Organisation

- operating system specifications
- database supplier technical specifications and manuals
- data samples
- the database package.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS402 Complete database backup and restore

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to establish backup and recovery procedures, in accordance with organisational requirements, and consistent with the database architecture.

It applies to individuals who are technical support personnel, such as help-desk supervisors, information and communications technology (ICT) support technicians, database support technicians and user-support specialists.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Review the database architecture to plan backup and recovery | 1.1 Examine the architecture of a database file system<br>1.2 Determine the most appropriate methods for backup and recovery<br>1.3 Identify and examine the likely or possible risk and failure scenarios<br>1.4 Prepare a backup maintenance schedule |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Prepare a contingency plan |
| 2. Determine backup methods appropriate to database requirements | 2.1 Evaluate the range of backup and restoration methods, based on organisational and security standards, and on the assessment of likely, or possible, failure scenarios<br>2.2 Complete full off-line backups according to organisational and security standards, with minimal down time<br>2.3 Complete online file backups, as determined by organisational and security standards, with minimal down time<br>2.4 Employ disk mirroring and redundant array of inexpensive disks (RAID) hard disk configurations to keep copies of files<br>2.5 Arrange off-site copies of backup files |
| 3. Establish recovery points and disaster-recovery procedures | 3.1 Determine database recovery points based on the backup arrangements, according to organisational guidelines<br>3.2 Test the restore process to ensure that the database can be restored to a given recovery point, with minimal down time<br>3.3 Complete the restoration of the database to the point of failure, without loss of committed transactions |
| 4. Create and deploy a standby database | 4.1 Create or set up a standby database, in order to meet organisational guidelines<br>4.2 Implement a standby database to support critical business functions<br>4.3 Prepare the documentation for a standby database |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.1 | • Analyses complex textual information in order to evaluate a range of backup and restoration methods |
| Writing | 1.4, 1.5, 4.3 | • Uses technically specific language in developing plans and documentation<br>• Articulates information, and presents this information, in a clear, concise, sequential and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | grammatically-correct manner, and in a writing style that is appropriate to the audience |
| Oral Communication | 1.2, 1.3, 1.4, 2.1 | • Facilitates successful discussions by employing effective listening, questioning and summarising skills to ensure that appropriate information is gathered |
| Navigate the world of work | 2.2, 2.3, 3.1, 4.1 | • Recognises and follows, both explicit and implicit protocols, and meets expectations associated with own role when complying with organisational and security standards, and guidelines |
| Get the work done | All | • Takes responsibility for planning, sequencing and prioritising tasks, and own workload for efficiency, and for effective outcomes<br>• Makes routine decisions, and implements standard procedures, for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Addresses less predictable problems and initiates standard procedures in response to these, applying problem-solving processes in determining a solution<br>• Uses familiar digital technologies and systems to access information, search and enter data, and code, present information. and communicate with others, cognisant of data security and safety |

# Assessment Requirements for ICTDBS402 Complete database backup and restore

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine and prepare the appropriate methods for backup, maintenance and recovery, including a contingency plan
- implement the backup and restore procedures, with minimum disruption to the business
- create, implement and document a standby database.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the basic principles of:
  - diagnostic tools
  - structured query language (SQL)
  - databases
  - tuning methodologies
- outline and apply the principles of:
  - backup and recovery methods
  - database administration
  - database security
  - open file backup procedures and restore operations.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment and materials
- documentation standards
- backup and recovery policies
- sites with a representative range of current industry standard software and diagnostic tools
- database package with data
- technical records
- organisational guidelines
- vendor documentation
- the server, and a networked personal computer, on which to conduct the backup and restore procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS403 Create basic databases

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, develop and test a database in order to meet a specification.

It applies to individuals who may be either database, or web designers, required to create a simple database to store information for an online application, using a simple entity relational database.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse the requirements for the database | 1.1 Determine the information that the database is required to hold<br>1.2 Develop a written requirement report for the functionality of the database<br>1.3 Complete the documentation, and submit it to the appropriate person for approval |
| 2. Use data modelling to | 2.1 Design an entity-relationship (ER) diagram to model the |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| design the database to suit requirements | relationships between the entities and the attributes that the database will hold<br>2.2 Develop primary and foreign keys to link the entities<br>2.3 Develop a data dictionary<br>2.4 Complete the documentation, and submit it to the appropriate person for approval |
| 3. Create a database on a web or database server | 3.1 Use the appropriate language on a web or database server to create one or more databases<br>3.2 Use the appropriate language on a web or database server to create tables<br>3.3 Populate the database fields |
| 4. Test the database and debug | 4.1 Test the database on the web or database server<br>4.2 Ensure that the information represented matches the requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3 | • Analyses textual information to establish requirements |
| Writing | 1.2, 1.3 | • Uses technically appropriate language and presents information in a format, and layout, that is appropriate to the requirements |
| Oral Communication | 1.1, 1.3, 2.4 | • Listens, and participates, in oral exchanges to effectively identify and confirm requirements<br>• Presents information using appropriate and effective language in negotiating the best outcome |
| Navigate the world of work | 1.3, 2.4 | • Recognises and follows, both explicit and implicit, procedures, and meets the expectations associated with own role when submitting the documentation for approval |
| Interact with | 1.3, 2.4 | • Recognises and applies the protocols governing what to communicate, with whom and how, in a |

# Assessment Requirements for ICTDBS403 Create basic databases

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research client requirements for a database solution
- design a database that meets client requirements
- create a database on a web hosting service or server to meet client requirements by a due date
- test and debug the database.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the principles of open platforms, including browsers and databases
- list the processes associated with the creation of entities, attributes, and in populating fields, using both software solutions and script- based input
- describe data-modelling techniques to design a database
- outline the steps in database design, modelling and implementation
- describe the internet operation related to web servers and clients
- identify the naming conventions appropriate to database design
- identify security restrictions on servers, incorporating some theoretical concepts
- describe best practice communication, and accessibility, for audiences with special needs.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment, materials and industry software packages

© Commonwealth of Australia, 2025 Future Skills Organisation

- database and database management system
- the internet and web browser software
- software for creating entity-relationship (ER) diagrams
- software development environment
- the server.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS404 Identify and resolve common database performance problems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to diagnose database problems, as well as to configure and tune the database in order to maintain consistent performance.

It applies to individuals who are experienced technical support personnel, such as help-desk supervisors, database support technicians, information and communications technology (ICT) support technicians, and user-support specialists, who are responsible for maintaining the performance of a database.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Diagnose problems | 1.1 Determine an appropriate database performance diagnostic tool to use, based on organisational database requirements, and vendor recommendations<br>1.2 Run a diagnostic tool to identify the issues causing degradation of the database's performance<br>1.3 Determine and record where the inappropriate use/s of |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | database and temporary table spaces occur<br>1.4 Carry out appropriate fixes, based on diagnostic results |
| 2. Configure the database | 2.1 Adopt a distributed files architecture to minimise input and output (I/O) contention<br>2.2 Ensure that database backup procedures are appropriate for the method of data storage<br>2.3 Reconfigure rollback segments<br>2.4 Configure the database and test its performance |
| 3. Tune the database | 3.1 Track module performance according to its specifications<br>3.2 Monitor and tune the efficiency of structured query language (SQL), as required<br>3.3 Monitor and measure the performance of shared pool, blocks and buffers<br>3.4 Detect, identify and resolve any contentions that may arise in the real-time operation of the database<br>3.5 Reconfigure the database according to specifications |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.2 | • Analyses and interprets textual information in order to establish performance issues and their corresponding solution(s) |
| Writing | 1.3 | • Uses technically appropriate language and format, when recording data |
| Oral Communication | 1.1 | • Uses effective listening, questioning and summarising skills to ensure that the correct information is gathered |
| Get the work done | All | • Uses a formal, logical planning processes, together with an increasingly intuitive understanding of context, to identify relevant information and risks, and to identify and evaluate alternative strategies and resources |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options<br>• Uses familiar digital technologies and systems to access information, search and enter data, code, present information and communicate with others, while maintaining data security and safety at all times |

# ICTDBS407 Monitor physical database implementation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to undertake database-management system modelling and to monitor database performance.

It applies to database support staff required to test and scrutinise the operation of a physical database, in order to ensure that it functions as efficiently as possible.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Undertake database management system modelling | 1.1 Review the database prototype as appropriate, to determine the acceptance criteria and performance standards<br>1.2 Load the test data according to the technical sequence detailed in the relevant documentation<br>1.3 Generate a test schedule for the database, of tasks to be performed and the results expected |
| 2. Monitor database performance | 2.1 Evaluate database performance against the acceptance criteria and performance standards |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Identify discrepancies in the results, when the expected outcomes do not meet the acceptance criteria<br>2.3 Identify areas needing enhancement, and document the changes to be made<br>2.4 Modify the database according to project standards<br>2.5 Repeat performance testing until the expected results are achieved |
| 3. Seek client feedback and sign-off | 3.1 Present test results in a document, and provide to the client for feedback<br>3.2 Incorporate client change requests as appropriate<br>3.3 Obtain client sign-off to the monitoring process |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1-2.3, 3.2 | • Analyses and interprets textual information to establish performance requirements and discrepancies |
| Writing | 1.3, 2.3, 3.1 | • Uses appropriate language, layout and format in logically presenting technical data and other information |
| Oral Communication | 1.1, 3.1-3.3 | • Listens, and participates, in oral exchanges in order to effectively identify and confirm requirements<br>• Presents information using appropriate and effective language in order to convey information |
| Get the work done | 1.1-1.3, 2.1-2.5 | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against the agreed criteria<br>• Applies key principles and concepts underpinning the design and operation of digital systems, and tools |

# Assessment Requirements for ICTDBS407 Monitor physical database implementation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify technical considerations affecting the implementation of a database
- analyse and monitor performance issues during the implementation of a database
- modify a database to meet project and client performance requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business domain
- list current industry-accepted hardware and software products
- describe requirements of basic database design
- identify required database performance standards
- outline quality assurance practices
- outline testing and benchmarking processes
- list three or more current principles of databases.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- industry software packages
- the database management system (DBMS)
- the target database prototype

© Commonwealth of Australia, 2025 Future Skills Organisation

- testing and benchmarking software.

Assessors must satisfy NVR/AQTF assessor requirements.

| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to transfer radio frequency identification (RFID) data to a database.

It applies to individuals who are required to maintain RFID data and make it available to an RFID system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine the data mapping and integration requirements | 1.1 Identify and document the format of the data from the RFID system, including data schema<br>1.2 Collect the required data, target database requirements and implementation details, ensuring the uniqueness of entries |
| 2. Perform data transition | 2.1 Write and test conversion programs, and use conversion tools<br>2.2 Ensure clean data take-on by converting according to database requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Use database adaptors and interfaces for data transition |
| 3. Check data transition | 3.1 Verify that the data transition has been completed, according to the requirements<br>3.2 Document programs, procedures and processes, according to the requirements of the client<br>3.3 Provide conversion reports to the client for sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 3.1 | • Analyses and interprets textual information to establish requirements and verify data |
| Writing | 1.1, 1.2, 2.1, 3.2, 3.3 | • Uses appropriate technical language, format and layout when recording data and producing technical documentation |
| Oral Communication | 1.1, 1.2, 3.1, 3.3 | • Uses active listening, questioning and summarising skills when gathering information and negotiating best project outcome |
| Get the work done | 1.1, 1.2, 2.1, 2.2, 2.3, 3.1 | • Sequences and schedules complex activities, monitors implementation, and manages relevant communication during data mapping and integration requirements<br>• Uses familiar digital technologies and systems to access information, search and enter data and code, present information and communicate with others, cognisant of data security and safety |

# Assessment Requirements for ICTDBS408 Link an RFID system to a database

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify formats of radio frequency identification (RFID) system output and data fields in database
- analyse, write, install and test conversion programs
- identify format of data fields of database
- write, or obtain, and install conversion software
- compile entries in database reports.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the client database's data structures
- describe client data management, data security policy, and procedures
- describe and apply data analysis in determining;
  - data types
  - data structures
  - queries
  - report design
- identify the data source names in use by the organisation
- describe the open database connection (ODC)
- list the primary files, and requirements, of transaction logs to confirm appropriate database activity
- outline quality assurance practices
- identify the required software tools

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the system’s data requirements
- define the system's current functionality
- identify the website foundation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- industry software packages
- conversion tools
- the database’s software
- networked computers
- organisational guidelines
- radio frequency identification (RFID) equipment specifications.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS409 Monitor and administer a database

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage databases including start up, operation, testing, monitoring and maintenance, in accordance with organisational requirements.

It applies to individuals employed as database support staff who are required to maintain a database, monitor its performance and access, as well as to administer its security.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Start up a database | 1.1 Configure the system for a database start-up<br>1.2 Monitor the database start-up and operation for irregularities |
| 2. Manage the database | 2.1 Take action to ensure that a data dictionary has been compiled and that data structures are in place<br>2.2 Maintain data integrity constraints, according to business requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Create and design indexes, and multiple-field keys, according to business requirements<br>2.4 Monitor the locking options chosen for the database<br>2.5 Confirm that recent backups of the database have been stored, and that backups can be retrieved as a full working copy<br>2.6 Monitor data storage space for ongoing viability, and resize as needed<br>2.7 Update the data according to organisational guidelines |
| 3. Manage database access | 3.1 Allocate or remove access privileges according to user status<br>3.2 Monitor network server log-in log file for illegal log-in attempts, or for security breaches<br>3.3 Manage system resources in the context of database administration |
| 4. Document database maintenance tasks | 4.1 Document changes to database start-up procedures<br>4.2 Itemise database management structures<br>4.3 File authorisations for access changes<br>4.4 Detail the procedures for monitoring log files<br>4.5 Record the procedures to manage systems resources |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 2.5, 3.2 | • Analyses textual information to determine start-up and operation irregularities |
| Writing | 2.7, 4.1, 4.2, 4.4, 4.5 | • Uses appropriate language and required format for updating data, and presenting information in technical and business documents |
| Oral Communication | 2.5, 3.1 | • Uses active listening and questioning skills when determining status of periodic tasks and activities |
| Navigate the | 2.7 | • Follows organisational requirements for updating |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| world of work | | data |
| Get the work done | All | • Monitors actions against stated goals during compilation of data dictionary and data structures, and when managing a database, according to business requirements<br>• Uses a formal decision-making process, setting or clarifying goals, gathering information, and identifying, and evaluating several choices against a limited set of criteria<br>• Understands key principles and concepts underpinning the design, and operation of digital systems and tools |

# Assessment Requirements for ICTDBS409 Monitor and administer a database

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- configure a database start-up
- confirm data integrity
- monitor data storage requirements for database
- update data
- update database access.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline backup and recovery methodologies
- explain the architectural design of relational databases
- explain the concept of database security
- outline the process involved in the selection and use of appropriate database management tools
- explain the principles of structured query language (SQL)
- outline the tasks involved in database administration
- outline the tuning methodologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- industry software packages
- a live database, preferably on a local area network (LAN) on which there is a server that offers log-in functionality.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS412 Build a database

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to build, implement, test and evaluate a database, using an established design.

It applies individuals employed as database administrators and designers who are required to build databases for information storage and retrieval requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm the database design | 1.1 Review the database design documentation, including data structures, queries, reports and user interface<br>1.2 Compare the database access and security feature design with the organisational security plan<br>1.3 Document inconsistencies in the database and security design |
| 2. Create a prototype | 2.1 Develop a prototype according to the database design<br>2.2 Populate database tables with suitable data, including |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | current business data<br>2.3 Write conversion programs to import data from existing systems<br>2.4 Develop test data to assess database features<br>2.5 Assess functionality of the prototype with the client, including identifying errors in the program code, and modifying screens, and reports<br>2.6 Incorporate feedback from the client into the prototype<br>2.7 Obtain client sign-off for the prototype |
| 3. Test the database | 3.1 Develop an implementation plan for the database<br>3.2 Install database management system software on the network<br>3.3 Populate the database tables with business data<br>3.4 Implement security and access controls<br>3.5 Test database output and security controls, and record results |
| 4. Evaluate the database | 4.1 Review the database with the client for final approval<br>4.2 Complete database documentation<br>4.3 Identify and document user training requirements<br>4.4 Seek and secure client acceptance of the database |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.5, 2.6, 4.1, 4.3 | • Analyses and interprets textual information in order to establish client system requirements and establish design inconsistencies |
| Writing | 1.3, 2.3, 2.7, 3.1, 3.5, 4.2 | • Uses appropriate technical terminology in recording test results and discrepancies<br>• Produces reports and documentation that are cohesive and well-structured, in order to convey detailed and |

# Assessment Requirements for ICTDBS412 Build a database

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify client data management and security requirements
- produce a prototype data base
- populate and perform tests
- discuss results with client for approval
- implement the data base with the client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the principles of data base design including :
  - database management system (DBMS) fundamentals particularly during the design phase
- describe the functions and features of a database
- describe logical data modelling
- outline object-model design concepts related to:
  - developing data structures
  - development of a prototype
  - queries
  - screens
  - reports
- explain the physical design concepts in relation to a prototype
- recognise and describe run-time facilities related to implementing a live database and operation of a prototype
- describe and apply structured query programming language (SQL).

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- industry software packages
- business requirements and strategy
- database design documentation
- database software
- database programming language.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS501 Monitor and improve knowledge management system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to monitor and improve a knowledge management system.

It applies to individuals who are knowledge engineers required to support and maintain an existing knowledge management system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Investigate the knowledge management system | 1.1 Review the structure of the existing knowledge management system, and develop an understanding of its operation<br>1.2 Interview the client and staff to determine information requirements<br>1.3 Identify frequently requested information<br>1.4 Create a structure for organising that information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Document the structure and forward to the appropriate person for approval |
| 2. Create a knowledge management system | 2.1 Retrieve the identified information<br>2.2 Organise information to follow the approved structure<br>2.3 Document the information structure |
| 3. Distribute and monitor knowledge management system documentation | 3.1 Distribute knowledge management system documentation to the client and staff<br>3.2 Gather feedback from the client and staff, and incorporate into improving systems and processes<br>3.3 Monitor the use of the knowledge management system to determine its effectiveness<br>3.4 Make changes to the knowledge management system<br>3.5 Make knowledge management system documentation available<br>3.6 Implement and monitor process improvements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.1, 3.2, 3.6 | • Recognises and interprets textual information to determine client information requirements |
| Writing | 1.4, 1.5, 2.2, 2.3 | • Records key information resulting from data gathering, issues and prepares documentation using basic punctuation, correct spelling, clear and instructional language |
| Oral Communication | 1.2, 1.5, 3.1, 3.2, 3.6 | • Obtains information by listening and questioning, and participates in a verbal exchange using detailed and clear language to articulate and confirm requirements |
| Interact with others | 3.1, 3.2 | • Participates in complex formal and informal conversations relevant to own role, initiating and taking the lead where appropriate in the context of gathering information and feedback from the client |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | and staff |
| Get the work done | All | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, taking into account capabilities, efficiencies and effectiveness<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against the agreed criteria<br>• Understands key principles and concepts underpinning the design and operation of digital systems and tools |

# Assessment Requirements for ICTDBS501 Monitor and improve knowledge management system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- monitor existing knowledge management systems
- implement strategies to improve a new, or existing, knowledge management system.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline current practices for information management within an organisation
- identify the information sources available within an organisation
- recognise current knowledge management systems
- explain database structures and their construction
- outline procedures for monitoring and reviewing knowledge managements systems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- industry software packages
- organisational databases
- information requirements
- information repositories
- current knowledge management system(s).

# ICTDBS502 Design a database

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to establish client needs and technical requirements and to design a database that meets those requirements.

It applies to individuals employed as database administrators and designers who are required to design databases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine database requirements | 1.1 Meet with the client, and conduct a user-needs analysis, to determine database functionality<br>1.2 Analyse the results of a user-needs analysis to identify technical requirements<br>1.3 Develop a conceptual model of the database<br>1.4 Submit the conceptual model to the client for review<br>1.5 Evaluate client feedback and make changes as required |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Develop a logical data model | 2.1 Identify the attributes and determine the data types<br>2.2 Undertake the normalisation of attributes<br>2.3 Develop an entity-relationship (ER) diagram in order to clarify the cardinality of relationships<br>2.4 Document attributes, normalised data, and the ER diagram<br>2.5 Forward documentation to the client for confirmation |
| 3. Design the data structures | 3.1 Confirm primary and foreign keys for tables<br>3.2 Review client business rules<br>3.3 Identify the referential integrity constraints<br>3.4 Establish database management system constraints and incorporate into database design<br>3.5 Develop the validation rules for data<br>3.6 Design indexes and develop the data dictionary<br>3.7 Document the database design |
| 4. Design queries, screens and reports | 4.1 Design the user interface for database, including menus, input screens and outputs<br>4.2 Design queries, based on requirements<br>4.3 Design output reports, based on requirements<br>4.4 Compare the physical design with the conceptual model, or user-needs analysis<br>4.5 Incorporate changes as required |
| 5. Design access and security systems | 5.1 Review the business security plan as a basis for commencing the access and security design<br>5.2 Design the password and access system for the database<br>5.3 Identify multiple-user requirements<br>5.4 Develop client access profiles using the client business model |
| 6. Confirm the database design | 6.1 Identify the database backup and recovery requirements<br>6.2 Develop and document the database backup and restore procedures<br>6.3 Submit the database, and documentation, to the client for final approval |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.5, 2.1, 3.2, 3.3, 4.4, 5.1, 6.1 | • Interprets textual information obtained from a range of sources and determines how content may be applied to requirements |
| Writing | 1.3, 2.3, 2.4, 3.7, 6.2, 6.3 | • Develops content in a manner that supports the purposes and format of the requirements using appropriate structure, layout and specialised technical and programming language |
| Oral Communication | 1.1, 1.4, 1.5, 2.5, 3.2, 5.1, 6.3 | • Uses listening, questioning and summarising techniques to identify needs, and uses specific and clear language when engaging with others |
| Numeracy | 3.4, 4.1, 4.3, 4.4 | • Makes measurements and performs calculations for work layout, determine field lengths and table size and estimate database size |
| Get the work done | All | • Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to identify relevant information and risks, identify and evaluate alternative strategies and resources<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against the agreed criteria<br>• Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools |

# Assessment Requirements for ICTDBS502 Design a database

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify and confirm client requirements for a database application
- design database elements including:
  - structure
  - indexes
  - queries
  - screens
  - reports
- design secure access to the database
- confirm final database design with the client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the process of data analysis, particularly in determining data types and data structures, query and report design
- describe the data modelling related to developing the conceptual data model
- explain how data redundancy is identified
- describe database management system (DBMS) fundamentals, particularly during the design phase
- explain encryption and authentication as these apply to database security features
- outline the functions and features of data types, and data structures
- describe the functions, and features, of databases
- describe logical design concepts, particularly those related to designing data structures, queries screens and reports

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the object model design concepts, particularly those related to designing data structures, queries, screens and reports
- explain the term ‘scalability’ as it applies to databases.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment and materials
- current industry accepted database software
- network or other system for remote or multi-user access
- business requirements
- computer-aided software engineering (CASE) or diagramming software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS503 Create a data warehouse

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, develop and implement a data warehouse within an organisation.

It applies to individuals who are senior database staff required to provide data warehouse functionality for their organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the required data and sources | 1.1 Identify the required organisational data, according to the enterprise's knowledge management strategy<br>1.2 Identify the subject areas, according to the business processes and the required enterprise data<br>1.3 Explore the operational data, define the warehouse sources, and record the outcomes<br>1.4 Develop the warehouse source specifications, according to the existing data tables and files |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Determine warehouse operational steps and processes | 2.1 Develop the warehouse targets, according to the business processes and the required enterprise data<br>2.2 Identify the warehouse agents, according to the system's configuration<br>2.3 Identify and develop, warehouse steps and processes |
| 3. Design and develop warehouse features | 3.1 Design and develop the warehouse user interface, according to the principles of user interface design<br>3.2 Develop and implement the warehouse security strategy, according to the enterprise's security plan<br>3.3 Identify dimension tables and fact tables, according to the required enterprise data<br>3.4 Develop the warehouse information catalogue, according to the enterprise's knowledge management strategy |
| 4. Test and implement the data warehouse | 4.1 Test data the warehouse against the business requirements, to ensure that iterations meet the business objectives<br>4.2 Recommend changes to business processes, to ensure compatibility with the data warehouse and the knowledge management strategy<br>4.3 Implement the data warehouse<br>4.4 Establish an ongoing maintenance schedule to keep the system efficient<br>4.5 Benchmark and document the performance level of the data warehouse |
| 5. Finalise work processes | 5.1 Arrange for users to have ongoing training in the data warehouse<br>5.2 Validate the test results<br>5.3 Obtain sign-off for the data warehouse |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1-1.4, 2.2, 2.3, 3.3, 4.5, 5.2 | • Critically analyses documentation from a variety of sources and records, and consolidates, information to determine requirements |
| Writing | 1.3, 2.1, 2.3, 3.1, 3.2, 3.4, 4.2, 4.4, 4.5, 2.2, 5.3 | • Collates and compiles data and text, using clear and detailed language, in order to convey specific information, requirements and recommendations |
| Oral Communication | 1.1-1.3, 2.1, 2.3, 4.2, 4.3, 5.1-5.3 | • Uses effective listening, questioning and summarising skills, to articulate requirements and convey information clearly |
| Numeracy | 4.5 | • Perform mathematical calculations to analyse the cost benefit of the data warehouse project |
| Navigate the world of work | 3.2, 3.4, 4.1, 4.2 | • Recognises and follows, explicit and implicit protocols, and meets the expectations associated with own role when obtaining sign-off for the data warehouse<br>• Modifies or develops organisational policies and procedures, to comply with legislative requirements and organisational goals |
| Get the work done | All | • Develops plans to manage relatively complex, non-routine tasks, with an awareness of how they may contribute to the longer-term operational and strategic goals<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options, against the agreed criteria<br>• Uses and investigates new digital technologies and applications to manage and manipulate data, and to communicate effectively with others, in a secure and stable digital environment |

# Assessment Requirements for ICTDBS503 Create a data warehouse

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- prepare the specifications for a data warehouse, from a range of organisational information
- design a data warehouse system that reflects the current, and future, business specifications, and also the business's knowledge management strategy
- test the data warehouse system
- implement the data warehouse design.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the functions and features of:
  - data warehousing and data mining
  - dimension tables and fact tables
  - various steps and processes, including transformer steps, program steps, structured query language (SQL) steps, and user-defined program steps
  - subject areas, warehouse sources and warehouse targets
  - warehouse agents and agent sites
- outline the business operating systems related to the data sources
- describe the decision support systems related to the knowledge management strategies
- define the parameters for a security plan
- outline the system's configuration parameters
- describe the key features of "Big Data" including:
  - data access speeds and processing

© Commonwealth of Australia, 2025 Future Skills Organisation

- the information handled by large corporations
- distribution, via the cloud, across the database servers.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment and materials
- industry software packages
- the business requirements
- computers configurable as information servers
- the enterprise's knowledge management strategy
- internet connectivity tools
- the local area network (LAN), with a relational database management system (DBMS)
- proxy server software
- specialised internet security software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS504 Integrate database with a website

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to ensure the database is integrated with a website.

It applies to individuals employed as web developers who are responsible for creating data-driven web applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Connect to the database | 1.1 Identify site data needs from the technical requirements<br>1.2 Connect to the database from a web application using a web development language |
| 2. Retrieve data from database and display on web pages | 2.1 Retrieve data using structured query language (SQL)<br>2.2 Display the data in the most appropriate control<br>2.3 Format the data so that it is displayed in the most effective way |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Update the database data from user input | 3.1 Update the existing data stored in the database with user-supplied input<br>3.2 Insert the data in the database with user-supplied input<br>3.3 Delete the data stored in the database<br>3.4 Validate the data and check for errors |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1, 3.3, 3.4 | • Interprets textual information from the sources in order to identify relevant and key information |
| Writing | 1.2, 2.3, 3.1, 3.2 | • Writes and edits computer input data, code and technical data, ensuring correct syntax and accuracy |
| Get the work done | All | • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against agreed criteria<br>• Uses analytical processes to decide on a course of action, and establishes the criteria for deciding between different options<br>• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world, and uses these to connect to a database from a web application, retrieving, displaying and updating data |

# Assessment Requirements for ICTDBS504 Integrate database with a website

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- access database using a web development language
- retrieve and display web-based data
- update web-based data.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a database structure
- outline internet technology as it relates to the use of databases
- identify and apply programming control structures, including object-oriented programming and structured query language (SQL)
- explain web programming concepts, including:
  - authentication and web security
  - hypertext transfer protocol (HTTP)
  - session management
  - defining the principles of stateless programming.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

- industry software packages
- the requirements documentation
- a web server
- a database
- the web development environment
- browsers.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS601 Build a data warehouse

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, develop and implement a data warehouse within an organisation.

It applies to individuals managing a knowledge management team, or works in a senior role in such a team with line management responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm the database design | 1.1 Review the database design document, including the data structures, queries, reports and user interface<br>1.2 Identify any possible "Big Data" applications<br>1.3 Compare the database access and security design, with the business security plan |
| 2. Identify the required data and sources | 2.1 Identify the required data, with reference to the enterprise's knowledge management strategy<br>2.2 Identify subject areas, with reference to the business |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | processes and the required data<br>2.3 Explore operational data, define the warehouse sources and record the outcomes<br>2.4 Develop the warehouse source specifications, with reference to the existing data tables and files |
| 3. Determine warehouse operational steps and processes | 3.1 Develop the warehouse targets, with reference to the business processes and the required data<br>3.2 Identify the warehouse agents, according to the system's configuration<br>3.3 Identify and develop, warehouse steps and processes |
| 4. Design and develop the warehouse features | 4.1 Design and develop the warehouse user interface, with reference to the principles of user interface design<br>4.2 Develop and implement the warehouse security strategy, according to the enterprise's security plan<br>4.3 Identify dimension tables and fact tables, with reference to the required data<br>4.4 Cost the technology requirements for the implementation of the warehouse security strategy, and include them in e-business budgeting<br>4.5 Develop a warehouse information catalogue, with reference to the enterprise's knowledge management strategy |
| 5. Test and implement the data warehouse | 5.1 Test the data warehouse against the business requirements, to ensure that iterations meet the business objectives<br>5.2 Recommend changes to business processes, to ensure compatibility with the data warehouse and the knowledge management strategy<br>5.3 Implement the data warehouse<br>5.4 Establish an ongoing maintenance schedule in order to keep the system efficient<br>5.5 Benchmark and document, the performance level of the data warehouse |
| 6. Finalise work processes | 6.1 Arrange for users to have ongoing training in the data warehouse<br>6.2 Validate the results<br>6.3 Obtain sign-off for the data warehouse |

# Assessment Requirements for ICTDBS601 Build a data warehouse

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- review and document the database's design, and security, for the current and future business requirements
- identify and document, the specifications for the storage of different types and sources of data
- develop a cost benefit analysis for a data warehouse
- design, develop, test, and implement a data warehouse that reflects the business's knowledge management strategy
- document the operation of the data warehouse.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the business operating systems related to the data sources
- outline database management system (DBMS) fundamentals, in order to facilitate the extraction of data
- define "Big Data" and summarise its use and management, in the corporate sector
- identify and apply, the decision-support systems related to knowledge management strategies
- explain encryption and authentication as they apply to database security features
- outline the functions and features of dimension tables and fact tables
- explain the installation and use of proprietary software
- explain the logical database model knowledge needed to facilitate data extraction
- describe the relationship between databases and data warehouses

© Commonwealth of Australia, 2025 Future Skills Organisation

- define the levels of technical documentation required for newly developed data management systems.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment and materials
- industry software packages
- data in a DBMS
- a data-warehousing tool.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS602 Develop a knowledge management strategy

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop a knowledge management strategy for an organisation. It includes analysing existing systems, determining requirements, and developing a strategy to meet those requirements.

It applies to individuals who may be managing a knowledge management team, or who are working in a senior role with line management responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse existing knowledge management arrangements | 1.1 Identify existing arrangements for the capture and use of knowledge, and information, from both internal and external sources<br>1.2 Distinguish between arrangements for managing knowledge and information management<br>1.3 Analyse the importance of knowledge management concepts in the identified organisation<br>1.4 Evaluate the effectiveness of existing procedures and |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | systems in meeting the needs of clients, organisational aims, objectives, and standards<br>1.5 Identify the improvements in the organisation's strategic use of knowledge, and prepare a cost-benefit analysis |
| 2. Evaluate knowledge management options | 2.1 Investigate the methods for capturing and using knowledge held by people within a business, and identify and evaluate barriers to their use<br>2.2 Evaluate knowledge management software and make recommendations regarding its usefulness, and likely benefit, to the organisation<br>2.3 Investigate incentives and reward systems to support knowledge management for their relevance to a business<br>2.4 Determine non-technical business requirements for maintaining and accessing an integrated knowledge database, according to organisational requirements |
| 3. Develop a knowledge-management strategy | 3.1 Develop a knowledge management strategy in consultation with staff for the capture and strategic use of organisational knowledge<br>3.2 Design business processes to support knowledge management, according to the organisation's knowledge management strategy, and budget<br>3.3 Plan an executive support system as part of the knowledge management strategy, to improve managerial decision-making according to organisational requirements<br>3.4 Cost the technology requirements for the implementation of the strategy, and include this costing in knowledge management budgeting<br>3.5 Design, or redesign, processes for a periodic review of knowledge management within the business in order to ensure ongoing efficiency and effectiveness<br>3.6 Ensure that the knowledge management strategy meets the organisational requirements identified in its overall business plan, and knowledge management strategy |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.5, 2.1-2.4, 3.1, 3.2 | • Interprets textual information obtained from a range of sources, and determines how this content may be applied to requirements |
| Writing | 1.5, 2.2, 3.1 | • Develops content in a manner that supports the purposes and format of the requirements using appropriate structure, layout and specialised technical language |
| Oral Communication | 1.1, 1.3, 1.4, 2.1-2.4, 3.1, 3.4 | • Uses listening, questioning and summarising techniques to identify needs, and uses specific and clear language when engaging with others |
| Numeracy | 1.5, 3.4 | • Uses mathematical formulas and calculations to perform a cost-benefit analysis |
| Get the work done | All | • Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences, and consider implementation issues and contingencies<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options, and seeking input and advice from others before taking action<br>• Experiments with the possibilities of new systems, devices, and applications before conducting a more sophisticated analysis of benefits, costs and risks |

# Assessment Requirements for ICTDBS602 Develop a knowledge management strategy

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- choose a knowledge management option that meets organisational requirements
- develop a knowledge management strategy able to be implemented.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the importance of knowledge management in contemporary organisations
- differentiate between the culture of the business versus traditional business models
- explain database design concepts
- identify both internal and external sources of information
- outline legal, ethical and security issues relating to knowledge management
- explain records management principles
- identify relevant government legislation that may affect business operation, especially in regard to:
  - workplace health and safety (WHS)
  - environmental issues
  - equal opportunity
  - industrial relations
  - anti-discrimination
- describe the structures of organisations and their business goals.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment and materials
- industry software packages
- sample organisations suitable for the implementation of knowledge management (including business plans).

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDBS603 Determine suitability of database functionality and scalability

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify the current and future business requirements for a database.

It applies to individuals with senior system-operations or line management responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Database

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine context of the business need or problem | 1.1 Develop the database objectives and identify the expected outcomes to be achieved<br>1.2 Document the database problem |
| 2. Gather information | 2.1 Analyse the database in order to identify the business rules, entities and relationships<br>2.2 Identify the existing and proposed business models<br>2.3 Identify any possible Big Data applications |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Determine the database functionality | 3.1 Document the existing database and the environment<br>3.2 Confirm database functionality with the client |
| 4. Identify scalability and functionality | 4.1 Identify the reserve, and long-term capacity, of the database<br>4.2 Identify the implications for the system's architecture, data models, data structures, hardware and software<br>4.3 Identify the requirements for scalability<br>4.4 Compare the functionality and scalability features of the database<br>4.5 Determine and document any gap between the features |
| 5. Prepare the database functionality and scalability report | 5.1 Document the functionality and scalability of the database<br>5.2 Submit the report to the client for review |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 2.2, 2.3, 3.2, 4.1-4.5 | • Critically analyses complex documentation from a variety of sources, and consolidates information relating to specific criteria, to determine the requirements |
| Writing | 1.1, 1.2, 3.1, 5.1, 5.2 | • Develops content in a manner that supports the purposes and format of the requirements, using the appropriate structure, layout and specialised technical language |
| Oral Communication | 1.1, 2.2, 3.2, 4.1-4.3, 5.2 | • Establishes and maintains, complex and effective communications in a broad range of contexts, using listening, questioning and summarising techniques to identify needs, and uses specific and clear language when engaging with others |
| Get the work done | 1.1, 1.2, 2.3, 4.1, 4.2, 4.3, 4.4, 4.5 | • Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands<br>• Gathers and analyses data, and seeks feedback, to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | improve plans and processes<br>• Makes high-impact decisions in a complex and diverse environment, using input from a range of sources<br>• Identifies the key factors that impact on decisions and their outcomes, drawing on experience, competing priorities and decision-making strategies, where appropriate<br>• Explores and incubates, new and innovative ideas through unconstrained analysis, and critical thinking, to develop and improve the organisation's goals<br>• Uses digital technologies to manage the business operations, and actively investigates new technologies for strategic and operational purposes |

# Assessment Requirements for ICTDBS603 Determine suitability of database functionality and scalability

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- document a clear statement of business expectations and needs, including critical business requirements
- examine the scalability, and functionality, of a database in light of future growth
- determine database functionality and scalability system requirements
- present the findings in a report to the client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the architecture of the network in which the database resides
- identify and explain, the code of ethics relevant to the computing industry in Australia
- identify the common system hardware related to the client, server and database architecture
- explain the concept of data modelling
- outline the functions and features of databases
- define "Big Data", and explain its implication for database design and functionality.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment and materials

© Commonwealth of Australia, 2025 Future Skills Organisation

- industry software packages
- a database management system (DBMS)
- a sample database and data.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDMT401 Create visual design components for digital media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create visual design components for interactive media, using industry-standard authoring tools.

It applies to individuals working in digital media, under the direction of industry standards and supervision, who are responsible for producing visual design components for digital media.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Digital media technologies

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify commonly used visual design components for games and interactive media | 1.1 Obtain the project brief and documents<br>1.2 Identify the features of the visual design components for interactive media<br>1.3 Discuss the design considerations for designing an interactive visual design component |
| 2. Identify the graphics software packages used | 2.1 Identify and review the range of industry-standard graphics software available |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| for visual design | 2.2 Assess the software related to the visual design component requirements<br>2.3 Discuss the technical specifications for rendering and editing processes<br>2.4 Select the graphics software package |
| 3. Use graphics software | 3.1 Run the graphics software and become familiar with the interface<br>3.2 Create new files and organise a file structure<br>3.3 Learn the required tools and features used to create visual design components |
| 4. Create the visual design components for an interactive media | 4.1 Design the visual components of a basic graphical user interface (GUI) for interactive media<br>4.2 Consider the interactive elements of GUI<br>4.3 Document the design<br>4.4 Use graphics software to create visual design components to be used for GUI |
| 5. Evaluate the implementation | 5.1 Demonstrate the implementation to relevant personnel<br>5.2 Evaluate the usability of design components<br>5.3 Reflect on possible changes to improve the visual design and interactivity of components |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1, 2.2, 3.1, 3.3, 4.1, 4.2, 5.2, 5.3 | • Analyses and comprehends documentation, images, briefs, instructions, technical and conceptual information from a range of sources, in order to inform the implementation of visual design components for interactive media |
| Writing | 3.2, 4.3 | • Uses industry specific language to create files and file structures<br>• Records technical information noting output of |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | investigations and discussions |
| Oral Communication | 1.3, 2.3, 5.1, 5.3 | • Articulates complex designs and graphical requirements to others in collaborative discussions, using listening and questioning techniques to check, evaluate and confirm design requirements |
| Numeracy | 1.2, 2.1, 2.3, 3.1, 3.3, 4.1, 4.2, 5.2 | • Uses both formal and informal, oral and written language to convey knowledge and evaluation of technical design components |
| Interact with others | 1.3, 2.3, 5.1-5.3 | • Selects and uses appropriate conventions and protocols to communicate with co-workers and others in a range of work contexts |
| Get the work done | 1.1-1.3, 2.1-2.4, 3.1-3.3, 4.1-4.4, 5.2, 5.3 | • Takes responsibility for planning and organising own workload<br>• Analyses available information to make informed decisions<br>• Reflects on outcomes to identify opportunities for improvement<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Assessment Requirements for ICTDMT401 Create visual design components for digital media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- demonstrate original and innovative approaches to the creative development of a graphical user interface (GUI)
- demonstrate how to maintain the integrity of the design brief
- produce concept art and design specifications for splash screens, start screens, and game field screens consistent with a design brief
- construct technical specifications for the visual design components, and overall usability.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain basic programming techniques
- identify the technical constraints that hardware imposes on software development, graphics requirements, code development and creative visual design
- identify the techniques for applying concept development skills
- identify the techniques for applying concept visualisation skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the digital media field of work, and include access to:

- computer hardware
- software
- file storage

© Commonwealth of Australia, 2025 Future Skills Organisation

- the internet for research purposes
- copyright and intellectual property legislation
- workplace health and safety (WHS) legislation
- enterprise policies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDMT402 Produce interactive animation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the, skills and knowledge required to create animation for a range of applications, including web pages, e-learning, simulations and advertisements.

It applies to individuals who possess a sound knowledge of digital media and who may either, provide support within a team, or be independently responsible for the design and development of animations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Digital media technologies

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse project requirements | 1.1 Determine the necessary dynamic functionality of the animation to be included inside a web or other interactive document<br>1.2 Determine the appropriate language to achieve that functionality<br>1.3 Determine and evaluate current requirements for the specified application |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Design animations | 2.1 Design animations to enhance the web page, and to meet requirements<br>2.2 Design animations to meet the specifications for sound and interactive functions<br>2.3 Design animations that will add to the overall professionalism, or entertainment value, of an application |
| 3. Produce animations | 3.1 Produce animations for web pages and other media<br>3.2 Research and experiment with a range of animation techniques for enhancing the user experience<br>3.3 Produce web animations for a website that enhance the overall professionalism or entertainment value of the website<br>3.4 Test and debug scripts against the required functionality and repeat until correct |
| 4. Publish animations | 4.1 Publish the animations in an acceptable format<br>4.2 Incorporate the animations into a hypertext markup language (HTML) page<br>4.3 Complete the documentation and submit it to the appropriate person for approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 3.2 | • Researches technical and conceptual information from a range of sources to identify, and evaluate, the appropriate design elements, and animation techniques for a specific audience |
| Writing | 2.1-2.3, 3.1-3.4, 4.1-4.3 | • Develops material according to internal standards using the appropriate language, layout and structure for a specific audience, to effectively and creatively convey animations in the appropriate format |
| Oral Communication | 4.3 | • Conveys information clearly and politely, and involves others in collaborative discussions using listening and questioning techniques and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | interpersonal skills |
| Numeracy | 3.4 | • Uses a logical sequence of steps to identify and solve functional problems relating to animation |
| Interact with others | 1.3, 2.1 | • Selects and uses appropriate conventions, and protocols, when communicating with co-workers and others in a range of work contexts |
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1-3.4, 4.1-4.3 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others taking into account capabilities, efficiencies and effectiveness<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Addresses less predictable problems and initiates standard procedures in response to these, applying problem-solving processes in determining a solution<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Unit Mapping Information

| **Code and title current version** | **Code and title previous version** | **Comments** | **Equivalence status** |

# Assessment Requirements for ICTDMT402 Produce interactive animation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design and create interactive animation, following current industry standards
- design and create interactive animation to enhance the professionalism and the entertainment value of a website.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the internet technology used to inform choice of the scripting type
- describe the principles of analysis and design
- explain programming control structures and object-oriented programming, including:
  - buttons
  - scripting to go to uniform resource locators (URLs)
  - scripting to jump to different parts of the animation
  - scripting using the programming language
- explain web-animation programming concepts, including:
  - acceptable formats for importing assets
  - component libraries
  - cross-browser issues
  - importing and exporting libraries
  - inserting published work to a hypertext markup language (HTML) or to an extensible hypertext markup language (XHTML) page
  - internet animation player statistics

© Commonwealth of Australia, 2025 Future Skills Organisation

- masking
- movements and automated movements
- publishing finished work in an acceptable web format
- shape animation and manipulation
- symbols
- text manipulation
- transparencies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the digital media field of work, and include access to:

- special purpose tools, equipment and materials
- industry software packages
- the internet and browser access.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDMT403 Produce and edit digital images

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to produce and edit digital images using a range of digital media technologies.

It applies to individuals who possess sound knowledge of digital media, who may provide support within a team or who may be independently responsible for producing editing, enhancing and manipulating digital images.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Digital media technologies

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Assess digital camera qualities | 1.1 Assess camera software compatibility with hardware systems and select appropriate software for the production<br>1.2 Select a pixel resolution on the camera to achieve the required quality and resolution of outcome<br>1.3 Check the storage capacity of the camera to identify the number of images required to be captured<br>1.4 Assess camera features suitable to the quality, and use of, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | the digital images required<br>1.5 Handle and store lithium batteries according to work health and safety (WHS) requirements |
| 2. Photograph an image | 2.1 Consider camera features, when operating the camera, to ensure that the capture of the image meets production requirements<br>2.2 Load and operate the camera, according to the manufacturer's specifications, and as appropriate to the quality of image to be photographed<br>2.3 Capture digital images using designated file formats |
| 3. Edit a digital image | 3.1 Ensure the correct use of digital image software, including entering and exiting the selected software<br>3.2 Create and store digital image files on a computer according to software procedures<br>3.3 Enhance, crop and alter digital images electronically, to deliver the required image<br>3.4 Check digital images for suitability and compliance with specifications<br>3.5 Save and retrieve digital images using designated file formats<br>3.6 Assess digital images for the delivery mode |
| 4. Incorporate digital images into an interactive sequence | 4.1 Create graphics that incorporate the principles of design using digital image software<br>4.2 Edit, enhance, amend and save digital images using digital image software<br>4.3 Combine digital images into a designated interactive sequence<br>4.4 Integrate the digital images into a designated interactive sequence<br>4.5 Evaluate the outcome for purpose, visual impact and effectiveness |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.5, 2.1-2.3, 3.1-3.6, 4.1, 4.2 | • Interprets and analyses complex information in a range of texts, critically evaluating numerical and textual information to identify compatibility, comparing technical specifications and solutions to new and emerging issues |
| Writing | 2.3, 3.1, 3.2, 3.5, 4.2, 4.5 | • Develops material and resources utilising knowledge of spelling, grammar, appropriate structure and layout, to organise and record information, and evaluates digital image details accurately using specific language and format required for the audience |
| Numeracy | 1.2,1.3, 4.1 | • Uses numeracy to identify the appropriate technical specifications to achieve the desired outcome<br>• Uses a combination of both formal and informal mathematical language involving knowledge of unity, scale, perspective and balance when considering creating graphics |
| Get the work done | 1.1-1.5, 2.1- 2.3, 3.1-3.6, 4.1-4.5 | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision making processes for more complex and non-routine situations<br>• Addresses less predictable problems and initiates standard procedures in response to these, applying problem-solving processes in determining a solution<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Assessment Requirements for ICTDMT403 Produce and edit digital images

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- demonstrate the operation of a digital camera in order to capture a range of images
- assemble the appropriate tools and procedures required to produce digital images
- demonstrate using digital imaging software to prepare high quality digital images that satisfy a range of customer or business requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the functions and features of a range of delivery platforms
- describe digital photographic techniques
- explain the basic principles of communication through visual design
- describe the implications of technology connectivity
- explain work health and safety (WHS) requirements for the use of cameras, and computers, and the handling and disposing of lithium batteries
- explain procedures for customer and business liaison
- describe the industry standards relevant to digital images.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the digital media field of work, and include access to:

- special purpose tools and equipment

© Commonwealth of Australia, 2025 Future Skills Organisation

- materials and industry software packages
- a digital camera
- industry standard graphics software
- copyright information.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDMT501 Incorporate and edit digital video

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to incorporate, and edit, digital video into interactive media presentations.

It applies to individuals who possess a sound knowledge of digital media, are independently responsible for the workflow process and provide support and supervision within a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Digital media technologies

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify and describe the formats of digital video | 1.1 Determine the distinguishing features and uses of a range of digital video software<br>1.2 Select the current video-editing software appropriate to a range of given outcomes<br>1.3 Determine the limiting factors of computer hardware on video production for a specified job<br>1.4 Determine the differences of image quality and image size, required to deliver the desired outcome |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Analyse the formats employed to create a given computer video sequence for a specified outcome |
| 2. Design the digital video | 2.1 Assess and select appropriate digital video software for the job<br>2.2 Use digital video-editing software to combine video assets<br>2.3 Control variations in video frame rates, as required for the job to be undertaken<br>2.4 Apply time-stamping techniques to the video frames, appropriate for the job to be undertaken<br>2.5 Save the digital video using the appropriate file techniques |
| 3. Edit the digital video | 3.1 Edit single and multiple video tracks to achieve a defined outcome<br>3.2 Join the multiple tracks of a digital video, according to specifications<br>3.3 Employ digital effects to modify and integrate digital video tracks, according to specifications<br>3.4 Apply time encoding to single and multiple-edited digital video tracks, according to specifications<br>3.5 Insert a video track into an interactive media production, according to specifications |
| 4. Present a digital video sequence | 4.1 Test the digital video, and combine with other digital imaging, sound, visual effects and animation to create an interactive media presentation<br>4.2 Save the digital media presentation, including the video, and present to the client or customer |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.5, 2.1, 4.1 | • Integrates a range of texts and organisational information to critically analyse data and evaluate text in order to determine effective engagement |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | methods, and to monitor the effectiveness of systems for the audience and environment |
| Writing | 2.5, 4.2 | • Develops material and resources utilising knowledge of spelling, grammar, appropriate structure and layout, to organise and record information and feedback in a sequential manner for client and staff engagement, as well as internal reference |
| Oral Communication | 4.2 | • Participates in verbal exchanges of ideas that elicit views, opinions and feedback from others, using appropriate professional techniques and interpersonal skills to effectively, and respectfully, convey information and establish rapport |
| Numeracy | 1.2, 1.4, 3.1-3.5 | • Interprets mathematical information embedded in technical and conceptual information |
| Get the work done | 1.1-1.5, 2.1-2.5, 3.1-3.5, 4.1-4.2 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others taking into account capabilities, efficiencies and effectiveness<br>• Applies systematic and analytical decision-making processes for complex and non-routine situations<br>• Responds intuitively to problems requiring immediate resolution, drawing on past experiences in order to focus on the cause of a problem rather than the symptom<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine and non-routine tasks |

# Assessment Requirements for ICTDMT501 Incorporate and edit digital video

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce, visualise and interpret creative concepts for digital video
- demonstrate application of the principles of video-editing and production techniques
- design, compile, edit and test the digital interactive media incorporating video.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain contemporary video software
- explain the importance of and actions required to ensure continuity during the editing process
- outline editing conventions
- identify electronic digital language and other terminology
- explain the purpose of using montage as part of a presentation, and the impact of sound and visual effects
- describe principles of video production and formats
- describe the types of cutting
- explain video-editing and post-production techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the digital media field of work, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- special purpose tools, equipment, and materials
- industry software
- the internet
- copyright and intellectual property legislation
- workplace health and safety (WHS) legislation
- enterprise policy.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTDRE301 Install digital reception equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to install and configure digital reception equipment (DRE) on a customer's premises.

It applies to individuals who install and maintain DRE in home or small business networks, and includes integration of many services such as broadband, digital TV, free to air (FTA), subscription TV (pay TV) and internet protocol TV (IPTV).

No licensing, legislative or certification requirements apply at the time of publication.

## Unit Sector

Telecommunications – Digital Reception Technology

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for installation | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Notify customer to verify installation order and arrange for site access to comply with security arrangements<br>1.3 Notify supervisor of identified safety hazards at the worksite and complete a job safety analysis (JSA) before commencing work<br>1.4 Confirm location of digital reception equipment and fittings with |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | required, and present to customer<br>5.3 Obtain authorised signatures on required documentation to confirm acceptance of completed work |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance*.

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 4.4 | • Interprets textual information from relevant sources to identify key information |
| Writing | 1.3, 2.3, 5.1, 5.2 | • Uses clear, specific and industry-related terminology to complete workplace documentation |
| Oral Communication | 1.2, 1.4, 2.3, 4.4 | • Articulates clearly using appropriate language for environment and uses listening techniques to confirm understanding |
| Numeracy | 1.6, 2.4, 3.1, 5.2 | • Takes readings and measurements and interprets results |
| Navigate the world of work | 1.1-1.4, 1.6, 2.6, 4.2, 4.3, 5.1-5.3 | • Takes responsibility for following safe, sustainable, appropriate and efficient workplace procedures |
| Interact with others | 2.7, 4.1, 5.3 | • Liaises with customer<br>• Signs-off work when completed to customer's satisfaction |
| Get the work done | 1.5, 2.1-2.5, 2.8, 3.1-3.3 | • Plans, organises and implements tasks efficiently to meet customer requirements<br>• Resolves any problems arising from installation |

# Assessment Requirements for ICTDRE301 Install digital reception equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- identify installation requirements and obtain required approvals
- install equipment applying work health and safety (WHS) requirements and work practices
- configure set equipment to customer requirements
- conduct functionality tests and interpret results
- provide customer training appropriate to equipment
- complete task and handover to customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss the range of products used across the industry
- list contemporary equipment and connection methods
- outline customer service principles, particularly dealing with customers face to face
- review enterprise or service specific knowledge of products and services supplied
- discuss work health and safety general principles and enterprise specific job safety analysis (JSA) requirements
- provide an overview of:
  - methods of training customer in product use
  - radio frequency (RF) theory, principles and safety
  - telephony principles to support return path awareness
- identify pre-installation enterprise specific requirements
- state enterprise quality assurance requirements

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain return path technology.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- site for digital reception equipment installation
- digital reception equipment currently used in industry
- test equipment required for digital reception equipment installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTDRE302 Locate and rectify digital reception equipment faults

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to locate and rectify all types of customer digital reception equipment (DRE) faults on a customer premises as part of a home network.

It applies to individuals who install and maintain integrated services in digital receiving equipment or small business networks, and who apply skills and knowledge in this unit to locate and rectify faults of DRE home networks such as broadband, digital TV, free to air (FTA), subscription TV (pay TV) and internet protocol TV (IPTV).

No licensing, legislative or certification requirements apply at the time of publication.

## Unit Sector

Telecommunications – Digital Reception Technology

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for DRE fault identification | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Notify customer to verify fault report and arrange for site access to comply with security arrangements<br>1.3 Notify supervisor of identified safety hazards at worksite and complete a |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | job safety analysis (JSA) before commencing work<br>1.4 Identify existing warranties, service agreements and equipment specifications and documentation covering digital reception equipment<br>1.5 Select and obtain tools and materials appropriate for the work order |
| 2. Assess likely cause and location of fault | 2.1 Verify system details to assist with fault identification<br>2.2 Assess available data and historical trends to determine likelihood of fault being the set top fault or existing customer equipment or cabling fault<br>2.3 Rank likely causes of fault in order of probability ensuring a methodical approach to fault-finding is used<br>2.4 Discuss problem fully with customer and advise of likely charges |
| 3. Perform tests to diagnose fault | 3.1 Conduct visual inspection of system for likely damage following work health and safety (WHS) and environmental requirements<br>3.2 Check connections, plugs, terminations and leads for operation<br>3.3 Measure signal strength at wall plate and beyond to ensure adequate signal level for equipment processing<br>3.4 Conduct functional test of facilities to identify faulty equipment<br>3.5 Progressively isolate fault to remove likely variables from assessment using manufacturer's diagnostic chart<br>3.6 Locate fault with minimal disruption to client activity, in the shortest possible time<br>3.7 Provide customer with regular progress reports |
| 4. Rectify faults | 4.1 Identify faulty cabling parts and equipment and replace or repair according to service agreement<br>4.2 Advise customer of cost of repair if service agreement does not exist<br>4.3 Re-program equipment to customer requirements if required<br>4.4 Complete work in a manner safe to repairer and customer |
| 5. Provide replacement service to customer | 5.1 Provide customer with temporary replacement equipment similar to existing equipment while faulty equipment is being repaired<br>5.2 Program replacement equipment to customer requirements<br>5.3 Test replacement service for functionality before handover – to meet customer satisfaction |
| 6. Clean up worksite and complete | 6.1 Remove waste and debris from site and dispose of in a safe and environmentally appropriate manner<br>6.2 Restore site to original condition and customer satisfaction |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| documentation | 6.3 Prepare invoices and other financial documentation, where required, and present to customer<br>6.4 Obtain authorised signatures on required documentation to confirm acceptance of completed work |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.1 | • Interprets textual information from relevant sources to identify key information |
| Writing | 1.3, 3.3, 3.5, 6.3, | • Uses clear, specific and industry-related terminology to complete workplace documentation |
| Oral Communication | 1.2, 2.4, | • Articulates clearly using appropriate language for environment and uses listening techniques to confirm understanding |
| Numeracy | 3.3 | • Takes readings and measurements and interprets results |
| Navigate the world of work | 1.1, 1.5, 5.1, 6.1-6.4 | • Takes responsibility for following safe, sustainable, appropriate and efficient workplace procedures |
| Interact with others | 4.2, 6.4 | • Deals with customer to provide reports and sign-off on completed work |
| Get the work done | 2.1-2.3, 4.1, 4.3, 4.4, 5.2, 5.3, | • Plans, organises and implements tasks efficiently to meet customer requirements |

# Assessment Requirements for ICTDRE302 Locate and rectify digital reception equipment faults

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- determine parameters for addressing digital reception faults for a customer and keep customer informed on progress
- apply a methodical approach to fault identification
- use test equipment to identify faults
- interpret test results
- install temporary equipment while repairs are affected
- repair faults, repair cable terminations or replace faulty cable equipment and test to verify correct function
- complete documentation in accordance with enterprise requirements and present to customer for approvals.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss broad knowledge of whole industry product range
- outline customer service principles, particularly dealing with customers face to face
- explain enterprise methods for test analysis and diagnosis
- discuss enterprise or service specific knowledge of products and services supplied
- review work health and safety (WHS) general principles and enterprise specific job safety analysis (JSA) requirements
- give an overview knowledge of:
  - objectives and methods of training for product use for customer education
  - radio frequency (RF) theory, principles and safety

© Commonwealth of Australia, 2025 Future Skills Organisation

  - telephony principles to support return path awareness
- identify pre-installation enterprise-specific requirements
- state quality assurance of enterprise requirements
- explain return path technology
- list signal measurement and other enterprise-specific tools
- discuss understanding of contemporary equipment and connection methods.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- site for digital reception equipment installation
- digital reception equipment currently used in industry
- test equipment required for digital reception equipment installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTDRE303 Install a complex digital reception system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to design, install, test and commission a complex digital reception system.

It applies to individuals who work on complex radio frequency (RF) and digital distribution systems, such as master antenna television (MATV) and satellite master antenna television (SMATV), in commercial or multi-dwelling unit (MDU) environments.

Work functions in occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Unit Sector

Telecommunications – Digital Reception Technology

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan installation of a complex digital reception system | 1.1 Notify customer to arrange access to site and identify customer equipment<br>1.2 Select type of complex digital systems and consequent constraints on installation according to customer specifications<br>1.3 Complete a job safety analysis (JSA) identifying work health and safety (WHS) issues |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Prepare for installation according to relevant legislation, codes, regulations and standards<br>1.5 Verify design requirements are suitable for site application and required system performance |
| 2. Assemble complex digital reception system | 2.1 Select and obtain materials, tools and equipment for installation<br>2.2 Select suitable headend location and cable access<br>2.3 Build headend according to design requirements and manufacturer's specifications<br>2.4 Configure headend and distribution devices to operate according to design and manufacturer's specifications<br>2.5 Run cables along identified routes<br>2.6 Terminate cables according to both design and manufacturer's specifications |
| 3. Test and commission system | 3.1 Conduct performance test operation of headend and distribution devices<br>3.2 Activate system and conduct signal measurement using test equipment<br>3.3 Record and analyse initial test results for quality of service according to design specifications<br>3.4 Rectify identified faults and adjust system to optimal operation<br>3.5 Conduct final signal measurement using test equipment to optimise performance<br>3.6 Update design plans to 'as built' status |
| 4. Complete administrative tasks | 4.1 Record final commissioning test results and settings in line with client requirements<br>4.2 Complete appropriate records and test results, and store according to policy<br>4.3 Complete all financial and other documentation<br>4.4 Hand over to customer and obtain sign off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.4, 3.2, 3.5 | • Interprets textual information from relevant sources to identify relevant and key information |
| Writing | 1.3, 3.3, 3.6, 4.1-4.3 | • Uses clear, specific and industry related terminology to complete workplace documentation |
| Oral Communication | 1.1 | • Articulates clearly using appropriate language for environment and uses listening techniques to confirm understanding |
| Numeracy | 2.1, 3.2 | • Takes readings and measurements and interprets results |
| Navigate the world of work | 1.3, 1.5, | • Takes responsibility for following safe, sustainable, appropriate, and efficient workplace procedures |
| Interact with others | 1.1, 4.4 | • Makes contact with customer<br>• Deals with customer to obtain sign-off on completed work |
| Get the work done | 2.1-2.6, 3.1, 3.4 | • Plans, organises and implements tasks efficiently to meet customer requirements<br>• Identifies and resolves problems |

# Assessment Requirements for ICTDRE303 Install a complex digital reception system

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- obtain relevant approvals for access to site and equipment
- plan, assemble and install a complex digital reception system
- conduct functionality tests and interpret results
- examine performance of adjustments (tuning, balancing and replacing components)
- perform handover with customer
- apply related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain procedures and equipment required for measurement of:
  - forward and reflected radio frequency (RF) power
  - feedline insertion loss
  - distance to fault
  - modulation error rate (MER) and bit error rate (BER) for purpose of signal integrity
- identify features of instruments, test equipment and performance requirements
- review legislation, codes of practice and other formal agreements directly impacting operation and testing of radio communications antennas and equipment
- summarise principles of master antenna television (MATV) and satellite master antenna television (SMATV)
- describe RF spectrum and its relationship to digital reception systems

© Commonwealth of Australia, 2025 Future Skills Organisation

- discuss RF awareness, electromagnetic radiation (EMR) standards and specific WHS requirements impacting use and testing of radio communications instruments and equipment
- outline typical issues and challenges that occur in telecommunications antenna installations

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- site for complex digital reception system installation
- complex digital reception systems currently used in industry
- test equipment required for digital reception system installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTDRE304 Design communications wiring systems for customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to design a smart cable wiring system on a customer premises.

It applies to individuals employed in a technical capacity for the emerging information technologies and applications in domestic and small to medium enterprises.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

## Pre-requisite Unit

ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule

## Unit Sector

Telecommunications – Digital Reception Technology

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to design a | 1.1 Consult customer and visit worksite to determine immediate and |

# Assessment Requirements for ICTDRE304 Design communications wiring systems for customer premises

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- capture customer functional needs for wiring system
- apply industry standards, regulations and codes of practice when designing a wiring system for a customer
- develop a detailed design in compliance with industry practices, including signal losses and/or expected measurements to be achieved at wall plates
- document the design, including a bill of materials, schedule of work and associated costs and submit to customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe cabling standards, regulations and codes applicable to cable design
- determine building regulations that apply to installation of cabling systems
- identify and describe codes of practice and Australian Communications and Media Authority (ACMA) standards for home wiring
- determine carrier network delivery systems used in single dwelling and multi-dwelling units for:
  - fibre
  - fixed wireless
  - satellite
  - twisted copper pair
  - subscription TV
- evaluate cabling requirements of home technology applications taking into account:

© Commonwealth of Australia, 2025 Future Skills Organisation

  - the user needs including age and assisted living conditions
  - communications
  - digital home health
  - energy management
  - entertainment
  - intelligent light and power
  - security and safety
- identify and describe testing and commissioning methods and determine performance requirements for home technologies
- describe customer interface elements commonly considered when designing a wiring system
- identify common service providers clients may specify
- consider safety implications of the design for users
- identify design parameters for cable selection and support system of a wiring system
- identify documentation required when submitting a design to a customer.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a contemporary dwelling design
- a specification of a customer's functional requirements
- current standards, codes of practice and regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# Assessment Requirements for ICTDRE305 Develop integrated digital reception systems

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- Comply with standards, regulations and work health and safety (WHS) procedures and practices when developing an integrated system
- communicate with customers
- determine the full scope of specifications for an integrated digital reception system
- use calculations to correctly determine the number of network and current requirements
- place system devices appropriately in system scheme
- apply and check appropriate modes of programming and diagnostic tools in the design
- program devices and set load operating parameters according to manufacturer specifications
- use diagnostic tools to locate and correct system defects, faults and anomalies
- document and backup system during appropriate stages of the project.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the applications and advantages of integrated systems
- identify the bus system cable type, polarity, length and acceptable topologies
- describe the process of controlling digital system integration (DSI) and communicating with digital addressable lighting interface (DALI) electronic ballasts
- identify factors that affect control bus stability, including number of units on a network, and current drawn by devices in relation to current output of power supplies
- define the operating parameters of integrated systems and programming to an extent indicated by:
  - importance of project documentation and backup

© Commonwealth of Australia, 2025 Future Skills Organisation

    - importance of location of output and input devices and control bus power supplies
- describe lighting dimmer capabilities and selection
- determine the low voltage (LV) supply overcurrent and surge protection
- describe multiple network connectivity
- identify the software used for system and device programming, monitoring and control
- explain system and device programming, encompassing:
    - addressing conventions for networks, devices, applications, output groups, types of control and outputs, which include ‘on’, ‘off’, a specific level, and over a specific time
    - PC programming tools and methods (programming includes configuring network database using addressing tools and objects, function objects, editing, altering and transferring the database to network)
- identify and describe system fault-finding processes
- determine the system components, encompassing:
    - support devices for control bus supply and control
    - support devices for programming, interconnection between networks and integration with third party systems
- describe the types and capabilities of input and output devices.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a typical contemporary dwelling into which a digital system will be developed
- availability of all functional requirements of a modern home
- access to contemporary digital equipment
- access to all current standards, codes and regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# Assessment Requirements for ICTDRE401 Integrate customer digital reception equipment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- identify modulation and other signal characteristics of a range of contemporary products
- design and build system
- install three types of equipment and services, applying all related work health and safety (WHS) requirements and work practices
- configure services and optimise customer system
- conduct functionality tests and interpret results
- provide customer training appropriate to equipment
- complete task and handover to customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify analog and digital connectors
- list contemporary equipment and connection methods
- explain continuity, ingress, egress, signal level and signal quality performance tests
- outline customer service principles, particularly dealing with customers face-to-face
- discuss enterprise or service specific knowledge of products and services supplied
- describe equipment types:
  - amplifiers
  - couplers
  - splitters
  - taps
- discuss modulation techniques

© Commonwealth of Australia, 2025 Future Skills Organisation

- define objectives and methods of training for product use for customer education
- discuss WHS general principles and enterprise-specific job safety analysis (JSA) requirements
- assess performance adjustments for tuning, balancing and replacing components
- summarise quality assurance of enterprise requirements
- review test analysis and diagnosis (enterprise diagnosis methods)
- describe video and audio fundamentals

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a site for Digital Reception Technology (DRE) integration
- DRE currently used in industry
- test equipment required for DRE integration.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTDRE402 Integrate data delivery modes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to connect and configure a media centre that integrates signal for distribution.

It applies to individuals working as installers in the digital reception sector integrating services from multiple sources and in multiple formats (radio frequency, digital, data, and voice) for both inward and outbound signals into complex customer systems.

No licensing, legislative or certification requirements apply at the time of publication.

## Unit Sector

Telecommunications – Digital Reception Technology

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Evaluate existing customer equipment | 1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work<br>1.2 Notify customer to verify installation order and arrange for site access to comply with security arrangements<br>1.3 Notify supervisor of identified safety hazards at worksite and complete job safety analysis (JSA) before commencing work<br>1.4 Use test equipment to verify customer equipment is operational |

# Assessment Requirements for ICTDRE402 Integrate data delivery modes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- identify service requirements of a range of contemporary products
- design and build a multiple service customer system solution
- install and integrate at least two services to a customer system comprised of at least three equipment components applying all related work health and safety (WHS) requirements and work practices
- activate and optimise customer equipment using two or more signal sources
- configure services and optimise customer system across multiple services
- conduct functionality tests and interpret results
- provide customer training appropriate to the equipment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list contemporary equipment and connection methods
- outline customer service principles, particularly dealing with customers face to face
- discuss enterprise or service specific knowledge of products and services supplied
- describe equipment types:
  - amplifiers
  - couplers
  - taps
  - splitters
- describe home automation
- identify functions of home theatre system components

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain modulation techniques
- discuss WHS general principles and enterprise specific job safety analysis (JSA) requirements
- assess performance adjustments for tuning, balancing and replacing components
- summarise quality assurance of enterprise requirements
- evaluate security systems
- review test analysis and diagnosis (enterprise diagnosis methods)
- identify test equipment and signal measurement and other enterprise-specific tools
- explain principles of video and audio technologies
- explain wireless local area networks (WLANs)
- explain wireless technology.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a site for data delivery modes integration
- equipment currently used in industry
- test equipment required for data delivery integration.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTEDU301 Train customers in new technology

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to conduct training for customers on telecommunications equipment including convergent technology applications, such as internet protocol television (IPTV), digital television and internet protocol (IP) based customer equipment. It involves assessing the type of training suitable for the product and customer, delivering and checking the training.

It applies to individuals involved with installation of new technology or an upgrade of an existing network or subsystem deploying next generation networks (NGN) for customer premises equipment (CPE) installation, or as dedicated trainers involved in very large installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Education

## Elements and Performance Criteria

| **Elements** | **Performance Criteria** |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify training required | 1.1 Confirm training to be provided with installation quote<br>1.2 Assess customer’s expertise and actual training details |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| | 1.3 Identify and prepare for specialised training needs<br>1.4 Provide quotes for enhanced training and confirm with customer |
| 2. Conduct training | 2.1 Demonstrate and explain relevant equipment, functions and network facilities<br>2.2 Provide customers with hands-on experience operating the equipment<br>2.3 Provide feedback to customers on their operational ability<br>2.4 Provide customers with relevant product literature<br>2.5 Provide enhanced training as agreed |
| 3. Check training | 3.1 Measure customer's skill using the equipment<br>3.2 Review training delivery and note improvements<br>3.3 Update and store records according to organisational requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 2.4, 3.1, 3.2, 3.3, | • Evaluates and integrates facts and ideas to construct meaning and develop training plans from a range of sources |
| Writing | 1.3, 1.4, 2.1-2.53.2, 3.3 | • Communicates relationships between ideas and information in a style appropriate to audience and purpose |
| Oral Communication | 1.1, 1.4, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1 | • Demonstrates flexibility in spoken texts by choosing appropriate structures and strategies while instructing, providing constructive feedback or interacting with customers, employer, supervisors, work associates, team members and other contractors |
| Numeracy | 1.1, 1.4, 3.1, | • Identifies and comprehends relevant mathematical information in familiar activities or texts such as costing training |
| Navigate the world of work | 3.3 | • Complies with explicit policies and procedures<br>• Explores and implements, where identified, implicit expectations of policies and procedures |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Interact with others | 1.2, 2.1, 2.2, 2.3, 2.4, 2.5 | • Identifies and takes steps to follow accepted communication practices and protocols<br>• Recognises common cultural and other differences of people in the work context, and makes adjustments in addressing differences<br>• Elicits feedback and provides feedback to others |
| Get the work done | 1.1, 1.3, 3.1, 3.2 | • Plans and implements routine tasks and workload making limited decisions on sequencing, timing and collaboration, seeks assistance in setting priorities<br>• Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates effectiveness of outcome |

# Assessment Requirements for ICTEDU301 Train customers in new technology

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- review and confirm predetermined training for telecommunications installation
- analyse learner characteristics and actual training needs
- prepare training material, including equipment specifications and guidelines
- conduct customer training on a telecommunications installation including:
  - demonstration
  - hands-on experience
  - feedback on performance
- complete training documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe in detail the content of learning to be provided
- explain common sources of technical training information
- summarise and explain appropriate training techniques for:
  - demonstration
  - individual and group activities
  - instruction
  - questioning.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Education field of work and include access to:

- a range of information and training resources
- customer premises equipment product information
- appropriate training facilities
- relevant industry software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTEDU501 Develop and deliver training associated with new and modified products

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Application

This unit describes the skills and knowledge required to design, conduct and evaluate effective vendor training programs for users and operators of telecommunications equipment. This includes digital or analog communications applications, including telephony, data, video, digital broadcasting, local area networks (LAN), wide area networks (WAN) and multimedia. These may be domestic, commercial or industrial installations.

It applies to individuals involved with customer support activities for the purpose of training technical support or maintenance staff.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – Education

## Elements and Performance Criteria

| Element | Performance Criteria |
|---|---|
| *Elements describe the essential outcomes* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to develop training | 1.1 Confirm training specifications required for a specific product with client<br>1.2 Research available and relevant material and prepare an outline for |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | |
|---|---|
| program | proposed training<br>1.3 Present and confirm suitability of proposed outline with client<br>1.4 Determine training schedule parameters<br>1.5 Establish criteria for post-training evaluation |
| 2. Design training program and support material | 2.1 Develop training program that follows a logical sequence and builds on existing knowledge of recipients<br>2.2 Create training material that meets up-to-date product and technical information and all related workplace health and safety (WHS) issues and work practices<br>2.3 Develop training delivery style to suit skills of recipient<br>2.4 Review and amend training material prior to product, equipment or facility changes being introduced by the company<br>2.5 Develop training schedule to meet needs and schedules of recipients |
| 3. Deliver training to sales and technical staff | 3.1 Deliver training sessions in a systematic fashion and in a format suitable to client's needs<br>3.2 Monitor student performance against pre-determined criteria<br>3.3 Provide feedback on student performance against pre-determined criteria<br>3.4 Evaluate training session against pre-determined criteria on completion, and identify potential improvements |
| 4. Complete documentation | 4.1 Record session evaluation and feedback from recipients<br>4.2 Present report to client on effectiveness of training sessions and recommendations for improvements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| **Skill** | **Performance Criteria** | **Description** |
|---|---|---|
| Reading | 1.1-1.4, 2.2, 2.4, 3.2-3.4, 4.1 | • Critically organises, evaluates and applies content from a range of structurally complex materials including client briefs, product and technical information and interpretation of feedback from students |
| Writing | 1.2, 1.5, 2.1, 2.2, 2.4, 2.5, | • Generates complex written texts appropriate for a specific audience, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 3.4, 4.1 | demonstrating control over a broad range of writing styles and purposes |
| Oral Communication | 1.1-1.3, 2.3, 3.1, 3.3, 4.2, | • Establishes and maintains complex and effective rapport with clients and students, with a depth of understanding that includes multiple and unstated meanings |
| Numeracy | 1.4, 2.5, | • Estimates and plans time requirements for scheduling |
| Navigate the world of work | 2.2 | • Takes full responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation or regulation |
| Interact with others | 1.1, 1.3, 2.3, 3.1-3.3, 4.2 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts<br>• Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships<br>• Elicits feedback and provides feedback to others to improve<br>• Recognises diversity in people and manages this diversity to improve workplace relations and practices |
| Get the work done | 1.1, 1.2, 1.4, 1.5, 2.1, 2.2, 2.4, 2.5, 3.2, 3.4 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, taking into account capabilities, efficiencies and effectiveness<br>• Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities<br>• Applies systematic and analytical decision-making processes for complex and non-routine situations<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation, formal and analytical thinking<br>• Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others, in a secure and |

# Assessment Requirements for ICTEDU501 Develop and deliver training associated with new and modified products

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 2.0. |

## Performance Evidence

Evidence of ability to:

- develop and deliver training programs for clients to operate new or modified equipment installations
- establish and use criteria to measure and report on training program effectiveness.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe equipment relative to customer requirements, customer telecommunications applications and related equipment
- describe features and applications of telecommunications products relative to customer requirements
- identify and outline common training methodologies for vendor training
- identify, locate and evaluate reference documents relevant to training and after training support.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Education field of work and include access to:

- suitable training resources and facilities
- relevant product information

# ICTGAM301 Apply simple modelling techniques

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop, and refine, 3-D models using simple modelling techniques and appropriate software.

It applies to individuals who support the design, development, and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify work requirements | 1.1 Clarify the requirements for, and purpose of, 3-D digital modelling techniques and refer to the production documentation, WHS requirements and roles of project team members<br>1.2 Clarify work-flow sequences in consultation with the relevant personnel, to ensure that production schedule deadlines are met<br>1.3 Select the software that best suits the type of production and |

# Assessment Requirements for ICTGAM301 Apply simple modelling techniques

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- clarify 3-D modelling requirements
- create 3-D digital models that:
  - demonstrate the application of simple 3-D modelling techniques
  - demonstrate the efficient use of geometry and attention to detail
  - meet production documentation requirements
- work collaboratively with the other members of the design and development team
- meet deadlines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify 3-D digital model design techniques
- outline 3-D digital modelling techniques
- outline the stages in the production process, from the initial concept through to the finished product
- discuss the features of a range of delivery platforms
- discuss geometry as it applies to the creation of realistic 3-D digital models
- outline the issues and challenges of creating 3-D digital models
- outline work health and safety (WHS) standards, as they relate to working for periods of time on computers
- outline the roles and responsibilities of project team members in the relevant industry sector

© Commonwealth of Australia, 2025 Future Skills Organisation

- discuss the use of scale, form, weight and volume in the design, and development, of 3-D digital models
- discuss basic copyright issues associated with designing and creating 3-D models.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- the production documentation
- reference materials
- computer hardware
- industry software packages
- games engines
- file storage
- enterprise policy about WHS requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM302 Design and apply simple textures to digital art

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to assess, and select, textures and shaders to develop new textures and to apply them to digital art, including 3-D models.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify the design requirements, and plan the approach | 1.1 Interpret the brief to clarify design, texture generation, and the delivery requirements in consultation with the client<br>1.2 Identify the design and technical constraints<br>1.3 Identify the software, media and file formats for digital imagery, texture production and manipulation<br>1.4 Identify the sequence of digital texturing activities in the production pipeline<br>1.5 Identify production workflow requirements, and develop the |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | production pipeline to meet client requirements |
| 2. Assess the existing textures and shaders for suitability | 2.1 Establish the underlying surface characteristics of the 3-D model to be textured and shaded<br>2.2 Identify basic shaders and textures with surface characteristics<br>2.3 Identify suitable textures from the available texture libraries<br>2.4 Select shaders and textures for the assignment to model<br>2.5 Confirm that the selections are consistent with the brief and with client requirements |
| 3. Determine shader attributes and assign to a 3-D model | 3.1 Identify and select the attributes required to achieve the desired effects on 3-D models<br>3.2 Determine and confirm the requirements related to lighting and rendering<br>3.3 Use the appropriate methods and techniques to achieve the desired shading outcome |
| 4. Acquire new textures | 4.1 Identify the desired resolution for texture, prior to acquisition<br>4.2 Acquire textures from an online library<br>4.3 Capture real-world textures using digital means<br>4.4 Generate the texture, using art media, or digital paint software, and then save<br>4.5 Ensure that the resolution of the acquired texture meets resolution requirements |
| 5. Generate procedural textures and create a texture map | 5.1 Assess the nature of the surface topology<br>5.2 Identify the suitable types of 3-D projection<br>5.3 Apply geometry where necessary<br>5.4 Use algorithms to simulate natural patterns, where required<br>5.5 Determine the texture-mapping method<br>5.6 Determine the projection-mapping method<br>5.7 Adjust the parameters to achieve desired effects |
| 6. Apply the texture to model | 6.1 Apply the texture to the model<br>6.2 Layer and enhance the textures to achieve the desired effects |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 6.3 Apply lighting to test the reaction of the textures<br>6.4 Apply the textures to lights, in order to achieve specified effects<br>6.5 Adjust the textures to achieve the final effects<br>6.6 Complete test renders, and confirm the outcome with the client |
| 7. Finalise the design | 7.1 Present test renders to the client for approval<br>7.2 Make technical or design adjustments consistent with the feedback and with budgetary constraints<br>7.3 Finalise shading and texturing<br>7.4 Save and archive files in agreed formats and repository |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 1.5, 2.1, 2.2, 2.3, 3.1, 3.2, 4.1, 4.5, 5.1, 5.2 | • Interprets and comprehends information in diagrams, designs, objects, and images<br>• Recognises and comprehends signs, symbols, pictures, jargon, abbreviations, computer generated text, numbers and letters necessary to operate complex digital art software |
| Oral Communication | 1.1, 1.2, 1.3, 1.4, 1.5, 2.5, 3.2, 6.6, 7.1 | • Uses effective questioning and listening techniques, translating digital art terminology to plain English where necessary, to clarify client requirements and obtain information<br>• Listens and responds to instructions and feedback to ensure that the finished result meets client requirements |
| Numeracy | 3.3, 4.1, 4.5, 5.4, 5.7, 6.2, 6.3, 6.4, 6.5, 6.6, 7.2, 7.3 | • Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other variables, in the application of texture to digital imagery<br>• Adds, subtracts, multiplies and divides whole numbers and decimals to ensure that the project |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | meets budgetary constraints |
| Get the work done | 1.1-1.5, 2.1-2.3, 3.1-3.3, 4.1-4.5, 6.1-6.5, 7.2, 7.3 | • Makes routine decisions and implements standard procedures for routine tasks<br>• Uses creativity and initiative in design<br>• Uses key features of digital systems and tools to complete routine tasks<br>• Understands the importance of secure information in relation to own work, and takes responsibility for data integrity and management |

# Assessment Requirements for ICTGAM302 Design and apply simple textures to digital art

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- comprehend design requirements
- complete texturing and shading tasks according to brief requirements
- create and apply textures to digital art
- use and optimise software components for best performance
- adhere to system requirements related to file sizes and formats
- store completed file components to software and organisational requirements
- develop textured, shaded and rendered models
- integrate texturing activities into the overall production pipeline.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss camera textures and filters that can be used to achieve shading and texturing effects
- outline the features of software used for:
  - 3-D modelling
  - appropriate file sizes and formats
  - digital image manipulation
  - lighting
  - rendering
  - scanning
  - the scheduling of production activities
  - shading

© Commonwealth of Australia, 2025 Future Skills Organisation

  - texturing
- describe how to interpret design, texturing, and shading briefs
- discuss digital image capture, using cameras and scanners
- describe shader attributes and their optimisation
- describe shader and texture mapping, and projection
- discuss texturing and shading requirements for games.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- the appropriate computer hardware, software and peripheral devices
- models and scenes to be shaded and textured
- style shots
- rendering briefs or specifications
- the schedules.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM303 Review and apply the principles of animation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to review the traditional animation process and design and produce 3-D animated sequences using modelling and animation software.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare the traditional animation process, and the sequence of its component parts | 1.1 Describe the traditional animation process and its application in the production of quality 3-D animation<br>1.2 Describe the twelve principles of animation and their application in the production of quality 3-D animation<br>1.3 Identify the components that are essential to producing quality 3-D animation |
| 2. Prepare scene layout | 2.1 Describe and demonstrate the scene layout techniques used |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| and storyboarding techniques | in traditional animation<br>2.2 Describe and demonstrate the storyboarding techniques used in traditional animation |
| 3. Nominate appropriate animation keys in a proposed animation sequence | 3.1 Describe the key animation process<br>3.2 Produce sample key drawings<br>3.3 Identify the criteria used for the selection of animation keys<br>3.4 Select the appropriate animation keys in a proposed animation sequence |
| 4. Create a short animation | 4.1 Produce shot animation key drawings<br>4.2 Produce line image recordings of drawings<br>4.3 Create a short, animated sequence |
| 5. Apply traditional animation principles to a 3-D animation | 5.1 Produce a 3-D animated sequence, employing traditional animation principles, using 3-D modelling and animation software<br>5.2 Save and store, or archive, an animated sequence onto appropriate equipment or media |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 4.3, 5.1 | • Recognises and comprehends a large range of signs, symbols, pictures, jargon, abbreviations, computer generated text, numbers and letters, necessary to operate complex animation software |
| Oral Communication | 1.1, 1.2, 2.1, 2.2, 3.1 | • Uses industry specific terminology to describe animation principles and processes |
| Numeracy | 3.2, 3.3, 3.4, 4.1, 4.2, 4.3, 5.1, 5.2 | • Uses positive and negative whole numbers, decimals, degrees and percentages when setting measurement, scale, coordinates, colour, shading, and other parameters in the development of animations |
| Get the work | 3.2, 3.4, 4.1-4.3, | • Follows clearly defined instructions, monitors own |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| done | 5.1, 5.2 | progress and seeks assistance, when necessary<br>• Makes routine decisions and implements standard procedures for routine tasks<br>• Uses creativity and initiative in design<br>• Uses key features of specific digital systems and tools to complete routine tasks<br>• Understands the importance of secure information in relation to own work and takes responsibility for data storage |

# Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

| | |
|---|---|
| Twelve principles of animation must include: | • anticipation<br>• appeal<br>• arcs<br>• exaggeration<br>• follow through and overlapping action<br>• secondary action<br>• slow in and slow out<br>• solid drawing<br>• squash and stretch<br>• staging<br>• straight ahead action and pose to pose<br>• timing. |

# ICTGAM401 Produce an interactive game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to produce an interactive game using an industry standard authoring tool.

It applies to individuals who work in the game development industry and support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the game component assets | 1.1 Obtain the project brief and documents<br>1.2 Identify the technical specifications and game-production assets, required to meet creative and production requirements<br>1.3 Discuss formats of assets, and issues of asset integration, with appropriate personnel<br>1.4 Save all digital assets in the appropriate format for inclusion, and store for retrieval<br>1.5 Determine the sequence for the development of a beta version |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | prototype for testing game play<br>1.6 Create a schedule for production and testing<br>1.7 Determine the strategies for monitoring production progress against the schedule |
| 2. Identify the capability of game-engine software and tools, and a make a selection | 2.1 Identify and review the range of industry standard game-engine software and development tools available<br>2.2 Assess the software and tools related to specified game concepts and play requirements<br>2.3 Discuss considerations for the selection of game-engine software with relevant personnel, to ensure that the selection will meet specified outcomes<br>2.4 Select the game-engine software |
| 3. Use game-engine software | 3.1 Load a game engine, including sound and game play<br>3.2 Create a new file for the specified task, and name appropriately<br>3.3 Display and use the tools and features of the software relevant to the game production process<br>3.4 Create a custom code to achieve a unique function |
| 4. Create a game-play sequence and prototype | 4.1 Import and assemble game-play assets in the appropriate sequence, according to creative and technical requirements<br>4.2 Create and check the game-play elements, according to creative and technical requirements<br>4.3 Test and run the game-play sequence as a presentation, to ensure that the sequence meets creative, production and technical requirements<br>4.4 Export to the game engine and create a prototype<br>4.5 Save the file formats and identify for specified purpose |
| 5. Evaluate the game prototype | 5.1 Demonstrate the initial prototype to relevant personnel<br>5.2 Evaluate against criteria, including the achievement of a creative and user-friendly product<br>5.3 Discuss and agree on required changes<br>5.4 Assist, if required, in tests and user trials<br>5.5 Evaluate feedback from user trials<br>5.6 Confirm the endorsement from the relevant personnel to develop the prototype into a complete product |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 6. Transform prototype into a final proof-of-concept prototype | 6.1 Make necessary changes, as indicated by user trials<br>6.2 Integrate all game elements, as required by specifications<br>6.3 Make final checks to ensure that all sequences conform to the navigation design<br>6.4 Save into specified storage systems |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2, 2.4, 5.2, 5.5 | • Interprets and comprehends information in diagrams, storyboards, objects and images to identify appropriate software, resources, assets and user requirements<br>• Recognises and comprehends signs, symbols, pictures, jargon, abbreviations, computer generated text, numbers, letters and coding syntax necessary to operate complex game engines |
| Writing | 1.6, 3.2, 3.4, 4.5, 6.1, 6.4 | • Uses clear, concise and accurate spelling, grammar, technical terminology and organisational document structures/layout to develop and communicate schedules, strategies and monitoring processes<br>• Uses coding syntax, gaming engine syntax and organisational, labelling and naming conventions when developing interactive games |
| Oral Communication | 1.1, 1.2, 1.3, 2.1, 2.3, 5.1, 5.2, 5.3, 5.4, 5.6 | • Uses effective listening and open questioning techniques to elicit the view and opinions of others, and to obtain information<br>• Participates in a verbal exchange of ideas and solutions, using detailed and clear language, to clarify and present information and strategies according to requirements and the audience |
| Numeracy | 1.2, 1.3, 1.6, 2.2, 2.3, 3.4, 4.1, 4.2, 4.3, 4.4, 5.2, 6.1 | • Uses positive and negative whole numbers, decimals, degrees and percentages when setting measurement, scale, coordinates, colour, shading, timing and other parameters in the development of |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | interactive games |
| Interact with others | 2.3, 5.3 | • Cooperates with others and contributes to work practices where joint outcomes are required |
| Get the work done | 1.1-1.7, 2.1-2.4, 3.1-3.4, 4.1-4.5, 5.1-5.6, 6.1-6.4 | • Makes decisions and implements procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Uses creativity and initiative in design<br>• Assesses, tests and modifies product to ensure that it meets client and technical requirements<br>• Uses digital systems and tools to complete routine tasks<br>• Understands the importance of secure information in relation to own work and takes responsibility for data integrity, storage and management |

# Assessment Requirements for ICTGAM401 Produce an interactive game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- apply a variety of strategies for game trialling and testing
- create a game using original and innovative approaches
- implement game development and production strategies
- maintain the integrity of the design brief and game design document.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe basic programming techniques
- discuss the capabilities, and constraints, of game engines
- identify current game-play hardware and software products
- outline the technical constraints that hardware and software impose on design and development
- explain risk and critical path management, relevant to interactive game development
- outline the game production, testing and trialling process
- discuss the process of evaluating game prototypes from technical, design and game play perspectives.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- project briefs

© Commonwealth of Australia, 2025 Future Skills Organisation

- relevant organisational documentation
- game-production assets
- technical specifications
- industry-standard computer hardware, software, and peripheral devices appropriate for interactive games development.

Assessors must satisfy NVR/AQTF assessor requirements.

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine the methodology used for games genres
- differentiate game genres
- identify the consumer demographic for games products
- differentiate game design and play principles
- prepare an outline of a game design according to industry and organisational requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe 3-D digital model design techniques
- outline procedures and processes for computer game development
- identify current game-play hardware and software products
- outline the technical constraints that hardware and software impose on design and development.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- the internet

© Commonwealth of Australia, 2025 Future Skills Organisation

- computer hardware and software appropriate for researching games and the games industry.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM403 Create design documents for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create a game concept, develop and document the game specifications.

It applies to individuals who support the design, development and programming of basic digital games and design, develop and use digital media technologies as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research, create and document the game concept | 1.1 Research, identify and describe the target market for the game<br>1.2 Research, identify and describe the game genre and its working title<br>1.3 Identify a suitable game platform<br>1.4 Identify a suitable game engine<br>1.5 Prepare the initial concept art to establish the look, and feel, |

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | of the characters, environment and game play |
| 2. Create and document the specifications for game design | 2.1 Develop the storylines and levels<br>2.2 Develop the artwork for the characters and environment<br>2.3 Identify the game-play elements<br>2.4 Develop the graphical user interface (GUI)<br>2.5 Identify suitable sounds and music for the game |
| 3. Create, and document, the technical specifications for the game | 3.1 Determine game mechanics<br>3.2 Finalise the platform, game engine and operating system<br>3.3 Specify the source and purpose of the code to be used, including level-specific code<br>3.4 Determine the game physics and artificial intelligence<br>3.5 Determine the sound engineering requirements<br>3.6 Determine the procedures needed to test the game prototype |
| 4. Collate the game design document | 4.1 Define the proposed game features in comparison to existing games<br>4.2 List the estimated resources required to develop the game<br>4.3 Prepare the estimated schedule for game development<br>4.4 Collate the design information, estimates and proposals into a comprehensive game design document |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 2.5 | • Interprets and comprehends technical documentation, financial information, and statistical data to investigate the target market and to identify suitable resources |
| Writing | 1.5, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 4.1, 4.2, 4.3, 4.4 | • Uses clear, concise language, accurate spelling, technical terminology and appropriate layout when developing the technical and financial aspects of the game design document |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Employs a wide range of descriptive language to create a cohesive and well-structured outline of the game, characters, environment and elements |
| Oral Communication | 1.1, 1.2, 1.3, 1.4 | • Uses effective listening and open questioning techniques to elicit the view and opinions of others, and to obtain information |
| Numeracy | 1.1, 1.3, 1.4, 2.1, 2.3, 2.4, 2.5, 3.4, 3.5, 3.6, 4.1, 4.2, 4.3, 4.4 | • Uses whole numbers, decimals and percentages to outline parameters and attributes in a wide range of technical specifications<br>• Interprets financial and statistical information and adds, subtracts, multiplies and divides whole numbers and decimals when researching the target market and estimating resources and schedules |
| Get the work done | 1.1-1.5, 2.1-2.5, 3.1-3.6, 4.1-4.4 | • Takes responsibility for planning, sequencing and prioritising tasks to achieve outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision making processes for more complex and non-routine situations<br>• Uses creativity and initiative in design<br>• Uses specific digital systems, applications and tools to complete routine tasks<br>• Understands the importance of secure information in relation to own work, and takes responsibility for data integrity and management |

# Assessment Requirements for ICTGAM403 Create design documents for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop concept art for characters, environments, splash screens, start screens and game field screens consistent with an identified game genre and design specifications
- develop technical specifications for game mechanics, artificial intelligence, physics, sound, game play and overall usability
- develop game design documents to required industry standard, consistent with client brief and specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss the process of computer game development
- compare and discuss current game-play hardware and software products
- outline the technical constraints that hardware and software impose on design and development
- outline the techniques for applying concept development skills
- outline the techniques for applying concept visualisation skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- the internet for research purposes
- computer hardware, software and peripheral devices suitable for game development

© Commonwealth of Australia, 2025 Future Skills Organisation

- games engines.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM404 Apply artificial intelligence in game development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to research, develop and implement artificial intelligence (AI) solutions in games.

It applies to individuals who contribute to the creation of computer-controlled objects in games, and who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Conduct research on AI strategies | 1.1 Describe the terminology involved in AI, as it relates to games and the game industry<br>1.2 Identify and analyse the range of AI path-finding strategies, including the appropriate genre and environments, and how they influence design and development<br>1.3 Discuss AI strategies and ideas, and collaborate as required, with the relevant personnel to ensure the contribution of a range of ideas and creative solutions, and to fulfil the requirements of the |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | brief<br>1.4 Organise research and findings for use by relevant personnel throughout the development process, updating as required |
| 2. Design an AI strategy for games | 2.1 Generate a range of possible goals and actions, and other factors in the design of an AI non-player character (NPC)<br>2.2 Select the AI strategies for NPCs for the game design that are technically feasible, respond to the brief, and provide creative solutions to all design issues<br>2.3 Continuously reflect on, and assess, AI strategies for implications regarding the budget, timeline, technical feasibility, and suitability for the brief |
| 3. Implement an AI strategy | 3.1 Implement a path-finding algorithm in a game<br>3.2 Implement an NPC AI strategy in a game |
| 4. Evaluate the game, based on NPC AI | 4.1 Review the game design, and AI strategies, for the fulfilment of the design brief<br>4.2 Discuss and confirm additional requirements, or modifications, to the game design with the relevant personnel, and undertake any necessary amendments |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 2.2, 2.3 | • Investigates, interprets and comprehends technical documentation, diagrams, icons, symbols, text, numbers and letters when determining AI strategies |
| Writing | 1.1, 1.4, 2.1, 2.2, 2.3, 3.1, 3.2 | • Uses clear, concise language, accurate spelling and technical terminology, to organise research findings and to document progress towards goals<br>• Develops AI solutions using the correct code layout, code, diagrams, icons, symbols, text, numbers and letters |
| Oral Communication | 1.1, 1.2, 1.3, 4.1, 4.2 | • Uses effective listening and open questioning techniques, together with technical terminology, to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | elicit the view and opinions of others, and to give and obtain information |
| Numeracy | 1.3, 2.1, 2.2, 2.3, 3.1, 3.2, 4.1, 4.2 | • Uses whole numbers and decimals to outline parameters<br>• Interprets budgets, and adds, subtracts, multiplies and divides whole numbers and decimals to ensure that the budget, timelines and other brief requirements are met |
| Get the work done | 1.2-1.4, 2.1-2.3, 3.1, 3.2, 4.1, 4.2 | • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making and analytical processes for more complex and non-routine situations<br>• Uses creativity and initiative in design<br>• Uses key features of specific digital systems and tools to complete routine tasks |

# Assessment Requirements for ICTGAM404 Apply artificial intelligence in game development

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify and analyse artificial intelligence (AI) strategies for appropriateness to a game development brief
- design a feasible AI strategy for a game
- implement path finding algorithms and non-player character AI strategies in a game
- review and evaluate an AI strategy for a game.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the implications of basic path-finding algorithms on game development
- list and define the major AI terms used in the game industry
- outline the development process for creating AI strategies for non-player characters (NPCs) in a game
- describe the application of object-oriented programming practices
- describe the overall architecture of a game engine.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- research tools including the internet
- path-finding libraries
- development tools to implement AI strategies

© Commonwealth of Australia, 2025 Future Skills Organisation

- game design specifications and documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM405 Write story and content for digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify and develop storylines, write plot synopses and background stories, and to develop story components for interactive digital games.

It applies to individuals who are employed as game concept developers, script writers, storyboard artists, game designers and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify and develop storylines with game potential | 1.1 Identify potential storylines for game development, to current industry standards and regulations<br>1.2 Modify and enhance storylines to suit the game environment<br>1.3 Determine the appropriate game genre |
| 2. Write the plot synopsis and background story | 2.1 Determine character profiles<br>2.2 Develop environment profiles consistent with the storyline |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Develop the background story<br>2.4 Develop the initial plot profile<br>2.5 Develop plot synopsis and options, and link to specific game levels |
| 3. Develop story components | 3.1 Source the initial concept artwork<br>3.2 Develop level specifications and storylines<br>3.3 Initiate the development of storyboards showing plot development, cinematic and level outlines |
| 4. Finalise story components for inclusion in the game design brief | 4.1 Seek feedback on the story and concept<br>4.2 Finalise the story concept, profiles and other specifications for inclusion in the game design brief |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 3.1 | • Identifies and evaluates a variety of texts to aid concept development |
| Writing | 1.2, 2.1, 2.2, 2.3, 2.4, 2.5, 3.2, 3.3, 4.2 | • Uses clear, concise language, accurate spelling, technical terminology, and appropriate layout, when developing the technical aspects and flowcharts for the game storyline<br>• Employs a wide range of descriptive language to create cohesive and well-structured content for the characters, environment and plot |
| Oral Communication | 1.1, 1.3, 3.1, 3.3, 4.1 | • Uses effective listening, open questioning techniques and reflective responses to obtain views, ideas, information and feedback<br>• Presents the concept and storyline clearly, using words and non-verbal features appropriate to the audience |
| Navigate the world of work | 1.1 | • Identifies and complies with industry and regulatory requirements |
| Get the work | 1.1-1.3, 2.1-2.5, | • Makes routine decisions and implements standard procedures for routine tasks, using formal decision |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| done | 3.1-3.3, 4.1, 4.2 | making processes for more complex and non-routine situations<br>• Uses creativity and initiative in the story, and the visual design<br>• Uses information and communications technology (ICT) based tools to conduct research, design work processes, and complete work tasks |

# Assessment Requirements for ICTGAM405 Write story and content for digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop storylines for games, according to current industry standards
- apply processes and procedures to facilitate quality script writing
- apply the role of narrative in game development
- seek, and professionally respond to, feedback regarding concept and storylines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline budgeting and scheduling considerations for game development
- outline the copyright and intellectual property protection regulations for written narrative and concept graphics
- discuss different story requirements for particular game genres
- discuss the role of story writing in game development, and the quality of the final product
- outline research methods that can be used to stay abreast of the latest changes and narrative development for games
- discuss tools and techniques for developing game narrative.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- a range of current computer games across all platforms and genres
- a range of the latest consoles and hand-held game devices

© Commonwealth of Australia, 2025 Future Skills Organisation

- the internet for research purposes
- computer hardware, software and games engines
- file storage
- current copyright and intellectual property legislation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM406 Create visual design components for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create visual design components for games and interactive media using industry standard authoring tools.

It applies to individuals who contribute who support the design, development, and programming of digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the commonly used visual design components for games and interactive media | 1.1 Obtain the project brief and documents<br>1.2 Identify the features of visual design components for games and interactive media<br>1.3 Discuss design considerations for an interactive visual design component with relevant personnel |
| 2. Identify the graphics software packages used for | 2.1 Identify and review the range of industry-standard graphics software available |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| visual design | 2.2 Assess the software related to visual design component requirements<br>2.3 Discuss the technical specifications for rendering and editing processes with relevant personnel<br>2.4 Select the graphics software package |
| 3. Use graphics software | 3.1 Run the graphics software and become familiar with the interface<br>3.2 Create new files and organise a file structure<br>3.3 Learn the tools and features used to create visual design components |
| 4. Create the visual design components for a game and interactive media | 4.1 Design a basic graphical user interface (GUI) for a game and interactive media<br>4.2 Consider the interaction processes of GUI elements<br>4.3 Document the design and programming requirements needed to implement the GUI<br>4.4 Use graphics software to create visual design components to be used for the GUI |
| 5. Evaluate the implementation | 5.1 Demonstrate the component to relevant personnel<br>5.2 Evaluate the usability of the design components<br>5.3 Reflect on possible changes to improve the visual design and interactivity of the components |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 3.1, 3.3 | • Identifies, investigates and applies information from a variety of texts containing highly technical language, to expand own knowledge of chosen graphics software programs |
| Reading | 1.1, 1.2, 2.1, 3.1 | • Identifies and interprets a range of documents containing complex terminology, and applies the information in selecting software and designing the |

# Assessment Requirements for ICTGAM406 Create visual design components for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- demonstrate original approaches to the creative development of a graphical user interface (GUI)
- implement game development and production strategies
- maintain the integrity of the design brief
- develop concept art and design specifications for splash screens, start screens and game field screens, consistent with a design brief
- develop technical specifications for visual design components and overall usability
- implement and evaluate a working GUI with basic functionalities.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the principles of GUI design and related programming techniques
- list the human resources required in the process of creating visual design components
- list technology requirements and outline technical constraints that they impose on design and development
- discuss techniques for applying concept development skills
- discuss techniques for applying concept visualisation skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a design brief
- computer hardware, software, and peripheral devices suitable for games development
- games engines
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM407 Write scripts for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop, write and test scripts and related content for interactive games.

It applies to individuals who contribute and support the design, development, and programming of digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify story components | 1.1 Identify creative concepts for the script<br>1.2 Identify game genres and story components for script development |
| 2. Develop script components | 2.1 Develop a script structure consistent with the genre and the game design brief<br>2.2 Develop script components for the main plot, background stories, and level or mission stories consistent with the genre and game design brief |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Write a draft script | 3.1 Write a script synopsis<br>3.2 Write a draft script for the main characters and their interactions using the structure and components previously determined, according to the brief<br>3.3 Write a draft script for background stories and level/mission stories using the previously determined structure and components, according to the brief<br>3.4 Develop character and narrator dialogue<br>3.5 Initiate storyboards for draft scripts in the required format |
| 4. Review the script based on feedback | 4.1 Present the synopsis and storyboards to the client and the relevant personnel for feedback<br>4.2 Collate, and respond to, comments and feedback<br>4.3 Revise scripts and storyboards consistent with feedback<br>4.4 Undertake focus testing with the intended audience |
| 5. Write the final script | 5.1 Collate, and respond to, comments and feedback from focus testing<br>5.2 Rewrite the script synopsis where required<br>5.3 Rewrite the script or dialogue where required<br>5.4 Initiate revised storyboards where required<br>5.5 Present the final script in agreed format to the client and colleagues |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 4.2, 4.4, 5.1 | • Interprets and comprehends a range organisational and client documentation, to identify the aim of the proposed games<br>• Reviews feedback containing a wide range of vocabulary and terminology, ranging from simple to highly technical, depending on the source of the feedback |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 2.1, 2.2, 3.1, 3.2, 3.3, 3.4, 3.5, 4.3, 4.4, 5.2, 5.3, 5.4 | • Uses correct spelling and grammar, together with descriptive language, to create a cohesive and well-structured script for the game, plot, characters, environment and elements<br>• Develops focus testing documentation using plain English and non-leading questioning techniques |
| Oral Communication | 1.1, 1.2, 4.2, 4.3, 5.1, 5.4 | • Participates in a verbal exchange of ideas and uses detailed and clear language, effective listening skills and open questioning techniques to elicit and clarify information and feedback<br>• Presents the script using persuasive presentation techniques, plain English (translating games specific terminology where necessary) |
| Interact with others | 4.1, 4.4, 5.5 | • Cooperates with others as part of routine activities through the explanation and testing of gaming scripts |
| Get the work done | 1.1, 1.2, 2.1, 2.2, 3.1-3.5, 4.1-4.4, 5.1-5.5 | • Makes decisions and implements procedures for routine and non-routine tasks, using formal decision-making processes<br>• Plans, organises and completes work according to defined requirements and schedules<br>• Uses a high level of creativity and initiative in writing scripts<br>• Uses information and communications technology (ICT) based tools to write, source and analyse information<br>• Understands the importance of secure information in relation to own work, and takes responsibility for data management |

# Assessment Requirements for ICTGAM407 Write scripts for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify the key components of the story
- develop the script structure and components
- write scripts consistent with the game design brief and client requirements
- communicate and liaise with the relevant personnel to review scripts
- prepare a final script and present to the client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss budgeting and scheduling considerations for game development
- discuss the components that drive script narrative and engage the target audience
- describe the contribution of script writing to narrative development and engaging game play
- outline focus testing processes and procedures
- discuss game genres and narrative structures
- list industry formats for game scripts
- outline research methods for:
  - keeping abreast of competitors' work in developing stories and scripts for games
  - obtaining factual information as a basis for character, location and narrative development
  - locating the owners of copyright and intellectual property used in the development of games
  - describing script structures and character profiling for interactive games

© Commonwealth of Australia, 2025 Future Skills Organisation

- discussing scriptwriting techniques and the requirements for interactive games
- identifying procedures for seeking permission from copyright owners for the use of protected elements in scripts
- describing different storyboarding techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- reference materials for scriptwriting
- the internet for research purposes
- a range of state-of-the-art computer games, across all platforms and genres
- a range of games consoles and hand-held game devices, computer hardware, software, and peripheral devices
- games engines.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM408 Use 3-D animation interface and toolsets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to investigate, customise, and use 3-D animation software interfaces and toolsets.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Locate and identify the 3-D application navigation controls | 1.1 Using chosen 3-D modelling and animation software, identify a range of 3-D navigation types, including panning, zooming and rotating around the viewport<br>1.2 Identify the methods of use for navigation, keyboard hotkeys and input procedures to improve user performance |
| 2. Locate and identify the 3-D animation toolsets | 2.1 Identify the common toolsets of 3-D animation software<br>2.2 Identify and analyse the 3-D application menus, and specific category types |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Use common 3-D application transformation types<br>2.4 Select and use, common 3-D application-specific toolset types |
| 3. Select and clarify appropriate menu categories for requirements | 3.1 Associate the menu categories as required for specific tasks<br>3.2 Consult with the relevant personnel, and use application hotkeys for superior application interaction |
| 4. Initiate and use application-support materials | 4.1 Identify and research the range of reference material available for use in creating 3-D animation and digital effects<br>4.2 Present the reference material for use in the 3-D animation process<br>4.3 Identify the native application support procedures<br>4.4 Access support documents and help files, through hotkey and application menus<br>4.5 In consultation with the relevant personnel, use support material as required |
| 5. Identify and plan 3-D application import and export procedures | 5.1 Discuss with relevant personnel application file-management procedure types, including opening, importing, saving and exporting<br>5.2 Discuss, and use, application project configuration procedures with the relevant personnel<br>5.3 Prepare and create projects as required |
| 6. Identify and use application feedback | 6.1 Discuss user application feedback with the relevant personnel<br>6.2 Use application feedback to troubleshoot error scenarios, as required<br>6.3 Use feedback with inbuilt support documentation, as required |
| 7. Customise application interface | 7.1 Identify variation of user interface windows and panels configurations<br>7.2 Use the custom interface for specific requirements based on toolset procedural needs |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2, 3.1, 4.1, 4.3, 4.4, 4.5, 6.1, 7.1 | • Identifies and interprets information from texts containing complex terminology, acronyms and jargon<br>• Interprets and comprehends computer generated text, diagrams, icons, symbols, numbers and letters necessary to use 3-D animation software |
| Oral Communication | 1.1, 1.2, 2.1, 2.2, 4.1, 4.2, 4.3, 5.1, 5.2, 6.1, 7.1 | • Employ effective listening and questioning techniques to obtain information<br>• Participates in a verbal exchange of ideas and solutions using plain English and games terminology, summarising the main points to ensure understanding |
| Numeracy | 2.3, 2.4, 5.1, 5.2, 5.3 | • Uses whole numbers, decimals and percentages relevant to measurement, font size, scale, ratio, coordinates, colour, shading and other attributes/variables in the development of animations |
| Interact with others | 3.2, 4.5 | • Cooperates and collaborates with others as part of routine activities, and to elicit support |
| Get the work done | 1.1, 1.2, 2.1-2.4, 3.1, 3.2, 4.1-4.5, 5.1-5.3, 6.1-6.3, 7.1, 7.2 | • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Uses digital systems and tools to complete routine tasks |

# Assessment Requirements for ICTGAM408 Use 3-D animation interface and toolsets

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- interact and navigate with 3-D application interface and toolsets
- manage files to protocols
- execute and use 3-D application native support
- use 3-D application user feedback
- configure custom panels and window configurations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline 3-D animation production protocols
- describe the contents and application of a production brief
- outline the process for the development and recording of ideas
- outline the protocols for filing media assets
- outline fundamental research principles
- discuss the principles of design and colour for use in 3-D animation and digital effects environments
- outline the procedures for producing a storyboard and script
- discuss the technical constraints that hardware and software impose on graphics requirements and creative visual design.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- reference materials
- appropriate computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM409 Create 3-D characters for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design and build 3-D characters for commercial games.

It applies to individuals who support the design, development and implementation of the 3D characters of digital games, as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research and analyse the characters | 1.1 Determine and agree on the style of characters, according to the client requirements<br>1.2 Determine and agree on, the character type and profile<br>1.3 Determine and agree on, the character role and name<br>1.4 Determine and agree on, the character animations required for implementation into game systems<br>1.5 Compare the animations with the analysis criteria |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Design the characters | 2.1 Develop a concept illustration for the character<br>2.2 Conduct focus testing of the concept illustration with the client, and with representatives of the target market audience<br>2.3 Develop character schematics based on feedback, and submit to the client for approval |
| 3. Develop the character models | 3.1 Construct a 3-D character model on a turntable, based on the character schematics<br>3.2 Construct 3-D costumes, tools and accessories for the character model<br>3.3 Shade, texture and light, the completed character model<br>3.4 Implement joints, vertex weighting and character rig, to a 3-D character model<br>3.5 Develop animation blocking and in-betweens, in consultation with animation personnel for their approval<br>3.6 Compare the 3-D models and animations to the original concept illustration, for verification of quality and conformity to the brief<br>3.7 Submit to the client for approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.5, 2.3 | • Identifies and interprets design briefs, and related technical documentation, containing complex animation-specific terminology and acronyms<br>• Interprets and comprehends computer-generated text, diagrams, icons, symbols, numbers and letters necessary to use 3-D animation software |
| Writing | 2.2 | • Uses plain English and appropriate questioning strategies, avoiding loaded or leading questions, when developing documentation for focus testing |
| Oral Communication | 1.1, 1.2, 2.2, 2.3, 3.6 | • Employs effective listening and questioning techniques to obtain information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Participates in a verbal exchange of ideas and solutions, using plain English and 3-D animation terminology, summarising the main points to ensure understanding |
| Numeracy | 1.4, 2.1, 2.3, 3.1, 3.2, 3.3, 3.4, 3.5 | • Uses whole numbers, decimals and percentages relevant to measurement, font size, scale, ratio, coordinates, colour, shading and other attributes/variables, in the development of the animations |
| Interact with others | 1.1-1.3, 2.2 | • Cooperates with others as part of familiar routine activities, to confirm agreement |
| Get the work done | 1.1-1.5, 2.1-2.3, 3.1-3.7 | • Makes decisions and implements procedures for both routine and non-routine tasks, using formal decision-making processes<br>• Plans, organises and completes work, according to the defined requirements and schedules<br>• Uses creativity and initiative in character design<br>• Uses digital systems and tools proficiently to complete required tasks |

# Assessment Requirements for ICTGAM409 Create 3-D characters for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop and realise the characters for games, using 2-D and 3-D software applications
- develop character designs that comply with the games design brief, and the client requirements
- develop the character designs
- test responses to the character designs for aesthetic suitability with the intended audience, and act on the feedback.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the features of 3-D software packages used to create 3-D character models for games
- interpret the game design briefs
- discuss the methods of 3-D character modelling, within the technical parameters and constraints of game development
- discuss the technical limitations for the creation of 3-D character models for games.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines

© Commonwealth of Australia, 2025 Future Skills Organisation

- file storage
- character reference materials, such as models, illustrations, art and design books, and character photographs
- a range of state-of-the-art games, across all platforms and genres
- a range of the latest consoles and hand-held game devices
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM410 Develop 3-D components for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, and to create, 3-D components within a games environment.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm 3-D component requirements within the game context | 1.1 Identify the definition and purpose of 3-D components, with examples<br>1.2 Identify the context of 3-D component design within the game design document<br>1.3 Create a list of required 3-D components |
| 2. Identify 3-D component integration methods within game | 2.1 Discuss the 3-D component format, file extensions and the ramifications of choice with the relevant personnel<br>2.2 Establish the methods of 3-D component loading and usage |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| architecture | |
| 3. Establish the content creation pipeline | 3.1 Finalise the required 3-D component list<br>3.2 Discuss the hardware and software required for the creation of 3-D components and assets<br>3.3 Discuss the methods of naming 3-D components and assets, and file archiving<br>3.4 Establish the deadlines for 3-D component creation |
| 4. Integrate 3-D components for testing and analysis | 4.1 Identify the evaluation methods for quality assurance<br>4.2 Ensure that the produced 3-D components meet the established quality requirements<br>4.3 Make changes to 3-D components, as required, by testing and evaluation<br>4.4 Submit the finalised assets with the archiving format outlined in the assignment brief |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 4.1, 4.3 | • Identifies and interprets briefs and related technical documentation containing complex task-specific terminology<br>• Interprets and comprehends computer generated text, diagrams, icons, symbols, numbers and letters necessary to use 3-D application software |
| Writing | 1.1, 1.3, 3.1, 3.4 | • Uses correct spelling, grammar, technical terminology and organisational templates/document structures to develop lists and schedules |
| Oral Communication | 1.1, 1.2, 2.1, 2.2, 3.2, 3.3, 3.4, 4.1, 4.4 | • Employs effective listening and open questioning techniques to obtain information<br>• Participates in a verbal exchange of ideas and solutions using plain English and games development terminology, summarising the main points to ensure understanding |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.2, 2.1, 2.2, 3.4, 4.2, 4.3 | • Uses whole numbers, decimals and percentages relevant to file size, software and hardware specifications, measurement, font size, scale, ratio, coordinates, colour, shading and other attributes/variables in the development of 3-D components and timelines<br>• Defines timeframes in accordance with schedule requirements |
| Get the work done | | • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Uses a systematic process to evaluate work and to implement improvements<br>• Uses key features of specific digital systems and tools, effectively to complete routine tasks<br>• Understands the importance of file format and takes responsibility for data integrity and management |

# Assessment Requirements for ICTGAM410 Develop 3-D components for interactive games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify and confirm 3-D component designs
- identify component integration
- establish the component development pipeline
- generate 3-D components for games
- test and analyse component integration
- submit final product.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss and explain current game hardware and software products
- discuss and explain game-engine architecture and methods used in component importing
- outline processes and techniques related to:
  - the creation of 3-D objects within industry-standard modelling software
  - the use of industry formats for the development of 3-D models and objects.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines

© Commonwealth of Australia, 2025 Future Skills Organisation

- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM412 Design interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design and implement technologies relating to human-computer interaction.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Define human-computer hardware interface devices | 1.1 Identify standard human-computer interaction devices<br>1.2 Identify game-specific human-computer interaction devices and the common controls used in their implementation |
| 2. Research common event-handling systems | 2.1 Identify and review industry-standard event-handling systems used in application libraries<br>2.2 Create an application, accessing and using technologies, and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | showcasing captured events from hardware devices<br>2.3 Consider the human-computer interaction device selection |
| 3. Research commonly used graphical user interface (GUI) widget sets | 3.1 Identify common widgets and their usage within an application environment<br>3.2 Identify and review industry-standard graphical user interface libraries, and their relevancy within game engine software<br>3.3 Consider the selection of widgets within a game heads-up display (HUD)<br>3.4 Use human-computer interface devices and event-handling call-backs in the creation of an application, showcasing the captured events with GUI widgets |
| 4. Design a simple media software device | 4.1 Design a prototype for the development of a custom user interface widget to be used within a game heads up display environment<br>4.2 Select GUI software for implementation and discuss the ramifications of the selection |
| 5. Build and implement a simple media software device | 5.1 Integrate all custom widget elements, as required by the prototype specifications<br>5.2 Make final checks to ensure that the functionality conforms to the original design<br>5.3 Save into specified storage systems |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 3.1, 3.2 | • Identifies and evaluates online documentation containing complex technical terminology to conduct research into hardware, existing interactive media and industry standards<br>• Interprets and comprehends computer-generated text, code, diagrams, icons, symbols, numbers and letters necessary to use the relevant software |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 2.2, 3.4, 5.1 | • Recognises and uses technical terminology, application terminology, code, syntax and labelling when conducting research and developing interactive media |
| Oral Communication | 1.1, 1.2, 2.3, 3.1, 3.2, 3.3, 4.1 | • Employs effective listening and open questioning techniques to obtain information<br>• Participates in verbal exchanges of ideas and solutions using plain English and interactive media terminology, summarising the main points to ensure understanding |
| Numeracy | 2.2, 2.3, 3.3, 3.4, 4.1, 4.2, 5.1, 5.2, 5.3 | • Uses whole numbers, decimals and percentages relevant to file size, software and hardware specifications, measurement, font size, scale, ratio, colour, shading and other attributes/variables in the development of interactive media |
| Get the work done | All | • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against the agreed criteria<br>• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options, and seeking input and advice from others before taking action, when necessary<br>• Uses key features of specific digital systems and tools, effectively to complete required tasks<br>• Understands the importance of file integrity and management |

# Assessment Requirements for ICTGAM412 Design interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- define hardware and software requirements for the human-computer interaction environment
- research event handling systems and graphic user interfaces (GUI)
- design a simple application, using correct methods of hardware event handling, within the context of a video game environment
- produce a custom control for use within a large project
- present a completed project on time.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain programming techniques appropriate to interactive media
- define specific terminology used by computer game developers
- describe common human-computer interaction devices and their application
- describe common widgets and their usage
- define a ‘heads-up display’
- outline the technical constraints that hardware and software impose on design and development.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM413 Design and create 3-D digital models

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design and create 3-D models.

It applies to individuals who design, develop and use digital media technologies, working independently or as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify work requirements | 1.1 Clarify the requirements and purpose for the design, and creation, of 3-D digital models, with reference to the production documentation<br>1.2 Clarify organisational guidelines and work flow sequences to ensure that the production schedule deadlines are met with the relevant personnel<br>1.3 Select the software that best suits the type of production and delivery platform for which 3-D digital models are being designed and created |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Gather and analyse reference materials to help with the design and visualisation of 3-D models |
| 2. Design 3-D digital models | 2.1 Design, and sketch, the concept drafts of a 3-D model<br>2.2 Create the concept art for 3-D models<br>2.3 Create the prototypes of 3-D models |
| 3. Create 3-D digital models | 3.1 Use software features to block out models, to determine the correct proportions related to reference materials<br>3.2 Manipulate software features to apply basic lighting and shaders, as required<br>3.3 Ensure that models' topology allows appropriate deformation, as required<br>3.4 Progressively refine and check the integrity of models until they meet the design requirements<br>3.5 Submit the models to the relevant personnel for comment regarding whether the production requirements have been met, and make final adjustments as required<br>3.6 Render and output the models in the required format, and submit them to the relevant personnel by the agreed deadlines<br>3.7 Make backup copies of the files and complete the workplace documentation, according to enterprise procedures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 3.1 | • Identifies and evaluates documentation containing complex technical terminology to interpret the design brief and to conduct research into the design and visualisation of 3-D models<br>• Interprets and comprehends computer-generated text, diagrams, icons, symbols, numbers, and letters necessary to use the relevant software |
| Oral Communication | 1.1, 1.2 | • Employs effective listening and open-questioning techniques to clarify design requirements, project |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | scheduling and to obtain feedback |
| Numeracy | 1.1, 1.2, 2.2, 2.3, 3.1, 3.2, 3.3, 3.4, 3.6 | • Uses whole numbers, decimals and percentages relevant to file size, software and hardware specifications, measurement, scale, form, weight, volume, colour, shading, and other attributes/variables in the development of 3-D models |
| Get the work done | All | • Takes responsibility for planning tasks required to achieve required outcomes, negotiating some key aspects with others<br>• Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Uses analytical processes to make decisions directly related to tasks<br>• Evaluates outcomes of design solutions to improve future responses<br>• Selects or supports new ideas on the basis of their contribution to the achievement of broader goals<br>• Uses key features of specific digital systems and tools to complete required tasks<br>• Manages and maintains files in a variety of storage media and formats |

# Assessment Requirements for ICTGAM413 Design and create 3-D digital models

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design, create and store 3-D digital models that meet work, design and production requirements
- communicate with personnel to clarify initial requirements, including deadlines, and to receive feedback about models.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the principles of 3-D digital modelling and design
- outline the stages in the production process, from the initial design through to the finished product
- describe the common issues and challenges that arise in the context of designing and creating 3-D digital models
- outline the roles and responsibilities of project team members in the development of digital models
- outline the features of a range of delivery platforms
- discuss geometry as it applies to the design and creation of realistic 3-D digital models
- discuss the use of scale, form, weight and volume in the development of 3-D digital models.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM414 Create audio for digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to produce and manipulate audio assets for computer games, using a variety of tools.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research and document game audio requirements | 1.1 Explore the evolution of audio hardware and audio formats<br>1.2 Provide a historical perspective on how audio has become integrated into computer games<br>1.3 Identify current trends and consider their impact on the future of game audio |
| 2. Research and document the use of | 2.1 Identify the different methods for using audio in computer games |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| audio in computer games | 2.2 Explore the role of music in creating mood and atmosphere<br>2.3 Explain how sound effects and vocals are used within computer games |
| 3. Source existing sound effects, music tracks and voice recordings | 3.1 Find sources of sound effects, music tracks and voice recordings<br>3.2 Create and maintain a small collection of audio assets<br>3.3 Identify the different audio formats<br>3.4 Differentiate between compressed and uncompressed audio formats<br>3.5 Identify the different genres of music<br>3.6 Develop an awareness of audio copyright laws and royalty-free audio |
| 4. Record and manipulate audio for a game | 4.1 Record character voices, music and sound effects<br>4.2 Develop a sound track for a game using audio-editing<br>4.3 Use audio-editing software to rearrange audio samples, and apply audio effects<br>4.4 Select an appropriate sample format and bit rate<br>4.5 Normalise the audio samples to make volume uniform<br>4.6 Trim the audio samples<br>4.7 Apply the audio effects<br>4.8 Export audio to a suitable format |
| 5. Create sound effects or music for a game | 5.1 Identify digital sound waveforms<br>5.2 Apply basic music theory to simple music-creation tool<br>5.3 Determine the suitable musical notation<br>5.4 Identify and use musical creation tools<br>5.5 Compose a simple piece of music for a game<br>5.6 Create various sound effects for a game |
| 6. Research audio-programming libraries | 6.1 Compare and contrast the functional capabilities of audio-programming libraries<br>6.2 Explore the use of channels and mixing |
| 7. Integrate sound, music and vocals into a computer game | 7.1 Play a mixture of cached and streaming audio sources<br>7.2 Integrate the sound effects in response to different events<br>7.3 Incorporate the ambient music into sections of the computer |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | game<br>7.4 Locate and play the positional audio sources |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 2.1, 2.2, 3.1, 3.3, 3.4, 3.5, 3.6, 6.1 | • Identifies and evaluates documentation containing complex technical and audio terminology, to research the current and future use of audio in games, and to identify appropriate hardware, software and assets<br>• Interprets and comprehends computer-generated text, audio tracks, abbreviations, symbols, icons, numbers, and letters necessary to use audio-editing software |
| Writing | 1.1, 1.2, 2.2, 2.3, 6.2 | • Uses correct spelling and grammatical structures and clear language, and technical terminology |
| Oral Communication | 1.1, 1.2, 1.3, 2.1, 2.3, 3.1, 3.3, 3.4, 3.5, 3.6, 6.2 | • Elicits information using effective listening and open-questioning techniques<br>• Speaks clearly and concisely, converting highly technical language and terminology to plain English |
| Numeracy | 3.4, 4.1-4.8, 5.1-5.6, 6.1-6.2 | • Uses whole numbers, decimals and percentages relevant to file size, software and hardware specifications, measurement, pitch, speed, tempo, time, frequency, amplification and other attributes/variables in the development of audio |
| Navigate the world of work | 3.6 | • Takes personal responsibility for adherence to legal/regulatory responsibilities relevant to own work context, in relation to copyright laws |
| Get the work done | 1.1, 2.2, 2.3, 3.1-3.6, 4.2-4.8, 5.1-5.6, 6.2, 7.1-7.4 | • Plans, organises and implements tasks required to achieve required outcomes<br>• Implements actions as per plan, making slight adjustments if necessary<br>• Uses exploration, analytical and lateral thinking to identify new ideas and adapt existing ideas to current context<br>• Uses digital systems and tools to create and save |

# Assessment Requirements for ICTGAM414 Create audio for digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research game audio requirements
- locate and obtain suitable audio resources
- record and manipulate audio
- generate sound effects
- compose simple music tracks for a game
- use audio programming libraries in a game.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe audio-editing tools
- discuss and explain different audio formats and their application to games
- discuss and explain the capabilities of audio-programming libraries
- explain copyright as it applies to audio recordings
- discuss music-creation tools and their relation to music theory.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- appropriate computer hardware, software and peripheral devices
- digital audio editing software

© Commonwealth of Australia, 2025 Future Skills Organisation

- games engines and file storage
- copyright and intellectual property legislation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM415 Develop simple environments for 3-D games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the performance outcomes, skills and knowledge required to research, design, verify, validate, develop, and evolve simple environments for different genres of games.

It applies to individuals working in the game development environment as concept artists, matte painters, game designers, animators and other personnel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research and analyse brief requirements | 1.1 Interpret the brief and clarify the design requirements, in consultation with the client<br>1.2 Identify the design, technical constraints and innovative features of the environments<br>1.3 Identify the software, media and file formats for digital imagery<br>1.4 Identify the production workflow requirements, and develop |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | the production pipeline to meet client requirements |
| 2. Design and visualise the environment | 2.1 Develop the concept illustration for the environment, consistent with the game genre<br>2.2 Conduct focus testing of the concept illustration with the client and the representatives of the target market audience<br>2.3 Submit to the client for approval and feedback<br>2.4 Make adjustments to the concept illustration, based on comment and feedback |
| 3. Verify and validate the environment | 3.1 Create an environment prototype according to the design brief, guidelines, and feedback on the concept illustration<br>3.2 Conduct focus testing and seek recommendations for the further enhancement of the documented environment prototype<br>3.3 Make adjustments to the environment prototype, based on comment and feedback<br>3.4 Submit to the client for approval and feedback |
| 4. Develop and evolve environment | 4.1 Further enhance the environment prototype based on recommendations generated from focus testing<br>4.2 Submit to the client for approval and feedback<br>4.3 Finalise the environment design<br>4.4 Save and archive the files in agreed formats and repository |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 2.2, 2.3, 3.1, 3.2, 3.3, 4.1, 4.3 | • Identifies and evaluates documentation containing complex technical terminology to interpret the design brief and conduct research into the design of 3-D game environments<br>• Interprets and comprehends computer generated text, diagrams, icons, symbols, numbers and letters necessary to develop environment prototypes |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 2.2, 3.2 | • Develops focus testing documentation according to organisational and user requirements |
| Oral Communication | 1.1, 1.2, 1.3, 1.4, 2.2, 2.3, 3.2, 3.4, 4.2 | • Participates in verbal exchanges of ideas using detailed and clear language, effective listening skills and open-questioning techniques to elicit and clarify information and feedback<br>• Presents the concept illustration and environment prototype using persuasive presentation techniques, plain English, translating games specific terminology where necessary |
| Numeracy | 1.1, 1.2, 1.3, 1.4, 2.1, 2.4, 3.1, 3.3, 4.1, 4.3 | • Uses whole numbers, decimals and percentages relevant to file size, software and hardware specifications, measurement, scale, form, weight, volume, colour, shading and other attributes/variables in the development of environments for 3-D games |
| Interact with others | 1.1, 2.2, 2.3 | • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, and taking a leadership role when conducting focus testing |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 2.4, 3.1, 3.2, 3.3, 3.4, 4.1, 4.2, 4.3, 4.4 | • Plans a range of routine, and some non-routine, tasks, aiming to achieve required outcomes efficiently and effectively<br>• Implements actions as per the plan, making slight adjustments if necessary, and addressing some unexpected issues when developing and evolving the environment design<br>• Analyses feedback from others to make design decisions<br>• Identifies and adapts ideas being used in similar contexts and understands and explicitly applies some basic principles of analytical and lateral thinking<br>• Understands the key principles and concepts underpinning the functions of digital systems and tools<br>• Manages and maintains the files securely in a variety of storage media and formats |

# Assessment Requirements for ICTGAM415 Develop simple environments for 3-D games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research and analyse requirements from the client's brief
- develop environment designs that comply with the games design brief and client requirements
- verify and validate the environment prototype
- test responses to the environment designs with the intended audience
- finalise the environment design.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- determine the budgeting and scheduling considerations for environment creation in games, with consideration given to human resources
- discuss the techniques applied to environment design and realisation, including how the genre of the game influences environment requirements
- discuss how to interpret environment design briefs
- describe the role and position of interactive environments in commercial game development, game duration, and quality
- outline the processes and procedures needed to facilitate quality, and innovation in the design of 3-D environments
- identify the prototyping tools and techniques for commercial environment development in games
- outline the research methods used to stay abreast of the latest developments in game environment design.

# ICTGAM416 Prepare and complete image rendering processes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to select suitable rendering applications and prepare and optimise rendering for 3-D modelling, animation and game development.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse the rendering requirements | 1.1 Identify the equipment and media required for the project<br>1.2 Identify the features of the rendering software packages used in the film and games industries<br>1.3 Analyse the design brief, or other reference sources, to plan and determine the rendering requirements |
| 2. Select a suitable rendering application to | 2.1 Select the rendering software with the capability to achieve the desired effects within the timeframe and budget |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| achieve desired appearance | 2.2 Confirm that the selection is according to the brief, system limitations and requirements |
| 3. Prepare rendering application for desired outcome | 3.1 Select and apply the appropriate image resolutions, image aspect ratio, and pixel ratio<br>3.2 Adjust the renderer attributes to obtain desired anti-aliasing<br>3.3 Adjust the renderer attributes to obtain other desired visual effects |
| 4. Check the render integrity and quality | 4.1 Refine the render integrity<br>4.2 Re-link any missing images and textures<br>4.3 Test the render times for optimising process<br>4.4 Test the alpha channels and opacity matts<br>4.5 Test the render layers and passes |
| 5. Optimise the images for render processes | 5.1 Complete pre-rendering optimisation tasks<br>5.2 Adjust and refine renderer attributes to optimise render times<br>5.3 Select the appropriate file format for output, according to the brief<br>5.4 Select the appropriate filenames and output destinations |
| 6. Render the images and save files appropriately | 6.1 Undertake the final rendering processes<br>6.2 Store or archive the files<br>6.3 Review the completed render to ensure compliance with the system and the brief<br>6.4 Confirm the rendering with the relevant personnel |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 2.1, 2.2, 6.3 | • Interprets a design brief containing complex games-design terminology<br>• Interprets and comprehends a large range of diagrams, icons, symbols, text and letters necessary to use |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | complex rendering software |
| Oral Communication | 1.1, 1.2, 1.3, 2.2, 6.4 | • Uses effective listening and questioning techniques to obtain information about the design brief, system limitations, software capabilities, and requirements<br>• Presents rendering outcomes using industry-specific terminology |
| Numeracy | 1.2, 1.3, 2.1, 2.2, 3.1-3.3, 4.1-4.5, 5.1-5.3, 6.3 | • Uses whole numbers, decimals and percentages relevant to measurement, resolution aspect ratio, pixel ratio, scale, coordinates, colour, shading, and other attributes/variables in the application of rendering<br>• Interprets numerical information and applies basic mathematical calculations relating to the timelines and budgetary information |
| Interact with others | 6.4 | • Collaborates with others as required to confirm rendering output is acceptable |
| Get the work done | All | • Applies formal processes when planning the rendering requirements, producing plans with logically sequenced steps that reflect awareness of time and resource constraints<br>• Implements actions as per the plan, making slight adjustments if necessary<br>• Recognises and takes responsibility for addressing predictable, and some less predictable problems in familiar work contexts<br>• Understands the key principles and concepts underpinning the design and operation, of digital systems and tools<br>• Manages and maintains files securely in a variety of storage media and formats |

# Assessment Requirements for ICTGAM416 Prepare and complete image rendering processes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify equipment, media and rendering software requirements according to design brief and system requirements
- use and optimise the rendering application components for best performance
- adhere to requirements related to file sizes and formats
- store the rendered components according to requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features of software used for:
  - 3-D animation
  - 3-D modelling
  - lighting
  - rendering
  - shading
  - texturing
- explain requirements for file formats and sizes
- outline pre-rendering optimisation techniques
- explain why rendering is required for 3-D modelling, animation or game development
- explain the requirements for using computer networks for rendering.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- appropriate computer hardware
- graphic rendering software
- input and output devices
- models and scenes to be rendered
- style shots
- briefs, specifications and schedules.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM417 Apply digital effects to interactive products

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to apply digital effects to an interactive product.

It applies to individuals who support the design, development and programming of basic digital games, as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify and apply an interactive concept map of the production | 1.1 Catalogue the individual components to be applied to the presentation<br>1.2 Identify, then apply, an interactive concept map showing the components in a logical layout and structure<br>1.3 Prepare an interactive storyboard for the production |
| 2. Identify and apply digital effect components | 2.1 Identify the method for applying the digital effects framework to the presentation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| for the production | 2.2 Apply the framework for digital effects, using industry-standard methods<br>2.3 Refine the digital effects framework<br>2.4 Ensure that the framework conforms to project specifications |
| 3. Identify and apply digital effect components for inclusion in the presentation | 3.1 Identify the digital effect components for inclusion<br>3.2 Confirm that the digital effect components are in an appropriate format for the framework<br>3.3 Apply the digital effect components to the framework, for inclusion in the product presentation |
| 4. Apply all components into a functioning and well-designed interactive product | 4.1 Apply all the media components in the authoring environment<br>4.2 Identify the digital effects programming necessary to ensure satisfactory results<br>4.3 Identify any inconsistencies within the digital effects<br>4.4 Review and test the design, to ensure that it meets the creative and technical requirements of the brief<br>4.5 Apply the runtime version of the presentation, for inclusion into the product<br>4.6 Ensure that the presentation runs satisfactorily on all target platforms |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.4, 4.4 | • Interprets a design brief containing complex effects and interactive design terminology<br>• Interprets information in diagrams, icons, symbols, text, numbers and letters |
| Writing | 1.1, 1.2 | • Documents information on designs according to industry standards and organisational requirements |
| Numeracy | 2.4, 4.1, 4.4 | • Uses whole numbers, decimals and percentages relevant to measurement, resolution aspect ratio, pixel ratio, scale coordinates, colour, shading and other |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | attributes/variables, in the application of digital effects<br>• Interprets numerical information and applies basic mathematical calculations, relating to the time lines and budgetary information |
| Interact with others | 1.1, 1.2, 1.3 | • Constructs a message with some understanding of the purpose, audience needs and expectations, when developing a concept map and storyboard |
| Get the work done | All | • Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools, and uses these when applying digital effects |

# Assessment Requirements for ICTGAM417 Apply digital effects to interactive products

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- prepare concept maps and storyboards according to requirements
- produce a functioning interactive product that:
  - meets a design brief
  - incorporates digital effects components
  - demonstrates use of effective and creative design principles
  - demonstrates use of visual communication principles.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the component-based programming skills required to produce interactive products
- describe the technical constraints that hardware or software imposes on design and development
- outline the techniques for applying:
  - concept development skills
  - concept visualisation skills
  - framework integration skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- appropriate computer hardware
- 3-D animation software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM418 Use simple modelling for animation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan and produce an animated sequence.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify the animation requirements of models | 1.1 Clarify the animation requirements and design specifications for the model, in consultation with the relevant personnel, and according to the production documentation<br>1.2 Examine the most appropriate animation techniques for the animation, in order to determine which modelling techniques to use<br>1.3 Identify the file format and delivery platform for animated sequences |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Identify factors that may influence the animation design approach<br>1.5 Clarify work flow sequences, in consultation with the relevant personnel, to ensure that production schedule deadlines are met |
| 2. Plan the approach | 2.1 Research animations, artworks and other creative sources that may inspire visual design ideas<br>2.2 Generate a range of animation ideas that are technically feasible, respond to briefs, and provide creative solutions to all design issues<br>2.3 Present animation ideas to the relevant personnel using appropriate design techniques<br>2.4 Adjust the approach to incorporate feedback, and agree on final design concepts<br>2.5 Discuss and select animation software with the relevant personnel to ensure that the animated sequences of the model meet specified outcomes<br>2.6 Analyse audio assets supplied for animations, as required |
| 3. Produce animated sequences for review | 3.1 Create animations of models using animation and modelling techniques to suit design requirements<br>3.2 Apply basic animation principles, screen principles, visual design principles and communication principles<br>3.3 Apply real-world camera techniques to the virtual cameras used in the animation<br>3.4 Render the completed animated sequences<br>3.5 Save and store the animated sequences using appropriate output file formats, standard naming conventions, and version-control protocols<br>3.6 Present the animated sequences of simple models to the relevant personnel for evaluation by agreed deadlines |
| 4. Finalise animated sequences | 4.1 Review the animated sequences to assess creative solutions to the design briefs, appropriateness to users or audience, and technical feasibility<br>4.2 Discuss and confirm with the relevant personnel, additional requirements or modifications, and complete any changes as required |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 2.1, 2.4, 2.5, 4.2 | • Identifies, evaluates and interprets texts containing complex technical, 3-D modelling and animation terminology to clarify requirements and research ideas<br>• Interprets and comprehends computer generated text, audio tracks, abbreviations, symbols, icons, numbers and letters necessary to use 3-D modelling and animation software |
| Oral Communication | 1.1, 1.5, 2.1, 2.3, 2.4, 2.5, 3.6, 4.1, 4.2 | • Participates in verbal exchanges of ideas and solutions, using a range of animation and 3-D modelling terminology, and effective listening and questioning techniques to clarify information<br>• Presents designs speaking clearly and concisely, using specific terminology and appropriate non-verbal features |
| Numeracy | 1.1, 1.4, 1.5, 2.2, 2.5, 2.6, 3.1, 3.2, 3.3, 3.4, 3.5, 4.1 | • Uses whole numbers, decimals and percentages relevant to file size, software and hardware specifications, measurement, scale, form, weight, volume, colour, shading, and other attributes/variables in the development of animated sequences |
| Get the work done | All | • Takes responsibility for planning, sequencing and prioritising tasks to achieve required outcomes<br>• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations<br>• Addresses less predictable problems and uses problem-solving processes to determine solutions<br>• Contributes to improvement of work practices by applying the basic principles of analytical and lateral thinking<br>• Uses digital technologies and systems to access information, enter data and code, present information and communicate with others |

# Assessment Requirements for ICTGAM418 Use simple modelling for animation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- create digital animated sequences of a model that:
  - demonstrates the principles of simple model animation, basic screen, visual design and communication
  - meets the technical requirements of specific platforms
  - satisfies the design brief and client requirements
  - meets the production deadlines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline basic digital animation techniques
- outline the principles of animation, screen, visual design and communication in relation to the production of animated sequences
- describe the features of a range of delivery platforms for animated sequences
- discuss the issues and challenges that arise in the context of creating models for digital animations
- outline the stages in the production process from initial design through to finished product
- outline the roles and responsibilities of project team members.

## Assessment Conditions

conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- appropriate computer hardware, software and games engines
- file storage
- design specifications and production documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM419 Build a database to support a computer game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, and to implement, a relational database for the management of the persisted- state world of a computer game.

It applies to individuals who work as game programmers or junior analyst programmers in the digital and interactive games industry, either as small independent specialists, or as part of a larger team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Verify the database model | 1.1 Verify that the game architecture and system implementation requirements have been addressed by the proposed database architecture<br>1.2 Correlate data model entities and their attributes with the game artefacts, and the game design requirements<br>1.3 Verify that the entity relationships defined in the data model implement the game-design and game-play rules |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Verify the estimates of the amounts of data storage required, and the data types defined by the data model<br>1.5 Document design inconsistencies<br>1.6 Review the database model and address, and correct any inconsistencies<br>1.7 Define the database test data |
| 2. Create the physical database design | 2.1 Implement the conceptual data model design as a physical database design<br>2.2 Determine the default database file size, according to the data model storage estimates<br>2.3 Determine game data input and output workload estimates<br>2.4 Determine the reliability and performance requirements<br>2.5 Define the minimum hardware requirements to support the input and output workload and reliability or performance requirements<br>2.6 Configure the database management system in order to use minimum hardware requirements<br>2.7 Refine and confirm the database test data |
| 3. Implement the physical database prototype | 3.1 Write structured query language (SQL) scripts to create physical database files according to the design requirements<br>3.2 Write SQL scripts to create database tables<br>3.3 Implement the primary key constraints<br>3.4 Implement the foreign key constraints<br>3.5 Define, and script, stored procedures for selecting, inserting, updating and deleting data<br>3.6 Define and script insert statements for test data<br>3.7 Execute SQL scripts and database, including test data |
| 4. Test the database and document results | 4.1 Document the entity integrity tests, and results<br>4.2 Document the referential integrity tests, and results<br>4.3 Document the input and output performance tests, and results<br>4.4 Document the stored procedures tests, and results |
| 5. Review, evaluate and correct database performance | 5.1 Review the test result deficiencies<br>5.2 Define, evaluate and test the deficiencies, and ensure that corrective measures are implemented |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 5.3 Implement corrections to the database |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.3, 1.4, 1.6, 2.2, 2.3, 2.4, 2.5, 2.7, 5.1 | • Interprets and analyses documents containing complex games-design and database-architecture terminology, to determine database requirements and identify design inconstancies<br>• Interprets and comprehends a large range of diagrams, flow charts, code, syntax, icons, symbols, text, numbers and letters necessary to design and develop a database |
| Writing | 1.5, 1.7, 2.1, 3.1, 3.2, 3.5, 3.6, 3.7, 4.1, 4.2, 4.3, 4.4 | • Uses correct spelling and grammar, plain English, specific terminology and appropriate document layout, when documenting database test data and test results<br>• Uses the appropriate programming code, syntax and conventions to develop the database |
| Oral Communication | 1.1, 1.2, 1.3, 1.4, 2.2, 2.3, 2.4 | • Employs effective listening and open-questioning techniques to clarify design requirements and project scheduling, and to obtain feedback |
| Numeracy | 1.1-1.7, 2.1-2.7, 3.1-3.7 | • Uses a wide range of applied mathematical calculations and functions to design, develop, and evaluate the database |
| Get the work done | All | • Plans a range of routine, and some non-routine, tasks, aiming to achieve required outcomes efficiently and effectively<br>• Makes a range of critical and non-critical decisions in relatively complex situations, using analytical processes to decide on appropriate courses of action<br>• Evaluates outcomes to identify opportunities for improvement within own work context<br>• Utilises a broad range of features within applications to complete required tasks |

# Assessment Requirements for ICTGAM419 Build a database to support a computer game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- interpret a conceptual database model
- create a database from a conceptual model, that allows for the persistence of state data for a computer game
- evaluate, and improve, the performance of a database built to support a computer game.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify computer hardware specifications and performance required to support database development
- discuss the creation, use and testing of stored procedures
- explain why input and output parameters are required
- explain database stress testing and stress testing software
- discuss the principles of database testing methodologies
- describe object-oriented database management systems
- discuss the similarities and difference between relational database management systems:
  - IBM DB2
  - Microsoft Access
  - Microsoft SQL (MS SQL) server
  - MySQL
  - Oracle
  - Postgre Structured Query Language (Postgre SQL)

© Commonwealth of Australia, 2025 Future Skills Organisation

- discuss relational database modelling building blocks and theory, including attributes, entity relationship modelling and normalisation of database tables
- discuss relationship cardinality and connectivity:
  - 1:1
  - 1:M
  - M:N
- outline the features, and functions, of structured query language (SQL), including data definition language and data manipulation language
- discuss the evolution of relational database management systems and their relationship to the flat file, hierarchical, and network data storage legacy of games
- outline the important functions of a relational database management system within the context of a computer game
- interpret data access languages, such as SQL and language-integrated query (LINQ)
- interpret data application programming interfaces (APIs) including:
  - ADO.Net
  - data integrity
  - disaster recovery and backups
  - data dictionary
  - data storage
  - security requirements of the data
  - transforming and presenting the data
- discuss the importance of data models
- describe the different types of data models, including Chen and Crow's Foot models
- describe the relationship between game-play rules and the modelling of the database structure.

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer-aided software engineering and modelling tools
- a relational or object-oriented database management system
- performance testing and analysis software for selected database management system/ game architecture specifications
- the game design and requirements documentation
- the client or server hardware
- networking infrastructure sufficient to simulate the game architecture specifications.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM501 Create design concepts for digital games and 3-D media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to work innovatively in game development, using thoughtful strategies and well-developed technical skills to accommodate a specified design brief.

It applies to individuals who support the design, development and programming of interactive 3-D media and digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify and analyse commonly used design concepts for games and 3-D media | 1.1 Obtain the project brief and other relevant organisational documents and procedures<br>1.2 Research and identify commonly used design concepts in digital games and interactive 3-D media<br>1.3 Analyse and interpret chosen common design concepts used in digital games and interactive 3-D media |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Discuss design considerations for designing a digital game or an interactive 3-D media concept |
| 2. Identify appropriate software packages used for a digital game and 3-D concept design | 2.1 Identify and review the appropriate range of industry-standard software available to develop design concepts<br>2.2 Assess the software related to the concept design process requirements<br>2.3 Discuss the technical specifications for the development process<br>2.4 Select the software package |
| 3. Use a chosen software package | 3.1 Run the selected software package and become familiar with the user interface<br>3.2 Create new files, organise and develop a file structure<br>3.3 Learn the required tools and components used to create, and develop a digital game, or interactive 3-D media concept |
| 4. Create and develop the concept components for a digital game or interactive media | 4.1 Design a heads-up display for a digital game or 3-D interactive media<br>4.2 Consider specific processes for the heads-up display elements<br>4.3 Document the design, necessary programming process and requirements needed to implement the heads-up display<br>4.4 Use the chosen software package to create and develop the visual design elements, and components, to be used for the heads-up display |
| 5. Implement a design concept into a game or 3-D interactive media | 5.1 Load in the images required and write the code to implement the heads-up display into an existing framework<br>5.2 Write code to demonstrate heads-up display capabilities with implemented concepts |
| 6. Evaluate the implementation | 6.1 Demonstrate implementation to the relevant personnel<br>6.2 Accept feedback to incorporate into the final design<br>6.3 Assess and refine the concept with the relevant personnel<br>6.4 Evaluate the usability of the concept’s components<br>6.5 Reflect on possible changes to improve the visual design and capabilities of the components |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 3.3 | • Uses a range of investigative and analysis techniques to acquire the knowledge needed to use tools, and other components, effectively for digital games and 3-D media production |
| Reading | 1.1, 1.3 | • Interprets and comprehends a large range of textual and diagrammatic information to inform instructional, technical, and conceptual requirements |
| Writing | 1.1, 3.2, 4.1, 4.3, 5.1, 5.2, 6.2, 6.3 | • Uses correct spelling and grammatical structures, clear language, and technical terminology when explaining technical and design requirements |
| Oral Communication | 1.1, 1.4, 2.3, 6.2 | • Elicits information using effective listening and open questioning techniques<br>• Speaks clearly and concisely, converting highly technical language and terminology into plain English, when providing information |
| Numeracy | 4.1, 4.3, 4.4 | • Uses whole numbers, decimals and percentages, when manipulating software to achieve the required technical and design components |
| Interact with others | 6.1, 6.3 | • Cooperates and collaborates with others as part of routine activities, and to elicit support and feedback |
| Get the work done | 1.1-1.4, 2.1-2.4, 3.1-3.3, 4.1-4.4, 5.1, 5.2, 6.1-6.5 | • Actively sources, analyses and evaluates applications, with the potential to meet 3-D design requirements<br>• Understands the purposes and uses the key features of specific digital systems, and tools, and operates them effectively to complete design tasks<br>• Understands the importance of file structure, and takes responsibility for data integrity and management<br>• Uses creativity and initiative in 3-D design<br>• Plans, organises and completes work according to defined requirements and schedules taking responsibility for decisions, and sequencing tasks to achieve efficient outcomes<br>• Uses a systematic process to evaluate work and to implement improvements |

# Assessment Requirements for ICTGAM501 Create design concepts for digital games and 3-D media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- demonstrate original and innovative approaches to the creative development of a game
- implement game development and production strategies
- maintain the integrity of the design brief
- develop concept art and design specifications for heads-up displays, splash screens, start screens and game field screens, consistent with an identified game genre
- develop technical specifications for game mechanics, artificial intelligence, physics, sound, game play and overall usability
- implement a working heads-up display with basic functionalities.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain basic programming techniques
- discuss the capabilities and constraints of game engines
- outline concept development and visualisation skills
- discuss computer game development, including specific terminology
- describe current game-play hardware and software products
- outline the human resources required in the process of creating a game and their respective skills and technology requirements
- summarise work health and safety (WHS) requirements for:
  - ergonomics
  - electrical safety
- discuss risk and critical path management

© Commonwealth of Australia, 2025 Future Skills Organisation

- summarise the technical constraints that hardware imposes on:
  - software development
  - graphics requirements
  - code development
  - creative visual design.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTGAM503 Create a complex 3-D interactive computer game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine required game assets
- apply a variety of strategies for game trialling and testing
- apply original and innovative approaches to the creative development of a 3-D game
- implement game development and production strategies
- maintain the integrity of the design brief and game design document
- communicate, collaborate and participate in a team environment
- transform the prototype into final publication.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain basic programming techniques
- summarise the capabilities and constraints of game engines
- discuss the process used for computer games development, including specific terminology
- provide a detailed summary of current game-play hardware and software products
- explain risk and critical path management
- outline technical constraints that hardware imposes on:
  - graphics requirements
  - code development
  - creative visual design.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM504 Manage interactive media production

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manage interactive media or game production.

It applies to individuals who manage personnel in the interactive media or game development industry who may be concept artists, designers, programmers, animators and others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Attend to the placement of staff for a digital media production | 1.1 Undertake the work placement of a production team<br>1.2 Ensure punctuality and appropriate dress<br>1.3 Follow organisational guidelines to support workplace culture, and the corporate image |
| 2. Monitor workplace structure and staff responsibilities | 2.1 Identify the duties carried out by various personnel<br>2.2 Observe the lines of reporting and communication<br>2.3 Determine the responsibilities of own area or department |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Identify appropriate behaviours and attitude | 3.1 Apply communication skills to interact effectively with other staff and clients<br>3.2 Demonstrate behaviour that reflects the organisational culture |
| 4. Carry out tasks within the range or context specified for the workplace | 4.1 Complete set tasks according to instructions and deadlines<br>4.2 Discuss any problems or concerns with assigned work with the supervisor or a mentor |
| 5. Report on workplace experience | 5.1 Maintain a log book that records daily activities<br>5.2 Complete a short report of the work experience |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.1, 4.1 | • Interprets and comprehends instructions, including textual and diagrammatic information to inform job requirements |
| Writing | 1.3, 3.1, 5.1, 5.2 | • Uses correct spelling and grammatical structures, clear language, and technical terminology when recording activities and writing reports |
| Oral Communication | 3.1, 4.2 | • Elicits information using effective listening and open questioning techniques<br>• Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information |
| Navigate the world of work | 1.1-1.3, 2.1-2.3 | • Draws on a repertoire of experience to facilitate understanding of the culture and the environment |
| Interact with others | 1.2, 1.3, 3.1, 3.2, 4.2 | • Cooperates and collaborates with others as part of routine activities, and to elicit support and feedback<br>• Collaborates with others sharing information to build strong connections, demonstrating behaviours reflective of organisational culture |
| Get the work done | 4.1, 5.1, 5.2 | • Plans, organises and completes work according to defined requirements and schedules, taking responsibility for decisions, and scheduling tasks to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | achieve efficient outcomes<br>• Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom |

# Unit Mapping Information

# Assessment Requirements for ICTGAM504 Manage interactive media production

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- monitor behaviour of self and others to ensure compliance with the workplace culture
- operate according to the lines of reporting and required method of communication
- allocate tasks to appropriate staff members
- plan and complete assigned tasks in a production environment, to meet deadlines
- demonstrate effective communication, listening and questioning skills with various people, including use of industry terminology.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise basic 3-D techniques
- explain the budgeting and scheduling considerations for 3-D design
- discuss capabilities and constraints of 3-D packages
- outline current game-play hardware and software products
- discuss the technical constraints that hardware or software imposes on graphics and visual design
- explain the process required to produce a 3-D animation sequence or components
- summarise the roles and responsibilities of team members producing 3-D animations and digital effects
- summarise effective strategies for communicating with production teams and clients.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- an environment where interactive media production may be carried out
- organisational guidelines and policies
- relevant people.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM506 Create complex code for mobile game devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create complex code for mobile game devices.

It applies to individuals working as programmers who support the design, development and programming of interactive 3-D media and digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research and identify appropriate implementations for complex code for mobile game devices | 1.1 Obtain, or create, a mobile game device framework<br>1.2 Identify the tools and technology for creating applications for mobile game devices<br>1.3 Research and identify the appropriate game physics implementation, for a mobile game device<br>1.4 Research and identify the appropriate artificial intelligence |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | (AI) implementation, for a mobile game device<br>1.5 Research and identify the appropriate shaders, for a mobile game device<br>1.6 Identify the technical limitations and constraints of the mobile device within the game |
| 2. Implement physics code for mobile game devices | 2.1 Develop the code for simulating velocity and momentum<br>2.2 Develop the code for simulating acceleration and gravity<br>2.3 Develop the code for simulating frictional effects<br>2.4 Develop the code for simulating collisions and collision detection<br>2.5 Implement the code for game physics in the mobile game device |
| 3. Develop and implement AI for mobile game devices | 3.1 Use finite state machines to model behaviour<br>3.2 Develop path-finding algorithms<br>3.3 Develop code based on a genetic algorithm<br>3.4 Implement the code for AI in the mobile game device |
| 4. Develop and implement the shader for mobile game devices | 4.1 Develop code based on the shading algorithm<br>4.2 Implement the shading algorithm code in the mobile game device |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.4 | • Interprets and comprehends instructions, briefs, technical and conceptual information to inform job requirements |
| Numeracy | 1.3, 2.1, 2.2, 2.3, 2.4, 2.5, 3.2, 3.3, 3.4, 4.1, 4.2 | • Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading, and other variables |
| Get the work done | 1.1-1.6, 2.1-2.5, 3.1-3.4, 4.1, 4.2 | • Plans, organises and completes work according to defined requirements and schedules, taking responsibility for decisions, and scheduling tasks to achieve efficient |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | outcomes<br>• Uses a high level of creativity and initiative in coding<br>• Actively sources, analyses and evaluates tools and technologies with the potential to meet requirements<br>• Understands the purposes and uses key features of specific digital systems and tools, and operates them effectively to complete coding tasks |

# Assessment Requirements for ICTGAM506 Create complex code for mobile game devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use research to determine appropriate implementations for mobile game devices
- develop and implement the code for game physics in a mobile device
- develop and implement the artificial intelligence for a mobile device
- develop and implement shading algorithms for a mobile device.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss relevant programming techniques
- outline the budgeting and scheduling considerations for game design
- outline the capabilities and constraints of game engines
- discuss computer game development, including specific terminology
- outline the concept development
- describe the concept visualisation
- provide a detailed summary of current game-play hardware and software products
- outline environmental impact and sustainability considerations
- discuss the human resources required in the process of creating a game, and describe the team’s respective skills and technology requirements
- explain risk and critical path management
- provide a detailed explanation of the technical constraints that hardware imposes on:
  - software development
  - graphics requirements
  - code development

© Commonwealth of Australia, 2025 Future Skills Organisation

- creative visual design.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM507 Develop intermediate 3-D software for games and interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop intermediate 3-D software for games or interactive media.

It applies to individuals working as programmers who support the design, development and programming of interactive 3-D media and digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Build a 3-D application using a provided framework or engine | 1.1 Employ integrated development environment facilities to include existing 3-D libraries suitable for games or interactive media production<br>1.2 Use existing library facilities and appropriate language, to facilitate the configuration of a 3-D environment compatible with a specified platform |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.3 Instantiate virtual objects in a simple 3-D environment<br>1.4 Create mesh primitives using 3-D library routines<br>1.5 Generate code to manipulate 3-D objects, including cameras, lights and mesh primitives<br>1.6 Import pre-constructed meshes from persistent storage into a 3-D environment, using scripts or library routines<br>1.7 Apply class inheritance to modify or extend existing 3-D class<br>1.8 Select and apply, exception handling techniques to ensure program stability in a simple 3-D environment |
| 2. Create a graphical user interface (GUI) for a 3-D environment | 2.1 Employ integrated development environment facilities to include existing 3-D compatible graphical user interface (GUI) controls suitable for games, or interactive media production<br>2.2 Combine predefined GUI elements to create a simple interface for a 3-D environment<br>2.3 Modify scripts or code to customise existing GUI elements<br>2.4 Write code that processes events raised by a GUI in a 3-D environment<br>2.5 Create GUI events to modify the configuration of a simple 3-D environment |
| 3. Debug a 3-D application | 3.1 Use stand-alone debugging tools, or tools provided by an integrated development environment, to examine variables and trace running code<br>3.2 Use debugging facilities, such as log windows or files, to detect logical and coding errors |
| 4. Deploy documentation tools | 4.1 Investigate and select integrated, or third-party, documentation tools<br>4.2 Deploy integrated, or third-party, tools to create and maintain code documentation |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.2, 3.1, 3.2 | • Interprets and comprehends instructions, briefs, technical and conceptual information, to inform job requirements |
| Writing | 1.2, 1.5, 2.3, 2.4 | • Writes and customises precise code using the required language, industry-approved coding techniques, and programming practices |
| Numeracy | 1.5, 2.3 | • Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading, and other variables |
| Get the work done | 1.1-1.8, 2.1-2.5, 3.1, 3.2, 4.1, 4.2 | • Plans, organises and completes work according to defined requirements, and schedules, taking responsibility for decisions, and sequencing tasks to achieve efficient outcomes<br>• Actively sources, analyses and evaluates applications or tools with the potential to meet development requirements<br>• Understands the purposes, and uses key features, of specific digital systems and tools, and operates them effectively to complete development tasks<br>• Takes responsibility for data integrity and management |

# Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

| | |
|---|---|
| Configuration of a 3-D environment must include: | • device selection<br>• game resolution<br>• screen colour depth<br>• output performance, including:<br>• anti-aliasing<br>• level of detail<br>• filtering<br>• caustics and refraction. |
| Virtual objects must include: | • cameras<br>• lights<br>• viewports. |

# Assessment Requirements for ICTGAM507 Develop intermediate 3-D software for games and interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- create at least one 3-D framework or library that includes an appropriate graphical user interface (GUI)
- check for coding errors and debug the application
- select and deploy documentation tools
- create documentation generated by appropriate tools.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain 3-D application development
- provide a detailed explanation of debugging techniques
- outline documentation techniques
- discuss object-oriented 3-D programming concepts and language.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and must include access to:

- suitable 3-D hardware and software
- technical materials and manuals
- the detailed 3-D framework, or engine, on which to build the application.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTGAM508 Develop complex 3-D software for games and interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- employ multiple 3-D frameworks, engines and libraries
- build a complex graphical user interface (GUI) for a 3-D environment
- create and maintain code documentation, using appropriate tools.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- provide a detailed explanation of complex 3-D application development
- outline debugging techniques
- summarise documentation techniques
- explain object-oriented 3-D programming concepts
- describe object-oriented 3-D programming language
- discuss techniques for using a GUI to interact with a user
- describe techniques for using multiple games-oriented libraries.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- suitable 3-D equipment
- software and hardware
- technical manuals

© Commonwealth of Australia, 2025 Future Skills Organisation

- existing multiple frameworks, search engines or games-oriented libraries.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM509 Design interactive 3-D applications for scientific and mathematical modelling

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design interactive 3-D applications for scientific and mathematical modelling.

It applies to individuals with object-oriented programming skills working in any industrial context that requires 3-D computer simulation of a well-defined environment, system or set of relationships.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine and confirm business expectations and needs | 1.1 Apply skills to determine business requirements and verify the accuracy of the information gathered<br>1.2 Determine the critical environmental, systemic relationships that require simulation in a 3-D environment<br>1.3 Identify critical data sources required by simulations or modelling |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Document critical environmental, systemic relationships and data sources that require simulation in a 3-D environment |
| 2. Design an interactive 3-D application for scientific or mathematical modelling | 2.1 Use prototyping tools to provide proof of concept for environmental and systemic relationships<br>2.2 Identify technologies and platforms suitable for the deployment of scientific or mathematical modelling<br>2.3 Apply object-oriented programming principles to design classes and algorithms to support scientific or mathematical modelling in an interactive 3-D environment |
| 3. Design a 3-D environment that simulates a scientific or mathematical model | 3.1 Select appropriate visual representation for elements of a 3-D scientific or mathematical model<br>3.2 Analyse required interaction between user and a 3-D environment<br>3.3 Design a graphical user interface (GUI) to support required interaction between use and a 3-D environment |
| 4. Develop procedures to test a scientific or mathematical model | 4.1 Develop testing procedures and standards that verify modelling integrity writing,<br>4.2 Document testing procedures and standards that verify modelling integrity |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2 | • Interprets, analyses and comprehends instructions, briefs, technical and conceptual information to inform job requirements. |
| Writing | 1.4, 2.3, 4.1, 4.2 | • Writes and customises precise code using specialised language, industry-approved coding techniques, and programming practices<br>• Verifies modelling integrity, by documenting testing procedures that explore expected results, parallel processing and test data |
| Numeracy | 2.2, 2.3, 3.3, 4.1, 4.2 | • Uses whole numbers, decimals and percentages when |

# Assessment Requirements for ICTGAM509 Design interactive 3-D applications for scientific and mathematical modelling

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine business requirements and select data to be used in a 3-D computer simulation or mathematical modelling application
- design an interactive 3-D environment that reflects scientific or mathematical modelling
- develop and document testing procedures and standards to verify modelling.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- provide a detailed explanation of documentation techniques
- outline object-oriented 3-D programming design methodologies
- summarise object-oriented 3-D programming principles
- discuss data sources and business expectations and needs
- explain techniques for using a graphical user interface (GUI) to interact with a user
- provide a detailed summary of testing procedures
- describe how 3-D technologies can simulate scientific or mathematical models.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- suitable 3-D equipment, software and hardware
- technical manuals

© Commonwealth of Australia, 2025 Future Skills Organisation

- examples of scientific or mathematical models.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM510 Prepare games for different platforms and delivery modes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to build, maintain and test games across multiple system platforms.

It applies to individuals with games programming skills, and other personnel, working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Produce a game package for multiple platforms | 1.1 Research and identify cross-platform installers<br>1.2 Use an installer to package a game for multiple platforms |
| 2. Develop a cross-platform project | 2.1 Identify the cross-platform integrated development environment (IDE)<br>2.2 Identify cross-platform renderer libraries, physics libraries, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | audio libraries and network libraries<br>2.3 Source or compile cross-platform libraries<br>2.4 Compile a project for multiple platforms<br>2.5 Test and maintain the cross-platform software project<br>2.6 Use platform-specific input devices |
| 3. Compile a report on cross-platform software development | 3.1 Identify and document issues in cross-platform development<br>3.2 Develop an awareness of cross-platform hardware |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 3.2 | • Extends understanding of delivery modes and platforms by incorporating the results of trialling and testing |
| Reading | 1.1, 2.1, 2.2 | • Interprets, analyses and comprehends complex instructions, briefs, numerical code, technical data, and conceptual information, to inform job requirements |
| Writing | 3.1 | • Prepares evaluative material for a specific audience using clear and detailed language to convey information and requirements |
| Get the work done | 1.1, 1.2, 2.1-2.6, 3.1 | • Plans, organises and completes work according to defined requirements and schedules, sequencing tasks to achieve efficient outcomes<br>• Uses systematic, analytical processes in complex, routine and non-routine situations gathering information, identifying potential solutions, and evaluating options<br>• Takes responsibility for decisions regarding end-product testing and data integrity, and management<br>• Actively sources applications or tools with the potential to meet development requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTGAM510 Prepare games for different platforms and delivery modes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce a cross-platform game project
- identify and use cross-platform integrated development environment (IDE) libraries and installers
- test and maintain a cross-platform project
- document issues identified for cross-platform development.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise current cross-platform IDEs
- explain evaluation techniques for cross-platform development libraries
- summarise research methods for cross-platform development and distribution
- outline testing procedures.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage
- computers running various operating systems

© Commonwealth of Australia, 2025 Future Skills Organisation

- IDEs and libraries
- installers for product distribution
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM511 Manage testing of games and interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to define requirements and manage the testing of games, and interactive media, to enable timely product release.

It applies to individuals who ensure the delivery of well-tested, quality software products in the marketplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine the quality requirements statement that will enable product release | 1.1 Review the picture of the product in the market place to determine high-level requirements provided by the product, for expected clients, considering all types of requirements<br>1.2 Define a releasable product in terms of outstanding bugs, to enable a limited release and a complete product release<br>1.3 Summarise findings into a product release, enabling quality requirements statement<br>1.4 Confirm that the client requirements and development |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | specifications are in agreement for product release, to enable the preparation of a quality requirements statement |
| 2. Define test plan that enables testing of required quality as defined by quality requirements statement | 2.1 Determine expected test cycles during the software development life cycle, considering the development methodology in use and the quality requirements for the product's release<br>2.2 Determine the types of testing to be performed during the test cycles, to enable the efficiency of processes, and the confirmation of the quality requirements statement<br>2.3 Determine the testing methods to be used to implement the testing types defined for the identified test cycles<br>2.4 Determine the testing technique to be used to determine test cases, and analyse results<br>2.5 Perform the test cycle until a combination is found that provides an acceptable balance of cost, quality and risk, and on which upper management and development team can agree<br>2.6 Select test-support software to enable efficiency in testing and testing management<br>2.7 Define implementation details for agreed testing and the team responsible for testing management<br>2.8 Define reporting details for testing throughout the product life cycle to enable ongoing management of the testing process<br>2.9 Confirm test plan completeness using available completeness techniques<br>2.10 Confirm the test plan with development team and management |
| 3. Install and configure test plan defined test support software | 3.1 Install and configure the bug tracking process, and define bug description fields to maximise efficiency, and minimise possibilities of bouncing bugs<br>3.2 Install and configure test case management software<br>3.3 Install and configure test cycle management and reporting software<br>3.4 Install and configure automated test tools |
| 4. Manage testing process to enable defined quality requirements | 4.1 Manage and report on the development of test cases<br>4.2 Manage and report on test cycle status<br>4.3 Manage and report on outstanding bug status<br>4.4 Manage and report on the status of product testing related to product release, enabling a quality requirements statement |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 4.5 Update the test plan and schedule to deal with changing development conditions, and to ensure that management is informed<br>4.6 Manage bugs to ensure efficient bug handling and resolution<br>4.7 Manage the test environment, including setup, receipt of test builds and clean-up |
| 5. Finalise testing for release | 5.1 Produce testing results for management review prior to release<br>5.2 Manage test product freeze for final release and final test run<br>5.3 Confirm the product, release enabling, and ensure that quality requirements have been met |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.2, 2.4 | • Interprets analyses and comprehends product expectations, and conceptual information to inform job requirements |
| Writing | 1.3, 2.7, 2.8, 2.9, 2.10, 3.1, 4.1, 4.2, 4.3, 4.4, 4.5, 5.1 | • Prepares technical documentation and reports for specific audiences, using clear and detailed language, and numerical data, in order to convey explicit information and requirements |
| Oral Communication | 1.4, 2.7, 2.8, 2.9, 2.10, 4.1, 4.2, 4.3, 4.4, 4.5, 5.3 | • Elicits information using effective listening and open questioning techniques<br>• Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information |
| Numeracy | 2.5 | • Interprets budgetary information to enable decision-making during the product test-cycle |
| Get the work done | 1.1-1.4, 2.1-2.10, 3.1-3.4, 4.1, 4.2, 4.3, 4.4, 4.6, 4.7, 5.2, 5.3 | • Plans, organises and completes work according to defined requirements and schedules, sequencing tasks to achieve efficient outcomes<br>• Makes critical decisions systematically in complex situations, taking into consideration a range of variables, including the outcomes of previous decisions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Evaluates effectiveness of products to inform strategic decisions |

# Assessment Requirements for ICTGAM511 Manage testing of games and interactive media

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- define quality requirements and an associated test plan for software
- install and configure testing support software
- manage the testing process
- identify bugs or issues, accurately and concisely
- finalise the software testing process to enable the product release.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- provide a detailed summary of client requirements for platforms, hardware and software
- provide a detailed explanation of client system requirements, both functional and non-functional
- outline the procedures for bug or issue management and identification
- summarise test reporting requirements
- explain testing techniques, methods, test types and system dissection.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- a system undergoing development with the associated specifications
- client requirements (verbal or written) for system quality requirements

© Commonwealth of Australia, 2025 Future Skills Organisation

- testing support software
- a test environment.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM512 Create and implement designs for a 3-D games environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create and implement designs within the context of a 3-D games environment.

It applies to individuals with highly developed communication and technical skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the technologies to be used with 3-D games development | 1.1 Discuss and decide on 3-D modelling software for the production of designs, and ramifications of choice with the relevant personnel<br>1.2 Discuss and decide on 2-D image-editing software for textures with relevant personnel<br>1.3 Establish 3-D production considerations for available computer |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | hardware |
| 2. Develop design documentation for 3-D effects | 2.1 Establish a theme for design, and determine the required modelling assets<br>2.2 Create a file archiving system for the storage of 3-D components, models and versions<br>2.3 Establish the project development pipeline and production deadlines, to meet assessment dates |
| 3. Develop and create storyboards | 3.1 Create a storyline for animation<br>3.2 Develop storyboard that implements the storyline document<br>3.3 Review and finalise the storyboard document for implementation |
| 4. Develop and create projects | 4.1 Create a new document and conduct the creation of models as outlined in the production pipeline, theme, and storyboard documents<br>4.2 Archive the project as specified by the assignment criteria for submission |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.2, 3.3, 4.1, 4.2 | • Interprets analyses and comprehends conceptual information to inform job requirements |
| Writing | 2.2, 3.1-3.3, 4.1 | • Transforms creative ideas into readily-understood information for specific audiences, using clear and detailed language<br>• Develops material regarding the advantages, and limitations of, different technologies using explicit language to convey information and requirements |
| Oral Communication | 1.1, 1.2 | • Elicits information using effective listening and open questioning techniques<br>• Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1-3.3, 4.1, 4.2 | • Actively sources, analyses, and evaluates applications with the potential to meet 3-D game design requirements<br>• Uses key features, of specific digital systems and tools to complete design tasks<br>• Understands the importance of file structure, and takes responsibility for data integrity and management<br>• Uses creativity and initiative in 3-D game design<br>• Plans, organises and completes work according to defined requirements and schedules taking responsibility for decisions, and sequencing tasks to achieve efficient outcomes<br>• Uses a systematic process to evaluate work and implement improvements |

# Assessment Requirements for ICTGAM512 Create and implement designs for a 3-D games environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use discussion to identify the most appropriate technology for 3-D games development
- create and develop design documents for 3-D effects, including timelines for completion and file archiving system
- develop and use a storyline and storyboard to produce a 3-D games project.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the concepts of animation techniques
- explain the concepts of digital effects generation
- discuss and evaluate 2-D and 3-D graphics editing software and their common concepts
- provide a detailed summary of appropriate graphics formats for 3-D games.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM514 Design and create models for a 3-D and digital effects environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design and create models for a 3-D and digital effects environment using complex topology, specified geometry surfaces, and advanced model builds.

It applies to individuals with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Design and plan a 3-D model | 1.1 Research and collect a portfolio of reference material<br>1.2 Present the portfolio of collected reference material<br>1.3 Use reference material to develop and design a modelling plan |
| 2. Use suitable geometry | 2.1 Research the different types of geometry to select the most |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| surface for models | suitable for a 3-D model<br>2.2 Clearly document the selected geometry choice<br>2.3 Explain, justify and demonstrate the reasons for the selected geometry choice<br>2.4 Apply the selected geometry choice to 3-D model<br>2.5 Make changes to the geometry selection where necessary |
| 3. Analyse the resource material to construct and apply a suitable topology | 3.1 Construct and test a topology plan using chosen concept development software<br>3.2 Explain or demonstrate the reason for choosing a particular modelling method<br>3.3 Assess and refine the topology plan with the client and relevant personnel |
| 4. Construct a 3-D model | 4.1 Use a modelling plan to construct the model, in the chosen 3-D modelling and animation software<br>4.2 Build the model, according to specifications<br>4.3 Present the near-finished product to the relevant personnel<br>4.4 Accept feedback to incorporate into the final design<br>4.5 Assess and refine the model with clients and the relevant personnel<br>4.6 Compose a report on the experience of working on a 3-D model |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.1, 4.1, 4.2 | • Interprets, analyses, and comprehends conceptual and specification information to inform job requirements<br>• Organises, evaluates and critiques ideas and information, from a range of complex texts, to determine which geometry and topology will best suit the 3-D model |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.2, 1.3, 2.2, 2.3, 3.2, 3.3, 4.4, 4.5, 4.6 | • Transforms creative ideas into readily-understood information for specific audiences<br>• Develops material about the advantages and limitations of different technologies, using clear language to convey information and requirements |
| Oral Communication | 1.2, 2.3, 3.2, 3.3, 4.4, 4.5 | • Elicits information using effective listening and open-questioning techniques<br>• Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information |
| Numeracy | 2.2, 2.4, 2.5, 3.1, 4.1, 4.2, 4.4 | • Develops mathematical representations of any three-dimensional surface of objects using whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other 3-D modelling elements<br>• Interprets numerical data in order to decipher technical charts, diagrams, and other specifications |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Implements actions as per the plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of factors into account<br>• Uses feedback and evaluation of results to inform decisions about future improvement<br>• Utilises a broad range of features within digital applications for specific purposes |

# Assessment Requirements for ICTGAM514 Design and create models for a 3-D and digital effects environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research and build a portfolio of reference material
- prepare a topology plan for a 3-D model design using:
  - appropriate industry terminology
  - appropriate geometry surfaces
  - concept development software
  - feedback from others to refine the plan
- use software to construct an advanced 3-D model according to plan, and use feedback from others to refine the model.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline methods of sourcing reference material

summarise the key aspects of a modelling plan

- discuss geometry surfaces, including:
  - NURBS
  - Sub-D
  - Polygon
  - T-splines
- explain the digital model development process
- explain the technology requirements and human resources required to create 3-D models, and their respective skills

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain box, edge-loop and patch modelling
- summarise the capabilities and constraints of 3-D modelling packages
- outline why it is important to schedule each production component
- explain features of topology plans
- discuss the uses of storyboards and scripts.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM515 Design and create advanced particles, fluids and bodies for 3-D digital effects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design and create, advanced simulated effects in a 3-D and digital effects environment.

It applies to individuals with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse approaches to design requirements | 1.1 Analyse the design requirements for particle systems, fluids and bodies outlined in the brief and organisational documents<br>1.2 Identify where the advanced simulated effects will fit into the production pipeline<br>1.3 Identify the factors that may influence the design approach to creating advanced simulated effects |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Demonstrate the application of advanced simulated effects | 2.1 Review the media and techniques that may inspire ideas for simulated effects<br>2.2 Respond to the brief and documents, and provide solutions to the creation of advanced simulated effects for 3-D environments<br>2.3 Present design ideas and design considerations, with justification of the choice of advanced simulated effects to the relevant personnel |
| 3. Plan approach to simulated effects | 3.1 Adapt and finalise the design according to feedback from the relevant personnel<br>3.2 Identify skills and processes required for creating advanced simulated effects systems<br>3.3 Source and gather reference materials, and maintain a portfolio of these references<br>3.4 Plan a time line to create the advanced simulated effects |
| 4. Produce particles, fluids and bodies for review | 4.1 Use programming languages to create code to assist, or produce, the advanced simulated effects<br>4.2 Using toolsets, create prototype of advanced simulated effects based on finalised design<br>4.3 Implement physics and forces to the advanced simulated effects, to produce the desired outcome<br>4.4 Conduct testing<br>4.5 Review the results, and present the created effects, to the relevant personnel for feedback and discussion about the implementation of the effects, in accordance to the requirements of the design |
| 5. Finalise advanced simulated effects | 5.1 Adapt the advanced simulated effects and design if necessary, according to feedback<br>5.2 Refine the advanced simulated effects<br>5.3 Present the finalised advanced simulation effects in the requested form, including the pre-production portfolio, demonstrating project research and development for evaluation, and review, by the relevant personnel |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.2 | • Interprets, analyses and comprehends briefs, documents, and conceptual information, to inform job requirements |
| Writing | 2.3, 3.1, 4.1, 4.5, 5.1, 5.3 | • Develops readily understood design and instructional documentation<br>• Transforms creative ideas into documents for specific audiences |
| Oral Communication | 2.3, 3.1, 4.5, 5.1, 5.3 | • Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information<br>• Elicits information using effective listening and open-questioning techniques<br>• Provides practical advice, support and feedback to colleagues and management |
| Numeracy | 2.2, 3.1, 4.3 | • Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading, and other elements of radical 3-D effects |
| Get the work done | All | • Takes responsibility for own workload, negotiating some key aspects with others<br>• Sequences and schedules complex activities, monitors implementation, and manages relevant communication<br>• Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options, against the agreed criteria<br>• When dealing with complex issues, may use intuition to identify the general problem area, switching to analytical processes to clarify goals and key issues, and using lateral thinking processes to generate possible solutions<br>• Develops and shapes several options before making a final choice, using a combination of lateral and analytical thinking to tailor and strengthen ideas to suit needs, resources and constraints |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Recognises the value of continuous improvement within own work context<br>• Utilises a broad range of features within applications to improve personal productivity, optimising software functions for specific purposes<br>• Manages and maintains files securely, in a variety of storage media and formats, and is beginning to actively establish, maintain and monitor electronic paper trails |

# Assessment Requirements for ICTGAM515 Design and create advanced particles, fluids and bodies for 3-D digital effects

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- analyse design requirements and develop design documents
- develop advanced simulation effects according to requirements
- use appropriate effects, such as particles, fluids and rigid or soft bodies
- use programming languages to assist the creation of advanced simulation effects
- adapt design according to feedback
- produce a refined and finalised deliverable
- maintain a portfolio of reference materials.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the programming techniques required for creation of 3-D digital effects
- discuss computer game development, including specific terminology
- summarise the current game-play hardware and software products
- summarise the technology requirements and human resources required in the process of creating digital effects and each team member’s respective skills
- explain risk and critical path management
- provide a detailed summary of the technical constraints that hardware imposes on:
  - software development
  - graphics requirements
  - code development
  - creative visual design
- explain the techniques for applying concept development skills

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain the techniques for applying concept visualisation skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM516 Animate a 3-D character for digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to apply animation principles to develop an animated character, and export the character model into a game.

It applies to individuals with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine a 3-D character model for animation requirements | 1.1 Study the production documentation animation requirements for 3-D character<br>1.2 Determine the target environments for a 3-D digital character animation<br>1.3 Establish the required level of detail for a 3-D character model animation<br>1.4 Determine work-flow sequences, to ensure that production |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | schedule deadlines are met<br>1.5 Select the software tools that best suit the production pipeline and the target game engine, and platform, for the final export of a 3-D digital character modelling, and animations |
| 2. Create the required animations, using a variety of animated tools | 2.1 Determine the most efficient animation methodology<br>2.2 Animate first pass, applying animation principles and experimenting with techniques to produce the required movements<br>2.3 Submit first pass for approval to the relevant personnel<br>2.4 Make adjustments, as required, and refine animation in passes until storyboard requirements are achieved<br>2.5 Animate facial features with lip-syncing to match the audio and design requirements of the approved storyboard<br>2.6 Create primary animations, as required |
| 3. Finalise the animations | 3.1 Submit character animations for the final check to relevant personnel<br>3.2 Finalise projects according to the production procedure |
| 4. Export the animations | 4.1 Export the animation and 3-D character model to the required game engine<br>4.2 Test the character animations in the game engine<br>4.3 Submit the final character animations to the relevant personnel |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.5, 3.2 | • Interprets, analyses and comprehends workplace documentation and images, to aid implementation of job requirements |
| Writing | 1.3, 1.4 | • Creates documents for specific personnel, incorporating complex design information according to industry standards and required formats |
| Oral | 1.3, 1.4, 4.3 | • Elicits information using effective listening and open questioning techniques |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | | • Provides practical advice, support and feedback to colleagues and management, converting highly technical language and terminology to plain English |
| Numeracy | 2.2, 2.4, 2.5, 2.6 | • Applies numerical skills to develop applications using whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading, and other 3-D elements |
| Interact with others | 2.3, 3.1, 4.3 | • Selects, implements and seeks to improve protocols governing communications to clients and co-workers, in a range of work contexts<br>• Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships<br>• Elicits feedback and provides feedback to others to improve self or workgroup behaviours |
| Get the Work Done | 1.2-1.5, 2.1-2.6, 3.2, 4.2 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, taking into account capabilities, efficiencies and effectiveness<br>• Monitors the progress of plans and schedules, and reviews, and changes these in order to meet new demands and priorities<br>• Makes critical decisions quickly and intuitively in complex situations, taking into consideration a range of variables, including the outcomes of previous decisions<br>• Applies systematic and analytical decision-making processes for complex and non-routine situations<br>• Investigates new and innovative ideas as a means to continuously improve work practices and processes<br>• Uses, and investigates, new digital technologies and applications to manage and manipulate data, and communicate effectively with others, in a secure and stable digital environment |

# Assessment Requirements for ICTGAM516 Animate a 3-D character for digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- select the correct tools to work with the target game engine and platform
- apply animation principles
- develop an animated character model
- export the animated character model to the game engine
- test character animations in the game engine.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain 3-D animation principles, including the relevance of anatomy and physical movement
- summarise the capabilities and constraints of game engines
- summarise attributes of current game-play hardware and software products
- explain the function of a graph curve editor
- discuss risk and critical path management
- explain shading, texturing, weight and anticipation
- discuss transfer methodology, including rotoscope, hand key and motion capture
- provide a detailed summary of techniques for applying concept development skills
- summarise techniques for applying concept visualisation skills
- summarise techniques for using storyboard and script production
- discuss the technology requirements and human resources required in the process of creating games, and the team's skills
- outline the importance of communication with a client when working on projects

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline budgeting and scheduling considerations for game design
- explain the importance of time management in the development of a project.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM517 Produce a digital animation sequence

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to produce a digital animation sequence for the 3-D and digital effects environment, involving the completion of a digital editing project.

It applies to individuals with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop or source story or concept | 1.1 Research ideas for the animation sequence<br>1.2 Produce treatment of an animation sequence |
| 2. Develop plan and determine components required for the animation | 2.1 Produce and work according to the production plan<br>2.2 Develop a storyboard detailing the 3-D animation<br>2.3 Create concept drawings for 3-D models |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| sequence | 2.4 Show evidence of the reference material used for storyboard and concept drawings |
| 3. Produce the animation sequence using 3-D software | 3.1 Use the production plan to create the animation<br>3.2 Select appropriate frames per second to use for the animation<br>3.3 Use references to create assets<br>3.4 Create a 3-D animation project using 3-D modelling and animation software<br>3.5 Animate components of the 3-D environment to reflect the planned animation sequence<br>3.6 Using 3-D modelling and animation software, produce high-end lighting techniques |
| 4. Render and finalise the 3-D animation sequence | 4.1 Select the appropriate resolution and aspect ratio<br>4.2 Employ 3-D modelling software to render the animated sequence<br>4.3 Review the rendered frames against the initial storyboard concept |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 3.1, 3.3, 4.3 | • Interprets, analyses and comprehends workplace documentation and images to inform job requirements |
| Writing | 1.2, 2.2, 2.3 | • Creates documents incorporating complex design information and ideas according to industry standards and required formats |
| Numeracy | 3.2, 3.3, 3.5, 3.6, 4.1 | • Applies numerical skills to develop sequences using whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading, and other 3-D elements |
| Get the work done | All | • Takes responsibility for planning, organising and implementing tasks required to achieve outcomes<br>• Implements actions as per plan, making slight adjustments, if necessary, and addressing some |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | unexpected issues<br>• Makes a range of critical and non-critical decisions in relatively complex situations, analysing information and taking a range of factors into account<br>• Understands and applies some of the basic principles of analytical and lateral thinking<br>• Utilises a broad range of features within 3-D software applications to improve personal productivity, optimising software functions for specific purposes<br>• Manages and maintains files securely, in a variety of storage media and formats |

# Assessment Requirements for ICTGAM517 Produce a digital animation sequence

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- show the reference material used for concepts and storyboards
- develop storyboards and concept drawings for 3-D animation and models according to plans
- apply a variety of strategies to create an animation sequence using a 3-D environment
- develop a finalised frame of the animation in an appropriate resolution.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise digital editing processes and techniques
- summarise rendering processes and techniques
- outline the capabilities of digital editing and rendering software
- discuss the technology requirements and human resources required to create games, including team member's skills
- discuss the technical constraints that hardware imposes on:
  - graphics requirements
  - code development
  - creative visual design.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

# ICTGAM518 Animate physical attributes of models and elements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to animate the appropriate physical attributes of models and elements.

It applies to individuals with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Collect and use reference material | 1.1 Create the storyboard sequence of required animation<br>1.2 Determine the animation attribute sequence of objects, as per the storyboard<br>1.3 Select the 3-D modelling and animation software tools that best suit the type of production, and target platform, for which 3-D digital animations are being created<br>1.4 Research and gather the reference material to inform the |

# Assessment Requirements for ICTGAM518 Animate physical attributes of models and elements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research and collate reference materials
- create a storyboard sequence and use the storyboard to prepare pre-model animation for approval
- use animation and rendering software to create animations, according to animation principles and storyboard requirements
- present a final 3-D digital model, together with supporting documentation, for approval
- store files according to procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the principles of 3-D animation, lighting and modelling
- describe how knowledge of anatomy and physical movement is relevant to animation
- describe the importance of client communication when working on projects
- explain the importance of budgeting and scheduling considerations during projects
- outline the techniques for creating a storyboard
- outline techniques for script production
- describe the application of current game-play hardware and software products
- provide a detailed explanation of the purpose of dope sheets
- describe the principles of the graph curve editor for smooth animation
- outline the physical attributes to create effects, including weight and anticipation
- explain the purpose of rendering
- explain shading and texturing techniques

© Commonwealth of Australia, 2025 Future Skills Organisation

- provide a detailed summary of transfer methodology, including rotoscoping hand key and motion capture.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM519 Manage technical art and rigging in 3-D animation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, implement, and manage 3-D animation rigs for objects using structural controls, and construct hierarchies to formulate object geometry, and skeletal rigs to a defined project brief.

It applies to individuals with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Use reference or source materials to assess rig requirements | 1.1 Use organisational procedures and production documentation to determine model rigging requirements<br>1.2 Maintain a portfolio of reference materials<br>1.3 Determine the range of software features available, when using various rigging technologies |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Plan rig suitable for animation/movement | 2.1 Analyse the inner workings of the object to select appropriate skeletal or structural systems<br>2.2 Analyse required bones or joints behaviours to select correct orientations<br>2.3 Examine object geometry topologies to select the correct bone and joint placement<br>2.4 Analyse critical object movement to select forward kinematics (FK) or Inverse Kinematics (IK) requirements, or a hybrid solution<br>2.5 Record the results for use at the rigging implementation phase |
| 3. Implement character skeleton requirements | 3.1 Use 3-D software to place the bones and joints, according to rigging plan<br>3.2 Use 3-D software to orientate the bones and joints, according to rigging plan<br>3.3 Use 3-D software to construct FK or IK requirements in adherence to the rigging plan<br>3.4 Use 3-D software to construct hierarchies and pivotal sets<br>3.5 Trial and refine rotations and movement attributes |
| 4. Employ character movement and implement character attributes and control handles | 4.1 Use 3-D software to construct specific driven attributes for manipulation purposes<br>4.2 Use 3-D software to create, and place, control handles with the appropriate attributes<br>4.3 Use 3-D software to link control handles to improve the animation procedures<br>4.4 Trial and refine the controls, and attributes<br>4.5 Negotiate modifications, where appropriate<br>4.6 Use 3-D software toolsets to skin/bind object geometry, to created skeletal systems or mechanical structures |
| 5. Test and refine rig integrity | 5.1 Use 3-D software to test and refine, object rig interaction<br>5.2 Use 3-D software toolsets to test and refine, geometry skeleton systems or mechanical structure interaction<br>5.3 Negotiate modifications, where appropriate |
| 6. Produce animated sequences of rigged object | 6.1 Create 3-D animations of rigged models using animation and rigged modelling techniques, to suit design specifications<br>6.2 Render the completed animated sequences<br>6.3 Save and store the animated sequences, using appropriate |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | output file formats, standard naming conventions, and version-control protocols<br>6.4 Present the 3-D animated sequences of rigged models to the relevant personnel for evaluation by agreed deadlines |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1, 3.2, 3.3, 6.1, 6.3 | • Interprets, analyses and comprehends briefs, documents and conceptual information to inform job requirements |
| Writing | 2.5, 4.5, 5.3, 6.3 | • Develops readily-understood conceptual and instructional documentation, using programming language<br>• Transforms creative ideas for specific audiences, using clear and detailed language |
| Oral Communication | 1.3, 4.5, 5.3 | • Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information<br>• Elicits information using effective listening and open questioning techniques |
| Numeracy | 4.6, 5.1, 5.2 | • Undertakes geometric calculations to deduce measurements, relationships between points, lines, angles and figures in space by using assumed properties of space |
| Interact with others | 4.5, 5.3, 6.4 | • Recognises and applies the protocols governing what to communicate, with whom and how, when presenting work for evaluation, and negotiating modifications |
| Get the work done | All | • Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Implements actions as per the plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Makes a range of critical and non- critical decisions in relatively complex situations, taking a range of factors |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | into account when planning, testing and refining rigs<br>• Utilises a broad range of features within applications to improve personal productivity, optimising software functions for specific purposes<br>• Manages and maintains files securely in a variety of storage media and formats |

# Assessment Requirements for ICTGAM519 Manage technical art and rigging in 3-D animation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design, implement and manage rigs for objects according to production documentation and organisational procedures
- use and refine skeleton/structural and animation controls for best performance
- construct hierarchies to formulate specific controls
- combine and refine object geometry to skeletal/structural rigs
- create 3-D digital animated sequences of a rigged model
- meet production deadlines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise basic 3-D digital animation techniques
- explain the features of a range of delivery platforms
- describe the skills required for geometry topology analysis
- explain how to identify appropriate physical attributes to animate
- explain rigged 3-D modelling techniques
- discuss the theory of anatomy and structural systems and how they relate to 3-D animation techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM520 Create and combine 3-D digital games and components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create compound models using recognised industry software suitable to the animation production process, according to a defined set of parameters.

It applies to individuals with high-level technical and analytical skills working as modellers or artists, in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine model creation requirements | 1.1 Analyse and follow the design requirements, production documentation and organisational guidelines<br>1.2 Select the 3-D modelling software tools that best suit the type of production for which 3-D digital models are being created |
| 2. Create 3-D digital models using a variety of | 2.1 Determine the most efficient modelling methodology |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| modelling techniques | 2.2 Apply a variety of modelling techniques<br>2.3 Create the 3-D digital models<br>2.4 Progressively refine and check the integrity of the models |
| 3. Combine 3-D models to create a scene | 3.1 Combine the 3-D models to create a scene, based on the design requirements<br>3.2 Submit the models to the relevant personnel for comment, to determine whether the production requirements have been met, and make final adjustments, if required |
| 4. Render 3-D digital models using appropriate render engine | 4.1 Test the rendering scene and adjust the settings<br>4.2 Render the final 3-D scene<br>4.3 Submit the final model renders to the relevant personnel |
| 5. Back up work | 5.1 Make backup copies of the files<br>5.2 Complete the workplace documentation, according to predetermined procedures |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.1, 5.2 | • Interprets, analyses and comprehends briefs, documents and conceptual information<br>• Analyses texts and images to inform the implementation of specifications |
| Writing | 5.2 | • Develops readily understood administrative documentation, using detailed and workplace-specific language |
| Oral Communication | 3.2, 4.3 | • Speaks clearly and concisely, converting technical language and terminology to plain English, when providing information<br>• Elicits information using effective listening and open questioning techniques<br>• Provides practical advice, support and feedback, to colleagues and management |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 2.4, 3.2, 4.1 | • Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading, and other elements of 3-D animation |
| Get the work done | All | • Takes responsibility for planning and organising tasks required to efficiently meet required outcomes<br>• Implements actions as per the plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of factors into account<br>• Understands and explicitly applies, some basic principles of analytical and lateral thinking when creating a concept<br>• Utilises a broad range of features within 3-D software applications for specific purposes<br>• Manages and maintains files in a variety of storage media and formats |

# Assessment Requirements for ICTGAM520 Create and combine 3-D digital games and components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- create 3-D models according to design, production and organisational requirements
- combine 3-D models to build a scene that meets design requirements
- produce, circulate and store the final render of the scene.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- provide a basic summary of 3-D software interfaces
- summarise the capabilities and constraints of game engines
- outline current game-play hardware and software products
- discuss the process of computer game development
- discuss the application of the anatomy, and physical movement, to 3-D components
- describe the graph curve editor and its application to animation
- explain the physical attributes required to create effects, such as weight and anticipation
- summarise risk and critical path management
- discuss the importance of shading and texturing as a requirement of 3-D games components
- explain the techniques for applying concept-development skills
- explain the techniques for applying concept-visualisation skills
- explain transfer methodology including rotoscope, hand key and motion capture
- outline the technology requirements and human resources required in the process of creating a game, including team members' skills
- outline the budgeting and scheduling considerations for game design.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM521 Create interactive 3-D environments for digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to coordinate the design and technical elements of a smooth-running interactive 3-D environment.

It applies to individuals with excellent organisational skills and high-level technical expertise working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Obtain the design documents for the 3-D environment | 1.1 Conceptualise the design requirements, based on the project brief and other relevant documents<br>1.2 Identify the requirements for the design of the 3-D environment<br>1.3 Determine the design considerations, and generate the concept art for the final environment design |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Ensure that any missing requirements are considered and included in the design |
| 2. Identify software tools that can be used to create 3-D environments | 2.1 Identify the texturing tools, including painting, shading and texturing software<br>2.2 Identify the audio tools<br>2.3 Identify the 3-D modelling and animation software to be used |
| 3. Document and justify the design decisions | 3.1 Clearly document the design decisions<br>3.2 Explain and justify the design decisions<br>3.3 Make changes, where necessary |
| 4. Create the 3-D environment | 4.1 Implement basic geometry, flow and layout<br>4.2 Separate each section of the environment into key parts and choose a focal point for the environment<br>4.3 Incorporate detail into the focal point of the level<br>4.4 Use the focal points to set a reference for the rest of the environment<br>4.5 Integrate the geometry, texturing, and place the models<br>4.6 Carry out a detailed pass of the entire environment<br>4.7 Set up the exterior lighting and then the interior lighting<br>4.8 Incorporate any sound and particle effects, and perform optimisation, if required<br>4.9 Perform a final pass, finalising any elements |
| 5. Present the finished 3-D environment to relevant personnel | 5.1 Present the finished 3-D environment to the relevant personnel<br>5.2 Report how the design decisions have met the 3-D environment design requirements<br>5.3 Justify why certain design decisions were made<br>5.4 Accept peer feedback and incorporate in the final design |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | **Criteria** | |
|---|---|---|
| Reading | 1.1, 1.2 | • Interprets analyses and comprehends briefs, documents and conceptual information to inform job requirements |
| Writing | 1.1, 1.3, 1.4, 3.1, 3.2, 3.3, 5.2, 5.3 | • Develops readily-understood conceptual documentation using technically appropriate language<br>• Transforms creative ideas for specific audiences using clear and detailed language to justify choices that have been made |
| Oral Communication | 1.2, 1.3, 3.2, 5.1, 5.2, 5.3, 5.4 | • Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information<br>• Elicits information using effective listening and open questioning techniques |
| Numeracy | 4.1, 4.5 | • Undertakes geometric calculations to deduce measurements, relationships between points, lines, angles and figures in space by using assumed properties of space |
| Interact with others | 5.1, 5.2, 5.3 | • Recognises and applies the protocols governing what to communicate, with whom and how when presenting work to others for feedback |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7, 4.8, 4.9 | • Takes responsibility for planning, organising and implementing tasks required to achieve outcomes<br>• Implements actions as per the plan, making slight adjustments if necessary, and addressing some unexpected issues<br>• Makes a range of critical and non- critical decisions in relatively complex situations, taking a range of factors into account<br>• Understands and applies some basic principles of analytical and lateral thinking<br>• Utilises a broad range of features within 3-D software applications for specific purposes<br>• Manages and maintains files in a variety of storage media and formats |

# Assessment Requirements for ICTGAM521 Create interactive 3-D environments for digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- interpret design requirements, produce concept art accompanied by documentation that justifies and explains design decisions
- implement design requirements into a working 3-D environment
- create working interactions between the user and the environment
- deliver a finished 3-D environment and report on design decisions to others.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the budgeting and scheduling considerations for game design
- discuss the process used to develop computer games
- outline the technology requirements and human resources required to create games, including the team's respective skills
- explain current game-play hardware and software products, including any constraints that product impose on graphics and code development and creative visual design.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

# ICTGAM522 Complete digital editing for the 3-D and digital effects environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to edit a sequence in a 3-D environment, and finalise the edit in an appropriate video format.

It applies to individuals with high-level technical and communication skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research the digital editing techniques and software | 1.1 Research industry-standard digital editing techniques<br>1.2 Determine the suitable techniques to apply in various scenarios<br>1.3 Research the available digital editing software used in the industry<br>1.4 Identify the technical limitations, and constraints, of rendering |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | and editing processes |
| 2. Obtain or create the 3-D animation sequence | 2.1 Obtain or create a 3-D animation sequence in frames<br>2.2 Obtain or create a storyboard for the sequence<br>2.3 Use a suitable naming scheme for the rendered frames, and organise the files into a folder structure |
| 3. Apply digital editing techniques | 3.1 Edit the rendered frames, and any additional graphics, into the sequence outlined in the storyboard<br>3.2 Apply program functions to create and insert graphics, transitions and special effects into the animation<br>3.3 Implement sounds and music at the appropriate frame locations<br>3.4 Ensure that efficient file management is maintained during the editing process |
| 4. Finalise a digitally edited production | 4.1 Use editing software to resolve any sound or transition errors<br>4.2 Evaluate the final edit<br>4.3 Present the finalised edit to the relevant personnel, in an appropriate video format<br>4.4 Receive and incorporate the feedback |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.1 | • Interprets analyses and comprehends briefs, documents and conceptual information, to inform job requirements |
| Writing | 2.2, 2.3, 4.4 | • Develops readily-understood games, technical design and instructional documentation, using programming or industry-specific language<br>• Transforms creative ideas for specific audiences, using clear and detailed language |
| Oral Communication | 1.2, 4.3, 4.4 | • Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Elicits information using effective listening and open questioning techniques<br>• Provides practical advice, support, and feedback to colleagues and management |
| Numeracy | 2.1, 3.1 | • Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other elements of a 3-D environment |
| Interact with others | 4.3, 4.4 | • Recognises and applies the protocols governing what to communicate, with whom and how, when presenting work to others for feedback |
| Get the work done | 1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 3.4, 4.1, 4.2, 4.3, 4.4 | • Takes responsibility for planning, organising and implementing tasks required to achieve required outcomes<br>• Implements actions as per the plan, making slight adjustments if necessary and addressing some unexpected issues<br>• Makes a range of critical and non-critical decisions in relatively complex situations<br>• Uses analytical processes to decide on a course of action, establishing criteria for evaluating options, and taking a range of factors into account<br>• Utilises a broad range of features within editing software applications for specific purposes<br>• Manages and maintains files in a variety of storage media and formats |

# Assessment Requirements for ICTGAM522 Complete digital editing for the 3-D and digital effects environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use research to identify and select digital editing techniques and software
- edit a 3-D sequence by inserting graphics, special effects, sounds and music according to a storyboard, and store all files efficiently
- use editing software, and feedback from others, to develop a final version in an appropriate video format.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain digital editing and rendering processes and techniques
- discuss the capabilities, and constraints, of digital editing and rendering software
- summarise the technical constraints that hardware imposes on:
  - software development
  - graphics requirements
  - code development
  - creative visual design.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work and include access to:

- computer hardware and software

© Commonwealth of Australia, 2025 Future Skills Organisation

- games engines
- file storage
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM523 Collaborate in the design of 3-D game levels and environments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan, and implement, the design of an interactive 3-D game in a team environment.

It applies to individuals with high-level technical and communication skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research and plan the design process | 1.1 Select a project planning methodology<br>1.2 Identify the design practices and design considerations in collaboration with other team members<br>1.3 Record the stages of the design process, using the project brief and documents |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Identify the team roles that relate to level creation and design<br>1.5 Plan and implement a design process using time-management principles |
| 2. Conceptualise a 3-D environment design in collaboration with team | 2.1 Identify the key level specifications, and purpose, for the 3-D environment<br>2.2 Gather and analyse reference materials in collaboration, to help with visualisation of 3-D environment, including environment profiles, game genre, game design and game-play elements<br>2.3 Catalogue the required objects of the level environment<br>2.4 Identify the appropriate 3-D modelling and animation software, and painting, shading and texturing software that can be used to create the 3-D environment<br>2.5 Document the design decisions that are made before, and during, the design conceptualisation<br>2.6 Produce the concept art of the designed environment |
| 3. Present the conceptualised environment to peers | 3.1 Present the conceptualised environment to peers and receive feedback<br>3.2 Report on how the design decisions have met the requirements for game-play elements<br>3.3 Justify why certain design decisions were made<br>3.4 Receive and consider peer feedback |
| 4. Refine the design | 4.1 Implement quality assurance principles<br>4.2 Incorporate user feedback to modify the design<br>4.3 Finalise the design decision documents in readiness for creating the 3-D environment |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.2, 3.4 | • Interprets analyses and comprehends briefs, instructions, and conceptual information to inform job requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.2, 1.3, 2.3, 2.5, 2.6, 3.1, 3.2, 3.3, 4.2, 4.3 | • Develops readily-understood technical, design and instructional documentation<br>• Documents the decision-making process for specific audiences, using clear and detailed language |
| Oral Communication | 1.2, 3.1, 3.2, 3.3, 3.4 | • Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information<br>• Elicits information using effective listening and open questioning techniques<br>• Provides information, support and feedback to colleagues and management |
| Interact with others | 1.2, 1.4, 2.2, 3.1 | • Recognises and applies the protocols governing what to communicate, with whom and how<br>• Cooperates and collaborates with others to achieve shared outcomes |
| Get the work done | 1.1-1.5, 2.1-2.6, 4.1-4.3 | • Takes responsibility for planning and organising tasks required to achieve required outcomes, including coordinating tasks with others<br>• Makes a range of critical and non-critical decisions in relatively complex situations, using analytical processes to evaluate and choose appropriate options<br>• Understands and explicitly applies some basic principles of analytical and lateral thinking<br>• Reflects on the ways in which digital systems and tools are used, or could be used, to achieve work goals for modelling and animation<br>• Manages and maintains files in a variety of storage media and formats |

# Assessment Requirements for ICTGAM523 Collaborate in the design of 3-D game levels and environments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- collaborate with others to plan and implement the design process for creating an interactive 3-D environment
- produce and present draft design documents for the production of an interactive 3-D environment, and gather feedback
- review and modify the designs to create a finalised design for a 3-D environment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the budgeting and scheduling considerations for game design
- discuss the capabilities and constraints of game engines
- discuss the process used for computer game development
- outline current game-play hardware and software products, together with any technical constraints that products impose on graphics and code development, and creative visual design
- explain the technology and human resources required in the process of creating a game, including the team’s respective skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software

© Commonwealth of Australia, 2025 Future Skills Organisation

- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM524 Integrate multiple data sources into interactive 3-D environments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to integrate multiple data sources into interactive 3-D environments.

It applies to individuals with high-level technical and communication skills and may be applicable to concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Catalogue elements to integrate into the interactive 3-D environment | 1.1 Research and identify data sources that can be integrated into interactive 3-D environments<br>1.2 Identify data sources that will be integrated to suit the environment, game design, game genre, game mechanics, game-play elements, and level specifications<br>1.3 Obtain or create data sources for the interactive 3-D |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | environment |
| 2. Identify tools that can be used to integrate assets | 2.1 Identify tools and libraries for integration of identified elements into the 3-D environment<br>2.2 Review and document how the tools work |
| 3. Integrate sources into the interactive 3-D environment | 3.1 Create prototypes and integrate the elements into the interactive 3-D environment using the identified tools<br>3.2 Test integration of the elements<br>3.3 Ensure that the elements' integrity during the implementation is maintained |
| 4. Present and evaluate completed 3-D environment with all data sources included | 4.1 Present the interactive 3-D environment to the appropriate personnel<br>4.2 Review the feedback from the presentation<br>4.3 Evaluate and justify the implementation, using tools for the data sources |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Interprets analyses and comprehends briefs, instructions and conceptual information to inform job requirements |
| Writing | 2.2, 4.1, 4.2, 4.3 | • Develops clear and detailed catalogue documentation<br>• Documents the decision-making process for specific audiences using clear and detailed language |
| Oral Communication | 4.1, 4.2, 4.3 | • Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information<br>• Elicits information using effective listening and open questioning techniques<br>• Provides practical advice, support and feedback to colleagues and management |
| Get the work | 1.1-1.3, 2.1, 2.2, | • Plans, organises and completes work according to defined requirements and schedules taking |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| done | 3.1-3.3, 4.1-4.3 | responsibility for decision, and sequencing tasks to achieve efficient outcomes<br>• Actively sources, analyses and evaluates data sources with the potential to meet 3D design requirements<br>• Uses creativity and initiative in 3D design<br>• Uses a systematic process to evaluate work and to implement improvements<br>• Uses key features of specific digital systems and tools to effectively complete design tasks |

# Assessment Requirements for ICTGAM524 Integrate multiple data sources into interactive 3-D environments

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research and obtain data sources, tools and libraries needed to integrate elements into an interactive 3-D environment
- create and test prototypes that integrate multiple data sources into a working interactive 3-D environment
- deliver a 3-D environment with working interactions that includes all data sources, with documented reasons for its implementation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the range of data sources for the 3-D environment
- discuss how game design, genre and mechanics, game-play elements and level specifications affect the choice of data source
- summarise current game-play hardware and software products used for interactive 3-D environments, including any technical constraints imposed on design and development
- describe the technology requirements and human resources required in the process of creating a game, including team members' respective skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software

© Commonwealth of Australia, 2025 Future Skills Organisation

- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM525 Apply digital texturing for the 3-D environment in digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to research, select techniques, and apply industry standard graphic software tools, to digital texturing for the 3-D environment in digital games.

It applies to individuals with high-level technical, interpretive and communication skills and may be applicable to concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research common industry practices for texturing a 3-D environment | 1.1 Research, identify and describe the methods of texture creation and texture mapping<br>1.2 Choose a suitable graphics software to create textures<br>1.3 Document the design considerations for texturing a 3-D environment |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Create a basic 3-D environment | 2.1 Use 3-D modelling and animation software<br>2.2 Create simple 3-D objects<br>2.3 Place the objects in a 3-D environment<br>2.4 Apply inbuilt lighting effects to the 3-D environment |
| 3. Create multiple textures to apply to the 3-D environment | 3.1 Use graphics software<br>3.2 Apply industry-standard methods to create the textures<br>3.3 Create textures to establish the look, and the feel, of the 3-D environment |
| 4. Apply multiple texture effects to a 3-D environment | 4.1 Load the textures into the 3-D animation and modelling software<br>4.2 Apply the textures to colour the 3-D objects and environment<br>4.3 Use texture-mapping techniques to create multiple texture effects for a single 3-D object<br>4.4 Employ 3-D animation and modelling software to render an image of the 3-D environment |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Researches common industry practices to interpret technical design terminology<br>• Interprets and comprehends a large range of diagrams, icons, symbols, text, numbers and letters, necessary to use complex design software |
| Writing | 1.1, 1.3 | • Uses correct spelling and grammar, plain English, specific terminology and appropriate document layout when documenting methodologies and design considerations |
| Numeracy | 2.1, 2.2, 2.3 | • Uses whole numbers, decimals and percentages relevant to measurement, resolution aspect ratio, pixel ratio, scale, coordinates, colour, shading, and other attributes/variables in the application of digital effects |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1-1.3, 2.1-2.4, 3.1-3.3, 4.1-4.4 | • Plans, organises and completes tasks according to defined requirements and schedules<br>• Makes decisions directly related to completion of required tasks<br>• Uses creativity and initiative to visualise concepts<br>• Actively sources, analyses and evaluates methodologies and software with the potential to meet 3-D texturing requirements<br>• Uses key features of specific digital systems and software to complete design and creation tasks |

# Unit Mapping Information

# Assessment Requirements for ICTGAM525 Apply digital texturing for the 3-D environment in digital games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research, select and document suitable techniques and software to create texturing for a 3-D environment
- use modelling and animation software to create 3-D objects in a 3-D environment
- use graphics software to create multiple textures appropriate for a 3-D environment
- produce a final rendered image of a 3-D environment that incorporates multiple texture effects for a single 3-D object.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the technology and human resources required in the process of creating textures for the 3-D environment
- discuss the capabilities and constraints of graphics software for texturing
- provide a detailed summary of the methods of texture creation and texture mapping
- explain the design considerations for texturing including resource limitations and constraints, and target markets.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines

© Commonwealth of Australia, 2025 Future Skills Organisation

- file storage
- the internet for research purposes.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM526 Create complex 3-D characters for games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan, and implement, a design for complex 3-D characters for games.

It applies to individuals with high-level technical, interpretive and communication skills and may be applicable to concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Clarify work requirements | 1.1 Identify the design requirements based on the project brief and documents<br>1.2 Using the design requirements, conceptualise the appropriate characters for the game environments, design, level specifications and genre<br>1.3 Gather and analyse the reference materials to help with the design, and visualisation, of 3-D character models |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Ensure that any missing requirements are considered and included in the design |
| 2. Conceptualise 3-D character design | 2.1 Document the design decisions that are made before, and during, the design conceptualisation<br>2.2 Outline the key attributes of the character<br>2.3 Examine the design considerations and generate the concept art for the 3-D characters |
| 3. Identify software tools that can be used to create 3-D characters | 3.1 Identify texturing tools, including painting, shading and texturing software and 3-D modelling tools |
| 4. Create complex 3-D characters | 4.1 Create base 3-D character models<br>4.2 Refine and polish the character models to a near finalised state<br>4.3 Create and map, the textures to apply to the 3-D character models<br>4.4 Refine the textures and apply shaders<br>4.5 Check the integrity and modify the 3-D characters until they meet the design requirements<br>4.6 Present the 3-D model to the relevant personnel |
| 5. Present the finished 3-D characters to relevant personnel | 5.1 Present the finished 3-D characters to the relevant personnel<br>5.2 Report on how the design decisions have met the 3-D character's design requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 1.4, 4.5 | • Interprets analyses and comprehends briefs, instructions and conceptual information, to inform the design of environment specifications<br>• Interprets and comprehends a large range of diagrams, icons, symbols, text, numbers and letters necessary to use complex design software |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.4, 2.1, 2.2 | • Communicates software and graphics requirements and code development to others, using correct spelling and grammar, plain English, and industry terminology |
| Oral Communication | 2.2, 2.3, 4.6, 5.1, 5.2 | • Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information<br>• Elicits information using effective listening and open questioning techniques<br>• Provides practical advice, support and feedback to colleagues and management |
| Numeracy | 4.1, 4.2, 4.3, 4.4, 4.5 | • Uses whole numbers, decimals and percentages relevant to measurement, resolution aspect ratio, pixel ratio, scale, coordinates, colour, shading, and other attributes/variables in the application of digital effects |
| Get the work done | 1.1-1.4, 2.1-2.3, 3.1, 4.1-4.6, 5.1, 5.2 | • Plans, organises and completes work according to project brief and schedules, sequencing tasks to achieve efficient outcomes<br>• Actively sources and analyses reference materials to support 3-D character design<br>• Uses creativity and initiative in 3D character design and creation<br>• Uses systematic, analytical processes in routine and non-routine situations to identify potential quality issues or problems, evaluate options and choose solutions<br>• Uses the key features of specific digital systems and software to complete design and creation tasks |

# Assessment Requirements for ICTGAM526 Create complex 3-D characters for games

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan and manage the design process for creating 3-D character models according to a design brief
- incorporate the design specifications and create complex 3-D character models
- produce and deliver documentation, showing evidence of concepts creation and design decisions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise budgeting and scheduling considerations for game design
- discuss the process used for computer game development
- summarise the current game-play hardware and software products, including any technical constraints imposed on design and development
- explain the technology and human resources required in the process of creating a game, and outline the team members' respective skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

# ICTGAM527 Integrate database with online game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to integrate a database with an online game, where the relationship between the game server and the database server is also considered a client-server relationship on a local area network.

It applies to individuals with high-level technical and problem solving skills working as programmers, analyst programmers and game programmers responsible for the development of code to connect a computer game to a database.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Install application programming interfaces (APIs) suitable to the game's data source provider | 1.1 Research the appropriate application programming interfaces (APIs)<br>1.2 Identify the specific APIs suitable for the game architecture and the data source provider<br>1.3 Install the nominated APIs on game development computers |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Define and use a connection to the data source | 2.1 Define the game data source connection parameters<br>2.2 Store the connection parameters in an external text-based configuration file<br>2.3 Open and close the connection to the game data source |
| 3. Configure and use the connection pooling | 3.1 Configure connection pooling in the database management system<br>3.2 Define the connection pool parameters for minimum connections, maximum connections, and idle connections<br>3.3 Minimise the use of database resources through the use of connection pooling<br>3.4 Test and verify the use of connection pooling |
| 4. Pass embedded structured query language (SQL) to the database | 4.1 Define the database connection property<br>4.2 Compose a structured query language (SQL) statement or command to be passed to the database<br>4.3 Test, debug and execute the SQL statement |
| 5. Execute a stored procedure on a database | 5.1 Call a stored procedure on the database, using a command callable statement<br>5.2 Define and pass the parameters to the stored procedure<br>5.3 Test, debug and execute the database stored procedure |
| 6. Modify database data | 6.1 Retrieve multi-row multi-column result sets from the database into the game application domain<br>6.2 Insert new records into the database<br>6.3 Update existing database records<br>6.4 Delete existing database records |
| 7. Integrate data from the database with the game application domain | 7.1 Integrate data from a forward-only and read-only cursor into the game application domain<br>7.2 Incorporate the data from an updateable cursor into the game application domain |
| 8. Test and debug database integration code | 8.1 Test the database integration code<br>8.2 Document the test results<br>8.3 Determine the errors and exceptions, and document the solutions<br>8.4 Debug all errors and exceptions |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 8.5 Assess all data modifications in the database, and document any errors<br>8.6 Correct all causes to data modification errors |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1 | • Identifies and evaluates documents containing complex technical terminology to identify which APIs are best suited to the game application domain and the game architecture |
| Writing | 2.1, 2.2, 3.2, 4.1, 4.2, 4.3, 5.3, 6.2, 6.3, 8.2, 8.3, 8.5 | • Uses the appropriate programming code, syntax and conventions to update, test and de-bug the database integration code<br>• Documents test results and technical solutions, using correct spelling and grammar, plain English, and industry terminology |
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1-3.4, 4.1-4.3, 5.1-5.3, 6.1-6.4, 7.1, 7.2, 8.1-8.6 | • Plans, organises and completes work according to project brief and schedules, sequencing tasks to achieve efficient outcomes<br>• Actively sources and analyses reference materials related to database integration<br>• Uses creativity and initiative in database assessment and design<br>• Uses systematic, analytical processes in complex, routine and non-routine situations, gathering information, evaluating options, and identifying solutions to coding problems<br>• Uses key features, of specific digital systems and software effectively to complete defined tasks |

# Assessment Requirements for ICTGAM527 Integrate database with online game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine and install application programming interfaces (API) for games development
- define and add database functionality to an online game
- integrate, test and modify the database data provided by game-play input and document all errors and solutions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- provide a detailed explanation of relational database theory, including how:
  - to create and test stored procedures
  - to create ‘embedded’ structured query language (SQL) and to assign parameters in the code for filtering
  - tables are related, and how relationships between tables are implemented
  - SQL is used to retrieve data from multiple tables
  - inserts to tables in parent/child relationships can be implemented using artificial (auto-generated) primary key values
  - to implement cascading updates and deletes
- summarise the principles of game development
- explain the principles of integrated development environments, including:
  - data access APIs and associated classes, required for the integration of a database with an online game
  - online help and documentation required for research and debugging code
  - user authentication and authorisation management

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline the methodologies and techniques required for effective and well-factored object-oriented program (OOP) code, including:
  - class implementation
  - control of logic flow
  - use of collections and lists
  - use of OOP concepts, such as inheritance, encapsulation and overloading
- describe the implications of web development on games integration.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- the game design specification and requirements documentation
- a game server
- a database server
- integrated development environment software and hardware
- browsers for browser-based games or game consoles for console-based games.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM528 Create games for mobile devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to demonstrate innovative game development strategies, to create games for mobile devices.

It applies to individuals with high-level technical, creative and communication skills working as concept artists, games designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Research and document mobile gaming device technologies | 1.1 Research, identify and describe the current mobile devices suitable for games<br>1.2 Identity a suitable mobile device<br>1.3 Identify the technical limitations and constraints of the mobile gaming device<br>1.4 Research and identify the tools and technology for creating |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | applications for the mobile device<br>1.5 Identify a suitable tool for the mobile gaming device<br>1.6 Research, identify, and describe market-successful mobile game devices |
| 2. Plan the project | 2.1 Create or obtain the project brief and documents<br>2.2 Identify the game production assets required to meet creative and production requirements, and the technical specifications<br>2.3 Define developer roles and skills<br>2.4 Create a schedule for production and testing<br>2.5 Determine the strategies for monitoring the production progress against the schedule |
| 3. Create game assets | 3.1 Create graphics assets<br>3.2 Create music and sound assets |
| 4. Develop a game prototype | 4.1 Develop a game prototype using a programming language<br>4.2 Create and check game-play elements, according to creative and technical requirements<br>4.3 Test and run game-play on mobile devices<br>4.4 Identify whether or not the game meets creative, production and technical requirements |
| 5. Evaluate the game prototype | 5.1 Demonstrate the initial prototype to relevant personnel<br>5.2 Evaluate against criteria, including achievement of a creative and user-friendly product<br>5.3 Discuss, and agree, on required changes to the prototype<br>5.4 Assist, if required, in tests and user trials<br>5.5 Evaluate the feedback from user trials<br>5.6 Confirm the endorsement from relevant personnel to develop the prototype into a complete product |
| 6. Transform the prototype into a final proof-of-concept prototype | 6.1 Make the necessary changes, as indicated by user trials<br>6.2 Integrate all the game elements, as required by specifications<br>6.3 Polish the game |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.2, 4.2, 4.4, 5.5, 6.2 | • Interprets, analyses and comprehends briefs, instructions, and conceptual information to inform design specifications<br>• Interprets and comprehends a large range of diagrams, icons, symbols, text, numbers, and letters necessary to use complex programming software |
| Writing | 1.1, 1.6, 2.1, 2.3, 2.4, 2.5, 4.1, 4.2, 5.6 | • Uses plain English and industry terminologies to develop plans and schedules<br>• Develops an interactive product using complex programming language |
| Oral Communication | 5.1, 5.3, 5.6 | • Speaks clearly and concisely, converting highly technical language and terminology to plain English, when providing information<br>• Elicits information using effective listening and questioning techniques |
| Interact with others | 5.3, 5.6 | • Collaborates with others as part of familiar routine activities to achieve requirements |
| Get the work done | 1.1, 1.2, 2.1-2.6, 3.1 | • Actively sources information, applications and tools with the potential to meet the development requirements<br>• Plans work schedules and organises and completes tasks required to achieve outcomes<br>• Uses creativity and initiative in game design<br>• Uses systematic, analytical processes in routine and non-routine situations, conducting evaluations, gathering information and assessing potential solutions |

# Assessment Requirements for ICTGAM528 Create games for mobile devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- document plans and schedules relevant to game development
- implement game development and production strategies
- apply strategies for trialling and testing game prototypes
- evaluate whether games meet design brief, creative and technical requirements
- produce and demonstrate an original working game on a mobile device.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe current successful mobile game devices
- summarise the current tools and technologies needed for creating applications on mobile devices products
- summarise the technical constraints that mobile devices place on design and development of games
- outline suitable programming languages for mobile devices
- provide a detailed summary of budgeting and scheduling considerations for game design
- explain the importance of risk assessment and critical path planning
- explain the human resources required in the process of creating a game for a mobile device, and outline the team members' respective skills.
- outline the techniques for concept visualisation and development.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM529 Analyse business opportunities in the digital games environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to research the current digital games climate and analyse business opportunities.

It applies to individuals with high-level technical, creative and communication skills working as concept artists, games designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine the Australian digital games industry and development companies | 1.1 Identify both large and small organisations in the Australian digital games industry<br>1.2 Identify recent projects undertaken by small and large organisations in the Australian digital games industry<br>1.3 Identify the resources required for the production of a digital game in a small business environment |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Determine the process of subcontracting various production elements to other small businesses |
| 2. Determine the structure of a game-development team | 2.1 Identify the roles of engineers, artists, game designers, producers and additional staff<br>2.2 Identify the skills required to occupy each role in a game development team<br>2.3 Determine the interaction and collaboration between these roles |
| 3. Investigate the process of starting an independent game development business | 3.1 Identify the major factors involved in starting a small business in the digital games industry<br>3.2 Identify the legal requirements, environmental impact and sustainability considerations, and financial management of operating a small business<br>3.3 Identify the legal protection of the small business operator and dissolution procedures for a small business |
| 4. Evaluate the role of the Australian government and other organisations related to digital game production | 4.1 Identify the role of the Australian government and other organisations affecting the digital games industry<br>4.2 Identify the influence of the Australian government in game production and marketing<br>4.3 Determine the effect of rating standards on digital game production and marketing |
| 5. Review copyright and intellectual property laws | 5.1 Determine copyright and intellectual property laws related to digital game development<br>5.2 Undertake a review of the current state of national and international copyright pertaining to digital game assets<br>5.3 Incorporate the conventions of copyright related to the production of a digital game project |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Reading | 1.1-1.3, 2.1, 2.2, 3.1-3.3, 4.1, 4.2, 4.3, 5.1, 5.2, 5.3 | • Interprets, analyses and comprehends information from a range of relatively complex sources, including legislation |
| Writing | 1.1-1.3, 2.1, 2.2, 3.1-3.3, 4.1, 4.2, 5.2, 5.3 | • Documents results of research, analysis and reviews to inform analysis of business opportunities and requirements |
| Numeracy | 1.3 | • Analyses the budgetary requirements for the creation of a digital game in a small business environment |
| Navigate the world of work | 3.2, 3.3, 5.1, 5.2, 5.3 | • Identifies, confirms and incorporates legislative requirements of business operations |
| Get the Work Done | 1.4, 2.2, 2.3, 4.3, 5.1, 5.2 | • Systematically plans tasks to gather required information to build understanding of the digital games environment<br>• Makes critical decisions in complex situations, taking a range of variables into consideration<br>• Investigates new and innovative ideas as a means to identify business opportunities |

# Assessment Requirements for ICTGAM529 Analyse business opportunities in the digital games environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- research the key organisations and types of projects undertaken in the Australian digital games industry
- document the resources, roles and skills requirements of a games development team, and the interaction required between team members
- research and document the main factors to consider for starting up and operating a small business in the digital games industry, including legal, government, environmental and financial considerations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain sources of information about the Australian digital games industry
- explain the process of subcontracting
- explain various methods that could be used to allow interaction and collaboration between different members of a development team
- explain how rating standards affect digital game production and marketing
- explain risk and critical-path management
- outline copyright and intellectual property laws as they pertain to the development of digital games.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage
- the internet for research purposes
- relevant legislation, including copyright and intellectual property legislation, and work health and safety legislation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM530 Develop and implement physics in a 3-D digital game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to integrate a physics, and rendering, engine into a 3-D digital game.

It applies to individuals with high-level technical and mathematical skills working as game engine developers, gameplay programmers and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Develop a game world system | 1.1 Develop code using a programming language and create instances of the rendering engine, the scene manager and physics engine's world objects<br>1.2 Constrain the frame rate to a desired frame rate |
| 2. Develop components to support game world | 2.1 Create and implement the game physics system |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| creation using physics | 2.2 Implement the game object primitives<br>2.3 Use or develop a physics debugger to show collision frames |
| 3. Develop an understanding of constraint dynamics | 3.1 Generate game objects or physics bodies constrained by joints<br>3.2 Build a ragdoll using the game physics system |
| 4. Develop an understanding of physics interactivity | 4.1 Use the game physics system to ray cast the scene<br>4.2 Implement a player-controlled model<br>4.3 Implement and develop game physics system models |
| 5. Develop an interactive scene | 5.1 Use primitives to build a scene<br>5.2 Use trigger volumes to fire off events<br>5.3 Capture the collision events with call-backs<br>5.4 Use a toggle for collision frames |
| 6. Compile a report | 6.1 Build class diagrams for all objects<br>6.2 Describe the techniques used to create interactivity<br>6.3 Describe the objects and when they were used<br>6.4 Document the libraries used |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Writing | 1.1, 2.1, 2.3, 6.1, 6.2, 6.3, 6.4 | • Uses technical terminology to document reports<br>• Uses the appropriate programming code, syntax and conventions to develop the game |
| Numeracy | 1.2, 2.1, 2.2, 2.3, 3.1, 3.2, 4.1, 4.3, 5.1, 5.2, 5.3 | • Uses complex physics to simulate the world by creating mathematical models which measure mass<br>• Computes algorithms to regulate time and speed<br>• Interprets matrix-related functions to determine rate and scale<br>• Completes algorithmic geometry to determine the relationship between points, angles, lines, surfaces and solids |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1, 1.2, 2.1-2.3, 3.1, 3.2, 4.1-4.3, 5.1-5.4, 6.1-6.4 | • Plans, organises and completes work according to defined requirements and schedules<br>• Uses a systematic process to evaluate work, implement improvements and solve problems<br>• Uses creativity and initiative in the application of game physics<br>• Uses the key features of, specific digital systems and tools, and operates them effectively to complete design tasks |

# Assessment Requirements for ICTGAM530 Develop and implement physics in a 3-D digital game

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop and document an interactive game that implements game physics
- identify, evaluate, and use a physics library.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain basic programming techniques needed to develop game objects
- describe the integration issues of common physics concepts in games design
- summarise the current game-play hardware and software products, including any technical constraints they impose on design and development
- summarise the human resources required in the process of creating a game, and respective skills
- explain the techniques for applying concept development and visualisation skills.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- suitable development environment
- physics libraries
- computer hardware and software
- games engines
- file storage.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTGAM531 Complete compositing to create elements for the 3-D and digital effects environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to determine design requirements, plan, create and store composite photographic and 3-D digital effects elements.

It applies to individuals with high-level information technology skills who may work as compositors, matte painters, concept artists, modellers, animators, game designers, directors and other personnel working in the film, television and game development industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Game development

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Confirm the compositing requirements | 1.1 Undertake consultations with the client to develop the compositing brief<br>1.2 Plan and schedule the compositing work<br>1.3 Identify the appropriate software tools, equipment and media for compositing work<br>1.4 Consult with the relevant personnel in regard to the technical |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | aspects of the proposed compositing<br>1.5 Confirm the compositing requirements with the client prior to work commencement |
| 2. Prepare the elements for compositing | 2.1 Select the resolution and aspect ratio for final composited output<br>2.2 Create the digitised elements through non-digital means<br>2.3 Identify and obtain the source plates or layers, images and other elements for compositing<br>2.4 Modify or repair elements that are problematic, or inconsistent, with the desired outcomes<br>2.5 Undertake the colour correction of plates and elements<br>2.6 Create additional elements, where required<br>2.7 Generate mattes |
| 3. Composite images to achieve an integrated result | 3.1 Track and stabilise the images to be composited<br>3.2 Match cameras, lighting and shadows, and add motion blur, as required, to finalise the composite<br>3.3 Integrate the plates, layers or elements in the correct sequence, using compositing software<br>3.4 Incorporate the grain, where required<br>3.5 Present the test composites to the client for approval |
| 4. Render the composited images and save files | 4.1 Optimise the composited images for rendering<br>4.2 Undertake the rendering process using efficient levels of resources<br>4.3 Store or archive rendered files in the specified output format<br>4.4 Review the completed render, to ensure quality and compliance with system requirements and the client brief |
| 5. Present the composite to the client for final approval | 5.1 Present the final composited images for client approval<br>5.2 Make adjustments to composited images, where required, to meet client requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 4.4 | • Interprets, analyses and comprehends brief, instructions, technical and conceptual documentation and images relevant to a 3-D and digital games environment |
| Writing | 1.1, 1.2, 1.5 | • Uses plain English and industry terminologies to create clearly formatted documentation to confirm brief during the consultative phase of the project |
| Oral Communication | 1.1, 1.4, 1.5, 3.5, 5.1 | • Speaks clearly and concisely, converting technical language into plain English when providing information<br>• Elicits information using effective listening and open questioning techniques |
| Numeracy | 2.1 | • Determines the proportional relationship between the width, height and ratio of the final output |
| Interact with others | 1.1, 1.4, 1.5, 3.5, 5.1 | • Conducts successful negotiations, in a variety of contexts, with suppliers, colleagues or clients |
| Get the work done | 1.2, 1.3, 2.1-2.7, 3.1-3.5, 4.1-4.4, 5.2 | • Plans, organises and completes work according to defined brief and schedules<br>• Uses creativity and initiative in compositing<br>• Uses a systematic process to evaluate work, implement improvements and solve problems<br>• Actively sources, analyses and evaluates applications, tools and media with the potential to meet compositing requirements<br>• Uses key features of specific digital systems and tools to complete compositing tasks |

# Assessment Requirements for ICTGAM531 Complete compositing to create elements for the 3-D and digital effects environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop a compositing brief, and schedule compositing work taking into account client requirements, and technical aspects
- communicate with others to discuss requirements and technical aspects of the job
- complete the compositing tasks to the required level of quality, according to the brief
- refine the elements for consistency, best image quality and visual impact
- adhere to system requirements related to file size, format and storage.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- provide a detailed summary of 3-D modelling, animation and visual effects development
- explain the aspect ratios for image output
- provide a detailed summary of camera, lighting and shadow matching
- discuss the efficient sizes and the appropriate formats for composited files
- summarise the scheduling and sequencing of production and post-production tasks
- discuss the range of compositing software available
- explain rendering principles.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- computer hardware and software
- games engines
- file storage
- compositing and output documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT101 Operate a personal computer

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to operate a personal computer (PC) in a home or small office environment, including accessing files with application programs, sending and retrieving emails, using the internet, using peripheral devices and applying basic security procedures and power management settings.

It applies to individuals who require entry level information and communications technology (ICT) knowledge and literacy skills to perform a range of simple operation tasks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to use the personal computer | 1.1 Identify physical components and associated peripheral devices of the personal computer to become familiar with the available network<br>1.2 Check physical connectivity of devices to ensure correct operation and performance<br>1.3 Boot up and follow procedures to activate the computer |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Manage computer configurations | 2.1 Alter the computer settings to best suit the user<br>2.2 Configure power management settings to minimise power consumption as an environmentally sustainable measure<br>2.3 Identify operating system and the application programs loaded on the computer to determine computer capability<br>2.4 Conduct basic software installation and removal to improve computer capability<br>2.5 Navigate and manipulate desktop environment to create and customise desktop icons and access application programs |
| 3. Access and use basic application programs | 3.1 Open a folder with file documents containing basic office applications, make minor changes and save in a different folder<br>3.2 Send and retrieve a simple email message using the desktop icon to communicate with other parties<br>3.3 Access the internet using the web browser to view and conduct basic web information search<br>3.4 Use firewall and antivirus and malware scans to reduce security risks and threats in the system |
| 4. Access and use basic peripheral devices | 4.1 Access external storage devices to retrieve, copy, move and save information in different media and locations<br>4.2 Use printer settings on an installed printer to print a document<br>4.3 Access audio-visual (AV) devices to view and play a multimedia file |
| 5. Shut down computer | 5.1 Back up important documents and programs to minimise risk of data loss<br>5.2 Save any work to be retained and close open application programs<br>5.3 Shut down computer and switch off any unused peripheral devices |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.3, 2.1-2.5, 3.2, 3.3 | • Recognises textual information to determine and complete technical functions |
| Writing | 3.1- 3.3, 4.1 | • Enters information using familiar text types in a format appropriate to environment |
| Get the work done | 1.1-1.3, 2.1-2.5, 3.1-3.4, 4.1-4.3, 5.1-5.3 | • Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing<br>• Understands the purpose and specific functions of common digital tools used in work contexts<br>• Implements basic security requirements related to own tasks<br>• Recognises and responds to predictable routine problems related to role in the immediate work context |

# Assessment Requirements for ICTICT101 Operate a personal computer

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use hardware and software
- navigate around the desktop, using features to perform tasks
- save results of work.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify basic parts of a computer and various hardware components
- explain commonly used software operation and application packages
- name basic security functions and computer functions
- list a range of peripheral devices that can be used with a personal computer
- describe common computer storage devices.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- appropriate learning and assessment support when required
- personal computer, including printer, mouse, keyboard and monitor
- use of basic software currently used in industry.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT102 Operate word-processing applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to operate word- processing applications and perform basic operations, including creating and formatting documents, creating tables and printing labels.

It applies to individuals in the workplace using fundamental knowledge of word-processing under direct supervision or with limited responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Apply workplace health and safety (WHS) practices | 1.1 Use workplace ergonomic work practices and strategies<br>1.2 Organise work area to ensure an ergonomic work environment |
| 2. Create documents | 2.1 Open word-processing application, create document and add data according to information requirements<br>2.2 Use document templates as required |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Use simple formatting tools when creating the document<br>2.4 Save document to directory |
| 3. Customise basic settings to meet page layout conventions | 3.1 Adjust page layout to meet information requirements<br>3.2 Open and view different toolbars<br>3.3 Change font format to suit document purpose<br>3.4 Change alignment and line spacing according to document information requirements<br>3.5 Modify margins to suit the document purpose<br>3.6 Open and switch between several documents |
| 4. Format documents | 4.1 Use formatting features and styles as required<br>4.2 Highlight and copy text from another area in the document or from another active document<br>4.3 Insert headers and footers to incorporate necessary data<br>4.4 Save document in another file format<br>4.5 Save and close document to a storage device |
| 5. Create tables | 5.1 Insert standard table into document<br>5.2 Change cells to meet information requirements<br>5.3 Insert and delete columns and rows as necessary<br>5.4 Use formatting tools according to style requirements |
| 6. Add images | 6.1 Insert appropriate images into document and customise as necessary<br>6.2 Position and resize images to meet document formatting needs |
| 7. Print documents | 7.1 Preview document in print preview mode<br>7.2 Select basic print settings<br>7.3 Print document or part of document from printer |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 3.1, 3.4, 7.1 | • Interprets specific information to determine and complete work required |
| Writing | 2.1, 4.3 | • Prepares simple correspondence that incorporates key information in a format and style relevant to requirements |
| Navigate the world of work | 1.1 | • Takes some personal responsibility for adherence to regulatory requirements |
| Get the work done | 1.2, 2.1, 3.1-3.6, 4.1-4.5, 5.1-5.4, 6.1, 6.2, 7.2, 7.3 | • Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing<br>• Understands the purpose and specific functions of common digital tools used in work contexts<br>• Recognises and responds to common operational problems when using word-processing applications |

# Assessment Requirements for ICTICT102 Operate word-processing applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- follow organisational ergonomic work health and safety (WHS) requirements and practices
- create, open and retrieve documents using customised basic settings
- format documents by creating tables and adding text, objects and images
- save and prints documents.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe formatting styles and their effect on formatting, readability and appearance of documents
- identify organisational requirements for ergonomics, including work periods and breaks
- select organisational style guide to use
- outline purpose, use and function of word-processing software.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer and printer
- word-processing software currently used in industry

# ICTICT103 Use, communicate and search securely on the internet

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to connect to the internet, securely send and receive emails, search the internet using web browsers and interact securely and in a socially responsible manner with a range of different internet sites.

It applies to individuals who use business technology to perform a range of routine tasks in the workplace or home office with limited responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Connect to and access the internet | 1.1 Connect to internet via existing internet connection and confirm functionality<br>1.2 Open internet browser and set home page of personal choice by setting internet options<br>1.3 Ensure internet browser software security<br>1.4 Adjust display of the internet browser to suit personal requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Modify toolbar to meet user and internet browser needs<br>1.6 Access a particular website, note privacy and other conditions of use, and retrieve data<br>1.7 Use socially responsible behaviour when sharing information on the internet<br>1.8 Enter uniform resource locator (URL) in address line of internet browser |
| 2. Use email for communications | 2.1 Open email application package, create new email message and add addressees<br>2.2 Compose text of an email message according to organisational guidelines, and spell check and edit text as required<br>2.3 Create and add an automatic signature for the user<br>2.4 Attach files to email message where required<br>2.5 Determine and set priority and send email message<br>2.6 Reply to and forward a received message using available features<br>2.7 Open and save an attachment to the relevant folder<br>2.8 Search for, sort and save email message using available settings<br>2.9 Adjust email accounts to restrict and quarantine possible email security problems<br>2.10 Print email message as required |
| 3. Search the internet | 3.1 Review organisational guidelines on internet access<br>3.2 Open internet application and locate and access a search engine on the internet, and define search expressions based on data required<br>3.3 Enter appropriate key words into the search engine to locate desired information<br>3.4 Refine a search depending on outcomes of original search<br>3.5 Save search expression results and present them in a report according to information requirements<br>3.6 Create a bookmark within the internet browser or a link for the required web page for the key results<br>3.7 Save key results in a bookmark folder<br>3.8 Modify internet browser options for printing and print a |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | web page<br>3.9 Close internet browser |
| 4. Access and use consumer specific sites on the internet | 4.1 Identify, access and review information specific sites to gain consumer information<br>4.2 Identify and use internet application sites to lodge details and gain access and information<br>4.3 Access and use online forms on the internet |
| 5. Undertake online transactions | 5.1 Access online transaction site<br>5.2 Ensure security of transaction site<br>5.3 Enter required information into fields on merchant's website<br>5.4 Ensure pop-up dialog boxes, prompts or feedback mechanisms are completed<br>5.5 Enter, check and make changes to preferred transaction options<br>5.6 Complete online transaction<br>5.7 Record and archive receipts according to business processes<br>5.8 Close down and leave transaction process |
| 6. Conduct an advanced search | 6.1 Use search tools and advanced search features<br>6.2 Use Boolean search techniques when required to enhance the search<br>6.3 Use multiple or meta-search tools with a range of key words<br>6.4 Use search engines particular to a field of knowledge to refine the outcome<br>6.5 Access related virtual community sites and newsgroups, and note their objectives and operational arrangements<br>6.6 Conduct a search with domain names to refine the search |
| 7. Use information that has been located | 7.1 Cross reference information found by using several websites to determine accuracy of information<br>7.2 Check date that website was last updated or properties of website to determine currency of information<br>7.3 Determine website authority by looking at copyright statements, privacy statements and organisational information<br>7.4 Save and print information found in different file forms |

# Assessment Requirements for ICTICT103 Use, communicate and search securely on the internet

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- connect to and access the internet
- send and receive emails
- secure internet access and email communications
- use search tools to locate information
- use different internet search techniques
- research and select appropriate website
- undertake online transactions
- assess the accuracy, currency, authority and reliability of the site and information located.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must :

- list basic technical terminology related to reading help files and prompts
- describe the basics of copyright and privacy statements
- explain different types of messages that occur, including error messages and messages to install plug-ins
- list different types of search engines and web browsers
- list procedures for using email applications
- list procedures for evaluating and assessing the authority, reliability and authenticity of information
- outline internet search functions
- describe internet speed and traffic loads related to times of accessing the internet
- describe the makeup and structure of internet addresses

© Commonwealth of Australia, 2025 Future Skills Organisation

- list organisational guidelines on internet and email use (web etiquette or netiquette)
- describe business process related to online transactions
- describe web browser update techniques
- explain what key words and bookmarks are used for.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer or digital device with internet
- search engines currently used in industry
- organisational policies on internet usage.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT104 Use digital devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use a range of digital devices, such as a digital camera, video camera, or personal digital assistant (PDA) device.

It applies to individuals who require entry level information and communications technology (ICT) knowledge and literacy skills to support their work in a home office or small office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to use the digital device | 1.1 Review the instruction manual and ensure identified components are available<br>1.2 Identify the physical components of the digital device<br>1.3 Turn on and follow access procedures to activate the digital device<br>1.4 Alter the digital device settings to best suit intended use<br>1.5 Configure power management settings where appropriate to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | minimise power consumption, as an environmentally sustainable measure |
| 2. Set up and use the digital device | 2.1 Identify and set the basic operating, security and menu settings<br>2.2 Navigate and manipulate the screen environment<br>2.3 Customise screen icons and access to applications where applicable<br>2.4 Use the digital device, and save and edit output where applicable<br>2.5 Identify more advanced features available and use as required |
| 3. Access and use basic connectivity devices | 3.1 Connect to external digital devices, such as computer devices or storage devices, to retrieve, copy, move and save information<br>3.2 Check physical connectivity of computer devices or storage devices to ensure operation and performance<br>3.3 Connect to a printer either through a computer device or directly, and use printer settings and print data<br>3.4 Access audio-visual devices to view and play a multimedia file |
| 4. Shut down digital device | 4.1 Save current work and back up important data<br>4.2 Close open programs on the digital device and any computer device or storage device<br>4.3 Shut down digital devices, according to manufacturer instructions |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.5, 2.1-2.5, 3.1, 3.4, 4.3 | • Reviews on-line and hard-copy text, and interprets and comprehends symbols, text, numbers and letters to determine and adhere to requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1-1.5, 2.1-2.5, 3.1-3.4, 4.1-4.3 | • Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Plans a range of routine tasks with familiar goals and outcomes |

# Unit Mapping Information

| **Code and title current version** | **Code and title previous version** | **Comments** | **Equivalence status** |

# Assessment Requirements for ICTICT104 Use digital devices

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- turn on a digital device
- use the menu features and navigate a graphical user interface
- use device features to perform tasks
- save the results of work.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must :

- outline the capabilities and connectivity requirements of relevant:
  - audio-visual devices
  - peripheral devices
  - storage devices
- list basic security functions
- explain basic software operation and associated applications
- explain digital device functions
- explain digital device settings.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry and include access to:

- digital devices

# ICTICT105 Operate spreadsheet applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use spreadsheet applications, including creating spreadsheets, formatting data, incorporating charts and objects, and printing spreadsheets.

It applies to individuals who perform a range of routine tasks in the workplace using a fundamental knowledge of spreadsheets under direct supervision or with limited responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Create spreadsheets | 1.1 Open the spreadsheet application, create spreadsheet files and enter numbers, text and symbols into cells according to information requirements<br>1.2 Enter simple formulas and functions using cell referencing when required<br>1.3 Correct formulas when error messages occur<br>1.4 Use a range of common tools during spreadsheet |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | development<br>1.5 Edit columns and rows within the spreadsheet<br>1.6 Use the auto-fill function to increment data where required<br>1.7 Save the spreadsheet to a folder on a storage device |
| 2. Customise basic settings | 2.1 Adjust page layout to meet user requirements or special needs<br>2.2 Open and view different toolbars<br>2.3 Change font settings so they are appropriate for the document purpose<br>2.4 Change alignment options and line spacing according to spreadsheet formatting features<br>2.5 Format cell to display different styles as required<br>2.6 Modify margin sizes to suit the purpose of the spreadsheets<br>2.7 View multiple spreadsheets concurrently |
| 3. Format spreadsheet | 3.1 Use formatting features as required<br>3.2 Copy selected formatting features from another cell in the spreadsheet or from another active spreadsheet<br>3.3 Use formatting tools as required within the spreadsheet<br>3.4 Align information in a selected cell as required<br>3.5 Insert headers and footers using formatting features<br>3.6 Save spreadsheet as another file type<br>3.7 Save to storage device and close spreadsheet |
| 4. Incorporate object and chart in spreadsheet | 4.1 Import an object into an active spreadsheet<br>4.2 Manipulate imported object by using formatting features<br>4.3 Create a chart using selected data in the spreadsheet<br>4.4 Display selected data in a different chart<br>4.5 Modify chart using formatting features |
| 5. Print spreadsheet | 5.1 Preview spreadsheet in print preview mode<br>5.2 Select basic printer options<br>5.3 Print spreadsheet or selected part of spreadsheet<br>5.4 Submit the spreadsheet to appropriate person for approval or feedback |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1 | • Interprets and comprehends symbolic, textual and numerical information and data<br>• Identifies data specifically needed for the spreadsheet from information received |
| Writing | 1.1, 1.2, 1.5, 3.5, 4.5 | • Enters both written and verbally received information and data into a format suitable for spreadsheet analysis<br>• Selects vocabulary, terminology and naming conventions suitable for the spreadsheet |
| Oral Communication | 1.1, 2.1, 5.4 | • Uses simple and relevant language with listening and questioning skills to confirm user requirements and elicit feedback |
| Numeracy | 1.2, 4.3, 4.4 | • Adds, subtracts, multiplies and divides whole numbers and decimals, identifying and selecting the correct formulas and functions to use<br>• Applies the order of operations in calculations<br>• Identifies and comprehends the specific numeric data needed to create charts |
| Interact with others | 5.4 | • Begins to use some routine forms of written communication relevant to immediate work role, with a limited awareness of requirements and expectations |
| Get the work done | 1.1-1.7, 2.1-2.7, 3.1-3.7, 4.1-4.5, 5.1-5.3 | • Plans routine tasks with familiar goals and outcomes, taking limited responsibility for decisions regarding sequencing<br>• Understands the purpose and specific functions of common digital tools used in work contexts<br>• Takes responsibility for routine low-impact decisions within familiar situations |

# Assessment Requirements for ICTICT106 Operate presentation packages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- create, format and prepare presentations for distribution and display
- customise basic settings
- add slide show effects.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list basic technical terminology to read help files and prompts
- outline the different types of:
  - formal and informal presentations
  - audience
- explain the effect of design and formatting on the readability and usability of presentations
- outline presentation pitfalls
- identify suitable presentation effects for different audiences.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) and printer
- presentation software currently used in industry

© Commonwealth of Australia, 2025 Future Skills Organisation

- documents detailing organisational style guide and policy.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT107 Use personal productivity tools

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use the features and components of a range of personal productivity tools.

It applies to individuals who perform routine tasks in the workplace and use a range of current technology based personal productivity tools, under direct supervision or with limited responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Use calendar features | 1.1 Navigate within the calendar of the personal productivity tool and schedule events and appointments<br>1.2 Set a reminder and customise the reminder<br>1.3 Customise the calendar views, menus and toolbars, and work within different views<br>1.4 Delete events and appointments<br>1.5 Customise the calendar's print options and print the calendar |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | according to format requirements |
| 2. Use contact management | 2.1 Create, edit and delete contacts as required, recording information in the appropriate fields<br>2.2 Use contact information for email purposes according to organisational policies related to privacy<br>2.3 Group contacts into categories that are consistent and meaningful |
| 3. Use additional features | 3.1 Link activities and contacts when required<br>3.2 Use expense sheets, search facilities, notes and email when appropriate<br>3.3 Integrate the above features with other applications or the calendar and contacts list |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.1, 2.2 | • Interprets and comprehends a large range of signs, symbols, pictures, text, numbers and letters necessary to operate a range of personal productivity tools<br>• Interprets instructions containing basic words and sentence structures |
| Writing | 1.1, 1.2, 2.1, 2.2, 3.2 | • Enters written information using simple sentence structure, correct terminology, and writing conventions suitable for personal productivity tools |
| Numeracy | 1.1, 1.2, 3.2 | • Counts, adds, subtracts, multiplies and divides whole numbers and fractions and decimals to schedule appointments and use expense sheets |
| Get the work done | 1.1-1.5, 2.1-2.3, 3.1-3.3 | • Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role<br>• Understands the purpose and specific functions of common digital tools used in work contexts<br>• Plans routine tasks with familiar goals and outcomes, taking limited responsibility for decisions regarding |

# Assessment Requirements for ICTICT107 Use personal productivity tools

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use the calendar of the personal productivity tool to schedule events and appointments
- create, edit and delete contacts
- use the additional features of a particular personal productivity tool and software.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline organisational policies regarding:
  - email list
  - internet connection and usage policy
  - web etiquette
  - calendar and scheduling tools.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry and include access to:

- a personal productivity device
- organising software currently used in industry
- organisational policies on internet usage.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT108 Use digital literacy skills to access the internet

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to safely and securely use the internet to undertake basic interactive communication.

It applies to individuals who locate, organise, understand, evaluate and analyse information using digital technology in a range of different areas.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Operate hardware at a basic level | 1.1 Identify hardware components required to connect to the Internet<br>1.2 Set up and check physical connectivity of devices<br>1.3 Use hardware components and comply with work health and safety (WHS) guidelines |
| 2. Ensure safe and secure online access | 2.1 Connect and access relevant internet sites<br>2.2 Provide an appropriate level of personal information to |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.3, 2.5-2.7, 3.1, 3.6, 4.1 | • Recognises and comprehends a large range of signs, symbols, pictures, jargon, text, numbers and letters necessary to operate web browsers, operating systems, search engines and application packages, and to evaluate web page content |
| Writing | 2.1, 2.2, 2.8, 2.10, 3.2, 3.3, 4.1, 4.4 | • Enters text and data using keystrokes and adhering to the software program requirements<br>• Structures and orders search queries using relevant search conventions, jargon, acronyms, symbols and wildcards to obtain optimum search results |
| Navigate the world of work | 1.3, 2.3 | • Takes some personal responsibility for adherence to legal and regulatory requirements |
| Get the work done | 1.1-1.3, 2.1, 2.5-2.10, 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 4.1-4.4, 5.1-5.5 | • Plans routine tasks with familiar goals and outcomes, taking limited responsibility for decisions regarding sequencing<br>• Understands purpose and specific functions of common digital tools used in work contexts<br>• Takes responsibility for routine, low-impact decisions within familiar situations<br>• Implements basic security requirements related to own tasks |

# Assessment Requirements for ICTICT108 Use digital literacy skills to access the internet

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- connect to and access the internet
- send and receive emails
- secure internet access and email communications
- use search tools to locate information or content
- research and select appropriate websites
- undertake online interactions
- make an informed assessment of the accuracy, currency, authority and reliability of the site and information located.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list types and basic components of hardware and storage devices
- list different categories of domain names and explain how they indicate the integrity of the materials on the web site
- identify and explain common automated messages found when accessing the web
- outline types of online communication and participation, including transactional
- outline basic research techniques
- outline basic copyright legislation
- explain digital footprint and basic security, safety and legal issues
- list work health and safety (WHS) issues, including basic ergonomics of keyboard and computer use
- identify device interfaces

© Commonwealth of Australia, 2025 Future Skills Organisation

- Identify desk top icons
- explain basic principles of web browser search engines
- outline internet protocols
- explain basic principles and features of web browsers and search engines.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- hardware with internet access
- search engines currently used in industry.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT201 Use computer operating systems and hardware

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to select, configure and use computer operating systems and basic computer hardware, including configuring the operating system to work with a variety of hardware peripherals and types of information and communications technology (ICT) equipment.

It applies to individuals who may work under supervision and provide support to others using a range of skills to identify and resolve issues.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify operating system and hardware components | 1.1 Determine ICT organisational requirements and specifications<br>1.2 Identify and select the operating system<br>1.3 Identify appropriate external hardware components<br>1.4 Identify internal hardware components |
| 2. Install and configure | 2.1 Install and configure the operating system to meet |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| operating system and application software with hardware components | organisational requirements<br>2.2 Identify functions associated with the operating system and associated boot process<br>2.3 Configure power management settings to minimise power consumption, as an environmentally sustainable measure<br>2.4 Use both the graphical user interface and the command line interface to perform basic tasks<br>2.5 Install or upgrade application software onto the operating system and hardware configuration<br>2.6 Determine the relationship between an application program, the operating system and hardware<br>2.7 Identify general differences between different computer platforms and their respective operating systems |
| 3. Optimise operating system and hardware components | 3.1 Optimise operating system, using included tools or third-party utilities<br>3.2 Customise the graphical user interface<br>3.3 Use techniques unique to the command line interface<br>3.4 Set up and configure external hardware components and check functionality<br>3.5 Install drivers as appropriate and check functionality |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4, 2.1-2.7, 3.1-3.5 | • Identifies and reviews both on-line and hard-copy text containing simple sentences with terminology relevant to the ICT industry<br>• Interprets and comprehends diagrams, icons, symbols, text, numbers and letters necessary to install and configure operating systems, software and hardware |
| Writing | 2.1, 2.4, 2.5, 3.3 | • Uses systems related syntax, text and numbers to input commands<br>• Uses correct terminology, text, letters and numbers to |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | respond to computer generated prompts |
| Get the work done | 1.1-1.4, 2.1-2.7, 3.1-3.5 | • Plans routine tasks with familiar goals and outcomes, taking limited responsibility for decisions regarding sequencing and timing<br>• Understands purposes, specific functions and key features of common digital systems and tools |

# Assessment Requirements for ICTICT201 Use computer operating systems and hardware

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use an operating system in a variety of scenarios and across functions, including:
  - scheduling, loading, initiating, and supervising the execution of programs
  - allocating storage
  - initiating and controlling input and output operations
  - handling errors
- identify and install suitable hardware components
- install and upgrade application software.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the basic specifications of current industry accepted operating systems, hardware and applications software products
- explain the compatibility of an operating system, in respect to other versions
- explain the function of single-user and multi-user operating systems
- explain interoperability between operating systems
- outline work health and safety (WHS) principles and responsibilities, including ergonomic principles to avoid injury associated with using computer systems.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- hardware components
- work health and safety (WHS) standards and organisational policy and procedures
- an operating system currently used in industry
- software configuration guides
- documents detailing operating system control panel and configuration data.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT202 Work and communicate effectively in an ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to work and communicate effectively within organisational policies and governance arrangements, using information and communications technology (ICT) systems, equipment and software.

It applies to individuals who may work under supervision with responsibility to support others within a small office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to communicate and work effectively within an ICT organisation | 1.1 Gather input from sources of information to develop, refine and document ICT roles and services in an organisation<br>1.2 Develop clear knowledge of enterprise policies, procedures and organisational requirements, including principles of equal employment opportunity (EEO) and anti-discrimination<br>1.3 Identify ICT policy and procedures, and determine whether |

# Assessment Requirements for ICTICT202 Work and communicate effectively in an ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- gather information about the organisation and incorporate in communications
- process internal and external requests according to organisational policies and requirements
- respond promptly to client enquiries and requests from colleagues.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe current industry accepted hardware and software including:
  - features and capabilities
  - product directions
- outline the operational environment, including the:
  - customer base
  - company products
  - services
- outline the organisational policies and procedures that cover:
  - code of conduct
  - mission statement
  - routine work processes
  - systems, management structure and governance arrangements
- outline the principles of equal employment opportunity (EEO) and anti-discrimination

© Commonwealth of Australia, 2025 Future Skills Organisation

- explain the role and positioning of information and communications technology (ICT) within the overall business objectives of the organisation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a workstation
- a range of ICT equipment, operating systems, software and technical information
- organisational policies, procedures and governance documents.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT203 Operate application software packages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify, select and operate three commercial software packages, including a word-processing and a spreadsheet application package.

It applies to individuals who utilise different software applications within a small to large office environment to produce diverse documents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Use appropriate workplace health and safety (WHS) office work practices | 1.1 Use safe work practices to ensure ergonomic, work organisation, energy and resource conservation requirements are addressed<br>1.2 Use wrist rests and document holders where appropriate<br>1.3 Use monitor anti-glare and radiation reduction screens where appropriate |
| 2. Use appropriate | 2.1 Select word-processing software appropriate to perform |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| word-processing software | activity<br>2.2 Identify document purpose, audience and presentation requirements, and clarify with personnel as required<br>2.3 Identify organisational requirements for text-based business documents, and design document structure and layout to ensure consistency of style and image<br>2.4 Match document requirements with software functions to provide efficient production of documents<br>2.5 Use technical functions, other data and formatting to finalise documents<br>2.6 Ensure the naming and storing of documents in appropriate directories or folders and the printing of documents to the required specifications |
| 3. Use appropriate spreadsheet software | 3.1 Select spreadsheet software appropriate to perform activity<br>3.2 Identify document purpose, audience and presentation requirements, and clarify with personnel as required<br>3.3 Enter simple formulas and functions using cell referencing where required<br>3.4 Customise spreadsheet settings to meet requirements<br>3.5 Ensure the naming and storing of documents in appropriate directories or folders and the printing of documents to the required specifications |
| 4. Use a third application software package | 4.1 Select software application package appropriate to perform activity<br>4.2 Identify purpose, audience and presentation requirements, and clarify with personnel as required<br>4.3 Use technical functions, other data and formatting to finalise documents<br>4.4 Ensure documents are named and stored in appropriate directories or folders and printed to required specifications |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

© Commonwealth of Australia, 2025 Future Skills Organisation

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.2-2.5, 3.2-3.4, 4.2, 4.3 | • Recognises and interprets textual information to determine organisational standards and job requirements<br>• Interprets and comprehends symbols, icons and text associated with applications software |
| Writing | 2.3-2.6, 3.3- 3.5, 4.3, 4.4 | • Enters both written and verbally received information and data into a format suitable for the software application<br>• Selects vocabulary, syntax, terminology, labelling and naming conventions suitable for the program |
| Oral Communication | 2.2, 2.3, 3.2, 4.2 | • Uses simple, relevant language, effective questioning, and active listening techniques to clarify work requirements |
| Numeracy | 3.2-3.4 | • Adds, subtracts, multiplies and divides whole numbers and decimals, identifying and selecting the correct formulas and functions to use<br>• Applies the order of operations in calculations |
| Navigate the world of work | 1.1 | • Takes some personal responsibility for adherence to legal and regulatory requirements |
| Get the work done | 1.2, 1.3, 2.1-2.6, 3.1-3.5, 4.1-4.4 | • Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role<br>• Understands purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks, adapting some functions to improve personal efficiency<br>• Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing |

# Assessment Requirements for ICTICT203 Operate application software packages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce workplace documents using a minimum of three different software application packages
- open, amend and save files and documents according to organisational requirements
- apply workplace health and safety (WHS) principles and responsibilities for ergonomics, such as work periods and breaks
- use help manuals and online help.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify application software packages used by the organisation and list the purpose of each
- explain basic technical terminology related to reading help files and responding to system help prompts
- outline current business practices related to using software to prepare reports
- list features and functions of commercial computing packages
- describe import and export software functions
- describe the process of linking documents
- outline WHS principles and responsibilities for ergonomics, such as work periods and breaks
- explain the purpose of input and output devices.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) and printer
- software currently used in industry
- documents detailing organisational style guide and policy
- documents or information containing data suitable for developing software application documents.

Assessors must satisfy NVR/AQTF assessor requirements.

# Assessment Requirements for ICTICT204 Operate a digital media technology package

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- interpret basic requirements of a design brief
- use digital media package to meet organisational requirements
- apply workplace health and safety (WHS) principles and responsibilities for ergonomics, such as work periods and breaks
- use help manuals and online help when appropriate
- use digital media technologies to support design brief requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the basic principles of visual design
- outline the functions and features of digital media packages and technologies
- identify graphic design and stylistic language conventions
- outline WHS principles and responsibilities for ergonomics, such as work periods and breaks
- outline the principles of digital imaging and file formats, video and sound file formats, file management and transfer systems
- identify vendor product directions in digital media hardware and software
- explain how to visualise and interpret creative information, scripts (text) and images.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) and printer
- software currently used in industry
- documents detailing organisational style guide and policy
- documents or information containing data suitable for developing software application documents.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT205 Design basic organisational documents using computing packages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, create and produce basic organisational documents using application software within organisational guidelines, procedures and policies.

It applies to individuals who need to use foundation information and communications technology (ICT) skills in a wide range of varying industry occupations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Design documents to meet organisational needs | 1.1 Determine basic design guidelines and requirements<br>1.2 Select appropriate application software<br>1.3 Use application software to design and configure document templates for use in a business environment |
| 2. Use application software to develop | 2.1 Use application software as per specifications to develop documents |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| documents | 2.2 Access, retrieve, manipulate and save document files<br>2.3 Amend designs according to organisational requirements<br>2.4 Store documents for wider access and editing as required |
| 3. Evaluate and incorporate feedback | 3.1 Obtain document sign-off from appropriate person<br>3.2 Incorporate feedback and update document |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 3.2 | • Recognises and interprets text to determine organisational guidelines and requirements, and application software specifications |
| Writing | 1.3, 2.1, 3.2 | • Uses appropriate and clear language and organisational protocols for labels and filenames when designing templates and developing documents |
| Oral Communication | 1.1, 3.1 | • Uses simple, relevant language, effective questioning, and active listening techniques to clarify work requirements and obtain feedback |
| Numeracy | 1.3, 2.1, 2.3 | • Takes measurements and performs calculations for document layout |
| Get the work done | 1.2, 1.3, 2.1-2.4, 3.2 | • Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role<br>• Understands purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks, adapting some functions to improve personal efficiency<br>• Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing<br>• Uses the main features and functions of digital tools to complete work tasks and access information |

# Assessment Requirements for ICTICT205 Design basic organisational documents using computing packages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce a workplace document using a range of features
- develop several workplace documents with minimal instruction on their design from end user or supervisor.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify features of application packages
- explain current business practices related to preparing organisational documents
- recognise industry standard input and output devices
- identify organisational documentation and style guides
- identify organisational storage and retrieval procedures.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- organisational requirements and a template for the documents
- a personal computer (PC), scanner and laser printer
- word-processing facilities
- presentation software applications.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT206 Install software applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to select, install or upgrade basic commercial software applications.

It applies to individuals who require basic information and communications technology (ICT) skills to undertake related tasks under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine software or software upgrade requirements | 1.1 Document client requirements and report to appropriate person<br>1.2 Act on instructions to meet client requirements, according to organisational requirements |
| 2. Obtain software or software upgrade | 2.1 Investigate and select a software application program that best conforms to requirements and organisational policies<br>2.2 Obtain application program under instruction from appropriate person |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Determine licensing requirements and record, according to organisational guidelines<br>2.4 Ensure target computer conforms to the minimum hardware and operating system requirements of the application program |
| 3. Install or upgrade software | 3.1 Install new or upgraded software application program according to appropriate person or organisational instructions<br>3.2 Complete the installation process efficiently and effectively to minimise disruption<br>3.3 Carry out testing and acceptance, according to organisational guidelines, paying particular attention to possible effect on other systems<br>3.4 Ensure client requirements are satisfied<br>3.5 Refer outstanding client issues to appropriate person as necessary |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 2.3 | • Uses available literature to appropriately address requirements<br>• Interprets and responds to complex text to ascertain and confirm requirements |
| Writing | 1.1, 2.3 | • Records key information relevant to requirements, using basic punctuation, text and correct spelling |
| Oral Communication | 1.1, 2.2, 3.1, 3.4, 3.5 | • Uses listening and questioning techniques to confirm understanding of requirements<br>• Uses clear and specific language to convey requirements |
| Navigate the world of work | 2.1 | • Takes some personal responsibility for adherence to organisational requirements |
| Get the work done | 1.2, 2.1, 2.2, 2.4, 3.1-3.3 | • Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role<br>• Understands purposes, specific functions and key |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing |

# Assessment Requirements for ICTICT206 Install software applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- install software applications through operating system instructions
- configure computer to accept new software or upgrade
- carry out testing and acceptance according to organisational guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a typical client business domain
- identify typical hardware storage devices
- identify typical input and output devices
- describe key licensing arrangements and responsibilities to ensure they are adhered to
- identify operating systems supported by the organisation
- describe the organisational guidelines for purchasing
- identify the installation requirements for key software application packages
- describe typical software copyright responsibilities.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) where software installation may be performed

© Commonwealth of Australia, 2025 Future Skills Organisation

- application software currently used in industry
- documents detailing organisational testing and acceptance policy and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT207 Integrate commercial computing packages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to manipulate, convert and integrate data between two or more different commercial software applications.

It applies to individuals who require foundation skills and knowledge to use information and communications technology (ICT) in any ICT business or office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine work requirements | 1.1 Identify the task requirement<br>1.2 Select appropriate software and file formats to perform required work<br>1.3 Obtain organisational documentation, such as procedures, manuals and guides, and use when appropriate |
| 2. Integrate data across different software application packages | 2.1 Create a mailing list using a database, spreadsheet or address book, and merge mailing list with another document<br>2.2 Use software application package conversion tool to convert |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | data from one format to another to enable additional work on the converted data<br>2.3 Save data to a new file format<br>2.4 Import objects from another software application package and modify as required to produce a required outcome<br>2.5 Export data to another software application package to produce a required outcome<br>2.6 Create a link between one software application package and another, and use this to update information to a document |
| 3. Save and retrieve data with the aid of help functions | 3.1 Save data to disk<br>3.2 Convert data to a new file format<br>3.3 Re-access data and check information<br>3.4 Access user help documentation or other resources for basic difficulties with software application package |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 3.4 | • Recognises and interprets text with ICT specific terminology to determine task requirements, organisational guidelines and use application software |
| Oral Communication | 1.1, 3.4 | • Uses effective listening and questioning techniques to elicit information about task requirements to resolve basic difficulties |
| Navigate the world of work | 1.3 | • Generally follows the explicit protocols immediately related to role |
| Get the work done | 1.1, 1.2, 2.1- 2.3, 2.5, 2.6, 3.1-3.3, 3.4 | • With assistance, determines priorities and sequences the steps involved in clearly defined, familiar tasks, and identifies and assembles the resources required<br>• Recognises and responds to predictable routine problems related to role in the immediate work |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | context<br>• Understands the purpose and specific functions of common digital tools used in work contexts<br>• Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role |

# Assessment Requirements for ICTICT207 Integrate commercial computing packages

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- select appropriate software and file formats
- create mailing list and merge with another document
- manipulate and integrate data between commercial application software following organisational procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline current business practices related to preparing reports
- identify features and functions of commercial computing packages
- identify import and export software functions
- outline processes for linking documents
- outline workplace health and safety (WHS) principles and responsibilities for ergonomics
- identify software packages used by the organisation
- outline strategies for integrating commercial computing packages
- outline the use of input and output devices.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a personal computer (PC) and printer
- software currently used in industry
- documents detailing organisational style guide and policy
- documents or information containing data suitable for use with multiple computing packages.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT208 Operate accounting applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to operate common accounting software packages in order to maintain enterprise financial records.

It applies to individuals working with little supervision who use information and communications technology (ICT) skills and knowledge to support the financial area within a small to large office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Customise software | 1.1 Select accounting software to meet business requirements<br>1.2 Load, register and configure accounting software according to operating instructions |
| 2. Create enterprise data | 2.1 Establish chart of accounts according to business and legislative requirements<br>2.2 Create and add data on customers and sales |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.3 Create and add data on suppliers and purchases<br>2.4 Create and add payroll details<br>2.5 Create and add inventory details<br>2.6 Add required or suitable tax codes |
| 3. Record and track transactions | 3.1 Generate invoices and track their progress<br>3.2 Record customer payments and update customer details<br>3.3 Record and track purchases<br>3.4 Record payment of wages, allowances, taxation and superannuation<br>3.5 Update business data as required |
| 4. Save and back up data | 4.1 Save accounting data to disk<br>4.2 Make a regular backup of accounting data and store in a safe location |
| 5. Generate reports | 5.1 Reconcile accounts<br>5.2 Generate and print financial reports based on accounting data<br>5.3 Check financial reports for errors and discrepancies<br>5.4 Discuss errors with appropriate person and rectify as required |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 5.3, 5.4 | • Identifies and interprets textual and numerical financial information necessary to maintain organisational accounting records<br>• Interprets textual information from relevant sources to identify the most appropriate software to use, and business and legislative requirements |
| Oral | 1.1, 1.2, 2.1, 5.4 | • Uses plain English, effective listening and questioning techniques and, where necessary, |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | | finance specific terminology to elicit information and discuss issues |
| Numeracy | 2.1-2.6, 3.1-3.5, 5.1-5.4 | • Interprets numerical information containing whole numbers, decimals and percentages, and applies a range of mathematical calculations to ensure organisational financial requirements are met |
| Navigate the world of work | 2.1 | • Appreciates the implications of legal and regulatory responsibilities related to own work |
| Get the work done | 1.1, 1.2, 2.2- 2.6, 3.1-3.5, 4.1, 4.2, 5.1, 5.4 | • Plans a range of routine and some non-routine tasks, accepting stated goals and aiming to achieve them efficiently<br>• Understands the purpose, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Uses familiar digital systems and tools to access, organise, analyse and display information relevant to role |

# Assessment Requirements for ICTICT208 Operate accounting applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- load and configure accounting software
- create and maintain enterprise financial records as per business and legislative requirements
- record and track transactions
- back up data
- reconcile accounts and generate reports.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss basic accounting concepts, including:
  - assets
  - cost of sales
  - creditors
  - debtors
  - equity
  - expenses
  - income
  - liabilities
- identify basic accounting devices, including:
  - accounts
  - chequebook register

© Commonwealth of Australia, 2025 Future Skills Organisation

  - general ledger
  - invoices
  - purchases
  - sales journals
  - transaction journals
- outline current legislative requirements relating to enterprise requirements, including:
  - goods and services tax
  - income tax rates
  - pay as you go
  - superannuation
- discuss the features and functions of common accounting reports, including:
  - balance sheet
  - business activity statements
  - chart of accounts
  - profit and loss
- outline the features and functions of common accounting software.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a printer and personal computer (PC) with appropriate specifications to run the software
- industry standard commercial accounting applications
- documents detailing business requirements
- legislative requirements if required.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT209 Interact with ICT clients

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to provide routine information and communications technology (ICT) support to clients in a professional manner.

It applies to individuals who, while working under a level of supervision, have responsibility in a frontline technical support capacity to exercise discretion and judgement using appropriate knowledge to provide assistance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Deliver support to ICT clients | 1.1 Provide support for ICT clients in a courteous and professional manner according to organisational policy<br>1.2 Establish and confirm nature of client's ICT concerns using active listening and questioning<br>1.3 Maintain client contact and provide progress information until the problem is resolved |
| 2. Respond to ICT client | 2.1 Respond to ICT client's concerns and issues, demonstrating |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| complaints | a positive, sensitive and helpful attitude<br>2.2 Escalate and refer client concerns to support person if required, explaining the nature of issues involved<br>2.3 Resolve ICT client complaint using recommendations from the support person<br>2.4 Document and record ICT client concerns and solutions, according to organisational guidelines |
| 3. Evaluate received ICT client complaints | 3.1 Analyse recent ICT register<br>3.2 Propose proactive training to appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 3.1 | • Evaluates textual information containing ICT specific terminology to establish proactive training needs |
| Writing | 2.4 | • Completes documentation necessary for work tasks and reporting requirements by using clear, concise and accurate grammar and language, and relevant ICT terminology |
| Oral Communication | 1.1-1.3,2.1-2.3, 3.2 | • Uses effective questioning and active listening techniques to elicit information and clarify client queries, concerns and complaints<br>• Contributes to an effective working environment by communicating in a courteous manner and using clear, easy-to-understand and non-discriminatory language and behaviour |
| Navigate the world of work | 1.1 | • Generally follows the explicit protocols immediately related to own role |
| Get the work done | 1.3, 2.3, 3.1 | • Recognises and responds to predictable routine problems related to role in the immediate work context<br>• Uses the main features and functions of common digital tools in everyday work contexts |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Requirements for ICTICT209 Interact with ICT clients

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- provide routine information and communications technology (ICT) client support in a professional manner
- refer client concerns to support person if required, according to escalation procedures
- resolve client complaints
- document and record client concerns and solutions according to organisational guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list current industry accepted hardware and software products, and describe their general features and capabilities
- describe the ICT client business domain and business critical functions
- discuss the organisational systems and working environment
- outline organisational policies for external and internal client contact.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a personal computer
- relevant organisational guidelines
- relevant documentation

© Commonwealth of Australia, 2025 Future Skills Organisation

- a site where routine ICT client support may be demonstrated.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT210 Operate database applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to operate database applications and create and develop simple relational databases using pre-existing data.

It applies to individuals who provide administrative support working under direct supervision or with limited responsibility within a wide range of industry occupations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Create database | 1.1 Open a database application and design a two-table, simple relational database incorporating basic design principles<br>1.2 Develop a table with fields and attributes according to database usage, as well as user requirements<br>1.3 Create a primary key and establish an index for each table<br>1.4 Modify table layout and field attributes as required<br>1.5 Create a relationship between the two tables<br>1.6 Add and modify data in a table according to information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | requirements<br>1.7 Add and delete records as required<br>1.8 Save and close down database to storage area |
| 2. Customise basic settings | 2.1 Adjust page layout to meet user requirements<br>2.2 Open and view different toolbars<br>2.3 Format font as appropriate for the purpose of the database entries |
| 3. Create reports | 3.1 Design reports to present data in a logical sequence<br>3.2 Modify reports to include or exclude additional requirements<br>3.3 Distribute reports to appropriate person in a suitable format |
| 4. Create forms | 4.1 Use a wizard to create a simple form<br>4.2 Open existing database and modify records through a simple form<br>4.3 Rearrange objects within the form to accommodate information requirements |
| 5. Retrieve information | 5.1 Access existing database and locate required records<br>5.2 Create simple query and retrieve required information<br>5.3 Develop query with multiple criteria and retrieve required information<br>5.4 Select data and display appropriately |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 5.1 | • Identifies and analyses a wide range of hard copy and on-line forms, reports and other end-user documentation to identify end-user needs and data |
| Writing | 1.2, 3.1, 3.2, 4.1, 4.3, 5.2, 5.3 | • Uses database related terminology and protocols when designing tables, queries, reports and forms |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Uses clear plain English appropriate for end-users when labelling fields within reports and forms |
| Oral Communication | 1.2, 3.3 | • Uses simple, relevant language, effective questioning, and active listening techniques to clarify user requirements, confirm understanding and when liaising with the appropriate person |
| Numeracy | 5.3 | • Identifies and comprehends the specific numeric data needed, and uses logical functions, mathematical symbols and applies the order of operations in calculations when developing queries |
| Interact with others | 3.3 | • Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role |
| Get the work done | 1.1-1.8, 2.1-2.3, 3.1,3.2, 4.1-4.3, 5.1-5.4 | • Plans a range of routine tasks and aims to achieve them efficiently<br>• Takes responsibility for routine, low-impact decisions within familiar situations<br>• Begins to identify and implement standard solutions for a number of routine problems<br>• Understands the purpose and specific functions of common digital tools used in work contexts<br>• Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role |

# Assessment Requirements for ICTICT210 Operate database applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- design and develop a simple database using a standard database package
- add data
- create and use a query with multiple criteria
- create and modify reports and forms.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline basic database design principles
- discuss the purposes of forms, reports and queries for retrieving and displaying information
- outline the reasons for relationships between tables (cardinality)
- describe the purpose, use and function of database software.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry and include access to:

- a PC and printer
- database software currently used in industry
- documents detailing organisational style guide and policy

© Commonwealth of Australia, 2025 Future Skills Organisation

- documents or information containing data suitable for creating a database.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT211 Identify and use basic current industry specific technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to engage in basic ongoing review and research of industry specific technologies in order to identify and apply these technologies or techniques to improve aspects of an organisation's activities.

It applies to individuals who work under minimal supervision and are responsible for ensuring that the quality of the business process is maintained at the highest level possible, through the appropriate application of industry specific technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to use basic industry specific technologies | 1.1 Identify technologies specific to an industry sector<br>1.2 Acquire and use the industry specific technologies<br>1.3 Identify, classify and use industry specific technologies for the benefit of the organisation |
| 2. Use basic industry | 2.1 Conduct testing of industry specific technologies |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| specific technologies to assist in solving organisational problems | 2.2 Use features and functions of industry specific technologies within an organisational context<br>2.3 Demonstrate depth of knowledge of enabling technologies to an accepted industry standard<br>2.4 Access and use sources of information relating to the industry specific technologies |
| 3. Evaluate performance of basic industry specific technology | 3.1 Evaluate industry specific technologies for performance, usability and benefit to the organisation<br>3.2 Determine environmental considerations involved when using the technology<br>3.3 Seek feedback from users where appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 1.1-1.3, 2.3, 2.4 | • Investigates, evaluates and applies information from a range of complex and technical texts to expand own knowledge and identify industry specific technologies that will benefit the organisation |
| Reading | 1.1, 1.3, 2.1, 2.4, 3.2, 3.3 | • Identifies and interprets technical online and hard copy documentation containing complex terminology and diagrams to identify industry specific technologies that will benefit the organisation, and to determine environmental considerations |
| Oral Communication | 1.1-1.3, 2.4, 3.1-3.3 | • Elicits information and feedback by using effective listening and questioning techniques to identify and evaluate industry specific technologies<br>• Uses clear, easy-to-understand language, and translates industry specific terminology into plain English where necessary |
| Navigate the world of work | 2.3, 3.2 | • Recognises organisational expectations and follows explicit protocols and procedures |
| Get the work done | 1.1-.3, 2.1-2.4, 3.1 | • Determines priorities and sequences the steps involved in clearly defined familiar tasks, and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | identifies and assembles the resources required<br>• Demonstrates the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Unit Mapping Information

# Assessment Requirements for ICTICT211 Identify and use basic current industry specific technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify basic new and emerging industry specific technologies and techniques
- use basic features and functions of identified industry specific technologies to an industry standard.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline current technology trends and directions in information and communications technology (ICT), and specifically of the major industry technology standards used in the specified area
- outline vendor product directions
- describe current industry hardware and software products, with broad knowledge of general features and capabilities, and their application
- outline information gathering techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a site where industry specific technologies may be used
- industry specific technologies currently used in industry
- documents detailing work health and safety (WHS) standards, environmental guidelines and organisational requirements.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT212 Incorporate Indigenous needs and perspectives into ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify and use current information and communications technology (ICT) within Indigenous communities and to research and discuss alternative ICT solutions that meet the specific needs of Indigenous learners.

It applies to individuals who work with Indigenous people and communities under a level of supervision and use a range of specialised technical knowledge and knowledge of Indigenous learning styles and systems to provide advice.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: delivery and assessment against this unit of competency must comply with Indigenous community protocols and guidelines, and be supported by Elders or custodians of Country.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify the use of ICT systems in the Indigenous | 1.1 Identify local community organisations, including Indigenous community organisations and other relevant |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| community | Indigenous and related agencies, that use ICT<br>1.2 Determine specific Indigenous learning styles, knowledge systems and relevant legislation that impact on the use of ICT in an Indigenous community<br>1.3 Identify the most common communication technologies, software applications and hardware solutions used in the local community<br>1.4 Identify the use of ICT in local community organisations, including Indigenous community organisations and other relevant bodies |
| 2. Identify and use specific ICT resources relevant to Indigenous people | 2.1 Identify a range of methods of accessing Indigenous and non-Indigenous electronic resources for research and learning<br>2.2 Identify and access relevant Indigenous and ICT websites and other online resources<br>2.3 Following community consultation, discuss and compare the relevance of a range of Indigenous websites to Indigenous communities |
| 3. Identify appropriate ICT resources to meet the needs of Indigenous people and communities | 3.1 Use the most common local communication technologies, software applications and hardware solutions<br>3.2 Research and identify possible alternative communication technologies, software applications and hardware solutions<br>3.3 Discuss most appropriate ICT resources with local Indigenous community, to meet Indigenous individual and community needs |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2, 3.2 | • Recognises and interprets both hard copy and on-line texts from both Indigenous and non-Indigenous sources to obtain information about the use of ICT in Indigenous communities |
| Oral | 1.1-1.4, 2.1-2.3, | • Uses effective questioning and active listening techniques to elicit information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | 3.2, 3.3 | • Uses specific language and applies appropriate communication skills to ensure satisfactory interactions with Indigenous community members<br>• Participates in a verbal exchange of ideas/solutions and uses detailed and clear language to clarify and present information |
| Get the work done | 1.3, 2.1, 2.2, 3.1 | • Begins to identify and assemble resources required to undertake the role<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Unit Mapping Information

| **Code and title current version** | **Code and title previous version** | **Comments** | **Equivalent status** |

# Assessment Requirements for ICTICT212 Incorporate Indigenous needs and perspectives into ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify common communication technologies, software applications and hardware solutions used in the local Indigenous community
- identify specific Indigenous customs and practices that impact on the use of information and communications technology (ICT) within the community
- use current communication technologies, software applications and hardware solutions
- consult with relevant Indigenous community members and develop alternative ICT solutions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- provide a summary of operating system, hardware and software products
- discuss ergonomic principles to avoid back, wrist and eye strain
- discuss work health and safety (WHS) principles and responsibilities relating to ICT specific to Indigenous community customs and practices
- identify important indigenous cultural communications attributes.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a PC
- relevant hardware components

© Commonwealth of Australia, 2025 Future Skills Organisation

- WHS standards and organisational policies and procedures
- relevant software applications
- common communication technologies.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT301 Create user documentation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create user documentation that is clear to the target audience and easy to navigate.

It applies to individuals who may work under supervision with responsibility to support others in a range of information and communications technology (ICT) areas.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine documentation standards and requirements | 1.1 Determine documentation requirements<br>1.2 Investigate documentation and industry standards for requirements, and determine appropriate application to user documentation<br>1.3 Design documentation templates using appropriate software and obtain approval from appropriate person |
| 2. Produce user documentation | 2.1 Conduct a review of the subject system, program, network or application in order to understand its functionality |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Gather existing technical, design or user specifications and supporting documentation<br>2.3 Create user documentation based on the template to record the operation of the subject system, program, network or application |
| 3. Review and obtain sign-off | 3.1 Submit user documentation to target audience for review<br>3.2 Gather and analyse feedback<br>3.3 Make changes to user documentation<br>3.4 Submit user documentation to appropriate person for approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 2.1, 2.2, 3.2 | • Identifies and interprets textual, numeric and diagrammatic information with ICT specific syntax, terminology and formatting to determine and understand job requirements |
| Writing | 1.3, 2.3, 3.3 | • Uses correct spelling, grammar and plain English together with the ICT specific terminology in the required format, incorporating, diagrams, icons and syntax related to the subject matter |
| Oral Communication | 1.1, 1.2, 2.1, 3.1, 3.2, 3.4 | • Elicits and evaluates information using effective listening and questioning techniques<br>• Uses simple and relevant language to confirm understanding of requirements, identify the audience, present information and obtain feedback |
| Navigate the world of work | 1.2 | • Takes some personal responsibility for adherence to legal and regulatory requirements |
| Get the work done | 1.1, 1.3, 2.1, 2.2 | • Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Plans routine tasks with familiar goals and |

# Assessment Requirements for ICTICT301 Create user documentation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- produce user documentation that:
  - meets business requirements
  - caters for a diverse audience
  - is clear and easy to navigate.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify content features, including clarity and readability
- discuss document design, web design and usability
- list the functions and features of templates and style guides.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry and include access to:

- documentation standards
- software tools for creating documentation
- information about the system, platform, network or application being documented.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT302 Install and optimise operating system software

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit defines the skills and knowledge required to install, configure and optimise operating system (OS) software to meet business and client needs.

It applies to individuals who may work under supervision and support others using well developed skills in creating solutions through analysis and evaluation of information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine function of operating system | 1.1 Identify and demonstrate understanding of the purposes of operating system<br>1.2 Distinguish between batch system, real-time system and multi-tasking system<br>1.3 Compare and contrast different operating systems and their features<br>1.4 Identify and demonstrate knowledge of the basic functions of operating system, including file system, memory |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | management, process scheduling<br>1.5 Identify and demonstrate management of virtual memory |
| 2. Obtain operating system | 2.1 Contact operating system vendors to obtain technical specifications and system requirements<br>2.2 Identify process and steps required to install and configure the operating system using installation components<br>2.3 Document adjustment recommendations and provide to appropriate person<br>2.4 Determine and apply knowledge of licensing, hardware and security requirements |
| 3. Install, configure and optimise operating system | 3.1 Install, configure and test operating system using installation components and boot-utility options<br>3.2 Use the relevant operating system user interface to correctly configure the installation<br>3.3 Optimise the system to meet organisational requirements<br>3.4 Document the system according to organisational requirements<br>3.5 Install the operating system with minimal disruption to client or users |
| 4. Provide instruction to meet new software requirements | 4.1 Provide one-to-one instruction about changes to the client or users as required<br>4.2 Obtain client evaluation about new system to ensure requirements are met, using appropriate feedback mechanism |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3-1.5, 2.1, 2.2, 2.4, 3.1, 3.2, 4.2 | • Identifies, analyses and evaluates a range of on-line and hard-copy text containing complex, OS specific terminology, and applies the information to the selection, installation, configuration and optimisation of operating systems |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Interprets and comprehends a large range of syntax, diagrams, icons, symbols, text, numbers and letters necessary to install and configure operating systems |
| Writing | 2.3, 3.4 | • Uses the correct spelling and grammar, clear plain English and systems related text to document recommendations and processes, and develop feedback tools |
| Oral Communication | 2.1, 3.5, 4.1, 4.2 | • Elicits and evaluates information using OS related terminology and effective listening and questioning techniques<br>• Uses simple and relevant language to liaise with clients, present information and obtain feedback |
| Navigate the world of work | 2.4 | • Takes some personal responsibility for adherence to legal and regulatory requirements, and seeks clarification when required |
| Get the work done | 1.1-1.5, 2.1, 2.2, 3.1-3.3, 3.5 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency and considering how to link with the work of others<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks |

# Assessment Requirements for ICTICT302 Install and optimise operating system software

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- install, configure and test an operating system to improve system performance with minimum disruption to clients.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- compare current industry accepted hardware and software products
- outline functions and features of operating systems used by the organisation
- explain the installation and configuration of systems software
- explain the architecture of current technical systems
- outline the deployment of current organisational systems
- list organisational requirements for operating system (OS) software
- explain prerequisites for system software installation
- outline set-up and configuration procedures
- list software packages supported by the organisation
- describe system’s current functionality
- list system’s diagnostic software
- outline vendor specifications and requirements for installation.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer where installation may be performed
- OS software and technical documentation
- organisational documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT303 Connect internal hardware components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to acquire, install, configure and evaluate system hardware components according to client and user requirements.

It applies to individuals who work with a degree of self-sufficiency and provide support in a range of information and communications technology (ICT) work areas and activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify, categorise and distinguish between the different types of internal hardware components | 1.1 Identify and categorise the different internal hardware components<br>1.2 Define the purpose and characteristics of the different internal hardware component categories<br>1.3 Distinguish between different types of devices within each internal hardware component category |
| 2. Determine components required | 2.1 Identify and clarify user internal hardware component requirements according to organisational guidelines |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Organise and record user component requirements, pass on to appropriate person for evaluation and vendor selection |
| 3. Obtain components | 3.1 Contact vendors to obtain technical specifications for the proposed components<br>3.2 Assess options and provide recommendations to the appropriate person for final analysis<br>3.3 Obtain components to prepare for installation |
| 4. Install components | 4.1 Develop plans, with prioritised tasks and contingency arrangements, for the installation of selected components with minimum disruption to clients<br>4.2 Liaise with appropriate person to obtain approval for the plans<br>4.3 Install and configure components according to plan, installation procedures and organisational requirements<br>4.4 Test components for error-free performance, using available technology<br>4.5 Identify and resolve identified problems<br>4.6 Test and enhance system performance, using knowledge of the system, to meet organisational benchmarks<br>4.7 Document the installation and configuration process according to organisation guidelines |
| 5. Evaluate modified system | 5.1 Collect client or user feedback and analyse against client requirements<br>5.2 Correct identified shortcomings in the system and record actions |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1, 3.2, 4.3, 5.1 | • Identifies, interprets and evaluates online and hard copy documentation containing complex ICT related terminology, acronyms and concepts |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 2.2, 3.2, 4.1, 4.7 | • Uses correct spelling, grammar and plain English together with the ICT specific terminology and diagrams to convey recommendations and requirements, and complete organisational documentation |
| Oral Communication | 1.1, 2.2, 3.1-3.3, 4.1, 4.2, 5.1 | • Converts highly technical language and terminology into plain English to communicate ideas and plans, and gather feedback from clients<br>• Uses effective listening and questioning techniques and technical terminology to elicit information and make the correct component selection |
| Navigate the world of work | 2.1, 4.3 | • Recognises and follows explicit protocols and meets expectations associated with own role |
| Get the work done | 1.1, 1.3, 2.1, 2.2, 3.2, 3.3, 4.1, 4.4-4.6, 5.1, 5.2 | • Initiates standard procedures when responding to familiar problems within immediate context<br>• Recognises some general design and operating principles of digital tools and uses these to help when modifying systems and when troubleshooting<br>• Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency |

# Assessment Requirements for ICTICT303 Connect internal hardware components

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify and categorise the different types of internal hardware components
- modify system's hardware to meet client requirements
- plan modification of and connect internal hardware components according to vendor and technical specifications
- install components across a variety of situations and account for unexpected contingencies
- evaluate the system on completion.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe areas of the operating system relevant to configuration and testing
- compare current industry accepted hardware and software products
- outline environmental considerations in e-waste disposal
- outline organisational guidelines and organisational requirements with regard to safety, recycling and component installation
- outline system's diagnostic software and current functionality
- interpret vendor specifications and requirements for component installation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a personal computer and internal hardware components for installation
- current industry standard performance testing software
- documents detailing organisational guidelines and requirements
- technical manuals and tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT304 Implement system software changes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to implement system software changes and to hand over the modified system to the client's operational area.

It applies to individuals working in support roles who are required to update operating systems on client computers with the latest technology fixes, working under minimum supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine system changes required | 1.1 Determine and record required changes to system<br>1.2 Ensure documentary evidence exists to support changes and evaluate changes required<br>1.3 Complete documentation required according to maintenance methodologies<br>1.4 Clarify and confirm nature of the changes with the client<br>1.5 Obtain technical data from reliable sources and request |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | other resources that may be required to complete the changes |
| 2. Carry out system changes | 2.1 Plan the procedure to effect intended changes<br>2.2 Consult with colleagues and users involved in the proposed changes and agree a mutually acceptable timeline and method of implementation<br>2.3 Copy initialisation or configuration files prior to implementation<br>2.4 Create a roll-back path in the event of failure<br>2.5 Ensure changes required in software are made according to project or organisational guidelines<br>2.6 Test and verify that the changes have been made according to implementation guides and organisational standards |
| 3. Present changes to client | 3.1 Demonstrate changes to the client and explain the impact of these changes<br>3.2 Work towards making these changes acceptable to the client if changes are rejected, or making further modifications if required<br>3.3 Update documentation and repositories according to standards and update modifications made to the change management system |
| 4. Perform handover to client | 4.1 Update documentation and client procedures to reflect changes made<br>4.2 Secure sign-off of acceptance documents by client<br>4.3 Facilitate handover of modified system to client's operational area |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.5 | • Identifies and interprets hard copy, online and computer generated text, numerical and diagrammatic information with systems |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | software specific terminology<br>• Reviews a range of organisational documentation to identify relevant information relating to the requirements of both the job role and organisation |
| Writing | 1.1, 1.3, 3.3, 4.1 | • Uses correct spelling and grammar, plain English and, when necessary, systems related text and terminology to complete documentation and update client procedures |
| Oral Communication | 1.1, 1.2, 1.4, 1.5, 2.1, 2.2, 3.1, 3.2, 4.2, 4.3 | • Uses effective listening and questioning techniques and systems related terminology to elicit information about the systems and determine the job requirements<br>• Converts highly technical language and terminology to plain English to communicate changes to, and gather feedback from, the client(s) |
| Navigate the world of work | 2.5, 2.6, 3.3 | • Recognises and follows explicit protocols and meets expectations associated with own role |
| Get the work done | 1.1, 2.1-2.4, 2.6, 3.2, 3.3, 4.3 | • Initiates standard procedures when responding to familiar problems within immediate context<br>• Recognises some general design and operating principles of digital tools and uses these to help when modifying systems and when troubleshooting<br>• Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency |

# Assessment Requirements for ICTICT304 Implement system software changes

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- evaluate, document and implement changes to the system with minimum disruption to the system and client users
- hand over the project to the client with instructions and updated documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe business scheduling requirements
- identify change control procedures
- describe client business domain
- discuss current industry accepted hardware and software products
- discuss emerging standards for data and voice communications
- outline the system's current functionality
- discuss the features of the system under modification
- outline the organisational policy and procedures with regard to system changes
- recognise vendor software services with regard to system changes.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a computer
- system software currently used in industry
- technical manuals and tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT305 Identify and use current industry specific technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify, research and apply industry specific technologies to ensure that the quality of the entire business process is maintained at the highest level possible.

It applies to individuals who work under minimal supervision and support information technology activities in the workplace across a wide range of information and communications technology (ICT) areas, including technical support, network administration, web technologies, software applications and digital media technologies.

Check the Implementation Guide Companion Volume for details about licensing, legislative or certification requirements.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to use industry specific technologies | 1.1 Identify technologies specific to an industry sector<br>1.2 Acquire and use the industry specific technologies<br>1.3 Identify, classify and use industry specific technologies where appropriate for the benefit of the organisation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Use industry specific technology to assist in solving organisational problems | 2.1 Conduct testing of industry specific technology<br>2.2 Use features and functions of industry specific technology within an organisational context<br>2.3 Demonstrate depth of knowledge of the enabling technologies to an accepted industry standard<br>2.4 Access and use sources of information relating to the industry specific technology |
| 3. Evaluate industry specific technology performance | 3.1 Evaluate industry specific technology for performance, usability and benefit to the organisation<br>3.2 Determine environmental considerations involved with using the technology<br>3.3 Seek feedback from users, where appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 1.1-1.3, 2.3, 2.4 | • Investigates, evaluates and applies information from a range of complex and technical texts to expand own knowledge and identify industry specific technologies that will benefit the organisation |
| Reading | 1.1, 1.3, 2.1, 2.4, 3.2, 3.3 | • Identifies and interprets technical online and hard copy documentation containing complex terminology and diagrams to identify industry specific technologies that will benefit the organisation, and to determine environmental considerations |
| Oral Communication | 1.1-1.3, 2.4, 3.1-3.3 | • Elicits information and feedback by using effective listening and questioning techniques to identify and evaluate industry specific technologies<br>• Uses clear, easy-to-understand language, translating industry specific terminology into plain English when talking to users and when necessary |
| Navigate the world of work | 3.2 | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1-1.3, 2.1-2.3, 3.1 | • Recognises some general design and operating principles of digital tools<br>• Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency<br>• Initiates standard procedures when responding to familiar problems within immediate context |

# Assessment Requirements for ICTICT305 Identify and use current industry specific technologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify new and emerging industry specific technologies
- use features and functions of identified industry specific technologies to an industry standard level
- evaluate the performance and usability of the technology.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss current technology trends and directions in information and communications technology (ICT) and specifically the major industry technology standards used in the specified ICT area
- describe vendor product directions relating to the specified ICT area
- describe the general features, capabilities and application of current industry hardware and software products
- outline information gathering techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a site where industry specific technologies may be used
- industry specific technologies currently used in industry

© Commonwealth of Australia, 2025 Future Skills Organisation

- documents detailing work health and safety (WHS) standards, environmental guidelines and organisational requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT306 Migrate to new technology

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to research, acquire, evaluate and apply new technology to improve the organisation’s performance.

This unit applies to individuals who have achieved a degree of autonomy as information and communications technology (ICT) users and support staff engaged in ongoing review and research to identify and apply new technology or techniques to improve aspects of the organisation's activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to use new technology | 1.1 Review organisation’s goals and activities<br>1.2 Research new operational technologies that will advance the organisation’s goals and activities<br>1.3 Prepare evaluation checklist<br>1.4 Evaluate and select the most appropriate technologies<br>1.5 Acquire selected technology |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.6 Identify and use new or upgraded equipment where appropriate for the benefit of the organisation |
| 2. Use technology to assist in solving organisational problems | 2.1 Conduct testing of new or upgraded equipment<br>2.2 Use features and functions of new or upgraded equipment and software within the organisation<br>2.3 Access and use sources of information relating to new or upgraded equipment |
| 3. Evaluate new or upgraded technology performance | 3.1 Evaluate new or upgraded equipment for performance and usability against work health and safety (WHS) standards and evaluation criteria<br>3.2 Determine environmental considerations for new or upgraded equipment<br>3.3 Seek feedback from users, where appropriate<br>3.4 Document new technology in a method consistent with organisational guidelines |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 1.1, 1.3, 1.4, 2.3 | • Investigates, evaluates and applies information from a range of complex and technical texts to expand own knowledge and identify new technologies that will benefit the organisation |
| Reading | 1.2, 1.4, 2.3, 3.1-3.3 | • Identifies and interprets technical online and hard copy documentation containing complex terminology and diagrams to identify new technologies that will benefit the organisation, and to determine organisational, WHS and environmental considerations |
| Writing | 1.3, 3.3, 3.4 | • Uses appropriate language and document structure to clarify evaluation criteria and enhance objectivity when developing checklists<br>• Uses correct grammar, sentence structure and, as much as possible, plain English in all documentation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | developed<br>• Uses appropriate questioning strategies, avoiding loaded or leading questions, when developing feedback gathering documentation |
| Oral Communication | 1.1, 1.2, 1.4, 2.3, 3.3 | • Elicits information and feedback by using effective listening and questioning techniques, and language appropriate to the audience and subject matter to identify and evaluate new technologies<br>• Uses clear, easy-to-understand language, translating technical terminology into plain English when talking to users |
| Navigate the world of work | 3.1 | • Appreciates the implications of legal and regulatory responsibilities related to own work and is beginning to recognise some general legal principles across work contexts |
| Get the work done | 1.3, 1.4-1.6, 2.1, 2.2, 3.2 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for efficiency<br>• Understands the purposes, specific functions and key features of common digital systems and tools<br>• Tests and operates common digital tools and systems to effectively complete routine tasks<br>• Takes responsibility for the outcomes of routine decisions related directly to own role |

# ICTICT307 Customise packaged software applications for clients

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to analyse, design, implement and review the customisation of packaged software applications, using simple programming constructs.

It applies to individuals who have achieved a degree of autonomy as information and communications technology (ICT) users and support personnel for software application activities in the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Analyse customisation requirements | 1.1 Determine and document client requirements in a requirement specifications file in line with organisational requirements and security requirements<br>1.2 Confirm that projected specifications meet client requirements<br>1.3 Determine level of documentation necessary to meet client requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Develop customisation | 2.1 Design software applications, taking into account system limitations and client needs<br>2.2 Customise software applications using simple programming constructs, conforming to organisational requirements<br>2.3 Obtain feedback from the client following client testing of the customised software applications<br>2.4 Make further changes to software applications to meet client requirements<br>2.5 Document the changes |
| 3. Provide support for customised application | 3.1 Produce documentation for client<br>3.2 Produce help desk documentation for ongoing support<br>3.3 Obtain clients' evaluation and feedback to ensure that their requirements have been met |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 2.2, 3.3 | • Identifies and interprets a variety of hard copy and online technical information to identify organisational requirements and clarify client requirements |
| Writing | 1.1, 1.3, 2.1, 2.2, 2.4, 2.5, 3.1, 3.2 | • Uses correct spelling and grammar, plain English and specific terminology to produce documents to organisational guidelines as required by the job role<br>• Uses the appropriate programming syntax and conventions to perform job role |
| Oral Communication | 1.1-1.3, 2.3, 3.3 | • Elicits and evaluates information using effective listening and questioning techniques<br>• Uses simple and relevant language to confirm understanding of requirements, liaise with the client and obtain feedback |
| Get the work | 1.1, 1.3, 2.1-2.4 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and |

# Assessment Requirements for ICTICT307 Customise packaged software applications for clients

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- interpret and document client requirements to customise software applications
- design software applications
- analyse, implement and review customised software applications
- produce documentation for the client
- obtain feedback from client to ensure requirements have been met.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the general features and capabilities of current industry accepted hardware and software products
- discuss functions and features of software applications suitable for client
- discuss functions and features of the operating system (OS)
- identify information and communications technology (ICT) structure and system infrastructure
- describe organisational policy and procedures relating to customising software
- identify organisational security procedures.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

# ICTICT308 Use advanced features of computer applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use computer applications employing advanced features. It involves manipulating data and accessing support resources to solve routine problems.

It applies to individuals who have achieved a degree of autonomy as advanced information and communications technology (ICT) users, and support information technology activities in software applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Manipulate data | 1.1 Employ advanced features of applications in the preparation and presentation of data<br>1.2 Transfer data between applications, linking and embedding related data files as required<br>1.3 Create and employ objects, macros and templates for routine activities |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Use shortcuts and features to increase personal productivity |
| 2. Access and use support resources | 2.1 Solve routine problems using support resources<br>2.2 Use online help to overcome difficulties with applications<br>2.3 Solve problems with manuals and training booklets<br>2.4 Access and apply technical support for system problems, using troubleshooting results and alert messages |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 2.1-2.4 | • Identifies and interprets a variety of hard copy, online and software generated technical information containing software specific language, syntax and code to apply features and functions of applications to their fullest extent and to solve problems |
| Oral Communication | 2.1, 2.4 | • Discusses and resolves problems using technical terms and language, and effective listening and questioning techniques |
| Get the work done | 1.1-1.4, 2.1-2.4 | • Understands key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology |

# Assessment Requirements for ICTICT308 Use advanced features of computer applications

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use at least three computer applications employing advanced features and import and export capacities for efficiency and productivity purposes
- solve routine problems using support resources.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the basic features and functions of relevant operating systems software and system tools
- outline relevant vendor product directions in computer applications
- identify commonly available vendor applications and their features.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a site where advanced features of computer applications may be used
- computer applications currently used in industry
- documents or information containing data suitable to demonstrate advanced features of computer applications
- support resources, including online, manuals and training booklets.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT401 Determine and confirm client business requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to determine client business system requirements and verify the accuracy of the information gathered.

It applies to information and communications technology (ICT) personnel who are required to analyse client expectations and needs, and recommend business system changes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine context of business need or problem | 1.1 Establish the business problem to be investigated, including determining system boundaries, scope and the development methodology to be used<br>1.2 Choose information gathering method and develop questions appropriate to business problem<br>1.3 Develop objectives and identify expected outcomes to be achieved<br>1.4 Document the business problem |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Submit documentation to appropriate person for substantiation |
| 2. Gather information | 2.1 Use chosen information gathering method to identify clients of the system and problems they encounter<br>2.2 Record client responses<br>2.3 Analyse gathered information to identify new system requirements and establish problem specifications<br>2.4 Document system requirements and problems<br>2.5 Analyse physical requirements and identify changes required to implement new systems |
| 3. Confirm system specifications | 3.1 Check documentation to ensure it meets client business needs<br>3.2 Submit documentation to the client for verification of accuracy and approval<br>3.3 Make changes to the documentation as necessary and indicated by the client<br>3.4 Submit documentation to client for final approval or sign-off |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.3, 2.5, 3.1 | • Identifies, analyses and evaluates information from a variety of sources containing complex systems related terminology to determine system performance requirements and establish solutions |
| Writing | 1.2-1.4, 2.2, 2.4, 3.3 | • Uses the correct spelling and grammar, plain English and, when necessary, systems related text and terminology to develop information gathering tools and document recommendations |
| Oral Communication | 1.1, 2.1, 2.5, 3.2, 3.4 | • Uses plain English, effective listening and questioning techniques and, where necessary, systems related terminology to elicit information |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | • Uses plain English and relevant terminology to liaise with clients, present information and obtain feedback |
| Get the work done | 1.1-1.3, 2.1, 2.3, 2.5 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements so work is undertaken methodically<br>• Recognises and takes responsibility for addressing predictable and some less predictable problems in familiar work contexts<br>• Understands the purposes, specific functions and key features of common digital systems and tools to provide current advice on systems and data gathering products |

# Assessment Requirements for ICTICT401 Determine and confirm client business requirements

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- use investigative techniques to obtain information and document the business system problem
- produce a clear statement of business expectations and needs, including critical business requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a variety of data gathering techniques
- describe areas related to the client business in detail
- interpret functional organisational charts
- outline physical requirements of the client's business, taking into account current system functionality, geography, environment, client user and cost constraints
- describe products related to data capture
- discuss the role of stakeholders and the degree of stakeholder involvement.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- current business needs
- a client expectations brief

© Commonwealth of Australia, 2025 Future Skills Organisation

- business objectives
- systems, data gathering and appropriate software products.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT402 Determine project specifications and secure client agreement

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop agreed acceptance criteria for information and communications technology (ICT) projects.

It applies to individuals who are competent in a wide range of general ICT technologies and support small to medium enterprises (SMEs) that require broader rather than more specialised ICT support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine milestones and quality attributes with client | 1.1 Interview client to determine project deliverables and acceptance criteria<br>1.2 Document project milestones and associated deliverables in measurable terms, taking into account constraints<br>1.3 Determine and document criteria to evaluate each deliverable |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.4 Negotiate and document quality standards with client<br>1.5 Confirm project direction with appropriate person |
| 2. Formulate metrics and milestones | 2.1 Define the units of measurement (metrics) that will be used in the project, including consideration of project milestones, timeframe and costs<br>2.2 Schedule the measurement of project milestones and associated deliverables<br>2.3 Document the process for analysing variances and their impact on the project<br>2.4 Schedule quality reviews into project plan |
| 3. Obtain client agreement to acceptance criteria | 3.1 Obtain client agreement for project delivery dates<br>3.2 Communicate acceptance criteria clearly and coherently to the client<br>3.3 Obtain client agreement to acceptance criteria and anticipated timeframes for the project |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Writing | 1.2-1.4, 2.2-2.4 | • Uses plain English; appropriate grammatical structures and specialised terminology; diagrams and flow charts; logical document structures and formatting relevant to the job role and organisation to record project deliverables and benchmarks<br>• Enters text, data and financial information into project planning tools to produce output for the project plan that is appropriate to the audience |
| Oral Communication | 1.1, 1.4, 1.5, 3.1-3.3 | • Uses open questioning and effective listening techniques to elicit information, clarify requirements and conduct effective negotiations<br>• Uses appropriate vocabulary, grammatical structure, voice tone, body language and reflective responses to negotiate deliverables, present project plan and gain consensus |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Numeracy | 1.1-1.4, 2.1-2.3 | • Applies mathematical calculations and financial functions relating to timelines and project budgets |
| Interact with Others | 1.1, 1.4, 1.5, 3.1-3.3 | • Identifies and takes steps to follow accepted communication practices and protocols<br>• Uses a limited range of accepted practices for communicating in a work environment |
| Get the work done | 1.1-1.3, 1.5, 2.1, 2.2, 2.4 | • Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to identify relevant information, including strategic initiatives and resources<br>• Considers purpose, needs and limitations when selecting digital devices and applications for different tasks<br>• Uses digital technology for basic reading, recording and searching information, and for communications following routine procedures and security requirements |

# Assessment Requirements for ICTICT402 Determine project specifications and secure client agreement

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop acceptance criteria for a project
- document acceptance criteria according to organisational standards
- present the document to stakeholders and obtain approval.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business area
- outline project planning methodologies and tools
- identify and apply quality processes
- interpret system development plans
- identify technical tools and their use relating to task list when formulating metrics and milestones
- explain the theory and purpose of metrics.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- client requirements
- technical specifications

© Commonwealth of Australia, 2025 Future Skills Organisation

- organisational and process goals
- critical business requirements
- predefined high-level acceptance criteria
- project deliverables
- future organisational business processes test plan
- project budget timeframe.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT403 Apply software development methodologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to apply traditional and non-traditional systems development methodologies.

It applies to individuals in a senior development role who exercise discretion and judgement to create solutions using appropriate technical knowledge and analysis skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine and select appropriate methodology for a given activity | 1.1 Determine and define subject activity<br>1.2 Define criteria for selection of development methodology<br>1.3 Review and evaluate a range of traditional and non-traditional system development methodologies<br>1.4 Select appropriate system development methodology to suit the activity |
| 2. Apply the selected | 2.1 Create an initial project plan to guide developmental |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| development methodology | processes<br>2.2 Identify appropriate task types according to development methodology<br>2.3 Clearly describe and articulate task types<br>2.4 Define appropriate control structures that need to be created during task type execution<br>2.5 Associate each task type with a set of input and output parameters |
| 3. Adjust project to suit appropriate methodology | 3.1 Identify resources to support methodology selection<br>3.2 Apply appropriate methodology to solve tasks<br>3.3 Monitor project flow and record effectiveness against project plan<br>3.4 Review and document opportunities for improvement, lessons learned and recommendations for future projects<br>3.5 Submit results to appropriate person for approval |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.3, 3.1, 3.4 | • Identifies, analyses and evaluates a range of textual information containing complex systems development specific terminology, syntax and diagrams, and applies the information to the task |
| Writing | 2.1, 2.3, 3.3, 3.4 | • Uses the correct spelling and grammar, and technical terminology to develop project plans, document recommendations, processes and reports in a format suitable to the audience |
| Oral Communication | 1.1, 1.3, 2.3, 3.1-3.4 | • Elicits and evaluates information using project related terminology and effective listening and questioning techniques<br>• Uses plain English and, where necessary, project related terminology to liaise with clients, present information and obtain feedback<br>• Uses specific and complex systems development |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | terminology to liaise with co-workers |
| Get the work done | 1.1-1.4, 2.2, 2.4, 2.5, 3.1-3.4 | • Uses familiar digital systems and tools to access, organise, analyse and display information relevant to the role<br>• Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps, reflecting an awareness of time and resource constraints and the needs of others<br>• Reflects on the appropriateness and effectiveness of project methodologies and identifies some key principles that may be relevant in future situations |

# Assessment Requirements for ICTICT403 Apply software development methodologies

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- develop a project plan
- apply a methodology to a project
- produce documentation as required by the chosen methodology.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe client business domain and organisational requirements
- explain current project requirements
- explain role of stakeholders and the degree of stakeholder involvement in the development process
- describe at least two current system development methodologies.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- design specifications and current methodologies
- organisational standards for documentation and version control
- detailed user requirements document, including model and scope.

© Commonwealth of Australia, 2025 Future Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT404 Use online learning tools

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to use the internet as a resource to acquire knowledge and skills to meet client requirements.

It applies to individuals who use the internet to maintain currency of workplace skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify learning requirements | 1.1 Identify learning requirements and skill gaps<br>1.2 Seek advice from relevant personnel on learning requirements and skill gaps<br>1.3 Identify opportunities for undertaking learning development activities<br>1.4 Develop learning plan |
| 2. Research learning tools available online | 2.1 Identify existing online learning tools<br>2.2 Research and evaluate other relevant online learning tools |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 3. Undertake learning | 3.1 Implement learning plan<br>3.2 Identify opportunities in the workplace to apply new learning<br>3.3 Follow coaching or mentoring advice in work activities |
| 4. Monitor learning effectiveness | 4.1 Determine suitable assessment mode<br>4.2 Review outcomes of assessment<br>4.3 Undertake peer assessment<br>4.4 Assess feedback from peer assessment, individuals and colleagues<br>4.5 Identify further learning requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 1.1, 1.2, 1.4, 3.1, 3.3, 4.3 | • Identifies future skills and knowledge needs by seeking the opinions of others<br>• Investigates and evaluates information from a range of sources to select learning development activities to meet skills gaps and future learning needs<br>• Uses a range of learning mediums, including coaching, mentoring, online and peer-to-peer to manage the learning process, and ensures learning is reinforced by application |
| Reading | 1.1, 1.3, 2.1, 2.2, 3.2, 4.1, 4.2, 4.4, 4.5 | • Identifies, analyses and compares information gathered from a large range of both online and hard copy texts to determine current and future learning needs, and to develop and execute a learning plan |
| Writing | 1.4, 2.2, 3.1, 4.3 | • Uses appropriate and clear language, including clear referencing and web links, to document findings, develop a learning plan, undertake assessment and complete learning |
| Oral Communication | 1.2, 3.3, 4.3, 4.4 | • Elicits and evaluates information using effective listening and questioning techniques to identify skills gaps and future skills needs, and undertake |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | the learning, assessment and feedback process |
| Interact with Others | 1.2, 3.3, 4.3 4.4 | • Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts<br>• Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers<br>• Cooperates with others and contributes to work practices where joint outcomes are expected and deadlines are to be met |
| Get the work done | 2.1, 3.1, 3.2, 4.1, 4.2 | • Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Takes responsibility for defining key aspects of own workload and managing own learning related activities<br>• Reflects on the appropriateness and effectiveness of assessment outcomes and identifies some key principles that may be relevant in future situations |

# Assessment Requirements for ICTICT404 Use online learning tools

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify current and future skills needs
- develop and implement learning plan and assessment
- use online learning tools to acquire knowledge and skills to meet client requirements
- maintain currency of skills within the workplace.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the current and future industry trends
- identify and describe relevant legislation and statutory requirements
- describe organisational training policies, plans and procedures
- identify and apply a range of online training tools
- explain the principles and techniques of measuring performance and self-assessment
- identify methods to recognise and prioritise required learning needs
- describe the systems and processes used to direct learning
- identify relevant competency standards and assessment relative to learning needs.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to the internet to use online learning tools.

# ICTICT405 Develop detailed technical design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to assist in the development of a detailed technical design.

It applies to individuals performing systems design tasks who are required to review and update technical design documents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Assist in selecting technical design features | 1.1 Select and revise design model based on iteration and design changes<br>1.2 Incorporate outstanding design points according to acceptance criteria<br>1.3 Distribute reports identifying changes and implications to appropriate person for review |
| 2. Contribute to design review | 2.1 Compare design against requirements and fix as necessary |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Confirm design with appropriate person<br>2.3 Use feedback mechanisms to gather information on design changes from client<br>2.4 Incorporate design changes where required |
| 3. Contribute to development of program specifications | 3.1 Implement modules by incremental development techniques<br>3.2 Identify user authority for each module<br>3.3 Prepare detailed specifications of module implementation for each module that will not be incrementally built<br>3.4 Prepare documentation according to requirements of the project |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.3 | • Identifies, analyses and evaluates a range of online and hard copy text containing complex systems design terminology, syntax and diagrams, and applies the information to the task |
| Writing | 1.1, 1.2, 2.3, 2.4, 3.3, 3.4 | • Uses correct spelling and grammar, plain English, systems design related terminology and diagrams to obtain feedback, document recommendations and prepare final project specifications |
| Oral Communication | 1.1, 1.3, 2.2, 2.3 | • Elicits and evaluates information using project related terminology and effective listening and questioning techniques<br>• Uses plain English and, where necessary, project related terminology to liaise with clients, present information and obtain feedback |
| Interact with Others | 1.3, 2.2, 2.3 | • Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts<br>• Uses a range of strategies to establish a sense of connection and build rapport with clients and co workers |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Get the work done | 1.1-1.3, 2.1, 2.4, 3.1-3.3 | • Uses familiar digital systems and tools to incorporate required changes to model<br>• Applies formal processes when developing strategic initiatives, and plans tasks with logically sequenced steps<br>• Initiates standard procedures when responding to familiar problems within immediate context<br>• Uses familiar digital technologies and systems to access information, search and enter data and code, present information and communicate with others, cognisant of data security and safety |

# Unit Mapping Information

# Assessment Requirements for ICTICT405 Develop detailed technical design

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- define the client business domain and client's critical business functions and processes
- design and prepare a clear and best-fit technical design for a set project, incorporating:
  - changes to design model based on user requirements
  - detailed specification of modules
- produce updated documentation to reflect changes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain various life cycle options
- describe design fundamentals and refinement
- discuss design quality metrics.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- requirements model
- business requirements
- project deliverables
- acceptance criteria

© Commonwealth of Australia, 2025 Future Skills Organisation

- current ICT blueprint.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT406 Build a graphical user interface

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to design, build and test a graphical user interface (GUI) to specification.

It applies to individuals employed as programmers in a variety of fields who provide information and communications technology (ICT) support in small to medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine specification of GUI | 1.1 Review GUI requirements<br>1.2 Review organisational standards for GUI<br>1.3 Determine the back-end for interfacing with the GUI<br>1.4 Determine the functionality of the GUI, including back-end interface<br>1.5 Determine the application development language for writing the GUI |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.6 Determine type and level of documentation required |
| 2. Design GUI to specification | 2.1 Design the GUI incorporating the required functionality<br>2.2 Document design outcomes |
| 3. Build GUI to specification | 3.1 Build the GUI with the required functionality in the determined language, using the toolkit's classes or widgets, containers and other pertinent features |
| 4. Test and document GUI to meet specification | 4.1 Test GUI for overall functionality according to requirements<br>4.2 Iterate GUI design or build until test results meet requirements<br>4.3 Produce technical documentation for the GUI |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.4, 1.6 | • Identifies and interprets a range of online and hard copy text containing complex ICT and programming specific terminology<br>• Interprets and comprehends a large range of syntax, diagrams, icons, symbols, text, numbers and letters necessary to develop a GUI |
| Writing | 2.1, 2.2, 3.1, 4.2, 4.3 | • Uses correct spelling and grammar, plain English and specific terminology to produce documents to organisational guidelines as required by the job role<br>• Uses the appropriate programming syntax and conventions to develop the GUI<br>• Uses plain English, clear labels and terminology appropriate for the user on the actual interface display |
| Oral Communication | 1.1-1.4, 1.6 | • Elicits and evaluates information using effective listening and questioning techniques<br>• Uses simple and relevant language to confirm understanding of requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.2 | • Recognises and follows explicit protocols and meets expectations associated with own role |
| Get the work done | 1.1, 1.3-1.6, 2.1, 3.1 | • Develops plans to manage relatively complex tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Recognises and anticipates an increasing range of familiar problems, their symptoms and causes, and implements contingency plans<br>• Takes responsibility for the outcomes of routine decisions related directly to own role<br>• Considers purpose, needs and limitations when selecting devices and applications for different tasks |

# Assessment Requirements for ICTICT406 Build a graphical user interface

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- build a graphical user interface (GUI) to requirements
- demonstrate a GUI in concept and compiled form, using appropriate development tools to assist GUI construction
- develop appropriate documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain and apply object oriented programming concepts
- identify the system properties
- describe the features of application programming interface (API)
- identify the issues relating to copyright and intellectual property
- discuss code of practice relevant to the computer industry
- discuss the Commonwealth and State privacy and information access legislation applicable to the job role.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- GUI requirements
- organisational standards

© Commonwealth of Australia, 2025 Future Skills Organisation

- a development environment.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT407 Maintain website information standards

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to publish new content and establish and maintain the accuracy and usability of current content on client websites. It applies to individuals working in the web area who provide support in small to medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare and publish organisational content and information required by industry for website | 1.1 Validate organisational information and seek approval prior to uploading to a website<br>1.2 Ensure specific details of the organisation are made available on the website<br>1.3 Ensure privacy, security and liability statements are correctly displayed on the website and conform to legislative requirements and web development standards<br>1.4 Develop and make available organisational information |
| 2. Provide navigation links and payment | 2.1 Ensure website users have navigation links to access appropriate information, regardless of where they are located |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| information | within the website<br>2.2 List various payment options on the website |
| 3. Ensure disclosure of policies and services | 3.1 Present a clear website statement outlining charges<br>3.2 Present warranty information on appropriate screen, prior to finalising orders<br>3.3 Provide after-sales support and services information, and direct the website user to its location<br>3.4 Ensure website contains policies regarding cancellations, returns and refunds, and associated conditions |
| 4. Communicate product or service conditions and notifications | 4.1 Ensure appropriate screens display limitations and legislative restrictions on who or where goods and services will be sold or shipped to<br>4.2 Ensure the website provides facilities to confirm orders and cancellations as quickly as possible<br>4.3 Ensure website provides facilities to communicate to client with minimum delay, details of orders, hold-ups or errors with ordered or cancelled goods or services, information about changed costs or adjustments, and expected date of arrival |
| 5. Ensure customer service support | 5.1 Explain service standards and make them available to all potential and current website users<br>5.2 Ensure website users have a method for providing feedback on aspects of information held on the website<br>5.3 Ensure acknowledgements of complaints are transmitted to website users lodging complaints, with a description of what will take place within the organisation to address issues raised |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1 | • Reviews a range of documentation of varying quality to identify information relating to the organisation, organisational responsibilities and legislative requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Writing | 1.2- 1.4, 2.2, 3.1–3.4, 4.1–4.3, 5.1–5.3 | • Uses correct spelling and grammar, plain English, a consistent writing style and industry specific terminology to produce web content to organisational guidelines and to web development standards<br>• Uses the appropriate syntax and conventions to upload content onto the web and modify existing web content |
| Oral Communication | 1.1, 1.4 | • Uses simple and relevant language and effective listening and questioning techniques to develop and validate organisational information |
| Navigate the world of work | 1.3 | • Takes personal responsibility for adherence to legal/regulatory responsibilities relevant to own work context |
| Get the work done | 1.2-1.4, 2.1, 3.1-3.4, 4.1-4.3, 5.1-5.3 | • Uses familiar digital systems and tools to access websites, publish on a website and write hypertext markup language (HTML) code<br>• Applies methodical processes to collect and evaluate organisational information for web publication |

# Assessment Requirements for ICTICT407 Maintain website information standards

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- apply current programming practices in the preparation and publishing of the organisation web site
- comply with organisation, legislative and industry requirements
- develop policies applicable to cancellations, returns and refunds
- display a site accessible to a variety of customers via electronic communication
- develop and modify information to meet the requirements for an effective and efficient e-commerce interaction.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline consumer protection legislation
- identify content features, including clarity and readability
- discuss document design, web design and usability
- interpret electronic commerce modelling language
- discuss information architecture principles
- discuss instructional design principles
- identify obligations of merchants and service providers
- identify organisational requirements
- outline privacy legislation.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a range of organisational policies, procedures and guidelines
- customer service manuals and general data
- appropriate organisational structures
- information standards for legislative and organisational requirements
- software and web development tools.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT408 Create technical documentation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to create technical documentation that is clear to the target audience and easy to navigate.

It applies to individuals working as technical writers, designers, developers and support staff who are required to produce technical support documents of their work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Identify and analyse documentation requirements and client needs | 1.1 Consult with client to identify documentation requirements<br>1.2 Interpret and evaluate documentation requirements and confirm details with client<br>1.3 Investigate industry and documentation standards for requirements<br>1.4 Define and document the scope of work to be produced<br>1.5 Consult with client to validate and confirm the scope of work |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Design documentation | 2.1 Identify information requirements with reference to layout and document structure<br>2.2 Create document templates and style guides consistent with information requirements<br>2.3 Conduct a review of the system in order to understand its functionality<br>2.4 Extract content that meets information requirements according to copyright restrictions<br>2.5 Develop the structure of the technical documentation, giving focus to the flow of information, style, tone and content format<br>2.6 Validate the technical documentation structure with the client |
| 3. Develop documentation | 3.1 Write technical documentation based on the template and scope of work using the information gathered<br>3.2 Translate technical terminology into plain English where appropriate<br>3.3 Apply content format and style according to documentation standards and templates |
| 4. Evaluate and edit documentation | 4.1 Submit technical documentation to appropriate person for review<br>4.2 Gather and analyse feedback<br>4.3 Incorporate alterations into the technical documentation<br>4.4 Edit the technical documentation for technical and grammatical accuracy |
| 5. Prepare documentation for publication | 5.1 Check that the completed technical documentation meets client requirements and scope of work<br>5.2 Submit the technical documentation to appropriate person for approval<br>5.3 Prepare the technical documentation for publication and distribution using appropriate channels |

© Commonwealth of Australia, 2025 Future Skills Organisation

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 2.3, 2.4, 4.2, 4.4, 5.1 | • Identifies and evaluates organisational documentation and standards, and a range of online and hard copy text containing technical project related terminology and diagrams, then applies the information to the development of appropriate technical documentation<br>• Interprets and comprehends a large range of diagrams, icons, and computer generated text |
| Writing | 1.4, 2.2, 2.5, 3.1-3.3, 4.3, 4.4, 5.3 | • Uses correct spelling and grammar, plain English and specific terminology relevant to the project<br>• Uses organisational naming conventions, terminology, style and format to develop technical documents to organisational standards |
| Oral communication | 1.1, 1.3-1.5, 2.1, 2.3, 2.6, 4.1, 4.2 | • Elicits and evaluates information using effective listening and questioning techniques<br>• Uses simple and relevant language to confirm understanding of requirements, present information and obtain feedback |
| Interact with others | 5.2 | • Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role |
| Navigate the world of work | 1.3, 2.4 | • Appreciates the implications of legal and regulatory responsibilities related to own work and is beginning to recognise some general legal principles applicable across work contexts |
| Get the work done | 1.4, 2.1, 2.2, 2.5, 3.3, 4.2 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency<br>• Uses familiar digital systems and tools to access, organise, analyse and display information relevant to role<br>• Automatically implements standard procedures for routine decisions |

# Assessment Requirements for ICTICT408 Create technical documentation

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- establish customer needs
- design and develop technical documentation, such as system, procedures, training material and user guides, incorporating appropriate standards
- update document with client feedback
- prepare documentation for publication.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe content features, such as clarity and readability
- outline the principles of document design, web design and usability
- explain the functions and features of templates and style guides
- explain instructional design principles
- list organisational policies, procedures and standards that cover document design.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- technical specifications
- documentation standards

© Commonwealth of Australia, 2025 Future Skills Organisation

- organisational resources and documentation
- information about system, platform, network or application being documented
- relevant standards
- appropriate word processing software.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT409 Develop macros and templates for clients using standard products

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to develop macros and templates for clients using industry recognised software applications.

It applies to individuals working in an office environment who achieve a degree of self-sufficiency as an advanced information and communications technology (ICT) user, and who support software applications activities in the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine macro or template requirement | 1.1 Determine client requirements in line with organisational guidelines<br>1.2 Develop macro or template specification<br>1.3 Confirm that macro or template specification meets client's needs and operational guidelines<br>1.4 Determine documentation requirements |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Develop macro or template for client | 2.1 Develop macro or template to specification using industry recognised software applications<br>2.2 Demonstrate macro or template to client and obtain feedback<br>2.3 Amend macro or template as required by client<br>2.4 Update macro or template specification |
| 3. Provide client support for macro or template | 3.1 Document support and instruction requirements<br>3.2 Provide documentation to client help desk for future support |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.4 | • Reviews a range of written and online texts to identify relevant organisational guidelines and requirements relating to the job role |
| Writing | 1.2, 1.3, 2.1, 2.3, 2.4, 3.1 | • Uses the appropriate macro syntax and conventions to develop macros<br>• Uses correct spelling and grammar; and organisational guidelines for terminology, address format, logos and document structure to develop templates<br>• Uses correct spelling and grammar, plain English and, when necessary, technical terminology to comply with documentation requirements and develop support documentation |
| Oral Communication | 1.1, 1.3, 1.4, 2.2, 3.2 | • Uses simple and relevant language and effective listening and questioning techniques to determine client needs and obtain feedback<br>• Uses technical language suitable to the job role when liaising with help desk personnel |
| Interact with others | 3.2 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 1.1, 1.3 | • Recognises and follows explicit and implicit protocols, and meets expectations associated with own role |
| Get the work done | 1.1, 1.2, 2.1- 2.4 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Recognises and takes responsibility for addressing predictable problems in familiar work contexts |

# Assessment Requirements for ICTICT409 Develop macros and templates for clients using standard products

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine client needs and specifications for macros and templates
- develop a variety of macros and templates using at least two industry recognised application packages
- provide support to the client for utilising the macros and templates.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline features and functions of particular categories of commercial computing packages, in particular procedures for:
  - creating macros and using default templates supplied by the software application package
  - creating new macros and templates
- identify functions and features of the operating system
- identify features and functions of software and hardware supported by the organisation.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- documents detailing organisational policies
- a personal computer where software installation may be performed
- internet connection
- networked computers
- server and workstation hardware and software

© Commonwealth of Australia, 2025 Future Skills Organisation

- style guides and design brief
- technical documentation and installation manuals
- use of software currently used in industry.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT410 Conduct post-implementation ICT system reviews

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to plan and execute an information and communications technology (ICT) system review following implementation at a point where the system has been operational for some time.

It applies to individuals working in a range of ICT development roles in small to medium enterprises (SMEs) and who are required to review the success of a project with a view to contributing to best practice for future projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Schedule review | 1.1 Review organisational guidelines and criteria procedures to identify system implementation results<br>1.2 Convert the review process into specific criteria<br>1.3 Contact the appropriate person to schedule timing and venue of review<br>1.4 Prepare work schedule for the review, based on organisational guidelines, identifying action, items and staff |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | involved<br>1.5 Contact appropriate vendor and other organisations regarding support or service commitments |
| 2. Carry out review | 2.1 Explain the purpose of the review to stakeholders<br>2.2 Use techniques to obtain data on the areas under review |
| 3. Document and publish results | 3.1 Document and record information relating to the system review<br>3.2 Distribute review results and related documentation to stakeholders<br>3.3 Gather feedback from stakeholders about the review document<br>3.4 Schedule additional meetings and discuss the review findings with stakeholders<br>3.5 Finalise recommendations and action items from the review and distribute to appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.3 | • Identifies and analyses system specific data, output and feedback containing technical terminology to identify system implementation results |
| Writing | 1.2, 1.4, 2.2, 3.1, 3.5 | • Uses plain English and appropriate questioning strategies, avoiding loaded or leading questions, when developing information gathering documentation<br>• Employs vocabulary, grammatical structures, appropriate terminology, formatting and structure relevant to the specific task and organisation to develop review criteria, create a schedule and produce reports |
| Oral Communication | 1.1, 1.3-1.5, 2.1, 2.2, 3.3-3.5 | • Uses plain English to articulate review and scheduling requirements, and applies effective listening and questioning techniques to elicit data |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | and feedback<br>• Participates in a verbal exchange of ideas/solutions and uses detailed and clear language to clarify and present information according to requirements and audience |
| Interact with others | 3.2, 3.5 | • Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role |
| Navigate the world of work | 1.1, 1.4 | • Complies with explicit organisational policies and procedures |
| Get the work done | 1.1, 1.4, 2.2, 3.3-3.5 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Initiates standard diagnostic procedures when responding to familiar and unfamiliar problems within immediate context |

# Assessment Requirements for ICTICT410 Conduct post-implementation ICT system reviews

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- plan a review of a system after the implementation has been completed and has been operational for some time
- carry out the review
- document the results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify client business domain
- identify current industry accepted hardware and software products
- discuss implementation process and issues
- compare review techniques
- identify specific project concerned
- discuss role of stakeholders and the degree of stakeholder involvement in a review.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) where software installation may be performed
- use of software currently used in industry

© Commonwealth of Australia, 2025 Future Skills Organisation

- documents detailing organisational style guide or policies
- server and workstation hardware and software
- an internet connection
- an operational system and specifications.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT411 Select and employ software and hardware testing tools

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to select and use software and hardware diagnostic and testing tools.

It applies to individuals in a wide range of information and communications technology (ICT) areas who are required to test software and hardware.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish process operational requirements | 1.1 Identify process requirements, ensuring they are accurate, complete, prioritised, have functionality, and reference appropriate method or media types<br>1.2 Identify conflicting or overlapping requirements<br>1.3 Document and validate functional requirements of the client<br>1.4 Identify and validate available resources and budget |
| 2. Select hardware and | 2.1 Identify and evaluate relevant hardware and software tools |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| software for processing function | with reference to functional requirements<br>2.2 Identify and analyse relevant products and equipment interdependencies with reference to functional requirements and system architecture<br>2.3 Identify and document appropriate tools, including their limitations for the required use and industry standards<br>2.4 Select and acquire tools according to purchasing policies |
| 3. Configure and test hardware and software | 3.1 Install and configure appropriate hardware and software tools according to vendor guidelines with reference to system architecture and client functionality requirements<br>3.2 Configure system architecture for optimal usage<br>3.3 Prepare, schedule and execute tests and record outcomes<br>3.4 Track errors, and interpret and correct them<br>3.5 Make changes to the tested hardware or software based on test results<br>3.6 Document the hardware and software configuration according to requirements |
| 4. Use and validate software and hardware | 4.1 Provide appropriate training of client with reference to guides, instructions and vendor materials<br>4.2 Use hardware and software according to vendor guidelines<br>4.3 Validate hardware and software performance with reference to client functional requirements |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 1.2, 1.4, 2.1, 2.4, 3.1, 3.3-3.5, 4.2 | • Identifies and comprehends a large range of complex textual and diagrammatic information with systems related terminology to determine organisational requirements and standards, and select appropriate tools and processes |
| Writing | 1.3, 2.3, 2.4, | • Uses correct spelling and grammar together with relevant systems related terminology to document |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | 3.1-3.3, 3.6 | progress and results, and develop user documentation<br>• Converts jargon, terminology and acronyms into plain English<br>• Uses specific scripting and syntax to install, configure and program the system to user requirements |
| Oral communication | 1.1, 1.2, 1.4, 2.1, 2.2, 3.3, 4.1 | • Uses effective listening and questioning techniques and systems related terminology to elicit information about the systems and make the correct tool selection<br>• Uses plain English and interprets technical terminology when liaising with clients and providing training |
| Numeracy | 1.4, 2.4 | • Performs mathematical calculations to interpret complex financial information |
| Interact with others | 4.1 | • Shares information and resources, provides training voluntarily and feedback to client when required |
| Navigate the world of work | 2.3 | • Recognises and follows explicit and implicit protocols and meets expectations associated with own role |
| Get the work done | 1.1, 1.2, 1.4, 2.1-2.4, 3.1-3.4, 3.5, 4.2, 4.3 | • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency<br>• Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks<br>• Initiates standard diagnostic procedures when responding to familiar and unfamiliar problems within immediate context |

# Assessment Requirements for ICTICT411 Select and employ software and hardware testing tools

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- evaluate hardware and software that meet functional requirements
- select and use the correct automating tools
- develop an automating process to produce an outcome that is measurable and meets specified requirements
- install, configure and document hardware and software according to vendor guidelines
- validate hardware and software performance against client usage requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and apply batch scripting of nominated automating software routines
- discuss relevant aspects of the client business domain
- identify and apply vendor product directions
- describe current industry accepted hardware and software products, and their features and capabilities
- explain the functions and features of:
  - development tools, including animation development tools
  - development package automating options
  - third-party tools for automating a range of software applications
  - media management tools
- identify interaction between relevant hardware and software products.

© Commonwealth of Australia, 2025 Future Skills Organisation

# Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a site where automated processing may be carried out
- hardware and software currently used in industry
- a range of automating vendor products currently used in industry
- client requirements documentation
- organisational requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT412 Coordinate and maintain ICT work teams

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to establish and manage work teams and their performance in an information and communications technology (ICT) environment.

It applies to individuals who are competent in a wide range of general information and communications technologies (ICT) and work in a management capacity within a small to medium enterprise (SME).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Establish team | 1.1 Select and identify suitable team members for a particular project or problem<br>1.2 Secure agreement from appropriate persons for release of team members<br>1.3 Identify the type of work team<br>1.4 Determine time allocation for team members to suit team operations or nature of the project or problem |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 1.5 Define team and individual responsibilities<br>1.6 Define how team performance will be measured |
| 2. Coordinate team | 2.1 Clarify and plan tasks in consultation with the team<br>2.2 Allocate tasks appropriately<br>2.3 Determine and apply motivational factors<br>2.4 Represent the team at meetings<br>2.5 Work with team members to manage interpersonal conflict |
| 3. Conduct team activities and review team performance | 3.1 Regularly review team performance against objectives and take corrective action where necessary<br>3.2 Regularly communicate with the team on policies, plans and other matters affecting the team<br>3.3 Seek the input of team members during the decision making process<br>3.4 Consult the team regarding proposed workplace changes and improvements to processes<br>3.5 Recognise team and individual achievement<br>3.6 Validate team objectives against targets<br>3.7 Determine ongoing nature of the team and either disband, select new objective, incorporate new team members or change team profile |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 3.7 | • Reviews documentation to identify objectives and organisational requirements |
| Writing | 1.5, 1.6, 2.1, 3.2, 3.5, 3.6 | • Develops material and plans to a specific audience using clear and detailed language in order to convey explicit information, requirements and recommendations |
| Oral | 1.1, 1.2, | • Participates in a verbal exchange of ideas, and elicits the view and opinions of others, by communicating in |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | 2.1-2.5, 3.1-3.5 | a courteous manner, using effective listening and questioning techniques, using appropriate body language, and using appropriate tone and pitch of voice<br>• Presents expectations choosing language appropriate to audience, interacts effectively to remedy issues and disagreements and negotiates outcomes |
| Numeracy | 1.4, 2.1 | • Uses basic maths calculations to calculate timelines and schedule |
| Interact with others | 2.4, 2.5, 3.1-3.7 | • Identifies key triggers for specific emotions and behaviours, and uses a range of strategies to moderate responses that cause unnecessary problems for others<br>• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and taking a leadership role<br>• Demonstrates an increasing awareness of the interplay of factors involved in any group interaction<br>• Recognises the importance of building rapport in order to establish effective working relationships |
| Get the work done | 1.1-1.6, 2.1, 2.2, 3.1 | • Recognises and anticipates an increasing range of familiar problems, their symptoms and causes, actively looking for early warning signs and implementing contingency plans<br>• Takes responsibility for own workload, negotiating some key aspects with others<br>• Sequences and schedules complex activities, monitors implementation and manages relevant communication<br>• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria<br>• Reflects on ways in which digital systems and tools are used, or could be used, to achieve work goals and begins to recognise strategic and operational applications |

# Assessment Requirements for ICTICT412 Coordinate and maintain ICT work teams

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- establish and coordinate teams to meet objectives
- prioritise work schedules to meet organisational guidelines
- provide leadership and guidance to others in the application and planning of project tasks
- review the performance of the team.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline business planning processes relevant to the development of information and communications technology (ICT) business solutions, such as when delegating responsibility and authority
- outline team-building techniques
- outline the principles of effective communication
- outline change management systems
- identify the client business domain
- describe conflict resolution practices
- outline current business practices relating to preparing reports
- identify the general features and capabilities of current industry accepted hardware and software products
- identify information gathering techniques
- identify workplace health and safety (WHS) requirements relating to work safety, environmental factors and ergonomic considerations
- outline principles of equal employment opportunity (EEO) and anti-discrimination

© Commonwealth of Australia, 2025 Future Skills Organisation

- identify relevant quality assurance practices.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- team members
- organisational policies and operational planning documentation
- current industry products and services.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT413 Relate to clients on a business level

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to formulate, implement, monitor and adjust service level agreements (SLAs).

It applies to individuals who are competent in a wide range of general information and communications technologies (ICT) and provide ICT support to small to medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare for development of SLA | 1.1 Research organisational service standards, values and culture in order to understand the organisational environment<br>1.2 Investigate and document the goods and services provided by the organisation<br>1.3 Review current service level agreements (SLAs) if appropriate |
| 2. Develop SLA for | 2.1 Research client service needs and preferred level of service |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| consultation | 2.2 Determine level of service to be provided to the client<br>2.3 Develop a draft SLA for the client that incorporates quality, time, target performance and cost specifications |
| 3. Negotiate client support service | 3.1 Conduct a session with the client and present the draft SLA in a clear, concise and comprehensive manner<br>3.2 Present proposed cost and timeframes to the client<br>3.3 Negotiate terms with client and record alterations if required<br>3.4 Clarify areas of uncertainty or disagreement<br>3.5 Document terms of service negotiated with client, and refer document to appropriate person for approval and feedback |
| 4. Monitor, adjust and implement procedures to maintain client focus | 4.1 Assess progress in achieving client support service targets, using organisational systems and procedures<br>4.2 Gather client feedback to improve the provision of client support services where appropriate<br>4.3 Make adjustments to client support service based on client feedback and in line with organisational guidelines<br>4.4 Document changes to SLA and report changes to appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1-1.3, 2.1, 4.1, 4.2 | • Identifies and evaluates complex business documentation in a variety of formats containing technical terminology and financial information to identify organisational standards, SLA requirements and client feedback |
| Writing | 2.3, 3.5, 4.3, 4.4 | • Uses plain English, correct spelling, appropriate grammatical structures and terminology, numerical and financial information, and formatting and document structure relevant to the job role and organisation to develop SLAs |
| Oral | 1.1, 1.2, 2.1, 2.2, | • Elicits client requirements and organisational |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Communication | 3.1-3.4, 4.1, 4.2, 4.4 | information by using effective listening and questioning techniques<br>• Employs a courteous manner, detailed and clear language, appropriate tone, style, and body language, and effective listening and questioning techniques together with reflective responses to present information and negotiate SLAs |
| Numeracy | 2.2, 2.3, 3.1- 3.5, 4.1, 4,3, 4.4 | • Interprets and analyses financial and numerical information from organisational documentation, and uses fractions, decimals and percentages to calculate timelines and cost specifications for SLAs |
| Interact with others | 3.5 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Navigate the world of work | 1.1, 4.1, 4.3 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts |
| Get the work done | 1.2, 2.2, 2.3, 4.1-4.3 | • Develops plans to manage relatively complex tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Takes responsibility for the outcomes of routine decisions related directly to own role |

# Assessment Requirements for ICTICT413 Relate to clients on a business level

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- negotiate client support service provision
- formulate and document a service level agreement (SLA)
- implement the service level agreement
- meet client requirements for support service within quality, time, target performance and cost parameters.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss business practices, including:
  - change management
  - information gathering techniques
  - planning process, including development of information and communications technology (ICT) business solutions
  - the process for the preparation of reports
- outline the general features and vendor product directions of current industry accepted hardware and software products
- explain the legal principles of commercial contracts and service level agreements
- outline relevant organisational policies, plans and procedures, including contracting
- discuss theoretical concepts relating to negotiation and business relationships.

© Commonwealth of Australia, 2025 Future Skills Organisation

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- organisational policies, procedures and SLAs for the ICT industry
- contexts for negotiating SLAs
- current ICT hardware and software products.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT415 Provide one-to-one instruction

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to convey technical information to an individual client for their specific use.

It applies to individuals who are competent in a wide range of general information and communications technologies (ICT), and support clients in technical areas, including instructing others on an individual basis.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Determine client needs | 1.1 Meet with client to determine learning needs and type of one-to-one instruction required<br>1.2 Decide upon actions for delivery of one-to-one instruction |
| 2. Organise instruction resources | 2.1 Determine the resources required to perform the instruction<br>2.2 Prepare the instruction plan<br>2.3 Acquire the resources according to organisational guidelines |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | and prepare the resources for the instruction session<br>2.4 Provide client with details of instruction plan |
| 3. Provide appropriate instruction | 3.1 Provide instruction session to client, using identified instructions<br>3.2 Document the instruction session according to organisational guidelines<br>3.3 Refer further instruction requirements or training needs to appropriate person as required |
| 4. Obtain client feedback | 4.1 Create or obtain an evaluation and feedback form or other feedback mechanism according to organisational guidelines<br>4.2 Obtain client evaluation and feedback to ensure the requirements of the client are met<br>4.3 Review client feedback and discuss suggestions with appropriate person |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.1, 2.1, 2.3, 4.3 | • Reviews documentation to identify relevant information relating to the client learning needs and delivery method |
| Writing | 2.2-2.4, 3.2, 4.1 | • Uses correct grammar and spelling, and plain English, and translates technical terminology in order to convey and obtain explicit information for a specific audience |
| Oral Communication | 1.1, 2.1-2.4, 3.1, 3.3, 4.2, 4.3 | • Uses correct tone, pitch and volume, clear diction, plain English and simple sentence structure, and effective listening and questioning techniques when conducting instruction sessions, liaising with the client and obtaining feedback |
| Interact with others | 3.1, 3.3 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Navigate the world of work | 2.3, 3.2, 4.1 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts |
| Get the work done | 1.2, 2.1, 2.3 | • Uses a combination of planning processes and an increasingly intuitive understanding of context to identify relevant information, including necessary resources and time required to undertake tasks<br>• Takes responsibility for the outcomes of routine decisions related directly to own role |

# Assessment Requirements for ICTICT415 Provide one-to-one instruction

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine the instruction required by client
- acquire and prepare associated resources
- demonstrate empathy and understanding of the learner and accommodate different cultures
- convey technical information to individual clients for their specific use in a clear, concise and coherent manner
- convey the meanings of technical jargon.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify delivery and evaluation methods
- discuss adult learning principles and styles
- outline communication and facilitation techniques
- discuss critical behaviour issues and problems that can occur with one-on-one instruction
- describe the general features and capabilities of current industry accepted hardware and software products
- describe the functions and features of common operating systems (OS)
- identify and describe hardware and software supported by the organisation
- recognise the availability of in-house or vendor support
- identify and describe common information and communications technology (ICT) terms and terminology
- describe security and network guidelines and procedures

© Commonwealth of Australia, 2025 Future Skills Organisation

- outline sources and availability of technical and organisational systems
- specify telephone, fax and online functions and procedures
- identify and incorporate work group procedures.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to client requirements either directly or through a peer or supervisor.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT416 Contribute to the development of strategic plans

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to participate in the planning process and to contribute to the development of strategic plans.

It applies to individuals who work in a senior capacity within small-to-medium enterprises (SMEs) and are competent in a wide range of general information and communications technologies (ICT).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Plan for strategy | 1.1 Participate in planning committee and clarify roles of people involved in process<br>1.2 Participate in identifying issues that the planning process should address<br>1.3 Identify information that must be collected |
| 2. Investigate the current environment | 2.1 Investigate mission and vision statements of the organisation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| | 2.2 Investigate current internal and external environment of the organisation |
| 3. Participate in feedback session | 3.1 Identify most important issues facing the organisation, using information gathered<br>3.2 Undertake a review session with appropriate persons to confirm issues identified<br>3.3 Identify objectives and strategies for the organisation |
| 4. Finalise and validate plan | 4.1 Create a written plan to document mission, vision, issues, objectives and strategies of the organisation<br>4.2 Submit written plan to appropriate persons for approval<br>4.3 Review feedback and make alterations where appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Reading | 1.2, 1.3, 2.1, 2.2, 4.3 | • Identifies, analyses and evaluates a range of online and written complex texts to obtain organisational and industry information relevant to strategic planning |
| Writing | 4.1, 4.3 | • Integrates information and ideas from a number of sources, using correct grammar and spelling, specialised and cohesive language, and appropriate document structures to produce reports |
| Oral communication | 1.1-1.3, 2.1, 2.2, 3.2, 4.2 | • Elicits the view and opinions of others by using effective listening and questioning techniques, appropriate tone, style and body language, and by giving reflective responses<br>• Participates in a verbal exchange of ideas/solutions and uses detailed and clear language to clarify and present information |
| Navigate the world of work | 2.1 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts, and appreciates the importance of identifying and responding to protocols in new situations |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| Interact with others | 4.2 | • Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience |
| Get the work done | 1.1-1.3, 2.1, 2.2, 3.1, 3.3, 4.1 | • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals<br>• Makes a range of critical and non-critical decisions in various situations, taking a range of constraints into account |

# Assessment Requirements for ICTICT416 Contribute to the development of strategic plans

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- determine criteria and issues for planning process
- undertake feedback session to identify issues, goals and outcomes that meet stakeholder requirements
- create a written plan documenting objectives and strategies of organisation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the process of information gathering techniques
- describe quality assurance practices
- outline the components of the business planning process relevant to the development of strategic plans
- discuss current business practices in preparing reports, particularly for contributing to the development of a strategic plan that identifies:
  - final expected results
  - details how these results will be achieved.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a site and personnel where a strategic business plan may be developed

© Commonwealth of Australia, 2025 Future Skills Organisation

- detailed information relating to current needs and project requirements of business
- client expectations brief
- business mission, vision statements and objectives.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT417 Identify, evaluate and apply current industry-specific technologies to meet industry standards

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to identify, evaluate and apply industry specific technologies to ensure that the quality of the entire business process is maintained to the highest possible level.

It applies to individuals who support information and communications technology (ICT) activities in the workplace across a wide range of ICT areas, including technical support, network administration, programming, testing, web technologies, software applications and digital media technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT

## Elements and Performance Criteria

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| *Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.* |
| 1. Prepare to identify and evaluate industry specific technologies | 1.1 Identify technologies specific to an industry sector<br>1.2 Acquire industry-specific technologies<br>1.3 Identify, classify and use industry specific technologies for the benefit of the organisation |

© Commonwealth of Australia, 2025 Future Skills Organisation

| ELEMENT | PERFORMANCE CRITERIA |
|---|---|
| 2. Apply industry specific technology to assist in solving organisational problems | 2.1 Conduct testing of industry specific technologies<br>2.2 Apply features and functions of industry specific technologies to provide a suitable solution to an identified problem<br>2.3 Demonstrate depth of knowledge of enabling technologies to an accepted industry standard<br>2.4 Access and use sources of information relating to the industry specific technologies |
| 3. Review and evaluate industry-specific technology performance | 3.1 Review and evaluate industry specific technologies for performance, usability and benefit to the organisation<br>3.2 Determine environmental considerations involved with using the technologies<br>3.3 Seek feedback from users where appropriate |

# Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

| Skill | Performance Criteria | Description |
|---|---|---|
| Learning | 1.1-1.3, 2.3, 2.4 | • Investigates, evaluates and applies information from a range of complex and technical texts to expand own knowledge and identify industry specific technologies that will benefit the organisation |
| Reading | 1.1, 1.3, 2.1, 2.4, 3.2, 3.3 | • Identifies and interprets technical online and hard copy documentation containing complex terminology and diagrams to identify industry specific technologies that will benefit the organisation, and to determine environmental considerations |
| Oral Communication | 1.1-1.3, 2.4, 3.1-3.3 | • Elicits information and feedback by using effective listening and questioning techniques to identify and evaluate industry specific technologies<br>• Uses clear, easy-to-understand language and translates industry specific terminology into plain English when talking to users and when necessary |
| Navigate the world of work | 2.4, 3.2 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts and appreciates the importance of identifying and |

© Commonwealth of Australia, 2025 Future Skills Organisation

| | | |
|---|---|---|
| | | responding to protocols in new situations<br>• May recognise problems that have the potential to become legal issues and takes steps to address them before they escalate |
| Get the work done | 1.1-1.3, 2.1-2.4, 3.1 | • Understands key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology and when seeking to understand the potential of new technology<br>• Develops plans to manage relatively complex non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals |

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Performance Evidence

Evidence of the ability to:

- identify new and emerging industry specific technologies
- apply and evaluate features and functions of identified industry specific technologies to an industry standard.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

## Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss current industry specific technology trends and directions, and the major standards
- outline vendor product directions
- describe the general features, capabilities and application of current industry hardware and software products
- discuss information gathering techniques.

## Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

© Commonwealth of Australia, 2025 Future Skills Organisation

- a site where industry specific technologies may be used
- industry specific technologies currently used in industry
- documents detailing workplace health and safety (WHS) standards, environmental guidelines and organisational requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

# ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment

## Modification History

| Release | Comments |
|---|---|
| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

## Application

This unit describes the skills and knowledge required to maintain professional and ethical conduct, as well as to ensure that personal information of stakeholders is handled in a confidential and professional manner when dealing with stakeholders in an information and communications technology (ICT) environment.

It applies to ICT personnel who are required to gather information to determine the organisation's code of ethics, and protect and maintain privacy policies and system security.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

General ICT
